USRTR-RD	Record of complete of instruct to user
Lv.1	Details
	To record whether instructions regarding safety have been provided to the user. After provision of instructions is completed, set 1. The result can be output with P-PRINT.
	Use case
	When provision of instructions to the user is completed
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Not completed, 1: Completed
	Default value
	0
	Related service mode
	COPIER> FUNCTION> MISC-P> P-PRINT
DLV-FAN	Adj Delivery Upper Cooling Fan airflow
Lv.2	Details
	To adjust the airflow amount of the Delivery Upper Cooling Fan when feeding coated paper 1/2. Increase the value when uneven gloss occurs. Because the airflow amount increases, uneven gloss is alleviated, but noise becomes louder. Decrease the value when thin glossy lines appear. When the value falls within the range from -2 to 0, the fan stops.
	Use case
	When an image failure (uneven gloss/glossy lines) occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	As the value is larger, noise becomes louder.
	Display/adj/set range
	-10 to 10
	Unit
	10 %
	Default value
	0

COPIER > OPTION > FNC-SW		
ITB-HREG		ON/OFF of ITB displace correct control
Lv.2	Details	To set ON/OFF of the ITB displacement correction control. By setting 1 when the control is not executed correctly due to failure of the ITB Displacement Sensor, printing can be continued temporarily until replacement of the part.
	Use case	When continuing printing temporarily while ITB displacement correction control cannot be executed
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	- Use this item only as a temporary measure. - When 1 is set, color displacement may occur. Be sure to set the value back to 0 immediately after completion of the measure.
	Display/adj/set range	0 to 1 0: ON, 1: OFF
	Default value	0
	CLN-RT	Set real-time multi tone ptch clean time
Lv.2	Details	To set the duration to clean the patch formed at real-time multiple tone control. As the value is incremented by 1, the duration is increased by approx. 3.3 seconds.
	Use case	When multiple tone patch cleaning failure occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	As the value is larger, productivity is decreased.
	Display/adj/set range	0 to 3
	Unit	1
	Default value	0
	PBJ-ORD	Set perfect binding job execution order
Lv.2	Details	To set whether to execute jobs including perfect binding job in the order they are sent. Normally, a perfect binding job becomes standby state during glue temperature control. When 0 is set, non perfect binding job that is sent during glue temperature control is executed before perfect binding job. When 1 is set, perfect binding job is suspended until glue temperature control is completed. Once the control is completed, the job is resumed. Since the succeeding non perfect binding job is not processed before the perfect binding job, all jobs are executed in the order they are sent. When PRISMAsync print server is connected, the value is automatically set to 1.
	Use case	When executing jobs including perfect binding jobs in the order they are sent
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Normal (Perfect binding job may be processed after succeeding job), 1: Execute jobs in the order they are sent
	Default value	0

COPIER > OPTION > FNC-SW		
IMGWIDTH		Set of print width priority mode: 13x19
Lv.2	Details	To set whether to put priority on securing print width over registration accuracy with 13 x 19 size paper. When 1 is set, print width becomes 323 mm.
	Use case	When securing print width with 13 x 19 size paper
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Registration accuracy priority, 1: Print width priority
	Unit	-
	Default value	0
	ITBROTWSW	Set ITB idle rotn time: warm-up rotation
Lv.2	Details	To set the idle rotation time of the ITB at warm-up rotation performed first time for the day. If the machine is not used for a long time, lines in horizontal scanning direction appear on the image due to trace of roller on the ITB. Normally, if the machine is not used for 60 hours or more, idle rotation of the ITB is executed at warm-up rotation performed first time for the day to remove the trace of roller. Increase the value (extend idle rotation time) if image failure is not alleviated by regular idle rotation after the machine is not used for 7 days or more.
	Use case	When lines in horizontal scanning direction appear on coated paper or halftone image after the machine is not used for a long time
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Be sure to get approval from the user by telling that startup takes time.
	Display/adj/set range	0 to 4 0: OFF, 1: ON, 2: ON (extend for 60 seconds), 3: ON (extend for 120 seconds), 4: ON (extend for 180 seconds)
	Default value	0
	Related service mode	COPIER> FUNCTION> INSTALL> ITB-ROT

INTPPR-1	Set wire clean interval in ppr interval
Lv.2	Details
	To set the paper interval for automatic cleaning of the Primary Charging Wire and Pre-transfer Charging Wire. Decrease the value when the density varies, and increase the value to reduce downtime.
	Use case
	- When density varies - When downtime occurs due to cleaning
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 9999
	Unit
	1 sheet
	Default value
	4000
DEVL-PTH	Low duty toner eject image duty total VL
Lv.1	Details
	To set the total value of the image duty, which is the condition to perform the low duty toner ejection sequence. When any of the average image duty of 4 colors indicates the threshold value or below, low duty toner ejection sequence is executed at the paper interval calculated by dividing the total value by the value of "threshold value - average image duty value". (The value specified in DEVL-VTH is used as a threshold value.)
	Use case
	While printing low duty (low image ratio) images, - When graininess (coarseness) occurs - When low productivity or high toner consumption is pointed out by the user
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this when the machine is operating correctly.
	Display/adj/set range
	0 to 4 0: 50 %, 1: 100 %, 2: 150 %, 3: 200 %, 4: 250 %
	Unit
	50 %
	Default value
	1

	Default value
	1
PCHINT-2	Adj of ATR patch ppr interval: 2nd limit
Lv.2	Details
	To adjust the paper interval which patch detection is performed by ATR control. (2nd limit)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 4 0: 100 sheets, 1: 200 sheets, 2: 300 sheets, 3: 400 sheets, 4: 500 sheets
	Unit
	100 sheet
	Default value
	1

COPIER > OPTION > IMG-DEV	
PCHINT-V	Adj ATR patch VD counter total VL intvl
Lv.2	Details
	To adjust the interval calculated by the total video counter value at which the patch detection is performed in ATR control and weighting at high duty. If any of the average image duty of 4 colors indicates the threshold value or higher, the patch detection of ATR control is executed at the paper interval calculated by dividing the total standard value by the average image duty value. Patch detection is normally executed at the paper interval per 200 sheets; however, if the foregoing condition is satisfied, detection will be executed even though it does not reach the specified number of sheet. When the negative value is specified, weighting (6.5 times) is applied to the video counter total value only if a new Toner Container is set and also in case of high duty (threshold value: 80% or higher). As the value is changed by 1, the total standard value of video counter is changed by 1000%. When 0 or higher value is specified, weighting is always applied when the duty value indicates the threshold value or higher. Combination of threshold value and weighting differs depending on the setting value. Total standard value of video counter is fixed to 6000%.
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-10 to 10 -10: Total standard value 10000%, -9: 9000%, -8: 8000%, -7: 7000%, -6: 6000%, -5: 5000%, -4: 4000%, -3: 3000%, -2: 2000%, -1: 1000% 0: Threshold value 80% / weighting 6.5 times, 1: 60% / 6.5 times, 2: 40% / 6.5 times, 3: 20% / 6.5 times, 4: 80% / 8 times, 5: 60% / 8 times, 6: 40% / 8 times, 7: 20% / 8 times, 8: 80% / 10 times, 9: 60% / 10 times, 10: 40% / 10 times
	Default value
	-6
DMX-OF-Y	Adj of Y-color density at D-max control
Lv.2	Details
	To adjust Y-color density at D-max control. Increase the value if density of solid area on Y-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
	Use case
	When density of solid area on an image is not appropriate even performing auto gradation adjustment
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
	Display/adj/set range
	-3 to 3
	Default value
	0

COPIER > OPTION > IMG-DEV	
DMX-OF-M	Adj of M-color density at D-max control
Lv.2	Details
	To adjust M-color density at D-max control. Increase the value if density of solid area on M-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
	Use case
	When density of solid area on an image is not appropriate even performing auto gradation adjustment
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
	Display/adj/set range
	-3 to 3
	Default value
	0
DMX-OF-C	Adj of C-color density at D-max control
Lv.2	Details
	To adjust C-color density at D-max control. Increase the value if density of solid area on C-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
	Use case
	When density of solid area on an image is not appropriate even performing auto gradation adjustment
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
	Display/adj/set range
	-3 to 3
	Default value
	0
DMX-OF-K	Adj of Bk-color density at D-max control
Lv.2	Details
	To adjust Bk-color density at D-max control. Increase the value if density of solid area on Bk-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
	Use case
	When density of solid area on an image is not appropriate even performing auto gradation adjustment
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
	Caution
	Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
	Display/adj/set range
	-3 to 3
	Default value
	0

COPIER > OPTION > IMG-DEV	
PRI-SHUT	Set Pry/Pre-trn Chg Shutter close timing
Lv.1	Details
	To set the time from when the Photosensitive Drum stops to when the Primary/Pre-transfer Charging Shutter is closed. With the Primary/Pre-transfer Charging Shutter control, the Primary/Pre-transfer Charging Shutter is closed after up to 255 minutes of the stop of the Photosensitive Drum to prevent image smear due to nitrogen oxide. Decrease the value to close the shutter earlier when image smear occurs first time for the day. Depending on the value, the shutter is closed before the machine shifts to sleep mode, so that the first copy time becomes longer for the time to open the shutter again (approx. 13 seconds). As the value is reduced, the life of the Primary/Pre-transfer Charging Wire Cleaning Pad is shortened because cleaning of the Charging Wire is performed every time the shutter is closed.
	Use case
	When image smear occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	- If the shutter is closed before the machine shifts to sleep mode, the first copy time becomes longer for the time to open it again. - As the value is reduced, the life of the Primary/Pre-transfer Charging Wire Cleaning Pad is shortened.
	Display/adj/set range
	0 to 120
	Unit
	1 min
	Appropriate target value
	120
	Default value
	120
ADJVPP-1	Adj of dev AC bias Vpp: 1/1 SPD
Lv.2	Details
	To adjust Vpp of the developing AC bias at 1/1 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.
	Use case
	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-4 to 2
	Default value
	0

COPIER > OPTION > IMG-DEV	
ADJVPP-2	Adj of dev AC bias Vpp: 2/3 SPD
Lv.2	Details
	To adjust Vpp of the developing AC bias at 2/3 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.
	Use case
	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-4 to 2
	Default value
	0
ADJVPP-3	Adj of dev AC bias Vpp: 1/2 SPD
Lv.2	Details
	To adjust Vpp of the developing AC bias at 1/2 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.
	Use case
	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs
	Adj/set/operate method
	1) Enter the setting value (switch negative/positive by +/- key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	-4 to 2
	Default value
	0
DRBNDWSW1	ON/OFF of drum toner band formation
Lv.2	Details
	To set whether to form toner band on the Photosensitive Drum. Interval to form toner band can be set by DRBNDTM1 (during last rotation)/DRBNDTM2 (at paper interval).
	Use case
	When flip of the Cleaning Blade/fusion occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, toner consumption is increased and productivity is decreased.
	Display/adj/set range

DEVLVTHY	Set toner eject Y-clr img duty threshold
Lv.2	
Details	To set the threshold value of the Y-color image duty (average image ratio) where the low duty toner ejection sequence is executed. There are 5 selections for setting value and threshold value changes according to the temperature inside the machine. As the value is larger, coarseness is decreased, but productivity is lowered and toner consumption is increased. As the value is smaller, productivity and toner consumption are improved, but coarseness gets worse.
Use case	When coarseness (graininess) occurs on low duty image (image with low image ratio)
Adj/set/operate method	Enter the setting value, and then press OK key.
Caution	- As the value is larger, productivity is decreased but toner consumption is increased. - Increase the value by 1 while checking the symptom each time.
Display/adj/set range	1 to 5 1: 1.0%, 1.5%, 2.0%, 2.5%, 3.0% (When the temperature inside the machine is as follow: below 40 deg C, 40 deg C or higher and below 42 deg C, 42 deg C or higher and below 44 deg C, and 44 deg C or higher) 2: 1.5%, 2.0%, 2.5%, 3.0%, 3.5% 3: 2.0%, 2.5%, 3.5%, 4.5%, 5.0% 4: 3.0%, 4.0%, 5.0%, 6.0%, 7.0% 5: 5.0%, 7.0%, 9.0%, 10.0%, 10.0%

DEV-STOP	Set continuous printing pause interval
Lv.2	Details
	To set the interval (number of sheets) to pause print operation at continuous printing. When either 0, 1, or 2 is set, drive of the Developing Cylinder is forcibly stopped and then restarted after a specified number of sheets is fed regardless of the density control. Developer coating failure which occurs at continuous printing can be prevented. When 3 is set, print operation is not paused.
	Use case
	When all the following conditions are satisfied - The setting value of R-FREQ-S is "3" - Frequency of real-time multiple tone control is changed in Settings/Registration menu - Upon user's request (to improve productivity)
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	If the interval is wide, developer coating failure may occur.
	Display/adj/set range
	0 to 3 0: 150 sheets, 1: 500 sheets, 2: 1000 sheets, 3: OFF
	Unit

SCWSP-Y1	Fine adj Dev Ass'y (Y) Screw rotn:1/1SPD
Lv.1	Details
	To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Y) at 1/1 speed. If uneven density at certain intervals occurs with Y-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
	Use case
	When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
	Display/adj/set range
	-10 to 10
	Default value
	0
SCWSP-M1	Fine adj Dev Ass'y (M) Screw rotn:1/1SPD
Lv.1	Details
	To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (M) at 1/1 speed. If uneven density at certain intervals occurs with M-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
	Use case
	When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution

COPIER > OPTION > IMG-DEV		
DVS-REF1	Set Dev Cylinder refresh exe interval	
Lv.2	Details	To set the intervals to execute refresh operation of the Developing Cylinder at continuous printing. As the value is larger, execution interval becomes shorter (productivity is decreased). Increase the value when developer coating failure occurs. If uneven density at certain intervals occurs, decrease the value as a temporary measure until the Developing Assembly is replaced.
	Use case	When developer coating failure/uneven density at certain intervals occurs at continuous printing of low duty images in a high temperature and high humidity environment
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	If the value is large, productivity is decreased. If the value is too large, uneven density at certain intervals or soiled image due to leakage of developer may occur. If the value is too small, developer coating failure may occur.
	Display/adj/set range	-8 to 8
	Default value	0

4CBKSPIT	Set YMC developer eject intvl: single Bk	
Lv.2	Details	To set the interval to execute ejection of Y/M/C-color developer in single Bk-color mode at process speed other than 1/1 speed and in color mode where single Bk-color is mixed. Set 1 when noise occurs due to the Cleaning Blade. As the Photosensitive Drum gets closer to the end of life, flip of the Cleaning Blade or image smear due to the Drum Unit occurs. When the Drum Unit (Y/M/C) is replaced as a countermeasure, set 1.
	Use case	In single Bk-color mode at process speed other than 1/1 speed or in color mode where single Bk-color is mixed, - When noise occurs due to the Cleaning Blade - When replacing the Drum Unit (Y/M/C) as a measure against flip of the Cleaning Blade and image smear
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When 1 or 2 is set, increase in toner consumption and decrease in productivity occur.
	Display/adj/set range	0 to 2 0: N/A, 1: 30 seconds, 2: 2 minutes
	Default value	0
	AT-SPIT	ON/OFF low duty toner ejection control
Lv.2	Details	To set whether to execute toner ejection control at continuous printing of low duty images. If hue variation occurs by outputting high duty image (photo, etc.) after continuous printing of low duty images, set 1.
	Use case	When hue variation occurs at the time of switching from low duty image to high duty image
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When 1 is set, productivity is decreased and toner consumption is increased.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0

T-8-65

■ IMG-FIX

COPIER > OPTION > IMG-FIX	
LL-DWN	Set of low temp environment mode level
Lv.1	Details
	To set ON/OFF of fixing improvement mode when fixing performance right after the start of printing is low in a low temperature environment. As the value is larger, fixing performance is improved, but the machine is likely to go into the down sequence (approx. 90% productivity). When setting IMGC-ADJ to 1, this setting can be also made in Settings/Registration> Adjustment/Maintenance> Low Temperature Environment Mode.
	Use case
	When fixing performance right after the start of printing is low
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 4 0: OFF, 1: Level 1, 2: Level 2, 3: Level 3, 4: Level 4
	Default value
	0
	Related service mode
	COPIER> OPTION> DSPLY-SW> IMGC-ADJ
	Related UI menu
	Adjustment/Maintenance> Low Temperature Environment Mode
FX-MODE	Set productivity/qlty priority: mix ppr
Lv.1	Details
	To set whether productivity or image quality is to be prioritized when paper types are mixed. When 0 to 2 is set, productivity is prioritized over image quality. Waiting time for fixing temperature control is shortened, but image failure or feed failure may occur depending on media or environment. When 3 is set, the machine waits until reaching the control temperature for optimal image quality so that productivity is decreased.
	Use case
	At print while types of paper are mixed
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 3 0: Productivity priority (normal), 1: Productivity priority (thin paper), 2: Productivity priority (heavy paper), 3: Image quality priority
	Default value
	0
	Related UI menu
	Productivity/Image Quality Priority (Different Paper Types)

COPIER > OPTION > IMG-FIX	
FX-SPD-1	Adjustment of fixing speed: thin paper 2
Lv.2	Details
	To adjust fixing speed when feeding thin paper 2 (52 to 63 g/m2). Increase the value when discharge mark due to separating discharge/smear image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied..
	Use case
	When discharge mark due to separating discharge/smear image due to fixing/image failure on the trailing edge occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-20 to 20
	Unit

	Related user mode
	Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
	Supplement/memo
	Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smear image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.

COPIER > OPTION > IMG-FIX	
FX-SPD-2	Adj fix speed: no-coat, textured ppr 1/2
Lv.2	Details
	To adjust fixing speed when feeding non-coated paper (64 to 105 g/m ²) and textured paper 1/2 (80 to 105 g/m ²). Increase the value when discharge mark due to separating discharge/smear image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied..
	Use case

Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.

COPIER > OPTION > IMG-FIX	
FX-SPD-3	Adj fix speed: no-coat, textured 3/4/5/6
Lv.2	Details
	To adjust fixing speed when feeding non-coated paper (106 to 220 g/m ²) and textured paper 3/4/5/6 (106 to 220 g/m ²). Increase the value when discharge mark due to separating discharge/smear image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied..
	Use case
	When discharge mark due to separating discharge/smear image due to fixing/image failure on the trailing edge occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-20 to 20
	Unit
	0.1 %
	Default value
	0
	Related service mode
	COPIER> OPTION> IMG-FIX> FX-SPD-1 to 2, 4 to 8
	Related user mode
	Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
	Supplement/memo
	Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smear image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.

COPIER > OPTION > IMG-FIX	
FX-WUT	Set of Fixing Assembly warm-up time
Lv.2	Details
	To set the warm-up time of the Fixing Assembly, which is performed first time for the day. Use 0 (initial value) in the normal operation. Extend the time as needed when a fixing failure occurs first time for the day. As the value is incremented by 1, the time is increased by 60 seconds.
	Use case
	- When a fixing failure occurs first time for the day - In the environment of 15 deg C or lower - When using media out of the specifications
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 3 0: Initial value, 1: Initial value + 60 seconds, 2: Initial value + 120 seconds, 3: Initial value + 180 seconds
	Unit
	60 sec
	Default value
	0
TMP-ST1	Adj of standby 1 fixing temperature
Lv.1	Details
	To adjust the startup/standby 1 fixing control temperature.
	Use case
	When a fixing failure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	When -3 or less is set, a fixing failure might occur.
	Display/adj/set range
	-4 to 4
	Unit
	5 deg C
	Default value
	0
TMP-ST2	Adj of standby 2 fixing temperature
Lv.1	Details
	To adjust the standby 2 fixing control temperature.
	Use case
	- When a fixing failure occurs - When reducing control temperature cooling wait time for frequently used papers
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	When -3 or less is set, a fixing failure might occur.
	Display/adj/set range
	-4 to 4
	Unit
	5 deg C
	Default value
	0
TMP-ST1L	Adj of standby 1 pressure temperature
Lv.1	Details
	To adjust the standby 1 pressure control temperature.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 4 0: 0 deg C, 1: +5 deg C, 2: +10 deg C, 3: +15 deg C, 4: +20 deg C
	Unit
	5 deg C
	Default value
	0

COPIER > OPTION > IMG-FIX	
TMP-ST2L	Adj of standby 2 pressure temperature
Lv.1	Details
	To adjust the standby 2 pressure control temperature.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 4 0: 0 deg C, 1: +5 deg C, 2: +10 deg C, 3: +15 deg C, 4: +20 deg C
	Unit
	5 deg C
	Default value
	0
TMP-OHT	Adj of fixing temperature: transparency
Lv.2	Details
	To adjust the fixing control temperature while transparency is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case
	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Unit
	5 deg C
	Default value
	0

COPIER > OPTION > IMG-FIX	
TMP-L	Adj of pressure temperature: plain paper
Lv.2	Details
	To adjust the pressure control temperature while plain paper is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case
	When a failure due to temperature occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-1 to 3
	Unit
	5 deg C
	Default value
	0
DWN-TMP	Adj of down sequence temp threshold VL
Lv.2	Details
	To adjust the threshold value of the temperature at which the machine goes into the down sequence. Use 0 (initial value) in the normal operation. As the value is smaller, the machine is less likely to enter the down sequence. When -4 is set, the down sequence actually becomes OFF.
	Use case
	When making adjustments according to the environment and media
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-4 to 1
	Default value
	0
	Supplement/memo
	Conditions in which the machine is likely to go into the down sequence (the center temperature is likely to be lowered): 500 sheets or more of continuous prints in small size, LL or lower temperature environment, input voltage lower than the rated voltage
EDG-WAIT	Edge heat stby set: thin/pln1,2/rcycl1,2
Lv.2	Details
	To set ON/OFF of job standby in the case of temperature rise at the edge of "Thin, Plain 1, Plain 2, Recycled 1 and Recycled 2," and adjust the job acceptance judgment temperature when ON is set. Use 0 (OFF) in the normal operation. When hot offset due to temperature rise at the paper edge occurs, set 1 to 3 (ON). 1 to 3: Job acceptance judgment temperature differs by 5 deg C.
	Use case
	When hot offset occurs
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1, 2, or 3 is set, job standby occurs after small size sheets are continuously fed.
	Display/adj/set range
	0 to 3 0: OFF 1: ON (Job acceptance judgment temperature: Initial value) 2: ON (Job acceptance judgment temperature: Initial value - 5 deg C) 3: ON (Job acceptance judgment temperature: Initial value - 10 deg C)
	Default value
	0

COPIER > OPTION > IMG-FIX	
FX-FAN1	Adj of Press Belt Cooling Fan ON temp
Lv.2	Details
	To adjust the temperature condition which the Pressure Belt Cooling Fan is turned ON during/after a job. Use 0 (initial value) in the normal operation.
	Use case
	When changing the temperature condition to which the Pressure Belt Cooling Fan is turned ON
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-1 to 4
	Unit
	5 deg C
	Default value
	0
FX-FAN2	Adj of Press Belt Cooling Fan OFF temp
Lv.2	Details
	To adjust the temperature condition which the Pressure Belt Cooling Fan is turned OFF during/after a job. Use 0 (initial value) in the normal operation.
	Use case
	When changing the temperature condition to which the Pressure Belt Cooling Fan is turned OFF
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Unit
	3 deg C
	Default value
	0
NIP-DWN	[Not used]
NIP-DWN2	Adj of fixing nip pressure amount 2
Lv.2	Details
	To adjust the pressure amount of the fixing nip when feeding large size of non-coated paper (151 to 300 g/m ²), coated paper (221 to 300 g/m ²) and textured paper (181 to 300 g/m ²). As the value is larger, pressure is increased.
	Use case
	When an image failure or a feeding failure due to nip pressure occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Fixing at the paper edge might be deteriorated.
	Display/adj/set range
	-3 to 3
	Default value
	0

COPIER > OPTION > IMG-FIX		
NIP-DWN3	Adj of fixing nip pressure amount 3	
Lv.2	Details	To adjust the pressure amount of the fixing nip when feeding postcard, envelope, small size of non-coated paper (151 to 300 g/m ²), coated paper (221 to 300 g/m ²) and textured paper (181 to 300 g/m ²). As the value is larger, pressure is increased.
	Use case	When an image failure or a feeding failure due to nip pressure occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Fixing at the paper edge might be deteriorated.
	Display/adj/set range	-3 to 3
	Default value	0
NIP-DWN1	Adj of fixing nip pressure amount 1	
Lv.2	Details	To adjust the pressure amount of the fixing nip when feeding non-coated paper (52 to 150 g/m ²), coated paper (106 to 220 g/m ²), textured paper (80 to 180 g/m ²), transparency and label. As the value is larger, pressure is increased.
	Use case	When an image failure or a feeding failure due to nip pressure occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	Fixing at the paper edge might be deteriorated.
	Display/adj/set range	-3 to 3
	Default value	0
FX-ERRSW	ON/OFF of Fixing Belt Unit life judgment	
Lv.2	Details	To set whether to judge the life of the Fixing Belt Unit using the number of fed sheets. The number of fed sheets is counted by COPIER> COUNTER> DRBL-1> FX-BLT-U. When 1 is set, FX-U-ERR is enabled.
	Use case	When enabling the judgment of the Fixing Belt Unit life
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> COUNTER> DRBL-1> FX-BLT-U COPIER> OPTION> IMG-FIX> FX-U-ERR

COPIER > OPTION > IMG-FIX		
FX-U-ERR	Set Fix Belt Unit life error thresholdVL	
Lv.2	Details	To set the threshold value for the number of fed sheets which an error indicating that the Fixing Belt Unit reaches its life is displayed when the life of the Fixing Belt Unit is judged by the number of fed sheets. The number of fed sheets is counted by COPIER> COUNTER> DRBL-1> FX-BLT-U. When FX-ERRSW is 1, this setting is enabled.
	Use case	When enabling the judgment of the Fixing Belt Unit life
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 4 1: 400,000 sheets, 2: 600,000 sheets, 3: 800,000 sheets, 4: 1,000,000 sheets
	Unit	200000 sheet
	Default value	4
	Related service mode	COPIER> COUNTER> DRBL-1> FX-BLT-U COPIER> OPTION> IMG-FIX> FX-ERRSW
	L-WAIT	ON/OFF of standby: Press Belt temp rise
Lv.2	Details	To set ON/OFF of standby mode at temperature rising of Pressure Belt and the threshold value. When 1, 2, or 3 is set, the machine enters standby mode to cool down when temperature exceeds the specified temperature, so image failure which occurs at temperature rising of the Pressure Belt can be prevented.
	Use case	When wrinkles or rain-like spots occur on coated paper due to temperature rising of the Pressure Belt
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When 1, 2, or 3 is set, the machine may enter standby mode (approx. 30 sec) due to temperature rising of the Pressure Belt during a job.
	Display/adj/set range	0 to 3 0: OFF, 1: ON (Judgment temperature table value), 2: ON (Judgment temperature table value -3 deg C), 3: ON (Judgment temperature table value -6 deg C)
	Default value	0

COPIER > OPTION > IMG-FIX	
FX-MODE1	Set of heavy 5/6 productivity priority
Lv.1	Details
	To set whether to prioritize productivity when printing on heavy paper 5/6. When 1 is set, productivity for heavy paper 5/6 is improved, but a fixing failure may occur. When setting PR/GL-SW to 1, this setting can be also made in Settings/Registration> Function Settings> Common> Print Settings> Heavy Paper 5/6 Productivity Priority.
	Use case
	When disabling/enabling productivity priority for heavy paper 5/6 according to the usage status
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Productivity priority is disabled, 1: Productivity priority is enabled
	Default value
	0
	Related service mode
	COPIER> OPTION> DSPLY-SW> IMGC-ADJ
	Related UI menu
	Function Settings> Common> Print Settings> Heavy Paper 5/6 Productivity Priority
FX-MODE2	Set coat ppr productivity/gloss priority
Lv.1	Details
	To set whether productivity or gloss is to be prioritized when printing on coated paper. When 1 is set, productivity for coated paper is improved, but deterioration of gloss occurs. When 2 is set, gloss is improved, but productivity is decreased. When setting PR/GL-SW to 1, this setting can be also made in Settings/Registration> Function Settings> Common> Print Settings> Coated Paper Productivity/Gloss Priority.
	Use case
	When switching productivity/gloss priority for coated paper according to the usage status
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 2 0: Normal, 1: Productivity priority, 2: Gloss priority
	Default value
	0
	Related service mode
	COPIER> OPTION> DSPLY-SW> IMGC-ADJ

	Function Settings> Common> Print Settings> Coated Paper Productivity/Gloss Priority

COPIER > OPTION > IMG-FIX	
FX-FAN3	Adj of Delivery Edge Cooling Fan ON temp
Lv.2	Details
	To set the threshold value of temperature to turn ON the Delivery Edge Cooling Fan. As the value is smaller, an image failure at mixed paper weight/mixed paper size can be alleviated, but waiting time tends to be longer. As the value is larger, waiting time becomes shorter, but an image failure is likely to occur.
	Use case
	When an image failure (spots), uneven gloss, a separation failure, or a feeding failure occurs due to temperature rising of the Fixing Belt
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	As the value is small, waiting time tends to be longer. As the value is large, an image failure is likely to occur.
	Display/adj/set range
	-2 to 2
	Unit
	2 deg C
	Default value
	0
FX-FAN4	Adj Delivery Edge Cooling Fan OFF temp
Lv.2	Details
	To set the threshold value of temperature to turn OFF the Delivery Edge Cooling Fan. As the value is smaller, an image failure at mixed paper weight/mixed paper size can be alleviated, but waiting time tends to be longer. As the value is larger, waiting time becomes shorter, but an image failure is likely to occur.
	Use case
	When an image failure (spots), uneven gloss, a separation failure, or a feeding failure occurs due to temperature rising of the Fixing Belt
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	As the value is small, waiting time tends to be longer. As the value is large, an image failure is likely to occur.
	Display/adj/set range
	-2 to 2
	Unit
	2 deg C
	Default value
	0

COPIER > OPTION > IMG-FIX	
FX-SPD-4	Adj fix speed: no-coat, textured ppr 7/8
Lv.2	Details
	To adjust fixing speed when feeding non-coated paper (221 to 300 g/m ²) and textured paper 7/8 (221 to 300 g/m ²). Increase the value when discharge mark due to separating discharge/smear image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied..
	Use case
	When discharge mark due to separating discharge/smear image due to fixing/image failure on the trailing edge occurs
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-20 to 20
	Unit
	0.1 %
	Default value
	0

	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Default value
	0
TMP-EM3	Adj of fixing temperature: textured 3
Lv.2	Details
	To adjust the fixing control temperature while textured paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case
	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Default value
	0
TMP-EM4	Adj of fixing temperature: textured 4
Lv.2	Details
	To adjust the fixing control temperature while textured paper 4 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case
	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Default value
	0
TMP-EM5	Adj of fixing temperature: textured 5
Lv.2	Details
	To adjust the fixing control temperature while textured paper 5 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case
	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-2 to 2
	Default value
	0

COPIER > OPTION > IMG-FIX		
TMP-EM6		Adj of fixing temperature: textured 6
Lv.2	Details	To adjust the fixing control temperature while textured paper 6 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-EM7		Adj of fixing temperature: textured 7
Lv.2	Details	To adjust the fixing control temperature while textured paper 7 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-EM8		Adj of fixing temperature: textured 8
Lv.2	Details	To adjust the fixing control temperature while textured paper 8 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-EVLP		Adj of fixing temperature: envelope
Lv.2	Details	To adjust the fixing control temperature while envelope is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-GC1		Adj of fixing temperature: gloss coat 1
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-GC2		Adj of fixing temperature: gloss coat 2
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-GC3		Adj of fixing temperature: gloss coat 3
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-GC4		Adj of fixing temperature: gloss coat 4
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 4 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-GC5		Adj of fixing temperature: gloss coat 5
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 5 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-GC6		Adj of fixing temperature: gloss coat 6
Lv.2	Details	To adjust the fixing control temperature while gloss coated paper 6 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-H1		Adj of fixing temperature: heavy paper 1
Lv.2	Details	To adjust the fixing control temperature while heavy paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-H2		Adj of fixing temperature: heavy paper 2
Lv.2	Details	To adjust the fixing control temperature while heavy paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-H3		Adj of fixing temperature: heavy paper 3
Lv.2	Details	To adjust the fixing control temperature while heavy paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-H4		Adj of fixing temperature: heavy paper 4
Lv.2	Details	To adjust the fixing control temperature while heavy paper 4 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-H5		Adj of fixing temperature: heavy paper 5
Lv.2	Details	To adjust the fixing control temperature while heavy paper 5 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-H6		Adj of fixing temperature: heavy paper 6
Lv.2	Details	To adjust the fixing control temperature while heavy paper 6 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-L2		Adj of pressure temperature: heavy paper
Lv.2	Details	To adjust the pressure temperature while heavy paper is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When a failure due to temperature occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-1 to 3
	Unit	5
	Default value	0
TMP-L3		Adj of pressure temperature: coated paper
Lv.2	Details	To adjust the pressure temperature while coated paper is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When a failure due to temperature occurs
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-1 to 3
	Unit	5
	Default value	0
TMP-MC1		Adj of fixing temperature: matte coat 1
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-MC2		Adj of fixing temperature: matte coat 2
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-MC3		Adj of fixing temperature: matte coat 3
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-MC4		Adj of fixing temperature: matte coat 4
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 4 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-MC5		Adj of fixing temperature: matte coat 5
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 5 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-MC6		Adj of fixing temperature: matte coat 6
Lv.2	Details	To adjust the fixing control temperature while matte coated paper 6 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-P1		Adj of fixing temperature: plain paper 1
Lv.2	Details	To adjust the fixing control temperature while plain paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-P2		Adj of fixing temperature: plain paper 2
Lv.2	Details	To adjust the fixing control temperature while plain paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-POST		Adj of fixing temperature: postcard
Lv.2	Details	To adjust the fixing control temperature while postcard is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-R1		Adj of fixing temperature: recycled 1
Lv.2	Details	To adjust the fixing control temperature while recycled paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-R2		Adj of fixing temperature: recycled 2
Lv.2	Details	To adjust the fixing control temperature while recycled paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-R3		Adj of fixing temperature: recycled 3
Lv.2	Details	To adjust the fixing control temperature while recycled paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0

COPIER > OPTION > IMG-FIX		
TMP-TH1	Adj of fixing temperature: thin paper 1	
Lv.2	Details	To adjust the fixing control temperature while thin paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-2 to 2
	Default value	0
TMP-TH2	Adj of fixing temperature: thin paper 2	
Lv.2	Details	To adjust the fixing control temperature while thin paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
	Use case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution	As the value is small, deterioration of gloss or fixing performance occurs. As the value is large, uneven gloss, wrinkles, or paper separation failure occurs.
	Display/adj/set range	-2 to 2
Default value	0	

T-8-66

■ IMG-LSR

COPIER > OPTION > IMG-LSR		
PRI-FAN	Set of Primary Charging Fan forcible ON	
Lv.2	Details	To set the timing to forcibly turn ON the Primary Charging Suction Fan, Primary Charging Exhaust Fan and Developing and Pre-transfer Charging Fan. When 1 is set, they are always turned ON by full speed and when 2 is set, they are always turned ON by half speed while power is ON.
	Use case	When an image smear due to the drum occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: Cancel forcible ON, 1: Always ON by full speed, 2: Always ON by half speed
	Default value	0
LS-LP-Y	ON/OFF Y uneven dens:6mm/9mm intvl prev	
Lv.2	Details	To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with Y-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
	Use case	When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
	Adj/set/operate method	1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
Related service mode	COPIER> TEST> PG> TYPE	

COPIER > OPTION > IMG-LSR		
LS-LP-M		ON/OFF M uneven dens:6mm/9mm intvl prev
Lv.2	Details	To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with M-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
	Use case	When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
	Adj/set/operate method	1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> TEST> PG> TYPE
LS-LP-C		ON/OFF C uneven dens:6mm/9mm intvl prev
Lv.2	Details	To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with C-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
	Use case	When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
	Adj/set/operate method	1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> TEST> PG> TYPE

COPIER > OPTION > IMG-LSR		
LS-LP-K		ON/OFF Bk uneven dens:6mm/9mm intvl prev
Lv.2	Details	To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with Bk-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
	Use case	When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
	Adj/set/operate method	1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
	Related service mode	COPIER> TEST> PG> TYPE

IMG-MCON

COPIER > OPTION > IMG-MCON	
PASCAL	Use/no use of auto gradation adj data
Lv.1	Details
	To set to use/not to use the gradation adjustment data gamma LUT that is generated by auto gradation adjustment (full/quick adjustment) control. Whether to use gamma LUT at the time of image formation can be selected.
	Use case
	When PASCAL-related failure occurs/when identifying the cause of PASCAL-related failure
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Initial LUT is used (Auto gradation adjustment is not used), 1: Auto gradation adjustment is used, 2 to 3: Not used
	Default value
	1
PRN-FLG	Select of image area flag (PDL image)
Lv.2	Details
	To set the image area flag for image processing which is performed when a PDL image fails to be compressed at a specified compression rate. If an image fails to be compressed at a specified compression rate, the following processing is performed by default: - Processing to prioritize text reproduction - Replacement of Bk-color with single Bk-color Set 1 when moire occurs or jaggy is significant. Set 2 when not preferring to replace Bk-color with single Bk-color.
	Use case
	- When moire occurs or jaggy is significant in case of printing an image containing many halftone dots or photos - When avoiding to replace Bk-color with single black color
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	This setting trades off with reproducibility of text.
	Display/adj/set range
	0 to 2 0: High screen ruling, gray compensation LUT 1: Error diffusion, gray compensation LUT 2: High screen ruling, normal LUT
	Default value
	0

COPIER > OPTION > IMG-MCON	
SCN-FLG	Select of image area flag (copy image)
Lv.2	Details
	To set the image area flag for image processing which is performed when a scanned image fails to be compressed at a specified compression rate. If an image fails to be compressed at a specified compression rate, processing to prioritize reproduction of text is performed by default. Set 1 when an image contains many halftone photo images. Set 2 when an image contains many printed photos.
	Use case
	When copying an image which contains many halftone and photos
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	This setting trades off with reproducibility of text.
	Display/adj/set range
	0 to 2 0: Text, 1: Halftone photo image, 2: Printed photos
	Default value
	0
TMIC-BK	ON/OFF of TMIC Bk_LUT end edge correct
Lv.2	Details
	To set ON/OFF of the trailing edge adjustment of Bk_LUT for PDL and for copy which are used by TMIC. When the trailing edge adjustment is set to ON, the density of the high density area becomes high, and consequently text and thin lines become clear. While an image becomes clear, the hue of the gradation area of photos, etc. is changed.
	Use case
	When thin lines are partly missing or characters are faded
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: ON for PDL, OFF for copy 1: OFF for PDL, OFF for copy 2: ON for PDL, ON for copy 3: OFF for PDL, ON for copy
	Default value
	2
DH-MODE	Set ptch data at Dhalf except full adj
Lv.2	Details
	To set whether to use the high-density patch data that has been scanned by D-half control of full adjustment at the time of D-half control other than full adjustment.
	Use case
	At image adjustment
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Used, 1: Not used
	Default value
	0

COPIER > OPTION > IMG-MCON	
MIX-FLG	Set img processing at img composition
Lv.2	Details
	To set the image processing which is performed when an image fails to be compressed at a specified compression rate by the Main Controller upon image composition.
	Use case
	When an image processing failure occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)
	Default value
	0
REPORT-Z	Set of image processing at report print
Lv.1	Details
	To set the image processing which is performed when printing a report.
	Use case
	When there is a request for image improvement
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with a single Bk color. Error diffused image.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image.) 3: Equivalent to scanned photo mode (Black text is reproduced with 4 colors. Screen processed image.)
	Default value
	0

COPIER > OPTION > IMG-MCON	
IFXEML-Z	Set img proc at clr iFAX,mail rcv print
Lv.1	Details
	To set the image processing which is performed when printing color iFAX or received e-mail.
	Use case
	When there is a request for image improvement
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)
	Default value
	0
BMLNKS-Z	Set img proc at BMLinkS reception print
Lv.1	Details
	To set the image processing which is performed when printing received BMLinkS.
	Use case
	When there is a request for image improvement
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)
	Default value
	0

COPIER > OPTION > IMG-MCON	
REDU-CNT	Set toner deposit amount limit at clr adj
Lv.2	Details
	To set whether to limit the toner deposit amount at color adjustment (color balance, fine adjustment of density). When 0 is set, the color adjustment value is reflected to an image precisely, but toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.
	Use case
	- Upon user's request - When reflecting the color adjustment value to an image precisely
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	When 0 is set, toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.
	Display/adj/set range
	0 to 1 0: Toner deposit amount is not limited. 1: Toner deposit amount is limited to the specified amount.
	Default value
	1
VP-ART	Setting of line art processing
Lv.2	Details
	To set outline processing for line art on scalable PDF. In the outline processing, a binary image outline is extracted in the field which is recognized as line art, and is converted into vector data. Specify whether to convert the binary image outline into vector data or to recognize it as one line (as a thin line). For the thin line, the line width can be specified. Change this value when you want to obtain an output of a wide-width line as one line rather than as an outline (when you want to prioritize edit operation as a line rather than image quality).
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 99
	Default value
	1

COPIER > OPTION > IMG-MCON	
VP-TXT	Set of character vectorization process
Lv.2	Details
	To set vectorization processing for text on scalable PDF. In the vectorization processing, a binary image outline is extracted in the field which is recognized as text, and is converted into vector data. In regular vectorization, function approximation is not used for small text not to change the image quality. When the value is changed, function approximation processing is executed for small text, which realizes smooth text although the image quality is changed. Change this value when you want to prioritize smoothness in small text.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 99
	Default value
	1
PASCL-TY	Set of paper type for auto gradation adj
Lv.2	Details
	Auto gradation adjustment is normally executed with the recommended paper specified for each location. However, if you want to change the paper type, use this setting to change the paper type.
	Use case
	When executing the auto gradation adjustment using a paper other than the recommended paper type
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not change the setting in the normal operation.
	Display/adj/set range
	1 to 3 1: CS-814 (Except for USA and EU. Mainly for Japan), 2: Hammermill (For USA), 3: Mondi (For EU)
	Default value
	It differs according to the location.
AST-SEL	Adj of advanced smoothing effect
Lv.2	Details
	To adjust the smoothing effect which is set in the advanced smoothing UI. Set 3 if no smoothing effect is obtained even though "Strong" is set in the advanced smoothing UI. Set 0 if too much effect is obtained even though "Weak" is set.
	Use case
	When image failures (jaggy, moire) occur
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3
	Default value
	2

COPIER > OPTION > IMG-MCON	
BGE-OFS	Fine adj background (background removal)
Lv.2	Details
	To make a fine adjustment of the background adjustment (background removal) level which can be set manually. Break up the adjustment values into smaller ones when user does not satisfy with the default adjustment values.
	Use case
	When color fogging occurs on the output image when copying yellowed blank paper as an original
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Caution
	Since the background color is set to be washed out with this mode, not only the background of yellowed blank paper, but also other light colors (light blue, etc.) are washed out.
	Display/adj/set range
	-15 to 15
	Default value
	0
	Related UI menu
	Copy> Options> Density> Background Density
TGT-3	Multi tone ctrl ptch dens crct: 1/2 SPD
Lv.1	Details
	To set the extent of patch density target value at 1/2 speed that has been corrected by real-time multiple tone control to be reflected to other speeds in % (percentage).
	Use case
	When hue variation occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 100
	Default value
	50
AFTR-FB	Real-time multi tone ctrl crct: 1st rtn
Lv.2	Details
	To set the extent of the correction result of real-time multiple tone control to be reflected at the time of last rotation in % (percentage).
	Use case
	When hue variation occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 100
	Unit
	1 %
	Default value
	30
DITH-FB	Real-time multi tone ctrl crct: dither
Lv.2	Details
	To set the extent of gradation that has been corrected by real-time multiple tone control to be reflected to other dithering methods in % (percentage). Increase the value when dithering occurs.
	Use case
	When the error diffusion hue is not appropriate
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 100
	Unit
	1 %
	Default value
	10

COPIER > OPTION > IMG-MCON	
EXPFL-C	Set C-clr exposure modulation parameter
Lv.1	Details
	To set the C-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decrease the value when toner scattering occurs.
	Use case
	When fading, toner scattering, or crash characters occur
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 5 0: OFF, 1 to 5: Parameter
	Default value
	3
EXPFL-K	Set Bk-clr exposure modulation parameter
Lv.1	Details
	To set the Bk-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decrease the value when toner scattering occurs.
	Use case
	When fading, toner scattering, or crash characters occur
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 5 0: OFF, 1 to 5: Parameter
	Default value
	3
EXPFL-M	Set M-clr exposure modulation parameter
Lv.1	Details
	To set the M-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decrease the value when toner scattering occurs.
	Use case
	When fading, toner scattering, or crash characters occur
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 5 0: OFF, 1 to 5: Parameter
	Default value
	3
EXPFL-Y	Set Y-clr exposure modulation parameter
Lv.1	Details
	To set the Y-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decrease the value when toner scattering occurs.
	Use case
	When fading, toner scattering, or crash characters occur
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 5 0: OFF, 1 to 5: Parameter
	Default value
	3

COPIER > OPTION > IMG-MCON		
FL-FB	Real-time multi tone ctrl crct: full	
Lv.2	Details	To set the extent of gradation to which full correction has been applied by real-time multiple tone control to be reflected in % (percentage).
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 100
	Unit	1 %
	Default value	100
HIGH-C	For R&D	
HIGH-Y	For R&D	
HIGH-M	For R&D	
INT-FB	Real-time multi tone ctrl crct: simple	
Lv.2	Details	To set the extent of gradation to which simple correction (5-patch interruption) has been applied by real-time multiple tone control to be reflected in % (percentage).
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 100
	Unit	1 %
	Default value	30
LOW-C	For R&D	
LOW-Y	For R&D	
LOW-M	For R&D	
LPMAX-K	For R&D	
LPMIN-K	For R&D	
PTN-AFTR	Multi tone ctrl patch pattern: 1st rotn	
Lv.2	Details	To set the patch pattern to be used for real-time multiple tone control at last rotation.
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 7
	Default value	1
PTN-INT	Multi tone ctrl patch pattern: interrupt	
Lv.2	Details	To set the patch pattern to be used for real-time multiple tone control at interruption.
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 7
	Default value	1

COPIER > OPTION > IMG-MCON		
PTN-MNG	Multi tone ctrl ptch:wrmup rtn,1st pw-on	
Lv.2	Details	To set the patch pattern to be used for real-time multiple tone control at warm-up rotation performed first time for the day.
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 7
	Default value	7
R-FREQ-S	Set real-time multiple tone ctrl frqcy	
Lv.2	Details	To set the frequency to execute real-time multiple tone control. As the value is larger (excluding 3), hue becomes stable, but productivity is decreased and toner consumption is increased. This setting is linked with the item displayed in Settings/Registration menu when IMG-ADJ is set to 1.
	Use case	When hue variation occurs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	In exchange for stability of hue, productivity is decreased and toner consumption is increased.
	Display/adj/set range	0 to 3 0: Normal, 1: Hue improvement mode 1, 2: Hue improvement mode 2, 3: OFF
	Default value	0
Related service mode	COPIER> OPTION> DSPLY-SW> IMG-ADJ, RFREQ-SW	
S-DITH	Multi tone control dither: ppr interval	
Lv.1	Details	To set the combination of dithering methods to be used for real-time multiple tone control at paper interval. Use 3 of the following methods: low screen ruling, high screen ruling, copy, or error diffusion (6 types).
	Use case	When hue variation occurs (type of patch pattern)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 7
	Default value	1
TGT-2	Multi tone ctrl ptch dens crct: 2/3 SPD	
Lv.1	Details	To set the extent of patch density target value at 2/3 speed that has been corrected by real-time multiple tone control to be reflected to other speeds in % (percentage).
	Use case	When hue variation occurs
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 100
	Unit	1 %
Default value	100	

COPIER > OPTION > IMG-MCON	
R-V-MULT	Set real-time multiple tone ctrl exe SPD
Lv.2	Details
	To set the process speed at which the real-time multiple tone control is executed. When 0 is set, the control is executed only at the latest process speed. When 1 is set, it is executed at all process speeds. Since the execution frequency of the control is increased, productivity is decreased and toner consumption is increased.
	Use case
	- When color difference occurs among media - When color difference occurs even if execution frequency is changed by R-FREQ-S
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, productivity is decreased and toner consumption is increased.
	Display/adj/set range
	0 to 1 0: Latest process speed only, 1: All process speeds
	Default value
	0
	Related service mode
	COPIER> OPTION> IMG-MCON> R-FREQ-S
R-ACT-TM	Multi tone ctrl after being left unatndd
Lv.2	Details
	To set the interval to execute real-time multiple tone control while the machine is left unattended.
	Use case
	- When hue variation occurs after leaving the machine unattended while sleep is OFF - When the user does not execute auto gradation adjustment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 or 2 is set, productivity is decreased and toner consumption is increased.
	Display/adj/set range
	0 to 2 0: OFF, 1: 1 hour, 2: 30 minutes
	Default value
	0
R-LTMP	Set multi tone ctrl exe: chg frqcy chng
Lv.2	Details
	To set whether to execute the real-time multiple tone control when automatically changing the charging frequency in a low temperature environment.
	Use case
	When hue varies for each job in a low temperature environment
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0

COPIER > OPTION > IMG-MCON	
CPSCR-SW	Setting of copy screen
Lv.2	Details
	To set the copy screen. When coarseness occurs on a copy image, set 1.
	Use case
	When coarseness occurs on a copy image
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
	Caution
	- Be sure to execute auto gradation adjustment (full adjustment) after adjustment. - Moire or decrease in contrast may occur at copy.
	Display/adj/set range
	0 to 1 0: Default, 1: Low screen ruling
	Default value
	0
	Related UI menu
	Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
PDMX-O-Y	Adj Y-clr density:printer PASCAL control
Lv.2	Details
	To adjust the Y-color density at printer PASCAL control. Increase the value if Y-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
	Use case
	When the density is not appropriate after execution of printer PASCAL control
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-5 to 5
	Default value
	0
	Related service mode
	COPIER> OPTION> IMG-DEV> DMX-OF-Y
PDMX-O-M	Adj M-clr density:printer PASCAL control
Lv.2	Details
	To adjust the M-color density at printer PASCAL control. Increase the value if M-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
	Use case
	When the density is not appropriate after execution of printer PASCAL control
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-5 to 5
	Default value
	0
	Related service mode
	COPIER> OPTION> IMG-DEV> DMX-OF-M

COPIER > OPTION > IMG-MCON		
PDMX-O-C	Adj C-clr density:printer PASCAL control	
Lv.2	Details	To adjust the C-color density at printer PASCAL control. Increase the value if C-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
	Use case	When the density is not appropriate after execution of printer PASCAL control
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-5 to 5
	Default value	0
	Related service mode	COPIER> OPTION> IMG-DEV> DMX-OF-C
	PDMX-O-K	Adj Bk density:printer PASCAL control
Lv.2	Details	To adjust the Bk-color density at printer PASCAL control. Increase the value if Bk-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
	Use case	When the density is not appropriate after execution of printer PASCAL control
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-5 to 5
	Default value	0
	Related service mode	COPIER> OPTION> IMG-DEV> DMX-OF-K

T-8-68

■ IMG-RDR

COPIER > OPTION > IMG-RDR		
DFDST-L1	Adj dust detect level: ppr intvl, DADF	
Lv.1	Details	To adjust dust detection level with dust detection correction control that is executed at paper interval in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
	Use case	- When black line occurs due to dust - Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
	Display/adj/set range	0 to 255 0: OFF
	Default value	200
	DFDST-L2	Adj dust detect level: after job, DADF
Lv.1	Details	To adjust dust detection level with dust detection correction control that is executed after the job is completed in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
	Use case	- When black line occurs due to dust - Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
	Display/adj/set range	0 to 255 0: OFF
	Default value	200

COPIER > OPTION > IMG-RDR		
DF2DSTL1	Dust detect level: ppr intvl, back, DADF	
Lv.1	Details	To adjust dust detection level with dust detection correction control that is executed at paper interval by the Scanner Unit (for back side) in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
	Use case	- When black line occurs due to dust - Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
	Display/adj/set range	0 to 255 0: OFF
	Default value	200
DF2DSTL2	Dust detect level: after job, back, DADF	
Lv.1	Details	To adjust dust detection level with dust detection correction control that is executed by the Scanner Unit (for back side) after the job is completed in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
	Use case	- When black line occurs due to dust - Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
	Display/adj/set range	0 to 255 0: OFF
	Default value	200

T-8-69

■ IMG-SPD

COPIER > OPTION > IMG-SPD		
TAB-SW	ON/OFF of cleaning at tab paper feeding	
Lv.1	Details	To set whether to execute cleaning when tab paper is fed. When printing an image on a whole tab area of tab paper, the backside of the succeeding paper is soiled. When 1 is set, cleaning is executed every time a tab paper is fed. Soiled back can be prevented, but productivity decreases.
	Use case	- When the backside of the succeeding paper to tab paper is soiled - Upon user's request (to improve quality)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to get approval from the user in advance by telling that backside is not soiled by cleaning, but productivity decreases.
	Display/adj/set range	0 to 2 0: OFF, 1: ON, 2: Not used
	Default value	0
PSCHG-SW	Real-time multi tone ctrl:ini rtn,SPD sw	
Lv.2	Details	To set whether to execute real-time multiple tone control at initial rotation when switching the process speed. When 1 is set, productivity is improved, but hue stability is decreased.
	Use case	Upon user's request (to improve productivity when media are mixed)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	When 1 is set, hue variation may occur.
	Display/adj/set range	0 to 1 0: ON, 1: OFF
	Default value	0

T-8-70

IMG-TR

COPIER > OPTION > IMG-TR	
2TR-RVON	Set end white spot crct ctrl user set
Lv.2	Details
	To set whether to enable the trailing edge white spot correction control in Settings/Registration menu. When 1 is set, user settings on the correct trail end toner application screen are enabled. If ON is set, weak bias is applied to the paper trailing edge, and white spots at the trailing edge are alleviated. When 0 is set, user settings are disabled.
	Use case
	When an image failure (white spots on the trailing edge) occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1
BK-4C-SW	Set clean failure prev mode: single Bk
Lv.2	Details
	To set whether to bring the Photosensitive Drums for all colors into contact with the ITB in single Bk mode. If black mode is used frequently, paper dust is accumulated on the Drum Cleaning Blade (Bk) so an image failure may occur. When 1 is set, all Photosensitive Drums are brought into contact with the ITB so cleaning failure due to paper dust can be prevented. There is not much influence on the life of the Photosensitive Drum (Y, M, C) and the ITB.
	Use case
	When an image failure due to paper dust occurs in case of frequent use of single Bk mode
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
2TR-TYPE	Set sec trn tbl by Sec Trn Out Roll type
Lv.1	Details
	To set the secondary transfer table according to the type of the Secondary Transfer Outer Roller (resistance value).
	Use case
	When replacing the Secondary Transfer Outer Roller with the one which resistance value is different
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: Low resistance type, 1: High resistance type
	Default value
	0

COPIER > OPTION > IMG-TR	
2TR-P-SW	Set ppr intvl sec trn bias: dens lvl dif
Lv.2	Details
	To set the bias applied to the Secondary Transfer Outer Roller at paper interval during secondary transfer ATVC control. In the normal operation, weak negative bias is applied to extend the life of the roller. When small size memory (difference in density level) occurs, set 1. With this setting, positive bias is applied, so difference in density level is alleviated.
	Use case
	When small size memory occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	When 1 is set, the life of the Secondary Transfer Outer Roller is shortened and soiled back of the paper may occur.
	Display/adj/set range
	0 to 1 0: Weak negative bias (normal), 1: Positive bias
	Default value
	0
	Supplement/memo
	Small size memory: A phenomenon where difference in density level between A3 feeding area and non-feeding area (right and left edges) occurs with paper larger than A3. It is likely to become obvious when printing a solid image on a paper larger than A3 after making a large number of outputs with A3 paper.

T-8-71

NETWORK

COPIER > OPTION > NETWORK	
RAW-DATA	Setting of received data print mode
Lv.2	Details
	To set print mode for the received image data. This item is used to identify the cause whether it's due to image data or image processing in the case of problem with received image.
	Use case
	When a problem with received image occurs
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Be sure to set the value back to 0 after recovering from the problem.
	Display/adj/set range
	0 to 1 0: Normal print operation, 1: Print raw data without image processing
	Default value
	0
IFAX-LIM	No. of max print lines at IFAX reception
Lv.2	Details
	To set the maximum number of lines for e-mail text to be printed when receiving IFAX. Setting of this item can prevent endless printing of the attached file data in the case of receiving an error e-mail or failure in interpretation of the context. When receiving an e-mail text without attached file while 0 is set, only the header/footer is printed in 1 sheet.
	Use case
	When preventing endless print in the case of failure in reception
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999 0: E-mail text not printed, 999: Unlimited
	Default value
	500
SMTPTXPN	Setting of SMTP transmission port number
Lv.2	Details
	To set SMTP transmission port number.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	25
SMTPRXPN	Setting of SMTP reception port number
Lv.2	Details
	To set SMTP reception port number.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	25

COPIER > OPTION > NETWORK	
POP3PN	Setting of POP3 reception port number
Lv.2	Details
	To set POP3 reception port number.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	110
FTPTXPN	Specify SEND destination port (FTP) No.
Lv.2	Details
	To specify destination port (FTP) number for SEND.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	21
STS-PORT	ON/OFF of TOT sync status comctn port
Lv.2	Details
	To set ON/OFF of Inquiry/Response (sync)-mode status communication port with T.O.T. Set 1 when connecting PC and the machine with crossover cable in case of using Service NAVI.
	Use case
	When Service NAVI is used
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
CMD-PORT	ON/OFF TOTasync command comctn port
Lv.2	Details
	To set ON/OFF of asynchronous command communication port with T.O.T. Set 1 when connecting PC and the machine with crossover cable in case of using Service NAVI.
	Use case
	When Service NAVI is used
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
NS-CMD5	Limit CRAM-MD5 auth method: SMTP auth
Lv.2	Details
	To restrict use of CRAM-MD5 authentication method at the time of SMTP authentication.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value
	0

COPIER > OPTION > NETWORK		
NS-GSAPI	Limit GSSAPI auth method: SMTP auth	
Lv.2	Details	To restrict use of GSSAPI authentication method at the time of SMTP authentication.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value	0
NS-NTLM	Limit NTLM auth method: SMTP auth	
Lv.2	Details	To restrict use of NTLM authentication method at the time of SMTP authentication.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value	0
NS-PLNWS	Limit plaintext auth: SMTP auth, encry	
Lv.2	Details	To restrict use of PLAIN/LOGIN authentication, which is plaintext authentication, at the time of SMTP authentication under the environment where the communication packet is encrypted.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value	0
NS-PLN	Limit plaintext auth: SMTP auth, noency	
Lv.2	Details	To restrict use of PLAIN/LOGIN authentication, which is plaintext authentication, at the time of SMTP authentication under the environment where the communication packet is not encrypted.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value	0

COPIER > OPTION > NETWORK		
NS-LGN	Limit LOGIN authentication: SMTP auth	
Lv.2	Details	To restrict use of LOGIN authentication at the time of SMTP authentication.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: SMTP server-dependent, 1: Not used
	Default value	0
MEAP-PN	Set of HTTP port No. of MEAP application	
Lv.2	Details	To set HTTP port number of MEAP application.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not specify port 8080 when the print server is connected. Otherwise, you cannot browse the device RUI in which MEAP authentication application is running (Port 8080 is reserved for redirection of EFI Controller to the iR side.)
	Display/adj/set range	1 to 65535
Default value	8000	
CHNG-STS	Set of TOT status connection port number	
Lv.2	Details	To set the port number for status connection with T.O.T.
	Use case	When Service NAVI is used
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 65535
	Default value	20010
CHNG-CMD	Set of TOT command connection port No.	
Lv.2	Details	To set the port number for command connection with T.O.T.
	Use case	When Service NAVI is used
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 65535
	Default value	20000
MEAP-SSL	HTTPS port setting of MEAP	
Lv.2	Details	To set the port of HTTPS server in the case of using SSL with HTTP of MEAP.
	Use case	When setting HTTPS port for MEAP
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 65535
	Default value	8443

COPIER > OPTION > NETWORK		
LPD-PORT		Setting of LPD port number
Lv.2	Details	To set the LPD port number.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 65535
	Default value	515
WUEV-SW		Setting of sleep notification execution
Lv.2	Details	To set whether to notify the sleep mode to the application (imageWARE, etc) on the network when shifting to/recovering from the sleep mode.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Notified, 1: Not notified
	Default value	0
WUEV-INT		Setting of sleep notification interval
Lv.2	Details	To set the interval of sleep notification. When WUEV-SW is 0, this setting is enabled.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	60 to 65535
	Unit	1 sec
	Default value	600
	Related service mode	COPIER> OPTION> NETWORK> WUEV-SW
WUEV-POT		Port number setting for sleep notice
Lv.2	Details	To set port number of the PC to notify the sleep mode. When WUEV-SW is 0, this setting is enabled.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 65535
	Default value	11427
	Related service mode	COPIER> OPTION> NETWORK> WUEV-SW
WUEV-RTR		Setting of sleep notification range
Lv.2	Details	To set the number of available routers to the target for sleep notification. When WUEV-SW is 0, this setting is enabled.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 254
	Default value	3
	Related service mode	COPIER> OPTION> NETWORK> WUEV-SW

COPIER > OPTION > NETWORK			
WUEN-LIV		Recovery time setting after sleep notice	
Lv.2	Details	To set the time from the sleep start from network without job assignment until the mode is shifted to the sleep mode.	
	Use case	When setting the startup time after sleep notification	
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
	Display/adj/set range	1 to 600	
	Unit	1 sec	
	Default value	15	
IFX-CHIG		Set operation by IFAX recv e-mail text	
Lv.1	Details	To set the number of characters for the IFAX received e-mail text, so that the e-mail is not printed/forwarded when the characters in the text is less than the number of specified characters. If an e-mail text consists of linefeed codes only, the machine outputs blank paper. In such case, specify 2 (number of characters) so that there will be no output of blank paper. In the case of specifying any number other than 0, header/footer is printed/forwarded in 1 sheet only if the e-mail (body) text is less than the specified value while no TIFF file is attached. As the value is incremented by 1, the number of target characters in e-mail body text is increased by 1 character.	
	Use case	When reducing printouts of blank paper due to e-mail received by IFAX	
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
	Caution	Be sure to get approval from the user by telling that e-mail text is not printed if the number of characters is less than the specified value.	
	Display/adj/set range	0 to 999 0: E-mail text is not ignored.	
	Unit	1 char	
	Default value	0	
	DNSTRANS		Setting of DNS transfer priority
	Lv.1	Details	To set priority order of the protocol (IPv4/IPv6) to be used for DNS query. In the case of using both IPv6 and IPv4 while the DNS server supports IPv4, it takes time because of timeout when executing DNS query with priority on IPv6. When 0 is set, time can be shortened.
		Use case	When it takes time to execute DNS query with priority on IPv6 because the DNS server supports IPv4
Adj/set/operate method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/adj/set range		0 to 1 0: IPv4, 1: IPv6	
Default value		1	

COPIER > OPTION > NETWORK		
PROXYRES		Setting of proxy response to Windows
Lv.2	Details	To set whether to provide proxy response or return the device status when an inquiry is received via Windows while the device is in sleep mode.
	Use case	When executing status response for query from Windows correctly
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: No proxy response, 1: Proxy response
	Default value	1
WOLTRANS		Setting of sleep recovery protocol
Lv.1	Details	To set the protocol for recovery from sleep mode according to the value of WOL (Wake On LAN) trans. The machine recovers from sleep mode by receiving particular network packets. When the number of supported network protocols is increased, the types of network packets which activate recovery from sleep mode vary. However, there is a possibility that the existing network protocol is actually used. Select a type of network protocol which activates recovery from sleep mode according to the usage environment.
	Use case	When selecting protocol for sleep recovery
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 3 1: WSD and SNMP, 2: WSD and CPCA, 3: CPCA and SNMP
	Default value	1
802XTOUT		Set of IEEE802.1X authentication timeout
Lv.1	Details	To set timeout value for IEEE802.1X authentication. If the device executes 802.1X authentication, change the wait time for response from the authentication server.
	Use case	When response from the authentication server is slow/fast
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	10 to 120
	Unit	1 sec
	Default value	30
IKERETRY		Set IKE packet transmission retry times
Lv.1	Details	To set the number of retries in the case of no response from the communication target at the time of IKE packet transmission.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 3
	Default value	2

COPIER > OPTION > NETWORK		
SPDALDEL		Initialization of SPD value
Lv.2	Details	To initialize all the SPD values that are under management. SPD values can be initialized without clearing SRAM.
	Use case	At the time of SPD value mismatch when IPSec Board is added
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
NCONF-SW		ON/OFF of Network Configurator function
Lv.1	Details	To set ON/OFF of Network Configurator function. If the user does not use the function, set 0 to prevent remote attack through network.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
IKEINTVL		Set IKE packet transmit retry interval
Lv.1	Details	To set retry interval in the case of no response from the communication target at the time of IKE packet transmission.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 10
	Unit	1 sec
	Default value	5
SP-LINK		Mode setting at 1W sleep
Lv.1	Details	To set the condition to shift to sleep mode. When 0 is set, 10Base-T standby is executed, therefore standby power 1W can be realized. When 1 is set, the machine enters sleep mode after negotiation (same as conventional machines).
	Use case	When shifting to sleep mode after negotiation (same as conventional machines)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: 10Base-T standby, 1: Shift to sleep mode after negotiation
	Default value	0

COPIER > OPTION > NETWORK	
AFS-JOB	Set of FAX server job reception port
Lv.1	Details
	To set the reception port of the fax server to which a fax client sends jobs.
	Use case
	When changing the job reception port of the fax server
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	20317
AFC-JOB	Set of FAX client job sending port
Lv.1	Details
	To set the port of a fax client from which jobs are sent to the fax server.
	Use case
	When changing the job sending port of a fax client
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	20317
AFC-EVNT	Set of FAX client event reception port
Lv.1	Details
	To set the event notification reception port of a fax client.
	Use case
	When changing the event notification reception port of a fax client
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 65535
	Default value
	29400
ILOGMODE	Setting of IP address block mode
Lv.1	Details
	To set all protocols or TCP/UDP/ICMP unicast as the target of IP block. When 0 is set, the machine responds to ARP, ICMP multicast and broadcast which have no direct relation, and consequently the number of logs is increased. When 1 is set, the machine filters TCP, UDP and ICMP unicast only.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 3 0: All protocols support mode, 1: TCP/UDP/ICMP unicast support mode, 2 to 3: Not used
	Default value
	0

COPIER > OPTION > NETWORK	
ILOGKEEP	Set of IP address block log hold time
Lv.1	Details
	To set the retention time from the log time of IP block. When access is made again from a same IP address which was blocked before, if it is within the retention time from the previous log time, its log is not recorded. If access is frequently made from a same IP address, the log record of the UI might be filled with its logs. If the user considers that a single log for a same IP address is enough, set the longer retention time.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 48 0: 1 minute (special mode), 1 to 48: 1 hour to 48 hours
	Default value
	1
IPTBROAD	Set to allow broad/multicast packet TX
Lv.1	Details
	To set whether to permit transmission of broadcast packets and multicast packets. When 0 is set, transmission of broadcast packets and multicast packets is permitted without specifying an exception address. It is permitted within the device even if it is rejected in the default setting of the IPv4/v6 transmission filter. Set 1 when the user does not want to send them.
	Use case
	Upon user's request
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 5 0: Enabled, 1: Disabled, 2 to 5: Not used
	Default value
	0
PFWFTPRT	Set of RST reply at IP filter FTP SEND
Lv.1	Details
	When FTP SEND is executed using an IP filter by which packets from a specific remote PC are rejected, SYN is returned to the port 113 if the PC supports authentication of the FTP port 113. However, since the IP filter blocks the packets, the block logs are increased and the performance is lowered. When 1 is set, RST is returned to the port 113 without blocking packets.
	Use case
	When executing FTP SEND against the OS which supports authentication of the FTP port 113 while the IP filter is enabled
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0

COPIER > OPTION > NETWORK		
IPMTU		Setting of MTU size of network packet
Lv.1	Details	To set MTU size of network packet. This item is used when performing SEND communication between locations connected with Ethernet in a field environment where MTU black hole problem occurs.
	Use case	When MTU black hole problem occur
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	With IPv6, use of MTU which size is less than 1280 bytes is not recommended by RFC. Therefore, when setting IPv6 to ON and MTU to 7 or smaller, communication using IPv6 may not be available.
	Display/adj/set range	1 to 10 1: 600 bytes, 2: 700 bytes, ..., 9: 1400 bytes, 10: 1500 bytes
	Unit	100 byte
	Default value	10
	Supplement/memo	MTU: A unit of transmission showing the maximum value of data which can be sent per 1 transfer (1 frame) in a network MTU black hole: A problem which occurs when ICMP packet is being filtered by firewall, etc. (Since the message does not reach the sender, the sender is not aware of the packet being lost, which then results in time-out.)
DDNSINTV		Set of DDNS periodical update interval
Lv.1	Details	In the conventional machines, DNS registration is executed only once at startup, so the registered contents are deleted in an environment where the DNS server settings are deleted at intervals. To set the interval of DDNS periodical update for not deleting the registered contents.
	Use case	When the DNS server settings are deleted at intervals
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 48 0: No periodical update, 1: 1-hour interval, 2: 2-hour interval, ..., 47: 47-hour interval, 48: 48-hour interval
	Unit	1 hour
	Default value	24
NWLOGINT		For R&D
PRCLTYPE		Setting of dedicated protocol type
Lv.2	Details	To switch the type of dedicated protocol.
	Use case	Upon user's request (Assumed to make change from the default value only for customization.)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: TYPE 0 (Compatible in conventional manner), 1: TYPE 1
	Default value	0

COPIER > OPTION > NETWORK		
VLAN-SW		ON/OFF VLAN participation packets send
Lv.2	Details	To set whether to send packets for participating in dynamic VLAN. Packets are sent at startup, when LAN cable is connected or when the device recovers from deep sleep.
	Use case	When participating in dynamic VLAN
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF (Packets are not sent), 1: ON (Packets are sent)
	Default value	0
	Related service mode	COPIER> OPTION> NETWORK> VLAN-PKT
	Supplement/memo	VLAN (Virtual LAN): A method for realizing grouping of terminals depending on the HUB, switch connection port, MAC address, protocol, etc. If IP address of the machine has not been set, an IP address is assigned after participating in VLAN.
VLAN-PKT		No. of VLAN participation packet to send
Lv.2	Details	To set the number of packets for participating in VLAN. 3 sets of packets multiplied by the setting value are sent.
	Use case	When participating in dynamic VLAN
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	This setting is ignored when the setting is made not to send packets for participating in VLAN (VLAN-SW=0).
	Display/adj/set range	0 to 10
	Default value	1
	Related service mode	COPIER> OPTION> NETWORK> VLAN-SW
	Supplement/memo	VLAN (Virtual LAN): A method for realizing grouping of terminals depending on the HUB, switch connection port, MAC address, protocol, etc. If IP address of the machine has not been set, an IP address is assigned after participating in VLAN.
RAWTOU		Set of reception timeout at printing
Lv.2	Details	To set the duration of time before disconnecting the connection when packet reception is delayed during printing with RAW/LPR setting. If connection is not disconnected after making prints from a Windows PC via network, failure such as unable to make print from other devices occurs. In such case, shorten the timeout time so that connection is disconnected earlier.
	Use case	When failure (unable to make print, etc.) occurs on the network where a Windows PC is connected
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	1 to 5 1: 1 minute, 2: 3 minutes, 3: 5 minutes, 4: 10 minutes, 5: 60 minutes
	Unit	1 min

T-8-72

USER

COPIER > OPTION > USER	
COPY-LIM	
Setting of upper limit for copy	
Lv.1	Details
	To set the upper limit value for copy.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	1 to 9999
	Default value
	9999
SLEEP	
ON/OFF of auto sleep function	
Lv.1	Details
	To set ON/OFF of auto sleep function.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1
	Related UI menu
	Preferences> Timer/Energy Settings> Auto Sleep Time
	Supplement/memo
	The time to shift to the sleep mode can be set in Settings/ Registration> Preferences> Timer/Energy Settings> Auto Sleep Time.
SIZE-DET	
ON/OFF of original size detect function	
Lv.2	Details
	To set ON/OFF of original size detection function.
	Use case
	Upon user's request (The LED is too bright, etc.)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	1
COUNTER1	
Display of software counter 1	
Lv.1	Details
	To display counter type for software counter 1 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	N/A (Display only)
	Caution
	Display only. No change is available.
	Display/adj/set range
	0 to 999 0: No registration
	Default value
	The value differs according to the location.
COUNTER2	
Setting of software counter 2	
Lv.1	Details
	To set counter type for software counter 2 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999
	Default value
	The value differs according to the location.

COPIER > OPTION > USER	
COUNTER3	
Setting of software counter 3	
Lv.1	Details
	To set counter type for software counter 3 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999
	Default value
	The value differs according to the location.
COUNTER4	
Setting of software counter 4	
Lv.1	Details
	To set counter type for software counter 4 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999
	Default value
	The value differs according to the location.
COUNTER5	
Setting of software counter 5	
Lv.1	Details
	To set counter type for software counter 5 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999
	Default value
	0
COUNTER6	
Setting of software counter 6	
Lv.1	Details
	To set counter type for software counter 6 on the Counter Check screen.
	Use case
	Upon user/dealer's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 999
	Default value
	0
DATE-DSP	
Setting of date/time display format	
Lv.2	Details
	To set date/time display format according to the country or region. After the display format is set with this mode, the order of date is reflected to the followings: Preferences> Timer/Energy Settings> Date/Time Settings, and report output.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: YYMM/DD, 1: DD/MYY, 2: MM/DD/YY
	Default value
	The value differs according to the location.
	Related UI menu
	Preferences> Timer/Energy Settings> Date/Time Settings

COPIER > OPTION > USER	
MB-CCV	Control card usage limit for Mail Box
Lv.2	Details
	To restrict use of control card for Mail Box.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Unlimited, 1: Limited
	Default value
	0
CONTROL	Charge setting of PDL job
Lv.1	Details
	To set charge count transmission of PDL job to the connected charge management device (Coin Manager or non-Canon-made control card).
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: No charge, 1: Charge
	Default value
	0
	Related service mode
	COPIER > OPTION > ACC > COIN
B4-L-CNT	Count setting of B4 size
Lv.1	Details
	To set B4 count with software counter 1 to 8 as to whether B4 is counted as large size or small size. Selecting 1 counts B4 or larger size paper as large size while paper smaller than B4 size as small size.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Small size, 1: Large size
	Default value
	0
	Related service mode
	COPIER> OPTION> CUSTOM> SC-L-CNT

COPIER > OPTION > USER	
TRY-STP	Set of suspension at full Finisher Tray
Lv.2	Details
	To set whether to suspend or continue output when the full Finisher Tray is detected. When 1 is set, the detection of full stacking by the number of sets is ignored to continue output in the staple mode. When full stacking is detected by the height of the tray, the output is stopped.
	Use case
	Upon user's request
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	Fin-AM1 0 to 1 0: At detection of full tray, 1: Detection of height only Fin-T1 0 to 1 0: Detection of full stacking by the number of sets or detection of height, 1: Detection of height only
	Default value
	0
MF-LG-ST	ON/OFF of long original mode display
Lv.2	Details
	To set whether to display the long original switch. When 1 is set, [Long Original] button is displayed in Copy> Options screen and the long length paper can be used.
	Use case
	Upon user's request (to use long original or long length paper)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	0
	Related UI menu
	Copy> Options
CNT-DISP	ON/OFF of serial No. display
Lv.2	Details
	To set whether to display the serial number on the Counter Check screen.
	Use case
	When not displaying the serial number on the Counter Check screen
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Display, 1: Hide
	Default value
	0
COPY-JOB	Setting of copy job reservation
Lv.1	Details
	To set to enable/disable copy job reservation when the Card Reader/ Coin Manager is used.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Enabled, 1: Disabled
	Default value
	0

COPIER > OPTION > USER		
OP-SZ-DT		ON/OFF of orgnl size detect:open Cpybrd
Lv.2	Details	To set ON/OFF of original size detection while the Copyboard is opened. When 0 is set, enter original size manually from the Control Panel. When 1 is set, original size is detected automatically.
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
JOB-INVL		Job intvl setting at interruption copy
Lv.2	Details	To set output interval between jobs at the time of interruption copy. Sorting is difficult after interruption copy because of the continuous output of the next job. Paper interval becomes longer when starting pickup for the next job after the last sheet of the previous job is delivered.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: Continuous output of the interruption copy and the next job 1: Starting pickup for the next job after the interruption copy is delivered all. 2: Starting pickup for the next job after the previous job is delivered all. (For all jobs)
	Default value	0
TAB-ROT		Set of landscape img rotn at PDL:tab ppr
Lv.1	Details	To set whether to rotate landscape image by 180 degrees when PDL print is made on tab paper. When 1 is set, image is rotated.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Not rotated, 1: Rotated
	Default value	0
PR-PSESW		ON/OFF of output stop button display
Lv.1	Details	To set whether to display [Stop] button on Status Monitor/Cancel screen.
	Use case	- Upon user's request - When promptly stopping the print job in operation or under reservation
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1

COPIER > OPTION > USER		
IDPRN-SW		Charge target job set of dept mngm cntr
Lv.1	Details	To set the job type that advances the department management counter.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: PRINT category: Inbox Print, Report Print, Send Local Print, PDL Print COPY category: COPY 1: PRINT category: Report Print, Send Local Print, PDL Print COPY category: COPY, Inbox Print
	Default value	0
CPRT-DSP		ON/OFF of [Print Charge Log] button
Lv.1	Details	To set whether to display [Print Charge Log] button to print the charge logs on the charge log screen in Settings/Registration menu. When 1 is set, the button is displayed in Management Settings> Charge Management> Charge Log screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
PCL-COPY		Set of PCL COPIES command control method
Lv.2	Details	To set the binder control method of COPIES command with PCL. Select whether to use the control method of Canon-made PCL or use the same control method of non-Canon-made PCL.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 65535 0: Control method of Canon-made PCL (following the value of COPIES command that is specified for each page to control on a page basis) 1: Control method of non-Canon-made PCL (handling the value of COPIES command, which is specified for page 1 when collating, as bind figure while the value of COPIES command for the next page or later is invalid. Same control applies as Canon-made PCL when not collating) 2 to 65535: For future use
	Default value	0

COPIER > OPTION > USER	
CNT-SW	Set default dspl items on charge counter
Lv.1	Details
	To set default display items of the charge counter on the Counter Check screen.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Do not use this mode overseas (outside Japan).
	Display/adj/set range
	0 to 1 0:Type1 , 1:Type2
	Default value
	0
	Related service mode
	COPIER> OPTION> FNC-SW> CONFIG
TAB-ACC	Set of auto cassette change: tab paper
Lv.1	Details
	To set to enable/disable auto cassette change when tab paper runs out.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Be sure to instruct the user to thoroughly comply the following: - Use tab paper with the same number of tabs. - Set tab paper. Be sure to comply the above; otherwise, proper print is not available and it can cause soiling inside the machine because of toner.
	Display/adj/set range
	0 to 1 0: Auto cassette change disabled, 1: Auto cassette change enabled
	Default value
	0
BCNT-AST	Set of Inbox print charge target job
Lv.1	Details
	To set the job type that advances the counter in Inbox print with the eM Controller (ASSIST).
	Use case
	When switching the job type that is subject to counting of the Inbox print with the eM Controller
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: PDL job, 1: Copy job
	Default value
	0
PRJOB-CP	Set count TX at RX/report print
Lv.2	Details
	To set to enable/disable a page-basis count pulse transmission to the charge management device at the time of RX print or report print.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: No transmission, 1: Transmission
	Default value
	0

COPIER > OPTION > USER	
DFTL-CPY	Setting of color mode for copy
Lv.1	Details
	To set the default color mode for copy operation.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: Based on Auto/ACS/Printer Driver settings, 1: Color mode, 2: Black mode
	Default value
	0
DFTL-BOX	Setting of color mode for Mail Box scan
Lv.1	Details
	To set the default color mode for Mail Box scan operation.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Execute COPIER> FUNCTION> CLEAR> JV-CACHE. 3) Turn OFF/ON the main power switch.
	Caution
	After the setting has been changed, execute JV-CACHE to clear the cache of the JAVA application.
	Display/adj/set range
	0 to 2 0: Based on Auto/ACS settings, 1: Color mode, 2: Black mode
	Default value
	0
	Related service mode
	COPIER> FUNCTION> CLEAR> JV-CACHE
DOC-REM	ON/OFF of original removal message
Lv.1	Details
	To set whether to display the message to remove original when scanning with DADF without opening/closing DADF after scanning with the Copyboard.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	0
DPT-ID-7	Password entry set at dept ID reg/auth
Lv.2	Details
	To set whether to enter a password at the time of registration/authentication of department ID. With 1 is set, entry of 7-digit password is required beside department ID.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Department ID only, 1: 7-digit (password) entry
	Default value
	0

COPIER > OPTION > USER	
RUI-RJT	Connct set at invalid auth from remoteUI
Lv.2	Details
	To set whether to disconnect HTTP port when the machine receives invalid authentication from remote UI 3 times.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Continued connection, 1: Disconnected
	Default value
	0
FREG-SW	ON/OFF MEAP counter free reg area dspl
Lv.2	Details
	To set whether to display the free register area of MEAP counter for SEND.
	Use case
	At problem analysis
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	- Do not use this at the normal service. - Take necessary action in accordance with the instructions from the Quality Support Division.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	0
IFAX-SZL	Setting of IFAX send size limit
Lv.2	Details
	To set for restricting data size at the time of IFAX transmission that does not go through the server. When 0 is set, it is to be #830 error in the case of sending data that exceeds the upper limit value. In the case that the data goes through the server, the size of transmission data is always restricted regardless of the setting.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Limited, 1: Unlimited (Restriction applies when data goes through the server.)
	Default value
	1

COPIER > OPTION > USER	
IFAX-PGD	Set page split TX at IFax Simple mode TX
Lv.2	Details
	To set whether to perform split-data transmission on a page basis in the case that the transmission size in I-Fax Simple mode exceeds the upper limit value.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	In the case to enable split-data transmission, be sure to receive approval from the user in advance by explaining the following: - No guarantee for page order on the reception side - There is a possibility of interruption of other received jobs between pages.
	Display/adj/set range
	0 to 1 0: Disabled, 1: Enabled
	Default value
	0
MEAPSAFE	Setting of MEAP safe mode
Lv.2	Details
	To set safe mode for MEAP platform. MPSF is displayed on the Control Panel in safe mode. In safe mode, MEAP application is stopped while just the system application, which starts with initial state, is activated. This mode enables obtaining log for cause analysis of MEAP failure.
	Use case
	Perform system recovery processing when MEAP platform fails to be activated due to resource conflict between MEAP applications, service registration or use order.
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Normal mode, 1: Safe mode
	Default value
	0
TRAY-FLL	Set of target tray for tray full notice
Lv.2	Details
	To set the tray which is the target of an output tray full notification.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: All trays to which paper can be output, 1: All trays which are specified as the dedicated trays
	Default value
	0

COPIER > OPTION > USER		
PRNT-POS		ON/OFF of all pauses at error job cancel
Lv.2	Details	To set whether to pause the print operation of following jobs when a job is canceled due to an error inside the machine (#037, etc.) except service calls during PDL print.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
AFN-PSWD		Setting of Set/Reg menu access limit
Lv.2	Details	To set restriction on accessing Settings/Registration menu by entering password. When 1 is set, password entry of system administrator is required after pressing Settings/Registration key.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Password is not required, 1: Password is required
	Default value	0
PTJAM-RC		Auto reprint setting at PDL print jam
Lv.2	Details	To set whether to automatically restart printing after clearing jam that occurs with PDL print.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Not automatically reprinted, 1: Automatically reprinted
	Default value	1
PDL-NCSW		Card mngm setting for PDL print job
Lv.2	Details	To set to make PDL print job be subject to card management by the Card Reader. When 1 is set, PDL print is available only when the card ID of the card inserted to the Card Reader matches the department ID.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: PDL print is available with no card inserted. 1: PDL print is available only when the card ID matches the department ID in the case that the card is inserted.
	Default value	0

COPIER > OPTION > USER		
SLP-SLCT		Usage setting of network applications
Lv.2	Details	To set whether to use network-related applications. For this machine to recover from sleep mode 1 through network, a particular packet needs to be received; however, the existing network-related application does not send this packet. When 0 is set, network-related application is not used. Therefore, the machine cannot recover from sleep mode 1 through network when it enters sleep mode 1. When 1 is set, the machine does not shift to sleep mode 1 so that it can recover from the mode through network.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Do not use this at the normal service.
	Display/adj/set range	0 to 1 0: Not used (Shift to sleep mode 1 is available.) 1: Used (Shift to sleep mode 1 is not available.)
Default value	0	
CNCT-RLZ		Setting of connection serialize function
Lv.2	Details	Connection serialize is a function to assure job grouping function of imageWARE Output Manager Select Edition V1.0. When 1 is set, job rearrangement can be avoided because the machine does not receive job data from other connection until it completes job data reception from the current connection.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
COUNTER7		Setting of software counter 7
Lv.1	Details	To set counter type for software counter 7 on the Counter Check screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 999 0: No registration
	Default value	0

COPIER > OPTION > USER		
COUNTER8		Setting of software counter 8
Lv.1	Details	To set counter type for software counter 8 on the Counter Check screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 999 0: No registration
	Default value	0
2C-CT-SW		Set of color counter at 2-color mode
Lv.2	Details	To set whether to use the single color counter or full color counter for count-up in 2-color mode.
	Use case	When supporting 2-color mode
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Single color counter, 1: Full color counter
	Default value	JP:0, USA:1, EUR:1, AU:1, CN:1, KR:1, TW:1, ASIA:1
LDAP-SW		Set of search condition for LDAP server
Lv.1	Details	To set the condition to search e-mail address, etc. from LDAP server.
	Use case	When specifying condition to search e-mail address, etc. from LDAP server
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 5 0: Includes the next, 1: Not include the next, 2: Equivalent to the next, 3: Not equivalent to the next, 4: Starts with the next, 5: Finishes with the next
	Default value	4
FROM-OF		Deletion of e-mail sender's address
Lv.1	Details	To set whether to delete the sender's address (From) at the time of e-mail transmission.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Retained, 1: Deleted
	Default value	0

COPIER > OPTION > USER		
DOM-ADD		Additional entry of e-mail destn domain
Lv.2	Details	To set to automatically add the domain specified in Settings/Registration menu to the sending address (To) entered at the time of e-mail transmission. If specifying "xxx.com" as a domain in Settings/Registration menu in advance, just entering "aaa" enables to display "aaa@xxx.com" when sending e-mail.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Not added, 1: Added
	Default value	0
FILE-OF		File send prohibition to entered address
Lv.1	Details	To set to prohibit the file transmission to entered address. When 1 is set, file transmission is not available by entering the address because "File" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
	Display/adj/set range	0 to 1 0: Allowed, 1: Prohibited
Default value	0	
MAIL-OF		E-mail TX prohibition to entered address
Lv.1	Details	To set to prohibit the e-mail transmission to entered address. When 1 is set, e-mail transmission is not available by entering the address because "E-mail" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
	Display/adj/set range	0 to 1 0: Allowed, 1: Prohibited
Default value	0	

COPIER > OPTION > USER	
IFAX-OF	IFAX send prohibition to entered address
Lv.1	Details
	To set to prohibit the I-Fax transmission to entered address. When 1 is set, I-Fax transmission is not available by entering the address because "I-Fax" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
	Display/adj/set range
	0 to 1 0: Allowed, 1: Prohibited
	Default value
	0
LDAP-DEF	Set LDAP server search initial condition
Lv.1	Details
	To set initial condition for search target attribute that is specified at the time of LDAP server details search.
	Use case
	Upon user's request
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 6 0: Name, 1: E-mail, 2: FAX, 3: Organization, 4: Organization unit, 5: No registration 1 (any setting), 6: No registration 2 (any setting)
	Default value
	0
FINGM-SW	ON/OFF fingerprint removal button dsp
Lv.2	Details
	To set whether to display the fingerprint removal button with which printing is performed after the fixing operation is once executed as a measure to prevent fingerprint at the time of paper pickup from the Multi-purpose Tray. By pressing the button, the number of fixing operation is increased so printing performance is decreased significantly.
	Use case
	When fingerprint appears due to paper pickup from the Multi-purpose Tray
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	0

COPIER > OPTION > USER	
DK3-ASST	Set of Multi Deck (Middle) Air Heater
Lv.1	Details
	To set the condition to turn ON the Air Heater at the Multi Deck (Middle) in accordance with media/environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. When 2 is set, the heater is always ON regardless of media and environment.
	Use case
	Upon user's request (to shorten the wait time)
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.
	Display/adj/set range
	0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)
	Default value
	0
FREE-DSP	ON/OFF of charge disable screen
Lv.2	Details
	To set whether to display "Use Charge Management" screen for switching between charge and no charge in Settings/Registration menu. The hardware switch for switching charge/no charge in the Coin Manager enables the mode in which all the services are available for free (store manager mode) by temporarily releasing the charging system. When 1 is set, the mode can be switched with the software switch even without the hardware switch.
	Use case
	When enabling all the services to be provided for free by temporarily releasing the charging system
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 1 0: Hide, 1: Display
	Default value
	0

COPIER > OPTION > USER		
TNRB-SW	ON/OFF of Toner Container counter dspl	
Lv.2	Details	To set whether to display the Toner Container counter on the Counter Check screen.
	Use case	When preferring not to show the screen to users
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 3 0: Hide, 1: Display (Toner Container counter only), 2: Display (Toner Container counter + ejection counter), 3: Display (Toner Container counter + unidentified counter)
	Default value	It differs according to the location.
CLR-TIM	Set of HDD Encry Kit data delete timing	
Lv.2	Details	To set the timing to completely delete the data when HDD Data Encryption/Mirroring Kit is used. When 0 is set, the job processing speed may be reduced because page data that has been already processed is deleted while the other job is in process, causing overload to PCU and HDD access. Selecting 1 improves the job processing speed because the process is executed after a job is completed.
	Use case	Upon user's request (to improve the job processing speed)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: During job process, 1: After the job is completed
	Default value	0
FX-CLNLV	Setting of Fixing Belt refresh level	
Lv.2	Details	If long-width paper is printed after printing a large quantity of short-width paper, light glossy lines may occur with the same width as short-width paper in the feed direction. (Example: When printing A3 paper after printing A4R paper) Auto refresh control of the Fixing Belt is performed to prevent glossy lines, but use this mode when the symptom still occurs. As the value is increased, the effect of refresh control is improved, but the life of the Fixing Belt is shortened. Also, there is a possibility that the Fixing Belt may get damage. When setting IMGC-ADJ to 1, this setting can be also made in Settings/Registration> Adjustment/Maintenance> Fixing Belt Auto Refresh Level.
	Use case	When glossy lines occur in feed direction
	Adj/set/operate method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	-5 to 5
	Default value	0
	Related service mode	COPIER> OPTION> DSPLY-SW> IMGC-ADJ
	Related UI menu	Adjustment/Maintenance> Fixing Belt Auto Refresh Level

COPIER > OPTION > USER		
HDCR-DSW	Dspl/hide of HDD complete delete ON/OFF	
Lv.1	Details	To set whether to display "Hard Disk Data Complete Deletion" in Settings/Registration menu. When 1 is set, ON/OFF of HDD data complete deletion function is available on HDD Data Complete Deletion screen. When 0 is set, it is not displayed on the screen so the user cannot use it.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	1
	Related UI menu	Management Settings> Data Management> HDD Data Complete Deletion> Hard Disk Data Complete Deletion
DK1-ASST	Setting of POD Deck Lite Air Heater	
Lv.1	Details	To set the condition to turn ON the Air Heater at the POD Deck Lite in accordance with media/environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. When 2 is set, the heater is always ON regardless of media and environment.
	Use case	Upon user's request (to shorten the waiting time)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.
	Display/adj/set range	0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)
	Default value	0

COPIER > OPTION > USER	
DK4-ASST	Set of Multi Deck (Lower) Air Heater
Lv.1	<p>Details</p> <p>To set the condition to turn ON the Air Heater at the Multi Deck (Lower) in accordance with media/environment. POL-SCAN		ON/OFF of Rights Management Server set
Lv.1	Details	When 1 is set, the Rights Management Server function screen is displayed. Although the Rights Management Server function is a standard feature, set 0 if not necessary.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0
EXP-CRYP		Confidential encrypt ON/OFF:add book exprt
Lv.1	Details	To set whether to encrypt the confidential part (password part) in the Address Book when exporting the address book and device settings via RUI. When 0 is set, the confidential part in the address book is exported without encryption.
	Use case	When there is a need to export password without encryption because of operation and tool
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	Be sure not to allow the user to execute export without encryption because of security concern.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
SLEEP1SW		Power supply when shifting to SLEEP1
Lv.1	Details	When shifting to SLEEP1 mode, the power stops to be supplied, so it takes time to activate after a job is received. When 1 is set, the power keeps to be supplied even after shifting to SLEEP1 mode, so the activation of job processing becomes earlier.
	Use case	Upon user's request (when job processing after shifting to SLEEP1 is slow)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0

COPIER > OPTION > USER		
CNCL-ATH		ON/OFF of auth at secure job stop
Lv.1	Details	To set whether to conduct authentication when stopping a secured job on the secured print screen. When 0 is set, pressing [Stop] button deletes the secure job immediately. By setting 1 when user authentication is not conducted, the authentication screen is displayed and only the jobs which authentication was succeeded are deleted, so security for the secure job is enhanced.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
SMD-EXPT		Set export target data dspl: remote UI
Lv.1	Details	To set whether to allow export of service mode data from remote UI. When 1 is set, "service mode data" is displayed on remote UI as exportable data.
	Use case	When installing more than 1 machine at the same time (When registering the same service mode data to more than 1 machine)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	0
Supplement/memo		By selecting "service mode data" as the target data of export on remote UI after setting SMD-EXPT to 1, service mode data can be exported from remote UI.
SNDSTREN		Set of setting delete aftr scan and send
Lv.1	Details	To set whether to delete the transmission setting/address after transmission on the "Scan and Send" screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: Delete, 1: Retain only the transmission setting, 2: Retain the transmission setting and address
	Default value	JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0

COPIER > OPTION > USER		
FAXSTREN		Set of setting delete aftr fax transmit
Lv.1	Details	To set whether to delete the transmission settings except for the address after transmission from the "Fax" screen.
	Use case	Upon user's request
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Delete, 1: Retain
Default value		JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0
M-RNG-EX		ON/OFF of out of spec paper type add
Lv.1	Details	To set whether to use paper types not defined in the specifications. When 0 is set, only the paper types defined in the specifications can be used. When 1 is set, coated paper/textured paper can be picked up from the cassette of the host machine and coated paper which weight is less than 105 g/m2 can be picked up from all paper sources. Select a paper type in the Control Panel menu.
	Use case	Upon user's request (to use paper types not defined in the specifications)
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	- Be sure to get approval from the user in advance by telling that pickup operation cannot be performed depending on paper type. - Be sure to check that jam does not occur with the specified paper type after the setting has been made.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
Default value		0

ST-OOXML	Install state display of Office Open XML
Lv.2	Details
	To display installation state of Office Open XML transmission function when disabling the function with license transfer.
	Use case
	When checking whether Office Open XML transmission function is installed
	Adj/set/operate method
	1) Select ST-OOXML. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-OOXML.
	Display/adj/set range
	When operation finished normally: OK!
	Default value
	According to the setting at shipment
TR-OOXML	Trns lcns key display of Office Open XML
Lv.2	Details
	To display transfer license key to use Office Open XML when the function is disabled with license transfer.
	Use case
	- When replacing the HDD - When replacing the device
	Adj/set/operate method
	1) Select ST-OOXML. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-OOXML.
	Display/adj/set range
	24 digits
OF-OOXML	Office Open XML OFF w/ license transfer
Lv.2	Details
	To set Office Open XML to OFF with license transfer.
	Display/adj/set range
	0: OFF, 1: ON
ST-2600	Instal state dspl: IEEE2600.1 scrtly func
Lv.2	Details
	To display installation state of security function of IEEE2600.1 when disabling the function with license transfer.
	Use case
	When checking whether security function of IEEE2600.1 is installed
	Adj/set/operate method
	1) Select ST-2600. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-2600.
	Display/adj/set range
	When operation finished normally: OK!
	Default value
	According to the setting at shipment
TR-2600	Trn lcns key dspl: IEEE2600.1 scrtly func
Lv.2	Details
	To display transfer license key to use security function of IEEE2600.1 when the function is disabled with license transfer.
	Use case
	- When replacing the HDD - When replacing the device
	Adj/set/operate method
	1) Select ST-2600. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-2600.
	Display/adj/set range
	24 digits

COPIER > OPTION > LCNS-TR		
OF-2600		IEEE2600.1 scrty func OFF w/ lcns trn
Lv.2	Details	To set security function of IEEE 2600.1 to OFF with license transfer.
	Display/adj/set range	0: OFF, 1: ON
ST-OPFNT		Install state display of PCL Font Set
Lv.2	Details	To display installation state of PCL Font Set when disabling the function with license transfer.
	Use case	When checking whether PCL Font Set is installed
	Adj/set/operate method	1) Select ST-OPFNT. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-OPFNT.
	Display/adj/set range	0: Not installed, 1: Installed When operation finished normally: OK!
	Default value	According to the setting at shipment
TR-OPFNT		Trns license key display of PCL Font Set
Lv.2	Details	To display transfer license key to use PCL Font Set with another MFP.
	Use case	- When replacing the HDD - When replacing the device
	Adj/set/operate method	1) Select ST-OPFNT. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-OPFNT.
	Display/adj/set range	24 digits
OF-OPFNT		PCL Font Set OFF with license transfer
Lv.2	Details	To set the license of PCL Font Set to OFF with license transfer.
	Display/adj/set range	0: OFF, 1: ON
ST-NCAPT		Install state display of NetCap func
Lv.2	Details	To display installation state of network packet capture function when disabling the function with license transfer.
	Use case	When checking whether network packet capture function is installed
	Adj/set/operate method	1) Select ST-NCAPT. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-NCAPT.
	Display/adj/set range	0: Not installed, 1: Installed When operation finished normally: OK!
	Default value	According to the setting at shipment
TR-NCAPT		Transfer license key dspl of NetCap func
Lv.2	Details	To display transfer license key to use network packet capture function when the function is disabled with license transfer.
	Use case	- When replacing the HDD - When replacing the device
	Adj/set/operate method	1) Select ST-NCAPT. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-NCAPT.
	Display/adj/set range	24 digits

COPIER > OPTION > LCNS-TR

TR-PSPDF	Trns lcns key dspl: PS-PDF combined lcns	
Lv.2	Details	To display the transfer license key to use the combined license for PS-PDF when the functions are disabled with license transfer.
	Use case	- When replacing the HDD - When replacing the device
	Adj/set/operate method	1) Select ST-PSPDF. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSPDF.
	Display/adj/set range	24 digits
OF-PSPDF	For R&D	

T-8-77

COPIER > TEST > PG		
TYPE		Test print
Lv.1	Details	To execute the test print.
	Use case	At problem analysis
	Adj/set/operate method	Enter the setting value, and then press Start key. Test print is executed.
	Caution	Be sure to set the value back to 0 after the test print output.
	Display/adj/set range	0 to 100 0: Image from CCD (normal print), 1 to 3: For R&D use, 4: 16 gradations, 5: Whole-area halftone image, 6: Grid, 7 to 9: For R&D use, 10: MCYBk horizontal stripes, 11: For R&D use, 12: YMCBk 64 gradations, 13: For R&D use, 14: Full color 16 gradations, 15: For R&D use, 16: Image with 10% image ratio, 17 to 22: For R&D use, 23: Chart for adjusting the phase of Laser Scanner, 24: Chart for adjusting the magnification ratio of Laser Scanner, 25 to 29: For R&D use, 30: Dedicated chart used for color measurement by C3iPR (Canon Color Checker imagePRESS) and i1iSis, 31 to 46: For R&D use, 47: Dedicated chart used for color measurement by C3iPR (Canon Color Checker imagePRESS) and i1, 48 to 54: For R&D use, 55: PG for REOS, 56 to 57: For R&D use, 58: Chart for calibrating color difference on front and back sides, 59 to 100: For R&D use
	Default value	0
TXPH		Setting of test print image mode
Lv.1	Details	To set the image mode at the time of test print output. This mode is enabled for test print only.
	Use case	At problem analysis
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 8 0: 600 dpi error diffusion (no trailing edge correction of Bk), 1: "Gradation" screen, 2: "Resolution" screen (no trailing edge correction of Bk), 3: Copy screen, 4: None, 5: 600 dpi error diffusion (with trailing edge correction of Bk), 6: "Resolution" screen (with trailing edge correction of Bk), 7: 1200 dpi error diffusion (no trailing edge correction of Bk), 8: 1200 dpi error diffusion (with trailing edge correction of Bk)
	Default value	3

COPIER > TEST > PG		
THRU		Set image correct table use: test print
Lv.1	Details	To set whether to use the image correction table at the time of test print output.
	Use case	At problem analysis
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 2 0: "Auto Adjust Gradation": ON, "Auto Correct Full Color": OFF 1: "Auto Adjust Gradation": OFF, "Auto Correct Full Color": OFF 2: "Auto Adjust Gradation": ON, "Auto Correct Full Color": ON
DENS-Y		Adj of Y-color density at test print
Lv.1	Details	To adjust Y-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
	Use case	At test print (TYPE = 5)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 255
	Default value	128
DENS-M		Adj of M-color density at test print
Lv.1	Details	To adjust M-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
	Use case	At test print (TYPE = 5)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 255
	Default value	128
DENS-C		Adj of C-color density at test print
Lv.1	Details	To adjust C-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
	Use case	At test print (TYPE = 5)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 255
	Default value	128
DENS-K		Adj of Bk-color density at test print
Lv.1	Details	To adjust Bk-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
	Use case	At test print (TYPE = 5)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 255
	Default value	128

COPIER > TEST > PG		
COLOR-Y		Y-color output setting at test print
Lv.1	Details	To make a setting of Y-color output for test print. The setting is applied to all types. When setting COLOR-Y to 1 and other items to 0, a single Y-color is output.
	Use case	At test print
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Not output, 1: Output
	Default value	1
	Related service mode	COPIER> TEST> PG> TYPE, COLOR-M/C/K
COLOR-M		M-color output setting at test print
Lv.1	Details	To make a setting of M-color output for test print. The setting is applied to all types. When setting COLOR-M to 1 and other items to 0, a single M-color is output.
	Use case	At test print
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Not output, 1: Output
	Default value	1
	Related service mode	COPIER> TEST> PG> TYPE, COLOR-Y/C/K
COLOR-C		C-color output setting at test print
Lv.1	Details	To make a setting of C-color output for test print. The setting is applied to all types. When setting COLOR-C to 1 and other items to 0, a single C-color is output.
	Use case	At test print
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Not output, 1: Output
	Default value	1
	Related service mode	COPIER> TEST> PG> TYPE, COLOR-Y/M/K
COLOR-K		Bk-color output setting at test print
Lv.1	Details	To make a setting of Bk-color output for test print. The setting is applied to all types. When setting COLOR-K to 1 and other items to 0, a single Bk-color is output.
	Use case	At test print
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Not output, 1: Output
	Default value	1
	Related service mode	COPIER> TEST> PG> TYPE, COLOR-Y/M/C

COPIER > TEST > PG		
F/M-SW		Setting of PG full color/mono color
Lv.1	Details	To set for the output in full color/monochrome color with PG.
	Use case	When separating (identifying) the cause whether it's due to color or monochrome.
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Full color, 1: Single color
	Default value	0
PG-PICK		Setting of test print paper source
Lv.1	Details	To set the paper source that is used at the time of test print output.
	Use case	- At problem analysis - At test print output
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 19 1: Cassette 1, 2: Cassette 2, 3: Cassette 3, 4 to 6: Not used, 7: POD Deck Lite, 8: Multi-purpose Tray, 9 to 16: Not used, 17: Multi Deck (Upper), 18: Multi Deck (Middle), 19: Multi Deck (Lower)
	Default value	1
2-SIDE		Set of 1-sided/2-sided print for PG
Lv.1	Details	To set 1-sided/2-sided print for PG output.
	Use case	At problem analysis
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: 1-sided, 1: 2-sided
	Default value	0
PG-QTY		Setting of PG output quantity
Lv.1	Details	To set the number of sheets for PG output.
	Use case	At problem analysis
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 999
	Unit	1 sheet
	Default value	1

COPIER > TEST > PG	
FINISH	Option processing function test print
Lv.1	Details
	To execute the test print relating to option processing function.
	Use case
	When checking operation of option processing function
	Adj/set/operate method
	1) Enter the number of sheets in PG-QTY, and then press OK key. 2) Enter the setting value, and then press OK key. 3) Press Start button. The machine outputs a test print.
	Display/adj/set range
	0 to 99 0: N/A 1: Staple (front) *1 2: Staple (2 points) *1 3: Staple (rear) *1 4: Booklet (saddle stitch) *1 5: Z-fold (single sleeve) *1 6: 2-fold *1 7: C-fold *2 8: V-fold *2 9: 4-fold *2 10: Z-fold (out-3-fold) *2 11: Punch (Inner Puncher) *3 12: Multiple-hole punch *4 13: Offset *1 14 to 99: Spare (for future use) *1 Finisher, *2 Multi-folding machine, *3 Inner Puncher, *4 Multiple-hole Puncher
	Default value
	0

NETWORK

COPIER > TEST > NETWORK	
	PING
	Network connection check
Lv.1	Details
	To check connection between this machine and TCP/IP network.
	Use case
	- When checking network connection at the time of installation - At network connection failure
	Adj/set/operate method
	1) Turn OFF the main power switch. 2) Connect the network cable to this machine, and then turn ON the main power switch. 3) Inform the system administrator at user's site that installation of this machine is complete, and ask for network setting. 4) Ask the system administrator to check the network connection, and check the remote host address of PING transmission target. 5) Select the item and enter the remote host address, and then press OK key and Start key. OK: Connection is normal. Checking procedure is complete. NG: Connection failed. Go to step 6) if the cable connection is OK. In case of cable connection failure, connect again and then go to step 5). 6) Select the item and enter loopback address, and then press OK key and Start key. OK: TCP/IP setting of this machine is normal. Go to step 7) to check NIC. NG: TCP/IP setting of this machine has failure. Go to step 3) to check the setting again. 7) Select the item and enter the local host address, and then press OK key. OK: Network setting of this machine and NIC are normal. Inform the system administrator that the trouble is due to network environment and ask for countermeasure. NG: Connection failure/fault with NIC. Check connection of NIC/replace NIC.
	Display/adj/set range
	0.0.0.0 to 255.255.255.255 At normal state: OK, At failure occurrence: NG
	IPv6-ADR
	Setting of PING send address (IPv6)
Lv.1	Details
	To set the IPv6 address to send PING. When PING is sent to this address by PING-IP6, the network connection condition in the IPv6 environment can be checked.
	Use case
	At network connection via IPv6
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	- Enter a valid character string as an address of IPv6. - Enter an address within 39 characters including hexadecimal numbers (0 to 9, a to f) and a separator (:).

	Display/adj/set range	0 to 1023

T-8-108

FEEDER > ADJUST		
DOCST		Adj of DADF img lead edge margin: front
Lv.1	Details	To adjust the leading edge margin on the front side at DADF reading. Execute this item when the output image after DADF installation is displaced. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)
	Use case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
LA-SPEED		Fine adj img ratio: DADF,vert scan,front
Lv.1	Details	To make a fine adjustment of the front side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)
	Use case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 %
	Default value	0
DOCST2		Adj of DADF img lead edge margin: back
Lv.1	Details	To adjust the leading edge margin on the back side at DADF reading. Execute this item when the output image after DADF installation is displaced. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)
	Use case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

FEEDER > ADJUST		
LA-SPD2		Fine adj img ratio: DADF,vert scan,back
Lv.1	Details	To make a fine adjustment of the back side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)
	Use case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-20 to 20
	Unit	0.1 %
	Default value	0
ADJMCSN1		Fine adj img ratio:2-sided,horz scan,frt
Lv.1	Details	To make a fine adjustment of the front side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is reduced by 0.1% in horizontal scanning direction.
	Use case	When image magnification ratio on the front side and back side are different at 2-sided reading
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.1 %
	Default value	0
ADJMCSN2		Fine adj img ratio:2-sided,horz scan,bck
Lv.1	Details	To make a fine adjustment of the back side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is reduced by 0.1% in horizontal scanning direction.
	Use case	When image magnification ratio on the front side and back side are different at 2-sided reading
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.1 %
	Default value	0

FEEDER > ADJUST		
ADJSSCN1		Fine adj img ratio:2-sided,vert scan
Lv.1	Details	To make a fine adjustment of image magnification ratio in vertical scanning direction on both the front and back sides at DADF 2-sided reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction.
	Use case	When making a fine adjustment of image magnification ratio on both the front and back sides at 2-sided printing
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.1 %
	Appropriate target value	0
	Default value	0
ADJSSCN2		Fine adj img ratio:2-sided,vert scan,bck
Lv.1	Details	To make a fine adjustment of the back side image magnification ratio in vertical scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction.
	Use case	When image magnification ratio on the front side and back side are different at 2-sided reading
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-10 to 10
	Unit	0.1 %
	Default value	0

TRY-A4	
Adj of DADF Tray width detect ref 1: A4	
Lv.1	Details
	To automatically adjust the paper width detection reference point 1 for the DADF Original Pickup Tray. (A4)
	Use case
	- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	Select the item, and then press OK key.
TRY-A5R	
Adj of DADF Tray width detect ref 2: A5R	
Lv.1	Details
	To automatically adjust the paper width detection reference point 2 for the DADF Original Pickup Tray. (A5R)
	Use case
	- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	Select the item, and then press OK key.
TRY-LTR	
Adj of DADF Tray width detect ref 1: LTR	
Lv.1	Details
	To automatically adjust the paper width detection reference point 1 for the DADF Original Pickup Tray. (LTR)
	Use case
	- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	Select the item, and then press OK key.

FEEDER > FUNCTION	
TRY-LTRR	
Adj of DADF Tray width detect ref2: LTRR	
Lv.1	Details
	To automatically adjust the paper width detection reference point 2 for the DADF Original Pickup Tray. (LTRR)
	Use case
	- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
	Adj/set/operate method
	Select the item, and then press OK key.
FEED-CHK	
Specify DADF individual feed operation	
Lv.1	Details
	To specify the feed mode for DADF. Feed operation is activated by FEED-ON.
	Use case
	At operation check
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 3 0: 1-sided pickup/delivery operation, 1: 2-sided pickup/delivery operation, 2: 1-sided pickup/delivery operation (with stamp), 3: 2-sided pickup/delivery operation (with stamp)

SORTER

ADJUST

SORTER > ADJUST		
PNCH-Y		Adj punch hole side reg position:Puncher
Lv.1	Details	To adjust the punch hole in side registration direction. As the value is incremented by 1, the punch hole moves by 0.45 mm. +: Toward rear -: Toward front
	Use case	When the punch hole is misaligned in the side registration direction
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	-5 to 5
	Unit	0.45 mm
	Default value	0
CV-REG-L		Adj large cover side reg pstn: P-binder
Lv.1	Details	To adjust the position of cover whose depth is 298 mm or more in side registration direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward front -: Toward rear
	Use case	-When the cover is displaced toward front/rear -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
CV-REG-S		Adj small cover side reg pstn: P-binder
Lv.1	Details	To adjust the position of cover whose depth is less than 298 mm in side registration direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward front -: Toward rear
	Use case	-When the cover is displaced toward front/rear -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0

SORTER > ADJUST		
CV-CENT		Adj cover pstn in feed way: P-binder
Lv.1	Details	To adjust the cover position in feed direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward delivery direction -: Toward inlet direction
	Use case	-When the cover is displaced to the right/left -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0
CLCT-SB		Adj stacking swback shft amnt: P-binder
Lv.1	Details	To adjust degree to push signature to the reference wall of the Stacking Assembly. As the value is changed by 1, the degree of push-on is changed by 0.1 mm. (The setting value 0 is equivalent to 10 mm.) +: Increase -: Decrease
	Use case	-When the paper stack is misaligned or gets damage -When missing pages occurs -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-50 to 50
	Unit	0.1 mm
	Default value	0 (10 mm)
ALG-F-A4		[Not used]
ALG-R-A4		[Not used]
ALG-F-L		Front Align Plate shift amnt: P-binder
Lv.1	Details	To adjust the travel length of the Front Alignment Plate when aligning the signature. As the value is changed by 1, the travel length is changed by 0.1 mm. +: Increase -: Decrease
	Use case	-When misalignment in horizontal direction occurs -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-30 to 30
	Unit	0.1 mm
	Default value	0
	Supplement/memo	Do not usually adjust it in markets.

SORTER > ADJUST	
ALG-R-L	Rear Align Plate shift amount: P-binder
Lv.1	<p>Details</p> <p>To adjust the travel length of the Rear Alignment Plate when aligning the signature. As the value is changed by 1, the travel length is changed by 0.1 mm. +: Increase -: Decrease</p> <p>Use case</p> <p>-When misalignment in horizontal direction occurs -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by -/+ key) and press OK key.</p> <p>Display/adj/set range</p> <p>-30 to 30</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p> <p>Supplement/memo</p> <p>Do not usually adjust it in markets.</p>
GLUING	[Not used]
STK-DLV	Adj ppr stack feed shft amnt: P-binder
Lv.2	<p>Details</p> <p>To adjust the shift amount when feeding a paper stack from the Stack Delivery Roller of the cover feed area to the trimming area. As the value is changed by 1, the shift amount is changed by 0.1 mm. +: Increase -: Decrease</p> <p>Use case</p> <p>-When a feeding failure of paper stack to the trimming area occurs -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by -/+ key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
GRP-CHNG	Adj Main Grip shift position: P-binder
Lv.2	<p>Details</p> <p>To adjust the position when the Main Grip shifts paper stack position after gluing. As the value is decreased by 1, the position is lowered by 0.1 mm. The position cannot be raised higher than the initial state.</p> <p>Use case</p> <p>-When a feeding failure of paper stack to the trimming area occurs -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by -/+ key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 0</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0 (10 mm)</p>

SORTER > ADJUST	
SIZE-H	Adj finish size in feed way: P-binder
Lv.2	<p>Details</p> <p>To adjust the finishing size in feed direction. As the value is changed by 1, the length is changed by 0.1 mm. +: Increase -: Decrease</p> <p>Use case</p> <p>-When the finishing size in feed direction is not correct -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by -/+ key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
SIZE-W	Adj finish size in depth way: P-binder
Lv.2	<p>Details</p> <p>To adjust the finishing size in depth direction. As the value is changed by 1, the length is changed by 0.1 mm. +: Increase -: Decrease</p> <p>Use case</p> <p>-When the finishing size in depth direction is not correct -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by -/+ key) and press OK key.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
CV-LNG	Adj trimming position from top: P-binder
Lv.2	<p>Details</p> <p>To adjust the trimming amount from the top edge of the finishing size. As the value is changed by 1, the trimming amount is changed by 0.1 mm. +: Increase -: Decrease</p> <p>Use case</p> <p>-When the length from the edge of the cover to the short edge at rear side is different -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Display/adj/set range</p> <p>-50 to 50</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>

SORTER > ADJUST	
10RGT-1	10-sht stck top R-angle accuracy:P-bind
Lv.2	<p>Details</p> <p>To adjust the trimming angle of top edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.</p> <p>Use case</p> <p>-When right angle accuracy of trimmed paper stack is not appropriate -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-100 to 100</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
10RGT-2	10-sht stck btm R-angle accuracy:P-bind
Lv.2	<p>Details</p> <p>To adjust the trimming angle of bottom edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle increases. -: Rotation amount decreases and trimming angle decreases.</p> <p>Use case</p> <p>-When right angle accuracy of trimmed paper stack is not appropriate -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-100 to 100</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>
10RGT-3	10-sht fore edge R-angle accuracy:P-bind
Lv.2	<p>Details</p> <p>To adjust the trimming angle of fore edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.</p> <p>Use case</p> <p>-When right angle accuracy of trimmed paper stack is not appropriate -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-100 to 100</p> <p>Unit</p> <p>0.1 mm</p> <p>Default value</p> <p>0</p>

SORTER > ADJUST

THC-CL	Setting heavy ppr curl prev mode:Fin-T1
Lv.1	<p>Details To set ON/OFF of heavy paper curl prevention mode. Set 1 when upward curl occurs on the heavy paper delivered. When 1 is set, the amount of Stack Tray descension for stack delivery increases. The paper surface detection is performed for every sheet, not for every 5 sheets.</p> <p>Use case -When upward curl occurs on the heavy paper delivered. -When stack over detection is earlier than an assumption.</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 1 0: OFF, 1: ON</p> <p>Default value 0</p> <p>Supplement/memo When satisfy even one following conditions, this mode functions. -In the case of cardboard appointment. -In the case of LDR eject and a non-sort mode. -In the case of a staple mode.</p>

SORTER > ADJUST	
THC-PUSH	Setting heavy ppr out prev mode:Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of heavy paper push-out prevention mode. Set to 1 when a sheet of paper on the stack tray, which is delivered in the previous job, is pushed out by a sheet of heavy paper in the following job. When 1 is set and all the following conditions are satisfied, the stack tray descends once before the sheet of heavy paper is delivered on the processing tray:*</p> <ul style="list-style-type: none"> * Specified paper in the previous job is "plain paper". * The first-delivered paper of the following job is "heavy paper". * The length of the above-mentioned heavy paper is more than 216mm. <p>The heavy paper push-out prevention mode does not function in the non sort mode even if the parameter is set to 1.</p> <p>Use case</p> <p>When the already stacked paper is pushed out at the time of heavy paper delivery.</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
OFST-STC	Set offset stack improve mode 1:Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of offset stack improvement mode. Set 1 when paper is not appropriately stacked in small size offset mode (shift sort mode). (Buffer operation is not performed.)</p> <p>Use case</p> <p>When paper is not appropriately stacked in the small size offset mode (shift sort mode).</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
THN-STC	Set thin ppr poor stack prev mode:Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of poor stack prevention mode for thin paper. Set 1 when thin paper (Less than 63g) is not appropriately stacked. (Buffer operation of thin paper of less than 63g is not performed)</p> <p>Use case</p> <p>When thin paper (Less than 63g) is not appropriately stacked</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Caution</p> <p>When 1 is set, productivity of thin paper mode (Less than 63g) deteriorates.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>

SORTER > ADJUST	
STP-P-CH	Set stpl stack displace prev mode:Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of staple stack displacement prevention mode. Set 1 when the paper on the top is misaligned in staple delivery mode. When 1 is set, paper stack alignment operation is executed twice immediately before stapling.</p> <p>Use case</p> <p>When the paper on the top is misaligned in staple delivery mode</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p>
TRY-NIS	Set tray switch noise reduct mode:Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of tray switching noise reduction mode. Set 1 if the operation noise is loud when switching the Stack Tray. When 1 is set, the Stack Tray rise operation becomes slow. This mode (TRY-NIS) has priority over tray switching speed-up mode (TRY-SU).</p> <p>Use case</p> <p>When the operation noise at the time of switching the Stack Tray is loud</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p> <p>Related service mode</p> <p>SORTER>ADJUST>TRY-SU</p>
TRY-SU	Set tray switching speedup mode: Fin-T1
Lv.1	<p>Details</p> <p>To set ON/OFF of tray switching speed-up mode. Set 1 when it takes long time to switch the Stack Tray. When 1 is set, the Stack Tray rise speed becomes fast. In addition, productivity is improved by making stack tray rise speed fast. Switching noise reduction mode (TRY-NIS) has priority over this mode (TRY-SU).</p> <p>Use case</p> <p>When the Stack Tray switching time is long</p> <p>Adj/set/operate method</p> <p>Enter the setting value, and then press OK key.</p> <p>Display/adj/set range</p> <p>0 to 1 0: OFF, 1: ON</p> <p>Default value</p> <p>0</p> <p>Related service mode</p> <p>SORTER>ADJUST>TRY-NIS</p>

SORTER > ADJUST	
FIN-NIS	Set tray drive noise reduct mode: Fin-T1
Lv.1	Details
	To set ON/OFF of tray drive noise reduction mode. Set 1 when the Finisher operation noise is loud. When 1 is set, stack tray initialization of Finisher is minimized.
	Use case
	When the Finisher operation noise is loud
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	Because it is the individual treatment, do not use it with the normal product.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
1SHT-SHF	Set 1-sheet stack shift sorting: Fin-T1
Lv.1	Details
	To set ON/OFF of 1-sheet stack shift sorting on print mood. Setting the value to 1 enables 1-sheet stack shift sorting.
	Use case
	When the 1-sheet shift sort enabled mode (print mode) is necessary.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
SDL-SWCH	Sddl stack capacity increase mode:Fin-T1
Lv.1	Details
	To set ON/OFF of saddle stacking capacity increase mode. Set 1 when increasing the number of sets to be stacked for saddle stitching. When 1 is set, the stacking capacity increases over the upper limit. This mode becomes invalid when turn on the saddle stack full alarm mode(SDL-ALM).
	Use case
	When increasing the number of sets to be stacked for saddle stitching
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When increasing the number of sets to be stacked, the movement is not guaranteed.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
	Related service mode
	SORTER>ADJUST>SDL-ALM

SORTER > ADJUST	
SDL-ALM	Set sddl stack full alarm mode: Fin-T1
Lv.1	Details
	To set ON/OFF of saddle stack full alarm. Set 1 when disabling the stack full alarm for saddle stitching. If 1 is set, the saddle stacking capacity increase mode(SDL-SWCH) become invalid.
	Use case
	When disabling the stack full alarm for saddle stitching
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, paper stack in the saddle delivery tray(top) blocks up the saddle delivery port, and may become the saddle eject sensor stay jam.
	Display/adj/set range
	0 to 1 0: ON (Alarm detection) 1: OFF (Non Alarm detection)
	Default value
	0
	Related service mode
	SORTER>ADJUST>SDL-SWCH
THN-STCL	Poor stack prev mode: Large paper:Fin-T1
Lv.1	Details
	To set ON/OFF of poor stack prevention mode for large paper. When 1 is set, the stacking condition of large paper is improved, but stack delivery speed from a processing tray decreases.
	Use case
	When the stacking condition of large paper is low
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When 1 is set, stack delivery speed from a processing tray decreases.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
	Supplement/memo
	When satisfy either following conditions, this mode works. -In the case of shift sort mode(large paper). -In the case of a non-sort mode(large paper) via the processing tray.
PF-LGL41	Adj of LGL 4-fold position (1st): PFU
Lv.1	Details
	To adjust the 1st fold position of LGL paper 4-fold position on Paper Folding Unit. As the value is incremented by 1, the fold position moves by 0.1 mm.
	Use case
	When the fold position adjustment in Settings/Registration menu is inadequate
	Adj/set/operate method
	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range
	-128 to 120
	Unit
	0.1 mm
	Default value
	0
	Related UI menu
	Adjustment/Maintenance> Adjust Action> Adjust Fold Position> Adjust Double Parallel Fold Position

SORTER > ADJUST		
PF-LGL42		Adj of LGL 4-fold position (2nd): PFU
Lv.1	Details	To adjust the 2nd fold position of LGL paper 4-fold position on Paper Folding Unit. As the value is incremented by 1, the fold position moves by 0.1 mm.
	Use case	When the fold position adjustment in Settings/Registration menu is inadequate
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-128 to 127
	Unit	0.1 mm
	Default value	0
	Related UI menu	Adjustment/Maintenance> Adjust Action> Adjust Fold Position> Adjust Double Parallel Fold Position
	SC-OFST	
Lv.1	Details	To adjust the paper position in the Stacker in side registration position. As the value is changed by 1, the position moves by 0.1 mm.
	Use case	When displacement in side registration direction occurs in the Stacker
	Adj/set/operate method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
	Display/adj/set range	-220 to 220
	Unit	0.1 mm
	Default value	0
KEY-RPT		Adj double press judgment time: Stacker
Lv.1	Details	To adjust the threshold of the interval to be judged as "double press" of the Stack Eject button.
	Use case	When changing the judgment conditions for "double press"
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 5000
	Unit	1 msec
	Appropriate target value	50
	Default value	50
SET-SHFT		Adj of paper stack shift amount: Stacker
Lv.1	Details	To adjust the offset of shift amount when performing shifting between paper stacks. As the value is changed by 1, the shift amount is changed by 0.1 mm. As the value is larger, the shift amount is increased.
	Use case	When adjusting the shift amount between paper stacks
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 150
	Unit	0.1 mm
	Default value	150

SORTER > ADJUST		
JOB-SHFT		Adj shift amount between jobs: Stacker
Lv.1	Details	To adjust the offset of the shift amount between jobs when delivering paper to the Stack Tray. As the value is changed by 1, the shift amount is changed by 0.1 mm. As the value is larger, the shift amount is increased.
	Use case	When adjusting the shift amount between jobs
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 150
	Unit	0.1 mm
	Default value	0

T-8-111

SORTER > FUNCTION		
FIN-BK-R		
Finisher backup data HDD saving: Fin-T1		
Lv.1	Details	To read the backup data from Finisher Controller PCB and save in HDD.
	Use case	When replacing the Finisher Controller PCB
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER>FUNCTION>FIN-BK-W
FLD-BK-W		
Controller PCB backup data write: PFU		
Lv.1	Details	To write the backup data saved in HDD to the DC Controller PCB of the Paper Folding Unit.
	Use case	When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> FLD-BK-R
PIU-BK-R		
Controller PCB backup data read: IFU		
Lv.1	Details	To read the backup data from the DC Controller PCB of the Professional Puncher Integration Unit and save in HDD.
	Use case	When replacing the DC Controller PCB of the Professional Puncher Integration Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> PIU-BK-W
INS-BK-R		
Controller PCB backup data read: INS		
Lv.1	Details	To read the backup data from the DC Controller PCB of the Inserter and save in HDD.
	Use case	When replacing the DC Controller PCB of the Inserter
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> INS-BK-W
FIN-BK-W		
Writing of Finisher backup data: Fin-T1		
Lv.1	Details	To write the backup data saved in HDD to Finisher Controller PCB.
	Use case	When replacing the Finisher Controller PCB
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER>FUNCTION>FIN-BK-R

SORTER > FUNCTION		
FLD-BK-R		
Controller PCB backup data read: PFU		
Lv.1	Details	To read the backup data from the DC Controller PCB of the Paper Folding Unit and save in HDD.
	Use case	When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> FLD-BK-W
INS-BK-W		
Controller PCB backup data write: INS		
Lv.1	Details	To write the backup data saved in HDD to DC Controller PCB of the Inserter.
	Use case	When replacing the DC Controller PCB of the Inserter
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> INS-BK-R
PIU-BK-W		
Controller PCB backup data write: IFU		
Lv.1	Details	To write the backup data saved in HDD to DC Controller PCB of the Professional Puncher Integration Unit.
	Use case	When replacing the DC Controller PCB of the Professional Puncher Integration Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> PIU-BK-R
VR1-A4R		
Adj Uptr Tray width volume (A4R):Inserter		
Lv.1	Details	To adjust the paper minimum width (A4R) of Inserter Upper Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Upper Tray
	Adj/set/operate method	1) Set the A4R paper on the Inserter Upper Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR1-A4, be sure to execute VR1-A4 continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR1-A4

SORTER > FUNCTION		
VR1-A4	Adj Upr Tray width volume (A4): Inserter	
Lv.1	Details	To adjust the paper maximum width (A4) of Inserter Upper Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Upper Tray
	Adj/set/operate method	1) Set the A4 paper on the Inserter Upper Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR1-A4R, be sure to execute VR1-A4R continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR1-A4R
VR1-LTRR	Adj Upr Tray width vol (LTRR): Inserter	
Lv.1	Details	To adjust the paper minimum width (LTRR) of Inserter Upper Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Upper Tray
	Adj/set/operate method	1) Set the LTRR paper on the Inserter Upper Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR1-LTR, be sure to execute VR1-LTR continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR1-LTR
VR1-LTR	Adj Upr Tray width vol (LTR): Inserter	
Lv.1	Details	To adjust the paper maximum width (LTR) of Inserter Upper Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Upper Tray
	Adj/set/operate method	1) Set the LTR paper on the Inserter Upper Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR1-LTRR, be sure to execute VR1-LTRR continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR1-LTRR

SORTER > FUNCTION		
VR2-A4R	Adj Lower Tray width vol (A4R): Inserter	
Lv.1	Details	To adjust the paper minimum width (A4R) of Inserter Lower Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Lower Tray
	Adj/set/operate method	1) Set the A4R paper on the Inserter Lower Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR2-A4, be sure to execute VR2-A4 continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR2-A4
VR2-A4	Adj Lower Tray width vol (A4): Inserter	
Lv.1	Details	To adjust the paper maximum width (A4) of Inserter Lower Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Lower Tray
	Adj/set/operate method	1) Set the A4 paper on the Inserter Lower Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR2-A4R, be sure to execute VR2-A4R continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR2-A4R
VR2-LTRR	Adj Lower Tray width vol (LTRR):Inserter	
Lv.1	Details	To adjust the paper minimum width (LTRR) of Inserter Lower Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Lower Tray
	Adj/set/operate method	1) Set the LTRR paper on the Inserter Lower Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR2-LTR, be sure to execute VR2-LTR continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR2-LTR

SORTER > FUNCTION		
VR2-LTR		Adj Lower Tray width vol (LTR): Inserter
Lv.1	Details	To adjust the paper maximum width (LTR) of Inserter Lower Tray automatically.
	Use case	When the size mismatch jam occurs at the time of pickup from the Inserter Lower Tray
	Adj/set/operate method	1) Set the LTR paper on the Inserter Lower Tray and align it with the width of Slide Guide. 2) Select the item, and then press OK key.
	Caution	When not executing VR2-LTRR, be sure to execute VR2-LTRR continuously.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Related service mode	SORTER> FUNCTION> VR2-LTRR
FIN-CON		Controller PCB RAM clear: Fin-T1
Lv.1	Details	To clear RAM data of the Finisher Controller. All the adjustment contents (excluding counter values) are deleted.
	Use case	When clearing RAM data of the Finisher Controller PCB
	Adj/set/operate method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	-Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. -The RAM data is cleared after the main power switch is turned OFF/ON.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	COPIER> FUNCTION> MISC-P> P-PRINT
PF-CON		Controller PCB RAM clear: PFU
Lv.1	Details	To clear RAM data of the DC Controller PCB on Paper Folding Unit. All the adjustment contents (excluding counter values) are deleted.
	Use case	When clearing RAM data of the DC Controller PCB on Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
PF-SENS1		Adj Slowdown Timing Sensor output: PFU
Lv.1	Details	To adjust the output of Slowdown Timing Sensor on Paper Folding Unit automatically.
	Use case	-When replacing the Slowdown Timing Sensor -When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG

SORTER > FUNCTION		
PF-SENS2		Adj Release Timing Sensor output: PFU
Lv.1	Details	To adjust the output of Release Timing Sensor on Paper Folding Unit automatically.
	Use case	-When replacing the Release Timing Sensor -When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
PF-SENS3		Adj Fold Position Sensor output: PFU
Lv.1	Details	To adjust the output of Fold Position Sensor on Paper Folding Unit automatically.
	Use case	-When replacing the Fold Position Sensor -When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
PF-SENS4		Adj Upper Stopper Ppr Sensor output: PFU
Lv.1	Details	To adjust the output of Upper Stopper Paper Sensor on Paper Folding Unit automatically.
	Use case	-When replacing the Upper Stopper Path Sensor -When replacing the DC Controller PCB of the Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
IS-CON		DC Controller PCB RAM clear: Inserter
Lv.1	Details	To clear RAM data of the DC Controller PCB of the Inserter. All the adjustment contents (excluding counter values) are deleted.
	Use case	When clearing RAM data of the DC Controller PCB of Inserter
	Adj/set/operate method	Select the item, and then press OK key.
	Caution	After execution, perform adjustment of the tray width volume.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
HCS-BK-R		Reading of backup data: Stacker
Lv.1	Details	To read the backup data from the Controller PCB of the Stacker-G1 and save in HDD.
	Use case	-When turning ON the power, when recovering from sleep mode, etc -When replacing the Controller PCB of the Stacker-G1
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Related service mode	SORTER> FUNCTION> HCS-BK-W

SORTER > FUNCTION			
HCS-BK-W		Writing of backup data: Stacker	
Lv.1	Details	To write the backup data saved in HDD to the Controller PCB of the Stacker-G1.	
	Use case	When replacing the Controller PCB of the Stacker-G1	
	Adj/set/operate method	Select the item, and then press OK key.	
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG	
	Related service mode	SORTER> FUNCTION> HCS-BK-R	
MTR-CHK		Specification of operation motor:Stacker	
Lv.1	Details	To specify the motor to operate. 1:STAINPMO1 First papertransport motor (21M1A) 2:STAINPMO3 Third papertransport motor (21M1B) 3:STACTSMO Paper turning motor (21M2) 4:STAREGINPMO Papertransport motor (21M31) 5:STAREGSMOL Left S-registration moto (21M4) 6:STAREGSMOR Right S-registration motor (21M5) 7:STATRAMO Papertransport motor in the transport trajectory (21M32) 8:STAOUTMO1 First papertransport motor in the output trajectory (21M33) 9:STAOUTMO2 Second papertransport motor in the output trajectory (21M34) 10:STAFLIPMO Stepper-motor controlling the flipping-wheel (21M7) 11:STAFLIPHAMO Stepper-motor controlling the flip-fingers (21M15) 12:STAINPMO2 Second papertransport motor (21M1C)	
	Use case	When replacing the motor/checking the operation	
	Adj/set/operate method	Enter the setting value, and then press OK key.	
	Display/adj/set range	1 to 20	
	MTR-ON		Operation check of motor: Stacker
	Lv.1	Details	To start operation check of the motor specified by MTR-CHK.
		Use case	When replacing the motor/checking the operation
Adj/set/operate method		Select the item, and then press OK key.	
Display/adj/set range		During operation: ACTIVE, When operation finished normally: OK!	

SORTER > FUNCTION		
SL-CHK		Specification of solenoid: Stacker
Lv.1	Details	To specify the solenoid to operate. 1:STAREGINPSO1E Solenoid which lifts pinch STAREGINPPI1 (21Y2) 2:STAREGINPSO2E Solenoid which lifts pinch STAREGINPPI2 (21Y3) 3:STACTSDEFSEOEN Solenoid that controls the deflector near the CTS (21Y1) 4:STAFLIPDEFSEOEN Solenoid that controls the deflector near the flipping-wheel (21Y4) 5:STATOPDEFSEOEN Solenoid that controls the deflector near the Top-tray (21Y5)
	Use case	When replacing the solenoid/checking the operation
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 10
SL-ON		Operation check of solenoid: Stacker
Lv.1	Details	To start operation check of the solenoid specified by SL-CHK.
	Use case	When replacing the solenoid/checking the operation 1:STADEFDC0 Gives a sheet trigger to the OEM finisher 2:STADEFDC1 Notifies the OEM finisher of an end of set 3:STADEFDC2 Signals the OEM finisher to cycle-up/-down 4:STADEFDC3 Notifies the OEM finisher of an end of job 5:STADEFDC4 Notifies the OEM finisher of a paperformat change 6:not yet supported 7:not yet supported 8:not yet supported
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!
	PORT-CHK	
Lv.1	Details	To specify the port number of Stacker.
	Use case	At operation check
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	1 to 10
PORT-ON		Operation check of port: Stacker
Lv.1	Details	To start operation check of the port specified by PORT-CHK.
	Use case	At operation check
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, When operation finished normally: OK!

SORTER > FUNCTION		
CNT-FCON		Clearing of Finisher parts counter
Lv.1	Details	To clear the parts counter counted by the Finisher Controller PCB.
	Use case	When clearing the parts counter of the Finisher
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
	Supplement/memo	When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.
CNT-ICON		Clearing of Inserter parts counter
Lv.1	Details	To clear the parts counter counted by the Inserter Controller PCB.
	Use case	When clearing the parts counter of the Inserter
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Supplement/memo	When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.
CNT-PCON		Clear Paper Folding Unit parts counter
Lv.1	Details	To clear the parts counter counted by the DC Controller PCB of the Paper Folding Unit.
	Use case	When clearing the parts counter of the Paper Folding Unit
	Adj/set/operate method	Select the item, and then press OK key.
	Display/adj/set range	During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
	Supplement/memo	When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.

T-8-112

 OPTION

SORTER > OPTION	
MD-SPRTN	Set restricted operation at error: Fin
Lv.1	Details
	To set whether to run the machine (execute restricted operation) when an error occurs at Finisher. When 1 is set, the machine runs but staple operation or alignment operation is not performed.
	Use case
	When preferring to run the machine at Finisher error occurrence
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	Set "0" normally.
	Display/adj/set range
	0 to 1 0: Normal, 1: Restricted operation
	Default value
	0
	Related user mode
	Settings/Registration > Management Settings > Device Management > limited Functions Mode
SDL-PRS	Set Saddle Stitcher press oprtn
Lv.1	Details
	To set press operation of the Saddle Stitcher. Use this item when saddle stitched booklet is swollen. If wrinkles occur, make the setting not to perform press operation.
	Use case
	-When wrinkles occur due to press operation in the case that the machine is installed in a high humidity environment or thin paper is used -When saddle stitched booklet is swollen due to poor folding accuracy
	Adj/set/operate method
	1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.
	Caution
	If wrinkles occur due to press operation, do not execute the operation.
	Display/adj/set range
	0 to 5 0: Normal 1: Without press operation 2: Not used 3: Extend press operation time (enabled for booklet with 21 sheets or more) 4: With forcible press operation (enabled for booklet with 9 sheets or less) 5: Without intermittent feed
	Default value
	0

SORTER > OPTION	
BUFF-SW	ON/OFF of buffer operation(Fin-AM1/T1)
Lv.1	Details
	To set ON/OFF of buffer operation in the Finisher. Fin-AM1: Set 1 to 4 when misalignment occurs. When 1 is set, buffer operation is not performed for all jobs. Alignment performance is improved, but productivity is decreased. When 2 is set, buffer operation is not performed only for non-binding job. Since buffer operation is performed for binding jobs, productivity is improved, but alignment performance is decreased. When 3 is set, buffer operation is not performed only for binding job. Buffer operation is performed for non-binding job. When 4 is set, buffer operation is not performed only for binding job with coated paper. Buffer operation is performed for non-binding job and binding job with paper other than coated paper. Fin-T1: Set to 1 when misalignment occurs in the staple mode with small size paper. When 1 is set, the buffer operation is not performed in the staple mode with the small size paper.
	Use case
	Fin-AM1: When misalignment of paper stack occurs (misalignment of 3 sheets at the lowest part of the stack in case of the side stitch, and 3 sheets at the middle of the stack in case of saddle stitch) Fin-T1: When misalignment occurs in the staple mode with small size paper
	Adj/set/operate method
	Enter the setting value and press OK key.
	Caution
	Without performing buffer operation, productivity is decreased.
	Display/adj/set range
	Fin-AM1: 0 to 4 0: ON, 1: OFF, 2: OFF for non-binding job only, 3: OFF for binding job only, 4: OFF for binding job with coated paper only Fin-T1: 0 to 1 0: OFF, 1: ON
	Default value
	0
TRY-EJCT	Set delivery control: thin paper
Lv.1	Details
	To set the delivery control (delivery speed) for thin paper. When this setting is made, delivery control for thin paper is applied to all jobs regardless of media. When 1 is set, lifting amount of tray is changed at Lower Tray delivery. When 2 is set, delivery speed is reduced at Upper/Lower Tray delivery. This item can be also set with DIP switch of the Finisher (with common setting range and setting value). The latest setting is enabled regardless of service mode/DIP switch.
	Use case
	When a stacking failure of thin paper occurs
	Adj/set/operate method
	1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.
	Display/adj/set range
	0 to 2 0: Normal operation, 1: Change the lifting amount of the Lower Tray, 2: Reduce the speed at delivery
	Default value
	0

SORTER > OPTION		
PN-SKEW		Set punch hole position accuracy: Fin-AM
Lv.1	Details	To set the accuracy of punch hole position when the punch hole is misaligned due to paper skew.
	Use case	When punch hole is misaligned by (approx.) 2 mm or more and when paper fed to the Finisher is skewed
	Adj/set/operate method	Enter the setting value and press OK key.
	Caution	As the value is larger, skew can be corrected more accurately, but productivity is decreased.
	Display/adj/set range	0 to 2 0: Normal mode, 1: Skew tolerance increase mode, 2: Skew tolerance decrease mode
	Default value	0
MHPN-OHP		ON/OFF of film forcible feed: P-Puncher
Lv.1	Details	To set whether to forcibly feed transparency/clear film with the Professional Puncher. If a jam occurs due to incorrect detection by the sensor when the paper is fed, set 1.
	Use case	When a jam occurs at the time of feeding transparency/clear film
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Do not use this at the normal service. Use this item only for the device where a jam occurs with transparency/clear film.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	0
TBWRNLVL		Set blade rplce alarm dspl intvl: P-bind
Lv.1	Details	To set the interval to display the Perfect Binder Trimming Blade replacement alarm. As the value is incremented by 1, interval to display the Trimming Blade replacement alarm becomes longer for 1000 trims.
	Use case	-Upon user's request -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	10 to 100 (1,000 times units)
	Unit	1000 time
	Default value	40

SORTER > OPTION		
TBPCOUNT		Set number of Blade Plate use: P-bind
Lv.1	Details	To set the number of use per Trimming Blade Plate of Perfect Binder. Decrease the value if a trimming failure occurs. As the value is decreased by 1, timing to shift the Trimming Blade Plate becomes earlier for 10 trims (the life of the Trimming Blade Plate is shortened).
	Use case	-When a trimming failure occurs -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	As the value is decreased, the life of the Trimming Blade Plate is shortened.
	Display/adj/set range	10 to 110 (10 times units)
	Unit	10 time
	Default value	110
TBP-POSW		Set of Blade Plate use position: P-bind
Lv.1	Details	To set the use position of the Trimming Blade Plate of Perfect Binder. If a trimming failure occurs, enter the value larger than the one currently displayed. When the value is increased, the Trimming Blade Plate moves up so the Trimming Blade Plate position which is not yet used can be used.
	Use case	-When a trimming failure occurs -When replacing the Master Controller PCB/EEPROM
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution	-Do not set the value which is the same as the current value or less. Trimming failure occurs at the position which has been already used. -When the value is changed, the setting of CUT-HLDR is also changed.
	Display/adj/set range	0 to 9
	Default value	0
Related service mode		COPIER> COUNTER> DRBL-2> CUT-HLDR

SORTER > OPTION	
CURL-SW	Setting of curl prevention mode: Fin-AM
Lv.1	<p>Details</p> <p>To set the delivery speed of the trailing edge of paper to prevent a stacking failure due to paper curl.</p> <p>When 1 is set, delivery speed of the trailing edge of paper is increased at Upper/Lower Tray delivery. Since the trailing edges of papers with upward curl do not stay at the delivery outlet, stacking performance improves. However, delivery control of TRY-EJCT has priority over this mode.</p> <p>When 2 is set, delivery speed of the trailing edge of paper is reduced at Lower Tray delivery. Since papers with downward curl do not fall off from a tray along slope of paper stack, stacking performance improves.</p> <p>The item can be also set with DIP switch of the Finisher (with common setting range and setting value). The latest setting value is enabled regardless of service mode/DIP switch.</p> <p>Use case</p> <p>When a stacking failure due to paper curl occurs</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.</p> <p>Caution</p> <p>When 1 or 2 is set, stacking performance may decrease with non-curved paper.</p> <p>Display/adj/set range</p> <p>0 to 2 0: Normal operation, 1: Upward curl prevention mode, 2: Downward curl prevention mode</p> <p>Default value</p> <p>0</p>
TRY-OVER	Set limit of stack capacity
Lv.1	<p>Details</p> <p>To set whether to limit the stack capacity of the Upper/Lower Tray. When 1 is set, paper can be stacked beyond the maximum stack capacity.</p> <p>Use case</p> <p>When stacking the paper beyond the maximum stack capacity of the tray</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Caution</p> <p>When the stacking limit is cleared, stacking capacity increases, but stacking performance decreases.</p> <p>This mode is enabled when selecting "ON" for the following: Settings/Registration> Function Settings> Common Settings> Paper Output Settings> High Volume Stack Mode.</p> <p>Display/adj/set range</p> <p>0 to 1 0: With stacking limit, 1: Without stacking limit</p> <p>Default value</p> <p>0</p> <p>Related UI menu</p> <p>Settings/Registration> Function Settings> Common Settings> Paper Output Settings> High Volume Stack Mode</p>

SORTER > OPTION	
ST1-LMT	Set stck capacity limit at 1-sided:Stckr
Lv.1	<p>Details</p> <p>To set whether to limit the number of sheets to be stacked on stack area of the first Stacker at 1-sided print.</p> <p>When either ST1-LMT or ST1-LMT2 reaches the setting value, it is judged as full.</p> <p>It does not mean that the stacking is not stopped when it reaches the specified number.</p> <p>Use case</p> <p>Upon user's request</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Display/adj/set range</p> <p>0 to 5 0: No limit (up to 570 mm in height), 1: 5000 sheets, 2: 4000 sheets, 3: 3000 sheets, 4: 2000 sheets, 5: 1000 sheets</p> <p>Default value</p> <p>0</p> <p>Related service mode</p> <p>SORTER> OPTION> ST1-LMT2</p>
GLU-OF1N	Glu appli amnt adj 1: non-coated, P-bind
Lv.1	<p>Details</p> <p>To adjust the application amount of glue at perfect binding (Non-coated paper: 50 sheets or less).</p> <p>Change the clearance between a paper stack and the glue rod when applying glue heavily.</p> <p>As the value is changed by 1, the clearance is changed by 0.05 mm.</p> <p>+ : Clearance is widened (application amount is increased) - : Clearance is narrowed (application amount is decreased)</p> <p>Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.</p> <p>Use case</p> <p>-When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-6 to 6</p> <p>Unit</p> <p>0.05 mm</p> <p>Default value</p> <p>0</p> <p>Related UI menu</p> <p>Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application</p>

SORTER > OPTION	
GLU-OF2N	Glu appli amnt adj 2: non-coated, P-bind
Lv.1	<p>Details</p> <p>To adjust the application amount of glue at perfect binding (Non-coated paper: 51 to 100 sheets). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.</p> <p>Use case</p> <p>-When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) -When replacing the Master Controller PCB/EEPROM</p> <p>Adj/set/operate method</p> <p>Enter the setting value (switch negative/positive by +/- key) and press OK key.</p> <p>Display/adj/set range</p> <p>-6 to 6</p> <p>Unit</p> <p>0.05 mm</p> <p>Default value</p> <p>0</p> <p>Related UI menu</p> <p>Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application</p>

SORTER > OPTION	
PRCS-SP1	Set Process Tray stack speed: Fin-AM1/T1
Lv.1	Details
	Fin-AM1: To set the stacking speed when collating heavy paper. When stacking heavy paper (181 g/m ² or more) on the Finisher Process Tray, the speed is normally decreased. When 1 is set, the stacking speed at collate mode does not decrease so productivity is improved. Fin-T1: To set feed speed to the Process Tray Stopper. When 0 is set, the buffer paper with a sort / staple mode, transportation speed to the Process Tray slows down.
	Use case
	Fin-AM1: When improving productivity of collate mode for heavy paper. (181 g/m ² or more) Fin-T1: When misalignment occurs in sort/staple mode due to the buffer paper pull-back failure.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	In exchange for improvement in productivity, stacking condition may decrease.
	Display/adj/set range
	0 to 1 0: Speed is decreased, 1: Speed is not decreased
	Default value
	Fin-AM1: 0/ Fin-T1: 1
	Related service mode

	Default value
	00000000
STCR-DWN	Set occasional misalign prev mode:Fin-T1
Lv.1	Details
	To set ON/OFF of occasional misalignment prevention mode. When misalignment in feed direction occurs at approx. every 30 sheets for thin/plain paper (105 g/m ² and less) at staple mode, set 1. When 1 is set, decrease quantity of swing roller drop.
	Use case
	When misalignment in feed direction occurs occasionally for thin/plain paper at staple mode.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0
BUFF-INT	Set Dvry Sns stationary jam prev: Fin-T1
Lv.1	Details
	In case of paper with excessive upward curl, paper right after the buffer paper is ejected at the Finisher hits the Stack Delivery Roller, causing Saddle Delivery Sensor stationary jam. When 1 is set, the jam can be avoided since the paper intervals between the present and the following papers after the buffer paper ejection become wider.
	Use case
	When stationary jam occurs at the Stack Delivery Roller at buffer operation
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Display/adj/set range
	0 to 1 0: OFF, 1: ON
	Default value
	0

SORTER > OPTION	
PRCS-SP3	Set the feed speed to Proc Tray: Fin-T1
Lv.1	Details
	To set the feeding speed to the Process Tray for the non-buffered papers in the staple mode of small size paper. As the value is incremented by 1, the feeding speed of the non-buffered papers is decelerated by 50 mm/sec.
	Use case
	When misalignment (buckling on the trailing edge) occurs in staple mode because non-buffered papers are pulled back too much.
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	Adjust the Process Tray pull-back amount again with PRCS-RET as needed.
	Display/adj/set range
	0 to 8 0: 700 mm/s 1: 650 mm/s 2: 600 mm/s 3: 550 mm/s 4: 500 mm/s 5: 450 mm/s 6 to 8: 450 mm/s

NSRT-STC	Poor stack prev mode: non-collate:Fin-T1
Lv.1	Details
	To set poor stack prevention mode when not collating. Stack delivery is performed via processing tray even in non sort mode resulting in the improvement of stacking alignment.
	Use case
	When the stacking condition at non-collating is poor
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	As for this mode, productivity falls
	Display/adj/set range
	0 to 2 0: Pass through the Process Tray at 2-sided print of thin paper (Less than 63g) of standard size paper (small size paper is not covered). (Small size paper:Feed direction is the paper of less than 220mm.) 1: Pass through the Process Tray at 2-sided print of thin paper (Less than 63g) of standard size paper. Pass through the Process Tray at single-sided print of thin paper (Less than 63g) of A4R/B5R/A5R size paper. 2: Pass through the Process Tray.
	Default value
	0

SORTER > OPTION	
STP-MAX	Set max No. of sht for staple: Fin-AM1
Lv.1	Details
	To set the maximum number of sheets to be stapled in the Finisher.
	Use case
	-Upon user's request (to increase the number of sheets to be stapled) -When decreasing the number of sheets to be stapled at the time of staple failure occurrence due to the paper type or use environment
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	When setting a value larger than the default value (upper limit on the specification), staple failure may occur.
	Display/adj/set range
	2 to 200
	Unit
	1 sheet
	Default value
	100
SDL-MAX	Set max No. of sht for staple: Fin-AM2
Lv.1	Details
	To set the maximum number of sheets to be stapled in the Saddle Finisher.
	Use case
	-Upon user's request (to increase the number of sheets to be stapled) -When decreasing the number of sheets to be stapled at the time of staple failure occurrence due to the paper type or use environment
	Adj/set/operate method
	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Caution
	When setting a value larger than the default value (upper limit on the specification), staple failure may occur.
	Display/adj/set range
	2 to 50
	Unit
	1 sheet
	Default value
	25
VFLD-MAX	Set Saddle V-fold max No. of sht:Fin-AM2
Lv.1	Details
	To set the maximum number of sheets to be folded in V-shape in the Saddle.
	Use case
	Upon user's request (to increase the number of sheets to be folded in V-shape in the Saddle)
	Adj/set/operate method
	Enter the setting value, and then press OK key.
	Caution
	When setting a value larger than the default value (upper limit on the specification), Saddle V-fold failure may occur.
	Display/adj/set range
	1 to 16
	Unit
	1 sheet
	Default value
	5

SORTER > OPTION	
NEAT-MIX	Set ppr align:mixed ppr wid dvry, Fin-AM
Lv.1	<p>Details To set whether to enable paper alignment function when delivering papers which widths are different. When 0 is set, the setting of NEAT-SW is disabled. When 1 is set, paper alignment is performed.</p> <p>Use case When not performing paper alignment at the time of delivering papers which widths are different</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 1 0: OFF, 1: ON</p> <p>Default value 0</p> <p>Related service mode SORTER> OPTION> NEAT-SW</p>
NEAT-SW	Ppr align cndtn:mix ppr wid dvry, Fin-AM
Lv.1	<p>Details To set the conditions for performing paper alignment when delivering papers which widths are different. When the specified condition (paper type) is satisfied while NEAT-MIX is 1, paper alignment is performed.</p> <p>Use case When performing paper alignment with a specific paper type (neat alignment)</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 2</p> <p>Default value 0</p> <p>Related service mode SORTER> OPTION> NEAT-MIX</p>
TRM-CNT	Set of number of trim: Booklet Trimmer
Lv.1	<p>Details To set the number of trimming by the Booklet Trimmer.</p> <p>Use case When performing trimming precisely</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Caution In case of performing trimming twice, productivity may decrease.</p> <p>Display/adj/set range 0 to 2 0: 1 time, 1: 2 times (1 time if productivity decreases), 2: 2 times</p> <p>Default value 0</p>
THN-TRSW	Set nrrw width thin ppr dvry dest:Fin-T1
Lv.1	<p>Details To set the delivery destination for narrow width thin paper. When delivering thin/plain paper (79 g/m² or less) which length in width direction is 140 mm or less to the First/Second Tray, delivery stationary jam may occur. When 1 is set, paper is forcibly delivered on the Escape Tray.</p> <p>Use case When delivery stationary jam occurs at the time of delivering thin/plain paper (79 g/m² and less) which width direction is 140 mm and smaller to the First/Second Tray.</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 1 0: Deliver to the destination specified on UI 1: Deliver to the Escape Tray.</p> <p>Default value 0</p>

SORTER > OPTION	
THN-SW	Dvry Tr thn ppr stck cpcty incr: Fin-T1
Lv.1	<p>Details To set whether to increase the stack capacity for thin paper (Less than 59 g) of small size on the Delivery Tray. When 1 is set, the stack capacity for thin paper of small size becomes same as plain paper of small size.</p> <p>Use case When expand the limit of stack capacity for small size of thin paper (less than 59 g).</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 1 0: OFF, 1: ON</p> <p>Default value 0</p>
SWGUP-SW	Swing Unit diseng oprtn:1st thin:Fin-T1
Lv.1	<p>Details To set whether the Swing Unit performs disengagement operation when feeding the 1st sheet of thin paper (Less than 59 g). When 1 is set, the retraction is performed for the 1st sheet of thin paper. The retraction is performed only in case the paper length is 297 mm or less and paper width is 210 mm or less.</p> <p>Use case When corner bend occurs on the first sheet of thin paper (Less than 59 g).</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Caution When 1 is set, the swing unit performs its retraction and there is accordingly a less productivity.</p> <p>Display/adj/set range 0 to 1 0: OFF, 1: ON</p> <p>Default value 0</p>
CALG-SW	Set ctr align oprtn: corner-stpl, Fin-T1
Lv.1	<p>Details Paper width is a change of ON/OFF of center stack alignment operation at the time of corner-staple mode in more than 257 mm. When 1 is set, center stack alignment operation is not performed in the corner-staple mode.</p> <p>Use case -When switching the alignment position from center to front/rear side in corner-staple mode. -When stack failure occurred from consecutive stacking of corner-staple mode. -In case that the paper surface detection sensor detects the paper on the stack tray too early as the stapled part of the paper stack is higher than expected.</p> <p>Adj/set/operate method Enter the setting value, and then press OK key.</p> <p>Display/adj/set range 0 to 1 0: OFF (Center alignment), 1: ON (Front/rear side alignment)</p> <p>Default value 0</p>

SORTER > OPTION		
THN-STK	Set thin ppr stack mthd:Low Tray, Fin-AM	
Lv.1	Details	To set the method for stacking thin papers on the Lower Tray. When 1 is set, the method is changed from normal delivery to the delivery method with which papers are delivered as a paper stack so stacking condition improves.
	Use case	Upon user's request (to improve stacking condition of thin papers on the Lower Tray)
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Normal delivery method, 1: Stack delivery method
	Default value	0
ST1-MFH	Set maximum stack height: Stacker	
Lv.1	Details	To set the height of paper stack that can be stacked on the Stacker. When -1 is set, height is not limited. When 0 to 3550 is set, the maximum stack height is changed by 0.1 mm (0 to 355 mm) as the value is changed by 1.
	Use case	Upon user's request
	Adj/set/operate method	Enter the setting value (switch negative/positive by +/- key) and press OK key.
	Display/adj/set range	-1 to 3550 -1: No limit
	Unit	0.1 mm
	Default value	-1
WBF-IMPR	Waste collection improvement:P-binder	
Lv.1	Details	To set ON/OFF of the waste collection retry movement (improvement of waste collection movement). When the settings is 1, the waste collection re-try movement operates according to the following conditions at the cutting operation. -Bottom edge side and Fore edge side perform improvement operation regardless of a bunch thickness. -Signature sheet does not perform the improvement operation of the top edge side in the case of 99 sheets from ten sheets. -Signature sheet does perform the improvement operation of the top edge side in the case of more than 100 sheets.
	Use case	When waste jamming occurred
	Adj/set/operate method	1) Enter the setting value and press OK key. 2) Turn OFF/ON the main power switch.
	Caution	When 1 is set, the productivity is decreased.
	Display/adj/set range	0 to 1 0: OFF, 1:ON
	Default value	0
	Supplement/memo	In one improvement operation, it takes 2.5 seconds.

	Default value	5
C3PW		C3 (End of job) signal pulse-width
Lv.1	Details	Pulse-width for sheet exit signal (TE only)
	Display/adj/set range	5 to 250
	Default value	5
C0DLY		C0 (Sheet exit) signal delay
Lv.1	Details	Delay between the LE/TE of the last sheet at the output of the printer and activation of sheet exit signal
	Display/adj/set range	0 to 5000
	Default value	0
C1DLY		C1 (End of set) signal delay
Lv.1	Details	Delay between the LE/TE of the last sheet at the output of the printer and activation of end of set signal.
	Display/adj/set range	0 to 5000
	Default value	0
C3DLY		C3 (End of job) signal delay
Lv.1	Details	Delay between the LE/TE of the last sheet at the output of the printer and activation of end of job signal.
	Display/adj/set range	0 to 5000
	Default value	0
FSC2D		First sheet delay after C2 (Cycle up)
Lv.1	Details	Minimum delay between activation of cycle up signal and the leading edge of the first sheet at the output of the printer.
	Display/adj/set range	0 to 60000
	Default value	0
LSC2D		C2 (Cycle down) delay after last sheet
Lv.1	Details	Minimum delay between the TE of the last sheet at the output of the printer and the deactivation of the cycle up signal (= cycle down).
	Display/adj/set range	0 to 20000
	Default value	0
C4SZ		C4 (Large paper format) threshold size
Lv.1	Details	The threshold size in X direction on which the large paper format signal is activated. (Defined in steps of 0.1 mm)
	Display/adj/set range	0 to 5000
	Unit	0.1 mm
	Default value	2500

SORTER > MISC		
C4SWDL		C4 (Large paper format) switch delay
Lv.1	Details	Minimum delay between the TE of the last sheet at the output of the printer and the LE of the following sheet in case of a switch of paper format.
	Display/adj/set range	0 to 60000
	Default value	0
	DFSHMIN	Default minimum sheet interval time
Lv.1	Details	Minimum time between two sheet exit signals.
	Display/adj/set range	0 to 5000
	Default value	0
OPSHMIN		Optional minimum sheet interval
Lv.1	Details	Minimum time between two sheet exit signals.
	Display/adj/set range	0 to 5000
DFMINTIM		Default minimum set interval time
Lv.1	Details	Minimum time between two end of set signals
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 60000
	Default value	0
OPMINTIM		Optional minimum set interval time
Lv.1	Details	Minimum time between two end of set signals
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 60000
	Default value	0
DFMINSET		Default minimum delay between sets
Lv.1	Details	Minimum delay between the TE of the last sheet of a set at the output of the printer and the LE of the first sheet of the next set.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 60000
	Default value	0
OPMINSET		Optional minimum delay between sets
Lv.1	Details	Minimum delay between the TE of the last sheet of a set at the output of the printer and the LE of the first sheet of the next set.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Caution	Set a value according to the connected External Finisher.
	Display/adj/set range	0 to 60000
	Default value	0

SORTER > MISC		
DFMINJOB		Default minimum delay between jobs
Lv.1	Details	Minimum delay between the TE of the last sheet of a job at the output of the printer and the LE of the first sheet of the next job.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 60000
	Default value	0
OEMSNSR		OEM Sensor edge selection Leading edge
Lv.1	Details	Edge of paper path sensor to base C0, C1 and C3 signal timing on.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 1 0: Leading edge, 1: Trailing edge
	Default value	0
TOUTS3		Time out S3 (Sheet delivered)
Lv.1	Details	Maximum delay between the sheet exit signal and sheet delivered signal.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 10000
	Default value	0
TOUTS4		Time out S4 (Set delivered)
Lv.1	Details	Maximum delay between the end of set signal and set delivered signal.
	Use case	When an External Finisher (such as a Ring Binder) is connected
	Adj/set/operate method	Enter the setting value, and then press OK key.
	Display/adj/set range	0 to 10000
	Default value	0
NOFSETAF		No.of acptble set afr full notice: DFD
Lv.1	Details	It is set automatically according to the setting of SORTER> MISC> PRESET.
	Display/adj/set range	-1 to 100 -1: No limit, 0 to 100: Number of acceptable sets after tray full notification
	Default value	-1
	Related service mode	SORTER> MISC> PRESET
C5C6JDU		DFD Job Destn Usage(Config of C5 and C6)
Lv.1	Details	To set whether to use C5 and C6 signals of DFD I/F. In the case of connecting a finisher to the downstream of DFD, set 1 or 2.
	Use case	When connecting a finisher to the downstream of DFD
	Display/adj/set range	0 to 2 0: None, 1: ActiveHigh, 2: ActiveLow
	Default value	0
	Related service mode	SORTER> MISC> PRESET

SORTER > MISC		
C5C6JDSD		Set DFD job destination sw delay time
Lv.1	Details	To set the job destination switch delay amount of C5 and C6 signals of DFD I/F when connecting a finisher to the downstream of DFD.
	Use case	When connecting a finisher to the downstream of DFD
	Display/adj/set range	0 to 60000
	Unit	1 msec
	Default value	0
C5C6BD		Set DFD job C5/C6 bypass delay time
Lv.1	Details	To set the bypass delay amount of C5 and C6 signals of DFD I/F when connecting a finisher to the downstream of DFD.
	Use case	When connecting a finisher to the downstream of DFD
	Display/adj/set range	0 to 60000
	Unit	1 msec
	Default value	0

- USB Device Port-A3 / Multimedia Reader/Writer-A3
- HDD-related Option

How to Check this Installation Procedure

For PRISMAsync model, refer to PRISMAsync installation procedure.

Description on the parts included in the package

The parts with a diagonal line in the contents list will not be used.

Symbols in the illustration

The frequently-performed operations are described with symbols in this procedure.

F-9-1

Checking Before Installation

Following shows requirements for the installation site.

Therefore, it is desirable to see the installation site in advance before bringing in the machine to the user's site.

Checking Power Supply

1) There must be a properly grounded source of power that can be used exclusively by the following machines:

- 208V/20A Model: 1 Power Plug
- 200-240V/13A Model: 2 Power Plugs

Checking the Installation Environment

- 1) The environment of the installation site must be in the range as shown below. Avoid installation near the faucet, water boiler, humidifier or refrigerator.
Guaranteed range for operation/image, Temperature: 20.0 to 27.0 deg C, Humidity: 15% to 60%
- 2) It is desirable to hang curtains over the window if the machine is installed near the source of fire, a dusty area, or a place subject to generation of ammonia gas or direct sunlight.
- 3) Room odor can be bothering when running the machine for a long time in a poorly-ventilated room although the ozone amount generated while running this equipment does not harm human health. Be sure to provide adequate ventilation of the room to keep the work environment comfortable.

Checking Installation Space

- 1) The caster of this equipment should be in contact with the floor. This equipment should be kept on the level.
 - 2) The machine must be away from the wall by 100 mm or more to secure a sufficient space to operate the machine.
- When the Output Tray-A1, Duplex Color Image Reader Unit-H1, and Upright Control Panel-D1 are attached:

F-9-2

- When the Two-Knife Booklet Trimmer-A1, Booklet Trimmer-D1, Saddle Finisher-AM2, Paper Folding Unit-F1, Perfect Binder-D1, Professional Puncher Integration Unit-C1, Professional Puncher-B1, Document Insertion Unit-M1, Duplex Color Image Reader Unit-H1, Upright Control Panel-D1, and Multi-drawer Paper Deck-B1 are attached:

F-9-3

NOTE:

Make sure to provide the following space if you attach one or more of the delivery-system / pickup-system options mentioned above:

- *1: 800 mm or more
- *2: 1000 mm or more

- 3) To install the host machine, install it in a well-ventilated place. Especially when there are multiple host machines, be sure to locate the machine where the machine is free from direct exhaust of other machines. Be sure to keep the machine away from the air-inlet duct which is used for ventilation of the room.

Points to Note at Installation Work

Take note of the following points when installing the host machine.

- 1) Moving the host machine from a cool place to a warm place can generate condensation, causing moisture beads on the metal surface. Using the host machine while the machine is condensed can cause image failure.
Therefore, when moving the machine from a cool place to a warm place to install, unpack the host machine and leave it for 2 hours or more before the installation work so that the machine becomes used to the room temperature.
- 2) Be sure to work with a group of 4 or more people to install the host machine.

Order to Install the Host Machine and the Options

NOTE:

In the case of installing the Host Machine and the other options at the same time, follow the order as described below to install the options first so that the installation operability is improved.

1. Checking Before Installation
2. Unpacking
3. Checking the Contents
4. Installing the Image Reader Unit/Printer Cover
5. Installing the Upright Control Panel
When installing the Stack Bypass and POD Deck Lite simultaneously, it is efficient to install them before installing the Upright Control Panel.
6. Multi-drawer Paper Deck (in the case of simultaneous installation)
7. Registering the Speed License
(while the Loop Connector is installed and the packing material is attached)
8. Installing the External Cover
9. Installing the Fixing Feed Assembly
10. Before Installing the Waste Toner Container
11. Installing the Decurler Unit
12. Installing the Waste Toner Container
13. Installing the Process Unit
14. Installing the Black Developing Assembly
15. Installing the Noise Reduction Cover
16. Installing the Finisher Guides
17. Installing the Rear Curtain Unit

18. Installing the Others
19. Securing the Host Machine
20. Preparation for the Main Power Connection
21. Registering the Speed License (When the Loop Connector is not installed)
22. Turning ON the Main Power
23. Installing the Toner Container
24. Settings at Installation
25. Installing the Cleaning Tool (Only when installing the Image Reader Unit)
26. Auto Gradation Adjustment
27. Register Paper to Adjust
28. Execution of Correct Shading
29. Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)
30. Image Position Adjustment
31. Setting the Paper Cassette
32. Checking the Network Connection

Unpacking

CAUTION:

- The host machine weights Approx. 270 kg. For safety, be sure to work carefully to move and install the machine.
- Be sure to work with a group of 4 or more people to install the Host Machine.
- Be sure to do unpacking in a place where the height of the place is more than twice of the height of the package.

NOTE:

The dimension of the Host Machine and the transport container is as shown in the figure. Be sure to secure a space to unpack, and then start the installation work.

F-9-4

- 1) Remove the tapes attaching the host machine and the Accessory Box and bring down the Accessory Box from the pallet.

CAUTION:

Be careful not to drop the Accessory Box when removing the tapes.

<Right Side of the host machine>

<Left Side of the host machine>

F-9-5

- 2) Pull the plastic bag all the way down.

- 3) Remove the handle from the machine.

CAUTION:
Be sure not to lift the host machine too much. Otherwise, it will lose the balance.

F-9-6

- 4) Insert the handle into the slot at left rear side of the host machine while holding the Leaf Spring of the handle.

CAUTION:
Be sure not to lift the host machine too much. Otherwise, it will lose the balance.

F-9-7

- 5) Hold the handles at the right side of the host machine and lift the host machine to remove the pad. Put the plastic bag aside in the direction of the arrow.

CAUTION:
Be sure not to lift the host machine too much. Otherwise, it will lose the balance.

F-9-8

- 6) Hold the handles at the left side of the host machine and lift the host machine to remove the pad and the plastic bag.

F-9-9

- 7) Take out the 2 Slope Plates stored at the right side of the Pallet and remove the 2 pins which are secured at the back of the Slope Plate with tape.
- 8) Turn around the 2 Slope Plates to install as shown in the figure, and then fit the pin-holes of the pallet with the pin-holes of the Slope Plates to put the 2 pins into the holes.

F-9-10

- 9) Hold the handles at the left side of the host machine, and then, while supporting the corner of the host machine, fit the casters to the center of the Slope Plate to slowly bring the machine down.

CAUTION:
Be careful not to make the casters off from the Slope Plate.

F-9-11

- 10) Remove the handle from the slot at left rear side of the host machine while holding the Leaf Spring of the handle.

F-9-12

NOTE:
Store the handle after installing the Sub Frame Unit.

F-9-13

- 11) Remove the tapes to remove the Box Left Cover.

CAUTION:
Because the Box Left Cover is not secured with the screw, be careful not to drop the Box Left Cover when removing the tapes.

F-9-14

- 12) Remove the tapes to remove the Box Right Cover.

CAUTION:
Because the Box Right Cover is not secured with the screw, be careful not to drop the Box Right Cover when removing the tapes.

F-9-15

- 13) Remove the tapes affixed to the outside of the machine and the packaging materials.

CAUTION:
Do not remove the plastic bag covering the Waste Toner Pipe in this step.

F-9-16

Checking the Contents

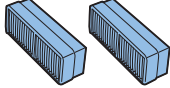

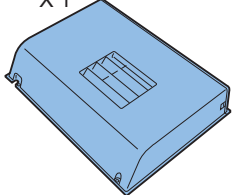

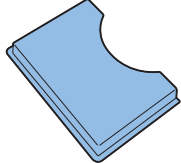

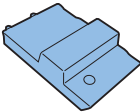

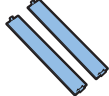

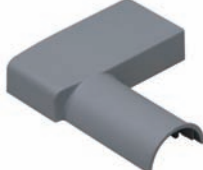

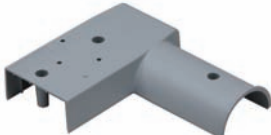

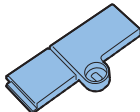

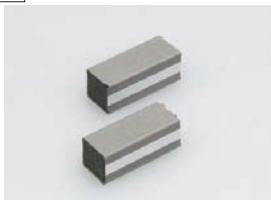

● Accessory Box 1 (ACC-1)

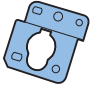

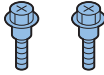

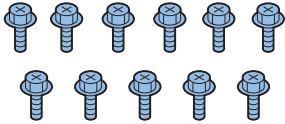

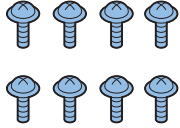

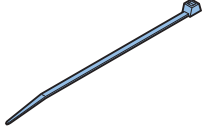

CAUTION:

Do not unpack the Filter until just before installing the Ozone Filter.

NOTE:

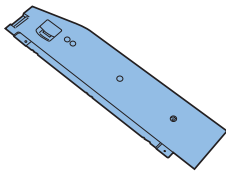

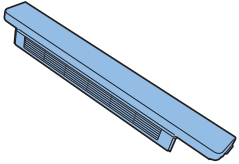

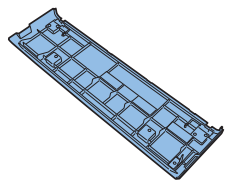

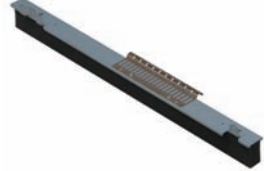

- [15] to [18], [22] x 2: Used when installing the Reader Unit.
- [17], [18] [22] x 2: Used when installing the Printer Cover. If there is a possibility to replace the Printer Cover with the Image Reader Unit, be sure to keep [15] and [16].
- [10] to [14], [22] x 1, [26] to [29]: Used when installing the Upright Control Panel
- Use the screws included in Accessory Box 1 when installing the parts included in Accessory Box 1, 2 and 6.

- Notice Regarding the Machine

Installing the Image Reader Unit/Printer Cover

Be sure to perform installation by referring to the Installation Procedure included in each option.

Installing the Upright Control Panel

Product Name

Safety regulations require the product's name to be registered. In some regions where this product is sold, the following name may be registered instead.

- F712100

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the host machine.
- 2) Check that both the Control Panel display and the main power lamp are turned off, and then disconnect the power plug.

<input type="checkbox"/> [10] Screw (RS Tightening; M4x8) X 1 		

F-9-26

Points to Note at Installation

It is preferable to install the hinge of the Upright Control Panel Unit at a right angle (which is how it comes included in the package) so that it will be easier to install the Hinge Upper Cover.

F-9-27

Installation Procedure

-
- 1) Remove the tape and put the Upright Arm Unit vertically into the round hole of the Frame Base. (included with ACC-1 of the host machine)
- 2) Fit the Upright Arm Unit in the hole of the Frame Base to install the Upright Arm Unit.
 - 2 Screw (W Sems; M4 x 10) (included with ACC-1 of the host machine)

CAUTION:

Be careful not to drop the screws because they are non-magnetic.

F-9-28

CAUTION:

Be sure to route the Power Supply Cable and the Control Panel Cable from the rear side.

F-9-29

-
- 3) Secure the Control Panel Cable and the Power Supply Cable.
 - 1 Reuse Band (Control Panel Cable)
 - 1 Edge Saddle
 - 1 Wire Saddle

F-9-30

- 4) Secure the Power Supply Cable with the Cable Clamp.
 - 1 Screw (TP; M4 x 8)

CAUTION:
Secure the cable with the Harness Band on the host machine side.

F-9-31

- 5) Connect the connector of the Power Supply Cable of the Upright Arm, and secure the cable in place.
 - 1 Wire Saddle
 - 1 Reuse Band

F-9-32

- 6) When the Image Reader Unit is installed, perform steps 7 to 10 and then go to step 13 and later. When the Printer Cover is installed, go to step 11 and later.

<In the case where the Image Reader is installed>

- 7) Install the Reader Support Plate assembled at installation of the Image Reader Unit.
 - 1 Screw (Use the screw removed of the Installation Procedure of the Image Reader Unit.)

NOTE:
When replacing the Laser Unit, it is necessary to lift down the Image Reader Unit from the host machine. At that time, be sure to store the Support Plate here because it will be needed later.

F-9-33

CAUTION:

Secure the cables according to the procedure from step 8 and later as there is a risk of malfunction.

- 8) Connect the Control Panel Cable to the Controller Box, and secure it together with the cables connected during installation of the Image Reader Unit.
- 10 Wire Saddles (Do not secure the [A] part in this step.)

CAUTION:

- Do not secure the Reuse Band in place.
- Secure the Control Panel Cable so that the Reuse Band is located as shown in the figure.

F-9-34

- 9) Secure the Reader Communication Cable. However, do not secure the "2" part in this step.
- 3 Wire Saddles

CAUTION:

Do not secure the Reader Communication Cable with the Wire Saddle around the ferrite core shown in the figure below.

F-9-35

- 10) Secure the part in the middle of the 2 Harness Bands attached to the Power Supply Cable using the Wire Saddle.

F-9-36

CAUTION:

Be sure to allow extra slack of the cables at the [A] part for opening and closing the Controller Box.

F-9-37

<Overview of routing cables>

F-9-38

<In the case where the Printer Cover>

- 11) Install the Reader Mount (included with the Printer Cover).
- 1 Screw (TP; M4 x 8) (included with the Printer Cover)

F-9-39

CAUTION:
Secure the cables according to the procedure from step 12 and later as there is a risk of malfunction.

- 12) Connect the Control Panel Cable to the Controller Box, and secure it together with the cables connected during installation of the Image Reader.
- 9 Wire Saddles

CAUTION:

- Do not secure the Reuse Band in place.
- Secure the Control Panel Cable so that the Reuse Band is located as shown in the figure.

F-9-40

- 13) Install the Right Upper Rear Cover using a stubby screwdriver. (included with ACC-1 of the host machine)
 - 1 Protrusion
 - 1 Screw (RS Tightening; M4 x 8) (included with ACC-1 of the host machine)

F-9-41

- 14) Install the Base Front Cover and the Base Rear Cover. (included with ACC-1 of the host machine)
 - 1 Screw (TP; M4 x 10) (included with ACC-1 of the host machine)
 - 2 Screws (P Tightening; M4 x 10) (included with ACC-1 of the host machine)

F-9-43

CAUTION:
Be sure that the Control Panel Cable and the Power Supply Cable do not cover the screw hole.

F-9-42

- 15) Install the Arm Rear Cover. (included with ACC-1 of the host machine)
 - 1 Screw (TP; M4 x 10) (included with ACC-1 of the host machine)
 - 2 Screws (P Tightening; M3 x 8) (included with ACC-1 of the host machine)

F-9-44

- 16) Install the Upright Control Panel Unit.
- 2 Screws (W Sems; M4 x 10)

CAUTION:
Be careful not to drop the screws because they are non-magnetic.

F-9-45

- 17) Secure the Power Supply Cable and the Control Panel Cable.
- 4 Wire Saddles

F-9-46

- 18) Connect the Power Supply Cable, and secure the cable in place.
- 1 Cable Clamp
- 1 Screw (TP; M4 x 8)
- 1 Wire Saddle (Not to be closed here)

F-9-47

- 19) Secure the Control Panel Cable, and connect it.
- 3 Wire Saddles
- 20) Secure the cable using the Reuse Band. (Cut the extra part)

F-9-48

- 21) Install the Hinge Inner Cover.
- 4 Claws

CAUTION:
Be sure that the 4 claws are properly fitted in the holes.

F-9-49

- 22) Install the Hinge Lower Cover from the bottom side of the arm.
- 2 Bosses
- 2 Screws (P Tightening; M3 x 8)

F-9-50

- 23) Install the Hinge Upper Cover.
- 4 Claws

CAUTION:
Be sure to set the Control Panel Unit back at a right angle because otherwise it will be difficult to install the Hinge Upper Cover.

F-9-51

□
24) Install the Control Panel Rear Cover 3.

F-9-52

□
25) Install the Control Panel Rear Cover 2.

- 2 Screws (P Tightening; M3 x 8)
- 2 Rubber Caps

F-9-53

Installing the Host Machine

Registering the Speed License

- When registering the Speed License while the Loop Connector is installed and the packaging material is attached, be sure to register it at this timing.
- When the Loop Connector is not installed, go to "Installing the External Cover 9-25".

CAUTION:

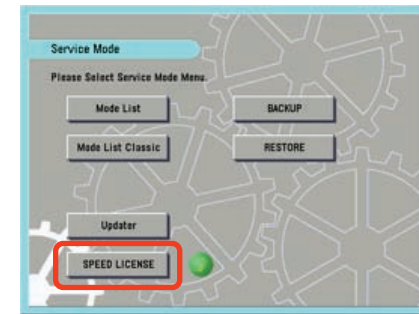

- Before performing this procedure, it is necessary to obtain the license key of the speed license.
- With this product, license of engine speed needs to be entered depending on location or model. Entry of license is possible even before removing the packaging material.
- Be sure that the Loop Connector (*) is connected when turning ON the main power.

*Purpose: This is for enabling the registration of speed license while the packing materials are still attached. (While the Loop Connector is connected, warm-up rotation is not performed, and only UI screen display and operation of the machine are possible.)

F-9-54

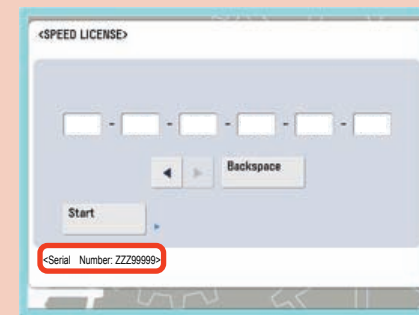

- 1) Connect the power plug of the host machine to the outlet.
- 2) Turn ON the main power switch.
- 3) An error message "E612-0007" is displayed.
- 4) Enter service mode.
- 5) Press [SPEED LICENSE].

F-9-55

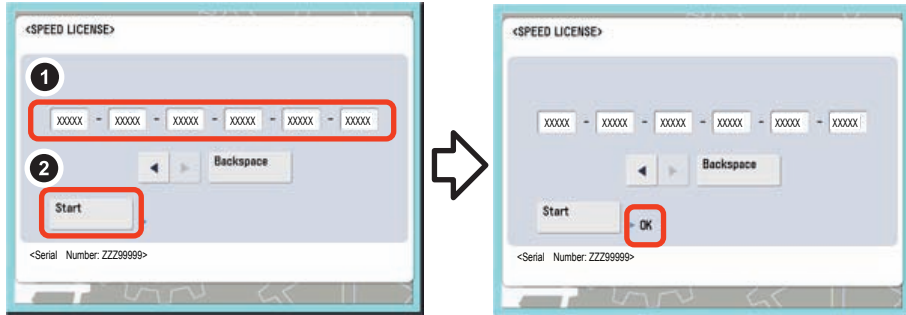

CAUTION:

Check that the serial number of the machine at acquisition of the license and the serial number displayed on the license No. input screen are the same.

F-9-56

- 6) Enter the license number and press [Start]. Then, "OK" is displayed.

F-9-57

- 7) Turn OFF the main power switch.
- 8) Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.
- 9) Install the Name Plate of the product according to the speed license. (included with Cassette 1)

CAUTION:
Be sure to bring back the unused Name Plates.

F-9-58

- 10) Disconnect the Loop Connector. (The removed Loop Connector will not be used.)

F-9-59

Installing the External Cover

- 1) Install the Left Upper Cover. (included with ACC-2)

CAUTION:

Be sure to place the protrusion [A] of the cover on the outside of the Reader Left Cover.

- 4 Protrusions
- 2 Stepped Screws (RS Tightening; M4 x 11.5) (included with ACC-1)
- 2 Screws (Binding; M4 x 8) (included with ACC-1)

F-9-60

- 2) Remove the Right Middle Front Cover 1.
 - 1 Screw
 - 1 Hook

F-9-61

- 3) Right Upper Front Cover. (included with ACC-2)
 - 4 Protrusions
 - 2 Screws (RS Tightening; M4 x 8) (included with ACC-1)
 - 1 Rubber Cap (included with ACC-1)

F-9-62

4) Install the Right Middle Front Cover 1.

- 1 Hook
- 1 Boss
- 1 Screw (The screw removed in step 2)
- 2 Screws (RS Tightening; M4 x 8) (included with ACC-1)

F-9-63

5) Open the HDD Cover and secure the Box Right Cover removed at unpacking.

- 1 Screw (TP; M4x8) (included with ACC-1)

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-64

6) Close the HDD Cover.

7) Install the Box Upper Cover. (included with ACC-2)

- 1 Protrusion
- 1 Rib
- 2 Screws (TP; M4x8) (included with ACC-1)

8) Install the screw (TP; M4x8) packed with ACC-1 to secure the Box Right Cover.

F-9-65

NOTE:

When installing the imagePRESS Server F200/G100 at the same time, it is efficient to install the Open I/F PCB and the Interface Cable included with imagePRESS Server F200/G100 before installing the Box Left Cover (see "Installing the Open I/F PCB" in the Installation Procedure included with imagePRESS Server F200/G100).

- 9) Install the Box Left Cover removed when unpacking the machine.
 - 4 Screws (TP; M4x8) (included with ACC-1)

CAUTION:

Be careful not to trap the cable.

F-9-66

Installing the Fixing Feed Assembly

- 1) Open the Front Cover.
- 2) Remove the tape affixed on Release Lever.
- 3) Release the Release Lever, pull out the Fixing Feed Unit until it stops and remove the tapes.

F-9-67

- 4) Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.

F-9-68

- 5) Open the Inner Delivery Unit and remove the paper.

F-9-69

- 6) Remove the Fixing Upper Cover.
 - 1 Screw
 - 2 Hooks

F-9-70

- 7) Remove the tapes, and then remove the 4 packaging materials with tags.

NOTE:
It is desirable to keep the removed member because it may be used when moving the host machine.

F-9-71

- 8) Remove the tape and packaging material on the bottom side of the Fixing Feed Unit.

NOTE:
It is desirable to keep the removed member because it may be used when moving the host machine.

F-9-72

- 9) Install the Fixing Upper Cover. (1 Screw)
- 10) Close the Inner Delivery Unit.

NOTE:
When installing the Auto Gradation Sensor, it is efficient to do so before returning the Fixing Feed Unit (see the Installation Procedure included with the Auto Gradation Sensor).

- 11) Push the Fixing Feed Unit into the host machine and lock the Release Lever.
- 12) Close the Front Cover.

Before Installing the Waste Toner Container

1) Remove the plastic bag covering the Waste Toner Pipe.

2) Remove the packing material over the plastic bag with its mouth open.

CAUTION:

Be careful not to spill toner because toner is attached to the packing material.

NOTE:

It is desirable to keep the removed member because it may be used when moving the host machine.

F-9-73

- 3) Install the Delivery Lower Cooling Fan. (included with ACC-1)
- 3 Screws (RS Tightening; M4x8) (included with ACC-1)
 - 2 Connectors
 - 2 Wire Saddles

F-9-74

- 4) Remove the screw of the Waste Toner Pipe. (The removed screw will be used in step 5.)

F-9-75

- 5) Install the Waste Toner Pipe by putting it in vertical state.
 - 1 Screw (Use the screws removed in step 4.)
 - 1 Screw (RS Tightening; M4x8) (included with ACC-1)

F-9-76

- 6) Install the Sub Frame Unit. (included with ACC-6)
 - 2 Bosses
 - 2 Screws (Binding; M4x8) (included with ACC-1)

NOTE:
If it is difficult to tighten the screws on the rear side of the machine, release the lever and pull out the slider so that they can be tightened easily.

F-9-77

F-9-78

- 7) Store the handle.

F-9-79

Installing the Decurler Unit

Unpacking

NOTE:

Be sure to open the plastic bag before starting the work. Holding the Decurler Unit (included in ACC-3) while it is still in the plastic bag may cause slipping.

CAUTION:

Do not hold inside the dashed frame as shown in the figure; otherwise, it can cause the Paper Path Guide deformed.

F-9-80

CAUTION:

Be sure to hold Frame [A] and Frame [B] areas of the Decurler Unit. Avoid the harness to hold [B] area; otherwise, the harness can be damaged.

F-9-81

1) Lift the Decurler Unit straight upward, and then place the bottom of the Decurler Unit facing down.

CAUTION:

Do not move the Decurler Unit while making [A] area as the supporting point nor place it on the floor while the Unit is tilted; otherwise, [A] area can be deformed.

F-9-82

F-9-83

- 2) Remove the tape and the Decurler Upper Cover. (The removed Decurler Upper Cover will be used in step 11 of <Installation Procedure>.)

CAUTION:
Because the Decurler Upper Cover is not secured with the screw, be careful not to drop the Decurler Upper Cover when removing the tapes.

F-9-84

- 3) Remove the tapes.

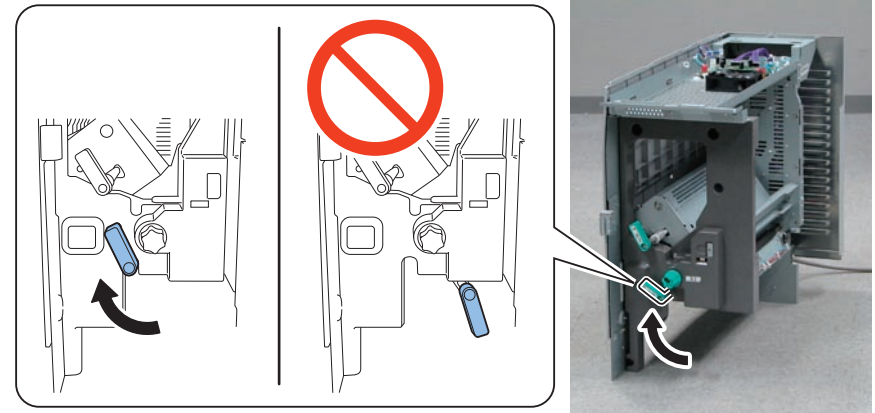

CAUTION:
Be sure to remove the packaging material from the Decurler Cable.

F-9-85

■ Installation Procedure

- 1) Before installing the Decurler Unit to the Host Machine, check that the Jam Process Lever is positioned as shown in the figure.

F-9-86

- 2) Put the 4 shafts of the Decurler Unit into the 4 U-shaped slots on the left side of the host machine, and install the equipment.

CAUTION:

Be careful not to come in contact with Waste Toner Pipe and Delivery Lower Cooling Fan at installation.

F-9-87

F-9-88

- 3) Shift the Decurler Unit in the direction of the arrow, and fix it while pushing it on the Buffer Mounting Plate (Front).

- 1 Screw (RS Tightening Round End; M4x8) (included with ACC-4)

F-9-89

- 4) Release the lever and pull out the slider.

F-9-90

- 5) Connect the 3 Connectors to the host machine.

F-9-91

- 6) Install the Connecting Harness Stopping Plate.
 - 2 Screws (RS Tightening Round End; M4x8) (included with ACC-4)

CAUTION:
Be careful not to trap the harnesses with the Connecting Harness Stopping Plate.

F-9-92

- 7) Return the slider.

- 8) Install the Front Cover Hinge Unit. (included with ACC-4)
 - 1 Screw (RS Tightening Round End; M3x8.5) (included with ACC-4)

F-9-93

- 9) Install the Left Cover.(included with ACC-3)
 - 2 Hooks
 - 7 Screws (RS Tightening Round End; M4x8) (included with ACC-4)

F-9-94

- 10) Install the 2 Wire Saddles and secure the Decurler Cable with them. (included with ACC-4)

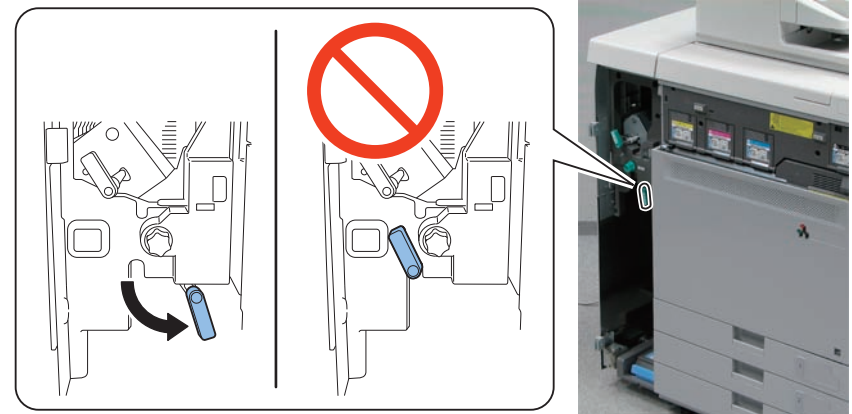

F-9-95

- 11) Install the Decurler Upper Cover removed in "Unpacking" step 2.
 - 2 Hooks
 - 2 Screws (RS Tightening Round End; M3x8.5) (included with ACC-4)

F-9-96

- 12) Rotate the Jam Process Lever in clockwise direction and make the machine in paper pass condition shown in the figure below.

F-9-97

- 13) Remove the tapes on the Left Cover.
- 14) Align the hinge positions of the Front Left Cover and the Decurler Unit in 2 places, and insert the Hinge Shaft in the direction of the arrow. (included with ACC-4)

F-9-98

15) Secure the Hinge Stopper.

- 1 Stepped Screw (Binding Round End; M3x5.7) (included with ACC-4)

F-9-99

16) Close the Front Left Cover.

17) When the Front Left Cover is misaligned when viewed from the front, loosen 2 screws [A], and after adjusting the side position of the Front Left Cover, tighten screws.

F-9-100

Installing the Waste Toner Container

- 1) Change the position of the cap of the Waste Toner Container. (included with ACC-2)

F-9-101

- 2) Open the Front Left Cover.
- 3) Release the lever and pull out the slider.
- 4) Set the Waste Toner Container and push the slider into the machine.

F-9-102

- 5) Return the slider.
- 6) Close the Front Left Cover.

Installing the Process Unit

- 1) Open the Front Cover.
- 2) Affix the Jam Clearing Process Caution Label of the appropriate language as shown in the figure below. (included with Cassette 1)

F-9-103

- 3) Remove the Process Unit Front Cover.
- 2 Screws

NOTE:
It is designed that the 2 screws do not come off from the cover.

F-9-104

- 4) Bring down the 2 Levers of the Process Unit Inner Cover to pull out to the front and open the Process Unit Inner Cover.

CAUTION:
There is the Drum Unit (Bk) inside the Process Unit Inner Cover. Leaving the cover opened for a long time may cause the drum to be exposed. Therefore, do not leave the cover opened for a long time.

F-9-105

- 5) Remove the tape, and remove the ITB packaging material.

NOTE:
It is desirable to keep the packaging material because they may be used when moving the host machine.

F-9-106

- 6) Take out the Developing Assembly (Yellow) from the attached container box.

CAUTION:

- The color is specified for the Color Developing Assembly.
- Do not tilt or shake the Color Developing Assembly strongly when taking it out; otherwise, the toner can be scattered.
- When touching the Developing Assembly (Yellow), check that no foreign particle (especially metal chip) is attached on your hands before starting the work. (If foreign particle is attached on the Sleeve, it can cause image failure).
- Do not tilt or strongly shake the Developing Assembly, but be sure to hold it in a horizontal state (otherwise, toner scattering or image failure (image loss, etc) may occur).
- Be sure to exercise these cautions while performing the following procedure.

- 7) Unpack the Developing Assembly (Yellow) to remove the packing material. (included with ACC-1)

CAUTION:

- Be sure not to remove the tape [A] on the Supply Mouth until right before installing to the host machine.
- Be sure not to remove the tape [B] and [C].
- Be sure not to remove the tape [B] and [C] because they are fixing the roller in place to prevent it moving when removing the Sleeve Seal.
- When removing the packaging material, pay attention not to allow the Sleeve Seal (which is to be removed in the next step) also to be removed.

F-9-107

8) Slowly remove the Sleeve Seal from the Developing Assembly (Y).

CAUTION:

- When removing the Sleeve Seal, be careful not to make any crease in the seal.
- Otherwise, the Toner Blocking Sheet may be caught and damaged by the crease.

F-9-108

9) Check that developer is not scattered on the Toner Blocking Sheet (Inner). If it is scattered, clean it with dry lint-free Paper.

F-9-109

10) Remove the tapes [B] and [C] fixing the Roller.

F-9-110

- 11) Make the coupling of the sleeve rotate a full turn or 1.5 turns in the direction of the arrow.

CAUTION:
Do not turn the Developing Sleeve in the reverse direction.
By rotating it in the reverse direction, toner clots on the Sleeve may damage the Toner Blocking Sheet on the cylinder.

NOTE:
Toner clots are removed by rotating the Sleeve in the direction of the arrow.

F-9-111

- 12) Take out the Drum Unit (Yellow) from the attached packing box.

CAUTION:
The color is specified for the Color Drum Unit.

- 13) Unpack the Drum Unit (Yellow), and remove the packing materials. (included with ACC-1)

CAUTION:

- Do not touch the Photosensitive Drum.
- Be sure not to remove the Protection Sheet during work.

F-9-112

- 14) Pull the 2 Spacers in the direction of the arrow from the Drum Unit (Yellow) to remove.

F-9-113

- 15) Release the lock of the Fixing Levers of the Color Drum Unit (Yellow) and lift the Fixing Levers up.

F-9-114

- 16) Fit the 2 protrusions on the Developing Assembly (Yellow) into the Drum Unit (Yellow), and combine the Developing Assembly (Yellow) and the Drum Unit (Yellow). Then, turn the Fixation Lever in the direction of the arrow and assemble the Process Unit.

CAUTION:

- Be sure to use the correct color when assembling.
- When assembling, be sure to place the Protection Sheet or paper.

F-9-115

CAUTION:

Check that the lock is engaged and also check that the groove is visible as shown in the figure. (If installing the Process Unit while the Fixation Lever is not properly locked, the unit may not be able to be removed from the host machine.)

F-9-116

- 18) Remove the tape [A] on the Supply Mouth and Toner Mouth Packing.

CAUTION:

Be sure to remove the Toner Mouth Packing certainly.

F-9-118

- 17) Secure the harness with the Harness Guides, and connect the connector.

F-9-117

- 19) Hold the upper front area and the left side of the Process Unit as shown in the figure and place the rib at the right side of the Process Unit to the guide [A] of the Process Unit Inner Cover, and then fit the lower left side of the Process Unit to the guide [B] of the Process Unit Inner Cover to push in horizontally.

CAUTION:
 Do not touch the Photosensitive Drum at the lower side with your hand when putting in the Process Unit.

F-9-119

NOTE:

- The guides positions [A] and [B] of the Process Unit Inner Cover differ between the Process Cartridge (Y) (M) and the Process Cartridge (C). The positions of guide [A] and [B] are shown in the figure below.

F-9-120

- While holding the Process Unit with both hands, insert about 2/3 of it, and then push the handle of the Process Unit with your finger as shown in the figure to insert all the way until it stops.

F-9-121

- 20) Connect the Connector.

F-9-122

- 21) Repeat the step 5) through 19) and install the Magenta and Cyan Process Units in the same way.

CAUTION:
Be sure to use the correct color to install.

Installing the Black Developing Assembly

- 1) Take out the Black Developing Assembly from the attached packing box.

CAUTION:

- Do not tilt or shake the Black Developing Assembly strongly when taking it out; otherwise, the toner can be scattered.
- When touching the Black Developing Assembly, check that no foreign particle (especially metal chip) is attached on your hands before starting the work. (If foreign particle is attached on the Sleeve, it can cause image failure)
- Do not tilt or strongly shake the Developing Assembly, but be sure to hold it in a horizontal state (otherwise, toner scattering or image failure (image loss, etc) may occur).
- Be sure to exercise these cautions while performing the following procedure.

- 2) Unpack the Black Developing Assembly and remove the packing material.(included with ACC-1)

CAUTION:

- Be sure not to remove the tape [A] on the Supply Mouth until right before installing to the host machine.
- Be sure not to remove the tape [B] and [C].
- Be sure not to remove the tape [B] and [C] because they are fixing the roller in place to prevent it moving when removing the Sleeve Seal.
- When removing the packaging material, pay attention not to allow the Sleeve Seal (which is to be removed in the next step) also to be removed.

F-9-123

- 3) Remove the Sleeve Seal from the Developing Assembly (Black).

CAUTION:
When removing the Sleeve Seal, be careful not to make any crease in the seal. Otherwise, the Toner Blocking Sheet may be caught and damaged by the crease.

F-9-124

- 4) Check that developer is not scattered on the Toner Blocking Sheet (Inner). If it is scattered, clean it with dry lint-free Paper.

F-9-125

- 5) Be sure to remove the tape [B] and [C] after removing the Sleeve Seal.

F-9-126

- 6) Make the Gear of the Sleeve rotate a full turn or 1.5 turns in the direction of the arrow.

CAUTION:
Do not turn the Developing Sleeve in the reverse direction.
By rotating it in the reverse direction, toner clots on the Sleeve may damage the Toner Blocking Sheet on the cylinder.

NOTE:
Toner clots are removed by rotating the cylinder in the direction of the arrow.

F-9-127

- 7) Move the lock of the Developing Assembly Pressure Lever in the direction of the arrow to release the lock.

F-9-128

- 8) Pull out the Developing Assembly Pressure Lever until it stops to release the pressure.
- 9) Turn the Developing Assembly Pressure Lever in the direction of the arrow.

F-9-129

- 10) Remove the tape [A] on the Supply Mouth and Toner Mouth Packing.

CAUTION:
Be sure to remove the Toner Mouth Packing certainly.

F-9-130

- 11) Hold the front right side and the left side of the Black Developing Assembly and fit the rail of the Black Developing Assembly to the rail slot to push in horizontally.

CAUTION:

Do not touch the Developing Sleeve with your hand when inserting the Black Developing Assembly.

F-9-131

F-9-132

NOTE:

While holding the Black Developing Assembly with both hands, insert about 2/3 of it, and then push the handle of the Black Developing Assembly with your finger as shown in the figure to insert all the way until it stops.

F-9-133

- 12) Secure the harness with the Harness Guides, and connect the connector.

F-9-134

- 13) Turn the Developing Assembly Pressure Lever in the direction of the arrow, and push it in to apply pressure.

F-9-135

- 14) Close the Process Unit Inner Cover.

CAUTION: How to Close the Process Unit Inner Cover

When closing the Process Unit Inner Cover, go through the following steps 1 through 3.

1. Hold the 2 levers and lift up the levers and Process Unit Inner Cover to the horizontal level.
2. While keeping the levers horizontally, push the Process Unit Inner Cover to the rear side. Then, push on the 2 Stopper Plates [A] of the right and left hooks of the Process Unit Inner Cover to the end faces [B] of the Hinge Shaft Holder at the right and left sides of the host machine.

F-9-136

- If the Process Unit Inner Cover is pushed to the rear side without keeping the levers horizontally, the 2 Stopper Plates [A] of the hooks run over the inside of the Hinge Shaft Holder at the right and left sides of the host machine.
- Furthermore, if the Process Unit Inner Cover is pushed to the rear side with this condition, or if the levers are raised at a 90-degree angle and the Process Unit Inner Cover is closed, the Release Arm inside the Process Unit Inner Cover may get damage.

F-9-137

3. Raise the levers at a 90-degree angle further and close the Process Unit Inner Cover. The 2 hooks (right and left) of the Process Unit Inner Cover are hooked to the Hinge Shaft at the right and left sides of the host machine to lock.

F-9-138

- 15) Install the removed Process Unit Front Cover. (2 Screws)
- 16) Turn the ITB Pressure Release Lever in the direction of the arrow to make it engaged, and then install the ITB Front Middle Cover.(included with ACC-1)
 - 2 Protrusions
 - 1 Screw (Binding; M4 x 10) (included with ACC-1)

F-9-139

- 17) Remove the Hinge Shaft from the Toner Replacement Cover (included with ACC-2).

F-9-140

- 18) Align the Right Hinge of the Toner Replacement Cover with the hinge hole of the host machine.
- 19) Install the Left Hinge Shaft and the Toner Replacement Cover.

F-9-141

- 20) Close the Toner Replacement Cover.
- 21) Close the Front Cover.

Installing the Noise Reduction Cover

CAUTION:

Do not unpack the Ozone Filter until just before installing the Ozone Filter.

- 1) Remove the Fixing Dustproof Filter from the Noise Reduction Cover. (included with ACC-1)

F-9-142

- 2) Remove the Filter Case from the Noise Reduction Cover.
- 2 Claws

F-9-143

- 3) Open the 2 Ozone Filters included in the package and install them to the Filter Case. (included with ACC-1)

F-9-144

CAUTION:

Be sure to install the Filters in the correct direction.

F-9-145

- 4) Install the Filter Case to the Noise Reduction Cover and install the Fixing Dustproof Filter removed in step 1.

CAUTION:
Be sure to install the Fixing Dustproof Filter in the correct direction.

F-9-146

F-9-147

- 5) Install the Noise Reduction Cover.

- 3 Protrusions
- 2 Bosses
- 2 Screws (RS Tightening Black; M4 x 12) (included with ACC-1)

Installing the Finisher Guides

NOTE:

It is not necessary when installing the Output Tray.

-
- 1) Install the Finisher Guide (Upper). (included with ACC-4)
 - 4 Hooks
 - 1 Screw (P Tightening; M4 x 10) (included with ACC-4)

F-9-149

-
- 2) Install the Finisher Guide (Lower). (included with ACC-4)
 - 2 Hooks
 - 1 Screw (P Tightening; M4 x 10) (included with ACC-4)

F-9-150

Installing the Rear Curtain Unit

CAUTION:

Be sure to install it after moving the machine to the installation site. The host machine can be moved at least back and forth even after the unit is installed.

- 1) Remove the 2 screws, and install the Rear Curtain Unit using the removed screws. (included with ACC-2)

F-9-151

Installing the Others

<Service Book Holder>

- 1) Remove the release paper from the back side of the Service Book Holder, and affix the holder on the Base Plate of the host machine. (included with ACC-1)

F-9-152

<Handle Cover>

- 1) Install the 2 Handle Covers. (included with ACC-1)
 - 2 Protrusions
 - 2 Claws

F-9-153

<Cover Spacer>

-
- 1) If it is difficult to secure work space at rear side of the machine, install the Cover Spacer on the Noise Reduction Cover in the lower rear side.
- Parts No.: FL2-9160

NOTE:
Be sure that the spacer is not overlapped with the [A] area when installing it.

F-9-154

● Securing the Host Machine

-
- 1) Confirm the position to install the host machine and turn the 2 adjusters with your hand until they closely contact the floor.

NOTE:
If you failed to turn the adjusters with your hand, use a screwdriver so that they can be turned by your hand.

-
- 2) Use a screwdriver to turn the adjusters in the direction of the arrow to make them secured.

NOTE:
Securing of the adjuster is not earthquake resistant.

F-9-155

Preparation for the Main Power Connection

- 1) Insert the power plug into the outlet. In the case of 200-240V/13A Model, connect the 2 power plugs of the machine to different power outlets.
 - USA (120V region): 208V/20A machines: 1 power plug
 - Other regions: 200-240V/13A machine: 2 power plugs

F-9-156

- 2) Check that the Leakage Breakers are turned ON.
 - USA (120V region): 208V/20A machines: 1 Leakage Breaker
 - Other regions: 200-240V/13A machine: 2 Leakage Breakers

F-9-157

- 3) Turn ON the Environment Heater Switch and the Cassette Heater Switch in accordance with the installation environment.
 - In the case of a high humidity environment or low temperature environment, turn ON the Environment Switch.
 - Turn ON the Cassette Heater Switch if the installation environment is a high temperature and high humidity environment.

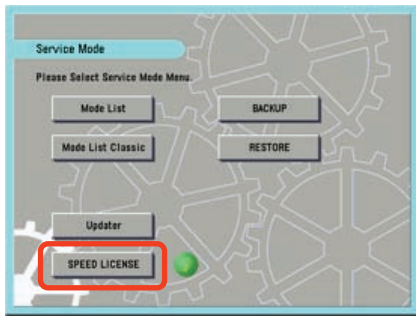

F-9-158

Registering the Speed License (When the Loop Connector is not installed)

CAUTION:

- Before performing this procedure, it is necessary to obtain the license key of the speed license.
- With this product, license of engine speed needs to be entered depending on location or model.

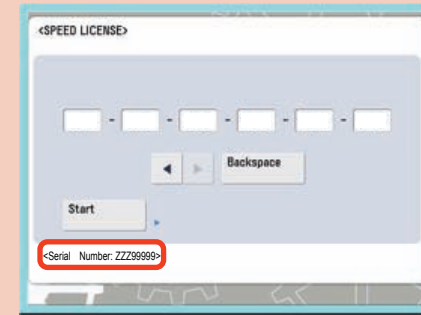

- 1) Turn ON the main power switch.
- 2) An error message "E612-0007" is displayed.
- 3) Enter service mode.
- 4) Press [SPEED LICENSE].

F-9-159

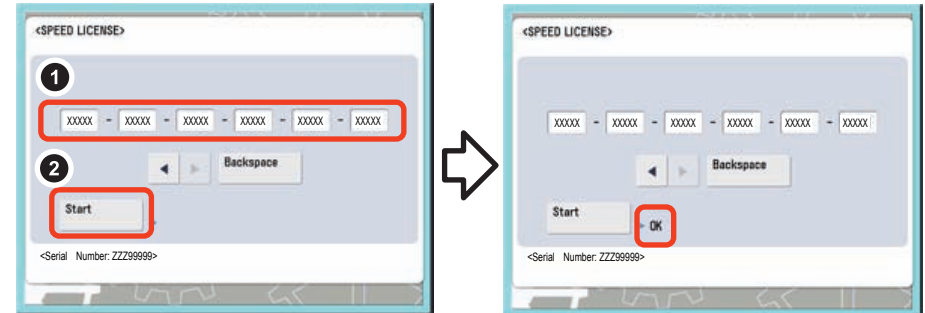

CAUTION:

Check that the serial number of the machine at acquisition of the license and the serial number displayed on the license No. input screen are the same.

F-9-160

- 5) Enter the license number and press [Start]. Then, "OK" is displayed.

F-9-161

- 6) Turn OFF the main power switch.

CAUTION:

When the license of imagePRESS C800 or imagePRESS C600 has been registered, perform steps 7 and 8. When these steps have been performed, the following steps of "Turning ON the Main Power Switch" is not necessary.

- In the Case of Image Reader Unit has been installed: steps 2) and 3)
- In the Case of Printer Cover has been installed: step 2)

7) Turn ON the main power switch.

8) Turn OFF and then ON the main power switch as E750-0005 is displayed.

9) Install the Name Plate of the product according to the speed license. (included with Cassette 1)

CAUTION:

Be sure to bring back the unused Name Plates.

F-9-162

Turning ON the Main Power

<In the Case of Image Reader Unit has been installed>

-
- 1) Remove the Protection Sheet on the Control Panel.
 - 2) Turn ON the main power switch.
 - 3) When the message appears to prompt a shutdown, turn OFF and then ON the main power switch.

NOTE:

Although a message "Remove the toner cartridge" is indicated on UI, execute step 5 through 7.

- 4) Enter the following Service Mode (Level 1), make sure that the setting value is "1".
 - COPIER > OPTION > FNC-SW > W/SCNR
- 5) Enter the following Service Mode (Level 1), make sure that the setting value is "1".
 - COPIER > OPTION > CUSTOM > SCANTYPE
- 6) Exit the Service Mode.

<In the Case of Printer Cover has been installed>

-
- 1) Remove the Protection Sheet on the Control Panel.
 - 2) Turn ON the main power switch.

NOTE:

Although a message "Remove the toner cartridge" is indicated on UI, execute step 3 through 4.

- 3) Select "0" for the following service mode (level 1).
 - COPIER > OPTION > FNC-SW > W/SCNR
- 4) When installing the imagePRESS Server F200/G100 at the same time, set the value of the following service mode (Level 1) to "3".
 - COPIER > OPTION > INT-FACE > IMG-CONT
- 5) Exit the Service Mode.
- 6) Turn OFF and then ON the main power switch when the setting has been changed in step 4.

NOTE: Turning OFF the Main Power

- 1) Turn OFF the main power switch.
- 2) Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.

Installing the Toner Container

Follow the instruction on the UI to install the Toner Container.

- 1) Open the Toner Replacement Cover.
- 2) Select all colors from the "Replacement Required List" and press "Remove Toner Container" button.

NOTE:

The Toner Container is not installed when installing the Host Machine.

- 3) The Toner Container Replacement Door is automatically open.

NOTE:

Although a message telling "Remove the black toner cartridge" is displayed on the UI, ignore the message because the Toner Container is not installed when installing the Host Machine.

- 4) Shake the Toner Container approx. 10 times.
- 5) Turn the safety cap of the Toner Container to remove.
- 6) Set a new Toner Container and close the Toner Container Replacement Door.
- 7) Repeat the procedure from step 4) to 6) to install the Toner Containers in other colors as well.

CAUTION:

Be sure to use the correct color to install.

- 8) Close the Toner Replacement Cover.

NOTE:

Toner supply starts automatically when the Front Upper Cover is closed. (Approx. 6 minutes)

Settings at Installation

CAUTION:

Be sure to execute service mode after the machine enters in a standby state.

- 1) Enter the Service Mode.
 - SITUATION > Installation > ITB install setting
- 2) Execute the ITB neutral position adjustment. (Approx. 6 minutes)
 - INIT-ITB
- 3) Execute the primary transfer ATVC control. (Approx. 1 minute)
 - 1ATVC-EX
- 4) Execute auto registration. (Approx. 1 minute)
 - AT-IMG-X
- 5) Exit the Service Mode.

Installing the Cleaning Tool (Only when installing the Image Reader Unit)

CAUTION:

- It cannot be installed to the Front Cover and the left side of the DADF External Cover because the Cleaning Cloth will fly out when opening/closing the covers.
- It cannot be installed to the right side of the host machine when the Voice Guidance or Multi Deck is installed.
- Be sure to install the Cleaning Cloth Storage Box to a position after checking with the user on where to install it.

- 1) Clean the position where the Cleaning Cloth Storage Box is to be installed with lint-free paper moistened with alcohol.

<Recommendation 1:
Top side of decurler unit>

<Recommendation 2:
Right side of the host machine>

F-9-163

- 2) Remove one side of the release paper of the double-sided tape.
3) Affix the double-sided tape to the Cleaning Cloth Storage Box at a position as shown in the figure, and remove the release paper of the double-sided tape.

F-9-164

- 4) Install the Cleaning Cloth Storage Box.
<Recommendation 1: Top side of decurler unit>

F-9-165

<Recommendation 2: Right side of the host machine>

CAUTION:

Be sure to avoid screw holes when installing it.

F-9-166

5) Place the Cleaning Cloth in the Cleaning Cloth Storage Box.

Auto Adjust Gradation

Execute the Auto Gradation Adjustment to the following 3 modes: [Thin 1/Plain/Heavy 1-4], [Heavy 5], and [Heavy 6]. However, when using 2 or more types of paper, it is necessary to execute all the modes corresponding to the types of paper.

"Heavy 5" and "Heavy 6" are selectable only when the Multi Deck, POD Deck Lite, and Multi-purpose Tray Pickup Unit are installed.

Points to Note at Installation of the Printer Cover:

The following conditions must be met to execute auto gradation adjustment on a machine with Printer Cover installed.

- Auto Gradation Sensor has been installed
- When installing it and the imagePRESS Server F200/G100 at the same time: The Open I/F PCB included with the imagePRESS Server F200/G100 has been installed, and the value in service mode (Level 1) > COPIER > OPTION > INT-FACE > IMG-CONT has been set to "3".
- When the imagePRESS Server F200/G100 is not installed: The printer driver license (imagePRESS Printer Kit-B1/imagePRESS PS Printer Kit-C1) has been installed in advance.

CAUTION:

- Note that if a type of paper to which auto gradation adjustment is not performed is used, it may cause negative effects on image or the host machine.
- In the case that both the Image Reader Unit and the Auto Gradation Sensor are installed, select which one to be used in [Select Method] before executing the adjustment.
 - When using the Image Reader Unit: Select [Use Scanner].
 - When using the Auto Gradation Sensor: Select [Do Not Use Scanner].
- Be sure to use standard type paper to execute the adjustment.

	When using the Scanner	When not using the Scanner
Paper size	A3 or 11"x17"	A3, 11"x17", 305x457 mm, 320x450 mm (SRA3) or 330x483 mm
Standard type Paper weight (Canon-recommended paper)	<ul style="list-style-type: none"> • Thin 1/Plain/Heavy 1-4 USA: Hammermill Color Copy Digital 28lb (105gsm) EUR: CANON-OCE TOP COLOUR 100gsm • Heavy 5 USA: Mohawk Options Navajo Smooth Brilliant White 90lb. Cover / 243gsm EUR: CANON-OCE TOP COLOUR 250gsm • Heavy 6 USA: Hammermill Color Copy Digital Cover 100lb (271gsm) EUR: CANON-OCE Top Colour FSC 	
Number of sheets to be used	3 sheets or more	10 sheets or more

- 1) Clean the Copyboard Glass surface of the host machine.
- 2) Log in as a system manager.

Factory default password is as follows.

- System administration division ID: 7654321
- System administration password: 7654321

CAUTION:

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

- 3) Select [Settings/Registration] > [Adjustment/Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation].

NOTE:

Perform step 4 when pickup system options are installed.

- 4) Display the heavy paper mode of auto gradation adjustment.
Change the setting of [Adjustment Level] to [By Paper Type Group], and then press [OK].

NOTE:

Three mode buttons "Thin 1/Plain/Heavy 1-4", "Heavy 5" and "Heavy 6" are displayed on the screen at auto gradation adjustment.

- 5) In the case that both the Image Reader Unit and the Auto Gradation Sensor are installed, select which one to be used in [Select Method].
- 6) Place standard type paper in a cassette. (See "Setting the Paper Cassette"(page 9-80).)

CAUTION:

Since the amount of toner and print speed are adjusted according to paper type, be sure to select a correct paper type.

- 7) Select [Initialize When Using Full Adjust] and press [OK]. (The color of the button changes to orange.)
- 8) Press [Full Adjust]. If the setting of [Adjustment Level] is changed to [By Paper Type Group] in step 4, select [Thin 1/Plain/Heavy 1-4] and then press [Full Adjust].
- 9) Select the paper source (the paper source where standard type paper is loaded) for test print, and press [OK].

10) Press [Start Printing].

NOTE:

By pressing [Start Printing] while [Do Not Use Scanner] is selected, test print and adjustment are performed automatically.

- 11) From this point on, follow the instruction on UI.
- 12) When the Multi Deck, POD Deck Lite, and Multi-purpose Tray Pickup Unit are installed, make the settings of "Heavy 5" and "Heavy 6" by the same procedure mentioned above.

Register Paper to Adjust

NOTE:

- When auto gradation adjustment is executed with "Thin 1/Plain/Heavy 1-4", "Heavy 5" and "Heavy 6", be sure to perform [Register Paper to Adjust] for each mode in the following steps.
- In the case that the Scanner is not used, the step to scan an image is not needed.

- 1) Place standard type paper and paper which is used by the user in paper sources and make settings. (See "Setting the Paper Cassette"(page 9-80).)
- 2) Log in as a system manager.

Factory default password is as follows.

- System administration division ID: 7654321
- System administration password: 7654321

CAUTION:

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

NOTE:

If the three mode buttons are displayed, be sure to select "Thin 1/Plain/Heavy 1-4", "Heavy 5" or Heavy 6" after [Auto Adjust Gradation], and then select [Register Paper to Adjust].

- 3) Select Settings/Registration > [Adjustment/Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation] > [Register Paper to Adjust].
- 4) Select [Paper to Adjust 1] and press [Next].
- 5) Select [Standard] and press [Next].

6) Select the paper source where standard type paper is loaded and press [Next].

7) Press [Start Printing].

8) Set the output image on the Copyboard and press [Start Scanning].

9) Select the paper which is used by the user and press [Next].

10) Press [Start Printing].

11) Set the output image on the Copyboard and press [Start Scanning].

12) Select Settings/Registration > [Adjustment/Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation] > "Details of Selected Paper", and check that paper which is used by the user is displayed.

NOTE:

Check with the user if the paper displayed on the screen is the one which is used for auto gradation adjustment. If it is not correct, change the paper to the one used for auto gradation adjustment in [Select Paper to Adjust]. Note that the standard type paper means Canon-recommended paper. In the case of using the recommended paper, be sure to select "standard paper type".

- 13) Set the adjustment level according to the user's request in the case that the Multi Deck, POD Deck Lite, or Multi-purpose Tray Pickup Unit is installed.
 - In the case of surely control hue on heavy paper and coated paper: Make the setting for each paper type
 - In the case of saving time and effort by sacrificing hue on heavy paper and coated paper: Make the setting as default ("Thin 1/Plain/Heavy 1-4")

Execution of Correct Shading

CAUTION:

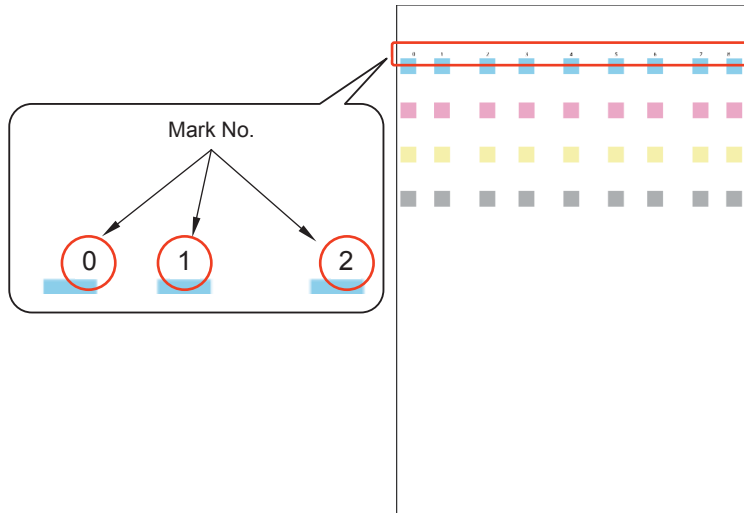

- Be sure to use the largest size of Canon-recommended paper or the largest size of paper which the user uses (It is preferable to use 320 x 450 mm (SRA3) or 330 x 483 mm).
- Do not use special paper (color paper, coated paper, texture paper, etc.).

- 1) Select Settings/Registration > [Adjustment/Maintenance] > [Adjust Image Quality] > [Correct Shading] > [Densitometer Correction], and press [Start Printing].
- 2) Measure the density (Y, M, C, Bk) of the output image with a densitometer.

NOTE:

- Mark No. to be displayed vary according to the paper size.
- 320 x 450 mm (SRA3), 330 x 483 mm: 0 to 8
 - A3 or 11"x17", 305 x 457 mm: 1 to 7

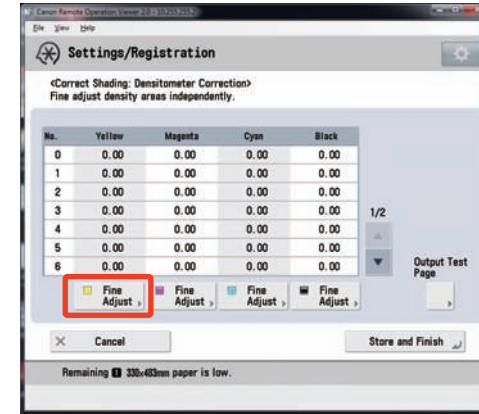

F-9-167

NOTE:

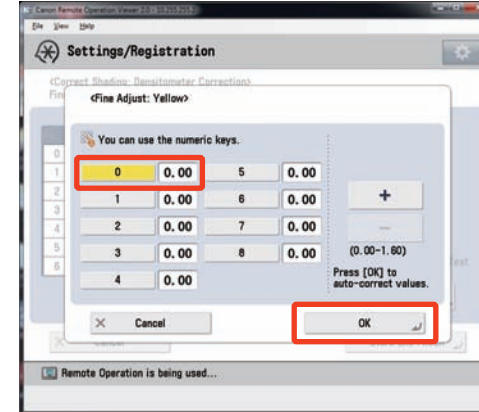

In steps 3 to 5, the procedure is described using the screen for yellow.

- 3) Press [Fine Adjust] of the target color to make entries.

F-9-168

- 4) Select the number same as that of the target Mark No..
- 5) Enter all the values for yellow measured in step 2, and press [OK].

F-9-169

- 6) Repeat steps 3 to 5 to enter the measured values for other colors.
- 7) Check that the entered values are correct, and then press [Store and Finish].
- 8) Press [OK], and exit from [Correct Shading] screen.

Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

1) Log in as a system manager.

Factory default password is as follows.

- System administration division ID: 7654321
- System administration password: 7654321

CAUTION:

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

2) Select Settings/Registration > [Adjustment/Maintenance] > [Adjust Image Quality] > [Register Correction Pattern], and press [Yes].

CAUTION:

It is required that auto gradation adjustment has been executed.

3) Select the destination for registration, and press [Next].

4) Select the paper which is used by the user and press [Next].

CAUTION:

- Select the paper used for auto gradation adjustment.
- If paper has been registered for auto gradation adjustment, select the registered paper.

5) Select the paper source where paper which is used by the user is loaded and press [OK].

6) Press [Start Printing].

7) Set the output image on the Copyboard and press [Start Scanning].

8) If there are 2 or more papers which either was used for auto gradation adjustment or has been registered, repeat steps 2 to 7 as necessary. At that time, be sure to register each paper to different destination. (Up to 4 papers can be registered.)

Image Position Adjustment <Overview>

Checking the paper size

- The image position adjustment is executed based on the following premises: paper sizes of A3 and LDR are 297mm X 420mm and 279mm X 432mm, respectively. Therefore, if the trailing edge margin and right edge margin do not become the reference value 2.5mm after the adjustment, the paper size may not be the regular size so check the paper size being used.
- In leading edge right angle adjustment, it is assumed that the four corners of paper are at a right angle.

Paper type

Following papers are recommended for the image margin adjustment:

- GF-C081 81.4gsm
- OK Top Coated + (128gsm)
- Hammermill Color Copy Digital 28lb (105gsm)
- CANON-OCE TOP COLOUR 100gsm

Because the foregoing papers are recommended as the general papers, so it is acceptable to use papers which a user frequently uses for the image position adjustment. Be sure not to use recycled paper, textured paper, and vellum paper because variation in feeding performance is more likely to occur with them.

Checking method

The test print used for adjustment must be magenta halftone image.

Check that each image position is within the specified range in accordance with "Checking/ Adjusting Image Position". If it is out of the specified range, make an adjustment in accordance with "<Adjustment method>" of each item.

1. **Standard value of left edge margin (Mechanical Adjustment for Cassette, Execute with all paper sources)**
 - L4 = 2.5 +/- 1.0 mm or less

2. Standard value of leading edge skew

- 0.3mm \leq L1 - L2 \leq +0.3 mm
- * In case of L1 - L2 \leq - 0.5 mm or L1 - L2 \geq + 0.5 mm, execute mechanical adjustment for registration alignment.

3. Standard value of leading edge right angle (based on an assumption that right angle accuracy of paper is correct)

- (L4 - L5) x 280/400 \geq / = - 0.5 mm or (L4 - L5) x 280/400 \leq / = + 0.5 mm

4. Standard value of trapezoid

- Lx1 - Lx2 \geq / = - 0.5 mm or Lx1 - Lx2 \leq / = + 0.5 mm

5. Magnification ratio in horizontal scanning direction

- A3 paper: Ly = 292 ± 0.6mm or less
- LDR paper: Ly = 274.4 ± 0.5mm or less

6. Magnification ratio in vertical scanning direction

- A3 paper: Lx = 412 ± 0.8 mm or less
- LDR paper: Lx = 423.8 ± 0.8 mm or less

7. Standard value of left edge margin/leading edge margin (1st side/2nd side: Software Adjustment)

- left edge margin L4: 2.5 ± 0.5 mm or less
- leading edge margin L3: 4.0 ± 0.5 mm or less

Image Position Adjustment <Checking/Adjusting>

Go through the following procedure for image adjustment.

-
- 1. Left Edge Margin Adjustment (Mechanical Adjustment for Cassette Execute with all paper sources)
 - 1) Set service mode (level1) > COPIER > OPTION > FEED-SW > CIS-OFF to "1" (Disabling side registration shift).
 - 2) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.
 - COPIER > TEST > PG > TYPE = 5
 - COPIER > TEST > PG > COLOR-M = 1
 - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
 - COPIER > TEST > PG > PG-PICK = 1/2/3
 - 3) Check that the left edge margin L4 of the image is within 2.5 +/- 1.0 mm.

- 4) If the margin is within the range, proceed to "Adjustment Method step 7".
If it is not within the range, execute adjustment by following the procedure below.

<Adjustment Method>

- 1) Pull out the Cassette.
- 2) Check the position of the scale of the Cassette Lock Unit.

F-9-172

- 3) Loosen the 2 screws of the Cassette Lock Unit.

F-9-173

- 4) According to the scale in which the position was checked in step 2, adjust the position of the Cassette Lock Unit.
 - If the left edge margin is big, move the Cassette Lock Unit to the front.
 - If the left edge margin is small, move the Cassette Lock Unit to the rear.

CAUTION:

Be careful not to move a cassette too much; otherwise, it may not be able to be installed in the host machine.

F-9-174

- 5) Tighten the 2 screws loosened in step 3.
- 6) Perform printing again from the paper source where adjustment has been made, and check that the value is within the specified range. When the result is out of the specified range, repeat steps 1 to 5.

NOTE:

If you are concerned with alignment of the Cassette Cover, adjust the right and left sides of the cover as necessary.

- 7) Loosen the 2 screws and adjust the position of the Cassette Cover by referring to the scale.
- When moving the Cassette Lock Unit, adjust the left side of the Cassette Cover by shifting it with the same shifting amount of the unit.
- 8) Tighten the 2 screws that were loosened.

F-9-175

- 9) Change the setting of Service Mode (Level 1) > COPIER > OPTION > FEED-SW > CIS-OFF back to "0" (to enable side registration shift).
- 10) Exit service mode.

CAUTION:

When "Mechanical Adjustment for Cassette Execute" has been performed, be sure to perform the following "Cassette pull-in Check".

<Cassette pull-in Check>

- 1) Open the Left Cover.
- 2) Open the cassette 200 mm or more.

NOTE:

The pull-in mechanism is activated by opening the cassette 200 mm or more.

- 3) Push back the cassette until it is 15 mm [A] from the Front Cover of the host machine, and let go of the cassette.

F-9-176

<Appropriate>

The latch is locked, and the level difference between the Cassette Front Cover and other external covers is within the appropriate range when viewed from the left side. Adjustment is not necessary.

- The level difference [A] between the cassette and other covers (the Front Cover and other Cassette Front Covers) on the front side should be 2 mm or less.
- The gap [B] from the cover on the rear side should be 3 +/- 1 mm.

F-9-177

<Semi-closed>

The cassette has been excessively pulled in. The gap from other external covers is eliminated by further pushing the cassette in this situation, but adjustment is needed from a functional point of view.

F-9-178

By further pushing the cassette in this situation, a gap [B] is generated between the cassette and the cover on the rear side. Measure and write down the gap [B].

F-9-179

Perform "Adjusting the Cassette Front Cover", and then perform "Adjusting the Pull-in Guide" as needed.

<Latch not locking>

The cassette has not been pulled in enough. The cassette is not latched and comes out. Perform "Adjust the Pull-in Guide".

F-9-180

<Adjusting the Cassette Front Cover>

- 1) Pull out the cassette.
- 2) Loosen the 2 adjustment screws on the left side, and move the Cassette Front Cover as needed using the 2 scales as reference until the gap [B] from the cover on the rear side you wrote down in "Checking Method" changes to a value within the appropriate range.

NOTE:
While the appropriate range of the gap is 3 +/- 1 mm in normal circumstances, in the case of a semi-closed cassette, adjust the gap to a value within 3 to 4 mm.

F-9-181

- 3) Tighten the 2 adjustment screws you loosened in step 2.
- 4) Perform the procedure of "Checking Method" again. If the gap is still out of the appropriate range, perform "Adjusting the Pull-in Guide".

<Adjusting the Pull-in Guide>

- 1) Remove the cassette.
- 2) Loosen the 3 adjustment screws on the rear side of the cassette. Using the scale and the boss line as reference, move the position of the Pull-in Guide for 1 division of the scale.

NOTE:
Check the initial position on the scale (because the position at the time of shipment is not always at the center).

- In the case of a semi-closed cassette: Move the Pull-in Guide for 1 division of the scale upward (toward the rear side [A] of the host machine) so that the amount the cassette is pulled in is reduced.
- In the case of latch not locking: Move the Pull-in Guide for 1 division of the scale downward (toward the front side [B] of the host machine) so that the amount the cassette is pulled in is increased.

F-9-182

- 3) Tighten the 3 adjustment screws you loosened in step 2.
- 4) Perform the procedure of "Checking Method" again, and adjust the gap until it becomes an appropriate value.

CAUTION:

The value of Service Mode (Level 1) > COPIER > OPTION > FEED-SW > CIS-OFF must be back to "0" (to enable side registration shift) when performing the following adjustments.

NOTE:

By executing the leading edge margin adjustment for the Cassette 1, the adjustment is applied to all source of paper.

2. Leading Edge Skew Adjustment

1) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > PG-PICK = 1

2) Check that the leading edge skew on the image is as follow. When the result is out of the specified range, perform adjustment by following the following procedure.

- If the result is $L1 - L2 \leq -0.5\text{mm}$ or $L1 - L2 \geq +0.5\text{mm}$: Go to mechanical adjustment for registration alignment
- If the result is as follow: $-0.5\text{mm} < L1 - L2 < -0.3\text{mm}$ or $0.3\text{mm} < L1 - L2 < 0.5\text{mm}$: Go to software adjustment

F-9-183

<Adjustment method (mechanical adjustment for registration alignment)>

- 1) Open the Front Cover and pull out the Fixing Feed Unit.
- 2) Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.

CAUTION:

Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.

F-9-184

3) Remove the Fixing Feed Inner Cover.

- 1 Screw
- 2 Hooks

F-9-185

4) Remove the Secondary Transfer Outer Unit.

- 2 Connectors
- 2 Protrusions

F-9-186

CAUTION:

Do not touch the surface of the Secondary Transfer Outer Roller.

F-9-187

5) Loosen the 4 screws.

F-9-188

6) Adjust the Registration Adjustment Shaft by turning it with a screwdriver.

- In case of $L1 - L2 > 0.5 \text{ mm}$: Turn to - direction
 - In case of $L1 - L2 < -0.5 \text{ mm}$: Turn to + direction
- e.g.: In case of $L1 - L2 = 0.6$, turn the shaft to - direction by 6 scales.
1 scale mark of the dial: 0.1mm

F-9-189

7) Install the Secondary Transfer Outer Unit (2 Connectors).

CAUTION:

When installing the Secondary Transfer Outer Unit to the Fixing Feed Unit, be sure to do so after releasing the pressure applied on the Secondary Transfer Outer Roller. (Otherwise, the Secondary Transfer Outer Roller may be deformed, or the ITB may be damaged.)

<How to release the pressure applied on the Secondary Transfer Outer Roller>

The pressure on the Secondary Transfer Outer Roller can be released by turning the gear and changing the direction of the cam. Be sure to keep the Secondary Transfer Outer Roller lowered.

F-9-190

8) Tighten the 4 screws loosened in step 5.

CAUTION:

When tightening the screws, be sure to tighten them in the order from (1) to (2).

F-9-191

9) Perform printing again from the Cassette 1, and check that the value is within the specified range.

- If $-0.5 \text{ mm} < L1 - L2 < -0.3 \text{ mm}$ or $0.3 \text{ mm} < L1 - L2 < 0.5 \text{ mm}$: Go to software adjustment
- If $-0.3 \text{ mm} \leq L1 - L2 \leq +0.3 \text{ mm}$ or less: Go to leading edge right angle adjustment

<Adjustment method (software adjustment)>

- 1) Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > SLP-1.
 - Setting range: -10 to 10 (0.1 mm per increment)
 - When the value is increased by "1", the leading edge skew (L1 - L2) is increased by 0.1 mm.
- 2) Perform printing again from the Cassette 1, and check that the value is within the specified range.
- 3) Write down the new adjustment value in the service label.
 - SLP-1

NOTE:
From "3. Leading Edge Right Angle Adjustment" through "6. Vertical Scanning Magnification Ratio Adjustment", adjustment can be made with the same test print image.

3. Leading Edge Right Angle Adjustment

1) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > PG-PICK = 1

2) Check that the leading edge right angle on the image is $(L4 - L5) \times 280/400 \geq -0.5$ mm or $(L4 - L5) \times 280/400 \leq +0.5$ mm. When the result is out of the specified range, perform adjustment by following the following procedure.

<Adjustment method>

- 1) Measure the leading edge right angle $((L4 - L5) \times 280/400)$ on the 1st side.
- 2) Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > ANGLE-1
 - Setting range: -10 to 10 (0.1 mm per increment)
 - When the value is increased by "1", the leading edge right angle $((L4 - L5) \times 280/400)$ is increased by 0.1 mm.
E.g. (in the case of A3 paper): When $L4 = 2.5$ and $L5 = 1.5$, $(2.5 - 1.5) \times 280/400 = 0.7$; therefore, the value to enter is "-7".
- 3) Perform printing again from the Cassette 1, and check that the value is within the specified range.
- 4) Write down the new adjustment value in the service label.
 - ANGLE-1

4. Trapezoid Adjustment

1) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > PG-PICK = 1

2) Check that trapezoid of the image is $Lx1 - Lx2 \geq -0.5$ mm or $Lx1 - Lx2 \leq +0.5$ mm.

When the result is out of the specified range, perform adjustment by following the following procedure.

F-9-193

<Adjustment method>

1) Measure trapezoid ($Lx1 - Lx2$) on the 1st side.

2) Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > TRPZ-1

- Setting range: -10 to 10 (0.1 mm per increment)
- When the value is increased by "1", the trapezoid ($Lx1 - Lx2$) is increased by 0.1 mm.
E.g. (in the case of A3 paper): When $Lx1=412$ and $Lx2 = 411.4$, $412-411.4 = 0.6$; therefore, the value to enter is "-6".

3) Perform printing again from the Cassette 1, and check that the value is within the specified range.

4) Write down the new adjustment value in the service label.

- TRPZ-1

5. Horizontal Scanning Magnification Ratio Adjustment

1) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > PG-PICK = 1

2) Check that the horizontal scanning magnification ratio is within the specified range. When the result is out of the specified range, perform adjustment by following the following procedure.

- A3 paper: $Ly = Ly = 292 \pm 0.6$ mm
- LDR paper: $Ly = Ly = 274.4 \pm 0.5$ mm

F-9-194

<Adjustment method>

- 1) Measure the horizontal scanning magnification ratio on the 1st side.
 - In case of A3 paper: $(L_y/292 - 1) \times 100$ (%)
 - In case of LDR paper: $(L_y/274.4 - 1) \times 100$ (%)
- 2) Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > MAG-H

NOTE:
If the version of the Main Controller is older than 10.2x, it is displayed under Level 2.

- Setting range: -100 to 100 (0.01% per increment)
- When the value is increased by "1", the horizontal scanning magnification ratio is increased by 0.01%
E.g. (in the case of A3 paper): When $L_y = 291$, $(291/292-1) \times 100 = -0.342\dots$ (The value is rounded off to two decimal places)
When the actually measured value is smaller than the nominal value (292 mm), the value of the ratio becomes "-" (negative)"; therefore, the value to enter is "+34".
- 3) Perform printing again from the Cassette 1, and check that the value is within the specified range.
- 4) Write down the new adjustment value in the service label.
 - MAG-H

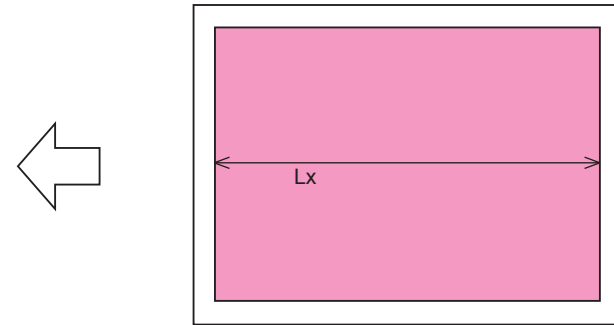

6. Vertical Scanning Magnification Ratio Adjustment

- 1) After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.
 - COPIER > TEST > PG > TYPE = 5
 - COPIER > TEST > PG > COLOR-M = 1
 - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
 - COPIER > TEST > PG > PG-PICK = 1

- 2) Check that the vertical scanning magnification ratio is within the specified range. When the result is out of the specified range, perform adjustment by following the following procedure.

- A3 paper: $L_x = 412 \pm 0.8$ mm
- LDR paper: $L_x = 423.8 \pm 0.8$ mm

F-9-195

<Adjustment method>

- 1) Measure the vertical scanning magnification ratio on the 1st side.
 - A3 paper: $(L_x/412 - 1) \times 100$ (%)
 - LDR paper: $(L_x/423.8 - 1) \times 100$ (%)
- 2) Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > MAG-V
 - Setting range: -100 to 100 (0.01% per increment)
 - When the value is increased by "1", the vertical scanning magnification ratio is increased by 0.01%.
E.g. (in the case of A3 paper): When $L_x = 411$, $(411/412-1) \times 100 = -0.242\dots$ (The value is rounded off to two decimal places)
When the actually measured value is smaller than the nominal value (412 mm), the value of the ratio becomes "-" (negative)"; therefore, the value to enter is "+24".
- 3) Perform printing again from the Cassette 1, and check that the value is within the specified range.
- 4) Write down the new adjustment value in the service label.
 - MAG-V

7. Left Edge/Leading Edge Margin Adjustment (1st side/2nd side: Software Adjustment)

CAUTION:

By making an adjustment for the 1st side, the absolute value of the margin on the 2nd side is also changed. Therefore, the margin adjustment for the 2nd side is adjustment of the difference from the margin on the 1st side. If the difference between 1st and 2nd sides is +/- 0.5 mm or less, do not perform adjustment for the 2nd side.

1) After setting the service mode (level 1) as follow, press the Start key and output a test print (2-sided print) from the Cassette 1.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > 2-SIDE = 1
- COPIER > TEST > PG > PG-PICK = 1

CAUTION:

At 2-sided printing, paper is output with the 1st side down and 2nd side up. Therefore, when checking the leading edge margin on the 1st side, check the margin at the side opposite to the feeding direction on the face-down side.

2) Check that the left edge margin L4 and the leading edge margin L3 for the 1st and 2nd sides are within the range indicated below.

- left edge margin L4: 2.5 +/- 0.5 mm
- leading edge margin L3: 4.0 +/- 0.5 mm

F-9-196

<Left Edge Margin Adjustment Method>

1) Change the left edge margin adjustment value for the 1st side.

- Service Mode (Level 1) > COPIER > ADJUST > FEED-ADJ > REG-L
Setting range: -100 to 100 (0.1 mm per increment)

As the value is incremented by "1", the left edge margin is increased by 0.1 mm.

2) Change the left edge margin adjustment value for the 2nd side.

- Service Mode (Level 1) > COPIER > ADJUST > FEED-ADJ > ADJ-REFE

When the value is increased by "1", the left edge margin on the 2nd side is increased by 0.1 mm.

<Leading Edge Margin Adjustment Method>

1) Change the leading edge margin adjustment value for the 1st side.

- Service Mode (Level 1) > COPIER > ADJUST > FEED-ADJ > REGIST
Setting range: -100 to 100 (0.1 mm per increment)

When the setting value is increased by "1", the leading edge margin is decreased by 0.1 mm.

2) Change the leading edge margin adjustment value for the 2nd side.

CAUTION:

It is necessary to change the setting value individually according to the process speed.

- Service Mode (Level 1) > COPIER > ADJUST > FEED-ADJ

- REG-DUP1 (2nd side at 1/1 speed)
- REG-DUP2 (2nd side at 2/3 speed)
- REG-DUP3 (2nd side at 1/2 speed)

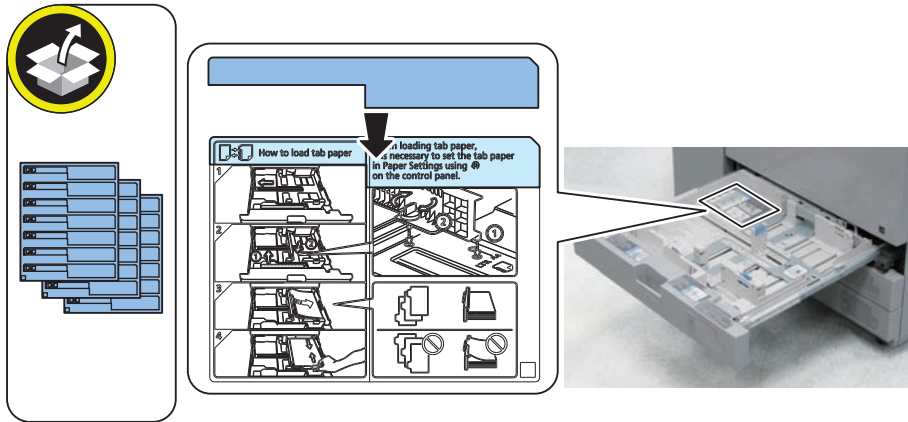

When the setting value is increased by "1", the leading edge margin on the 2nd side is decreased by 0.1 mm.

<Checking after Adjustment >

- 1) Perform 2-sided printing from the Cassette 1.
- 2) Check that the left edge margin L4 and the leading edge margin L3 for the 1st and 2nd sides are within the range indicated below.
 - left edge margin L4: 2.5 +/- 0.5mm
 - leading edge margin L3: 4.0 +/- 0.5 mm
- 3) If the values of the following service modes have been changed, write down the new adjustment value in the service label.
 - REG-L
 - ADJ-REFE
 - REGIST
 - REG-DUP1/2/3
- 4) Exit service mode.

Setting the Paper Cassette

- 1) While pulling the Handle Lever toward the front, pull out the cassette toward the front.
- 2) Affix the Tab Paper Setting Label of the appropriate language as shown in the figure below. (included with Cassette 1)

F-9-197

- 3) Hold the Lever of the Side Guide Plate to set the Side Guide Plate to the specified size.
- 4) Hold the Lever of the Trail Edge Guide Plate to set the Trail Edge Guide Plate to the specified size.

F-9-198

- 5) Place papers and insert the cassette.
- 6) Affix the Paper Size Label according to the size of paper being set to the Media Indication Sheet. (included with Cassette 1)

F-9-199

- 7) Insert the Media Indication Sheet to the Media Plate Holder on the front side of the cassette.

F-9-200

- 8) Set other cassettes in the same way.

NOTE:
Paper size is set to be automatically recognized.

- 9) Register the type of paper loaded in the paper source.
- 9-1) Select Settings/Registration > [Preferences] > [Paper Settings] > [Paper Settings].
 - 9-2) Select the paper source where paper is loaded, and press [Set].
 - 9-3) Select the paper type same as that of the loaded paper, and press [OK] > [OK].

NOTE:

- If the corresponding paper type is not displayed on the simple settings screen, press [Detailed Settings] and make a selection on the detailed settings screen.
- If the type of loaded paper is not displayed on the detailed settings screen, you can register it. For details, refer to the e-Manual.

Checking the Network Connection

Overview

If the user's network environment is TCP/IP, use the Ping function to check that the network setting is properly performed.

If the user's network environment is IPX/SPX or Apple Talk, there is no need to check the network environment.

Checking the Network Connection

CAUTION:

Be sure to use the network cable with Category 5e or higher. In addition, a sealed type (STP cable) is recommended.

Using the non-shield type can affect the peripheral electrical equipment through the network cable.

- 1) Turn OFF the main power switch
- 2) Connect the network cable to the host machine and turn ON the main power switch.
- 3) Inform the system administrator at the installation site that installation of the host machine is complete, and then, ask for the network setting.

NOTE:

Network setting cannot be executed unless logging in as an administrator. Factory default password is as follows.

- System administration division ID: 7654321
- System administration password: 7654321

CAUTION:

To perform the network setting, the following Settings/Registration items must be set "ON".

- Settings/Registration > [Preferences] > [Network] > [Confirm Network Connection Set. Changes]
- Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [Use IPv4]

- 4) Turn OFF and then ON the main power.

■ Operation Procedure Using Ping

- 1) Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]
- 2) Enter the IP address with the numeric keypad on the Control Panel and press "Execute" key. "Response from the host" is displayed if Ping command is succeeded while "no response from the host" is displayed if failed.

■ Checking by the Remote Host Address

Using the remote host address to execute Ping can check whether connection to the network is enabled or not.

Remote host address: IP address of PC terminal connected/running on TCP/IP network environment that connects to this equipment.

- 1) Inform the system administrator about checking of the network connection using Ping.
- 2) Confirm the remote host address with the system administrator.
- 3) Enter the remote host address to Ping.
 - The network is properly connected if the message say "Response from the host".
 - The network is not properly connected if the message say "No response from the host", therefore, execute the following troubleshooting.

● Network Troubleshooting

■ Checking Connection of the Network Cable

To check whether the network cable is properly connected to the Ethernet Port.

■ Operation Procedure Using Ping

- 1) Ask the network administrator at the user's site to write down the IP address of the PC that is connected to the network.
- 2) Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address of the PC with the numeric keypad and press Execute key.
 - The network is properly connected if the message say "Response from the host".
 - If the message say "No response from the host", check the following.

NOTE:

The IP address of the PC can be checked by the following procedure: Select the following on a Windows PC: Start > Program > Accessory > Command Prompt; and enter "ipconfig" and press Enter key to display information of the IP address.

■ Checking the Network Setting of the Host Machine

Check if the IP address specified in the host machine is correct.

- 1) Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [IP address setting]; and write down the address in the IP address field.
- 2) Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address.
 - The IP address specified in the host machine is correct if the message say "Response from the host".
 - If the message say "No response from the host", check the following.

NOTE:

When setting the address by manually input, set the Subnet Mask by following the instruction of the administrator.

■ Checking Network Function on the Main Controller

Perform checking by the loopback address.

- 1) Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address, "127.0.0.1" with the numeric keypad and enter Execute key.
 - The network function of the Main Controller is working properly if the message say "Response from the host".
 - If the message say "No response from the host", the network function of the Main Controller is faulty.
- 2) Replace with a Main Controller that works properly, and then check connection.

When Relocating the Machine

NOTE:

If packing materials such as fixing material which were removed on the installation are not available, it is recommended to use cushioning materials that matches to them.

When moving the machine to another floor

If you need to relocate the machine (move to another floor, etc) after installation, be sure to perform the following work in advance.

- 1) Move the Scanner Unit to the position where it is going to be secured.
 - Service Mode (Level 2) > COPIER > FUNCTION > MISC-R > RD-SHPOS
- 2) Turn OFF the main power switch.
- 3) Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.
- 4) Remove the options.

- 5) Open the DADF, and remove the Left Upper Small Cover using a flat-blade screwdriver.
 - 1 Claw
 - 1 Protrusion

F-9-201

- 6) Secure the Scanner Unit with the Scanner Fixation Tool that have been kept in a safe place since image Reader Unit installation.

NOTE:
Be sure to push it in until it clicks.

F-9-202

- 7) Install the Packing Materials that were removed during installation.

F-9-203

- 8) Close the DADF.
- 9) Open the Front Cover.

- 10) Remove the ITB Front Middle Cover.
 - 1 Screw
 - 2 Protrusions
- 11) Turn the ITB Pressure Release Lever in the direction of the arrow to release the pressure.

CAUTION:
Be sure not to pull out the Fixing Feed Unit until power is turned on after relocation.

F-9-204

- 12) Close the Front Cover.

- 13) Remove the Rear Curtain Unit. Install the screws removed previously to their original position.

F-9-205

- 14) Lift the host machine off the floor by turning the 2 adjusters with a screwdriver.
- 15) When moving the machine, grasp the Handles and move the host machine.

NOTE:
When moving the machine, be careful not to bump into the arm of the Upright Control Panel.

- 16) At reinstallation after moving the machine, remove the installed packaging materials.
- 17) Remove the Scanner Fixation Tool, and install the Left Upper Small Cover.
- 18) Put the ITB Pressure Release Lever back to the original position to apply pressure and install the ITB Front Middle Cover. (1 Screw)
- 19) Install the Rear Curtain Unit.
- 20) Secure the host machine in place by turning the 2 adjusters with a screwdriver.
- 21) After turning ON the power, execute ITB neutral position adjustment.
 - Service Mode (Level1) > COPIER > FUNCTION > INSTALL > INIT-ITB
- 22) Execute auto registration.
 - Service Mode (level 1) > COPIER > FUNCTION > MISC-P > AT-IMG-X

- 23) The paper feed direction may tilt because of the change in floor surface condition; thus, be sure to execute the image position adjustment.
Refer to the Service Manual > Installation > Image Position Adjustment

When moving the machine by truck

If you need to relocate the machine after installation by truck or other means of transportation, be sure to perform the following work in advance.

- 1) Move the Scanner Unit to the position where it is going to be secured.
 - Service Mode (Level 2) > COPIER > FUNCTION > MISC-R > RD-SHPOS
- 2) Turn OFF the main power switch.
- 3) Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.
- 4) Open the DADF, and remove the Left Upper Small Cover using a flat-blade screwdriver.
 - 1 Protrusion
 - 1 Claw

F-9-206

- 5) Secure the Scanner Unit with the Scanner Fixation Tool that have been kept in a safe place since image Reader Unit installation.

NOTE:
Be sure to push it in until it clicks.

F-9-207

- 6) Install the Packing Materials that were removed during installation.

F-9-208

- 7) Close the DADF.
- 8) Open the Front Cover.

CAUTION:
If this equipment will be moved in simplified packaging using a truck, it is desirable to perform the following steps.
It is recommended to attach the Fixation Members that were removed during installation.

- 9) Release the Lock Lever, and pull out the Fixing Feed Unit.
- 10) Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.

F-9-209

- 11) Open the Inner Delivery Unit, and insert a sheet of paper between the Pressure Belt and the Fixing Refresh Roller.

F-9-210

- 12) Remove the Fixing Upper Cover.
 - 1 Screw
 - 2 Hooks

F-9-211

- 13) Install the 5 packing materials that were removed during installation.
 - <Top side: 4 locations>

F-9-212

- <Bottom side: 1 location>

F-9-213

- 14) Remove the ITB Front Middle Cover.
 - 1 Screw
 - 2 Protrusions

F-9-214

□

CAUTION:
Be sure to pull out the Fixing Feed Unit without fail before releasing the ITB Pressure Release Lever.

- 15) Turn the ITB Pressure Release Lever in the direction of the arrow to release the pressure.

F-9-215

- 16) Hold the handle to pull out the ITB Unit.
- 17) Install the packing material that were removed during installation.

F-9-216

- 18) Close the ITB Unit (Do not lock the Release Lever)
- 19) Install the Fixing Upper Cover. (2 Hooks, 1 Screw)
- 20) Close the Inner Delivery Unit.

NOTE:
If any tag is attached to the packaging material, move it to outside the cover and secure by tape.

- 21) Push the Fixing Feed Unit into the host machine and lock the Release Lever.
- 22) Close the Front Cover.

- 23) Remove the Rear Curtain Unit. Install the screws removed previously to their original position.
- 2 Screws

F-9-217

- 24) Remove the following parts in the reverse order you used.
- Waste Toner Container (Refer to "Installing the Waste Toner Container"(page 9-38).)
- Decurler Unit (Refer to "Installing the Decurler Unit"(page 9-32).)

- 25) Remove the Sub Frame Unit.
- 2 Screws

F-9-218

- 26) While holding down the Primary Shutter of the Waste Toner Pipe, install the packing material that was removed at installation.

F-9-219

CAUTION:

Be sure that the packing material is installed properly.

F-9-220

- 27) Remove the 2 screws, and install the Waste Toner Pipe with the screw as shown in the figure.
The screw will be used after the machine is relocated.

F-9-221

- 28) Remove the Delivery Lower Cooling Fan.
 - 2 Wire Saddles
 - 2 Connectors
 - 3 Screws

F-9-222

- 29) When moving the machine, grasp the Handles and move the host machine.

- 30) Install the handle that was stored in the Sub Frame Unit to the host machine.

F-9-223

- 31) Lift the host machine off the floor by turning the 2 adjusters with a screwdriver.
- 32) When moving the machine, grasp the Handles and move the host machine.

CAUTION:

- When moving the machine, be careful not to bump into the arm of the Upright Control Panel.
- The Upright Control Panel should be removed and packed when being transported.
- When moving by a truck, it is recommended to tape and secure all movable locations (all doors and Upright Control Panel Arm).

- 33) At reinstallation after moving the machine, remove the installed packaging materials.
- 34) Remove the Scanner Fixation Tool, and install the Left Upper Small Cover.
- 35) Put the ITB Pressure Release Lever back to the original position to apply pressure and install the ITB Front Middle Cover. (1 Screw)
- 36) Install the Sub Frame Unit and Delivery Lower Cooling Fan. (Refer to "Before Installing the Waste Toner Container"(page 9-30).)
- 37) Install the Decurler Unit. (Refer to "Installing the Decurler Unit"(page 9-32).)
- 38) Install the Waste Toner Container. (Refer to "Installing the Waste Toner Container"(page 9-38).)"Installing the Waste Toner Container"(page 9-38).
- 39) Install the Rear Curtain Unit.
- 40) Secure the host machine in place by turning the 2 adjusters with a screwdriver.

41) After turning ON the power, execute ITB neutral position adjustment.

- Service Mode (Level1) > COPIER > FUNCTION > INSTALL > INIT-ITB

42) Execute auto registration.

- Service Mode (Level 1) > FUNCTION > CLEANING > FXD-CL-E

43) Execute cleaning operation of the Fixing Belt.

- Service Mode (Level 1) > FUNCTION > CLEANING > FXD-CL-E

44) The paper feed direction may tilt because of the change in floor surface condition; thus, be sure to execute the image position adjustment.

Refer to the Service Manual > Installation > Image Position Adjustment

Copy Card Reader-F1

Points to Note Before Installation

The Copy Card Reader Attachment is required for the installation of the equipment.

Checking the Contents

Copy Card Reader-F1

F-9-224

Copy Card Reader Attachment-A2

F-9-225

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the host machine.
- 2) Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.

Installation Outline Drawing

F-9-226

Installation Procedure

CAUTION:

After Card Reader is installed, get in Service Mode (Level 1) with this equipment: COPIER > FUNCTION > INSTALL > CARD; and then enter the card number to use.

If the card number fails to be entered, the card will not be recognized even if the card is inserted.

- 1) Push the [A] part, and open the HDD Cover.

F-9-227

-
- 2) Remove the screw of the Box Upper Cover. (Removed screw will be used at step 18.)
- 3) Remove the Box Right Cover.
 - 2 Screws (Removed screw will be used at step 17.)
 - 1 Hook

F-9-228

F-9-229

-
- 4) Remove the USB Cable and the Control Panel Cable.

F-9-230

-
- 5) Remove the 2 screws of the Main Controller PCB 1. (Removed screw will be used at step 11.)

F-9-231

- 6) While holding the cable, remove the Main Controller PCB 1 by holding the handle.

F-9-232

CAUTION:

Place the removed Main Controller PCB 1 as shown in the figure.

Reason: Because the fan is protruded, performing work while the Main Controller PCB 1 is tilted (not placed flatly on a surface) may cause damage to the PCB.

F-9-233

- 7) Remove the Face Cover. (Do not reuse the removed Face Cover.)
 - 2 Screws (Removed screw will be used at step 9.)

F-9-234

8) Remove the screw, and install the PCB Spacer. (Do not reuse the removed screw.)

F-9-235

F-9-236

9) Install the Card Reader Relay Unit.

- 2 Screws (Use the screws removed at step 7.)
- 1 Screw (Binding; M3 x 6)
- 1 Connector

F-9-237

10) Release the 2 Lock Levers in the direction of the arrows, and uniformly push in the Main Controller PCB 1 with both hands until it stops while holding the cable.

F-9-238

- 11) Press 2 Lock Levers down to push the Main Controller PCB 1 and secure.
 - 2 Screws (Removed screws at step 5: Install in order of bottom and top.)

CAUTION:
Keep the order of steps 1 thru 4 shown in the figure since there is the case that a connector of the Main Controller PCB 1 is not connected.

F-9-239

- 12) Install the USB Cable and the Control Panel Cable.
- 13) Remove the screw. (Removed screw will be used at step 15.)

F-9-240

- 14) Connect the Card Reader External Relay Wire Harness.

CAUTION:
Be sure to pay attention to the direction in which to connect the cable.

F-9-241

- 15) Install the Connector Cover 2 to the Card Reader External Relay Harness and secure it in place.
 - 1 Screw (Use the screws removed at step 13.)

CAUTION:
Install it so that the harness band of the Card Reader External Relay Harness can be inside of the Connector Cover 2.

F-9-242

- 16) Put the Card Reader External Relay Harness into the Box Right Cover.

F-9-243

- 17) Install the Box Right Cover.
 - 1 Hook
 - 2 Screws (Use the screws removed at step 3.)
- 18) Install the screw of the Box Upper Cover. (Use the screws removed at step 2.)

F-9-244

- 19) Close the HDD Cover.

20) Remove the Lower Cover of the Card Reader Unit, and change the position of the cable.

- 1 Screw

21) Install the Lower Cover of the Card Reader Unit.

- 1 Screw

F-9-245

22) Remove the Short Connector in the Card Reader. (Do not reuse the removed Short Connector.)

F-9-246

23) Install the Card Reader by putting its cable through the hole of the Card Reader Mounting Plate.

- 1 Toothed Washer
- 1 Screw (RS Tightening; M4 x 8)

F-9-247

- 24) Install the assembled Card Reader Unit.
- 1 Screw (TP; M4 x 12)

CAUTION:

When it is difficult to install the screw of the Card Reader Unit due to the position of the screw hole having been shifted, be sure to loosen the 2 screws of the Base Rear Cover, adjust the position of the screw hole, and then tighten the loosened screws.

F-9-248

F-9-249

< In the case of the Multi-drawer Paper Deck installed >

CAUTION:

Install it without pinching the Interface Cable of the Multi-drawer Paper Deck.

F-9-250

- 25) Connect the connectors of the Card Reader External Relay Harness and the Card Reader Unit.

F-9-251

- 26) Install the 2 Connector Cases.

CAUTION:
Install so that the harness band and the Loop of the Card Reader External Relay Harness can be inside of the Connector Cases.

F-9-252

- 27) Remove the cover of the Cord Guide, and affix it to the area indicated in the figure.
- 28) Put the Card Reader External Relay Harness through the Cord Guide, and install the cover of the guide.

F-9-253

< In the case of the Multi-drawer Paper Deck installed >

F-9-254

- 29) Connect the Power Plug into the outlet.
- 30) Turn ON the main power switch.

Setting After Installation

- 1) Check the model of the Card Reader.
 - Check that the setting value is "0" in the following Service Mode (Level 1) > COPIER > OPTION > ACC > CR-TYPE.
- 2) Set the number of card (number of department) that can be used with the Card Reader.
 - Service Mode (Level 2) > COPIER > OPTION > FNC-SW > CARD-RNG
- 3) Use Service Mode to enter the minimum card number to be used by a user (1 to 2001).
 - Service Mode (Level 1) > COPIER > FUNCTION > INSTALL > CARD
From the entered card number, 1000 cards can be used.
- 4) To enable the setting value, turn OFF/ON the main power switch.
- 5) Insert the card with the registered card No. and make sure that it is in standby.

NOTE:

After setting, if a request arises from a user and changing the number of card (number of department), make a following setting. In that case, the current counter information by department will be reset.

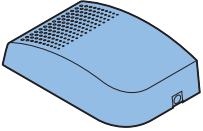

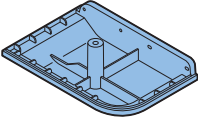

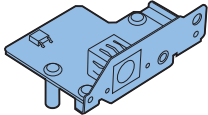

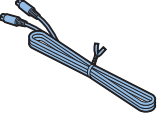

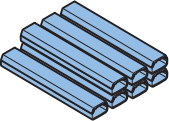

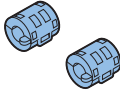

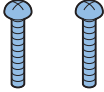

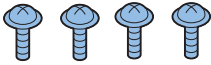

- Execute in Service Mode (Level 1) > COPIER > FUNCTION > CLEAR > CARD.
- Specify the value in Service Mode (Level 2) > COPIER > OPTION > FNC-SW > CARD-RNG.
- To enable the setting value, turn OFF/ON the main power switch.
- After that, go through the procedure from step 3.

Voice Guidance Kit-F2

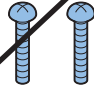

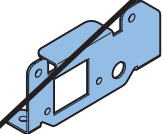

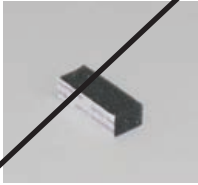

Points to Note Before Installation

Image Reader Unit is necessary to operate this equipment.

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the host machine.
- 2) Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.

Installation Outline Drawing

F-9-257

Installation Procedure

- 1) Push the [A] part, and open the HDD Cover.

F-9-258

- 2) Remove the screw of the Box Upper Cover. (Removed screw will be used at step 14.)
- 3) Remove the Box Right Cover.
 - 2 Screws (Removed screw will be used at step 13.)
 - 1 Hook

F-9-259

F-9-260

4) Remove the USB Cable and the Control Panel Cable.

F-9-261

5) Remove the 2 screws of the Main Controller PCB 1. (Removed screw will be used at step 10.)

F-9-262

6) While holding the cable, remove the Main Controller PCB 1 by holding the handle.

F-9-263

CAUTION:

Place the removed Main Controller PCB 1 as shown in the figure.

Reason: Because the fan is protruded, performing work while the Main Controller PCB 1 is tilted (not placed flatly on a surface) may cause damage to the PCB.

F-9-264

- 7) Remove the Voice Operation Board Support Plate from Main Controller PCB 1.
(Do not reuse the removed Voice Operation Board Support Plate.)
- 2 Screws (The removed screws are used in step 8.)

F-9-265

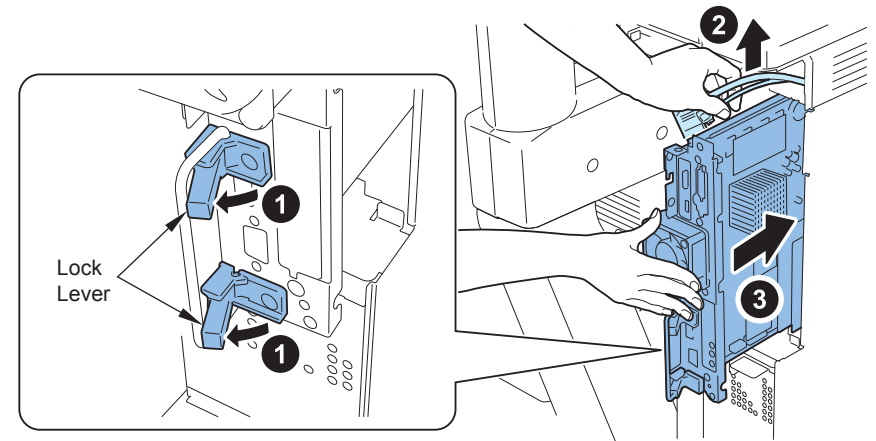

- 8) Install the Voice Guidance Board Unit.
- 1 Connector
- 2 Screws (The removed screws are used in step 7.)
- 2 screws (TP; M3 x 6)

NOTE:
Check that the connector is connected properly.

F-9-266

- 9) Release the 2 Lock Levers in the direction of the arrows, and uniformly push in the Main Controller PCB 1 with both hands until it stops while holding the cable.

F-9-267

- 10) Press 2 Lock Levers down to push the Main Controller PCB 1 and secure.
- 2 Screws (Removed screws at step 5: Install in order of bottom and top.)

CAUTION:
Keep the order of steps 1 thru 4 shown in the figure since there is the case that a connector of the Main Controller PCB 1 is not connected.

F-9-268

- 11) Install the USB Cable and the Control Panel Cable.

F-9-269

- 12) Remove the Connector Cover from the Box Right Cover.

- 1 Claw
- 2 Protrusions

F-9-270

- 13) Install the Box Right Cover.

- 1 Hook
- 2 Screws (Use the screws removed at step 3.)

- 14) Install the screw of the Box Upper Cover. (Use the screws removed at step 2.)

F-9-271

- 15) Close the HDD Cover.

- 16) Remove the 2 Rubber Caps from Right Upper Front Cover. (Do not reuse the removed Rubber Caps.)

F-9-272

- 17) Install the Speaker Unit (Lower).
- 2 Screws (Binding; M4 x 20)

F-9-273

- 18) Install the Speaker Unit (Upper).
- 1 Screw (Binding; M4 x 6)

F-9-274

- 19) Remove the cover of the Cord Guide, and affix it to the area indicated in the figure.

F-9-275

- 20) Install the 2 Ferrite Cores to both edges of the Speaker Cable.

CAUTION:
Be sure to install the Ferrite Core within 50 mm from the edge of the Speaker Cable.

F-9-276

- 21) Insert the Speaker Cable to the Voice Guidance Board and the Speaker Unit.

NOTE:
Pass the Speaker Cable on the upper side of the Base Cover.

F-9-277

- 22) Put the Speaker Cable through the Cord Guide and install the Cord Guide Cover.

F-9-278

CAUTION:
Do not leave a slack in the Speaker Cable as it may be caught when opening and closing the DADF.

F-9-279

- 23) Connect the Power Plug into the outlet.
- 24) Turn ON the Main Power Switch.

Checking After Installation

- 1)[Settings/Registration] > [Preferences] > [Accessibility] > [Voice Navigation Settings] > and make sure that [Use Voice Navigation] is [ON].
- 2)[Settings/Registration] > [Preferences] > [Accessibility] > [Voice Navigation Settings] > and make sure that [Voice Guide from Speakers] is displayed.

Operation Check

< When Starting to Use >

- 1) Press reset key 3 secs or more.
- 2) If the display in panel screen is boxed with red frame, "Voice Guidance Kit" is available.

If "Voice Guidance Kit" doesn't properly operate, check the below.

- Make the following selection; Service Mode (Level 1) > COPIER > DISPLAY > VERSION, and check that TTS-JA/TTS-EN/TTS-IT/TTS-FR/TTS-DE/TTS-ES are installed correctly.

< When Disusing >

- 1) Hold down the Reset Key or Voice Recognition button for more than 3 seconds.

Reader Heater Unit

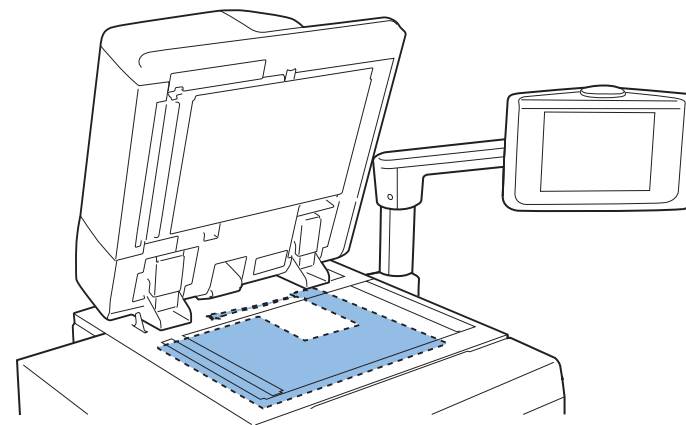

Checking the Contents (Asia only)

Reader Heater Unit-G1

Installation Outline Drawing

F-9-281

Checking the Parts to be Installed (Except for Asia)

Each parts of the Reader Heater Unit are provided as service parts, order as necessary to prepare parts below.

NO.	Parts name	Parts Number.	Q'ty
[1]	Reader Heater (200V)	FK2-7164-000	1 pc
[2]	Flat Screw (M4 x4)	XA9-1956-000	4 pc
[3]	Heater Sheet	FC8-6060-000	1 sheet

T-9-1

Installation Procedure

1) Open the DADF.

F-9-282

Product Name

Safety regulations require the product's name to be registered. In some regions where this product is sold, the following name may be registered instead.

- F154549

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the host machine.
- 2) Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.

- 2) Remove the Right Retainer Cover.
- 2 Screws

F-9-283

- 3) Remove the DF Cable Cover.
- 2 Screws

F-9-284

- 4) Remove the Copyboard Glass.

CAUTION:

When removing the Copyboard Glass, be sure not to get your fingers touched with the glass surface or the backside of the white plate.

In case the glass is soiled, clean it with lint-free paper.

F-9-285

F-9-286

- 5) Align the 5 Heater Sheets in the marking line and put them on.

F-9-287

- 6) Install the Reader Heater.
• 4 Screws (Flat-head; M4 x 4)
(*Binding screw can also be used.)

CAUTION:
Do not scratch the surface of the Guide Shaft.

F-9-288

- 7) Pass the connector under the scanner rail.

CAUTION:
Do not scratch surface of the wire and the Scanner Rail.

F-9-289

- 8) Loosen the screw and shift the harness guide in the direction of the arrow to make a space [A] to pass the harness.

F-9-290

- 9) Put the harness along the claws of FCC guide in the 4 places.

NOTE:
Make sure to keep the harness tightly put.

F-9-291

- 10) Release the wire saddle and connect the connector.

F-9-292

- 11) Fix the harness.
- 2 Edge Saddles
 - 1 Wire Saddle

F-9-293

NOTE:
Be sure to check that the sheet is on the plate.

F-9-294

- 12) Aligning with the boss, tighten the screw that has been loosened in step 8). (2 Screws)
- 13) Install the removed cover.
- Copy board glass
 - DF cable cover (2 Screws)
 - Right retainer cover (2 Screws)
- 14) Close the DADF.
- 15) Turn ON the environment switch.
- 16) Insert the power plug to the outlet.
- 17) Turn ON the main power switch.

Cassette Heater Unit for Host Machine

Checking the Parts to be Installed

Prepare the following parts because each part of the Cassette Heater Unit is assigned as service part.

F-9-295

No	Parts name	Parts Number	Q'ty
[1]	Cassette Heater Mounting Base	FE2-0010-000	1pc
[2]	Cassette Heater	FM0-4834-000	1pc
[3]	Wire Saddle	WT2-5694-000	1pc
[4]	Screw (Binding; M4x8)	XA9-1031-000	1pc
[5]	Screw (RS Tightening; M4x8)	XB3-6400-805	2pc

T-9-2

Product Name

Safety regulations require the product's name to be registered.

In some regions where this product is sold, the following name may be registered instead.

- F276801

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the host machine.
- 2) Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.

Installation Outline Drawing

F-9-296

Installation Procedure

- 1) Install the Cassette Heater to the Cassette Heater Mounting Base.
 - 3 Hooks
 - 1 Screw (Binding; M4 x 8)

F-9-297

- 2) Install the Wire Saddle, and secure the cable in place.

F-9-298

- 3) Pull the Open/Close Lever, and pull out the Cassette 1.

F-9-299

- 4) Move the stopper [A] to the front until it stops while loosening the screw.

F-9-300

- 5) Remove the Cassette 1 while lifting the [A] part of the Cassette 1.

F-9-301

- 6) Remove other cassettes in the same way.

- 7) Remove the Connector Cover.

- 1 Claw
- 2 Protrusions

F-9-302

- 8) Fit the 2 protrusions of the Cassette Heater Unit into the holes of the host machine.

F-9-303

□ 9) Install the Cassette Heater Unit.

- 2 Bosses
- 2 Screws (RS Tightening; M4 x 8)
- 1 Connector

F-9-304

□ 10) Install the Connector Cover.

- 2 Protrusions
- 1 Claw

F-9-305

□ 11) Align the position of the marking [A] on the machine with that of the marking [B] on the cassette. Install the cassette while lifting the [C] part of the cassette.

F-9-306

- 12) Move the stopper [A] to the rear until it stops while loosening the screw.

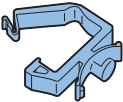

F-9-307

- 13) Close the Cassette.
- 14) Install other cassettes in the same way.
- 15) Turn on the Environment Heater Switch.
- 16) Insert the power plug to the outlet.
- 17) Turn ON the main power switch.

Cassette Heater Unit for POD Deck Lite

Checking the Parts to be Installed

Each part of the Cassette Heater Unit for the POD Deck Lite is supplied as a service part, so prepare the following parts. Also, use the appropriate Cassette Heater Unit for each country.

<input type="checkbox"/> [1] Cassette Heater Unit X 1 	<input type="checkbox"/> [2] Screw (TP ; M3x6) X 1 
<input type="checkbox"/> [3] Cassette Heater Harness X 1 	<input type="checkbox"/> [4] Switch Unit X 1 
<input type="checkbox"/> [5] Wire Saddle X 1 	

F-9-308

No	Parts name	Parts Number	Q'ty
[1]	Cassette Heater Unit	FM1-D634-000	1pc.
[2]	Screw (TP ; M3x6)	XB6-7300-605	1pc.
[3]	Cassette Heater Harness (120V)	FM1-E857-000	1pc.
	Cassette Heater Harness (230V)	FM1-E858-000	1pc.
[4]	Switch Unit	FM1-E859-000	1pc.
[5]	Wire Saddle	WT2-6108-000	1pc.

*As for the change of the part number, please refer to the latest parts catalog.

T-9-3

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the Host Machine.
- 2) Be sure that Control Panel Display and Main Power Lamp are both turned OFF, and then disconnect the power plug.

CAUTION:

When installing the Cassette Heater Unit to the POD Deck Lite, take the following precautions.

- a. The AC power plug of the Host Machine must have been removed from the outlet.
- b. Install the Heater after installing the Host Machine and POD Deck Lite.

Release the POD Deck Lite from the Host Machine

If the POD Deck Lite have been connecting to the Host Machine, release the POD Deck Lite from the Host Machine as follows.

- 1) Disconnect the Power Cord from the POD Deck Lite. Disconnect the plug end of the power cord from the external power outlet.

F-9-309

- 21) Remove the cable.
- 1 Wire Saddle
 - 1 Connector

F-9-310

- 32) Pull the deck release lever to release the POD Deck Lite from the Host Machine, and then move the POD Deck Lite until it stops.

F-9-311

Installation Procedure

- 11) Remove the Rear Cover.
 - 5 Screws

F-9-312

- 21) Pull the releasing lever to open the Deck Unit.

F-9-313

- 31) Remove the Right Cover.
 - 5 Screws

F-9-314

- 41) Install the Wire Saddle.
 - 1 Wire Saddle

F-9-315

□ 51) Install the Cassette Heater Harness.

- 3 Reuse Bands
- 2 Connectors

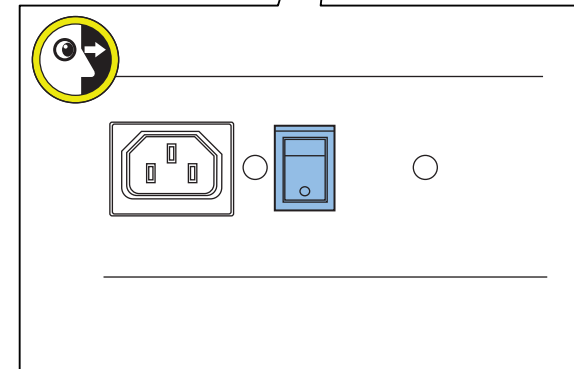

F-9-316

□ 61) Install the Switch Unit.

NOTE:

When installing the Switch Unit to the POD Deck Lite, make sure that the circle mark of the switch is the lower side.

F-9-317

71) Install the Harness of the Switch Unit as shown in the figure.

- 2 Wire Saddles
- 1 Connector

F-9-318

81) Remove the Heater Connector Cover inside POD Deck Lite. (The removed Heater Connector Cover will be used in "Installation Procedure" step 9)).

- 2 Projections
- 1 Claw

F-9-319

91) Set the Cassette Heater Unit inside the POD Deck Lite.

- 3 Claws

NOTE:
Be sure that the claws are properly fitted in the holes on the Base Plate.

F-9-320

101) Fix the Cassette Heater Unit.

- 1 Screw (TP; M3x6)

F-9-321

- 111) Connect the connector of Cassette Heater Unit.
- 1 Connector

F-9-322

- 121) Install the Heater Connector Cover. (Use the Cover removed in step 5).)
- 2 Projections
 - 1 Claw

F-9-323

- 131) Restore the removed covers.
- Right cover <5 Screws (Binding; M4x8)>
 - Rear cover <5 Screws (Binding; M4x8)>

- 141) If having released POD Deck Lite from the Host Machine, connect it to Host Machine.
- 1 Connector
 - 1 Wire Saddle

- 151) Connect the Power Cord removed in "Release the POD Deck Lite from the Host Machine" step 1) to POD Deck Lite.

F-9-324

Paper Deck Heater Unit

Checking the Parts to be Installed

Each part of the Paper Deck Heater Unit for the Paper Deck is supplied as a service part, so prepare the following parts.

Also, use the appropriate Paper Deck Heater Unit for each country.

No	Parts name	Parts Number <small>F-9-325</small>	Q'ty
[1]	Heater Unit (120V)	FM3-3771-000	1pc.
	Heater Unit (230V)	FM3-3772-000	1pc.
[2]	Middle Deck Cassette Heater Relay Harness (750mm)	FG3-4325-000	1pc.
[3]	Lower Deck Cassette Heater Relay Harness (405mm)	FG3-4326-000	1pc.
[4]	Screw (W Sems ; M4x8)	FC7-7646-000	1pc.

*As for the change of the part number, please refer to the latest parts catalog.

T-9-4

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch of the Host Machine.
- 2) Be sure that Control Panel Display and Main Power Lamp are both turned OFF, and then disconnect the power plug.

CAUTION:

When installing the Paper Deck Heater Unit to the Paper Deck, take the following precautions.

- a. The AC power plug of the Host Machine must have been removed from the outlet.
- b. Install the Paper Deck Heater Unit after installing the Host Machine and Paper Deck.

Installation Procedure

NOTE:

Following explains installation of the Paper Deck Heater Unit to the Middle Deck. Same procedure applies to installation of the Paper Deck Heater Unit to the Lower Deck.

- 1) Remove the Deck Rear Right Cover.

- 8 Screws

F-9-326

- 2) Remove the Deck Upper Rear Cover.

F-9-327

- 3) Remove the Deck Right Cover.
• 6 Screws

F-9-328

- 4) Open the Middle Deck manually with pressing the latch.

F-9-329

- 5) Remove the screw securing the Foreign Substance Sensor Bracket.
• 1 Screw

F-9-330

- 6) While the Sensor Harness is connected, remove the Foreign Substance Sensor Bracket and the Foreign Substance Sensor Flag.

F-9-331

- 7) Install the Heater Unit.
 - 3 Claws

F-9-332

- 8) Secure the Heater Unit.
 - 1 Screw (W Sems; M4x8)

F-9-333

-
- 9) Install the Foreign Substance Sensor Flag and the Foreign Substance Sensor Bracket to the original position.
- 1 Screw ((RS Tightening; M4x8)

NOTE:

Check that the sensor and the connector are securely connected and attached to the base.

F-9-334

-
- 10) Pass the Heater Unit Harness through the Square Bush at the lower side.

F-9-335

-
- 11) Secure the Heater Unit Harness and close the Middle Deck.
- 1 Wire Saddle

F-9-336

-
- 12) Release the AC Distribution PCB Harness.
- 1 Wire Saddle

F-9-337

- 13) Remove the AC Distribution PCB Cover.
- 2 Screws

F-9-338

- 14) Open the 20 Wire Saddles.

F-9-339

- NOTE:
When installing the Paper Deck Heater Unit to the Lower Deck, open the 11 Wire Saddles.

F-9-340

- 15) Connect the 2-pin connector side of the Middle Deck Cassette Heater Relay Harness to the Heater Unit Harness.
- 1 Connector

F-9-341

- 16) Secure the Middle Deck Cassette Heater Relay Harness.
- 20 Wire Saddles

NOTE:

When installing the Paper Deck Heater Unit to the Lower Deck, secure the Lower Deck Cassette Heater Relay Harness with the 11 Wire Saddles.

F-9-342

- 17) Install the 5-pin connector side of the Middle Deck Cassette Heater Relay Harness to CN4 on the AC Distribution PCB.
- 1 Connector

NOTE:

When installing the Paper Deck Heater Unit to the Lower Deck, install the 4-pin connector side of the Lower Deck Cassette Heater Relay Harness to CN3 on the AC Distribution PCB.

F-9-343

- 18) Install the AC Distribution PCB Cover.
- 2 Screws (RS Tightening; M4 x 8)
 - 1 Wire Saddle
- 19) Install the Deck Right Cover.
- 6 Screws (RS Tightening; M4 x 8)
- 20) Install the Deck Upper Rear Cover.
- 21) Install the Deck Rear Right Cover.
- 8 Screws (RS Tightening; M4 x 8)
- 22) Turn on the Cassette Heater Switch.
- 23) Insert the power plug to the outlet.
- 24) Turn ON the main power switch.

USB Device Port-A3 / Multimedia Reader/Writer-A3

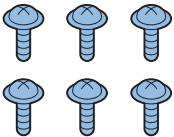

Points to Note at Installation

- When installing the Multimedia Reader/Writer, the USB Device Port must be installed beforehand.
- The Multimedia Reader/Writer cannot be used in combination with the Card Reader.

Checking the Contents

USB Device Port-A3

Check Items when Turning OFF the Power

Check that the main power is OFF.

- 1) Turn OFF the main power switch.
- 2) Check that display in the Control Panel and the lamp of the main power are turned off.

Installation Outline Drawing

F-9-347

Installation Procedure

Installing the USB Device Port

1) Open the Toner Replacement Cover.

2) Remove the Upper Front Cover.

- 3 Rubber Caps
- 3 Screws
- 3 Hooks

F-9-348

F-9-349

3) Remove the USB Cable.

- 2 Screws (The removed screw will be used in step 8.)

CAUTION:
Be careful not to drop the screws.

F-9-350

4) Free only the USB Cable from the 2 Wire Saddles. (Be sure not to close the 2 Wire Saddles.)

F-9-351

- 5) Pull the slack of the USB Cable in the direction of the arrow [1], secure it with the Wire Saddle [2] at the right edge, and close the Wire Saddle [3].

F-9-352

- 6) Install the DUH-V3 Board.
- 3 Screws (TP Round End, M3 x 6)

CAUTION:

Be careful not to damage the PCB.

F-9-353

- 7) Connect the Connector and the USB Cable.

F-9-354

- 8) Install the DP USB Cable.
- 2 Screws (Use the screws removed in step 3.)
 - 1 Wire Saddle

F-9-355

- 9) Connect the DP USB Cable.
 - 8 Wire Saddles

CAUTION:
Be sure to route the cable in the order shown in the figure to prevent the cable from overlapping itself.

F-9-356

F-9-357

- 10) If you are going to install the Card Reader (sales company's option), proceed to "Installing the Card Reader".
If you are going to install the Multimedia Reader/Writer, proceed to "Installing the Multimedia Reader/Writer".

■ Installing the Card Reader

- 1) Remove the Device Port Cover from the Upper Front Cover (removed in step 2 of the "Installing the USB Device Port") with a flat-blade screwdriver. (The removed Device Port Cover will be used in step 9.)
 - 3 Claws
 - 2 Hooks

F-9-358

F-9-359

□
2) Install the Card Reader Support.

- 2 Bosses
- 3 Screws (TP Round End; M3 x 6)

F-9-360

□
3) Install the Upper Front Cover.

- 3 Hooks
- 3 Screws
- 3 Rubber Caps

F-9-361

□
4) Close the Toner Replacement Cover.

□
5) Connect the Card Reader to the DUH-V3 Board.

F-9-362

□
6) Install the DP Cushion.

NOTE:
Be sure to adjust the number of cushions according to how the cable of the Card Reader is stored.

F-9-363

- 7) Route the cables in the free space.

F-9-364

- 8) Place the Card Reader in the center.

F-9-365

- 9) Install the Device Port Cover you removed in step 1.
- 3 Claws
 - 3 Hooks

F-9-366

- 10) Affix the Device Port Label to the place shown in the figure.

CAUTION: Standard for affixing the Device Port Label
 The label should be affixed within the depressed area.
 The gap from the edge of the depressed area should be 0.5 mm or less.

F-9-367

- 11) Insert the power plug into the outlet.
- 12) Turn ON the main power switch.

■ Installing the Multimedia Reader/Writer

- 1) Install the Media Reader Mounting Plate Unit.
 - 2 Bosses
 - 3 Screws (TP Round End; M3 x 6)

F-9-368

- 2) Install the Multimedia Card Slot and the Slot Holder.
 - 4 Screws (TP Round End; M3 x 6)

F-9-369

- 3) Cut off the Harness Band of the USB Cable.

CAUTION:
Be careful not to damage the cable covering.

F-9-370

- 4) Connect the USB Cable.
 - 2 Wire Saddles

F-9-371

- 5) Remove the Face Cover of the Upper Front Cover, which was removed in step 2 of "Installing the USB Device Port", by pushing it from inside. (Do not reuse the removed Face Cover.)

- 2 Claws
- 1 Hook

F-9-372

- 6) Install the Media Reader Cover.

- 1 Hook
- 2 Claws

F-9-373

- 7) Install the Upper Front Cover.

- 3 Hooks
- 3 Screws
- 3 Rubber Caps

F-9-374

- 8) Close the Toner Replacement Cover.

- 9) Insert the power plug into the outlet.
- 10) Turn ON the main power switch.
- 11) Next, proceed to "Operation Check".

● Operation Check (USB Device Port, Multimedia Reader/Writer)

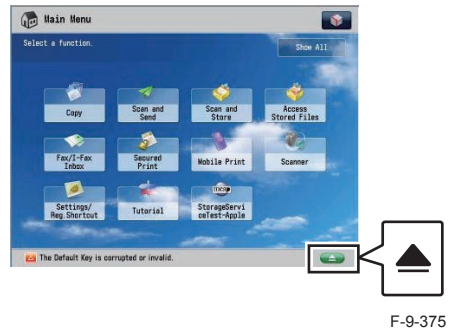

NOTE:

- Connect a USB memory device to the USB Device Port and perform the operation check.
- To the Multimedia Reader/Writer, Memory Media of the SD Card, Memory Stick, and CF Card can be connected. With one of the 3 types of Memory Media, perform the operation check.
- When changing the settings upon user's request, it is required to log in as a system manager in accordance with instructions from the user administrator.

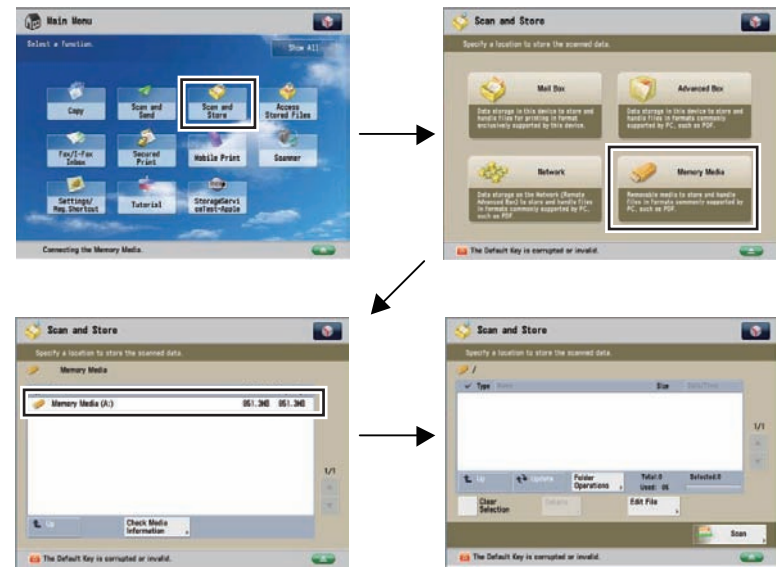

● 1. Writing Check

- 1) Select "1" for the following Service Mode (Level 2) (Default value "0").
 - COPIER > OPTION > DSPLY-SW > UI-MEM
- 2) To make the setting value effective, turn OFF/ON the main power of the Host Machine.

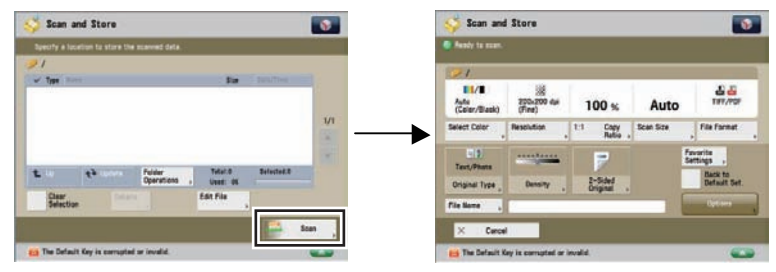

- 3) Mount the Memory Media to the Multimedia Card Reader/Writer (Check that the Mount Mark is indicated in the bottom right).

- 4) Make the following selection: [Scan and Store] > [Memory Media] > [Memory Media (A:)]

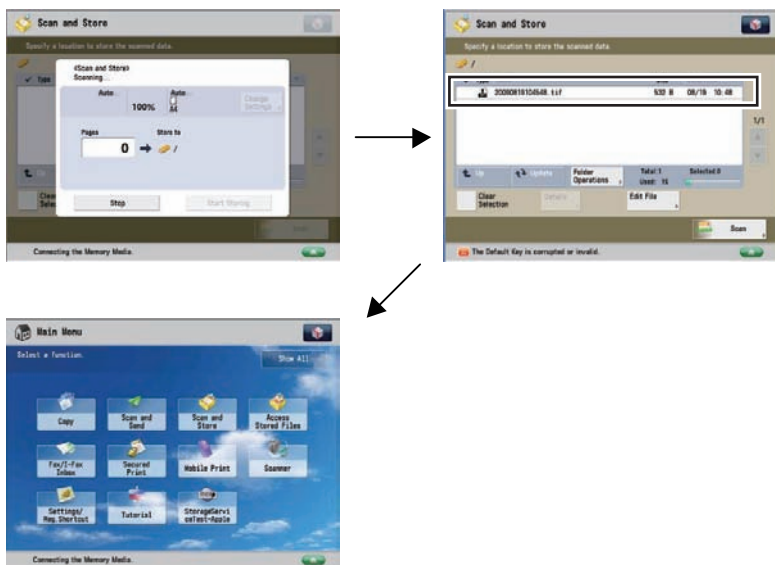

- 5) Set originals to Copyboard, and press the [Scan] button. Then, press the Start button on the Control Panel.

6) After scanning of the original is completed, press [Start Storing].

Confirm that data is stored in the media and press [Main Menu] on the Control Panel.

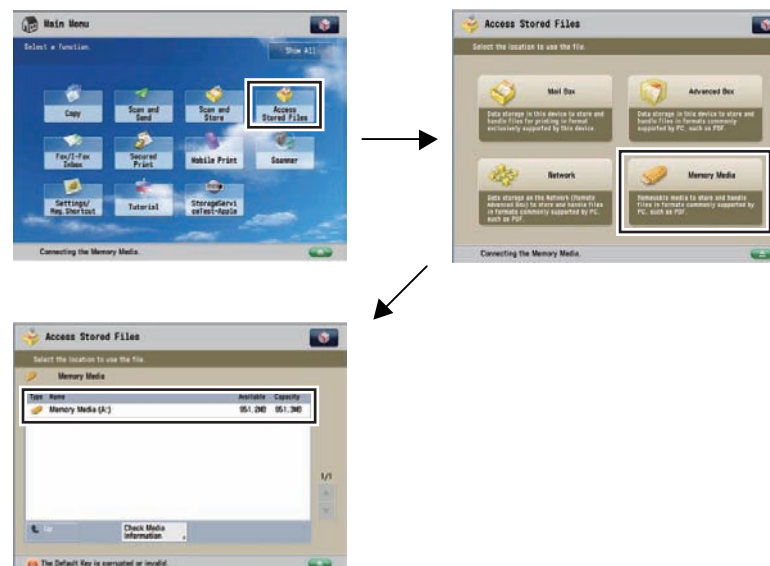

F-9-378

2. Reading Check

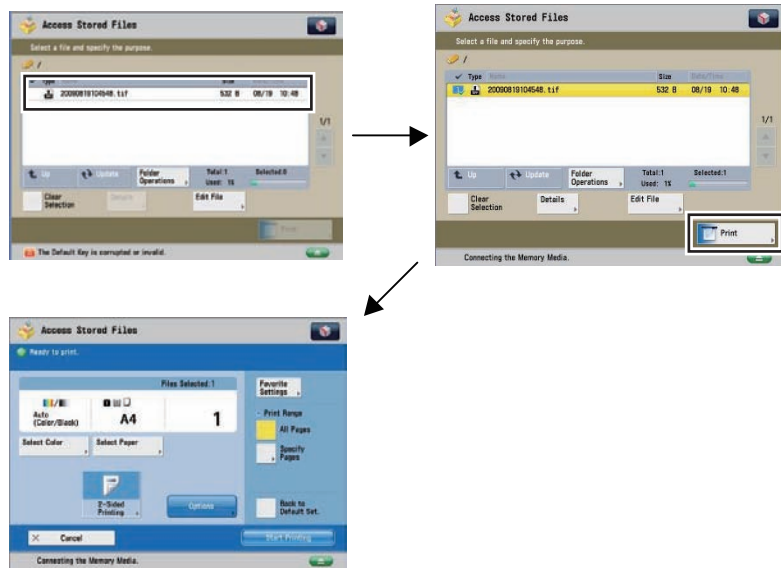

7) Make the following selection from Main Menu: [Access Stored Files] > [Memory Media] > [Memory Media(A:)]

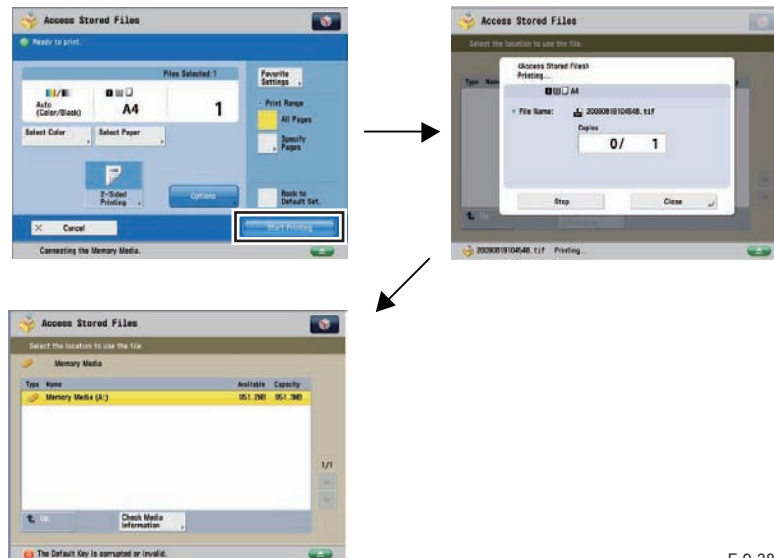

F-9-379

- 8) Select the files stored in step 4 to 6, and then press the [Print] button.

F-9-380

- 9) Press the [Start Printing] button, and print the file. Then check that the file is printed correctly.

F-9-381

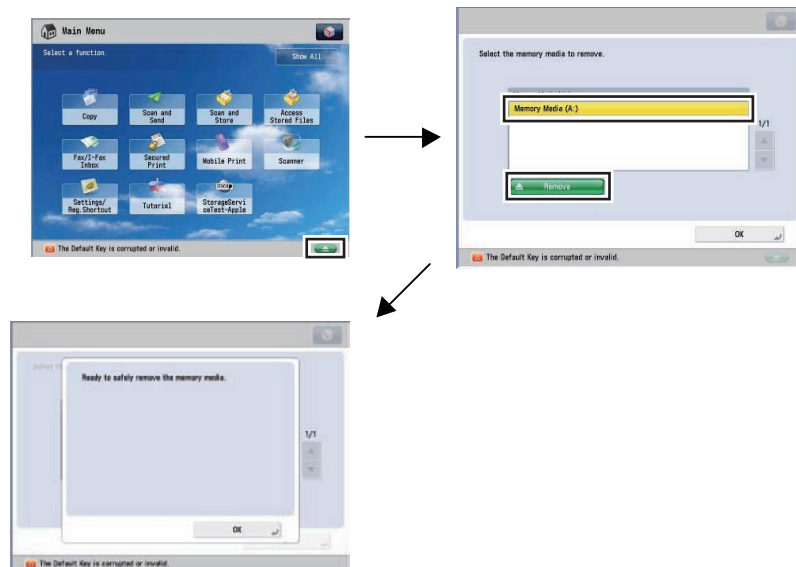

- 10) Press the [Main Menu] button on the Control Panel.

F-9-382

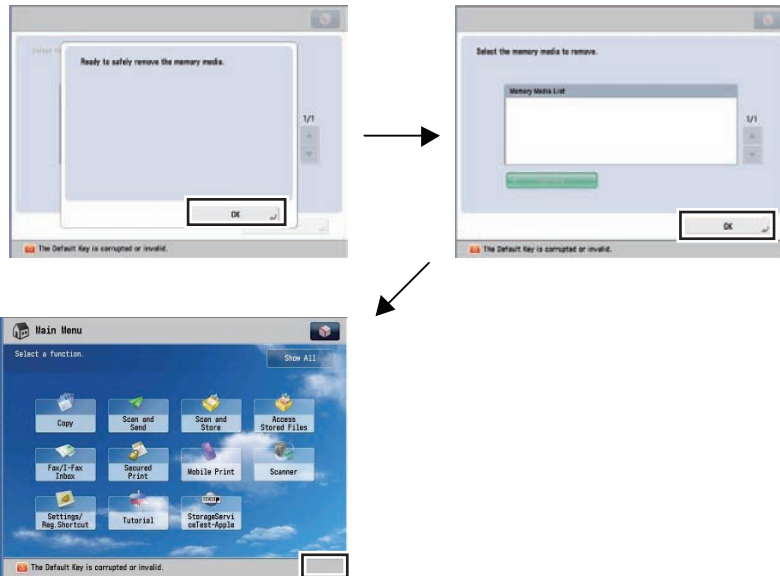

3. Memory Media Removal

- 11) Press the [Mount Mark] in the bottom right. Then, select the memory media to be removed, and press the [Remove] button.

F-9-383

- 12) Press the [OK] button. Then, check that the Mount Mark is not indicated in the bottom right on the Main Menu screen.

F-9-384

HDD-related Option

Combination of HDD Options

When installing the HDD options, refer to the pages indicated in the following table.

- 3.5inch/1TB HDD-M1
- Removable HDD Kit-AB2
- HDD Data Encryption & Mirroring Kit-C8

CAUTION:

- Caution on installing the HDD Data Encryption & Mirroring Kit :
Before turning off the machine, make sure to perform steps in "Setting Before Turning OFF the Power".
Refer to installation procedures of "Setting Before Turning OFF the Power" for details.
- When installing the HDD Data Encryption/Mirroring Kit, the data on the HDD will be erased. Be sure to back up/export the data as necessary.
- The system software needs to be after installing the HDD Data Encryption & Mirroring Kit.

Reference Pages in the Manual According to Product Combination:

Title	Combination of Product	Reference Pages	Remarks
TYPE-1	Removable HDD Kit	p. 9-151 to p. 9-166	
TYPE-2	Option HDD + HDD Data Encryption & Mirroring Kit	p. 9-167 to p. 9-182	These types correspond to "CASE-8" described in Installation Procedure included in the package of HDD Data Encryption & Mirroring Kit-C8.
TYPE-3	HDD Data Encryption & Mirroring Kit	p. 9-183 to p. 9-198	
TYPE-4	Option HDD + Removable HDD Kit + HDD Data Encryption & Mirroring Kit	p. 9-199 to p. 9-222	
TYPE-5	Removable HDD Kit + HDD Data Encryption & Mirroring Kit	p. 9-223 to p. 9-244

Points to Note Regarding Data Backup/Export

Before performing work that will result in the loss of data, inform the system administrator of the inevitable loss, asking him to make a backup or export of important data items.

Backup or export work must not be performed by the service person because of security considerations.

In this Installation Procedure, a series of backup or export procedures are described for reference.

[List of Data to be Deleted]

Data to be Deleted	Availability of Backup
Information registered in the Address Book	Yes
Settings made from the Settings/Registration screen	Yes *1
Forwarding Settings	Yes
License files for MEAP applications	Yes
MEAP applications	No
Data saved using MEAP applications	Yes *2
Favorite Settings registered in the Copy and Mail Box functions	No
Data stored in Mail Boxes	Yes *3
Scan modes registered in the Send Function	No
Unsent documents (documents waiting to be sent with the Delayed Send mode)	No
Image forms stored in the Superimpose Image	Yes
MEAP SMS (Service Management Service) password (the password will return to its default password if it was changed)	No
Job logs	No
User authentication information registered in the Local Device Authentication user authentication system of SSO-H (Single Sign-On H)	Yes
Registration information for the Network Place	No
Key Pair and Server Certificate	No
Log information for the IP address/MAC address restriction settings	No
Password that is protected by TPM	Yes *4
Encryption key that is protected by TPM	No
Information for Web browser settings	Yes *5
Quick Menu Information	Yes

T-9-6

*1 Can only be backed up using the Remote UI.

*2 Depending on the MEAP application.

*3 Only the following items are backed up.

- Mail Box Settings (mail box names, passwords, and auto erase times)
- Files in Mail Box
- Forms registered for the Superimpose Image

*4 You may not be able to back up, depending on the type of the password.

*5 Only the stored Favorite Settings can be backed up.

[List of Data that can be backed up]

Data that can be backed up	Reference	
Address Book	See the "e-Manual > Remote UI".	
Settings/Registration settings		
Device Settings (Forwarding Settings, Address List, Favorite Settings)		
Printer Settings		
Paper Information		
Image forms stored in the Superimpose Image		
Quick Menu Information		
Favorite Settings for Web browser		See the e-Manual > Web Access. (You can select this if web browser (Option) is installed.)
License files for MEAP applications		
Data saved by MEAP applications		Data saved by MEAP applications may be able to be backed up, depending on the MEAP application. See the documentation included with the MEAP application.
Data stored in Mail Boxes	See the e-Manual > Remote UI "Setting the Backup Location for Stored Data".	
SSO-H (Single Sign-On H) user authentication information	see the "e-Manual > MEAPI".	

T-9-7

CAUTION: Work to Perform After Installing the Kit

- When you start using this product, passwords set for Mail Boxes, Confidential Fax Inboxes, and the Memory RX Inbox are erased. Set these passwords again.
- If you have logged on to the machine using a login service, such as SSO-H (Single Sign-On H) before using this product, you must select the login service again using SMS (Service Management Service) after restarting the machine.
For more information on using SMS, see the e-Manual > MEAP.

Making a Backup of the Data (reference only)

The data items that have been backed up may be restored when the this product has been installed.

These data items are property of the user, and the restoration work must be performed by the system administrator.

The method of restoration is described in the Users Guide. See Table (Data to be backed up) in Points to Note About Installation of the Installation Procedure.

Preparation

Service mode setting values should be imported/exported by service technicians.

Execute import/export of service mode setting values by either of the following methods:

a. When importing/exporting from remote UI

1) Change the setting value of the following service mode to [1] to display "Service Mode Settings" on remote UI.

- Service mode (Level 1) > Copier > Option > USER > SMD-EXPT
[0] : Hide the "Service Mode Settings" (Default)
[1] : Display the "Service Mode Settings"

2) Turn OFF and then ON the power of the host machine.

b. When importing/exporting from service mode

Perform backup of service mode setting values in the USB flash drive.

Perform backup from [BACK UP] in service mode.

For the procedure, refer to the following section of the Service Manual.

ServiceManual > Technology > DCM > DCM > Import/Export by Service Mode (External)
(Refer to p. 2-288)

Procedure for Import/Export ALL of User Settings

Following data can be batch exported.

- Settings/Registration Basic Information
- Box Settings
- Department ID Management Settings
- Main Menu Settings
- Favorite Settings
- Address Book
- Forwarding Settings
- Quick Menu Settings
- MEAP Application Setting Information
- Paper Type Management Settings
- Web Access Settings

1) Access the URL given below, and then access Remote UI.

http://[IP address of the device]/

If the system administrator ID and password are set, a dialog box to enter the user name and password appears. Enter the system administrator ID in User Name and the password in Password, and then click [Administrator Login].

2) Select [Settings/Registration] > [Management Settings] > [Data Management] > [Import/Export ALL] > [Export].

3) Select the items to export (Select All).

CAUTION:

When exporting only specific items, this may cause setting information relating to multiple items to lose its relations and cause setting details to be switched. In this case, export all related items simultaneously.

4) Enter the password into [Encryption Password] and click on [Start Exporting].

5) Click [Check Status].

6) Check the result of the batch export, and click [Start Downloading].

■ Backup of MEAP Application

When a MEAP application has been installed, the data and license that the MEAP application retains will be deleted. If no MEAP application is installed, there is no need to make a backup. If a MEAP application has a backup function, make a backup of the data peculiar to the MEAP application using this function. With regard to the license, there is a need to stop all applications from SMS (Service Management Service), invalidate the license, and download the invalid license file.

The overview of procedures for stop of MEAP applications, Disabling of the license, and download of an Disabled license file is described below. For more information, see the MEAPSMS Administrator Guide

■ Stop of MEAP Applications, Disabling, Download of Disabled License Files and Uninstallation

- 1) Select the URL given below and access SMS.
http://[IP address of the device]:8000/sms/
The default password is MeapSmsLogin. If a user has changed the password, ask the user to change the password again after the use of this product is started.

CAUTION:

The default password is MeapSmsLogin. If a user has changed the password, ask the user to change the password again after the use of this product is started.

- 2) Click [MEAP Application Management].
- 3) Click [Stop] button of the application you want to stop on the MEAP Application Management page.
- 4) Check the status of MEAP Application is [Stop],
- 5) Click on the name of applications to disable.
- 6) Click [License Control], and then click [Disable].
- 7) Click [Yes] in a confirmation window for disabling the license.
- 8) Return to the MEAP Application Management page and click on the appropriate application names.
- 9) Click [License Management] on the Application/License Information page.
- 10) Click [Download].

- 11) Following the instructions on the window, specify the location to save the file.
Set a distinctive name for the disabled license file so that you can recognize it for which application. After you download the disabled license file to your PC, click [Delete].
Click [Yes] in a confirmation window for license deletion.
- 12) Return to the MEAP Application Management page, click [Uninstall] button of the application you want to uninstall. Click [Yes] in a confirmation window for uninstallation.
If there are several applications, repeat the procedures 1 to 7.
- 13) After the use of this product is started, re-install the application using an application file (jar file) of each application from SMS and the disabled license file (lic file).

■ User Authentication Information Registered by SSO-H (Single Sign-ON H)

In the case that the MEAP login application has been changed to SSO-H, there is a need to make a backup of the user authentication information.

- 1) Access the URL given below.
http://[IP address of the device]:8000/sso/
- 2) Login with the user name and password registered as an administrator in SSO-H.
The default administrator user name and password are as follows:
User Name: Administrator
Password: password
- 3) Click [User Control].
- 4) Put a checkmark to Select All, and then click [Export].
- 5) Leave the file format and character code as defaults and click [Start Export].
- 6) Following the instructions on the window, specify the location to save the file and click [Save].

Backup of User inbox document data

The procedure of backup and restoration of a box document data is described below.

Specify the backup destination of a document data:

- Backup to SMB server
Select SMB as a backup destination and specify an address, a user name, a password, and a path to the SMB server to which saved data is backed up.
- Backup to USB HDD
Select USB HDD as a backup destination and specify a path to the USB HDD folder to which saved data is backed up.

CAUTION: Data which cannot be backed up

If you back up/restore stored data without restarting the machine after changing the language displayed on the touch panel display by pressing [Settings/Registration] > [Preferences] from the control panel of the machine, the stored data may not be backed up/restored properly. For more information on the data that cannot be backed up, see Points to Note for Installation.

CAUTION:

If the language setting in the common specification settings (Settings/Registration) is set to ON, 'host address' and 'path to folder' might not be displayed correctly or cannot be referred.

CAUTION:

- Regarding the method of inputting characters, see 'Basic Operations' in the e-Manual.
- A host address can be up to 128 characters in 1 byte or 64 characters in 2 bytes using the 'Kana-Kanji,' 'Katakana,' 'alphanumeric character,' 'mark,' and 'code input' modes.
- A path to the folder can be up to 255 characters in 1 byte (127 characters in 2 bytes).
- A user name can be up to 128 characters in 1 byte or 64 characters in 2 bytes using the 'Kana-Kanji,' 'Katakana,' 'alphanumeric character,' 'mark,' and 'code input' modes.
- A password can be up to 7 to 48 characters using the 'alphanumeric character' and 'mark (1 byte)' modes.
- The voice sound symbol and the semi-voice sound symbol entered in the 'Katakana (1 byte)' mode are counted up as one 1-byte character.

[Backup method of User inbox document data]

- 1) Select [Settings/Registration] > [Management Settings] > [Data Management] > [Backup].
- 2) Select 'All' or 'Changes' for the backup method.
- 3) Click [Execute].

CAUTION:

- If any of the host IP address, user name, password, or path to the folder is not correctly entered, a backup cannot be made.
- If you select to encrypt the backup data, the backup process may take longer.

[Restoring the backup data of User inbox document data]

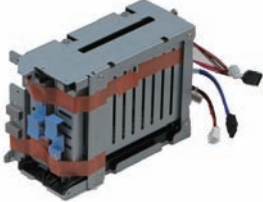

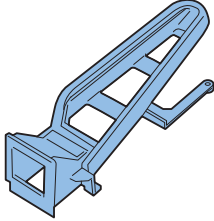

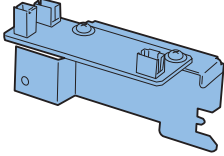

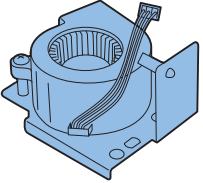

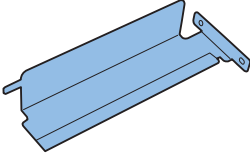

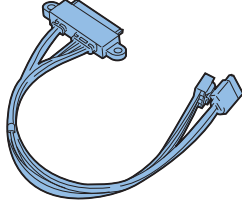

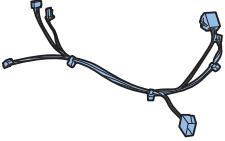

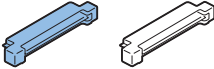

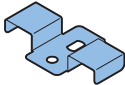

- 1) Select [Settings/Registration] > [Management Settings] > [Data Management] > [Restore].
- 2) Click [Display Backup Data].
- 3) Select the backup data to restore from the list and then click [Execute].

CAUTION:

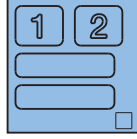

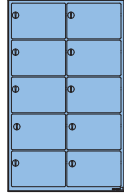

- If you want to restore encrypted backup data, enter the same password used when backing up the data.
- Depending on the settings of the machine, the backup data may not be completely restored, or some documents may be automatically printed.
- Restoration is performed after all of the box data stored in the machine, or documents that are being sent, received, or stored, are erased.

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch.
- 2) Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.

Installation Procedure

Removing the HDD Unit

- 1) Push the [A] part, and open the HDD Cover.

F-9-388

- 2) Remove the screw of the Box Upper Cover.
3) Remove the Box Right Cover.
- 2 Screws
 - 1 Hook

F-9-389

F-9-390

- 4) Remove the Box Left Cover.
• 4 Screws

F-9-391

- 5) Remove the Box Upper Cover.
• 1 Screw

F-9-392

- 6) Remove the Rear Upper Cover.
• 9 Screws
• 1 Hook

F-9-393

- 7) Open the HDD Lid.
• 1 Screw (The removed screw will no longer be used.)

F-9-394

8) Remove the Signal Cable and the Power Cable from the HDD.

- 2 Connectors
- 1 Wire Saddle
- 1 Edge Saddle

9) Remove the screw of the HDD Unit. (The removed screw will be used in step 8 of "Installing the Removable HDD Unit".)

F-9-395

10) Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.

F-9-396

CAUTION:

- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.

F-9-397

11) Remove the HDD Unit from the host machine.

F-9-398

- 12) Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

F-9-399

- 13) Close the 4 Wire Saddles [A].

F-9-400

■ Installing the Fan Duct / Fan Keyboard Unit

- 1) Remove the plate. (The removed plate and screws will no longer be used.)
- 2 Screws

F-9-401

- 2) Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)

- 2 Connectors
- 1 Wire Saddle
- 1 Reuse Band

- 3) Install the included in Fan Cable to the Fan Keyboard Unit.

- 3 Connectors

F-9-403

- 4) Install the Fan Keyboard Unit.

- 1 Protrusion
- 1 Screw (TP Round End; M3 x 6)

F-9-404

- 5) Insert the Reuse Band of the Fan Cable.

F-9-405

- 6) Connect the 2 Connectors of the Fan Cable.
- 1 Wire Saddle (To be closed)
 - 1 Edge Saddle (To be kept open)

NOTE:

The connector [A] will be used to connect in the step 4 of "Installing the Removable HDD Unit".

F-9-406

- 7) Slide the Fan Duct in the arrow direction, and install.
- 2 Hooks
 - 1 Boss

F-9-407

Replacing to the Removable HDD Unit

- 1) Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)
 - 2 Screws
- 2) Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)
 - 2 Screws
- 3) Remove the Grounding Plate. (The removed Grounding Plate will be used in step 13.)
 - 1 Screw (The removed screw will no longer be used.)

- 4) Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)
 - 4 Screws (The removed screws will be used in step 19.)
 - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 19.)

CAUTION:

Hold and support the HDD with a hand to prevent from dropping off.

- 5) Remove the tape affixed to the outside of the Removable HDD Unit.
- 6) Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.

7) Install the Latch Shaft removed at step 2 to the Removable HDD Unit.

- 2 Bosses
- 2 Screws (Use the screws removed in step 2.)

F-9-411

8) Install the HDD Lid removed at step 1 to the Removable HDD Unit.

- 2 Screws (Use the screws removed in step 1.)

NOTE:

When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.

F-9-412

9) Remove the IVDR4 Cable (A:HDD-Sig1(Red)/A:HDD-Pow1) and the IVDR4B Cable (A:HDD-Sig2(Blue)/A:HDD-Pow2) from the Removable HDD Unit.

- 4 Drawer Stepped Screws
- 4 Drawer Springs
- 4 Spacers

NOTE:

- Two each of the drawer stepped screws, the drawer springs, and the spacers are reused at step 12.
- The removed IVDR4B Cable (A: HDD-Sig2 (Blue)/A: HDD-Pow2), 2 Drawer Stepped Screws, 2 Drawer Springs, and 2 Spacers each will not be used.

F-9-413

10) Remove the Connector Holder Plate from either IVDR4 Cable (A:HDD-Sig1(Red)/A:HDD-Pow1) which was removed in step 9. (The removed cable will no longer be used.)

- 2 Screws (The removed screws will be used in step 11.)

F-9-414

- 11) Install the Connector Holder Plate which was removed in step 10 to the IVDR2 Cable.
- 2 Screws (Use the screws removed in step 10.)

F-9-415

- 12) Install the IVDR2 Cable to the Removable HDD Unit.
- 2 Spacers
 - 2 Drawer Springs
 - 2 Drawer Stepped Screws
- (Use the Spacers, the Drawer Springs, and the Drawer Stepped Screws removed in step 9.)

F-9-416

- 13) Install the Grounding Plate removed at step 3.
- 2 Bosses
- 14) Fit the protrusion on the HDD Face Plate into the hole on the mold part, and install it.
- 1 Screw (TP Round End; M3 x 6)

F-9-417

- 15) Close the HDD Lid.

< Disassembling and Assembling of the HDD Removed from the Host Machine >

- 16) Remove the screw of the HDD removed at step 4. (The removed screw will be used in step 18.)
- 17) Install the Conversion Connector to the HDD.

F-9-418

- 18) Install the HDD in the Removable HDD Case as shown in the figure.
- 1 Screw (Use the screw removed in step 16.)
 - 1 Inch Screw

CAUTION:

- Be sure to check that the Plastic Film is over the PCB of the HDD.
- The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 19) from coming in contact with the PCB of the HDD, resulting in short circuit.

F-9-419

- 19) Install the Removable HDD Case Cover to the HDD.
- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
 - 4 Screws (Use the screws removed in step 4.)

F-9-420

- 20) Affix the No.1 of the R-HDD Label to the handle of the assembled Removable HDD.
- 21) Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

CAUTION:

Be sure that the Removable HDD is in the correct direction.

F-9-421

■ Installing the Removable HDD Unit

1) Insert 2/3 of the Removable HDD Unit along the rail on the host machine.

F-9-422

2) Connect 2 connectors of the IVDR2 Cable.

- 1 Wire Saddle
- 1 Edge Saddle

F-9-423

3) To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.

F-9-424

□
4) Install the Fan Unit, and connect the connector to the yellow cable.

- 2 Bosses
- 2 Screws (P Tightening; M4 x 10)

F-9-425

□
5) Connect the Fan Cable of the host machine disconnected in step 3 to the light blue cable.

F-9-426

□
6) Secure 3 cables with the Wire Saddle.

CAUTION:

- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.

F-9-427

- 7) Insert the Removable HDD Unit all the way to the hook [A].

CAUTION:

Check that the IVDR2 Cable does not come in contact with the [B] part (the drawer stepped screw/drawer spring).

- 8) Open the HDD Lid, install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.

- 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

F-9-428

- 9) Insert the Removable HDD along the rail of the Removable HDD Unit.

F-9-429

- 10) Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.

F-9-430

- 11) Close the HDD Lid.

- 12) Affix the Handle Label on the Handle part of the HDD Lid.

F-9-431

- 13) Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

CAUTION:

When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.

F-9-432

- 14) Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:

Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-433

- 15) Close the HDD Cover.

- 16) Install the Box Upper Cover.
- 1 Protrusion
 - 1 Lib
 - 2 Screws
- 17) Install the screw of the Box Right Cover.

F-9-434

- 18) Install the Box Left Cover.
- 4 Screws

CAUTION:
Be careful not to trap the cable.

F-9-435

- 19) Connect the power plug to the outlet.
- 20) Turn ON the main power switch.

[TYPE-2] Option HDD + HDD Data Encryption & Mirroring Kit

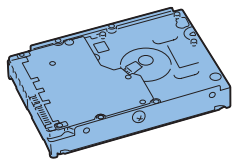

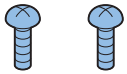

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.

If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

- Installation Procedure

Setting Before Turning OFF the Power

CAUTION:

Be sure to turn OFF the main power after executing this service mode setting.

Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.

When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

- 1) Execute the following service mode (level 1).
COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch.
- 2) Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.

Installation Procedure

Removing the HDD Unit

- 1) Push the [A] part, and open the HDD Cover.

F-9-439

-
- 2) Remove the screw of the Box Upper Cover.
- 3) Remove the Box Right Cover.
- 2 Screws
- 1 Hook

F-9-440

F-9-441

-
- 4) Remove the Box Left Cover.
- 4 Screws

F-9-442

-
- 5) Remove the Box Upper Cover.
- 1 Screw

F-9-443

□ 6) Remove the Rear Upper Cover.

- 9 Screws
- 1 Hook

F-9-444

□ 7) Open the HDD Lid.

- 1 screw (The removed screw will be used in step 7 of "Installing the HDD Unit".)

F-9-445

□ 8) Remove the Signal Cable and the Power Cable from the HDD.

- 2 Connectors
- 1 Wire Saddle
- 1 Edge Saddle

9) Remove the screw of the HDD Unit. (The removed screw will be used in step 5 of "Installing the HDD Unit".)

F-9-446

- 10) Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.

F-9-447

- 11) Remove the HDD Unit from the host machine.

F-9-449

CAUTION:

- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.

F-9-448

- 12) Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

F-9-450

■ Adding a HDD

- 1) Install the 4 Anti-vibration Dampers to the removed HDD Unit.
- 2) Remove the release paper of the Gasket, and affix the Gasket to the position inside the HDD Unit shown in the figure.

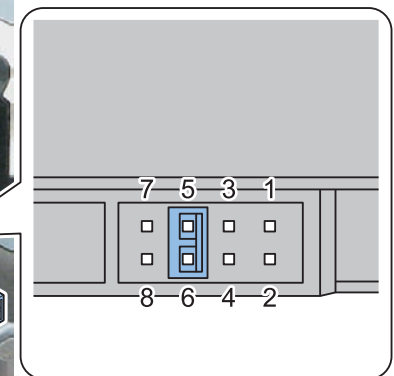

F-9-451

- 3) Connect the Short Plug to the Pin 5 and Pin 6 of the connector of the HDD.

CAUTION:

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-452

- 4) Place the Option HDD with its labeled face up, and connect the Short Plug to the Pin 5 and Pin 6 of the connector.

CAUTION:

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-453

- 5) Tighten the 2 Inch Screws to the Option HDD.

NOTE:

Be sure to use Inch Screws.

F-9-454

- 6) While holding the Option HDD, install it to the HDD Unit by inserting its PCB side into the HDD Unit.
- 4 Inch Stepped Screws

NOTE:

- Be sure to use Inch Stepped Screws.
- Do not remove the Gasket affixed to the inside of the HDD Unit when installing the HDD.

F-9-455

■ Installing the Encryption Board

- 1) Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 5 Wire Saddles (Small).

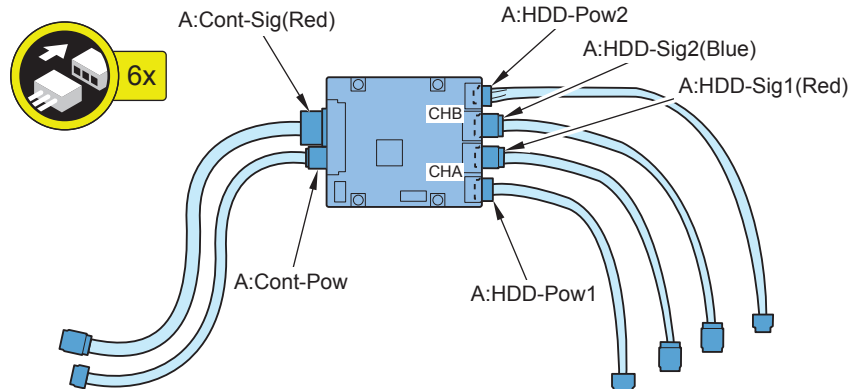

F-9-456

2) Connect the Signal Cable and Power Cable to the Encryption Board.

- Signal Cable (450 mm; A:Cont-Sig (Red))
- Power Cable (430 mm; A:Cont-Pow)
- Power Cable (430 mm; A:HDD-Pow2)
- Signal Cable (370 mm; A:HDD-Sig2 (Blue))
- Signal Cable (340 mm; A:HDD-Sig1 (Red))
- Power Cable (320 mm; A:HDD-Pow1)

F-9-457

3) Install the Encryption Board.

- 4 Screws (TP; M3 x 6)

F-9-458

4) Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).

- 2 Connectors
- 1 Edge Saddle (To be closed)
- 7 Wire Saddles (To be kept open)

CAUTION:

Route cables equally to eliminate unnecessary slack.

F-9-459

- 5) Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).

- 6) Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.
- 1 Screw (TP; M3 x 6)

- 7) Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.
- 1 Connector
 - 7 Wire Saddles (Keep the Wire Saddle [A] open.)

CAUTION:

Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.

Installing the HDD Unit

NOTE:

The following shows the combination of the HDD and the Encryption Board.

- Connect Slot.1 to "CH A" (Host machine's HDD)
- Connect Slot.2 to "CH B" (Option HDD)

F-9-463

- 1) Pass the 3 cables through the 5 Wire Saddles as shown in the figure. (Keep the 4 Wire Saddles [A] open.)

F-9-464

- 2) As shown in the figure, secure the Power Cable (430 mm; A:HDD-Pow2) with the 5 Wire Saddles, and close all the Wire Saddles.

F-9-465

CAUTION:

- Be sure to take up slack of the cables.
- Be sure to tuck the [A] part of the cables to the rear side.

F-9-466

-
- 3) Insert the HDD Unit approx. 2/3 along the rails of the host machine, and pass the 4 cables through the [A] part.

F-9-467

-
- 4) Insert the HDD Unit until it stops.
- 2 Protrusions
- 5) Secure the 4 cables with the Edge Saddle, and install the HDD Unit.
- 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

CAUTION:

Do not deform the [A] part of the Grounding Plate.

F-9-468

□
6) Connect the Signal Cable and the Power Cable to the HDD.

- Connect the Signal Cable (370 mm; A:HDD-Sig2 (Blue)) and the Power Cable (430 mm; A:HDD-Pow2) to Slot.2, and fix with the wire saddle.
- Connect the Power Cable (320 mm; A:HDD-Pow1) and the Signal Cable (340 mm; A:HDD-Sig1 (Red)) to Slot.1.

F-9-469

CAUTION:

If there is extra slack of the cables, be sure to tuck them in the [A] part.

F-9-470

□
7) Close the HDD Lid, and tighten the screw. (Use the screw removed in step 7 of "Removing the HDD Unit".).

CAUTION:

Be careful not to trap the Cable.

F-9-471

□
8) Affix the LED Label according to align with the ruled line on the HDD Lid.

F-9-472

□
9) Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

CAUTION:

When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.

F-9-473

□
10) Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:

Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-474

□
11) Close the HDD Cover.

- 12) Install the Box Upper Cover.
- 1 Protrusion
 - 1 Lib
 - 2 Screws
- 13) Install the screw of the Box Right Cover.

F-9-475

- 14) Install the Box Left Cover.
- 4 Screws

CAUTION:
Be careful not to trap the cable.

F-9-476

- 15) Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

1. Requirements

- 1) PC
Service Support Tool in the version that supports this host machine must be installed.
- 2) Cross Ethernet Cable

2. Preparing for the Installation of the System Software of Host machine

- 1) If both PC and the machine are on, turn them off.
- 2) Connect the PC and the host machine using an Cross Ethernet cable.
- 3) Turn on the PC.
- 4) Start up the host machine in download mode (safe mode).

3. Selecting the System Software

- 1) Set the CD containing the latest System Software in the PC on which the SST is used.
- 2) Start up the SST.
- 3) Click 'Register Firmware'.
- 4) Select the drive in which the System Software CD has been set, and click 'SEARCH'.
- 5) Click 'REGISTER'.
- 6) Click OK.

4. Downloading the System Software

- 1) Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.
- 2) When initialization is completed, the host machine is automatically restarted and it enters download mode.
- 3) Select the version to be downloaded and click "Start".
- 4) When download is completed, the host machine is automatically restarted.
- 5) When writing of the firmware is completed, the host machine is automatically restarted.
- 6) Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.
- 7) Terminate the SST.
- 8) Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.
- 9) Check the version of the downloaded firmware in service mode.

Checking the Security Version

- 1) Press the Counter key (123 key) on the control panel.
- 2) Press the [Check Device Configuration] key appearing on the control panel.
- 3) Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.
When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:

The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:

< Confirming the Security Mark >

When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark () is displayed on the lower left corner of a panel screen.

Setting for Mirroring

- 1) Specify the setting for Mirroring.
 - Service Mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID; select "1" for W/RAID.
- 2) Turn OFF/ON the main power switch to enable the setting value.
- 3) Check that the UI screen is started normally.
- 4) Open the HDD Cover, and observe the LED to check that mirroring is normally executed.
 - The green LED of HDD1 (Slot.1) is flashing.
 - The green and red LEDs of HDD2 (Slot.2) are flashing.

CAUTION:

Re-building process starts after setting W/RAID to "1".

When the error indicating the message of "Need to replace Hard Disk (Contact with Service Technician)" on the UI occurs, re-execute the re-building process as follows:

- 1) Check the lighted Red LED is for the HDD2.
- 2) Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to "0".
- 3) Turn OFF/ON the main power switch of the host machine to enable the setting value.
- 4) Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to "1".
- 5) Turn OFF/ON the main power switch of the host machine to enable the setting value.

The abovementioned procedure is limited only for the re-building process at the initial installation. The error occurred at re-building process during operation is not targeted.

F-9-477

Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:

At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.

Completion of the Installation Work:

Ask the system administrator to make sure that '2.01' is indicated for 'Canon MFP Security Chip' as the version information of the security chip by referring to the description of Checking the Security Version.

Maintenance of the Security Functions:

Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.

After installing this product, execute the image quality adjustment shown below. (Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust) (Refer to p. 9-62)
- Register Paper to Adjust (Refer to p. 9-64)
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit) (Refer to p. 9-66)

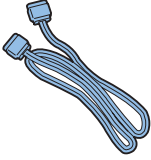

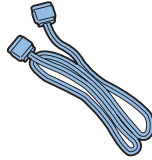

[TYPE-3] HDD Data Encryption & Mirroring Kit

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

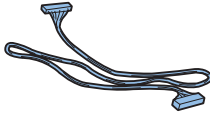

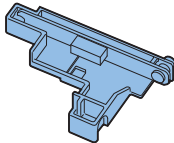

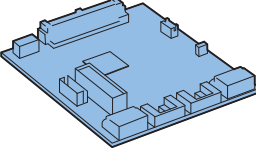

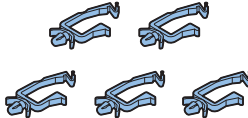

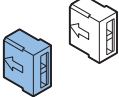

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.

If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Checking the Contents

<input type="checkbox"/> [1] Signal Cable (450mm; A:Cont-Sig (Red)) X 1 	<input type="checkbox"/> [2] Power Cable (430mm; A:Cont-Pow) X 1 	<input type="checkbox"/> [3] Signal Cable (340mm; A:HDD-Sig1 (Red)) X 1

- FCC/IC Sheet
- Installation Procedure

Setting Before Turning OFF the Power

CAUTION:

Be sure to turn OFF the main power after executing this service mode setting.

Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.

When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

- 1) Execute the following service mode (level 1).
COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch.
- 2) Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.

Installation Procedure

Removing the HDD Unit

- 1) Push the [A] part, and open the HDD Cover.

F-9-480

-
- 2) Remove the screw of the Box Upper Cover.
- 3) Remove the Box Right Cover.
- 2 Screws
- 1 Hook

F-9-481

F-9-482

-
- 4) Remove the Box Left Cover.
- 4 Screws

F-9-483

-
- 5) Remove the Box Upper Cover.
- 1 Screw

F-9-484

□ 6) Remove the Rear Upper Cover.

- 9 Screws
- 1 Hook

F-9-485

□ 7) Open the HDD Lid.

- 1 screw (The removed screw will be used in step 7 of "Installing the HDD Unit".)

F-9-486

□ 8) Remove the Signal Cable and the Power Cable from the HDD.

- 2 Connectors
- 1 Wire Saddle
- 1 Edge Saddle

9) Remove the screw of the HDD Unit. (The removed screw will be used in step 5 of "Installing the HDD Unit".)

F-9-487

- 10) Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.

F-9-488

- 11) Remove the HDD Unit from the host machine.

F-9-490

CAUTION:

- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.

F-9-489

- 12) Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

F-9-491

- 13) Connect the Short Plug to the Pin 5 and Pin 6 of the connector of the HDD removed in step 11.

CAUTION:

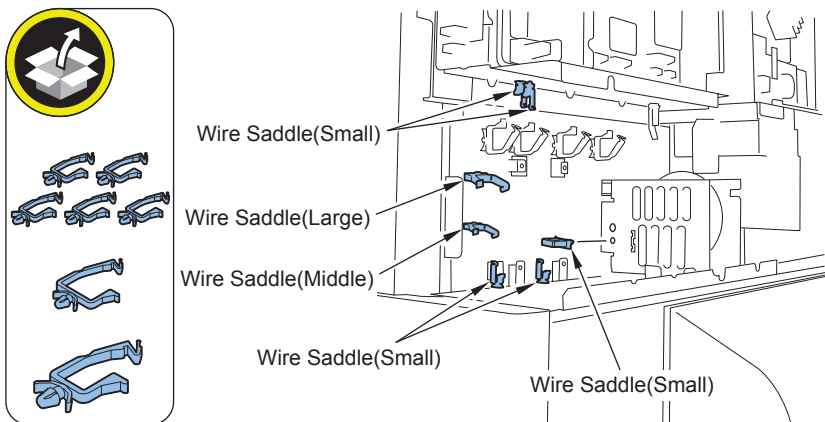

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-492

Installing the Encryption Board

- 1) Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 5 Wire Saddles (Small).

F-9-493

- 2) Connect the Signal Cable and Power Cable to the Encryption Board.

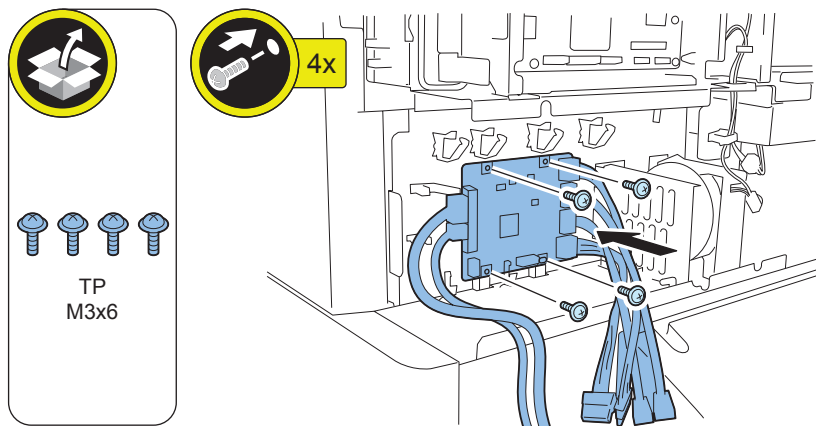

- Signal Cable (450 mm; A:Cont-Sig (Red))
- Power Cable (430 mm; A:Cont-Pow)
- Power Cable (430 mm; A:HDD-Pow2)
- Signal Cable (370 mm; A:HDD-Sig2 (Blue))
- Signal Cable (340 mm; A:HDD-Sig1 (Red))
- Power Cable (320 mm; A:HDD-Pow1)

F-9-494

3) Install the Encryption Board.

- 4 Screws (TP; M3 x 6)

F-9-495

4) Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).

- 2 Connectors
- 1 Edge Saddle (To be closed)
- 7 Wire Saddles (To be kept open)

CAUTION:
Route cables equally to eliminate unnecessary slack.

F-9-496

5) Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).

F-9-497

6) Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.

- 1 Screw (TP; M3 x 6)

F-9-498

7) Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.

- 1 connector
- 7 Wire Saddles (Keep the Wire Saddle [A] open.)

CAUTION:

Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.

F-9-499

■ Installing the HDD Unit

NOTE:

The following shows the combination of the HDD and the Encryption Board.

- Connect Slot.1 to "CH A" (Host machine's HDD)
- No HDD to Slot.2

F-9-500

1) Pass the 3 cables through the 5 Wire Saddles as shown in the figure. (Keep the 4 Wire Saddles [A] open.)

F-9-501

- 2) As shown in the figure, secure the Power Cable (430 mm; A:HDD-Pow2) with the 5 Wire Saddles, and close all the Wire Saddles.

F-9-502

CAUTION:

- Be sure to take up slack of the cables.
- Be sure to tuck the [A] part of the cables to the rear side.

F-9-503

- 3) Insert the HDD Unit approx. 2/3 along the rails of the host machine, and pass the 4 cables through the [A] part.

F-9-504

□
4) Insert the HDD Unit until it stops.

- 2 Protrusions

5) Secure the 4 cables with the Edge Saddle, and install the HDD Unit.

- 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

CAUTION:

Do not deform the [A] part of the Grounding Plate.

F-9-505

□
6) Connect the Signal Cable and the Power Cable to the HDD.

- Fix the Power Cable (430 mm; A:HDDPow2) and Signal Cable (370 mm; A:HDD-Sig2 (Blue)) with the wire saddle, and insert the connector into the empty space of Slot.2 side.
- Connect the Power Cable (320 mm; A:HDD-Pow1) and the Signal Cable (340 mm; A:HDD-Sig1 (Red)) to Slot.1.

F-9-506

CAUTION:

If there is extra slack of the cables, be sure to tuck them in the [A] part.

F-9-507

- 7) Close the HDD Lid, and tighten the screw. (Use the screw removed in step 7 of "Removing the HDD Unit".).

CAUTION:

Be careful not to trap the Cable.

F-9-508

- 8) Affix the LED Label according to align with the ruled line on the HDD Lid.

F-9-509

- 9) Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

CAUTION:

When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.

F-9-510

- 10) Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:

Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-511

- 11) Close the HDD Cover.

- 12) Install the Box Upper Cover.
- 1 Protrusion
 - 1 Lib
 - 2 Screws
- 13) Install the screw of the Box Right Cover.

F-9-512

- 14) Install the Box Left Cover.
- 4 Screws

CAUTION:

Be careful not to trap the cable.

F-9-513

- 15) Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

1. Requirements

- 1) PC
Service Support Tool in the version that supports this host machine must be installed.
- 2) Cross Ethernet Cable

2. Preparing for the Installation of the System Software of Host machine

- 1) If both PC and the machine are on, turn them off.
- 2) Connect the PC and the host machine using an Cross Ethernet cable.
- 3) Turn on the PC.
- 4) Start up the host machine in download mode (safe mode).

3. Selecting the System Software

- 1) Set the CD containing the latest System Software in the PC on which the SST is used.
- 2) Start up the SST.
- 3) Click 'Register Firmware'.
- 4) Select the drive in which the System Software CD has been set, and click 'SEARCH'.
- 5) Click 'REGISTER'.
- 6) Click OK.

4. Downloading the System Software

- 1) Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.
- 2) When initialization is completed, the host machine is automatically restarted and it enters download mode.
- 3) Select the version to be downloaded and click "Start".
- 4) When download is completed, the host machine is automatically restarted.
- 5) When writing of the firmware is completed, the host machine is automatically restarted.
- 6) Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.
- 7) Terminate the SST.
- 8) Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.
- 9) Check the version of the downloaded firmware in service mode.

Checking the Security Version

- 1) Press the Counter key (123 key) on the control panel.
- 2) Press the [Check Device Configuration] key appearing on the control panel.
- 3) Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.

When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:

The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:

< Confirming the Security Mark >

When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark () is displayed on the lower left corner of a panel screen.

Checking After Installation

- 1) Open the HDD Cover, and observe the LED to check that there is no error in communication with the HDD.
 - The green LED of HDD1 (Slot.1) is flashing.

F-9-514

Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:

At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.

Completion of the Installation Work:

Ask the system administrator to make sure that '2.01' is indicated for 'Canon MFP Security Chip' as the version information of the security chip by referring to the description of Checking the Security Version.

Maintenance of the Security Functions:

Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.

After installing this product, execute the image quality adjustment shown below.

(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust) (Refer to p. 9-62)
- Register Paper to Adjust (Refer to p. 9-64)
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit) (Refer to p. 9-66)

[TYPE-4] Option HDD + Removable HDD Kit + HDD Data Encryption & Mirroring Kit

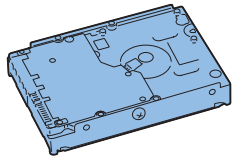

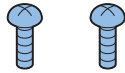

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.

If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Setting Before Turning OFF the Power

CAUTION:

Be sure to turn OFF the main power after executing this service mode setting.

Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.

When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

- 1) Execute the following service mode (level 1).
COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1) Turn OFF the main power switch.
- 2) Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.

Installation Procedure

Removing the HDD Unit

- 1) Push the [A] part, and open the HDD Cover.

F-9-520

-
- 2) Remove the screw of the Box Upper Cover.
- 3) Remove the Box Right Cover.
 - 2 Screws
 - 1 Hook

F-9-521

F-9-522

-
- 4) Remove the Box Left Cover.
 - 4 Screws

F-9-523

-
- 5) Remove the Box Upper Cover.
 - 1 Screw

F-9-524

□ 6) Remove the Rear Upper Cover.

- 9 Screws
- 1 Hook

F-9-525

□ 7) Open the HDD Lid.

- 1 Screw (The removed screw will no longer be used.)

F-9-526

□ 8) Remove the Signal Cable and the Power Cable from the HDD.

- 2 Connectors
- 1 Wire Saddle
- 1 Edge Saddle

9) Remove the screw of the HDD Unit. (The removed screw will be used in step 10 of "Installing the Removable HDD Unit".)

F-9-527

- 10) Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.

F-9-528

CAUTION:

- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.

F-9-529

- 11) Remove the HDD Unit from the host machine.

F-9-530

- 12) Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

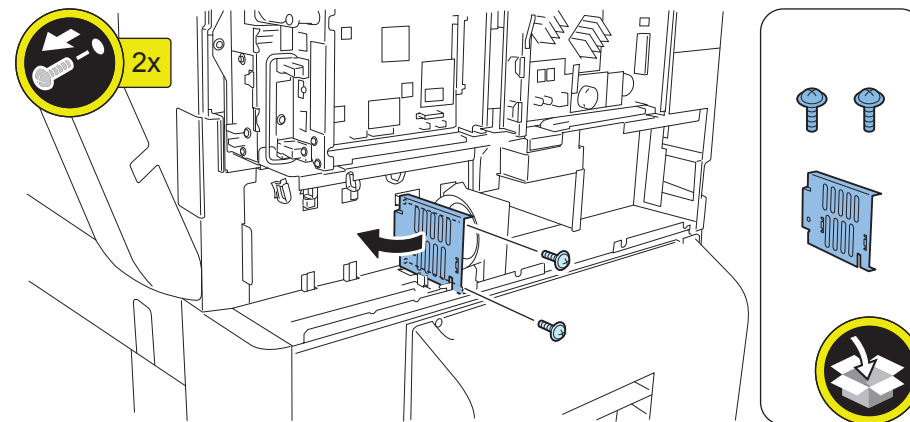

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

F-9-531

■ Installing the Fan Duct / Fan Keyboard Unit

- 1) Remove the plate. (The removed plate and screws will no longer be used.)
- 2 screws

F-9-532

- 2) Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)

- 2 Connectors
- 1 Wire Saddle
- 1 Reuse Band

F-9-533

3) Install the included in Fan Cable to the Fan Keyboard Unit.

- 3 Connectors

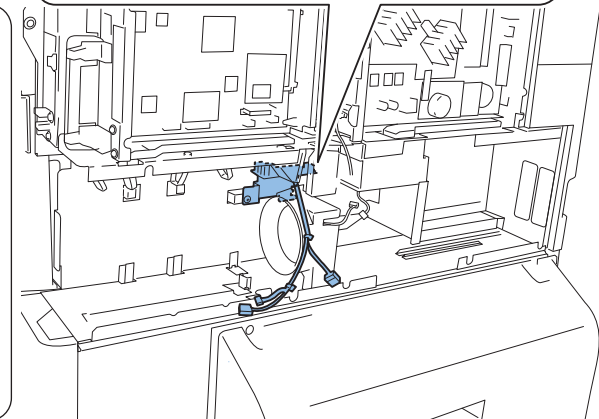

F-9-534

4) Install the Fan Keyboard Unit.

- 1 Protrusion
- 1 Screw (TP Round End; M3 x 6)

F-9-535

- 5) Insert the Reuse Band of the Fan Cable.

F-9-536

- 6) Connect the 2 Connectors of the Fan Cable.
- 1 Wire Saddle (To be closed)
 - 1 Edge Saddle (To be kept open)

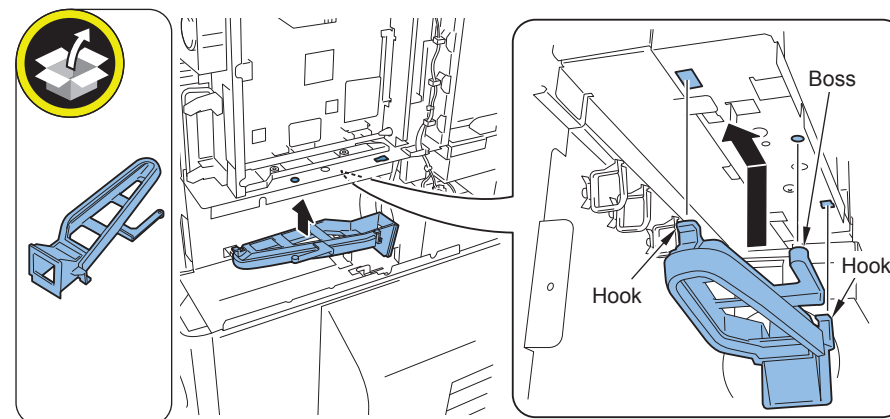

NOTE:

The connector [A] will be used to connect in the step 6 of "Installing the Removable HDD Unit".

F-9-537

- 7) Slide the Fan Duct in the arrow direction, and install.
- 2 Hooks
 - 1 Boss

F-9-538

Replacing to the Removable HDD Unit

- 1) Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)
 - 2 Screws
- 2) Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)
 - 2 Screws
- 3) Remove the Grounding Plate. (The removed Grounding Plate will be used in step 9.)
 - 1 Screw (The removed screw will no longer be used.)

- 4) Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)
 - 4 Screws (The removed screws will be used in step 14.)
 - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 14.)

CAUTION:

Hold and support the HDD with a hand to prevent from dropping off.

- 5) Remove the tape affixed to the outside of the Removable HDD Unit.
- 6) Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.

7) Install the Latch Shaft removed at step 2 to the Removable HDD Unit.

- 2 Bosses
- 2 Screws (Use the screws removed in step 2.)

F-9-542

8) Install the HDD Lid removed at step 1 to the Removable HDD Unit.

- 2 Screws (Use the screws removed in step 1.)

NOTE:

When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.

F-9-543

9) Install the Grounding Plate removed at step 3.

- 2 Bosses
- 1 Screw (TP Round End; M3 x 6)

F-9-544

< Disassembling and Assembling of the HDD Removed from the Host Machine (the First HDD) >

- 10) Place the HDD removed in step 4 with its labeled face up, and connect the Short Plug to the Pin 5 and Pin 6 of the connector.

CAUTION:

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-545

- 11) Remove the screw of the HDD. (The removed screw will be used in step 13.)
12) Install the Conversion Connector to the HDD.

F-9-546

- 13) Install the HDD in the Removable HDD Case as shown in the figure.
- 1 Screw (Use the screw removed in step 11.)
 - 1 Inch Screw (Included in the Removable HDD Kit.)

CAUTION:

The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 14) from coming in contact with the PCB of the HDD, resulting in short circuit.

Be sure to check that the Plastic Film is over the PCB of the HDD.

F-9-547

- 14) Install the Removable HDD Case Cover to the HDD.
- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
 - 4 Screws (Use the screws removed in step 4.)

F-9-548

- 15) Affix the No.1 of the R-HDD Label to the handle of the assembled Removable HDD.
- 16) Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

CAUTION:

Be sure that the Removable HDD is in the correct direction.

F-9-549

< Assembling the Option HDD (the Second HDD) >

- 17) Place the Option HDD with its labeled face up, and connect the Short Plug to the Pin 5 and Pin 6 of the connector.

CAUTION:

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-550

- 18) Install the Conversion Connector to the Option HDD.

F-9-551

- 19) Install the Option HDD in the Removable HDD Case as shown in the figure.
- 2 Inch Screws

CAUTION:

The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 20) from coming in contact with the PCB of the HDD, resulting in short circuit.

Be sure to check that the Plastic Film is over the PCB of the HDD.

F-9-552

- 20) Install the Removable HDD Case Cover to the HDD.
- 4 Vibration-prevention Dampers
 - 4 Inch Stepped Screws

F-9-553

- 21) Affix the No.2 of the R-HDD Label to the handle of the assembled Removable HDD.
- 22) Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

CAUTION:

Be sure that the Removable HDD is in the correct direction.

F-9-554

Installing the Encryption Board

- 1) Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 4 Wire Saddles (Small).

F-9-555

- 2) Connect the Signal Cable and Power Cable to the Encryption Board.
- Signal Cable (450 mm; A:Cont-Sig (Red))
 - Power Cable (430 mm; A:Cont-Pow)

F-9-556

- 3) Install the Encryption Board.
- 4 Screws (TP; M3 x 6)

F-9-557

- 4) Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).
- 2 Connectors
 - 1 Edge Saddle
 - 7 Wire Saddles (Keep the 3 Wire Saddles [A] open.)

CAUTION:
Route cables equally to eliminate unnecessary slack.

F-9-558

- 5) Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).

F-9-559

- 6) Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.

- 1 Screw (TP; M3 x 6)

F-9-560

- 7) Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.

- 1 Connector
- 7 Wire Saddles

CAUTION:

Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.

F-9-561

Installing the Removable HDD Unit

NOTE:

The following shows the combination of the HDD and the Encryption Board.

- Connect Slot.1 to "CH A" (Host machine's HDD)
- Connect Slot.2 to "CH B" (Option HDD)

F-9-562

2) Insert 2/3 of the Removable HDD Unit along with the rail on the host machine.

F-9-564

1) Remove the HDD Cooling Fan to make it easier to connect the cable.

- 1 Connector
- 2 Screws (The removed screws will be used in step 4.)

F-9-563

□
3) Connect the Signal Cable and the Power Cable to the Encryption Board.

- Power Cable (A:HDD-Pow1)
- Signal Cable (A:HDD-Sig1 (Red))
- Signal Cable (A:HDD-Sig2 (Blue))
- Power Cable (A:HDD-Pow2)

CAUTION:

Be sure to connect the cable in the following order.

F-9-565

□
4) Install the removed HDD Cooling Fan.

- 2 Screws (Use the screws removed in step 1.)
- 1 Connector

F-9-566

□
5) To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.

F-9-567

□
6) Install the Fan Unit, and connect the connector to the yellow cable.

- 2 Bosses
- 2 Screws (P Tightening; M4 x 10)

F-9-568

□
7) Connect the Fan Cable of the host machine disconnected in step 5 to the light blue cable.

F-9-569

□
8) Secure 3 cables with the Wire Saddle.

CAUTION:

- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.

F-9-570

- 9) Insert the Removable HDD Unit all the way to the hook [A].
- 10) Install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.
- 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

F-9-571

- 11) Insert the Removable HDD along the rail of the Removable HDD Unit.

CAUTION:

Be sure to insert the No.1 HDD to the Slot.1 and the No.2 HDD to the Slot.2.

F-9-572

- 12) Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.

F-9-573

- 13) Close the HDD Lid.

- 14) Affix the Handle Label on the Handle part of the HDD Lid.

F-9-574

15) Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

CAUTION:

When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.

F-9-575

16) Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:

Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-576

17) Close the HDD Cover.

- 18) Install the Box Upper Cover.
- 1 Protrusion
 - 1 Lib
 - 2 Screws
- 19) Install the screw of the Box Right Cover.

F-9-577

- 20) Install the Box Left Cover.
- 4 Screws

CAUTION:
Be careful not to trap the cable.

F-9-578

- 21) Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

1. Requirements

- 1) PC
Service Support Tool in the version that supports this host machine must be installed.
- 2) Cross Ethernet Cable

2. Preparing for the Installation of the System Software of Host machine

- 1) If both PC and the machine are on, turn them off.
- 2) Connect the PC and the host machine using an Cross Ethernet cable.
- 3) Turn on the PC.
- 4) Start up the host machine in download mode (safe mode).

3. Selecting the System Software

- 1) Set the CD containing the latest System Software in the PC on which the SST is used.
- 2) Start up the SST.
- 3) Click 'Register Firmware'.
- 4) Select the drive in which the System Software CD has been set, and click 'SEARCH'.
- 5) Click 'REGISTER'.
- 6) Click OK.

4. Downloading the System Software

- 1) Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.
- 2) When initialization is completed, the host machine is automatically restarted and it enters download mode.
- 3) Select the version to be downloaded and click "Start".
- 4) When download is completed, the host machine is automatically restarted.
- 5) When writing of the firmware is completed, the host machine is automatically restarted.
- 6) Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.
- 7) Terminate the SST.
- 8) Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.
- 9) Check the version of the downloaded firmware in service mode.

Checking the Security Version

- 1) Press the Counter key (123 key) on the control panel.
- 2) Press the [Check Device Configuration] key appearing on the control panel.
- 3) Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.
When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:

The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:

< Confirming the Security Mark >

When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark () is displayed on the lower left corner of a panel screen.

Setting for Mirroring

- 1) Specify the setting for Mirroring.
 - Service Mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID; select "1" for W/RAID.
- 2) Turn OFF/ON the main power switch to enable the setting value.
- 3) Check that the UI screen is started normally.
- 4) Open the HDD Cover, and observe the LED to check that mirroring is normally executed.
 - The green LED of HDD1 (Slot.1) is flashing.
 - The green and red LEDs of HDD2 (Slot.2) are flashing.

CAUTION:

Re-building process starts after setting W/RAID to "1".

When the error indicating the message of "Need to replace Hard Disk (Contact with Service Technician)" on the UI occurs, re-execute the re-building process as follows;

- 1) Check the lighted Red LED is for the HDD2.
- 2) Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to "0".
- 3) Turn OFF/ON the main power switch of the host machine to enable the setting value.
- 4) Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to "1".
- 5) Turn OFF/ON the main power switch of the host machine to enable the setting value.

The abovementioned procedure is limited only for the re-building process at the initial installation. The error occurred at re-building process during operation is not targeted.

F-9-579

Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:

At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.

Completion of the Installation Work:

Ask the system administrator to make sure that '2.01' is indicated for 'Canon MFP Security Chip' as the version information of the security chip by referring to the description of Checking the Security Version.

Maintenance of the Security Functions:

Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.

After installing this product, execute the image quality adjustment shown below.

(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust) (Refer to p. 9-62)
- Register Paper to Adjust (Refer to p. 9-64)
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit) (Refer to p. 9-66)

[TYPE-5] Removable HDD Kit + HDD Data Encryption & Mirroring Kit

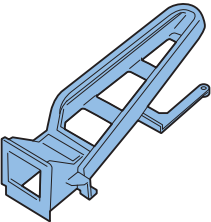

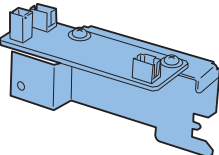

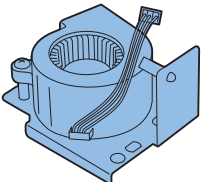

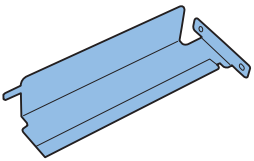

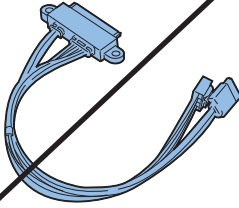

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.

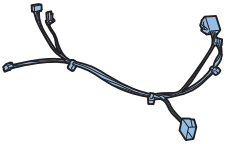

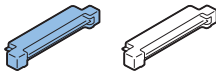

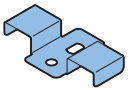

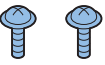

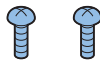

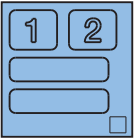

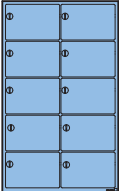

If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

- Installation Procedure

Setting Before Turning OFF the Power

CAUTION:

Be sure to turn OFF the main power after executing this service mode setting. Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board. When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

- 1)Execute the following service mode (level 1).
COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

- 1)Turn OFF the main power switch.
- 2)Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.

Installation Procedure

Removing the HDD Unit

- 1) Push the [A] part, and open the HDD Cover.

F-9-584

- 2) Remove the screw of the Box Upper Cover.
3) Remove the Box Right Cover.
- 2 Screws
 - 1 Hook

F-9-585

F-9-586

- 4) Remove the Box Left Cover.
• 4 Screws

F-9-587

- 5) Remove the Box Upper Cover.
• 1 Screw

F-9-588

- 6) Remove the Rear Upper Cover.
• 9 Screws
• 1 Hook

F-9-589

- 7) Open the HDD Lid.
• 1 Screw (The removed screw will no longer be used.)

F-9-590

□ 8) Remove the Signal Cable and the Power Cable from the HDD.

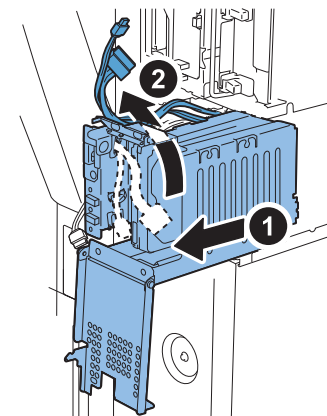

- 2 Connectors
- 1 Wire Saddle
- 1 Edge Saddle

9) Remove the screw of the HDD Unit. (The removed screw will be used in step 10 of "Installing the Removable HDD Unit".)

F-9-591

□ 10) Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.

F-9-592

CAUTION:

- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.

F-9-593

- 11) Remove the HDD Unit from the host machine.

F-9-594

- 12) Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

F-9-595

■ Installing the Fan Duct / Fan Keyboard Unit

1) Remove the plate. (The removed plate and screw will no longer be used.)

- 2 screws

F-9-596

2) Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)

- 2 Connectors
- 1 Wire Saddle
- 1 Reuse Band

F-9-597

3) Install the included in Fan Cable to the Fan Keyboard Unit.

- 3 Connectors

F-9-598

□
4) Install the Fan Keyboard Unit.

- 1 Protrusion
- 1 Screw (TP Round End; M3 x 6)

F-9-599

□
5) Insert the Reuse Band of the Fan Cable.

F-9-600

□
6) Connect the 2 Connectors of the Fan Cable.

- 1 Wire Saddle (To be closed)
- 1 Edge Saddle (To be kept open)

NOTE:

The connector [A] will be used to connect in the step 6 of "Installing the Removable HDD Unit".

F-9-601

□
7) Slide the Fan Duct in the arrow direction, and install.

- 2 Hooks
- 1 Boss

F-9-602

■ Replacing to the Removable HDD Unit

-
- 1) Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)
 - 2 Screws
 - 2) Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)
 - 2 Screws
 - 3) Remove the Grounding Plate. (The removed Grounding Plate will be used in step 9.)
 - 1 Screw (The removed screw will no longer be used.)

F-9-603

- 4) Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)
- 4 Screws (The removed screws will be used in step 15.)
 - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 15.)

CAUTION:

Hold and support the HDD with a hand to prevent from dropping off.

- 5) Remove the tape affixed to the outside of the Removable HDD Unit.
- 6) Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.

- 7) Install the Latch Shaft removed at step 2 to the Removable HDD Unit.
- 2 Bosses
 - 2 Screws (Use the screws removed in step 2.)

- 8) Install the HDD Lid removed at step 1 to the Removable HDD Unit.
- 2 Screws (Use the screws removed in step 1.)

NOTE:

When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.

9) Install the Grounding Plate removed at step 3.

- 2 Bosses

10) Fit the protrusion on the HDD Face Plate into the hole on the mold part, and install it.

- 1 Screw (TP Round End; M3 x 6)

F-9-608

< Disassembling and Assembling of the HDD Removed from the Host Machine >

11) Place the HDD removed in step 4 with its labeled face up, and connect the Short Plug to the Pin 5 and Pin 6 of the connector.

CAUTION:

Place the HDD with its labeled face up, and check that the Short Plug is connected to the Pin 5 and Pin 6 of the connector.

F-9-609

12) Remove the screw of the HDD. (The removed screw will be used in step 14.)

13) Install the Conversion Connector to the HDD.

F-9-610

- 14) Install the HDD in the Removable HDD Case as shown in the figure.
- 1 Screw (Use the screw removed in step 12.)
 - 1 Inch Screw

CAUTION:

The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 15) from coming in contact with the PCB of the HDD, resulting in short circuit.

Be sure to check that the Plastic Film is over the PCB of the HDD.

F-9-611

- 15) Install the Removable HDD Case Cover to the HDD.
- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
 - 4 Screws (Use the screws removed in step 4.)

F-9-612

- 16) Affix the No.1 of the R-HDD Label to the handle of the assembled Removable HDD.
- 17) Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

CAUTION:

Be sure that the Removable HDD is in the correct direction.

F-9-613

■ Installing the Encryption Board

- 1) Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 4 Wire Saddles (Small).

F-9-614

- 2) Connect the Signal Cable and Power Cable to the Encryption Board.
- Signal Cable (450 mm; A:Cont-Sig (Red))
 - Power Cable (430 mm; A:Cont-Pow)

F-9-615

- 3) Install the Encryption Board.
- 4 Screws (TP; M3 x 6)

F-9-616

- 4) Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).
- 2 Connectors
 - 1 Edge Saddle
 - 7 Wire Saddles (Keep the 3 Wire Saddles [A] open.)

CAUTION:
Route cables equally to eliminate unnecessary slack.

F-9-617

- 5) Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).

- 6) Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.
- 1 Screw (TP; M3 x 6)

- 7) Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.
- 1 Connector
 - 7 Wire Saddles

CAUTION:

Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.

Installing the Removable HDD Unit

NOTE:

The following shows the combination of the HDD and the Encryption Board.

- Connect Slot.1 to "CH A" (Host machine's HDD)
- No HDD to Slot.2

F-9-621

2) Insert 2/3 of the Removable HDD Unit along with the rail on the host machine.

F-9-623

1) Remove the HDD Cooling Fan to make it easier to connect the cable.

- 1 Connector
- 2 Screws (The removed screws will be used in step 4.)

F-9-622

□
3) Connect the Signal Cable and the Power Cable to the Encryption Board.

- Power Cable (A:HDD-Pow1)
- Signal Cable (A:HDD-Sig1 (Red))
- Signal Cable (A:HDD-Sig2 (Blue))
- Power Cable (A:HDD-Pow2)

CAUTION:

Be sure to connect the cable in the following order.

F-9-624

□
4) Install the removed HDD Cooling Fan.

- 2 Screws (Use the screws removed in step 1.)
- 1 Connector

F-9-625

□
5) To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.

F-9-626

□ 6) Install the Fan Unit, and connect the connector to the yellow cable.

- 2 Bosses
- 2 Screws (P Tightening; M4 x 10)

F-9-627

□ 7) Connect the Fan Cable of the host machine disconnected in step 5 to the light blue cable.

F-9-628

□ 8) Secure 3 cables with the Wire Saddle.

CAUTION:

- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.

F-9-629

- 9) Insert the Removable HDD Unit all the way to the hook [A].
- 10) Install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.
- 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

F-9-630

- 11) Insert the Removable HDD along the rail of the Removable HDD Unit.

F-9-631

- 12) Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.

F-9-632

- 13) Close the HDD Lid.

- 14) Affix the Handle Label on the Handle part of the HDD Lid.

F-9-633

- 15) Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

CAUTION:

When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.

F-9-634

- 16) Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:

Be sure to install the screw at upper side after installing the Box Upper Cover.

F-9-635

- 17) Close the HDD Cover.

- 18) Install the Box Upper Cover.
- 1 Protrusion
 - 1 Lib
 - 2 Screws
- 19) Install the screw of the Box Right Cover.

F-9-636

- 20) Install the Box Left Cover.
- 4 Screws

CAUTION:
Be careful not to trap the cable.

F-9-637

- 21) Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

1. Requirements

- 1) PC
Service Support Tool in the version that supports this host machine must be installed.
- 2) Cross Ethernet Cable

2. Preparing for the Installation of the System Software of Host machine

- 1) If both PC and the machine are on, turn them off.
- 2) Connect the PC and the host machine using an Cross Ethernet cable.
- 3) Turn on the PC.
- 4) Start up the host machine in download mode (safe mode).

3. Selecting the System Software

- 1) Set the CD containing the latest System Software in the PC on which the SST is used.
- 2) Start up the SST.
- 3) Click 'Register Firmware'.
- 4) Select the drive in which the System Software CD has been set, and click 'SEARCH'.
- 5) Click 'REGISTER'.
- 6) Click OK.

4. Downloading the System Software

- 1) Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.
- 2) When initialization is completed, the host machine is automatically restarted and it enters download mode.
- 3) Select the version to be downloaded and click "Start".
- 4) When download is completed, the host machine is automatically restarted.
- 5) When writing of the firmware is completed, the host machine is automatically restarted.
- 6) Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.
- 7) Terminate the SST.
- 8) Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.
- 9) Check the version of the downloaded firmware in service mode.

Checking the Security Version

- 1) Press the Counter key (123 key) on the control panel.
- 2) Press the [Check Device Configuration] key appearing on the control panel.
- 3) Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.
When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:

The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:

< Confirming the Security Mark >

When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark () is displayed on the lower left corner of a panel screen.

Checking After Installation

- 1) Open the HDD Cover, and observe the LED to check that there is no error in communication with the HDD.
 - The green LED of HDD1 (Slot.1) is flashing.

F-9-638

Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:

At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.

Completion of the Installation Work:

Ask the system administrator to make sure that '2.01' is indicated for 'Canon MFP Security Chip' as the version information of the security chip by referring to the description of Checking the Security Version.

Maintenance of the Security Functions:

Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.

After installing this product, execute the image quality adjustment shown below.

(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust) (Refer to p. 9-62)
- Register Paper to Adjust (Refer to p. 9-64)
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit) (Refer to p. 9-66)

■ Timer/Energy Settings

¹ It is recommended that you use the default setting for this item. However, if you set priority is given to productivity when you copy or print, set the value in this mode to '0'. If you set to '0', press [Energy Saver] to set the machine to enter the Sleep mode or the Energy Saver mode.

² Indicates items that appear only when the appropriate optional product is available for use.

³ If you set '20 secs' or '1 min.', '5 mins' is delivered as device information.

Item	Setting Description	Default Setting	Can be set in Remote UI	Device Information Delivery Available
[Adjust Time]	00:00 to 23:59, in one minute increments	-	No	No
[Date/Time Settings]	Date and Time Setting (12 digit number)	-	Yes	No

Network

If you are configuring the settings for the first time in "Interface Settings," "TCP/IPv4 Settings," "TCP/IPv6 Settings," or "Settings Common to TCP/IPv4 and TCP/IPv6," use the control panel of the machine. After configuring the TCP/IP settings, you can change them using the Remote UI.

If you are using a NetWare or AppleTalk network, you must use the TCP/IP protocol if you want to specify settings using software other than the control panel of the machine.

^{*1} Indicates items that appear only when the appropriate optional product is available for use.

^{*2} Indicates items that appear only when the imagePRESS Printer Kit is activated.

Operator Maintenance

Overview

Introduction

The operator maintenance means some parts of replacement of the periodically replaced parts/durables and consumables, maintenance such as cleaning, and imageadjustment performed by the user (operator) that have been conventionally performed by the service technician at the user's site.

The operator maintenance allows the user to perform maintenance and image adjustment without the need for the visit of the service technician to the user's site,resulting in the reduced downtime of the machine. It also enables periodic maintenance that achieves improved image quality of the outputs and ensures safety.

Preparation for Introduction

Target Parts

Following shows the target parts to be replaced/cleaned by the operator.

Replaceable Parts

Category	Part name	Part No.	Replacement interval (sheets)				Q'ty	Parts replaced by operator
			imagePRESS C800	imagePRESS C700	imagePRESS C600	imagePRESS C60		
Transfer area	Secondary Transfer Outer Roller	FC0-9786	900,000	750,000	600,000	600,000	1	Secondary Transfer Unit
Fixing area	Fixing Assembly / Fixing Belt Unit	FM1-C721	600,000	500,000	400,000	400,000	1	Fixing Assembly
	Fixing Assembly / Pressure Belt Unit	FM1-C722	600,000	500,000	400,000	400,000	1	
	Fixing Assembly / Pressure Sub Thermistor (Rear)	FK2-7870	1,200,000	1,000,000	600,000	600,000	1	
	Fixing Assembly / Pressure Sub Thermistor (Front)	FK2-7871	1,200,000	1,000,000	600,000	600,000	1	

T-10-34

Cleanable Parts

Category	Part name	Part No.	Cleaning interval (seconds)				Q'ty	Parts replaced by operator	Remarks
			imagePRESS C800	imagePRESS C700	imagePRESS C600	imagePRESS C60			
Cleaning	Fixing Refresh Roller	-	3,600	3,600	3,600	3,600	1	Fixing Refresh Roller	The counter value in service mode indicates the time (the number of seconds) during which the Refresh Roller is engaged. Equivalent to 600,000 sheets under normal conditions

T-10-35

Allocation of Works

Operator

- Replacement/cleaning of operator maintenance parts

Service technician

- Initial registration to use operator maintenance
- Reconditioning of the Fixing Assembly *
- Registration of the Backup Fixing Assembly *
- Troubleshooting

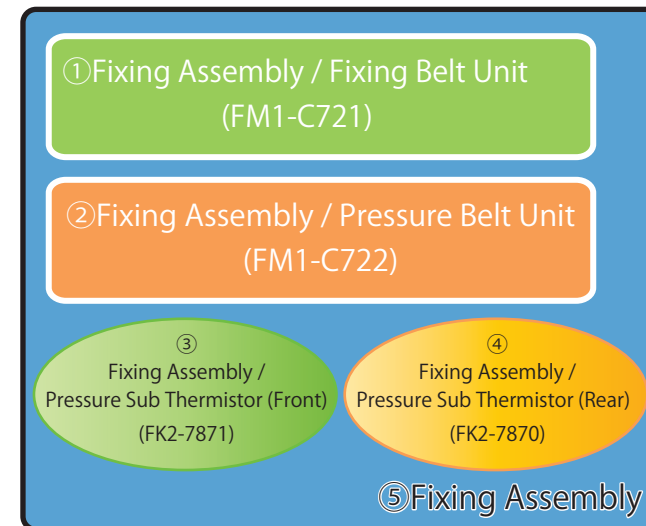

* Required for the operation in which the Fixing Assembly is reconditioned See the next page for details.

Operator Maintenance Mode Settings

Operator Maintenance Mode

There are the following 2 types of operations depending on the administration of each sales company.

- Operation in which the Fixing Assembly is reconditioned
The service technician replaces sub parts inside the Fixing Assembly which has been replaced by the operator to use the Fixing Assembly again.
Enter and manage the counter of each sub part one by one when replacing the Fixing Assembly.

Replacement by the operator

- ⑤ Fixing Assembly

Replacement by the service technician

- ① Fixing Assembly / Fixing Belt Unit
- ② Fixing Assembly / Pressure Belt Unit
- ③ Fixing Assembly / Pressure Sub Thermistor (Front)
- ④ Fixing Assembly / Pressure Sub Thermistor (Rear)

F-10-9

- Operation in which the Fixing Assembly is not reconditioned
The operator always replaces the Fixing Assembly with a new one.
Clear the counters of all the sub parts at a time when replacing the Fixing Assembly.

When using operator maintenance mode, operator maintenance mode needs to be set to ON in service mode.

< Display of operator maintenance mode >

Setting value	Description
0	No Display
1	Display (When the Fixing Assembly is reconditioned)
2	Display (When the Fixing Assembly is not reconditioned)

T-10-36

● Steps to Operator Maintenance Mode settings

1) Start [Service Mode] at Level 1.

2) Press [COPIER] > [OPTION] > [DSPLY-SW] > [OPEMANT].

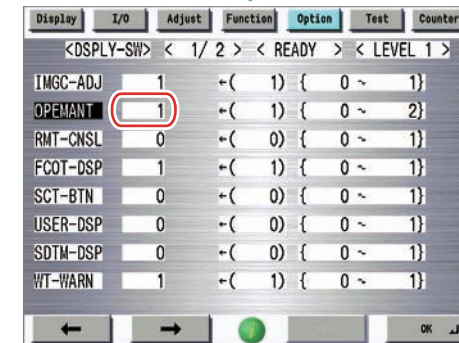

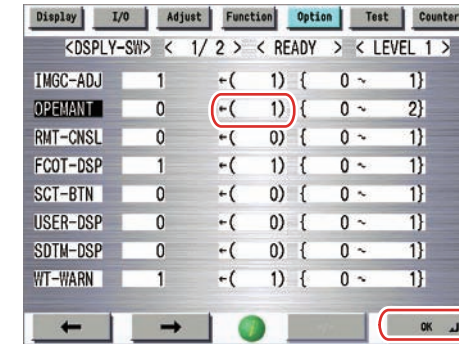

F-10-10

NOTE:

Be sure to refer to the correct step according to the following instruction since the step differs depending on whether the Fixing Assembly is reconditioned.

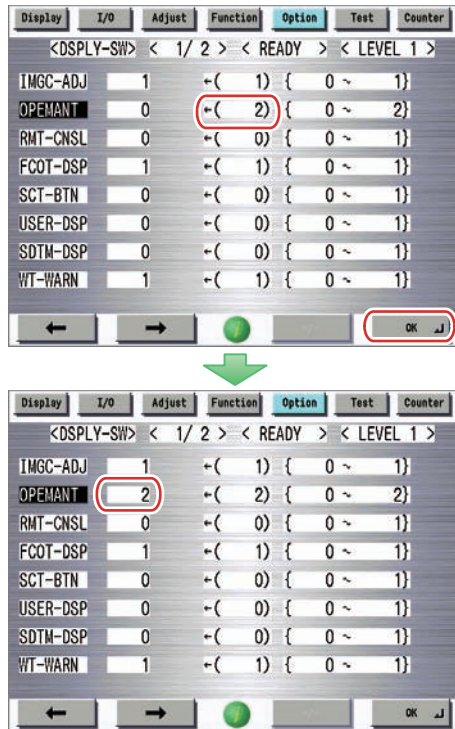

- For the operation in which the Fixing Assembly is reconditioned, perform the step 3-1.
- For the operation in which the Fixing Assembly is not reconditioned, perform the step 3-2.

3-1) Press the numeric key [1] on the control panel (the setting value is changed to 1) and press [OK]. (The data is reflected to the setting value field.)

F-10-11

3-2) Press the numeric key [2] on the control panel (the setting value is changed to 2) and press [OK]. (The data is reflected to the setting value field.)

F-10-12

4) Turn OFF and then ON the main power.

● Operator Maintenance-related setting items (service mode)

To set ON/OFF Operator Maintenance Mode

Item	Description
OPEMANT	ON/OFF of operator maintenance mode
(Lv.1) COPIER > OPTION > DSPLY-SW	<p>Details</p> <p>To set ON/OFF of operator maintenance mode. When 0 is set, operator maintenance mode is not displayed. When 1 or 2 is set, "Operator Maintenance Mode" is displayed in Settings/Registration menu. When 1 is set, sub parts counter can be managed individually at replacement of the Fixing Assembly. When 2 is set, sub parts counters are cleared collectively at replacement of the Fixing Assembly.</p> <p>Use case</p> <p>When starting operator maintenance</p> <p>Adj/set/operate method</p> <p>1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.</p> <p>Display/adj/set range</p> <p>0 to 2 0: OFF 1: ON (Manage the Fixing Assembly sub parts counter individually) 2: ON (Clear the Fixing Assembly sub parts counters collectively)</p> <p>Default value</p> <p>0</p>

Item		Description
FX1-RFRL		Fixing Refresh Roller clean cntr ave VL
(Lv.1) COPIER > COUNTER > AVE-CLN	Details	To display average value of the Fixing Refresh Roller cleaning counter. 1st line: Average value (calculated from the actual cleaning interval value when clearing the counter value at FX1-RFRL) 2nd line: Estimated cleaning timing value (Enter the value as cleaning interval based on the average value. This value is linked/reflected on the value of FX1-RFRL.) If the estimated cleaning timing value is set individually by grasping the usage status from the cleaning counter average value, the accuracy of cleaning interval improves.
	Use case	When improving the accuracy of cleaning interval
	Adj/set/ operate method	Select the item, and then enter the estimated cleaning timing value.
	Display/adj/ set range	0 to 99999
	Unit	sec
	Related service mode	COPIER> COUNTER> CLEANING> FX1-RFRL

Workflow upon Introduction of Operator Maintenance

- Overview
- Overall flow

F-10-13

Menu of Fixing Assembly Operator Maintenance (service mode)

For the operation in which the Fixing Assembly is reconditioned (setting of the display of operator maintenance mode (OPEMANT): 1), register the Fixing Assembly ID or make settings for the reconditioning of Fixing Assembly in service mode.

There are the following 4 menus in the menu of Fixing Assembly Operator Maintenance.

F-10-14

Menu	Description
Report output	Used to check the counters when reconditioning the Fixing Assembly, and record which parts have been replaced.
Input of backup counter	Used to register the information of the new Fixing Assembly. Also used to clear the backup counter of the parts that have been replaced when reconditioning the Fixing Assembly.
Parts counter correction	Used to register/modify the information of the Fixing Assembly which is currently installed.
Replacement history	Displays the history of Fixing Assembly replacements and counter clearings by the operator. Used to correct the counters when a Fixing Assembly has been replaced multiple times with the ID unknown.

T-10-43

Initial Registration

The following shows what to be performed by the service technician when starting the operation of operator maintenance.

1. Set ON for operator maintenance mode.
2. Register the ID of the Fixing Assembly installed in the host machine.
3. Register the ID of the new Fixing Assembly.

1. Set ON for operator maintenance mode.

For Setting Procedure, see "Steps to Operator Maintenance Mode settings".

2. Register the ID of the Fixing Assembly installed in the host machine.

NOTE:

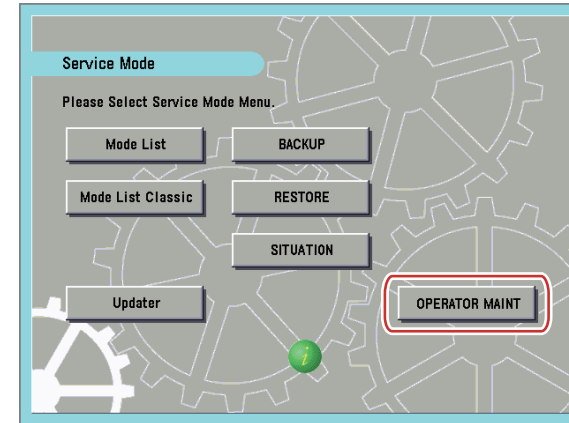

For the operation in which the Fixing Assembly is reconditioned (setting of the display of operator maintenance mode (OPEMANT): 1), perform the following.

- 1) Check the ID label for operator maintenance affixed to the Fixing Assembly, and write down the ID.

F-10-15

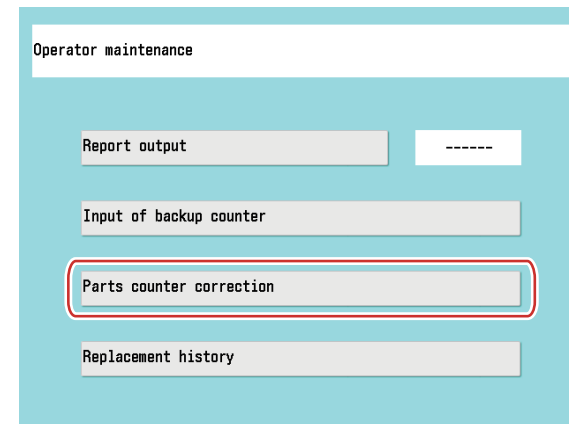

- 2) In [Service Mode] screen, press [OPERATOR MAINT].

F-10-16

->Fixing assembly operator maintenance screen is shown.

- 3) Press [Parts counter correction].

F-10-17

4) In Parts Counter Correction screen, write down the counters of the following 4 sub parts.

- Fixing : Fixing Belt Unit
- Fixing : Pressure Belt Unit
- Fixing : Thermistor (Front)
- Fixing : Thermistor (Rear)

Fixing	Counter Value
Fixing : Fixing Belt Unit	1000
Fixing : Pressure Belt Unit	1000
Fixing : Thermistor (Front)	1000
Fixing : Thermistor (Rear)	1000

F-10-18

5) Press the reset key to return to the Fixing Assembly operator maintenance screen.

6) Press [Input of backup counter].

F-10-19

7) Press [ID No.], and enter the ID written down in step 1 using the numeric keys.

8) Press [Fixing : Fixing Belt Unit], and enter the counter value written down in step 4 using the numeric keys. Enter the counter values of the other 3 sub parts in the similar way.

Fixing	Counter Value
Fixing : Fixing Belt Unit	1000
Fixing : Pressure Belt Unit	1000
Fixing : Thermistor (Front)	1000
Fixing : Thermistor (Rear)	1000

F-10-20

CAUTION:

Note that if a value larger than the specified value has been entered by mistake, an error screen will appear when the counter is cleared (step 16).

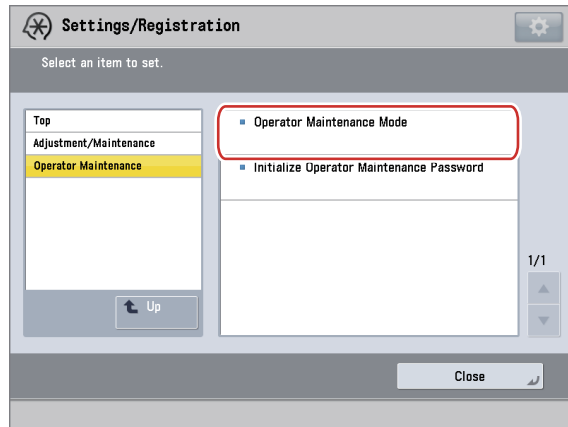

F-10-21

If the error screen appears, enter the correct counter value, and restart the host machine.

9) Press [OK].

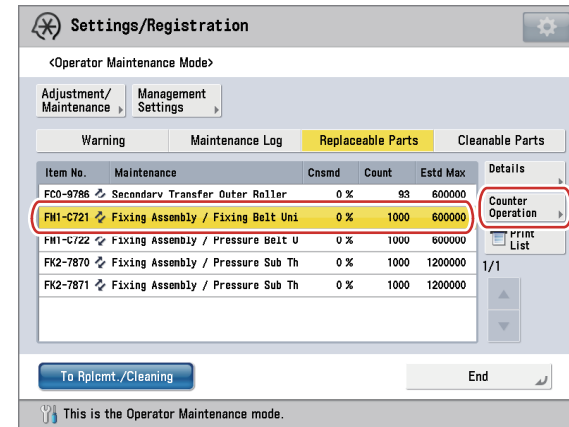

10) Press the Reset key to exit service mode.

- 11) Press [Settings/Registration] > [Adjustment/Maintenance] > [Operator Maintenance] > [Operator Maintenance Mode].

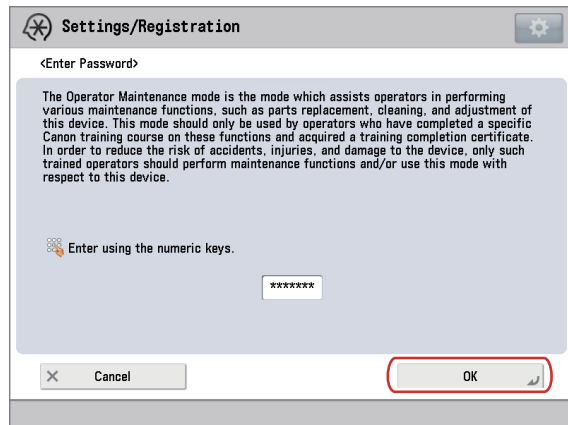

F-10-22

- 13) In the Replaceable Parts screen, select the parts of the Fixing Assembly, and press [Counter Operation].

F-10-24

- 12) Enter the password and press [OK].

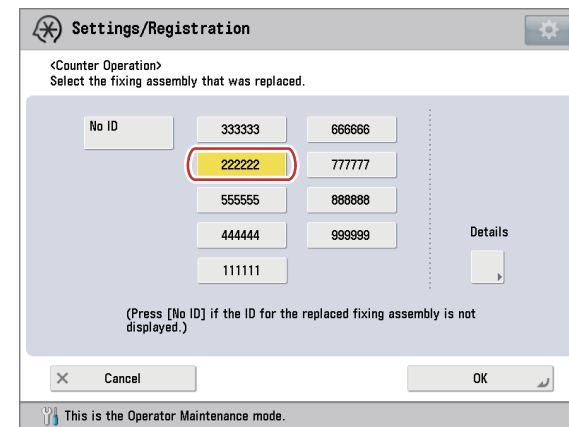

F-10-23

- 14) In the Counter Operation screen, select the ID of the Fixing Assembly installed in the host machine which was input in step 7.

NOTE:

At the start of operation, the Fixing Assembly is operating with "No ID". Although no Fixing Assembly is actually replaced, select the ID of the Fixing Assembly which is installed in the host machine. This determines the connection between the installed Fixing Assembly and the backup counter.

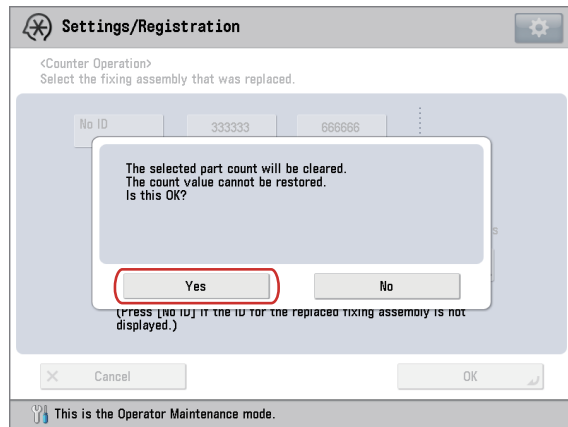

F-10-25

15) Press [OK].

->The confirmation screen for clearing the counter will appear.

16) Press [Yes].

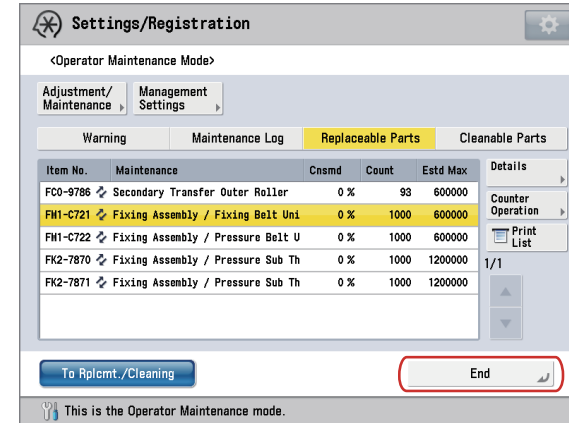

F-10-26

->The count clear completion screen will appear.

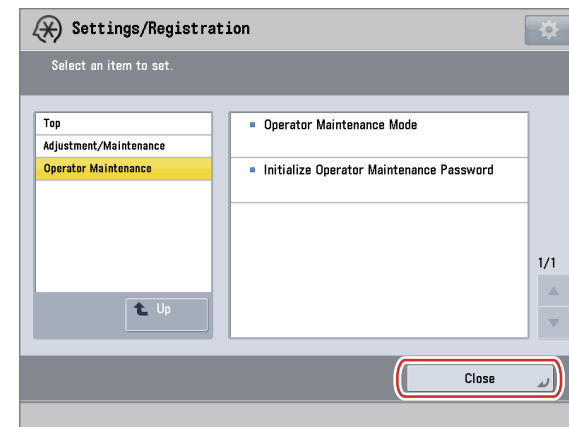

F-10-27

17) Press [End].

F-10-28

18) Press [Close].

F-10-29

3. Register the ID of the new Fixing Assembly.

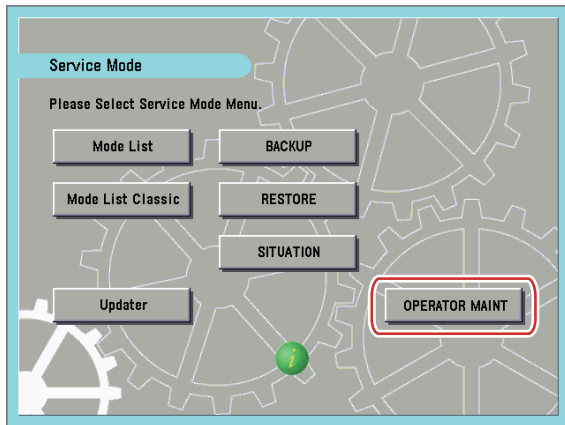

Register the ID of the new Fixing Assembly to be stored at the user's site.

For details, refer to "Registration of the New Fixing Assembly" on the next page.

Registration of the New Fixing Assembly

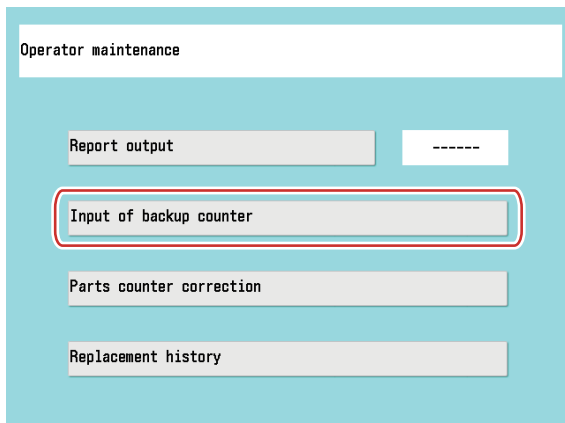

NOTE:
Up to 10 Fixing Assembly IDs can be registered.

- 1) Check the ID label for operator maintenance affixed to the Fixing Assembly, and write down the ID.
- 2) In [Service Mode] screen, press [OPERATOR MAINT].

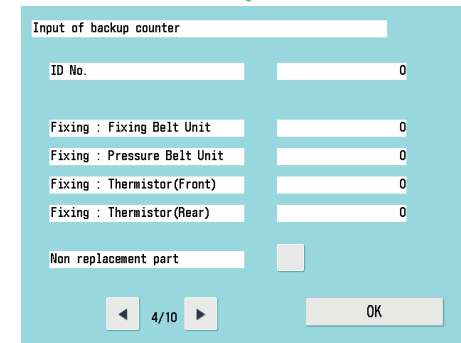

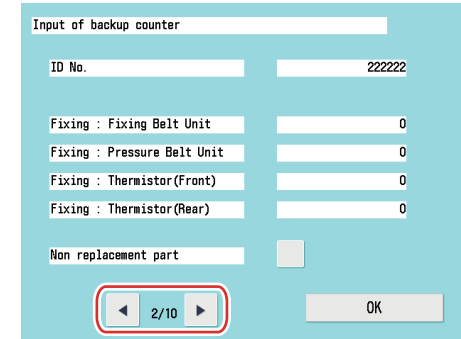

F-10-30

- 3) Press [Input of backup counter].

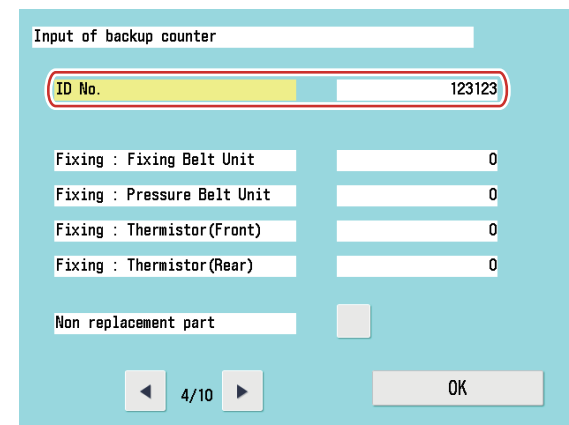

F-10-31

- 4) Press the left arrow or right arrow key to display a screen in which no ID is registered.

F-10-32

- 5) Press [ID No.], and enter the ID written down in step 1 using the numeric keys.

F-10-33

6) Press [OK].

7) Press the Reset key to exit service mode.

■ Reconditioning of the Fixing Assembly

The following shows what to be performed by the service technician after the operator has replaced the Fixing Assembly.

1. Apply grease to the tooth surface of the gear of the Fixing Drive Unit.
2. Output the counter report of the Fixing Assembly which is to be reconditioned.
3. Recondition the Fixing Assembly.
4. Clear the backup counter of the sub parts replaced when reconditioning the Fixing Assembly.

1. Apply grease to the tooth surface of the gear of the Fixing Drive Unit.

For the procedure, See "Removing the Fixing Assembly," on p. 4-375.)

NOTE:

This is usually performed when replacing the Fixing Assembly; however, since it is not performed by the operator at the time of Fixing Assembly replacement, it should be performed by the service technician.

2. Output the counter report of the Fixing Assembly which is to be reconditioned.

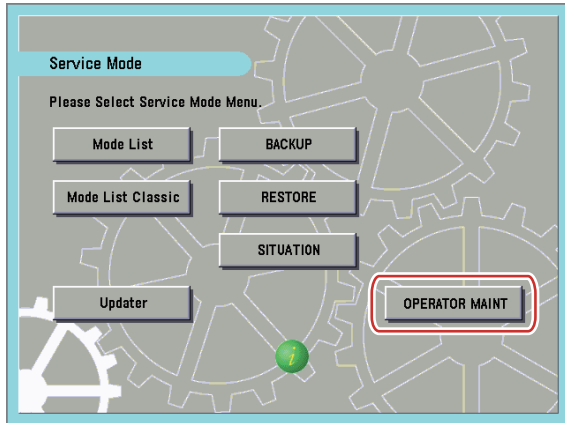

NOTE:

- Used to check the counters when reconditioning the Fixing Assembly, and record which parts have been replaced.
- All the parts counters of the Fixing Assembly registered in the backup counter are output.

CAUTION:

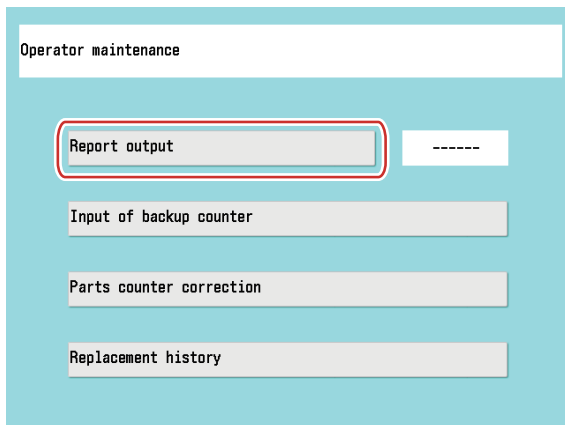

If [To Rplcmt./Cleaning] in operator maintenance mode is pressed immediately after outputting a report, wait time of approx. 2 minutes is required in order to protect the device.

1) In [Service Mode] screen, press [OPERATOR MAINT].

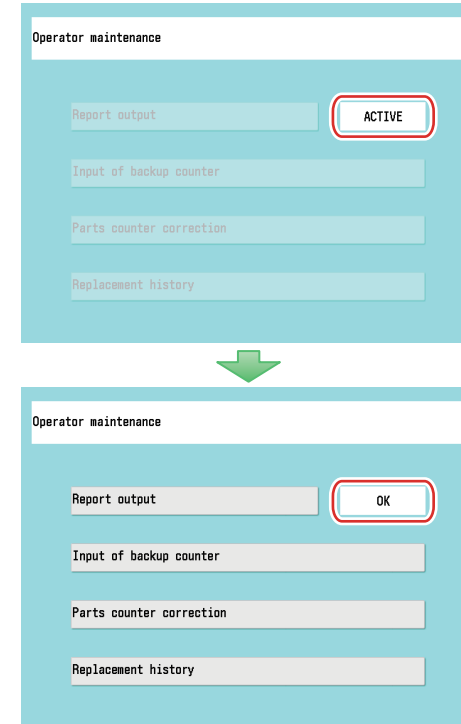

F-10-34

2) Press [Report output].

F-10-35

3) The status field changes from "ACTIVE" to "OK", and then the report is output.

F-10-36

4) Press the Reset key to exit service mode.

5) When the Fixing Assembly is reconditioned (sub parts are replaced) at the service office, include a report in the packaging box of the Fixing Assembly which is to be reconditioned.

3. Recondition the Fixing Assembly.

- 1) Check the report output in "2. Output the counter report of the Fixing Assembly which is to be reconditioned.", and replace the sub parts whose degree of wear has exceeded 100%. Refer to the following for the part replacement procedure.

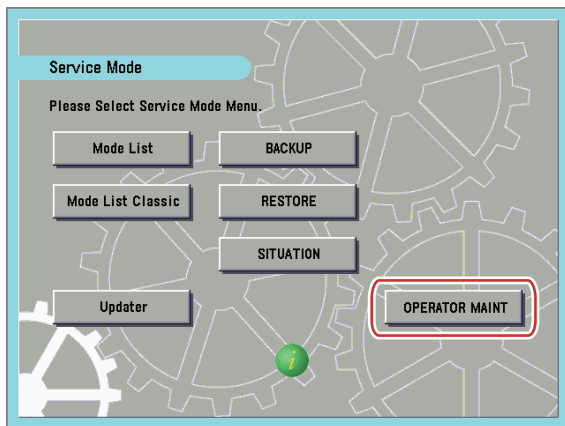

Replaceable Parts	Reference
Fixing : Fixing Belt Unit	p. 4-350
Fixing : Pressure Belt Unit	p. 4-362
Fixing : Thermistor (Front)	p. 4-371
Fixing : Thermistor (Rear)	p. 4-372

T-10-44

- 2) Select the check box of the replaced parts in the report.
- 3) Include the report in the packaging box of the Fixing Assembly which has been reconditioned.

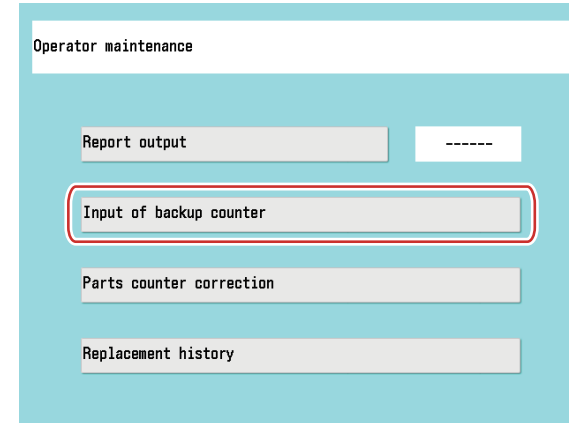

4. Clear the backup counter of the sub parts replaced when reconditioning the Fixing Assembly.

- 1) In [Service Mode] screen, press [OPERATOR MAINT].

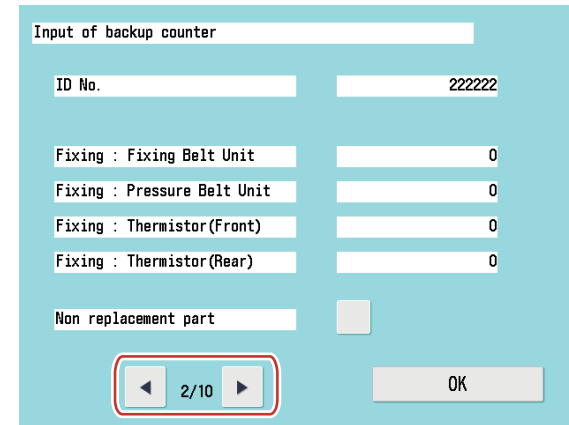

F-10-37

- 2) Press [Input of backup counter].

F-10-38

- 3) Press the left arrow or right arrow key until the ID of the Fixing Assembly which has been reconditioned is displayed.

F-10-39

4) Select the sub parts which have been replaced, and press the Clear key to clear the counters.

Input of backup counter

ID No. 111111

Fixing : Fixing Belt Unit	600000
Fixing : Pressure Belt Unit	600000
Fixing : Thermistor(Front)	600000
Fixing : Thermistor(Rear)	600000

Non replacement part

5/10 OK

Input of backup counter

ID No. 111111

Fixing : Fixing Belt Unit	0
Fixing : Pressure Belt Unit	600000
Fixing : Thermistor(Front)	600000
Fixing : Thermistor(Rear)	600000

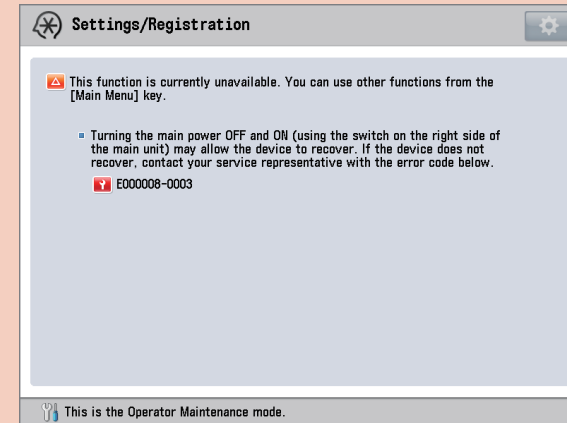

Non replacement part

5/10 OK

F-10-40

CAUTION:

Note that if the counter is not cleared and the counter value exceeds the specified value, an error screen will appear when the counter is cleared after the operator has replaced the Fixing Assembly.

F-10-41

For the remedy to be performed when the error screen appears, refer to the troubleshooting "When the service technician forgot to clear the counter of the Fixing Assembly which has been reconditioned".

NOTE:

When reconditioning the Fixing Assembly by replacing those other than sub parts (such as a gear or motor), keep the button on the right side of [Non replacement] selected.

Input of backup counter

ID No. 111111

Fixing : Fixing Belt Unit	0
Fixing : Pressure Belt Unit	0
Fixing : Thermistor(Front)	600000
Fixing : Thermistor(Rear)	600000

Non replacement part

5/10 OK

F-10-42

- 5) Press [OK].
- 6) Press the Reset key to exit service mode.
- 7) Keep the Fixing Assembly which has been reconditioned at user site.

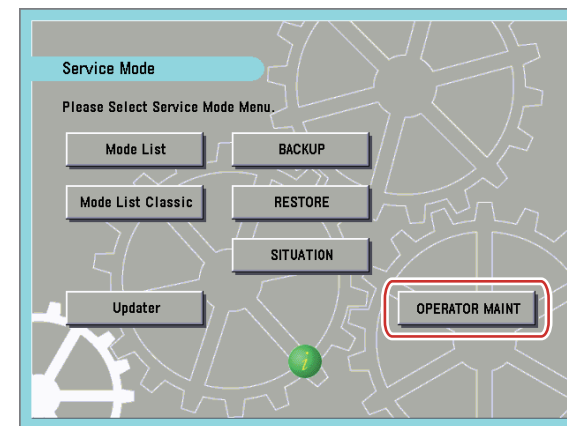

■ Countermeasure for Trouble

● When the service technician forgot to register the Fixing Assembly ID

- 1) Have the operator proceed with the replacement of the Fixing Assembly while "No ID" is selected.
- 2) Register the ID by referring to "2. Register the ID of the Fixing Assembly installed in the host machine." (page LXVII).

● When the service technician forgot to clear the counter of the Fixing Assembly which has been reconditioned

- 1) Prepare the report included in the packaging box of the Fixing Assembly which has been replaced by the operator, and check the replaced sub parts and the part counter values.
- 2) In [Service Mode] screen, press [OPERATOR MAINT].

F-10-43

3) Press [Parts counter correction].

-> The screen to modify the parts counters of the Fixing Assembly which is currently installed in the host machine is displayed.

F-10-44

4) Select the sub parts checked in step 1.

5) Using the numeric keys, enter the value obtained by subtracting the part counter value checked in step 1 from the displayed (current) counter value.

[e.g.]

- Part checked in step 1: Fixing Assembly : Fixing Belt Unit
- Part counter value checked in step 1: 600000
- Current counter value: 601000

$$601000 - 600000 = 1000$$

-> Select "Fixing Assembly : Fixing Belt Unit", and enter "1000".

F-10-45

6) Press [OK].

7) Press the Reset key to exit service mode.

*1	The following settings are deleted. Preferences > Paper Settings > B5/EXEC Paper Selection Preferences > Paper Settings > A5R/STMTR Paper Selection
*2	The following settings are deleted. Function Settings > Common > Paper Feed Settings > Paper Drawer Auto Selection On/Off
*3	The following settings are deleted. Function Settings > Common > Scan Settings > Scanner Noise Settings Function Settings > Common > Scan Settings > Timing to Raise Feeder Tray Function Settings > Common > Scan Settings > Streak Prevention
*4	Because clearing MN-CONT changes the memory reception setting to "OFF", the image data saved in the Memory RX Inbox is automatically printed after restart. After a print, it is deleted from a system box.
*5	Since the password is TPM-encrypted and saved, password backed up after all data/settings have been initialized cannot be restored. When all data/settings have been initialized, initialize the password using a switch license for password initialization. [Reference] Since TPM encryption key is updated when all data/settings are initialized, the password which was backed up cannot be read.
*6	If the backup key information in the HDD is missing, it is automatically recovered from the key in the SRAM (MCON2). When replacing the HDD and Main PCB 2 simultaneously, the key information is not restored automatically.
*7	If the key information in the SRAM (MCON2) is missing, it is automatically recovered from the backup key in the HDD. When replacing the HDD and Main PCB 2 simultaneously, the key information is not restored automatically.
*8	An error code is displayed when "ON" is displayed for the TPM setting. After all data/settings are initialized after restart, select "ON" for the TPM setting to enable the TPM setting.
*9	If the TPM key information in the SRAM is lost, the key information in the SRAM is automatically recovered from the backup of the common key in the HDD. Then the internal state of TPM setting changes to "ON". However, the display on the UI remains "OFF", therefore the TPM setting needs to be manually changed to "ON".
*10	The TPM setting changes to "OFF" when all the data/settings have been initialized.

T-10-49

*11	Detailed parameters cannot be imported by default. Only basic parameters can be imported. When OFF is set for "Restrict Receiving for Each Function" in "Device Information Delivery Settings" in "Settings/Registration", the detailed parameters can also be imported. However, import of detailed parameters between different models is not recommended.
*12	Detailed parameters cannot be imported by default. Only basic parameters can be imported. When OFF is set for "Restrict Receiving for Each Function" in "Device Information Delivery Settings" in "Settings/Registration", the detailed parameters can also be imported. However, import of detailed parameters between different models is not recommended. The data can be import/export only from/to another host machine of the same model.
*13	"Copy" and "Scan and Store" are not supported.

*14	If start-up in download mode in safe mode is available in the event of an HDD failure, it is assumed that MEAP applications can be backed up using SST in some cases. In that case, the data can be recovered with the information of the MEAP applications maintained by checking that the machine starts normally after installation of the system after replacement of the HDD, starting the machine in download mode in safe mode, and restoring the backup data.
*15	Between the same models only.
*16	It is possible only when logging in as an administrator user.
*17	Between the same models only. Restoration of only this item is not possible, but "Mail Box settings", "Mail Box image data" and "Form for Superimpose Image" are also restored.
*18	Only "favorites of web browser" can be backed up.
*19	Only when the MEAP applications have a backup function
*20	Data retained independently by the MEAP application is excluded. This includes only data registered as management information data of the MEAP application.
*21	Backup only against TPM PCB failure is possible. In addition, restoration cannot be done to other machines whose TPM setting is set to "ON".
*22	Backup is possible in Sraming, DSRAMBUP, and RSRAMBUP.
*23	When You set it in COPIER > OPTION > USER > SMD-EXPT > ON, a backup/restore is possible in Service Mode Settings from the Remote UI. There is a backup button on the TOP page of the service mode. HDD and USB memory can back up Service Mode Settings by backup button.
*24	Audit log that was exported cannot be put back to the device from which the log was exported
*25	Send only between different models.

Detail of HDD partition

CHK-TYPE	CHK-TYPE Group	Partition name	Description	HDD Format	
				HD-CLEAR	Using SST or USB memory
1	Four same time	FSTDEV	Image data storage area (Box etc)	Enabled	Entering SST menu or USB menu Select "ALL" All partition format same time. Select "BOOTDEV" Only BOOTDEV is erased.
2		IMG-MNG	Management data of image		
3		FSTCDEV	Image data storage area (for Job archive system)		
4		THUMDEV	Thumbnail		
5	One	APL_GEN	Storage area of universal data (Note: For details, see the following list.)	Enabled	
6	Three same time	TMP_GEN	Storage area of universal data (temporary file)	Enabled	
7		TMP_FAX	FAX (temporary file)		
8		TMP_PSS	PSS (temporary file)		
9	One	PDLDEV	PDL-related file storage area (font, registration form, color correction information file for ICCProfile-PDL function)	Enabled	
10	One	BOOTDEV	Firmware storage area (Bootable/MEAP/key/certificate/PDF dictionary/RUI contents/voice dictionary (ICC profile. PS test data.))	Disabled	
11	One	APL_MEAP	MEAP	Enabled	
12	One	APL_SEND	Address book, Setting for Forwarding	Disabled	
13	One	APL_KEEP	MEAP stored data	Disabled	
14	One	APL_LOG	System log storage area	Enabled	
15	One	CRBDEV	Advanced Box area	Enabled	
16	One	APL_CDS	Area for distribution server	Enabled	

T-10-52

Selecting "CHK-TYPE1" means selecting four partitions.

Soft Counter List

Soft counter specifications

The numbers entered for software counters are classified as follows:

No.	Counter Details
000 to 099	Remote copy
100 to 199	Total
200 to 299	Copy
300 to 399	Print
400 to 499	Copy and print
500 to 599	Scan
600 to 699	Box
700 to 799	Reception print
800 to 899	Report print
900 to 999	Transmission

T-10-54

Meanings of symbols in tables

- L: Large size (larger than B4 size)
- S: Small size (smaller than B4 size)
- S: Small size (smaller than B4 size)

It can be changed by the service mode (COPIER > OPTION > USER > B4-L-CNT) so that the paper larger than B4 size can be counted as large size paper.

- Copy: Local copy + remote copy
- Copy A: Local copy + remote copy + box print
- Print: PDL print + report print + box print
- Print A: PDL print + report print
- Scan: Black and white scan + color scan

T-10-61

Removal

Removal

Overview

- User data kept by the machine contains address books and inbox documents that users can recognize.
- By using the copy, print, or send function, there is also information left on the HDD of MFPs that is generally not recognizable but can be recovered as documents. (Refer to the illustration on the next page.)
- For security, the user mode is provided to delete data on SRAM and perform overwrite deletion to render user data on HDD unrecoverable.

User data delete

- To delete user data, execute Settings/Registration > Management Settings > Data Management > Initialize All Data/Settings in user mode. Performing Initialize All Data/Settings returns user mode setting values to their factory defaults.
- Usually, one overwrite is enough. Note that increasing the number of overwrite increases the time required for the deletion operation.

Note:

- When you perform Initialize All Data/Settings, license and data of MEAP application are initialized to the state same as when the HDD is replaced. If MEAP application may be used by other users after the machine is removed, disable the MEAP application and uninstall it in advance.
- Performing Initialize All Data/Settings does not delete the license of the system option.

Deletion of Service Mode Settings

The service mode setting values may have been changed at the user's request. In that case, the service mode setting values should be changed back to the default values before removing the machine.

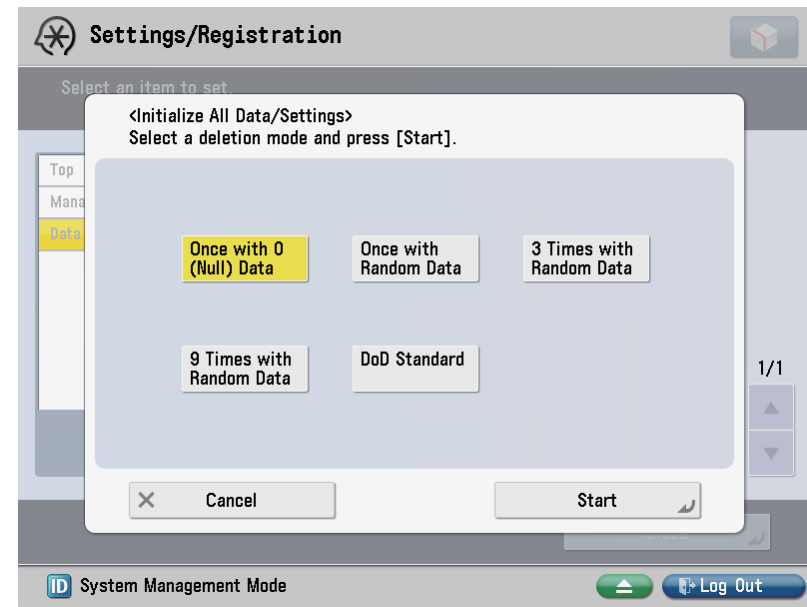

Work Procedure

If the user uses MEAP applications, ask the user to uninstall the MEAP applications if necessary.

User data delete procedure

1. Management Settings > Data Management > Initialize All Data/Settings
2. Select a deletion mode
3. Select [Start]

If the user has not given any instruction on which item in the deletion mode should be used, select the default "Once with 0 (Null) Data".

F-10-46

Note:

- When all the data are initialized, the user data on the HDD and the user data on the SRAM of the Main Controller PCB 2 are deleted. For the items to be deleted, refer to the backup list.
- Performing "Initialize All Data" turns auto gradation adjustment values and TPM settings to OFF. Therefore, to enable normal operation the next time, the operation performed at installation is necessary.
- Performing Initialize All Data/Settings does not delete the license of the system option.
- In the case of "Once with 0(Null)Data", it takes it more than three hours to be completed.

Report output upon completion of Initialize All Data/Settings

With MN-CONT, a report is output after executing Initialize All Data/Settings. Consider using this report to provide to user as a material to inform of work details when executing Initialize All Data/Settings upon user's request.

Operation after Initialize All Data/Settings

The machine is started normally at restart after Initialize All Data/Settings without displaying the message (Turn OFF the main power supply on the right side of the machine) on the screen to prompt shutdown. The report is output after startup.

```

*****
***  System Information  ***
*****

<< Initialize All Data/Settings Report >>

Serial Number          QKH00057
Device Name            iPR C800 (iPRC800)

Overwrite Method for Deletion Mode  Once with 0 (Null) Data (*1)

The following data stored in the device has been completely erased.

- Data stored in the temporary data area
- User generated data
- Settings under Settings/Registration (restored to factory defaults)

```

F-10-47

*1 display following one.

"Once with 0 (Null) Data"

"Once with Random Data"

"3 Times with Random Data"

"9 Times with Random Data"

"DoD Standard"

Limitations

- The language of the report is only English, and cannot be changed.
- The report is output without fail (a function to select ON/OFF of report output is not provided).
- There is no second output of report when the machine is turned ON without paper.
- Only the output of this report remains in the job log.

● Deletion of Service Mode Setting Values

Service Mode Lev1 > Function> CLEAR > MN-CONT

F-10-48

Note:

When MN-CON clear is executed, the address book on the SRAM of the Main Controller PCB 2 is not deleted. As for the user data, initialize all the data.
