			Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] - Harnesses from the Finisher Controller PCB to the Tray A Lifting Motor 1. Finisher Controller PCB (UN3/J109A) to Tray A Motor Driver PCB (UN10/J292A) (Unit of replacement: CABLE ASSEMBLY, A) 2. Tray A Motor Driver PCB (UN10/J291A) to Tray A Lifting Motor (M22) (Unit of replacement: STEPPING MOTOR UNIT) - Tray A Lifting Motor Rotation Sensor (PS34) (Unit of replacement: IC, PHOTO-INTERRUPTER, LG248NL1A) - Tray A Lifting Motor (M22) (Unit of replacement: STEPPING MOTOR UNIT) - Tray A Motor Driver PCB (UN10) (Unit of replacement: MOTOR DRIVER PCB ASSEMBLY) - Finisher Controller PCB (UN3) (Unit of replacement: FINISHER CONTROLLER PCB ASS'Y) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

E Code	Detail Code	Location	Item	Description
E542	8001	02	Title	a. Lower Tray timeout error b. Tray B (Lower Tray) lifting error
			Detection description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray did not return to the home position although the Secondary Tray Shift Motor was driven for 25 sec. - The tray did not move to the other area although the Secondary Tray Shift Motor was driven for 5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Tray B Lifting Motor Rotation Sensor was not turned OFF although 800 sec had passed after the Tray B Lifting Motor started the operation.
			Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray lifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] - Harnesses from the Finisher Controller PCB to the Tray B Lifting Motor 1. Finisher Controller PCB (UN3/J108A) to Tray B Motor Driver PCB (UN11/J292B) (Unit of replacement: CABLE ASSEMBLY, B) 2. Tray B Motor Driver PCB (UN11/J291B) to Tray B Lifting Motor (M23) (Unit of replacement: STEPPING MOTOR UNIT) - Tray B Lifting Motor Rotation Sensor (PS35) (Unit of replacement: IC,PHOTO-INTERRUPTER,LG248NL1A) - Tray B Lifting Motor (M23) (Unit of replacement: STEPPING MOTOR UNIT) - Finisher Controller PCB (UN3) (Unit of replacement: FINISHER CONTROLLER PCB ASS'Y) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

E Code	Detail Code	Location	Item	Description
E542	8002	02	Title	a. Secondary Tray shift area error b. Tray B (Lower Tray) area error
			Detection description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray reached the upper limit before the Secondary Tray Paper Surface Sensor 1 detected the paper surface during the paper surface detection operation. - A non-contiguous area was detected during the tray operation. - The tray reached the next area before the Secondary Tray Paper Surface Sensor 2 detected the paper surface during the escape operation. b. FIN-AM1/SADDLE FIN-AM2 - Tray A (Upper Tray) was detected as being at a lower position than Tray B (Lower Tray). - The Tray B Position Sensor detected a non-contiguous area.

E566	8001	02	Title	Side Registration Detection Unit HP error
			Detection description	FIN-AM1/SADDLE FIN-AM2 The Side Registration Detection Unit HP Sensor was not turned ON although 3 sec had passed after the Side Registration Detection Unit Shift Motor started the operation.
			Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] - Harness between the Feed Motor Driver PCB (UN5/J281) and the Side Registration Detection Unit Shift Motor (M6/J530) - Harnesses from the Finisher Controller PCB to the Side Registration Detection Unit HP Sensor 1. Finisher Controller PCB (UN3/J128) to Relay Connector (3P) (Unit of replacement: CABLE, FEED UNIT) 2. Relay Connector (3P) to Side Registration Detection Unit HP Sensor (PS7/J512) (Unit of replacement: DETECT DRIVE ASSEMBLY) - Side Registration Detection Unit Shift Motor (M6) (Unit of replacement: MOTOR, STEPPING, DC) - Side Registration Detection Unit HP Sensor (PS7) (Unit of replacement: IC, PHOTO-INTERRUPTER, LG248NL1A) - Finisher Controller PCB (UN3) (Unit of replacement: FINISHER CONTROLLER PCB ASS'Y) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

			Remedy	- Punch Unit (Unit of replacement: PUNCHER UNIT-BS1/BT1/BU1) - Finisher Controller PCB (UN3) (Unit of replacement: FINISHER CONTROLLER PCB ASS'Y) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

			Detection description	BOOKLET TRIMMER-D1 An error was detected in the Knife Motor Driver PCB.
			Remedy	BOOKLET TRIMMER-D1 [Related parts] - Harness between the Knife Motor (M05) and the Trim Section Transport Motor Driver PCB (A04/CN3) - Knife Motor (M05) - Knife Motor Driver PCB (A05) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts.

E Code	Detail Code	Location	Item	Description
E5A7	8044	02	Title	Upper Knife Upper Limit Sensor detection error
			Detection description	BOOKLET TRIMMER-D1 The Upper Knife Upper Limit Sensor was not turned ON although the Upper Knife moved a certain amount.
			Remedy	BOOKLET TRIMMER-D1 [Related parts] - Harnesses connecting the Upper Knife Upper Limit Sensor (PI06/J106), the Relay Connector (J3) and the Trimmer Controller PCB (QPM-220/CON10) - Harness between the Knife Motor (M05) and the Knife Motor Driver PCB (A05/CN3) - Upper Knife Upper Limit Sensor (PI06) - Knife Motor (M05) - Knife Motor Driver PCB (A05) - Trimmer Controller PCB (QPM-220) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E5AF	802A	02	Title	Front Knife Up/Down Drive Motor detection error
			Detection description	2-KNIFE TRIMMERThe pulses required to reach the lower limit from the home position were not input.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts.

E Code	Detail Code	Location	Item	Description
E5AF	802B	02	Title	Front Knife Up/Down Drive Motor detection error
			Detection description	2-KNIFE TRIMMERThe pulses required to reach the trimming completion position from the home position were not input.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts.
E5AF	8031	02	Title	Rear Jog Guide Home Position Sensor detection error
			Detection description	2-KNIFE TRIMMERThe Rear Jog Guide Home Position Sensor was not turned ON.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Rear Jog Guide Home Position Sensor (PI122/J29) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Harness between the Rear Jog Guide Motor (M21) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Rear Jog Guide Home Position Sensor (PI122) - Rear Jog Guide Motor (M21) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Rear Jog Guide Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5AF	8032	02	Title	Rear Jog Guide Home Position Sensor detection error
			Detection description	2-KNIFE TRIMMER The Rear Jog Guide Home Position Sensor was not turned OFF.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Rear Jog Guide Home Position Sensor (PI122/J29) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Harness between the Rear Jog Guide Motor (M21) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Rear Jog Guide Home Position Sensor (PI122) - Rear Jog Guide Motor (M21) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. E5AF	8071	02	Title	Delivery Roller Home Position Sensor detection error
			Detection description	2-KNIFE TRIMMER The Delivery Roller Home Position Sensor was not turned ON.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Delivery Roller Home Position Sensor (PI14), the Relay Connector (J114/J37) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1) - Harness between the Delivery Roller Motor (M08) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1 (CON13)) - Delivery Roller Home Position Sensor (PI14) - Delivery Roller Motor (M08) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5AF	8072	02	Title	Delivery Roller Home Position Sensor detection error
			Detection description	2-KNIFE TRIMMER The Delivery Roller Home Position Sensor was not turned OFF.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Delivery Roller Home Position Sensor (PI14), the Relay Connector (J114/J37) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1) - Harness between the Delivery Roller Motor (M08) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1 (CON13)) - Delivery Roller Home Position Sensor (PI14) - Delivery Roller Motor (M08) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5AF	8085	02	Title	EEPROM error
			Detection description	2-KNIFE TRIMMER Either the initial setting of EEPROM which stores each home position value has not made, or data is corrupted (normally, this occurs when the Two-Knife Booklet Trimmer Controller PCB is replaced).
			Remedy	2-KNIFE TRIMMER [Related parts] Two-Knife Booklet Trimmer Controller PCB P100211 (QPM-254) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF the main power of the Two-Knife Booklet Trimmer, and then set "2" of DIP SW1 of the Two-Knife Booklet Trimmer Controller PCB to ON. 2. Turn ON the main power of the Two-Knife Booklet Trimmer, and then after the initialization process of the EEPROM is finished, turn OFF the main power of the Two-Knife Booklet Trimmer, and return "2" of DIP SW1 to OFF. 3. Set each home position value described in the home position seal affixed to the Two-Knife Booklet Trimmer from the LCD panel of the Booklet Trimmer.
E5AF	8086	02	Title	EEPROM error
			Detection description	2-KNIFE TRIMMER An EEPROM write error occurred.
			Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.
E5AF	8087	02	Title	EEPROM error
			Detection description	2-KNIFE TRIMMER An EEPROM checksum error occurred.
			Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5AF	8096	02	Title	Knife Front/Rear Move Motor home position return not completed
			Detection description	2-KNIFE TRIMMERThe paper stack information or the booklet delivery command from the Booklet Trimmer was received before receiving the operation start command.
			Remedy	<p>2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13), the Knife Front/Rear Move Motor Driver PCB (A40/CN2) and the Knife Front/Rear Move Motor (M40) - Knife Front/Rear Move Motor (M40) - Two-Knife Booklet Trimmer Controller PCB (QPM-254)</p> <p>[Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable.</p> <p>[Remedy] Check/replace the related parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.</p>

E Code	Detail Code	Location	Item	Description
E5AF	8097	02	Title	Knife Front/Rear Move Motor setting position shift not completed
			Detection description	2-KNIFE TRIMMERAfter the operation start command was received and the guide was initialized, the delivery command from the Booklet Trimmer was received before receiving the paper stack information.
			Remedy	<p>2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13), the Knife Front/Rear Move Motor Driver PCB (A40/CN2) and the Knife Front/Rear Move Motor (M40) - Knife Front/Rear Move Motor (M40) - Two-Knife Booklet Trimmer Controller PCB (QPM-254)</p> <p>[Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable.</p> <p>[Remedy] Check/replace the related parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.</p>
E5AF	80A8	02	Title	Command transmission retry error
			Detection description	2-KNIFE TRIMMERSending of a command to the Booklet Trimmer was retried 4 times.
			Remedy	<p>2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.</p>
E5AF	80A9	02	Title	Command NACK reception count error
			Detection description	2-KNIFE TRIMMER NACK was received 5 or more times for the same command sent to the Booklet Trimmer.
			Remedy	<p>2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.</p>

E Code	Detail Code	Location	Item	Description
E5AF	80AA	02	Title	Interlock Safety Unit error
			Detection description	2-KNIFE TRIMMERAn error occurred in the Interlock Safety Unit.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Diode PCB (QPW-793/CON404, CON401), the Interlock Safety Unit (A100) and the Top Cover Switch (SW01) - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON9) and the Interlock Safety Unit (A100) - Interlock Safety Unit (A100) - Diode PCB (QPW-793) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.
E5AF	80AB	02	Title	Power Supply error
			Detection description	2-KNIFE TRIMMERAn alarm signal was received from the Power Supply (24 VDC).
			Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON10) and the Power Supply (G00/CON2) - Remote Power Relay (K00) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5AF	80AC	02	Title	Interlock error
			Detection description	2-KNIFE TRIMMERWhen the Top Cover was opened, the Interlock Relay 2 was turned OFF but the Interlock Relay 1 was not turned OFF.
			Remedy	2-KNIFE TRIMMER [Related parts] - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON49), the Interlock Safety Unit (A100/J201), the Top Cover Switch (SW01), and Interlock Relay 1 (K01) - Top Cover Switch (SW01) - Interlock Relay 1 (K01) - Interlock Safety Unit (A100) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Points to note at work] When checking the harness/cable or connector, perform the following work. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Remedy] Check/replace the related parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

E Code	Detail Code	Location	Item	Description
E5B0	8007	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	An error in the Thermostat (THSW) was detected.
			Remedy	1. Heater (HTR1) error 2. Thermostat (THSW) error 3. Slave Controller PCB error
E5B0	8008	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	The Level Thermistor (S58) detected 170 deg C or higher for 10 sec or longer after completion of warm-up.
			Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B0	8009	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	The Level Thermistor (S58) detected 100 deg C or lower for 10 sec or longer after completion of warm-up.
			Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B0	800B	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	An open circuit of the Abnormal Temperature Thermistor (S57) was detected.
			Remedy	1. Heater (HTR1) error 2. Abnormal Temperature Thermistor (S57) error 3. Slave Controller PCB error
E5B0	800C	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	An open circuit of the Level Thermistor (S58) was detected.
			Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B0	800D	61	Title	Error in internal temperature of Perfect Binder
			Detection description	The Machine Temperature Thermistor (S105) detected 80 deg C or higher for 1 sec.
			Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error
E5B0	800E	61	Title	Error in internal temperature of Perfect Binder
			Detection description	An open circuit of the Machine Temperature Thermistor (S105) was detected.
			Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B0	800F	61	Title	Error in internal temperature of Perfect Binder
			Detection description	There was 10 deg C or larger gap between the 1-minute fixed data detected by the Machine Temperature Thermistor (S105) and the last 1-second row data for the specified period of time or longer.
			Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error
E5B0	8010	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was increased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
			Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error
E5B0	8011	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was decreased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
			Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error
E5B0	8012	61	Title	Error in Heater (HTR1) of Perfect Binder
			Detection description	Warm-up was not completed although 500 sec had passed since the start of temperature control.
			Remedy	1. Heater (HTR1) error 2. Slave Controller PCB error
E5B0	8013	61	Title	Error in internal temperature of Perfect Binder
			Detection description	The Machine Temperature Thermistor (S105) detected 0 deg C or lower.
			Remedy	1. The environment is out of the specified range. 2. Slave Controller PCB error
E5B2	0001	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	The Level Thermistor (S58) detected that the glue level was lower than the lower limit for 4 consecutive times during glue supply.
			Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B2	0002	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	The Level Thermistor (S58) detected that the glue level had not risen above the upper limit although a specified amount of glue was supplied without applying glue while the glue level was higher than the lower limit.
			Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B2	0003	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	The Level Thermistor (S58) detected that the glue level had not lowered below the upper limit although a specified amount of glue was applied without supplying it.
			Remedy	1. Operation failure in glue application mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B2	0004	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	An error in the adjustment value of the Level Thermistor (S58) was detected.
			Remedy	1. Level Thermistor (S58) error 2. Slave Controller PCB error
E5B2	8001	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	The Level Thermistor (S58) detected that the glue level was lower than the lower limit for 4 consecutive times during glue supply.
			Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error
E5B2	8002	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	The Level Thermistor (S58) detected that the glue level had not risen above the upper limit although a specified amount of glue was supplied without applying glue while the glue level was higher than the lower limit.
			Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

			Detection description	The Level Thermistor (S58) detected that the glue level had not lowered below the upper limit although a specified amount of glue was applied without supplying it.
			Remedy	1. Operation failure in glue application mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B2	8004	61	Title	Error in glue vat level detection of Perfect Binder
			Detection description	An error in the adjustment value of the Level Thermistor (S58) was detected.
			Remedy	1. Level Thermistor (S58) error 2. Slave Controller PCB error
E5B4	0001	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the upper limit.
			Remedy	1. Soiling on the Timing Sensor (S5) 2. Timing Sensor (S5) error 3. Master Controller PCB error
E5B4	0002	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the upper limit.
			Remedy	1. Soiling on the Cover Registration Sensor (S21) 2. Cover Registration Sensor (S21) error 3. Master Controller PCB error
E5B4	0003	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the upper limit.
			Remedy	1. Soiling on the Cover Horizontal Registration Sensor (S) (S71) 2. Cover Horizontal Registration Sensor (S) (S71) error 3. Slave Controller PCB error
E5B4	0004	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the upper limit.
			Remedy	1. Soiling on the Cover Horizontal Registration Sensor (L) (S72) 2. Cover Horizontal Registration Sensor (L) (S72) error 3. Slave Controller PCB error
E5B4	0005	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Stack Delivery Sensor (S64T/S64L) was changed up to the upper limit.
			Remedy	1. Soiling on the Stack Delivery Sensor (S64T/S64L) 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B4	0006	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Leading Edge Sensor (S65T/S65L) was changed up to the upper limit.
			Remedy	1. Soiling on the Leading Edge Sensor (S65T/S65L) 2. Leading Edge Sensor (S65T/S65L) error 3. Slave Controller PCB error
E5B4	0007	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Inlet Path Sensor (S92T/S92L) was changed up to the upper limit.
			Remedy	1. Soiling on the Inlet Path Sensor (S92T/S92L) 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error
E5B4	0008	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Registration Sensor (S88T/S88L) was changed up to the upper limit.
			Remedy	1. Soiling on the Registration Sensor (S88T/S88L) 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error
E5B4	0011	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the lower limit.
			Remedy	1. Timing Sensor (S5) error 2. Master Controller PCB error
E5B4	0012	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the lower limit.
			Remedy	1. Cover Registration Sensor (S21) error 2. Master Controller PCB error
E5B4	0013	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the lower limit.
			Remedy	1. Cover Horizontal Registration Sensor (S) (S71) error 2. Slave Controller PCB error
E5B4	0014	61	Title	Perfect Binder sensor auto adjustment error
			Detection description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the lower limit.
			Remedy	1. Cover Horizontal Registration Sensor (L) (S72) error 2. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description

E Code	Detail Code	Location	Item	Description
E5B5	0001	61	Title	Error in Leading Edge Sensor (S65T/S65L) of Perfect Binder
			Detection description	The Leading Edge Sensor (S65T/S65L) could not detect presence of paper.
			Remedy	1. Adhesion of paper stack to the Main Gripper 2. Remain of paper stack between the Main Gripper and the Cover Feed Assembly 3. Leading Edge Sensor (S65T/S65L) error 4. Slave Controller PCB error 5. Cutter Controller PCB error
E5B5	0002	61	Title	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
			Detection description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper.
			Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error
E5B5	0003	61	Title	Error in Registration Sensor (S88T/S88L) of Perfect Binder
			Detection description	The Registration Sensor (S88T/S88L) could not detect presence of paper.
			Remedy	1. Remain of paper stack in the Stack Rotation Assembly 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error
E5B5	0006	61	Title	Error in Stack Delivery Sensor (S64T/S64L) of Perfect Binder
			Detection description	The Stack Delivery Sensor (S64T/S64L) could not detect absence of paper.
			Remedy	1. Remain of paper stack in the Cover Feed Assembly at power-on 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error
E5B5	0007	61	Title	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
			Detection description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper at auto delivery operation.
			Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly at auto delivery operation after an error 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error 4. Slave Controller PCB error
E5B5	0008	61	Title	Error in Main Gripper Paper Sensor (S55) of Perfect Binder
			Detection description	The Main Gripper Paper Sensor (S55) could not detect presence of paper.
			Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B5	0012	61	Title	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
			Detection description	The Inlet Path Sensor (S92T/S92L) could not detect absence of paper.
			Remedy	1. Remain of paper stack in the Trimming Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error
E5B5	0013	61	Title	Error in Registration Sensor (S88T/S88L) of Perfect Binder
			Detection description	The Registration Sensor (S88T/S88L) could not detect absence of paper.
			Remedy	1. Remain of paper stack at the Lifting Tray at auto delivery operation after an error 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error
E5B5	0014	61	Title	Error in Stack Arrival Sensor (S76) of Perfect Binder
			Detection description	The Stack Arrival Sensor (S76) could not detect absence of paper.
			Remedy	1. Remain of paper stack at the Lifting Tray 2. Stack Arrival Sensor (S76) error 3. Cutter Controller PCB error
E5B5	0016	61	Title	Error in waste paper detection of Perfect Binder
			Detection description	a. Waste paper with the specified size or larger was detected between the Waste Paper Buffer and the Paper Retainer Plate after waste paper processing. b. The waste paper full alarm due to jammed waste paper was not released although initialization of buffer by opening/closing the door was performed 3 times. * Waste paper jam is detected by the Paper Retainer Plate Sensor (S104) and the volume of jammed waste paper is detected according to the positional relationship between the Waste Paper Buffer and the Pressing Plate.
			Remedy	1. Remain of waste paper in the Waste Paper Buffer Assembly 2. Remain of waste paper between the Waste Paper Buffer Assembly and the Pressing Plate 3. Paper Retainer Plate Sensor (S104) error 4. Cutter Controller PCB error
E5B5	0017	61	Title	Error in Sub Gripper Paper Sensor (S39) of Perfect Binder
			Detection description	The Sub Gripper Paper Sensor (S39) could not detect absence of paper.
			Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Sub Gripper Paper Sensor (S39) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B5	0018	61	Title	Error in Main Gripper Paper Sensor (S55) of Perfect Binder

			Detection description	The Main Gripper Paper Sensor (S55) could not detect absence of paper.
			Remedy	1. Remain of paper stack in the Main Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error
E5B6	0001	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The result of paper stack thickness detection was smaller than the AD value(-30) of minimum value (0 mm) at the time of adjustment.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error
E5B6	0002	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The result of paper stack thickness detection was larger than the maximum AD value (25 mm) at the time of adjustment.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error
E5B6	0003	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The paper stack thickness detection value was not changed despite an open/close operation of the Main Gripper Assembly.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error
E5B6	8001	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The result of paper stack thickness detection was smaller than the AD value(-30) of minimum value (0 mm) at the time of adjustment.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error
E5B6	8002	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The result of paper stack thickness detection was larger than the maximum AD value (25 mm) at the time of adjustment.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error
E5B6	8003	61	Title	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
			Detection description	The paper stack thickness detection value was not changed despite an open/close operation of the Main Gripper Assembly.
			Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

E5B7	0001	61	Title	Error in Glue Vat Shift Motor (M32) of Perfect Binder
			Detection description	a. The Glue Vat Shift HP Sensor (S73) was not turned ON although the Glue Vat Shift Motor was driven for a specified period of time when the Glue Vat moved to the rear HP. b. The Glue Vat Shift HP Sensor (S73) was already turned OFF when the Glue Vat moved to the front HP.
			Remedy	1. Glue Vat Shift Motor (M32) error 2. Glue Vat Shift HP Sensor (S73) error 3. Slave Controller PCB error
E5B7	0002	61	Title	Error in Glue Vat Shift Motor (M32) of Perfect Binder
			Detection description	a. The Glue Vat Shift HP Sensor (S73) was not turned OFF although the Glue Vat Shift Motor was driven for a specified period of time when the Glue Vat moved to the front side. b. The Glue Vat Shift HP Sensor (S73) was already turned ON when the Glue Vat moved to the rear HP.
			Remedy	1. Glue Vat Shift Motor (M32) error 2. Glue Vat Shift HP Sensor (S73) error 3. Slave Controller PCB error
E5B8	0001	61	Title	Error in Glue Vat Roller Motor (M25) of Perfect Binder
			Detection description	The Glue Vat Roller Rotation Sensor (S59) could not detect rotation of the Glue Vat Roller when it was driven.
			Remedy	1. Glue Vat Roller Motor (M25) error 2. Glue Vat Roller Rotation Sensor (S59) error 3. Slave Controller PCB error
E5B8	8001	61	Title	Error in Glue Vat Roller Motor (M25) of Perfect Binder
			Detection description	The Glue Vat Roller Rotation Sensor (S59) could not detect rotation of the Glue Vat Roller when it was driven.
			Remedy	1. Glue Vat Roller Motor (M25) error 2. Glue Vat Roller Rotation Sensor (S59) error 3. Slave Controller PCB error
E5B9	0001	61	Title	Error in Glue Supply Motor (M33) of Perfect Binder
			Detection description	The Glue Supply HP Sensor (S75) was not turned ON although the Glue Supply Motor was driven for a specified period of time during glue supply.
			Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error
E5B9	0002	61	Title	Error in Glue Supply Motor (M33) of Perfect Binder
			Detection description	The Glue Supply HP Sensor (S75) was not turned OFF although the Glue Supply Motor was driven for a specified period of time during glue supply.
			Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5B9	8001	61	Title	Error in Glue Supply Motor (M33) of Perfect Binder
			Detection description	The Glue Supply HP Sensor (S75) was not turned ON although the Glue Supply Motor was driven for a specified period of time during glue supply.
			Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error
E5B9	8002	61	Title	Error in Glue Supply Motor (M33) of Perfect Binder
			Detection description	The Glue Supply HP Sensor (S75) was not turned OFF although the Glue Supply Motor was driven for a specified period of time during glue supply.
			Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error
E5BA	0001	61	Title	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
			Detection description	a. The Spine Bending HP Sensor (Left) (S60) was not turned ON although the Spine Bending Motor (Left) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending HP Sensor (Left) (S60) had been already turned OFF when closing the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Slave Controller PCB error
E5BA	0002	61	Title	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
			Detection description	a. The Spine Bending HP Sensor (Left) (S60) was not turned OFF although the Spine Bending Motor (Left) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending HP Sensor (Left) (S60) had been already turned ON when opening the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Slave Controller PCB error
E5BA	0003	61	Title	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
			Detection description	a. The Spine Bending Closed Sensor (Left) (S61) was not turned ON although the Spine Bending Motor (Left) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending Closed Sensor (Left) (S61) had been already turned OFF when opening the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending Closed Sensor (Left) (S61) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5BA	0004	61	Title	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
			Detection description	a. The Spine Bending Closed Sensor (Left) (S61) was not turned OFF although the Spine Bending Motor (Left) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending Closed Sensor (Left) (S61) had been already turned ON when closing the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending Closed Sensor (Left) (S61) error 3. Slave Controller PCB error
E5BA	0005	61	Title	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
			Detection description	The Spine Bending HP Sensor (Left) (S60) and the Spine Bending Closed Sensor (Left) (S61) were turned ON at the same time.
			Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Spine Bending Closed Sensor (Left) (S61) error 4. Slave Controller PCB error
E5BB	0001	61	Title	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
			Detection description	a. The Spine Bending HP Sensor (Right) (S66) was not turned ON although the Spine Bending Motor (Right) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending HP Sensor (Right) (S66) had been already turned OFF when closing the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending HP Sensor (Right) (S66) error 3. Slave Controller PCB error
E5BB	0002	61	Title	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
			Detection description	a. The Spine Bending HP Sensor (Right) (S66) was not turned OFF although the Spine Bending Motor (Right) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending HP Sensor (Right) (S66) had been already turned ON when opening the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending HP Sensor (Right) (S66) error 3. Slave Controller PCB error
E5BB	0003	61	Title	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
			Detection description	a. The Spine Bending Closed Sensor (Right) (S69) was not turned ON although the Spine Bending Motor (Right) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending Closed Sensor (Right) (S69) had been already turned OFF when opening the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3. Slave Controller PCB error

E Code	Detail Code	Location	Item	Description
E5BB	0004	61	Title	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
			Detection description	a. The Spine Bending Closed Sensor (Right) (S69) was not turned OFF although the Spine Bending Motor (Right) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending Closed Sensor (Right) (S69) had been already turned ON when closing the Spine Bending Plate.
			Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3. Slave Controller PCB error
E5BB	0005	61	Title	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
			Detection description	The Spine Bending HP Sensor (Right) (S66) and the Spine Bending Closed Sensor (Right) (S69) were turned ON at the same time.
			Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3. Spine Bending Home position Sensor (Right) (S66) error. 4. Slave Controller PCB error
E5BC	0001	61	Title	Error in Spine Plate Shift Motor (M26) of Perfect Binder
			Detection description	The Spine Plate Open Sensor (S62) was not turned ON although the Spine Plate Shift Motor (M26) was driven for a specified period of time when opening the Spine Plate.
			Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Open Sensor (S62) error 3. Slave Controller PCB error
E5BC	0002	61	Title	Error in Spine Plate Shift Motor (M26) of Perfect Binder
			Detection description	The Spine Plate Open Sensor (S62) was not turned OFF although the Spine Plate Shift Motor (M26) was driven for a specified period of time when closing the Spine Plate.
			Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Open Sensor (S62) error 3. Slave Controller PCB error
E5BC	0003	61	Title	Error in Spine Plate Shift Motor (M26) of Perfect Binder
			Detection description	The Spine Plate Closed Sensor (S63) was not turned ON although the Spine Plate Shift Motor (M26) was driven for a specified period of time when closing the Spine Plate.
			Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Closed Sensor (S63) error 3. Slave Controller PCB error
E5BC	0004	61	Title	Error in Spine Plate Shift Motor (M26) of Perfect Binder
			Detection description	The Spine Plate Closed Sensor (S63) was not turned OFF although the Spine Plate Shift Motor (M26) was driven for a specified period of time when opening the Spine Plate.
			Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Closed Sensor (S63) error 3. Slave Controller PCB error

E748	2023	00	Title	Main Controller PCB 2 access error
			Detection description	The DDR2-SDRAM on the Main Controller PCB 2 could not be initialized at startup.
			Remedy	[Remedy] Check/replace the DDR2-SDRAM (M1) on the Main Controller PCB 2. (Unit of replacement: MEMORY PCB ASSEMBLY)
E748	2024	00	Title	Main Controller PCB 2 access error
			Detection description	The CPU on the Main Controller PCB 2 could not complete initialization at startup.
			Remedy	[Related parts] - DDR2-SDRAM (M1) on the Main Controller PCB 2 (Unit of replacement: MEMORY PCB ASSEMBLY) - Main Controller PCB 1 (UN81) (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 1) - Main Controller PCB 2 (UN82) (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 2) [Remedy] Check/replace the related parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - If there are any optional PCBs installed on the old Main Controller PCB 1/2, transfer them to the new PCB.

E Code	Detail Code	Location	Item	Description
E748	2025	00	Title	Main Controller PCB 2 access error
			Detection description	It was detected at startup that there was no Bypass PCB installed.
			Remedy	[Remedy] Remove and then install the Bypass PCB on the Main Controller PCB 2. (Unit of replacement: BYPASS PCB ASS'Y, SUB)
E748	2026	00	Title	Main Controller PCB 2 access error
			Detection description	It was detected at startup that there was no Image Processing Sub PCB installed.
			Remedy	[Remedy] Remove and then install the Bypass PCB on the Main Controller PCB 2. (Unit of replacement: BYPASS PCB ASS'Y, SUB)
E748	9000	00	Title	System error
			Detection description	System error
			Remedy	Contact to the sales company.
E749	0006	00	Title	Restart direction due to configuration change.
			Detection description	The option such as the Finisher and Paper Deck was installed or removed when all of following conditions were met and the machine configuration is changed when the main power switch is turned ON. - Settings/Registration > Preferences > Timer/Energy Settings > Quick Startup at Power-on > ON - The Main Power Switch is turned OFF - The power plug of the machine is connected to the output. - The breaker is ON
			Remedy	[Remedy] It is recovered by turning OFF and then ON the main power. [CAUTION] This machine provides power to some PCBs even when in the main power OFF status. The power supply is not completely OFF by just turning OFF the main power switch and therefore, the machine is unable to detect a configuration change. When disconnecting and then connecting a connector, always disconnect the power plug or turn the breaker OFF. Refer to the Service Manual > Chapter 2 > External and Controls > Quick Startup for details.
E750	0000	05	Title	System software combination mismatch error
			Detection description	Combination of the DC Controller software and the Main Controller software was not correct.
			Remedy	[Remedy] Reinstall the firmware of the DC Controller/Main Controller or the system software using SST or a USB memory device.

E Code	Detail Code	Location	Item	Description

T-7-15

Jam Code

Jam Type

Jam types are shown below.

Type	Meaning
DELAY	Delay jam
STNRY	Stationary jam
OVERLAP	Double feed detection
TIMING NG	Timing error
OHP NG	Incorrect paper
ADF OP	ADF open
COVER OP	Cover open
RESIDUAL	Residual jam
PICKUP NG	Pickup error
POWER ON	Power ON
DOOR OP	Door open
SEQ NG	Sequence jam
DELAY ESC	Delay jam while ejecting to the escape delivery tray
OTH JAM	Other jams
STNRY ESC	Stationary jam while ejecting to the escape delivery tray
STP	Staple
SDL STP	Saddle stitch staple
INIT ROT	Residual (at initial rotation)
UP DEVICE	Upper stream device jam
OTHER	Others
ERROR	Error
RETRY ERR	Retry error
STOP	Press Stop key
ROT	Keeps rotating
PROGRAM	Program
TIME OUT	Time-out
PUNCH	Punch
MEDIA NG	Misprint

T-7-16

Jam screen display specification

Due to one jam code being used for multiple options, the illustration for the different option may be displayed on the jam screen.

In this case, "1/2" or similar information is displayed on top left side of the screen and this area can be pushed. This operation can be used to switch information on the screen.

*1 The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.

If the same jam is detected although the above operation is performed, an error code will be notified.

*2 The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.

If it is not recovered by the above operation, it is considered an error near the target sensor. Disconnect and then connect the connectors around the target sensor, check if the cable is open circuit, and replace the sensor.

*1The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.

If the same jam is detected although the above operation is performed, an error code will be notified.

*2The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.

If it is not recovered by the above operation, it is considered an error near the target sensor. Disconnect and then connect the connectors around the target sensor, check if the cable is open circuit, and replace the sensor.

Alarm Code

Alarm Code Details

Alarm Code	Level	Title	A. movement /B. cause /C. measures
00-0085	3	A notice of stat	-
00-E746	3	Detection of E746-0032 occurrence	Movement: Automatic reboot Cause: Error in the TPM PCB was detected at startup. Measures: It is not necessary to perform a remedy because the alarm is cleared by automatic reboot. If it occurs again, an error code is notified.
02-0025	3	Insufficient Scanner Unit LED light intensity alarm	In the case that the light intensity is insufficient at LED lighting. (Some of the LEDs are OFF. Scanning can be continued.)
04-0001	3	Cassette 1 Lifter error	Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 1 is removed, turn ON the power and then insert Cassette 1. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Sensor 2-1. Check if the Cassette 1 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 1 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 1 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 1 Lifter Motor 5-2. Replace the DC Controller

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-0002	3	Cassette 2 Lifter error	Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 2 is removed, turn ON the power and then insert Cassette 2. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Sensor 2-1. Check if the Cassette 2 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 2 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 2 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 2 Lifter Motor 5-2. Replace the DC Controller

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-0003	3	Cassette 3 Lifter error	<p>Cause: Error in Lift Motor or Lifter Sensor</p> <p>Measures:</p> <p>1. While Cassette 3 is removed, turn ON the power and then insert Cassette 3.</p> <p>When there is operation sound of the motor</p> <p>1-1. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Sensor</p> <p>2-1. Check if the Cassette 3 Lifter Sensor is installed.</p> <p>3-1. Extend the Sensor Flag of the Cassette 3 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc.</p> <p>4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear)</p> <p>5-1. Replace the Cassette 3 Lifter Sensor</p> <p>6-1. Replace the DC Controller PCB</p> <p>When there is no operation sound of the motor</p> <p>1-2. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Motor</p> <p>2-2. Check conduction of the fuse of the DC Controller</p> <p>3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear)</p> <p>4-2. Check the Cassette 3 Lifter Motor</p> <p>5-2. Replace the DC Controller</p>

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-1537	3	Deck Lifter Motor alarm The Lifter Plate cannot be lowered.	<p>Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.)</p> <p>Cause: Error in the Lifter Motor, error in the Lifter Plate, or error in the harness</p> <p>Measures:</p> <p>- If you hear motor drive sound:</p> <p>1. Check that the Lifter Plate is not caught by the Side Guide.</p> <p>2. Check that the wire is not disconnected or wound in the reverse direction.</p> <p>3. Check response of the Lower Position Sensor.</p> <p>- If you do not hear motor drive sound:</p> <p>1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary.</p> <p>2. Replace the Lifter Motor.</p> <p>3. Replace the harness.</p> <p>4. Replace the Relay PCB.</p> <p>5. Replace the Deck Controller PCB (UN1).</p>
04-1539	3	Deck Lifter Motor alarm The Lifter Plate cannot be raised.	<p>Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.)</p> <p>Cause: Error in the Lifter Motor, error in the Lifter Plate, or error in the harness</p> <p>Measures:</p> <p>- If you hear motor drive sound:</p> <p>1. Check that the Lifter Plate is not caught by the Side Guide.</p> <p>2. Check that the wire is not disconnected or wound in the reverse direction.</p> <p>3. Check response of the sensor.</p> <p>- If you do not hear motor drive sound:</p> <p>1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary.</p> <p>2. Replace the Lifter Motor.</p> <p>3. Replace the harness.</p> <p>4. Replace the Relay PCB.</p> <p>5. Replace the Deck Controller PCB (UN1).</p>

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-1542	3	Deck Lifter upper limit detection alarm	Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Upper Limit Sensor or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Check for any damaged parts around the sensor flag. 3. Replace the Upper Limit Sensor 1. 4. Replace the Upper Limit Sensor 2. 5. Replace the harness. 6. Replace the Deck Controller PCB (UN1).
04-1543	3	Deck Lifter lower limit detection alarm	Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Lower Limit Sensor or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the harness of the Lower Limit Detection Switch. 3. Replace the harness. 4. Replace the Relay PCB. 5. Replace the Deck Controller PCB (UN1).
04-1553	3	Deck Left Separation Fan alarm Low speed error	Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Left Separation Fan or error in the harness 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Left Separation Fan. 3. Replace the harness. 4. Replace the Swing Driver PCB. 5. Replace the Relay PCB. 6. Replace the Deck Controller PCB (UN1).

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-1555	3	Deck Right Separation Fan alarm Low speed error	Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Right Separation Fan or error in the harness 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Left Separation Fan. 3. Replace the harness. 4. Replace the Swing Driver PCB. 5. Replace the Relay PCB. 6. Replace the Deck Controller PCB (UN1).
04-3039	3	Upper multi-cassette deck lifter error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3040	3	Upper multi-cassette deck lifter lower limit sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3041	3	Upper multi-cassette deck paper surface sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3042	3	The upper limit of the upper multi-cassette deck lifter upper limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3043	3	The lower limit of the upper multi-cassette deck lifter lower limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3053	3	Reaching the life of the upper multi-cassette deck left separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3055	3	Reaching the life of the upper multi-cassette deck right separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3060	3	Error in home position detection with Multi Deck Upper Deck Swing Motor	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3062	3	Multi Deck Upper Deck Air Heater high temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT101). 2. Replace the harness of the Air Heater PCB. 3. Replace the Upper Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.
04-3063	3	Multi Deck Upper Deck Air Heater low temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT101). 2. Replace the harness of the Air Heater PCB. 3. Replace the Upper Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3139	3	Middle multi-cassette deck lifter error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3140	3	Middle multi-cassette deck lifter lower limit sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3141	3	Middle multi-cassette deck paper surface sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3142	3	The upper limit of the middle multi-cassette deck lifter upper limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3143	3	The lower limit of the middle multi-cassette deck lifter lower limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3153	3	Reaching the life of the middle multi-cassette deck left separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3155	3	Reaching the life of the middle multi-cassette deck right separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3160	3	Error in home position detection with Multi Deck Middle Deck Swing Motor	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3162	3	Multi Deck Middle Deck Air Heater high temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT201). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.
04-3163	3	Multi Deck Middle Deck Air Heater low temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT201). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.
04-3239	3	Lower multi-cassette deck lifter error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3240	3	Lower multi-cassette deck lifter lower limit sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3241	3	Lower multi-cassette deck paper surface sensor error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3242	3	The upper limit of the lower multi-cassette deck lifter upper limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3243	3	The lower limit of the lower multi-cassette deck lifter lower limit sensor has been exceeded.	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3253	3	Reaching the life of the lower multi-cassette deck left separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3255	3	Reaching the life of the lower multi-cassette deck right separation fan / Failure of the fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-3260	3	Error in home position detection with Multi Deck Lower Deck Swing Motor	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3262	3	Multi Deck Lower Deck Air Heater high temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT301). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.
04-3263	3	Multi Deck Lower Deck Air Heater low temperature error	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT301). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.
04-9061	3	Error in Multi Deck Power Supply Fan	Movement: The machine automatically enters limited functions mode. (The Multi Deck cannot be used.) Measures: 1. Check connection of the connector. 2. Replace the Power Supply Cooling Fan (FM001).

Alarm Code	Level	Title	A. movement /B. cause /C. measures
04-9064	3	Error in Multi Deck Pickup Motor	Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Deck Pickup Motor. 2. Replace the Deck Driver PCB. 3. Replace the DC Controller PCB of the host machine.
04-9090	3	OHT sensor (PS29) adjustment failure	Movement: OHT detection cannot be performed. Cause: An adjustment of the OHT sensor (PS29) failed at initial rotation. Measures: Re-adjust during pre-rotation.
06-0002	3	Fixing Film life alarm 1	Measures: Replace the Fixing Belt Unit. Leaving this alarm unsolved (approx. 10,000) leads to E008-0003.
06-0004	3	Fixing Assembly torque overload warning alarm	Measures: Replace the Pressure Belt Unit. Leaving this alarm unsolved (approx. 10,000) leads to E008-0001.
06-0007	3	Succeeded in retry of full displacement control of the Fixing Lower Belt (front side)	Movement: Retry of full displacement control of the Fixing Lower Belt was performed successfully. Frequent occurrence of this alarm may lead to a Fixing Lower Belt full displacement error. Early replacement of the Fixing Lower Belt is recommended.
06-0008	3	Succeeded in retry of full displacement control of the Fixing Lower Belt (rear side)	Movement: Retry of full displacement control of the Fixing Lower Belt was performed successfully. Frequent occurrence of this alarm may lead to a Fixing Lower Belt full displacement error. Early replacement of the Fixing Lower Belt is recommended.
10-0001	1	Toner out (Bk)	Toner out (Bk)
10-0002	1	Toner out (C)	Toner out (C)
10-0003	1	Toner out (M)	Toner out (M)
10-0004	1	Toner out (Y)	Toner out (Y)

Alarm Code	Level	Title	A. movement /B. cause /C. measures
10-0013	3	Communication error between the Color Sensor PCB and the DC Controller (at the time of writing)	Remedy: Check the following connectors: From the Color Sensor Driver PCB (UN121/J4200) to the Fixing Feed Driver PCB (UN5/J2013, J2002) to the DC Controller PCB (UN2/J1035) Replace the Color Sensor Driver PCB. (UN121: FM0-2935) Replace the DC Controller PCB. (UN2: FM0-2921) Clean or replace the Drawer Connector. J8023
10-0017	3	Toner (Y) prior delivery alarm	The remaining quantity of the toner became the specific level or less.
10-0018	3	Toner (M) prior delivery alarm	The remaining quantity of the toner became the specific level or less.
10-0019	3	Toner (C) prior delivery alarm	The remaining quantity of the toner became the specific level or less.
10-0020	3	Toner (Bk) prior delivery alarm	The remaining quantity of the toner became the specific level or less.
10-0100	3	Toner bottle replacement completion alarm	The replacement of the Toner Container was detected.
10-0101	3	Soiled Patch Sensor window (Y)	Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0102	3	Soiled Patch Sensor window (M)	Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0103	3	Soiled Patch Sensor window (C)	Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0104	3	Soiled Patch Sensor window (Bk)	Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0305	3	Toner bottle CPU communication error alarm	Measures: Check the connectors between the Toner Container ID Driver PCB (UN112/J4011) and DC Controller PCB (UN2/J1267) Replace the Toner Container ID Driver PCB. (UN112: FM0-2933) Replace the DC Controller PCB. (UN2: FM0-2921)
11-0001	3	Waste Toner Container full level	Movement: A message "The waste toner container is full." is displayed on the Control Panel, and the machine is stopped. Cause: The Waste Toner Counter reaches full. Measures: Replace the Waste Toner Container.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
11-0010	3	Display of Waste Toner Container preparation warning	Movement: A message is displayed on the Control Panel. (Continuous printing is enabled.) Cause: Display of Waste Toner Box preparation warning
30-0021	1	Primary transfer ATVC control error (Y-color)	Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0022	1	Primary transfer ATVC control error (M-color)	Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0023	1	Primary transfer ATVC control error (C-color)	Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0024	1	Primary transfer ATVC control error (Bk-color)	Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
31-0006	3	HDD failure when the mirroring function is installed	Movement: HDD failure when the mirroring function is installed Cause: The HDD has a failure when the mirroring function is installed Measures: Check the connection among the following: the HDD that corresponds to the red LED on the LED PCB of the Mirroring Kit, the Mirroring Board and the Main Controller PCB 2. Replace the HDD if it cannot be recovered.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
31-0008	3	HDD failure prediction alarm	Movement: A message "The hard disk needs to be replaced. (Call service rep.)" is displayed on the Control Panel. Cause: Error in the S.M.A.R.T. value of HDD It indicates a physical error of the HDD, which is expected to soon lead to a failure. *: S.M.A.R.T. (Self-Monitoring Analysis and Reporting Technology) = It is a self-diagnosis function built in the HDD, and monitors the occurrence rate of reading errors, reading/writing speed, total number of times of motor start-up/stop, total length of power-on time, etc. Continuously using the machine without taking any measures may lead to E602. Measures: Back up the data stored in the HDD, and restore the data after replacing the HDD.
34-0001	3	Auto registration adjustment	Zero (0) was entered in the reading data of auto registration pattern -> Due to misalignment in reading data as a result of misdetection that soil or scar on the belt was detected as pattern
34-0002	3	Auto registration adjustment	When there is abnormal data in 8 or more sets among the 10 auto registration pattern sets -> Due to misalignment in reading data as a result of misdetection that soil or scar on the belt is detected as pattern
34-0003	3	Auto registration adjustment	Timeout occurred due to unsuccess in reading 10 sets of auto registration pattern. Registration Patch Sensor failure, Registration Patch Sensor cleaning member covered the registration detection sensor, or no image drew on the ITB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
34-0004	3	Image position correction patch correction alarm 2	<p>Movement: None</p> <p>Cause:</p> <p>The horizontal scanning direction writing correction limiter has been exceeded.</p> <ul style="list-style-type: none"> - Incorrect detection by the registration sensor (Scratches on the belt) - Failure of the laser scanner unit - Failure of installation of the laser scanner unit - Patch image failure <p>Measures:</p> <ol style="list-style-type: none"> 1. Check whether a color image is formed correctly for 4 colors. <ol style="list-style-type: none"> a. Perform test print in the following condition. COPIER>TEST>PG>TYPE: 6 Output one sheet for each color in the paper of LTR/A4/A3 size (more than 290mm in a horizontal scanning direction). b. Check the following points. <ul style="list-style-type: none"> - Check whether there is color displacement in a horizontal scanning direction based on the Bk standard, and check whether there is a color which is extremely displaced. Reinstall the laser scanner unit where significant color displacement occurred. If the problem cannot be still eliminated, replace the unit. - If a correct image is not formed, take measures to be taken for prevention of an image failure. (Replace the drum unit, etc.) 2. Check whether there are a lot of scratches or dents on the ITB or not. If there are a lot of them and this alarm occurs frequently, replace the ITB.

Alarm Code	Level	Title	A. movement /B. cause /C. measures
34-0005	3	Image position correction patch correction alarm 3	<p>Movement: None</p> <p>Cause:</p> <p>The horizontal scanning direction writing correction limiter has been exceeded.</p> <ul style="list-style-type: none"> - Incorrect detection by the registration sensor (Scratches on the belt) - Failure of the laser scanner unit - Failure of installation of the laser scanner unit - Patch image failure <p>Measures:</p> <ol style="list-style-type: none"> 1. T-7-50

Service Mode

- Overview
- COPIER
- FEEDER
- SORTER
- BOARD

Overview

Instructions on how to use service mode items can be found within the service mode itself. The information explains what items have been added or changed from previous models. For PRISMAsync model, refer to PRISMAsync service manual.

Entering Service Mode

Contact the sales company for the method to enter service mode.

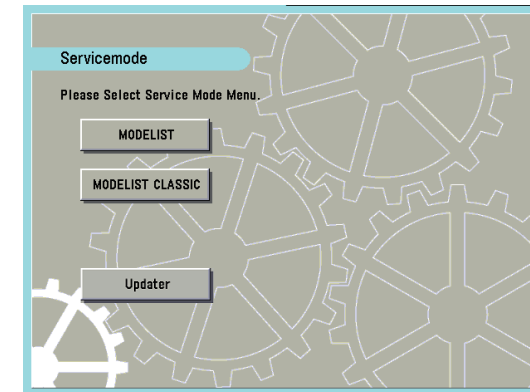

Points to note when using Service Mode

- When setting or executing in Service Mode, do not open or close the cover and turn off the power while "active" is displayed. This may cause Service Mode to set incorrectly or fail to execute.
- In service mode, it may list "Do not use this at the normal service." in "Points to Note when Using". The followings indicate when this item should be used.
 - The case when a setting value needs to be input on clearing RAM when replacing the PCB (Clearly indicated in the use case)
 - The case when instructed by the service office (due to reasons as having the large negative effects, difficult settings, etc.)
 - The case of performing the individual measure (due to the tender business, etc.)

Do not use in cases that are not mentioned above.

Service Mode Menu

TOP Screen

F-8-1

- | | |
|--------------------|---|
| "MODELIST" | A brand new additional mode in the host machine. A function that can be used as a reference on how to use each item in Service Mode is installed. The new function, which will be described later, is available in MODELIST Mode. |
| "MODELIST CLASSIC" | This mode is same as the old machine. The new function, which will be described later, is not available in the MODELIST CLASSIC Mode. |
| "Updater" | This is a MEAP application with functions of network communication to Content Delivery System V1.0 (hereinafter CDS) and installation of firmware, MEAP applications or system options. (Refer to Updater V1.0 service manual.) |

If "MODELIST" or "MODELIST CLASSIC" or "Updater" is pressed, the screen will switch to initial screen for each mode.

Service mode item explanations

Explanatory texts for the initial window, main items, sub items and minor items can be displayed.

Select the desired initial window, main item, sub item or minor item, then press [i] (Information button) to display an explanatory text (hereafter, service mode contents) on the selected item.

E.g., COPIER > DISPLAY > Version window

1) Press [i]

2) Minor item titles are displayed.

3) Select the desired minor item and press [i]

4) A detailed explanation on the item will be displayed (usage scenarios, instructions, settings range, etc.).

- The service mode contents can be displayed in J/E/F/I/G/S languages.
- Service mode contents, like system software, can be upgraded by SST.

F-8-2

I/O information enhancement

On the COPIER > I/O, the mode to confirm input output signal of electrical parts used (sensor, motor, fan, etc), makes it easier to look for the intended electrical part.

And the screen will also display the input output signal.

Device classification

Electrical parts classification

1) Press the button. Which button to press, will depend on which electrical parts intended and its device classification. For instance, if the host machine uses paper pass detection sensor, then press the button on the "COPIER" and "P-Sensor" position.

2) Then the selected electrical parts classification's mark, name, port number and 0/1 content will appear.

3) If the "i" button is pressed, the screen displaying the electrical parts array will appear.

F-8-3

Display of Error Code/Alarm Code description

The detail description of each code can be viewed on the error code and alarm code occurrence record screen.

ERROR CODE : COPIER > DISPLAY > ERR

Display							I/O	Adjust	Function	Option	Test	Counter
< ERR >							< 2/ 7 >		< READY >		< LEVEL 1 >	
No.	DATE	TIME1	TIME2	CODE	DTL	L	P					
09	0102	0304	050	E804-0003								
10	----	----	----	TITLE : Error in primary suction fan Assumed cause: When an error is detected on the primary suction fan								
11	0102	0304	050									
12	0102	0304	050									
13	0102	0304	050	DONE								
14	0102	0304	0506	E0748	4910	00	00					
15	0102	0304	0506	E0804	0002	00	00					
16	0102	0304	0506	E0804	0003	00	00					

F-8-4

ALARM CODE : COPIER > DISPLAY > ERR

Display							I/O	Adjust	Function	Option	Test	Counter
< ALARM-2 >							< 2/ 7 >		< READY >		< LEVEL 1 >	
No.	DATE	TIME1	TIME2	CODE	DTL	CNTR						
09	0308	1345	160	E804-0027								
10	0308	1345	160	[Title] Error in fixing feed motor driver cooling fan [Assumed cause] When an error is detected on the fixing feed motor driver cooling fan.								
11	0308	1345	160									
12	0308	1345	160									
13	0308	1345	160	DONE								
14	0308	1345	1600	040046	0000	0						
15	0308	1345	1600	040047	0000	0						
16	0308	1345	1600	040048	0000	0						

F-8-5

COPIER > OPTION > BODY, Item Segmentation

On the current machine, there are extremely many items in the COPIER > OPTION > BODY (in related to host machine specification), that it is difficult to reach the intended item.

In order to reach the intended item in shorter time, all items inside the BODY is classified to 15 categories.

Classification	Name	Description
Function switching	FNC-SW	Language, cassette, paper size type, NAVI/DA connection, count-up spec., document size detection, dirt detection level
Display switching/ display timing	DSPLY-SW	UI (User Interface) display related
Image related (fixing)	IMG-FIX	Fixing related
Image related (transfer)	IMG-TR	Primary transfer, secondary transfer, ITB
Image related (developing)	IMG-DEV	Developer related
Image related (laser/ latent image)	IMG-LSR	Laser, latent image related
Image related (reader/ ADF)	IMG-RDR	Reader, ADF image related
Image related (controller, other general items)	IMG-MCON	MN-CON image related, and image related items other than those referred to above.
Image quality/ copy speed	IMG-SPD	Power down sequence
Cleaning	CLEANING	Cleaning of charging unit, drum, transfer roller, ITB, etc.
Environment settings	ENV-SET	Temperature, humidity, environmental heater, condensation, log acquisition
Paper feed (pickup, delivery)	FEED-SW	Stack performance, motor speed adjustment, delivery functions, etc.
Noise reduction	SOUND	Noise related
Network	NETWORK	Network settings, IFAX, SEND, E-RDS, etc.
Customization	CUSTOM	Customization

T-8-1

Security features

To prevent unauthorized access to Service Mode, Password set is enabled.

Related service modes

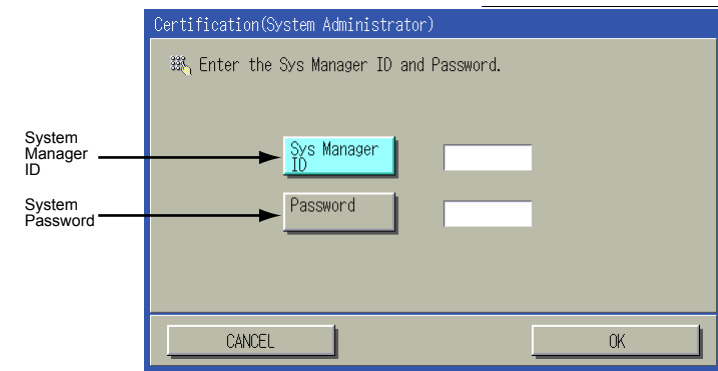

- COPIER > OPTION > FNC-SW > PSWD-SW (Level1)
Set password type for transition to service mode.
<Setting range>
0: No password (default)
1: Service engineer
2: System administrator and Service engineer.
- COPIER > OPTION > FNC-SW > SM-PSWD (Level2)
Password for service engineer for transition to service mode.
<Setting range>

To reinforce the security, change the password from a default.

***** (eight digit numeral) [default: 11111111]

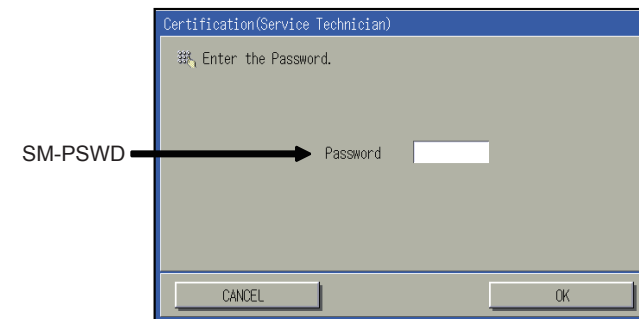

After the above setting, to enter Service Mode, enter password screen will appear.

- 1) Additional Functions > System Settings > System Manager Settings > enter System Manager ID > enter System Password Settings > press OK button.

F-8-6

- 2) After entering the password for service technician (Service mode: COPIER > Option > FNC-SW > SM-PSWD), press OK button.

F-8-7

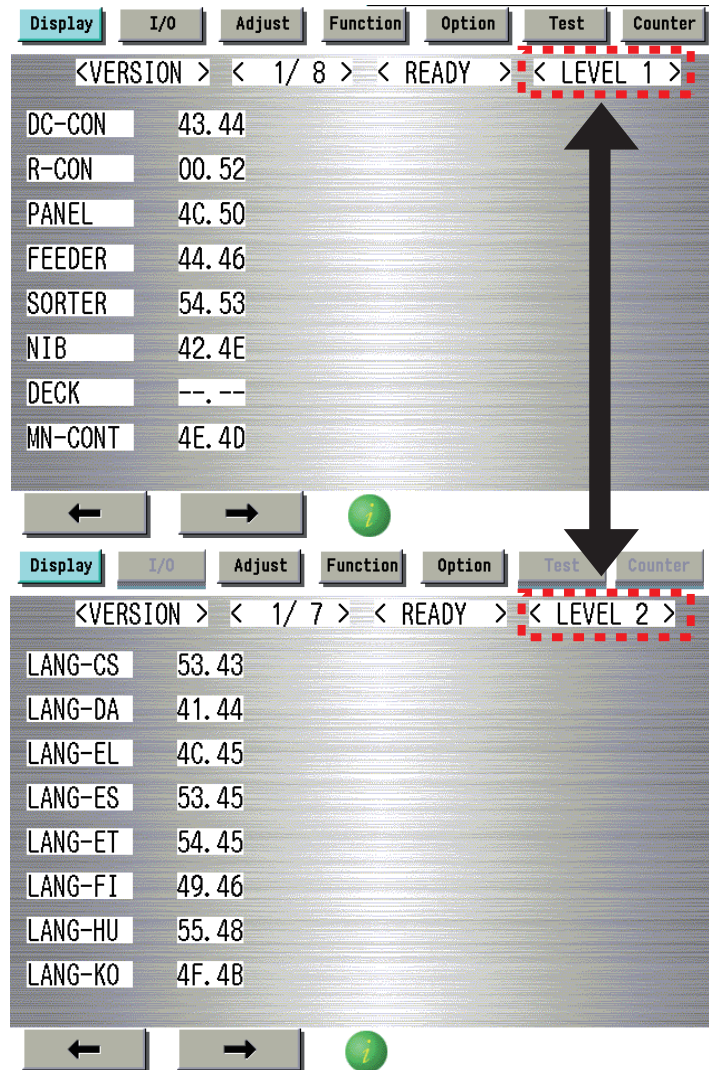

NOTE :

If Service Engineer's password is forgotten, password function is cancelable by using Service Support Tool (SST).

Switching Screen (Level 1 < - > 2)

Switching screens between level 1 and 2 has been made easier.

When level 1 screen is displayed, press <LEVEL 1> in the right upper side of the screen, and it will switch to level 2.

F-8-8

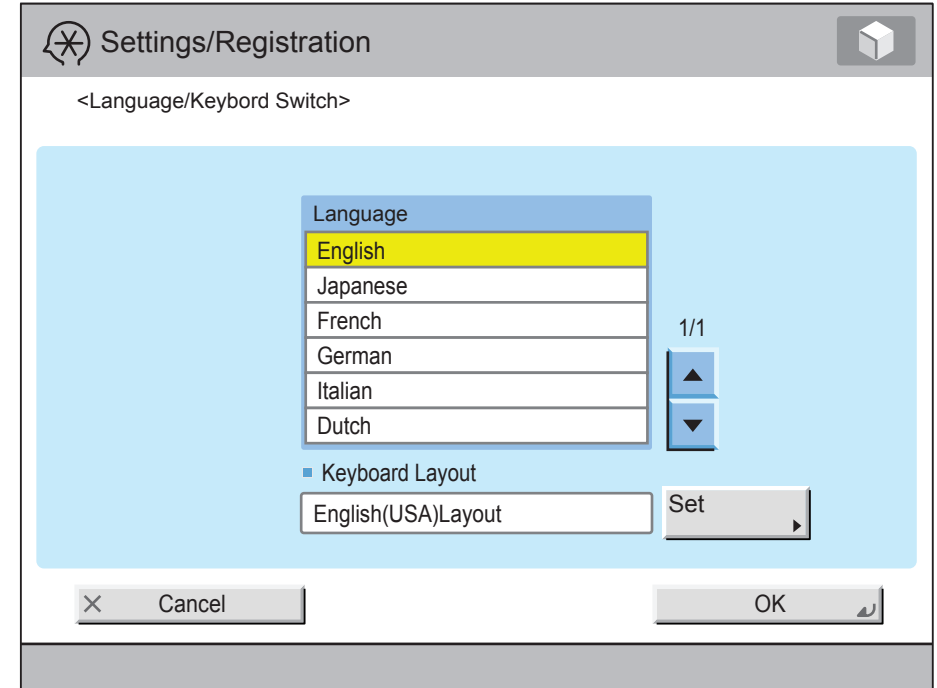

Language switch

The language of the explanatory text displayed in the Service Mode can be switched by performing the below language switch operation in User Mode

The explanatory text can be displayed by installing the Service Mode Content (SCMNT) in HDD.

Service Mode Content (SCMNT) can be installed and upgraded on SST.

Additional Functions > Common Settings > Language Switch

F-8-9

Back-up of service mode

In factory setting, adjustments are made for each machine, and adjustment values are written in the service label.

When you replaced the DC controller PCB, or executed the RAM clear function, adjustment values for ADJUST or OPTION return to default. Therefore, when you made adjustments and changed values of the Service Mode in the field, be sure to write down the changed values in the service label. When there is no relevant field in the service label, write down the values in a blank field.

F-8-10

The data output of the service data print

Overview

- Data output of service print such as P-PRINT is supported.
- Service mode level 1 > COPIER > FUNCTION > MISC-P > RPT-FILE > [OK].
The created data file is saved in the HDD of the machine.
- The created (saved) data is deleted when it is moved to a USB memory device.
- Even if the machine has stopped operation due to a no-paper error, data can be moved to the USB memory device as long as the machine can enter download mode.

Service Prints and Data File Names That Support File Output

Item code	Title
CP-PRINT	Print output mode for color assurance
D-PRINT	Output of service mode (DISPLAY)
ENV-PRT	Output inside temp&hmdy/Fix Rol temp log
HIST-PRT	Output of jam and error log
KEY-HIST	Output of Ctrl Panel key input log
PJH-P-1	Detail info of print job log: 100 jobs
PJH-P-2	Detail info of print job log: all jobs
P-PRINT	Output of service mode setting value
TNRB-PRT	Output of Toner Container ID report
USER-PRT	Settings/Registration menu list output
USBH-PRT	Output of USB device information report

T-8-2

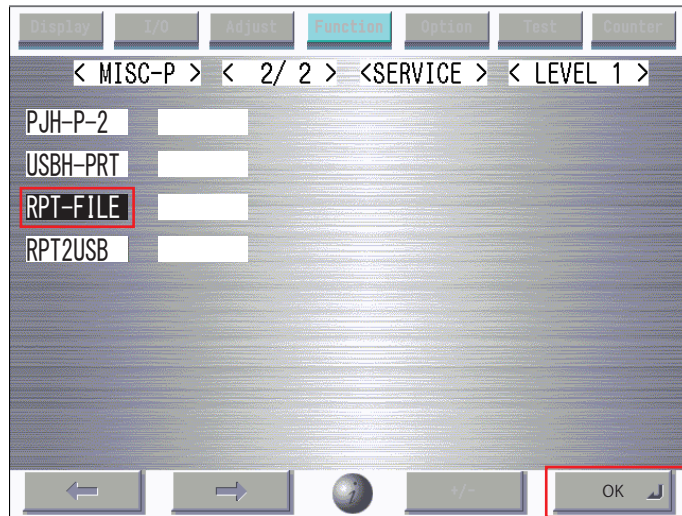

How to Move Service Print Files to a USB Memory Device

Preparation

- USB memory device
FAT32 format file system, with no password locks.

operation

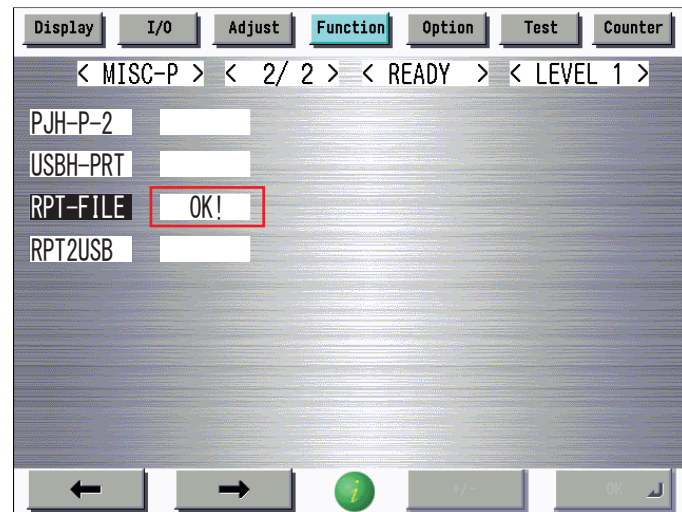

1. Select service mode (Level 1) > COPIER > FUNCTION > MISC-P > RPT-FILE; and then press "OK".

F-8-11

2. Generating report file

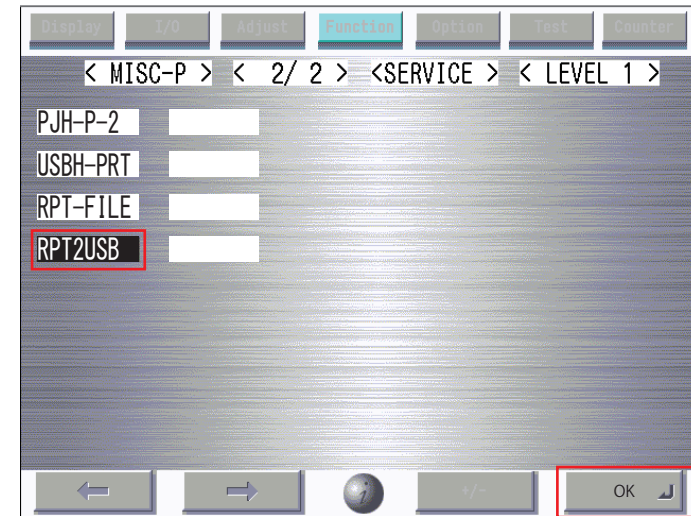

After the "ACTIVE" blinks for 3 to 4 minutes, generation of a report file is complete as "OK!" is displayed.

F-8-12

3. Connect the USB memory storage device to the USB port.

4. Select service mode (Level 1) > COPIER > FUNCTION > MISC-P > RPT2USB; and then press "OK".

F-8-13

NOTE:

- If the downloaded file is opened as plain text, the paragraphs are misaligned, which makes it difficult to read the data.
- When the file is dragged to WordPad, an image similar to the image output on paper may be displayed in some cases.

Introduction of situation mode

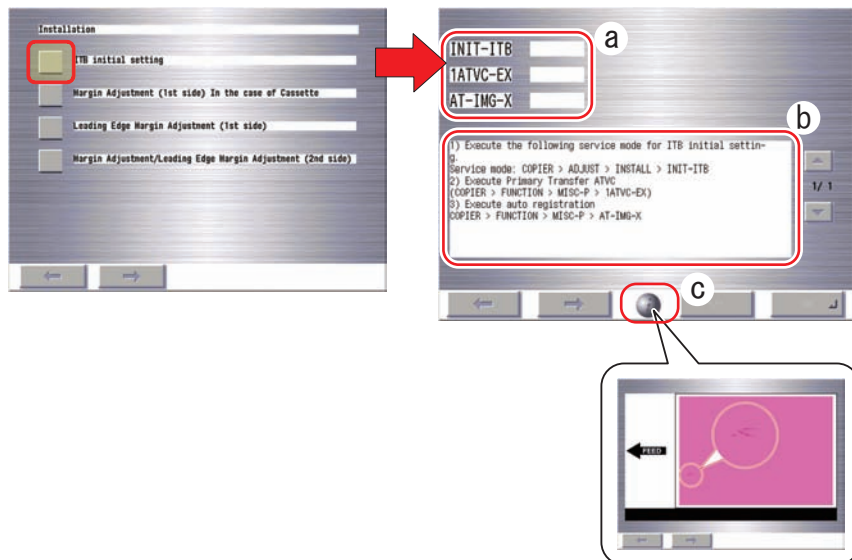

Situation mode has been newly added to improve workability and searchability at the site. This mode makes it possible to easily use the service mode appropriate for the scene at the site.

F-8-14

The following three points are made available depending on each situation:

- Display of related service mode when an adjustment is necessary
- Display of causes and remedies
- Display of related images

F-8-15

Changes made in MN-CON Ver.10.01 and later

Points to Note When Separating a Delivery System Option

When part of the delivery system options is removed from the configuration, service mode (COPIER > FUNCTION > MIS-P > ACCPST) needs to be executed. Otherwise, the configuration change is not recognized.

Not that the addition of a delivery system option is automatically recognized.

When the configuration change has not been recognized (when service mode has not been executed)

"Unit Confirmation" screen appears every time the machine power is turned ON. The machine is started as having a configuration without the target option when "Continue Startup" is selected in this screen.

- When the target option is not connected
 - There is no problem with the operation itself. A screen for confirmation appears every time the machine power is turned ON.
- When the power of the target option is OFF or the cable is disconnected although the target option is connected
 - A jam occurs when paper passes through the target option.

COPIER

 DISPLAY

 VERSION

COPIER > DISPLAY > VERSION		
DC-CON		Display of DCON firmware version
Lv.1	Details	To display the firmware version of DC Controller PCB.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
R-CON		Display of RCON firmware version
Lv.1	Details	To display the firmware version of Reader Controller PCB.
	Use case	When upgrading the firmware

	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
TTS-ES		Dspl of Spanish voice dictionary version
Lv.1	Details	To display the version of Spanish voice dictionary. “--” is displayed when no file is found.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99

COPIER > DISPLAY > VERSION		
TTS-DE		Dspl of German voice dictionary version
Lv.1	Details	To display the version of German voice dictionary. “--.--” is displayed when no file is found.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
WEB-BRWS		Display of Web browser version
Lv.1	Details	To display the version of Web browser. “--.--” is displayed when no file is found.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
STK-IF		Firmware version of Relay PCB: Stacker
Lv.1	Details	To display the firmware version of Relay PCB for Stacker.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
STACK		Display of Stacker firmware version
Lv.1	Details	To display the firmware version of Stacker.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BND-IF		Firmware ver of Relay PCB:Perfect Binder
Lv.1	Details	To display the firmware version of Relay PCB for Perfect Binder.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BND-MSTR		Dspl of Perfect Binder main ROM version
Lv.1	Details	To display the main ROM version of Perfect Binder.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BND-SLAV		Dspl of Perfect Binder sub ROM version
Lv.1	Details	To display the sub ROM version of Perfect Binder.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BND-TRIM		Firmware ver of Perfect Binder Trimmer
Lv.1	Details	To display the firmware version of Trimmer connected to the Perfect Binder.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99

COPIER > DISPLAY > VERSION

	Display/adj/set range	00.01 to 99.99
	Supplement/memo	ERS: Error Recovery System
ERS-TH		Display of ERS Thai file version
Lv.2	Details	To display the version of Thai language file for ERS application.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
	Supplement/memo	ERS: Error Recovery System
ERS-VN		Display of ERS Vietnamese file version
Lv.2	Details	To display the version of Vietnamese language file for ERS application.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
	Supplement/memo	ERS: Error Recovery System
ROM-Y		Dspl of Laser Scanner Unit (Y) version
Lv.2	Details	To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (Y).
	Use case	When checking the lot No. or EEPROM version of Laser Scanner Unit
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
ROM-M		Dspl of Laser Scanner Unit (M) version
Lv.2	Details	To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (M).
	Use case	When checking the lot No. or EEPROM version of Laser Scanner Unit
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
ROM-C		Dspl of Laser Scanner Unit (C) version
Lv.2	Details	To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (C).
	Use case	When checking the lot No. or EEPROM version of Laser Scanner Unit
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)

COPIER > DISPLAY > VERSION		
ROM-K		Dspl of Laser Scanner Unit (Bk) version
Lv.2	Details	To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (Bk).
	Use case	When checking the lot No. or EEPROM version of Laser Scanner Unit
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
BCT		Display of self diagnosis tool version
Lv.1	Details	To display the version of self diagnosis tool.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
LANG-TH		Display of Thai language file ver
Lv.2	Details	To display the version of Thai language file.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
LANG-VN		Dspl of Vietnamese language file version
Lv.2	Details	To display the version of Vietnamese language file.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BOX-FR		Display of BOX appli French file version
Lv.1	Details	To display the version of French language file for BOX application (JAVA UI).
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BOX-IT		Dspl of BOX appli Italian file version
Lv.1	Details	To display the version of Italian language file for BOX application (JAVA UI).
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
BOX-DE		Display of BOX appli German file version
Lv.1	Details	To display the version of German language file for BOX application (JAVA UI).
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99

	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
NLS-VN		Dspl UAC appli Vietnamese lang file ver
Lv.2	Details	To display the version of Vietnamese language file for UAC application.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
IMLUT		Dspl image processing coefficient file
Lv.1	Details	To display the version of image processing coefficient.
	Use case	When upgrading the firmware
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
DSUB1		Firmware ver of Printer Engine Sub PCB 1
Lv.1	Details	To display the firmware version of Printer Engine Sub PCB 1.
	Use case	When checking the version of DC-CON Sub CPU
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
DSUB2		Firmware ver of Printer Engine Sub PCB 2
Lv.1	Details	To display the firmware version of Printer Engine Sub PCB 2.
	Use case	When checking the version of DC-CON Sub CPU
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99
DSUB3		Firmware ver of Printer Engine Sub PCB 3
Lv.1	Details	To display the firmware version of Printer Engine Sub PCB 3.
	Use case	When checking the version of DC-CON Sub CPU
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	00.01 to 99.99

T-8-3

■ USER

COPIER > DISPLAY > USER	
SPDTYPE	Not used
BRWS-ST5	Display of service browser ON/OFF
Lv.1	Details
	To display whether the service browser can be used. If the value is 1, [Service Browser] button is displayed on the service mode initial screen. The value of BRWS-ST5 switches whenever COPIER> FUNCTION> INSTALL> BRWS-ACT is executed, but ON/OFF of service browser is enabled after reboot. If the service browser does not start even though the value of BRWS-ST5 is 1, turn OFF/ON the main power switch.
	Use case
	When checking the usage status of service browser
	Adj/set/operate method
	N/A (Display only)
	Caution
	The value of BRWS-ST5 is linked with BRWS-ACT, but the service browser cannot start even though 1 is displayed unless the main power switch is turned OFF/ON.
	Display/adj/set range
	1 to 2 1: ON (Available), 2: OFF (Not available)
	Related service mode
	COPIER> FUNCTION> INSTALL> BRWS-ACT

T-8-4

■ ACC-ST5

COPIER > DISPLAY > ACC-ST5	
	FEEDER
	Display of DADF connection state
Lv.1	Details
	To display the connection state of DADF.
	Use case
	When checking the connection between the machine and DADF
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1 0: Not yet connected, 1: Connected
	SORTER
	Install state of Finisher-related option
Lv.1	Details
	To display the installation state of Finisher-related options.
	Use case
	When checking the connection of Finisher-related options
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	Left column (connecting state of Finisher-related options): 1 to 5 1: Without Saddle 2: With Saddle, without Folding Unit 3: With Saddle and Inserter, without Folding Unit 4: With Saddle and Folding Unit, without Inserter 5: With Saddle, Inserter and Folding Unit Right column (connecting state of Finisher-belonged Inserter): 0 to 4 0: no hole, 1: 2-hole, 2: 2/3-hole, 3: 4-hole, 4: 4-hole (SW)
	DECK
	Dspl of Paper Deck connection state
Lv.1	Details
	To display the connection state of the Paper Deck.
	Use case
	When checking the connection between the machine and the Paper Decks
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 8 0: Not yet connected 1: Connected (small) (Display is hidden on this machine.) 2: Connected (large) 3: POD Deck Lite (with Multi-purpose Tray) 4: POD Deck Lite (without Multi-purpose Tray) 5: Multi-purpose Tray only 6: POD deck 7: 2-POD Deck connected 8: 3-POD deck connected (Display is hidden on this machine.)
	CARD
	Dspl of connection state of Card Reader
Lv.1	Details
	To display the connecting state of Card Reader.
	Use case
	When checking the connection between the machine and the Card Reader
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1 0: No card is inserted while the Card Reader is connected. (Copy is not available.) 1: Card Reader has not yet been connected, or the card has been inserted with the Card Reader connected. (Copy is available.)

COPIER > DISPLAY > ACC-STS		
COINROBO		Dspl of Coin Manager connection state
Lv.1	Details	To display the connecting state of the Coin Manager.
	Use case	When checking the connection between the machine and the Coin Manager
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1 0: Not yet connected, 1: Connected
NIB		Dspl of Network PCB installation state
Lv.1	Details	To display the installation state of the Network PCB.
	Use case	When checking the connection between the machine and the Network PCB
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 3 0: Not yet connected, 1: Ethernet PCB connected, 2: Token Ring PCB connected, 3: Ethernet PCB + Token Ring PCB connected
NETWARE		Install state dspl of NetWare firmware
Lv.1	Details	To display the installation state of NetWare firmware.
	Use case	When checking whether NetWare firmware is installed to the machine
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1 0: Not installed, 1: Installed
SEND		Dspl SEND support PCB installation state
Lv.1	Details	To display the installation state of the PCB that supports SEND function. If the PCB is installed, SEND function can be used.
	Use case	When checking the connection between the machine and the PCB that supports SEND function
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1 0: Not installed, 1: Installed
IA-RAM		Display of MNCON PCB 1 memory capacity
Lv.1	Details	To display the memory capacity of the Main Controller PCB 1.
	Use case	When checking the memory capacity of the Main Controller PCB
	Adj/set/operate method	N/A (Display only)
	Unit	- MB

T-8-5

ANALOG

COPIER > DISPLAY > ANALOG		
TEMP		Display of outside temperature
Lv.1	Details	To display the temperature outside the machine. This is measured by the Environment Sensor that measures the outside air.
	Use case	When checking the temperature outside the machine
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 60
	Unit	1 deg C
HUM		Display of outside humidity
Lv.1	Details	To display the humidity outside the machine. This is measured by the Environment Sensor that measures the outside air.
	Use case	When checking the humidity outside the machine
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
ABS-HUM		Display of outside moisture content
Lv.1	Details	To display the absolute moisture content outside the machine. This is measured by the Environment Sensor that measures the outside air.
	Use case	When checking the moisture content outside the machine
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 g/m3
DR-TEMP		For R&D
FIX-UC		Dspl of Fixing Belt center temperature
Lv.1	Details	To display the center temperature of the Fixing Belt detected by the Fixing Main Thermistor.
	Use case	When checking the temperature at the center of Fixing Belt
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 999
	Unit	1 deg C
FIX-UE		Dspl Fixing Belt rear edge temperature
Lv.1	Details	To display the rear edge temperature of the Fixing Belt detected by the Fixing Sub Thermistor 1.
	Use case	When checking the edge temperature of the Fixing Belt
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 999
	Unit	1 deg C

COPIER > DISPLAY > ANALOG		
FIX-LC		Dspl of Pressure Belt center temperature
Lv.1	Details	To display the center temperature of the Pressure Belt detected by the Pressure Main Thermistor.
	Use case	When checking the temperature at the center of the Pressure Belt
	Adj/set/operate method	N/A (Display only)
	Unit	1 deg C
FIX-LE		Dspl Pressure Belt rear edge temperature
Lv.1	Details	To display the rear edge temperature of the Pressure Belt detected by the Pressure Sub Thermistor 1.
	Use case	When checking the edge temperature of the Pressure Belt
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 999
	Unit	1 deg C
FIX-LE2		Dspl Pressure Belt front edge temperature
Lv.1	Details	To display the front edge temperature of the Pressure Belt detected by the Pressure Sub Thermistor 2.
	Use case	When checking the edge temperature of the Pressure Belt
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 999
	Unit	1 deg C
FIX-UE2		Dspl Fixing Belt front edge temperature
Lv.1	Details	To display the front edge temperature of the Fixing Belt detected by the Fixing Sub Thermistor 2.
	Use case	When checking the edge temperature of the Fixing Belt
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 999
	Unit	1 deg C
DR-TEMPL		Dspl Bk Photosensitive Drum surface temp
Lv.1	Details	To display the surface temperature of the Photosensitive Drum (Bk) detected by the Drum Thermopile.
	Use case	When image smear occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-58 to 100
	Unit	1 deg C
DEVHUM1		Dspl of Y/M Developing Ass'y humidity
Lv.2	Details	To display the humidity of the Y/M Developing Assembly detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %

COPIER > DISPLAY > ANALOG		
DEVHUM2		Dspl C-color Developing Ass'y humidity
Lv.2	Details	To display the humidity of the C Developing Assembly detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
DEVTEMP2		Dspl Developing Ass'y (C) ambient temp
Lv.2	Details	To display the temperature around the Developing Assembly (C) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
PDK-TEMP		Dspl of POD Deck compartment temp
Lv.1	Details	To display the compartment temperature of POD Deck Lite. It may be out of order if the indicated temperature is greatly different from the machine right after power-on.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 60
	Unit	1 deg C
	Related service mode	COPIER> DISPLAY> ANALOG> TEMP, PDK-HUM
PDK-HUM		Dspl of POD Deck compartment humidity
Lv.1	Details	To display the compartment humidity of POD Deck Lite. It may be out of order if the indicated humidity is greatly different from the machine right after power-on.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Related service mode	COPIER> DISPLAY> ANALOG> HUM, PDK-TEMP
MDK-TEMP		Dspl Multi Deck compartment temperature
Lv.1	Details	To display the compartment temperature of the Multi Deck. It may be out of order if the indicated temperature is greatly different from the machine right after power-on.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 60
	Unit	1 deg C
	Related service mode	COPIER> DISPLAY> ANALOG> HUM, MDK-HUM

COPIER > DISPLAY > ANALOG		
MDK-HUM		Dspl Multi Deck compartment humidity
Lv.1	Details	To display the compartment humidity of the Multi Deck. It may be out of order if the indicated humidity is greatly different from the machine right after power-on.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Related service mode	COPIER> DISPLAY> ANALOG> HUM, MDK-TEMP
	DEVTEMP1	
Lv.2	Details	To display the temperature around the Developing Assembly (Y)/(M) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
	FX-MTR	
Lv.1	Details	To display the real-time current value of the Fixing Motor.
	Use case	When checking the life of the Pressure Belt Unit
	Adj/set/operate method	N/A (Display only)
	Unit	1 mA
FX-U-POS		Dspl of Fixing Belt displacement state
Lv.1	Details	To display the Fixing Belt displacement state in real-time. This shows the ON/OFF status of the Fixing Belt Position Sensor1 and 2 and the Fixing Belt HP Sensor.
	Use case	When checking the Fixing Belt displacement control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1 0: ON (Transmit light), 1: OFF (Block light)
FX-L-POS		Dspl of Pressure Belt displacement state
Lv.1	Details	To display the Pressure Belt displacement state in real-time. This shows the ON/OFF status of the Pressure Belt Position Sensor 1 and 2 and the Pressure Belt HP Sensor.
	Use case	When checking the Pressure Belt displacement control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1 0: ON (Transmit light), 1: OFF (Block light)
DEVHUM-Y		Dspl of Developing Assembly (Y) humidity
Lv.2	Details	To display the humidity of the Developing Assembly (Y) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Appropriate target value	5 - 80

COPIER > DISPLAY > ANALOG		
DEVHUM-M		Dspl of Developing Assembly (M) humidity
Lv.2	Details	To display the humidity of the Developing Assembly (M) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Appropriate target value	5 - 80
DEVHUM-C		Dspl of Developing Assembly (C) humidity
Lv.2	Details	To display the humidity of the Developing Assembly (C) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Appropriate target value	5 - 80
DEVHUM-K		Dspl of Developing Assembly(Bk) humidity
Lv.2	Details	To display the humidity of the Developing Assembly (Bk) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 %
	Appropriate target value	5 - 80
DEVTEMPY		Dspl of Developing Assembly (Y) temp
Lv.2	Details	To display the temperature of the Developing Assembly (Y) detected by the Thermistor of the Toner Density Sensor (Y). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
	Appropriate target value	TEMP - TEMP + 20
	Related service mode	COPIER> DISPLAY> ANALOG> TEMP
DEVTEMPM		Dspl of Developing Assembly (M) temp
Lv.2	Details	To display the temperature of the Developing Assembly (M) detected by the Thermistor of the Toner Density Sensor (M). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
	Appropriate target value	TEMP - TEMP + 20
	Related service mode	COPIER> DISPLAY> ANALOG> TEMP

COPIER > DISPLAY > ANALOG		
DEVTEMPC		Dspl of Developing Assembly (C) temp
Lv.2	Details	To display the temperature of the Developing Assembly (C) detected by the Thermistor of the Toner Density Sensor (C). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
	Appropriate target value	TEMP - TEMP + 20
	Related service mode	COPIER> DISPLAY> ANALOG> TEMP
DEVTEMPK		Dspl of Developing Assembly (Bk) temp
Lv.2	Details	To display the temperature of the Developing Assembly (Bk) detected by the Thermistor of the Toner Density Sensor (Bk). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
	Use case	When a failure occurs on the developing contrast
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 100
	Unit	1 deg C
	Appropriate target value	TEMP - TEMP + 20
	Related service mode	COPIER> DISPLAY> ANALOG> TEMP

T-8-6

■ CST-ST5

COPIER > DISPLAY > CST-ST5		
WIDTH-MF		Dspl Multi-purpose Tray paper width size
Lv.2	Details	To display the paper width size currently set on the Multi-purpose Tray.
	Use case	When checking the paper width side set on the Multi-purpose Tray
	Adj/set/operate method	N/A (Display only)
	Unit	1 mm

T-8-7

HV-STS

COPIER > DISPLAY > HV-STS		
PRIMARY		
Display of primary charging current		
Lv.1	Details	To display the current flown to the Primacy Charging Assembly at the latest. The result set in COPIER> ADJUST> HV-PRI> PRIMARY is reflected.
	Use case	When checking ON/OFF of potential control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1600
	Unit	1 uA
	Related service mode	COPIER> ADJUST> HV-PRI> PRIMARY
PRI-GRID		
Display of Bk primary charging grid bias		
Lv.1	Details	To display the Bk-color primary charging grid bias applied after execution of potential control.
	Use case	When checking ON/OFF of potential control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-1300 to 0
	Unit	1 V
PRE-TR		
Dspl of pre-transfer charge DC current		
Lv.1	Details	To display the DC current flown to the Primacy Charging Assembly at the latest. The result set in COPIER> ADJUST> HV-TR> PRE-TR is reflected.
	Use case	At the time of checking
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-650 to 0
	Unit	1 uA
1ATVC-Y		
Dspl Y pry trns paper interval current		
Lv.2	Details	To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (Y) by the primary transfer paper interval ATVC control.
	Use case	When estimating the life of Primary Transfer Roller based on the displayed value
	Adj/set/operate method	N/A (Display only)
	Caution	Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
	Display/adj/set range	0 to 900
	Unit	1 uA

COPIER > DISPLAY > HV-STS		
1ATVC-M		
Dspl M pry trns paper interval current		
Lv.2	Details	To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (M) by the primary transfer paper interval ATVC control.
	Use case	When estimating the life of Primary Transfer Roller based on the displayed value
	Adj/set/operate method	N/A (Display only)
	Caution	Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
	Display/adj/set range	0 to 900
	Unit	1 uA
1ATVC-C		
Dspl C pry trns paper interval current		
Lv.2	Details	To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (C) by the primary transfer paper interval ATVC control.
	Use case	When estimating the life of Primary Transfer Roller based on the displayed value
	Adj/set/operate method	N/A (Display only)
	Caution	Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
	Display/adj/set range	0 to 900
	Unit	1 uA
1ATVC-K4		
Dspl Bk pry trns ppr intvl crnt: clr		
Lv.2	Details	To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (Bk) by the primary transfer paper interval ATVC control in color mode.
	Use case	When estimating the life of Primary Transfer Roller based on the displayed value
	Adj/set/operate method	N/A (Display only)
	Caution	Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
	Display/adj/set range	0 to 900
	Unit	1 uA

COPIER > DISPLAY > HV-ST5		
1ATVC-K1	Dspl Bk pry trns ppr intvl crnt: B&W	
Lv.2	Details	To display the decuple value of the paper interval current lastly flown to the Bk Primary Transfer Roller by the primary transfer paper interval ATVC control in black mode.
	Use case	When estimating the life of Primary Transfer Roller based on the displayed value
	Adj/set/operate method	N/A (Display only)
	Caution	Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
	Display/adj/set range	0 to 900
	Unit	1 uA
2EL	Dspl of Sec Trns Static Eliminator bias	
Lv.2	Details	To display the bias which is applied to the Secondary Transfer Static Eliminator at the latest.
	Use case	At the time of checking
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-4000 to 0
	Unit	1 V
PR-GRI-K	Dspl of Primary Charging Ass'y grid bias	
Lv.2	Details	To display the grid bias voltage that is applied to the Primacy Charging Assembly at the latest.
	Use case	When checking the grid bias of the Primary Charging Assembly
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-1200 to 0
	Unit	1 V
2ATVC-F1	Sec Trns ATVC target current:clr,1/1 SPD	
Lv.2	Details	To display the decuple value of the target current at 1/1 speed in color mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA
PRIACV-Y	For R&D	
PRIACV-M	For R&D	
PRIACV-C	For R&D	

COPIER > DISPLAY > HV-ST5		
2ATVC-M1	Sec Trns ATVC target current:B&W,1/1 SPD	
Lv.2	Details	To display the decuple value of the target current at 1/1 speed in black mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA
2ATVC-F2	Sec Trns ATVC target current:clr,2/3 SPD	
Lv.2	Details	To display the decuple value of the target current at 2/3 speed in color mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA
2ATVC-M2	Sec Trns ATVC target current:B&W,2/3 SPD	
Lv.2	Details	To display the decuple value of the target current at 2/3 speed in black mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA
2ATVC-F3	Sec Trns ATVC target current:clr,1/2 SPD	
Lv.2	Details	To display the decuple value of the target current at 1/2 speed in color mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA

COPIER > DISPLAY > HV-STS		
2ATVC-M3		Sec Trns ATVC target current:B&W,1/2 SPD
Lv.2	Details	To display the decuple value of the target current at 1/2 speed in black mode derived from the latest secondary transfer Full ATVC control.
	Use case	When judging whether the secondary transfer is appropriately set at image failure
	Adj/set/operate method	N/A (Display only)
	Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.
	Unit	1 uA
PRIACI-Y		Dischg crmnt ctrl Y AC crmnt set VL: 1/1
Lv.2	Details	To display the AC current setting value flowing to the Primary Charging Roller (Y) at 1/1 speed derived from the latest discharge current control.
	Use case	When checking the AC current of discharge current control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5000
	Unit	1 uA
PRIACI-M		Dischg crmnt ctrl M AC crmnt set VL: 1/1
Lv.2	Details	To display the AC current setting value flowing to the Primary Charging Roller (M) at 1/1 speed derived from the latest discharge current control.
	Use case	When checking the AC current of discharge current control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5000
	Unit	1 uA
PRIACI-C		Dischg crmnt ctrl C AC crmnt set VL: 1/1
Lv.2	Details	To display the AC current setting value flowing to the Primary Charging Roller (C) at 1/1 speed derived from the latest discharge current control.
	Use case	When checking the AC current of discharge current control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5000
	Unit	1 uA
PRISMP-Y		Dischg crmnt ctrl Y AC crmnt sample VL
Lv.2	Details	To display the AC current value flown to the Primary Charging Roller (Y) to which the certain voltage is applied by the latest discharge current control. AC voltage/current to be applied at 1/1 speed is derived from 6 sampling results.
	Use case	When checking the sampling results of discharge current control
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5000
	Unit	1 uA
	Related service mode	COPIER> ADJUST> HV-TR> HV-STS> CLN1-V1

COPIER > DISPLAY > CCD		
TARGET-B		
Display of Blue shading target value		
Lv.2	Details	To display the shading target value of Blue. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	512 - 2047
TARGET-G		
Display of Green shading target value		
Lv.2	Details	To display the target value of Green. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	512 - 2047
TARGET-R		
Display of Red shading target value		
Lv.2	Details	To display the shading target value of Red. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	512 - 2047
GAIN-OB		
Gain level of Read Sensor odd bit(B):frt		
Lv.2	Details	To display the Blue gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143

COPIER > DISPLAY > CCD		
GAIN-OG		Gain level of Read Sensor odd bit(G):frt
Lv.2	Details	To display the Green gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN-OR		Gain level of Read Sensor odd bit(R):frt
Lv.2	Details	To display the Red gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN-EB		Gain lvl of Read Sensor even bit(B):frt
Lv.2	Details	To display the Blue gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN-EG		Gain lvl of Read Sensor even bit(G):frt
Lv.2	Details	To display the Green gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143

COPIER > DISPLAY > CCD		
GAIN-ER		Gain lvl of Read Sensor even bit(R):frt
Lv.2	Details	To display the Red gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
LAMP-BW		Dspl LED light intnsty adj VL:B&W, front
Lv.2	Details	To display the LED light intensity adjustment value of Scanner Unit (for front side) in B&W scanning mode.
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	100 - 275
Supplement/memo		LED cannot be replaced individually. Replace the Scanner Unit.
LAMP-CL		Dspl LED light intnsty adj VL:clr, front
Lv.2	Details	To display the LED light intensity adjustment value of Scanner Unit (for front side) in color scanning mode.
	Use case	When image failure occurs at front side scanning in color mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	100 - 275
Supplement/memo		LED cannot be replaced individually. Replace the Scanner Unit.
LAMP2-BW		Dspl LED light intnsty adj VL: B&W, back
Lv.2	Details	To display the LED light intensity adjustment value of Scanner Unit (for back side) in B&W scanning mode.
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	100 - 275
Supplement/memo		LED cannot be replaced individually. Replace the Scanner Unit.
LAMP2-CL		Dspl LED light intnsty adj VL: clr, back
Lv.2	Details	To display the LED light intensity adjustment value of Scanner Unit (for back side) in color scanning mode.
	Use case	When image failure occurs at back side scanning in color mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	100 - 275
Supplement/memo		LED cannot be replaced individually. Replace the Scanner Unit.

COPIER > DISPLAY > CCD		
OFST-BW		Dspl Read Sensor offset value:B&W, front
Lv.2	Details	To display the offset value of the Reading Sensor of Scanner Unit (for front side) in B&W scanning mode.
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 116
OFST-CL		Dspl Read Sensor offset value:clr, front
Lv.2	Details	To display the offset value of the Reading Sensor of Scanner Unit (for front side) in color scanning mode.
	Use case	When image failure occurs at front side scanning in color mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 116
OFST2-BW		Dspl Read Sensor offset value: B&W, back
Lv.2	Details	To display the offset value of the Reading Sensor of Scanner Unit (for back side) in B&W scanning mode.
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 116
GAIN-BW1		Read Sensor gain level adj VL1: B&W, frt
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 1 of Scanner Unit (for front side).
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN-BW2		Read Sensor gain level adj VL2: B&W, frt
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 2 of Scanner Unit (for front side).
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN-BW3		Read Sensor gain level adj VL3: B&W, frt
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 3 of Scanner Unit (for front side).
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143

COPIER > DISPLAY > CCD		
GAIN-BW4		Read Sensor gain level adj VL4: B&W, frt
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 4 of Scanner Unit (for front side).
	Use case	When image failure occurs at front side scanning in black mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2BW1		Read Sensor gain level adj VL1:B&W, back
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 1 of Scanner Unit (for back side).
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2BW2		Read Sensor gain level adj VL2:B&W, back
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 2 of Scanner Unit (for back side).
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2BW3		Read Sensor gain level adj VL3:B&W, back
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 3 of Scanner Unit (for back side).
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2BW4		Read Sensor gain level adj VL4:B&W, back
Lv.2	Details	To display the Reading Sensor B&W gain level adjustment value 4 of Scanner Unit (for back side).
	Use case	When image failure occurs at back side scanning in black mode.
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2-OR		Gain lvl of Read Sensor odd bit(R):back
Lv.2	Details	To display the Red gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143

COPIER > DISPLAY > CCD		
GAIN2-OG		Gain lvl of Read Sensor odd bit(G):back
Lv.2	Details	To display the Green gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2-OB		Gain lvl of Read Sensor odd bit(B):back
Lv.2	Details	To display the Blue gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2-ER		Gain lvl of Read Sensor even bit(R):back
Lv.2	Details	To display the Red gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
GAIN2-EG		Gain lvl of Read Sensor even bit(G):back
Lv.2	Details	To display the Green gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143

COPIER > DISPLAY > CCD		
GAIN2-EB		Gain lvl of Read Sensor even bit(B):back
Lv.2	Details	To display the Blue gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
	Use case	- When replacing the Reader Controller PCB - At scanned image failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 143
OFST2-CL		Dspl Read Sensor offset value:clr, back
Lv.2	Details	To display the offset value of the Reading Sensor of Scanner Unit (for back side) in color scanning mode.
	Use case	When image failure occurs at back side scanning in color mode
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to FFFF
	Appropriate target value	0 - 116

T-8-9

DPOT

COPIER > DISPLAY > DPOT		
DPOT-K		
Dspl Bk Photo-s Drum surface potential		
Lv.1	Details	To display the current surface potential Vd on the Bk Photosensitive Drum that is specified as a result of the potential control. The value after the calculation of potential offset is displayed. If the offset value is not adjusted, negative value may be detected during printing.
	Use case	When checking the surface potential of the Drum at density failure or occurrence of fogging
	Adj/set/operate method	N/A (Display only)
	Caution	To update the display, be sure to move to a different screen, and then move back to display it again. (The potential at the moment of showing this screen is displayed.)
	Display/adj/set range	-1100 to 0
	Unit	1 V
VCONT-Y		
Dspl Y dev contrast potential: 1/1 SPD		
Lv.2	Details	To display the Y-color developing contrast potential Vcont at 1/1 speed.
	Use case	When checking developing contrast potential
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 800
	Unit	1 V
VCONT-M		
Dspl M dev contrast potential: 1/1 SPD		
Lv.2	Details	To display the M-color developing contrast potential Vcont at 1/1 speed.
	Use case	When checking developing contrast potential
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 800
	Unit	1 V
VCONT-C		
Dspl C dev contrast potential: 1/1 SPD		
Lv.2	Details	To display the C-color developing contrast potential Vcont at 1/1 speed.
	Use case	When checking developing contrast potential
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 800
	Unit	1 V
VCONT-K		
Dspl Bk dev contrast potential: 1/1 SPD		
Lv.2	Details	To display the Bk-color developing contrast potential Vcont at 1/1 speed.
	Use case	When checking developing contrast potential
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 800
	Unit	1 V

COPIER > DISPLAY > DPOT			
VBACK-Y		Dspl Y-clr fog removal potential:1/1SPD	
Lv.2	Details	To display the setting value of Y-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB	
	Use case	When foggy image occurs	
	Adj/set/operate method	N/A (Display only)	
	Display/adj/set range	0 to 300	
	Unit	1 V	
	Appropriate target value	175	
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast	
	VBACK-M		Dspl M-clr fog removal potential:1/1SPD
	Lv.2	Details	To display the setting value of M-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use case		When foggy image occurs	
Adj/set/operate method		N/A (Display only)	
Display/adj/set range		0 to 300	
Unit		1 V	
Appropriate target value		175	
Related UI menu		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast	

COPIER > DISPLAY > DPOT	
VBACK-C	Dspl C-clr fog removal potential:1/1SPD
Lv.2	Details
	To display the setting value of C-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
	Use case
	When foggy image occurs
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range

VBACK-K	Dspl Bk-clr fog removal potential:1/1SPD
Lv.2	Details
	To display the setting value of Bk-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast.
	Use case
	When checking the setting value of fogging removal potential at image failure such as fogging
	Adj/set/operate method
	N/A (Display only)
	Caution
	Fogging occurred in the normal use range of 150 to 250 V is judged as an error on the high voltage or the Potential Sensor.
	Display/adj/set range
	0 to 300
	Unit
	1 V

P-LPW-K	Display of Bk patch target laser power
Lv.2	Details
	To display the laser power to be used as a target Bk-color patch contrast potential. Check the laser power to be used as a target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
	Use case
	- When analyzing the cause of the image density failure - When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	00 to FF (hexadecimal)

COPIER > DISPLAY > DPOT	
D-CONT-Y	Dspl Y Photo-s Drum total charging time
Lv.1	Details To display the total charging time (charging counter) for the Y-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETY.
	Use case When checking if the high voltage is properly set
	Adj/set/operate method N/A (Display only)
	Display/adj/set range 0 to 10000000
	Unit 100 msec
	Related service mode COPIER> FUNCTION> DPC> DRMRSETY
D-CONT-M	Dspl M Photo-s Drum total charging time
Lv.1	Details To display the total charging time (charging counter) for the M-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETM.
	Use case When checking if the high voltage is properly set
	Adj/set/operate method N/A (Display only)
	Display/adj/set range 0 to 10000000
	Unit 100 msec
	Related service mode COPIER> FUNCTION> DPC> DRMRSETM
D-CONT-C	Dspl C Photo-s Drum total charging time
Lv.1	Details To display the total charging time (charging counter) for the C-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETC.
	Use case When checking if the high voltage is properly set
	Adj/set/operate method N/A (Display only)

PVCON3-M	Dspl M tgt patch contrast potntl:1/2 SPD	
Lv.2	Details	To display the target M-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
	Use case	At the occurrence of an image density failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 500
	Unit	1 V
PVCON3-C	Dspl C tgt patch contrast potntl:1/2 SPD	
Lv.2	Details	To display the target C-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
	Use case	At the occurrence of an image density failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 500
	Unit	1 V
PVCON3-K	Dspl Bk tgt ptch contrast potntl:1/2 SPD	
Lv.2	Details	To display the target Bk-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
	Use case	At the occurrence of an image density failure
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 500
	Unit	1 V
VBACK2-Y	Dspl Y-clr fog removal potential:2/3SPD	
Lv.2	Details	To display the setting value of Y-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
	Use case	When foggy image occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 300
	Unit	1 V
	Appropriate target value	175

COPIER > DISPLAY > DPOT		
VBACK2-M	Dspl M-clr fog removal potential:2/3SPD	
Lv.2	Details	To display the setting value of M-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
	Use case	When foggy image occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 300
	Unit	1 V
	Appropriate target value	175
	VBACK2-C	Dspl C-clr fog removal potential:2/3SPD
Lv.2	Details	To display the setting value of C-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
	Use case	When foggy image occurs

■ DENS

COPIER > DISPLAY > DENS		
DENS-Y		
Dspl of Y developer density change ratio		
Lv.1	Details	To display the difference between Y-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.
	Use case	- When the density varies dramatically - When the density is unstable even after gradation correction
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-8 to 8
	Unit	1 %
DENS-M		
Dspl of M developer density change ratio		
Lv.1	Details	To display difference between M-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.
	Use case	- When the density varies dramatically - When the density is unstable even after gradation correction
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-8 to 8
	Unit	1 %
DENS-C		
Dspl of C developer density change ratio		
Lv.1	Details	To display difference between C-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.
	Use case	- When the density varies dramatically - When the density is unstable even after gradation correction
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-8 to 8
	Unit	1 %

COPIER > DISPLAY > DENS		
DENS-K		
Dspl Bk developer density change ratio		
Lv.1	Details	To display difference between Bk-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.
	Use case	- When the density varies dramatically - When the density is unstable even after gradation correction
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	-8 to 8
	Unit	1 %
DENS-S-Y		
Display of Y-color patch image density		
Lv.2	Details	To display the Y-color patch image density detected by the Patch Sensor.
	Use case	When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023
DENS-S-M		
Display of M-color patch image density		
Lv.2	Details	To display the M-color patch image density detected by the Patch Sensor.
	Use case	When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023
DENS-S-C		
Display of C-color patch image density		
Lv.2	Details	To display the C-color patch image density detected by the Patch Sensor.
	Use case	When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023
DENS-S-K		
Display of Bk-color patch image density		
Lv.2	Details	To display the Bk-color patch image density detected by the Patch Sensor.
	Use case	When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023

D-Y-TRGT	Dspl of Y patch target density: ATR ctrl
Lv.2	Details
	To display the target density for Y patch image created by ATR control.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
D-M-TRGT	Dspl of M patch target density: ATR ctrl
Lv.2	Details
	To display the target density for M patch image created by ATR control.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
D-C-TRGT	Dspl of C patch target density: ATR ctrl
Lv.2	Details
	To display the target density for C patch image created by ATR control.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
REF-Y	Dspl of Y developer density target value
Lv.2	Details
	To display the Y-color developer density target value.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
	Appropriate target value
	50 - 200
REF-M	Dspl of M developer density target value
Lv.2	Details
	To display the M-color developer density target value.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
	Appropriate target value
	50 - 200
REF-C	Dspl of C developer density target value
Lv.2	Details
	To display the C-color developer density target value.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
	Appropriate target value
	50 - 200

COPIER > DISPLAY > DENS	
REF-K	Dspl Bk developer density target value
Lv.2	Details
	To display the Bk-color developer density target value.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
	Appropriate target value
	50 - 200
SGNL-Y	Display of Y-color developer density
Lv.1	Details
	To display the measured value of Y-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
	Appropriate target value
	20 - 230
	Related service mode
	COPIER> DISPLAY> DENS> DENS-Y
SGNL-M	Display of M-color developer density
Lv.1	Details
	To display the measured value of M-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
SGNL-C	Display of C-color developer density
Lv.1	Details
	To display the measured value of C-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
SGNL-K	Display of Bk-color developer density
Lv.1	Details
	To display the measured value of Bk-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255

COPIER > DISPLAY > DENS	
P-SENS-P	Dspl Bk base intensity (P-wave):ATR ctrl
Lv.2	Details
	To display the light intensity (P-wave) reflected from the background (Bk-color Photosensitive Drum) at ATR control. If the value is not appropriate, the following may be the cause: - Open circuit/failure of the Drum Patch Sensor (Bk), soiled sensor surface - Bk-color Drum Patch Sensor Shutter error - Drum Patch Shutter Solenoid (Bk) error - Cleaning failure of the Photosensitive Drum, etc.
	Use case
	When checking the Drum Patch Sensor/Photosensitive Drum at low density, fogging deterioration or E020 occurrence
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Related service mode
	COPIER> DISPLAY> DENS> P-SENS-S
DEV-DC-Y	Display of developing DC bias (Y)
Lv.2	Details
	To display the Y developing DC bias Vdc applied at the latest.
	Use case
	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Unit
	1 V
DEV-DC-M	Display of developing DC bias (M)
Lv.2	Details
	To display the M developing DC bias Vdc applied at the latest.
	Use case
	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Unit
	1 V
DEV-DC-C	Display of developing DC bias (C)
Lv.2	Details
	To display the C developing DC bias Vdc applied at the latest.
	Use case
	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Unit
	1 V
DEV-DC-K	Display of developing DC bias (Bk)
Lv.2	Details
	To display the Bk developing DC bias Vdc applied at the latest.
	Use case
	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Unit
	1 V

COPIER > DISPLAY > DENS	
CHG-DC-Y	Dspl of primary charging DC voltage (Y)
Lv.2	Details
	To display the latest primary charging DC voltage of Y color.
	Use case
	When low density or fogging occurs
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	-1000 to 0
	Unit
	1 V
	Appropriate target value
	-870 - -450
CHG-DC-M	Dspl of primary charging DC voltage (M)
Lv.2	Details
	To display the latest primary charging DC voltage of M color.
	Use case
	When low density or fogging occurs
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	-1000 to 0
	Unit
	1 V
	Appropriate target value
	-870 - -450
CHG-DC-C	Dspl of primary charging DC voltage (C)
Lv.2	Details
	To display the latest primary charging DC voltage of C color.
	Use case
	When low density or fogging occurs
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	-1000 to 0
	Unit
	1 V
	Appropriate target value
	-870 - -450
D-K-TRGT	Dspl of Bk patch target density:ATR ctrl
Lv.2	Details
	To display the Bk patch image target density created by ATR control.
	Use case
	When analyzing the cause of a problem
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
D-CRNT-P	Dspl of Bk dark current(P-wave):ATR ctrl
Lv.2	Details
	To display the Bk-color dark current value (P-wave) measured at ATR control.
	Use case
	When checking the Drum Patch Sensor (Bk)
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Related service mode
	COPIER> DISPLAY> DENS> D-CRNT-S
D-CRNT-S	Dspl of Bk dark current(S-wave):ATR ctrl
Lv.2	Details
	To display the Bk-color dark current value (S-wave) measured at ATR control.
	Use case
	When checking the Drum Patch Sensor (Bk)
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Related service mode
	COPIER> DISPLAY> DENS> D-CRNT-P

COPIER > DISPLAY > DENS	
P-SENS-S	Dspl Bk base intensity (S-wave):ATR ctrl
Lv.2	Details
	To display the light intensity (S-wave) reflected from the background (Bk-color Photosensitive Drum) at ATR control. If the value is not appropriate, the following may be the cause: - Open circuit/failure of the Drum Patch Sensor (Bk), soiled sensor surface - Bk-color Drum Patch Sensor Shutter error - Drum Patch Shutter Solenoid (Bk) error - Cleaning failure of the Photosensitive Drum, etc.
	Use case
	When checking the Drum Patch Sensor/Photosensitive Drum at low density, fogging deterioration or E020 occurrence
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 1023
	Related service mode
	COPIER> DISPLAY> DENS> P-SENS-P
DENS-Y-H	Dspl of Y-clr TD ratio log: ATR control
Lv.2	Details
	To display the latest 8 Y-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
	Use case
	When checking toner density in the Developing Assembly at low density or fogging deterioration
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
DENS-M-H	Dspl of M-clr TD ratio log: ATR control
Lv.2	Details
	To display the latest 8 M-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
	Use case
	When checking toner density in the Developing Assembly at low density or fogging deterioration
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255
DENS-C-H	Dspl of C-clr TD ratio log: ATR control
Lv.2	Details
	To display the latest 8 C-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
	Use case
	When checking toner density in the Developing Assembly at low density or fogging deterioration
	Adj/set/operate method
	N/A (Display only)
	Display/adj/set range
	0 to 255

COPIER > DISPLAY > DENS	
DS-S-Y-H	Dspl of Y-color patch image density log
Lv.2	Details
	To display the latest 8 Y-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.
	Use case
	When analyzing the cause of E020
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
DS-S-M-H	Dspl of M-color patch image density log
Lv.2	Details
	To display the latest 8 M-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.
	Use case
	When analyzing the cause of E020
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
DS-S-C-H	Dspl of C-color patch image density log
Lv.2	Details
	To display the latest 8 C-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.
	Use case
	When analyzing the cause of E020
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023
DS-S-K-H	Dspl of Bk-color patch image density log
Lv.2	Details
	To display the latest 8 Bk-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.
	Use case
	When analyzing the cause of E020
	Adj/set/operate method
	N/A (Display only)
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1023

COPIER > DISPLAY > DENS		
P-LED-DA	Dspl of Patch Sensor LED light intensity	
Lv.2	Details	To display the Patch Sensor LED light intensity. The soiled Sensor window or soiled ITB (ITB cleaning failure) is suspected if the background light intensity (P-wave) is too low even with sufficient LED light intensity and PT-LPADJ execution will not correct the problem.
	Use case	When checking the Patch Sensor
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1023
	Related service mode	COPIER> DISPLAY> DENS> P-SENS-P COPIER> FUNCTION> MISC-P> PT-LPADJ
SPL-LG-Y	Display of Y-color toner supply log	
Lv.2	Details	To display the latest 8 Y-toner supply log data. Each data represents the number of toner blocks supplied per paper.
	Use case	When checking toner supply status at E020 occurrence, low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5
SPL-LG-M	Display of M-color toner supply log	
Lv.2	Details	To display the latest 8 M-toner supply log data. Each data represents the number of toner blocks supplied per paper.
	Use case	When checking toner supply status at E020 occurrence, low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5
SPL-LG-C	Display of C-color toner supply log	
Lv.2	Details	To display the latest 8 C-toner supply log data. Each data represents the number of toner blocks supplied per paper.
	Use case	When checking toner supply status at E020 occurrence, low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5
P-B-P-K	Dspl Bk drum base intnsty,Pwave:ATR ctrl	
Lv.1	Details	To display the Photosensitive Drum (Bk) base light intensity (P-wave) detected at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor (Bk).
	Use case	At low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999

COPIER > DISPLAY > DENS		
P-B-S-Y	ITB rear base intensity (Swave):ATR ctrl	
Lv.1	Details	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Rear) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.
	Use case	At low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
P-B-S-M	ITB ctr base intensity (Swave):ATR ctrl	
Lv.1	Details	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Center) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.
	Use case	At low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
P-B-S-C	ITB frt base intensity (Swave):ATR ctrl	
Lv.1	Details	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Front) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.
	Use case	At low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
DENS-K-H	Dspl of Bk-clr TD ratio log: ATR control	
Lv.2	Details	To display the latest 8 Bk-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
	Use case	When checking toner density in the Developing Assembly at low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 255
SPL-LG-K	Display of Bk-color toner supply log	
Lv.2	Details	To display the latest 8 Bk-toner supply log data. Each data represents the number of toner blocks supplied per paper.
	Use case	When checking the toner supply status at low density or fogging deterioration
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 5

COPIER > DISPLAY > DENS		
CONT-M		Dspl Toner Density Sensor (M) ctrl voltg
Lv.1	Details	To display the density detection control voltage of the Toner Density Sensor (M).
	Use case	When checking before clearing RAM data
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 255
	Unit	1 V
CONT-Y		Dspl Toner Density Sensor (Y) ctrl voltg
Lv.1	Details	To display the density detection control voltage of the Toner Density Sensor (Y).
	Use case	When checking before clearing RAM data
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 255
	Unit	1 V
CONT-C		Dspl Toner Density Sensor (C) ctrl voltg
Lv.1	Details	To display the density detection control voltage of the Toner Density Sensor (C).
	Use case	When checking before clearing RAM data
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 255
	Unit	1 V
CONT-K		Dspl Toner Density Sensor(Bk) ctrl voltg
Lv.1	Details	To display the density detection control voltage of the Toner Density Sensor (Bk).
	Use case	When checking before clearing RAM data
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 255
	Unit	1 V
BASE-L-Y		Dspl Y-color Guide Plate light intensity
Lv.2	Details	To display the light intensity of the Guide Plate for Y-color.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
BASE-L-M		Dspl M-color Guide Plate light intensity
Lv.2	Details	To display the light intensity of the Guide Plate for M-color.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
BASE-L-C		Dspl C-color Guide Plate light intensity
Lv.2	Details	To display the light intensity of the Guide Plate for C-color.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999

COPIER > DISPLAY > DENS		
BASE-L-K		Dspl Bk-clr Guide Plate light intensity
Lv.2	Details	To display the light intensity of the Guide Plate for Bk-color.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 9999
P-ALF-Y		Dspl Ptch Sns (Y) soil wdw crctt coeffct
Lv.1	Details	To display the soiled window correction coefficient alpha value of the Patch Sensor (Y). If the different between the initial value (left) and the current value (right) is 150 or more, clean the Patch Sensor.
	Use case	- When hue variation occurs - When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 400
	Related service mode	COPIER> FUNCTION> SENS-ADL> PCHSTADJ
P-ALF-M		Dspl Ptch Sns (M) soil wdw crctt coeffct
Lv.1	Details	To display the soiled window correction coefficient alpha value of the Patch Sensor (M). If the different between the initial value (left) and the current value (right) is 150 or more, clean the Patch Sensor.
	Use case	- When hue variation occurs - When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 400
	Related service mode	COPIER> FUNCTION> SENS-ADL> PCHSTADJ
P-ALF-C		Dspl Ptch Sns (C) soil wdw crctt coeffct
Lv.1	Details	To display the soiled window correction coefficient alpha value of the Patch Sensor (C). If the different between the initial value (left) and the current value (right) is 150 or more, clean the Patch Sensor.
	Use case	- When hue variation occurs - When analyzing the cause of a problem
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 400
	Related service mode	COPIER> FUNCTION> SENS-ADL> PCHSTADJ
Y-LED-DA		Dspl Patch Sns (Y) light intnsty set VL
Lv.1	Details	To display the LED light intensity setting value of the Patch Sensor (Y).
	Use case	When an error related to the Patch Sensor occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1023
	Appropriate target value	300 - 700
Supplement/memo	If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.	

COPIER > DISPLAY > DENS		
M-LED-DA	Dspl Patch Sns (M) light intnsty set VL	
Lv.1	Details	To display the LED light intensity setting value of the Patch Sensor (M).
	Use case	When an error related to the Patch Sensor occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1023
	Appropriate target value	300 - 700
	Supplement/memo	If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.
C-LED-DA	Dspl Patch Sns (C) light intnsty set VL	
Lv.1	Details	To display the LED light intensity setting value of the Patch Sensor (C).
	Use case	When an error related to the Patch Sensor occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1023
	Appropriate target value	300 - 700
	Supplement/memo	If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.
K-LED-DA	Dspl Patch Sns (Bk) light intnsty set VL	
Lv.1	Details	To display the LED light intensity setting value of the Patch Sensor (Bk).
	Use case	When an error related to the Patch Sensor occurs
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 1023
	Appropriate target value	300 - 700
	Supplement/memo	If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.

FIXING

COPIER > DISPLAY > FIXING	
FX-MTR2	Dspl Fixing Motor crnt VL log: 1/1 SPD
Lv.2	Details
	To display the Fixing Motor current values (4 values in total) at 1/1 speed. The maximum and latest present values (values after clearing of counter value), the maximum and latest previous values (values before clearing of counter value) When the maximum present value exceeds the specified value, an alarm (06-0004) and an error (E008-001) are displayed. When the counter value is cleared at FX-BLT-L or FX-L-CLR, the present value is cleared after the previous value is overwritten with the present value.
	Use case
	When investigating the drive torque at the Pressure Belt Unit replacement or error occurrence
	Adj/set/operate method
	N/A (Display only)
	Caution
	Press the Clear key at FX-BLT-L when replacing the Pressure Belt Unit. For other than the replacement, execute FX-L-CLR to reset.
	Display/adj/set range
	0 to 500, 0 to 500, 0 to 500, 0 to 500
	Unit
	1 mA
	Related service mode
	COPIER> COUNTER> DRBL-1> FX-BLT-L COPIER> FUNCTION> CLEAR> FX-L-CLR
FX-MTR3	Dspl Fixing Motor crnt VL log: 2/3 SPD
Lv.2	Details
	To display the Fixing Motor current values (4 values in total) at 2/3 speed. The maximum and latest present values (values after clearing of counter value), the maximum and latest previous values (values before clearing of counter value) When the maximum present value exceeds the specified value, an alarm (06-0004) and an error (E008-001) are displayed. When the counter value is cleared at FX-BLT-L or FX-L-CLR, the present value is cleared after the previous value is overwritten with the present value.
	Use case
	When investigating the drive torque at the Pressure Belt Unit replacement or error occurrence

MISC

COPIER > DISPLAY > MISC		
ENV-TR		
Display of outside device environment		
Lv.1	Details	To display the environment outside the machine in the latest output.
	Use case	When checking the current installation environment
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	0 to 7
LPOWER-Y		
Display of Y-color laser light intensity		
Lv.2	Details	To display the Y-color laser intensity in real-time.
	Use case	When analyzing the cause of the image density failure
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	00 to FF
LPOWER-M		
Display of M-color laser light intensity		
Lv.2	Details	To display the M-color laser intensity in real-time.
	Use case	When analyzing the cause of the image density failure
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	00 to FF
LPOWER-C		
Display of C-color laser light intensity		
Lv.2	Details	To display the C-color laser intensity in real-time.
	Use case	When analyzing the cause of the image density failure
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	00 to FF
LPOWER-K		
Display of Bk-clr laser light intensity		
Lv.2	Details	To display the Bk-color laser intensity in real-time.
	Use case	When analyzing the cause of the image density failure
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	00 to FF
TNRB-IDY		
Display of Y-color Toner Container ID		
Lv.1	Details	To display the ID of Y-color Toner Container that is installed to the machine
	Use case	When checking whether the barcode ID on the Toner Container is read correctly
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Character string (4 digits)

COPIER > DISPLAY > MISC		
TNRB-IDM		
Display of M-color Toner Container ID		
Lv.1	Details	To display the ID of M-color Toner Container that is installed to the machine
	Use case	When checking whether the barcode ID on the Toner Container is read correctly
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Character string (4 digits)
TNRB-IDC		
Display of C-color Toner Container ID		
Lv.1	Details	To display the ID of C-color Toner Container that is installed to the machine
	Use case	When checking whether the barcode ID on the Toner Container is read correctly
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Character string (4 digits)
TNRB-IDK		
Display of Bk-color Toner Container ID		
Lv.1	Details	To display the ID of Bk-color Toner Container that is installed to the machine
	Use case	When checking whether the barcode ID on the Toner Container is read correctly
	Adj/set/operate method	N/A (Display only)
	Display/adj/set range	Character string (4 digits)

	Display/adj/set range	0 to 1023
SGNL-D-Y		Multi tone screen D Y-patch current VL
Lv.2	Details	To display the current Y-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023
SGNL-D-M		Multi tone screen D M-patch current VL
Lv.2	Details	To display the current M-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023
SGNL-D-C		Multi tone screen D C-patch current VL
Lv.2	Details	To display the current C-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023

COPIER > DISPLAY > HT-C		
SGNL-D-K		Multi tone screen D Bk-patch current VL
Lv.2	Details	To display the current Bk-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
	Use case	When hue variation occurs
	Adj/set/operate method	N/A (Display only)
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 1023

T-8-28

COPIER > ADJUST > ADJ-XY		
ADJ-X	Adj start pstn in book mode: vert scan	
Lv.1	Details	To adjust the image reading start position (image leading edge position) in the vertical scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. Decrease the value when the non-image width is larger than the standard value. Increase the value when out of original area is copied. As the value is incremented by 1, the image position is moved to the trailing edge side by 0.1 mm.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
ADJ-Y	Adj start pstn in book mode: horz scan	
Lv.1	Details	To adjust the image reading start position in the horizontal scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. Decrease the value when the non-image width is larger than the standard value. Increase the value when out of original area is copied. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > ADJ-XY		
ADJ-Y-DF	Adj start pstn:DADF mode, horz scan, frt	
Lv.1	Details	To adjust the front side image reading start position in horizontal scanning direction at DADF reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
STRD-POS	Adj read pstn in DADF mode: front side	
Lv.1	Details	To adjust the reading position at DADF reading (front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0
ADJ-X-MG	Fine adj img ratio: book mode, vert scan	
Lv.1	Details	To make a fine adjustment of image magnification ratio in vertical scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is changed by 1, the image magnification ratio is changed by 0.01 %. +: Enlarge -: Reduce
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-50 to 50
	Unit	0.01 %
	Default value	0

COPIER > ADJUST > ADJ-XY	
ADJY-DF2	Adj start pstn:DADF mode, horz scan, bck
Lv.1	Details
	To adjust the back side image reading start position in horizontal scanning direction at DADF reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0
ADJ-Y-MG	Fine adj img ratio:book, horz scan
Lv.1	Details
	To make a fine adjustment of image magnification ratio in horizontal scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is changed by 1, the image magnification ratio is changed by 0.1 %. +: Enlarge -: Reduce
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-10 to 10
	Unit
	0.1 %
	Default value
	0

T-8-29

■ CCD

COPIER > ADJUST > CCD	
W-PLT-X	Stdrd White Plt white lvl data (X) entry
Lv.1	Details
	To enter the white level data (X) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
	Use case
	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	1 to 9999
	Unit
	1
	Default value
	8271
W-PLT-Y	Stdrd White Plt white lvl data (Y) entry
Lv.1	Details
	To enter the white level data (Y) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
	Use case
	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	1 to 9999
	Unit
	1
	Default value
	8735
W-PLT-Z	Stdrd White Plt white lvl data (Z) entry
Lv.1	Details
	To enter the white level data (Z) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
	Use case
	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	1 to 9999
	Unit
	1
	Default value
	9418

COPIER > ADJUST > CCD		
SH-TRGT	Shading target VL (B&W) entry: Copyboard	
Lv.1	Details	To enter the B&W shading target value in copyboard reading mode. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Scanner Unit, execute COPIER> FUNCTION> CCD> DF-WLVL3, and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	1 to 2047
	Unit	1
	Default value	1126
100-RG	Img Sensr RG color displace crct: front	
Lv.1	Details	To correct the color displacement between R and G lines in vertical scanning direction due to the Scanner Unit (for front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-256 to 256
	Unit	0.001 line
	Default value	0
100-GB	Img Sensr GB color displace crct: front	
Lv.1	Details	To correct the color displacement between G and B lines in vertical scanning direction due to the Scanner Unit (for front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-256 to 256
	Unit	0.001 line
	Default value	0

COPIER > ADJUST > CCD		
DFTAR-R	Shading target VL (R) entry: front side	
Lv.1	Details	To enter the shading target value of Red on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2047
	Unit	1
	Default value	1159
DFTAR-G	Shading target VL (G) entry: front side	
Lv.1	Details	To enter the shading target value of Green on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2047
	Unit	1
	Default value	1189
DFTAR-B	Shading target VL (B) entry: front side	
Lv.1	Details	To enter the shading target value of Blue on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2047
	Unit	1
	Default value	1209

COPIER > ADJUST > CCD		
MTF2-M1		MTF value 1 entry: horz scan, front side
Lv.1	Details	To enter the setting value 1 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M2		MTF value 2 entry: horz scan, front side
Lv.1	Details	To enter the setting value 2 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M3		MTF value 3 entry: horz scan, front side
Lv.1	Details	To enter the setting value 3 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M4		MTF value 4 entry: horz scan, front side
Lv.1	Details	To enter the setting value 4 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF2-M5		MTF value 5 entry: horz scan, front side
Lv.1	Details	To enter the setting value 5 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M6		MTF value 6 entry: horz scan, front side
Lv.1	Details	To enter the setting value 6 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M7		MTF value 7 entry: horz scan, front side
Lv.1	Details	To enter the setting value 7 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-M8		MTF value 8 entry: horz scan, front side
Lv.1	Details	To enter the setting value 8 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF2-M9		MTF value 9 entry: horz scan, front side
Lv.1	Details	To enter the setting value 9 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S1		MTF value 1 entry: vert scan, front side
Lv.1	Details	To enter the setting value 1 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S2		MTF value 2 entry: vert scan, front side
Lv.1	Details	To enter the setting value 2 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S3		MTF value 3 entry: vert scan, front side
Lv.1	Details	To enter the setting value 3 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF2-S4		MTF value 4 entry: vert scan, front side
Lv.1	Details	To enter the setting value 4 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S5		MTF value 5 entry: vert scan, front side
Lv.1	Details	To enter the setting value 5 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S6		MTF value 6 entry: vert scan, front side
Lv.1	Details	To enter the setting value 6 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S7		MTF value 7 entry: vert scan, front side
Lv.1	Details	To enter the setting value 7 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF2-S8		MTF value 8 entry: vert scan, front side
Lv.1	Details	To enter the setting value 8 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
MTF2-S9		MTF value 9 entry: vert scan, front side
Lv.1	Details	To enter the setting value 9 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 80
	Unit	1
	Default value	50
100DF2GB		Img Sensr GB color displace crct: back
Lv.2	Details	To correct the color displacement between G and B lines in vertical scanning direction due to the Scanner Unit (for back side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-256 to 256
	Unit	0.001 line
	Default value	0
100DF2RG		Img Sensr RG color displace crct: back
Lv.2	Details	To correct the color displacement between R and G lines in vertical scanning direction due to the Scanner Unit (for back side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-256 to 256
	Unit	0.001 line
	Default value	0

COPIER > ADJUST > CCD		
DFCH2R2		Complex chart No.2 data (R) entry: front
Lv.1	Details	To derive the front/back side linearity, enter the Red data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH2R10		Complex chart No.10 data (R) entry:front
Lv.1	Details	To derive the front/back side linearity, enter the Red data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0
DFCH2B2		Complex chart No.2 data (B) entry: front
Lv.1	Details	To derive the front/back side linearity, enter the Blue data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH2B10		Complex chart No.10 data (B) entry:front
Lv.1	Details	To derive the front/back side linearity, enter the Blue data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0

COPIER > ADJUST > CCD	
DFCH2G2	Complex chart No.2 data (G) entry: front
Lv.1	Details
	To derive the front/back side linearity, enter the Green data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	1 to 2550
	Unit
	1
	Default value
	2000
DFCH2G10	Complex chart No.10 data (G) entry:front
Lv.1	Details
	To derive the front/back side linearity, enter the Green data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2550
	Unit
	1
	Default value
	0
MTF-M1	MTF value 1 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 1 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50
MTF-M2	MTF value 2 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 2 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50

COPIER > ADJUST > CCD	
MTF-M3	MTF value 3 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 3 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50
MTF-M4	MTF value 4 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 4 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50
MTF-M5	MTF value 5 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 5 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50
MTF-M6	MTF value 6 entry: horz scan, back side
Lv.1	Details
	To enter the setting value 6 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	20 to 85
	Unit
	1
	Default value
	50

COPIER > ADJUST > CCD		
MTF-M7		MTF value 7 entry: horz scan, back side
Lv.1	Details	To enter the setting value 7 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-M8		MTF value 8 entry: horz scan, back side
Lv.1	Details	To enter the setting value 8 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-M9		MTF value 9 entry: horz scan, back side
Lv.1	Details	To enter the setting value 9 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S1		MTF value 1 entry: vert scan, back side
Lv.1	Details	To enter the setting value 1 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF-S2		MTF value 2 entry: vert scan, back side
Lv.1	Details	To enter the setting value 2 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S3		MTF value 3 entry: vert scan, back side
Lv.1	Details	To enter the setting value 3 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S4		MTF value 4 entry: vert scan, back side
Lv.1	Details	To enter the setting value 4 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S5		MTF value 5 entry: vert scan, back side
Lv.1	Details	To enter the setting value 5 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF-S6	MTF value 6 entry: vert scan, back side	
Lv.1	Details	To enter the setting value 6 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S7	MTF value 7 entry: vert scan, back side	
Lv.1	Details	To enter the setting value 7 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S8	MTF value 8 entry: vert scan, back side	
Lv.1	Details	To enter the setting value 8 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S9	MTF value 9 entry: vert scan, back side	
Lv.1	Details	To enter the setting value 9 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
DFCH-R2	Complex chart No.2 data (R) entry: back	
Lv.1	Details	To derive the front/back side linearity, enter the Red data on the back side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH-R10	Complex chart No.10 data (R) entry: back	
Lv.1	Details	To derive the front/back side linearity, enter the Red data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0
DFCH-B2	Complex chart No.2 data (B) entry: back	
Lv.1	Details	To derive the front/back side linearity, enter the Blue data on the back side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH-B10	Complex chart No.10 data (B) entry: back	
Lv.1	Details	To derive the front/back side linearity, enter the Blue data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0

COPIER > ADJUST > CCD

Lv.1	Details	To derive the front/back side linearity, enter the Green data on the back side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH-G10	Complex chart No.10 data (G) entry: back	
Lv.1	Details	To derive the front/back side linearity, enter the Green data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0
MTF2-M10	MTF value 10 entry:horz scan, front side	
Lv.1	Details	To enter the setting value 10 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF2-M11	MTF value 11 entry:horz scan, front side	
Lv.1	Details	To enter the setting value 11 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF2-M12	MTF value 12 entry:horz scan, front side	
Lv.1	Details	To enter the setting value 12 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF2-S10	MTF value 10 entry:vert scan, front side	
Lv.1	Details	To enter the setting value 10 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF2-S11	MTF value 11 entry:vert scan, front side	
Lv.1	Details	To enter the setting value 11 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF2-S12	MTF value 12 entry:vert scan, front side	
Lv.1	Details	To enter the setting value 12 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF-M10		MTF value 10 entry: horz scan, back side
Lv.1	Details	To enter the setting value 10 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-M11		MTF value 11 entry: horz scan, back side
Lv.1	Details	To enter the setting value 11 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-M12		MTF value 12 entry: horz scan, back side
Lv.1	Details	To enter the setting value 12 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S10		MTF value 10 entry: vert scan, back side
Lv.1	Details	To enter the setting value 10 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50

COPIER > ADJUST > CCD		
MTF-S11		MTF value 11 entry: vert scan, back side
Lv.1	Details	To enter the setting value 11 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
MTF-S12		MTF value 12 entry: vert scan, back side
Lv.1	Details	To enter the setting value 12 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	20 to 85
	Unit	1
	Default value	50
DFCH2K2		Complex chart No.2 data (B&W) entr: frt
Lv.1	Details	To derive the front/back side linearity, enter the B&W data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH2K10		Complex chart No.10 data (B&W) entr: frt
Lv.1	Details	To derive the front/back side linearity, enter the B&W data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0

COPIER > ADJUST > CCD		
DFCH-K2	Complex chart No.2 data (B&W) entr: bck	
Lv.1	Details	To derive the front/back side linearity, enter the B&W data on the back side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 2550
	Unit	1
	Default value	2000
DFCH-K10	Complex chart No.10 data (B&W) entr: bck	
Lv.1	Details	To derive the front/back side linearity, enter the B&W data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2550
	Unit	1
	Default value	0
DFTAR-BW	Shading target VL (B&W) entry: front	
Lv.1	Details	To enter the B&W shading target value on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL3, DF-WLVL4 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	700 to 1400
	Unit	1
	Default value	1209

COPIER > ADJUST > CCD		
DFTBK-G	Shading target VL (G) entry: back side	
Lv.1	Details	To enter the shading target value of Green on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	700 to 1400
	Unit	1
	Default value	1136
DFTBK-B	Shading target VL (B) entry: back side	
Lv.1	Details	To enter the shading target value of Blue on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	700 to 1400
	Unit	1
	Default value	1126
DFTBK-R	Shading target VL (R) entry: back side	
Lv.1	Details	To enter the shading target value of Red on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
	Use case	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	700 to 1400
	Unit	1
	Default value	1156

COPIER > ADJUST > CCD	
DFTBK-BW	Shading target VL (B&W) entry: back
Lv.1	Details
	To enter the B&W shading target value on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL3, DF-WLVL4 and write the value which is automatically set in the service label.
	Use case
	- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for back side)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	700 to 1400
	Unit
	1
	Default value
	1126

T-8-30

■ LASER

COPIER > ADJUST > LASER	
LSADJ1-Y	
Adj Laser Scanner Y-clr phase difference	
Lv.1	Details
	To adjust the phase difference of laser scanner for Y-color.
	Use case
	When replacing the Laser Scanner Unit
	Adj/set/operate method
	1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range
	-15 to 15
	Default value
	0
	Related service mode
	COPIER> TEST> PG> TYPE
LSADJ1-M	
Adj Laser Scanner M-clr phase difference	
Lv.1	Details
	To adjust the phase difference of laser scanner for M-color.
	Use case
	When replacing the Laser Scanner Unit
	Adj/set/operate method
	1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range
	-15 to 15
	Default value
	0
	Related service mode
	COPIER> TEST> PG> TYPE
LSADJ1-C	
Adj Laser Scanner C-clr phase difference	
Lv.1	Details
	To adjust the phase difference of laser scanner for C-color.
	Use case
	When replacing the Laser Scanner Unit
	Adj/set/operate method
	1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range
	-15 to 15
	Default value
	0
	Related service mode
	COPIER> TEST> PG> TYPE

COPIER > ADJUST > LASER		
LSADJ1-K		Adj Laser Scanner Bk phase difference
Lv.1	Details	To adjust the phase difference of laser scanner for Bk-color.
	Use case	When replacing the Laser Scanner Unit
	Adj/set/operate method	1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range	-15 to 15
	Default value	0
Related service mode		COPIER> TEST> PG> TYPE
LSADJ2-Y		Adj Laser Scanner Y-clr magnification
Lv.1	Details	To adjust the magnification of laser scanner for Y-color.
	Use case	When replacing the Laser Scanner Unit
	Adj/set/operate method	1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range	-15 to 15
	Default value	0
Related service mode		COPIER> TEST> PG> TYPE
LSADJ2-M		Adj Laser Scanner M-clr magnification
Lv.1	Details	To adjust the magnification of laser scanner for M-color.
	Use case	When replacing the Laser Scanner Unit
	Adj/set/operate method	1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range	-15 to 15
	Default value	0
Related service mode		COPIER> TEST> PG> TYPE

COPIER > ADJUST > LASER		
LSADJ2-C		Adj Laser Scanner C-clr magnification
Lv.1	Details	To adjust the magnification of laser scanner for C-color.
	Use case	When replacing the Laser Scanner Unit
	Adj/set/operate method	1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range	-15 to 15
	Default value	0
Related service mode		COPIER> TEST> PG> TYPE
LSADJ2-K		Adj Laser Scanner Bk-clr magnification
Lv.1	Details	To adjust the magnification of laser scanner for Bk-color.
	Use case	When replacing the Laser Scanner Unit
	Adj/set/operate method	1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
	Display/adj/set range	-15 to 15
	Default value	0
Related service mode		COPIER> TEST> PG> TYPE
M-ADJ-Y		Dspl Laser Scan Y-color moire adj phase
Lv.1	Details	To display the Y-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not change the value except in the case of replacing the Laser Scanner Unit.
	Display/adj/set range	-999 to 999
	Unit	1
	Default value	0

COPIER > ADJUST > LASER	
M-ADJ-M	Dspl Laser Scan M-color moire adj phase
Lv.1	Details
	To display the M-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Do not change the value except in the case of replacing the Laser Scanner Unit.
	Display/adj/set range
	-999 to 999
	Unit
	1
	Default value
	0
M-ADJ-C	Dspl Laser Scan C-color moire adj phase
Lv.1	Details
	To display the C-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Do not change the value except in the case of replacing the Laser Scanner Unit.
	Display/adj/set range
	-999 to 999
	Unit
	1
	Default value
	0

COPIER > ADJUST > LASER	
M-ADJ-K	Dspl Laser Scan Bk-color moire adj phase
Lv.1	Details
	To display the Bk-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Do not change the value except in the case of replacing the Laser Scanner Unit.
	Display/adj/set range
	-999 to 999
	Unit
	1
	Default value
	0
M-ADJ2-Y	Dspl Laser Scan Y-moire adj magnifictn
Lv.1	Details
	To display the Y-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-999 to 999
	Unit
	1
	Default value
	0
M-ADJ2-M	Dspl Laser Scan M-moire adj magnifictn
Lv.1	Details
	To display the M-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-999 to 999
	Unit
	1
	Default value
	0

COPIER > ADJUST > LASER		
M-ADJ2-C		Dspl Laser Scan C-moire adj magnifictn
Lv.1	Details	To display the C-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-999 to 999
	Unit	1
	Default value	0
	M-ADJ2-K	
Lv.1	Details	To display the Bk-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Laser Scanner Unit -When an image failure occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-999 to 999
	Unit	1
	Default value	0

■ IMG-REG

COPIER > ADJUST > IMG-REG		
REG-H-Y		Adj Y-color write start pstn: horz scan
Lv.1	Details	To adjust the write start position of Y-color image in horizontal scanning direction in increments of 1 micro meter.
	Use case	When Y-color displacement in horizontal scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
Default value	0	
REG-H-C		Adj C-color write start pstn: horz scan
Lv.1	Details	To adjust the write start position of C-color image in horizontal scanning direction in increments of 1 micro meter.
	Use case	When C-color displacement in horizontal scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
Default value	0	
REG-H-K		Adj Bk-color write start pstn: horz scan
Lv.1	Details	To adjust the write start position of Bk-color image in horizontal scanning direction in increments of 1 micro meter.
	Use case	When Bk-color displacement in horizontal scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
Default value	0	
REG-V-Y		Adj Y-color write start pstn: vert scan
Lv.1	Details	To adjust the write start position of Y-color image in vertical scanning direction in increments of 1 micro meter.
	Use case	When Y-color displacement in vertical scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
Default value	0	

COPIER > ADJUST > IMG-REG		
REG-V-C	Adj C-color write start pstn: vert scan	
Lv.1	Details	To adjust the write start position of C-color image in vertical scanning direction in increments of 1 micro meter.
	Use case	When C-color displacement in vertical scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
	Default value	0
REG-V-K	Adj Bk-color write start pstn: vert scan	
Lv.1	Details	To adjust the write start position of Bk-color image in vertical scanning direction in increments of 1 micro meter.
	Use case	When Bk-color displacement in vertical scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
	Default value	0
REG-H-M	Adj M-color write start pstn: horz scan	
Lv.1	Details	To adjust the write start position of M-color image in horizontal scanning direction in increments of 1 micro meter.
	Use case	When M-color displacement in horizontal scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
	Default value	0
REG-V-M	Adj M-color write start pstn: vert scan	
Lv.1	Details	To adjust the write start position of M-color image in vertical scanning direction in increments of 1 micro meter.
	Use case	When M-color displacement in vertical scanning direction occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-5250 to 5250
	Unit	1 um
	Appropriate target value	0
	Default value	0

COPIER > ADJUST > IMG-REG		
MAG-H	Adj magnification: horz scan, 1st side	
Lv.1	Details	To adjust the magnification ratio in horizontal scanning direction when length in horizontal scanning direction of image area is out of the specified range. Tolerable range of A3 paper: 292.0 +/- 0.6 mm Tolerable range of LDR paper: 274.4 +/- 0.5 mm As the value is incremented by 1, image width becomes wider by 0.01%.
	Use case	- At installation - When an error in magnification ratio in horizontal scanning direction occurs due to parts replacement or environmental change
	Adj/set/operate method	1) Measure the length (Ly mm) in horizontal scanning direction of image area on the 1st side. 2) Calculate the difference (My) between the magnification ratios. A3 paper: $My = (292 - Ly) / 292 \times 100 (\%)$ LDR paper: $My = (274.4 - Ly) / 274.4 \times 100 (\%)$ 3) Enter the setting value (current value + My x 100), and then press OK key. 4) Write the entry value in the service label.
	Caution	- Be sure to perform color displacement correction after adjustment. - After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-100 to 100
	Unit	0.01 %
	Default value	0
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch

COPIER > ADJUST > IMG-REG	
MAG-V	Adj magnification: vert scan, 1st side
Lv.1	Details
	To adjust the magnification ratio in vertical scanning direction when length in vertical scanning direction of image area is out of the specified range. Tolerable range of A3 paper: 412.0 +/- 0.8 mm Tolerable range of LDR paper: 423.8 +/- 0.8 mm As the value is incremented by 1, image width becomes wider by 0.01%.
	Use case
	- At installation - When an error in magnification ratio in vertical scanning direction occurs after replacement of ITB Unit/Secondary Transfer Unit/Registration Unit/Fixing Assembly
	Adj/set/operate method
	1) Measure the length (Lx mm) in vertical scanning direction of image area on the 1st side. 2) Calculate the difference (Mx) between the magnification ratios. A3 paper: $Mx = (412 - Lx) / 412 \times 100$ (%) LDR paper: $Mx = (423.8 - Lx) / 423.8 \times 100$ (%) 3) Enter the setting value (current value + Mx x 100), and then press OK key. 4) Write the entry value in the service label.
	Caution
	- Be sure to perform color displacement correction after adjustment. - After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-100 to 100
	Unit
	0.01 %
	Default value
	0
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch
ANGLE-1	Crrct img distortion (parallelogram):1st
Lv.1	Details
	To correct the distortion of image (parallelogram) on the 1st side. If the corners of an image are not printed at a right angle, adjust the angle of image. As the value is changed by 1, the angle is changed by 1 %.
	Use case
	When distortion of image (parallelogram) occurs at replacement of ITB/Secondary Transfer/Registration Unit, or Fixing Assembly
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-10 to 10
	Unit
	1 %
	Default value
	0

COPIER > ADJUST > IMG-REG	
MAG-V-K	Crrct magnifictn dif:vert scan,B&W/color
Lv.2	Details
	To adjust the magnification ratio when image magnification ratio in vertical scanning direction in black mode and that in color mode are different. As the value is changed by 1, the magnification ratio is changed by 1 %.
	Use case
	- When image magnification ratio in vertical scanning direction in black mode and that in color mode are different - When replacing the ITB
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-20 to 20
	Unit
	1 %
	Appropriate target value
	0
	Default value
	0
SLP-1	Correction of image misalignment: 1st
Lv.1	Details
	To correct misalignment of image on the 1st side. As the value is changed by 1, the angle is changed by 1 %.
	Use case
	- When misalignment occurs at replacement of ITB/Secondary Transfer/Registration Unit, or Fixing Assembly - When misalignment is not corrected although the arch amount before registration is adjusted
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-10 to 10
	Unit
	1 %
	Default value
	0
	Related service mode
	COPIER> ADJUST> FEED-ADJ> LP-MULT1/MULT2/DUP1/DUP2/CST/DK/DUP/MDK/MF
TRPZ-1	Crrct image distortion (trapezoid): 1st
Lv.1	Details
	To correct the distortion of image (trapezoidal image) on the 1st side. As the value is changed by 1, the magnification ratio is changed by 1 %.
	Use case
	When distortion of image (trapezoidal image) occurs at replacement of ITB/Secondary Transfer/Registration Unit, or Fixing Assembly
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-10 to 10
	Unit
	1 %
	Default value
	0

COPIER > ADJUST > IMG-REG		
DRM-SPD1	Adj of Photosensitive Drum speed: 1/1SPD	
Lv.2	Details	To adjust the speed of the Photosensitive Drum at 1/1 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
	Use case	- When color displacement in vertical scanning direction occurs - When shock image occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.025 %
	Default value	0
DRM-SPD2	Adj of Photosensitive Drum speed: 2/3SPD	
Lv.2	Details	To adjust the speed of the Photosensitive Drum at 2/3 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
	Use case	- When color displacement in vertical scanning direction occurs - When shock image occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.025 %
	Default value	0
DRM-SPD3	Adj of Photosensitive Drum speed: 1/2SPD	
Lv.2	Details	To adjust the speed of the Photosensitive Drum at 1/2 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
	Use case	- When color displacement in vertical scanning direction occurs - When shock image occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.025 %
	Default value	0

■ DENS

COPIER > ADJUST > DENS		
REF-Y	Y toner dens target VL entry	
Lv.2	Details	To enter the target value of ATR control for the Toner Density Sensor (Y). Be sure to check the value before clearing RAM and enter it again after RAM clear.
	Use case	When checking the value before RAM clear and re-entering it after RAM clear
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not use this at the normal service.
	Display/adj/set range	0 to 255
REF-M	M toner dens target VL entry	
Lv.2	Details	To enter the target value of ATR control for the Toner Density Sensor (M). Be sure to check the value before clearing RAM and enter it again after RAM clear.
	Use case	When checking the value before RAM clear and re-entering it after RAM clear
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 255
REF-C	C toner dens target VL entry	
Lv.2	Details	To enter the target value of ATR control for the Toner Density Sensor (C). Be sure to check the value before clearing RAM and enter it again after RAM clear.
	Use case	When checking the value before RAM clear and re-entering it after RAM clear
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 255
SIGG-Y	Y-color ATR patch dens target VL entry	
Lv.1	Details	To enter the Y-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
	Use case	When re-entering the value at the time of DC Controller PCB replacement/RAM clear
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1023

COPIER > ADJUST > DENS	
SIGG-M	M-color ATR patch dens target VL entry
Lv.1	Details
	To enter the M-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
	Use case
	When re-entering the value at the time of DC Controller PCB replacement/RAM clear
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1023
SIGG-C	C-color ATR patch dens target VL entry
Lv.1	Details
	To enter the C-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
	Use case
	When re-entering the value at the time of DC Controller PCB replacement/RAM clear
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1023
SIGG-K	Bk-color ATR patch dens target VL entry
Lv.1	Details
	To enter the Bk-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
	Use case
	When re-entering the value at the time of DC Controller PCB replacement/RAM clear
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1023
HLMT-PTY	Toner Dens Sensr(Y) dens crct upr limit
Lv.2	Details
	To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Y). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
	Use case
	-When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. -When analyzing the cause of a problem
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	-2 to 6 -2: 11.0%, -1: 10.5%, 0: 10.0%, 1: 9.0%, 2: 8.0%, 3: 7.5%, 4: 7.0%, 5: 6.5%, 6: 6.0%
	Unit

	0

COPIER > ADJUST > DENS		
LLMT-PTY	Toner Dens Sensr(Y)dens crct lowr limit	
Lv.2	Details	To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Y). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
	Use case	-When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. -When analyzing the cause of a problem
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
	Unit	1 %
	Default value	0
LLMT-PTM	Toner Dens Sensr(M)dens crct lowr limit	
Lv.2	Details	To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (M). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
	Use case	-When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. -When analyzing the cause of a problem
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
	Unit	1 %
	Default value	0

COPIER > ADJUST > DENS		
LLMT-PTC	Toner Dens Sensr(C)dens crct lowr limit	
Lv.2	Details	To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (C). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
	Use case	-When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. -When analyzing the cause of a problem
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
	Unit	1 %
	Default value	0
ALF-C	Adjustment of Patch Sensor alpha value	
Lv.1	Details	To adjust the coefficient alpha value of the Patch Sensor. The value multiplied by 1000 is displayed on the screen. When replacing the Patch Sensor/clearing RAM data, enter the value of service label.
	Use case	-When clearing RAM data -When replacing the Patch Sensor
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2047
	Default value	1200
P-K-K	Adj Bk-color ptch dens convs coeffct k	
Lv.2	Details	To adjust the Bk-color patch density conversion coefficient k value of the Patch Sensor. The value multiplied by 100 is displayed on the screen.
	Use case	When the Patch Sensor fails to read the density
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 255
	Default value	170

COPIER > ADJUST > DENS	
HLMT-PTK	Toner Dens Sensr(Bk)dens crct upr limit
Lv.2	Details
	To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Bk). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
	Use case
	-When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. -When analyzing the cause of a problem
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Take necessary action in accordance with the instructions from the Quality Support Division.

COPIER > ADJUST > DENS	
REF-K	Bk toner dens target VL entry
Lv.2	Details
	To enter the target value of ATR control for the Toner Density Sensor (Bk) after RAM clear.
	Use case
	When checking the value before RAM clear and re-entering it after RAM clear
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	0 to 255
	Default value
	90 (It may vary by initialization when clearing RAM.)
CONT-Y	Toner Density Sensor (Y) control voltage
Lv.1	Details
	To enter the density detection control voltage of the Toner Density Sensor (Y). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When the backup data is cleared by RAM clear, etc.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
CONT-M	Toner Density Sensor (M) control voltage
Lv.1	Details
	To enter the density detection control voltage of the Toner Density Sensor (M). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When the backup data is cleared by RAM clear, etc.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
CONT-C	Toner Density Sensor (C) control voltage
Lv.1	Details
	To enter the density detection control voltage of the Toner Density Sensor (C). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When the backup data is cleared by RAM clear, etc.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255

COPIER > ADJUST > DENS		
CONT-K	Toner Density Sensor(Bk) control voltage	
Lv.1	Details	To enter the density detection control voltage of the Toner Density Sensor (Bk). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When the backup data is cleared by RAM clear, etc.
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	0 to 255
P-TG-Y1	Adj Y ATR patch dens target VL: 1/1SPD	
Lv.2	Details	To adjust the offset of the ATR patch target value for Y at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range	-10 to 10
	Unit	1
Default value	0	

COPIER > ADJUST > DENS		
P-TG-M1	Adj M ATR patch dens target VL: 1/1SPD	
Lv.2	Details	To adjust the offset of the ATR patch target value for M at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range	-10 to 10
	Unit	1
Default value	0	
P-TG-C1	Adj C ATR patch dens target VL: 1/1SPD	
Lv.2	Details	To adjust the offset of the ATR patch target value for C at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range	-10 to 10
	Unit	1
Default value	0	

COPIER > ADJUST > DENS	
P-TG-K1	Adj Bk ATR patch dens target VL: 1/1SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for Bk at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.

P-TG-C2	Adj C ATR patch dens target VL: 2/3SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for C at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range
	-10 to 10
	Unit
	1
	Default value
	0

COPIER > ADJUST > DENS	
P-TG-K2	Adj Bk ATR patch dens target VL: 2/3SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for Bk at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range
	-10 to 10
	Unit
	1
	Default value
	0
P-TG-Y3	Adj Y ATR patch dens target VL: 1/2SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for Y at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range
	-10 to 10
	Unit
	1
	Default value
	0

COPIER > ADJUST > DENS	
P-TG-M3	Adj M ATR patch dens target VL: 1/2SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for M at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range
	-10 to 10
	Unit
	1
	Default value
	0
P-TG-C3	Adj C ATR patch dens target VL: 1/2SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for C at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.
	Display/adj/set range
	-10 to 10
	Unit
	1
	Default value
	0

COPIER > ADJUST > DENS	
P-TG-K3	Adj Bk ATR patch dens target VL: 1/2SPD
Lv.2	Details
	To adjust the offset of the ATR patch target value for Bk at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Increase/decrease the value a little at a time (about 2) while checking the image each time.

	-10 to 10
	Unit
	1
	Default value
	0

T-8-33

■ BLANK

COPIER > ADJUST > BLANK		
BLANK-T		Adjustment of leading edge margin
Lv.1	Details	To adjust the margin on the leading edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
	Use case	-Upon user's request (to reduce the margin) -When increasing the margin for transfer separation/fixing separation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Do not use this at the normal service.
	Display/adj/set range	0 to 1000
	Unit	1 pixel
	Appropriate target value	94
	Default value	94
BLANK-L		Adjustment of left edge margin
Lv.1	Details	To adjust the margin on the left edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
	Use case	-Upon user's request (to reduce the margin) -When increasing the margin for transfer separation/fixing separation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1000
	Unit	1 pixel
	Default value	59
BLANK-R		Adjustment of right edge margin
Lv.1	Details	To adjust the margin on the right edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
	Use case	-Upon user's request (to reduce the margin) -When increasing the margin for transfer separation/fixing separation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1000
	Unit	1 pixel
	Default value	59
BLANK-B		Adjustment of trailing edge margin
Lv.1	Details	To adjust the margin on the trailing edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
	Use case	-Upon user's request (to reduce the margin) -When increasing the margin for transfer separation/fixing separation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1000
	Unit	1 pixel
	Appropriate target value	94
	Default value	94

T-8-34

V-CONT

COPIER > ADJUST > V-CONT	
VCONT-K	Adj of Bk-color contrast potential
Lv.2	Details
	To adjust the offset of the contrast potential Vcont for Bk. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter. When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Use case
	When adjusting the density of D-max control in the case that an image density failure occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute COPIER> FUNCTION> DPC> DPC. 4) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-30 to 30
	Unit
	1 V
	Default value
	0
	Related service mode
	COPIER> FUNCTION> DPC> DPC
VBACK-Y	Adj Y-color fog removal potential:1/1SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for Y-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
	Use case
	At the occurrence of Y fogging
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0

COPIER > ADJUST > V-CONT	
VBACK-M	Adj M-color fog removal potential:1/1SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for M-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
	Use case
	At the occurrence of M fogging
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
VBACK-C	Adj C-color fog removal potential:1/1SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for C-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
	Use case
	At the occurrence of C fogging
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0

COPIER > ADJUST > V-CONT	
VBACK-K	Adj Bk-clr fog removal potential:1/1SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for Bk-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
	Use case
	At the occurrence of Bk fogging
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
EPOTOFST	Manual adj of Potential Sensor offset
Lv.1	Details
	To adjust the offset auto adjustment value of the Potential Sensor manually. As the value is changed by 1, the offset value is changed by 1 V. +: Identified as the lower potential than the detected one -: Identified as the higher potential than the detected one When an error is displayed in COPIER> FUNCTION> DPC> OFST after the replacement of the Potential Sensor, the value out of the specified range is set due to the error in the Potential Sensor. Enter 0 (initial value) to stop the error, and then perform the following in the order while checking whether the problem can be solved. 1) Check whether open circuit/connection failure/installation failure occurs in the Potential Sensor. 2) Enter the value of the service label. 3) If fogging occurs, increase the value in increments of 10.
	Use case
	When an error is displayed in COPIER> FUNCTION> DPC> OFST at replacement of the Potential Sensor
	Adj/set/operate method
	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-100 to 100
	Unit
	1 V
	Default value
	0
	Related service mode
	COPIER> FUNCTION> DPC> OFST

COPIER > ADJUST > V-CONT	
PT-VCT-Y	Adj Y ATR patch target contrast potntl
Lv.2	Details
	To adjust the Y-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Display/adj/set range
	-40 to 50
	Unit
	1 V
	Related service mode
	COPIER> TEST> PG> TYPE
PT-VCT-M	Adj M ATR patch target contrast potntl
Lv.2	Details
	To adjust the M-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Display/adj/set range
	-40 to 50
	Unit
	1 V
	Related service mode
	COPIER> TEST> PG> TYPE
PT-VCT-C	Adj C ATR patch target contrast potntl
Lv.2	Details
	To adjust the C-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
	Use case
	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Display/adj/set range
	-40 to 50
	Unit
	1 V
	Related service mode
	COPIER> TEST> PG> TYPE

COPIER > ADJUST > V-CONT		
PT-VCT-K		Adj Bk ATR patch target contrast potntl
Lv.2	Details	To adjust the Bk-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
	Use case	When density failures, fogging, carrier adherence, etc. occur
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
	Display/adj/set range	-40 to 50
	Unit	1 V
	Related service mode	COPIER> TEST> PG> TYPE
LPGAIN-Y		Adj of Y-color laser power gain
Lv.2	Details	To adjust the offset of the laser power for Y. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
	Use case	-At the occurrence of an image density failure -At the occurrence of a spotted image
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Caution	Do not use this when the machine is operating correctly.
	Display/adj/set range	-30 to 30
	Unit	4
	Default value	0
LPGAIN-M		Adj of M-color laser power gain
Lv.2	Details	To adjust the offset of the laser power for M. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
	Use case	-At the occurrence of an image density failure -At the occurrence of a spotted image
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Caution	Do not use this when the machine is operating correctly.
	Display/adj/set range	-30 to 30
	Unit	4
	Default value	0

COPIER > ADJUST > V-CONT		
LPGAIN-C		Adj of C-color laser power gain
Lv.2	Details	To adjust the offset of the laser power for C. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
	Use case	-At the occurrence of an image density failure -At the occurrence of a spotted image
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Caution	Do not use this when the machine is operating correctly.
	Display/adj/set range	-30 to 30
	Unit	4
	Default value	0
VBACK2-Y		Adj Y-color fog removal potential:2/3SPD
Lv.2	Details	To adjust the offset of the fogging removal potential Vback for Y-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case	When any image failure occurs at 2/3 speed
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution	Do not use this when the machine is operating correctly.
	Display/adj/set range	-5 to 5
	Unit	10 V
	Default value	0
VBACK2-M		Adj M-color fog removal potential:2/3SPD
Lv.2	Details	To adjust the offset of the fogging removal potential Vback for M-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case	When any image failure occurs at 2/3 speed
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution	Do not use this when the machine is operating correctly.
	Display/adj/set range	-5 to 5
	Unit	10 V
	Default value	0

COPIER > ADJUST > V-CONT	
VBACK2-C	Adj C-color fog removal potential:2/3SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for C-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 2/3 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
VBACK2-K	Adj Bk-clr fog removal potential:2/3SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for Bk-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 2/3 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0

COPIER > ADJUST > V-CONT	
VBACK3-Y	Adj Y-color fog removal potential:1/2SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for Y-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 1/2 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
VBACK3-M	Adj M-color fog removal potential:1/2SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for M-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 1/2 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0

COPIER > ADJUST > V-CONT	
VBACK3-C	Adj C-color fog removal potential:1/2SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for C-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 1/2 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
VBACK3-K	Adj Bk-clr fog removal potential:1/2SPD
Lv.2	Details
	To adjust the offset of the fogging removal potential Vback for Bk-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
	Use case
	When any image failure occurs at 1/2 speed
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-5 to 5
	Unit
	10 V
	Default value
	0
LPW-C	Correction of C-color laser power
Lv.2	Details
	To adjust the correction amount of C-color laser power at laser power variable control.
	Use case
	When hue variation occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
	Display/adj/set range
	0 to 10 0: OFF, 1 to 10: Change the correction amount
	Default value
	1

COPIER > ADJUST > V-CONT	
LPW-K	Correction of Bk-color laser power
Lv.2	Details
	To adjust the correction amount of Bk-color laser power at laser power variable control.
	Use case
	When hue variation occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
	Display/adj/set range
	0 to 10 0: OFF, 1 to 10: Change the correction amount
	Default value
	1
LPW-M	Correction of M-color laser power
Lv.2	Details
	To adjust the correction amount of M-color laser power at laser power variable control.
	Use case
	When hue variation occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
	Display/adj/set range
	0 to 10 0: OFF, 1 to 10: Change the correction amount
	Default value
	1
LPW-Y	Correction of Y-color laser power
Lv.2	Details
	To adjust the correction amount of Y-color laser power at laser power variable control.
	Use case
	When hue variation occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
	Display/adj/set range
	0 to 10 0: OFF, 1 to 10: Change the correction amount
	Default value
	1

COPIER > ADJUST > V-CONT		
VCONT2-Y		Adj Y-color contrast potential: 2/3 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for Y at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0
VCONT2-M		Adj M-color contrast potential: 2/3 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for M at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0

COPIER > ADJUST > V-CONT		
VCONT2-C		Adj C-color contrast potential: 2/3 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for C at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0
VCONT2-K		Adj Bk-color contrast potential: 2/3 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for Bk at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0

COPIER > ADJUST > V-CONT		
VCONT3-Y		Adj Y-color contrast potential: 1/2 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for Y at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0
VCONT3-M		Adj M-color contrast potential: 1/2 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for M at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0

COPIER > ADJUST > V-CONT		
VCONT3-C		Adj C-color contrast potential: 1/2 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for C at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0
VCONT3-K		Adj Bk-color contrast potential: 1/2 SPD
Lv.2	Details	To adjust the offset of the contrast potential Vcont for Bk at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
	Use case	When the contrast is weak
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	-When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. -In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. -In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
	Display/adj/set range	-30 to 30
	Unit	1 V
	Default value	0

T-8-35

PASCAL

COPIER > ADJUST > PASCAL	
OFST-P-Y	Y density adj at test print reading
Lv.1	Details
	To adjust the offset of Y-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment
OFST-P-M	M density adj at test print reading
Lv.1	Details
	To adjust the offset of M-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment
OFST-P-C	C density adj at test print reading
Lv.1	Details
	To adjust the offset of C-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment

COPIER > ADJUST > PASCAL	
OFST-P-K	Bk density adj at test print reading
Lv.1	Details
	To adjust the offset of Bk-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment
OFST-PY3	Y density adj at test print reading
Lv.1	Details
	To adjust the offset of Y-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment
OFST-PM3	M density adj at test print reading
Lv.1	Details
	To adjust the offset of M-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	-128 to 128
	Unit
	1
	Default value
	According to the adjustment value of the Reader at factory shipment

COPIER > ADJUST > PASCAL		
OFST-PC3		C density adj at test print reading
Lv.1	Details	To adjust the offset of C-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-128 to 128
	Unit	1
	Default value	According to the adjustment value of the Reader at factory shipment
OFST-PK3		Bk density adj at test print reading
Lv.1	Details	To adjust the offset of Bk-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
	Use case	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range	-128 to 128
	Unit	1
	Default value	According to the adjustment value of the Reader at factory shipment

T-8-36

COLOR

COPIER > ADJUST > COLOR		
ADJ-Y		Y-color balance adjustment
Lv.1	Details	To adjust the default value of the color balance when the Y-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.
	Use case	Upon user's request (to alleviate the variation of the density between machines)
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not use this at the normal service.
	Display/adj/set range	-8 to 8
	Default value	0
ADJ-M		M-color balance adjustment
Lv.1	Details	To adjust the default value of the color balance when the M-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.
	Use case	Upon user's request (to alleviate the variation of the density between machines)
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
ADJ-C		C-color balance adjustment
Lv.1	Details	To adjust the default value of the color balance when the C-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.
	Use case	Upon user's request (to alleviate the variation of the density between machines)
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
ADJ-K		Bk-color balance adjustment

COPIER > ADJUST > COLOR		
Lv.1	Details	To adjust the default value of the color balance when the Bk-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.
	Use case	Upon user's request (to alleviate the variation of the density between machines)
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
OFST-Y		Adj of Y bright area dens&color balance
Lv.1	Details	To adjust the bright area density and color balance of Y. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
	Use case	-When the background of a document cannot be read correctly -When removal of the background cannot be performed correctly and a fogging-like image appears
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-32 to 32
	Default value	0
OFST-M		Adj of M bright area dens&color balance
Lv.1	Details	To adjust the bright area density and color balance of M. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
	Use case	-When the background of a document cannot be read correctly -When removal of the background cannot be performed correctly and a fogging-like image appears
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-32 to 32
	Default value	0

COPIER > ADJUST > COLOR		
OFST-C		Adj of C bright area dens&color balance
Lv.1	Details	To adjust the bright area density and color balance of C. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
	Use case	-When the background of a document cannot be read correctly -When removal of the background cannot be performed correctly and a fogging-like image appears
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-32 to 32
	Default value	0
OFST-K		Adj Bk bright area dens&color balance
Lv.1	Details	To adjust the bright area density and color balance of Bk. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
	Use case	-When the background of a document cannot be read correctly -When removal of the background cannot be performed correctly and a fogging-like image appears
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-32 to 32
	Default value	0
LD-OFS-Y		Color balance adj of Y low dens area
Lv.2	Details	To adjust the color balance of the low density area of Y. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0

COPIER > ADJUST > COLOR		
LD-OFS-M	Color balance adj of M low dens area	
Lv.2	Details	To adjust the color balance of the low density area of M. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
LD-OFS-C	Color balance adj of C low dens area	
Lv.2	Details	To adjust the color balance of the low density area of C. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
LD-OFS-K	Color balance adj of Bk low dens area	
Lv.2	Details	To adjust the color balance of the low density area of Bk. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
MD-OFS-Y	Color balance adj of Y mid dens area	
Lv.2	Details	To adjust the color balance of the medium density area of Y. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
MD-OFS-M	Color balance adj of M mid dens area	

COPIER > ADJUST > COLOR		
Lv.2	Details	To adjust the color balance of the medium density area of M. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
MD-OFS-C	Color balance adj of C mid dens area	
Lv.2	Details	To adjust the color balance of the medium density area of C. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
MD-OFS-K	Color balance adj of Bk mid dens area	
Lv.2	Details	To adjust the color balance of the medium density area of Bk. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
HD-OFS-Y	Color balance adj of Y high dens area	
Lv.2	Details	To adjust the color balance of the high density area of Y. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
HD-OFS-M	Color balance adj of M high dens area	

COPIER > ADJUST > COLOR		
Lv.2	Details	To adjust the color balance of the high density area of M. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	HD-OFS-C Color balance adj of C high dens area	
Lv.2	Details	To adjust the color balance of the high density area of C. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	HD-OFS-K Color balance adj of Bk high dens area	
Lv.2	Details	To adjust the color balance of the high density area of Bk. As the value is larger, the image gets darker. This setting is linked with Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Color Balance.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PL-OFS-Y Clr blnce adj of Y low dens area: PDL	
Lv.2	Details	To adjust the color balance of the low density area of Y at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PL-OFS-M Clr blnce adj of M low dens area: PDL	

COPIER > ADJUST > COLOR		
Lv.2	Details	To adjust the color balance of the low density area of M at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PL-OFS-C Clr blnce adj of C low dens area: PDL	
Lv.2	Details	To adjust the color balance of the low density area of C at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PL-OFS-K Clr blnce adj of Bk low dens area: PDL	
Lv.2	Details	To adjust the color balance of the low density area of Bk at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PM-OFS-Y Clr blnce adj of Y mid dens area: PDL	
Lv.2	Details	To adjust the color balance of the medium density area of Y at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-8 to 8
	Default value	0
	PM-OFS-M Clr blnce adj of M mid dens area: PDL	
Lv.2	Details	To adjust the color balance of the medium density area of M at PDL print. As the value is larger, the image gets darker.
	Use case	Do not use this when the machine is operating correctly.
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.

COPIER > ADJUST > HV-PRI	
PRIMARY	Adjustment of primary charging current
Lv.1	Details
	To adjust the offset of the primary charging current. As the value is changed by 1, the current is changed by 50 micro A.
	Use case
	-When the output difference from the initial value is large due to the failure in Primary Charging Assembly High Voltage Transformer -When changing the primary charging current and then checking the high voltage output
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-10 to 6
	Unit
	50 uA
	Default value
	0
DIS-TGY	Adj env Vpp ctrl Y tgt current: 1/1 SPD
Lv.2	Details
	To adjust the target current for Y-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
	Use case
	When an image failure (sand-like image/image smear) occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-10 to 15
	Unit
	50 V
	Default value
	0
	Supplement/memo
	Sand-like image: white dots on a halftone image, black dots on white background, etc.
DIS-TGM	Adj env Vpp ctrl M tgt current: 1/1 SPD
Lv.2	Details
	To adjust the target current for M-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
	Use case
	When an image failure (sand-like image/image smear) occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	-10 to 15
	Unit
	50 V
	Default value
	0
	Supplement/memo
	Sand-like image: white dots on a halftone image, black dots on white background, etc.

COPIER > ADJUST > HV-PRI	
DIS-TGC	Adj env Vpp ctrl C tgt current: 1/1 SPD
Lv.2	Details
	To adjust the target current for C-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
	Use case
	When an image failure (sand-like image/image smear) occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this when the machine is operating correctly.

HV-TR

COPIER > ADJUST > HV-TR	
PRE-TR	Set Pre-transfer charge current adj VL
Lv.1	Details
	To set the output adjustment value of pre-transfer charging current. As the value is changed by 1, the current is changed by 5 micro A. When the toner scattering occurs at the image end side, decrease the value.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When an image failure (leopard patterns on Bk solid image) occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-30 to 40
	Unit
	5 uA
	Default value
	0
2TR-TGT1	Sec trns indiv set tgt crnt adj: set 1
Lv.2	Details
	To adjust the target current of secondary transfer for setting 1. Setting 1 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV1, TR-PPR1, TR-CLR1 and TR-DUP1. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
	Use case
	When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Increase/decrease the value by 1 while checking the symptom each time.
	Display/adj/set range
	-10 to 10
	Unit
	2 uA
	Default value
	0

	To adjust the paper allotted voltage of secondary transfer for setting 6. Setting 6 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV6, TR-PPR6, TR-CLR6 and TR-DUP6. When this condition is satisfied, the paper allotted voltage that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the voltage is changed by 100 V. +: Increase -: Decrease
	Use case
	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the paper type occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Increase/decrease the value by 1 while checking the symptom each time.
	Display/adj/set range
	-10 to 10
	Unit
	100 V
	Default value
	0
2TR-SHR7	Sec trns indiv set ppr allot voltg:set 7
Lv.2	Details
	To adjust the paper allotted voltage of secondary transfer for setting 7. Setting 7 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV7, TR-PPR7, TR-CLR7 and TR-DUP7. When this condition is satisfied, the paper allotted voltage that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the voltage is changed by 100 V. +: Increase -: Decrease
	Use case
	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the paper type occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Increase/decrease the value by 1 while checking the symptom each time.
	Display/adj/set range
	-10 to 10
	Unit
	100 V
	Default value
	0

Setting 7 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV7, TR-PPR7, TR-CLR7 and TR-DUP7. When this condition is satisfied, the target current that is set in 2TR-TGT7 and paper allotted voltage that is set in 2TR-SHR7 are applied to the Secondary Transfer Outer Roller.</p> <p>Use case</p> <p>When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>1 to 2 1: Black mode, 2: Color mode</p> <p>Default value</p> <p>1</p>
TR-CLR8	Sec trns indiv setting color mode: set 8
Lv.2	<p>Details</p> <p>To set B&W/color for setting 8. Setting 8 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV8, TR-PPR8, TR-CLR8 and TR-DUP8. When this condition is satisfied, the target current that is set in 2TR-TGT8 and paper allotted voltage that is set in 2TR-SHR8 are applied to the Secondary Transfer Outer Roller.</p> <p>Use case</p> <p>When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>1 to 2 1: Black mode, 2: Color mode</p> <p>Default value</p> <p>1</p>

COPIER > ADJUST > HV-TR		
TR-DUP1	Sec trns indiv setting feed side: set 1	
Lv.2	Details	To set the feed side for setting 1. Setting 1 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV1, TR-PPR1, TR-CLR1 and TR-DUP1. When this condition is satisfied, the target current that is set in 2TR-TGT1 and paper allotted voltage that is set in 2TR-SHR1 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1
TR-DUP2	Sec trns indiv setting feed side: set 2	
Lv.2	Details	To set the feed side for setting 2. Setting 2 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV2, TR-PPR2, TR-CLR2 and TR-DUP2. When this condition is satisfied, the target current that is set in 2TR-TGT2 and paper allotted voltage that is set in 2TR-SHR2 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1

COPIER > ADJUST > HV-TR		
TR-DUP3	Sec trns indiv setting feed side: set 3	
Lv.2	Details	To set the feed side for setting 3. Setting 3 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV3, TR-PPR3, TR-CLR3 and TR-DUP3. When this condition is satisfied, the target current that is set in 2TR-TGT3 and paper allotted voltage that is set in 2TR-SHR3 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1
TR-DUP4	Sec trns indiv setting feed side: set 4	
Lv.2	Details	To set the feed side for setting 4. Setting 4 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV4, TR-PPR4, TR-CLR4 and TR-DUP4. When this condition is satisfied, the target current that is set in 2TR-TGT4 and paper allotted voltage that is set in 2TR-SHR4 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1

COPIER > ADJUST > HV-TR		
TR-DUP5		Sec trns indiv setting feed side: set 5
Lv.2	Details	To set the feed side for setting 5. Setting 5 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV5, TR-PPR5, TR-CLR5 and TR-DUP5. When this condition is satisfied, the target current that is set in 2TR-TGT5 and paper allotted voltage that is set in 2TR-SHR5 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1
TR-DUP6		Sec trns indiv setting feed side: set 6
Lv.2	Details	To set the feed side for setting 6. Setting 6 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV6, TR-PPR6, TR-CLR6 and TR-DUP6. When this condition is satisfied, the target current that is set in 2TR-TGT6 and paper allotted voltage that is set in 2TR-SHR6 are applied to the Secondary Transfer Outer Roller.
	Use case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
	Default value	1

COPIER > ADJUST > HV-TR

CLN1-PI3	Upstm cln crnt:1/2,multi tone ptch form
Lv.2	Details
	To adjust the current flowing to the ITB Cleaning Roller (Upstream) when forming patch for real-time multiple tone control at 1/2 speed. As the value is changed by 1, the current is changed by 1 micro A.
	Use case
	When cleaning failure occurs with patch
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-80 to 0
	Unit
	1 uA
	Default value
	0
	Related service mode
	COPIER> ADJUST> HV-TR> CLN2-PI3
CLN2-I1	Adj dwstm clean current:1/1SPD, img form
Lv.2	Details
	To adjust the current flowing to the ITB Cleaning Roller (Downstream) when forming an image at 1/1 speed. As the value is changed by 1, the current is changed by 1 micro A.
	Use case
	When cleaning failure occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	If cleaning failure is not solved after adjustment is made, adjust the current flowing to the ITB Cleaning Roller (Upstream) with CLN1-I1.
	Display/adj/set range
	0 to 80
	Unit
	1 uA
	Default value
	0

■ FEED-ADJ

COPIER > ADJUST > FEED-ADJ		
REGIST	Adj of paper leading edge margin: plain	
Lv.1	Details	To adjust the leading edge margin on plain paper by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. +: Leading edge margin becomes smaller. (An image moves upward.) -: Leading edge margin becomes larger. (An image moves downward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
	ADJ-C1	Write start pstn in horz scan:Cassette 1
Lv.1	Details	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 1. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0
ADJ-C2	Write start pstn in horz scan:Cassette 2	
Lv.1	Details	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 2. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ		
ADJ-C3		Write start pstn in horz scan:Cassette 3
Lv.1	Details	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 3. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0
ADJ-MF		Write start pstn in horz scan: MP tray
Lv.1	Details	To adjust the image write start position in the horizontal scanning direction when picking up paper from the Multi-purpose Tray. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0
ADJ-DK		Write start pstn in horz scan: Deck Lite
Lv.1	Details	To adjust the image write start position in the horizontal scanning direction when feeding paper from the POD Deck Lite. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ		
ADJ-REFE		Write start pstn in horz scan: 2nd side
Lv.1	Details	To adjust the image write start position on the 2nd side in the horizontal scanning direction. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-100 to 100
	Unit	0.1 mm
	Default value	0
REG-DUP1		Adj ppr lead edge margin: 1/1 SPD, 2nd
Lv.1	Details	To adjust the leading edge margin on the 2nd side at 1/1 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ	
REG-DUP2	Adj ppr lead edge margin: 2/3 SPD, 2nd
Lv.1	Details
	To adjust the leading edge margin on the 2nd side at 2/3 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0
PFIX-FAN	Set Pre-fix Feed Attraction Fan airflow
Lv.2	Details
	To set the airflow amount of the Pre-fixing Feed Attraction Fan in order to adjust the suction feeding capability of the Pre-fixing Feed Unit. Heavy paper of small irregular size can be fed when full speed is set, but noise becomes louder. In addition, wrinkles on thin paper may be alleviated. When 0 is set, the fan rotates at full speed for heavy paper 5 and paper with 200 mm or less in length in feed direction and 181 g/m ² or more in weight. The fan rotates at half speed for other papers. When 1 is set, the fan rotates at full speed for thin paper 1/2 and recycled paper 1 in addition to the above papers. The fan rotates at half speed for other papers. When 2 is set, the fan always rotates at full speed.
	Use case
	-Upon user's request (to improve feeding performance of small size paper) -When wrinkles occur with thin paper
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	-When full speed is set, noise becomes larger. -When half speed is set, a jam might occur unless an upward curl is added to paper depending on the paper type.
	Display/adj/set range
	0 to 2 0: Full speed for heavy paper 5 and paper with 200 mm or less in length in feed direction and 181 g/m ² or more in weight. Half speed for other papers. 1: Full speed for papers mentioned above, thin paper 1/2 and recycled paper 1. Half speed for other papers. 2: Full speed
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
ADJ-MDK1	Write pstn in horz scan:Multi Deck(Upr)
Lv.1	Details
	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Upper). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	If the paper width is larger than 320 mm, execute mechanical adjustment.
	Display/adj/set range
	-100 to 100
	Unit
	0.1 mm
	Default value
	0
ADJ-MDK2	Write pstn in horz scan:Multi Deck(Mid)
Lv.1	Details
	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Middle). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	If the paper width is larger than 320 mm, execute mechanical adjustment.
	Display/adj/set range
	-100 to 100
	Unit
	0.1 mm
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
ADJ-MDK3	Write pstn in horz scan:Multi Deck(Lowr)
Lv.1	Details
	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Lower). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	If the paper width is larger than 320 mm, execute mechanical adjustment.
	Display/adj/set range
	-100 to 100
	Unit
	0.1 mm
	Default value
	0
PFIX-SPD	Adj of Pre-fix Feed Motor speed
Lv.2	Details
	To adjust the speed of the Pre-fixing Feed Motor. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. Increase the value if a jam occurs as the result that the trailing edge of thin paper or recycled paper winds around the Secondary Transfer Outer Roller.
	Use case
	When the trailing edge of thin paper or recycled paper winds around the Secondary Transfer Outer Roller, and a jam occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 %
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
EXT-SPD	Adj of Delivery Motor speed
Lv.2	Details
	To adjust the speed of the Delivery Motor. The rotation speed of the Outer Delivery Roller changes in the case of the straight delivery and 2-sided delivery. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and fixing side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is created between the Outer Delivery Roller and Fixing Assembly, and consequently a jam due to paper bending might occur.
	Use case
	-When uneven gloss occurs -When noise comes from the Outer Delivery Drive Assembly -When a jam occurs because paper winds around the Fixing Assembly
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-30 to 30
	Unit
	0.1 %
	Appropriate target value
	0
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
TBLT-SPD	Fine adjustment of ITB speed
Lv.1	<p>Details</p> <p>To make a fine adjustment of the ITB speed. As the value is changed by 1, the speed of the ITB Drive Motor is changed by 0.025 %. +: The speed is increased. -: The speed is decreased. When the speed is changed, the image magnification ratio in vertical scanning direction is changed. The adjustment result is reflected to 1/1 speed, 2/3 speed, and 1/2 speed. If blur image (uneven density at random intervals) is not alleviated by COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3, increase the speed (1 to 4).</p> <p>Use case</p> <p>When blur image (uneven density at random intervals) occurs</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value (1 to 4; switch negative/positive by +/- key) and press OK key. 2) Output an halftone image. If blur image is alleviated, execute step 3 and later. If not, change the setting value to 5 to 8, and check again. 3) Change the magnification ratio in vertical scanning direction in "Fine Adjust Zoom" in Settings/Registration as needed. 4) Change the leading edge margin in COPIER> ADJUST> FEED-ADJ> REGIST as needed. 5) Adjust the color displacement in vertical scanning direction in "Auto Correct Color Mismatch" in Settings/Registration.</p> <p>Caution</p> <p>-Use this mode when blur image (uneven density at random intervals) is not alleviated by COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3. -The operation is enabled when the setting value of COPIER> OPTION> IMG-TR> ITB-TYPE is "1". -If the setting value is out of the range between -4 and 0, uneven density at intervals of other circumference might get worse. -After execution, check magnification ratio in vertical scanning direction and leading edge margin, and then execute "Auto Correct Color Mismatch".</p> <p>Display/adj/set range</p> <p>-10 to 10</p> <p>Unit</p> <p>0.025 %</p> <p>Default value</p> <p>0</p> <p>Related service mode</p> <p>COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3 COPIER> ADJUST> FEED-ADJ> REGIST COPIER> OPTION> IMG-TR> ITB-TYPE</p> <p>Related UI menu</p> <p>Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Image Position> Fine Adjust Zoom Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch</p>

COPIER > ADJUST > FEED-ADJ	
REG-DUP3	Adj ppr lead edge margin: 1/2 SPD, 2nd
Lv.1	<p>Details</p> <p>To adjust the leading edge margin on the 2nd side at 1/2 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.</p> <p>Use case</p> <p>When replacing the DC Controller PCB/clearing RAM data</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p> <p>DCR1-SPD</p> <p>Adj of Decurler Feed Motor 1 speed</p> <p>Lv.2</p> <p>Details</p> <p>To adjust the speed of the Decurler Feed Motor 1. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and decurler side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is formed between the delivery side and the Buffer Decurler, and it may cause scratch on an image or uneven gloss.</p> <p>Use case</p> <p>-When uneven gloss occurs -When scratch on an image occurs</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-30 to 30</p> <p>Unit</p> <p>0.1 %</p> <p>Appropriate target value</p> <p>0</p> <p>Default value</p> <p>0</p>

COPIER > ADJUST > FEED-ADJ		
DCR2-SPD	Adj of Decurler Feed Motor 2 speed	
Lv.2	Details	To adjust the speed of the Decurler Feed Motor 2. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and decurler side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is formed between the delivery side and the Buffer Decurler, and it may cause scratch on an image or uneven gloss.
	Use case	-When uneven gloss occurs -When scratch on an image occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Appropriate target value	0
	Default value	0
LP-CST	Adj pre-rgst arch amnt: 1st side, Cassette	
Lv.1	Details	To adjust the arch amount before registration for the 1st side of paper when feeding paper from a cassette. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
	Use case	When skew occurs on the 1st side at the time of picking up paper from a cassette
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, paper wrinkles or paper bending may occur.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ		
LP-DK	Adj pre-rgst arch amnt: 1st, Deck Lite	
Lv.1	Details	To adjust the arch amount before registration for the 1st side of paper when feeding paper from POD Deck Lite. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
	Use case	When skew occurs on the 1st side at the time of picking up paper from POD Deck Lite
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, paper wrinkles or paper bending may occur.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
LP-DUP	Adj pre-rgst arch amount: 2nd side	
Lv.1	Details	To adjust the arch amount before registration for the 2nd side of paper. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
	Use case	When skew occurs on the 2nd side
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, paper wrinkles or paper bending may occur.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
LP-MDK	Adj pre-rgst arch amnt: 1st, Multi Deck	
Lv.1	Details	To adjust the arch amount before registration for the 1st side of paper when feeding paper from the Multi Deck. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
	Use case	When skew occurs on the 1st side at the time of picking up paper from Multi Deck
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, paper wrinkles or paper bending may occur.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ	
LP-MF	Adj pre-rgst arch amount: 1st, MP Tray
Lv.1	Details
	To adjust the arch amount before registration for the 1st side of paper when feeding paper from the Multi-purpose Tray. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
	Use case
	When skew occurs on the 1st side at the time of picking up paper from the Multi-purpose Tray
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	If the value is too large, paper wrinkles or paper bending may occur.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0
REG-1	Adj ppr lead edge margin: 1/1 SPD, 1st
Lv.1	Details
	To adjust the leading edge margin on the 1st side at 1/1 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
REG-2	Adj ppr lead edge margin: 2/3 SPD, 1st
Lv.1	Details
	To adjust the leading edge margin on the 1st side at 2/3 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0
REG-3	Adj ppr lead edge margin: 1/2 SPD, 1st
Lv.1	Details
	To adjust the leading edge margin on the 1st side at 1/2 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-50 to 50
	Unit
	0.1 mm
	Default value
	0

COPIER > ADJUST > FEED-ADJ	
REG-MF-1	Adj ppr lead edge margin: 1/1 SPD, MP
Lv.1	<p>Details</p> <p>To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 1/1 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.</p> <p>Use case</p> <p>When replacing the DC Controller PCB/clearing RAM data</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
REG-MF-2	Adj ppr lead edge margin: 2/3 SPD, MP
Lv.1	<p>Details</p> <p>To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 2/3 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.</p> <p>Use case</p> <p>When replacing the DC Controller PCB/clearing RAM data</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>

COPIER > ADJUST > FEED-ADJ	
REG-MF-3	Adj ppr lead edge margin: 1/2 SPD, MP
Lv.1	<p>Details</p> <p>To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 1/2 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.</p> <p>Use case</p> <p>When replacing the DC Controller PCB/clearing RAM data</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
REV-SPD	Adj of Reverse Motor speed
Lv.2	<p>Details</p> <p>To adjust the speed of the Reverse Motor. The rotation speed of the Reverse Roller changes in the case of the reverse delivery and 2-sided delivery. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and fixing side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is created between the Reverse Roller and Fixing Assembly, and consequently a jam due to paper bending might occur.</p> <p>Use case</p> <p>-When uneven gloss occurs -When noise comes from the Outer Delivery Drive Assembly -When a jam occurs because paper winds around the Fixing Assembly</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-30 to 30</p> <p>Unit</p> <p>0.1 %</p> <p>Appropriate target value</p> <p>0</p> <p>Default value</p> <p>0</p>

COPIER > ADJUST > FEED-ADJ		
PREG-SPD	Adj of Pre-registration Motor speed	
Lv.2	Details	To adjust the speed of the Pre-registration Motor. As the value is changed by 1, the speed is changed by 0.1%.
	Use case	When analyzing the cause of a problem
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Default value	0
REG-REV1	Adj of Reg Roller rvrs rotn amnt:1/1SPD	
Lv.2	Details	To adjust the reverse rotation amount of the Registration Roller at side registration correction. (1/1 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
	Use case	-When skew correction is insufficient -When leading edge of paper is bent or flipped
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
REG-REV2	Adj of Reg Roller rvrs rotn amnt:2/3SPD	
Lv.2	Details	To adjust the reverse rotation amount of the Registration Roller at side registration correction. (2/3 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
	Use case	-When skew correction is insufficient -When leading edge of paper is bent or flipped
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ		
REG-REV3	Adj of Reg Roller rvrs rotn amnt:1/2SPD	
Lv.2	Details	To adjust the reverse rotation amount of the Registration Roller at side registration correction. (1/2 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
	Use case	-When skew correction is insufficient -When leading edge of paper is bent or flipped
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
REG-SPD1	Adj of Registration Motor speed: 1/1SPD	
Lv.1	Details	To adjust the speed of the Registration Motor at 1/1 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
	Use case	-When the image at the leading edge of paper shrinks or expands in the feed direction -When an image failure (wavy-line image) occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Default value	0
REG-SPD2	Adj of Registration Motor speed: 2/3SPD	
Lv.1	Details	To adjust the speed of the Registration Motor at 2/3 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
	Use case	-When the image at the leading edge of paper shrinks or expands in the feed direction -When an image failure (wavy-line image) occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Default value	0

COPIER > ADJUST > FEED-ADJ		
REG-SPD3	Adj of Registration Motor speed: 1/2SPD	
Lv.1	Details	To adjust the speed of the Registration Motor at 1/2 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
	Use case	-When the image at the leading edge of paper shrinks or expands in the feed direction -When an image failure (wavy-line image) occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Default value	0
CT1-PKLV	Adj of paper surface height: Cassette 1	
Lv.2	Details	To adjust the pickup position of the Cassette 1. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
	Use case	-When a pickup failure occurs -When double feed occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
	Display/adj/set range	-10 to 10
	Unit	0.5
	Default value	0
CT2-PKLV	Adj of paper surface height: Cassette 2	
Lv.2	Details	To adjust the pickup position of the Cassette 2. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
	Use case	-When a pickup failure occurs -When double feed occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
	Display/adj/set range	-10 to 10
	Unit	0.5
	Default value	0

COPIER > ADJUST > FEED-ADJ		
CT3-PKLV	Adj of paper surface height: Cassette 3	
Lv.2	Details	To adjust the pickup position of the Cassette 3. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
	Use case	-When a pickup failure occurs -When double feed occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
	Display/adj/set range	-10 to 10
	Unit	0.5
	Default value	0
DK1-PKLV	Adjustment of paper surface height: Deck	
Lv.2	Details	To adjust the pickup position of POD Deck Lite. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
	Use case	-When a pickup failure occurs -When double feed occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
	Display/adj/set range	-10 to 10
	Unit	0.5
	Default value	0
REG-STOP	Adj of stop position before registration	
Lv.2	Details	To adjust the position where a paper stops immediately before registration. As the value is changed by 1, the stop position is moved by 0.1 mm. If degree of skew varies after replacement of the Registration Sensor/Registration Unit or when the Pre-registration Roller has worn out, make an adjustment a little at a time while checking the symptom.
	Use case	When skew correction is insufficient
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Be sure to increase the value a little at a time. If the value is too large, wrinkles occur.
	Display/adj/set range	-30 to 30
	Unit	0.1 mm
	Default value	0

COPIER > ADJUST > FEED-ADJ	
CIS-INIT	Entr Contact Img Sns adj VL: fcty shpmt
Lv.2	Details
	To enter the adjustment value of the Contact Image Sensor at factory shipment. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label together with the value of L-INIT (left edge margin value).
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value and press OK key.
	Display/adj/set range
	4817 to 5100
	Unit
	1 pixel
	Appropriate target value
	4958
	Default value
	According to the setting at shipment
	Related service mode
	COPIER> ADJUST> FEED-ADJ> L-INIT
L-INIT	Entr left edge margin adj VL at shipment
Lv.2	Details
	To enter the adjustment value of the left edge margin at factory shipment. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label together with the value of CIS-INIT (Contact Image Sensor).
	Use case
	When replacing the DC Controller PCB/clearing RAM data
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-100 to 100
	Unit
	0.1
	Default value
	According to the setting at shipment
	Related service mode
	COPIER> ADJUST> FEED-ADJ> CIS-INIT
REG-L	Adj of left edge registration position
Lv.1	Details
	To adjust the left edge registration position by changing the image write start position in horizontal scanning direction. Adjust the value of "i" to be 20 mm by checking the image adjustment chart. As the value is changed by 1, the image is moved by 0.1 mm. +: Toward rear (Left margin becomes larger.) -: Toward front (Left margin becomes smaller.) When CIS-OFF is 0, this setting is enabled.
	Use case
	-At initial installation -When checking image displacement at replacement of the Registration Unit/Contact Image Sensor/ITB/Scanner Unit
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-100 to 100
	Unit
	0.1
	Default value
	0
	Related service mode
	COPIER> OPTION> FEED-SW> CIS-OFF

T-8-40

■ CST-ADJ

COPIER > ADJUST > CST-ADJ	
MF-A4R	Adj of MP Tray A4R paper width
Lv.1	Details
	To adjust the width of A4R paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A4R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
MF-A6R	Adj of MP Tray A6R paper width
Lv.1	Details
	To adjust the width of A6R paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A6R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
MF-A4	Adj of MP Tray A4 paper width
Lv.1	Details
	To adjust the width of A4 paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A4.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255

COPIER > ADJUST > CST-ADJ	
MDK1-A4	Adj of Multi Deck (Upper) A4 paper width
Lv.1	Details
	To adjust the width of A4 paper in the Multi Deck (Upper). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK1-A4.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK1-A4
MDK1-A5R	Adj of Multi Deck(Upper) A5R paper width
Lv.1	Details
	To adjust the width of A5R paper in the Multi Deck (Upper). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK1-A5R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK1-A5R
MDK2-A4	Adj of Multi Deck (Mid) A4 paper width
Lv.1	Details
	To adjust the width of A4 paper in the Multi Deck (Middle). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK2-A4.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK2-A4

COPIER > ADJUST > CST-ADJ	
MDK2-A5R	Adj of Multi Deck (Mid) A5R paper width
Lv.1	Details
	To adjust the width of A5R paper in the Multi Deck (Middle). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK2-A5R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK2-A5R
MDK3-A4	Adj of Multi Deck (Lower) A4 paper width
Lv.1	Details
	To adjust the width of A4 paper in the Multi Deck (Lower). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK3-A4.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK3-A4
MDK3-A5R	Adj of Multi Deck(Lower) A5R paper width
Lv.1	Details
	To adjust the width of A5R paper in the Multi Deck (Lower). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK3-A5R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 255
	Related service mode
	COPIER> FUNCTION> CST> MDK3-A5R

COPIER > ADJUST > CST-ADJ	
PDK-A4	Adj of POD Deck Lite A4 paper width
Lv.1	Details
	To adjust the width of A4 paper in the POD Deck Lite. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Sensor PCB or registering a new value, execute COPIER> FUNCTION> CST> PDK-A4.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Paper Width Sensor PCB or registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 1023
	Default value
	0
	Related service mode
	COPIER> FUNCTION> CST> PDK-A4
PDK-A5R	Adj of POD Deck Lite A5R paper width
Lv.1	Details
	To adjust the width of A5R paper in the POD Deck Lite. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Sensor PCB or registering a new value, execute COPIER> FUNCTION> CST> PDK-A5R.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Paper Width Sensor PCB or registering a new value
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After the setting value is changed, write the changed value in the service label.
	Display/adj/set range
	0 to 1023
	Default value
	0
	Related service mode
	COPIER> FUNCTION> CST> PDK-A5R

T-8-41

■ MISC

COPIER > ADJUST > MISC	
SEG-ADJ	Set criteria for text/photo: front side
Lv.1	Details
	To set the judgment level of text/photo original in Text/Photo/Map mode. As the value is larger, the original is more likely judged as a photo document, and as the value is smaller, the original is more likely judged as a text document.
	Use case
	When adjusting the classification level of text and photo in Text/Photo/Map mode
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-4 to 4
	Default value
	0
K-ADJ	Set criteria for black text: front side
Lv.1	Details
	To set the judgment level of black characters at text processing. As the value is increased, the text tends to be detected as black.
	Use case
	When preferring the text to be judged as black
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-3 to 3
	Default value
	0
ACS-ADJ	Set criteria for B&W/color in ACS:front
Lv.1	Details
	To set the judgment level of B&W/color original in ACS mode. As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.
	Use case
	When adjusting the color recognition level in ACS mode
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-3 to 3
	Default value
	0
ACS-EN	Set judgment area in ACS mode:front
Lv.2	Details
	To set the judgment area in ACS mode. As the value is larger, the judgment area is widened.
	Use case
	When adjusting the judgment area in ACS mode
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-2 to 2
	Default value
	1

COPIER > ADJUST > MISC		
ACS-CNT		Set jdgmt pixel count area in ACS:front
Lv.2	Details	To set the area where the pixel is counted to judge the color presence in ACS mode. As the value is larger, the judgment area is widened.
	Use case	When adjusting the area where the pixel is counted to judge the color presence in ACS mode
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-2 to 2
	Default value	0
ACS-EN2		Set ACS mode jdgmt area in DADF mode
Lv.2	Details	To set the judgment area in ACS mode at DADF reading. As the value is larger, the judgment area is widened.
	Use case	When adjusting the judgment area in ACS mode at DADF reading
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-2 to 2
	Default value	1
ACS-CNT2		Set ACS jdgmt pixel count area in DADF
Lv.2	Details	To set the area where the pixel is counted to judge the color presence in ACS mode at DADF reading. As the value is larger, the judgment area is widened.
	Use case	When adjusting the area where the pixel is counted to judge the color presence in ACS mode at DADF reading
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-2 to 2
	Default value	0
WT-ER-LV		Set Drum Clean/Waste Toner Feed Mtr SPD
Lv.1	Details	To set the speed of Drum Cleaning/Waste Toner Feed Drive Motor (M30). Increase the value when uneven density at 10 mm intervals occurs.
	Use case	When uneven density at 10 mm intervals occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range	0 to 3 0: 120 %, 1: 150 %, 2: 160 %, 3: 170 %
	Unit	-%
	Default value	0

COPIER > ADJUST > MISC		
SEG-ADJ3		Set criteria for text/photo: back side
Lv.1	Details	To set the judgment level of text/photo original in Text/Photo/Map mode when reading the back side. As the value is larger, the original is more likely judged as a photo document, and as the value is smaller, the original is more likely judged as a text document.
	Use case	When adjusting the classification level of text and photo in Text/Photo/Map mode on the back side
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-4 to 4
	Default value	0
K-ADJ3		Set Bk text jdgmt stdrd: back side
Lv.1	Details	To set the judgment level of black characters for text processing when reading the back side. As the value is larger, the text tends to be detected as black.
	Use case	When preferring the text to be judged as black on the back side
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-3 to 3
	Default value	0
ACS-ADJ3		Set criteria for B&W/color in ACS:back
Lv.1	Details	To set the judgment level of B&W/color original in ACS mode when reading the back side. As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.
	Use case	When adjusting the color recognition level in ACS mode on the back side
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-3 to 3
	Default value	0
ACS-EN3		Set judgment area in ACS mode:back
Lv.2	Details	To set the judgment area in ACS mode when reading the back side. As the value is larger, the judgment area is widened.
	Use case	When adjusting the judgment area in ACS mode on the back side
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-2 to 2
	Default value	1

COPIER > ADJUST > MISC	
ACS-CNT3	Set jdgmt pixel count area in ACS:back
Lv.2	Details
	To set the area where the pixel is counted to judge the color presence in ACS mode when reading the back side. As the value is larger, the judgment area is widened.
	Use case
	When adjusting the area where the pixel is counted to judge the color presence in ACS mode on the back side
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-2 to 2
	Default value
	0
SH-ADJ	Adj of sharpness: Copyboard, DADF front
Lv.1	Details
	To adjust the sharpness of image in copyboard reading mode and image on the front side in duplex stream reading mode that is set in Settings/Registration menu. As the value is larger, the image gets sharper. If the value is too large, moire is likely to occur in an output image of COPY and SEND. To match the image quality with that of the back side in the duplex stream reading mode, decrease the value when moire on the front side is stronger than the back side and increase the value when it is weaker.
	Use case
	When moire frequently occurs on images of COPY and SEND output
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-3 to 3
	Default value
	0
SH-ADJ2	Adjustment of sharpness: DADF back side
Lv.1	Details
	To adjust the sharpness of image on the back side in duplex stream reading mode that is set in Settings/Registration menu. As the value is larger, the image gets sharper. If the value is too large, moire is likely to occur in an output image of COPY and SEND. To match the image quality with that of the front side in the duplex stream reading mode, decrease the value when moire on the front side is stronger than the back side, and increase the value when it is weaker.
	Use case
	When moire frequently occurs on images of COPY and SEND output
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-3 to 3
	Default value
	0

COPIER > ADJUST > MISC	
FAN-HIGH	Adj Fix Heat Fan rotn: hi temp at print
Lv.2	Details
	To adjust the number of rotations of the Fixing Heat Fan when temperature inside the machine rises high during printing. Decrease the value when the drive noise from the fan at high temperature is loud.
	Use case
	Upon user's request (to reduce fan drive noise at high temperature)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	80 to 100
	Unit
	1 %
	Default value
	100
FAN-STBY	Adj Fixing Heat Fan rotations: standby
Lv.2	Details
	To adjust the number of rotations of the Fixing Heat Fan at standby. As the value is increased, high frequency noise from the fan at standby can be alleviated, but drive noise becomes louder.
	Use case
	Upon user's request (to alleviate high frequency noise from the fan at standby)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	As the value is larger, drive noise from the fan becomes louder.
	Display/adj/set range
	2450 to 3500
	Unit
	1 rpm
	Default value
	2450

T-8-42

■ SENS-ADJ

COPIER > ADJUST > SENS-ADJ	
UP-ED-OF	Adj ITB upstream displace correct amount
Lv.2	Details
	To adjust the displacement correction amount at upstream side of the ITB by changing the tilt of the ITB Displacement Sensor 2. If the upstream side of the ITB is displaced, the degree of color displacement in horizontal scanning direction becomes larger in the following order: Bk, C, M, and Y. As the value is changed by 1, the correction amount is changed by 20 micro m. If Y-color is displaced toward front relative to Bk-color, increase the value.
	Use case
	When color displacement (Bk<C<M<Y) occurs in horizontal scanning direction
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-10 to 10
	Unit
	20 um
	Default value
	0

T-8-43

■ EXP-LED

COPIER > ADJUST > EXP-LED	
PR-EXP-Y	Adj Clean Pre-expo LED(Y) current:1/1SPD
Lv.2	Details
	To adjust the current of the Cleaning Pre-exposure LED (Y) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case
	-When drum ghost (uneven density at intervals of drum circumference) occurs -When potential is not applied well
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this at the normal service.
	Display/adj/set range
	-10 to 10
	Unit
	10 mA
	Default value
	0
PR-EXP-M	Adj Clean Pre-expo LED(M) current:1/1SPD
Lv.2	Details
	To adjust the current of the Cleaning Pre-exposure LED (M) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case
	-When drum ghost (uneven density at intervals of drum circumference) occurs -When potential is not applied well
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-10 to 10
	Unit
	10 mA
	Default value
	0
PR-EXP-C	Adj Clean Pre-expo LED(C) current:1/1SPD
Lv.2	Details
	To adjust the current of the Cleaning Pre-exposure LED (C) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case
	-When drum ghost (uneven density at intervals of drum circumference) occurs -When potential is not applied well
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-10 to 10
	Unit
	10 mA
	Default value
	0

COPIER > ADJUST > EXP-LED	
PR-EXP-K	Adj Clean Pre-expo LED(Bk) crnt:1/1SPD
Lv.2	Details
	To adjust the current of the Cleaning Pre-exposure LED (Bk) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case
	-When drum ghost (uneven density at intervals of drum circumference) occurs -When potential is not applied well
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range
	-10 to 10
	Unit
	10 mA
	Default value
	0
AF-EXP-K	Adj Cln Post-expo LED(Bk) intnsty:1/1SPD
Lv.2	Details
	To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 1/1 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
	Use case
	When patch detection ghost occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	-As the value is increased, the life of the Photosensitive Drum is shortened. -Return the value to 0 when replacing the Photosensitive Drum.
	Display/adj/set range
	-10 to 10
	Unit
	5
	Default value
	0
	Supplement/memo
	Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.

COPIER > ADJUST > EXP-LED	
AF-EXPK2	Adj Cln Post-expo LED(Bk) intnsty:2/3SPD
Lv.2	Details
	To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 2/3 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
	Use case
	When patch detection ghost occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	-Do not use this at the normal service. -As the value is increased, the life of the Photosensitive Drum is shortened. -Return the value to 0 when replacing the Photosensitive Drum.
	Display/adj/set range
	-10 to 10
	Unit
	5 mA
	Default value
	0
	Supplement/memo
	Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.
AF-EXPK3	Adj Cln Post-expo LED (Bk) intnsty:1/2SP
Lv.2	Details
	To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 1/2 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
	Use case
	When patch detection ghost occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	-As the value is increased, the life of the Photosensitive Drum is shortened. -Return the value to 0 when replacing the Photosensitive Drum.
	Display/adj/set range
	-10 to 10
	Unit
	5 mA
	Default value
	0
	Supplement/memo
	Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.

COPIER > ADJUST > EXP-LED		
PR-EXPY2	Adj Clean Pre-expo LED(Y) current:2/3SPD	
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (Y) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0
	PR-EXPM2	Adj Clean Pre-expo LED(M) current:2/3SPD
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (M) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0
	PR-EXPC2	Adj Clean Pre-expo LED(C) current:2/3SPD
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (C) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0

COPIER > ADJUST > EXP-LED		
PR-EXPY3	Adj Clean Pre-expo LED(Y) current:1/2SPD	
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (Y) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0
	PR-EXPM3	Adj Clean Pre-expo LED(M) current:1/2SPD
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (M) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0
	PR-EXPC3	Adj Clean Pre-expo LED(C) current:1/2SPD
Lv.2	Details	To adjust the current of the Cleaning Pre-exposure LED (C) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
	Use case	When drum ghost occurs
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	As the value is increased, the life of the Photosensitive Drum is shortened.
	Display/adj/set range	-10 to 10
	Unit	10 mA
	Default value	0

T-8-44

P-PASCAL

COPIER > ADJUST > P-PASCAL	
CS1OFWMY	Y-clr white measure luminance:Clr Sns 1
Lv.2	Details
	To adjust the Y-color white measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range
	0 to 1023
	Unit
	1
	Default value
	According to the setting at shipment
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
CS1OFWIM	M-clr white ideal luminance: Clr Sns 1
Lv.2	Details
	To adjust the M-color white ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range
	0 to 1023
	Unit
	1
	Default value
	According to the setting at shipment
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL	
CS1OFDMM	Solid M-clr measure luminance: Clr Sns 1
Lv.2	Details
	To adjust the solid M-color measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range
	0 to 1023
	Unit
	1
	Default value
	According to the setting at shipment
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
CS1OFDMY	Solid Y-clr measure luminance: Clr Sns 1
Lv.2	Details
	To adjust the solid Y-color measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case
	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range
	0 to 1023
	Unit
	1
	Default value
	According to the setting at shipment
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS1OFDIM	Solid M-clr ideal luminance: Clr Sns 1	
Lv.2	Details	To adjust the solid M-color ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS1OFDIY	Solid Y-clr ideal luminance: Clr Sns 1
Lv.2	Details	To adjust the solid Y-color ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS1OFHMM	M-clr HT measured luminance: Clr Sns 1	
Lv.2	Details	To adjust the M-color halftone measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS1OFHMY	Y-clr HT measured luminance: Clr Sns 1
Lv.2	Details	To adjust the Y-color halftone measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS10FHIM	M-clr HT ideal luminance: Clr Sns 1	
Lv.2	Details	To adjust the M-color halftone ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS10FHIY	Y-clr HT ideal luminance: Clr Sns 1
Lv.2	Details	To adjust the Y-color halftone ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS20FDMK	Solid Bk-clr measure luminance:Clr Sns 2	
Lv.2	Details	To adjust the solid Bk-color measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS20FDMC	Solid C-clr measure luminance: Clr Sns 2
Lv.2	Details	To adjust the solid C-color measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS2OFDIK	Solid Bk-clr ideal luminance: Clr Sns 2	
Lv.2	Details	To adjust the solid Bk-color ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS2OFDIC	Solid C-clr ideal luminance: Clr Sns 2
Lv.2	Details	To adjust the solid C-color ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS2OFHMK	Bk-clr HT measured luminance: Clr Sns 2	
Lv.2	Details	To adjust the Bk-color halftone measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS2OFHMC	C-clr HT measured luminance: Clr Sns 2
Lv.2	Details	To adjust the C-color halftone measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > ADJUST > P-PASCAL		
CS2OFHIK	Bk-clr HT ideal luminance: Clr Sns 2	
Lv.2	Details	To adjust the Bk-color halftone ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.

COPIER > ADJUST > P-PASCAL		
CS10FWMM	M-clr white measure luminance:Clr Sns 1	
Lv.2	Details	To adjust the M-color white measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
	CS10FWIY	Y-clr white ideal luminance: Clr Sns 1
Lv.2	Details	To adjust the Y-color white ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
	Use case	-When replacing the DC Controller PCB/clearing RAM data -When replacing the Fixing Feed Unit
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution	Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
	Display/adj/set range	0 to 1023
	Unit	1
	Default value	According to the setting at shipment
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

T-8-45

FUNCTION

INSTALL

COPIER > FUNCTION > INSTALL		
STRD-POS		Scan position auto adj in DADF mode
Lv.1	Details	To automatically adjust the reading start position at DADF reading
	Use case	At DADF installation/uninstallation
	Adj/set/operate method	1) Close the DADF. 2) Select the item, and then press OK key. The operation automatically stops after the adjustment. 3) Write the value displayed by COPIER> ADJUST> ADJ-XY> STRD-POS in the service label.
	Caution	Write the adjusted value in the service label.
	Display/adj/set range	At normal termination: OK, At abnormal termination: NG
	Related service mode	COPIER> ADJUST> ADJ-XY> STRD-POS
	CARD	Card number setting
Lv.1	Details	To set the card number to be used for Card Reader. A series of numbers from the entered number to the number of cards specified by CARD-RNG can be used.
	Use case	- At installation of the Card Reader - When replacing the HDD
	Adj/set/operate method	1) Enter the number, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	The card management information (department ID and password) is initialized.
	Display/adj/set range	0 to 2001
	Default value	0
	AINR-OFF	ON/OFF of warm-up rotation deactivation
Lv.1	Details	To set ON/OFF to disable execution of warm-up rotation. Warm-up rotation can be omitted when turning OFF/ON the power to check the image, etc. after the adjustment of warm-up rotation, etc. This mode is executed when warm-up rotation is not needed.
	Use case	- At installation - When replacing the Developing Assembly
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to enable the operation (cancel disabling) before the machine is used by the user. The operation is automatically enabled by executing INISET-Y/M/C/K/4.
	Display/adj/set range	0 to 1 0: OFF (warm-up rotation enabled), 1: ON (warm-up rotation disabled)
	Default value	0
	Related service mode	COPIER> FUNCTION> INSTALL> INISET-Y/M/C/K/4

COPIER > FUNCTION > INSTALL		
	E-RDS	ON/OFF of Embedded-RDS
Lv.1	Details	To set whether to use the Embedded-RDS.
	Use case	When using Embedded-RDS
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
	Display/adj/set range	0 to 1 0: Not used, 1: Used (All the counter information is sent.)
	Default value	0
	Related service mode	COPIER> FUNCTION> INSTALL> RGW-PORT, COM-TEST, COM-LOG, RGW-ADR COPIER> FUNCTION> CLEAR> ERDS-DAT
	Supplement/memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
	RGW-PORT	Set port number of Sales Co's server
Lv.1	Details	To set the port number of the sales company's server to be used for Embedded-RDS.
	Use case	When using Embedded-RDS
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
	Display/adj/set range	1 to 65535
	Default value	443
	Related service mode	COPIER> FUNCTION> INSTALL> E-RDS, COM-TEST, COM-LOG, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT
	Supplement/memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
	COM-TEST	Displ connect result w/ Sales Co's server
Lv.1	Details	To display the result of the connection test with the sales company's server.
	Use case	When using Embedded-RDS
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
	Display/adj/set range	During operation: ACTIVE, When connection is completed: OK, When connection is failed: NG
	Related service mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-LOG, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT

COPIER > FUNCTION > INSTALL	
COM-LOG	Dspl connect error w/ Sales Co's server
Lv.1	Details
	To display error information when the connection with the sales company's server failed.
	Use case
	When using Embedded-RDS
	Adj/set/operate method
	N/A (Display only)
	Caution
	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
	Display/adj/set range
	Year, date, time, error code, error detail information (maximum 128 characters)
	Related service mode
	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT
	Supplement/memo
	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
RGW-ADR	URL setting of Sales Company's server
Lv.1	Details
	To set the URL of the sales company's server to be used for Embedded-RDS.
	Use case
	When using Embedded-RDS
	Adj/set/operate method
	1) Select the URL. 2) Enter the URL, and then press OK key. 3) Turn OFF/ON the main power switch.
	Caution
	- Do not use Shift-JIS character strings. - Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
	Display/adj/set range
	URL
	Default value
	https://a01.ugwdevice.net/ugw/agentif010
	Related service mode
	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, COM-LOG COPIER>FUNCTION>CLEAR>ERDS-DAT
	Supplement/memo
	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
CNT-DATE	Set counter send start date to SC server
Lv.1	Details
	To set the year, month, date, hour and minute to send counter information to the sales company's server. This is displayed only when the Embedded-RDS third-party extended function is available.
	Use case
	When the Embedded-RDS third-party expanded function is available
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	YYYYMMDDHHMM (12 digits) YYYY: Year, MM: Month, DD: Date, HH: Hour, MM: Minute
	Default value
	000000000000

COPIER > FUNCTION > INSTALL	
CNT-INTV	Set counter send interval to SC server
Lv.1	Details
	To set the interval of sending counter information to the sales company's server in a unit of one hour. This is displayed only when the Embedded-RDS third-party extended function is available.
	Use case
	- When restarting potential control after execution of COPIER> OPTION> IMG-FIX> PO-CNT - When the D-max control condition is changed
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	1 to 168 (= 1 week)
	Unit
	1 hour
	Default value
	24
	Related service mode
	COPIER> OPTION> IMG-FIX> PO-CNT
INIT-ITB	Creation of ITB edge profile
Lv.1	Details
	To create the initial ITB edge profile to be used for the ITB displacement correction control. The initial ITB edge profile is created after neutral position of the Steering Roller is determined by the ITB displacement correction control.
	Use case
	When replacing the ITB
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
BRWS-ACT	ON/OFF of service browser
Lv.1	Details
	To set ON/OFF of service browser. ON/OFF of service browser switches whenever the main power switch is turned OFF/ON after execution. If connection with the UGW server is successful, "OK!" is displayed. If "NG!" is displayed, execute a communication test using COM-TEST. The setting is enabled after reboot. Whether the service browser is ON or OFF can be checked in COPIER> DISPLAY> USER> BRWS-STSTS (1: ON, 2: OFF).
	Use case
	- When using the service browser - At operation check
	Adj/set/operate method
	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	After execution, turn OFF/ON the main power switch. After reboot, be sure to check the usage status in COPIER> DISPLAY> USER> BRWS-STSTS.
	Display/adj/set range
	At normal termination: OK, At abnormal termination: NG
	Related service mode
	COPIER> DISPLAY> USER> BRWS-STSTS

COPIER > FUNCTION > INSTALL		
CDS-CTL		Setting of country/area when CDS is used
Lv.1	Details	To set country/area to enable CDS.
	Use case	When enabling CDS
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	CA (Canada), LA (Latin America), HK (Hong Kong) and the country/area specified in COPIER> OPTION> FNC-SW> CONFIG.
	Default value	It differs according to the location.
	Related service mode	COPIER> OPTION> FNC-SW> CONFIG
	Supplement/memo	CDS: Contents Delivery System
SPLY-H		[Not used]
STIR		Stirring of developer of any color
Lv.1	Details	To stir developer of any color. Execute this item after specifying a color in CLR-SET.
	Use case	- At installation - When replacing the Developing Assembly/developer - When an image failure occurs
	Adj/set/operate method	1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Required time	160 sec
	Related service mode	COPIER> FUNCTION> INSTALL> CLR-SET
INISSET		Exe Dev Ass'y (any clr) ini install mod
Lv.1	Details	To automatically execute operation necessary for initial installation of the Developing Assembly of any color. Execute this item after specifying a color in CLR-SET.
	Use case	- At installation - When replacing the Developing Assembly
	Adj/set/operate method	1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.
	Display/adj/set range	During operation: xxx second (remaining time), At normal termination: OK, At abnormal termination: NG
	Unit	1 sec
	Required time	350 sec
	Related service mode	COPIER> FUNCTION> INSTALL> CLR-SET

COPIER > FUNCTION > INSTALL		
CLR-SET		Spec color for Dev Ass'y-related process
Lv.1	Details	To set the color of the Developing Assembly/Drum Unit subject to SPLY-H/STIR/INISSET/DRMRESET. Depending on the setting value, multiple colors can be selected. Only Bk can be selected when the setting values are as follow: Y: 0, M: 0, C: 0, K: 1, and 4: 0. Y and C can be selected when the setting values are as follow: Y: 1, M: 0, C: 1, K: 0, and 4: 0. All 4 colors can be selected when the setting values are as follow: Y: 0, M: 0, C: 0, K: 0, and 4: 1 (Y/M/C/K is arbitrary).
	Use case	- At installation - When replacing the Developing Assembly/Drum Unit/developer - When an image failure occurs
	Adj/set/operate method	Enter the setting value for each color, and then press OK key.
	Display/adj/set range	0 to 1 0: Clear, 1: Select
	Default value	0
	Related service mode	COPIER> FUNCTION> INSTALL> SPLY-H, STIR, INISSET COPIER> FUNCTION> INSTALL> DRMRESET
HD-CRYP		Exe HDD Encrypt Board ini install mod
Lv.1	Details	To automatically execute operation necessary for initial installation of the HDD Data Encryption/Mirroring Kit. By turning OFF the main power switch after execution, the HDD Data Encryption/Mirroring Kit can be installed.
	Use case	When replacing the HDD Data Encryption/Mirroring Kit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
BIT-SVC		OFF/ON of Web service function of E-RDS
Lv.1	Details	To set whether to use Web service function of Embedded-RDS. When 0 is set, authentication information cannot be obtained from Embedded-RDS.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1

COPIER > FUNCTION > INSTALL	
DRMRESET	Forcible exe of any drums replce
Lv.1	<p>Details</p> <p>When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur.</p> <p>To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation to the Drum Unit for any color. Specify the color in CLR-SET.</p> <p>When this item is executed, laser power values, etc., that were corrected according to drum counter for the color, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.</p> <p>Use case</p> <p>When replacing the Drum Unit</p> <p>Adj/set/operate method</p> <p>1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p> <p>Related service mode</p> <p>COPIER> FUNCTION> INSTALL> CLR-SET</p>

MTF-CLC	Deriving of MTF filter coefficient
Lv.1	<p>Details</p> <p>To derive the MTF filter coefficient to be set for ASIC based on the MTF value of the DADF complex chart.</p> <p>Use case</p> <p>When replacing the Reader Controller PCB/clearing RAM data</p> <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>

COPIER > FUNCTION > CCD		
DF-WLVL3	White level adj in book mode: B&W	
Lv.1	Details	To adjust the white level for copyboard scanning automatically by setting a paper which is usually used by the user on the Copyboard Glass.
	Use case	- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Set a paper on the Copyboard Glass. 2) Select the item, and then press OK key.
	Caution	Be sure to execute DF-WLVL4 in a row.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related service mode	COPIER> FUNCTION> CCD> DF-WLVL4
DF-WLVL4	White level adj in DADF mode: B&W	
Lv.1	Details	To adjust the white level for DADF scanning automatically by setting the paper which is usually used by the user on the DADF.
	Use case	- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	1) Set paper on the DADF. 2) Select the item, and then press OK key.
	Caution	Be sure to execute this item after DF-WLVL3.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related service mode	COPIER> FUNCTION> CCD> DF-WLVL3
BW-TGT	Set of B&W shading target value	
Lv.1	Details	After the white level data (X/Y/Z) for the Standard White Plate is set, read the Standard White Plate and set the black and white shading target value.
	Use case	When replacing the Copyboard Glass/Scanner Unit
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Be sure to execute this item after execution of COPIER> ADJUST> CCD>W-PLT-X, W-PLT-Y, W-PLT-Z.
	Display/adj/set range	1 to 2047
	Related service mode	COPIER> ADJUST> CCD> W-PLT-X/Y/Z

T-8-47

■ DPC

COPIER > FUNCTION > DPC		
DPC	Exe of potential control: 1/1 speed	
Lv.1	Details	To execute potential control for the Photosensitive Drum manually. (It is usually executed automatically.) When this item is executed, the same condition is set for development of plain paper and coated paper.
	Use case	When identifying the cause at the occurrence of E060
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Since the same condition is set for development of plain paper and coated paper groups, be sure to execute D-max control for both groups after execution of this item.
	Related service mode	COPIER> ADJUST> V-CONT> EPOTOFST
OFST	Adj Potential Ctrl PCB detect potential	
Lv.1	Details	To adjust the detection potential offset value of the Potential Sensor automatically.
	Use case	When diagnosing failure of the Potential Sensor or replacing the sensor
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	An error is displayed when open circuit/connection failure/installation failure occurs to the Potential Sensor at the time of replacement. In this case, manually set the value to 0 by EPOTOFST and then make an adjustment.
	Related service mode	COPIER> ADJUST> V-CONT> EPOTOFST
DRM-RSET	Forcible exe of all clr drums rerplice	
Lv.1	Details	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to drum counter for all colors, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.
	Use case	When replacing the Drum Units for all colors
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to execute this item after replacement of the Drum Units for all colors.
	Display/adj/set range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)
	Related service mode	COPIER> ADJUST> V-CONT> EPOTOFST

COPIER > FUNCTION > DPC	
DRMRSETY	Forcible exe of Y Drum replacement mode
Lv.1	Details
	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to Y drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.
	Use case
	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.
	Display/adj/set range
	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)
DRMRSETM	Forcible exe of M Drum replacement mode
Lv.1	Details
	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to M drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.
	Use case
	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.

CST1-FCK	
Pre-feed operation check: Cassette 1	
Lv.1	Details
	To execute the pre-feed control to check whether paper in the Cassette 1 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
	Use case
	When identifying the cause (pickup failure, skew feed, etc.)
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > CST	
CST2-FCK	
Pre-feed operation check: Cassette 2	
Lv.1	Details
	To execute the pre-feed control to check whether paper in the Cassette 2 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
	Use case
	When identifying the cause (pickup failure, skew feed, etc.)
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
CST3-FCK	
Pre-feed operation check: Cassette 3	
Lv.1	Details
	To execute the pre-feed control to check whether paper in the Cassette 3 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
	Use case
	When identifying the cause (pickup failure, skew feed, etc.)
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
DK1-FCK	
Checking of Deck individual delivery	
Lv.1	Details
	To check whether individual delivery of POD Deck Lite that is isolated from the host machine can be performed. If it operates normally, only a sheet of paper is delivered.
	Use case
	When identifying the cause (pickup failure, skew feed, etc.)
	Adj/set/operate method
	1) Isolate the POD Deck Lite from the host machine. 2) Select the item, and then press OK key.
	Caution
	Isolate the POD Deck Lite before execution.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
DK1-INT1	
Initialization at Deck parts replacement	
Lv.1	Details
	To execute initialization of POD Deck Lite at parts replacement. By executing this item, the lifter moves up from the lower limit position and stops when the Paper Surface Sensor detects paper top face. The travel distance is reflected to the paper level detection control.
	Use case
	When replacing the Pickup Unit/PCB/compartment
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
	Required time
	30 sec

COPIER > FUNCTION > CST	
DK1-SPAD	Setting of Deck Lifter stop position
Lv.1	Details
	To set stop position of the lifter when opening the compartment. When 0 is set, the lifter moves down to the lower limit position when the compartment is opened. When 1 is set, the lifter stops at pickup position. When opening the compartment under this condition, height of the Pre-separation Plate can be adjusted. Even 1 is set, the value is returned to 0 when the compartment is opened.
	Use case
	When adjusting pre-separation position after replacing the Pickup Unit/compartment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Stop at lower limit position (normal), 1: Stop at pickup position
	Default value
	0
PDK-A4	Rgst POD Deck Lite A4 standard width
Lv.1	Details
	To register the standard value of A4 paper width (297 mm) on the POD Deck Lite. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> PDK-A4.
	Use case
	- When replacing the DC Controller PCB/clearing RAM data - When replacing the Paper Width Sensor PCB or registering a new value
	Adj/set/operate method
	1) Set A4 paper on the POD Deck Lite, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
	Caution
	After execution, check the registered value by COPIER> ADJUST> CST-ADJ> PDK-A4, and write it down on the service label.
	Display/adj/set range
	0 to 1023
	Default value
	0

CLEANING

COPIER > FUNCTION > CLEANING	
TBLT-CLN	Cleaning of ITB
Lv.1	<p>Details</p> <p>To execute four idle rotations of the ITB and clean the ITB. By applying reverse bias to the Primary Transfer Roller that is engaged to the ITB (for 3 rotations of the ITB), it makes toner on the ITB easier to be removed.</p> <p>During that time, the Secondary Transfer Outer Roller is disengaged. After that, high voltage is applied to the Static Fur Brush (for 1 rotation of the ITB) just like at the time of image formation, and toner is collected.</p> <p>The ITB stops after 4 rotations in total.</p> <p>Use case</p> <ul style="list-style-type: none"> - When image failure occurs periodically due to the assumption of soiled ITB - When contacting with the ITB at the time of periodical replacement, etc. <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>
WIRE-CLN	Cleaning of Charge Wire(1-reciprocation)
Lv.1	<p>Details</p> <p>To clean the Primary Charging Wire and the Pre-transfer Charging Wire simultaneously (1 reciprocations).</p> <p>Use case</p> <ul style="list-style-type: none"> - When replacing the Primary Charging Assembly/Pre-transfer Charging Assembly - When replacing the Charging Wire - When an image failure (vertical lines) occurs <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>
TB-INSD	Cleaning of inner surface of ITB
Lv.1	<p>Details</p> <p>To execute two idle rotations of the ITB and clean inner surface of the ITB and Primary Transfer Roller.</p> <p>During the cleaning, the Primary Transfer Roller is engaged to the ITB and high voltage is applied to the Static Fur Brush just like at the time of image formation.</p> <p>First rotation of the ITB: The Secondary Transfer Outer Roller is engaged to the ITB and positive/reverse secondary transfer high voltage bias is alternately applied for every one rotation of the roller.</p> <p>Second rotation of the ITB: The Secondary Transfer Outer Roller is disengaged.</p> <p>The ITB stops after 2 rotations in total.</p> <p>Use case</p> <ul style="list-style-type: none"> - When image failure occurs periodically due to the assumption of inside ITB or Primary Transfer Roller soiling - When contacting with the inside of ITB at the time of periodical replacement <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>

COPIER > FUNCTION > CLEANING	
BK-BNDEX	Toner supply to Photosensitive Drum
Lv.1	<p>Details</p> <p>To form the toner band on the Photosensitive Drum, and collect it with the Drum Cleaning Blade to decrease friction between the two. All Photosensitive Drums and the ITB perform idle rotation, and stop after toner cleaning.</p> <p>Use case</p> <p>When image smear occurs due to the Drum Cleaning Blade</p> <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>
WIRE-EX	Cleaning of Charge Wire(5-reciprocation)
Lv.1	<p>Details</p> <p>To clean the Primary Charging Wire and the Pre-transfer Charging Wire simultaneously (5-reciprocation).</p> <p>Polish new Charging Wires to remove foreign matters or protrusions.</p> <p>Use case</p> <ul style="list-style-type: none"> - When replacing the Primary Charging Assembly/Pre-transfer Charging Assembly - When replacing the Charging Wire - When an image failure (vertical lines) occurs <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>
2TR-CLN	Clean of Secondary Transfer Outer Roller
Lv.1	<p>Details</p> <p>To clean paper dust adhered on the Secondary Transfer Outer Roller. Both the Primary Transfer Roller and the Secondary Transfer Outer Roller are engaged to the ITB.</p> <p>The Process Unit does operation that is the same at image formation.</p> <p>It forms 4 toner bands which the 4 colors are laid on top of another on the ITB. The base voltage (Vb) calculated with the Secondary Transfer ATVC control is applied to the Secondary Transfer Outer Roller until the toner bands pass through, so that toner is adhered on the Secondary Transfer Outer Roller.</p> <p>After the toner bands passed, Secondary Transfer Outer Roller cleaning control is executed (positive/reverse bias is applied every 2 rotations of the roller). Toner is adhered on the ITB.</p> <p>When the toner adhered on the ITB passed through the ITB Cleaning Unit, the operation is stopped.</p> <p>Use case</p> <ul style="list-style-type: none"> - When the backside of the paper is soiled by the Secondary Transfer Outer Roller - When contacting with the Secondary Transfer Outer Roller at the time of jam processing, etc. <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!</p>

COPIER > FUNCTION > CLEANING		
FXD-CL-E	Refresh of Fixing Belt	
Lv.1	Details	To execute refresh operation of the Fixing Belt. Degree of scratches caused by paper edges is alleviated, so glossy lines in the feed direction can be alleviated.
	Use case	When an image failure (glossy lines) occurs due to scratches on the Fixing Belt caused by paper edges
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure not to execute this item frequently. Otherwise, the life of the Fixing Belt is shortened.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related UI menu	Adjustment/Maintenance> Refresh Fixing Roller
FX-CL-FQ	Setting of Fixing Belt refresh	
Lv.1	Details	To set refresh operation of the Fixing Belt. - Contact time: Amount of time where the Fixing Refresh Roller is in contact with the belt in a single refresh operation - Frequency: Interval (the number of sheets) (on 80 g/m ² , A4 size conversion basis, it differs according to the paper type) - Temperature control: Fixing temperature control table to be applied at refresh operation
	Use case	When an image failure (lines in vertical scanning direction) occurs due to scratches on the Fixing Belt caused by paper edges
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When contact time or frequency is increased, the life of the Fixing Refresh Roller is shortened. When the control temperature rises, the effect of the refresh increases, but an image failure (lines, etc.) may occur.
	Display/adj/set range	0 to 3 (Contact time) 300 to 30000 (Frequency) 0 to 4 (Temperature control)
	Default value	0, 3000, 0
D-CLN-4	Cleaning of Photosensitive Drum	
Lv.2	Details	To perform idle rotation of the Photosensitive Drum for 1 minute. Image smear is alleviated.
	Use case	When image smear occurs
	Adj/set/operate method	Select the item, and then press OK key. When it is completed, it automatically stops.
	Caution	If lines in horizontal scanning direction appear after execution, execute "Clean Inside Main Unit" in Settings/Registration menu.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related UI menu	Adjustment/Maintenance> Maintenance> Clean Inside Main Unit

COPIER > FUNCTION > CLEANING		
DVS-CLNY	Refresh of Y-color Developing Cylinder	
Lv.2	Details	To execute refresh operation of the Y-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
	Use case	When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG
	DVS-CLNM	Refresh of M-color Developing Cylinder
Lv.2	Details	To execute refresh operation of the M-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
	Use case	When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG

COPIER > FUNCTION > CLEANING	
DVS-CLNC	Refresh of C-color Developing Cylinder
Lv.2	<p>Details</p> <p>To execute refresh operation of the C-color Developing Cylinder.</p> <ol style="list-style-type: none"> 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed <p>Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.</p> <p>Use case</p> <p>When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment</p> <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Caution</p> <p>Once the operation is executed, it cannot be executed again until 2000 sheets are fed.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG</p>
DVS-CLNK	Refresh of Bk-color Developing Cylinder
Lv.2	<p>Details</p> <p>To execute refresh operation of the Bk-color Developing Cylinder.</p> <ol style="list-style-type: none"> 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed <p>Developer coating failure which occurs at continuous printing of low duty images can be alleviated. T-8-50

FIXING

COPIER > FUNCTION > FIXING	
NIP-CHK	Check of fixing nip width
Lv.1	<p>Details</p> <p>To check visually whether the fixing nip width is appropriate by making an output. If it is not appropriate, a fixing failure or a feeding failure may occur.</p> <p>Use case</p> <ul style="list-style-type: none"> - When replacing the fixing-related parts (Fixing Belt Unit, Pressure Belt Unit) - When an image failure/fixing feeding failure occurs <p>Adj/set/operate method</p> <ol style="list-style-type: none"> 1) Set paper for test print on a paper source. <ul style="list-style-type: none"> - A4/LTR - Plain paper (75 to 90 g/m²)/Coated paper (106 to 128 g/m²) 2) Set "1" ("Gradation" screen) in COPIER> TEST> PG> TXPH. 3) Set the density for each color according to the paper type. <ul style="list-style-type: none"> - Plain paper: Set DENS-Y/M/C to "0" and DENS-K to "255" (solid black) - Coated paper: Set DENS-Y/K to "0" and DENS-M/C to "255" (solid blue), or set DENS-Y/M/C to "0" and DENS-K to "128" (black halftone) 4) TYPE to "5" (whole-area halftone image) The machine outputs a test print. 5) Set the output made in step 4 on the Multi-purpose Tray (or Cassette 1 if the tray is not available). 6) Select the item in NIP-CHK, and then press OK key. A sheet of paper is stopped at the fixing nip for 10 seconds and then is automatically delivered. 7) Measure the nip widths at 3 locations. It is judged as normal if the values are as follow: 15.5 +/- 1.0 mm at the center of the nip trace, and 17.5 +/- 1.0 mm at 15 mm from right and left edges of paper. <p>Related service mode</p> <p>COPIER> TEST> PG> TXPH, DENS-Y/M/C/K, TYPE</p>
FX-UHP	Exe Fixing Belt displacement crct ctrl
Lv.1	<p>Details</p> <p>To execute Fixing Belt displacement correction control.</p> <p>Use case</p> <p>When checking Fixing Belt displacement correction control</p> <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!, At timeout: NG</p>
FX-LHP	Exe Press Belt displacement crct ctrl
Lv.1	<p>Details</p> <p>To execute Pressure Belt displacement correction control.</p> <p>Use case</p> <p>When checking Pressure Belt displacement correction control</p> <p>Adj/set/operate method</p> <p>Select the item, and then press OK key.</p> <p>Display/adj/set range</p> <p>During operation: ACTIVE, When operation finished normally: OK!, At timeout: NG</p>

T-8-51

PANEL

COPIER > FUNCTION > PANEL		
LCD-CHK		
Check of LCD Panel dot missing		
Lv.1	Details	To check whether there is a missing dot on the LCD Panel of the Control Panel.
	Use case	When replacing the LCD Panel
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Check that the LCD Panel lights up in the order of white, black, red, green and blue. 3) Press STOP key to terminate checking.
LED-CHK		
Lighting check of Control Panel LED		
Lv.1	Details	To check whether the LED on the Control Panel lights up.
	Use case	When replacing the LCD Panel
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Check that the LED lights up in the order. 3) Use LED-OFF to terminate checking.
LED-OFF		
Terminate Control Panel LED light check		
Lv.1	Details	To terminate the lighting check of LED on the Control Panel.
	Use case	During execution of LED-CHK
	Adj/set/operate method	Select the item, and then press OK key.
	Related service mode	COPIER> FUNCTION> PANEL> LED-CHK
KEY-CHK		
Check of Control Panel key input		
Lv.1	Details	To check the key input on the Control Panel.
	Use case	When replacing the LCD Panel
	Adj/set/operate method	1) Select the item and press the key on the Control Panel. 2) Check that the input value is displayed. 3) Cancel the selection to terminate checking.
TOUCHCHK		
Adj of coordinate pstn of Touch Panel		
Lv.1	Details	To adjust the coordinate position on the Touch Panel of the Control Panel.
	Use case	When replacing the LCD Panel
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Press the nine "+" keys in sequence.

T-8-52

PART-CHK

COPIER > FUNCTION > PART-CHK		
CL		
Specification of operation Clutch		
Lv.1	Details	To specify the Transfer Cleaning Clutch (CL1) to operate.
	Use case	When replacing the clutch/checking the operation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 6 1: (Multi-drawer Paper Deck) Upper Deck Pickup Clutch (CL101) 2: (Multi-drawer Paper Deck) Upper Deck Pull-out Clutch (CL102) 3: (Multi-drawer Paper Deck) Middle Deck Pickup Clutch (CL201) 4: (Multi-drawer Paper Deck) Middle Deck Pull-out Clutch (CL202) 5: (Multi-drawer Paper Deck) Lower Deck Pickup Clutch (CL301) 6: (Multi-drawer Paper Deck) Lower Deck Pull-out Clutch (CL302) During operation: ACTIVE, When operation finished normally: OK!
	Default value	0
CL-ON		
Operation check of Clutch		
Lv.1	Details	To start operation check of the Transfer Cleaning Clutch (CL1). During operation, ON/OFF is repeated at intervals of 3 seconds.
	Use case	When replacing the clutch/checking the operation
	Adj/set/operate method	1) Drive the ITB and Drum (COPIER> FUNCTION> MISC-P> MAIN-DRV). 2) Select the item, and then press OK key. 3) Check the gear of the Transfer Cleaning Assembly.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Default value	0

COPIER > FUNCTION > PART-CHK	
FAN	Specification of operation Fan
Lv.1	Details
	To specify the Fan to operate.
	Use case
	When replacing the fan/checking the operation
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	1 to 28
	1: Primary Charging Suction Fan (FM2)
	2: Primary Charging Exhaust Fan (FM3)
	3: Developing and Pre-transfer Charging Fan (FM4)
	4: Color Cleaning Fan (FM5)
	5: Fixing Heat Fan (FM6)
	6: IH Power Supply Fan (FM7)
	7: Power Supply Fan 1 (FM8)
	8: Power Supply Fan 2 (FM9)
	9: Power Supply Cooling Fan (38V) (FM14)
	10: Pressure Belt Cooling Fan (Front) (FM15)
	11: Pressure Belt Cooling Fan (Rear) (FM16)
	12: Hopper Cooling Exhaust Fan (FM18)
	13: Hopper Cooling Suction Fan (FM22)
	14: Decurler Suction Fan (FM30)
	15: Decurler Side Exhaust Fan (FM31)
	16: Decurler Lower Exhaust Fan (FM32)
	17: Developing Cooling Exhaust Fan (FM40)
	18: Developing Cooling Suction Fan (Y) (FM41)
	19: Developing Cooling Suction Fan (M) (FM42)
	20: Developing Cooling Suction Fan (C) (FM43)
	21: Delivery Edge Cooling Fan 1 (FM45)
	22: Delivery Edge Cooling Fan 2 (FM46)
	23: Delivery Upper Cooling Fan (FM47)
	24: Delivery Lower Cooling Fan (FM48)
	25: Reverse Exhaust Fan 1 (FM49)
	26: Reverse Exhaust Fan 2 (FM50)
	27: Reverse Exhaust Fan 3 (FM51)
	28: 24V Power Supply Fan (FM52)
	During operation: ACTIVE, When operation finished normally: OK!
	Default value
	1
FAN-ON	Operation check of Fan
Lv.1	Details
	To start operation check of the Fan specified by FAN.
	Use case
	When replacing the fan/checking the operation
	Adj/set/operate method
	Select the item, and then press OK key.

COPIER > FUNCTION > PART-CHK	
MTR	Specification of operation motor
Lv.1	Details
	To specify the Motor to operate.
	Use case
	When replacing the motor/checking the operation
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	1 to 19
	1: Duplex Left Motor (M32)
	2: Duplex Right Motor (M33)
	3: Registration Motor (M34)
	4: Pre-registration Motor (M36)
	5: Delivery Motor (M37)
	6: Reverse Motor (M38)
	7: Cassette 1 Vertical Path Motor (M39)
	8: Cassette 1 Pickup Motor (M43)
	9: Cassette 2 Pickup Motor (M44)
	10: Cassette 3 Pickup Motor (M45)
	11: Decurler Feeding Motor 1 (M51)
	12: Decurler Feeding Motor 2 (M52)
	13: Pre-fixing Feed Motor (M63)
	14: Cassette 2/3 Vertical Path Motor (M67)
	15: (POD Deck Lite) Deck Pickup Motor (M1)
	16: (POD Deck Lite) Deck Pull-outMotor (M2)
	17: (Multi-drawer Paper Deck) Vertical Path Upper Feed Motor (M002)
	18: (Multi-drawer Paper Deck) Vertical Path Lower Feed Motor (M003)
	19: (Multi-drawer Paper Deck) Horizontal Path Feed Motor (M004)
	During operation: ACTIVE, When operation finished normally: OK!
	Default value
	1
MTR-ON	Operation check of motor
Lv.1	Details
	To start operation check of the motor specified by MTR. The operation automatically stops after operation of 5 seconds.
	Use case
	When replacing the motor/checking the operation
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	While the Toner Container Drive Motor is active, be sure to remove the Toner Container. Otherwise, toner leakage may occur in the machine.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > PART-CHK		
SL		Specification of operation solenoid
Lv.1	Details	To specify the Solenoid to operate.
	Use case	When replacing the solenoid/checking the operation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 11 1: Registration Patch Shutter Solenoid (SL1) 2: Delivery Upper Cooling Switch Flapper Solenoid (SL10) 3: Patch Sensor Solenoid (Bk) (SL11) 4: Color Sensor Solenoid (SL12) 5: Cassette 1 Pickup Solenoid (SL13) 6: Cassette 2 Pickup Solenoid (SL14) 7: Cassette 3 Pickup Solenoid (SL15) 8: (Multi-drawer Paper Deck) Upper Deck Pickup Roller Release Solenoid (SL101) 9: (Multi-drawer Paper Deck) Middle Deck Pickup Roller Release Solenoid (SL201) 10: (Multi-drawer Paper Deck) Lower Deck Pickup Roller Release Solenoid (SL301) 11: (POD Deck Lite) Deck Pickup Roller Release Solenoid (SL1) During operation: ACTIVE, When operation finished normally: OK!
	Default value	1
SL-ON		Operation check of solenoid
Lv.1	Details	To start operation check of the solenoid specified by SL. The operation stops after "ON for 0.5 sec" => "OFF for 10 sec" => "ON for 0.5 sec" => "OFF for 10 sec" => "ON for 0.5 sec".
	Use case	When replacing the solenoid/checking the operation
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!

T-8-53

■ CLEAR

COPIER > FUNCTION > CLEAR		
ERR		Clear of error code
Lv.1	Details	To clear error codes (E000, E001, E002, E003, E717, E719).
	Use case	At error occurrence
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
DC-CON		RAM clear of DC Controller PCB
Lv.1	Details	To clear the RAM data of the DC Controller PCB.
	Use case	When clearing RAM data of the DC Controller PCB
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	- Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.
R-CON		RAM clear of Reader Controller PCB
Lv.1	Details	To clear the RAM data of the Reader Controller PCB.
	Use case	When clearing RAM data of the Reader Controller PCB
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	- Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.
JAM-HIST		Clear of jam log
Lv.1	Details	To clear the jam log.
	Use case	When clearing the jam log
	Adj/set/operate method	Select the item, and then press OK key.
ERR-HIST		Clear of error code log
Lv.1	Details	To clear the error code log.
	Use case	When clearing the error code log
	Adj/set/operate method	Select the item, and then press OK key.
PWD-CLR		Clear of system administrator password
Lv.1	Details	To clear the password of the system administrator set in Settings/Registration menu.
	Use case	When clearing the password of the system administrator
	Adj/set/operate method	Select the item, and then press OK key.
ADRS-BK		Clear of address book
Lv.1	Details	To clear the address book data.
	Use case	When clearing the address book data
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	The address book data is cleared after the main power switch is turned OFF/ON.

COPIER > FUNCTION > CLEAR		
CNT-MCON		Clear of Main Controller service counter
Lv.1	Details	To clear the service counter counted by the Main Controller PCB.
	Use case	When clearing the service counter counted by the Main Controller PCB
	Adj/set/operate method	Select the item, and then press OK key.
CNT-DCON		Clear of DC Controller service counter
Lv.1	Details	To clear the service counter (FIN-STPR, SDL-STPL, SADDLE) counted by the DC Controller PCB.
	Use case	When clearing the service counter counted by the DC Controller PCB
	Adj/set/operate method	Select the item, and then press OK key.
	Related service mode	COPIER> COUNTER> DRBL-2> FIN-STPR, SDL-STPL COPIER> COUNTER> MISC> SADDLE
MMI		Clear of Settings/Registration set VL
Lv.1	Details	To clear the Settings/Registration setting values. - Preferences (excluding values for Paper Type Management Settings) - Adjustment/Maintenance - Function Settings - Set Destination (excluding Address Lists) - Management Settings (excluding Department ID Management)
	Use case	When clearing various setting values of Settings/Registration menu
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	The setting value is cleared after the main power switch is turned OFF/ON.
	MN-CON	
Lv.1	Details	To clear the RAM data of the Main Controller PCB SRAM Board. All data on the SRAM Board is initialized.
	Use case	When clearing RAM data of the Main Controller PCB SRAM Board
	Adj/set/operate method	1) Select the item, and then press OK key. The machine is automatically rebooted. 2) Turn OFF/ON the main power switch.
	Caution	- Be sure to get approval from the user by telling that all images in Inbox will be deleted. - Since the file management information is initialized, images on the HDD cannot be read. - Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.
CARD		Clear of card ID-related data
Lv.1	Details	To clear the data related to the card ID (department).
	Use case	When clearing the data related to the card ID
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	The data is cleared after the main power switch is turned OFF/ON.

COPIER > FUNCTION > CLEAR			
CA-KEY		Init of key pair, certificate and CRL	
Lv.2	Details	To simultaneously delete the key pair, certificate and CRL which are additionally registered by the user, and return to the default state.	
	Use case	When a service person replaces/discards the device	
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Check that OK is displayed. 3) Turn OFF/ON the main power switch.	
	Caution	- Unless this item is executed at the time of replacement/discard of the device, the key pair, certificate and CRL which are additionally registered by the user remain in the HDD, which is a problem in terms of security. - Do not execute this item carelessly because the key pair, certificate and CRL which are additionally registered are deleted when it is executed. If they are deleted mistakenly, they need to be again registered by the user. If no CA certificate and key pair are additionally registered, the machine condition becomes the same as the one at the time of factory - When NG is displayed in 2), there is a possibility that deletion was not executed. In this case, surely execute the deletion by initializing the HDD, etc.	
	Display/adj/set range	At normal termination: OK, At abnormal termination: NG	
Supplement/memo		After this function is executed, the registered key pair, certificate and CRL are initialized upon turning OFF and the ON the main power, and the key pair, certificate and CRL registered at the time of factory shipment are decompressed from the archive.	
ERDS-DAT		Initialization of E-RDS SRAM data	
Lv.1	Details	To initialize the SCM value of the Embedded-RDS stored in the SRAM. SCM values are ON/OFF of Embedded-RDS, server's port number, server's SOAP URL, and communication schedule with the server (how often the data is acquired), etc. The value set by COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG is cleared.	
	Use case	When upgrading the Bootable in the E-RDS environment	
	Adj/set/operate method	Select the item, and then press OK key.	
	Caution	The method of using the SRAM in Embedded-RDS differs depending on the Bootable version. Therefore, unless the SRAM data is cleared at the time of version upgrade, data inconsistency occurs.	
	Display/adj/set range	At normal termination: OK, At abnormal termination: NG	
	Related service mode		COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG

COPIER > FUNCTION > CLEAR		
KEY-CLR	Encrypt key clear of HDD Encrypt Kit	
Lv.2	Details	To clear the encryption key of the HDD Data Encryption/Mirroring Kit for replacement. Processing performed at installation is executed, and a new encryption key is generated.
	Use case	When replacing the encryption key of the HDD Data Encryption/Mirroring Kit
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Check that OK is displayed. 3) Turn OFF/ON the main power switch.
	Caution	Since all data in the HDD becomes unavailable when executing this item, be sure to initialize the HDD after turning OFF/ON the main power switch.
	Display/adj/set range	At normal termination: OK, At abnormal termination: NG
USBM-CLR	Initialize USB MEAP priority rgst info	
Lv.1	Details	To initialize the registered ID data retained in the OS field by calling the API provided by the OS.
	Use case	When a failure occurs in USB MEAP priority registration
	Adj/set/operate method	Select the item, and then press OK key.
FX-L-CLR	Clear of Fixing Motor current value log	
Lv.1	Details	To clear the log of current value of the Fixing Motor. Use this mode when resetting the log (FX-MTR2 to 5) without replacing the Pressure belt Unit.
	Use case	- When E008-0001 occurs - When resetting the current value of the Fixing Motor at the time other than at replacement of the Pressure Belt Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Related service mode	COPIER> DISPLAY> FIXING> FX-MTR2 - 5 COPIER> COUNTER> DRBL-1> FX-BLT-L
	Supplement/memo	When the counter value (FX-BLT-L) is cleared at replacement of the Pressure Belt Unit, the log of current value of the Fixing Motor is also cleared.
JV-CACHE	Cache clear of JAVA application	
Lv.1	Details	To clear the cache information used by JAVA application.
	Use case	When initializing the JAVA application
	Adj/set/operate method	Select the item, and then press OK key.
FCTX-CLR	Clearing fax job information	
Lv.1	Details	To clear fax job information stored on SRAM. Use this mode to restore from E611-0001.
	Use case	When E611-0001 occurs
	Adj/set/operate method	Select the item, and then press OK key.

COPIER > FUNCTION > CLEAR		
LANG-CLR	Uninstallation of language files	
Lv.2	Details	To uninstall the language files other than English and Japanese files. When rebooting the machine after execution, language files other than English and Japanese files are deleted, and language displayed on the screen becomes English.
	Use case	When uninstalling language files
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Reboot the machine.
FIN-MCON	Clearing Finisher info in controller	
Lv.1	Details	To clear the Finisher information which is stored in the Main Controller. Malfunction occurs if replacing the Finisher with a different type of it without cleaning the information. After execution, reset the Delivery Tray again in Settings/Registration> Function Settings> Common> Paper Output Settings> Output Tray Settings.
	Use case	When switching to a different type of Finisher in the field
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	After execution, set the Delivery Tray of the Finisher again.
	Related UI menu	Function Settings> Common> Paper Output Settings> Output Tray Settings

T-8-54

MISC-R

COPIER > FUNCTION > MISC-R		
SCANLAMP	Lighting check of Scanner Unit (frt) LED	
Lv.1	Details	To light up the LED of the Scanner Unit (for front side) for 3 sec. Check whether there is a missing block or no lighting in LED.
	Use case	When replacing the LED of the Scanner Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
1PSCLB-A	DADF 2 faces color differ crct (front)	
Lv.1	Details	To acquire scanning data on the front side in order to correct the color difference between the front and back side at the time of duplex stream reading. A significant color difference may occur between the front and back side of the image scanned on DADF caused by variations in the LED and changes in durability. Such a color difference is corrected by executing 1PSCLB-B following 1PSCLB-A.
	Use case	When a significant color difference occurs between the front and back side at DADF duplex reading
	Adj/set/operate method	1) Set paper on the DADF. 2) Select the item, and then press OK key.
	Caution	Do not turn OFF/ON the main power switch before executing 1PSCLB-B even though OK is displayed by 1PSCLB-A.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related service mode	COPIER> FUNCTION> MISC-R> 1PSCLB-B
1PSCLB-B	DADF 2 faces color differ crct (back)	
Lv.1	Details	To acquire scanning data on the back side in order to correct the color difference between the front and back side at the time of duplex stream reading. A significant color difference may occur between the front and back side of the image scanned on DADF caused by variations in the LED and changes in durability. Such a color difference is corrected by executing 1PSCLB-B following 1PSCLB-A.
	Use case	When a significant color difference occurs between the front and back side at DADF duplex reading
	Adj/set/operate method	1) Set the document used by 1PSCLB-A on DADF, so that the front side is faced down and the cyan image is placed at the left rear side. 2) Select the item, and then press OK key.
	Caution	Do not turn OFF/ON the main power switch before executing 1PSCLB-B even though OK is displayed by 1PSCLB-A.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Related service mode	COPIER> FUNCTION> MISC-R> 1PSCLB-A

COPIER > FUNCTION > MISC-R		
1PCLBSET	DADF 2 faces color differ crct ref side	
Lv.1	Details	To set which side (the front or back side) should be the reference side when correcting a color difference at the time of duplex stream reading. The correction result is reflected after executing the following operation: specify the reference side, execute a series of color difference correction processing, and then turn OFF/ON the power.
	Use case	Before correcting color difference in DADF duplex reading
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 2 0: N/A, 1: Front side, 2: Back side
	Default value	0
	1PCLBUDR	DADF 2 faces clr differ crct lowr limit
Lv.1	Details	To keep colors which do not need to be corrected at DADF duplex stream reading, the correction amount is adjusted so that the effect of correction is weakened. The result is reflected when correction of color difference is executed again after the setting is made. When 1 is set, unnecessary correction is not executed, but an expected effect may not be obtained for other colors.
	Use case	When color difference occurs on the colors which did not have any difference before correction
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Expected correction result may not be obtained.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	1PCLBOVR	DADF 2 faces clr differ crct upr limit
Lv.1	Details	Excessive correction is sometimes made when correcting color difference in duplex stream reading. To prevent it happens, adjust the correction amount to weaken the effect of the correction. The result is reflected when correction of color difference is executed again after the setting is made. When 1 or 2 is set, excessive correction is not executed, but an expected effect may not be obtained for other colors.
	Use case	When color difference occurs on the colors which did not have any difference before correction
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Expected correction result may not be obtained.
	Display/adj/set range	0 to 2 0: No control, 1: Weak control, 2: Strong control
	SCANLMP2	Lighting check of Scanner Unit (bck) LED
Lv.1	Details	To light up the LED of the Scanner Unit (for back side) for 3 sec. Check whether there is a missing block or no lighting in LED.
	Use case	When replacing the LED of the Scanner Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > MISC-R		
RD-SHPOS		Moving to Reader Scanner Unit fix pstn
Lv.2	Details	To move the Reader Scanner Unit to the position where it is secured in when moving. When moving the Reader after installation, the Reader Scanner Unit may move and get damage. By moving the Scanner Unit to the specified position and securing it in place with a screw before moving, damage can be prevented.
	Use case	When moving the Reader after installation
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure to move the Scanner Unit to the fixing position and secure it in place with a screw when moving the Reader after installation. Otherwise, the Scanner Unit may get damage.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!

T-8-55

■ MISC-P

COPIER > FUNCTION > MISC-P		
P-PRINT		Output of service mode setting value
Lv.1	Details	To print the service mode setting value.
	Use case	Before executing the CLEAR service mode
	Adj/set/operate method	Select the item, and then press OK key.
	Related service mode	COPIER> FUNCTION> CLEAR
HIST-PRT		Output of jam and error log
Lv.1	Details	To print the jam log and error log.
	Use case	When printing the jam/error log
	Adj/set/operate method	Select the item, and then press OK key.
TRS-DATA		Moving memory reception data to Inbox
Lv.2	Details	To move data received in memory to Fax/I-Fax Inbox> Memory RX Inbox.
	Use case	When moving the data received in memory to Inbox
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
USER-PRT		Settings/Registration menu list output
Lv.1	Details	To output Settings/Registration menu list.
	Use case	When outputting Settings/Registration menu list.
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	Supplement/memo	It takes approximately 3 seconds before printing starts.
LBL-PRNT		Output of service label
Lv.1	Details	To output the service label.
	Use case	When outputting the service label
	Adj/set/operate method	1) Place A4/LTR paper in Cassette 1. 2) Select the item, and then press OK key.
PRE-EXP		Lighting-up of Cleaning Pre-exposure LED
Lv.1	Details	To light up the Cleaning Pre-exposure LED (Y/M/C/Bk). Open the Front Cover, and check visually that the LEDs light up. It automatically stops after all LEDs light up.
	Use case	When checking lighting of the Cleaning Pre-exposure LED
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Drum memory may occur, so be sure not to execute this item frequently.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
D-PRINT		Output of service mode (DISPLAY)
Lv.1	Details	To output items displayed by DISPLAY in service mode . Items output by P-PRINT, LBL-PRNT and HIST-PRT, and ALARM are excluded.
	Use case	When checking items in DISPLAY
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > MISC-P	
1ATVC-EX	Execute of primary transfer ATVC control
Lv.1	Details
	To execute the primary transfer ATVC control to optimize the primary transfer voltage.
	Use case
	- At occurrence of the primary transfer failure - When replacing the Primary Transfer Roller and ITB
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
ENV-PRT	Temp&hmdy/surface temp of Fix Belt
Lv.1	Details
	To output data of the temperature and humidity inside the machine/surface temperature of the Fixing Belt as a log.
	Use case
	When figuring out the past temperature inside the machine/fixing temperature information at problem analysis
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
ITB-ROT	Idle rotation of ITB
Lv.2	Details
	If the machine is not used for a long time, lines in horizontal scanning direction appear on the image due to trace of roller on the ITB. Normally, if the machine is not used for 60 hours or more, idle rotation of the ITB is executed at warm-up rotation performed first time for the day to remove the trace of roller. If image failure is not alleviated, execute idle rotation of the ITB manually. If image failure due to leaving the machine unused for a long time occurs frequently, extend idle rotation time by ITBROT SW.
	Use case
	- At installation - When lines in horizontal scanning direction appear on coated paper or halftone image after the machine is not used for a long time
	Adj/set/operate method
	Select the item, and then press OK key.
	Required time
	2 - 3 min
	Related service mode
	COPIER> OPTION> FNC-SW> ITBROT SW
ATR-EX	Execution of ATR control
Lv.2	Details
	To execute the ATR control for all colors.
	Use case
	- At occurrence of E020 - When checking the result of ATR control
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
INTR-EX	Exe of warm-up rotation at 1st power-on
Lv.2	Details
	To execute the regular warm-up rotation performed first time for the day excluding the Photosensitive Drum idle rotation and Charging Wire cleaning.
	Use case
	- When restarting potential control after execution of COPIER> OPTION> IMG-FIX> PO-CNT - When the D-max control condition is changed
	Adj/set/operate method
	Select the item, and then press OK key.
	Related service mode
	COPIER> OPTION> IMG-FIX> PO-CNT

COPIER > FUNCTION > MISC-P	
PJH-P-1	Detail info of print job log: 100 jobs
Lv.1	Details
	To print the print job log for the latest 100 jobs with detailed information. In the case of less than 100 jobs, the log of all print jobs is printed.
	Use case
	When printing the print job log with detailed information
	Adj/set/operate method
	Select the item, and then press OK key.
PJH-P-2	Detail info of print job log: all jobs
Lv.1	Details
	To print the log of all print jobs stored in the machine with detailed information (for maximum 5000 jobs). The difference between PJH-P-1 and this item is only the number of jobs printed.
	Use case
	When printing the print job log with detailed information
	Adj/set/operate method
	Select the item, and then press OK key.
PT-LPADJ	Adj of Patch Sensor light intensity
Lv.1	Details
	To execute correction of patch intensity and correction of background.
	Use case
	When replacing the Patch Sensor
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
AT-IMG-X	Exe image position correction control
Lv.1	Details
	To execute a series of image position correction control operation at parts replacement. Image position correction control is usually executed at the specific timing according to the operation status and environment change. The setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch.
	Use case
	- When removing the Drum Unit - When releasing the ITB pressure
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > MISC-P	
GRID-ADJ	Primary Charge Wire height adj PG outpt
Lv.1	Details
	To print the Primary Charging Wire height adjustment PG (Bk). When replacing the Primary Charging Assembly or adjusting the height of Primary Charging Wire, check whether there is a density difference in the output PG between the front side and rear side.
	Use case
	- When replacing the Primary Charging Assembly - When adjusting the height of Primary Charging Wire
	Adj/set/operate method
	Select the item, and then press OK key while <READY> is displayed.
	Caution
	- This item must be executed after <READY> is displayed. While <WAIT> is displayed, this item is not executed even if OK key is pressed. - When outputting PG using paper other than A3 extra-long paper which size is 329.0 mm x 483.0 mm (13" x 19"), soiled back of the paper due to secondary transfer may occur. When soiled back of paper occurs, execute cleaning of roller from Settings/Registration menu.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
	Related user mode
	Adjustment/Maintenance> Clean Roller
	Supplement/memo
	* Ledger 279.4 mm x 431.8 mm (11" x 17") is supported with DCON Ver. 4.01 or later.
CP-PRINT	Output color assurance-related info
Lv.1	Details
	To output color assurance-related information collectively.
	Use case
	When collectively checking the service mode data required for color assurance service
	Adj/set/operate method
	Select the item, and then press OK key.
USBH-PRT	Output of USB device information report
Lv.1	Details
	To output information of the connected USB memory device in the form of a report.
	Use case
	When outputting information in the USB memory device in the form of a report
	Adj/set/operate method
	Select the item, and then press OK key.
SPIT-EX	Execution of toner ejection
Lv.2	Details
	To supply new toner by ejecting the toner in the Developing Assembly. Use this mode when the image density is low or coarseness occurs on halftone image after the machine is left for a long time.
	Use case
	When image failures (light image, coarseness) occur after the machine is left for a long time (e.g. summer vacation)
	Adj/set/operate method
	Select the item, and then press OK key.

COPIER > FUNCTION > MISC-P	
DRUM-TH	Drum Thermopile operation check
Lv.1	Details
	To check if the Drum Thermopile detects the surface temperature of the Photosensitive Drum correctly. The operation status and the surface temperature are displayed.
	Use case
	When replacing the Drum Thermopile
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK! -58 to 64
	Unit
	1 deg C
RPT-FILE	Saving of service report as a file
Lv.1	Details
	To save the report of various service modes in HDD as a file. The files can be obtained using SST or a USB memory device after starting the machine in download mode.
	Use case
	When obtaining the report as a file instead of printing the report out
	Adj/set/operate method
	Select the item, and then press OK key.
	Related service mode
	COPIER> FUNCTION> MISC-P> RPT2USB
	Supplement/memo
	File size: Approx. 1 MB at a maximum
RPT2USB	Write service report file to USB memory
Lv.1	Details
	To store the report file of service mode saved in HDD by RPT-FILE to a USB memory device.
	Use case
	When storing the report file of service mode to a USB memory device
	Adj/set/operate method
	Select the item, and then press OK key.
	Related service mode
	COPIER> FUNCTION> MISC-P> RPT-FILE
TNRB-PRT	Output of Toner Container ID report
Lv.1	Details
	To output the ID of the Toner Container in the form of a report.
	Use case
	When checking the ID of the Toner Container
	Adj/set/operate method
	Select the item, and then press OK key.
	Display/adj/set range
	Character string (4 digits)
INITITB2	Developer ejection at ITB initialization
Lv.1	Details
	To execute developer ejection at ITB initialization.
	Use case
	- When high-voltage mottled image occurs on halftone image - When an image failure (mottled image) occurs after replacement of the ITB - When using special paper after replacement of the ITB while developer is deteriorated
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	Toner is consumed
DET-C-Y	Y-clr Primary Charge Ass'y conct detect
Lv.1	Details
	To detect whether the Y-color Primary Charging Assembly is electrically connected in a proper manner.
	Use case
	When replacing the Primary Charging Assembly
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.
	Related service mode
	COPIER> FUNCTION> INSTALL> AINR-OFF

COPIER > FUNCTION > MISC-P		
DET-C-M		M-clr Primary Charge Ass'y conct detect
Lv.1	Details	To detect whether the M-color Primary Charging Assembly is electrically connected in a proper manner.
	Use case	When replacing the Primary Charging Assembly
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.
	Related service mode	COPIER> FUNCTION> INSTALL> AINR-OFF
DET-C-C		C-clr Primary Charge Ass'y conct detect
Lv.1	Details	To detect whether the C-color Primary Charging Assembly is electrically connected in a proper manner.
	Use case	When replacing the Primary Charging Assembly
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.
	Related service mode	COPIER> FUNCTION> INSTALL> AINR-OFF
DEV-RCVR		Exe toner density normalization process
Lv.2	Details	To execute the process to normalize toner density in the Developing Assembly when the Hopper Unit is replaced due to Toner Density Sensor output upper limit error (E025-0151/0251/0351/0451) caused by error in the Hopper Unit. After replacement of the Hopper Unit, set the target color to "1" with CLR-SET and execute SPLY-H so that toner is supplied to the Hopper Unit. After that, by executing this service mode, toner is supplied to the Developing Assembly and stirred, so that toner density becomes normal. The color is identified by the machine automatically.
	Use case	When replacing/repairing the Hooper Unit at the occurrence of E025-0x51
	Adj/set/operate method	1) Select the item, and then press OK key. 2) When it is completed normally, execute auto gradation adjustment (full adjustment).
	Caution	- Before executing this service mode, be sure to set the target color to "1" with CLR-SET and execute SPLY-H. - If this service mode ends up as abnormal termination, it cannot be executed again. In this case, replace the Developing Assembly of the corresponding color.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	COPIER> FUNCTION> INSTALL> CLR-SET, SPLY-H

COPIER > FUNCTION > MISC-P		
ACCPST		Acceptance of delivery option config
Lv.1	Details	To make the host machine recognize the delivery option being connected. Execute this item when the connected delivery option is removed. In a case where an option is added, it is recognized automatically; therefore, there is no need to execute this item.
	Use case	When the connected delivery option is removed
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Unless this item is executed after removal of delivery option, a message indicating that the equipment cannot be recognized appears every time the power is turned ON.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
PSCCL-PRT		[For customization]

■ SYSTEM

COPIER > FUNCTION > SYSTEM		
DOWNLOAD		Shift to download mode
Lv.1	Details	To make the machine enter the download mode and wait for a command. Perform downloading by SST.
	Use case	At upgrade
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Perform downloading by SST.
	Caution	Do not turn OFF the power before HOLD is displayed.
	Display/adj/set range	When waiting for a command: STAND-BY/STNDBY, In communication: CONNECTED, Communication terminated: HOLD
CHK-TYPE		Spec HD-CLEAR/HD-CHECK exe partition No.
Lv.1	Details	To specify the partition number of the HDD to execute HD-CLEAR/HD-CHECK.
	Use case	When executing HD-CLEAR/HD-CHECK
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 65535 0: Entire HDD 1: Image accumulation area 2: Universal file storage area 3: PDL file storage area 4: Program file storage area 5: MEAP application 6: Address book/transfer setting 7: MEAP storage data 8: System log storage area
	Related service mode	COPIER> FUNCTION> SYSTEM> HD-CLEAR, HD-CHECK
HD-CHECK		Entire HDD check and recovery
Lv.1	Details	To check the entire HDD and execute recovery processing.
	Use case	When E602/E614 (file corruption, etc.) occurs
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Be sure to execute this item after CHK-TYPE.
	Display/adj/set range	0 to 4 0: Sector check of the entire HDD and recovery 1: Image accumulation area 2: Universal file storage area 3: PDL file storage area 4: Program file storage area
	Related service mode	COPIER> FUNCTION> SYSTEM> CHK-TYPE

COPIER > FUNCTION > SYSTEM	
HD-CLEAR	Initialization of specified partition
Lv.1	Details
	To initialize the HDD partition specified by CHK-TYPE.
	Use case
	When initializing the HDD partition
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	Be sure to execute this item after CHK-TYPE.
	Display/adj/set range
	First 2 digits: Progress ratio (%; Returns to "00" at termination) Last 2 digits: Result at termination (00: Normally finished, Others: Abnormally finished)
	Related service mode
	COPIER> FUNCTION> SYSTEM> CHK-TYPE
DSRAMBUP	Backup of DC Controller PCB SRAM
Lv.2	Details
	To back up the setting data in SRAM of the DC Controller PCB.
	Use case
	When replacing the DC Controller PCB for troubleshooting at the time of problem occurrence
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
DSRAMRES	Restore of DC Controller PCB SRAM
Lv.2	Details
	To restore the setting data which has been backed up in SRAM of the DC Controller PCB.
	Use case
	When replacing the DC Controller PCB for troubleshooting at the time of problem occurrence
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
RSRAMBUP	Backup of Reader Controller PCB SRAM
Lv.2	Details
	To back up the setting data in SRAM of the Reader Controller PCB.
	Use case
	When replacing the Reader Controller PCB for troubleshooting at the time of problem occurrence
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > SYSTEM	
RSRAMRES	Restore of Reader Controller PCB SRAM
Lv.2	Details
	To restore the setting data which has been backed up in SRAM of the Reader Controller PCB.
	Use case
	When replacing the Reader Controller PCB for troubleshooting at the time of problem occurrence
	Adj/set/operate method
	Select the item, and then press OK key.
	Caution
	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
	Display/adj/set range
	During operation: ACTIVE, When operation finished normally: OK!
REBOOT	Reboot of host machine
Lv.2	Details
	To reboot the host machine.
	Use case
	For customization
	Adj/set/operate method
	Select the item, and then press OK key.

T-8-58

COPIER > OPTION > CLEANING	
W-CLN-P	Set Prmry Chg Wire clean intvl: 1st rotn
Lv.2	Details
	To set the paper interval for automatic cleaning of the Primary Charging Wire. The Primary Charging Wire is cleaned (1 reciprocation) at the time of last rotation after completion of job with every specified number of sheets. When W-CLN-PH is 1, this settings is enabled.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	50 to 10000
	Unit
	1 sheet
	Default value
	2000
	Related service mode
	COPIER> OPTION> CLEANING> W-CLN-PH
W-CLN-T	Set Pre-trn Chg Wire clean intvl:1st rtn
Lv.2	Details
	To set the paper interval for automatic cleaning of the Pre-transfer Charging Wire. Cleaning is executed at the time of last rotation after completion of job with every specified number of sheets. When W-CLN-PH is 1, this settings is enabled.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	50 to 10000
	Unit
	1 sheet
	Default value
	2000
	Related service mode
	COPIER> OPTION> CLEANING> W-CLN-PH
D-CLN-TM	Set of drum clean time: warm-up rotation
Lv.2	Details
	To adjust the time for cleaning the surface of the Photosensitive Drum which is performed at warm-up rotations. When AUTO-DH is 1, this settings is enabled.
	Use case
	When image smear occurs in an HH environment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	1 to 300
	Unit
	1 sec
	Default value
	1
	Related service mode
	COPIER> OPTION> IMG-DEV> AUTO-DH

COPIER > OPTION > CLEANING	
OHP-PTH	Set of ITB clean transp threshold value
Lv.2	Details
	When a large number of transparencies is fed, surface active agent which coats the surface of an transparency adheres to the ITB, and consequently the transfer efficiency is lowered, causing an image failure. After feeding a certain number of transparencies, a patch is formed on the ITB, and the ITB Cleaning Blade scrapes it off together with surface active agent. This setting is used to set the threshold value for the number of fed transparency which is the condition to execute ITB cleaning.
	Use case
	When an image failure occurs due to lowering of the transfer efficiency
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 100 0: Not executed
	Unit
	1 sheet
	Default value
	0
W-CLN-PH	ON/OFF of Charging Wire auto cleaning
Lv.2	Details
	To set ON/OFF of automatic cleaning of the Primary Charging Wire and Pre-transfer Charging Wire. When 1 is set, W-CLN-P and W-CLN-T are enabled.
	Use case
	When switching ON/OFF of automatic cleaning
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1
	Related service mode
	COPIER> OPTION> CLEANING> W-CLN-P, W-CLN-T
PR-CLN	Set of Pressure Belt cleaning interval
Lv.2	Details
	To set the interval to execute the Pressure Belt cleaning. Cleaning is executed every time the specified number of sheets (setting value x 1000 sheets) are fed.
	Use case
	When adjusting the frequency of the Pressure Belt cleaning according to the usage status
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	1 to 100 1: 1,000 sheets, ... 100: 100,000 sheets
	Unit
	1000 sheet
	Default value
	20

COPIER > OPTION > CLEANING	
DEV-EXT	Dev Cylndr idle rtn time extsn:wrmup rtn
Lv.2	Details
	To set whether to extend idle rotation time of the Developing Cylinder at warm-up rotation in a high temperature and high humidity environment. When 1 is set, toner of all colors are consumed at warm-up rotation.
	Use case
	When an image failure (dark lines in vertical scanning direction) occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	The warm-up rotation time and consumption of toner of all colors are increased only in a high temperature and high humidity environment. If lines appear every morning, ask the user which is preferable: clean inside the machine by him/herself as needed or set the value of this item to 1.
	Display/adj/set range
	0 to 1 0: 60 seconds, 1: 120 seconds
	Default value
	0
CLN-TM	Set inside the machine cleaning time
Lv.2	Details
	To set the time to execute "Clean Inside Main Unit" in Settings/Registration menu. When outputting low duty images in a high temperature and high humidity environment, dark lines in vertical scanning direction or density difference in horizontal scanning direction may occur due to toner adhered on the surface of the Photosensitive Drum. In such case, the symptom may be alleviated by ejecting toner onto the Photosensitive Drum and executing cleaning for a longer time so that adhered toner can be removed.
	Use case
	When an image failure (dark lines in vertical scanning direction) occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	Toner consumption at "Clean Inside Main Unit" is increased.
	Display/adj/set range
	0 to 2 0: 60 seconds, 1: 120 seconds, 2: 180 seconds
	Default value
	0
	Related UI menu
	Adjustment/Maintenance> Maintenance> Clean Inside Main Unit

COPIER > OPTION > CLEANING	
ROT-COND	Set frqcy of fusion prev drum idle rotn
Lv.2	Details
	To set the frequency to execute idle rotation of the Photosensitive Drum. In a high temperature and high humidity environment, in order to prevent fusion of toner on the Photosensitive Drum, idle rotation of the Photosensitive Drum is normally executed for 60 seconds every 1,000 sheets of print. Set 1 when white dots occur on the solid area outside the A3 width on paper of A3 size or larger. Image failures caused by fusion are alleviated, but the productivity is decreased by the frequent idle rotation. Set 2 if paper of A3 size or larger is not used very often. The productivity increases, but fusion is likely to occur.
	Use case
	When white dots occur on the solid area outside the A3 width in a high temperature and high humidity environment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, fusion is improved, but productivity is decreased. When 2 is set, productivity is increased, but fusion is likely to occur. Use this setting value when paper of A3 size or larger is not used very often.
	Display/adj/set range
	0 to 4 0: Rotation for 60 seconds every 1,000 sheets 1: Rotation for 30 seconds every 500 sheets 2: Rotation for 60 seconds every 5,000 sheets 3 and 4: For R&D
	Default value
	0

T-8-59

CUSTOM

COPIER > OPTION > CUSTOM	
SC-L-CNT	Set large paper jdgmt reference at scan
Lv.1	Details
	To set the criteria for the scan counter to count which paper size whether B4 or LTR as large size. The threshold is determined by the combination with the setting of B4-L-CNT. SC-L-CNT=0, B4-L-CNT=0: paper exceeding B4 is determined as large size, paper with B4 or smaller is determined as small size. SC-L-CNT=0, B4-L-CNT=1: paper with B4 or larger is determined as large size, paper smaller than B4 is determined as small size.
	Use case
	As needed
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: B4 size, 1: LTR size
	Default value
	0
	Related service mode
	COPIER> OPTION> USER> B4-L-CNT
SCANTYPE	Switching of DADF + Reader type
Lv.1	Details
	To switch the type of DADF + Reader to a different type.
	Use case
	At installation
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Reverse Duplex DADF + Reader, 1: 1-Path Duplex DADF + Reader
	Default value
	0
ABK-TOOL	Allow access from address book mntc tool
Lv.1	Details
	To set whether to accept import from the address book maintenance tool.
	Use case
	When executing import from the address book maintenance tool
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Prohibited, 1: Allowed
	Default value
	0

COPIER > OPTION > CUSTOM	
USEUPTNR	Set Toner Container use-up mode
Lv.1	Details
	To set the maximum number of rotations of the Toner Container and operation to use up the toner in the container.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	When the setting value is 0, if the toner consumption is high (at the time of continuous output of high duty image), toner in the Hopper may be used up before the replacement timing of the Toner Container.
	Display/adj/set range
	0 to 2 0: 50 rotations, remove immediately when supply is stopped 1: 50 rotations, continue rotation even after supply is stopped 2: 80 rotations, continue rotation even after supply is stopped
	Default value
	1
DFEJCLEd	ON/OFF of DADF delivery LED
Lv.1	Details
	To set whether to light up the delivery LED of DADF.
	Use case
	Upon user's request (The delivery LED is too bright.)
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: ON, 1: OFF
	Default value
	0
RDEV-SP1	RCON device special settings 1
Lv.2	Details
	To execute the device special setting.
	Use case
	For customization
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Use this mode only when specific instructions are given.
	Display/adj/set range
	00000000 to 11111111
	Default value
	0
RDEV-SP2	RCON device special settings 2
Lv.2	Details
	To execute the device special setting.
	Use case
	For customization
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Use this mode only when specific instructions are given.
	Display/adj/set range
	00000000 to 11111111
	Default value
	0
RDEV-SP3	RCON device special settings 3
Lv.2	Details
	To execute the device special setting.
	Use case
	For customization
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Use this mode only when specific instructions are given.
	Display/adj/set range
	00000000 to 11111111
	Default value
	0

DSPLY-SW

COPIER > OPTION > DSPLY-SW	
UI-COPY	Display/hide of copy screen
Lv.2	Details
	To set whether to display or hide the copy function.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	1
UI-BOX	Display/hide of Inbox screen
Lv.2	Details
	To set whether to display or hide the Inbox function.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: No Inbox function (Storing is not available even with PDL to Inbox.) 1: Inbox function is active 2: Inbox function is active (with limitation; Storing is available with PDL to Inbox despite no display on the Control Panel/remote UI)
	Default value
	1
UI-SEND	Display/hide of transmission screen
Lv.2	Details
	To set whether to display or hide the SEND function.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	1
UI-FAX	Display/hide of fax screen
Lv.2	Details
	To set whether to display or hide the fax function.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	1

COPIER > OPTION > DSPLY-SW	
NWERR-SW	OFF/ON of network-related error display
Lv.2	Details
	To set OFF/ON of network-related error message display. When setting 0 while the machine is not connected to network, the network-related error message "Check the network connection." is not displayed.
	Use case
	When using the machine as a copy machine
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1 (Normal model)/0 (Self-operated copy model)
T-CRG-SW	ON/OFF of Toner Cntner rplce scrn dspl
Lv.2	Details
	To set whether to display the Toner Container replacement screen in Settings/Registration menu.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
FXMSG-SW	ON/OFF of Fixing Ass'y rplce warn dspl
Lv.2	Details
	To set whether to display the warning prompting to replace the Fixing Assembly on the Control Panel when the Fixing Assembly reaches its life. Criteria for judging the life differ, depending on the setting value of FXMSGW2. - FXMSGW2 = 2: Current value of the Fixing Motor + Rotation time of the Fixing Belt Unit - FXMSGW2 = 1: Items above + Total number of sheets fed on the Fixing Belt Unit
	Factor at occurrence of the warning is identified in accordance with CODE column of log displayed in ALARM-2. - 06-0004: Current value of the Fixing Motor (FX-MTR2 to 8) - No log: Rotation time of the Fixing Belt Unit (FX-U-TM1) - 06-0002: Total number of sheets fed on the Fixing Belt Unit (FX-BLT-U)
	Use case
	When displaying the Fixing Assembly replacement message
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1

UI-RSCAN		ON/OFF of remote scan screen display
Lv.2	Details	To set whether to display the remote scan screen on the Control Panel.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1
UI-EPRNT		ON/OFF of extended print screen display
Lv.2	Details	To set whether to display the extended print screen (print screen for the print server).
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	0

COPIER > OPTION > DSPLY-SW		
UI-WEB		ON/OFF of Web browser screen display
Lv.2	Details	To set whether to display the Web browser screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1
UI-HOLD		ON/OFF of hold job screen display
Lv.2	Details	To set whether to display the hold job screen on the Control Panel.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1
OPEMANT		ON/OFF of operator maintenance mode
Lv.1	Details	To set ON/OFF of operator maintenance mode. When 0 is set, operator maintenance mode is not displayed. When 1 or 2 is set, "Operator Maintenance Mode" is displayed in Settings/Registration menu. When 1 is set, sub parts counter can be managed individually at replacement of the Fixing Assembly. When 2 is set, sub parts counters are cleared collectively at replacement of the Fixing Assembly.
	Use case	When starting operator maintenance
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: OFF 1: ON (Manage the Fixing Assembly sub parts counter individually) 2: ON (Clear the Fixing Assembly sub parts counters collectively)
	Default value	0
OPLOG-SW		Dspl/hide of error log in operator mntc
Lv.2	Details	To set whether to display or hide error/jam/alarm-2 log in operator maintenance mode.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	0
	Related user mode	Settings/Registration> Adjustment/Maintnance> Operator Maintenance> Operator Maintenance Mode> Display Log> ERR, JAM, ALARM-2

COPIER > OPTION > DSPLY-SW		
OP-ALMT		Set warning mssg timing in operator mntc
Lv.2	Details	To set the timing to display warning message of parts replacement/cleaning counter in operator maintenance mode. With this setting, warning message is displayed once before reaching the specified life of parts or number of sheets for cleaning.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: At 100%, 1: At 90% and 100%
	Default value	0
RMT-CNSL		Allow console application connection
Lv.1	Details	To set whether to allow connection from a console application (RemoteConsole). When 1 is set, logs of MEAP application can be collected via the console application activated on a PC.
	Use case	When collecting logs of MEAP application
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
UI-MEM		ON/OFF of memory media screen display
Lv.2	Details	To set whether to display the memory media screen on the Control Panel.
	Use case	When not displaying the memory media screen on the Control Panel
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
FCOT-DSP		ON/OFF of FCOT priority mode display
Lv.1	Details	To set whether to display "Color/Black Priority for First Print Time" in Settings/Registration menu. When 1 is set, the home position of the Primary Transfer Rollers for Y, M, C can be switched from Settings/Registration menu (equivalent to T1HP-POS).
	Use case	When setting "Color/Black Priority for First Print Time" in Settings/Registration menu
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
	Related service mode	COPIER> OPTION> FNC-SW> T1HP-POS

COPIER > OPTION > DSPLY-SW		
FXMSGW2		ON/OFF of Fix Belt Uni life criteria
Lv.2	Details	To set whether the total number of sheets fed through the Fixing Belt Unit is included as one of the criteria for displaying the Fixing Assembly replacement message. When FXMSG-SW is 1, this setting is enabled.
	Use case	When detecting the life of Fixing Assembly
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> OPTION> DSPLY-SW> FXMSG-SW
UI-CUSTM		ON/OFF of custom menu screen display
Lv.2	Details	To set whether to display the custom menu screen on the Control Panel.
	Use case	When not displaying the custom menu screen on the Control Panel
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
SCT-BTN		Set of shortcut button upper limit
Lv.1	Details	To set an upper limit on the number of "shortcut buttons" that appear at the top of the Control Panel screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When 1 is set, the number of shortcut buttons that can be set increases from 2 to 4. However, the buttons become smaller in width, and the number of characters that can be displayed decreases. Depending on the MEAP application allocated to the shortcut button, the character strings may not be fully displayed. Since the character strings displayed on the shortcut button are specified by the MEAP application, they cannot be changed. Therefore, if the number of characters are too many, foregoing symptom occurs. To prevent the symptom, a measure such as decreasing the number of characters on the MEAP application side needs to be taken.
	Display/adj/set range	0 to 1 0: 2 buttons, 1: 4 buttons
	Default value	0
	Supplement/memo	- Not necessary for WVGA model (The number is always 4.) - The settings for shortcut buttons are made in Advanced Menu Button> Top Buttons Settings.

COPIER > OPTION > DSPLY-SW		
USER-DSP		ON/OFF of SSO-H login user name
Lv.1	Details	To set whether to display the name of the user who logs in using MEAP authentication (SSO-H) on the upper left area of the Control Panel screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	0
SDTM-DSP		ON/OFF of auto shutdown shift time
Lv.1	Details	To set whether to display "Auto Shutdown Time" in Settings/Registration menu.
	Use case	When switching to display or hide auto shutdown time
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When "Hide" is set, auto shutdown time is reset. (Auto shutdown is not performed.)
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0
Related UI menu	Preferences> Timer/Energy Settings> AutoShutdown Time	
WT-WARN		Dspl/hide of Wst Toner Cntner prep mssg
Lv.1	Details	To set whether to display the preparation warning message of the Waste Toner Container on the status area of LUI.
	Use case	When there is no need to notify the preparation timing of the Waste Toner Container to the user
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1
PRCLNSW		ON/OFF Fix Pressure Belt clean message
Lv.2	Details	To set whether to display the message prompting to clean the Fixing Pressure Belt. The timing to display the message can be adjusted in COPIER>OPTION> CLEANING> PR-CLN.
	Use case	When a soiled image occurs because toner adheres to the Fixing Pressure Belt
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> OPTION> CLEANING> PR-CLN

COPIER > OPTION > DSPLY-SW		
RFREQ-SW		Real-time multi tone ctrl frqcy set sw
Lv.1	Details	To set whether to enable the execution frequency of the real-time multiple tone control set in service mode (R-FREQ-S). When 0 is set, the control is executed at the same frequency as when "Use Standard Settings" is selected in "Gradation Adjustment During Printing" in Settings/Registration menu. The setting of R-FREQ-S is ignored. When 1 is set, it is executed at the same frequency as when "Use Service Mode Settings" is selected in "Gradation Adjustment During Printing" (at the frequency set by R-FREQ-S). The above setting is linked with the setting of "Gradation Adjustment During Printing". The setting is switched to "Use Standard Settings" when 0 is set, whereas it is switched to "Use Service Mode Settings" when 1 is set.
	Use case	When hue variation occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Use Standard Settings, 1: Use Service Mode Settings
	Default value	0
	Related service mode	COPIER> OPTION> IMG-MCON> R-FREQ-S
	Related UI menu	Adjustment/Maintenance> Adjust Image Quality> Gradation Adjustment During Printing
	IMG-MODE	
Lv.2	Details	To set the moire alleviation mode that occurs with dark green color. When 1 is set, moire is alleviated by changing screen angle of Y-color
	Use case	When moire occurs with dark green color
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When 1 is set, uneven density may occur in the case that Y-color and Bk-color are mixed.
	Display/adj/set range	"0 to 1 0: Standard, 1: Moire alleviation mode"
	Default value	0

T-8-61

■ ENV-SET

COPIER > OPTION > ENV-SET		
ENVP-INT		Temp&hmdy/Fx Blt sface temp log get cycl
Lv.1	Details	To set the cycle to collect log of the temperature and humidity inside the machine and the surface temperature of the Fixing Belt. As the value is changed by 1, the cycle is changed by 1 min. Collected log can be displayed in COPIER> DISPLAY> ENVRNT.
	Use case	At problem analysis
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 480
	Unit	1 min
	Default value	60
	Related service mode	COPIER> DISPLAY> ENVRNT
	DRY-CISU	ON/OFF of condensation prevention mode
Lv.1	Details	To set ON/OFF of condensation prevention mode. Set 1 when an image failure or E225 occurs due to condensation in the Scanner Unit. From the next startup, the Scanner Unit (for front side) stops the fan for 15 sec and the Scanner Unit (for back side) lights LED for 30 sec.
	Use case	When droplets appear on the Scanner Unit due to condensation and image failure or E225 occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF (Normal mode), 1: ON (Condensation prevention mode)
	Default value	0

T-8-62

■ FEED-SW

COPIER > OPTION > FEED-SW		
EVLP-SPD		Envelope feeding speed setting
Lv.1	Details	To set the envelope feeding speed. By feeding an envelope at 2/3 speed (default) in the case of a high humidity environment, the glue flap may adhere at the time of fixing. As a result of that, the envelope may not be opened. By setting to 1/1 speed, adhesion can be prevented, but fixing might be deteriorated in a low humidity environment.
	Use case	When a glue flap of envelope adheres
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	The fixing performance is decreased by setting 1/1 speed in a low temperature environment.
	Display/adj/set range	0 to 1 0: 2/3 speed, 1: 1/1 speed
	Default value	0
	DK5-REST	Adj paper level for Multi Deck (Upper)
Lv.1	Details	To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Upper) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.
	Use case	Upon user's request
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	The number of remaining papers varies according to the air-floatation condition.
	Display/adj/set range	0 to 5
	Unit	20 sheet
	Default value	0
	Related UI menu	Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity

COPIER > OPTION > FEED-SW	
DK6-REST	Adj paper level for Multi Deck (Middle)
Lv.1	<p>Details</p> <p>To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Middle) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.</p> <p>Use case</p> <p>Upon user's request</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Caution</p> <p>The number of remaining papers varies according to the air-floatation condition.</p> <p>Display/adj/set range</p> <p>0 to 5</p> <p>Unit</p> <p>20 sheet</p> <p>Default value</p> <p>0</p> <p>Related UI menu</p> <p>Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity</p>
DK7-REST	Adj paper level for Multi Deck (Lower)
Lv.1	<p>Details</p> <p>To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Lower) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.</p> <p>Use case</p> <p>Upon user's request</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Caution</p> <p>The number of remaining papers varies according to the air-floatation condition.</p> <p>Display/adj/set range</p> <p>0 to 5</p> <p>Unit</p> <p>20 sheet</p> <p>Default value</p> <p>0</p> <p>Related UI menu</p> <p>Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity</p>

INSRT-SW	Insert ppr presence/absence jdgmt ON/OFF
Lv.1	<p>Details</p> <p>To set whether to perform paper presence/absence judgment by the Inserter before starting a job. When 1 is set, a job is started before paper detection is performed so productivity is improved.</p> <p>Use case</p> <p>Upon user's request (to improve productivity when using the Inserter)</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Caution</p> <p>If there is no insertion sheet in the Inserter while 1 is set, pages will be out of order. Consequently, a lot of papers being fed from the host machine will be handled as jam papers.</p> <p>Display/adj/set range</p> <p>0 to 1 0: ON (Starts pickup after confirming the presence of papers), 1: OFF (Starts pickup without judging paper presence or absence)</p> <p>Default value</p> <p>0</p>

COPIER > OPTION > FEED-SW	
PINT-REG	Set img pstn crctt exe condtn: ppr intvl
Lv.2	<p>Details</p> <p>To set the mode (frequency) to execute image position correction control at paper interval. As default, when any of the following conditions reaches the specified value, the control is executed.</p> <ul style="list-style-type: none"> - Interval (the number of sheets): 1000 sheets - Change in temperature of the Laser Scanner Unit: 2 deg C - Change in temperature of the host machine: 2 deg C - Time interval: 10 minutes <p>Since each specified value differs depending on mode, execution frequency can be selected according to the usage status. As the execution frequency is higher, color displacement is less likely to occur, but productivity is decreased. This control is executed at warm-up rotation performed first time for the day and after jam processing regardless of the setting value.</p> <p>Use case</p> <p>Upon user's request (to reduce occurrence of color displacement/to shorten the control time at paper interval)</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Caution</p> <p>To change the setting, check user's tolerable range of color displacement and productivity.</p> <p>Display/adj/set range</p> <p>0 to 10 0: Default mode 1: Color displacement top priority mode (The highest frequency) 2: Color displacement priority mode (Higher frequency than that of default) 3: Environment change support mode (More sensitive to change in temperature of the host machine than that of default) 4: Sleep support mode (More sensitive to change in temperature of the Laser Scanner Unit and shorter time interval than those of default) 5: FCOT priority mode (Less sensitive to change in temperature of the Laser Scanner Unit/host machine than that of default) 6: Productivity priority mode (Lower frequency than that of default) 7: Productivity top priority mode (No correction) 8 to 10: For R&D use</p> <p>Default value</p> <p>0</p>

COPIER > OPTION > FEED-SW	
DK4-TURN	ON/OFF POD-D Lite Pickup Roll last rotn
Lv.1	<p>Details</p> <p>To set whether to execute last rotation of the Pickup Roller on the POD Deck Lite for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.</p> <p>Use case</p> <ul style="list-style-type: none"> - When frequency of use is relatively low - When pickup jam tends to occur <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
DK5-TURN	ON/OFF M-Deck (Upr) Pickup Rol last rotn
Lv.1	<p>Details</p> <p>To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Upper) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.</p> <p>Use case</p> <ul style="list-style-type: none"> - When frequency of use is relatively low - When pickup jam tends to occur <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
DK6-TURN	ON/OFF M-Deck (Mid) Pickup Rol last rotn
Lv.1	<p>Details</p> <p>To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Middle) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.</p> <p>Use case</p> <ul style="list-style-type: none"> - When frequency of use is relatively low - When pickup jam tends to occur <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>

COPIER > OPTION > FEED-SW	
DK7-TURN	ON/OFF M-Deck (Low) Pickup Rol last rotn
Lv.1	<p>Details</p> <p>To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Lower) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.</p> <p>Use case</p> <ul style="list-style-type: none"> - When frequency of use is relatively low - When pickup jam tends to occur <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
DK1-AIR	ON/OFF of POD Deck Lite air assist
Lv.1	<p>Details</p> <p>To set ON/OFF of the POD Deck Lite air assist. When 0 (initial setting) is set, the air assist is OFF for plain paper or heavy paper 1, and ON for coated paper, textured paper, heavy paper 2 to 5, transparency, etc. When a jam or double feed error frequently occurs with plain paper, etc., set the value to 1. When the transfer performance is low with coated paper, textured paper, etc., set the value to 2.</p> <p>Use case</p> <ul style="list-style-type: none"> - When a jam or double feed error frequently occurs with plain paper or heavy paper 1 - When the transfer performance is low with coated paper, textured paper, etc. <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 2 0: Initial setting, 1: ON, 2: OFF</p> <p>Default value</p> <p>0</p>
DK2-AIR	ON/OFF of Multi Deck (Upper) air assist
Lv.1	<p>Details</p> <p>To set ON/OFF of the Multi Deck (Upper) air assist. When the value is 0, the air assist becomes ON according to the paper type or size. When the value is 1, the air assist is ON by fixing the air flow for all paper types and sizes. When the value is 2, the air assist is OFF for all paper types and sizes. If a jam or double feed error frequently occurs, set the value to 1. If the transfer performance is low, set the value to 2.</p> <p>Use case</p> <ul style="list-style-type: none"> - When a jam or double feed error frequently occurs - When the transfer performance is low <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 2 0: automatic, 1: ON (Fixation air capacity), 2: OFF</p> <p>Default value</p> <p>0</p>

COPIER > OPTION > FEED-SW

COPIER > OPTION > FEED-SW	
TFL-RTC	Set delvry dest at rcvry after tray full
Lv.1	Details
	To select the delivery destination for a job with multiple pages after recovering the Delivery Tray that reaches the full level. When 0 is set, a job is output from the delivery destination again from which the last job was delivered. When 1 is set, a job is output from the delivery destination which priority is set as high at "Output Tray Settings" in Settings/Registration menu.
	Use case
	When changing the delivery tray
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Output from the tray from which the last job was output, 1: Output from the delivery destination which priority is high among the delivery trays
	Default value
	0
D-MXDSZ	Set prdctvty priority:mix media, 2-sided
Lv.1	Details
	At a 2-sided job while media are mixed, productivity is decreased because paper circulation inside the machine is stopped. When 1 is set, productivity is improved because paper circulation is not stopped.
	Use case
	Upon user's request (to improve productivity when media are mixed)
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Normal mode, 1: Productivity priority mode
	Default value
	1
USZ-FEED	ON/OFF Job set/ppr source ppr size chck
Lv.1	Details
	To set whether to check if the paper size set for the job matches the paper size set on the paper source. When 1 is set, papers are picked up without checking even user defined size papers that differ from the job setting size are set on a paper source.
	Use case
	When forcibly picking up papers even the paper size setting differs between a job and a paper source
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: ON, 1: OFF
	Default value
	0

COPIER > OPTION > FEED-SW	
CIS-LED	ON/OFF of CIS light intensity auto adj
Lv.2	Details
	To set whether to adjust light intensity of CIS automatically. If an error occurs at pre-sampling of color paper or pre-printed paper, set 1. Adjust light intensity by CIS-LV.
	Use case
	When an error occurs at pre-sampling of color paper or pre-printed paper
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Automatic adjustment, 1: Manual adjustment
	Default value
	0
	Related service mode
	COPIER> OPTION> FEED-SW> CIS-LV
CIS-LV	Manual adjustment of CIS light intensity
Lv.2	Details
	To adjust light intensity of CIS manually. If an error occurs at pre-sampling of color paper or pre-printed paper, increase/decrease the value from 12. Increase the value for color paper of deep color, and decrease the value for glossy paper. When CIS-LED is 1, this setting is enabled.
	Use case
	When an error occurs at pre-sampling of color paper or pre-printed paper
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 16
	Default value
	12
	Related service mode
	COPIER> OPTION> FEED-SW> CIS-LED
CIS-SW	ON/OFF of CIS dtct threshold VL auto adj
Lv.2	Details
	To set whether to automatically adjust the threshold value at which CIS detects paper edge. If an error occurs at pre-sampling, set 1. Adjust the threshold value by CIS-TH.
	Use case
	When an error occurs at pre-sampling of color paper or pre-printed paper
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Automatic adjustment, 1: Manual adjustment
	Default value
	0
	Related service mode
	COPIER> OPTION> FEED-SW> CIS-TH

COPIER > OPTION > FEED-SW		
CIS-TH		Manual adj of CIS detect threshold value
Lv.2	Details	To manually adjust the threshold value at which CIS detects paper edge. If the edge of color paper of deep color cannot be detected, decrease the value.
	Use case	When an error occurs at pre-sampling of color paper or pre-printed paper
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 4 0: Color paper (deep color), 1: Color paper (pale color), 2: Normal, 3: Glossy paper (low luminance), 4: Glossy paper (high luminance)
	Default value	2
	Related service mode	COPIER> OPTION> FEED-SW> CIS-SW
	CST1-PSP	
Lv.2	Details	To set whether to disengage the Pickup Roller of the Cassette 1 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
	Use case	When Pickup Roller trace occurs on the 2nd sheets and later
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
	Display/adj/set range	0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
	Default value	0
CST2-PSP		Set Cassette 2 Pickup Roller eng/diseng
Lv.2	Details	To set whether to disengage the Pickup Roller of the Cassette 2 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
	Use case	When Pickup Roller trace occurs on the 2nd sheets and later
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
	Display/adj/set range	0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
	Default value	0

COPIER > OPTION > FEED-SW		
CST3-PSP		Set Cassette 3 Pickup Roller eng/diseng
Lv.2	Details	To set whether to disengage the Pickup Roller of the Cassette 3 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
	Use case	When Pickup Roller trace occurs on the 2nd sheets and later
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
	Display/adj/set range	0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
	Default value	0
	DK1-ALVD	
Lv.2	Details	To adjust the airflow amount of the Air Floatation Fan (Downstream) of the POD Deck Lite or Multi Deck (Upper). When making an adjustment, be sure to adjust the setting of DK1-ALVU.
	Use case	When double-feed occurs.
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
	Display/adj/set range	-10 to 10
	Default value	0
	Related service mode	COPIER> OPTION> FEED-SW> DK1-ALVU
	Supplement/memo	"Deck" means either POD Deck Lite or Multi Deck (Upper) depending on which equipment is connected to the host machine.
DK1-ALVU		Deck Air Float Fan airflow amnt:upstream
Lv.2	Details	To adjust the airflow amount of the Air Floatation Fan (Upstream) of the POD Deck Lite or Multi Deck (Upper). When making an adjustment, be sure to adjust the setting of DK1-ALVD.
	Use case	When double-feed occurs.
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
	Display/adj/set range	-10 to 10
	Default value	0
	Related service mode	COPIER> OPTION> FEED-SW> DK1-ALVD
	Supplement/memo	"Deck" means either POD Deck Lite or Multi Deck (Upper) depending on which equipment is connected to the host machine.

COPIER > OPTION > FEED-SW	
DK1-LDWN	Set ppr surface level down: Deck standby
Lv.2	Details
	To set whether to lower the paper surface level in the POD Deck Lite below pickup position during standby. When a trace which looks like that the Pickup Roller had contact with a paper occurs, set 1. It returns to pickup position at the time of starting a job.
	Use case
	When Pickup Roller trace occurs on transparency or the 1st sheet of coated paper in an LL environment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, FCOT becomes longer.
	Display/adj/set range
	0 to 1 0: Normal (Pickup Roller is in contact), 1: Paper surface level moves down
	Default value
	0
DK1-PSP	Setting of Deck Pickup Roller eng/diseng
Lv.2	Details
	To set whether to disengage the Pickup Roller of the POD Deck Lite or Multi Deck every time paper is picked up. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
	Use case
	When Pickup Roller trace occurs on the 2nd sheets and later
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
	Display/adj/set range
	0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
	Default value
	0
PDK-REST	Set Deck ppr lvl thrshld: prdctvty prrty
Lv.1	Details
	To set the threshold value for paper level to be determined as "no paper" in the Deck. As the value is increased, papers remaining in the Deck at the time of switching paper source by auto cassette change decrease. However, in some cases, the machine keeps pickup operation until paper runs out. As a result of that, adjustment needs to be made so productivity may decrease. Therefore, thickness of paper needs to be taken into consideration when making the setting. In case of heavy paper, keep the setting value as 0. In case of thin paper, set a relatively large value.
	Use case
	Upon user's request (to use up paper in the Deck)
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As the value is increased, the machine keeps pickup operation until paper runs out so productivity may be decreased.
	Display/adj/set range
	0 to 5 0: Maximum paper level, ... 5: Minimum paper level
	Default value
	0

COPIER > OPTION > FEED-SW	
DK2-ALVU	M-Deck(Mid) Air Float Fan airflow: upstm
Lv.2	Details
	To adjust the airflow amount of the Air Floation Fan (Upstream) of the Multi Deck (Middle). When making an adjustment, be sure to adjust the setting of DK2-ALVD.
	Use case
	When double-feed occurs.
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
	Display/adj/set range
	-10 to 10
	Default value
	0
	Related service mode

	COPIER> OPTION> FEED-SW> DK3-ALVU
CIS-OFF	Set left edge reg position adj control
Lv.1	Details
	To set ON/OFF of left edge registration position adjustment control. If adjusting image position when feeding paper from a cassette/deck while the setting value is 0 (control: ON), the result may not be reflected correctly due to the effects of automatic adjustment. When image position cannot be completely adjusted automatically or the adjustment result is not reflected correctly, change the setting value to 1 (control: OFF) and manually adjust image position when feeding paper from a cassette/deck. After the adjustment is completed, set the value back to 0.
	Use case
	When adjusting image position on paper which is fed from a cassette/deck at initialization or before execution of REG-L
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	Be sure to set the value back to 0 after manual adjustment.
	Display/adj/set range
	0 to 1 0: ON, 1: OFF
	Unit
	-
	Default value
	0
	Related service mode
	COPIER> ADJUST> FEED-ADJ> REG-L

COPIER > OPTION > FEED-SW	
REG-RCPR	Set side registration displace tolerance
Lv.2	Details
	To set the tolerance for paper displacement at side registration. As the value is changed by 1, the tolerance is changed by 0.1 mm. Use this item when any of the cases of the conditions a and b respectively are met at the same time. a. Conditions that worsen scratches caused by paper edges - When outputting a large volume of papers which sizes and paper types are the same - When mainly using a cassette - When mainly using small size heavy papers - When mainly performing 1-sided jobs b. Conditions that are less affected by deterioration of registration for front and back sides - When accuracy of registration for front and back sides are not particularly important - When mainly using paper which length in feed direction is short (a measure of length: 270.0 mm or less) - When mainly using paper which paper weight is small (a measure of weight: 150 g/m ² or less) There is not much influence if paper length in feed direction is short even though paper weight is large.
	Use case
	When an image failure occurs due to scratches on the Fixing Belt/ITB by paper edges
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	If the value is increased in the following cases, decrease in registration accuracy (inappropriate left edge margin, skew, trapezoid) may occur. - When using multiple types of paper and making small volume of prints with each of them - When accuracy of registration for the front and back sides are particularly important (e.g.: saddle job, trimming at lower process, business card/ledger/pre-printed paper/tab paper, etc.) - When mainly using paper which length in feed direction is long (a measure of length: 279.4 mm or more)
	Display/adj/set range
	0 to 25
	Unit
	0.1 mm
	Appropriate target value
	0
	Default value
	0

COPIER > OPTION > FNC-SW	
PO-CNT	ON/OFF of potential control function
Lv.1	Details
	To set ON/OFF of potential control function.
	Use case
	When replacing the Potential Control PCB
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Be sure to set the value back to 1 after servicing.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1
MODEL-SZ	Fix magnifictn dspl&DADF orgnl dtct size
Lv.1	Details
	To set the fixed magnification ratio display and the original detection size with DADF. It is set automatically at the time of installation of the Reader according to the location.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: AB configuration (6R5E) for Japan, 1: Inch configuration (5R4E) for North/Middle/South America, 2: A configuration (3R3E) for Europe, 3: AB/Inch configuration (6R5E) for Asia, Oceania, South America
	Default value
	It differs according to the location.
SCANSLCT	ON/OFF of scan area calculate function
Lv.2	Details
	To set ON/OFF of the function to calculate scanning area based on the specified paper size. When 1 is set and the paper size is larger than the original size, productivity is decreased because the scanning area gets larger.
	Use case
	When matching the scanning area with the paper size
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF (Calculate based on the detected original size), 1: ON (Calculate based on the specified paper size)
	Default value
	0

COPIER > OPTION > FNC-SW	
SENS-CNF	Setting of original detection size
Lv.2	Details
	To set original detection size according to AB configuration/Inch configuration/A configuration. Set 1 (Inch configuration) or 0 (A configuration) for Inch/A configuration machine.
	Use case
	When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: AB configuration, 1: Inch configuration
	Default value
	0
CONFIG	Set country/regn/lang/location/ppr size
Lv.1	Details
	To set the country/region, language, location, paper size configuration for multiple system software in HDD.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	XX YY.ZZ.AA XX: Country/region JP: Japan, US: USA, GB: Great Britain, FR: France, DE: Germany, IT: Italy, AU: Australia, SG: Singapore, NL: Netherlands, KR: Korea, CN: China, TW: Taiwan, ES: Spain, SE: Sweden, PT: Portugal, NO: Norway, DK: Denmark, FI: Finland, PL: Poland, HU: Hungary, CZ: Czech Republic, SI: Slovenia, GR: Greece, EE: Estonia, RU: Russia, AD: Andorra, AL: Albania, AM: Armenia, AR: Argentina, AT: Austria, BA: Bosnia and Herzegovina, BE: Belgium, BG: Bulgaria, BO: Bolivia, BR: Brazil, CA: Canada, CH: Switzerland, CL: Chile, CY: Cyprus, HR: Croatia, ID: Indonesia, IE: Ireland, IL: Israel, IN: India, IS: Iceland, LU: Luxembourg, LV: Latvia, MX: Mexico, MY: Malaysia, NZ: New Zealand, PE: Peru, PH: Philippines, PY: Paraguay, RO: Romania, SK: Slovakia, TH: Thailand, TR: Turkey, UA: Ukraine, UY: Uruguay, VE: Venezuela, VN: Vietnam YY: Language (Fixed; e.g. ja: Japanese) ZZ: Location (Fixed; e.g. 00: CANON) AA: Paper size configuration (00: AB configuration, 01: Inch configuration, 02: A configuration, 03: Inch/AB configuration)
W/SCNR	Setting of Reader Unit installation
Lv.1	Details
	To set installation state of the Reader Unit. Once the Reader Unit is detected at the start of the machine, 1 is set automatically.
	Use case
	When installing/removing the Reader Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Not installed, 1: Installed
	Default value
	According to the setting at shipment

COPIER > OPTION > FNC-SW	
ORG-LGL	Special paper size set in DADF mode: LGL
Lv.2	Details
	To set the size of special paper (LGL configuration) that cannot be recognized in DADF stream reading mode.
	Use case
	- Upon user's request - When picking up special paper size original from DADF
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 10 0: LEGAL-R, 1: FOOLSCAP-R, 2: OFICIO-R, 3: FOLIO-R, 4: Australian FOOLSCAP-R, 5: Ecuador OFICIO-R, 6: Bolivia OFICIO-R, 7: Argentine OFICIO-R, 8: Argentine LEGAL-R, 9: Government LEGAL-R, 10: Mexico OFICIO-R
	Default value
	0
ORG-LTR	Special paper size set in DADF mode: LTR
Lv.2	Details
	To set the size of special paper (LTR configuration) that cannot be recognized in DADF stream reading mode.
	Use case
	- Upon user's request - When picking up special paper size original from DADF
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: LETTER, 1: EXECUTIVE, 2: Argentine LETTER, 3: Government LETTER
	Default value
	0
ORG-B5	Special paper size set in DADF mode: B5
Lv.2	Details
	To set the size of special paper (B5) that cannot be recognized in DADF stream reading mode.
	Use case
	- Upon user's request - When picking up special paper size original from DADF
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: B5, 1: Korean government office paper
	Default value
	0

COPIER > OPTION > FNC-SW	
MODELSZ2	Ppr size dtct global support in bookmode
Lv.2	Details
	To set whether to enable global support of original size detection at Copyboard reading.
	Use case
	Upon user's request (original consists of mixed media (AB/Inch configuration))
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	- Do not use this at the normal service. - The Document Size Sensor (Photo Sensor) is additionally required to correctly detect the original size when the original consists of mixed media (AB/Inch configuration).
	Display/adj/set range
	0 to 1 0: Detected with detection size according to location, 1: Detected with AB/Inch mixed media.
	Default value
	0
SVMD-ENT	Setting of entry method to service mode
Lv.2	Details
	To set the way to get in service mode to prevent information leak.
	Use case
	As needed
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Factory default 1: [Settings/Registration] - Pressing [4] and [9] at the same time - [Settings/Registration]
	Default value
	0
FXWRNLVL	Set Fix Belt Unit fed sht warn dspl lvl
Lv.2	Details
	To set the threshold value for the number of fed sheets to indicate the warning message that the Fixing Belt Unit is near the end of life.
	Use case
	When switching the warning level of the Fixing Belt Unit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Error display threshold value 1: The value 10,000 smaller than the error display threshold value 2: The value 20,000 smaller than the error display threshold value 3: The value 30,000 smaller than the error display threshold value
	Default value
	2
KSIZE-SW	Set of Chinese paper (K-size) support
Lv.2	Details
	To set to detect/display the Chinese paper (K-size paper: 8K, 16K). When MODEL-SZ is 0, this setting is enabled.
	Use case
	When using K-size paper
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Not supported, 1: Supported
	Default value
	0
	Related service mode
	COPIER> OPTION> FNC-SW> MODEL-SZ

COPIER > OPTION > FNC-SW	
ORG-A4R	Special paper size set in DADF mode: A4R
Lv.2	Details
	To set the size of special paper (A4R) that cannot be recognized in DADF stream reading mode. When picking up A4R size original from the DADF of the Inch/AB configuration models, the size is converted into the specified size so that an image can be formed properly.
	Use case
	- Upon user's request - When picking up special paper size original from DADF
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: A4R, 1: FOLIO-R
	Default value
	0
PDF-RDCT	PDF reduction set at forwarding
Lv.2	Details
	To set whether to reduce the image for transmission when converting the image received by IFAX into PDF for e-mail/file transmission.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: With the current setting, 1: Image reduction
	Default value
	0
REBOOTSW	Restart setting at E240 error occurrence
Lv.2	Details
	To set whether to reboot in the case of E240 error. In the case of E240 error, the machine is automatically rebooted due to the possibility of continuous operation of the drive system while the spooled print job is cleared. Print job can be obtained if selecting the setting not to reboot.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	- Do not use this at the normal service. - Be sure to get approval from the user by telling the possibility of continuous operation of the drive system in the case of E240 error.
	Display/adj/set range
	0 to 1 0: Rebooted, 1: Not rebooted
	Default value
	0
SJB-UNW	Reserve upper limit of secure print job
Lv.2	Details
	To set the upper limit for the number of reserved jobs in secured print job.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: 50 jobs, 1: 90 jobs, 2: No limit
	Default value
	0

COPIER > OPTION > FNC-SW	
CARD-RNG	Card number setting (department number)
Lv.2	Details
	To set the number of cards (departments) that can be used with the Card Reader.
	Use case
	When setting the number of cards (departments)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1000
	Unit
	1 sheet
	Default value
	1000
COMP-PRT	Img proc memory allocate at job conflict
Lv.2	Details
	When making 2 or more composition prints (page number, number of copies, stamp, date, booklet, watermark), memory for image processing is allotted preferentially to print jobs. Meanwhile, memory for image processing of scan/send and PDL input becomes insufficient depending on the options and document size, and these jobs might be unprocessed until composition prints are finished. If these jobs are interfered each other, image processing can be put forward little by little by allotting memory equally to each job.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Print priority, 1: Equal allocation
	Default value
	0
ARCDT-SW	ON/OFF of ARCDAT control
Lv.1	Details
	To set ON/OFF of ARCDAT control. When 1 is set, the result of ARCDAT control is not reflected to LUT. When the hue variation occurs in the case of failure value displayed in COPIER> DISPLAY> HT-C, turn OFF the ARCDAT control once and check the hue. If hue variation is alleviated, analyze the cause of ARCDAT control error (developer, Patch Sensor, etc.).
	Use case
	When hue variation occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Be sure to set 0 again when ARCDAT control recovers.
	Display/adj/set range
	0 to 1 0: ON, 1: OFF
	Default value
	0
	Related service mode
	COPIER> DISPLAY> HT-C

COPIER > OPTION > FNC-SW	
SJOB-CL	Set of scan job canceling by logout
Lv.1	Details
	To set whether to cancel the scan job in operation by logout of the user.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	The job with scanning completed cannot be canceled.
	Display/adj/set range
	0 to 2 0: Cancel only scan job in waiting state, 1: Cancel all scan jobs, 2: Not canceled
	Default value
	0
PT3-INEX	Set to allow paper type "Type 3" info
Lv.2	Details
	To set whether to allow to use the paper type "Type 3" information with the following functions. - Individual import/export from RUI - Distribution of device information - Import/export from paper type management plug-in for iWEMC
	Use case
	When importing/exporting paper type Type 3
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Prohibited, 1: Allowed
	Default value
	0
	Related UI menu
	Device Management> Device Information Distribution Settings> Set Auto Distribution> Paper Information Device Management> Device Information Distribution Settings> Manual Distribution> Paper Information
	Supplement/memo
	Device Management> Device Information Distribution Settings> Set Auto Distribution> Paper Information Device Management> Device Information Distribution Settings> Manual Distribution> Paper Information On the above screens, the setting can be switched all, custom type, or paper database. On the list of individual import/export from RUI, custom type or paper database can be specified.

COPIER > OPTION > FNC-SW	
UNLMTBND	Over 400 binders print job support set
Lv.1	Details
	To set whether to support print job that exceeds 400 binders. With the setting to support, the machine makes prints by sharing binders according to job attribution. Set 1 if job with large quantity of binders* is not printed.
	Use case
	When supporting print job that exceeds 400 binders
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Automatic setting (When the print server has not yet been connected: not supported; When the print server is connected: supported), 1: Not supported
	Default value
	0
	Supplement/memo
	*: A job that requires finishing (such as stapling) in one job. Does not apply in the case of executing finishing with multiple sets of output.
MIBCOUNT	Scope range set of Charge Counter MIB
Lv.2	Details
	To set the range of counter information that can be obtained as MIB (Management Information Base).
	Use case
	For customization
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: All charge counters are obtained, 1: Only the displayed counter* is obtained, 2: All charge counters are not obtained *: Counter specified by the following: COPIER> OPTION> USER> COUNTER 1 to 6
	Default value
	0
	Related service mode
	COPIER> OPTION> USER> COUNTER1 - 6
CNTR-SW	Init parts counter estimated life value
Lv.1	Details
	To return the estimated life value of parts counter to the initial value.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter 0, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0: Returned to the initial value
	Default value
	0
W/RAID	Set HDD Encrypt/Mirror Kit inst state
Lv.1	Details
	To set installation state of the HDD Data Encryption/Mirroring Kit. When it is installed, set 1. When it is removed, set 0.
	Use case
	When installing/removing the HDD Data Encryption/Mirroring Kit
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Not installed, 1: Installed
	Default value
	0

COPIER > OPTION > FNC-SW		
PSWD-SW		Set password type to enter service mode
Lv.1	Details	To set the type of password that is required to enter when getting into service mode. Two types are available: one for "service technician" and the other for "system administrator + service technician". When selecting the type for "system administrator + service technician", enter the password for service technician after the password entry by the user's system administrator.
	Use case	Upon request from the user who concerns security
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: No password, 1: Service technician, 2: System administrator + service technician
	Default value	0
SM-PSWD		Password setting for service technician
Lv.2	Details	To set password for service technician that is used when getting into service mode.
	Use case	When password is required to get into service mode
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to select 1 or 2 with PSWD-SW in advance.
	Display/adj/set range	1 to 9999999
	Default value	1111111
	Related service mode	COPIER> OPTION> FNC-SW> PSWD-SW
RPT2SIDE		Set of service report 1-/2-sided output
Lv.1	Details	To set whether to use 1-sided or 2-sided for report output of service mode.
	Use case	When making 2-sided report output to reduce the number of output pages
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: 1-sided, 1: 2-sided
	Default value	1
BRWS-FAV		Set of service browser favorite register
Lv.2	Details	To set whether to allow registration of favorites in the browser for service. When 1 is set, favorites in the browser for service can be edited, and any URLs can be accessed.
	Use case	When service engineers edit favorites in the browser for service
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Prohibited, 1: Allowed
	Default value	0

COPIER > OPTION > FNC-SW		
PSCL-MS		Set of auto gradation adj target speed
Lv.1	Details	To set the speed to execute auto gradation adjustment. When 0 is set, it is executed only at 1/1 speed. When 2 is set, it is executed at 1/1, 2/3 and 1/2 speeds.
	Use case	Upon user's request
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 3 0: 1/1 speed only 1: Not used 2: 1/1 speed, 2/3 speed, 1/2 speed 3: Not used
	Default value	0
	Supplement/memo	When real-time multiple tone control is executed, the result of gradation adjustment is reflected to the image density correction table based on speed that was created last time.
INVALPDL		Disabling of PDL license
Lv.1	Details	To disable the registered PDL license. When 1 is set, PDL is disabled even if a PDL license is registered. This is set to the machines installed at convenience stores, which do not allow PDL to be used.
	Use case	When prohibiting the use of PDL
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Registered PDL license is enabled, 1: Disabled
	Default value	0
CDS-FIRM		Set to allow firmware update by admin
Lv.1	Details	To set whether to allow the user (administrator) to perform firmware update linked with CDS and collection of log files. When 1 is set, "Deliver Update" is added to remote UI, and "Firmware Update" is added to the Register/Update Software menu of local UI. Log files can be collected from remote UI.
	Use case	When allowing the administrator to update the firmware and collect log files
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Disabled, 1: Enabled
	Default value	JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0
	Related service mode	COPIER> OPTION> FNC-SW> LCDSFLG
	Supplement/memo	CDS: Contents Delivery System

COPIER > OPTION > FNC-SW		
CDS-MEAP		Set to allow MEAP installation by admin
Lv.1	Details	To set whether to allow the user (administrator) to install MEAP applications and enable iR options from CDS. When 1 is set, Updater can be activated from Settings/Registration menu.
	Use case	When allowing the administrator to install MEAP applications and enable iR options from CDS
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Disabled, 1: Enabled
	Default value	1
	Supplement/memo	CDS: Contents Delivery System
CDS-UGW		Set to allow firmware update from UGW
Lv.1	Details	To set whether to allow update of the firmware from the UGW server. When 1 is set, Updater accepts the operation from the UGW server in cooperation with CDS.
	Use case	When allowing update of the firmware from the UGW server
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Disabled, 1: Enabled
	Default value	0
	Supplement/memo	CDS: Contents Delivery System
LOCLFIRM		Set to allow firmware update by file
Lv.1	Details	To set whether to allow the user (administrator) to update the firmware from the remote UI using a local file. This update is executed as a measure for vulnerability in emergency situations.
	Use case	When prohibiting the administrator to update the firmware using a file
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Prohibited, 1: Allowed
	Default value	1
RSHDW-SW		ON/OFF of remote shutdown
Lv.1	Details	A shared multi-function machine is not likely to be shut down at power failure. Set ON/OFF of the remote shutdown function to prevent accident. When 1 is set, the machine can be shut down from the remote shutdown menu displayed on the remote UI.
	Use case	When preventing an accident at specified power-off time
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1

COPIER > OPTION > FNC-SW		
MIXM-PFP		Set productivity priority: mixed media
Lv.1	Details	To set the productivity priority mode when media are mixed. When 1 is set, media information is notified to the DC Controller before the start of printing, so that constant speed performance for any type of media can be realized. When 0 is set, productivity decreases because adjustment of printer engine is performed at the time of switching media.
	Use case	Upon user's request (to prioritize the life of Fixing Assembly or image quality)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Normal, 1: Priority on productivity
	Default value	1
	T1HP-POS	
Lv.1	Details	To set whether to consider the state that the Primary Transfer Rollers for Y, M, C are engaged to the ITB as the home position of the rollers. Set 0 when prioritizing FCOT in color mode. In the initial state, the Primary Transfer Rollers of 4 colors are engaged to the ITB. Set 1 when prioritizing FCOT in black mode. In the initial state, only the Primary Transfer Roller of Bk is engaged to the ITB.
	Use case	Upon user's request (Frequency to use color/B&W)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Engagement position, 1: Disengagement position
	Default value	0
	Related service mode	COPIER> OPTION> DSPLY-SW> FCOT-DSP
MC-FANSW		Setting of Controller Cooling Fan speed
Lv.1	Details	To set whether to make the Controller Cooling Fan 1 and 2 rotate at full speed. When 1 is set, the heat exhaust efficiency is enhanced.
	Use case	- When HDD damage occurs multiple times - When the machine is installed in a high temperature environment in which HDD damage is likely to occur
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Half speed, 1: Full speed
	Default value	0
BXNUPLOG		ON/OFF of Nup log at Inbox print
Lv.2	Details	To set whether to keep Nup log at Inbox print.
	Use case	When not keeping Nup log at printing from Mail Box
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1

COPIER > OPTION > FNC-SW		
BUSI-SW	Setting of customized function	
Lv.1	Details	To set the function in accordance with the customized specification.
	Use case	When installing a customized machine
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Standard, 1: Customization
	Default value	0
SDLMTWRN	ON/OFF cpcty warn dsp: E-mail/I-Fax TX	
Lv.1	Details	To set whether to display the warning message when sending data that exceeds the upper limit value for the transmission data size via E-mail/I-Fax.
	Use case	For customization
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
FAX-INT	Set FAX RX print interruption oprtn mode	
Lv.2	Details	To set the mode performing interruption operation of FAX reception print automatically.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Normal, 1: Interruption operation mode
	Default value	0
PDL-Z-LG	Setting of drawing algorithm	
Lv.1	Details	To switch the drawing algorithm of the iR C series and the iR-ADV C series to obtain output the user expects. When 0 is set, image is output as displayed on the screen by the new algorithm adopted from the iR-ADV C Series. Pseudo outline (boundary for processing divided graphics separately) occurred with the iR C series does not occur. However, when PDL job with special data structure is sent, output the user expects may not be obtained. When 1 is set, the drawing algorithm adopted by the conventional iR C series is used. Output equivalent to that of the iR C Series can be obtained; however, drawing-related phenomenon occurred with the series occurs.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not use setting value 2 and 3.
	Display/adj/set range	0 to 3 0: Drawing algorithm of iR-ADV C series, 1: Drawing algorithm of the conventional iR C series, 2, 3: For R&D use
	Default value	0

COPIER > OPTION > FNC-SW		
CDS-LVUP	Set to allow CDS periodical update	
Lv.1	Details	To set whether to allow periodical update by CDS. When 1 is set, the user administrator/service technician can set the periodical update function from Settings/Registration menu/service mode. With this setting, Updater performs periodical update.
	Use case	When allowing the administrator to perform periodical update
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Disabled, 1: Enabled
	Default value	The value differs according to the location.
	Supplement/memo	CDS: Contents Delivery System
AMSOFFSW	OFF of AMS mode	
Lv.1	Details	Usually, AMS mode is enabled automatically when the following conditions are satisfied. - AMS license which is an iR option is installed. - AMS-supported Login application is activated. Set 1 when preferring to disable AMS mode. For North/Middle/South America and for Europe, the default is 1. Set 0 when preferring to enable AMS mode.
	Use case	- When preferring to disable AMS mode - When preferring to enable AMS mode (for North/Middle/South America and for Europe)
	Adj/set/operate method	1) Press Counter button, and check that "ACCESS MANAGEMENT SYSTEM" is displayed on the Device Configuration screen. 2) Set the service mode to 1. 3) Turn OFF/ON the main power switch. 4) Check that AMS is disabled. Press Counter button, and check that "ACCESS MANAGEMENT SYSTEM" is not displayed on the Device Configuration screen.
	Display/adj/set range	0 to 1 0: AMS mode enabled, 1: AMS mode disabled
	Default value	JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0
	Supplement/memo	AMS: Access Management System When the device is in AMS mode, "ACCESS MANAGEMENT SYSTEM" is displayed in Check Counter> Check Device Configuration.
UA-OFFSW	ON/OFF of unified auth function	
Lv.1	Details	To set ON/OFF of the Unified Authentication function. Set the value to 0 when not preferring to use the Unified Authentication function because of security concern.
	Use case	Upon user's request (not to use the Unified Authentication function)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: ON, 1: OFF
	Default value	0

COPIER > OPTION > FNC-SW		
MIB-NVTA		RFC-compatible character string MIB write
Lv.1	Details	As default, MIB object which NVT-ASCII can be written exists in order to link with LUI entry value. This violates RFC order, so a problem like garbled 2-byte characters may occur in the SNMP monitoring system, such as the 3rd vendor's MPS. Whether non-RFC-compatible character strings are written in MIB can be set using this mode. When 1 is set, only the character strings which are strictly compatible with RFC are written. (Writing operation is executed from the SNMP manager.) LUI is not linked.
	Use case	Upon user's request (operation with RFC-compatible system)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 3 0: Compatible in a conventional manner, 1: RFC-compatible, 2 to 3: Not used
	Default value	0
SVC-RUI		Enabling of RUI function for servicing
Lv.1	Details	To set whether to enable the remote UI function for servicing (not provided to end users). When 0 is set, the remote UI function is disabled. When setting the value other than 0, remote UI function is enabled. The value entered becomes password to use the remote UI function. The setting is reset when the main power switch is turned OFF/ON.
	Use case	When preferring to use the import function of background image file of main menu
	Adj/set/operate method	Enter the setting value (other than 0), and then press OK key.
	Caution	The setting is reset when the main power switch is turned OFF/ON.
	Display/adj/set range	0 to 65535
	Default value	0
LCDSFLG		Enabling of local CDS server
Lv.1	Details	To set whether to use the local CDS server. When CDS-FIRM is 1, this settings is enabled. When this setting is enabled, the "Connected Server Settings" screen is displayed in Settings/Registration> Management Settings> License/Other> Register/Update Software> Software Management Settings.
	Use case	When using the local CDS server
	Adj/set/operate method	Enter 1, and then press OK key.
	Display/adj/set range	0 to 1 0: Not used, 1: Used
	Default value	0
	Related service mode	COPIER> OPTION> FNC-SW> CDS-FIRM
	Related UI menu	Management Settings> License/Other> Register/Update Software> Software Management Setting> Setting
	Supplement/memo	When local CDS is used, iW EMC/MC device firmware update plug-in is required.

COPIER > OPTION > FNC-SW		
BXSHIFT		Setting of binding at 0mm binding margin
Lv.1	Details	To set whether to judge the job as a job "without binding" when storing a PDL job in Inbox while the binding margin is set to "0". By setting the binding margin to 0 mm while "0" is set, the job is processed as "without binding". "Booklet" in "Options" on the Inbox screen can be also used. When "1" is set, it is judged as "with binding" even the binding margin is 0 mm so "Booklet", which has an exclusive relationship with "binding", cannot be used.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Without binding, 1: With binding
	Default value	0
SELF-CHK		For R&D
HOME-SW		Set screen displayed with Main Menu key
Lv.1	Details	To set whether to display the main menu screen or the screen registered as the startup screen when pressing Main Menu key.
	Use case	When setting the specified application as the startup screen by pressing a hardware key
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Main Menu screen, 1: Screen registered as the startup screen
	Default value	0
NO-LGOUT		ON/OFF of Logout button
Lv.1	Details	To set whether to display the [Logout] button. When 0 is set, [Logout] button is displayed on the screen, and logout with the ID key is enabled. (Normal) When 1 is set, [Logout] button is not displayed, and logout with the ID key is disabled.
	Use case	When hiding the Logout button for customization
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Display (normal), 1: Hide (customization)
	Default value	0

COPIER > OPTION > FNC-SW	
T-DLV-BK	Set Bk pre-toner low alarm notice timing
Lv.1	Details
	To set the timing (toner level) to notify the pre-toner low alarm for Bk-color. When the toner level in the Toner Container reaches the setting value (%), the alarm (10-0020 (Bk)) is notified.
	Use case
	When changing the timing to notify the end of life according to the usage status
	Adj/set/operate method
