How the cleaning card works:

The cleaning waffles are flexible raised platforms that allow the card to clean previously unreachable areas within the equipment.

Canon Check Scanner Cleaning Card # **KWCAN-C1B15WS**

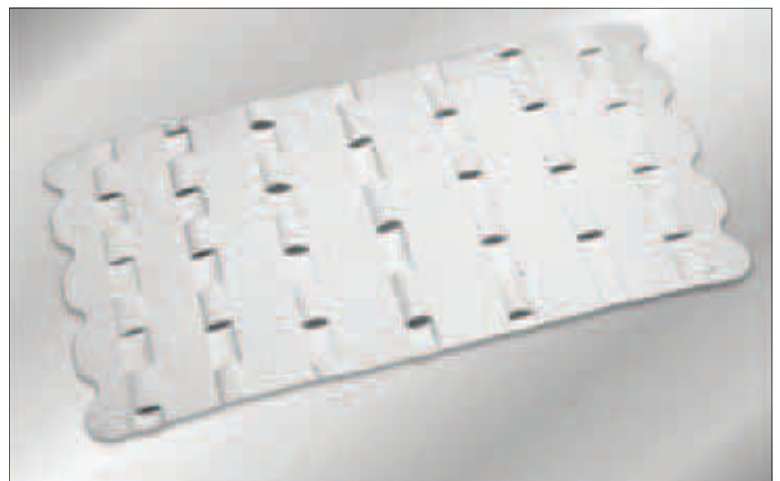

KWCAN-C1B15WS - 15 Cleanings per Kit

Use this product to clean Canon CR-25, CR-55, CR-135i, CR-180, CR-180II and 190i check transports.

The Canon CR-25, CR-55, CR-135i, CR-180, CR-180II and 190i check transports are high tech imaging machines for check scanning in a compact package. In order to create accurate images, the lenses need to be cleaned often to remove dust or ink debris that could distort or alter the image. This Canon Check Transport Cleaning Card, featuring Waffletechnology®, is specifically designed to maintain these Canon check transport models. When used as a consistent maintenance product, this card will keep your Canon CR-Series check transport performing as designed. This cleaning card is approved and endorsed by Canon to be the only product used on their equipment. Use this product once per week or after 2,000 checks scanned. For more information read the literature from Canon Cleaning Tool Software.

Purpose of Product:

Canon Check Transports require regular cleaning to maintain unblemished images of checks and other scanned documents. These products will clean lenses, item travel paths, motorized belts and guide rollers within the scanner to keep the unit operating at peak efficiency.

TellerScan Maintenance

Cleaning the TellerScan® 240

Over time, ink, dirt and dust particles will collect on the scanner rollers and document track. Therefore, it is necessary to clean these areas on a regular basis to assure reliable performance. Tips for performing preventative maintenance by the user on the TellerScan® TS240 include (see the TS240 Routine Maintenance & Troubleshooting video at www.digitalcheck.com for additional info):

- Perform a periodic inspection of the entire document track area. The use of a flashlight will enhance the visual inspection between the scan heads and throughout the document track.
- Remove any staples, paper clips, and rubber bands that may have accumulated during use.
- Have a can of compressed air available to blow out the document track on a regular basis.
- Purchase the TellerScan® cleaning cards (available at eagledirects.com) to have on hand for regular cleaning maintenance. Run several scan cycles, flipping the card between cycles, while holding the card to “scrub” the first drive or entry rollers. Once the entry rollers no longer deposit dirt onto the card, allow the card to scan through the entire path. Run this through several times while flipping the card end-to-end and top to bottom. (See the TS240 Routine Maintenance & Troubleshooting video at www.digitalcheck.com for additional info.)
- Use the special cleaning swabs, which come with the TellerScan® cleaning kit, to “scrub” the four drive rollers under the center cover.
- Inspect the quality of the captured images on a regular basis. If the image quality drops off, inspect and clean the scan heads. (See the manual for instructions.) If the quality does not appear to be related to dirt or debris, contact your service provider to determine if the scan heads can be recalibrated.

Digital Check Cleaning Kits

Digital Check cleaning kits are an easy way to get everything you need to keep your scanner running at peak performance. Each kit includes 25 cleaning cards and 6 cleaning swabs. The cards are used to easily clean the scanner feeder, transport track and rollers. The swabs are used to clean the cameras, rollers or other parts that require extra attention.

SmartSource Waffle Cleaning Card

For use with Burroughs SmartSource & Unisys SourceNDP Check Scanners

KWBUR-BUR2B15W

Note: Replaces Product Code: 75-2093-906

Burroughs Check Scanner Cleaning Card

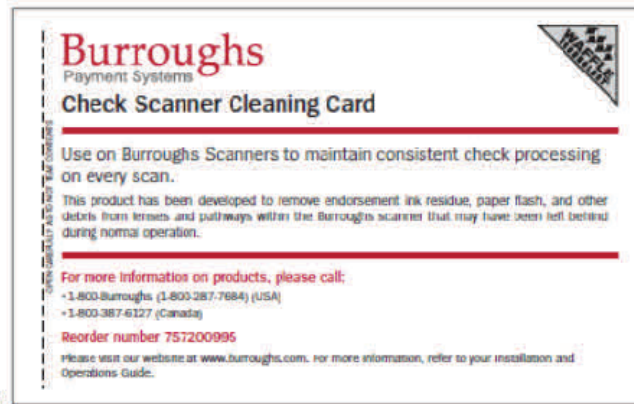

Product Code: **KWBUR-BUR2B15W**

This Waffletechnology Cleaning Card is specifically designed to maintain Burroughs SmartSource® Check Scanners. Once inserted it will:

- Clean the optical scanner lenses
- Clean the check pathways
- Clean the check transport belts and rollers

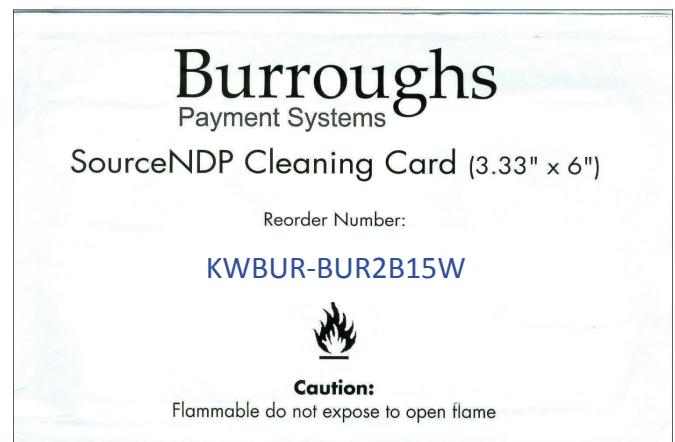

Use as:

- A scheduled maintenance product to prevent poor check scans
- An emergency maintenance product to correct failed scans

How Waffletechnology® Works

The cleaning waffles are flexible, raised platforms that allow the card to clean previously unreachable areas within the equipment.

<p>Position & Layout Transparent Check Gauge (Gauge Only) The transparent position & layout gauge is a plastic template that is placed over the check. It is your first line of defense when checking for character errors such as skew variation, alignment, positioning, dimensions, and spacing. Our MICR Gauges are designed and manufactured to measure the placement of the magnetic ink characters (E13B)-that are printed on checks, drafts, and other documents intended for automated processing-with the highest tolerance standards.</p>		1/EA	M1027-01	EA	

Product Code: **KWPNI-CS2B15WS** - 15 Cleanings Cards per Box

Waffle Check Scanner Cleaning Card

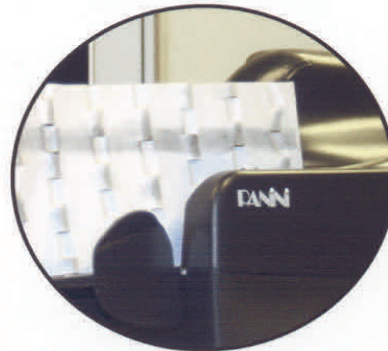

Scanner Lenses Clouded with Dirt and Endorsement Ink Residue.

Eliminate dirt and ink buildup with a Panini approved cleaning card.

Waffle Cleaning Cards is an advancement in cleaning card technology. The Cleaning waffles are flexible raised platforms. These platforms allow the card to clean previously unreachable areas within the check scanner. Now more dirt is removed making your check

Panini Waffletechnology Check Scanner Cleaning Card

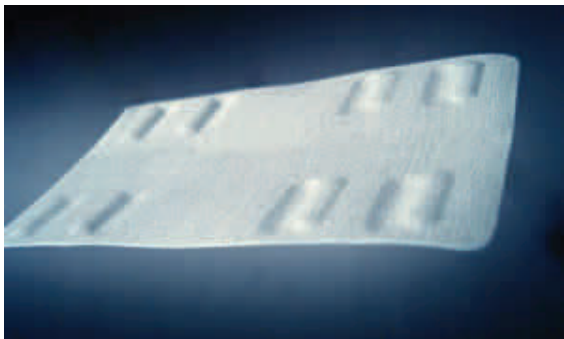

Ideal Cleaning on

Panini My Vision X® Check Scanners

Panini Waffle Check Scanner Cleaning Card is an approved product by Panini for use on the My Vision X Check Scanner. This product was developed and tested to be an effective means of maintaining this equipment.

Waffle cleaning cards incorporate flexible, raised platforms on their top and bottom surfaces. These cleaning platforms are essentially spring-loaded, significantly increasing the pressure applied to the internal components as the card passes through the mechanism. Not only is cleaning pressure increased, but the platforms actually spring up into surface cavities to clean recessed sensors. Additionally, the leading and trailing surfaces of rounded optical lenses are effectively cleaned. Flat cards do not touch recessed sensors and, at best, only come into contact with the convex tip of a rounded optical lens. As the card is accepted into the mechanism and as it is dispensed by the mechanism, it is cleaning all surfaces.
