Remedy	[Related parts] R1.00 - Harnesses from the Glass HP Sensor to the DADF Driver PCB 1. Glass HP Sensor (SR11/J708) to Relay Connector (6P) 2. Relay Connector (6P) to Relay Connector (9P) 3. Relay Connector (9P) to Relay Connector (9P) 4. Relay Connector (9P) to DADF Driver PCB (PCB1/J411) - Harnesses from the Glass Shift Motor to the DADF Driver PCB 1. Glass Shift Motor (M9/J714) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to DADF Driver PCB (PCB1/J409) - Glass HP Sensor (SR11) - Glass Shift Motor (M9) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

227-0001-04	Power supply error
Detection Description	The Reader Controller PCB did not detect 24 V when the main power was turned ON.
Remedy	[Related parts] R1.00 - Harness between the Reader Controller PCB (PCB1/J111) and the DADF Driver PCB (PCB1/J418) (Unit of replacement: CABLE, ADF POWER SUPPLY) - Harness between the Reader Controller PCB (PCB1/J101) and the Relay PCB (UN7/J1819) - Harness between the Relay PCB (UN7/J1805) and the DC Controller PCB (UN2/J1224) - Harness between the Relay PCB (UN7/J1803) and the DC Power Supply PCB (24VB) (UN35/J202B) - Reader Controller PCB (PCB1/J101/pin 1) - DADF Driver PCB (PCB1/J418/pin 1) - Relay PCB (UN7/J1819/pin 5, and J1803/pin 3) - DC Controller PCB (UN2) - DC Power Supply PCB (24VB) (UN35) [Remedy] Perform the following in the order while checking whether the error is cleared. When an error is detected, conduction of 24 V is stopped. At power check, check if 24 V is conducted by repeating power cycling of the machine. Measure the Reader Controller PCB (J101/pin 1) using a tester. a. When 24 V is output to the Reader Controller PCB (J101/pin 1), measure the DADF Driver PCB (J418/pin 1) using a tester. a. When 24 V is output to the DADF Driver PCB (J418/pin 1), replace the DADF Driver PCB. b. When 24 V is not output: 1. Check the harness between the Reader Controller PCB and the DADF Driver PCB. 2. Replace the Reader Controller PCB. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES b. When 24 V is not output to the Reader Controller PCB (J101/pin 1), measure the Relay PCB (J1819/pin 5) using a tester. a. When 24 V is output to the Relay PCB (J1819/pin 5): 1. Check the harness between the Reader Controller PCB and the Relay PCB. 2. Replace the harness between the Reader Controller PCB and the Relay PCB. b. When 24 V is not output, measure the Relay PCB (J1803/pin 3) using a tester. a. When 24 V is output to the Relay PCB (J1803/pin 3): 1. Replace the Relay PCB. 2. Replace the harness between the Relay PCB and the DC Controller PCB. 3. Replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES b. When 24 V is not output: 1. Replace the DC Power Supply PCB (24VB). 2. Replace the harness between the Relay PCB and the DC Power Supply PCB (24VB).

227-0002-04	Power supply error
Detection Description	The Reader Controller PCB did not detect 24V when a job was started.
Remedy	[Related parts] R1.00 - Harness between the Reader Controller PCB (PCB1/J111) and the DADF Driver PCB (PCB1/J418) (Unit of replacement: CABLE, ADF POWER SUPPLY) - Harness between the Reader Controller PCB (PCB1/J101) and the Relay PCB (UN7/J1819) - Harness between the Relay PCB (UN7/J1805) and the DC Controller PCB (UN2/J1224) - Harness between the Relay PCB (UN7/J1803) and the DC Power Supply PCB (24VB) (UN35/J202B) - Reader Controller PCB (PCB1/J101/pin 1) - DADF Driver PCB (PCB1/J418/pin 1) - Relay PCB (UN7/J1819/pin 5, and J1803/pin 3) - DC Controller PCB (UN2) - DC Power Supply PCB (24VB) (UN35) [Remedy] Perform the following in the order while checking whether the error is cleared. When an error is detected, conduction of 24 V is stopped. At power check, check if 24 V is conducted by repeating power cycling of the machine. Measure the Reader Controller PCB (J101/pin 1) using a tester. a. When 24 V is output to the Reader Controller PCB (J101/pin 1), measure the DADF Driver PCB (J418/pin 1) using a tester. a. When 24 V is output to the DADF Driver PCB (J418/pin 1), replace the DADF Driver PCB. b. When 24 V is not output: 1. Check the harness between the Reader Controller PCB and the DADF Driver PCB. 2. Replace the Reader Controller PCB. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES b. When 24 V is not output to the Reader Controller PCB (J101/pin 1), measure the Relay PCB (J1819/pin 5) using a tester. a. When 24 V is output to the Relay PCB (J1819/pin 5): 1. Check the harness between the Reader Controller PCB and the Relay PCB. 2. Replace the harness between the Reader Controller PCB and the Relay PCB. b. When 24 V is not output, measure the Relay PCB (J1803/pin 3) using a tester. a. When 24 V is output to the Relay PCB (J1803/pin 3): 1. Replace the Relay PCB. 2. Replace the harness between the Relay PCB and the DC Controller PCB. 3. Replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES b. When 24 V is not output: 1. Replace the DC Power Supply PCB (24VB). 2. Replace the harness between the Relay PCB and the DC Power Supply PCB (24VB).

Detection Description	System error
Remedy	Contact to the sales company.

248-0001-04	EEPROM error
Detection Description	Reading error was detected when the Main Controller PCB read the Reader backup value in the Reader Controller PCB.
Remedy	[Remedy] Check/replace the Reader Controller PCB (PCB1). (Unit of replacement: READER CONTROLLER PCB ASSEMBLY) [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

248-0002-04	EEPROM error
Detection Description	The Main Controller PCB failed writing of the Reader backup value in the Reader Controller PCB.
Remedy	[Remedy] Check/replace the Reader Controller PCB (PCB1). (Unit of replacement: READER CONTROLLER PCB ASSEMBLY) [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

248-0003-04	EEPROM error
Detection Description	The Main Controller PCB detected an error at inspection after completion of writing of the Reader backup value in the Reader Controller PCB.
Remedy	[Remedy] Check/replace the Reader Controller PCB (PCB1). (Unit of replacement: READER CONTROLLER PCB ASSEMBLY) [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

260-0000-05	Power supply (24VA/24VB) error
Detection Description	24V power (+24VA, +24VB) was not supplied.
Remedy	[Related parts] - Harnesses from the AC Driver PCB to the Relay PCB 1. AC Driver PCB (UN10/J813) to Relay Connector (7P) 2. Relay Connector (7P) to Relay Connector (3P) 3. Relay Connector (3P) to DC Power Supply PCB (24VA, 24VB) (UN34/J102A, UN35/102B) 4. DC Power Supply PCB (24VA, 24VB) (UN34/J202A, UN35/J202B) to Relay PCB (UN7/J1802, J1803) - Relay PCB (UN7) - DC Power Supply PCB (24VA) (UN34) - DC Power Supply PCB (24VB) (UN35) - AC Driver PCB (UN10) [Remedy] Check/replace the related harness/cable, connector and parts.

260-0001-05	Power supply (24VA) error
Detection Description	24V power (+24VA) was not supplied.
Remedy	[Related parts] R1.00 - Harnesses from the AC Driver PCB to the Relay PCB 1. AC Driver PCB (UN10/J813) to Relay Connector (7P) 2. Relay Connector (7P) to Relay Connector (3P) 3. Relay Connector (3P) to DC Power Supply PCB (24VA) (UN34/J102A) 4. DC Power Supply PCB (24VA) (UN34/J202A) to Relay PCB (UN7/J1802) - DC Power Supply PCB (24VA) (UN34) - AC Driver PCB (UN10) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts.

260-0002-05	Power supply (24VB) error
Detection Description	24V power (+24VB) was not supplied.
Remedy	[Related parts] R1.00 - Harnesses from the AC Driver PCB to the Relay PCB 1. AC Driver PCB (UN10/J813) to Relay Connector (7P) 2. Relay Connector (7P) to Relay Connector (3P) 3. Relay Connector (3P) to DC Power Supply PCB (24VB) (UN35/J102B) 4. DC Power Supply PCB (24VB) (UN35/J202B) to Relay PCB (UN7/J1803) - DC Power Supply PCB (24VB) (UN35) - AC Driver PCB (UN10) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts.

260-0003-05	DC Controller PCB output (5 V) error
Detection Description	It was detected that the fuse (5 V) of the DC Controller PCB was blown out.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Fixing Feed Driver PCB 1. DC Controller PCB (UN2/J1222) to Fixing Drawer (J8023) 2. Fixing Drawer (J8023) to Relay Connector (19P) 3. Relay Connector (19P) to Fixing Feed Driver PCB (UN5/J2002) - Harness between the DC Controller PCB (UN2/J1223) and the Pickup Feed Driver PCB (UN4/J1400) - Harness between the DC Controller PCB (UN2/J1224) and the Relay PCB (UN7/J1805) - Harness between the DC Controller PCB (UN2/J1262) and the DC Controller DIFF PCB (UN9/J1032) - Harness between the DC Controller PCB (UN2/J1267) and the Toner Container ID Driver PCB (UN112/J4011) - Harness between the DC Controller PCB (UN2/J1261) and the Drum ITB Driver PCB (UN6/J1901) - Harness between the DC Controller PCB (UN2/J1225) and the Registration Patch Driver PCB (UN8/J2402) - Harnesses from the DC Controller PCB to the CAN Transceiver PCB on the host machine 1. DC Controller PCB (UN2/J1268) to Relay Connector (19P) 2. Relay Connector (19P) to Relay Connector (19P) 3. Relay Connector (19P) to CAN Transceiver PCB (UN118/J3) - Harnesses from the DC Controller PCB to the Buffer Driver PCB 1. DC Controller PCB (UN2/J1226) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to Buffer Driver PCB (UN11/J2102) - DC Controller PCB (UN2) [Remedy] Measure the left end of the fuse (FU9) located at the lower side of J1240 on the DC Controller PCB and the plate of the host machine using a tester. a. If there is electrical continuity (less than 10 ohm), check/replace the harness. b. If there is no electrical continuity (10 ohm or higher), replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

270-0001-04	Vertical scanning synchronous signal error
Detection Description	The vertical scanning synchronous signal (VSYNC) was not transmitted normally at the Document Reading Sensor (for paper front) side that communicates with the Reader Controller PCB.
Remedy	[Related parts] R1.00 - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - Reader Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

270-0002-04	Horizontal scanning/vertical scanning synchronous signal error
Detection Description	The vertical scanning synchronous signal (VSYNC) was not transmitted due to horizontal scanning synchronous signal (HSYNC) error.
Remedy	[Related parts] R1.00 - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - Reader Scanner Unit - DADF Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

270-0101-04	Vertical scanning synchronous signal error
Detection Description	The vertical scanning synchronous signal (VSYNC) was not transmitted normally at the Document Reading Sensor (for paper back) side that communicates with the Reader Controller PCB.
Remedy	[Related parts] R1.00 - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - DADF Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

280-0001-04	Communication error
Detection Description	Communication between the Reader Controller PCB and the Reader Scanner Unit was not completed within the specified period of time.
Remedy	[Related parts] R1.00 - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - Reader Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

280-0002-04	Communication error
Detection Description	Disconnection of FFC between the Reader Controller PCB and the Reader Scanner Unit was detected.
Remedy	[Related parts] R1.00 - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) [Remedy] Check/replace the related harness/cable, connector and parts.

280-0101-04	Communication error
Detection Description	Communication between the Reader Controller PCB and the DADF Scanner Unit was not completed within the specified period of time.
Remedy	[Related parts] R1.00 - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - DADF Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

280-0102-04	Communication error
Detection Description	Disconnection of FFC between the Reader Controller PCB and the DADF Scanner Unit was detected.
Remedy	[Related parts] R1.00 - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) [Remedy] Check/replace the related harness/cable, connector and parts.

302-0001-04	Error in paper front white shading
Detection Description	An access error to the paper front white shading RAM or a paper front white shading value that was higher than the specified value was detected.
Remedy	[Related parts] R1.00 - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the Reader Controller PCB (PCB1/J109) and the Main Controller PCB 2 (UN82/J22) - Reader Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

302-0002-04	Error in paper front black shading
Detection Description	An access error to the paper front black shading RAM or a paper front black shading value that was higher than the specified value was detected.
Remedy	[Related parts] R1.00 - Reflective Mirrors of the Reader Scanner Unit - Harness between the Reader Scanner Unit (J1101) and the Reader Controller PCB (PCB1/J106) - Harness between the Reader Controller PCB (PCB1/J109) and the Main Controller PCB 2 (UN82/J22) - Reader Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Wipe the Reflective Mirrors of the Reader Scanner Unit with dry lint-free paper. 2. Check the harness between the Reader Scanner Unit and the Reader Controller PCB. 3. Check the harness between the Reader Controller PCB and Main Controller PCB 2. 4. Replace the Reader Scanner Unit. 5. Replace the Reader Controller PCB. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

302-0101-04	Error in paper back white shading
Detection Description	An access error to the paper back white shading RAM or a paper back white shading value that was higher than the specified value was detected.
Remedy	[Related parts] R1.00 - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - DADF Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

302-0102-04	Error in paper back black shading
Detection Description	An access error to the paper back black shading RAM or a paper back black shading value that was higher than the specified value was detected.
Remedy	[Related parts] R1.00 - Reflective Mirrors of the DADF Scanner Unit - Harness between the DADF Scanner Unit (J1102) and the Reader Controller PCB (PCB1/J105) - Harness between the Reader Controller PCB (PCB1/J109) and Main Controller PCB 2 (UN82/J22) - DADF Scanner Unit - Reader Controller PCB (PCB1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Wipe the Reflective Mirrors of the DADF Scanner Unit with dry lint-free paper. 2. Check the harness between the DADF Scanner Unit and Reader Controller PCB. 3. Check the harness between the Reader Controller PCB and Main Controller PCB 2. 4. Replace the DADF Scanner Unit. 5. Replace the Reader Controller PCB. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

315-000E-00	Image processing device error
Detection Description	An error was detected at software decoding.
Remedy	[Related parts] - DDR2-SDRAM (M1) on the Main Controller PCB (Unit of replacement: MEMORY PCB ASSEMBLY) - HDD (Unit of replacement: HDD, WD10EURX, WESTEM DIGITAL) - Main Controller PCB 1 (UN81) (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the DDR2-SDRAM (M1) on the Main Controller PCB 2 is installed properly by removing and then installing it again. 2. Replace the DDR2-SDRAM (M1) on the Main Controller PCB 2. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. 4. Replace the Main Controller PCB 1. [CAUTION] If there are any optional PCBs installed on the old Main Controller PCB 1, transfer them to the new PCB.

350-0000-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

350-0001-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

351-0000-00	Main Controller PCB 2 communication error
Detection Description	Communication function of the Main Controller PCB 2 did not work properly.
Remedy	[Remedy] Replace the Main Controller PCB 2 (UN82). (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 2) [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - If there are any optional PCBs installed on the old Main Controller PCB 2, transfer them to the new PCB.

354-0001-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

354-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

355-0001-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

355-0003-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

355-0004-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

400-0001-04	Communication error
Detection Description	A communication error between the Reader Controller PCB and the DADF Driver PCB was detected.
Remedy	[Related parts] R1.00 - Harness between the DADF Driver PCB (PCB1/J401) and the Reader Controller PCB (PCB1/J104) - Harness between the DADF Driver PCB (PCB1/J418) and the Reader Controller PCB (PCB1/J111) - DADF Driver PCB (PCB1) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

400-0002-04	Communication error
Detection Description	A communication error between the Reader Controller PCB and the DADF Driver PCB was detected.
Remedy	[Related parts] R1.00 - Harness between the DADF Driver PCB (PCB1/J401) and the Reader Controller PCB (PCB1/J104) - Harness between the DADF Driver PCB (PCB1/J418) and the Reader Controller PCB (PCB1/J111) - DADF Driver PCB (PCB1) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

400-0003-04	Communication error
Detection Description	- Disconnection of the harness between the Reader Controller PCB and the DADF Driver PCB was detected. - In the case of no CPU, disconnection of the harness between the Reader Controller PCB and the Relay PCB (ADF side) was detected.
Remedy	[Related parts] R1.00 - Harness between the DADF Driver PCB (PCB1/J401) and the Reader Controller PCB (PCB1/J104) - Harness between the DADF Driver PCB (PCB1/J418) and the Reader Controller PCB (PCB1/J111) - DADF Driver PCB (PCB1) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

401-0001-04	Pickup Roller Unit Lifting HP Sensor error
Detection Description	The Pickup Roller Unit Lifting HP Sensor in the DADF did not detect the ON status.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Roller Unit Lifting HP Sensor to the DADF Driver PCB 1. Pickup Roller Unit Lifting HP Sensor (SR12/J614) to Relay Connector (7P) 2. Relay Connector (7P) to DADF Driver PCB (PCB1/J413) - Harness between the Pickup Roller Unit Lifting Motor (M10/J617) and the DADF Driver PCB (PCB1/J403) - Pickup Roller Unit Lifting HP Sensor (SR12) - Pickup Roller Unit Lifting Motor (M10) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

401-0002-04	Pickup Roller Unit Lifting HP Sensor error
Detection Description	The Pickup Roller Unit Lifting HP Sensor in the DADF did not detect the OFF status.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Roller Unit Lifting HP Sensor to the DADF Driver PCB 1. Pickup Roller Unit Lifting HP Sensor (SR12/J614) to Relay Connector (7P) 2. Relay Connector (7P) to DADF Driver PCB (PCB1/J413) - Harness between the Pickup Roller Unit Lifting Motor (M10/J617) and the DADF Driver PCB (PCB1/J403) - Pickup Roller Unit Lifting HP Sensor (SR12) - Pickup Roller Unit Lifting Motor (M10) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

407-0001-04	Tray Lifting Motor error
Detection Description	The Tray HP Sensor in the DADF did not detect the ON/OFF status within the specified period of time.
Remedy	[Related parts] R1.00 - Harnesses from the Tray HP Sensor to the DADF Driver PCB 1. Tray HP Sensor (SR13/J603) to Relay Connector (3P) 2. Relay Connector (3P) to DADF Driver PCB (PCB1/J414) - Harness between the Tray Lifting Motor (M8) and the DADF Driver PCB (PCB1/J416) - Tray HP Sensor (SR13) - Tray Lifting Motor (M8) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

407-0002-04	Tray Lifting Motor error
Detection Description	The Paper Surface Sensor in the DADF was not turned ON within the specified period of time when lifting up the lifter.
Remedy	[Related parts] R1.00 - Harnesses from the Paper Surface Sensor to the DADF Driver PCB 1. Paper Surface Sensor (SR6/J613) to Relay Connector (7P) 2. Relay Connector (7P) to DADF Driver PCB (PCB1/J413) - Paper Surface Sensor (SR6) - Tray Lifting Motor (M8) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

412-0001-04	Fan error
Detection Description	Rotation of fan was detected after the stop signal for the Scanner Unit Cooling Fan was transmitted.
Remedy	[Related parts] 1.00 - Harnesses from the Scanner Unit Cooling Fan to the Reader Controller PCB 1. Scanner Unit Cooling Fan (FM2/J125) to Relay Connector (3P) 2. Relay Connector (3P) to Relay Connector (3P) 3. Relay Connector (3P) to Reader Controller PCB (PCB1/J103) - Scanner Unit Cooling Fan (FM2) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

412-0002-04	Fan error
Detection Description	Stop of fan was detected after rotation signal for the Scanner Unit Cooling Fan was transmitted.
Remedy	[Related parts] R1.00 - Harnesses from the Scanner Unit Cooling Fan to the Reader Controller PCB 1. Scanner Unit Cooling Fan (FM2/J125) to Relay Connector (3P) 2. Relay Connector (3P) to Relay Connector (3P) 3. Relay Connector (3P) to Reader Controller PCB (PCB1/J103) - Scanner Unit Cooling Fan (FM2) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

412-0003-04	Fan error
Detection Description	Rotation of fan was detected after the stop signal for the DADF Cooling Fan 3 was transmitted.
Remedy	[Related parts] R1.00 - Harnesses from the DADF Cooling Fan 3 to the DADF Driver PCB 1. DADF Cooling Fan 3 (FM3/J616) to Relay Connector (3P) 2. Relay Connector (3P) to Relay Connector (12P) 3. Relay Connector (12P) to Relay Connector (27P) 4. Relay Connector (27P) to DADF Driver PCB (PCB1/J410) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

412-0004-04	Fan error
Detection Description	Stop of fan was detected after rotation signal for the DADF Cooling Fan 3 was transmitted.
Remedy	[Related parts] R1.00 - Harnesses from the DADF Cooling Fan 3 to the DADF Driver PCB 1. DADF Cooling Fan 3 (FM3/J616) to Relay Connector (3P) 2. Relay Connector (3P) to Relay Connector (12P) 3. Relay Connector (12P) to Relay Connector (27P) 4. Relay Connector (27P) to DADF Driver PCB (PCB1/J410) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

412-0005-04	Fan error
Detection Description	Rotation of fan was detected after the stop signal for the DADF Cooling Fan 1/2 was transmitted.
Remedy	[Related parts] R1.00 - Harness between DADF Cooling Fan 1 (FM1/J614) and the DADF Driver PCB (PCB1/J404) - Harness between DADF Cooling Fan 2 (FM2/J615) and the DADF Driver PCB (PCB1/J404) - DADF Cooling Fan 1 (FM1) - DADF Cooling Fan 2 (FM2) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

412-0006-04	Fan error
Detection Description	Stop of fan was detected after rotation signal for the DADF Cooling Fan 1/2 was transmitted.
Remedy	[Related parts] R1.00 - Harness between DADF Cooling Fan 1 (FM1/J614) and the DADF Driver PCB (PCB1/J404) - Harness between DADF Cooling Fan 2 (FM2/J615) and the DADF Driver PCB (PCB1/J404) - DADF Cooling Fan 1 (FM1) - DADF Cooling Fan 2 (FM2) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

413-0001-04	Disengagement HP Sensor timeout error
Detection Description	Disengagement HP Sensor 1 in the DADF did not detect the ON status within the specified period of time.
Remedy	[Related parts] R1.00 - Harnesses from the Disengagement HP Sensor 1 to DADF Driver PCB 1. Disengagement HP Sensor 1 (SR15/J702) to Relay Connector (12P) 2. Relay Connector (12P) to Relay Connector (27P) 3. Relay Connector (27P) to DADF Driver PCB (PCB1/J410) - Harnesses from the Disengagement Motor 1 to the DADF Driver PCB 1. Disengagement Motor 1 (M6/J716) to Relay Connector (6P) 2. Relay Connector (6P) to Relay Connector (11P) 3. Relay Connector (11P) to DADF Driver PCB (PCB1/J405) - Disengagement HP Sensor 1 (SR15) - Disengagement Motor 1 (M6) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

413-0002-04	Disengagement HP Sensor timeout error
Detection Description	Disengagement HP Sensor 1 in the DADF did not detect the OFF status within the specified period of time.
Remedy	[Related parts] R1.00 - Harnesses from the Disengagement HP Sensor 1 to DADF Driver PCB 1. Disengagement HP Sensor 1 (SR15/J702) to Relay Connector (12P) 2. Relay Connector (12P) to Relay Connector (27P) 3. Relay Connector (27P) to DADF Driver PCB (PCB1/J410) - Harnesses from the Disengagement Motor 1 to the DADF Driver PCB 1. Disengagement Motor 1 (M6/J716) to Relay Connector (6P) 2. Relay Connector (6P) to Relay Connector (11P) 3. Relay Connector (11P) to DADF Driver PCB (PCB1/J405) - Disengagement HP Sensor 1 (SR15) - Disengagement Motor 1 (M6) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

413-0011-04	Disengagement HP Sensor timeout error
Detection Description	Disengagement HP Sensor 2 in the DADF did not detect the ON status within the specified period of time.
Remedy	[Related parts] R1.00 - Harnesses from the Disengagement HP Sensor 2 to the DADF Driver PCB 1. Disengagement HP Sensor 2 (SR16/J707) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to DADF Driver PCB (PCB1/J411) - Harnesses from the Disengagement Motor 2 to the DADF Driver PCB 1. Disengagement Motor 2 (M7/J715) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to DADF Driver PCB (PCB1/J409) - Disengagement HP Sensor 2 (SR16) - Disengagement Motor 2 (M7) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

413-0012-04	Disengagement HP Sensor timeout error
Detection Description	Disengagement HP Sensor 2 in the DADF did not detect the OFF status within the specified period of time.
Remedy	[Related parts] R1.00 - Harnesses from the Disengagement HP Sensor 2 to the DADF Driver PCB 1. Disengagement HP Sensor 2 (SR16/J707) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to DADF Driver PCB (PCB1/J411) - Harnesses from the Disengagement Motor 2 to the DADF Driver PCB 1. Disengagement Motor 2 (M7/J715) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to DADF Driver PCB (PCB1/J409) - Disengagement HP Sensor 2 (SR16) - Disengagement Motor 2 (M7) - DADF Driver PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts.

423-0001-04	SDRAM error in the Reader Controller PCB
Detection Description	Either an access error to SDRAM in the Reader Controller PCB or an error at data inspection was detected.
Remedy	[Remedy] Replace the Reader Controller PCB (PCB1). (Unit of replacement: READER CONTROLLER PCB ASSEMBLY) [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

490-0001-04	Different DADF model error
Detection Description	A wrong DADF was installed.
Remedy	[Related parts] R1.00 - Flat Cable between the DADF Driver PCB (PCB1/J401) and the Reader Controller PCB (PCB1/J104) - DADF Driver PCB (PCB1) - Reader Controller PCB (PCB1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check if the installed DADF model matches the model that was set in "COPIER> OPTION> CUSTOM> SCANTYPE". If not matched, install the appropriate DADF. 2. Check/replace the related parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

500-0000-02	Communication error
Detection Description	Communication with the connected device was suspended.
Remedy	1. Finisher Controller PCB error 2. Error in connected device's DC Controller PCB

500-0001-11	Communication error
Detection Description	Serial communication error with the Multi Deck or POD Deck Lite
Remedy	[Related parts] R1.00 a. MULTI DRAWER PD-B1 - Harnesses from the DC Controller PCB to the Multi Deck Driver PCB 1. DC Controller PCB (UN2/J1230 and J1232) to Relay Connector (19P) on the host machine side 2. Relay Connector (19P) on the host machine side to Multi Deck Driver PCB (PCB1) - Multi Deck Driver PCB (PCB1) - DC Controller PCB (UN2) b. POD DECK LITE-B1 - Harnesses from the DC Controller PCB to the Deck Driver PCB 1. DC Controller PCB (UN2/J1235) to Relay Connector (9P) 2. Relay Connector (9P) to Deck Lattice Connector (J7515) 3. Deck Lattice Connector (J7515) to Deck Driver PCB (PCB1) - Deck Driver PCB (PCB1) - DC Controller PCB (UN2) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the Power Supply Cable is connected to the deck/there is electrical current in the outlet/breaker of the deck is ON. 2. Check the harness between the DC Controller PCB and the Multi Deck Driver PCB or the Deck Driver PCB. 3. Replace the Multi Deck Driver PCB or the Deck Driver PCB. [Reference] After PCB replacement, refer to "Adjustments> Adjustment when Replacing the Parts" in the Service Manual (MULTI DRAWER PD-B1, POD DECK LITE-B1). 4. Replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

500-0001-51	Arcnet Communication Error
Detection Description	Arcnet Communication Fail
Remedy	Check Arcnet cable connection

500-0002-11	Communication error
Detection Description	Serial communication error with the Multi Deck
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Multi Deck Driver PCB 1. DC Controller PCB (UN2/J1230, J1232) to Relay Connector (19P, 19P) on the host machine side 2. Relay Connector (19P) on the host machine side to Multi Deck Driver PCB (PCB1) - Multi Deck Driver PCB (PCB1) - DC Controller PCB (UN2) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the Power Supply Cable is connected to the Multi Deck/there is electrical current in the outlet/breaker of the Multi Deck is ON. 2. Check the harness between the DC Controller PCB and the Multi Deck Driver PCB. 3. Replace the Multi Deck Driver PCB. [Reference] After replacement of the Multi Deck Driver PCB, refer to "Adjustments> Adjustment when Replacing the Parts" in the Service Manual (MULTI DRAWER PD-B1). 4. Replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

500-0003-11	Communication error
Detection Description	Serial communication error with the Multi Deck
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Multi Deck Driver PCB 1. DC Controller PCB (UN2/J1230, J1232) to Relay Connector (19P, 19P) on the host machine side 2. Relay Connector (19P) on the host machine side to Multi Deck Driver PCB (PCB1) - Multi Deck Driver PCB (PCB1) - DC Controller PCB (UN2) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the Power Supply Cable is connected to the Multi Deck/there is electrical current in the outlet/breaker of the Multi Deck is ON. 2. Check the harness between the DC Controller PCB and the Multi Deck Driver PCB. 3. Replace the Multi Deck Driver PCB. [Reference] After replacement of the Multi Deck Driver PCB, refer to "Adjustments> Adjustment when Replacing the Parts" in the Service Manual (MULTI DRAWER PD-B1). 4. Replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

500-0004-05	POD Deck communication error
Detection Description	A communication error of the POD Deck was detected.
Remedy	Turn OFF and then ON the main power. If the error is not cleared, collect debug log and contact the sales company.

500-0022-02	Communication error
Detection Description	FIN-AM1/SADDLE FIN-AM2A communication error between the host machine and the Finisher was detected. Or the drive did not stop due to a software failure.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Remedy] If the problem is not solved by turning OFF and then ON the main power, contact to the sales company.

500-0099-02	Communication error
Detection Description	FIN-AM1/SADDLE FIN-AM2 A communication error between the host machine and the Finisher was detected. Or the drive did not stop due to a software failure.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Remedy] If the problem is not solved by turning OFF and then ON the main power, contact to the sales company.

501-0001-71	Communication error
Detection Description	INSERION UNIT-N1 Communication failed 5 consecutive times.
Remedy	1. Check the connector of the Insertion Unit controller PCB. 2. Check the connector of the option controller PCB. 3. Check the connection of the harness between the Insertion Unit controller PCB and the option controller PCB. 4. Replace the option controller PCB. 5. Replace the Insertion Unit controller PCB.

501-0080-61	Communication error between the Master Controller PCB and the Slave Controller PCB in the Perfect Binder
Detection Description	The same communication alarm was detected for the specified period of time or longer when the Master Controller PCB communicates with the Slave Controller PCB.
Remedy	1. Disconnection of the connector of the Master Controller PCB 2. Disconnection of the connector of the Slave Controller PCB 3. Master Controller PCB error 4. Slave Controller PCB error

501-0081-61	**Communication error between the Master Controller PCB and the Slave Controller PCB in the Perfect Binder**
Detection Description	The same communication alarm was detected for the specified period of time or longer when the Slave Controller PCB communicates with the Master Controller PCB.
Remedy	1. Disconnection of the connector of the Master Controller PCB 2. Disconnection of the connector of the Slave Controller PCB 3. Master Controller PCB error 4. Slave Controller PCB error

501-0082-61	**Communication error between the Relay PCB (Option Controller) and the Master Controller PCB in the Perfect Binder**
Detection Description	Communication between the Relay PCB (Option Controller) and the Master Controller PCB was not established within the specified period of time, or an error was detected.
Remedy	1. Disconnection of the connector of the Master Controller PCB 2. Disconnection of the connector of the Relay PCB (Option Controller) 3. Master Controller PCB error 4. Relay PCB (Option Controller) error

501-0083-61	**Communication error between the Slave Controller PCB and the Cutter Controller PCB in the Perfect Binder**
Detection Description	The same communication alarm was detected for the specified period of time or longer when the Slave Controller PCB communicates with the Cutter Controller PCB.
Remedy	1. Disconnection of the connector of the Slave Controller PCB 2. Disconnection of the connector of the Cutter Controller PCB 3. Slave Controller PCB error 4. Cutter Controller PCB error

501-0084-61	**Communication error between the Slave Controller PCB and the Cutter Controller PCB in the Perfect Binder**
Detection Description	The same communication alarm was detected for the specified period of time or longer when the Cutter Controller PCB communicates with the Slave Controller PCB.
Remedy	1. Disconnection of the connector of the Slave Controller PCB 2. Disconnection of the connector of the Cutter Controller PCB 3. Slave Controller PCB error 4. Cutter Controller PCB error

503-0001-31	**Communication error**
Detection Description	INTEGRATION UNIT-C1 Communication error from the Finisher Assembly to the Saddle Stitcher Assembly.
Remedy	1. Controller PCB error 2. Open circuit of the Communication Cable (for IPC connection) 3. Disconnection of the connector of the Controller PCB 4. Option Controller PCB error (for ARCNET connection) 5. Open circuit of the harness between the Controller PCB and the Option Controller PCB (for ARCNET connection) 6. Disconnection of the connector of the Option Controller PCB

503-0002-02	**Communication error with Saddle Stitcher Assembly**
Detection Description	Communication with the Saddle Stitcher Assembly was suspended.
Remedy	1. Open circuit of the harness between the Finisher Controller PCB and the Saddle Controller PCB 2. Finisher Controller PCB error 3. Saddle Controller PCB error

503-0003-02	Communication error
Detection Description	STAPLE FIN-T1/BOOKLET FIN-T1, External_Puncher-C1 Communication with the Puncher Assembly was suspended.
Remedy	STAPLE FIN-T1/BOOKLET FIN-T1, External_Puncher-C1 1. Open circuit of the harness between the Finisher Controller PCB and the Punch Controller PCB 2. Punch Controller PCB error 3. Finisher Controller PCB error 4. Error in connected device's DC Controller PCB

503-0003-31	Communication error
Detection Description	INTEGRATION UNIT-C1 A communication error with Professional Puncher-B1 was detected.
Remedy	INTEGRATION UNIT-C1 [Related parts] R1.00 Communication Cable between the Professional Puncher-B1 and the Integration Unit-C1 [Remedy] Check/replace the related harness/cable, connector and parts.

503-0004-31	Communication error
Detection Description	INTEGRATION UNIT-C1 A communication error between the Professional Puncher and the Integration Unit was detected.
Remedy	INTEGRATION UNIT-C1 [Related parts] R1.00 - Communication Cable between the PRO.PUNCHER-B1 and the INTEGRATION UNIT-C1 - Integration Unit Controller PCB - Professional Puncher Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.

503-0006-02	Communication error
Detection Description	STAPLE FIN-W1/BOOKLET FIN-W1/PAPER FOLDING UNIT-J1 A communication error between the Finisher and the Paper Folding Unit was detected.
Remedy	STAPLE FIN-W1/BOOKLET FIN-W1/PAPER FOLDING UNIT-J1 [Related parts] R1.00 - AC Cable of the Paper Folding Unit - Cable between the Finisher and the Paper Folding Unit - Paper Folding Unit Controller PCB - Finisher Controller PCB (UN3) (Unit of replacement: FINISHER CONTROLLER PCB ASS'Y) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher. [Reference] After replacement of the Paper Folding Unit Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the DC Controller PCB" in the Service Manual for the Paper Folding Unit.

503-8004-02	Communication error
Detection Description	FIN-AM1/SADDLE FIN-AM2 A communication error between the Finisher and the Trimmer was detected.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - AC Cable of the Trimmer - Cable between the Finisher and the Trimmer - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

503-8006-02	**Communication error**
Detection Description	FIN-AM1/SADDLE FIN-AM2 A communication error between the Finisher and the Paper Folding Unit was detected.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - AC Cable of the Paper Folding Unit - Cable between the Finisher and the Paper Folding Unit - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

505-0001-02	**Error in EEPROM of the Finisher**
Detection Description	STAPLE FIN-T1/BOOKLET FIN-T1 An error was detected in the check sum value of data read from EEPROM on the Finisher PCB.
Remedy	STAPLE FIN-T1/BOOKLET FIN-T1 Finisher Controller PCB error

505-0001-61	**Error in EEPROM of the Perfect Binder**
Detection Description	PERFECT BINDER-D1 The value written in EEPROM and the value read from EEPROM were not matched.
Remedy	PERFECT BINDER-D1 Master Controller PCB error

505-0001-71	**Backup data error (failed data reading)**
Detection Description	INSERION UNIT-N1 Data failed to be read properly
Remedy	Replace the Insertion Unit controller PCB.

505-0002-02	**a. INSERTION UNIT-M1, PAPER FOLDING UNIT-F1 Data could not be written correctly. b. STAPLE FIN-T1/BOOKLET FIN-T1, External_Puncher-C1 An error was detected in the check sum value of data read from EEPROM on the Punch Controller PCB.**
Detection Description	a. INSERTION UNIT-M1, PAPER FOLDING UNIT-F1 Data could not be written correctly. b. STAPLE FIN-T1/BOOKLET FIN-T1, External_Puncher-C1 An error was detected in the check sum value of data read from EEPROM on the Punch Controller PCB.
Remedy	a. INSERTION UNIT-M1, PAPER FOLDING UNIT-F1 DC Controller PCB error b. STAPLE FIN-T1/BOOKLET FIN-T1, External_Puncher-C1 Punch Controller PCB error

505-0002-61	**Error in EEPROM of the Perfect Binder**
Detection Description	PERFECT BINDER-D1 The EEPROM was not recovered from the busy status when writing data in EEPROM.
Remedy	PERFECT BINDER-D1 Master Controller PCB error

505-0002-71	**Backup data error (failure in writing data)**
Detection Description	INSERTION UNIT-N1 Data could not be written correctly.
Remedy	INSERTION UNIT-N1 Replace the Insertion Unit controller PCB.

505-0008-02	**Backup data error (failed data reading)**
Detection Description	PAPER FOLDING UNIT-J1 Data failed to be read properly
Remedy	Replace the DC controller PCB.

505-0009-02	Data could not be written correctly.
Detection Description	PAPER FOLDING UNIT-J1 Data could not be written correctly.
Remedy	PAPER FOLDING UNIT-J1 DC Controller PCB replacement

508-0082-61	Communication error between the Perfect Binder and the Inserter
Detection Description	Failure in initialization communication occurred while a connection with the Inserter was detected.
Remedy	1. Disconnection of the connector of the Inserter Controller PCB 2. Disconnection of the connector of the Master Controller PCB 3. Disconnection of the Relay Connector between the Inserter and the Perfect Binder 4. Inserter Controller PCB error 5. Master Controller PCB error

508-0083-61	Communication error between the Perfect Binder and the Inserter
Detection Description	Communication error between the Perfect Binder and the Inserter occurred.
Remedy	1. Disconnection of the connector of the Inserter Controller PCB 2. Disconnection of the connector of the Master Controller PCB 3. Disconnection of the Relay Connector between the Inserter and the Perfect Binder 4. Inserter Controller PCB error 5. Master Controller PCB error

509-0001-51	Internal Software Error
Detection Description	Internal Software Error
Remedy	-

509-0002-02	Software authentication error
Detection Description	FIN-AM1/SADDLE FIN-AM2 An error in the combination of the BOOTROM and the firmware was detected.
Remedy	[Remedy] Enter safe mode using (2+8) startup, and reinstall the system software using SST or a USB memory device.

509-0003-61	Software combination error of the Perfect Binder
Detection Description	a. Combination of the host machine and the Perfect Binder ID was not correct. b. Product codes for the Option Controller PCB and the Perfect Binder were not matched. c. Version of the firmware was not supported by the Perfect Binder.
Remedy	1. Option Controller PCB error 2. Master Controller PCB error 3. Slave Controller PCB error 4. Cutter Controller PCB error

509-8004-02	Software authentication error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The wrong Trimmer was connected.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Remedy] Connect the Trimmer-D1.

510-0001-51	Stacker CTS powerfailure
Detection Description	Short circuit detected in the Stacker CTS motor(M2)
Remedy	Check / Replace the "Stacker CTS motor[21M2]". Check wiring harness and connections,repair if necessary.

510-0002-51	Stacker input drive21M1a power failure
Detection Description	Short circuit detected in the Stacker Input Motor1a
Remedy	Check / Replace the "Stacker Input Mo-tor [21M1a]". Check the wiring harness and connec-tions, repair if necessary Check / Replace "PBA, Stacker Spider IO[21PBA02] "

510-0003-51	Stacker reg inputdrive power failure
Detection Description	Short circuit detected in the Stacker RegistrationInput Motor
Remedy	Check / Replace the "Stacker RegistrationInput Motor [21M31]". Check wiring harness and connections,repair if necessary Check / Replace the "PBA, Stacker SpiderIO [21PBA02] "

510-0004-51	Stacker tra drivepower failure
Detection Description	Short circuit detected in the Stacker TrajectoryMotor
Remedy	Check / Replace the "Stacker TrajectoryMotor [21M32]". Check wiring harness and connections,repair if necessary Check / Replace the "PBA, Stacker SpiderIO [21PBA02] "

510-0005-51	Stacker input drive21M1b power failure
Detection Description	Short circuit detected in the Stacker Input Motor1
Remedy	Check / Replace the "Stacker Input Mo-tor [21M1b]" Check wiring harness and connections,repair if necessary. Check / Replace "PBA, Stacker Spider IO[21PBA02] ".

512-0001-51	Stacker out sensors21B6 / 21B9/13/8 / 21B23power failure
Detection Description	Short circuit detected in one of the Stacker OutputSensors 21B6, 21B8, 21B9, 21B13 or 21B23
Remedy	Check / Replace the "Stacker Top Sensor[21B6]". Check / Replace the "Stacker OutputUpper Sensor [21B8]". Check / Replace the "Stacker OutputLower Sensor [21B9]". Check / Replace the "Stacker OutputMiddle Sensor [21B13]". Check / Replace the "Stacker Top EmptySensor [21B23]". Check wiring harness and connections,repair if necessary

512-0002-51	Stacker output 1drive power failure
Detection Description	Short circuit detected in the Stacker Output Motor1
Remedy	Check / Replace the "Stacker OutputMotor 1 [21M33]" Check wiring harness and connections,repair if necessary. Check / Replace "PBA, Stacker Spider IO[21PBA02] ".

512-0003-51	Stacker output 2drive power failure
Detection Description	Short circuit detected in the Stacker Output Motor2
Remedy	Check / Replace the "Stacker OutputMotor 2 [21M34]" Check wiring harness and connections,repair if necessary. Check / Replace "PBA, Stacker Spider IO[21PBA02] ".

514-8001-02	a. Trailing Edge Assist home position error b. Processing Tray HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to move from the trailing edge assist home position although the Trailing Edge Assist Motor was driven for 3 sec. b. FIN-AM1/SADDLE FIN-AM2 The Processing Tray HP Sensor was not turned ON although 5 sec had passed after the Assist Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Trailing Edge Assist Home Position Sensor (PI109) error 2. Open circuit of the harness between the Finisher Controller PCB and the Trailing Edge Assist Motor 3. Trailing edge assist mechanism error 4. Trailing Edge Assist Motor (M109) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Processing Tray HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Processing Tray HP Sensor (PS13) - Harnesses from the Finisher Controller PCB to the Assist Motor 1. Finisher Controller PCB (UN3/J111) to Relay Connector (12P) 2. Relay Connector (J12P) to Assist Motor (M12/J632) - Processing Tray HP Sensor (PS13) - Assist Motor (M12) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

514-8002-02	a. Trailing Edge Assist home position error b. Processing Tray HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to return to the trailing edge assist home position although the Trailing Edge Assist Motor was driven for 3 sec. b. FIN-AM1/SADDLE FIN-AM2 The Processing Tray HP Sensor was not turned OFF although 5 sec had passed after the Assist Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Trailing Edge Assist Home Position Sensor (PI109) error 2. Open circuit of the harness between the Finisher Controller PCB and the Trailing Edge Assist Motor 3. Trailing edge assist mechanism error 4. Trailing Edge Assist Motor (M109) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Processing Tray HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Processing Tray HP Sensor (PS13) - Harnesses from the Finisher Controller PCB to the Assist Motor 1. Finisher Controller PCB (UN3/J111) to Relay Connector (12P) 2. Relay Connector (J12P) to Assist Motor (M12/J632) - Processing Tray HP Sensor (PS13) - Assist Motor (M12) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

518-8001-02	Fold Feed Motor (M11) error
Detection Description	PAPER FOLDING UNIT-J1 A lock signal was detected consecutively for a certain period of time since the Fold Feed Motor started to be driven.
Remedy	1. Disconnection of the connector of the Fold Feed Motor 2. Fold Feed Motor error

530-8001-02	a. Front Alignment Plate HP Sensor error b. Rear Alignment Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Front Alignment Plate did not move from the home position although the Front Alignment Plate Motor was driven for 4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Rear Alignment Guide HP Sensor was not turned ON although 5 sec had passed after the Rear Alignment Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Front Alignment Plate HP Sensor (PI106) error 2. Open circuit of the harness between the Finisher Controller PCB and the Front Alignment Plate Motor 3. Front Alignment Plate error 4. Front Alignment Plate Motor (M103) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Rear Alignment Guide HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Rear Alignment Guide HP Sensor (PS12/J608) - Harnesses from the Finisher Controller PCB to the Rear Alignment Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Rear Alignment Motor (M10/J612) - Rear Alignment Guide HP Sensor (PS12) - Rear Alignment Motor (M10) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

530-8002-02	a. Front Alignment Plate HP Sensor error b. Rear Alignment Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Front Alignment Plate did not return to the home position although the Front Alignment Plate Motor was driven for 4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Rear Alignment Guide HP Sensor was not turned OFF although 5 sec had passed after the Rear Alignment Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Front Alignment Plate HP Sensor (PI106) error 2. Open circuit of the harness between the Finisher Controller PCB and the Front Alignment Plate Motor 3. Front Alignment Plate error 4. Front Alignment Plate Motor (M103) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Rear Alignment Guide HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Rear Alignment Guide HP Sensor (PS12/J608) - Harnesses from the Finisher Controller PCB to the Rear Alignment Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Rear Alignment Motor (M10/J612) - Rear Alignment Guide HP Sensor (PS12) - Rear Alignment Motor (M10) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

531-8001-02	a. Staple home position error b. Staple HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Stapler did not move from the staple home position although the Staple Motor was driven for 0.4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Staple HP Sensor was not turned ON although 0.5 sec had passed after the Staple Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Open circuit of the harness between the Finisher Controller PCB and the Stapler 2. Stapler error 3. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Staple HP Sensor 1. Finisher Controller PCB (UN3/J122) to Relay Connector (15P) 2. Relay Connector (15P) to Staple HP Sensor (PS27/J678) - Harnesses from the Finisher Controller PCB to the Staple Unit 1. Finisher Controller PCB (UN3/J123) to Staple Driver PCB (UN6/J311) 2. Staple Driver PCB (UN6/J315 and J316) to Staple Unit (J672 and J673) - Staple Driver PCB (UN6) - Staple HP Sensor (PS27) - Stapler - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

531-8002-02	a. Staple home position error b. Staple HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Stapler did not return to the staple home position although the Staple Motor was driven for 0.4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Staple HP Sensor was not turned OFF although 0.5 sec had passed after the Staple Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Open circuit of the harness between the Finisher Controller PCB and the Stapler 2. Stapler error 3. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Staple HP Sensor 1. Finisher Controller PCB (UN3/J122) to Relay Connector (15P) 2. Relay Connector (15P) to Staple HP Sensor (PS27/J678) - Harnesses from the Finisher Controller PCB to the Staple Unit 1. Finisher Controller PCB (UN3/J123) to Staple Driver PCB (UN6/J311) 2. Staple Driver PCB (UN6/J315 and J316) to Staple Unit (J672 and J673) - Staple Driver PCB (UN6) - Staple HP Sensor (PS27) - Stapler - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

532-8001-02	a. Stapler shift home position error b. Staple HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to move from the stapler shift home position although the Stapler Shift Motor was driven for 5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Staple HP Sensor was not turned ON although 10 sec had passed after the Staple Shift Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Open circuit of the harness between the Finisher Controller PCB and the Stapler 2. Stapler error 3. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Staple HP Sensor 1. Finisher Controller PCB (UN3/J122) to Relay Connector (15P) 2. Relay Connector (15P) to Staple HP Sensor (PS27/J678) - Harnesses from the Finisher Controller PCB to the Staple Unit 1. Finisher Controller PCB (UN3/J123) to Staple Driver PCB (UN6/J311) 2. Staple Driver PCB (UN6/J317) to Staple Move Motor (M21/J671) - Staple Driver PCB (UN6) - Staple HP Sensor (PS27) - Staple Move Motor (M21) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

532-8002-02	a. Stapler shift home position error b. Staple HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to return to the stapler shift home position although the Stapler Shift Motor was driven for 20 sec. b. FIN-AM1/SADDLE FIN-AM2 The Staple HP Sensor was not turned OFF although 2 sec had passed after the Staple Shift Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Open circuit of the harness between the Finisher Controller PCB and the Stapler 2. Stapler error 3. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Staple HP Sensor 1. Finisher Controller PCB (UN3/J122) to Relay Connector (15P) 2. Relay Connector (15P) to Staple HP Sensor (PS27/J678) - Harnesses from the Finisher Controller PCB to the Staple Unit 1. Finisher Controller PCB (UN3/J123) to Staple Driver PCB (UN6/J311) 2. Staple Driver PCB (UN6/J317) to Staple Move Motor (M21/J671) - Staple Driver PCB (UN6) - Staple HP Sensor (PS27) - Staple Move Motor (M21) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

535-8001-02	a. Swing home position error b. Swing Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to move from the swing home position although the Swing Motor was driven for 3 sec. b. FIN-AM1/SADDLE FIN-AM2 The Swing Guide HP Sensor was not turned ON although 5 sec had passed after the Swing Guide Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Swing Home Position Sensor (PI105) error 2. Open circuit of the harness between the Finisher Controller PCB and the Swing Motor 3. Swing mechanism error 4. Swing Motor (M106) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Swing Guide Motor 1. Finisher Controller PCB (UN3/J141) to Relay Connector (6P) 2. Relay Connector (6P) to Relay Connector (6P) 3. Relay Connector (6P) to Swing Guide Motor (M18/J630) - Harnesses from the Finisher Controller PCB to the Swing Guide HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (3P) (Unit of replacement: CABLE, JOG-U) 3. Relay Connector (3P) to Swing Guide HP Sensor (PS44/J616) - Swing Guide Motor (M18) - Swing Guide HP Sensor (PS44) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

535-8002-02	a. Swing home position error b. Swing Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Failed to return to the swing home position although the Swing Motor was driven for 3 sec. b. FIN-AM1/SADDLE FIN-AM2 The Swing Guide HP Sensor was not turned OFF although 5 sec had passed after the Swing Guide Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Swing Home Position Sensor (PI105) error 2. Open circuit of the harness between the Finisher Controller PCB and the Swing Motor 3. Swing mechanism error 4. Swing Motor (M106) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Swing Guide Motor 1. Finisher Controller PCB (UN3/J141) to Relay Connector (6P) 2. Relay Connector (6P) to Relay Connector (6P) 3. Relay Connector (6P) to Swing Guide Motor (M18/J630) - Harnesses from the Finisher Controller PCB to the Swing Guide HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (3P) 3. Relay Connector (3P) to Swing Guide HP Sensor (PS44/J616) - Swing Guide Motor (M18) - Swing Guide HP Sensor (PS44) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

537-8001-02	a. Rear Alignment Plate home position error b. Front Alignment Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Rear Alignment Plate did not move from the home position although the Rear Alignment Plate Motor was driven for 4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Front Alignment Guide HP Sensor was not turned ON although 5 sec had passed after the Front Alignment Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Rear Alignment Plate HP Sensor (PI107) error 2. Open circuit of the harness between the Finisher Controller PCB and the Rear Alignment Plate Motor 3. Rear Alignment Plate error 4. Rear Alignment Plate Motor (M104) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Front Alignment Guide HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Front Alignment Guide HP Sensor (PS11/J605) - Harnesses from the Finisher Controller PCB to the Front Alignment Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Front Alignment Motor (M9/J606) - Front Alignment Guide HP Sensor (PS11) - Front Alignment Motor (M9) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

537-8002-02	a. Rear Alignment Plate home position error b. Front Alignment Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Rear Alignment Plate did not return to the home position although the Rear Alignment Plate Motor was driven for 4 sec. b. FIN-AM1/SADDLE FIN-AM2 The Front Alignment Guide HP Sensor was not turned OFF although 5 sec had passed after the Front Alignment Motor operation started.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Rear Alignment Plate HP Sensor (PI107) error 2. Open circuit of the harness between the Finisher Controller PCB and the Rear Alignment Plate Motor 3. Rear Alignment Plate error 4. Rear Alignment Plate Motor (M104) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Front Alignment Guide HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Front Alignment Guide HP Sensor (PS11/J605) - Harnesses from the Finisher Controller PCB to the Front Alignment Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Front Alignment Motor (M9/J606) - Front Alignment Guide HP Sensor (PS11) - Front Alignment Motor (M9) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

539-8001-02	Delivery angle change HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Delivery Angle HP Sensor was not turned ON although 5 sec had passed after the Delivery Angle Adjustment Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Delivery Angle HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Delivery Angle HP Sensor (PS45/J650) - Harnesses from the Finisher Controller PCB to the Delivery Angle Adjustment Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Delivery Angle Adjustment Motor (M28/J651) - Delivery Angle HP Sensor (PS45) - Delivery Angle Adjustment Motor (M28) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

539-8002-02	Delivery angle change HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Delivery Angle HP Sensor was not turned OFF although 5 sec had passed after the Delivery Angle Adjustment Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Delivery Angle HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Delivery Angle HP Sensor (PS45/J650) - Harnesses from the Finisher Controller PCB to the Delivery Angle Adjustment Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Delivery Angle Adjustment Motor (M28/J651) - Delivery Angle HP Sensor (PS45) - Delivery Angle Adjustment Motor (M28) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

540-8001-02	a. Upper Tray timeout error b. Tray A (Upper Tray) lifting error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray did not return to the home position although the Primary Tray Shift Motor was driven for 25 sec. - The tray did not move to the other area although the Primary Tray Shift Motor was driven for 5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Tray A Lifting Motor Rotation Sensor was not turned OFF although 800 sec had passed after the Tray A Lifting Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray lifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Tray A Lifting Motor 1. Finisher Controller PCB (UN3/J109A) to Tray A Motor Driver PCB (UN10/J292A) 2. Tray A Motor Driver PCB (UN10/J291A) to Tray A Lifting Motor (M22) - Tray A Lifting Motor Rotation Sensor (PS34) - Tray A Lifting Motor (M22) - Tray A Motor Driver PCB (UN10) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

540-8002-02	a. Primary Tray shift area error b. Tray A (Upper Tray) area error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray exceeded the upper/lower limit before the Primary Tray Paper Surface Sensor detected the paper surface during the paper surface detection operation. - A non-contiguous area was detected during the tray operation. b. FIN-AM1/SADDLE FIN-AM2 - Tray A (Upper Tray) was detected as being at a lower position than Tray B (Lower Tray). - The Tray A Position Sensor detected a non-contiguous area.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray lifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J109B) and the Tray A Third Position Sensor (PS49/J2534) - Harness between the Finisher Controller PCB (UN3/J109B) and the Tray A Fourth Position Sensor (PS50/J2533) - Tray A Third Position Sensor (PS49) - Tray A Fourth Position Sensor (PS50) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

540-8003-02	Swing Guide Open Detection Switch/Staple Safety Switch error
Detection Description	The Swing Guide Open Detection Switch or the Staple Safety Switch was activated while the tray was working.
Remedy	1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray shifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error

540-8004-02	Primary Tray Shift Motor clock error
Detection Description	The FG signal ON status could not be detected within 0.2 sec since the Primary Tray Shift Motor started to be driven.
Remedy	1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray shifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error

540-8005-02	Primary Tray Shift Motor speed error
Detection Description	The LED signal was turned OFF for 200 msec after 150 msec had passed since it was turned ON.
Remedy	1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray shifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error

540-8006-02	Primary Tray Shift Motor acceleration error
Detection Description	The LED signal ON status could not be detected within 1 sec since the Lifting Motor started to be driven.
Remedy	1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray shifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error

540-8007-02	Primary Tray Shift Motor error
Detection Description	The LED signal was not turned OFF although the Primary Tray Shift Motor was stopped.
Remedy	1. Primary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Primary Tray Shift Motor 3. Tray shifting mechanism error 4. Primary Tray Shift Motor (M107) error 5. Finisher Controller PCB error

540-80FF-02	Tray A (Upper Tray) shift timeout error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The lifting operation did not complete although 25 sec had passed after the Tray A Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Tray A Lifting Motor 1. Finisher Controller PCB (UN3/J109A) to Tray A Motor Driver PCB (UN10/J292A) 2. Tray A Motor Driver PCB (UN10/J291A) to Tray A Lifting Motor (M22) - Tray A Lifting Motor Rotation Sensor (PS34) - Tray A Lifting Motor (M22) - Tray A Motor Driver PCB (UN10) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

542-8001-02	a. Lower Tray timeout error b. Tray B (Lower Tray) lifting error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray did not return to the home position although the Secondary Tray Shift Motor was driven for 25 sec. - The tray did not move to the other area although the Secondary Tray Shift Motor was driven for 5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Tray B Lifting Motor Rotation Sensor was not turned OFF although 800 sec had passed after the Tray B Lifting Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray lifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Tray B Lifting Motor 1. Finisher Controller PCB (UN3/J108A) to Tray B Motor Driver PCB (UN11/J292B) 2. Tray B Motor Driver PCB (UN11/J291B) to Tray B Lifting Motor (M23) - Tray B Lifting Motor Rotation Sensor (PS35) - Tray B Lifting Motor (M23) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

542-8002-02	a. Secondary Tray shift area error b. Tray B (Lower Tray) area error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 - The tray reached the upper limit before the Secondary Tray Paper Surface Sensor 1 detected the paper surface during the paper surface detection operation. - A non-contiguous area was detected during the tray operation. - The tray reached the next area before the Secondary Tray Paper Surface Sensor 2 detected the paper surface during the escape operation. b. FIN-AM1/SADDLE FIN-AM2 - Tray A (Upper Tray) was detected as being at a lower position than Tray B (Lower Tray). - The Tray B Position Sensor detected a non-contiguous area.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray lifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J108B) and the Tray B First Position Sensor (PS51/J2543) - Harness between the Finisher Controller PCB (UN3/J108B) and the Tray B Third Position Sensor (PS52/J2542) - Harness between the Finisher Controller PCB (UN3/J108B) and the Tray B Fourth Position Sensor (PS53/J2541) - Tray B First Position Sensor (PS51) - Tray B Third Position Sensor (PS52) - Tray B Fourth Position Sensor (PS53) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

542-8004-02	Secondary Tray Shift Motor clock error
Detection Description	The FG signal ON status could not be detected within 0.2 sec since the Secondary Tray Shift Motor started to be driven.
Remedy	1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray shifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error

542-8005-02	Secondary Tray Shift Motor speed error
Detection Description	The LED signal was turned OFF for 200 msec after 150 msec had passed since it was turned ON.
Remedy	1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray shifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error

542-8006-02	Secondary Tray Shift Motor acceleration error
Detection Description	The LED signal ON status could not be detected within 1 sec since the Lifting Motor started to be driven.
Remedy	1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray shifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error

542-8007-02	Secondary Tray Shift Motor error
Detection Description	The LED signal was not turned OFF although the Secondary Tray Shift Motor was stopped.
Remedy	1. Secondary Tray Shift Area Sensor PCB error 2. Open circuit of the harness between the Finisher Controller PCB and the Secondary Tray Shift Motor 3. Tray shifting mechanism error 4. Secondary Tray Shift Motor (M108) error 5. Finisher Controller PCB error

542-80FF-02	Tray B (Lower Tray) shift timeout error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The lifting operation did not complete although 25 sec had passed after the Lower Tray Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Tray B Lifting Motor 1. Finisher Controller PCB (UN3/J108A) to Tray B Motor Driver PCB (UN11/J292B) 2. Tray B Motor Driver PCB (UN11/J291B) to Tray B Lifting Motor (M23) - Tray B Lifting Motor Rotation Sensor (PS35) - Tray B Lifting Motor (M23) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

544-0001-02	Upper Neat Stack Unit Return Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Upper Neat Stack Unit Return Roller HP Sensor was not turned ON although 1 sec had passed after the Upper Neat Stack Unit Return Roller Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Neat Driver PCB to the Upper Neat Stack Unit Return Roller Lifting Motor 1. Neat Driver PCB (UN201/J505) to Relay Connector (17P) 2. Relay Connector (17P) to Upper Neat Stack Unit Return Roller Lifting Motor (M209) - Harnesses from the Neat Driver PCB to the Upper Neat Stack Unit Return Roller HP Sensor 1. Neat Driver PCB (UN201/J503) to Relay Connector (13P) 2. Relay Connector (13P) to Upper Neat Stack Unit Return Roller HP Sensor (PS209) - Upper Neat Stack Unit Return Roller Lifting Motor (M209) - Upper Neat Stack Unit Return Roller HP Sensor (PS209) [Remedy] Check/replace the related harness/cable, connector and parts.

544-0002-02	Upper Neat Stack Unit Return Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Upper Neat Stack Unit Return Roller HP Sensor was not turned OFF although 1 sec had passed after the Upper Neat Stack Unit Return Roller Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Neat Driver PCB to the Upper Neat Stack Unit Return Roller Lifting Motor 1. Neat Driver PCB (UN201/J505) to Relay Connector (17P) 2. Relay Connector (17P) to Upper Neat Stack Unit Return Roller Lifting Motor (M209) - Harnesses from the Neat Driver PCB to the Upper Neat Stack Unit Return Roller HP Sensor 1. Neat Driver PCB (UN201/J503) to Relay Connector (13P) 2. Relay Connector (13P) to Upper Neat Stack Unit Return Roller HP Sensor (PS209) - Upper Neat Stack Unit Return Roller Lifting Motor (M209) - Upper Neat Stack Unit Return Roller HP Sensor (PS209) [Remedy] Check/replace the related harness/cable, connector and parts.

548-0001-02	Lower Neat Stack Unit Return Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Lower Neat Stack Unit Return Roller HP Sensor was not turned ON although 1 sec had passed after the Lower Neat Stack Unit Return Roller Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Neat Driver PCB to the Lower Neat Stack Unit Return Roller Lifting Motor 1. Neat Driver PCB (UN201/J506) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (5P) 3. Relay Connector (5P) to Lower Neat Stack Unit Return Roller Lifting Motor (M208/J2511) - Harnesses from the Neat Driver PCB to the Lower Neat Stack Unit Return Roller HP Sensor 1. Neat Driver PCB (UN201/J504) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (3P) 3. Relay Connector (3P) to Relay Connector (3P) 4. Relay Connector (3P) to Lower Neat Stack Unit Return Roller HP Sensor (PS208/J2517) - Lower Neat Stack Unit Return Roller Lifting Motor (M208) - Lower Neat Stack Unit Return Roller HP Sensor (PS208) [Remedy] Check/replace the related harness/cable, connector and parts.

548-0002-02	Lower Neat Stack Unit Return Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Lower Neat Stack Unit Return Roller HP Sensor was not turned OFF although 1 sec had passed after the Lower Neat Stack Unit Return Roller Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Neat Driver PCB to the Lower Neat Stack Unit Return Roller Lifting Motor 1. Neat Driver PCB (UN201/J506) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (5P) 3. Relay Connector (5P) to Lower Neat Stack Unit Return Roller Lifting Motor (M208/J2511) - Harnesses from the Neat Driver PCB to the Lower Neat Stack Unit Return Roller HP Sensor 1. Neat Driver PCB (UN201/J504) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (3P) 3. Relay Connector (3P) to Relay Connector (3P) 4. Relay Connector (3P) to Lower Neat Stack Unit Return Roller HP Sensor (PS208/J2517) - Lower Neat Stack Unit Return Roller Lifting Motor (M208) - Lower Neat Stack Unit Return Roller HP Sensor (PS208) [Remedy] Check/replace the related harness/cable, connector and parts.

550-0001-51	+24V not presentor too low
Detection Description	24V is not detected on the IO board within apredetermined period of time after activating thepower supply
Remedy	Check / Replace the "Stacker PowerSupply Unit" Check wiring harness and connections,repair if necessary.

550-0002-61	Error in power supply check signal in Perfect Binder
Detection Description	The 24V1 check signal of the Master Controller PCB showed disconnection of the power although the Front Cover was closed.
Remedy	1. Front Cover Switch (MSW1/2/4/5/6/7) error 2. Master Controller PCB error

550-0003-61	Error in power supply check signal in Perfect Binder
Detection Description	a. The Master Controller PCB detected the open status of the Upper Cover Switch although the Front Cover and the Upper Cover were closed. b. The 24V2 check signal of the Master Controller PCB showed disconnection of the power although the Front Cover and the Upper Cover were closed.
Remedy	1. Upper Cover Switch (MSW3) error 2. Upper Cover Open/Close Sensor (S4) error 3. Master Controller PCB error

550-0004-61	Error in power supply check signal in Perfect Binder
Detection Description	The 24V2 check signal of the Slave Controller PCB showed disconnection of the power although the Front Cover and the Upper Cover were closed.
Remedy	1. Upper Cover Switch (MSW3) error 2. Upper Cover Open/Close Sensor (S4) error 3. Master Controller PCB error 4. Slave controller PCB error

550-0005-61	Error in power supply check signal in Perfect Binder
Detection Description	The 24V3 check signal of the Slave Controller PCB showed disconnection of the power although the Front Cover was closed.
Remedy	1. Front Cover Switch (MSW1/2/4/5/6/7) error 2. Slave Controller PCB error

551-0001-02	Power Supply Cooling Fan error
Detection Description	FIN-AM1/SADDLE FIN-AM2 Operation was not performed although 5 sec had passed after the operation of the Power Supply Cooling Fan 1 and 2 started.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J103) and the Power Supply Cooling Fan 1 (FM1/J1003) - Harness between the Finisher Controller PCB (UN3/J103) and the Power Supply Cooling Fan 2 (FM4/J1020) - Power Supply Cooling Fan 1and 2 (FM1 and FM4) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

551-0001-61	Perfect Binder Power Supply Cooling Fan (Right) (FM1) error
Detection Description	PERFECT BINDER-D1 A lock signal of the Power Supply Cooling Fan (Right) was detected.
Remedy	PERFECT BINDER-D1 1. Power Supply Cooling Fan (Right) (FM1) error 2. Slave Controller PCB error

551-0001-71	Power Supply Fan (F1) error
Detection Description	INSERTION UNIT-N1 -Lock signal ON was detected while the Power Supply Fan was being driven. - Lock signal OFF was detected while the Power Supply Fan was stopped.
Remedy	INSERTION UNIT-N1 1. Power Supply Fan connector disconnection 2. Replace the Power Supply Fan.

551-0002-02	a. Power Supply Fan (F1) error b. Feed Cooling Fan error
Detection Description	a. PAPER FOLDING UNIT-F1 - Lock signal ON was detected while the Power Supply Fan was being driven. - Lock signal OFF was detected while the Power Supply Fan was stopped. b. FIN-AM1/SADDLE FIN-AM2 Operation was not performed although 5 sec had passed after the Feed Cooling Fan operation started.
Remedy	a. PAPER FOLDING UNIT-F1 1. Power Supply Fan connector disconnection 2. Power Supply Fan error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 -Harnesses from the Finisher Controller PCB to the Feed Cooling Fan 1 1. Finisher Controller PCB (UN3/J127) to Relay Connector (3P) 2. Relay Connector (3P) to Feed Cooling Fan 1 (FM2/J518L) - Harnesses from the Finisher Controller PCB to the Feed Cooling Fan 2 1. Finisher Controller PCB (UN3/J127) to Relay Connector (3P) 2. Relay Connector (3P) to Feed Cooling Fan 2 (FM3/J519L) - Feed Cooling Fan 1 (FM2) - Feed Cooling Fan 2 (FM3) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

551-0002-61	Perfect Binder Power Supply Cooling Fan (Middle) (FM2) error
Detection Description	PERFECT BINDER-D1 A lock signal of the Power Supply Cooling Fan (Middle) was detected.
Remedy	PERFECT BINDER-D1 1. Power Supply Cooling Fan (Middle) (FM2) error 2. Slave Controller PCB error

551-0003-61	Error in Power Supply Cooling Fan (Left) (FM3) of Perfect Binder
Detection Description	The lock signal of the Power Supply Cooling Fan (Left) was detected.
Remedy	1. Power Supply Cooling Fan (Left) (FM3) error 2. Master Controller PCB error

551-0004-61	Error in Spine Plate Lower Cooling Fan (Front) (FM10) of Perfect Binder
Detection Description	The lock signal of the Spine Plate Lower Cooling Fan (Front) (FM10) was detected.
Remedy	1. Spine Plate Lower Cooling Fan (Front) (FM10) error 2. Slave Controller PCB error

551-0005-61	Error in Spine Plate Lower Cooling Fan (Rear) (FM11) of Perfect Binder
Detection Description	The lock signal of the Spine Plate Lower Cooling Fan (Rear) (FM11) was detected.
Remedy	1. Spine Plate Lower Cooling Fan (Rear) (FM11) error 2. Slave Controller PCB error

551-0006-61	Error in Spine Plate Upper Cooling Fan (Front) (FM12) of Perfect Binder
Detection Description	The lock signal of the Spine Plate Upper Cooling Fan (Front) (FM12) was detected.
Remedy	1. Spine Plate Upper Cooling Fan (Front) (FM12) error 2. Slave Controller PCB error

551-0007-61	Error in Spine Plate Upper Cooling Fan (Rear) (FM13) of Perfect Binder
Detection Description	The lock signal of the Spine Plate Upper Cooling Fan (Rear) (FM13) was detected.
Remedy	1. Spine Plate Upper Cooling Fan (Rear) (FM13) error 2. Slave Controller PCB error

551-0008-61	Error in Signature Cooling 2 Fan (Front) (FM6) of Perfect Binder
Detection Description	The lock signal of the Signature Cooling 2 Fan (Front) (FM6) was detected.
Remedy	1. Signature Cooling 2 Fan (Front) (FM6) error 2. Slave Controller PCB error

551-0009-61	Error in Signature Cooling 2 Fan (Rear) (FM7) of Perfect Binder
Detection Description	The lock signal of the Signature Cooling 2 Fan (Rear) (FM7) was detected.
Remedy	1. Signature Cooling 2 Fan (Rear) (FM7) error 2. Slave Controller PCB error

551-000A-61	Error in Signature Cooling 1 Fan (Front) (FM8) of Perfect Binder
Detection Description	The lock signal of the Signature Cooling 1 Fan (Front) (FM8) was detected.
Remedy	1. Signature Cooling 1 Fan (Front) (FM8) error 2. Slave Controller PCB error

551-000B-61	Error in Signature Cooling 1 Fan (Rear) (FM9) of Perfect Binder
Detection Description	The lock signal of the Signature Cooling 1 Fan (Rear) (FM9) was detected.
Remedy	1. Signature Cooling 1 Fan (Rear) (FM9) error 2. Slave Controller PCB error

551-000C-61	Error in Glue Supply Cooling Fan (Upper) (FM4) of Perfect Binder
Detection Description	The lock signal of the Glue Supply Cooling Fan (Upper) (FM4) was detected.
Remedy	1. Glue Supply Cooling Fan (Upper) (FM4) error 2. Slave Controller PCB error

551-000D-61	Error in Glue Supply Cooling Fan (Lower) (FM5) of Perfect Binder
Detection Description	The lock signal of the Glue Supply Cooling Fan (Lower) (FM5) was detected.
Remedy	1. Glue Supply Cooling Fan (Lower) (FM5) error 2. Slave Controller PCB error

551-000E-61	Error in Blower Fan (FM14).
Detection Description	Perfect Binder-D1 The lock signal of the Blower Fan (FM14) was detected.
Remedy	1. Blower Fan (FM14) error 2. Master Controller PCB error

551-000F-61	Exhaust FAN (right)(FM15) error
Detection Description	Perfect Binder-D1 The lock signal of the Exhaust FAN (right)(FM15) was detected.
Remedy	1. Exhaust FAN (right)(FM15) error 2. Master Controller PCB error

551-0010-61	Exhaust FAN (left)(FM16) error
Detection Description	Perfect Binder-D1 The lock signal of the Exhaust FAN (left) (FM16) was detected.
Remedy	1. Exhaust FAN (left)(FM16) error 2. Master Controller PCB error

551-800E-61	Error in Blower Fan(FM14).
Detection Description	Perfect Binder-D1 The lock signal of the Blower Fan(FM14) was detected.
Remedy	1. Blower Fan(FM14) error 2. Master Controller PCB error

551-800F-61	Exhaust FAN (right)(FM15)error
Detection Description	Perfect Binder-D1 The lock signal of the Exhaust FAN (right) (FM15) was detected.
Remedy	1. Exhaust FAN (right)(FM15) error 2. Master Controller PCB error

551-8010-61	Exhaust FAN (left)(FM16) error
Detection Description	Perfect Binder-D1 The lock signal of the Exhaust FAN (left) (FM16) was detected.
Remedy	1. Exhaust FAN (left)(FM16) error 2. Master Controller PCB error

562-8001-02	Error in Deceleration Timing Sensor (S30)
Detection Description	PAPER FOLDING UNIT-J1 The light-receiving amount was not within the threshold level although the light-emitting amount of the sensor was adjusted to be within the threshold level.
Remedy	1. Disconnection of the connector of the Deceleration Timing Sensor 2. Sensor error

562-8002-02	Error in Disengagement Timing Sensor (S31)
Detection Description	PAPER FOLDING UNIT-J1 The light-receiving amount was not within the threshold level although the light-emitting amount of the sensor was adjusted to be within the threshold level.
Remedy	1. Disconnection of the connector of the Disengagement Timing Sensor 2. Sensor error

562-8003-02	Error in Folding Position Accuracy Sensor (S32)
Detection Description	PAPER FOLDING UNIT-J1 The light-receiving amount was not within the threshold level although the light-emitting amount of the sensor was adjusted to be within the threshold level.
Remedy	1. Disconnection of the connector of the Folding Position Accuracy Sensor 2. Sensor error

562-8004-02	Error in Upper Stopper HP Sensor (S23)
Detection Description	PAPER FOLDING UNIT-J1 The light-receiving amount was not within the threshold level although the light-emitting amount of the sensor was adjusted to be within the threshold level.
Remedy	1. Disconnection of the connector of the Upper Stopper HP Sensor 2. Sensor error

566-0001-51	Stacker SZ slidepower failure
Detection Description	Short circuit detected in SZ registration slide assy
Remedy	Check / Replace the "Stacker RegistrationSledge Carriage" Check wiring harness and connections,repair if necessary.

566-8001-02	Side Registration Detection Unit HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Side Registration Detection Unit HP Sensor was not turned ON although 3 sec had passed after the Side Registration Detection Unit Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J281) and the Side Registration Detection Unit Shift Motor (M6/J530) - Harnesses from the Finisher Controller PCB to the Side Registration Detection Unit HP Sensor 1. Finisher Controller PCB (UN3/J128) to Relay Connector (3P) 2. Relay Connector (3P) to Side Registration Detection Unit HP Sensor (PS7/J512) - Side Registration Detection Unit Shift Motor (M6) - Side Registration Detection Unit HP Sensor (PS7) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

566-8002-02	Side Registration Detection Unit HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Side Registration Detection Unit HP Sensor was not turned OFF although 3 sec had passed after the Side Registration Detection Unit Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J281) and the Side Registration Detection Unit Shift Motor (M6/J530) - Harnesses from the Finisher Controller PCB to the Side Registration Detection Unit HP Sensor 1. Finisher Controller PCB (UN3/J128) to Relay Connector (3P) 2. Relay Connector (3P) to Side Registration Detection Unit HP Sensor (PS7/J512) - Side Registration Detection Unit Shift Motor (M6) - Side Registration Detection Unit HP Sensor (PS7) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

566-8002-51	Stacker SZ framepower failure
Detection Description	Short circuit detected in SZ registration frame assy
Remedy	Check / Replace the "Stacker RegistrationSledge Frame". Check wiring harness and connections,repair if necessary.

566-8003-51	Stacker reg inputsolenoid 21Y2 power failure
Detection Description	Short circuit detected in Stacker Registration InputSolenoid 1
Remedy	Check / Replace the "Stacker RegistrationInput Solenoid 1 [21Y2]". Check wiring harness and connections,repair if necessary.

566-8004-51	Stacker reg inputsolenoid 21Y3 power failure
Detection Description	Short circuit detected in Stacker Registration InputSolenoid 2
Remedy	Check / Replace the "Stacker RegistrationInput Solenoid 2 [21Y3] " Check wiring harness and connections,repair if necessary

566-8005-51	Stacker SZ sensorpower failure
Detection Description	Short circuit detected in SZ registration sensorassy
Remedy	Check / Replace the "Stacker RegistrationSensor assy". Check wiring harness and connections,repair if necessary.

567-8001-02	Shift Roller Unit HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Shift Roller Unit HP Sensor was not turned ON although 5 sec had passed after the operation started.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J282) and the Side Registration Shift Motor (M7/J532) - Harnesses from the Finisher Controller PCB to the Shift Roller Unit HP Sensor 1. Finisher Controller PCB (UN3/J128) to Relay Connector (3P) 2. Relay Connector (3P) to Shift Roller Unit HP Sensor (PS8/J513) - Side Registration Shift Motor (M7) - Shift Roller Unit HP Sensor (PS8) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

567-8002-02	Shift Roller Unit HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Shift Roller Unit HP Sensor was not turned OFF although 5 sec had passed after the operation started.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J282) and the Side Registration Shift Motor (M7/J532) - Harnesses from the Finisher Controller PCB to the Shift Roller Unit HP Sensor 1. Finisher Controller PCB (UN3/J128) to Relay Connector (3P) 2. Relay Connector (3P) to Shift Roller Unit HP Sensor (PS8/J513) - Side Registration Shift Motor (M7) - Shift Roller Unit HP Sensor (PS8) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

568-8001-02	Feed Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Feed Roller HP Sensor was not turned ON although 5 sec had passed after the Feed Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J286) and the Feed Roller Disengagement Motor (M8/J535) - Harness between the Feed Motor Driver PCB (UN5/J286) to the Feed Roller HP Sensor (PS9/J538) - Feed Roller Disengagement Motor (M8) - Feed Roller HP Sensor (PS9) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

568-8002-02	Feed Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Feed Roller HP Sensor was not turned OFF although 5 sec had passed after the Feed Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Feed Motor Driver PCB (UN5/J286) and the Feed Roller Disengagement Motor (M8/J535) - Harness between the Feed Motor Driver PCB (UN5/J286) to the Feed Roller HP Sensor (PS9/J538) - Feed Roller Disengagement Motor (M8) - Feed Roller HP Sensor (PS9) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

569-8003-02	Upper Stopper Motor failed to leave HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned OFF although the Upper Stopper Motor was driven by the specified-pulse while the Upper Stopper HP Sensor was ON.
Remedy	1. Check the connector of the upper stopper motor (M8). 2. Replace the upper stopper motor. 3. Check the connector of the upper stopper HP sensor (S23). 4. Replace the upper stopper HP sensor.

569-8004-02	Upper Stopper Motor failed to return to HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned ON although the Upper Stopper Motor was driven by the specified-pulse while the Upper Stopper HP Sensor was OFF.
Remedy	1. Check the connector of the upper stopper motor (M8). 2. Replace the upper stopper motor. 3. Check the connector of the upper stopper HP sensor (S23). 4. Replace the upper stopper HP sensor.

56A-8001-02	C-fold Stopper Motor failed to leave HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned OFF although the C-fold Stopper Motor was driven by the specified-pulse while the C-fold Stopper Motor HP Sensor was ON.
Remedy	1. Disconnection of the connector of the C-fold Stopper Motor (M9) 2. C-fold Stopper Motor error 3. Disconnection of the connector of the C-fold Stopper Motor HP Sensor (S24) 4. C-fold Stopper Motor HP Sensor error

56A-8002-02	C-fold Stopper Motor failed to return to HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned ON although the C-fold Stopper Motor was driven by the specified-pulse while the C-fold Stopper Motor HP Sensor was OFF.
Remedy	1. Check the connector of the C-fold stopper motor (M9). 2. Replace the C-fold stopper motor. 3. Check the connector of the C-fold stopper motor HP sensor (S24) 4. Replace the C-fold stopper motor HP sensor.

56B-8001-02	Fold Tray Motor failed to leave HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned OFF although the Fold Tray Motor was driven by the specified-pulse while the Fold Tray HP Sensor was ON.
Remedy	1. Check the connector of the folding tray motor (M7). 2. Replace the folding tray motor. 3. Check the connector of the folding tray HP sensor (S28) 4. Replace the folding tray HP sensor.

56B-8002-02	Fold Tray Motor failed to return to HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned ON although the Fold Tray Motor was driven by the specified-pulse while the Fold Tray HP Sensor was OFF.
Remedy	1. Check the connector of the folding tray motor (M7). 2. Replace the folding tray motor. 3. Check the connector of the folding tray HP sensor (S28) 4. Replace the folding tray HP sensor.

56C-0001-51	Stacker coverpower failure
Detection Description	Short circuit detected in the safety interlocks
Remedy	Check wiring harness and connectionsbetween the Cover Switches and the"PBA, Stacker Spider IO [21PBA02] ",repair if necessary

56C-0002-51	Stacker tra sensor21B7 power failure
Detection Description	Short circuit detected in Stacker Transport Inputsensor
Remedy	Check / Replace the "Stacker TransportInput Sensor [21B7]". Check wiring harness and connections,repair if necessary.

56C-0003-51	Stacker CTSsolenoid power failure
Detection Description	Short circuit detected in the CTS DeflectorSolenoid
Remedy	Check / Replace the "Stacker CTS Deflec-tor Solenoid [21Y1]" Check the wiring harness and connec-tions, repair if necessary.

56C-0004-51	Stacker flipsolenoid power failure
Detection Description	Short circuit detected in the Stacker Flip DeflectorSolenoid
Remedy	Check / Replace the "Stacker Flip Deflec-tor Solenoid [21Y4]". Check wiring harness and connections,repair if necessary.

56C-0005-51	Stacker topsolenoid power failure
Detection Description	Short circuit detected in the Stacker Top DeflectorSolenoid
Remedy	Check / Replace the "Stacker Top Deflec-tor Solenoid [21Y5]". Check wiring harness and connections,repair if necessary.

56C-0006-51	Illegal power state+24V RED
Detection Description	Error detected in safety circuit of RED zone
Remedy	Check / Replace the "PBA, Stacker SpiderIO [21PBA02] " Check wiring harness and connections,repair if necessary.

56C-0007-51	Illegal power state+24V BLUE
Detection Description	Error detected in safety circuit of BLUE zone
Remedy	Check / Replace the "PBA, Stacker SpiderIO [21PBA02] " Check wiring harness and connections,repair if necessary.

56C-0008-51	Illegal power state+24V GREEN
Detection Description	Error detected in safety circuit of GREEN zone
Remedy	Check / Replace the "PBA, Stacker SpiderIO [21PBA02] " Check wiring harness and connections,repair if necessary.

56C-0009-51	STADFD5V_Powe Fail
Detection Description	DFD Interface Power 5V Fail
Remedy	Check DFD Interface Connection

56C-0010-51	Illegal power state +24V
Detection Description	Illegal power state +24V
Remedy	Check / Replace the PBA, Stacker Spider IO Check wiring harness and connections, repair if necessary.

56C-0011-51	Stacker input sen-sors 21B3 21B4 power failure
Detection Description	Short circuit detected in Stacker Input In sensoror Stacker Input Out sensor
Remedy	Check / Replace the "Stacker Input InSensor [21B3]". Check / Replace the "Stacker Input OutSensor [21B4]". Check wiring harness and connection,repair if necessary.

56C-0012-51	Stacker CTS sen-sor 21B5 power failure
Detection Description	Short circuit detected in Stacker Copy Turn sensor
Remedy	Check / Replace the "Stacker Copy TurnSensor [21B5]". Check wiring harness and connections,repair if necessary.

56C-0013-51	Stacker reg inputsensor 21B18 power failure
Detection Description	Short circuit detected in Stacker Registration Inputsensor
Remedy	Check / Replace the "Stacker Reg InputSensor [21B18]". Check wiring harness and connections,repair if necessary.

56E-8001-02	Leading Edge Retainer Guide Motor failed to leave HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned OFF although the Leading Edge Retainer Guide Motor was driven by the specified-pulse while the Leading Edge Retainer Guide HP Sensor was ON.
Remedy	1. Check the connector of the Leading Edge Retainer Guide Motor (M10) 2. Replace the Leading Edge Retainer Guide Motor 3. Check the connector of the Leading Edge Retainer Guide HP Sensor (S25) 4. Replace the Leading Edge Retainer Guide HP Sensor

56E-8002-02	Leading Edge Retainer Guide Motor failed to return to HP
Detection Description	PAPER FOLDING UNIT-J1 The sensor was not turned ON although the Leading Edge Retainer Guide Motor was driven by the specified-pulse while the Leading Edge Retainer Guide HP Sensor was OFF.
Remedy	1. Check the connector of the Leading Edge Retainer Guide Motor (M10) 2. Replace the Leading Edge Retainer Guide Motor 3. Check the connector of the Leading Edge Retainer Guide HP Sensor (S25) 4. Replace the Leading Edge Retainer Guide HP Sensor

56F-8001-02	Inlet Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Inlet Roller HP Sensor was not turned ON although 5 sec had passed after the Inlet Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Feed Motor Driver PCB to the Inlet Roller Disengagement Motor 1. Feed Motor Driver PCB (UN5/J278) to Relay Connector (11P) 2. Relay Connector (11P) to Inlet Roller Disengagement Motor (M27/J542) - Harnesses from the Feed Motor Driver PCB to the Inlet Roller HP Sensor 1. Feed Motor Driver PCB (UN5/J278) to Relay Connector (11P) 2. Relay Connector (11P) to Inlet Roller HP Sensor (PS43/J544) - Inlet Roller Disengagement Motor (M27) - Inlet Roller HP Sensor (PS43) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

56F-8002-02	Inlet Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Inlet Roller HP Sensor was not turned OFF although 5 sec had passed after the Inlet Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Feed Motor Driver PCB to the Inlet Roller Disengagement Motor 1. Feed Motor Driver PCB (UN5/J278) to Relay Connector (11P) 2. Relay Connector (11P) to Inlet Roller Disengagement Motor (M27/J542) - Harnesses from the Feed Motor Driver PCB to the Inlet Roller HP Sensor 1. Feed Motor Driver PCB (UN5/J278) to Relay Connector (11P) 2. Relay Connector (11P) to Inlet Roller HP Sensor (PS43/J544) - Inlet Roller Disengagement Motor (M27) - Inlet Roller HP Sensor (PS43) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

577-8001-02	Paddle rotation HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paddle Rotation HP Sensor was not turned ON although 5 sec had passed after the Paddle Rotation Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Paddle Rotation Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Relay Connector (5P) 3. Relay Connector (5P) to Paddle Rotation Motor (M14/J628) - Harnesses from the Finisher Controller PCB to the Paddle Rotation HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (3P) 3. Relay Connector (3P) to Paddle Rotation HP Sensor (PS20/J619) - Paddle Rotation Motor (M14) - Paddle Rotation HP Sensor (PS20) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

577-8002-02	Paddle rotation HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paddle Rotation HP Sensor was not turned OFF although 5 sec had passed after the Paddle Rotation Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Paddle Rotation Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Relay Connector (5P) 3. Relay Connector (5P) to Paddle Rotation Motor (M14/J628) - Harnesses from the Finisher Controller PCB to the Paddle Rotation HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (3P) 3. Relay Connector (3P) to Paddle Rotation HP Sensor (PS20/J619) - Paddle Rotation Motor (M14) - Paddle Rotation HP Sensor (PS20) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

577-8003-02	Paddle lifting HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paddle Lifting HP Sensor was not turned ON although 5 sec had passed after the Paddle Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Paddle Lifting Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Paddle Lifting Motor (M15/J627) - Harnesses from the Finisher Controller PCB to the Paddle Lifting HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Paddle Lifting HP Sensor (PS21/J613) - Paddle Lifting Motor (M15) - Paddle Lifting HP Sensor (PS21) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

577-8004-02	Paddle lifting HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paddle Lifting HP Sensor was not turned OFF although 5 sec had passed after the Paddle Lifting Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Paddle Lifting Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Paddle Lifting Motor (M15/J627) - Harnesses from the Finisher Controller PCB to the Paddle Lifting HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Paddle Lifting HP Sensor (PS21/J613) - Paddle Lifting Motor (M15) - Paddle Lifting HP Sensor (PS21) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

578-8001-02	Feed knurling HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Feed Belt HP Sensor was not turned ON although 5 sec had passed after the Feed Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Feed Belt Shift Motor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Feed Belt Shift Motor (M17/J640) - Harnesses from the Finisher Controller PCB to the Feed Belt HP Sensor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Feed Belt HP Sensor (PS25/J639) - Feed Belt Shift Motor (M17) - Feed Belt HP Sensor (PS25) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

578-8002-02	Feed knurling HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Feed Belt HP Sensor was not turned OFF although 5 sec had passed after the Feed Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Feed Belt Shift Motor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Feed Belt Shift Motor (M17/J640) - Harnesses from the Finisher Controller PCB to the Feed Belt HP Sensor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Feed Belt HP Sensor (PS25/J639) - Feed Belt Shift Motor (M17) - Feed Belt HP Sensor (PS25) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57A-8001-02	Process Tray HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Process Tray HP Sensor was not turned ON although 5 sec had passed after the Process Stopper Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Process Stopper Shift Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Process Stopper Shift Motor (M11/J607) - Harnesses from the Finisher Controller PCB to the Process Tray HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Process Tray HP Sensor (PS13/J611) - Process Stopper Shift Motor (M11) - Process Tray HP Sensor (PS13) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57A-8002-02	Process Tray HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Process Tray HP Sensor was not turned OFF although 5 sec had passed after the Process Stopper Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Process Stopper Shift Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Process Stopper Shift Motor (M11/J607) - Harnesses from the Finisher Controller PCB to the Process Tray HP Sensor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (16P) 3. Relay Connector (16P) to Process Tray HP Sensor (PS13/J611) - Process Stopper Shift Motor (M11) - Process Tray HP Sensor (PS13) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57A-8003-02	Process Stopper operation error
Detection Description	FIN-AM1/SADDLE FIN-AM2 Operation could not be started because the Process Stopper interfered with the Stapler.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Process Stopper Shift Motor 1. Finisher Controller PCB (UN3/J139) to Relay Connector (31P) 2. Relay Connector (31P) to Relay Connector (14P) 3. Relay Connector (14P) to Process Stopper Shift Motor (M11/J607) - Process Stopper Shift Motor (M11) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57B-8001-02	Paper Trailing Edge Drop Guide HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paper Trailing Edge Drop Guide HP Sensor was not turned ON although 5 sec had passed after the Paper Trailing Edge Drop Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Feed Motor Driver PCB to the Paper Trailing Edge Drop Guide HP Sensor 1. Feed Motor Driver PCB (UN5/J277) to Relay Connector (7P) 2. Relay Connector (7P) to Paper Trailing Edge Drop Guide HP Sensor (PS24/J510) - Paper Trailing Edge Drop Motor (M16) - Paper Trailing Edge Drop Guide HP Sensor (PS24) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57B-8002-02	Paper Trailing Edge Drop Guide HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Paper Trailing Edge Drop Guide HP Sensor was not turned OFF although 5 sec had passed after the Paper Trailing Edge Drop Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Feed Motor Driver PCB to the Paper Trailing Edge Drop Guide HP Sensor 1. Feed Motor Driver PCB (UN5/J277) to Relay Connector (7P) 2. Relay Connector (7P) to Paper Trailing Edge Drop Guide HP Sensor (PS24/J510) - Paper Trailing Edge Drop Motor (M16) - Paper Trailing Edge Drop Guide HP Sensor (PS24) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57C-8001-02	Upper Guide HP Error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Upper Guide HP Sensor was not turned ON although 5 sec had passed after the Upper Guide Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Upper Guide Motor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Upper Guide Motor (M20/J641) - Harness between the Finisher Controller PCB (UN3/J127) and the Upper Guide HP Sensor (PS26/J638) - Upper Guide Motor (M20) - Upper Guide HP Sensor (PS26) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

57C-8002-02	Upper Guide HP Error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Upper Guide HP Sensor was not turned OFF although 5 sec had passed after the Upper Guide Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Upper Guide Motor 1. Finisher Controller PCB (UN3/J129) to Relay Connector (11P) 2. Relay Connector (11P) to Upper Guide Motor (M20/J641) - Harness between the Finisher Controller PCB (UN3/J127) and the Upper Guide HP Sensor (PS26/J638) - Upper Guide Motor (M20) - Upper Guide HP Sensor (PS26) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

580-8001-51	Stacker lift powerfailure
Detection Description	Short circuit detected in the Stacker Lift motor(M9)
Remedy	Check / Replace the "Stacker Main DriveLift" Check wiring harness and connections,repair if necessary

580-8002-51	Stacker eject drivepower failure
Detection Description	Short circuit detected in the Stacker Eject Motor
Remedy	Check / Replace the "Stacker Eject Motor[21M8]" Check wiring harness and connections,repair if necessary. Check / Replace "PBA, Stacker Spider IO[21PBA02] ".

583-8001-02	Stack Delivery Auxiliary Tray HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Stack Delivery Auxiliary Tray HP Sensor was not turned ON although 5 sec had passed after the Stack Delivery Auxiliary Tray Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses connecting the Stack Delivery Auxiliary Tray Motor (M13/J629), the Relay Connector (J629/J633) and the Finisher Controller PCB (UN3/J140) - Harnesses from the Finisher Controller PCB to the Stack Delivery Auxiliary Tray Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Stack Delivery Auxiliary Tray Motor (M13/J629) - Harnesses from the Finisher Controller PCB to the Stack Delivery Auxiliary Tray HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (4P) 3. Relay Connector (4P) to Stack Delivery Auxiliary Tray HP Sensor (PS14/J617) - Stack Delivery Auxiliary Tray Motor (M13) - Stack Delivery Auxiliary Tray HP Sensor (PS14) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

583-8002-02	Stack Delivery Auxiliary Tray HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Stack Delivery Auxiliary Tray HP Sensor was not turned OFF although 5 sec had passed after the Stack Delivery Auxiliary Tray Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses connecting the Stack Delivery Auxiliary Tray Motor (M13/J629), the Relay Connector (J629/J633) and the Finisher Controller PCB (UN3/J140) - Harnesses from the Finisher Controller PCB to the Stack Delivery Auxiliary Tray Motor 1. Finisher Controller PCB (UN3/J140) to Relay Connector (19P) 2. Relay Connector (19P) to Stack Delivery Auxiliary Tray Motor (M13/J629) - Harnesses from the Finisher Controller PCB to the Stack Delivery Auxiliary Tray HP Sensor 1. Finisher Controller PCB (UN3/J106) to Relay Connector (25P) 2. Relay Connector (25P) to Relay Connector (4P) 3. Relay Connector (4P) to Stack Delivery Auxiliary Tray HP Sensor (PS14/J617) - Stack Delivery Auxiliary Tray Motor (M13) - Stack Delivery Auxiliary Tray HP Sensor (PS14) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

584-0002-02	Shutter HP error
Detection Description	The shutter failed to return to the home position although the Stack Delivery Motor was driven for 3 sec.
Remedy	1. Shutter HP Sensor (PI113) error 2. Shutter mechanism error 3. Stack Delivery Motor (M102)/Shutter Open/Close Clutch (CL101)/Stack Delivery Lower Roller Clutch (CL102) error 4. Finisher Controller PCB error

584-8001-02	Shutter HP error
Detection Description	The shutter failed to leave the home position although the Stack Delivery Motor was driven for 3 sec.
Remedy	1. Shutter HP Sensor (PI113) error 2. Open circuit of the harness between the Finisher Controller PCB and the Stack Delivery Motor (M102)/Shutter Open/Close Clutch (CL101) 3. Shutter mechanism error 4. Stack Delivery Motor/Shutter Open/Close Clutch/Stack Delivery Lower Roller Clutch (CL102) error 5. Finisher Controller PCB error

585-8001-02	Stack Retainer HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Stack Retainer HP Sensor was not turned ON although 0.25 sec had passed after the Stack Retainer Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Stack Retainer Motor 1. Finisher Controller PCB (UN3/J152) to Relay Connector (7P) 2. Relay Connector (7P) to Stack Retainer Motor (M201/J2598) - Harnesses from the Finisher Controller PCB to the Stack Retainer HP Sensor 1. Finisher Controller PCB (UN3/J152) to Relay Connector (7P) 2. Relay Connector (7P) to Stack Retainer HP Sensor (PS201/J2599) - Stack Retainer HP Sensor (PS201) - Stack Retainer Motor (M20) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

585-8002-02	Stack Retainer HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Stack Retainer HP Sensor was not turned OFF although 0.25 sec had passed after the Stack Retainer Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Finisher Controller PCB to the Stack Retainer Motor 1. Finisher Controller PCB (UN3/J152) to Relay Connector (7P) 2. Relay Connector (7P) to Stack Retainer Motor (M201/J2598) - Harnesses from the Finisher Controller PCB to the Stack Retainer HP Sensor 1. Finisher Controller PCB (UN3/J152) to Relay Connector (7P) 2. Relay Connector (7P) to Stack Retainer HP Sensor (PS201/J2599) - Stack Retainer HP Sensor (PS201) - Stack Retainer Motor (M20) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

588-8001-51	Stacker Flipunitpower failure
Detection Description	Short circuit detected in the Flipping Unit
Remedy	Check / Replace the "Stacker Flip Unit". Check wiring harness and connections,repair if necessary

588-8002-51	Stacker lift heightsensor 21B16 status not OK
Detection Description	The Stacker Lift Height Sensor (21B16) is nottoggled inactive-active-inactive within a predetermined period of time after the start of the StackerFlip Hammer Motor (M15)
Remedy	Check / Replace the "Stacker Flip Unit". Check wiring harness and connections,repair if necessary Check / Replace the "PBA, Stacker SpiderIO [21PBA02] ".

588-8003-51	Stacker slide doorpower failure
Detection Description	Short circuit detected in the Slide Door assy
Remedy	Check / Replace the "Stacker Slide Door". Check wiring harness and connections,repair if necessary. Check / Replace the "PBA, Stacker SpiderIO [21PBA02] ".

588-8004-51	Stacker slide doorsensor status not OK
Detection Description	Stacker Slide Up sensor en Stacker Slide down 2sensor are simultaneously active
Remedy	Check / Replace the "Stacker Slide Door". Check wiring harness and connections,repair if necessary Check / Replace the "PBA, Stacker SpiderIO [21PBA02] "

588-8005-51	Stacker eject sensorstatus not OK
Detection Description	Stack Eject Out sensor and Stack Eject In sensorare simultaneously active
Remedy	Check / Replace the "Stacker Eject TableIn Sensor [21B10]".. Check / Replace the "Stacker Eject TableOut Sensor [21B11]" Check wiring harness and connections,repair if necessary.

588-8006-51	Stacker eject sensorpower failure
Detection Description	Short circuit detected in Stack Eject Out sensoror Stack Eject In sensor
Remedy	Check / Replace the "Stacker Eject TableIn Sensor [21B10]".. Check / Replace the "Stacker Eject TableOut Sensor [21B11]" Check wiring harness and connections,repair if necessary.

588-8007-51	Stacker eject emptysensor power failure
Detection Description	Short circuit detected in Stacker Lift Table Homesensor or Stacker Eject Table Empty sensor
Remedy	Check / Replace the "Stacker Eject TableEmpty Sensor [21B12] " Check / Replace the "Stacker Lift TableHome Sensor [21B15]" Check wiring harness and connections,repair if necessary.

590-8000-02	Punch Motor detection error
Detection Description	PUNCHER UNIT-BS1/BT1/BU1 The punch did not move although 0.2 sec had passed after the Punch Motor started the operation.
Remedy	PUNCHER UNIT-BS1/BT1/BU1 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J131) and the Punch Motor (M24/J571) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor Clock Sensor (PS38/J575) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Front Sensor (PS37/J573) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch 2/3 Hole Sensor (PS39/J572) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor HP Sensor (PS36/J574) - Punch Motor Clock Sensor (PS38) - Punch Front Sensor (PS37) - Punch 2/3 Hole Sensor (PS39) - Punch Motor HP Sensor (PS36) - Punch Motor (M24) - Punch Unit - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

590-8001-02	a. Punch home position error b. Punch Motor HP error
Detection Description	a. External_Puncher-C1 The Puncher did not move from the punch home position although the Punch Motor was driven for 200 msec. b. PUNCHER UNIT-BS1/BT1/BU1 The Punch Motor HP Sensor was not turned ON although 500 sec had passed after the Punch Motor started the operation.
Remedy	a. External_Puncher-C1 1. Punch Home Position Sensor (PI63)/Punch Motor Clock Sensor (PI62) error 2. Open circuit of the harness between the Punch Controller PCB and the sensor 3. Punch mechanism error 4. Punch Motor (M61) error 5. Punch Controller PCB error 6. Finisher Controller PCB error b. PUNCHER UNIT-BS1/BT1/BU1 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J131) and the Punch Motor (M24/J571) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor Clock Sensor (PS38/J575) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Front Sensor (PS37/J573) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch 2/3 Hole Sensor (PS39/J572) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor HP Sensor (PS36/J574) - Punch Motor Clock Sensor (PS38) - Punch Front Sensor (PS37) - Punch 2/3 Hole Sensor (PS39) - Punch Motor HP Sensor (PS36) - Punch Motor (M24) - Punch Unit - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

590-8002-02	a. Punch home position error b. Punch Motor HP error
Detection Description	a. External_Puncher-C1 The Puncher could not detect the punch home position after driving stopped when initializing the Punch Motor. b. PUNCHER UNIT-BS1/BT1/BU1 The Punch Motor HP Sensor was not turned OFF although 500 sec had passed after the Punch Motor started the operation.
Remedy	a. External_Puncher-C1 1. Punch Home Position Sensor (PI63)/Punch Motor Clock Sensor (PI62) error 2. Open circuit of the harness between the Punch Controller PCB and the sensor 3. Punch mechanism error 4. Punch Motor (M61) error 5. Punch Controller PCB error 6. Finisher Controller PCB error b. PUNCHER UNIT-BS1/BT1/BU1 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J131) and the Punch Motor (M24/J571) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor Clock Sensor (PS38/J575) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Front Sensor (PS37/J573) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch 2/3 Hole Sensor (PS39/J572) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor HP Sensor (PS36/J574) - Punch Motor Clock Sensor (PS38) - Punch Front Sensor (PS37) - Punch 2/3 Hole Sensor (PS39) - Punch Motor HP Sensor (PS36) - Punch Motor (M24) - Punch Unit - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

590-8004-02	Punch switching error
Detection Description	PUNCHER UNIT-BS1/BT1/BU1 The Punch Motor home position could not be detected when switching the 2-hole/3-hole and 2-hole/4-hole (France) operations.
Remedy	PUNCHER UNIT-BS1/BT1/BU1 [Related parts] R1.00 - Harness between the Finisher Controller PCB (UN3/J131) and the Punch Motor (M24/J571) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor Clock Sensor (PS38/J575) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Front Sensor (PS37/J573) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch 2/3 Hole Sensor (PS39/J572) - Harness between the Finisher Controller PCB (UN3/J130) and the Punch Motor HP Sensor (PS36/J574) - Punch Motor Clock Sensor (PS38) - Punch Front Sensor (PS37) - Punch 2/3 Hole Sensor (PS39) - Punch Motor HP Sensor (PS36) - Punch Motor (M24) - PUNCHER UNIT-BS1/BT1/BU1 - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

591-8001-02	Error in punched waste full detection
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Punched Waste Full Sensor was set to 66% or higher.
Remedy	1. Open circuit of the harness between the Punched Waste Full Detection PCB and the Punch Controller PCB 2. Punched Waste Full Detection PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

591-8002-02	Error in punched waste full detection
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Punched Waste Full Sensor was set to 0%.
Remedy	1. Punched Waste Full Detection PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

592-8001-02	Paper Trailing Edge Sensor error
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Paper Trailing Edge Sensor (LED5, PTR5) was set to 66% or higher.
Remedy	1. Open circuit of the Harness between the LED PCB/Photosensor PCB and the Punch Controller PCB 2. LED PCB/Photosensor PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

592-8002-02	Paper Trailing Edge Sensor error
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Paper Trailing Edge Sensor (LED5, PTR5) was set to 0%.
Remedy	1. LED PCB/Photosensor PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

592-8003-02	Side Registration Sensor 1 error
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Side Registration Sensor 1 (LED1, PTR1) was set to 66% or higher.
Remedy	1. Open circuit of the Harness between the LED PCB/Photosensor PCB and the Punch Controller PCB 2. LED PCB/Photosensor PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

592-8004-02	Side Registration Sensor 1 error
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Side Registration Sensor 1 (LED1, PTR1) was set to 0%.
Remedy	1. LED PCB/Photosensor PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

592-8005-02	Side Registration Sensor 2 error
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Side Registration Sensor 2 (LED2, PTR2) was set to 66% or higher.
Remedy	1. Open circuit of the Harness between the LED PCB/Photosensor PCB and the Punch Controller PCB 2. LED PCB/Photosensor PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

592-8006-02	Side Registration Sensor 2 error
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Side Registration Sensor 2 (LED2, PTR2) was set to 0%.
Remedy	1. LED PCB/Photosensor PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

592-8007-02	Side Registration Sensor 3 error
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Side Registration Sensor 3 (LED3, PTR3) was set to 66% or higher.
Remedy	1. Open circuit of the Harness between the LED PCB/Photosensor PCB and the Punch Controller PCB 2. LED PCB/Photosensor PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

592-8008-02	Side Registration Sensor 3 error
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Side Registration Sensor 3 (LED3, PTR3) was set to 0%.
Remedy	1. LED PCB/Photosensor PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

592-8009-02	Side Registration Sensor 4 error
Detection Description	Light-receiving voltage was 2.5 V or less although the light-emission duty of Side Registration Sensor 4 (LED4, PTR4) was set to 66% or higher.
Remedy	1. Open circuit of the Harness between the LED PCB/Photosensor PCB and the Punch Controller PCB 2. LED PCB/Photosensor PCB error 3. Punch Controller PCB error 4. Finisher Controller PCB error

592-800A-02	Side Registration Sensor 4 error
Detection Description	Light-receiving voltage was 2.0 V or higher although the light-emission duty of Side Registration Sensor 4 (LED4, PTR4) was set to 0%.
Remedy	1. LED PCB/Photosensor PCB error 2. Punch Controller PCB error 3. Finisher Controller PCB error

593-8001-02	Side registration HP error
Detection Description	Failed to move from the side registration home position although the Punch Slide Unit slid 9 mm during the initial Side Registration Motor operation.
Remedy	1. Side Registration HP Sensor (PI61) error 2. Open circuit of the harness between the Punch Controller PCB and the Side Registration HP Sensor 3. Side registration mechanism error 4. Side Registration Motor (M62) error 5. Punch Controller PCB error 6. Finisher Controller PCB error

593-8002-02	Side registration HP error
Detection Description	Failed to return to the side registration home position although the Punch Slide Unit slid 37 mm during the initial Side Registration Motor operation.
Remedy	1. Side Registration HP Sensor (PI61) error 2. Open circuit of the harness between the Punch Controller PCB and the Side Registration HP Sensor 3. Side registration mechanism error 4. Side Registration Motor (M62) error 5. Punch Controller PCB error 6. Finisher Controller PCB error

5A1-0081-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip HP Sensor (S93) was not turned OFF although a specified period of time had passed at a grip operation.
Remedy	1. Grip Motor (M43) error 2. Grip HP Sensor (S93) error 3. Slave Controller PCB error

5A1-0082-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip HP Sensor (S93) was not turned ON although a specified period of time had passed at a grip release operation.
Remedy	1. Grip Motor (M43) error 2. Grip HP Sensor (S93) error 3. Slave Controller PCB error

5A1-0083-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip End Sensor (S94) was not turned OFF although a specified period of time had passed at a grip release operation.
Remedy	1. Grip Motor (M43) error 2. Grip End Sensor (S94) error 3. Slave Controller PCB error

5A1-0084-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip End Sensor (S94) was not turned ON although a specified period of time had passed at a grip operation.
Remedy	1. Grip Motor (M43) error 2. Grip End Sensor (S94) error 3. Slave Controller PCB error

5A1-8081-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip HP Sensor (S93) was not turned OFF although a specified period of time had passed at a grip operation.
Remedy	1. Grip Motor (M43) error 2. Grip HP Sensor (S93) error 3. Slave Controller PCB error

5A1-8082-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip HP Sensor (S93) was not turned ON although a specified period of time had passed at a grip release operation.
Remedy	1. Grip Motor (M43) error 2. Grip HP Sensor (S93) error 3. Slave Controller PCB error

5A1-8083-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip End Sensor (S94) was not turned OFF although a specified period of time had passed at a grip release operation.
Remedy	1. Grip Motor (M43) error 2. Grip End Sensor (S94) error 3. Slave Controller PCB error

5A1-8084-61	Error in Grip Motor (M43) of Perfect Binder
Detection Description	The Grip End Sensor (S94) was not turned ON although a specified period of time had passed at a grip operation.
Remedy	1. Grip Motor (M43) error 2. Grip End Sensor (S94) error 3. Slave Controller PCB error

5A2-0081-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Left) (S103) was not turned OFF although a specified period of time had passed while moving from the left home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Left) (S103) error 3. Cutter Controller PCB error

5A2-0082-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Left) (S103) was not turned ON although a specified period of time had passed while returning to the left home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Left) (S103) error 3. Cutter Controller PCB error

5A2-0083-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Right) (S100) was not turned OFF although a specified period of time had passed when the Waste Buffer moved from the right home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Right) (S100) error 3. Cutter Controller PCB error

5A2-0084-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Right) (S100) was not turned ON although a specified period of time had passed when the Waste Buffer returned to the right home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Right) (S100) error 3. Cutter Controller PCB error

5A2-0085-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer Clock Sensor (S101) was not turned ON although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer Clock Sensor (S101) error 3. Cutter Controller PCB error

5A2-0086-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Paper Retainer Plate Sensor (S104) was not turned OFF although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Paper Retainer Plate Sensor (S104) error 3. Cutter Controller PCB error

5A2-0087-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Paper Retainer Plate Sensor (S104) was not turned ON although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Paper Retainer Plate Sensor (S104) error 3. Cutter Controller PCB error

5A2-8081-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Left) (S103) was not turned OFF although a specified period of time had passed while moving from the left home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Left) (S103) error 3. Cutter Controller PCB error

5A2-8082-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Left) (S103) was not turned ON although a specified period of time had passed while returning to the left home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Left) (S103) error 3. Cutter Controller PCB error

5A2-8083-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Right) (S100) was not turned OFF although a specified period of time had passed when the Waste Buffer moved from the right home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Right) (S100) error 3. Cutter Controller PCB error

5A2-8084-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer HP Sensor (Right) (S100) was not turned ON although a specified period of time had passed when the Waste Buffer returned to the right home position.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer HP Sensor (Right) (S100) error 3. Cutter Controller PCB error

5A2-8085-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Waste Buffer Clock Sensor (S101) was not turned ON although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Waste Buffer Clock Sensor (S101) error 3. Cutter Controller PCB error

5A2-8086-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Paper Retainer Plate Sensor (S104) was not turned OFF although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Paper Retainer Plate Sensor (S104) error 3. Cutter Controller PCB error

5A2-8087-61	Error in Waste Buffer Shift Motor (M37) of Perfect Binder
Detection Description	The Paper Retainer Plate Sensor (S104) was not turned ON although a specified period of time had passed during rotation of the Waste Buffer Shift Motor.
Remedy	1. Waste Buffer Shift Motor (M37) error 2. Paper Retainer Plate Sensor (S104) error 3. Cutter Controller PCB error

5A3-0081-61	Error in Stacking Buffer Tray Motor (M39) of Perfect Binder
Detection Description	The Stacking Buffer Tray HP Sensor (S78) was not turned OFF although a specified period of time had passed when the Stacking Buffer Tray moved from the home position.
Remedy	1. Stacking Buffer Tray Motor (M39) error 2. Stacking Buffer Tray HP Sensor (S78) error 3. Cutter Controller PCB error

5A3-0082-61	Error in Stacking Buffer Tray Motor (M39) of Perfect Binder
Detection Description	The Stacking Buffer Tray HP Sensor (S78) was not turned ON although a specified period of time had passed when the Stacking Buffer Tray returned to the home position.
Remedy	1. Stacking Buffer Tray Motor (M39) error 2. Stacking Buffer Tray HP Sensor (S78) error 3. Cutter Controller PCB error

5A3-8081-61	Error in Stacking Buffer Tray Motor (M39) of Perfect Binder
Detection Description	The Stacking Buffer Tray HP Sensor (S78) was not turned OFF although a specified period of time had passed when the Stacking Buffer Tray moved from the home position.
Remedy	1. Stacking Buffer Tray Motor (M39) error 2. Stacking Buffer Tray HP Sensor (S78) error 3. Cutter Controller PCB error

5A3-8082-61	Error in Stacking Buffer Tray Motor (M39) of Perfect Binder
Detection Description	The Stacking Buffer Tray HP Sensor (S78) was not turned ON although a specified period of time had passed when the Stacking Buffer Tray returned to the home position.
Remedy	1. Stacking Buffer Tray Motor (M39) error 2. Stacking Buffer Tray HP Sensor (S78) error 3. Cutter Controller PCB error

5A4-0081-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press HP Sensor (S90) was not turned OFF although a specified period of time had passed at a press operation.
Remedy	1. Press Motor (M36) error 2. Press HP Sensor (S90) error 3. Cutter Controller PCB error

5A4-0082-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press HP Sensor (S90) was not turned ON although a specified period of time had passed at a press release operation.
Remedy	1. Press Motor (M36) error 2. Press HP Sensor (S90) error 3. Cutter Controller PCB error

5A4-0083-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press End Sensor (S87) was not turned OFF although a specified period of time had passed at a press release operation.
Remedy	1. Press Motor (M36) error 2. Press End Sensor (S87) error 3. Cutter Controller PCB error

5A4-0084-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press End Sensor (S87) was not turned ON although a specified period of time had passed at a press operation.
Remedy	1. Press Motor (M36) error 2. Press End Sensor (S87) error 3. Cutter Controller PCB error

5A4-0085-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press Limit Sensor (S89) was turned ON.
Remedy	1. The Press Plate moved to the press release limit position. 2. Press Motor (M36) error 3. Press Limit Sensor (S89) error 4. Cutter Controller PCB error

5A4-8081-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press HP Sensor (S90) was not turned OFF although a specified period of time had passed at a press operation.
Remedy	1. Press Motor (M36) error 2. Press HP Sensor (S90) error 3. Cutter Controller PCB error

5A4-8082-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press HP Sensor (S90) was not turned ON although a specified period of time had passed at a press release operation.
Remedy	1. Press Motor (M36) error 2. Press HP Sensor (S90) error 3. Cutter Controller PCB error

5A4-8083-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press End Sensor (S87) was not turned OFF although a specified period of time had passed at a press release operation.
Remedy	1. Press Motor (M36) error 2. Press End Sensor (S87) error 3. Cutter Controller PCB error

5A4-8084-61	Error in Press Motor (M36) of Perfect Binder
Detection Description	The Press End Sensor (S87) was not turned ON although a specified period of time had passed at a press operation.
Remedy	1. Press Motor (M36) error 2. Press End Sensor (S87) error 3. Cutter Controller PCB error

5A5-0081-61	Error in Slide Motor (M44) of Perfect Binder
Detection Description	The Slide HP Sensor (S82) was not turned OFF although a specified period of time had passed when the slide moved from the home position.
Remedy	1. Slide Motor (M44) error 2. Slide HP Sensor (S82) error 3. Cutter Controller PCB error

5A5-0082-61	Error in Slide Motor (M44) of Perfect Binder
Detection Description	The Slide HP Sensor (S82) was not turned ON although a specified period of time had passed when the slide returned to the home position.
Remedy	1. Slide Motor (M44) error 2. Slide HP Sensor (S82) error 3. Cutter Controller PCB error

5A5-8081-61	Error in Slide Motor (M44) of Perfect Binder
Detection Description	The Slide HP Sensor (S82) was not turned OFF although a specified period of time had passed when the slide moved from the home position.
Remedy	1. Slide Motor (M44) error 2. Slide HP Sensor (S82) error 3. Cutter Controller PCB error

5A5-8082-61	Error in Slide Motor (M44) of Perfect Binder
Detection Description	The Slide HP Sensor (S82) was not turned ON although a specified period of time had passed when the slide returned to the home position.
Remedy	1. Slide Motor (M44) error 2. Slide HP Sensor (S82) error 3. Cutter Controller PCB error

5A7-8011-02	Transport Hook Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Transport Hook Home Position Sensor was not turned ON.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Transport Hook Home Position Sensor (PI04/J104), the Relay Connector (J6) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses connecting the Transport Hook Motor (M02/J21), the Relay Connector (J14) and the Trimmer Controller PCB (QPM-220/CON103) - Transport Hook Home Position Sensor (PI04) - Transport Hook Motor (M02) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Transport Hook Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8012-02	Transport Hook Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Transport Hook Home Position Sensor was not turned OFF.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Transport Hook Home Position Sensor (PI04/J104), the Relay Connector (J6) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses connecting the Transport Hook Motor (M02/J21), the Relay Connector (J14) and the Trimmer Controller PCB (QPM-220/CON103) - Transport Hook Home Position Sensor (PI04) - Transport Hook Motor (M02) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Transport Hook Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8021-02	Top-bottom Guide Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Top-bottom Guide Home Position Sensor was not turned ON.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Top-bottom Guide Home Position Sensor (PI03/J103), the Relay Connector (J6) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses between the Top-bottom Guide Motor (M03/J22) and the Stepper Motor Driver PCB (QPW-727/CON104) - Top-bottom Guide Home Position Sensor (PI03) - Top-bottom Guide Motor (M03) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Transport Hook Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8022-02	Top-bottom Guide Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Top-bottom Guide Home Position Sensor was not turned OFF.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Top-bottom Guide Home Position Sensor (PI03/J103), the Relay Connector (J6) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses between the Top-bottom Guide Motor (M03/J22) and the Stepper Motor Driver PCB (QPW-727/CON104) - Top-bottom Guide Home Position Sensor (PI03) - Top-bottom Guide Motor (M03) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Transport Hook Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8025-02	EEPROM error (Booklet Trimmer)
Detection Description	BOOKLET TRIMMER-D1 A numerical value error was detected for the retained home position.
Remedy	BOOKLET TRIMMER-D1 Replace the Trimmer Controller PCB (QPM-220). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8033-02	Trim Section Transport Motor Driver error
Detection Description	BOOKLET TRIMMER-D1 An error was detected in the Trim Section Transport Motor Driver PCB.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harness between the Trim Section Transport Motor (M04) and the Trim Section Transport Motor Driver PCB (A04/CN3) - Trim Section Transport Motor (M04) - Trim Section Transport Motor Driver PCB (A04) [Remedy] Check/replace the related harness/cable, connector and parts.

5A7-8043-02	Knife Motor Driver error
Detection Description	BOOKLET TRIMMER-D1 An error was detected in the Knife Motor Driver PCB.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harness between the Knife Motor (M05) and the Trim Section Transport Motor Driver PCB (A04/CN3) - Knife Motor (M05) - Knife Motor Driver PCB (A05) [Remedy] Check/replace the related harness/cable, connector and parts.

5A7-8044-02	Upper Knife Upper Limit Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Upper Knife Upper Limit Sensor was not turned ON although the Upper Knife moved a certain amount.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Upper Knife Upper Limit Sensor (PI06/J106), the Relay Connector (J3) and the Trimmer Controller PCB (QPM-220/CON10) - Harness between the Knife Motor (M05) and the Knife Motor Driver PCB (A05/CN3) - Upper Knife Upper Limit Sensor (PI06) - Knife Motor (M05) - Knife Motor Driver PCB (A05) - Trimmer Controller PCB (QPM-220) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8051-02	Stopper Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Stopper Home Position Sensor was not turned ON.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Stopper Home Position Sensor (PI05/J105), the Relay Connector (J3) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses connecting the Stopper Move Motor (M06/J23), the Relay Connector (J3) and the Stepper Motor Driver PCB (QPW-727/CON104) - Stopper Home Position Sensor (PI05) - Trimmer Controller PCB (QPM-220) - Stopper Move Motor (M06) - Stepper Motor Driver PCB (QPW-727) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8052-02	Stopper Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Stopper Home Position Sensor was not turned OFF.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Stopper Home Position Sensor (PI05/J105), the Relay Connector (J3) and the Trimmer Controller PCB (QPM-220/CON10) - Harnesses connecting the Stopper Move Motor (M06/J23), the Relay Connector (J3) and the Stepper Motor Driver PCB (QPW-727/CON104) - Stopper Home Position Sensor (PI05) - Trimmer Controller PCB (QPM-220) - Stopper Move Motor (M06) - Stepper Motor Driver PCB (QPW-727) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8055-02	EEPROM error
Detection Description	BOOKLET TRIMMER-D1 An error with the numerical value for the retained home position of the Knife Stopper Positioning Motor was detected.
Remedy	BOOKLET TRIMMER-D1 Replace the Trimmer Controller PCB (QPM-220). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8061-02	Delivery Roller Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Delivery Roller Home Position Sensor was not turned ON.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Delivery Roller Home Position Sensor (PI14/J114), the Relay Connector (J37/J1) and the Trimmer Controller PCB (QPM-220/CON12) - Delivery Roller Motor (M08) - Delivery Roller Home Position Sensor (PI14) - Trimmer Controller PCB (QPM-220) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8062-02	Delivery Roller Home Position Sensor detection error
Detection Description	BOOKLET TRIMMER-D1 The Delivery Roller Home Position Sensor was not turned OFF.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harnesses connecting the Delivery Roller Home Position Sensor (PI14/J114), the Relay Connector (J37/J1) and the Trimmer Controller PCB (QPM-220/CON12) - Delivery Roller Motor (M08) - Delivery Roller Home Position Sensor (PI14) - Trimmer Controller PCB (QPM-220) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8065-02	EEPROM error
Detection Description	BOOKLET TRIMMER-D1 An error with the numerical value for the retained home position of the Delivery Roller Motor was detected.
Remedy	BOOKLET TRIMMER-D1 Replace the Trimmer Controller PCB (QPM-220). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-8073-02	Main Drive Motor Driver error
Detection Description	BOOKLET TRIMMER-D1 An error was detected in the Main Drive Motor Driver PCB.
Remedy	BOOKLET TRIMMER-D1 [Related parts] R1.00 - Harness between the Main Drive Motor (M10) and the Main Drive Motor Driver PCB (A10/CN3) - Main Drive Motor (M10) - Main Drive Motor Driver PCB (A10) [Remedy] Check/replace the related harness/cable, connector and parts.

5A7-8088-02	Command transmission retry error
Detection Description	BOOKLET TRIMMER-D1 Sending of a command to the Two-Knife Trimmer was retried 4 times.
Remedy	[Remedy] Check the harness between the Booklet Trimmer and the Two-Knife Booklet Trimmer.

5A7-8089-02	Command transmission retry error
Detection Description	BOOKLET TRIMMER-D1 Reception failure command from the Two-Knife Booklet Trimmer was received 5 consecutive times.
Remedy	Check/replace the harness between the Booklet Trimmer and the Two-Knife Booklet Trimmer.

5A7-80A7-02	Switching Power Supply Cooling Fan error
Detection Description	2-KNIFE TRIMMER Output pulse from the Switching Power Supply Cooling Fan was not detected.
Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON10) and the Power Supply (G00/CON2) - Power Supply (G00) - Remote Power Relay (K00) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-80A8-02	Power Supply error
Detection Description	2-KNIFE TRIMMER Power supply of 24 VDC was not detected. Meltdown of 24V fuse
Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON10) and the Power Supply (G00/CON2) - Power Supply (G00) - Remote Power Relay (K00) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A7-80A9-02	Power Supply error
Detection Description	2-KNIFE TRIMMER Power supply of 5 VDC was not detected. Meltdown of 5V fuse
Remedy	2-KNIFE TRIMMER [Related parts] - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON10) and the Power Supply (G00/CON2) - Power Supply (G00) - Remote Power Relay (K00) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5A8-0001-61	Error in Rotation Motor 1 (M42) of Perfect Binder
Detection Description	The Rotation HP Sensor1 (S95) was not turned OFF although a specified period of time had passed while moving from the home position.
Remedy	1. Rotation Motor 1 (M42) error 2. Rotation HP Sensor 1 (S95) error 3. Cutter Controller PCB error

5A8-0002-61	Error in Rotation Motor 1 (M42) of Perfect Binder
Detection Description	The Rotation HP Sensor1 (S95) was not turned ON although a specified period of time had passed while returning to the home position.
Remedy	1. Rotation Motor 1 (M42) error 2. Rotation HP Sensor 1 (S95) error 3. Cutter Controller PCB error

5A8-8001-61	Error in Rotation Motor 1 (M42) of Perfect Binder
Detection Description	The Rotation HP Sensor1 (S95) was not turned OFF although a specified period of time had passed while moving from the home position.
Remedy	1. Rotation Motor 1 (M42) error 2. Rotation HP Sensor 1 (S95) error 3. Cutter Controller PCB error

5A8-8002-61	Error in Rotation Motor 1 (M42) of Perfect Binder
Detection Description	The Rotation HP Sensor1 (S95) was not turned ON although a specified period of time had passed while returning to the home position.
Remedy	1. Rotation Motor 1 (M42) error 2. Rotation HP Sensor 1 (S95) error 3. Cutter Controller PCB error

5A9-0001-61	Error in Rotation Motor 2 (M41) of Perfect Binder
Detection Description	The Rotation HP Sensor 2 (S91) was not turned OFF although a specified period of time had passed while moving from the home position.
Remedy	1. Rotation 2 (M41) error 2. Rotation HP Sensor 2 (S91) error 3. Cutter Controller PCB error

5A9-0002-61	Error in Rotation Motor 2 (M41) of Perfect Binder
Detection Description	The Rotation HP Sensor 2 (S91) was not turned ON although a specified period of time had passed while returning to the home position.
Remedy	1. Rotation 2 (M41) error 2. Rotation HP Sensor 2 (S91) error 3. Cutter Controller PCB error

5A9-8001-61	Error in Rotation Motor 2 (M41) of Perfect Binder
Detection Description	The Rotation HP Sensor 2 (S91) was not turned OFF although a specified period of time had passed while moving from the home position.
Remedy	1. Rotation Motor 2 (M41) error 2. Rotation HP Sensor 2 (S91) error 3. Cutter Controller PCB error

5A9-8002-61	Error in Rotation Motor 2 (M41) of Perfect Binder
Detection Description	The Rotation HP Sensor 2 (S91) was not turned ON although a specified period of time had passed while returning to the home position.
Remedy	1. Rotation Motor 2 (M41) error 2. Rotation HP Sensor 2 (S91) error 3. Cutter Controller PCB error

5AA-0001-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned OFF although a specified period of time had passed during a cutting operation from the front side.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-0002-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned ON although a specified period of time had passed when the Trimming Blade moved to the rear (cutting operation was released).
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-0003-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned OFF although a specified period of time had passed during a cutting operation from the rear side.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-0004-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned ON although a specified period of time had passed when the Trimming Blade moved to the front (cutting operation was released).
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-0005-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 1 (S84) was not turned ON although a specified period of time had passed when the Trimming Blade moved from the front to the rear.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 1 (S84) error 3. Cutter Controller PCB error

5AA-0006-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 1 (S84) was not turned OFF although a specified period of time had passed when the Trimming Blade moved from the rear to the front.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 1 (S84) error 3. Cutter Controller PCB error

5AA-0007-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Limit Sensor (S86) was turned ON.
Remedy	1. The Trimming Blade moved to the limit position. 2. Cutter Motor (M35) error 3. Cutter Limit Sensor (S86) error 4. Cutter Controller PCB error

5AA-8001-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned OFF although a specified period of time had passed during a cutting operation from the front side.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-8002-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned ON although a specified period of time had passed when the Trimming Blade moved to the rear (cutting operation was released).
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-8003-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned OFF although a specified period of time had passed during a cutting operation from the rear side.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-8004-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 2 (S85) was not turned ON although a specified period of time had passed when the Trimming Blade moved to the front (cutting operation was released).
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 2 (S85) error 3. Cutter Controller PCB error

5AA-8005-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 1 (S84) was not turned ON although a specified period of time had passed when the Trimming Blade moved from the front to the rear.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 1 (S84) error 3. Cutter Controller PCB error

5AA-8006-61	Error in Cutter Motor (M35) of Perfect Binder
Detection Description	The Cutter Area Sensor 1 (S84) was not turned OFF although a specified period of time had passed when the Trimming Blade moved from the rear to the front.
Remedy	1. Cutter Motor (M35) error 2. Cutter Area Sensor 1 (S84) error 3. Cutter Controller PCB error

5AB-0001-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray HP Sensor (S79) was not turned OFF although a specified period of time had passed when the Booklet Lifting Tray moved from the home position.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray HP Sensor (S79) error 3. Cutter Controller PCB error

5AB-0002-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray HP Sensor (S79) was not turned ON although a specified period of time had passed when the Booklet Lifting Tray returned to the home position.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray HP Sensor (S79) error 3. Cutter Controller PCB error

5AB-0003-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray Clock Sensor (S102) was not turned ON although a specified period of time had passed during rotation of the Booklet Lifting Tray Motor.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray Clock Sensor (S102) error 3. Cutter Controller PCB error

5AB-8001-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray HP Sensor (S79) was not turned OFF although a specified period of time had passed when the Booklet Lifting Tray moved from the home position.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray HP Sensor (S79) error 3. Cutter Controller PCB error

5AB-8002-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray HP Sensor (S79) was not turned ON although a specified period of time had passed when the Booklet Lifting Tray returned to the home position.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray HP Sensor (S79) error 3. Cutter Controller PCB error

5AB-8003-61	Error in Booklet Lifting Tray Motor (M38) of Perfect Binder
Detection Description	The Booklet Lifting Tray Clock Sensor (S102) was not turned ON although a specified period of time had passed during rotation of the Booklet Lifting Tray Motor.
Remedy	1. Booklet Lifting Tray Motor (M38) error 2. Booklet Lifting Tray Clock Sensor (S102) error 3. Cutter Controller PCB error

5AC-0001-61	Error in Stacking Motor (M34) of Perfect Binder
Detection Description	The Stacking Tray HP Sensor (S80) was not turned OFF although a specified period of time had passed when the Stacking Tray moved from the home position.
Remedy	1. Stacking Motor (M34) error 2. Stacking Tray HP Sensor (S80) error 3. Cutter Controller PCB error

5AC-0002-61	Error in Stacking Motor (M34) of Perfect Binder
Detection Description	The Stacking Tray HP Sensor (S80) was not turned ON although a specified period of time had passed when the Stacking Tray returned to the home position.
Remedy	1. Stacking Motor (M34) error 2. Stacking Tray HP Sensor (S80) error 3. Cutter Controller PCB error

5AC-8001-61	Error in Stacking Motor (M34) of Perfect Binder
Detection Description	The Stacking Tray HP Sensor (S80) was not turned OFF although a specified period of time had passed when the Stacking Tray moved from the home position.
Remedy	1. Stacking Motor (M34) error 2. Stacking Tray HP Sensor (S80) error 3. Cutter Controller PCB error

5AC-8002-61	Error in Stacking Motor (M34) of Perfect Binder
Detection Description	The Stacking Tray HP Sensor (S80) was not turned ON although a specified period of time had passed when the Stacking Tray returned to the home position.
Remedy	1. Stacking Motor (M34) error 2. Stacking Tray HP Sensor (S80) error 3. Cutter Controller PCB error

5AD-0001-61	Error in Trimming Blade Plate Shift Motor (M40) of Perfect Binder
Detection Description	The Trimming Blade Plate HP Sensor (S83) was not turned OFF although a specified period of time had passed when the Trimming Blade Plate moved from the home position.
Remedy	1. Trimming Blade Plate Shift Motor (M40) error 2. Trimming Blade Plate HP Sensor (S83) error 3. Cutter Controller PCB error

5AD-0002-61	Error in Trimming Blade Plate Shift Motor (M40) of Perfect Binder
Detection Description	The Trimming Blade Plate HP Sensor (S83) was not turned ON although a specified period of time had passed when the Trimming Blade Plate returned to the home position.
Remedy	1. Trimming Blade Plate Shift Motor (M40) error 2. Trimming Blade Plate HP Sensor (S83) error 3. Cutter Controller PCB error

5AD-8001-61	Error in Trimming Blade Plate Shift Motor (M40) of Perfect Binder
Detection Description	The Trimming Blade Plate HP Sensor (S83) was not turned OFF although a specified period of time had passed when the Trimming Blade Plate moved from the home position.
Remedy	1. Trimming Blade Plate Shift Motor (M40) error 2. Trimming Blade Plate HP Sensor (S83) error 3. Cutter Controller PCB error

5AD-8002-61	Error in Trimming Blade Plate Shift Motor (M40) of Perfect Binder
Detection Description	The Trimming Blade Plate HP Sensor (S83) was not turned ON although a specified period of time had passed when the Trimming Blade Plate returned to the home position.
Remedy	1. Trimming Blade Plate Shift Motor (M40) error 2. Trimming Blade Plate HP Sensor (S83) error 3. Cutter Controller PCB error

5AE-0001-61	Error in Booklet Stacking Door Lock Solenoid (SL5) of Perfect Binder
Detection Description	The Stacking Door Open Sensor (S98) detected the door open while the Stacking Door was locked.
Remedy	1. Booklet Stacking Door Lock Solenoid (SL5) error 2. Stacking Door Open Sensor (S98) error 3. Cutter Controller PCB error

5AE-8001-61	Error in Booklet Stacking Door Lock Solenoid (SL5) of Perfect Binder
Detection Description	The Stacking Door Open Sensor (S98) detected the door open while the Stacking Door was locked.
Remedy	1. Booklet Stacking Door Lock Solenoid (SL5) error 2. Stacking Door Open Sensor (S98) error 3. Cutter Controller PCB error

5AF-8013-02	Rear Knife Up/Down Drive Motor Driver error
Detection Description	2-KNIFE TRIMMERAn error was detected in the Rear Knife Up/Down Drive Motor Driver PCB.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J24 to 11/J22) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN4) - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J25 to 11/J23) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN3) - Rear Knife Up/Down Drive Motor (M20) - Rear Knife Up/Down Drive Motor Driver PCB (A20) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-8019-02	Rear Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the booklet press position from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J24 to 11/J22) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN4) - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J25 to 11/J23) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN3) - Rear Knife Up/Down Drive Motor (M20) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-801A-02	Rear Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the lower limit from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J24 to 11/J22) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN4) - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J25 to 11/J23) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN3) - Rear Knife Up/Down Drive Motor (M20) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-801B-02	Rear Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the trimming completion position from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J24 to 11/J22) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN4) - Harnesses connecting the Rear Knife Up/Down Drive Motor (M20), the Robot Cable (11/J25 to 11/J23) and the Rear Knife Up/Down Drive Motor Driver PCB (A20/CN3) - Rear Knife Up/Down Drive Motor (M20) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-8023-02	Front Knife Up/Down Drive Motor Driver error
Detection Description	2-KNIFE TRIMMERAn error was detected in the Front Knife Up/Down Drive Motor Driver PCB.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) - Front Knife Up/Down Drive Motor Driver PCB (A30) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-8029-02	Front Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the booklet press position from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-802A-02	Front Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the lower limit from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-802B-02	Front Knife Up/Down Drive Motor detection error
Detection Description	2-KNIFE TRIMMERThe pulses required to reach the trimming completion position from the home position were not input.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (14/J34 to 14/J32) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN4) - Harnesses connecting the Front Knife Up/Down Drive Motor (M30), the Robot Cable (15/J35 to 14/J33) and the Front Knife Up/Down Drive Motor Driver PCB (A30/CN3) - Front Knife Up/Down Drive Motor (M30) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-8031-02	Rear Jog Guide Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMERThe Rear Jog Guide Home Position Sensor was not turned ON.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Rear Jog Guide Home Position Sensor (PI122/J29) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Harness between the Rear Jog Guide Motor (M21) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Rear Jog Guide Home Position Sensor (PI122) - Rear Jog Guide Motor (M21) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Rear Jog Guide Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8032-02	Rear Jog Guide Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMER The Rear Jog Guide Home Position Sensor was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Rear Jog Guide Home Position Sensor (PI122/J29) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Harness between the Rear Jog Guide Motor (M21) and the Rear Jog Guide Relay PCB 2 (A22/CON1) - Rear Jog Guide Home Position Sensor (PI122) - Rear Jog Guide Motor (M21) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Rear Jog Guide Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8041-02	Front Jog Guide Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMERThe Front Jog Guide Home Position Sensor was not turned ON.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Front Jog Guide Home Position Sensor (PI132/J39) and the Front Jog Guide Relay PCB 2 (A32/CON1) - Harness between the Front Jog Guide Motor (M31) and the Front Jog Guide Relay PCB 2 (A32/CON1) - Front Jog Guide Home Position Sensor (PI132) - Front Jog Guide Motor (M31) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Front Jog Guide Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8042-02	Front Jog Guide Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMER The Front Jog Guide Home Position Sensor was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Front Jog Guide Home Position Sensor (PI132/J39) and the Front Jog Guide Relay PCB 2 (A32/CON1) - Harness between the Front Jog Guide Motor (M31) and the Front Jog Guide Relay PCB 2 (A32/CON1) - Front Jog Guide Home Position Sensor (PI132) - Front Jog Guide Motor (M31) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Front Jog Guide Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8051-02	Knife Front/Rear Move Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMERThe Knife Front/Rear Move Home Position Sensor was not turned ON.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Knife Front/Rear Move Home Position Sensor (PI141/J41) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON9) - Harnesses connecting the Knife Front/Rear Move Motor (M40), the Knife Front/Rear Move Motor Driver PCB (A40/CN3/CN2) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13) - Knife Front/Rear Move Home Position Sensor (PI141) - Knife Front/Rear Move Motor (M40) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Knife Front/Rear Move Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8052-02	Knife Front/Rear Move Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMER The Knife Front/Rear Move Home Position Sensor was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Knife Front/Rear Move Home Position Sensor (PI141/J41) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON9) - Harnesses connecting the Knife Front/Rear Move Motor (M40), the Knife Front/Rear Move Motor Driver PCB (A40/CN3/CN2) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13) - Knife Front/Rear Move Home Position Sensor (PI141) - Knife Front/Rear Move Motor (M40) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Knife Front/Rear Move Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8063-02	Transport Motor Driver error
Detection Description	2-KNIFE TRIMMERAn error was detected in the Transport Motor Driver PCB.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Transport Motor (M10) and the Transport Motor Driver PCB (A10/CN3) - Transport Motor (M10) - Transport Motor Driver PCB (A10) [Remedy] Check/replace the related harness/cable, connector and parts.

5AF-8071-02	Delivery Roller Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMERThe Delivery Roller Home Position Sensor was not turned ON.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Delivery Roller Home Position Sensor (PI14), the Relay Connector (J114/J37) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1) - Harness between the Delivery Roller Motor (M08) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1 (CON13)) - Delivery Roller Home Position Sensor (PI14) - Delivery Roller Motor (M08) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8072-02	Delivery Roller Home Position Sensor detection error
Detection Description	2-KNIFE TRIMMER The Delivery Roller Home Position Sensor was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Delivery Roller Home Position Sensor (PI14), the Relay Connector (J114/J37) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1) - Harness between the Delivery Roller Motor (M08) and the Two-Knife Booklet Trimmer Controller PCB (QPM-254/J1 (CON13)) - Delivery Roller Home Position Sensor (PI14) - Delivery Roller Motor (M08) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Delivery Roller Home Position Sensor, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8085-02	EEPROM error
Detection Description	2-KNIFE TRIMMEREither the initial setting of EEPROM which stores each home position value has not made, or data is corrupted (normally, this occurs when the Two-Knife Booklet Trimmer Controller PCB is replaced).
Remedy	2-KNIFE TRIMMER [Related parts] Two-Knife Booklet Trimmer Controller PCB P100211 (QPM-254) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF the main power of the Two-Knife Booklet Trimmer, and then set "2" of DIP SW1 of the Two-Knife Booklet Trimmer Controller PCB to ON. 2. Turn ON the main power of the Two-Knife Booklet Trimmer, and then after the initialization process of the EEPROM is finished, turn OFF the main power of the Two-Knife Booklet Trimmer, and return "2" of DIP SW1 to OFF. 3. Set each home position value described in the home position seal affixed to the Two-Knife Booklet Trimmer from the LCD panel of the Booklet Trimmer.

5AF-8086-02	EEPROM error
Detection Description	2-KNIFE TRIMMERAn EEPROM write error occurred.
Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8087-02	EEPROM error
Detection Description	2-KNIFE TRIMMERAn EEPROM checksum error occurred.
Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8096-02	Knife Front/Rear Move Motor home position return not completed
Detection Description	2-KNIFE TRIMMERThe paper stack information or the booklet delivery command from the Booklet Trimmer was received before receiving the operation start command.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13), the Knife Front/Rear Move Motor Driver PCB (A40/CN2) and the Knife Front/Rear Move Motor (M40) - Knife Front/Rear Move Motor (M40) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-8097-02	Knife Front/Rear Move Motor setting position shift not completed
Detection Description	2-KNIFE TRIMMERAfter the operation start command was received and the guide was initialized, the delivery command from the Booklet Trimmer was received before receiving the paper stack information.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON13), the Knife Front/Rear Move Motor Driver PCB (A40/CN2) and the Knife Front/Rear Move Motor (M40) - Knife Front/Rear Move Motor (M40) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80A8-02	Command transmission retry error
Detection Description	2-KNIFE TRIMMERSending of a command to the Booklet Trimmer was retried 4 times.
Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80A9-02	Command NACK reception count error
Detection Description	2-KNIFE TRIMMER NACK was received 5 or more times for the same command sent to the Booklet Trimmer.
Remedy	2-KNIFE TRIMMER Replace the Two-Knife Booklet Trimmer Controller PCB (QPM-254). [Reference] After the replacement, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80AA-02	Interlock Safety Unit error
Detection Description	2-KNIFE TRIMMERAn error occurred in the Interlock Safety Unit.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Diode PCB (QPW-793/CON404, CON401), the Interlock Safety Unit (A100) and the Top Cover Switch (SW01) - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON9) and the Interlock Safety Unit (A100) - Interlock Safety Unit (A100) - Diode PCB (QPW-793) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80AB-02	Power Supply error
Detection Description	2-KNIFE TRIMMERAn alarm signal was received from the Power Supply (24 VDC).
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harness between the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON10) and the Power Supply (G00/CON2) - Remote Power Relay (K00) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80AC-02	Interlock error
Detection Description	2-KNIFE TRIMMERWhen the Top Cover was opened, the Interlock Relay 2 was turned OFF but the Interlock Relay 1 was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON49), the Interlock Safety Unit (A100/J201), the Top Cover Switch (SW01), and Interlock Relay 1 (K01) - Top Cover Switch (SW01) - Interlock Relay 1 (K01) - Interlock Safety Unit (A100) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5AF-80AD-02	Interlock error
Detection Description	2-KNIFE TRIMMER When the Top Cover was opened, the Interlock Relay 1 was turned OFF but the Interlock Relay 2 was not turned OFF.
Remedy	2-KNIFE TRIMMER [Related parts] R1.00 - Harnesses connecting the Two-Knife Booklet Trimmer Controller PCB (QPM-254/CON49), the Interlock Safety Unit (A100/J201), the Top Cover Switch (SW01), and Interlock Relay 2 (K02) - Top Cover Switch (SW01) - Interlock Relay 2 (K02) - Interlock Safety Unit (A100) - Two-Knife Booklet Trimmer Controller PCB (QPM-254) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Two-Knife Booklet Trimmer Controller PCB, refer to "Adjustments> Home Position Calibration" in the Service Manual.

5B0-0001-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) could not detect +/-5 deg C of the setting temperature although 600 sec had passed since the release of energy saver mode.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-0002-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 200 deg C or higher for 1 sec.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-0003-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 5 deg C or lower for 1 sec (the detection operation starts 10 sec after a booting).
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-0004-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) could not detect 140 deg C or higher within 200 sec since a detection of 50 deg C.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-0005-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 135 deg C or lower for 10 sec or longer after completion of temperature control.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-0006-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An error in the Abnormal Temperature Thermistor (S57) was detected.
Remedy	1. Heater (HTR1) error 2. Abnormal Temperature Thermistor (S57) error 3. Slave Controller PCB error

5B0-0007-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An error in the Thermostat (THSW) was detected.
Remedy	1. Heater (HTR1) error 2. Thermostat (THSW) error 3. Slave Controller PCB error

5B0-0008-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Level Thermistor (S58) detected 170 deg C or higher for 10 sec or longer after completion of warm-up.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-0009-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Level Thermistor (S58) detected 100 deg C or lower for 10 sec or longer after completion of warm-up.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-000B-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An open circuit of the Abnormal Temperature Thermistor (S57) was detected.
Remedy	1. Heater (HTR1) error 2. Abnormal Temperature Thermistor (S57) error 3. Slave Controller PCB error

5B0-000C-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An open circuit of the Level Thermistor (S58) was detected.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-000D-61	Error in internal temperature of Perfect Binder
Detection Description	The Machine Temperature Thermistor (S105) detected 80 deg C or higher for 1 sec.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-000E-61	Error in internal temperature of Perfect Binder
Detection Description	An open circuit of the Machine Temperature Thermistor (S105) was detected.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-000F-61	Error in internal temperature of Perfect Binder
Detection Description	There was 10 deg C or larger gap between the 1-minute fixed data detected by the Machine Temperature Thermistor (S105) and the last 1-second row data for the specified period of time or longer.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-0010-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was increased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error

5B0-0011-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was decreased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error

5B0-0012-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Warm-up was not completed although 500 sec had passed since the start of temperature control.
Remedy	1. Heater (HTR1) error 2. Slave Controller PCB error

5B0-0013-61	Error in internal temperature of Perfect Binder
Detection Description	The Machine Temperature Thermistor (S105) detected 0 deg C or lower.
Remedy	1. The environment is out of the specified range. 2. Slave Controller PCB error

5B0-8001-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) could not detect +/-5 deg C of the setting temperature although 600 sec had passed since the release of energy saver mode.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-8002-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 200 deg C or higher for 1 sec.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-8003-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 5 deg C or lower for 1 sec (the detection operation starts 10 sec after a booting).
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-8004-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) could not detect 140 deg C or higher within 200 sec since a detection of 50 deg C.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-8005-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Temperature Detection Thermistor (S56) detected 135 deg C or lower for 10 sec or longer after completion of temperature control.
Remedy	1. Heater (HTR1) error 2. Temperature Detection Thermistor (S56) error 3. Slave Controller PCB error

5B0-8006-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An error in the Abnormal Temperature Thermistor (S57) was detected.
Remedy	1. Heater (HTR1) error 2. Abnormal Temperature Thermistor (S57) error 3. Slave Controller PCB error

5B0-8007-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An error in the Thermostat (THSW) was detected.
Remedy	1. Heater (HTR1) error 2. Thermostat (THSW) error 3. Slave Controller PCB error

5B0-8008-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Level Thermistor (S58) detected 170 deg C or higher for 10 sec or longer after completion of warm-up.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-8009-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	The Level Thermistor (S58) detected 100 deg C or lower for 10 sec or longer after completion of warm-up.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-800B-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An open circuit of the Abnormal Temperature Thermistor (S57) was detected.
Remedy	1. Heater (HTR1) error 2. Abnormal Temperature Thermistor (S57) error 3. Slave Controller PCB error

5B0-800C-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	An open circuit of the Level Thermistor (S58) was detected.
Remedy	1. Heater (HTR1) error 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B0-800D-61	Error in internal temperature of Perfect Binder
Detection Description	The Machine Temperature Thermistor (S105) detected 80 deg C or higher for 1 sec.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-800E-61	Error in internal temperature of Perfect Binder
Detection Description	An open circuit of the Machine Temperature Thermistor (S105) was detected.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-800F-61	Error in internal temperature of Perfect Binder
Detection Description	There was 10 deg C or larger gap between the 1-minute fixed data detected by the Machine Temperature Thermistor (S105) and the last 1-second row data for the specified period of time or longer.
Remedy	1. Machine Temperature Thermistor (S105) error 2. Slave Controller PCB error

5B0-8010-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was increased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error

5B0-8011-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Temperature of the heater was not +/-5 deg C of the setting temperature although the setting temperature of the glue vat was decreased according to the detected temperature of the Machine Temperature Thermistor (S105). (Temperature is not detected for 100 sec after the completion of warm-up.)
Remedy	1. Heater (HTR1) error 2. Machine Temperature Thermistor (S105) error 3. Slave Controller PCB error

5B0-8012-61	Error in Heater (HTR1) of Perfect Binder
Detection Description	Warm-up was not completed although 500 sec had passed since the start of temperature control.
Remedy	1. Heater (HTR1) error 2. Slave Controller PCB error

5B0-8013-61	Error in internal temperature of Perfect Binder
Detection Description	The Machine Temperature Thermistor (S105) detected 0 deg C or lower.
Remedy	1. The environment is out of the specified range. 2. Slave Controller PCB error

5B2-0001-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level was lower than the lower limit for 4 consecutive times during glue supply.
Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-0002-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level had not risen above the upper limit although a specified amount of glue was supplied without applying glue while the glue level was higher than the lower limit.
Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-0003-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level had not lowered below the upper limit although a specified amount of glue was applied without supplying it.
Remedy	1. Operation failure in glue application mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-0004-61	Error in glue vat level detection of Perfect Binder
Detection Description	An error in the adjustment value of the Level Thermistor (S58) was detected.
Remedy	1. Level Thermistor (S58) error 2. Slave Controller PCB error

5B2-8001-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level was lower than the lower limit for 4 consecutive times during glue supply.
Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-8002-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level had not risen above the upper limit although a specified amount of glue was supplied without applying glue while the glue level was higher than the lower limit.
Remedy	1. Operation failure in glue supply mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-8003-61	Error in glue vat level detection of Perfect Binder
Detection Description	The Level Thermistor (S58) detected that the glue level had not lowered below the upper limit although a specified amount of glue was applied without supplying it.
Remedy	1. Operation failure in glue application mechanism 2. Level Thermistor (S58) error 3. Slave Controller PCB error

5B2-8004-61	Error in glue vat level detection of Perfect Binder
Detection Description	An error in the adjustment value of the Level Thermistor (S58) was detected.
Remedy	1. Level Thermistor (S58) error 2. Slave Controller PCB error

5B4-0001-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the upper limit.
Remedy	1. Soiling on the Timing Sensor (S5) 2. Timing Sensor (S5) error 3. Master Controller PCB error

5B4-0002-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Registration Sensor (S21) 2. Cover Registration Sensor (S21) error 3. Master Controller PCB error

5B4-0003-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Horizontal Registration Sensor (S) (S71) 2. Cover Horizontal Registration Sensor (S) (S71) error 3. Slave Controller PCB error

5B4-0004-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Horizontal Registration Sensor (L) (S72) 2. Cover Horizontal Registration Sensor (L) (S72) error 3. Slave Controller PCB error

5B4-0005-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Stack Delivery Sensor (S64T/S64L) was changed up to the upper limit.
Remedy	1. Soiling on the Stack Delivery Sensor (S64T/S64L) 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5B4-0006-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Leading Edge Sensor (S65T/S65L) was changed up to the upper limit.
Remedy	1. Soiling on the Leading Edge Sensor (S65T/S65L) 2. Leading Edge Sensor (S65T/S65L) error 3. Slave Controller PCB error

5B4-0007-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Inlet Path Sensor (S92T/S92L) was changed up to the upper limit.
Remedy	1. Soiling on the Inlet Path Sensor (S92T/S92L) 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B4-0008-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Registration Sensor (S88T/S88L) was changed up to the upper limit.
Remedy	1. Soiling on the Registration Sensor (S88T/S88L) 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B4-0011-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the lower limit.
Remedy	1. Timing Sensor (S5) error 2. Master Controller PCB error

5B4-0012-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the lower limit.
Remedy	1. Cover Registration Sensor (S21) error 2. Master Controller PCB error

5B4-0013-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the lower limit.
Remedy	1. Cover Horizontal Registration Sensor (S) (S71) error 2. Slave Controller PCB error

5B4-0014-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the lower limit.
Remedy	1. Cover Horizontal Registration Sensor (L) (S72) error 2. Slave Controller PCB error

5B4-0015-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Stack Delivery Sensor (S64T/S64L) was changed up to the lower limit.
Remedy	1. Stack Delivery Sensor (S64T/S64L) error 2. Slave Controller PCB error

5B4-0016-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Leading Edge Sensor (S65T/S65L) was changed up to the lower limit.
Remedy	1. Leading Edge Sensor (S65T/S65L) error 2. Slave Controller PCB error

5B4-0017-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Inlet Path Sensor (S92T/S92L) was changed up to the lower limit.
Remedy	1. Inlet Path Sensor (S92T/S92L) error 2. Cutter Controller PCB error

5B4-0018-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Registration Sensor (S88T/S88L) was changed up to the lower limit.
Remedy	1. Registration Sensor (S88T/S88L) error 2. Cutter Controller PCB error

5B4-8001-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the upper limit.
Remedy	1. Soiling on the Timing Sensor (S5) 2. Timing Sensor (S5) error 3. Master Controller PCB error

5B4-8002-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Registration Sensor (S21) 2. Cover Registration Sensor (S21) error 3. Master Controller PCB error

5B4-8003-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Horizontal Registration Sensor (S) (S71) 2. Cover Horizontal Registration Sensor (S) (S71) error 3. Slave Controller PCB error

5B4-8004-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the upper limit.
Remedy	1. Soiling on the Cover Horizontal Registration Sensor (L) (S72) 2. Cover Horizontal Registration Sensor (L) (S72) error 3. Slave Controller PCB error

5B4-8005-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Stack Delivery Sensor (S64T/S64L) was changed up to the upper limit.
Remedy	1. Soiling on the Stack Delivery Sensor (S64T/S64L) 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5B4-8006-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Leading Edge Sensor (S65T/S65L) was changed up to the upper limit.
Remedy	1. Soiling on the Leading Edge Sensor (S65T/S65L) 2. Leading Edge Sensor (S65T/S65L) error 3. Slave Controller PCB error

5B4-8007-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Inlet Path Sensor (S92T/S92L) was changed up to the upper limit.
Remedy	1. Soiling on the Inlet Path Sensor (S92T/S92L) 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B4-8008-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Registration Sensor (S88T/S88L) was changed up to the upper limit.
Remedy	1. Soiling on the Registration Sensor (S88T/S88L) 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B4-8011-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Timing Sensor (S5) was changed up to the lower limit.
Remedy	1. Timing Sensor (S5) error 2. Master Controller PCB error

5B4-8012-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Registration Sensor (S21) was changed up to the lower limit.
Remedy	1. Cover Registration Sensor (S21) error 2. Master Controller PCB error

5B4-8013-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (S) (S71) was changed up to the lower limit.
Remedy	1. Cover Horizontal Registration Sensor (S) (S71) error 2. Slave Controller PCB error

5B4-8014-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Cover Horizontal Registration Sensor (L) (S72) was changed up to the lower limit.
Remedy	1. Cover Horizontal Registration Sensor (L) (S72) error 2. Slave Controller PCB error

5B4-8015-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Stack Delivery Sensor (S64T/S64L) was changed up to the lower limit.
Remedy	1. Stack Delivery Sensor (S64T/S64L) error 2. Slave Controller PCB error

5B4-8016-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Leading Edge Sensor (S65T/S65L) was changed up to the lower limit.
Remedy	1. Leading Edge Sensor (S65T/S65L) error 2. Slave Controller PCB error

5B4-8017-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Inlet Path Sensor (S92T/S92L) was changed up to the lower limit.
Remedy	1. Inlet Path Sensor (S92T/S92L) error 2. Cutter Controller PCB error

5B4-8018-61	Perfect Binder sensor auto adjustment error
Detection Description	The A/D input value did not fall within the specified range although the D/A output value of the Registration Sensor (S88T/S88L) was changed up to the lower limit.
Remedy	1. Registration Sensor (S88T/S88L) error 2. Cutter Controller PCB error

5B5-0001-61	Error in Leading Edge Sensor (S65T/S65L) of Perfect Binder
Detection Description	The Leading Edge Sensor (S65T/S65L) could not detect presence of paper.
Remedy	1. Adhesion of paper stack to the Main Gripper 2. Remain of paper stack between the Main Gripper and the Cover Feed Assembly 3. Leading Edge Sensor (S65T/S65L) error 4. Slave Controller PCB error 5. Cutter Controller PCB error

5B5-0002-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper.
Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B5-0003-61	Error in Registration Sensor (S88T/S88L) of Perfect Binder
Detection Description	The Registration Sensor (S88T/S88L) could not detect presence of paper.
Remedy	1. Remain of paper stack in the Stack Rotation Assembly 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B5-0006-61	Error in Stack Delivery Sensor (S64T/S64L) of Perfect Binder
Detection Description	The Stack Delivery Sensor (S64T/S64L) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Cover Feed Assembly at power-on 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5B5-0007-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper at auto delivery operation.
Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly at auto delivery operation after an error 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error 4. Slave Controller PCB error

5B5-0008-61	Error in Main Gripper Paper Sensor (S55) of Perfect Binder
Detection Description	The Main Gripper Paper Sensor (S55) could not detect presence of paper.
Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error

5B5-0012-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Trimming Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B5-0013-61	Error in Registration Sensor (S88T/S88L) of Perfect Binder
Detection Description	The Registration Sensor (S88T/S88L) could not detect absence of paper.
Remedy	1. Remain of paper stack at the Lifting Tray at auto delivery operation after an error 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B5-0014-61	Error in Stack Arrival Sensor (S76) of Perfect Binder
Detection Description	The Stack Arrival Sensor (S76) could not detect absence of paper.
Remedy	1. Remain of paper stack at the Lifting Tray 2. Stack Arrival Sensor (S76) error 3. Cutter Controller PCB error

5B5-0016-61	Error in waste paper detection of Perfect Binder
Detection Description	a. Waste paper with the specified size or larger was detected between the Waste Paper Buffer and the Paper Retainer Plate after waste paper processing. b. The waste paper full alarm due to jammed waste paper was not released although initialization of buffer by opening/closing the door was performed 3 times. * Waste paper jam is detected by the Paper Retainer Plate Sensor (S104) and the volume of jammed waste paper is detected according to the positional relationship between the Waste Paper Buffer and the Pressing Plate.
Remedy	1. Remain of waste paper in the Waste Paper Buffer Assembly 2. Remain of waste paper between the Waste Paper Buffer Assembly and the Pressing Plate 3. Paper Retainer Plate Sensor (S104) error 4. Cutter Controller PCB error

5B5-0017-61	Error in Sub Gripper Paper Sensor (S39) of Perfect Binder
Detection Description	The Sub Gripper Paper Sensor (S39) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Sub Gripper Paper Sensor (S39) error 3. Slave Controller PCB error

5B5-0018-61	Error in Main Gripper Paper Sensor (S55) of Perfect Binder
Detection Description	The Main Gripper Paper Sensor (S55) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Main Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error

5B5-8001-61	Error in Leading Edge Sensor (S65T/S65L) of Perfect Binder
Detection Description	The Leading Edge Sensor (S65T/S65L) could not detect presence of paper.
Remedy	1. Adhesion of paper stack to the Main Gripper 2. Remain of paper stack between the Main Gripper and the Cover Feed Assembly 3. Leading Edge Sensor (S65T/S65L) error 4. Slave Controller PCB error 5. Cutter Controller PCB error

5B5-8002-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper.
Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B5-8003-61	Error in Registration Sensor (S88T/S88L) of Perfect Binder
Detection Description	The Registration Sensor (S88T/S88L) could not detect presence of paper.
Remedy	1. Remain of paper stack in the Stack Rotation Assembly 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B5-8006-61	Error in Stack Delivery Sensor (S64T/S64L) of Perfect Binder
Detection Description	The Stack Delivery Sensor (S64T/S64L) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Cover Feed Assembly at power-on 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5B5-8007-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect presence of paper at auto delivery operation.
Remedy	1. Remain of paper stack between the Cover Feed Assembly and the Stack Rotation Assembly at auto delivery operation after an error 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error 4. Slave Controller PCB error

5B5-8008-61	Error in Main Gripper Paper Sensor (S55) of Perfect Binder
Detection Description	The Main Gripper Paper Sensor (S55) could not detect presence of paper.
Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error

5B5-8012-61	Error in Inlet Path Sensor (S92T/S92L) of Perfect Binder
Detection Description	The Inlet Path Sensor (S92T/S92L) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Trimming Assembly 2. Inlet Path Sensor (S92T/S92L) error 3. Cutter Controller PCB error

5B5-8013-61	Error in Registration Sensor (S88T/S88L) of Perfect Binder
Detection Description	The Registration Sensor (S88T/S88L) could not detect absence of paper.
Remedy	1. Remain of paper stack at the Lifting Tray at auto delivery operation after an error 2. Registration Sensor (S88T/S88L) error 3. Cutter Controller PCB error

5B5-8014-61	Error in Stack Arrival Sensor (S76) of Perfect Binder
Detection Description	The Stack Arrival Sensor (S76) could not detect absence of paper.
Remedy	1. Remain of paper stack at the Lifting Tray 2. Stack Arrival Sensor (S76) error 3. Cutter Controller PCB error

5B5-8016-61	Error in waste paper detection of Perfect Binder
Detection Description	a. Waste paper with the specified size or larger was detected between the Waste Paper Buffer and the Paper Retainer Plate after waste paper processing. b. The waste paper full alarm due to jammed waste paper was not released although initialization of buffer by opening/closing the door was performed 3 times. * Waste paper jam is detected by the Paper Retainer Plate Sensor (S104) and the volume of jammed waste paper is detected according to the positional relationship between the Waste Paper Buffer and the Pressing Plate.
Remedy	1. Remain of waste paper in the Waste Paper Buffer Assembly 2. Remain of waste paper between the Waste Paper Buffer Assembly and the Pressing Plate 3. Paper Retainer Plate Sensor (S104) error 4. Cutter Controller PCB error

5B5-8017-61	Error in Sub Gripper Paper Sensor (S39) of Perfect Binder
Detection Description	The Sub Gripper Paper Sensor (S39) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Sub Gripper Assembly 2. Sub Gripper Paper Sensor (S39) error 3. Slave Controller PCB error

5B5-8018-61	Error in Main Gripper Paper Sensor (S55) of Perfect Binder
Detection Description	The Main Gripper Paper Sensor (S55) could not detect absence of paper.
Remedy	1. Remain of paper stack in the Main Gripper Assembly 2. Main Gripper Paper Sensor (S55) error 3. Slave Controller PCB error

5B6-0001-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The result of paper stack thickness detection was smaller than the AD value(-30) of minimum value (0 mm) at the time of adjustment.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B6-0002-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The result of paper stack thickness detection was larger than the maximum AD value (25 mm) at the time of adjustment.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B6-0003-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The paper stack thickness detection value was not changed despite an open/close operation of the Main Gripper Assembly.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B6-8001-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The result of paper stack thickness detection was smaller than the AD value(-30) of minimum value (0 mm) at the time of adjustment.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B6-8002-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The result of paper stack thickness detection was larger than the maximum AD value (25 mm) at the time of adjustment.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B6-8003-61	Error in Stack Thickness Volume Sensor (S50) of Perfect Binder
Detection Description	The paper stack thickness detection value was not changed despite an open/close operation of the Main Gripper Assembly.
Remedy	1. Stack Thickness Volume Sensor (S50) error 2. Slave Controller PCB error

5B7-0001-61	Error in Glue Vat Shift Motor (M32) of Perfect Binder
Detection Description	a. The Glue Vat Shift HP Sensor (S73) was not turned ON although the Glue Vat Shift Motor was driven for a specified period of time when the Glue Vat moved to the rear HP. b.The Glue Vat Shift HP Sensor (S73) was already turned OFF when the Glue Vat moved to the front HP.
Remedy	1. Glue Vat Shift Motor (M32) error 2. Glue Vat Shift HP Sensor (S73) error 3. Slave Controller PCB error

5B7-0002-61	Error in Glue Vat Shift Motor (M32) of Perfect Binder
Detection Description	a. The Glue Vat Shift HP Sensor (S73) was not turned OFF although the Glue Vat Shift Motor was driven for a specified period of time when the Glue Vat moved to the front side. b. The Glue Vat Shift HP Sensor (S73) was already turned ON when the Glue Vat moved to the rear HP.
Remedy	1. Glue Vat Shift Motor (M32) error 2. Glue Vat Shift HP Sensor (S73) error 3. Slave Controller PCB error

5B8-0001-61	Error in Glue Vat Roller Motor (M25) of Perfect Binder
Detection Description	The Glue Vat Roller Rotation Sensor (S59) could not detect rotation of the Glue Vat Roller when it was driven.
Remedy	1. Glue Vat Roller Motor (M25) error 2. Glue Vat Roller Rotation Sensor (S59) error 3. Slave Controller PCB error

5B8-8001-61	Error in Glue Vat Roller Motor (M25) of Perfect Binder
Detection Description	The Glue Vat Roller Rotation Sensor (S59) could not detect rotation of the Glue Vat Roller when it was driven.
Remedy	1. Glue Vat Roller Motor (M25) error 2. Glue Vat Roller Rotation Sensor (S59) error 3. Slave Controller PCB error

5B9-0001-61	Error in Glue Supply Motor (M33) of Perfect Binder
Detection Description	The Glue Supply HP Sensor (S75) was not turned ON although the Glue Supply Motor was driven for a specified period of time during glue supply.
Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error

5B9-0002-61	Error in Glue Supply Motor (M33) of Perfect Binder
Detection Description	The Glue Supply HP Sensor (S75) was not turned OFF although the Glue Supply Motor was driven for a specified period of time during glue supply.
Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error

5B9-8001-61	Error in Glue Supply Motor (M33) of Perfect Binder
Detection Description	The Glue Supply HP Sensor (S75) was not turned ON although the Glue Supply Motor was driven for a specified period of time during glue supply.
Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error

5B9-8002-61	Error in Glue Supply Motor (M33) of Perfect Binder
Detection Description	The Glue Supply HP Sensor (S75) was not turned OFF although the Glue Supply Motor was driven for a specified period of time during glue supply.
Remedy	1. Glue Supply Motor (M33) error 2. Glue Supply HP Sensor (S75) error 3. Slave Controller PCB error

5BA-0001-61	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
Detection Description	a. The Spine Bending HP Sensor (Left) (S60) was not turned ON although the Spine Bending Motor (Left) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending HP Sensor (Left) (S60) had been already turned OFF when closing the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Slave Controller PCB error

5BA-0002-61	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
Detection Description	a. The Spine Bending HP Sensor (Left) (S60) was not turned OFF although the Spine Bending Motor (Left) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending HP Sensor (Left) (S60) had been already turned ON when opening the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Slave Controller PCB error

5BA-0003-61	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
Detection Description	a. The Spine Bending Closed Sensor (Left) (S61) was not turned ON although the Spine Bending Motor (Left) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending Closed Sensor (Left) (S61) had been already turned OFF when opening the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending Closed Sensor (Left) (S61) error 3. Slave Controller PCB error

5BA-0004-61	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
Detection Description	a. The Spine Bending Closed Sensor (Left) (S61) was not turned OFF although the Spine Bending Motor (Left) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending Closed Sensor (Left) (S61) had been already turned ON when closing the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending Closed Sensor (Left) (S61) error 3. Slave Controller PCB error

5BA-0005-61	Error in Spine Bending Motor (Left) (M28) of Perfect Binder
Detection Description	The Spine Bending HP Sensor (Left) (S60) and the Spine Bending Closed Sensor (Left) (S61) were turned ON at the same time.
Remedy	1. Spine Bending Motor (Left) (M28) error 2. Spine Bending HP Sensor (Left) (S60) error 3. Spine Bending Closed Sensor (Left) (S61) error 4. Slave Controller PCB error

5BB-0001-61	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
Detection Description	a. The Spine Bending HP Sensor (Right) (S66) was not turned ON although the Spine Bending Motor (Right) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending HP Sensor (Right) (S66) had been already turned OFF when closing the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending HP Sensor (Right) (S66) error 3. Slave Controller PCB error

5BB-0002-61	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
Detection Description	a. The Spine Bending HP Sensor (Right) (S66) was not turned OFF although the Spine Bending Motor (Right) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending HP Sensor (Right) (S66) had been already turned ON when opening the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending HP Sensor (Right) (S66) error 3. Slave Controller PCB error

5BB-0003-61	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
Detection Description	a. The Spine Bending Closed Sensor (Right) (S69) was not turned ON although the Spine Bending Motor (Right) was driven for a specified period of time when closing the Spine Bending Plate. b. The Spine Bending Closed Sensor (Right) (S69) had been already turned OFF when opening the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3. Slave Controller PCB error

5BB-0004-61	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
Detection Description	a. The Spine Bending Closed Sensor (Right) (S69) was not turned OFF although the Spine Bending Motor (Right) was driven for a specified period of time when opening the Spine Bending Plate. b. The Spine Bending Closed Sensor (Right) (S69) had been already turned ON when closing the Spine Bending Plate.
Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3. Slave Controller PCB error

5BB-0005-61	Error in Spine Bending Motor (Right) (M29) of Perfect Binder
Detection Description	The Spine Bending HP Sensor (Right) (S66) and the Spine Bending Closed Sensor (Right) (S69) were turned ON at the same time.
Remedy	1. Spine Bending Motor (Right) (M29) error 2. Spine Bending Closed Sensor (Right) (S69) error 3.Spine Bending Home position Sensor (Right) (S66) error. 4. Slave Controller PCB error

5BC-0001-61	Error in Spine Plate Shift Motor (M26) of Perfect Binder
Detection Description	The Spine Plate Open Sensor (S62) was not turned ON although the Spine Plate Shift Motor (M26) was driven for a specified period of time when opening the Spine Plate.
Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Open Sensor (S62) error 3. Slave Controller PCB error

5BC-0002-61	Error in Spine Plate Shift Motor (M26) of Perfect Binder
Detection Description	The Spine Plate Open Sensor (S62) was not turned OFF although the Spine Plate Shift Motor (M26) was driven for a specified period of time when closing the Spine Plate.
Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Open Sensor (S62) error 3. Slave Controller PCB error

5BC-0003-61	Error in Spine Plate Shift Motor (M26) of Perfect Binder
Detection Description	The Spine Plate Closed Sensor (S63) was not turned ON although the Spine Plate Shift Motor (M26) was driven for a specified period of time when closing the Spine Plate.
Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Closed Sensor (S63) error 3. Slave Controller PCB error

5BC-0004-61	Error in Spine Plate Shift Motor (M26) of Perfect Binder
Detection Description	The Spine Plate Closed Sensor (S63) was not turned OFF although the Spine Plate Shift Motor (M26) was driven for a specified period of time when opening the Spine Plate.
Remedy	1. Spine Plate Shift Motor (M26) error 2. Spine Plate Closed Sensor (S63) error 3. Slave Controller PCB error

5BD-0001-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	The Front Cover Lock Release Sensor (S30) was not turned OFF although the Front Cover was locked.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5BD-0002-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	The Front Cover Lock Release Sensor (S30) was not turned ON although the Front Cover was lock released.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5BD-0003-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	Open status of the Front Cover was detected although the Front Cover Lock Release Sensor (S30) was OFF.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5BD-8001-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	The Front Cover Lock Release Sensor (S30) was not turned OFF although the Front Cover was locked.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5BD-8002-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	The Front Cover Lock Release Sensor (S30) was not turned ON although the Front Cover was lock released.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5BD-8003-61	Error in Front Cover Lock Release Sensor (S30) of Perfect Binder
Detection Description	Open status of the Front Cover was detected although the Front Cover Lock Release Sensor (S30) was OFF.
Remedy	1. Front Cover Lock Release Sensor (S30) error 2. Master Controller PCB error

5C0-0001-61	Error in Switchback Flapper Motor (M8) of Perfect Binder
Detection Description	The Switchback Flapper HP Sensor (S10) was not turned ON although the Switchback Flapper Motor (M8) was driven for a specified period of time when lifting up the Switchback Flapper.
Remedy	1. Switchback Flapper Motor (M8) error 2. Switchback Flapper HP Sensor (S10) error 3. Master Controller PCB error

5C0-0002-61	Error in Switchback Flapper Motor (M8) of Perfect Binder
Detection Description	The Switchback Flapper HP Sensor (S10) was not turned OFF although the Switchback Flapper Motor (M8) was driven for a specified period of time when lifting down the Switchback Flapper.
Remedy	1. Switchback Flapper Motor (M8) error 2. Switchback Flapper HP Sensor (S10) error 3. Master Controller PCB error

5C0-8001-61	Error in Switchback Flapper Motor (M8) of Perfect Binder
Detection Description	The Switchback Flapper HP Sensor (S10) was not turned ON although the Switchback Flapper Motor (M8) was driven for a specified period of time when lifting up the Switchback Flapper.
Remedy	1. Switchback Flapper Motor (M8) error 2. Switchback Flapper HP Sensor (S10) error 3. Master Controller PCB error

5C0-8002-61	Error in Switchback Flapper Motor (M8) of Perfect Binder
Detection Description	The Switchback Flapper HP Sensor (S10) was not turned OFF although the Switchback Flapper Motor (M8) was driven for a specified period of time when lifting down the Switchback Flapper.
Remedy	1. Switchback Flapper Motor (M8) error 2. Switchback Flapper HP Sensor (S10) error 3. Master Controller PCB error

5C1-0001-61	Error in Trailing Edge Retaining Lever Motor (M3) of Perfect Binder
Detection Description	The Trailing Edge Retaining Lever HP Sensor (S3) was not turned ON although the Trailing Edge Retaining Lever Motor (M3) was driven for a specified period of time when releasing the Trailing Edge Retaining Lever.
Remedy	1. Trailing Edge Retaining Lever Motor (M3) error 2. Trailing Edge Retaining Lever HP Sensor (S3) error 3. Master Controller PCB error

5C1-0002-61	Error in Trailing Edge Retaining Lever Motor (M3) of Perfect Binder
Detection Description	The Trailing Edge Retaining Lever HP Sensor (S3) was not turned OFF although the Trailing Edge Retaining Lever Motor (M3) was driven for a specified period of time when actuating the Trailing Edge Retaining Lever.
Remedy	1. Trailing Edge Retaining Lever Motor (M3) error 2. Trailing Edge Retaining Lever HP Sensor (S3) error 3. Master Controller PCB error

5C1-8001-61	Error in Trailing Edge Retaining Lever Motor (M3) of Perfect Binder
Detection Description	The Trailing Edge Retaining Lever HP Sensor (S3) was not turned ON although the Trailing Edge Retaining Lever Motor (M3) was driven for a specified period of time when releasing the Trailing Edge Retaining Lever.
Remedy	1. Trailing Edge Retaining Lever Motor (M3) error 2. Trailing Edge Retaining Lever HP Sensor (S3) error 3. Master Controller PCB error

5C1-8002-61	Error in Trailing Edge Retaining Lever Motor (M3) of Perfect Binder
Detection Description	The Trailing Edge Retaining Lever HP Sensor (S3) was not turned OFF although the Trailing Edge Retaining Lever Motor (M3) was driven for a specified period of time when actuating the Trailing Edge Retaining Lever.
Remedy	1. Trailing Edge Retaining Lever Motor (M3) error 2. Trailing Edge Retaining Lever HP Sensor (S3) error 3. Master Controller PCB error

5C2-0001-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/small) (S12) was not turned ON although the Alignment Motor (Front) (M4) was driven for a specified period of time to move small size paper to the home position.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/small) (S12) error 3. Master Controller PCB error

5C2-0002-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/small) (S12) was not turned OFF although the Alignment Motor (Front) (M4) was driven for the specified period of time to push small size paper.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/small) (S12) error 3. Master Controller PCB error

5C2-0003-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/large) (S14) was not turned ON although the Alignment Motor (Front) (M4) was driven for a specified period of time to move large size paper to the home position.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/large) (S14) error 3. Master Controller PCB error

5C2-0004-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/large) (S14) was not turned OFF although the Alignment Motor (Front) (M4) was driven for the specified period of time to push large size paper.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/large) (S14) error 3. Master Controller PCB error

5C2-8001-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/small) (S12) was not turned ON although the Alignment Motor (Front) (M4) was driven for a specified period of time to move small size paper to the home position.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/small) (S12) error 3. Master Controller PCB error

5C2-8002-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/small) (S12) was not turned OFF although the Alignment Motor (Front) (M4) was driven for the specified period of time to push small size paper.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/small) (S12) error 3. Master Controller PCB error

5C2-8003-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/large) (S14) was not turned ON although the Alignment Motor (Front) (M4) was driven for a specified period of time to move large size paper to the home position.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/large) (S14) error 3. Master Controller PCB error

5C2-8004-61	Error in Alignment Motor (Front) (M4) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Front/large) (S14) was not turned OFF although the Alignment Motor (Front) (M4) was driven for the specified period of time to push large size paper.
Remedy	1. Alignment Motor (Front) (M4) error 2. Alignment HP Sensor (Front/large) (S14) error 3. Master Controller PCB error

5C3-0001-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/small) (S13) was not turned ON although the Alignment Motor (Rear) (M5) was driven for the specified period of time to move small size paper to the home position.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/small) (S13) error 3. Master Controller PCB error

5C3-0002-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/small) (S13) was not turned OFF although the Alignment Motor (Rear) (M5) was driven for the specified period of time to push small size paper.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/small) (S13) error 3. Master Controller PCB error

5C3-0003-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/large) (S15) was not turned ON although the Alignment Motor (Rear) (M5) was driven for the specified period of time to move large size paper to the home position.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/large) (S15) error 3. Master Controller PCB error

5C3-0004-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/large) (S15) was not turned OFF although the Alignment Motor (Rear) (M5) was driven for the specified period of time to push large size paper.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/large) (S15) error 3. Master Controller PCB error

5C3-8001-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/small) (S13) was not turned ON although the Alignment Motor (Rear) (M5) was driven for the specified period of time to move small size paper to the home position.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/small) (S13) error 3. Master Controller PCB error

5C3-8002-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/small) (S13) was not turned OFF although the Alignment Motor (Rear) (M5) was driven for the specified period of time to push small size paper.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/small) (S13) error 3. Master Controller PCB error

5C3-8003-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/large) (S15) was not turned ON although the Alignment Motor (Rear) (M5) was driven for the specified period of time to move large size paper to the home position.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/large) (S15) error 3. Master Controller PCB error

5C3-8004-61	Error in Alignment Motor (Rear) (M5) of Perfect Binder
Detection Description	The Alignment Home Position Sensor (Rear/large) (S15) was not turned OFF although the Alignment Motor (Rear) (M5) was driven for the specified period of time to push large size paper.
Remedy	1. Alignment Motor (Rear) (M5) error 2. Alignment Home Position Sensor (Rear/large) (S15) error 3. Master Controller PCB error

5C4-0001-61	Error in Switchback Roller Lift Motor (M7) of Perfect Binder
Detection Description	The Switchback Roller Upper/Lower Home Position Sensor (S11) was not turned ON although the motor was driven for the specified period of time to lift up the Switchback Roller.
Remedy	1. Switchback Roller Lift Motor (M7) error 2. Switchback Roller Upper/Lower Home Position Sensor (S11) error 3. Master Controller PCB error

5C4-0002-61	Error in Switchback Roller Lift Motor (M7) of Perfect Binder
Detection Description	The Switchback Roller Upper/Lower Home Position Sensor (S11) was not turned OFF although the motor was driven for the specified period of time to lower the Switchback Roller.
Remedy	1. Switchback Roller Lift Motor (M7) error 2. Switchback Roller Upper/Lower Home Position Sensor (S11) error 3. Master Controller PCB error

5C4-8001-61	Error in Switchback Roller Lift Motor (M7) of Perfect Binder
Detection Description	The Switchback Roller Upper/Lower Home Position Sensor (S11) was not turned ON although the motor was driven for the specified period of time to lift up the Switchback Roller.
Remedy	1. Switchback Roller Lift Motor (M7) error 2. Switchback Roller Upper/Lower Home Position Sensor (S11) error 3. Master Controller PCB error

5C4-8002-61	Error in Switchback Roller Lift Motor (M7) of Perfect Binder
Detection Description	The Switchback Roller Upper/Lower Home Position Sensor (S11) was not turned OFF although the motor was driven for the specified period of time to lower the Switchback Roller.
Remedy	1. Switchback Roller Lift Motor (M7) error 2. Switchback Roller Upper/Lower Home Position Sensor (S11) error 3. Master Controller PCB error

5C5-0001-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Tray Lower Limit Sensor (S7) was not turned ON although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Tray Lower Limit Sensor (S7) error 3. Master Controller PCB error

5C5-0002-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Tray Lower Limit Sensor (S7) was not turned OFF although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Tray Lower Limit Sensor (S7) error 3. Master Controller PCB error

5C5-0003-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Front) (S1) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Master Controller PCB error

5C5-0004-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Front) (S1) was not turned OFF although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Master Controller PCB error

5C5-0005-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Rear) (S2) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Rear) (S2) error 3. Master Controller PCB error

5C5-0006-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Rear) (S2) was not turned OFF although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Rear) (S2) error 3. Master Controller PCB error

5C5-0007-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Stacking Tray Overflow Sensor (S6) error 3. Master Controller PCB error

5C5-0008-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) and the Tray Lower Limit Sensor (S7) were turned ON at the same time.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Stacking Tray Overflow Sensor (S6) error 3. Tray Lower Limit Sensor (S7) error 4. Master Controller PCB error

5C5-0009-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was not turned OFF although the motor was driven for the specified period of time to remove paper on the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Stacking Tray Overflow Sensor (S6) error 3. Master Controller PCB error

5C5-000A-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was OFF when lifting up the Stacking Tray while the Tray Empty Sensor (S8) was OFF and the Paper Surface Sensor (Front) (S1)/Paper Surface Sensor (Rear) (S2) was ON.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Paper Surface Sensor (Rear) (S2) error 4. Stacking Tray Overflow Sensor (S6) error 5. Tray Empty Sensor (S8) error 6. Master Controller PCB error

5C5-8001-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Tray Lower Limit Sensor (S7) was not turned ON although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Tray Lower Limit Sensor (S7) error 3. Master Controller PCB error

5C5-8002-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Tray Lower Limit Sensor (S7) was not turned OFF although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Tray Lower Limit Sensor (S7) error 3. Master Controller PCB error

5C5-8003-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Front) (S1) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Master Controller PCB error

5C5-8004-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Front) (S1) was not turned OFF although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Master Controller PCB error

5C5-8005-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Rear) (S2) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Rear) (S2) error 3. Master Controller PCB error

5C5-8006-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Paper Surface Sensor (Rear) (S2) was not turned OFF although the motor was driven for the specified period of time to lower the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Rear) (S2) error 3. Master Controller PCB error

5C5-8007-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was not turned ON although the motor was driven for the specified period of time to lift up the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Stacking Tray Overflow Sensor (S6) error 3. Master Controller PCB error

5C5-8009-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was not turned OFF although the motor was driven for the specified period of time to remove paper on the Stacking Tray.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Stacking Tray Overflow Sensor (S6) error 3. Master Controller PCB error

5C5-800A-61	Error in Stacking Tray Lift Motor (M2) of Perfect Binder
Detection Description	The Stacking Tray Overflow Sensor (S6) was OFF when lifting up the Stacking Tray while the Tray Empty Sensor (S8) was OFF and the Paper Surface Sensor (Front) (S1)/Paper Surface Sensor (Rear) (S2) was ON.
Remedy	1. Stacking Tray Lift Motor (M2) error 2. Paper Surface Sensor (Front) (S1) error 3. Paper Surface Sensor (Rear) (S2) error 4. Stacking Tray Overflow Sensor (S6) error 5. Tray Empty Sensor (S8) error 6. Master Controller PCB error

5C6-0001-61	Error in Stacking Tray Shift Motor (M9) of Perfect Binder
Detection Description	The Stacking Tray Shift Home Position Sensor (S9) was not turned ON although the motor was driven for the specified period of time to return the Stacking Tray back to the home position.
Remedy	1. Stacking Tray Shift Motor (M9) error 2. Stacking Tray Shift Home Position Sensor (S9) error 3. Master Controller PCB error

5C6-0002-61	Error in Stacking Tray Shift Motor (M9) of Perfect Binder
Detection Description	The Stacking Tray Shift Home Position Sensor (S9) was not turned OFF although the motor was driven for the specified period of time to shift the Stacking Tray from the home position.
Remedy	1. Stacking Tray Shift Motor (M9) error 2. Stacking Tray Shift Home Position Sensor (S9) error 3. Master Controller PCB error

5C6-8001-61	Error in Stacking Tray Shift Motor (M9) of Perfect Binder
Detection Description	The Stacking Tray Shift Home Position Sensor (S9) was not turned ON although the motor was driven for the specified period of time to return the Stacking Tray back to the home position.
Remedy	1. Stacking Tray Shift Motor (M9) error 2. Stacking Tray Shift Home Position Sensor (S9) error 3. Master Controller PCB error

5C6-8002-61	Error in Stacking Tray Shift Motor (M9) of Perfect Binder
Detection Description	The Stacking Tray Shift Home Position Sensor (S9) was not turned OFF although the motor was driven for the specified period of time to shift the Stacking Tray from the home position.
Remedy	1. Stacking Tray Shift Motor (M9) error 2. Stacking Tray Shift Home Position Sensor (S9) error 3. Master Controller PCB error

5C7-0001-61	Error in Stack Weight Shift Motor (M6) of Perfect Binder
Detection Description	The Stack Weight Shift Home Position Sensor (S16) was not turned ON although the motor was driven for the specified period of time to return the stacking weight back to the home position.
Remedy	1. Stack Weight Shift Motor (M6) error 2. Stack Weight Shift Home Position Sensor (S16) error 3. Master Controller PCB error

5C7-0002-61	Error in Stack Weight Shift Motor (M6) of Perfect Binder
Detection Description	The Stack Weight Shift Home Position Sensor (S16) was not turned OFF although the motor was driven for the specified period of time to shift the stacking weight from the home position.
Remedy	1. Stack Weight Shift Motor (M6) error 2. Stack Weight Shift Home Position Sensor (S16) error 3. Master Controller PCB error

5C7-8001-61	Error in Stack Weight Shift Motor (M6) of Perfect Binder
Detection Description	The Stack Weight Shift Home Position Sensor (S16) was not turned ON although the motor was driven for the specified period of time to return the stacking weight back to the home position.
Remedy	1. Stack Weight Shift Motor (M6) error 2. Stack Weight Shift Home Position Sensor (S16) error 3. Master Controller PCB error

5C7-8002-61	Error in Stack Weight Shift Motor (M6) of Perfect Binder
Detection Description	The Stack Weight Shift Home Position Sensor (S16) was not turned OFF although the motor was driven for the specified period of time to shift the stacking weight from the home position.
Remedy	1. Stack Weight Shift Motor (M6) error 2. Stack Weight Shift Home Position Sensor (S16) error 3. Master Controller PCB error

5C9-0001-61	Error in Disengage Motor (Left) (M15) of Perfect Binder
Detection Description	The Shift Home Position Sensor (Left) (S27) was not turned ON although the motor was driven for the specified period of time to return the left cover path back to the home position.
Remedy	1. Shift Motor (Left) (M15) error 2. Shift Home Position Sensor (Left) (S27) error 3. Master Controller PCB error

5C9-0002-61	Error in Disengage Motor (Left) (M15) of Perfect Binder
Detection Description	The Shift Home Position Sensor (Left) (S27) and the Shift Open Sensor (Left) (S28) were turned ON at the same time.
Remedy	1. Shift Motor (Left) (M15) error 2. Shift Home Position Sensor (Left) (S27) error 3. Shift Open Sensor (Left) (S28) error 4. Master Controller PCB error

5C9-0005-61	Error in Disengage Motor (Left) (M15) of Perfect Binder
Detection Description	The Shift Open Sensor (Left) (S28) was not turned ON although the motor was driven for the specified period of time to shift the left cover path to the open position.
Remedy	1. Shift Motor (Left) (M15) error 2. Shift Open Sensor (Left) (S28) error 3. Master Controller PCB error

5CA-0001-61	Error in Disengage Motor (Right) (M16) of Perfect Binder
Detection Description	The Shift Home Position Sensor (Right) (S22) was not turned ON although the motor was driven for the specified period of time to return the right cover path back to the home position.
Remedy	1. Shift Motor (Right) (M16) error 2. Shift Home Position Sensor (Right) (S22) error 3. Master Controller PCB error

5CA-0002-61	Error in Disengage Motor (Right) (M16) of Perfect Binder
Detection Description	The Shift Home Position Sensor (Right) (S22) and the Shift Open Sensor (Right) (S23) were turned ON at the same time.
Remedy	1. Shift Motor (Right) (M16) error 2. Shift Home Position Sensor (Right) (S22) error 3. Shift Open Sensor (Right) (S23) error 4. Master Controller PCB error

5CA-0005-61	Error in Disengage Motor (Right) (M16) of Perfect Binder
Detection Description	The Shift Open Sensor (Right) (S23) was not turned ON although the motor was driven for the specified period of time to shift the right cover path to the open position.
Remedy	1. Shift Motor (Right) (M16) error 2. Shift Open Sensor (Right) (S23) error 3. Master Controller PCB error

5CB-0001-61	Error in Cover Horizontal Registration Motor (M31) of Perfect Binder
Detection Description	The Registration Unit Home Position Sensor (S70) was not turned ON although the motor was driven for the specified period of time to return the Registration Unit back to the home position.
Remedy	1. Cover Horizontal Registration Motor (M31) error 2. Registration Unit Home Position Sensor (S70) error 3. Slave Controller PCB error

5CB-0002-61	Error in Cover Horizontal Registration Motor (M31) of Perfect Binder
Detection Description	The Registration Unit Home Position Sensor (S70) was not turned OFF although the motor was driven for the specified period of time to perform side registration of the cover.
Remedy	1. Cover Horizontal Registration Motor (M31) error 2. Registration Unit Home Position Sensor (S70) error 3. Slave Controller PCB error

5D0-0001-61	Error in Sub Gripper Lift Motor (M17) of Perfect Binder
Detection Description	The Sub Gripper Home Position Sensor (S37) was not turned ON although the motor was driven for the specified period of time to lift up the Sub Gripper.
Remedy	1. Sub Gripper Lift Motor (M17) error 2. Sub Gripper Home Position Sensor (S37) error 3. Slave Controller PCB error

5D0-0002-61	Error in Sub Gripper Lift Motor (M17) of Perfect Binder
Detection Description	The Sub Gripper Home Position Sensor (S37) was not turned OFF although the motor was driven for the specified period of time to lower the Sub Gripper.
Remedy	1. Sub Gripper Lift Motor (M17) error 2. Sub Gripper Home Position Sensor (S37) error 3. Slave Controller PCB error

5D0-8001-61	Error in Sub Gripper Lift Motor (M17) of Perfect Binder
Detection Description	The Sub Gripper Home Position Sensor (S37) was not turned ON although the motor was driven for the specified period of time to lift up the Sub Gripper.
Remedy	1. Sub Gripper Lift Motor (M17) error 2. Sub Gripper Home Position Sensor (S37) error 3. Slave Controller PCB error

5D0-8002-61	Error in Sub Gripper Lift Motor (M17) of Perfect Binder
Detection Description	The Sub Gripper Home Position Sensor (S37) was not turned OFF although the motor was driven for the specified period of time to lower the Sub Gripper.
Remedy	1. Sub Gripper Lift Motor (M17) error 2. Sub Gripper Home Position Sensor (S37) error 3. Slave Controller PCB error

5D1-0001-61	Error in Size Shift Motor (M19) of Perfect Binder
Detection Description	a.The Size Shift Home Position Sensor (S38) was not turned ON although the motor was driven for the specified period of time to open the Sub Gripper in the horizontal direction. b.When the Sub Gripper was moved to closed position from the opened position of the cross direction, the Size Shift Home Position Sensor (S38) was already OFF.
Remedy	1. Size Shift Motor (M19) error 2. Size Shift Home Position Sensor (S38) error 3. Slave Controller PCB error

5D1-0002-61	Error in Size Shift Motor (M19) of Perfect Binder
Detection Description	a. The Size Shift Home Position Sensor (S38) was not turned OFF although the motor was driven for the specified period of time to close the Sub Gripper in the horizontal direction. b. When the Sub Gripper was moved to opened position from the closed position of the cross direction, the Size Shift Home Position Sensor (S38) was already ON.
Remedy	1. Size Shift Motor (M19) error 2. Size Shift Home Position Sensor (S38) error 3. Slave Controller PCB error

5D1-8001-61	Error in Size Shift Motor (M19) of Perfect Binder
Detection Description	a. The Size Shift Home Position Sensor (S38) was not turned ON although the motor was driven for the specified period of time to open the Sub Gripper in the horizontal direction. b. When the Sub Gripper was moved to closed position from the opened position of the cross direction, the Size Shift Home Position Sensor (S38) was already OFF.
Remedy	1. Size Shift Motor (M19) error 2. Size Shift Home Position Sensor (S38) error 3. Slave Controller PCB error

5D1-8002-61	Error in Size Shift Motor (M19) of Perfect Binder
Detection Description	a. The Size Shift Home Position Sensor (S38) was not turned OFF although the motor was driven for the specified period of time to close the Sub Gripper in the horizontal direction. b. When the Sub Gripper was moved to opened position from the closed position of the cross direction, the Size Shift Home Position Sensor (S38) was already ON.
Remedy	1. Size Shift Motor (M19) error 2. Size Shift Home Position Sensor (S38) error 3. Slave Controller PCB error

5D2-0001-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Open Sensor (S40) was not turned ON although the motor was driven for the specified period of time to open the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Open Sensor (S40) error 3. Slave Controller PCB error

5D2-0002-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Open Sensor (S40) was not turned OFF although the motor was driven for the specified period of time to close the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Open Sensor (S40) error 3. Slave Controller PCB error

5D2-0003-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Closed Sensor (S41) was not turned ON although the motor was driven for the specified period of time to close the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Closed Sensor (S41) error 3. Slave Controller PCB error

5D2-0004-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Closed Sensor (S41) was not turned OFF although the motor was driven for the specified period of time to open the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Closed Sensor (S41) error 3. Slave Controller PCB error

5D2-0005-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Open Sensor (S40) and the Sub Gripper Closed Sensor (S41) were turned ON at the same time.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Closed Sensor (S41) error 3. Sub Gripper Open Sensor (S40) error 4. Slave Controller PCB error

5D2-8001-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Open Sensor (S40) was not turned ON although the motor was driven for the specified period of time to open the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Open Sensor (S40) error 3. Slave Controller PCB error

5D2-8002-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Open Sensor (S40) was not turned OFF although the motor was driven for the specified period of time to close the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Open Sensor (S40) error 3. Slave Controller PCB error

5D2-8003-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Closed Sensor (S41) was not turned ON although the motor was driven for the specified period of time to close the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Closed Sensor (S41) error 3. Slave Controller PCB error

5D2-8004-61	Error in Sub Gripper Motor (M20) of Perfect Binder
Detection Description	The Sub Gripper Closed Sensor (S41) was not turned OFF although the motor was driven for the specified period of time to open the Sub Gripper.
Remedy	1. Sub Gripper Motor (M20) error 2. Sub Gripper Closed Sensor (S41) error 3. Slave Controller PCB error

5D3-0001-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Stack Shift Home Position Sensor (S34) was not turned ON although the motor was driven for the specified period of time to return the Sub Gripper back to the home position.
Remedy	1. Stack Shift Motor (M18) error 2. Stack Shift Home Position Sensor (S34) error 3. Slave Controller PCB error

5D3-0002-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Stack Shift Home Position Sensor (S34) was not turned OFF although the motor was driven for the specified period of time when the Sub Gripper delivered a stack.
Remedy	1. Stack Shift Motor (M18) error 2. Stack Shift Home Position Sensor (S34) error 3. Slave Controller PCB error

5D3-0003-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	a. The Stack Shift Main Gripper Position Sensor (S35) was not turned ON although the motor was driven for the specified period of time when the Sub Gripper delivered a stack. b. The Main Gripper had gripped a stack at the rotation home position when the Sub Gripper delivered a stack.
Remedy	1. Remain of stack in the Main Gripper Assembly 2. Stack Shift Motor (M18) error 3. Stack Shift Main Gripper Position Sensor (S35) error 4. Slave Controller PCB error

5D3-0004-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Stack Shift Main Gripper Position Sensor (S35) was not turned OFF although the motor was driven for the specified period of time to return the Sub Gripper back to the home position.
Remedy	1. Stack Shift Motor (M18) error 2. Stack Shift Main Gripper Position Sensor (S35) error 3. Slave Controller PCB error

5D3-0005-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Main Gripper Rotation Enable Sensor (S36) was not turned ON although the motor was driven for the specified period of time to return the Sub Gripper back to the home position.
Remedy	1. Stack Shift Motor (M18) error 2. Main Gripper Rotation Enable Sensor (S36) error 3. Slave Controller PCB error

5D3-0006-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Main Gripper Rotation Enable Sensor (S36) was not turned OFF although the motor was driven for the specified period of time when the Sub Gripper delivered a stack.
Remedy	1. Stack Shift Motor (M18) error 2. Main Gripper Rotation Enable Sensor (S36) error 3. Slave Controller PCB error

5D3-0007-61	Error in Stack Shift Motor (M18) of Perfect Binder
Detection Description	The Stack Shift Home Position Sensor (S34) and then Stack Shift Main Gripper Position Sensor (S35) were turned ON at the same time.
Remedy	1. Stack Shift Motor (M18) error 2. Stack Shift Home Position Sensor (S34) error 3. Stack Shift Main Gripper Position Sensor (S35) error 4. Slave Controller PCB error

5D4-0001-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	a. The Main Gripper Home Position Sensor (S44) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper. b. The Main Gripper Home Position Sensor (S44) had been already turned OFF when lowering the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (S44) error 3. Slave Controller PCB error

5D4-0002-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	a. The Main Gripper Home Position Sensor (S44) was not turned OFF although the motor was driven for the specified period of time when lowering the Main Gripper. b. The Main Gripper Home Position Sensor (S44) had been already turned ON when lifting up the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (S44) error 3. Slave Controller PCB error

5D4-0003-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Small) (S48) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper from the stack registration position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Small) (S48) error 3. Slave Controller PCB error

5D4-0004-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Small) (S48) was not turned OFF although the motor was driven for the specified period of time to lower the Main Gripper to the stack registration position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Small) (S48) error 3. Slave Controller PCB error

5D4-0005-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Large) (S49) was not turned ON although the motor was driven for the specified period of time to lower the Main Gripper to the cover pressing position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Large) (S49) error 3. Slave Controller PCB error

5D4-0006-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Large) (S49) was not turned OFF although the motor was driven for the specified period of time to lift up the Main Gripper from the cover pressing position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Large) (S49) error 3. Slave Controller PCB error

5D4-0007-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Stack Delivery Sensor (S64T/S64L) was not turned ON although the motor was driven for the specified period of time when delivering a stack from the Main Gripper to the Stack Delivery Roller.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5D4-0008-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Home Position Sensor (H) (S45) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (H) (S45) error 3. Slave Controller PCB error

5D4-0009-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Home Position Sensor (H) (S45) was not turned OFF although the motor was driven for the specified period of time to lower the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (H) (S45) error 3. Slave Controller PCB error

5D4-8001-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	a. The Main Gripper Home Position Sensor (S44) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper. b. The Main Gripper Home Position Sensor (S44) had been already turned OFF when lowering the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (S44) error 3. Slave Controller PCB error

5D4-8002-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	a. The Main Gripper Home Position Sensor (S44) was not turned OFF although the motor was driven for the specified period of time when lowering the Main Gripper. b. The Main Gripper Home Position Sensor (S44) had been already turned ON when lifting up the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (S44) error 3. Slave Controller PCB error

5D4-8003-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Small) (S48) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper from the stack registration position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Small) (S48) error 3. Slave Controller PCB error

5D4-8004-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Small) (S48) was not turned OFF although the motor was driven for the specified period of time to lower the Main Gripper to the stack registration position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Small) (S48) error 3. Slave Controller PCB error

5D4-8005-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Large) (S49) was not turned ON although the motor was driven for the specified period of time to lower the Main Gripper to the cover pressing position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Large) (S49) error 3. Slave Controller PCB error

5D4-8006-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Locking Sensor (Large) (S49) was not turned OFF although the motor was driven for the specified period of time to lift up the Main Gripper from the cover pressing position.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Locking Sensor (Large) (S49) error 3. Slave Controller PCB error

5D4-8007-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Stack Delivery Sensor (S64T/S64L) was not turned ON although the motor was driven for the specified period of time when delivering a stack from the Main Gripper to the Stack Delivery Roller.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Stack Delivery Sensor (S64T/S64L) error 3. Slave Controller PCB error

5D4-8008-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Home Position Sensor (H) (S45) was not turned ON although the motor was driven for the specified period of time to lift up the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (H) (S45) error 3. Slave Controller PCB error

5D4-8009-61	Error in Main Gripper Lift Motor (M22) of Perfect Binder
Detection Description	The Main Gripper Home Position Sensor (H) (S45) was not turned OFF although the motor was driven for the specified period of time to lower the Main Gripper.
Remedy	1. Main Gripper Lift Motor (M22) error 2. Main Gripper Home Position Sensor (H) (S45) error 3. Slave Controller PCB error

5D5-0001-61	Error in Rotation Motor (M21) of Perfect Binder
Detection Description	a. The Rotation Home Position Sensor (S43) was not turned ON although the motor was driven for the specified period of time when the Main Gripper moved to the stack delivery position. b. The Main Gripper was not at the rotation home position while the Sub Gripper had a stack at a position other than the home position.
Remedy	1. Remain of stack in the Sub Gripper Assembly 2. Rotation Motor (S21) error 3. Rotation Home Position Sensor (S43) error 4. Slave Controller PCB error

5D5-0002-61	Error in Rotation Motor (M21) of Perfect Binder
Detection Description	The Rotation Home Position Sensor (S43) was not turned OFF although the motor was driven for the specified period of time when the Main Gripper moved to the binding position.
Remedy	1. Rotation Motor (S21) error 2. Rotation Home Position Sensor (S43) error 3. Slave Controller PCB error

5D5-0003-61	Error in Rotation Motor (M21) of Perfect Binder
Detection Description	The Rotation Binding Position Sensor (S42) was not turned ON although the motor was driven for the specified period of time when the Main Gripper moved to the binding position.
Remedy	1. Rotation Motor (M21) error 2. Rotation Binding Position Sensor (S42) error 3. Slave Controller PCB error

5D5-0004-61	Error in Rotation Motor (M21) of Perfect Binder
Detection Description	The Rotation Binding Position Sensor (S42) was not turned OFF although the motor was driven for the specified period of time when the Main Gripper moved to the stack delivery position.
Remedy	1. Rotation Motor (M21) error 2. Rotation Binding Position Sensor (S42) error 3. Slave Controller PCB error

5D5-0005-61	Error in Rotation Motor (M21) of Perfect Binder
Detection Description	The Rotation Binding Position Sensor (S42) and the Rotation Home Position Sensor (S43) were turned ON at the same time.
Remedy	1. Rotation Motor (M21) error 2. Rotation Binding Position Sensor (S42) error 3. Rotation Home Position Sensor (S43) error 4. Slave Controller PCB error

5D6-0001-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Rear) (S47) was not turned ON although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Open Sensor (Rear) (S47) error 3. Slave Controller PCB error

5D6-0002-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Rear) (S47) was not turned OFF although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Open Sensor (Rear) (S47) error 3. Slave Controller PCB error

5D6-0003-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Rear) (S54) was not turned ON although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Closed Sensor (Rear) (S54) error 3. Slave Controller PCB error

5D6-0004-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Rear) (S54) was not turned OFF although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Closed Sensor (Rear) (S54) error 3. Slave Controller PCB error

5D6-0005-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The signal of the Main Gripper Encoder (Rear) (S46) was not changed although the motor was driven for the specified period of time to open/close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Encoder (Rear) (S46) error 3. Slave Controller PCB error

5D6-0006-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Rear) (S47) and the Main Gripper Closed Sensor (Rear) (S54) were turned ON at the same time.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Open Sensor (Rear) (S47) error 3. Main Gripper Closed Sensor (Rear) (S54) error 4. Slave Controller PCB error

5D6-8001-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Rear) (S47) was not turned ON although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Open Sensor (Rear) (S47) error 3. Slave Controller PCB error

5D6-8002-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Rear) (S47) was not turned OFF although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Open Sensor (Rear) (S47) error 3. Slave Controller PCB error

5D6-8003-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Rear) (S54) was not turned ON although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Closed Sensor (Rear) (S54) error 3. Slave Controller PCB error

5D6-8004-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Rear) (S54) was not turned OFF although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Closed Sensor (Rear) (S54) error 3. Slave Controller PCB error

5D6-8005-61	Error in Main Gripper Motor (Rear) (M24) of Perfect Binder
Detection Description	The signal of the Main Gripper Encoder (Rear) (S46) was not changed although the motor was driven for the specified period of time to open/close the Main Gripper.
Remedy	1. Main Gripper Motor (Rear) (M24) error 2. Main Gripper Encoder (Rear) (S46) error 3. Slave Controller PCB error

5D7-0001-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Front) (S51) was not turned ON although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Open Sensor (Front) (S51) error 3. Slave Controller PCB error

5D7-0002-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Front) (S51) was not turned OFF although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Open Sensor (Front) (S51) error 3. Slave Controller PCB error

5D7-0003-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Front) (S53) was not turned ON although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Closed Sensor (Front) (S53) error 3. Slave Controller PCB error

5D7-0004-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Front) (S53) was not turned OFF although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Closed Sensor (Front) (S53) error 3. Slave Controller PCB error

5D7-0005-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The signal of the Main Gripper Encoder (Front) (S52) was not changed although the motor was driven for the specified period of time to open/close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Encoder (Front) (S52) error 3. Slave Controller PCB error

5D7-0006-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Front) (S51) and the Main Gripper Closed Sensor (Front) (S53) were turned ON at the same time.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Open Sensor (Front) (S51) error 3. Main Gripper Closed Sensor (Front) (S53) error 4. Slave Controller PCB error

5D7-8001-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Front) (S51) was not turned ON although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Open Sensor (Front) (S51) error 3. Slave Controller PCB error

5D7-8002-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Open Sensor (Front) (S51) was not turned OFF although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Open Sensor (Front) (S51) error 3. Slave Controller PCB error

5D7-8003-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Front) (S53) was not turned ON although the motor was driven for the specified period of time to close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Closed Sensor (Front) (S53) error 3. Slave Controller PCB error

5D7-8004-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The Main Gripper Closed Sensor (Front) (S53) was not turned OFF although the motor was driven for the specified period of time to open the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Closed Sensor (Front) (S53) error 3. Slave Controller PCB error

5D7-8005-61	Error in Main Gripper Motor (Front) (M23) of Perfect Binder
Detection Description	The signal of the Main Gripper Encoder (Front) (S52) was not changed although the motor was driven for the specified period of time to open/close the Main Gripper.
Remedy	1. Main Gripper Motor (Front) (M23) error 2. Main Gripper Encoder (Front) (S52) error 3. Slave Controller PCB error

5D8-0001-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Home Position Sensor (S67) was not turned ON although the motor was driven for the specified period of time to disengage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Home Position Sensor (S67) error 3. Slave Controller PCB error

5D8-0002-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Home Position Sensor (S67) was not turned OFF although the motor was driven for the specified period of time to engage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Home Position Sensor (S67) error 3. Slave Controller PCB error

5D8-0003-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Sensor (S68) was not turned ON although the motor was driven for the specified period of time to engage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Sensor (S68) error 3. Slave Controller PCB error

5D8-0004-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Sensor (S68) was not turned OFF although the motor was driven for the specified period of time to disengage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Sensor (S68) error 3. Slave Controller PCB error

5D8-8001-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Home Position Sensor (S67) was not turned ON although the motor was driven for the specified period of time to disengage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Home Position Sensor (S67) error 3. Slave Controller PCB error

5D8-8002-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Home Position Sensor (S67) was not turned OFF although the motor was driven for the specified period of time to engage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Home Position Sensor (S67) error 3. Slave Controller PCB error

5D8-8003-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Sensor (S68) was not turned ON although the motor was driven for the specified period of time to engage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Sensor (S68) error 3. Slave Controller PCB error

5D8-8004-61	Error in Stack Delivery Path Shift Motor (M30) of Perfect Binder
Detection Description	The Stack Delivery Path Sensor (S68) was not turned OFF although the motor was driven for the specified period of time to disengage the Stack Delivery Roller.
Remedy	1. Stack Delivery Path Shift Motor (M30) error 2. Stack Delivery Path Sensor (S68) error 3. Slave Controller PCB error

5D9-0001-61	Error in Stack Delivery Roller Motor (M27) of Perfect Binder
Detection Description	The Leading Edge Sensor (S65T/S65L) was not turned ON although the motor was driven for the specified period of time when delivering a stack from the Stack Delivery Roller.
Remedy	1. Stack Delivery Roller Motor (M27) error 2. Leading Edge Sensor (S65T/S65L) error 3. Slave Controller PCB error

5D9-8001-61	Error in Stack Delivery Roller Motor (M27) of Perfect Binder
Detection Description	The Leading Edge Sensor (S65T/S65L) was not turned ON although the motor was driven for the specified period of time when delivering a stack from the Stack Delivery Roller.
Remedy	1. Stack Delivery Roller Motor (M27) error 2. Leading Edge Sensor (S65T/S65L) error 3. Slave Controller PCB error

5F0-8001-02	a. Paper Positioning Plate HP error b. Saddle Leading Edge Stopper HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Paper Positioning Plate Home Position Sensor was not turned ON although the Paper Positioning Plate Motor was driven by 1500 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Leading Edge Stopper Home Position Sensor was not turned ON although 5.5 sec had passed after the Saddle Leading Edge Stopper started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Positioning Plate Home Position Sensor (PI7) error 2. Positioning Plate drive mechanism error 3. Paper Positioning Plate Motor (M4) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Leading Edge Stopper Home Position Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Leading Edge Stopper Home Position Sensor (PS105/J929) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Lead Edge Stopper Motor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Lead Edge Stopper Motor (M103/J925) - Saddle Leading Edge Stopper Home Position Sensor (PS105) - Saddle Leading Edge Stopper Motor (M103) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F0-8002-02	a. Paper Positioning Plate HP error b. Saddle Leading Edge Stopper HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Paper Positioning Plate Home Position Sensor was not turned OFF although the Paper Positioning Plate Motor was driven by 300 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Leading Edge Stopper Home Position Sensor was not turned OFF although 5.5 sec had passed after the Saddle Leading Edge Stopper started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Positioning Plate Home Position Sensor (PI7) error 2. Open circuit of the harness between the Finisher Controller PCB and the Stack Delivery Motor/ Shutter Clutch 3. Positioning Plate drive mechanism error 4. Paper Positioning Plate Motor (M4) error 5. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Leading Edge Stopper Home Position Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Leading Edge Stopper Home Position Sensor (PS105/J929) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Lead Edge Stopper Motor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Lead Edge Stopper Motor (M103/J925) - Saddle Leading Edge Stopper Home Position Sensor (PS105) - Saddle Leading Edge Stopper Motor (M103) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F1-8000-02	Saddle Fold/Feed Motor error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Fold/Feed Motor did not rotate although 1 sec had passed after the motor started the operation.
Remedy	[Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor 1. Saddle Stitcher Controller PCB (UN101/J210) to Relay Connector (2P) 2. Relay Connector (2P) to Saddle Fold/Feed Motor (M106/J902) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor Rotation Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (5P) 2. Relay Connector (5P) to Saddle Fold/Feed Motor Rotation Sensor (PS114/J946) - Harness between the Finisher Controller PCB (UN3/J103) and the Relay PCB (UN7/J413) - Saddle Fold/Feed Motor (M106) - Saddle Fold/Feed Motor Rotation Sensor (PS114) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F1-8001-02	a. Paper Fold Motor Clock error b. Saddle Fold/Feed Motor error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 Feeding speed of the Paper Fold Roller was 5 mm/sec or less. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Fold/Feed Motor Rotation Sensor was not turned ON although paper was fed for the specified distance after the sensor was turned OFF.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Fold Motor Clock Sensor (PI4)/Paper Fold Home Position Sensor (PI21) error 2. Paper Fold Roller drive mechanism error 3. Paper Fold Motor (M2) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor Rotation Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (5P) 2. Relay Connector (5P) to Saddle Fold/Feed Motor Rotation Sensor (PS114/J946) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor 1. Saddle Stitcher Controller PCB (UN101/J210) to Relay Connector (2P) 2. Relay Connector (2P) to Saddle Fold/Feed Motor (M106/J902) - Saddle Fold/Feed Motor Rotation Sensor (PS114) - Saddle Fold/Feed Motor (M106) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F1-8002-02	a. Paper Fold HP error b. Saddle Fold/Feed Motor error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The status of Paper Fold Home Position Sensor was not changed although the Paper Fold Motor was driven for 3 sec. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Fold/Feed Motor Rotation Sensor was not turned OFF although paper was fed for the specified distance after the Saddle Fold/Feed Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Fold Motor Clock Sensor (PI4)/Paper Fold Home Position Sensor (PI21) error 2. Paper Fold Roller drive mechanism error 3. Paper Fold Motor (M2) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor Rotation Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (5P) 2. Relay Connector (5P) to Saddle Fold/Feed Motor Rotation Sensor (PS114/J946) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Fold/Feed Motor 1. Saddle Stitcher Controller PCB (UN101/J210) to Relay Connector (2P) 2. Relay Connector (2P) to Saddle Fold/Feed Motor (M106/J902) - Saddle Fold/Feed Motor Rotation Sensor (PS114) - Saddle Fold/Feed Motor (M106) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F2-8001-02	a. Guide HP error b. Saddle Roller Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Guide Home Position Sensor was not turned ON although the Guide Motor was driven by 700 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Roller Guide HP Sensor was not turned ON although 1 sec had passed after the Saddle Roller Guide Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Guide Home Position Sensor (PI13) error 2. Guide Plate drive mechanism error 3. Guide Motor (M3) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Roller Guide HP Sensor (PS107/J944) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Roller Guide Motor 1. Saddle Stitcher Controller PCB (UN101/J204) to Relay Connector (4P) 2. Relay Connector (4P) to Saddle Roller Guide Motor (M104/J905) - Saddle Roller Guide HP Sensor (PS107) - Saddle Roller Guide Motor (M104) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F2-8002-02	a. Guide HP error b. Saddle Roller Guide HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Guide Home Position Sensor was not turned OFF although the Guide Motor was driven by 50 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Roller Guide HP Sensor was not turned OFF although 1 sec had passed after the Saddle Roller Guide Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Guide Home Position Sensor (PI13) error 2. Guide Plate drive mechanism error 3. Guide Motor (M3) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Roller Guide HP Sensor (PS107/J944) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Roller Guide Motor 1. Saddle Stitcher Controller PCB (UN101/J204) to Relay Connector (4P) 2. Relay Connector (4P) to Saddle Roller Guide Motor (M104/J905) - Saddle Roller Guide HP Sensor (PS107) - Saddle Roller Guide Motor (M104) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F3-8001-02	a. Alignment Plate HP error b. Saddle Alignment Plate HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Alignment Plate Home Position Sensor was not turned ON although the Alignment Motor was driven by 500 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Alignment Plate HP Sensor was not turned ON although 1.5 sec had passed after the Saddle Alignment Guide Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Alignment Plate Home Position Sensor (PI5) error 2. Alignment Plate drive mechanism error 3. Alignment Motor (M5) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Alignment Plate HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Alignment Plate HP Sensor (PS106/J928) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Alignment Guide Motor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Alignment Guide Motor (M102/J923) - Saddle Alignment Plate HP Sensor (PS106) - Saddle Alignment Guide Motor (M102) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F3-8002-02	a. Alignment Plate HP error b. Saddle Alignment Plate HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Alignment Plate Home Position Sensor was not turned OFF although the Alignment Motor was driven by 50 pulses. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Alignment Plate HP Sensor was not turned OFF although 1.5 sec had passed after the Saddle Alignment Guide Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Alignment Plate Home Position Sensor (PI5) error 2. Alignment Plate drive mechanism error 3. Alignment Motor (M5) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Alignment Plate HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Alignment Plate HP Sensor (PS106/J928) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Alignment Guide Motor 1. Saddle Stitcher Controller PCB (UN101/J213) to Relay Connector (17P) 2. Relay Connector (17P) to Relay Connector (17P) 3. Relay Connector (17P) to Saddle Alignment Guide Motor (M102/J923) - Saddle Alignment Plate HP Sensor (PS106) - Saddle Alignment Guide Motor (M102) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F4-8001-02	a. Stitch HP error b. Saddle Staple (Rear) error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Stitch Home Position Sensor was not turned ON although the Stitch Motor (Rear) was driven for 0.5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Staple HP Sensor was not turned ON although 0.8 sec had passed after the Saddle Staple Unit started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Stitch Home Position Sensor (Rear) (SW5) error 2. Stitcher (Rear) error 3. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Staple Unit to the Saddle Stitcher Controller PCB 1. Saddle Staple Unit (J904) to Relay Connector (10P) 2. Relay Connector (10P) to Saddle Stitcher Controller PCB (UN101/J207) - Saddle Staple Unit - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5F4-8002-02	a. Stitch HP error b. Saddle Staple (Rear) error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Stitch Home Position Sensor was not turned OFF although the Stitch Motor (Rear) was driven for 0.5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Staple HP Sensor was not turned OFF although 0.5 sec had passed after the Saddle Staple Unit started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Stitch Home Position Sensor (Rear) (SW5) error 2. Stitcher (Rear) error 3. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Staple Unit to the Saddle Stitcher Controller PCB 1. Saddle Staple Unit (J904) to Relay Connector (10P) 2. Relay Connector (10P) to Saddle Stitcher Controller PCB (UN101/J207) - Saddle Staple Unit - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5F5-8001-02	Stitch HP error
Detection Description	The Stitch Home Position Sensor was not turned ON although the Stitch Motor (Front) was driven for 0.5 sec.
Remedy	1. Stitch Home Position Sensor (Front) (SW7) error 2. Stitcher (Front) error 3. Saddle Stitcher Controller PCB error

5F5-8002-02	Stitch HP error
Detection Description	The Stitch Home Position Sensor was not turned OFF although the Stitch Motor (Front) was driven for 0.5 sec.
Remedy	1. Stitch Home Position Sensor (Front) (SW7) error 2. Stitcher (Front) error 3. Saddle Stitcher Controller PCB error

5F6-8001-02	a. Paper Retainer Plate HP error b. Saddle Paper Thrust Plate HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Paper Retainer Plate Home Position Sensor was not turned ON although the Paper Retainer Plate Motor was driven for 0.5 sec. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Paper Thrust Plate HP Sensor was not turned ON although 0.8 sec had passed after the Saddle Paper Thrust Plate Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Retainer Plate Home Position Sensor (PI14)/Paper Retainer Plate Leading Edge Position Sensor (PI15)/Paper Retainer Plate Motor Clock Sensor (PI1) error 2. Paper Retainer Plate drive mechanism error 3. Paper Retainer Plate Motor (M8) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Paper Thrust Plate HP Sensor (PS108/J937) - Harnesses from the Saddle Paper Thrust Plate Motor to the Saddle Stitcher Controller PCB 1. Saddle Stitcher Controller PCB (UN101/J206) to Relay Connector (4P) 2. Relay Connector (4P) to Relay Connector (4P) 3. Relay Connector (4P) to Saddle Paper Thrust Plate Motor (M105/J901) - Saddle Paper Thrust Plate HP Sensor (PS108) - Saddle Paper Thrust Plate Motor (M105) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F6-8002-02	a. Paper Retainer Plate HP error b. Saddle Paper Thrust Plate HP error
Detection Description	a. STAPLE FIN-T1/BOOKLET FIN-T1 The Paper Retainer Plate Home Position Sensor was not turned OFF although the Paper Retainer Plate Motor was driven for 150 msec. b. FIN-AM1/SADDLE FIN-AM2 The Saddle Paper Thrust Plate HP Sensor was not turned OFF although 0.8 sec had passed after the Saddle Paper Thrust Plate Motor started the operation.
Remedy	a. STAPLE FIN-T1/BOOKLET FIN-T1 1. Paper Retainer Plate Home Position Sensor (PI14)/Paper Retainer Plate Leading Edge Position Sensor (PI15)/Paper Retainer Plate Motor Clock Sensor (PI1) error 2. Paper Retainer Plate drive mechanism error 3. Paper Retainer Plate Motor (M8) error 4. Saddle Stitcher Controller PCB error b. FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Paper Thrust Plate HP Sensor (PS108/J937) - Harnesses from the Saddle Paper Thrust Plate Motor to the Saddle Stitcher Controller PCB 1. Saddle Stitcher Controller PCB (UN101/J206) to Relay Connector (4P) 2. Relay Connector (4P) to Relay Connector (4P) 3. Relay Connector (4P) to Saddle Paper Thrust Plate Motor (M105/J901) - Saddle Paper Thrust Plate HP Sensor (PS108) - Saddle Paper Thrust Plate Motor (M105) - Saddle Stitcher Controller PCB (UN101) - Finisher Controller PCB (UN3) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

5F6-8003-02	Paper Retainer Plate Motor Clock error
Detection Description	Detected pulse of the Paper Retainer Plate Motor Clock Sensor was 6 pulses or less.
Remedy	1. Paper Retainer Plate Home Position Sensor (PI14)/Paper Retainer Plate Leading Edge Position Sensor (PI15)/Paper Retainer Plate Motor Clock Sensor (PI1) error 2. Paper Retainer Plate drive mechanism error 3. Paper Retainer Plate Motor (M8) error 4. Saddle Stitcher Controller PCB error

5F6-8004-02	Push-on position error
Detection Description	The Paper Retainer Plate Leading Edge Position Sensor was not turned ON although the Paper Retainer Plate Motor was driven for 0.1 sec.
Remedy	1. Paper Retainer Plate Home Position Sensor (PI14)/Paper Retainer Plate Leading Edge Position Sensor (PI15)/Paper Retainer Plate Motor Clock Sensor (PI1) error 2. Paper Retainer Plate drive mechanism error 3. Paper Retainer Plate Motor (M8) error 4. Saddle Stitcher Controller PCB error

5F6-8005-02	Push-on position error
Detection Description	The Paper Retainer Plate Leading Edge Position Sensor was not turned OFF although the Paper Retainer Plate Motor was driven for 0.5 sec.
Remedy	1. Paper Retainer Plate Home Position Sensor (PI14)/Paper Retainer Plate Leading Edge Position Sensor (PI15)/Paper Retainer Plate Motor Clock Sensor (PI1) error 2. Paper Retainer Plate drive mechanism error 3. Paper Retainer Plate Motor (M8) error 4. Saddle Stitcher Controller PCB error

5FA-8000-02	Saddle Press Motor error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Press Motor did not move although 0.2 sec had passed after the motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Press Position Sensor 1. Saddle Stitcher Controller PCB (UN101/J207) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to Saddle Press Position Sensor (PS116/J913) - Saddle Press Motor (M108) - Saddle Press Position Sensor (PS116) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FA-8001-02	Saddle press position detection error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Press Position Sensor was not turned ON although 10 sec had passed after the Saddle Press Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Press Position Sensor 1. Saddle Stitcher Controller PCB (UN101/J207) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to Saddle Press Position Sensor (PS116/J913) - Saddle Press Motor (M108) - Saddle Press Position Sensor (PS116) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FA-8002-02	Saddle press position detection error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Press Position Sensor was not turned OFF although 10 sec had passed after the Saddle Press Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Press Position Sensor 1. Saddle Stitcher Controller PCB (UN101/J207) to Relay Connector (9P) 2. Relay Connector (9P) to Relay Connector (9P) 3. Relay Connector (9P) to Saddle Press Position Sensor (PS116/J913) - Saddle Press Motor (M108) - Saddle Press Position Sensor (PS116) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FB-8001-02	Saddle Pull-in Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Pull-in Roller HP Sensor was not turned ON although 0.5 sec had passed after the Saddle Pull-in Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J204) and the Saddle Pull-in Roller Disengagement Motor (M114/J1012) - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Pull-in Roller HP Sensor (PS122/J122) - Saddle Pull-in Roller Disengagement Motor (M114) - Saddle Pull-in Roller HP Sensor (PS122) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FB-8002-02	Saddle Pull-in Roller HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Pull-in Roller HP Sensor was not turned OFF although 0.5 sec had passed after the Saddle Pull-in Roller Disengagement Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J204) and the Saddle Pull-in Roller Disengagement Motor (M114/J1012) - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Pull-in Roller HP Sensor (PS122/J122) - Saddle Pull-in Roller Disengagement Motor (M114) - Saddle Pull-in Roller HP Sensor (PS122) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FC-8001-02	Saddle Paper Tapping HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Paper Tapping HP Sensor was not turned ON although 0.5 sec had passed after the Saddle Tapping Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J204) and the Saddle Tapping Motor (M113/J910) - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Paper Tapping HP Sensor (PS118/J945) - Saddle Tapping Motor (M113) - Saddle Paper Tapping HP Sensor (PS118) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FC-8002-02	Saddle Paper Tapping HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Paper Tapping HP Sensor was not turned OFF although 0.5 sec had passed after the Saddle Tapping Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harness between the Saddle Stitcher Controller PCB (UN101/J204) and the Saddle Tapping Motor (M113/J910) - Harness between the Saddle Stitcher Controller PCB (UN101/J209) and the Saddle Paper Tapping HP Sensor (PS118/J945) - Saddle Tapping Motor (M113) - Saddle Paper Tapping HP Sensor (PS118) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FD-8001-02	Saddle Trailing Edge Retainer Shift HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Trailing Edge Retainer Shift HP Sensor was not turned ON although 3 sec had passed after the Saddle Trailing Edge Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Shift Motor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Shift Motor (M111/J911) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer Shift HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer Shift HP Sensor (PS119/J916) - Saddle Trailing Edge Shift Motor (M111) - Saddle Trailing Edge Retainer Shift HP Sensor (PS119) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FD-8002-02	Saddle Trailing Edge Retainer Shift HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Trailing Edge Retainer Shift HP Sensor was not turned OFF although 3 sec had passed after the Saddle Trailing Edge Shift Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Shift Motor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Shift Motor (M111/J911) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer Shift HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer Shift HP Sensor (PS119/J916) - Saddle Trailing Edge Shift Motor (M111) - Saddle Trailing Edge Retainer Shift HP Sensor (PS119) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FE-8001-02	Saddle Trailing Edge Retainer HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Trailing Edge Retainer HP Sensor was not turned ON although 0.5 sec had passed after the Saddle Trailing Edge Retainer Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer Motor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer Motor (M110/J915) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer HP Sensor (PS121/J917) - Saddle Trailing Edge Retainer Motor (M110) - Saddle Trailing Edge Retainer HP Sensor (PS121) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FE-8002-02	Saddle Trailing Edge Retainer HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Trailing Edge Retainer HP Sensor was not turned OFF although 0.5 sec had passed after the Saddle Trailing Edge Retainer Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer Motor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer Motor (M110/J915) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Trailing Edge Retainer HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J214) to Relay Connector (14P) 2. Relay Connector (14P) to Saddle Trailing Edge Retainer HP Sensor (PS121/J917) - Saddle Trailing Edge Retainer Motor (M110) - Saddle Trailing Edge Retainer HP Sensor (PS121) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FF-8001-02	Saddle Clamp HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2The Saddle Clamp HP Sensor was not turned ON although 1 sec had passed after the Saddle Clamp Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Clamp Motor 1. Saddle Stitcher Controller PCB (UN101/J215) to Relay Connector (3P) 2. Relay Connector (3P) to Saddle Clamp Motor (M115/J2002) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Clamp HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J216) to Relay Connector (7P) 2. Relay Connector (7P) to Saddle Clamp HP Sensor (PS123/J2004) - Saddle Clamp Motor (M115) - Saddle Clamp HP Sensor (PS123) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

5FF-8002-02	Saddle Clamp HP error
Detection Description	FIN-AM1/SADDLE FIN-AM2 The Saddle Clamp HP Sensor was not turned OFF although 1 sec had passed after the Saddle Clamp Motor started the operation.
Remedy	FIN-AM1/SADDLE FIN-AM2 [Related parts] R1.00 - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Clamp Motor 1. Saddle Stitcher Controller PCB (UN101/J215) to Relay Connector (3P) 2. Relay Connector (3P) to Saddle Clamp Motor (M115/J2002) - Harnesses from the Saddle Stitcher Controller PCB to the Saddle Clamp HP Sensor 1. Saddle Stitcher Controller PCB (UN101/J216) to Relay Connector (7P) 2. Relay Connector (7P) to Saddle Clamp HP Sensor (PS123/J2004) - Saddle Clamp Motor (M115) - Saddle Clamp HP Sensor (PS123) - Saddle Stitcher Controller PCB (UN101) [Remedy] Check/replace the related harness/cable, connector and parts.

602-0001-00	HDD error
Detection Description	- HDD could not be recognized. - Startup partition (BOOTDEV) was not found at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD - Encryption Board (if it is installed) - Riser PCB (UN83) - Main Controller PCB 1 (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF the main power, and check the cable between the Main Controller PCB and the HDD. 2. If the Encryption Board is installed, disconnect the Signal Cable connected to the board and directly connect the cable to the HDD. [CAUTION] The cable cannot be connected from the rear side. To connect the cable, open the Main Controller Cover and pass the cable over the Main Controller PCB 1. 3. After connecting the cable, enter safe mode using (2+8) startup. If the machine starts normally, the Encryption Board is the cause of the error so replace the board. 4. Check that the HDD runs smoothly (no problem in drive sound) when turning ON the main power. If abnormality is found, replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. 5. Replace the Riser PCB. 6. Replace the Main Controller PCB 1.

602-0002-00	HDD error
Detection Description	There was no system for the main CPU.
Remedy	[Related parts] - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0003-00	HDD error
Detection Description	A part of the HDD data in BootDevice was damaged.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. a. In the case of B/W E-code display To detect and recover the damaged data, turn OFF the power and then execute (1+9) startup. HDD data damage recovery routine is automatically started which makes the screen black. After a while, it moves to the screen indicating progress bar. The process is complete when the screen turns white. (It takes 40 to 50 min.) b. In the case of official display of wrench-mark 1. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 2. Reinstall the system software using SST or a USB memory. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0006-00	HDD error
Detection Description	There was no system for the sub CPU.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Reinstall the system software using SST or a USB memory. 4. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0007-00	HDD error
Detection Description	There was no ICC Profile.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Reinstall the system software using SST or a USB memory. 4. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0009-00	HDD error
Detection Description	There was no Font file in /BOOTDEV/BOOT.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Reinstall the system software using SST or a USB memory. 3. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 4. Reinstall the system software using SST or a USB memory. 5. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0010-00	HDD error
Detection Description	There were no Chinese, Korean, and Taiwan font files.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Reinstall the system software using SST or a USB memory. 3. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 4. Reinstall the system software using SST or a USB memory. 5. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0011-00	HDD error
Detection Description	There were no Chinese, Korean, and Taiwan font files.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Reinstall the system software using SST or a USB memory. 3. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 4. Reinstall the system software using SST or a USB memory. 5. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0012-00	HDD error
Detection Description	There was no file in which the Web browser refers to.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Reinstall the system software using SST or a USB memory. 3. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 4. Reinstall the system software using SST or a USB memory. 5. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0015-00	HDD error
Detection Description	There was no file for downloading image coefficient.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Reinstall the system software using SST or a USB memory. 3. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 4. Reinstall the system software using SST or a USB memory. 5. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0101-00	HDD error
Detection Description	An error was detected in the storage area of image data (Inbox, etc.) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0111-00	HDD error
Detection Description	An error was detected in the storage area of image data (Inbox, etc.) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. After replacement of the HDD, format the HDD and reinstall the system software.

602-0201-00	HDD error
Detection Description	An error was detected in the management data area of image at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0211-00	HDD error
Detection Description	An error was detected in the management data area of image after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0301-00	HDD error
Detection Description	An error was detected in the storage area of image data (temporary data) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0311-00	HDD error
Detection Description	An error was detected in the storage area of image data (temporary data) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0401-00	HDD error
Detection Description	An error was detected in thumbnail area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "4", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "4", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0411-00	HDD error
Detection Description	An error was detected in thumbnail area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "4", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "4", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0501-00	HDD error
Detection Description	An error was detected in the storage area of universal data at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "5", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "5", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0511-00	HDD error
Detection Description	An error was detected in the storage area of universal data after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "5", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "5", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0601-00	HDD error
Detection Description	An error was detected in the storage area of universal data (temporary data) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0611-00	HDD error
Detection Description	An error was detected in the storage area of universal data (temporary data) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0701-00	HDD error
Detection Description	An error was detected in the storage area of fax (temporary data) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0711-00	HDD error
Detection Description	An error was detected in the storage area of fax (temporary data) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0801-00	HDD error
Detection Description	An error was detected in the storage area of PSS (temporary data) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0811-00	HDD error
Detection Description	An error was detected in the storage area of PSS (temporary data) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0901-00	HDD error
Detection Description	An error was detected in the PDL-related file storage area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-0911-00	HDD error
Detection Description	An error was detected in the PDL-related file storage area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1001-00	HDD error
Detection Description	An error was detected in the firmware storage area (BOOTDEV) at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Format the HDD (BOOTDEV) and reinstall the system software. 3-1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format)> [1] /BOOTDEV using SST or a USB memory. 3-2. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the system software. 4. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1011-00	HDD error
Detection Description	An error was detected in the firmware storage area (BOOTDEV) after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Format the HDD (BOOTDEV) and reinstall the system software. 3-1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format)> [1] /BOOTDEV using SST or a USB memory. 3-2. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the system software. 4. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1101-00	HDD error
Detection Description	An error was detected in the MEAP area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1111-00	HDD error
Detection Description	An error was detected in the MEAP area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1201-00	HDD error
Detection Description	An error was detected in the Send area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 5. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 6. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1211-00	HDD error
Detection Description	An error was detected in the Send area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 5. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 6. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1301-00	HDD error
Detection Description	An error was detected in the MEAP area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 5. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 6. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1311-00	HDD error
Detection Description	An error was detected in the MEAP area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the harness between the Riser PCB and the HDD. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 5. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 6. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1401-00	HDD error
Detection Description	An error was detected in the storage area of system log at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1411-00	HDD error
Detection Description	An error was detected in the storage area of system log after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1501-00	HDD error
Detection Description	An error was detected in the Advanced Box area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "15", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "15", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1511-00	HDD error
Detection Description	An error was detected in the Advanced Box area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "15", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "15", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1601-00	HDD error
Detection Description	An error was detected in the CDS area at startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "16", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "16", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-1611-00	HDD error
Detection Description	An error was detected in the CDS area after startup.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the harness between the Riser PCB and the HDD. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "16", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to the backup data list. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "16", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] Only the data in the corresponding partitions is deleted. 5. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CLEAR". Then, turn OFF and then ON the main power. [Reference] All the partitions that can be deleted are deleted. 6. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 7. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-2000-00	HDD Encryption Board error
Detection Description	Authentication between the host machine and the Encryption Board could not be performed because I/O error occurred in the file system after startup
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the HDD Encryption Board is installed properly by removing and then installing it again. 2. Turn ON the main power, and check whether the error is cleared. 3. Execute the key clear using SST (to make an unformatted disk). [CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD. 4. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory device. 5. Reinstall the necessary application software.

602-4000-00	HDD error
Detection Description	It was detected that there was no HDD installed or HDD was not formatted.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-4001-00	HDD error
Detection Description	It was detected that there was no HDD installed or HDD was not formatted.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-5001-00	HDD Encryption Board error
Detection Description	Mistake in the procedure for installing the HDD Encryption Board
Remedy	[Related parts] Encryption Board [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Remove the Encryption Board and install the HDD only. Then, turn ON the main power. 2. Execute "COPIER> FUNCTION> INSTALL> HD-CRYP". 3. Install the Encryption Board.

602-5002-00	HDD error
Detection Description	A non-genuine HDD was detected.
Remedy	[Related parts] HDD(Unit of replacement: HDD, WD10EURX, WESTEM DIGITAL) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Install a genuine HDD. 2. Enter download mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory device. 3. Reinstall the necessary application software.

602-FF01-00	HDD error
Detection Description	An unidentified HDD error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

602-FF11-00	HDD error
Detection Description	An unidentified HDD error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	[Related parts] R1.00 - Harnesses between the Riser PCB and the HDD 1. Riser PCB (UN83/J106) to HDD 2. Riser PCB (UN83/J107) to HDD - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Riser PCB and the HDD. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. [Reference] All data in the HDD is deleted. 3. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

612-0007-00	System error
Detection Description	Initial license has not yet been registered.
Remedy	Register the initial license (speed license).

613-1536-00	Error in/shortage of image memory
Detection Description	Necessary memory was not connected to the Main Controller PCB 2.
Remedy	[Remedy] Check/replace the Main Controller PCB 2 (UN82). (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 2) [CAUTION] When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode.

615-0001-00	Scanner communication error
Detection Description	An error was detected in self-diagnosis of the encryption library.
Remedy	[Related parts] HDD (Unit of replacement: HDD, WD10EURX, WESTEM DIGITAL) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Format the HDD and reinstall the system software using SST or a USB memory, and then turn OFF and then ON the main power. 2. Replace the HDD. [CAUTION] When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode.

677-0003-00	Print server error
Detection Description	Error was detected at the configuration check performed at startup.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the connection cable between the host machine and the print server. 2. Reinstall the system of the print server.

677-0010-00	Print server error
Detection Description	Not proper print server is connected.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Replace the print server with the proper one. 2. Reinstall the system of the print server.

677-0080-00	Print server error
Detection Description	A communication error between the print server and the host machine was detected.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the connection cable between the host machine and the print server. 2. Reinstall the system of the print server.

711-0001-05	Communication error
Detection Description	Occurrence of error was set for 4 times or more in 1.5 sec to the error register of the IPC Chip.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Finisher Lattice Connector 1. DC Controller PCB (UN2/J1226) to Relay Connector (J8227) 2. Relay Connector (J8227) to Finisher Lattice Connector (J7512/J7513) - Finisher Controller PCB (UNIT3) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

713-0001-05	Communication error
Detection Description	The operation was not completed although retry of the communication between the host machine (DCON) and the Finisher was performed for 3 consecutive times.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the CAN Transceiver PCB on the host machine 1. DC Controller PCB (UN2/J1268) to Relay Connector (19P) 2. Relay Connector (19P) to Relay Connector (19P) 3. Relay Connector (19P) to CAN Transceiver PCB (UN118/J3) - Harnesses from the Relay PCB to the CAN Transceiver PCB on the host machine 1. Relay PCB (UN7/J1856) to Relay Connector (5P) 2. Relay Connector (5P) to CAN Transceiver PCB (UN118/J4) - Harness between the CAN Transceiver PCB (UN8/J3) on the Finisher and the Finisher Controller PCB (UN3/J170) - Harness between the CAN Transceiver PCB (UN8/J4) on the Finisher and the AC Noise Filter PCB (UN12/J475) - LAN Cable [CAUTION] Be sure to check the connection with the delivery options. - CAN Transceiver PCB (UN118/UNIT8) [CAUTION] Be sure to check the connection with the delivery options. - AC Noise Filter PCB (UN12) - Finisher Controller PCB (UN3) - Relay PCB (UN7) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] - Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES - After replacement of the Finisher Controller PCB, refer to "Adjustments> Adjustment when Replacing the Parts> Points to Note when Replacing the Finisher Controller PCB" in the Service Manual for the Finisher.

719-0001-00	Coin vendor error
Detection Description	The coin vendor which was connected before turning OFF the main power was not connected at power-on.
Remedy	[Related parts] Cable between the charging management equipment and the host machine [Remedy] Perform the following in the order while checking whether the error is cleared. Check the cable between the charging management equipment and the host machine. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Reference] When operating the machine without the charging management equipment, execute "COPIER> FUNCTION> CLEAR> ERR". (It is designed to generate an error to prevent the misuse by removing the charging management equipment.)

719-0002-00	Coin vendor error
Detection Description	IPC error when the coin vendor is running - Open circuit of the IPC, or IPC communication could not be recovered. - Open circuit of the pickup/delivery signal cable was detected. - Invalid connection was detected.
Remedy	[Related parts] Cable between the charging management equipment and the host machine [Remedy] Perform the following in the order while checking whether the error is cleared. Check the cable between the charging management equipment and the host machine. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Reference] When operating the machine without the charging management equipment, execute "COPIER> FUNCTION> CLEAR> ERR". (It is designed to generate an error to prevent the misuse by removing the charging management equipment.)

719-0003-00	Coin vendor error
Detection Description	A communication error with the coin vendor was detected during unit price acquisition at startup.
Remedy	[Related parts] Cable between the charging management equipment and the host machine [Remedy] Perform the following in the order while checking whether the error is cleared. Check the cable between the charging management equipment and the host machine. 1. Disconnect and then connect the connector to check that there is no bent pin and cable disconnection. 2. Visually check that the harness is not caught or open circuit. 3. If there is any error, replace the corresponding harness/cable. [Reference] When operating the machine without the charging management equipment, execute "COPIER> FUNCTION> CLEAR> ERR". (It is designed to generate an error to prevent the misuse by removing the charging management equipment.)

719-0011-00	Card Reader communication error
Detection Description	The Card Reader which was connected before turning OFF the main power was not connected at power-on.
Remedy	[Related parts] R1.00 - Harness between the Card Reader and the Main Controller PCB (UN81/J20) - Card Reader(Unit of replacement: COPY CARD READER-F1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Card Reader and the Main Controller PCB. 2. After removing the Card Reader, execute "COPIER> FUNCTION> CLEAR> CARD" and "ERR". [CAUTION] Data related to card ID (department) is cleared.

719-0012-00	Card Reader IPC error
Detection Description	IPC error was detected while the Card Reader was running (open circuit of the IPC, or IPC communication could not be recovered).
Remedy	[Related parts] R1.00 - Harness between the Card Reader and the Main Controller PCB (UN81/J20) - Card Reader [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Card Reader and the Main Controller PCB. 2. After removing the Card Reader, execute "COPIER> FUNCTION> CLEAR> CARD" and "ERR". [CAUTION] Data related to card ID (department) is cleared.

719-0031-00	Card Reader communication error
Detection Description	Communication with the Card Reader could not be established at startup.
Remedy	[Related parts] R1.00 - Harness between the Card Reader and the Main Controller PCB (UN81/J20) - Card Reader(Unit of replacement: COPY CARD READER-F1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Card Reader and the Main Controller PCB. 2. After removing the Card Reader, execute "COPIER> FUNCTION> CLEAR> CARD" and "ERR". [CAUTION] Data related to card ID (department) is cleared.

719-0032-00	Card Reader communication error
Detection Description	Although communication with the Card Reader was available at startup, it became unavailable in the middle of it.
Remedy	[Related parts] R1.00 - Harness between the Card Reader and the Main Controller PCB (UN81/J20) - Card Reader(Unit of replacement: COPY CARD READER-F1) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the Card Reader and the Main Controller PCB. 2. After removing the Card Reader, execute "COPIER> FUNCTION> CLEAR> CARD" and "ERR". [CAUTION] Data related to card ID (department) is cleared.

719-0041-00	Coin vendor error
Detection Description	Communication with the coin vendor could not be established at startup of the host machine. (Unsupported charge mode (COIN = 6) has been set.)
Remedy	Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power.

719-0042-00	Coin vendor error
Detection Description	Communication with the coin vendor could not be established at startup of the host machine. (Unsupported charge mode (COIN = 6) has been set.)
Remedy	Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power.

720-0001-05	Error due to non-compatible delivery option
Detection Description	Finisher which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the finisher (STAPLE FIN-T1, BOOKLET FIN-T1) for this model.

720-0002-05	Error due to non-compatible delivery option
Detection Description	Finisher which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the finisher (FINISHER-AM1, SADDLE FIN-AM2) for this model.

720-0031-05	Error due to non-compatible delivery option
Detection Description	Puncher unit which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the puncher unit (PRO.PUNCHER-B1, INTEGRATION UNIT-C1) for this model.

720-0051-05	Error due to non-compatible delivery option
Detection Description	Stacker which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the stacker (HC STACKER-G1) for this model.

720-0061-05	Error due to non-compatible delivery option
Detection Description	Perfect binder which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the perfect binder (PERFECT BINDER-D1) for this model.

720-0071-05	Error due to non-compatible delivery option
Detection Description	Inserter unit which cannot be connected to the host machine has been connected.
Remedy	[Remedy] Connect the inserter unit (INSERTION UNIT-M1) for this model.

720-0101-05	Delivery option connection error
Detection Description	Finishers which cannot be connected to the iPR C800 has been connected. (The error occurs when STAPLE FIN-T1 and BOOKLET FIN-T1 have been connected to the iPR C800.)
Remedy	[Remedy] Disconnect the finishers (STAPLE FIN-T1 and BOOKLET FIN-T1) from the host machine.

720-1000-05	Delivery option connection error
Detection Description	Unidentifiable delivery option has been connected to the host machine.
Remedy	[Remedy] Disconnect the unidentifiable delivery option from the host machine. Delivery options which can be identified are as follow: FINISHER-AM1, SADDLE FIN-AM2, PRO.PUNCHER-B1, INTEGRATION UNIT-C1, HC STACKER-G1, PERFECT BINDER-D1, and INSERTION UNIT-M1.

730-B013-00	PDL embedded font error
Detection Description	Font data was corrupted.
Remedy	[Related parts] - Main Controller PCB 1 (UN81) (Unit of replacement: MAIN CONTROLLER PCB ASS'Y, 1) - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power, and check whether the error is cleared. 2. Delete the system software and install it again. 2-1. Enter safe mode using (2+8) startup, and execute "Delete System Software" using SST. 2-2. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the system software. 3. Replace the Flash PCB. 4. Replace the Main Controller PCB 1. [CAUTION] If there are any optional PCBs installed on the old Main Controller PCB 1, transfer them to the new PCB.

732-0001-00	Scanner communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB 2 was detected.
Remedy	[Related parts] R1.00 - Harness between the Main Controller PCB 2 (UN82/J22) and the Reader Controller PCB (PCB1/J109) - Harnesses from the Relay PCB to the Reader Controller PCB 1. Relay PCB (UN7/J1819) to Relay Connector (6P) 2. Relay Connector (6P) to Reader Controller PCB (PCB1/J101) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

732-0020-04	Scanner communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB 2 was detected at startup/recovery from sleep.
Remedy	[Related parts] R1.00 - Harness between the Main Controller PCB 2 (UN82/J22) and the Reader Controller PCB (PCB1/J109) - Harnesses from the Relay PCB to the Reader Controller PCB 1. Relay PCB (UN7/J1819) to Relay Connector (6P) 2. Relay Connector (6P) to Reader Controller PCB (PCB1/J101) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

732-0021-04	Scanner communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB 2 was detected at startup/recovery from sleep.
Remedy	[Related parts] R1.00 - Harness between the Main Controller PCB 2 (UN82/J22) and the Reader Controller PCB (PCB1/J109) - Harnesses from the Relay PCB to the Reader Controller PCB 1. Relay PCB (UN7/J1819) to Relay Connector (6P) 2. Relay Connector (6P) to Reader Controller PCB (PCB1/J101) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

732-0022-04	Scanner communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB 2 was detected at startup/recovery from sleep.
Remedy	[Related parts] R1.00 - Harness between the Main Controller PCB 2 (UN82/J22) and the Reader Controller PCB (PCB1/J109) - Harnesses from the Relay PCB to the Reader Controller PCB 1. Relay PCB (UN7/J1819) to Relay Connector (6P) 2. Relay Connector (6P) to Reader Controller PCB (PCB1/J101) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

732-0023-04	Scanner communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB 2 was detected at startup/recovery from sleep.
Remedy	[Related parts] R1.00 - Harness between the Main Controller PCB 2 (UN82/J22) and the Reader Controller PCB (PCB1/J109) - Harnesses from the Relay PCB to the Reader Controller PCB 1. Relay PCB (UN7/J1819) to Relay Connector (6P) 2. Relay Connector (6P) to Reader Controller PCB (PCB1/J101) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

732-8888-00	Reader detection error
Detection Description	The Reader was detected for the first time after clearing MN-CON. Only the message "Turn OFF and then ON the power" is displayed on the screen instead of displaying an error code. The error log is recorded in "COPIER> DISPLAY> ERR".
Remedy	[Remedy] Turn OFF and then ON the main power.

732-9999-00	Reader detection error
Detection Description	The Reader was detected with a printer model for the first time. Only the message "Turn OFF and then ON the power" is displayed on the screen instead of displaying an error code. The error log is recorded in "COPIER> DISPLAY> ERR".
Remedy	[Remedy] Turn OFF and then ON the main power.

733-0000-00	Communication error
Detection Description	A communication error between the DC Controller PCB and the Main Controller PCB was detected at startup.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1220) and the Riser PCB (UN83/J2) - Harness between the DC Controller PCB (UN2/J1221) and the Riser PCB (UN83/J1) - Harness between the DC Controller PCB (UN2/J1200) and the Relay PCB (UN7/J1817) - DC Controller PCB (UN2) - Main Controller PCB 2 (UN82) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the DC Controller PCB and the Riser PCB. 2. Check the harness between the DC Controller PCB and the Relay PCB. 3. Turn ON the power, and check if the initialization is executed at startup. a. If the initialization is executed, replace the Main Controller PCB 2. b. If the initialization is not executed, replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

733-0001-00	Communication error
Detection Description	A communication error between the DC Controller PCB and the Main Controller PCB was detected at startup.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1220) and the Riser PCB (UN83/J2) - Harness between the DC Controller PCB (UN2/J1221) and the Riser PCB (UN83/J1) - Harness between the DC Controller PCB (UN2/J1200) and the Relay PCB (UN7/J1817) - DC Controller PCB (UN2) - Main Controller PCB 2 (UN82) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the DC Controller PCB and the Riser PCB. 2. Check the harness between the DC Controller PCB and the Relay PCB. 3. Turn ON the power, and check if the initialization is executed at startup. a. If the initialization is executed, replace the Main Controller PCB 2. b. If the initialization is not executed, replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

733-0002-00	Communication error
Detection Description	DDI-P communication error (invalid packet) was detected while communication between the DC Controller PCB and the Main Controller PCB had been established.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1220) and the Riser PCB (UN83/J2) - Harness between the DC Controller PCB (UN2/J1221) and the Riser PCB (UN83/J1) - Harness between the DC Controller PCB (UN2/J1200) and the Relay PCB (UN7/J1817) - DC Controller PCB (UN2) - Main Controller PCB 2 (UN82) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the harness between the DC Controller PCB and the Riser PCB. 2. Check the harness between the DC Controller PCB and the Relay PCB. 3. Turn ON the power, and check if the initialization is executed at startup. a. If the initialization is executed, replace the Main Controller PCB 2. b. If the initialization is not executed, replace the DC Controller PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

743-0000-04	Communication error
Detection Description	The Reader Controller PCB did not detect the specified command sent from the Main Controller PCB since the start of a job.
Remedy	[Related parts] R1.00 - Harness between the Reader Controller PCB (PCB1/J109) and the Main Controller PCB 2 (UN82/J22) - Main Controller PCB 2 (UN82) - Reader Controller PCB (PCB1) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the Reader Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> RSRAMRES

744-0001-00	Language file error
Detection Description	The language file in HDD was not supported by the version of Bootable.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the correct language file or the system software. 2. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] BOOTDEV using SST or a USB memory. Then, reinstall the system software.

744-0002-00	Language file error
Detection Description	Size of the language file in HDD was too big.
Remedy	[Remedy] 1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 2. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the system software.

744-0003-00	Language file error
Detection Description	The language file to be switched to that was described in the Config.txt in HDD was not found.
Remedy	[Remedy] Enter safe mode using (2+8) startup, and execute [3] Upgrade (Overwrite all) using SST or a USB memory device to reinstall the correct language file or the system software.

744-0004-00	Language file error
Detection Description	Switching to the language file in the HDD failed.
Remedy	[Remedy] Enter safe mode using (2+8) startup, and execute [3] Upgrade (Overwrite all) using SST or a USB memory device to reinstall the correct language file or the system software.

744-2000-00	Error due to the DC Controller PCB not compatible with the model
Detection Description	Invalid controller firmware was detected at startup.
Remedy	[Remedy] Replace the ECO-ID PCB (UN80) with a correct one. (Unit of replacement: ECO-ID PCB ASSEMBLY)

746-0031-00	TPM error
Detection Description	A communication error has occurred between the Main Controller PCB and the TPM PCB at startup.
Remedy	[Related parts] TPM PCB (Unit of replacement: TPM PCB ASSEMBLY) [Remedy] Perform the following in the order while checking whether the error is cleared. Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 1. Replace the TPM PCB. 2. If the TPM key was backed up, execute "Restore TPM Key". 2-1. Connect the USB memory which stores the TPM key. 2-2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power.

746-0032-00	TPM error
Detection Description	The TPM PCB and the host machine were not matched at startup.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. 1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 2. Enter safe mode using (2+8) startup, and execute [3]: Upgrade (Overwrite all) using SST or a USB memory to reinstall the system software.

746-0033-00	TPM error
Detection Description	Data inconsistency in the TPM PCB was detected at startup.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 1. Turn OFF and then ON the main power, and execute "Settings/Registration> Log In> Management Settings> Data Management> Initialize All Data/Settings". [CAUTION] If the TPM setting is set to ON, the setting is changed to OFF. 2. Perform the appropriate remedy according to the status whether the TPM key was backed up. a. If the TPM key was backed up 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. b. If the TPM key was not backed up 1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 2. Enter safe mode using (2+8) startup, and reinstall the system software.

746-0034-00	TPM error
Detection Description	HDD was cleared while the TPM setting was ON.
Remedy	[Remedy] Perform the following in the order while checking whether the error is cleared. Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 1. Turn OFF and then ON the main power, and execute "Settings/Registration> Log In> Management Settings> Data Management> Initialize All Data/Settings". [CAUTION] If the TPM setting is set to ON, the setting is changed to OFF. 2. Perform the appropriate remedy according to the status whether the TPM key was backed up. a. If the TPM key was backed up 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. b. If the TPM key was not backed up 1. Enter safe mode using (2+8) startup, and execute [4] Clear/Format> [1] Disk Format (HDD format) using SST or a USB memory. 2. Enter safe mode using (2+8) startup, and reinstall the system software.

746-0035-00	TPM version error
Detection Description	The TPM PCB which cannot be used in this machine was installed.
Remedy	[Remedy] Install the supported TPM PCB. (Unit of replacement: TPM PCB ASSEMBLY)

747-0000-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-001E-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0119-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-011A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-011B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0219-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-021A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-021B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0319-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-031A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-031B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0419-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-041A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-041B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-051B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-051C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-051D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0618-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0619-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-061A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-061B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0718-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0719-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-071A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-071B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0818-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0819-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-081A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-081B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0918-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0919-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-091A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-091B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0A18-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0A19-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0A1A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0A1B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0B18-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0B19-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0B1A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0B1B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0C18-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0C19-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0C1A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-0C1B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-110D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-110E-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1117-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1200-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1201-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1202-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1203-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1204-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1205-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1206-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1207-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1208-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-1217-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-2000-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-2017-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-2018-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-201B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-201C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-201F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-2217-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-2218-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-221B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-221C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-221F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-3C00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-3D00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-3F00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6000-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-620C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-620D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-620E-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-620F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6210-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6211-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6218-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6219-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-621A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-621B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-621C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-621D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-621F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-650F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6513-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6514-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6515-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6516-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6517-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6519-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-651A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-651B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-651C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-651D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-651F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6A1F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6B1F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6C1E-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6C1F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-6F1F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-711F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-721F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-741E-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-741F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-751B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-751C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-751F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-7C00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-7D00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-7F00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-850F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8513-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8514-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8515-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8516-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8517-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-8519-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-851A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-851B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-851C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-851D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-851F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-951A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-951B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-9C00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-9F00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C000-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C519-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C51A-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C51B-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C51C-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C51D-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C51F-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C701-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-C706-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-DC00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-DF00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-FF00-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

747-FF01-00	Board error
Detection Description	There was unexpected interruption from ASIC.
Remedy	[Related parts] R1.00 - Bypass PCB - Open I/F PCB (if third party's controller is installed) - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 2 (UN82) - HDD - Encryption Board (if it is installed) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - When replacing the HDD, execute "Adjustment after the HDD replacement" in situation mode. - After replacement of the Encryption Board (option), execute the following operations: initialization of the Encryption Board, formatting of HDD, and reinstallation of the system software.

748-2010-00	Flash PCB error
Detection Description	The IPL (startup program) was not found at startup.
Remedy	Contact to the sales company.

748-2011-00	Flash PCB error
Detection Description	The kernel was not found at startup.
Remedy	[Remedy] Replace the Flash PCB. (Unit of replacement: SATA-FLASH PCB ASSEMBLY)

748-2012-00	Flash PCB error
Detection Description	At (2+8) startup (download mode), Linux system could not mount the drive, or there was no system startup script.
Remedy	[Remedy] Replace the Flash PCB. (Unit of replacement: SATA-FLASH PCB ASSEMBLY)

748-2021-00	Main Controller PCB 2 access error
Detection Description	Necessary hardware on the Main Controller PCB 2 was not detected at startup.
Remedy	[Related parts] R1.00 - Main Controller PCB 1 (UN81) - Main Controller PCB 2 (UN82) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - If there are any optional PCBs installed on the old Main Controller PCB 1/2, transfer them to the new PCB.

748-2022-00	Main Controller PCB 2 access error
Detection Description	Necessary hardware on the Main Controller PCB 2 was not detected at startup.
Remedy	[Related parts] R1.00 - Main Controller PCB 1 (UN81) - Main Controller PCB 2 (UN82) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - If there are any optional PCBs installed on the old Main Controller PCB 1/2, transfer them to the new PCB.

748-2023-00	Main Controller PCB 2 access error
Detection Description	The DDR2-SDRAM on the Main Controller PCB 2 could not be initialized at startup.
Remedy	[Remedy] Check/replace the DDR2-SDRAM (M1) on the Main Controller PCB 2. (Unit of replacement: MEMORY PCB ASSEMBLY)

748-2024-00	Main Controller PCB 2 access error
Detection Description	The CPU on the Main Controller PCB 2 could not complete initialization at startup.
Remedy	[Related parts] R1.00 - DDR2-SDRAM (M1) on the Main Controller PCB 2 - Main Controller PCB 1 (UN81) - Main Controller PCB 2 (UN82) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] - When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. - If there are any optional PCBs installed on the old Main Controller PCB 1/2, transfer them to the new PCB.

748-2025-00	Main Controller PCB 2 access error
Detection Description	It was detected at startup that there was no Bypass PCB installed.
Remedy	[Remedy] Remove and then install the Bypass PCB on the Main Controller PCB 2. (Unit of replacement: BYPASS PCB ASS'Y, SUB)

748-2026-00	Main Controller PCB 2 access error
Detection Description	It was detected at startup that there was no Image Processing Sub PCB installed.
Remedy	[Remedy] Remove and then install the Bypass PCB on the Main Controller PCB 2. (Unit of replacement: BYPASS PCB ASS'Y, SUB)

748-9000-00	System error
Detection Description	System error
Remedy	Contact to the sales company.

749-0005-05	Error due to change in hardware configuration
Detection Description	There was a change in option configuration that requires turning OFF and then ON the main power. On the screen, only the message "Turn the main power switch OFF and ON" is displayed instead of displaying the error code. The error log is not recorded in COPIER> DISPLAY> ERR.
Remedy	[Remedy] Turn OFF and then ON the main power. [Reference] Options are recognized again by turning OFF and then ON the main power. In the case of changing option configuration, disconnect the power plug or turn OFF the breaker after turning OFF the main power so that an error does not occur.

749-0006-00	Error due to change in hardware configuration
Detection Description	Change in option configuration could not be detected.
Remedy	[Remedy] Turn OFF and then ON the main power. [Reference] Options are recognized again by turning OFF and then ON the main power. In the case of changing option configuration, disconnect the power plug or turn OFF the breaker after turning OFF the main power so that an error does not occur.

750-0000-05	System software combination mismatch error
Detection Description	Combination of the DC Controller software and the Main Controller software was not correct.
Remedy	[Remedy] Reinstall the firmware of the DC Controller/Main Controller or the system software using SST or a USB memory device.

750-0001-05	System software error
Detection Description	Combination of the DC Controller software and the Video CPU software was not correct.
Remedy	[Remedy] Reinstall the firmware of the DC Controller/Main Controller or the system software using SST or a USB memory device.

750-0002-05	System software error
Detection Description	Combination of the DC Controller software and the Toner Container CPU software was not correct.
Remedy	[Remedy] Reinstall the firmware of the DC Controller/Main Controller or the system software using SST or a USB memory device.

750-0003-05	System software error
Detection Description	Combination of the DC Controller software and the Color Sensor CPU software was not correct.
Remedy	[Remedy] Reinstall the firmware of the DC Controller/Main Controller or the system software using SST or a USB memory device.

750-0010-05	Error due to non-compatible Laser Interface PCB
Detection Description	It was detected that a laser interface PCB not supported by this machine has been installed.
Remedy	Check/replace the Laser Interface PCB (UN100).

753-0001-00	Download error
Detection Description	Update of the system software failed.
Remedy	Turn OFF and then ON the main power.

760-0001-00	Main Controller PCB 2 internal error
Detection Description	An error was detected in the Main Controller PCB 2.
Remedy	[Related parts] Main Controller PCB 2 (UN82) [Remedy] Check/replace the related harness/cable, connector and parts. [CAUTION] When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode.

804-0000-00	Power Supply Fan error
Detection Description	It was detected that the Power Supply Fan 1/2 was locked.
Remedy	[Related parts] R1.00 - Power Supply Fan 1 (FM8) - Power Supply Fan 2 (FM9) - Harnesses from the Power Supply Fan 1 to the Riser PCB 1. Power Supply Fan 1 (FM8/J7401) to Relay PCB (UN7/J1830) 2. Relay PCB (UN7/J1805) to DC Controller PCB (UN2/J1224) 3. DC Controller PCB (UN2/J1221) to Riser PCB (UN83/J1) - Harnesses from the Power Supply Fan 2 to the Riser PCB 1. Power Supply Fan 2 (FM9/J7400) to Relay PCB (UN7/J1830) 2. Relay PCB (UN7/J1805) to DC Controller PCB (UN2/J1224) 3. DC Controller PCB (UN2/J1221) to Riser PCB (UN83/J1) - Relay PCB (UN7) - DC Controller PCB (UN2) - Main Controller PCB 1 (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Select "8" in "COPIER> FUNCTION> PART-CHK> FAN" and replace the Power Supply Fan 1 if it is not rotating. 2. Select "9" in "COPIER> FUNCTION> PART-CHK> FAN" and replace the Power Supply Fan 2 if it is not rotating. 3. Check the harnesses from the Power Supply Fan 1/2 to the Riser PCB. 4. Replace the Relay PCB. 5. Replace the DC Controller PCB. 6. Replace the Main Controller PCB 1. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0002-05	Primary Charging Suction Fan error
Detection Description	An error in the Primary Charging Suction Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Registration Patch Driver PCB (UN8/J2408) and the Primary Charging Suction Fan (FM2/J7109) - Primary Charging Suction Fan (FM2) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0003-05	Primary Charging Exhaust Fan error
Detection Description	An error in the Primary Charging Exhaust Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1249) and the Primary Charging Exhaust Fan (FM3/J7111) - Primary Charging Exhaust Fan (FM3) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0004-05	Developing/Pre-transfer Charging Fan error
Detection Description	An error in the Developing/Pre-transfer Charging Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1044) and the Developing/Pre-transfer Charging Fan (FM4/J7149) - Developing/Pre-transfer Charging Fan (FM4) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0005-05	Color Cleaning Fan error
Detection Description	An error in the Color Cleaning Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1044) and the Color Cleaning Fan (FM5/J7112) - Color Cleaning Fan (FM5) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0006-05	Fixing Heat Fan error
Detection Description	An error in the Fixing Heat Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1252) and the Fixing Heat Fan (FM6/J8905) - Fixing Heat Fan (FM6) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0007-05	IH Power Supply Fan error
Detection Description	An error in the IH Power Supply Fan was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Relay PCB to the IH Power Supply Fan 1. Relay PCB (UN7/J1812) to Relay Connector (23P) 2. Relay Connector (23P) to IH Power Supply PCB (UN30/J501 and J521) to IH Power Supply Fan (FM7/J7403) - IH Power Supply Fan (FM7) - IH Power Supply PCB (UN30) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0014-05	Error in the Power Supply Cooling Fan (38V)
Detection Description	An error in the Power Supply Cooling Fan (38V) was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Relay PCB to the Power Supply Cooling Fan (38V) 1. Relay PCB (UN7/J1830) to Relay Connector (4P) 2. Relay Connector (4P) to Power Supply Cooling Fan (38V) (FM14/J7529) - Power Supply Cooling Fan (38V) (FM14) - Relay PCB (UN7) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0015-05	Pressure Belt Cooling Fan (Front) error
Detection Description	An error in the Pressure Belt Cooling Fan (Front) in the Pre-fixing Feed Unit was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Fixing Feed Driver PCB to the Pressure Belt Cooling Fan (Front) 1. Fixing Feed Driver PCB (UN5/J2014) to Relay Connector (11P) 2. Relay Connector (11P) to Pressure Belt Cooling Fan (Front) (FM15/J7230) - Pressure Belt Cooling Fan (Front) (FM15) - Fixing Feed Driver PCB (UN5) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0016-05	Pressure Belt Cooling Fan (Rear) error
Detection Description	An error in the Pressure Belt Cooling Fan (Rear) in the Pre-fixing Feed Unit was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Fixing Feed Driver PCB to the Pressure Belt Cooling Fan (Rear) 1. Fixing Feed Driver PCB (UN5/J2014) to Relay Connector (11P) 2. Relay Connector (11P) to Pressure Belt Cooling Fan (Rear) (FM16/J7235) - Pressure Belt Cooling Fan (Rear) (FM16) - Fixing Feed Driver PCB (UN5) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0018-05	Hopper Cooling Suction Fan error
Detection Description	An error in the Hopper Cooling Suction Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1044) and the Hopper Cooling Suction Fan (FM18/J7116) - Hopper Cooling Suction Fan (FM18) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0022-05	Hopper Cooling Exhaust Fan error
Detection Description	An error in the Hopper Cooling Exhaust Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1044) and the Hopper Cooling Exhaust Fan (FM22/J7231) - Hopper Cooling Exhaust Fan (FM22) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0030-05	Decurler Suction Fan error
Detection Description	An error in the Decurler Suction Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Buffer Driver PCB (UN11/J2106) and the Decurler Suction Fan (FM30/J7141) - Decurler Suction Fan (FM30) - Buffer Driver PCB (UN11) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0031-05	Decurler Side Exhaust Fan error
Detection Description	An error in the Decurler Side Exhaust Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Buffer Driver PCB (UN11/J2106) and the Decurler Side Exhaust Fan (FM31/J7145) - Decurler Side Exhaust Fan (FM31) - Buffer Driver PCB (UN11) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0032-05	Decurler Lower Exhaust Fan error
Detection Description	An error in the Decurler Lower Exhaust Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Buffer Driver PCB (UN11/J2106) and the Decurler Lower Exhaust Fan (FM32/J80601) - Decurler Lower Exhaust Fan (FM32) - Buffer Driver PCB (UN11) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0040-05	Developing Cooling Exhaust Fan error
Detection Description	An error in the Developing Cooling Exhaust Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1044) and the Developing Cooling Exhaust Fan (FM40/J7150) - Developing Cooling Exhaust Fan (FM40) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0041-05	Developing Cooling Suction Fan (Y) error
Detection Description	An error in the Developing Cooling Suction Fan (Y) was detected.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Developing Cooling Suction Fan (Y) 1. DC Controller PCB (UN2/J1243) to Relay Connector (17P) 2. Relay Connector (17P) to Drawer (J8031) 3. Drawer (J8031) to Developing Cooling Suction Fan (Y) (FM41/J8920) - Developing Cooling Suction Fan (Y) (FM41) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0042-05	Developing Cooling Suction Fan (M) error
Detection Description	An error in the Developing Cooling Suction Fan (M) was detected.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Developing Cooling Suction Fan (M) 1. DC Controller PCB (UN2/J1243) to Relay Connector (17P) 2. Relay Connector (17P) to Drawer (J8031) 3. Drawer (J8031) to Developing Cooling Suction Fan (M) (FM42/J8918) - Developing Cooling Suction Fan (M) (FM42) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0043-05	Developing Cooling Suction Fan (C) error
Detection Description	An error in the Developing Cooling Suction Fan (C) was detected.
Remedy	[Related parts] R1.00 - Harnesses from the DC Controller PCB to the Developing Cooling Suction Fan (C) 1. DC Controller PCB (UN2/J1243) to Relay Connector (17P) 2. Relay Connector (17P) to Drawer (J8031) 3. Drawer (J8031) to Developing Cooling Suction Fan (C) (FM43/J8919) - Developing Cooling Suction Fan (C) (FM43) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0045-05	Fixing Belt Edge Cooling Fan 1 error
Detection Description	An error in the Fixing Belt Edge Cooling Fan 1 was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Feed Driver PCB to the Fixing Belt Edge Cooling Fan 1 1. Pickup Feed Driver PCB (UN4/J1406) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (9P) 3. Relay Connector (9P) to Fixing Belt Edge Cooling Fan 1 (FM45/J7161) - Fixing Belt Edge Cooling Fan 1 (FM45) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0046-05	Fixing Belt Edge Cooling Fan 2 error
Detection Description	An error in the Fixing Belt Edge Cooling Fan 2 was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Feed Driver PCB to the Fixing Belt Edge Cooling Fan 2 1. Pickup Feed Driver PCB (UN4/J1406) to Relay Connector (29P) 2. Relay Connector (29P) to Relay Connector (9P) 3. Relay Connector (9P) to Fixing Belt Edge Cooling Fan 2 (FM46/J7541) - Fixing Belt Edge Cooling Fan 2 (FM46) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0047-05	Delivery Upper Cooling Fan error
Detection Description	An error in the Delivery Upper Cooling Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Fan (FM47/J8903) - Delivery Upper Cooling Fan (FM47) - DC Controller DIFF PCB (UN9) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0048-05	Delivery Lower Cooling Fan error
Detection Description	An error in the Delivery Lower Cooling Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the DC Controller PCB (UN2/J1251) and the Delivery Lower Cooling Fan (FM48/J8902) - Delivery Lower Cooling Fan (FM48) - DC Controller PCB (UN2) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

804-0049-05	Reverse Exhaust Fan 1 error
Detection Description	An error in the Reverse Exhaust Fan 1 in the Reverse Delivery Unit was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Feed Driver PCB to the Reverse Exhaust Fan 1 1. Pickup Feed Driver PCB (UN4/J1414) to Relay Connector (13P) 2. Relay Connector (13P) to Relay Connector (9P) 3. Relay Connector (9P) to Reverse Exhaust Fan 1 (FM49/J7542) - Reverse Exhaust Fan 1 (FM49) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0050-05	Reverse Exhaust Fan 2 error
Detection Description	An error in the Reverse Exhaust Fan 2 in the Reverse Delivery Unit was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Feed Driver PCB to the Reverse Exhaust Fan 2 1. Pickup Feed Driver PCB (UN4/J1414) to Relay Connector (13P) 2. Relay Connector (13P) to Relay Connector (9P) 3. Relay Connector (9P) to Reverse Exhaust Fan 2 (FM50/J7543) - Reverse Exhaust Fan 2 (FM50) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0051-05	Reverse Exhaust Fan 3 error
Detection Description	An error in the Reverse Exhaust Fan 3 in the Reverse Delivery Unit was detected.
Remedy	[Related parts] R1.00 - Harnesses from the Pickup Feed Driver PCB to the Reverse Exhaust Fan 3 1. Pickup Feed Driver PCB (UN4/J1414) to Relay Connector (13P) 2. Relay Connector (13P) to Relay Connector (9P) 3. Relay Connector (9P) to Reverse Exhaust Fan 3 (FM51/J7545) - Reverse Exhaust Fan 3 (FM51) - Pickup Feed Driver PCB (UN4) [Remedy] Check/replace the related harness/cable, connector and parts.

804-0052-05	Power Supply Fan error
Detection Description	An error in the 24V Power Supply Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Options Power Supply PCB (UN119/J4406) and 24V Power Supply Fan (FM52/J8029) - 24V Power Supply Fan (FM52) - Options Power Supply PCB (UN119) [Remedy] Check/replace the related harness/cable, connector and parts.

805-0001-05	Delivery Upper Cooling Switch Flapper HP Sensor
Detection Description	The Delivery Upper Cooling Switch Flapper HP Sensor was not switched although the solenoid was turned ON/OFF at power-on or recovery from sleep.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper Solenoid (SL10/J8923) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper HP Sensor (PS137/J8907) - Delivery Upper Cooling Switch Flapper Solenoid (SL10) - Delivery Upper Cooling Switch Flapper HP Sensor (PS137) - DC Controller DIFF PCB (UN9) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Select "2" in "COPIER> FUNCTION> PART-CHK> SL", and then select "SL-ON". Check the operation sound of the Delivery Upper Cooling Switch Flapper Solenoid. a. If there is no operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper Solenoid. 2. Replace the Delivery Upper Cooling Switch Flapper Solenoid. b. If there is operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper HP Sensor. 2. Replace the Delivery Upper Cooling Switch Flapper HP Sensor. 2. Replace the DC Controller DIFF PCB.

805-0002-05	Delivery Upper Cooling Switch Flapper HP Sensor
Detection Description	The Delivery Upper Cooling Switch Flapper HP Sensor did not detect ON status within 4 sec after the solenoid was turned ON at the start of paper feeding.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper Solenoid (SL10/J8923) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper HP Sensor (PS137/J8907) - Delivery Upper Cooling Switch Flapper Solenoid (SL10) - Delivery Upper Cooling Switch Flapper HP Sensor (PS137) - DC Controller DIFF PCB (UN9) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Select "2" in "COPIER> FUNCTION> PART-CHK> SL", and then select "SL-ON". Check the operation sound of the Delivery Upper Cooling Switch Flapper Solenoid. a. If there is no operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper Solenoid. 2. Replace the Delivery Upper Cooling Switch Flapper Solenoid. b. If there is operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper HP Sensor. 2. Replace the Delivery Upper Cooling Switch Flapper HP Sensor. 2. Replace the DC Controller DIFF PCB.

805-0003-05	Delivery Upper Cooling Switch Flapper HP Sensor
Detection Description	The Delivery Upper Cooling Switch Flapper HP Sensor detected OFF status during paper feeding.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper Solenoid (SL10/J8923) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper HP Sensor (PS137/J8907) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Fan (FM47/J8903) - Delivery Upper Cooling Switch Flapper Solenoid (SL10) - Delivery Upper Cooling Switch Flapper HP Sensor (PS137) - Delivery Upper Cooling Fan (FM47) - DC Controller DIFF PCB (UN9) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Select "2" in "COPIER> FUNCTION> PART-CHK> SL", and then select "SL-ON". Check the operation sound of the Delivery Upper Cooling Switch Flapper Solenoid. a. If there is no operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper Solenoid. 2. Replace the Delivery Upper Cooling Switch Flapper Solenoid. b. If there is operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper HP Sensor/Delivery Upper Cooling Fan. 2. Replace the Delivery Upper Cooling Switch Flapper HP Sensor. 3. Replace the Delivery Upper Cooling Fan. 2. Replace the DC Controller DIFF PCB.

805-0004-05	Delivery Upper Cooling Switch Flapper HP Sensor
Detection Description	The Delivery Upper Cooling Switch Flapper HP Sensor detected ON status at cooling of fixing.
Remedy	[Related parts] R1.00 - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper Solenoid (SL10/J8923) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Switch Flapper HP Sensor (PS137/J8907) - Harness between the DC Controller DIFF PCB (UN9/J1010) and the Delivery Upper Cooling Fan (FM47/J8903) - Delivery Upper Cooling Switch Flapper Solenoid (SL10) - Delivery Upper Cooling Switch Flapper HP Sensor (PS137) - Delivery Upper Cooling Fan (FM47) - DC Controller DIFF PCB (UN9) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Select "2" in "COPIER> FUNCTION> PART-CHK> SL", and then select "SL-ON". Check the operation sound of the Delivery Upper Cooling Switch Flapper Solenoid. a. If there is no operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper Solenoid. 2. Replace the Delivery Upper Cooling Switch Flapper Solenoid. b. If there is operation sound 1. Check the harness between the DC Controller DIFF PCB and the Delivery Upper Cooling Switch Flapper HP Sensor/Delivery Upper Cooling Fan. 2. Replace the Delivery Upper Cooling Switch Flapper HP Sensor. 3. Replace the Delivery Upper Cooling Fan. 2. Replace the DC Controller DIFF PCB.

843-0001-05	Error in power supply for fixing
Detection Description	It was detected that the power plug for fixing was disconnected. Or it was detected that voltage was 120 V or less.
Remedy	[Related parts] R1.00 In the case of 200 V/208 V power - Power Supply Cable of the host machine - Breaker of the host machine - AC Driver PCB (UN10/J801) In the case of 230 V power - Power Supply Cable of the host machine - Breaker of the host machine - AC Driver PCB (UN10/J816) Common for 200 V/208 V/230 V - Harness between the AC Driver PCB (UN10/J809) and the IH Power Supply PCB (UN30/J500) - Harness from the Relay PCB to the IH Power Supply PCB 1. Relay PCB (UN7/J1812) to Relay Connector (23P) 2. Relay Connector (23P) to IH Power Supply PCB (UN30/J501) - IH Power Supply PCB (UN30) - Relay PCB (UN7) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check if rated voltage is output from the outlet. 2. Check/replace the related parts.

880-0001-00	Controller Cooling Fan 1 error
Detection Description	An error in the Controller Cooling Fan 1 was detected.
Remedy	[Related parts] R1.00 - Controller Cooling Fan 1 (FM19, UN81/J15) - Main Controller PCB 1 (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the connector of the Controller Cooling Fan 1. 2. Visually check that the Controller Cooling Fan 1 is rotated. a. If it is not rotated, replace the Controller Cooling Fan 1. b. If it is rotated, replace the Main Controller PCB 1.

880-0004-00	Controller Cooling Fan 2 error
Detection Description	An error in the Controller Cooling Fan 2 was detected.
Remedy	[Related parts] R1.00 - Harness between the Riser PCB (UN83/J108) and the Controller Cooling Fan 2 (FM20/J7066) - Controller Cooling Fan 2 (FM20) - Riser PCB (UN83) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the connector of the Controller Cooling Fan 2. 2. Visually check that the Controller Cooling Fan 2 is rotated. a. If it is not rotated, replace the Controller Cooling Fan 2. b. If it is rotated, replace the Main Controller PCB 1.

880-0005-00	HDD Cooling Fan error
Detection Description	An error in the HDD Cooling Fan was detected.
Remedy	[Related parts] R1.00 - Harness between the Riser PCB (UN83/J110) and the HDD Cooling Fan (FM21/J71150) - HDD Cooling Fan (FM21) - Riser PCB (UN83) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the connector of the HDD Cooling Fan. 2. Visually check that the HDD Cooling Fan is rotated. a. If it is not rotated, replace the HDD Cooling Fan. b. If it is rotated, replace the Main Controller PCB 1.

881-0001-00	Board over heat error
Detection Description	Abnormal temperature of the Main Controller CPU was detected.
Remedy	[Related parts] R1.00 - Main Controller PCB 1 (UN81) - Main Controller PCB 2 (UN82) [Remedy] Perform the following in the order while checking whether the error is cleared. a. If the error occurred during a service visit and then occurred again: 1. Replace the Main Controller PCB 1. 2. Replace the Main Controller PCB 2. [CAUTION] When replacing the Main Controller PCB 2, execute "Adjustment after the Main Controller PCB 2 replacement" in situation mode. b. If the error does not occur during a service visit but is found in the log: 1. Clean the inlet on the side where the fan is installed and remove dust. 2. Remove dust from the fan in the Controller Box. 3. If the space on the side where the fan is installed is less than 10 cm, ask the customer to secure enough space.

996-0071-04	Error for collecting sequence jam log (ADF)
Detection Description	Error for collecting jam log (ADF)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-R" to "0" (default), it is handled as a jam, instead of an error.

996-0CA0-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA2-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA3-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA4-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA5-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA6-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA7-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA8-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

996-0CA9-05	Error for collecting sequence jam log (Printer)
Detection Description	Error for collecting jam log (Printer)
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "0" (default), it is handled as a jam, instead of an error.

Jam Code

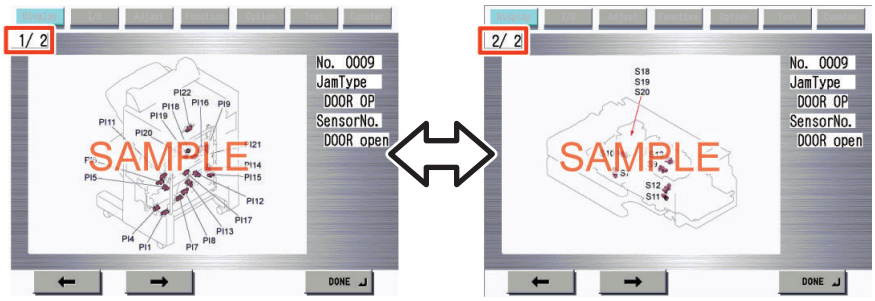
Jam Type

Jam types are shown below.

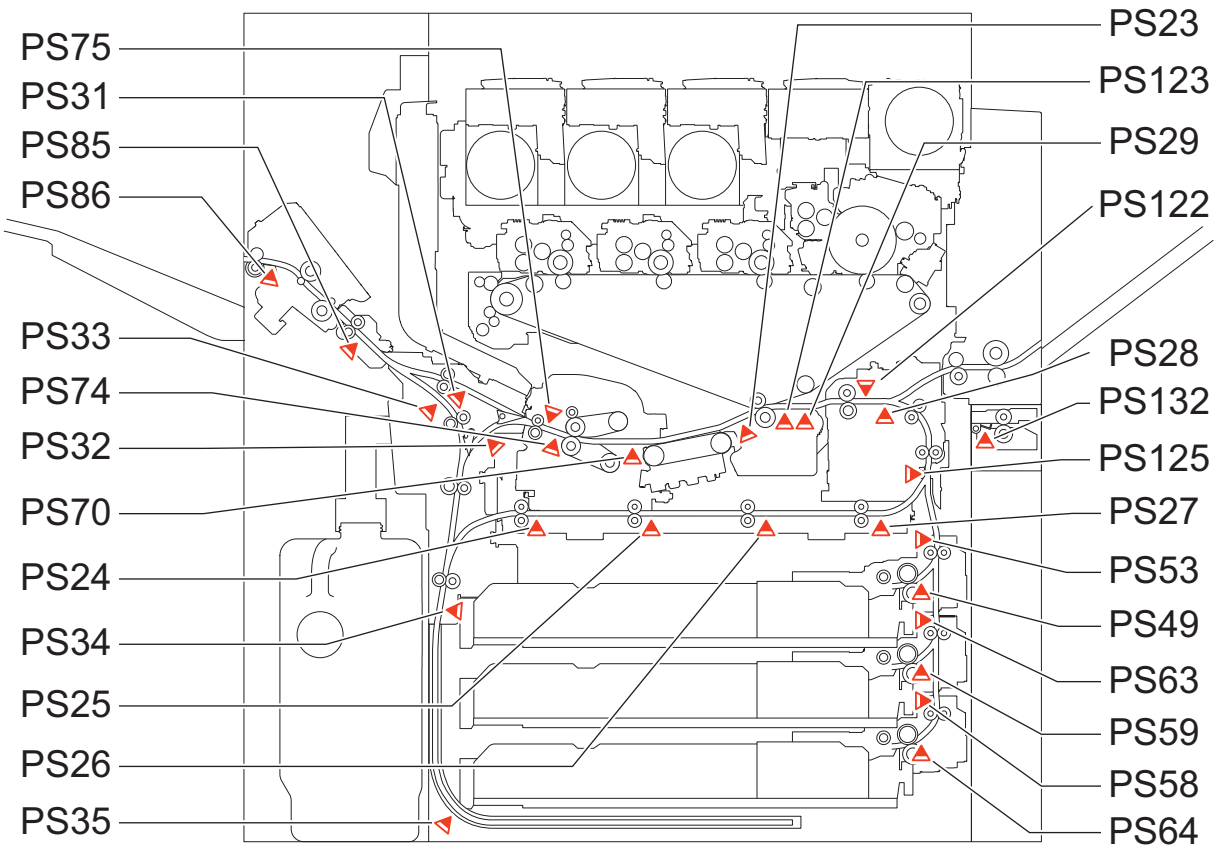
Type	Meaning	Type	Meaning
DELAY	Delay jam	ADF OP	ADF open
STNRY	Stationary jam	COVER OP	Cover open
DOUBLE	Double Feed jam	DOOR OP	Door open
ERROR	Error	STP	Staple
SEQUENCE	Sequence jam	SDL STP	Saddle stitch staple
POWER ON	Power ON jam	PUNCH	Punch
SIZE ERR	Size error	P-STOP	Residual (at initial rotation)
OTHER	Others	STOP	Press Stop key

Jam screen display specification

Due to one jam code being used for multiple options, the illustration for the different option may be displayed on the jam screen. In this case, "1/2" or similar information is displayed on top left side of the screen and this area can be pushed. This operation can be used to switch information on the screen.



Main Unit



ACC ID	Jam Code	Type	Sensor Name/Description	Sensor ID

*1 The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.
If the same jam is detected although the above operation is performed, an error code will be notified.
*2 The state is recovered by opening and closing the Door, or turning OFF and then ON the power supply.
If it is not recovered by the above operation, it is considered an error near the target sensor.
Disconnect and then connect the connectors around the target sensor, check if the cable is open circuit, and replace the sensor.

Alarm Code

Alarm Code Details

00-0085	**-**	**A notice of stat**
A. Operation / B. Cause / C. Remedy		-
00-E746	**-**	**Detection of E746-0032 occurrence**
A. Operation / B. Cause / C. Remedy		Movement: Automatic reboot Cause: Error in the TPM PCB was detected at startup. Measures: It is not necessary to perform a remedy because the alarm is cleared by automatic reboot. If it occurs again, an error code is notified.
01-0001	**-**	**Notification of disabled to obtain counter values for a certain period of time**
A. Operation / B. Cause / C. Remedy		Counter information is not set to UGW * Not displayed on service mode history due to the alarm being generated by UGW
01-0004	**-**	**Notification of IP address change**
A. Operation / B. Cause / C. Remedy		IP address has been changed * Not displayed on service mode history due to the alarm being generated by UGW
01-0005	**-**	**Restricted operation notification**
A. Operation / B. Cause / C. Remedy		The device entered limited function mode for some reason. * Not displayed on service mode history due to the alarm being generated by UGW
02-0025	**-**	**Insufficient Scanner Unit LED light intensity alarm**
A. Operation / B. Cause / C. Remedy		In the case that the light intensity is insufficient at LED lighting. (Some of the LEDs are OFF. Scanning can be continued.)
04-0001	**-**	**Cassette 1 Lifter error**
A. Operation / B. Cause / C. Remedy		Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 1 is removed, turn ON the power and then insert Cassette 1. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Sensor 2-1. Check if the Cassette 1 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 1 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 1 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 1 Lifter Motor 5-2. Replace the DC Controller

04-0002	-	Cassette 2 Lifter error
A. Operation / B. Cause / C. Remedy		Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 2 is removed, turn ON the power and then insert Cassette 2. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Sensor 2-1. Check if the Cassette 2 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 2 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 2 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 2 Lifter Motor 5-2. Replace the DC Controller

04-0003	-	Cassette 3 Lifter error
A. Operation / B. Cause / C. Remedy		Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 3 is removed, turn ON the power and then insert Cassette 3. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Sensor 2-1. Check if the Cassette 3 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 3 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 3 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 3 Lifter Motor 5-2. Replace the DC Controller

04-0010	-	Notification of jam left untouched
A. Operation / B. Cause / C. Remedy		Jam is left untouched * Not displayed on service mode history due to the alarm being generated by UGW

04-1537	-	Deck Lifter Motor alarm The Lifter Plate cannot be lowered.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Lifter Motor, error in the Lifter Plate, or error in the harness Measures: - If you hear motor drive sound: 1. Check that the Lifter Plate is not caught by the Side Guide. 2. Check that the wire is not disconnected or wound in the reverse direction. 3. Check response of the Lower Position Sensor. - If you do not hear motor drive sound: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Lifter Motor. 3. Replace the harness. 4. Replace the Relay PCB. 5. Replace the Deck Controller PCB (UN1).

04-1539	-	Deck Lifter Motor alarm The Lifter Plate cannot be raised.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Lifter Motor, error in the Lifter Plate, or error in the harness Measures: - If you hear motor drive sound: 1. Check that the Lifter Plate is not caught by the Side Guide. 2. Check that the wire is not disconnected or wound in the reverse direction. 3. Check response of the sensor. - If you do not hear motor drive sound: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Lifter Motor. 3. Replace the harness. 4. Replace the Relay PCB. 5. Replace the Deck Controller PCB (UN1).

04-1542	-	Deck Lifter upper limit detection alarm
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Upper Limit Sensor or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Check for any damaged parts around the sensor flag. 3. Replace the Upper Limit Sensor 1. 4. Replace the Upper Limit Sensor 2. 5. Replace the harness. 6. Replace the Deck Controller PCB (UN1).

04-1543	-	Deck Lifter lower limit detection alarm
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Lower Limit Sensor or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the harness of the Lower Limit Detection Switch. 3. Replace the harness. 4. Replace the Relay PCB. 5. Replace the Deck Controller PCB (UN1).

04-1553	-	Deck Left Separation Fan alarm Low speed error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Left Separation Fan or error in the harness 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Left Separation Fan. 3. Replace the harness. 4. Replace the Swing Driver PCB. 5. Replace the Relay PCB. 6. Replace the Deck Controller PCB (UN1).

04-1555	-	Deck Right Separation Fan alarm Low speed error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Right Separation Fan or error in the harness 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Left Separation Fan. 3. Replace the harness. 4. Replace the Swing Driver PCB. 5. Replace the Relay PCB. 6. Replace the Deck Controller PCB (UN1).

04-1581	-	Error in home position detection with Side Paper Deck Swing Motor
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Swing Motor, error in the Swing HP Sensor, or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Swing HP Sensor. 3. Replace the harness. 4. Replace the Swing Motor. 5. Replace the Swing Driver PCB. 6. Replace the Relay PCB. 7. Replace the Deck Controller PCB (UN1).

04-1582	-	Side Paper Deck Power Supply Fan end of life / Faulty fan error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Power Supply Cooling Fan or error in the harness Measures: 1. Check connector disconnection/improper connection. => Disconnect and then connect the connector. 2. Replace the Power Supply Cooling Fan (FM001).

04-1583	-	Side Paper Deck Air Heater low temperature detection error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Air Heater or error in the harness 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Air Heater. 3. Replace the harness. 4. Replace the Air Heater Driver PCB. 5. Replace the Deck Controller PCB (UN1).

04-1584	-	Side Paper Deck Air Heater high temperature detection error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Air Heater or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Air Heater. 3. Replace the harness. 4. Replace the Air Heater Driver PCB. 5. Replace the Deck Controller PCB (UN1).

04-1585	-	Side Paper Deck Solenoid Cooling Fan error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Solenoid Cooling Fan or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Solenoid Cooling Fan. 3. Replace the harness. 4. Replace the Deck Controller PCB (UN1).

04-1586	-	Side Paper Deck interlock error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Receptacle Open/Close Sensor, error in the Interlock Switch, or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Check that the sensor and switch respond when the receptacle is closed. 3. Replace the Receptacle Open/Close Sensor. 3. Replace the harness. 4. Replace the Deck Controller PCB (UN1).

04-1587	-	Side Paper Deck Pickup Motor disengagement error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The POD Deck Lite cannot be used.) Cause: Error in the Pickup Motor, error in the Disengagement Sensor, or error in the harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Check that the Disengagement Sensor Flag responds. 3. Replace the Disengagement Sensor. 4. Replace the harness. 5. Replace the Deck Controller PCB (UN1).

04-3039	-	Upper multi-cassette deck lifter error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3040	-	Upper multi-cassette deck lifter lower limit sensor error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3041	-	Upper multi-cassette deck paper surface sensor error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3042	-	The upper limit of the upper multi-cassette deck lifter upper limit sensor has been exceeded.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3043	-	The lower limit of the upper multi-cassette deck lifter lower limit sensor has been exceeded.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3053	-	Reaching the life of the upper multi-cassette deck left separation fan / Failure of the fan
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3055	-	Reaching the life of the upper multi-cassette deck right separation fan / Failure of the fan
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3060	-	Error in home position detection with Multi Deck Upper Deck Swing Motor
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3062	-	Multi Deck Upper Deck Air Heater high temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT101). 2. Replace the harness of the Air Heater PCB. 3. Replace the Upper Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3063	-	Multi Deck Upper Deck Air Heater low temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT101). 2. Replace the harness of the Air Heater PCB. 3. Replace the Upper Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3087	-	Multi Deck (Upper) Pickup Roller disengagement error
A. Operation / B. Cause / C. Remedy		Movement: A message is displayed on the Control Panel. The Upper Receptacle enters limited functions mode(operation cannot be performed). Cause: The Pickup Assembly Separation Roller of the Upper Receptacle cannot stop at home position. Measures: Replace the Pickup Unit, harness or the PCB.

04-3139	-	Middle multi-cassette deck lifter error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3140	-	Middle multi-cassette deck lifter lower limit sensor error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3141	**-**	**Middle multi-cassette deck paper surface sensor error**
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3142	**-**	**The upper limit of the middle multi-cassette deck lifter upper limit sensor has been exceeded.**
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3143	**-**	**The lower limit of the middle multi-cassette deck lifter lower limit sensor has been exceeded.**
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.
04-3153	**-**	**Reaching the life of the middle multi-cassette deck left separation fan / Failure of the fan**
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.
04-3155	**-**	**Reaching the life of the middle multi-cassette deck right separation fan / Failure of the fan**
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3160	-	Error in home position detection with Multi Deck Middle Deck Swing Motor
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3162	-	Multi Deck Middle Deck Air Heater high temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT201). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3163	-	Multi Deck Middle Deck Air Heater low temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Middle) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT201). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3187	-	Multi Deck (Middle) Pickup Roller disengagement error
A. Operation / B. Cause / C. Remedy		Movement: A message is displayed on the Control Panel. The Middle Receptacle enters limited functions mode (operation cannot be performed). Cause: The Pickup Assembly Separation Roller of the Middle Receptacle cannot stop at home position. Measures: Replace the Pickup Unit, harness or the PCB.

04-3239	-	Lower multi-cassette deck lifter error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3240	-	Lower multi-cassette deck lifter lower limit sensor error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3241	-	Lower multi-cassette deck paper surface sensor error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, or harness Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the Paper Surface Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3242	-	The upper limit of the lower multi-cassette deck lifter upper limit sensor has been exceeded.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the Paper Surface Sensor. 3. Replace the Upper Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3243	-	The lower limit of the lower multi-cassette deck lifter lower limit sensor has been exceeded.
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the HP Sensor. 3. Replace the Lower Limit Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3253	-	Reaching the life of the lower multi-cassette deck left separation fan / Failure of the fan
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3255	-	Reaching the life of the lower multi-cassette deck right separation fan / Failure of the fan
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the fan. 3. Replace the harness. 4. Replace the Multi Deck Driver PCB.

04-3260	-	Error in home position detection with Multi Deck Lower Deck Swing Motor
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Cause: Error in the motor, sensor, harness, or PCB Measures: 1. Check for any disconnection/improper connection of the connectors. => Disconnect and then connect them if necessary. 2. Replace the motor. 3. Replace the HP Sensor. 4. Replace the harness. 5. Replace the Multi Deck Driver PCB.

04-3262	-	Multi Deck Lower Deck Air Heater high temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT301). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3263	-	Multi Deck Lower Deck Air Heater low temperature error
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Lower) cannot be used.) Measures: 1. Replace the Air Heater Unit (HT301). 2. Replace the harness of the Air Heater PCB. 3. Replace the Middle Deck Air Heater PCB. 4. Replace the Deck Driver PCB. 5. Replace the DC Controller PCB of the host machine.

04-3287	-	Multi Deck (Lower) Pickup Roller disengagement error
A. Operation / B. Cause / C. Remedy		Movement: A message is displayed on the Control Panel. The Lower Receptacle enters limited functions mode (operation cannot be performed). Cause: The Pickup Assembly Separation Roller of the Lower Receptacle cannot stop at home position. Measures: Replace the Pickup Unit, harness or the PCB.

04-9061	-	Error in Multi Deck Power Supply Fan
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck cannot be used.) Measures: 1. Check connection of the connector. 2. Replace the Power Supply Cooling Fan (FM001).

04-9064	-	Error in Multi Deck Pickup Motor
A. Operation / B. Cause / C. Remedy		Movement: The machine automatically enters limited functions mode. (The Multi Deck (Upper) cannot be used.) Measures: 1. Replace the Deck Pickup Motor. 2. Replace the Deck Driver PCB. 3. Replace the DC Controller PCB of the host machine.

04-9065	-	Multi Deck communication error
A. Operation / B. Cause / C. Remedy		Movement: A message is displayed on the Control Panel. The Multi Deck enters limited functions mode (operation cannot be performed). Cause: The I/F connection is detected, but communication is not available. Measures: Replace the I/F Cable or the PCB.

04-9090	**-**	**OHT sensor (PS29) adjustment failure**
A. Operation / B. Cause / C. Remedy		Movement: OHT detection cannot be performed. Cause: An adjustment of the OHT sensor (PS29) failed at initial rotation. Measures: Re-adjust during pre-rotation.
06-0002	**-**	**Fixing Film life alarm 1**
A. Operation / B. Cause / C. Remedy		Measures: Replace the Fixing Belt Unit. Leaving this alarm unsolved (approx. 10,000) leads to E008-0003.
06-0004	**-**	**Fixing Assembly torque overload warning alarm**
A. Operation / B. Cause / C. Remedy		Measures: Replace the Pressure Belt Unit. Leaving this alarm unsolved (approx. 10,000) leads to E008-0001.
06-0007	**-**	**Succeeded in retry of full displacement control of the Fixing Lower Belt (front side)**
A. Operation / B. Cause / C. Remedy		Movement: Retry of full displacement control of the Fixing Lower Belt was performed successfully. Frequent occurrence of this alarm may lead to a Fixing Lower Belt full displacement error. Early replacement of the Fixing Lower Belt is recommended.
06-0008	**-**	**Succeeded in retry of full displacement control of the Fixing Lower Belt (rear side)**
A. Operation / B. Cause / C. Remedy		Movement: Retry of full displacement control of the Fixing Lower Belt was performed successfully. Frequent occurrence of this alarm may lead to a Fixing Lower Belt full displacement error. Early replacement of the Fixing Lower Belt is recommended.
10-0001	**-**	**Toner Low (Black) alarm**
A. Operation / B. Cause / C. Remedy		Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW
10-0002	**-**	**Toner Low (Cyan) alarm**
A. Operation / B. Cause / C. Remedy		Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW
10-0003	**-**	**Toner Low (Magenta) alarm**
A. Operation / B. Cause / C. Remedy		Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW
10-0004	**-**	**Toner Low (Yellow) alarm**
A. Operation / B. Cause / C. Remedy		Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW
10-0013	**-**	**Communication error between the Color Sensor PCB and the DC Controller (at the time of writing)**
A. Operation / B. Cause / C. Remedy		Remedy: Check the following connectors: From the Color Sensor Driver PCB (UN121/J4200) to the Fixing Feed Driver PCB (UN5/J2013, J2002) to the DC Controller PCB (UN2/J1035) Replace the Color Sensor Driver PCB. (UN121: FM0-2935) Replace the DC Controller PCB. (UN2: FM0-2921) Clean or replace the Drawer Connector. J8023
10-0017	**-**	**Toner (Y) prior delivery alarm**
A. Operation / B. Cause / C. Remedy		The remaining quantity of the toner became the specific level or less.
10-0018	**-**	**Toner (M) prior delivery alarm**
A. Operation / B. Cause / C. Remedy		The remaining quantity of the toner became the specific level or less.
10-0019	**-**	**Toner (C) prior delivery alarm**
A. Operation / B. Cause / C. Remedy		The remaining quantity of the toner became the specific level or less.
10-0020	**-**	**Toner (Bk) prior delivery alarm**
A. Operation / B. Cause / C. Remedy		The remaining quantity of the toner became the specific level or less.

10-0100	**-**	**Toner bottle replacement completion alarm**
A. Operation / B. Cause / C. Remedy		The replacement of the Toner Container was detected.
10-0101	**-**	**Soiled Patch Sensor window (Y)**
A. Operation / B. Cause / C. Remedy		Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0102	**-**	**Soiled Patch Sensor window (M)**
A. Operation / B. Cause / C. Remedy		Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0103	**-**	**Soiled Patch Sensor window (C)**
A. Operation / B. Cause / C. Remedy		Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0104	**-**	**Soiled Patch Sensor window (Bk)**
A. Operation / B. Cause / C. Remedy		Measures: Clean the Patch Sensor window. Leaving this alarm unsolved (approx. 100,000) leads to E029.
10-0305	**-**	**Toner bottle CPU communication error alarm**
A. Operation / B. Cause / C. Remedy		Measures: Check the connectors between the Toner Container ID Driver PCB (UN112/J4011) and DC Controller PCB (UN2/J1267) Replace the Toner Container ID Driver PCB. (UN112: FM0-2933) Replace the DC Controller PCB. (UN2: FM0-2921)
10-0401	**-**	**Toner Bottle empty alarm (Y)**
A. Operation / B. Cause / C. Remedy		When the Toner Bottle empty was detected
10-0402	**-**	**Toner Bottle empty alarm (M)**
A. Operation / B. Cause / C. Remedy		When the Toner Bottle empty was detected
10-0403	**-**	**Toner Bottle empty alarm (C)**
A. Operation / B. Cause / C. Remedy		When the Toner Bottle empty was detected
10-0404	**-**	**Toner Bottle empty alarm (Bk)**
A. Operation / B. Cause / C. Remedy		When the Toner Bottle empty was detected
11-0001	**-**	**Waste Toner Container full level**
A. Operation / B. Cause / C. Remedy		Movement: A message "The waste toner container is full." is displayed on the Control Panel, and the machine is stopped. Cause: The Waste Toner Counter reaches full. Measures: Replace the Waste Toner Container.
11-0010	**-**	**Display of Waste Toner Container preparation warning**
A. Operation / B. Cause / C. Remedy		Movement: A message is displayed on the Control Panel. (Continuous printing is enabled.) Cause: Display of Waste Toner Box preparation warning
13-0000	**-**	**For R&D**
A. Operation / B. Cause / C. Remedy		
13-0001	**-**	**For R&D**

A. Operation / B. Cause / C. Remedy		

30-0021	**-**	**Primary transfer ATVC control error (Y-color)**
A. Operation / B. Cause / C. Remedy		Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0022	**-**	**Primary transfer ATVC control error (M-color)**
A. Operation / B. Cause / C. Remedy		Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0023	**-**	**Primary transfer ATVC control error (C-color)**
A. Operation / B. Cause / C. Remedy		Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
30-0024	**-**	**Primary transfer ATVC control error (Bk-color)**
A. Operation / B. Cause / C. Remedy		Movement: The density of the output image is extremely low due to transfer failure. Cause: A high voltage was attempted to be applied by primary transfer ATVC control, and the current was lower than the lower limit. Measures: If the ITB has reached the end of life, replace the ITB.
34-0001	**-**	**Auto registration adjustment**
A. Operation / B. Cause / C. Remedy		Zero (0) was entered in the reading data of auto registration pattern -> Due to misalignment in reading data as a result of misdetection that soil or scar on the belt was detected as pattern
34-0002	**-**	**Auto registration adjustment**
A. Operation / B. Cause / C. Remedy		When there is abnormal data in 8 or more sets among the 10 auto registration pattern sets -> Due to misalignment in reading data as a result of misdetection that soil or scar on the belt is detected as pattern
34-0003	**-**	**Auto registration adjustment**
A. Operation / B. Cause / C. Remedy		Timeout occurred due to unsuccess in reading 10 sets of auto registration pattern. Registration Patch Sensor failure, Registration Patch Sensor cleaning member covered the registration detection sensor, or no image drew on the ITB.
34-0004	**-**	**Image position correction patch correction alarm 2**
A. Operation / B. Cause / C. Remedy		Movement: None Cause: The horizontal scanning direction writing correction limiter has been exceeded. - Incorrect detection by the registration sensor (Scratches on the belt) - Failure of the laser scanner unit - Failure of installation of the laser scanner unit - Patch image failure Measures: 1. Check whether a color image is formed correctly for 4 colors. a. Perform test print in the following condition. COPIER>TEST>PG>TYPE: 6 Output one sheet for each color in the paper of LTR/A4/A3 size (more than 290mm in a horizontal scanning direction). b. Check the following points. - Check whether there is color displacement in a horizontal scanning direction based on the Bk standard, and check whether there is a color which is extremely displaced. Reinstall the laser scanner unit where significant color displacement occurred. If the problem cannot be still eliminated, replace the unit. - If a correct image is not formed, take measures to be taken for prevention of an image failure. (Replace the drum unit, etc.) 2. Check whether there are a lot of scratches or dents on the ITB or not. If there are a lot of them and this alarm occurs frequently, replace the ITB.

34-0005	-	Image position correction patch correction alarm 3
A. Operation / B. Cause / C. Remedy		Movement: None Cause: The horizontal scanning direction writing correction limiter has been exceeded. - Incorrect detection by the registration sensor (Scratches on the belt) - Failure of the laser scanner unit - Failure of installation of the laser scanner unit - Patch image failure Measures: 1. Check whether a color image is formed correctly for 4 colors. a. Perform test print in the following condition. COPIER>TEST>PG>TYPE: 6 Output one sheet for each color in the paper of LTR/A4/A3 size (more than 290mm in a horizontal scanning direction). b. Check the following points. - Check whether there is color displacement in a horizontal scanning direction based on the Bk standard, and check whether there is a color which is extremely displaced. Reinstall the laser scanner unit where significant color displacement occurred. If the problem cannot be still eliminated, replace the unit. - If a correct image is not formed, take measures to be taken for prevention of an image failure. (Replace the drum unit, etc.) 2. Check whether there are a lot of scratches or dents on the ITB or not. If there are a lot of them and this alarm occurs frequently, replace the ITB.

34-0006	-	Horizontal scanning magnification ratio correction limiter was exceeded
A. Operation / B. Cause / C. Remedy		-

34-0007	-	ITB home position error
A. Operation / B. Cause / C. Remedy		An error was detected at ITB home position.

34-0010	-	For R&D
A. Operation / B. Cause / C. Remedy		-

34-0412	-	Image position correction patch correction alarm (Center)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: The background level detected by the Registration Patch Sensor (Center) (PS127) exceeded 2FFh at background correction. Measures: 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated.

34-0511	-	Image position correction patch correction alarm (Front)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Front) (PS19) was 3FFh at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Front), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0512	-	Image position correction patch correction alarm (Center)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Center) (PS127) was 3FFh at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Center), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0513	-	Image position correction patch correction alarm (Rear)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Rear) (PS20) was 3FFh at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Rear), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0711	-	Image position correction patch correction alarm (Front)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Front) (PS19) was 100h higher than that at last but one at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Front), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0712	-	Image position correction patch correction alarm (Center)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Center) (PS127) was 100h higher than that at last but one at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Center), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0713	-	Image position correction patch correction alarm (Rear)
A. Operation / B. Cause / C. Remedy		Movement: Leaving this alarm unsolved may lead to E194. Detection description: LED light intensity of the Registration Patch Sensor (Rear) (PS20) was 100h higher than that at last but one at light intensity adjustment. Measures: a. Clean the Registration Patch Sensor (Rear), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0911	-	Image position correction patch correction alarm (Front)
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Patch level detected by the Registration Patch Sensor (Front) (PS19) was 100h or more larger than the background at background correction. Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Front), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0912	-	Image position correction patch correction alarm (Center)
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Patch level detected by the Registration Patch Sensor (Center) (PS127) was 100h or more larger than the background at background correction. Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Center), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-0913	-	Image position correction patch correction alarm (Rear)
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Patch level detected by the Registration Patch Sensor (Rear) (PS20) was 100h or more larger than the background at background correction. Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Rear), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-1001	-	ITB Steering Motor retry error
A. Operation / B. Cause / C. Remedy		Movement: If the error occurs in succession, E075-0000 is notified. Measures: If it occurs frequently, check/replace the related parts shown below. [Related parts] - Harnesses from the ITB Relay PCB to the Steering Drive HP Sensor 1. ITB Relay PCB (UN28/J2701) to Relay Connector (3P) (Unit of replacement: CABLE, I.T.B. MAIN) 2. Relay Connector (3P) to Steering Drive HP Sensor (PS3/J7416) (Unit of replacement: CABLE, STEERING) - Harnesses from the ITB Relay PCB to the Steering Drive Motor 1. ITB Relay PCB (UN28/J2701) to Relay Connector (4P) (Unit of replacement: CABLE, I.T.B. MAIN) 2. Relay Connector (4P) to Steering Drive Motor (M4/J7414) (Unit of replacement: CABLE, STEERING) - Steering Drive HP Sensor (PS3) (Unit of replacement: IC, PHOTO-INTERRUPTER) - Steering Drive Motor (M4) (Unit of replacement: MOTOR, STEPPING, DC) - ITB Relay PCB (UN28) (Unit of replacement: I.T.B. CONNECTING PCB ASSEMBLY)

34-1011	-	Minor color displacement correction error
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Color displacement correction sequence error Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Front), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-1012	-	Minor color displacement correction error
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Color displacement correction sequence error Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Center), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Check the parts counter of the ITB Cleaning Unit/ITB (COPIER> COUNTER> DRBL-1> ITBCLN-U/TR-BLT), and replace the part if the counter value exceeds the life. 2. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-1013	-	Minor color displacement correction error
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Detection description: Color displacement correction sequence error Measures: Take the measures only when it is pointed out by the user who is sensitive to color displacement. a. Clean the Registration Patch Sensor (Rear), or check for any open circuit or connector disconnection. b. Check the parts of the transfer system. 1. Clean the ITB Cleaning Unit if toner is accumulated. c. Check the parts of the developing system. 1. Check the parts counter of the Developing Assembly for each color (COPIER> COUNTER> DRBL-1> DV-UNT-Y/M/C/K), and replace the part if the counter value exceeds the life. 2. Check the parts counter of the Drum Unit for each color (COPIER> COUNTER> LF> Y/M/C/K-DRM-LF), and replace the part if the counter value exceeds the life.

34-4101	-	Laser voltage error (Y)
A. Operation / B. Cause / C. Remedy		Movement: An error was detected during a laser operating voltage check. Leaving this alarm unsolved may lead to hue variation at environmental change. Cause: Poor contact of the cable Measures: Check if the flat cable is only inserted half way or the connector is soiled.

34-4201	-	Laser voltage error (M)
A. Operation / B. Cause / C. Remedy		Movement: An error was detected during a laser operating voltage check. Leaving this alarm unsolved may lead to hue variation at environmental change. Cause: Poor contact of the cable Measures: Check if the flat cable is only inserted half way or the connector is soiled.

34-4301	**-**	**Laser voltage error (C)**
A. Operation / B. Cause / C. Remedy		Movement: An error was detected during a laser operating voltage check. Leaving this alarm unsolved may lead to hue variation at environmental change. Cause: Poor contact of the cable Measures: Check if the flat cable is only inserted half way or the connector is soiled.
34-4401	**-**	**Laser voltage error (Bk)**
A. Operation / B. Cause / C. Remedy		Movement: An error was detected during a laser operating voltage check. Leaving this alarm unsolved may lead to hue variation at environmental change. Cause: Poor contact of the cable Measures: Check if the flat cable is only inserted half way or the connector is soiled.
35-0013	**-**	**Transfer Roller replacement completion alarm**
A. Operation / B. Cause / C. Remedy		The replacement completion button of Transfer Roller was pressed or the counter was cleared.
35-0019	**-**	**Fixing belt unit replacement completion alarm**
A. Operation / B. Cause / C. Remedy		-
35-0104	**-**	**Pressure Belt Unit replacement completion alarm**
A. Operation / B. Cause / C. Remedy		-
35-0105	**-**	**Pressure Sub Thermistor (Rear) replacement completion alarm**
A. Operation / B. Cause / C. Remedy		-
35-0106	**-**	**Pressure Sub Thermistor (Front) replacement completion alarm**
A. Operation / B. Cause / C. Remedy		-

50-0007	**-**	**Insufficient light intensity in Post-separation Sensor 3**
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Cause: Light intensity is insufficient when adjusting output of the Post-separation Sensor 3 (PCB2). Measures: Clean the Post-separation Sensor 3 (PCB2) (periodical maintenance).
50-0008	**-**	**Insufficient light intensity in Lead Sensor 1**
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Cause: Light intensity is insufficient when adjusting output of the Lead Sensor 1 (PCB4). Measures: Clean the Lead Sensor 1 (PCB4) (periodical maintenance).
50-0009	**-**	**Insufficient light intensity in Delivery Sensor**
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Cause: Light intensity is insufficient when adjusting output of the Delivery Sensor (PCB5). Measures: Clean the Delivery Sensor (PCB5) (periodical maintenance).
50-0010	**-**	**Alarm due to original separation failure**
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Cause: Condition unable to separate 1st sheet of original from the ADF occurs 3 times. Measures: Check the rotation of the Pickup Motor (M1) -> Check the life of the Pickup Roller -> Check if the paper lint is at the pickup slot.

50-0013	**-**	**Insufficient light intensity in Registration Sensor**
A. Operation / B. Cause / C. Remedy		Movement: Nothing in particular. Cause: Light intensity is insufficient when adjusting output of the Registration Sensor (PCB3). Measures: Clean the Registration Sensor (PCB3) (periodical maintenance).
50-0014	**-**	**Insufficient Scanner Unit (Paper Back) LED light intensity alarm (Some of the LEDs are OFF. Scanning can be continued.)**
A. Operation / B. Cause / C. Remedy		In the case that the light intensity is insufficient at LED lighting.
60-0001	**-**	**Shift Tray alarm**
A. Operation / B. Cause / C. Remedy		Movement: Shift Tray operation is stopped. Cause: Home position at startup of the host machine cannot be detected. Measure: Check connector disconnection of the HP Sensor (Front) (PS101) and the HP Sensor (Rear) (PS102) -> Replace the HP Sensor (Front) (PS101) and the HP Sensor (Rear) (PS102).
61-0001	**-**	**No staple**
A. Operation / B. Cause / C. Remedy		Operation : Print operation is suspended after user message is displayed on the Control Panel. Printing operation is suspended when operating side-staple job during a print job. Recovery method : Replenish with staples.
62-0001	**-**	**No staple (saddle assembly)**
A. Operation / B. Cause / C. Remedy		Operation : Print operation is suspended after user message is displayed on the Control Panel. Printing operation is suspended when operating side-staple job during a print job. Recovery method : Replenish with staples.
64-0003	**-**	**Finisher Upper Neat Stack Unit Alignment Plate Lifting Alarm**
A. Operation / B. Cause / C. Remedy		(1) The HP Sensor is not turned ON although 1 sec has passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation.
64-0004	**-**	**Finisher Upper Neat Stack Unit Front Alignment Plate Alarm**
A. Operation / B. Cause / C. Remedy		(1) The operation is not completed although 3 sec have passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation. (3) The alignment operation is not completed although 400 msec have passed during the alignment operation.
64-0005	**-**	**Finisher Upper Neat Stack Unit Rear Alignment Plate Alarm**
A. Operation / B. Cause / C. Remedy		(1) The operation is not completed although 3 sec have passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation. (3) The alignment operation is not completed although 400 msec have passed during the alignment operation.
64-0006	**-**	**Finisher Lower Neat Stack Unit Alignment Plate Lifting Alarm**
A. Operation / B. Cause / C. Remedy		(1) The HP Sensor is not turned ON although 1 sec has passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation.
64-0007	**-**	**Finisher Lower Neat Stack Unit Front Alignment Plate Alarm**
A. Operation / B. Cause / C. Remedy		(1) The operation is not completed although 3 sec have passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation. (3) The alignment operation is not completed although 400 msec have passed during the alignment operation.
64-0008	**-**	**Finisher Lower Neat Stack Unit Rear Alignment Plate Alarm**
A. Operation / B. Cause / C. Remedy		(1) The operation is not completed although 3 sec have passed since the start of operation. (2) The HP Sensor is not turned OFF although 1 sec has passed since the start of operation. (3) The alignment operation is not completed although 400 msec have passed during the alignment operation.
66-0001	**-**	**P-binder: Glue is about to be empty.**
A. Operation / B. Cause / C. Remedy		Contents: Glue in the glue supply bottle is empty. Operation: Paper stack that is under booklet operation is delivered and operation stops.

66-0002	**-**	**P-binder: Replacement timing of blade is reached.**
A. Operation / B. Cause / C. Remedy		Contents:Number of times that the blade is used reaches the usage assurance times. Operation:Alarm is displayed and operation is back to normal. Measures:Clear the parts counter in service mode.
66-0003	**-**	**P-binder: Replacement timing of blade mount is reached.**
A. Operation / B. Cause / C. Remedy		Number of times that the blade mount is moved reaches 9 times. Operation:Alarm is displayed and operation is back to normal. Measures:Clear the parts counter in service mode.
66-0004	**-**	**P-binder: Full of cut dust is detected.**
A. Operation / B. Cause / C. Remedy		Contents:Full of cut dust is detected. Operation:Next paper stack's registration is corrected at the blade and the operation stops.
67-0001	**-**	**Inserter: Drive switch motor does not go through the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not go through the home position even though the drive switch motor is operated by the specified pulse. Operation: 1. Drive switch motor is stopped urgently. 2. The paper on the inserter upper tray and lower tray is removed.
67-0002	**-**	**Inserter: Drive switch motor does not return to the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not go through the home position even though the drive switch motor is operated by the specified pulse. Operation: 1. Drive switch motor is stopped urgently. 2. The paper on the inserter upper tray and lower tray is removed.
67-0003	**-**	**Inserter: Up/down motor of upper tray does not go through the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not go through the home position even though the inserter upper tray up/down motor is operated by the specified pulse. Operation: 1. Inserter upper tray up/down motor is stopped urgently. 2. The paper on the inserter upper tray is removed.
67-0004	**-**	**Inserter: Up/down motor of upper tray does not return to the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not return to the home position even though the inserter upper tray up/down motor is operated by the specified pulse. Operation: 1. Inserter lower tray up/down motor is stopped urgently. 2. The paper on the inserter lower tray is removed.
67-0005	**-**	**Inserter: Up/down motor of lower tray does not go through the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not go through the home position even though the inserter lower tray up/down motor is operated by the specified pulse. Operation: 1. Inserter lower tray up/down motor is stopped urgently. 2. The paper on the inserter lower tray is removed.
67-0006	**-**	**Inserter: Up/down motor of lower tray does not return to the home position.**
A. Operation / B. Cause / C. Remedy		Contents:It does not return to the home position even though the inserter lower tray up/down motor is operated by the specified pulse. Operation: 1. Inserter lower tray up/down motor is stopped urgently. 2. The paper on the inserter lower tray is removed.
67-0007	**-**	**Inserter: Tray width volume is broken.**
A. Operation / B. Cause / C. Remedy		Contents:At the fitst initialization of inserter, there is an error in A/D value of A4 vertical width or A4 horizontal width of upper tray that is saved in EEPROM. Operation:The paper on the inserter upper tray is removed.

67-0008	**-**	**Inserter: Tray width volume is broken.**
A. Operation / B. Cause / C. Remedy		Contents:At the fitst initialization of inserter, there is an error in A/D value of A4 vertical width or A4 horizontal width of lower tray that is saved in EEPROM. Operation:The paper on the inserter lower tray is removed.
69-0001	**-**	**Fore Edge Trimmer Trim Section Blower Fan 1 alarm**
A. Operation / B. Cause / C. Remedy		Movement: The Blower Fan 1 does not rotate at the specified speed. Cause :Error in the Blower Fan 1 of the Trim Section or error in the harness Measures: 1. Turn OFF and then ON the power. 2. Check for any scrapings get caught in the fan. 3. Check for any disconnection/improper connection of the connector. => Disconnect and then connect it if necessary. 4. Replace the fan. 5. Replace the PCB and the connector
69-0002	**-**	**Fore Edge Trimmer Trim Section Blower Fan 2 alarm**
A. Operation / B. Cause / C. Remedy		Movement: The Blower Fan 2 does not rotate at the specified speed. Cause :Error in the Blower Fan 2 of the Trim Section or error in the harness Measures: 1. Turn OFF and then ON the power. 2. Check for any scrapings get caught in the fan. 3. Check for any disconnection/improper connection of the connector. => Disconnect and then connect it if necessary. 4. Replace the fan. 5. Replace the PCB and the connector

75-4002	-	While there was no image forward start command from the external controller
A. Operation / B. Cause / C. Remedy		Movement: It is displayed only when the external controller is connected. Cause: While there was no image forward start command from the external controller, disconnection of the predetermined communication port between the external controller and the host machine was detected. Measures: It is not necessary to perform a remedy for this alarm. If E677-0080 has occurred, it can be cleared by turning OFF and then ON the power of the external controller and the host machine which is the measure for the error. If E677 has not occurred and the machine has recovered to the initial state, no measures need to be performed. If E677 has not occurred and the machine has not recovered to the initial state, power of the external controller and the host machine is turned OFF and then ON.

75-4004	-	While there was no image forward completion command from the external controller
A. Operation / B. Cause / C. Remedy		Movement: It is displayed only when the external controller is connected. Cause: While there was no image forward completion command from the external controller, disconnection of the predetermined communication port between the external controller and the host machine was detected. Measures: It is not necessary to perform a remedy for this alarm. If E677-0080 has occurred, it can be cleared by turning OFF and then ON the power of the external controller and the host machine which is the measure for the error. If E677 has not occurred and the machine has recovered to the initial state, no measures need to be performed. If E677 has not occurred and the machine has not recovered to the initial state, power of the external controller and the host machine is turned OFF and then ON.

75-400F	-	Disconnection of the communication port from the external controller
A. Operation / B. Cause / C. Remedy		Movement: It is displayed only when the external controller is connected. Cause: Disconnection of the communication port from the external controller. Measures: It is not necessary to perform a remedy for this alarm. If E677-0080 has occurred, it can be cleared by turning OFF and then ON the power of the external controller and the host machine which is the measure for the error. If E677 has not occurred and the machine has recovered to the initial state, no measures need to be performed. If E677 has not occurred and the machine has not recovered to the initial state, power of the external controller and the host machine is turned OFF and then ON.

Service Mode

Overview

Instructions on how to use service mode items can be found within the service mode itself.
The information explains what items have been added or changed from previous models.
For PRISMAsync model, refer to PRISMAsync service manual.

Entering Service Mode

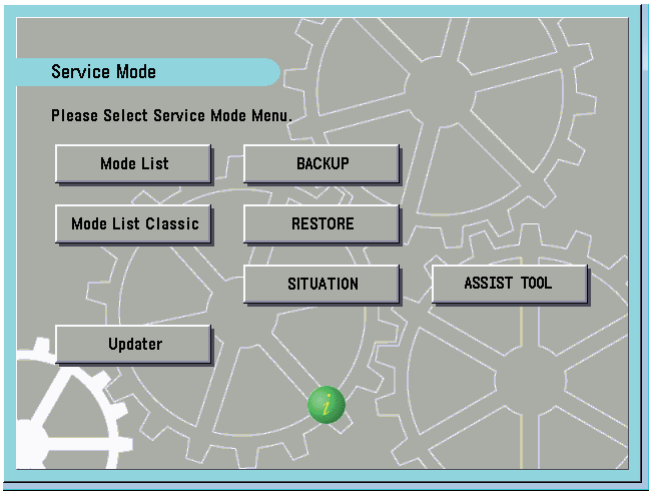
Contact the sales company for the method to enter service mode.

Points to note when using Service Mode

- When setting or executing in Service Mode, do not open or close the cover and turn off the power while "active" is displayed. This may cause Service Mode to set incorrectly or fail to execute.
- In service mode, it may list "Do not use this at the normal service." in "Points to Note when Using". The followings indicate when this item should be used.
  - The case when a setting value needs to be input on clearing RAM when replacing the PCB (Clearly indicated in the use case)
  - The case when instructed by the service office (due to reasons as having the large negative effects, difficult settings, etc.)
  - The case of performing the individual measure (due to the tender business, etc.)
    Do not use in cases that are not mentioned above.

Service Mode Menu

TOP Screen



MODELIST

The sevice mode list (with explain on the "i" button) is displayed.

MODELIST CLASSIC

The old sevice mode list (without explanation on the "i" button) is displayed

SERVICE BROWSER

Service browser function
(* The selection button is displayed only when the service browser has been enable from service mode.)

Updater

The function to upgrade the version using CDS

BACKUP

The function to backup the service mode setting values

RESTORE

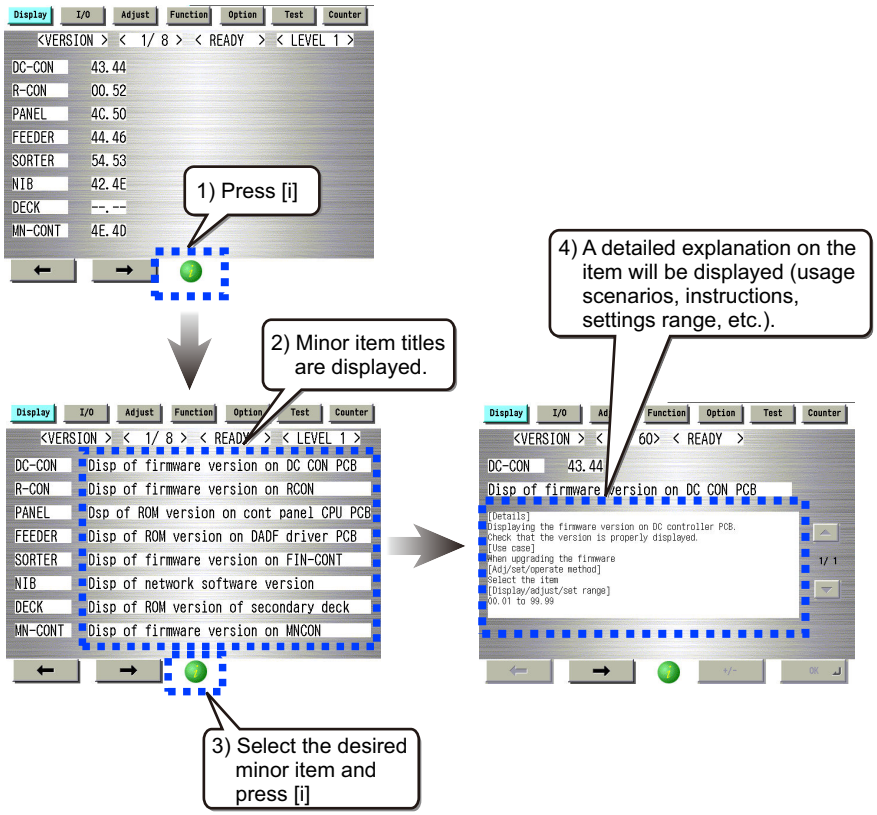
The function to restore the service mode setting values

SITUATION

The function to search service mode in accordance with the purpose

Service mode item explanations

Explanatory texts for the initial window, main items, sub items and minor items can be displayed.
Select the desired initial window, main item, sub item or minor item, then pres [i] (Information button) to display an explanatory text (hereafter, service mode contents) on the selected item.
E.g., COPIER > DISPLAY > Version window



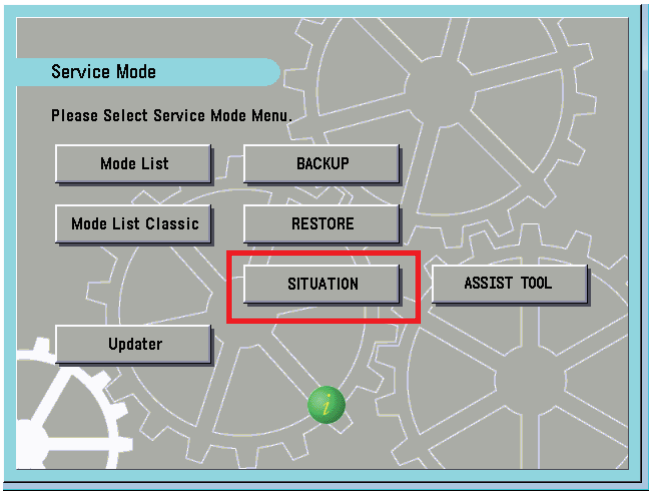
- The service mode contents can be displayed in J/E/F/I/G/S languages.
- Service mode contents, like system software, can be upgraded by SST.

I/O information enhancement

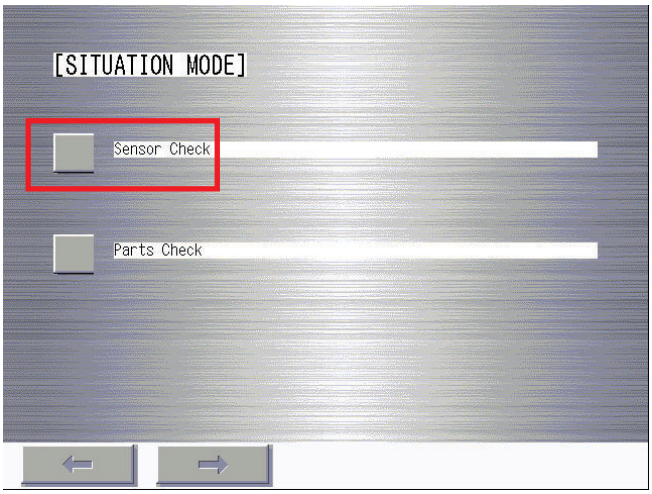
In situation mode of service mode, the searchability of an electrical component has been improved. Moreover, the signal input/output (I/O) state of the electrical components (sensors, motors, fans, etc.) in use can be checked on the screen.

1. **Start service mode.**

2. **Select "SITUATION".**

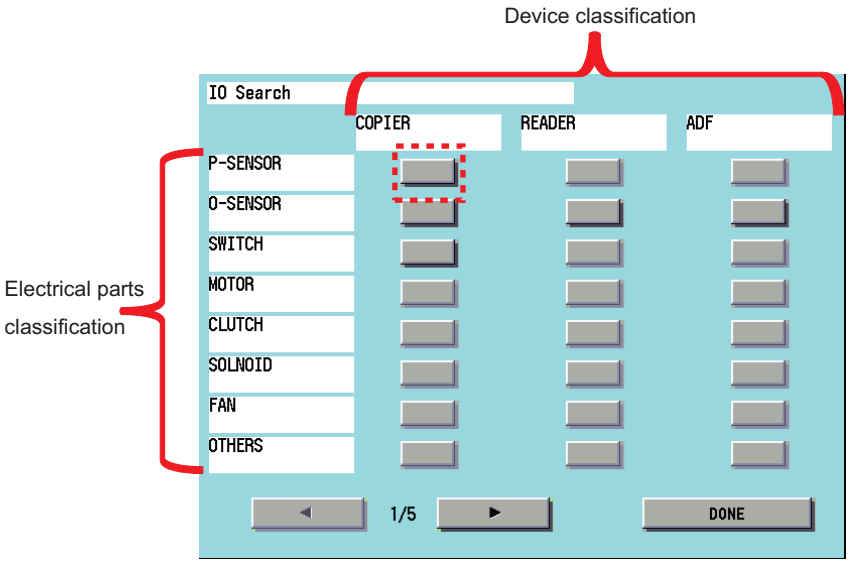


3. **On the "SITUATION MODE" screen, select "Sensor Check".**

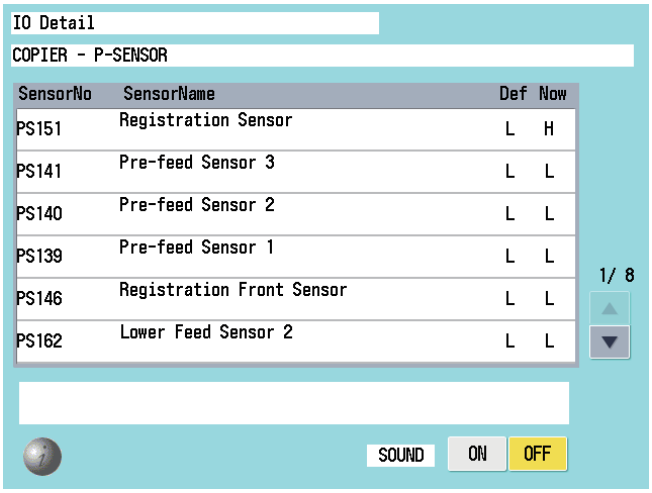


4. **Press a button according to the type of electrical component and the corresponding device type.**

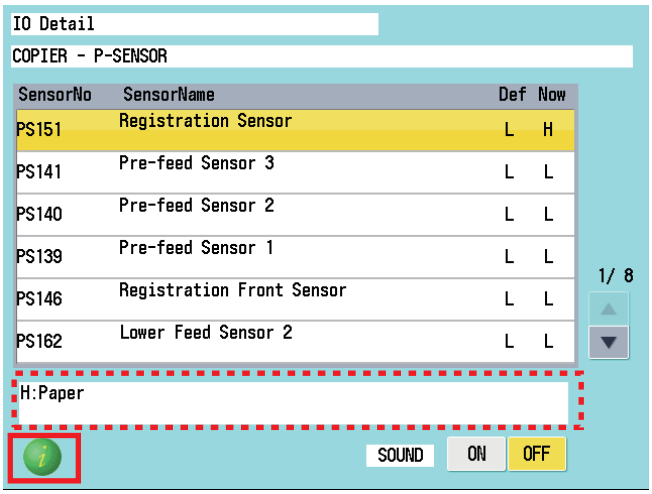
   Example: In the case of the Registration Sensor of the host machine, press the button (red dotted frame) at "COPIER"/"P-SENSOR".



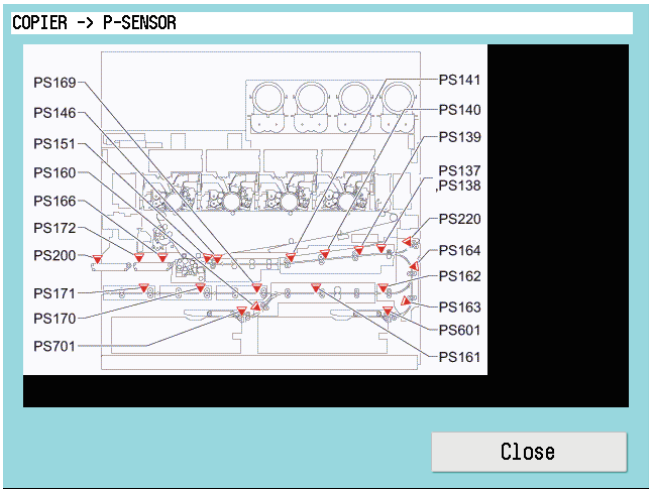
5. **A list of electrical component types for the selected device is displayed.**



6. **Select an electrical component to display the details in the frame (red dotted frame) at the bottom of the screen.**



7. **If the "i" button is pressed, the screen displaying the electrical parts array will appear.**

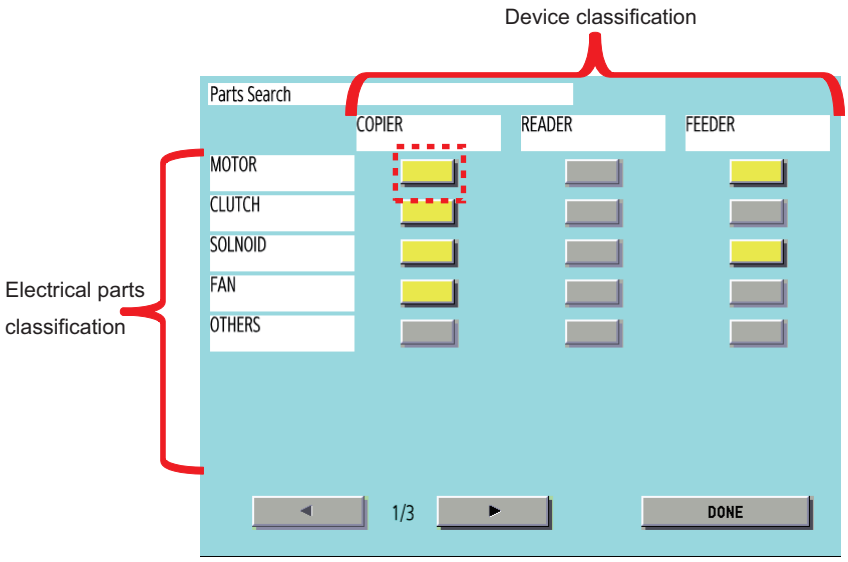


Operation Check of Electrical Components

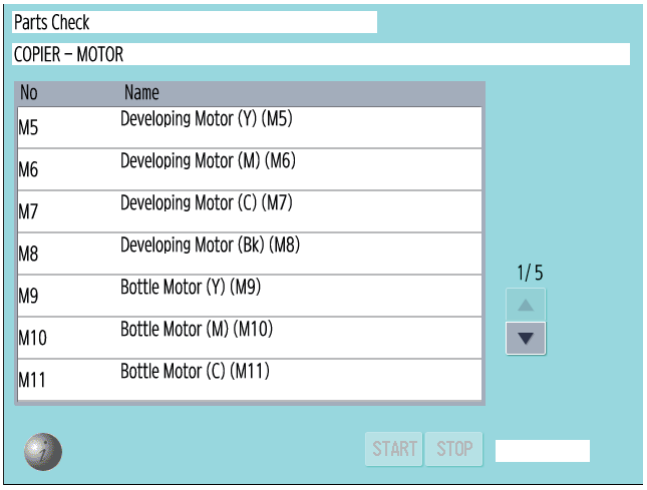
In situation mode of service mode, among electrical components used (motors, fans, solenoids, and clutches), operation of those that can operate alone can be checked on the Parts Check screen.

NOTE:
The service mode used below utilizes the system where electrical components used are operated by control signals sent from the DC Controller. If a control signal is sent but the electrical component does not operate, a failure of the electrical component, open circuit of the cable for transmitting control signals, or poor contact of the connector is suspected.

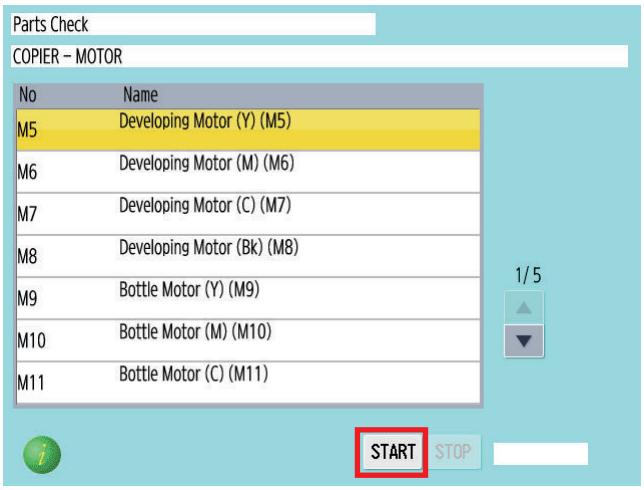
1. **Select SERVICE MODE > SITUATION MODE > Parts Check.**
2. **Press a button according to the type of electrical component and the corresponding device type.**
   Example: In the case of a motor of the host machine, press the button (red dotted frame) at "COPIER"/"MOTOR".



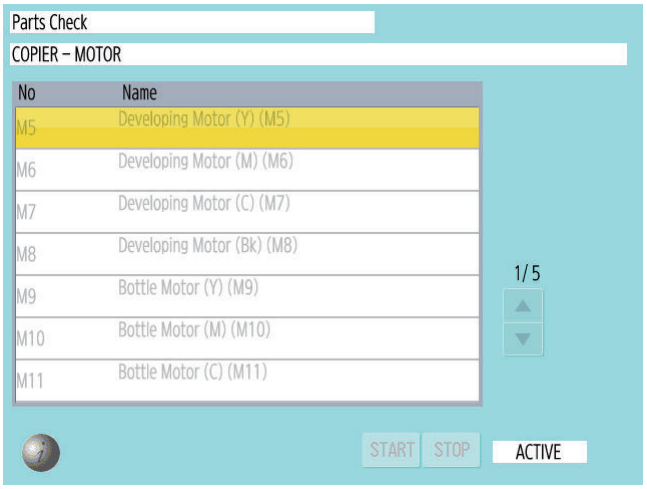
3. **A list of electrical component types for the selected device whose operation can be checked is displayed.**

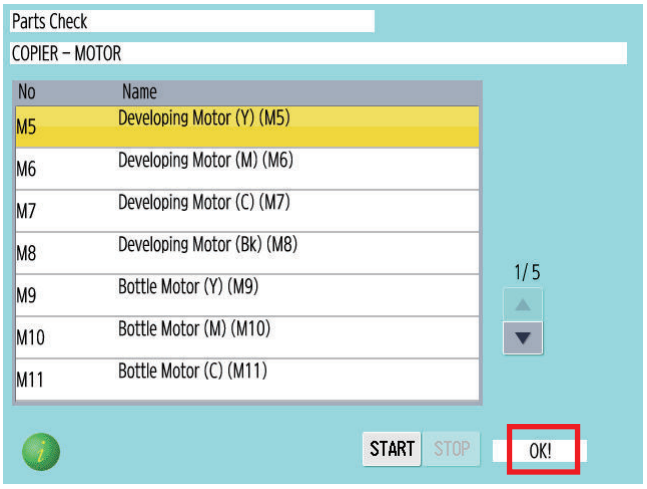


4. **Select the electrical component you want to operate and then press the Start button to send a signal for driving the selected electrical component for a specified period of time from the DC Controller.**

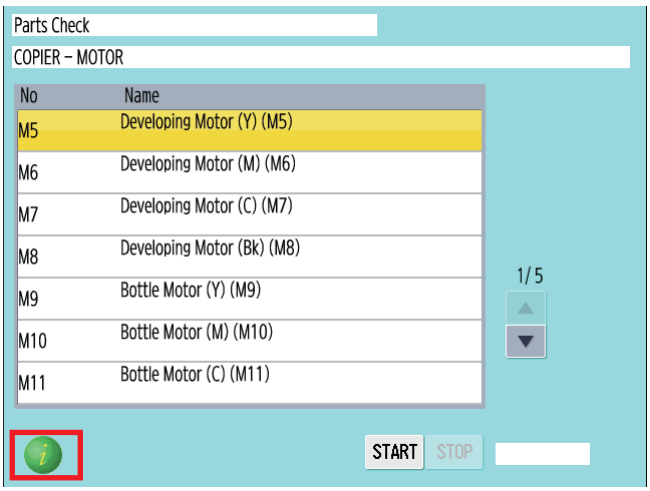


5. **"ACTIVE" is displayed while the electrical component is driven. After the electrical component has been driven for a specified period of time, "OK!" is displayed if transmission of the drive signal succeeded, or "NG !" is displayed if failed.**

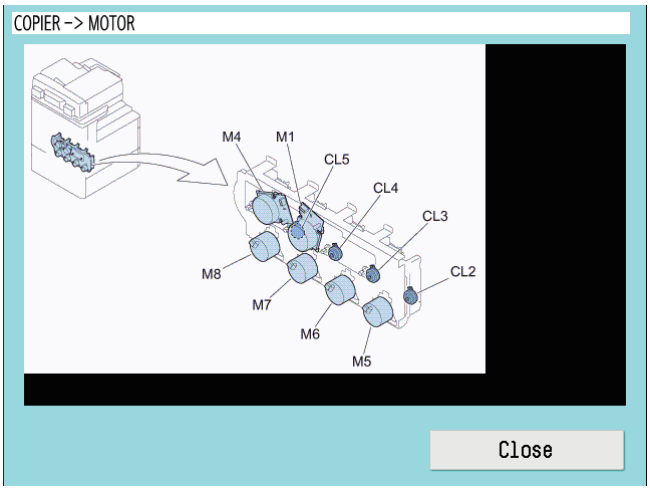




[i] : Press the button to display the screen showing the locations of electrical components.

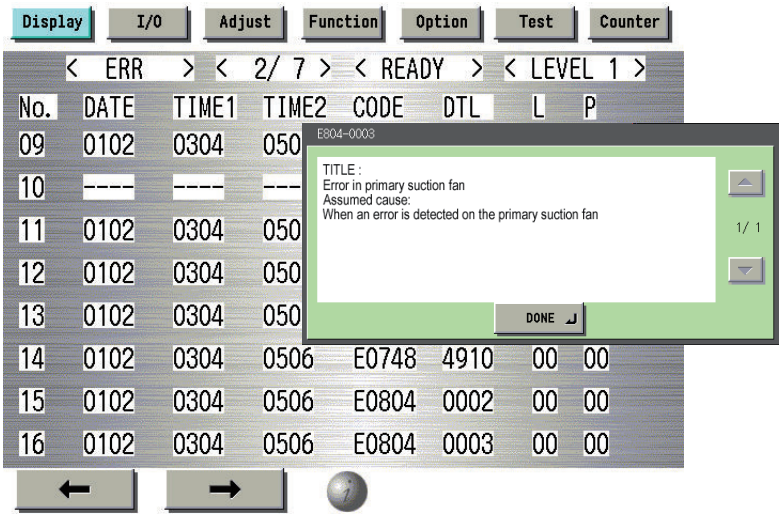


6. The screen showing the locations of electrical components is displayed.

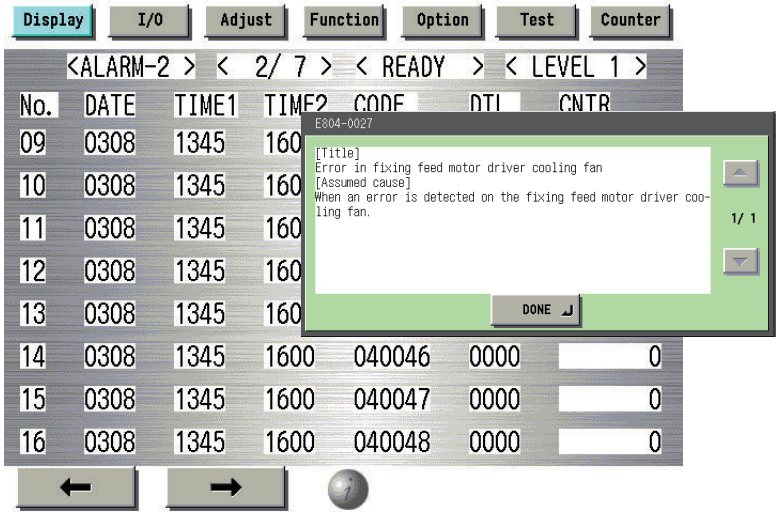


Display of Error Code/Alarm Code description

The detail description of each code can be viewed on the error code and alarm code occurrence record screen.
ERROR CODE : COPIER > DISPLAY > ERR



ALARM CODE : COPIER > DISPLAY > ERR



Security features

To prevent unauthorized access to Service Mode, Password set is enabled.

■ Related Service Mode

Setting password type when the screen is switched to the service mode (service mode)

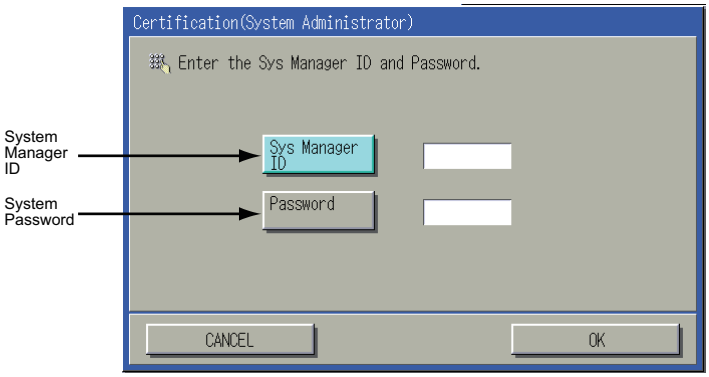
- COPIER > OPTION > FNC-SW > PSWD-SW
  <Setting range>
  0: No password [Default]
  1: Service engineer
  2: System administrator + Service engineer

The password for service engineer when the screen is switched to the service mode (service mode: Lv.2)

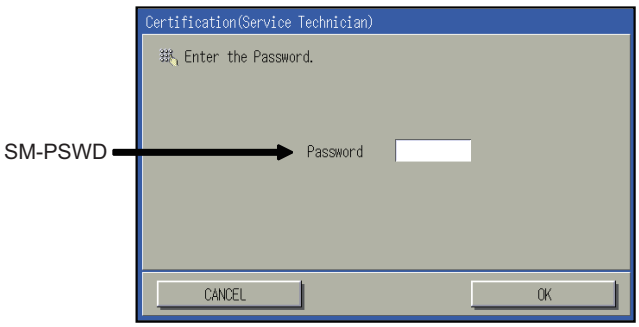
- COPIER > OPTION > FNC-SW > SM-PSWD
  <Setting range>
  ******** (Eight-digit number) [Default: 11111111]
  To enhance security, be sure to change the password from the default value.

Once the above setting is specified, the password entry screen is displayed when getting into the service mode.

1. **Go through the following: Settings/Registration > System Manager Settings > System Manager Information Settings; and enter the "System Manager ID" and "Password", and then press OK button.**



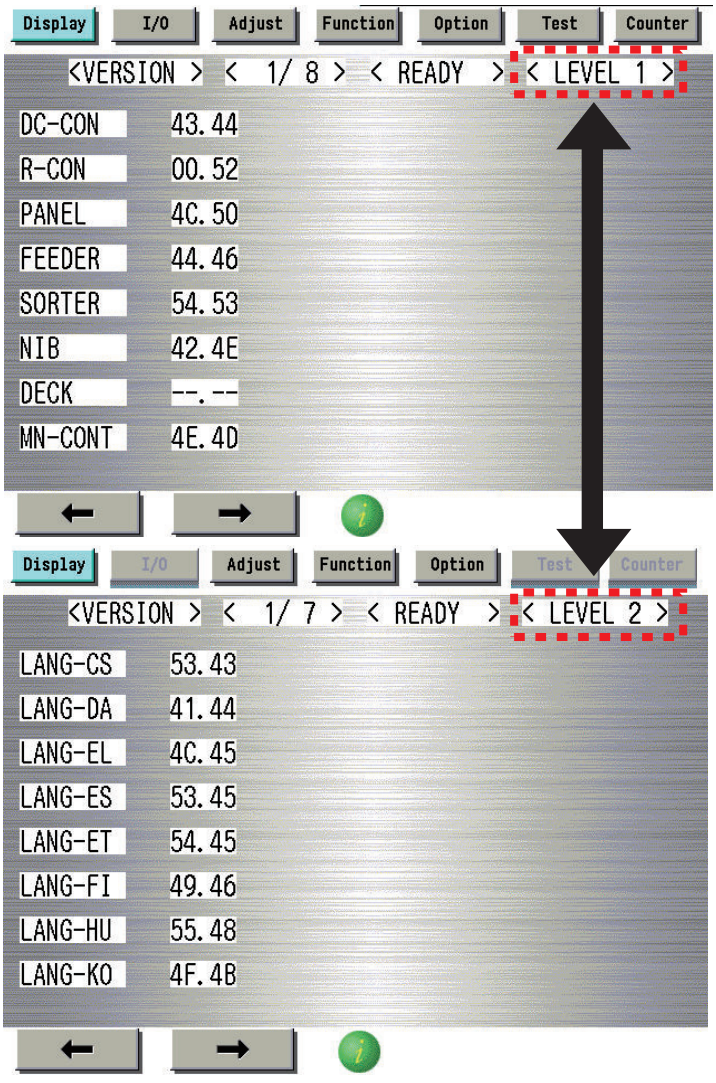
2. **Enter the password for service engineer (COPIER > OPTION > FNC-SW > SM-PSWD), and press OK button.**



NOTE:
In the case that you forget the password for service engineer, the password function can be cancelled by using the Service Support Tool (SST).

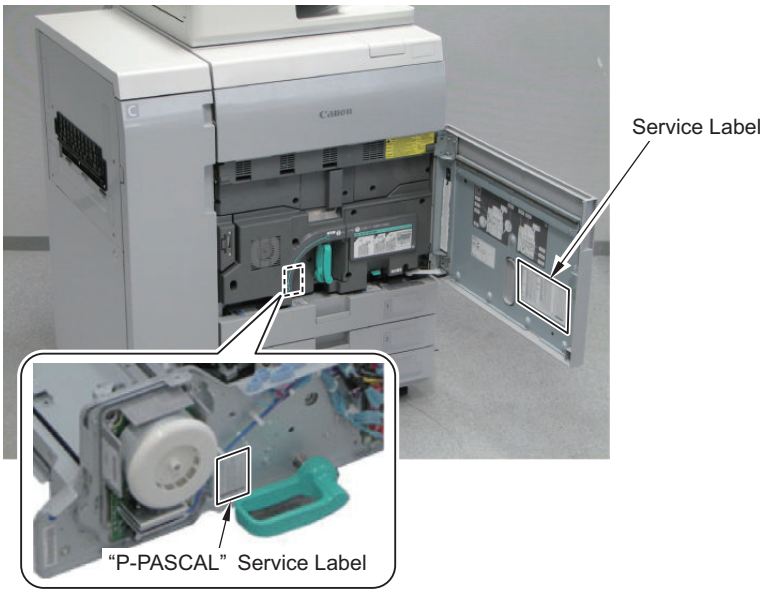
Switching Screen (Level 1 < - > 2)

Switching screens between level 1 and 2 has been made easier.
When level 1 screen is displayed, press <LEVEL 1> in the right upper side of the screen, and it will switch to level 2.



Service Mode Backup

Adjustment is made to every machine at the time of shipment to write the adjustment value in the service label.
When replacing the DC Controller PCB or clearing RAM, the adjusted values of ADJUST and OPTION return to the default; therefore, be sure to adjust the value in the field, and in the case of changing the service mode value, be sure to write down the changed value in the service label. When the corresponding item is not found on the service label, write the value in blank field.
In addition, each item in service mode
COPIER > ADJUST > P-PASCAL
is adjusted per Fixing Feed Unit.
Therefore, when replacing the DC Controller/clearing RAM data or when replacing the Fixing Feed Unit, enter the value shown on the service label for "P-PASCAL" item affixed to the location shown below that was hidden beneath the removed Front Cover of the Fixing Feed Unit.



The data output of the service data print

■ Overview

- Data output of service print such as P-PRINT is supported.
- Service mode level 1 > COPIER > FUNCTION > MISC-P > RPT-FILE > [OK].
  The created data file is saved in the HDD of the machine.
- The created (saved) data is deleted when it is moved to a USB memory device.
- Even if the machine has stopped operation due to a no-paper error, data can be moved to the USB memory device as long as the machine can enter download mode.

■ Service Print and Data File Name Supported for File Output

Item name	Title
CP-PRINT	Print output mode for color assurance
D-PRINT	Output of service mode (DISPLAY)
ENV-PRT	Output of the temperature and humidity inside the machine/surface temperature of the Fixing Roller as a log
HIST-PRT	Output of jam and error logs
KEY-HIST	Output of Control Panel Key input logs
PJH-P-1	Output of details on print job history (100 jobs)
PJH-P-2	Output of details on print job history (all jobs)
P-PRINT	Output of service mode setting values
TNRB-PRT	Printing of Toner Bottle ID report
USER-PRT	Output of Settings/Registration list
USBH-PRT	Output of USB device information report
PSCL-PRT	Output of gradation adjustment log report

■ Content of the report output of gradation adjustment history (PSCL-PRT)

● Example of report output

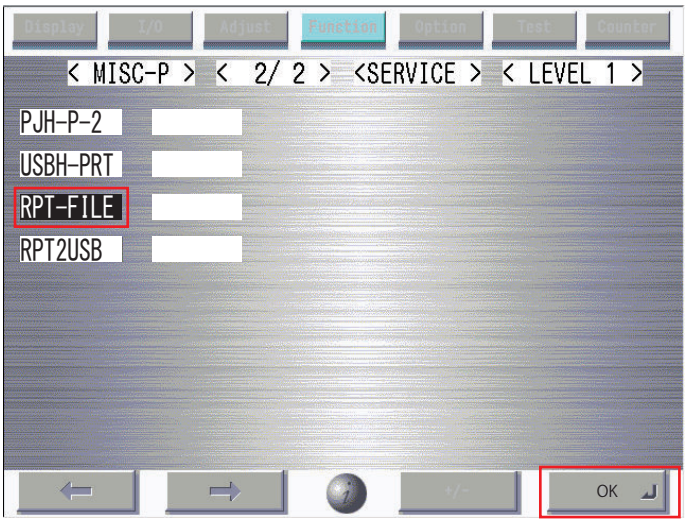
■ How to Move Service Print Files to a USB Memory Device

● Preparation

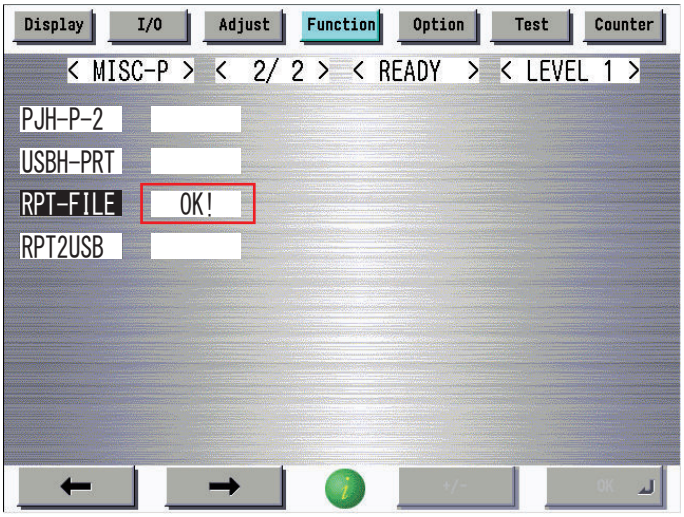
- USB memory device
  FAT32 format file system, with no password locks.

● operation

1. **Select service mode (Level 1) > COPIER > FUNCTION > MISC-P > RPT-FILE; and then press "OK“.**

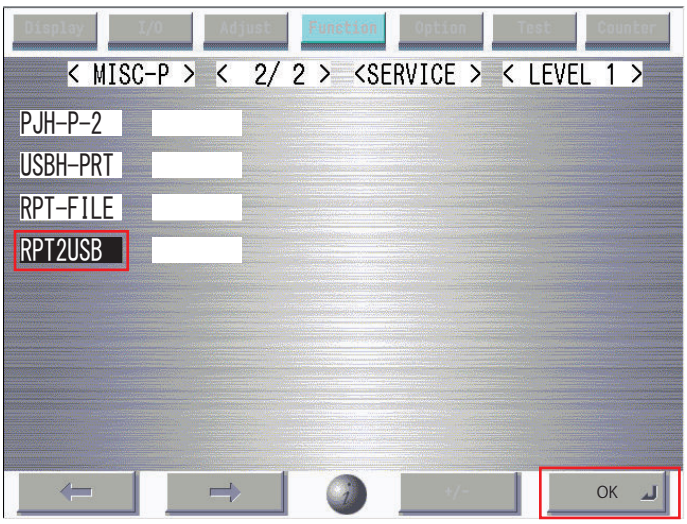


2. **Generating report file**
   After the “ACTIVE” blinks for 3 to 4 minutes, generation of a report file is complete as “OK!” is displayed.



3. **Connect the USB memory storage device to the USB port.**

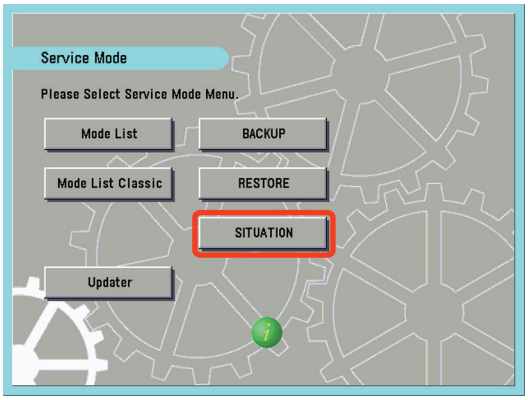
4. **Select service mode (Level 1) > COPIER > FUNCTION > MISC-P > RPT2USB; and then press "OK".**



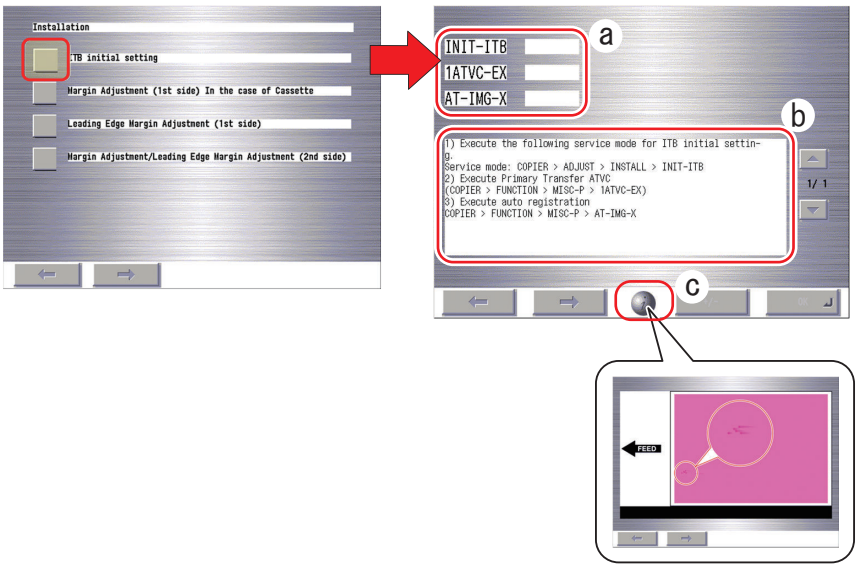
NOTE:
- If the downloaded file is opened as plain text, the paragraphs are misaligned, which makes it difficult to read the data.
- When the file is dragged to WordPad, an image similar to the image output on paper may be displayed in some cases.

Introduction of situation mode

Situation mode has been newly added to improve workability and searchability at the site. This mode makes it possible to easily use the service mode appropriate for the scene at the site.



The following three points are made available depending on each situation:
a) Display of related service mode when an adjustment is necessary
b) Display of causes and remedies
c) Display of related images



Installation
ITB initial setting
Margin Adjustment (1st side) In the case of Cassette
Leading Edge Margin Adjustment (1st side)
Margin Adjustment/Leading Edge Margin Adjustment (2nd side)
INIT-ITB
1ATVC-EX
AT-IMG-X
a
b
c
1) Execute the following service mode for ITB initial settin-
g.
Service mode: COPIER > ADJUST > INSTALL > INIT-ITB
2) Execute Primary Transfer ATVC
(COPIER > FUNCTION > MISC-P > 1ATVC-EX)
3) Execute auto registration
COPIER > FUNCTION > MISC-P > AT-IMG-X
1/ 1

SEND-ES	**1**	**Dspl of SEND appli Spanish file version**
Detail		To display the Spanish language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-ZH	**2**	**Dspl SEND appli Chinese file ver: smpl**
Detail		To display the simplified Chinese language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-TW	**2**	**Dspl of SEND appli Chinese file ver:trad**
Detail		To display the traditional Chinese language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-KO	**2**	**Dspl of SEND appli Korean file version**
Detail		To display the Korean language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-CS	**2**	**Dspl of SEND appli Czech file version**
Detail		To display the Czech language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-DA	**2**	**Dspl of SEND appli Danish file version**
Detail		To display the Danish language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-EL	**2**	**Dspl of SEND appli Greek file version**
Detail		To display the Greek language file version of the SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-ET	**2**	**Dspl of SEND appli Estonian file version**
Detail		To display the Estonian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-FI	**2**	**Dspl of SEND appli Finnish file version**
Detail		To display the Finnish language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99

COPIER > DISPLAY > VERSION

SEND-HU	**2**	**Dspl of SEND appli Hungarian file ver**
Detail		To display the Hungarian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-NL	**2**	**Dspl of SEND appli Dutch file version**
Detail		To display the Dutch language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-NO	**2**	**Dspl of SEND appli Norwegian file ver**
Detail		To display the Norwegian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-PL	**2**	**Dspl of SEND appli Polish file version**
Detail		To display the Polish language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-PT	**2**	**Dspl of SEND appli Portuguese file ver**
Detail		To display the Portuguese language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-RU	**2**	**Dspl of SEND appli Russian file version**
Detail		To display the Russian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-SL	**2**	**Dspl of SEND appli Slovenian file ver**
Detail		To display the Slovenian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-SV	**2**	**Dspl of SEND appli Swedish file version**
Detail		To display the Swedish language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
SEND-ID	**2**	**Dspl of SEND appli Indonesian file ver**
Detail		To display the Indonesian language file version of SEND application (JAVA UI).
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99

ERS-DA	**2**	**Display of ERS Danish file version**
Detail		To display the version of Danish language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-EL	**2**	**Display of ERS Greek file version**
Detail		To display the version of Greek language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-ET	**2**	**Display of ERS Estonian file version**
Detail		To display the version of Estonian language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-FI	**2**	**Display of ERS Finnish file version**
Detail		To display the version of Finnish language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System

Detail		To display the version of Hungarian language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-NL	**2**	**Display of ERS Dutch file version**
Detail		To display the version of Dutch language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-NO	**2**	**Display of ERS Norwegian file version**
Detail		To display the version of Norwegian language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-PL	**2**	**Display of ERS Polish file version**
Detail		To display the version of Polish language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-PT	**2**	**Display of ERS Portuguese file ver**
Detail		To display the version of Portuguese language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-RU	**2**	**Display of ERS Russian file version**
Detail		To display the version of Russian language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-SL	**2**	**Display of ERS Slovenian file version**
Detail		To display the version of Slovenian language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System

Detail		To display the version of Catalan language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-TH	**2**	**Display of ERS Thai file version**
Detail		To display the version of Thai language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ERS-VN	**2**	**Display of ERS Vietnamese file version**
Detail		To display the version of Vietnamese language file for ERS application.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
Supplement/Memo		ERS: Error Recovery System
ROM-Y	**2**	**Dspl of Laser Scanner Unit (Y) version**
Detail		To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (Y).
Use Case		When checking the lot No. or EEPROM version of Laser Scanner Unit
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
ROM-M	**2**	**Dspl of Laser Scanner Unit (M) version**
Detail		To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (M).
Use Case		When checking the lot No. or EEPROM version of Laser Scanner Unit
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
ROM-C	**2**	**Dspl of Laser Scanner Unit (C) version**
Detail		To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (C).
Use Case		When checking the lot No. or EEPROM version of Laser Scanner Unit
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)
ROM-K	**2**	**Dspl of Laser Scanner Unit (Bk) version**
Detail		To display the lot No., unit version and EEPROM version written in EEPROM of Laser Scanner Unit (Bk).
Use Case		When checking the lot No. or EEPROM version of Laser Scanner Unit
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Lot No.: 4 digits (decimal notation), unit version: 1 digit (hexadecimal notation), EEPROM version: 1 digit (hexadecimal notation)

Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
DSUB2	**1**	**Firmware ver of Printer Engine Sub PCB 2**
Detail		To display the firmware version of Printer Engine Sub PCB 2.
Use Case		When checking the version of DC-CON Sub CPU
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
DSUB3	**1**	**Firmware ver of Printer Engine Sub PCB 3**
Detail		To display the firmware version of Printer Engine Sub PCB 3.
Use Case		When checking the version of DC-CON Sub CPU
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.01 to 99.99
PUNCH-CM	**1**	**Comctn area firm ver: Multi Func P-Punch**
Detail		To display the firmware version of the communication area on the Main PCB of the Multi Function Professional Puncher.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.00 to 99.99
Supplement/Memo		Product name of P-Puncher: Multi Function Professional Puncher-A1
PUNCH-MN	**1**	**Control area firm ver:Multi Func P-Punch**
Detail		To display the firmware version of the control area on the Main PCB of the Multi Function Professional Puncher.
Use Case		When upgrading the firmware
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		00.00 to 99.99
Supplement/Memo		Product name of P-Puncher: Multi Function Professional Puncher-A1

■ ACC-STS

COPIER > DISPLAY > ACC-STS

FEEDER	**1**	**Display of DADF connection state**
Detail		To display the connection state of DADF.
Use Case		When checking the connection between the machine and DADF
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1 0: Not yet connected, 1: Connected

COPIER > DISPLAY > ACC-STS

SORTER	**1**	**Install state of Finisher-related option**
Detail	To display the installation state of Finisher-related options.	
Use Case	When checking the connection of Finisher-related options	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	Left column (connecting state of Finisher-related options): 1 to 5 1: Without Saddle 2: With Saddle, without Folding Unit 3: With Saddle and Inserter, without Folding Unit 4: With Saddle and Folding Unit, without Inserter 5: With Saddle, Inserter and Folding Unit Right column (connecting state of Finisher-belonged Inserter): 0 to 4 0: no hole, 1: 2-hole, 2: 2/3-hole, 3: 4-hole, 4: 4-hole (SW)	
DECK	**1**	**Dspl of Paper Deck connection state**
Detail	To display the connection state of the Paper Deck.	
Use Case	When checking the connection between the machine and the Paper Decks	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 8 0: Not yet connected 1: Connected (small) (Display is hidden on this machine.) 2: Connected (large) 3: POD Deck Lite (with Multi-purpose Tray) 4: POD Deck Lite (without Multi-purpose Tray) 5: Multi-purpose Tray only 6: POD deck 7: 2-POD Deck connected 8: 3-POD deck connected (Display is hidden on this machine.)	
CARD	**1**	**Dspl of connection state of Card Reader**
Detail	To display the connecting state of Card Reader.	
Use Case	When checking the connection between the machine and the Card Reader	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1 0: No card is inserted while the Card Reader is connected. (Copy is not available.) 1: Card Reader has not yet been connected, or the card has been inserted with the Card Reader connected. (Copy is available.)	
COINROBO	**1**	**Dspl of Coin Manager connection state**
Detail	To display the connecting state of the Coin Manager.	
Use Case	When checking the connection between the machine and the Coin Manager	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1 0: Not yet connected, 1: Connected	
NIB	**1**	**Dspl of Network PCB installation state**
Detail	To display the installation state of the Network PCB.	
Use Case	When checking the connection between the machine and the Network PCB	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 3 0: Not yet connected, 1: Ethernet PCB connected, 2: Token Ring PCB connected, 3: Ethernet PCB + Token Ring PCB connected	

COPIER > DISPLAY > ACC-STS

NETWARE	1	Install state dspl of NetWare firmware
Detail		To display the installation state of NetWare firmware.
Use Case		When checking whether NetWare firmware is installed to the machine
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1 0: Not installed, 1: Installed

SEND	1	Dspl SEND support PCB installation state
Detail		To display the installation state of the PCB that supports SEND function. If the PCB is installed, SEND function can be used.
Use Case		When checking the connection between the machine and the PCB that supports SEND function
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1 0: Not installed, 1: Installed

IA-RAM	1	Display of MNCON PCB 1 memory capacity
Detail		To display the memory capacity of the Main Controller PCB 1.
Use Case		When checking the memory capacity of the Main Controller PCB
Adj/Set/Operate Method		N/A (Display only)
Unit		MB

■ ANALOG

COPIER > DISPLAY > ANALOG

TEMP	1	Display of outside temperature
Detail		To display the temperature outside the machine. This is measured by the Environment Sensor that measures the outside air.
Use Case		When checking the temperature outside the machine
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 60
Unit		deg C
Amount of Change per Unit		1

HUM	1	Display of outside humidity
Detail		To display the humidity outside the machine. This is measured by the Environment Sensor that measures the outside air.
Use Case		When checking the humidity outside the machine
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Amount of Change per Unit		1

ABS-HUM	1	Display of outside moisture content
Detail		To display the absolute moisture content outside the machine. This is measured by the Environment Sensor that measures the outside air.
Use Case		When checking the moisture content outside the machine
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		g/m3
Amount of Change per Unit		1

COPIER > DISPLAY > ANALOG

DR-TEMP	**1**	**For R&D**
FIX-UC	**1**	**Dspl of Fixing Belt center temperature**
Detail	To display the center temperature of the Fixing Belt detected by the Fixing Main Thermistor.	
Use Case	When checking the temperature at the center of Fixing Belt	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 999	
Unit	deg C	
Amount of Change per Unit	1	
FIX-UE	**1**	**Dspl Fixing Belt rear edge temperature**
Detail	To display the rear edge temperature of the Fixing Belt detected by the Fixing Sub Thermistor 1.	
Use Case	When checking the edge temperature of the Fixing Belt	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 999	
Unit	deg C	
Amount of Change per Unit	1	
FIX-LC	**1**	**Dspl of Pressure Belt center temperature**
Detail	To display the center temperature of the Pressure Belt detected by the Pressure Main Thermistor.	
Use Case	When checking the temperature at the center of the Pressure Belt	
Adj/Set/Operate Method	N/A (Display only)	
Unit	deg C	
Amount of Change per Unit	1	
FIX-LE	**1**	**Dspl Pressure Belt rear edge temperature**
Detail	To display the rear edge temperature of the Pressure Belt detected by the Pressure Sub Thermistor 1.	
Use Case	When checking the edge temperature of the Pressure Belt	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 999	
Unit	deg C	
Amount of Change per Unit	1	
FIX-LE2	**1**	**Dspl Pressure Belt front edg temperature**
Detail	To display the front edge temperature of the Pressure Belt detected by the Pressure Sub Thermistor 2.	
Use Case	When checking the edge temperature of the Pressure Belt	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 999	
Unit	deg C	
Amount of Change per Unit	1	

COPIER > DISPLAY > ANALOG

FIX-UE2	**1**	**Dspl Fixing Belt front edge temperature**
Detail	To display the front edge temperature of the Fixing Belt detected by the Fixing Sub Thermistor 2.	
Use Case	When checking the edge temperature of the Fixing Belt	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 999	
Unit	deg C	
Amount of Change per Unit	1	
DR-TEMPL	**1**	**Dspl Bk Photosensitive Drum surface temp**
Detail	To display the surface temperature of the Photosensitive Drum (Bk) detected by the Drum Thermopile.	
Use Case	When image smear occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	-58 to 100	
Unit	deg C	
Amount of Change per Unit	1	
DEVHUM1	**2**	**Dspl of Y/M Developing Ass'y humidity**
Detail	To display the humidity of the Y/M Developing Assembly detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).	
Use Case	When a failure occurs on the developing contrast	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 100	
Unit	%	
Amount of Change per Unit	1	
DEVHUM2	**2**	**Dspl C-color Developing Ass'y humidity**
Detail	To display the humidity of the C Developing Assembly detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).	
Use Case	When a failure occurs on the developing contrast	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 100	
Unit	%	
Amount of Change per Unit	1	
DEVTEMP2	**2**	**Dspl Developing Ass'y (C) ambient temp**
Detail	To display the temperature around the Developing Assembly (C) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).	
Use Case	When a failure occurs on the developing contrast	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 100	
Unit	deg C	
Amount of Change per Unit	1	

COPIER > DISPLAY > ANALOG

PDK-TEMP	1	Dspl of POD Deck compartment temp
Detail		To display the compartment temperature of POD Deck Lite. It may be out of order if the indicated temperature is greatly different from the machine right after power-on.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 60
Unit		deg C
Related Service Mode		COPIER> DISPLAY> ANALOG> TEMP, PDK-HUM
Amount of Change per Unit		1

PDK-HUM	1	Dspl of POD Deck compartment humidity
Detail		To display the compartment humidity of POD Deck Lite. It may be out of order if the indicated humidity is greatly different from the machine right after power-on.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Related Service Mode		COPIER> DISPLAY> ANALOG> HUM, PDK-TEMP
Amount of Change per Unit		1

MDK-TEMP	1	Dspl Multi Deck compartment temperature
Detail		To display the compartment temperature of the Multi Deck. It may be out of order if the indicated temperature is greatly different from the machine right after power-on.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 60
Unit		deg C
Related Service Mode		COPIER> DISPLAY> ANALOG> HUM, MDK-HUM
Amount of Change per Unit		1

MDK-HUM	1	Dspl Multi Deck compartment humidity
Detail		To display the compartment humidity of the Multi Deck. It may be out of order if the indicated humidity is greatly different from the machine right after power-on.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Related Service Mode		COPIER> DISPLAY> ANALOG> HUM, MDK-TEMP
Amount of Change per Unit		1

DEVTEMP1	2	Dspl of Dev Ass'y (Y)/(M) ambient temp
Detail		To display the temperature around the Developing Assembly (Y)/(M) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		deg C
Amount of Change per Unit		1

COPIER > DISPLAY > ANALOG

FX-MTR	**1**	**Display of Fixing Motor current value**
Detail		To display the real-time current value of the Fixing Motor.
Use Case		When checking the life of the Pressure Belt Unit
Adj/Set/Operate Method		N/A (Display only)
Unit		mA
Amount of Change per Unit		1
FX-U-POS	**1**	**Dspl of Fixing Belt displacement state**
Detail		To display the Fixing Belt displacement state in real-time. This shows the ON/OFF status of the Fixing Belt Position Sensor1 and 2 and the Fixing Belt HP Sensor.
Use Case		When checking the Fixing Belt displacement control
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1 0: ON (Transmit light), 1: OFF (Block light)
FX-L-POS	**1**	**Dspl of Pressure Belt displacement state**
Detail		To display the Pressure Belt displacement state in real-time. This shows the ON/OFF status of the Pressure Belt Position Sensor 1 and 2 and the Pressure Belt HP Sensor.
Use Case		When checking the Pressure Belt displacement control
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1 0: ON (Transmit light), 1: OFF (Block light)
DEVHUM-Y	**2**	**Dspl of Developing Assembly (Y) humidity**
Detail		To display the humidity of the Developing Assembly (Y) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Appropriate Target Value		5 - 80
Amount of Change per Unit		1
DEVHUM-M	**2**	**Dspl of Developing Assembly (M) humidity**
Detail		To display the humidity of the Developing Assembly (M) detected by the Developing Assembly Inner Temperature Detection PCB (Y)/(M).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Appropriate Target Value		5 - 80
Amount of Change per Unit		1

COPIER > DISPLAY > ANALOG

DEVHUM-C	2	Dspl of Developing Assembly (C) humidity
Detail		To display the humidity of the Developing Assembly (C) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Appropriate Target Value		5 - 80
Amount of Change per Unit		1

DEVHUM-K	2	Dspl of Developing Assembly(Bk) humidity
Detail		To display the humidity of the Developing Assembly (Bk) detected by the Developing Assembly Inner Temperature Detection PCB (C)/(Bk).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		%
Appropriate Target Value		5 - 80
Amount of Change per Unit		1

DEVTEMPY	2	Dspl of Developing Assembly (Y) temp
Detail		To display the temperature of the Developing Assembly (Y) detected by the Thermistor of the Toner Density Sensor (Y). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		deg C
Appropriate Target Value		TEMP - TEMP + 20
Related Service Mode		COPIER> DISPLAY> ANALOG> TEMP
Amount of Change per Unit		1

DEVTEMPM	2	Dspl of Developing Assembly (M) temp
Detail		To display the temperature of the Developing Assembly (M) detected by the Thermistor of the Toner Density Sensor (M). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		deg C
Appropriate Target Value		TEMP - TEMP + 20
Related Service Mode		COPIER> DISPLAY> ANALOG> TEMP
Amount of Change per Unit		1

COPIER > DISPLAY > ANALOG

DEVTEMPC	2	Dspl of Developing Assembly (C) temp
Detail		To display the temperature of the Developing Assembly (C) detected by the Thermistor of the Toner Density Sensor (C). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		deg C
Appropriate Target Value		TEMP - TEMP + 20
Related Service Mode		COPIER> DISPLAY> ANALOG> TEMP
Amount of Change per Unit		1

DEVTEMPK	2	Dspl of Developing Assembly (Bk) temp
Detail		To display the temperature of the Developing Assembly (Bk) detected by the Thermistor of the Toner Density Sensor (Bk). The temperature should be somewhere in between TEMP (outside temperature) and TEMP + 20 (deg C).
Use Case		When a failure occurs on the developing contrast
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 100
Unit		deg C
Appropriate Target Value		TEMP - TEMP + 20
Related Service Mode		COPIER> DISPLAY> ANALOG> TEMP
Amount of Change per Unit		1

■ CST-STS

COPIER > DISPLAY > CST-STS

WIDTH-MF	2	Dspl Multi-purpose Tray paper width size
Detail		To display the paper width size currently set on the Multi-purpose Tray.
Use Case		When checking the paper width side set on the Multi-purpose Tray
Adj/Set/Operate Method		N/A (Display only)
Unit		mm
Amount of Change per Unit		1

REG-L-C1	**1**	**Dspl side register amount: Cassette 1**
Detail	To display how much paper fed from the Cassette 1 is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.	
Use Case	At installation	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Appropriate Target Value	-10 to 10	
Default Value	0	
Amount of Change per Unit	0.1	
REG-L-C2	**1**	**Dspl side register amount: Cassette 2**
Detail	To display how much paper fed from the Cassette 2 is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.	
Use Case	At installation	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Appropriate Target Value	-10 to 10	
Default Value	0	
Amount of Change per Unit	0.1	

COPIER > DISPLAY > CST-STS

REG-L-C3	1	Dspl side register amount: Cassette 3
Detail		To display how much paper fed from the Cassette 3 is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

REG-L-DK	1	Dspl side register amount: Deck Lite
Detail		To display how much paper fed from the POD Deck Lite is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation of the POD Deck Lite
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

REG-L-DP	1	Dspl side register amount: 2nd side
Detail		To display how much paper fed in 2-sided mode is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		When image position on the front and back sides are displaced
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

COPIER > DISPLAY > CST-STS

REG-L-M1	1	Dspl side reg amount: Multi Deck, Upper
Detail		To display how much paper fed from the Multi Deck (Upper) is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation of the Multi Deck
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

REG-L-M2	1	Dspl side reg amount: Multi Deck, Middle
Detail		To display how much paper fed from the Multi Deck (Middle) is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation of the Multi Deck
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

REG-L-M3	1	Dspl side reg amount: Multi Deck, Lower
Detail		To display how much paper fed from the Multi Deck (Lower) is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation of the Multi Deck
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

COPIER > DISPLAY > CST-STS

REG-L-MF	1	Dspl side reg amount: Multi-purpose Tray
Detail		To display how much paper fed from the Multi-purpose Tray is displaced toward front/rear. +: Toward front -: Toward rear The value 10 times higher than the travel distance of paper (mm) moved by side registration correction control is displayed.
Use Case		At installation of the Multi-purpose Tray Pickup Unit
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-100 to 100
Unit		mm
Appropriate Target Value		-10 to 10
Default Value		0
Amount of Change per Unit		0.1

CIS-DUP	1	Display of image shift amount: 2nd side
Detail		To display the shift amount against the 1st side when shifting the image on the 2nd side by left edge registration position adjustment control. The value 10 times higher than the shift amount (unit: mm) is displayed on the screen. +: Moves toward front -: Moves toward rear The value is updated by setting 1 for CIS-OFF and then performing 2-sided feed.
Use Case		When checking the shift amount of image on the 2nd side
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-50 to 50
Unit		mm
Appropriate Target Value		-20 - 20
Related Service Mode		COPIER> OPTION> FEED-SW> CIS-OFF
Amount of Change per Unit		0.1

■ HV-STS

COPIER > DISPLAY > HV-STS

PRIMARY	1	Display of primary charging current
Detail		To display the current flown to the Primacy Charging Assembly at the latest. The result set in COPIER> ADJUST> HV-PRI> PRIMARY is reflected.
Use Case		When checking ON/OFF of potential control
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1600
Unit		uA
Related Service Mode		COPIER> ADJUST> HV-PRI> PRIMARY
Amount of Change per Unit		1

PRI-GRID	1	Display of Bk primary charging grid bias
Detail		To display the Bk-color primary charging grid bias applied after execution of potential control.
Use Case		When checking ON/OFF of potential control
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-1300 to 0
Unit		V
Amount of Change per Unit		1

COPIER > DISPLAY > HV-STS

PRE-TR	1	Dspl of pre-transfer charge DC current
Detail		To display the DC current flown to the Primacy Charging Assembly at the latest. The result set in COPIER> ADJUST> HV-TR> PRE-TR is reflected.
Use Case		At the time of checking
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-650 to 0
Unit		uA
Amount of Change per Unit		1

1ATVC-Y	2	Dspl Y pry trns paper interval current
Detail		To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (Y) by the primary transfer paper interval ATVC control.
Use Case		When estimating the life of Primary Transfer Roller based on the displayed value
Adj/Set/Operate Method		N/A (Display only)
Caution		Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
Display/Adj/Set Range		0 to 900
Unit		uA
Amount of Change per Unit		1

1ATVC-M	2	Dspl M pry trns paper interval current
Detail		To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (M) by the primary transfer paper interval ATVC control.
Use Case		When estimating the life of Primary Transfer Roller based on the displayed value
Adj/Set/Operate Method		N/A (Display only)
Caution		Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
Display/Adj/Set Range		0 to 900
Unit		uA
Amount of Change per Unit		1

1ATVC-C	2	Dspl C pry trns paper interval current
Detail		To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (C) by the primary transfer paper interval ATVC control.
Use Case		When estimating the life of Primary Transfer Roller based on the displayed value
Adj/Set/Operate Method		N/A (Display only)
Caution		Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
Display/Adj/Set Range		0 to 900
Unit		uA
Amount of Change per Unit		1

COPIER > DISPLAY > HV-STS

1ATVC-K4	2	Dspl Bk pry trns ppr intvl crrnt: clr
Detail		To display the decuple value of the paper interval current lastly flown to the Primary Transfer Roller (Bk) by the primary transfer paper interval ATVC control in color mode.
Use Case		When estimating the life of Primary Transfer Roller based on the displayed value
Adj/Set/Operate Method		N/A (Display only)
Caution		Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
Display/Adj/Set Range		0 to 900
Unit		uA
Amount of Change per Unit		1

1ATVC-K1	2	Dspl Bk pry trns ppr intvl crrnt: B&W
Detail		To display the decuple value of the paper interval current lastly flown to the Bk Primary Transfer Roller by the primary transfer paper interval ATVC control in black mode.
Use Case		When estimating the life of Primary Transfer Roller based on the displayed value
Adj/Set/Operate Method		N/A (Display only)
Caution		Right after turning OFF and then ON the power, primary transfer paper interval ATVC control is not yet executed; therefore, the value is not displayed correctly. Be sure to make 2 sheets or more of 2-sided print or 3 sheets or more of 1-sided print.
Display/Adj/Set Range		0 to 900
Unit		uA
Amount of Change per Unit		1

2EL	2	Dspl of Sec Trns Static Eliminator bias
Detail		To display the bias which is applied to the Secondary Transfer Static Eliminator at the latest.
Use Case		At the time of checking
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-4000 to 0
Unit		V
Amount of Change per Unit		1

PR-GRI-K	2	Dspl of Primary Charging Ass'y grid bias
Detail		To display the grid bias voltage that is applied to the Primacy Charging Assembly at the latest.
Use Case		When checking the grid bias of the Primary Charging Assembly
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-1200 to 0
Unit		V
Amount of Change per Unit		1

COPIER > DISPLAY > HV-STS

2ATVC-F1	**2**	**Sec Trns ATVC target current:clr,1/1 SPD**
Detail	To display the decuple value of the target current at 1/1 speed in color mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	
PRIACV-Y	**2**	**For R&D**
Amount of Change per Unit	1	
PRIACV-M	**2**	**For R&D**
Amount of Change per Unit	1	
PRIACV-C	**2**	**For R&D**
Amount of Change per Unit	1	
2ATVC-M1	**2**	**Sec Trns ATVC target current:B&W,1/1 SPD**
Detail	To display the decuple value of the target current at 1/1 speed in black mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	
2ATVC-F2	**2**	**Sec Trns ATVC target current:clr,2/3 SPD**
Detail	To display the decuple value of the target current at 2/3 speed in color mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	
2ATVC-M2	**2**	**Sec Trns ATVC target current:B&W,2/3 SPD**
Detail	To display the decuple value of the target current at 2/3 speed in black mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	

COPIER > DISPLAY > HV-STS

2ATVC-F3	**2**	**Sec Trns ATVC target current:clr,1/2 SPD**
Detail	To display the decuple value of the target current at 1/2 speed in color mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	
2ATVC-M3	**2**	**Sec Trns ATVC target current:B&W,1/2 SPD**
Detail	To display the decuple value of the target current at 1/2 speed in black mode derived from the latest secondary transfer Full ATVC control.	
Use Case	When judging whether the secondary transfer is appropriately set at image failure	
Adj/Set/Operate Method	N/A (Display only)	
Caution	The correct value is not shown unless paper feed has triggered the secondary transfer ATVC control after power-off/on.	
Unit	uA	
Amount of Change per Unit	1	
PRIACI-Y	**2**	**Dischg crrnt ctrl Y AC crrnt set VL: 1/1**
Detail	To display the AC current setting value flowing to the Primary Charging Roller (Y) at 1/1 speed derived from the latest discharge current control.	
Use Case	When checking the AC current of discharge current control	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5000	
Unit	uA	
Amount of Change per Unit	1	
PRIACI-M	**2**	**Dischg crrnt ctrl M AC crrnt set VL: 1/1**
Detail	To display the AC current setting value flowing to the Primary Charging Roller (M) at 1/1 speed derived from the latest discharge current control.	
Use Case	When checking the AC current of discharge current control	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5000	
Unit	uA	
Amount of Change per Unit	1	
PRIACI-C	**2**	**Dischg crrnt ctrl C AC crrnt set VL: 1/1**
Detail	To display the AC current setting value flowing to the Primary Charging Roller (C) at 1/1 speed derived from the latest discharge current control.	
Use Case	When checking the AC current of discharge current control	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5000	
Unit	uA	
Amount of Change per Unit	1	

COPIER > DISPLAY > HV-STS

PRISMP-Y	**2**	**Dischg crrnt ctrl Y AC crrnt sample VL**
Detail	To display the AC current value flown to the Primary Charging Roller (Y) to which the certain voltage is applied by the latest discharge current control. AC voltage/current to be applied at 1/1 speed is derived from 6 sampling results.	
Use Case	When checking the sampling results of discharge current control	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5000	
Unit	uA	
Amount of Change per Unit	1	
PRISMP-M	**2**	**Dischg crrnt ctrl M AC crrnt sample VL**
Detail	To display the AC current value flown to the Primary Charging Roller (M) to which the certain voltage is applied by the latest discharge current control. AC voltage/current to be applied at 1/1 speed is derived from 6 sampling results.	
Use Case	When checking the sampling results of discharge current control	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5000	
Unit	uA	
Amount of Change per Unit	1	
PRISMP-C	**2**	**Dischg crrnt ctrl C AC crrnt sample VL**
Detail	To display the AC current value flown to the Primary Charging Roller (C) to which the certain voltage is applied by the latest discharge current control. AC voltage/current to be applied at 1/1 speed is derived from 6 sampling results.	
Use Case	When checking the sampling results of discharge current control	
Adj/Set/Operate Method	N/A (Display only)

CLN1-PV3	2	Dspl upstm clean current:1/2SPD,img form
Detail		To display the current flowing to the ITB Cleaning Roller (Upstream) when forming an image at 1/2 speed.
Use Case		When analyzing the cause of the cleaning failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-50 to -1
Unit		uA
Related Service Mode		COPIER> ADJUST> HV-TR> CLN1-I3 COPIER> DISPLAY> HV-STS> CLN1-V3
Amount of Change per Unit		1

CLN1-V1	2	Dspl upstm clean voltage:1/1SPD,img form
Detail		To display the bias applied to the ITB Cleaning Roller (Upstream) when forming an image at 1/1 speed.
Use Case		When analyzing the cause of the cleaning failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-5000 to -500
Unit		V
Related Service Mode		COPIER> ADJUST> HV-TR> CLN1-I1 COPIER> DISPLAY> HV-STS> CLN1-PV1
Supplement/Memo		At image formation, toner is distributed on the ITB unevenly, so bias is not stable. Voltage is actually measured during initial rotation right before forming an image.
Amount of Change per Unit		1

CLN1-V2	2	Dspl upstm clean voltage:2/3SPD,img form
Detail		To display the bias applied to the ITB Cleaning Roller (Upstream) when forming an image at 2/3 speed.
Use Case		When analyzing the cause of the cleaning failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-5000 to -500
Unit		V
Related Service Mode		COPIER> ADJUST> HV-TR> CLN1-I2 COPIER> DISPLAY> HV-STS> CLN1-PV2
Supplement/Memo		At image formation, toner is distributed on the ITB unevenly, so bias is not stable. Voltage is actually measured during initial rotation right before forming an image.

TARGET-B	2	Display of Blue shading target value
Detail		To display the shading target value of Blue. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		512 - 2047

TARGET-G	2	Display of Green shading target value
Detail		To display the target value of Green. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		512 - 2047

COPIER > DISPLAY > CCD

TARGET-R	**2**	**Display of Red shading target value**
Detail		To display the shading target value of Red. Continuous display of 0 (minimum) or FFFF (maximum) is considered a failure of the Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		512 - 2047
GAIN-OB	**2**	**Gain level of Read Sensor odd bit(B):frt**
Detail		To display the Blue gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143
GAIN-OG	**2**	**Gain level of Read Sensor odd bit(G):frt**
Detail		To display the Green gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143
GAIN-OR	**2**	**Gain level of Read Sensor odd bit(R):frt**
Detail		To display the Red gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143
GAIN-EB	**2**	**Gain lvl of Read Sensor even bit(B):frt**
Detail		To display the Blue gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

COPIER > DISPLAY > CCD

GAIN-EG	**2**	**Gain lvl of Read Sensor even bit(G):frt**
Detail		To display the Green gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143
GAIN-ER	**2**	**Gain lvl of Read Sensor even bit(R):frt**
Detail		To display the Red gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for front side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143
LAMP-BW	**2**	**Dspl LED light intnsty adj VL:B&W, front**
Detail		To display the LED light intensity adjustment value of Scanner Unit (for front side) in B&W scanning mode.
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		100 - 275
Supplement/Memo		LED cannot be replaced individually. Replace the Scanner Unit.
LAMP-CL	**2**	**Dspl LED light intnsty adj VL:clr, front**
Detail		To display the LED light intensity adjustment value of Scanner Unit (for front side) in color scanning mode.
Use Case		When image failure occurs at front side scanning in color mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		100 - 275
Supplement/Memo		LED cannot be replaced individually. Replace the Scanner Unit.
LAMP2-BW	**2**	**Dspl LED light intnsty adj VL: B&W, back**
Detail		To display the LED light intensity adjustment value of Scanner Unit (for back side) in B&W scanning mode.
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		100 - 275
Supplement/Memo		LED cannot be replaced individually. Replace the Scanner Unit.

COPIER > DISPLAY > CCD

LAMP2-CL	2	Dspl LED light intnsty adj VL: clr, back
Detail		To display the LED light intensity adjustment value of Scanner Unit (for back side) in color scanning mode.
Use Case		When image failure occurs at back side scanning in color mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		100 - 275
Supplement/Memo		LED cannot be replaced individually. Replace the Scanner Unit.

OFST-BW	2	Dspl Read Sensor offset value:B&W, front
Detail		To display the offset value of the Reading Sensor of Scanner Unit (for front side) in B&W scanning mode.
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 116

OFST-CL	2	Dspl Read Sensor offset value:clr, front
Detail		To display the offset value of the Reading Sensor of Scanner Unit (for front side) in color scanning mode.
Use Case		When image failure occurs at front side scanning in color mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 116

OFST2-BW	2	Dspl Read Sensor offset value: B&W, back
Detail		To display the offset value of the Reading Sensor of Scanner Unit (for back side) in B&W scanning mode.
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 116

GAIN-BW1	2	Read Sensor gain level adj VL1: B&W, frt
Detail		To display the Reading Sensor B&W gain level adjustment value 1 of Scanner Unit (for front side).
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN-BW2	2	Read Sensor gain level adj VL2: B&W, frt
Detail		To display the Reading Sensor B&W gain level adjustment value 2 of Scanner Unit (for front side).
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN-BW3	2	Read Sensor gain level adj VL3: B&W, frt
Detail		To display the Reading Sensor B&W gain level adjustment value 3 of Scanner Unit (for front side).
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

COPIER > DISPLAY > CCD

GAIN-BW4	2	Read Sensor gain level adj VL4: B&W, frt
Detail		To display the Reading Sensor B&W gain level adjustment value 4 of Scanner Unit (for front side).
Use Case		When image failure occurs at front side scanning in black mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN2BW1	2	Read Sensor gain level adj VL1:B&W, back
Detail		To display the Reading Sensor B&W gain level adjustment value 1 of Scanner Unit (for back side).
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN2BW2	2	Read Sensor gain level adj VL2:B&W, back
Detail		To display the Reading Sensor B&W gain level adjustment value 2 of Scanner Unit (for back side).
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN2BW3	2	Read Sensor gain level adj VL3:B&W, back
Detail		To display the Reading Sensor B&W gain level adjustment value 3 of Scanner Unit (for back side).
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN2BW4	2	Read Sensor gain level adj VL4:B&W, back
Detail		To display the Reading Sensor B&W gain level adjustment value 4 of Scanner Unit (for back side).
Use Case		When image failure occurs at back side scanning in black mode.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

GAIN2-OR	2	Gain lvl of Read Sensor odd bit(R):back
Detail		To display the Red gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.
Use Case		- When replacing the Reader Controller PCB - At scanned image failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 143

COPIER > DISPLAY > CCD

GAIN2-OG	2	Gain lvl of Read Sensor odd bit(G):back
Detail	To display the Green gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.	
Use Case	- When replacing the Reader Controller PCB - At scanned image failure	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to FFFF	
Appropriate Target Value	0 - 143	

GAIN2-OB	2	Gain lvl of Read Sensor odd bit(B):back
Detail	To display the Blue gain level adjustment value in odd-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.	
Use Case	- When replacing the Reader Controller PCB - At scanned image failure	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to FFFF	
Appropriate Target Value	0 - 143	

GAIN2-ER	2	Gain lvl of Read Sensor even bit(R):back
Detail	To display the Red gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.	
Use Case	- When replacing the Reader Controller PCB - At scanned image failure	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to FFFF	
Appropriate Target Value	0 - 143	

GAIN2-EG	2	Gain lvl of Read Sensor even bit(G):back
Detail	To display the Green gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.	
Use Case	- When replacing the Reader Controller PCB - At scanned image failure	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to FFFF	
Appropriate Target Value	0 - 143	

GAIN2-EB	2	Gain lvl of Read Sensor even bit(B):back
Detail	To display the Blue gain level adjustment value in even-numbered bit on the Reading Sensor of Scanner Unit (for back side). Continuous display of upper limit is considered a failure of the Scanner Unit/Reader Controller PCB.	
Use Case	- When replacing the Reader Controller PCB - At scanned image failure	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to FFFF	
Appropriate Target Value	0 - 143	

COPIER > DISPLAY > CCD

OFST2-CL	2	Dspl Read Sensor offset value:clr, back
Detail		To display the offset value of the Reading Sensor of Scanner Unit (for back side) in color scanning mode.
Use Case		When image failure occurs at back side scanning in color mode
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to FFFF
Appropriate Target Value		0 - 116

■ DPOT

COPIER > DISPLAY > DPOT

DPOT-K	1	Dspl Bk Photo-s Drum sface potntl tgt VL
Detail		To display the target surface potential Vd of the Bk-color Photosensitive Drum that is specified as a result of the potential control. The value after the calculation of potential offset is displayed.
Use Case		When checking the target surface potential of the drum
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-1100 to 0
Unit		V
Amount of Change per Unit		1

VCONT-Y	2	Dspl Y dev contrast potential: 1/1 SPD
Detail		To display the Y-color developing contrast potential Vcont at 1/1 speed.
Use Case		When checking developing contrast potential
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 800
Unit		V
Amount of Change per Unit		1

VCONT-M	2	Dspl M dev contrast potential: 1/1 SPD
Detail		To display the M-color developing contrast potential Vcont at 1/1 speed.
Use Case		When checking developing contrast potential
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 800
Unit		V
Amount of Change per Unit		1

VCONT-C	2	Dspl C dev contrast potential: 1/1 SPD
Detail		To display the C-color developing contrast potential Vcont at 1/1 speed.
Use Case		When checking developing contrast potential
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 800
Unit		V
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

VCONT-K	2	Dspl Bk dev contrast potential: 1/1 SPD
Detail		To display the Bk-color developing contrast potential Vcont at 1/1 speed.
Use Case		When checking developing contrast potential
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 800
Unit		V
Amount of Change per Unit		1

VBACK-Y	2	Dspl Y-clr fog removal potential:1/1SPD
Detail		To display the setting value of Y-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast
Amount of Change per Unit		1

VBACK-M	2	Dspl M-clr fog removal potential:1/1SPD
Detail		To display the setting value of M-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

VBACK-C	**2**	**Dspl C-clr fog removal potential:1/1SPD**
Detail		To display the setting value of C-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast
Amount of Change per Unit		1
VBACK-K	**2**	**Dspl Bk-clr fog removal potential:1/1SPD**
Detail		To display the setting value of Bk-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/1 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast.
Use Case		When checking the setting value of fogging removal potential at image failure such as fogging
Adj/Set/Operate Method		N/A (Display only)
Caution		Fogging occurred in the normal use range of 150 to 250 V is judged as an error on the high voltage or the Potential Sensor.
Display/Adj/Set Range		0 to 300
Unit		V
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

P-LPW-K	2	Display of Bk patch target laser power
Detail		To display the laser power to be used as a target Bk-color patch contrast potential. Check the laser power to be used as a target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		- When analyzing the cause of the image density failure - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00 to FF (hexadecimal)

D-CONT-Y	1	Dspl Y Photo-s Drum total charging time
Detail		To display the total charging time (charging counter) for the Y-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETY.
Use Case		When checking if the high voltage is properly set
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 10000000
Unit		msec
Related Service Mode		COPIER> FUNCTION> DPC> DRMRSETY
Amount of Change per Unit		100

D-CONT-M	1	Dspl M Photo-s Drum total charging time
Detail		To display the total charging time (charging counter) for the M-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETM.
Use Case		When checking if the high voltage is properly set
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 10000000
Unit		msec
Related Service Mode		COPIER> FUNCTION> DPC> DRMRSETM
Amount of Change per Unit		100

D-CONT-C	1	Dspl C Photo-s Drum total charging time
Detail		To display the total charging time (charging counter) for the C-color Photosensitive Drum. To reset the total charging time, execute COPIER> FUNCTION> DPC> DRMRSETC.
Use Case		When checking if the high voltage is properly set
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 10000000
Unit		msec
Related Service Mode		COPIER> FUNCTION> DPC> DRMRSETC

Use Case	When foggy image occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Amount of Change per Unit	1	
LPWR2-M	**2**	**Display of M-color laser power: 2/3 SPD**
Detail	To display M-color laser power determined by D-max control at 2/3 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.	
Use Case	When foggy image occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Amount of Change per Unit	1	
LPWR2-C	**2**	**Display of C-color laser power: 2/3 SPD**
Detail	To display C-color laser power determined by D-max control at 2/3 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.	
Use Case	When foggy image occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Amount of Change per Unit	1	
LPWR2-K	**2**	**Display of Bk-color laser power: 2/3 SPD**
Detail	To display Bk-color laser power determined by D-max control at 2/3 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.	
Use Case	When foggy image occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Amount of Change per Unit	1	

COPIER > DISPLAY > DPOT

LPWR3-Y	**2**	**Display of Y-color laser power: 1/2 SPD**
Detail		To display Y-color laser power determined by D-max control at 1/2 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
Amount of Change per Unit		1
LPWR3-M	**2**	**Display of M-color laser power: 1/2 SPD**
Detail		To display M-color laser power determined by D-max control at 1/2 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
Amount of Change per Unit		1
LPWR3-C	**2**	**Display of C-color laser power: 1/2 SPD**
Detail		To display C-color laser power determined by D-max control at 1/2 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
Amount of Change per Unit		1
LPWR3-K	**2**	**Display of Bk-color laser power: 1/2 SPD**
Detail		To display Bk-color laser power determined by D-max control at 1/2 speed. If "FF" is displayed although the image density is low, this indicates that the Photosensitive Drum is near the end of life.
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
Amount of Change per Unit		1
PVCON2-Y	**2**	**Dspl Y tgt patch contrast potntl:2/3 SPD**
Detail		To display the target Y-color patch contrast potential at 2/3 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

PVCON2-M	2	Dspl M tgt patch contrast potntl:2/3 SPD
Detail		To display the target M-color patch contrast potential at 2/3 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

PVCON2-C	2	Dspl C tgt patch contrast potntl:2/3 SPD
Detail		To display the target C-color patch contrast potential at 2/3 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

PVCON2-K	2	Dspl Bk tgt patch contrast potntl:2/3SPD
Detail		To display the target Bk-color patch contrast potential at 2/3 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

PVCON3-Y	2	Dspl Y tgt patch contrast potntl:1/2 SPD
Detail		To display the target Y-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

PVCON3-M	2	Dspl M tgt patch contrast potntl:1/2 SPD
Detail		To display the target M-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

PVCON3-C	2	Dspl C tgt patch contrast potntl:1/2 SPD
Detail		To display the target C-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

PVCON3-K	2	Dspl Bk tgt ptch contrast potntl:1/2 SPD
Detail		To display the target Bk-color patch contrast potential at 1/2 speed. Check the target patch contrast potential to check whether the toner supply control is properly executed at image density failure. Investigate the other possible factors if the value is within the defined range.
Use Case		At the occurrence of an image density failure
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 500
Unit		V
Amount of Change per Unit		1

VBACK2-Y	2	Dspl Y-clr fog removal potential:2/3SPD
Detail		To display the setting value of Y-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

VBACK2-M	2	Dspl M-clr fog removal potential:2/3SPD
Detail		To display the setting value of M-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Amount of Change per Unit		1

VBACK2-C	2	Dspl C-clr fog removal potential:2/3SPD
Detail		To display the setting value of C-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Amount of Change per Unit		1

VBACK2-K	2	Dspl Bk-clr fog removal potential:2/3SPD
Detail		To display the setting value of Bk-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 2/3 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast.
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 300
Unit		V
Appropriate Target Value		175
Amount of Change per Unit		1

COPIER > DISPLAY > DPOT

VBACK3-Y	2	Dspl Y-clr fog removal potential:1/2SPD
Detail		To display the setting value of Y-color fogging removal potential Vback (difference between the developing DC bias and the charging potential) at 1/2 speed. The fogging correction value is set based on this value corrected in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast. If fogging occurs even though it is within the appropriate range, it is considered a failure of the Primary Charging High Voltage PCB/Potential Control PCB
Use Case		When foggy image occurs
Adj/Set/Operate Method		N/A (Display only)

■ DENS

COPIER > DISPLAY > DENS

DENS-Y	**1**	**Dspl of Y developer density change ratio**
Detail	To display the difference between Y-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.	
Use Case	- When the density varies dramatically - When the density is unstable even after gradation correction	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	-8 to 8	
Unit	%	
Amount of Change per Unit	1	

DENS-M	**1**	**Dspl of M developer density change ratio**
Detail	To display difference between M-color developer density and the target value in % (percentage). Intolerable difference will trigger E020. This may be caused by deterioration of the developer, failure/open circuit of the Toner Density Sensor or error in toner supply system. The value is updated upon print operation after power-on.	
Use Case	- When the density varies dramatically - When the density is unstable even after gradation correction	
Adj/Set/Operate Method	N/A (Display only)

Use Case	When analyzing the cause of a problem	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Appropriate Target Value	50 - 200	
REF-K	**2**	**Dspl Bk developer density target value**
Detail	To display the Bk-color developer density target value.	
Use Case	When analyzing the cause of a problem	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Appropriate Target Value	50 - 200	

COPIER > DISPLAY > DENS

SGNL-Y	**1**	**Display of Y-color developer density**
Detail		To display the measured value of Y-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
Appropriate Target Value		20 - 230
Related Service Mode		COPIER> DISPLAY> DENS> DENS-Y
SGNL-M	**1**	**Display of M-color developer density**
Detail		To display the measured value of M-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
SGNL-C	**1**	**Display of C-color developer density**
Detail		To display the measured value of C-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
SGNL-K	**1**	**Display of Bk-color developer density**
Detail		To display the measured value of Bk-color developer density. The density is measured with the Toner Density Sensor for each job. The value is updated upon print operation after power-on.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
P-SENS-P	**2**	**Dspl Bk base intensity (P-wave):ATR ctrl**
Detail		To display the light intensity (P-wave) reflected from the background (Bk-color Photosensitive Drum) at ATR control. If the value is not appropriate, the following may be the cause: - Open circuit/failure of the Drum Patch Sensor (Bk), soiled sensor surface - Bk-color Drum Patch Sensor Shutter error - Drum Patch Shutter Solenoid (Bk) error - Cleaning failure of the Photosensitive Drum, etc.
Use Case		When checking the Drum Patch Sensor/Photosensitive Drum at low density, fogging deterioration or E020 occurrence
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Related Service Mode		COPIER> DISPLAY> DENS> P-SENS-S

DEV-DC-Y	**2**	**Display of developing DC bias (Y)**
Detail	To display the Y developing DC bias Vdc applied at the latest.	
Use Case	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1023	
Unit	V	
Amount of Change per Unit	1	
DEV-DC-M	**2**	**Display of developing DC bias (M)**
Detail	To display the M developing DC bias Vdc applied at the latest.	
Use Case	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1023	
Unit	V	
Amount of Change per Unit	1	
DEV-DC-C	**2**	**Display of developing DC bias (C)**
Detail	To display the C developing DC bias Vdc applied at the latest.	
Use Case	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1023	
Unit	V	
Amount of Change per Unit	1	
DEV-DC-K	**2**	**Display of developing DC bias (Bk)**
Detail	To display the Bk developing DC bias Vdc applied at the latest.	
Use Case	- When image failure occurs due to carrier adherence - When fogging occurs/is deteriorated	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1023	
Unit	V	
Amount of Change per Unit	1	
CHG-DC-Y	**2**	**Dspl of primary charging DC voltage (Y)**
Detail	To display the latest primary charging DC voltage of Y color.	
Use Case	When low density or fogging occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	-1000 to 0	
Unit	V	
Appropriate Target Value	-870 - -450	
Amount of Change per Unit	1	

COPIER > DISPLAY > DENS

CHG-DC-M	**2**	**Dspl of primary charging DC voltage (M)**
Detail		To display the latest primary charging DC voltage of M color.
Use Case		When low density or fogging occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-1000 to 0
Unit		V
Appropriate Target Value		-870 - -450
Amount of Change per Unit		1
CHG-DC-C	**2**	**Dspl of primary charging DC voltage (C)**
Detail		To display the latest primary charging DC voltage of C color.
Use Case		When low density or fogging occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		-1000 to 0
Unit		V
Appropriate Target Value		-870 - -450
Amount of Change per Unit		1
D-K-TRGT	**2**	**Dspl of Bk patch target density:ATR ctrl**
Detail		To display the Bk patch image target density created by ATR control.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		0 to 1023
D-CRNT-P	**2**	**Dspl of Bk dark current(P-wave):ATR ctrl**
Detail		To display the Bk-color dark current value (P-wave) measured at ATR control.
Use Case		When checking the Drum Patch Sensor (Bk)
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Related Service Mode		COPIER> DISPLAY> DENS> D-CRNT-S
D-CRNT-S	**2**	**Dspl of Bk dark current(S-wave):ATR ctrl**
Detail		To display the Bk-color dark current value (S-wave) measured at ATR control.
Use Case		When checking the Drum Patch Sensor (Bk)
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Related Service Mode		COPIER> DISPLAY> DENS> D-CRNT-P

COPIER > DISPLAY > DENS

P-SENS-S	**2**	**Dspl Bk base intensity (S-wave):ATR ctrl**
Detail		To display the light intensity (S-wave) reflected from the background (Bk-color Photosensitive Drum) at ATR control. If the value is not appropriate, the following may be the cause: - Open circuit/failure of the Drum Patch Sensor (Bk), soiled sensor surface - Bk-color Drum Patch Sensor Shutter error - Drum Patch Shutter Solenoid (Bk) error - Cleaning failure of the Photosensitive Drum, etc.
Use Case		When checking the Drum Patch Sensor/Photosensitive Drum at low density, fogging deterioration or E020 occurrence
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Related Service Mode		COPIER> DISPLAY> DENS> P-SENS-P
DENS-Y-H	**2**	**Dspl of Y-clr TD ratio log: ATR control**
Detail		To display the latest 8 Y-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
Use Case		When checking toner density in the Developing Assembly at low density or fogging deterioration
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
DENS-M-H	**2**	**Dspl of M-clr TD ratio log: ATR control**
Detail		To display the latest 8 M-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
Use Case		When checking toner density in the Developing Assembly at low density or fogging deterioration
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
DENS-C-H	**2**	**Dspl of C-clr TD ratio log: ATR control**
Detail		To display the latest 8 C-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.
Use Case		When checking toner density in the Developing Assembly at low density or fogging deterioration
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
DS-S-Y-H	**2**	**Dspl of Y-color patch image density log**
Detail		To display the latest 8 Y-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.
Use Case		When analyzing the cause of E020
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		0 to 1023

COPIER > DISPLAY > DENS

DS-S-M-H	**2**	**Dspl of M-color patch image density log**
Detail	To display the latest 8 M-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.	
Use Case	When analyzing the cause of E020	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
DS-S-C-H	**2**	**Dspl of C-color patch image density log**
Detail	To display the latest 8 C-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.	
Use Case	When analyzing the cause of E020	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
DS-S-K-H	**2**	**Dspl of Bk-color patch image density log**
Detail	To display the latest 8 Bk-patch image density log data. It is the reference for judging the cause at E020 occurrence, etc. Sharp change in values may indicate the failure in Patch Sensor, Shutter or laser, whereas gradual change may indicate failure in toner supply system. This is particularly caused by Patch Sensor.	
Use Case	When analyzing the cause of E020	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
P-LED-DA	**2**	**Dspl of Patch Sensor LED light intensity**
Detail	To display the Patch Sensor LED light intensity. The soiled Sensor window or soiled ITB (ITB cleaning failure) is suspected if the background light intensity (P-wave) is too low even with sufficient LED light intensity and PT-LPADJ execution will not correct the problem.	
Use Case	When checking the Patch Sensor	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 1023	
Related Service Mode	COPIER> DISPLAY> DENS> P-SENS-P COPIER> FUNCTION> MISC-P> PT-LPADJ	
SPL-LG-Y	**2**	**Display of Y-color toner supply log**
Detail	To display the latest 8 Y-toner supply log data. Each data represents the number of toner blocks supplied per paper.	
Use Case	When checking toner supply status at E020 occurrence, low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5	
SPL-LG-M	**2**	**Display of M-color toner supply log**
Detail	To display the latest 8 M-toner supply log data. Each data represents the number of toner blocks supplied per paper.	
Use Case	When checking toner supply status at E020 occurrence, low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5	

COPIER > DISPLAY > DENS

SPL-LG-C	**2**	**Display of C-color toner supply log**
Detail	To display the latest 8 C-toner supply log data. Each data represents the number of toner blocks supplied per paper.	
Use Case	When checking toner supply status at E020 occurrence, low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5	
P-B-P-K	**1**	**Dspl Bk drum base intnsty,Pwave:ATR ctrl**
Detail	To display the Photosensitive Drum (Bk) base light intensity (P-wave) detected at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor (Bk).	
Use Case	At low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
P-B-S-Y	**1**	**ITB rear base intensity (Swave):ATR ctrl**
Detail	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Rear) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.	
Use Case	At low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
P-B-S-M	**1**	**ITB ctr base intensity (Swave):ATR ctrl**
Detail	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Center) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.	
Use Case	At low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
P-B-S-C	**1**	**ITB frt base intensity (Swave):ATR ctrl**
Detail	To display the background (ITB) light intensity (S-wave) detected by the Registration Patch Sensor (Front) at ATR control. At low density or fogging deterioration, use this mode to check whether there is a problem in the Patch Sensor.	
Use Case	At low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
DENS-K-H	**2**	**Dspl of Bk-clr TD ratio log: ATR control**
Detail	To display the latest 8 Bk-toner density log data (TD ratio) detected by the Toner Density Sensor at ATR control. Sharp change in values may indicate open circuit/failure of Toner Density Sensor, whereas gradual change in values may indicate failure in toner supply system.	
Use Case	When checking toner density in the Developing Assembly at low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	

COPIER > DISPLAY > DENS

SPL-LG-K	**2**	**Display of Bk-color toner supply log**
Detail	To display the latest 8 Bk-toner supply log data. Each data represents the number of toner blocks supplied per paper.	
Use Case	When checking the toner supply status at low density or fogging deterioration	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 5	
CONT-M	**1**	**Dspl Toner Density Sensor (M) ctrl voltg**
Detail	To display the density detection control voltage of the Toner Density Sensor (M).	
Use Case	When checking before clearing RAM data	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Unit	V	
Amount of Change per Unit	1	
CONT-Y	**1**	**Dspl Toner Density Sensor (Y) ctrl voltg**
Detail	To display the density detection control voltage of the Toner Density Sensor (Y).	
Use Case	When checking before clearing RAM data	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Unit	V	
Amount of Change per Unit	1	
CONT-C	**1**	**Dspl Toner Density Sensor (C) ctrl voltg**
Detail	To display the density detection control voltage of the Toner Density Sensor (C).	
Use Case	When checking before clearing RAM data	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Unit	V	
Amount of Change per Unit	1	
CONT-K	**1**	**Dspl Toner Density Sensor(Bk) ctrl voltg**
Detail	To display the density detection control voltage of the Toner Density Sensor (Bk).	
Use Case	When checking before clearing RAM data	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 255	
Unit	V	
Amount of Change per Unit	1	
BASE-L-Y	**2**	**Dspl Y-color Guide Plate light intensity**
Detail	To display the light intensity of the Guide Plate for Y-color.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	

COPIER > DISPLAY > DENS

BASE-L-M	**2**	**Dspl M-color Guide Plate light intensity**
Detail	To display the light intensity of the Guide Plate for M-color.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
BASE-L-C	**2**	**Dspl C-color Guide Plate light intensity**
Detail	To display the light intensity of the Guide Plate for C-color.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
BASE-L-K	**2**	**Dspl Bk-clr Guide Plate light intensity**
Detail	To display the light intensity of the Guide Plate for Bk-color.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 9999	
P-ALF-Y	**1**	**Dspl Ptch Sns (Y) soil wdw crrct coeffct**
Detail	To display the soiled window correction coefficient alpha value of the Patch Sensor (Y). If the different between the initial value (left) and the current value (right) is 150 or more, clean the Patch Sensor.	
Use Case	- When hue variation occurs - When analyzing the cause of a problem	
Adj/Set/Operate Method	N/A (Display only)	
Display/Adj/Set Range	0 to 400	
Related Service Mode	COPIER> FUNCTION> SENS-ADL> PCHSTADJ	
P-ALF-M	**1**	**Dspl Ptch Sns (M) soil wdw crrct coeffct**
Detail	To display the soiled window correction coefficient alpha value of the Patch Sensor (M). If the different between the initial value (left) and the current value (right) is 150 or more, clean the Patch Sensor.	
Use Case	- When hue variation occurs - When analyzing the cause of a problem

Y-LED-DA	**1**	**Dspl Patch Sns (Y) light intnsty set VL**
Detail		To display the LED light intensity setting value of the Patch Sensor (Y).
Use Case		When an error related to the Patch Sensor occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Appropriate Target Value		300 - 700
Supplement/Memo		If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.
M-LED-DA	**1**	**Dspl Patch Sns (M) light intnsty set VL**
Detail		To display the LED light intensity setting value of the Patch Sensor (M).
Use Case		When an error related to the Patch Sensor occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Appropriate Target Value		300 - 700
Supplement/Memo		If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.
C-LED-DA	**1**	**Dspl Patch Sns (C) light intnsty set VL**
Detail		To display the LED light intensity setting value of the Patch Sensor (C).
Use Case		When an error related to the Patch Sensor occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Appropriate Target Value		300 - 700
Supplement/Memo		If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.
K-LED-DA	**1**	**Dspl Patch Sns (Bk) light intnsty set VL**
Detail		To display the LED light intensity setting value of the Patch Sensor (Bk).
Use Case		When an error related to the Patch Sensor occurs
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
Appropriate Target Value		300 - 700
Supplement/Memo		If the value is out of the appropriate range, clean the window of the Patch Sensor. If the problem is not solved, it is considered as a failure of the Patch Sensor.

FX-MTR2	**2**	**Dspl Fixing Motor crrnt VL log: 1/1 SPD**
Detail		To display the Fixing Motor current values (4 values in total) at 1/1 speed. The maximum and latest present values (values after clearing of counter value), the maximum and latest previous values (values before clearing of counter value) When the maximum present value exceeds the specified value, an alarm (06-0004) and an error (E008-001) are displayed. When the counter value is cleared at FX-BLT-L or FX-L-CLR, the present value is cleared after the previous value is overwritten with the present value.
Use Case		When investigating the drive torque at the Pressure Belt Unit replacement or error occurrence
Adj/Set/Operate Method		N/A (Display only)
Caution		Press the Clear key at FX-BLT-L when replacing the Pressure Belt Unit. For other than the replacement, execute FX-L-CLR to reset.
Display/Adj/Set Range		0 to 500, 0 to 500, 0 to 500, 0 to 500
Unit		mA
Related Service Mode		COPIER> COUNTER> DRBL-1> FX-BLT-L COPIER> FUNCTION> CLEAR> FX-L-CLR

FX-L-TM1	2	Dspl Press Belt Uni STBY total run time
Detail		To display the total value of Pressure Belt Unit's "STBY-equivalent running time" at all process speeds. "STBY-equivalent running time" is proportional to the rotations. When the counter value is cleared at FX-BLT-L, the values of FX-L-TM2 to 5 are also cleared.
Use Case		When checking the use history at the Pressure Belt Unit replacement or error occurrence
Adj/Set/Operate Method		N/A (Display only)
Caution		When replacing the Pressure Belt Unit, press the Clear key at FX-BLT-L to reset.
Display/Adj/Set Range		0 to 4294967295
Unit		sec
Related Service Mode		COPIER> COUNTER> DRBL-1> FX-BLT-L
Amount of Change per Unit		1

COPIER > DISPLAY > FIXING

FX-L-TM2	2	Dspl Pres Blt Unit run time:348mm/s, eng
Detail		To display the decuple value of the running time of the Pressure Belt Unit being engaged at process speed of 348 mm/sec. When the counter value is cleared at FX-BLT-L, the values at different process speeds are also cleared.
Use Case		When checking the use history at the Pressure Belt Unit replacement or error occurrence
Adj/Set/Operate Method		N/A (Display only)
Caution		When replacing the Pressure Belt Unit, press the Clear key at FX-BLT-L to reset.
Display/Adj/Set Range		0 to 999999
Unit		hour
Related Service Mode		COPIER> COUNTER> DRBL-1> FX-BLT-L

ENV-TR	**1**	**Display of outside device environment**
Detail		To display the environment outside the machine in the latest output.
Use Case		When checking the current installation environment
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 7
LPOWER-Y	**2**	**Display of Y-color laser light intensity**
Detail		To display the Y-color laser intensity in real-time.
Use Case		When analyzing the cause of the image density failure
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00 to FF
LPOWER-M	**2**	**Display of M-color laser light intensity**
Detail		To display the M-color laser intensity in real-time.
Use Case		When analyzing the cause of the image density failure
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00 to FF
LPOWER-C	**2**	**Display of C-color laser light intensity**
Detail		To display the C-color laser intensity in real-time.
Use Case		When analyzing the cause of the image density failure
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00 to FF
LPOWER-K	**2**	**Display of Bk-clr laser light intensity**
Detail		To display the Bk-color laser intensity in real-time.
Use Case		When analyzing the cause of the image density failure
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00 to FF
TNRB-IDY	**1**	**Display of Y-color Toner Container ID**
Detail		To display the ID of Y-color Toner Container that is installed to the machine
Use Case		When checking whether the barcode ID on the Toner Container is read correctly
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Character string (4 digits)
TNRB-IDM	**1**	**Display of M-color Toner Container ID**
Detail		To display the ID of M-color Toner Container that is installed to the machine
Use Case		When checking whether the barcode ID on the Toner Container is read correctly
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Character string (4 digits)
TNRB-IDC	**1**	**Display of C-color Toner Container ID**
Detail		To display the ID of C-color Toner Container that is installed to the machine
Use Case		When checking whether the barcode ID on the Toner Container is read correctly
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		Character string (4 digits)

COPIER > DISPLAY > MISC

TNRB-IDK	**1**	**Display of Bk-color Toner Container ID**
Detail		To display the ID of Bk-color Toner Container that is installed to the machine

SGNL-A-Y	**2**	**Mult tone scrnA Y-ptch current VL:1/1SPD**
Detail	To display the current Y-patch value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-A-M	**2**	**Mult tone scrnA M-ptch current VL:1/1SPD**
Detail	To display the current M-patch value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-A-C	**2**	**Mult tone scrnA C-ptch current VL:1/1SPD**
Detail	To display the current C-patch value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-A-K	**2**	**Mult tone scrnA K-ptch current VL:1/1SPD**
Detail	To display the current Bk-patch value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-B-Y	**2**	**Mult tone scrnB Y-ptch current VL:1/1SPD**
Detail	To display the current Y-patch value of screen B in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-B-M	**2**	**Mult tone scrnB M-ptch current VL:1/1SPD**
Detail	To display the current M-patch value of screen B in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	

COPIER > DISPLAY > HT-C

SGNL-B-C	**2**	**Mult tone scrnB C-ptch current VL:1/1SPD**
Detail	To display the current C-patch value of screen B in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-B-K	**2**	**Mult tone scrnB K-ptch current VL:1/1SPD**
Detail	To display the current Bk-patch value of screen B in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-C-Y	**2**	**Mult tone scrnC Y-ptch current VL:1/1SPD**
Detail	To display the current Y-patch value of screen C in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-C-M	**2**	**Mult tone scrnC M-ptch current VL:1/1SPD**
Detail	To display the current M-patch value of screen C in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-C-K	**2**	**Mult tone scrnC C-ptch current VL:1/1SPD**
Detail	To display the current C-patch value of screen C in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-C-C	**2**	**Mult tone scrnC K-ptch current VL:1/1SPD**
Detail	To display the current Bk-patch value of screen C in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023

DLTA-A-Y	**2**	**Multi tone scrnA Y-density differ:1/1SPD**
Detail	To display the difference between the Y-patch target value and the current value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLTA-A-M	**2**	**Multi tone scrnA M-density differ:1/1SPD**
Detail	To display the difference between the M-patch target value and the current value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLTA-A-C	**2**	**Multi tone scrnA C-density differ:1/1SPD**
Detail	To display the difference between the C-patch target value and the current value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLTA-A-K	**2**	**Multi tone scrnA K-density differ:1/1SPD**
Detail	To display the difference between the Bk-patch target value and the current value of screen A in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLTA-B-Y	**2**	**Multi tone scrnB Y-density differ:1/1SPD**
Detail	To display the difference between the Y-patch target value and the current value of screen B in real-time multiple tone control at 1/1 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023

SUM-A-K2	**2**	**Multi tone scrnA Bk ctrl differ: 2/3 SPD**
Detail	To display the Bk-patch control difference of screen A in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-B-Y2	**2**	**Multi tone scrnB Y ctrl differ: 2/3 SPD**
Detail	To display the Y-patch control difference of screen B in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-B-M2	**2**	**Multi tone scrnB M ctrl differ: 2/3 SPD**
Detail	To display the M-patch control difference of screen B in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-B-C2	**2**	**Multi tone scrnB C ctrl differ: 2/3 SPD**
Detail	To display the C-patch control difference of screen B in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-B-K2	**2**	**Multi tone scrnB Bk ctrl differ: 2/3 SPD**
Detail	To display the Bk-patch control difference of screen B in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	

COPIER > DISPLAY > HT-C

SUM-C-Y2	**2**	**Multi tone scrnC Y ctrl differ: 2/3 SPD**
Detail	To display the Y-patch control difference of screen C in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-C-M2	**2**	**Multi tone scrnC M ctrl differ: 2/3 SPD**
Detail	To display the M-patch control difference of screen C in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-C-C2	**2**	**Multi tone scrnC C ctrl differ: 2/3 SPD**
Detail	To display the C-patch control difference of screen C in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SUM-C-K2	**2**	**Multi tone scrnC Bk ctrl differ: 2/3 SPD**
Detail	To display the Bk-patch control difference of screen C in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-A-Y2	**2**	**Multi tone scrnA Y-density differ:2/3SPD**
Detail	To display the difference between the Y-patch target value and the current value of screen A in real-time multiple tone control at 2/3 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs

Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-B-C3	**2**	**Multi tone scrnB C-density differ:1/2SPD**
Detail	To display the difference between the C-patch target value and the current value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-B-K3	**2**	**Multi tone scrnB K-density differ:1/2SPD**
Detail	To display the difference between the Bk-patch target value and the current value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-C-Y3	**2**	**Multi tone scrnC Y-density differ:1/2SPD**
Detail	To display the difference between the Y-patch target value and the current value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	

COPIER > DISPLAY > HT-C

DLT-C-M3	**2**	**Multi tone scrnC M-density differ:1/2SPD**
Detail	To display the difference between the M-patch target value and the current value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-C-C3	**2**	**Multi tone scrnC C-density differ:1/2SPD**
Detail	To display the difference between the C-patch target value and the current value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
DLT-C-K3	**2**	**Multi tone scrnC K-density differ:1/2SPD**
Detail	To display the difference between the Bk-patch target value and the current value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, execute the auto gradation adjustment (reset the target value). Check the Patch Sensor if not corrected.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	-1023 to 1023	
SGL-A-Y3	**2**	**Mult tone scrnA Y-ptch current VL:1/2SPD**
Detail	To display the current Y-patch value of screen A in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-A-M3	**2**	**Mult tone scrnA M-ptch current VL:1/2SPD**
Detail	To display the current M-patch value of screen A in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	

COPIER > DISPLAY > HT-C

SGL-A-C3	**2**	**Mult tone scrnA C-ptch current VL:1/2SPD**
Detail	To display the current C-patch value of screen A in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-A-K3	**2**	**Mult tone scrnA K-ptch current VL:1/2SPD**
Detail	To display the current Bk-patch value of screen A in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-B-Y3	**2**	**Mult tone scrnB Y-ptch current VL:1/2SPD**
Detail	To display the current Y-patch value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-B-M3	**2**	**Mult tone scrnB M-ptch current VL:1/2SPD**
Detail	To display the current M-patch value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-B-C3	**2**	**Mult tone scrnB C-ptch current VL:1/2SPD**
Detail	To display the current C-patch value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-B-K3	**2**	**Mult tone scrnB K-ptch current VL:1/2SPD**
Detail	To display the current Bk-patch value of screen B in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	

COPIER > DISPLAY > HT-C

SGL-C-Y3	**2**	**Mult tone scrnC Y-ptch current VL:1/2SPD**
Detail	To display the current Y-patch value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-C-M3	**2**	**Mult tone scrnC M-ptch current VL:1/2SPD**
Detail	To display the current M-patch value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-C-C3	**2**	**Mult tone scrnC C-ptch current VL:1/2SPD**
Detail	To display the current C-patch value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGL-C-K3	**2**	**Mult tone scrnC K-ptch current VL:1/2SPD**
Detail	To display the current Bk-patch value of screen C in real-time multiple tone control at 1/2 speed. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-D-Y	**2**	**Multi tone screen D Y-patch current VL**
Detail	To display the current Y-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	
SGNL-D-M	**2**	**Multi tone screen D M-patch current VL**
Detail	To display the current M-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	N/A (Display only)	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 1023	

COPIER > DISPLAY > HT-C

SGNL-D-C	2	Multi tone screen D C-patch current VL
Detail		To display the current C-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
Use Case		When hue variation occurs
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		0 to 1023

SGNL-D-K	2	Multi tone screen D Bk-patch current VL
Detail		To display the current Bk-patch value of screen D in real-time multiple tone control. When hue variation occurs and the value shown is not in the tolerable range, check the Patch Sensor or replace the developer.
Use Case		When hue variation occurs
Adj/Set/Operate Method		N/A (Display only)
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		0 to 1023

■ IMG-REG

COPIER > DISPLAY > IMG-REG

ANGLE-1M	1	Dspl squareness measurement result: 1st
Detail		To display squareness of image on the 1st side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> ANGLE-1
Amount of Change per Unit		0.1

ANGLE-2M	1	Dspl squareness measurement result: 2nd
Detail		To display squareness of image on the 2nd side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > DISPLAY > IMG-REG

SLP-1M	1	Dspl skewness measurement result: 1st
Detail		To display skewness on the 1st side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> SLP-1
Amount of Change per Unit		0.1

SLP-2M	1	Dspl skewness measurement result: 2nd
Detail		To display skewness on the 2nd side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

TRPZ-1M	1	Dspl trapezoidal deg measmnt result: 1st
Detail		To display trapezoidal degree on the 1st side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> TRPZ-1
Amount of Change per Unit		0.1

COPIER > DISPLAY > IMG-REG

TRPZ-2M	1	Dspl trapezoidal deg measmnt result: 2nd
Detail		To display trapezoidal degree on the 2nd side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

MAG-H-1M	1	Horz scan magnifictn measmnt result: 1st
Detail		To display the magnification ratio in horizontal scanning direction on the 1st side measured at semi-automatic image position adjustment. The value 100 times higher than the measurement result (unit: %) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> MAG-H
Amount of Change per Unit		0.01

MAG-H-2M	1	Horz scan magnifictn measmnt result: 2nd
Detail		To display the magnification ratio in horizontal scanning direction on the 2nd side measured at semi-automatic image position adjustment. The value 100 times higher than the measurement result (unit: %) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Amount of Change per Unit		0.01

COPIER > DISPLAY > IMG-REG

MAG-V-1M	1	Vert scan magnifictn measmnt result: 1st
Detail		To display the magnification ratio in vertical scanning direction on the 1st side measured at semi-automatic image position adjustment. The value 100 times higher than the measurement result (unit: %) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> MAG-V
Amount of Change per Unit		0.01

MAG-V-2M	1	Vert scan magnifictn measmnt result: 2nd
Detail		To display the magnification ratio in vertical scanning direction on the 2nd side measured at semi-automatic image position adjustment. The value 100 times higher than the measurement result (unit: %) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Amount of Change per Unit		0.01

REGIST1M	1	Dspl lead edge margin measmnt result:1st
Detail		To display the leading edge margin on the 1st side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Related Service Mode		COPIER> ADJUST> FEED-ADJ> REGIST
Amount of Change per Unit		0.1

COPIER > DISPLAY > IMG-REG

REGIST2M	1	Dspl lead edge margin measmnt result:2nd
Detail		To display the leading edge margin on the 2nd side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

REG-L-1M	1	Dspl left edge margin measmnt result:1st
Detail		To display the left edge margin on the 1st side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		- At installation - When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Related Service Mode		COPIER> ADJUST> FEED-ADJ> REG-L
Amount of Change per Unit		0.1

REG-L-2M	1	Dspl left edge margin measmnt result:2nd
Detail		To display the left edge margin on the 2nd side measured at semi-automatic image position adjustment. The value 10 times higher than the measurement result (unit: mm) is displayed on the screen.
Use Case		When analyzing the cause of a problem
Adj/Set/Operate Method		N/A (Display only)
Caution		- Be sure to check the value right after semi-automatic image position adjustment. - If measures have been taken to solve the problem, execute semi-automatic image position adjustment and check whether the value is appropriate.
Display/Adj/Set Range		-100 to 100

ADJUST

■ ADJ-XY

COPIER > ADJUST > ADJ-XY

ADJ-X	**1**	**Adj start pstn in book mode: vert scan**
Detail		To adjust the image reading start position (image leading edge position) in the vertical scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. Decrease the value when the non-image width is larger than the standard value. Increase the value when out of original area is copied. As the value is incremented by 1, the image position is moved to the trailing edge side by 0.1 mm.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-Y	**1**	**Adj start pstn in book mode: horz scan**
Detail		To adjust the image reading start position in the horizontal scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. Decrease the value when the non-image width is larger than the standard value. Increase the value when out of original area is copied. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-Y-DF	**1**	**Adj start pstn:DADF mode, horz scan, frt**
Detail		To adjust the front side image reading start position in horizontal scanning direction at DADF reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > ADJ-XY

STRD-POS	1	Adj read pstn in DADF mode: front side
Detail		To adjust the reading position at DADF reading (front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-X-MG	1	Fine adj img ratio: book mode, vert scan
Detail		To make a fine adjustment of image magnification ratio in vertical scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is changed by 1, the image magnification ratio is changed by 0.01 %. +: Enlarge -: Reduce
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-50 to 50
Unit		%
Default Value		0
Amount of Change per Unit		0.01

ADJY-DF2	1	Adj start pstn:DADF mode, horz scan, bck
Detail		To adjust the back side image reading start position in horizontal scanning direction at DADF reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > ADJ-XY

ADJ-Y-MG	**1**	**Fine adj img ratio:book, horz scan**
Detail	To make a fine adjustment of image magnification ratio in horizontal scanning direction at copyboard reading. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is changed by 1, the image magnification ratio is changed by 0.1 %. +: Enlarge -: Reduce	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	After the setting value is changed, write the changed value in the service label.	
Display/Adj/Set Range	-10 to 10	
Unit	%	
Default Value	0	
Amount of Change per Unit	0.1	
RDR-ANG1	**2**	**Entr Scanner Unit squareness fcty adj VL**
Detail	To enter the factory adjustment value for image squareness of the Scanner Unit on the reader side. When installing the Duplex Color Image Reader Unit, the value 100 times higher than the displacement amount in vertical scanning direction at the rear side of the image trailing edge (unit: mm) that was corrected at the time of shipment is displayed. When replacing the Reader Controller PCB/clearing RAM data, enter the value of the Sub Station service label.	
Use Case	- When installing the Duplex Color Image Reader Unit - When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.01	
RDR-ANG2	**1**	**Adj of front side image squareness**
Detail	To adjust the squareness of image when reading the front side. As the value is changed by 1, the rear side of image leading edge is moved by 0.01 mm. +: Toward trailing edge of paper -: Toward leading edge of paper Use this item when squareness cannot be corrected completely by executing semi-automatic image position adjustment.	
Use Case	- When installing the Duplex Color Image Reader Unit - When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	-200 to 200	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.01	

■ CCD

COPIER > ADJUST > CCD

W-PLT-X	1	Stdrd White Plt white lvl data (X) entry
Detail		To enter the white level data (X) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		1 to 9999
Default Value		8271
Amount of Change per Unit		1

W-PLT-Y	1	Stdrd White Plt white lvl data (Y) entry
Detail		To enter the white level data (Y) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		1 to 9999
Default Value		8735
Amount of Change per Unit		1

W-PLT-Z	1	Stdrd White Plt white lvl data (Z) entry
Detail		To enter the white level data (Z) for the Standard White Plate. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. When replacing the Copyboard Glass, enter the value of barcode label which is affixed on the glass.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		1 to 9999
Default Value		9418
Amount of Change per Unit		1

COPIER > ADJUST > CCD

SH-TRGT	1	Shading target VL (B&W) entry: Copyboard
Detail		To enter the B&W shading target value in copyboard reading mode. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Scanner Unit, execute COPIER> FUNCTION> CCD> DF-WLVL3, and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		1 to 2047
Default Value		1126
Amount of Change per Unit		1

100-RG	1	Img Sensr RG color displace crrct: front
Detail		To correct the color displacement between R and G lines in vertical scanning direction due to the Scanner Unit (for front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-256 to 256
Unit		line
Default Value		0
Amount of Change per Unit		0.001

100-GB	1	Img Sensr GB color displace crrct: front
Detail		To correct the color displacement between G and B lines in vertical scanning direction due to the Scanner Unit (for front side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-256 to 256
Unit		line
Default Value		0
Amount of Change per Unit		0.001

COPIER > ADJUST > CCD

DFTAR-R	1	Shading target VL (R) entry: front side
Detail		To enter the shading target value of Red on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2047
Default Value		1159
Amount of Change per Unit		1

DFTAR-G	1	Shading target VL (G) entry: front side
Detail		To enter the shading target value of Green on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2047
Default Value		1189
Amount of Change per Unit		1

DFTAR-B	1	Shading target VL (B) entry: front side
Detail		To enter the shading target value of Blue on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2047
Default Value		1209
Amount of Change per Unit		1

MTF2-M1	1	MTF value 1 entry: horz scan, front side
Detail		To enter the setting value 1 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF2-M2	1	MTF value 2 entry: horz scan, front side
Detail		To enter the setting value 2 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M3	1	MTF value 3 entry: horz scan, front side
Detail		To enter the setting value 3 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M4	1	MTF value 4 entry: horz scan, front side
Detail		To enter the setting value 4 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M5	1	MTF value 5 entry: horz scan, front side
Detail		To enter the setting value 5 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M6	1	MTF value 6 entry: horz scan, front side
Detail		To enter the setting value 6 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF2-M7	1	MTF value 7 entry: horz scan, front side
Detail		To enter the setting value 7 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M8	1	MTF value 8 entry: horz scan, front side
Detail		To enter the setting value 8 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-M9	1	MTF value 9 entry: horz scan, front side
Detail		To enter the setting value 9 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S1	1	MTF value 1 entry: vert scan, front side
Detail		To enter the setting value 1 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S2	1	MTF value 2 entry: vert scan, front side
Detail		To enter the setting value 2 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF2-S3	1	MTF value 3 entry: vert scan, front side
Detail		To enter the setting value 3 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S4	1	MTF value 4 entry: vert scan, front side
Detail		To enter the setting value 4 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S5	1	MTF value 5 entry: vert scan, front side
Detail		To enter the setting value 5 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S6	1	MTF value 6 entry: vert scan, front side
Detail		To enter the setting value 6 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

MTF2-S7	1	MTF value 7 entry: vert scan, front side
Detail		To enter the setting value 7 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 80
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF2-S8	**1**	**MTF value 8 entry: vert scan, front side**
Detail	To enter the setting value 8 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	20 to 80	
Default Value	50	
Amount of Change per Unit	1	
MTF2-S9	**1**	**MTF value 9 entry: vert scan, front side**
Detail	To enter the setting value 9 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	20 to 80	
Default Value	50	
Amount of Change per Unit	1	
100DF2GB	**2**	**Img Sensr GB color displace crrct: back**
Detail	To correct the color displacement between G and B lines in vertical scanning direction due to the Scanner Unit (for back side). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-256 to 256	
Unit	line	
Default Value	0	
Amount of Change per Unit	0.001	
100DF2RG	**2**	**Img Sensr RG color displace crrct: back**

DFCH2R2	1	Complex chart No.2 data (R) entry: front
Detail		To derive the front/back side linearity, enter the Red data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2550
Default Value		2000
Amount of Change per Unit		1

DFCH2R10	1	Complex chart No.10 data (R) entry:front
Detail		To derive the front/back side linearity, enter the Red data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2550
Default Value		0
Amount of Change per Unit		1

DFCH2B2	1	Complex chart No.2 data (B) entry: front
Detail		To derive the front/back side linearity, enter the Blue data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2550
Default Value		2000
Amount of Change per Unit		1

DFCH2B10	1	Complex chart No.10 data (B) entry:front
Detail		To derive the front/back side linearity, enter the Blue data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2550
Default Value		0
Amount of Change per Unit		1

Default Value		2000
Amount of Change per Unit		1
DFCH-G10	**1**	**Complex chart No.10 data (G) entry: back**
Detail		To derive the front/back side linearity, enter the Green data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2550
Default Value		0
Amount of Change per Unit		1
MTF2-M10	**1**	**MTF value 10 entry:horz scan, front side**
Detail		To enter the setting value 10 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF2-M11	1	MTF value 11 entry:horz scan, front side
Detail		To enter the setting value 11 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF2-M12	1	MTF value 12 entry:horz scan, front side
Detail		To enter the setting value 12 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF2-S10	1	MTF value 10 entry:vert scan, front side
Detail		To enter the setting value 10 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF2-S11	1	MTF value 11 entry:vert scan, front side
Detail		To enter the setting value 11 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF2-S12	1	MTF value 12 entry:vert scan, front side
Detail		To enter the setting value 12 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF-M10	1	MTF value 10 entry: horz scan, back side
Detail		To enter the setting value 10 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF-M11	1	MTF value 11 entry: horz scan, back side
Detail		To enter the setting value 11 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF-M12	1	MTF value 12 entry: horz scan, back side
Detail		To enter the setting value 12 for MTF filter coefficient calculation in horizontal scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF-S10	1	MTF value 10 entry: vert scan, back side
Detail		To enter the setting value 10 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

MTF-S11	1	MTF value 11 entry: vert scan, back side
Detail		To enter the setting value 11 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

COPIER > ADJUST > CCD

MTF-S12	1	MTF value 12 entry: vert scan, back side
Detail		To enter the setting value 12 for MTF filter coefficient calculation in vertical scanning direction. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		20 to 85
Default Value		50
Amount of Change per Unit		1

DFCH2K2	1	Complex chart No.2 data (B&W) entr: frt
Detail		To derive the front/back side linearity, enter the B&W data on the front side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2550
Default Value		2000
Amount of Change per Unit		1

DFCH2K10	1	Complex chart No.10 data (B&W) entr: frt
Detail		To derive the front/back side linearity, enter the B&W data on the front side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2550
Default Value		0
Amount of Change per Unit		1

DFCH-K2	1	Complex chart No.2 data (B&W) entr: bck
Detail		To derive the front/back side linearity, enter the B&W data on the back side of No.2 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2550
Default Value		2000
Amount of Change per Unit		1

COPIER > ADJUST > CCD

DFCH-K10	1	Complex chart No.10 data (B&W) entr: bck
Detail		To derive the front/back side linearity, enter the B&W data on the back side of No.10 image in DADF complex chart. Enter the value of service label on the Reader.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2550
Default Value		0
Amount of Change per Unit		1

DFTAR-BW	1	Shading target VL (B&W) entry: front
Detail		To enter the B&W shading target value on the front side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for front side), execute COPIER> FUNCTION> CCD> DF-WLVL3, DF-WLVL4 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for front side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 2047
Default Value		1209
Amount of Change per Unit		1

DFTBK-G	1	Shading target VL (G) entry: back side
Detail		To enter the shading target value of Green on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		700 to 1400
Default Value		1136
Amount of Change per Unit		1

COPIER > ADJUST > CCD

DFTBK-B	1	Shading target VL (B) entry: back side
Detail		To enter the shading target value of Blue on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		700 to 1400
Default Value		1126
Amount of Change per Unit		1

DFTBK-R	1	Shading target VL (R) entry: back side
Detail		To enter the shading target value of Red on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL1, DF-WLVL2 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		700 to 1400
Default Value		1156
Amount of Change per Unit		1

DFTBK-BW	1	Shading target VL (B&W) entry: back
Detail		To enter the B&W shading target value on the back side at DADF reading. When replacing the Reader Controller PCB, enter the value of service label. When replacing the Copyboard Glass/Scanner Unit (for back side), execute COPIER> FUNCTION> CCD> DF-WLVL3, DF-WLVL4 and write the value which is automatically set in the service label.
Use Case		- When replacing the Reader Controller PCB/clearing RAM data - When replacing the Copyboard Glass/Scanner Unit (for back side)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		700 to 1400
Default Value		1126
Amount of Change per Unit		1

■ LASER

COPIER > ADJUST > LASER

LSADJ1-Y	1	Adj Laser Scanner Y-clr phase difference
Detail		To adjust the phase difference of laser scanner for Y-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ1-M	1	Adj Laser Scanner M-clr phase difference
Detail		To adjust the phase difference of laser scanner for M-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ1-C	1	Adj Laser Scanner C-clr phase difference
Detail		To adjust the phase difference of laser scanner for C-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ1-K	1	Adj Laser Scanner Bk phase difference
Detail		To adjust the phase difference of laser scanner for Bk-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "23" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for phase difference adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

COPIER > ADJUST > LASER

LSADJ2-Y	1	Adj Laser Scanner Y-clr magnification
Detail		To adjust the magnification of laser scanner for Y-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ2-M	1	Adj Laser Scanner M-clr magnification
Detail		To adjust the magnification of laser scanner for M-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ2-C	1	Adj Laser Scanner C-clr magnification
Detail		To adjust the magnification of laser scanner for C-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LSADJ2-K	1	Adj Laser Scanner Bk-clr magnification
Detail		To adjust the magnification of laser scanner for Bk-color.
Use Case		When replacing the Laser Scanner Unit
Adj/Set/Operate Method		1) Specify "24" in COPIER> TEST> PG> TYPE. An A3/LDR size PG for magnification adjustment is output. 2) Enter the number of optimal pattern in this service mode. 3) Turn OFF/ON the main power switch. 4) Perform step 1 again, and check that No.0 becomes the optimal pattern.
Display/Adj/Set Range		-15 to 15
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

COPIER > ADJUST > LASER

M-ADJ-Y	1	Dspl Laser Scan Y-color moire adj phase
Detail		To display the Y-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not change the value except in the case of replacing the Laser Scanner Unit.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

M-ADJ-M	1	Dspl Laser Scan M-color moire adj phase
Detail		To display the M-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not change the value except in the case of replacing the Laser Scanner Unit.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

M-ADJ-C	1	Dspl Laser Scan C-color moire adj phase
Detail		To display the C-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not change the value except in the case of replacing the Laser Scanner Unit.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > LASER

M-ADJ-K	1	Dspl Laser Scan Bk-color moire adj phase
Detail		To display the Bk-color moire adjustment value (phase) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not change the value except in the case of replacing the Laser Scanner Unit.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

M-ADJ2-Y	1	Dspl Laser Scan Y-moire adj magnifictn
Detail		To display the Y-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

M-ADJ2-M	1	Dspl Laser Scan M-moire adj magnifictn
Detail		To display the M-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > LASER

M-ADJ2-C	1	Dspl Laser Scan C-moire adj magnifictn
Detail		To display the C-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

M-ADJ2-K	1	Dspl Laser Scan Bk-moire adj magnifictn
Detail		To display the Bk-color moire adjustment value (magnification) which is backed up in the DC Controller PCB. When replacing the DC Controller PCB/clearing RAM data, when replacing the Laser Scanner Unit, or when an image failure occurs, enter the factory adjustment value written on the label of a new Laser Scanner Unit.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Laser Scanner Unit - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-999 to 999
Default Value		0
Amount of Change per Unit		1

■ IMG-REG

COPIER > ADJUST > IMG-REG

REG-H-Y	1	Adj Y-color write start pstn: horz scan
Detail		To adjust the write start position of Y-color image in horizontal scanning direction in increments of 1 micro meter.
Use Case		When Y-color displacement in horizontal scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > IMG-REG

REG-H-C	1	Adj C-color write start pstn: horz scan
Detail		To adjust the write start position of C-color image in horizontal scanning direction in increments of 1 micro meter.
Use Case		When C-color displacement in horizontal scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

REG-H-K	1	Adj Bk-color write start pstn: horz scan
Detail		To adjust the write start position of Bk-color image in horizontal scanning direction in increments of 1 micro meter.
Use Case		When Bk-color displacement in horizontal scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

REG-V-Y	1	Adj Y-color write start pstn: vert scan
Detail		To adjust the write start position of Y-color image in vertical scanning direction in increments of 1 micro meter.
Use Case		When Y-color displacement in vertical scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

REG-V-C	1	Adj C-color write start pstn: vert scan
Detail		To adjust the write start position of C-color image in vertical scanning direction in increments of 1 micro meter.
Use Case		When C-color displacement in vertical scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > IMG-REG

REG-V-K	1	Adj Bk-color write start pstn: vert scan
Detail		To adjust the write start position of Bk-color image in vertical scanning direction in increments of 1 micro meter.
Use Case		When Bk-color displacement in vertical scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

REG-H-M	1	Adj M-color write start pstn: horz scan
Detail		To adjust the write start position of M-color image in horizontal scanning direction in increments of 1 micro meter.
Use Case		When M-color displacement in horizontal scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

REG-V-M	1	Adj M-color write start pstn: vert scan
Detail		To adjust the write start position of M-color image in vertical scanning direction in increments of 1 micro meter.
Use Case		When M-color displacement in vertical scanning direction occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-5250 to 5250
Unit		um
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > IMG-REG

MAG-H	1	Adj magnification: horz scan, 1st side
Detail		To adjust the magnification ratio in horizontal scanning direction when length in horizontal scanning direction of image area is out of the specified range. Tolerable range of A3 paper: 292.0 +/- 0.6 mm Tolerable range of LDR paper: 274.4 +/- 0.5 mm As the value is incremented by 1, image width becomes wider by 0.01%.
Use Case		- At installation - When an error in magnification ratio in horizontal scanning direction occurs due to parts replacement or environmental change
Adj/Set/Operate Method		1) Measure the length (Ly mm) in horizontal scanning direction of image area on the 1st side. 2) Calculate the difference (My) between the magnification ratios. A3 paper: My = (Ly - 292) x 100 (%) LDR paper: My = (Ly - 274.4) x 100 (%) 3) Enter the setting value to make the difference falls within the range shown below, and then press OK key. A3 paper: -0.21 to +0.21 (%) LDR paper: -0.18 to +0.18 (%) 4) Write the entry value in the service label.
Caution		- Be sure to perform color displacement correction after adjustment. - After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch
Amount of Change per Unit		0.01

MAG-V	1	Adj magnification: vert scan, 1st side
Detail		To adjust the magnification ratio in vertical scanning direction when length in vertical scanning direction of image area is out of the specified range. Tolerable range of A3 paper: 412.0 +/- 0.8 mm Tolerable range of LDR paper: 423.8 +/- 0.8 mm As the value is incremented by 1, image width becomes wider by 0.01%.
Use Case		- At installation - When an error in magnification ratio in vertical scanning direction occurs after replacement of ITB Unit/Secondary Transfer Unit/Registration Unit/Fixing Assembly
Adj/Set/Operate Method		1) Measure the length (Lx mm) in vertical scanning direction of image area on the 1st side. 2) Calculate the difference (Mx) between the magnification ratios. A3 paper: Mx = (412 - Lx) / 412 x 100 (%) LDR paper: Mx = (423.8 - Lx) / 423.8 x 100 (%) 3) Enter the setting value (current value + Mx x 100), and then press OK key. 4) Write the entry value in the service label.
Caution		- Be sure to perform color displacement correction after adjustment. - After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-100 to 100
Unit		%
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch
Amount of Change per Unit		0.01

COPIER > ADJUST > IMG-REG

ANGLE-1	**1**	**Crrct img distortion (parallelogram):1st**
Detail	To correct the distortion of image (parallelogram) on the 1st side. If the corners of an image are not printed at a right angle, adjust the angle of image. As the value is changed by 1, the angle is changed by 0.1 mm.	
Use Case	When distortion of image (parallelogram) occurs at replacement of ITB/Secondary Transfer/ Registration Unit, or Fixing Assembly	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-10 to 10	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

MAG-V-K	**2**	**Crrct magnifictn dif:vert scan,B&W/color**
Detail	To adjust the magnification ratio when image magnification ratio in vertical scanning direction in black mode and that in color mode are different. As the value is changed by 1, the magnification ratio is changed by 0.01 %.	
Use Case	- When image magnification ratio in vertical scanning direction in black mode and that in color mode are different - When replacing the ITB	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-20 to 20	
Unit	%	
Appropriate Target Value	0	
Default Value	0	
Amount of Change per Unit	0.01	

SLP-1	**1**	**Correction of image misalignment: 1st**
Detail	To correct misalignment of image on the 1st side. As the value is changed by 1, the angle is changed by 0.1 mm.	
Use Case	- When misalignment occurs at replacement of ITB/Secondary Transfer/Registration Unit, or Fixing Assembly - When misalignment is not corrected although the arch amount before registration is adjusted	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-10 to 10	
Unit	mm	
Default Value	0	
Related Service Mode	COPIER> ADJUST> FEED-ADJ> LP-MULT1/MULT2/DUP1/DUP2/CST/DK/DUP/MDK/MF	
Amount of Change per Unit	0.1	

TRPZ-1	**1**	**Crrct image distortion (trapezoid): 1st**
Detail	To correct the distortion of image (trapezoidal image) on the 1st side. As the value is changed by 1, the magnification ratio is changed by 0.1 mm.	
Use Case	When distortion of image (trapezoidal image) occurs at replacement of ITB/Secondary Transfer/ Registration Unit, or Fixing Assembly	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-10 to 10	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

COPIER > ADJUST > IMG-REG

DRM-SPD1	2	Adj of Photosensitive Drum speed: 1/1SPD
Detail		To adjust the speed of the Photosensitive Drum at 1/1 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
Use Case		- When color displacement in vertical scanning direction occurs - When shock image occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		0.025

DRM-SPD2	2	Adj of Photosensitive Drum speed: 2/3SPD
Detail		To adjust the speed of the Photosensitive Drum at 2/3 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
Use Case		- When color displacement in vertical scanning direction occurs - When shock image occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		0.025

DRM-SPD3	2	Adj of Photosensitive Drum speed: 1/2SPD
Detail		To adjust the speed of the Photosensitive Drum at 1/2 speed. As the value is changed by 1, the speed is changed by 0.025 %. Increase the value when color displacement in vertical scanning direction occurs. Decrease the value when shock image occurs.
Use Case		- When color displacement in vertical scanning direction occurs - When shock image occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		0.025

■ DENS

COPIER > ADJUST > DENS

REF-Y	2	Y toner dens target VL entry
Detail		To enter the target value of ATR control for the Toner Density Sensor (Y). Be sure to check the value before clearing RAM and enter it again after RAM clear.
Use Case		When checking the value before RAM clear and re-entering it after RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		0 to 255

COPIER > ADJUST > DENS

REF-M	**2**	**M toner dens target VL entry**
Detail		To enter the target value of ATR control for the Toner Density Sensor (M). Be sure to check the value before clearing RAM and enter it again after RAM clear.
Use Case		When checking the value before RAM clear and re-entering it after RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 255
REF-C	**2**	**C toner dens target VL entry**
Detail		To enter the target value of ATR control for the Toner Density Sensor (C). Be sure to check the value before clearing RAM and enter it again after RAM clear.
Use Case		When checking the value before RAM clear and re-entering it after RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 255
SIGG-Y	**1**	**Y-color ATR patch dens target VL entry**
Detail		To enter the Y-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
Use Case		When re-entering the value at the time of DC Controller PCB replacement/RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023
SIGG-M	**1**	**M-color ATR patch dens target VL entry**
Detail		To enter the M-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
Use Case		When re-entering the value at the time of DC Controller PCB replacement/RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023
SIGG-C	**1**	**C-color ATR patch dens target VL entry**
Detail		To enter the C-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
Use Case		When re-entering the value at the time of DC Controller PCB replacement/RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023
SIGG-K	**1**	**Bk-color ATR patch dens target VL entry**
Detail		To enter the Bk-color ATR patch density target value which is set at initialization of the Developing Assembly. After the entry, write the value in the service label.
Use Case		When re-entering the value at the time of DC Controller PCB replacement/RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023

COPIER > ADJUST > DENS

HLMT-PTY	2	Toner Dens Sensr(Y) dens crrct upr limit
Detail		To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Y). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-2 to 6 -2: 11.0%, -1: 10.5%, 0: 10.0%, 1: 9.0%, 2: 8.0%, 3: 7.5%, 4: 7.0%, 5: 6.5%, 6: 6.0%
Unit		%
Default Value		0
Amount of Change per Unit		1

HLMT-PTM	2	Toner Dens Sensr(M) dens crrct upr limit
Detail		To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (M). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-2 to 6 -2: 11.0%, -1: 10.5%, 0: 10.0%, 1: 9.0%, 2: 8.0%, 3: 7.5%, 4: 7.0%, 5: 6.5%, 6: 6.0%
Unit		%
Default Value		0
Amount of Change per Unit		1

HLMT-PTC	2	Toner Dens Sensr(C) dens crrct upr limit
Detail		To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (C). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-2 to 6 -2: 11.0%, -1: 10.5%, 0: 10.0%, 1: 9.0%, 2: 8.0%, 3: 7.5%, 4: 7.0%, 5: 6.5%, 6: 6.0%
Unit		%
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

LLMT-PTY	2	Toner Dens Sensr(Y)dens crrct lowr limit
Detail		To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Y). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
Unit		%
Default Value		0
Amount of Change per Unit		1

LLMT-PTM	2	Toner Dens Sensr(M)dens crrct lowr limit
Detail		To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (M). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
Unit		%
Default Value		0
Amount of Change per Unit		1

LLMT-PTC	2	Toner Dens Sensr(C)dens crrct lowr limit
Detail		To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (C). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
Unit		%
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

ALF-C	**1**	**Adjustment of Patch Sensor alpha value**
Detail		To adjust the coefficient alpha value of the Patch Sensor. The value multiplied by 1000 is displayed on the screen. When replacing the Patch Sensor/clearing RAM data, enter the value of service label.
Use Case		- When clearing RAM data - When replacing the Patch Sensor
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2047
Default Value		1200
P-K-K	**2**	**Adj Bk-color ptch dens convs coeffct k**
Detail		To adjust the Bk-color patch density conversion coefficient k value of the Patch Sensor. The value multiplied by 100 is displayed on the screen.
Use Case		When the Patch Sensor fails to read the density
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 255
Default Value		170
HLMT-PTK	**2**	**Toner Dens Sensr(Bk)dens crrct upr limit**
Detail		To adjust the upper limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Bk). Density failures and carrier adherence are alleviated when the value is smaller, and fogging, scattering, and development stain are alleviated when it is larger.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-2 to 6 -2: 11.0%, -1: 10.5%, 0: 10.0%, 1: 9.0%, 2: 8.0%, 3: 7.5%, 4: 7.0%, 5: 6.5%, 6: 6.0%
Unit		%
Default Value		0
Amount of Change per Unit		1
LLMT-PTK	**2**	**Tonr Dens Sensr(Bk)dens crrct lowr limit**
Detail		To adjust the lower limit of the target density (TD ratio) adjustment for the Toner Density Sensor (Bk). As the value is smaller, the density increase at high duty can be prevented because QM down of developer is restrained, but carrier adherence gets worse.
Use Case		- When adjusting the toner density (TD ratio) upon occurrence of density failures, fogging, carrier adherence, scattering, development stain, etc. - When analyzing the cause of a problem
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		-5 to 2 -5: 9.0%, -4: 8.0%, -3: 7.5%, -2: 7.0%, -1: 6.0%, 0: 5.5%, 1: 5.0%, 2: 4.5%
Unit		%
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

REF-K	**2**	**Bk toner dens target VL entry**
Detail		To enter the target value of ATR control for the Toner Density Sensor (Bk) after RAM clear.
Use Case		When checking the value before RAM clear and re-entering it after RAM clear
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		0 to 255
Default Value		90 (It may vary by initialization when clearing RAM.)
CONT-Y	**1**	**Toner Density Sensor (Y) control voltage**
Detail		To enter the density detection control voltage of the Toner Density Sensor (Y). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When the backup data is cleared by RAM clear, etc.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
CONT-M	**1**	**Toner Density Sensor (M) control voltage**
Detail		To enter the density detection control voltage of the Toner Density Sensor (M). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When the backup data is cleared by RAM clear, etc.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
CONT-C	**1**	**Toner Density Sensor (C) control voltage**
Detail		To enter the density detection control voltage of the Toner Density Sensor (C). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When the backup data is cleared by RAM clear, etc.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
CONT-K	**1**	**Toner Density Sensor(Bk) control voltage**
Detail		To enter the density detection control voltage of the Toner Density Sensor (Bk). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When the backup data is cleared by RAM clear, etc.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255

COPIER > ADJUST > DENS

P-TG-Y1	2	Adj Y ATR patch dens target VL: 1/1SPD
Detail		To adjust the offset of the ATR patch target value for Y at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-M1	2	Adj M ATR patch dens target VL: 1/1SPD
Detail		To adjust the offset of the ATR patch target value for M at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-C1	2	Adj C ATR patch dens target VL: 1/1SPD
Detail		To adjust the offset of the ATR patch target value for C at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

P-TG-K1	2	Adj Bk ATR patch dens target VL: 1/1SPD
Detail		To adjust the offset of the ATR patch target value for Bk at 1/1 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-Y2	2	Adj Y ATR patch dens target VL: 2/3SPD
Detail		To adjust the offset of the ATR patch target value for Y at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-M2	2	Adj M ATR patch dens target VL: 2/3SPD
Detail		To adjust the offset of the ATR patch target value for M at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

P-TG-C2	2	Adj C ATR patch dens target VL: 2/3SPD
Detail		To adjust the offset of the ATR patch target value for C at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-K2	2	Adj Bk ATR patch dens target VL: 2/3SPD
Detail		To adjust the offset of the ATR patch target value for Bk at 2/3 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-Y3	2	Adj Y ATR patch dens target VL: 1/2SPD
Detail		To adjust the offset of the ATR patch target value for Y at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > DENS

P-TG-M3	2	Adj M ATR patch dens target VL: 1/2SPD
Detail		To adjust the offset of the ATR patch target value for M at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-C3	2	Adj C ATR patch dens target VL: 1/2SPD
Detail		To adjust the offset of the ATR patch target value for C at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

P-TG-K3	2	Adj Bk ATR patch dens target VL: 1/2SPD
Detail		To adjust the offset of the ATR patch target value for Bk at 1/2 speed. When the target value determined upon initialization is changed, the TD ratio is also changed. Decrease the value when fogging or density increase occurs. Increase the value when spotty gloss (mark of carrier) occurs or the contrast is weak.
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Caution		Increase/decrease the value a little at a time (about 2) while checking the image each time.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		1

■ BLANK

COPIER > ADJUST > BLANK

BLANK-T	1	Adjustment of leading edge margin
Detail		To adjust the margin on the leading edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
Use Case		- Upon user's request (to reduce the margin) - When increasing the margin for transfer separation/fixing separation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		0 to 1000
Unit		pixel
Appropriate Target Value		94
Default Value		94
Amount of Change per Unit		1

BLANK-L	1	Adjustment of left edge margin
Detail		To adjust the margin on the left edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
Use Case		- Upon user's request (to reduce the margin) - When increasing the margin for transfer separation/fixing separation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1000
Unit		pixel
Default Value		59
Amount of Change per Unit		1

BLANK-R	1	Adjustment of right edge margin
Detail		To adjust the margin on the right edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
Use Case		- Upon user's request (to reduce the margin) - When increasing the margin for transfer separation/fixing separation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1000
Unit		pixel
Default Value		59
Amount of Change per Unit		1

COPIER > ADJUST > BLANK

BLANK-B	1	Adjustment of trailing edge margin
Detail		To adjust the margin on the trailing edge of paper. As the value is incremented by 1, the margin is increased toward the center of the paper by 1 pixel (0.0423 mm).
Use Case		- Upon user's request (to reduce the margin) - When increasing the margin for transfer separation/fixing separation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1000
Unit		pixel
Appropriate Target Value		94
Default Value		94
Amount of Change per Unit		1

■ V-CONT

COPIER > ADJUST > V-CONT

VCONT-K	2	Adj of Bk-color contrast potential
Detail		To adjust the offset of the contrast potential Vcont for Bk. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter. When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Use Case		When adjusting the density of D-max control in the case that an image density failure occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute COPIER> FUNCTION> DPC> DPC. 4) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Related Service Mode		COPIER> FUNCTION> DPC> DPC
Amount of Change per Unit		1

COPIER > ADJUST > V-CONT

VBACK-Y	2	Adj Y-color fog removal potential:1/1SPD
Detail		To adjust the offset of the fogging removal potential Vback for Y-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
Use Case		At the occurrence of Y fogging
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

VBACK-M	2	Adj M-color fog removal potential:1/1SPD
Detail		To adjust the offset of the fogging removal potential Vback for M-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
Use Case		At the occurrence of M fogging
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > V-CONT

VBACK-C	2	Adj C-color fog removal potential:1/1SPD
Detail		To adjust the offset of the fogging removal potential Vback for C-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
Use Case		At the occurrence of C fogging
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

VBACK-K	2	Adj Bk-clr fog removal potential:1/1SPD
Detail		To adjust the offset of the fogging removal potential Vback for Bk-color at 1/1 speed. A value obtained by adding the adjustment value in Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Correct Color Cast to the fogging removal potential is set as the fogging adjustment value. As the value is changed by 1, the potential is changed by 10 V. +: Fogging, blanking of image edge, and carrier adherence are alleviated. -: Coarse image, blanking of image edge, and carrier adherence are alleviated.
Use Case		At the occurrence of Bk fogging
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > V-CONT

EPOTOFST	1	Manual adj of Potential Sensor offset
Detail		To adjust the offset auto adjustment value of the Potential Sensor manually. As the value is changed by 1, the offset value is changed by 1 V. +: Identified as the lower potential than the detected one -: Identified as the higher potential than the detected one When an error is displayed in COPIER> FUNCTION> DPC> OFST after the replacement of the Potential Sensor, the value out of the specified range is set due to the error in the Potential Sensor. Enter 0 (initial value) to stop the error, and then perform the following in the order while checking whether the problem can be solved. 1) Check whether open circuit/connection failure/installation failure occurs in the Potential Sensor. 2) Enter the value of the service label. 3) If fogging occurs, increase the value in increments of 10.
Use Case		When an error is displayed in COPIER> FUNCTION> DPC> OFST at replacement of the Potential Sensor
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-100 to 100
Unit		V
Default Value		0
Related Service Mode		COPIER> FUNCTION> DPC> OFST
Amount of Change per Unit		1

PT-VCT-Y	2	Adj Y ATR patch target contrast potntl
Detail		To adjust the Y-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Display/Adj/Set Range		-40 to 50
Unit		V
Related Service Mode		COPIER> TEST> PG> TYPE
Amount of Change per Unit		1

PT-VCT-M	2	Adj M ATR patch target contrast potntl
Detail		To adjust the M-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Display/Adj/Set Range		-40 to 50
Unit		V
Related Service Mode		COPIER> TEST> PG> TYPE
Amount of Change per Unit		1

COPIER > ADJUST > V-CONT

PT-VCT-C	2	Adj C ATR patch target contrast potntl
Detail		To adjust the C-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Display/Adj/Set Range		-40 to 50
Unit		V
Related Service Mode		COPIER> TEST> PG> TYPE
Amount of Change per Unit		1

PT-VCT-K	2	Adj Bk ATR patch target contrast potntl
Detail		To adjust the Bk-color patch target contrast potential for ATR patch. As the value is changed by 1, the potential is changed by 1 V. +: Increase -: Decrease
Use Case		When density failures, fogging, carrier adherence, etc. occur
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Make 50 prints of approx. 10 % image ratio (e.g. COPIER> TEST> PG> TYPE: 16) 4 times. 4) Execute full adjustment of auto gradation adjustment.
Display/Adj/Set Range		-40 to 50
Unit		V
Related Service Mode		COPIER> TEST> PG> TYPE
Amount of Change per Unit		1

LPGAIN-Y	2	Adj of Y-color laser power gain
Detail		To adjust the offset of the laser power for Y. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
Use Case		- At the occurrence of an image density failure - At the occurrence of a spotted image
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-30 to 30
Default Value		0
Amount of Change per Unit		4

COPIER > ADJUST > V-CONT

LPGAIN-M	2	Adj of M-color laser power gain
Detail		To adjust the offset of the laser power for M. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
Use Case		- At the occurrence of an image density failure - At the occurrence of a spotted image
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-30 to 30
Default Value		0
Amount of Change per Unit		4

LPGAIN-C	2	Adj of C-color laser power gain
Detail		To adjust the offset of the laser power for C. As the value is changed by 1, the laser power is changed by 4 Hex. Increase the gain when the density is low and decrease the gain when the density is high or an spotted image occurs.
Use Case		- At the occurrence of an image density failure - At the occurrence of a spotted image
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-30 to 30
Default Value		0
Amount of Change per Unit		4

VBACK2-Y	2	Adj Y-color fog removal potential:2/3SPD
Detail		To adjust the offset of the fogging removal potential Vback for Y-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
Use Case		When any image failure occurs at 2/3 speed
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > V-CONT

VBACK2-M	2	Adj M-color fog removal potential:2/3SPD
Detail		To adjust the offset of the fogging removal potential Vback for M-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
Use Case		When any image failure occurs at 2/3 speed
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

VBACK2-C	2	Adj C-color fog removal potential:2/3SPD
Detail		To adjust the offset of the fogging removal potential Vback for C-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
Use Case		When any image failure occurs at 2/3 speed
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

VBACK2-K	2	Adj Bk-clr fog removal potential:2/3SPD
Detail		To adjust the offset of the fogging removal potential Vback for Bk-color at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
Use Case		When any image failure occurs at 2/3 speed
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > V-CONT

VBACK3-Y	2	Adj Y-color fog removal potential:1/2SPD
Detail	To adjust the offset of the fogging removal potential Vback for Y-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.	
Use Case	When any image failure occurs at 1/2 speed	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-5 to 5	
Unit	V	
Default Value	0	
Amount of Change per Unit	10	

VBACK3-M	2	Adj M-color fog removal potential:1/2SPD
Detail	To adjust the offset of the fogging removal potential Vback for M-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.	
Use Case	When any image failure occurs at 1/2 speed	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-5 to 5	
Unit	V	
Default Value	0	
Amount of Change per Unit	10	

VBACK3-C	2	Adj C-color fog removal potential:1/2SPD
Detail	To adjust the offset of the fogging removal potential Vback for C-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.	
Use Case	When any image failure occurs at 1/2 speed	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-5 to 5	
Unit	V	
Default Value	0	
Amount of Change per Unit	10	

COPIER > ADJUST > V-CONT

VBACK3-K	2	Adj Bk-clr fog removal potential:1/2SPD
Detail		To adjust the offset of the fogging removal potential Vback for Bk-color at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Fogging is alleviated, but white/black spots are increased due to carrier adherence. -: White/black spots are alleviated, but fogging is increased.
Use Case		When any image failure occurs at 1/2 speed
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-5 to 5
Unit		V
Default Value		0
Amount of Change per Unit		10

LPW-C	2	Correction of C-color laser power
Detail		To adjust the correction amount of C-color laser power at laser power variable control.
Use Case		When hue variation occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
Display/Adj/Set Range		0 to 10 0: OFF, 1 to 10: Change the correction amount
Default Value		1

LPW-K	2	Correction of Bk-color laser power
Detail		To adjust the correction amount of Bk-color laser power at laser power variable control.
Use Case		When hue variation occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
Display/Adj/Set Range		0 to 10 0: OFF, 1 to 10: Change the correction amount
Default Value		1

LPW-M	2	Correction of M-color laser power
Detail		To adjust the correction amount of M-color laser power at laser power variable control.
Use Case		When hue variation occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
Display/Adj/Set Range		0 to 10 0: OFF, 1 to 10: Change the correction amount
Default Value		1

COPIER > ADJUST > V-CONT

LPW-Y	**2**	**Correction of Y-color laser power**
Detail		To adjust the correction amount of Y-color laser power at laser power variable control.
Use Case		When hue variation occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As the value is larger, density of image is vulnerable to the effects of environment changes and usage conditions.
Display/Adj/Set Range		0 to 10 0: OFF, 1 to 10: Change the correction amount
Default Value		1
VCONT2-Y	**2**	**Adj Y-color contrast potential: 2/3 SPD**
Detail		To adjust the offset of the contrast potential Vcont for Y at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1
VCONT2-M	**2**	**Adj M-color contrast potential: 2/3 SPD**
Detail		To adjust the offset of the contrast potential Vcont for M at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > V-CONT

VCONT2-C	2	Adj C-color contrast potential: 2/3 SPD
Detail		To adjust the offset of the contrast potential Vcont for C at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

VCONT2-K	2	Adj Bk-color contrast potential: 2/3 SPD
Detail		To adjust the offset of the contrast potential Vcont for Bk at 2/3 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > V-CONT

VCONT3-Y	2	Adj Y-color contrast potential: 1/2 SPD
Detail		To adjust the offset of the contrast potential Vcont for Y at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

VCONT3-M	2	Adj M-color contrast potential: 1/2 SPD
Detail		To adjust the offset of the contrast potential Vcont for M at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

COPIER > ADJUST > V-CONT

VCONT3-C	2	Adj C-color contrast potential: 1/2 SPD
Detail		To adjust the offset of the contrast potential Vcont for C at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

VCONT3-K	2	Adj Bk-color contrast potential: 1/2 SPD
Detail		To adjust the offset of the contrast potential Vcont for Bk at 1/2 speed. As the value is changed by 1, the potential is changed by 10 V. +: Image becomes darker. -: Image becomes lighter.
Use Case		When the contrast is weak
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- When the value is too large, paper winds around the Fixing Belt or a transfer failure occurs. - In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value. - In principle, the adjustment of the density should be performed in Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.
Display/Adj/Set Range		-30 to 30
Unit		V
Default Value		0
Amount of Change per Unit		1

■ PASCAL

COPIER > ADJUST > PASCAL

OFST-P-Y	1	Y density adj at test print reading
Detail		To adjust the offset of Y-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

COPIER > ADJUST > PASCAL

OFST-P-M	1	M density adj at test print reading
Detail		To adjust the offset of M-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

OFST-P-C	1	C density adj at test print reading
Detail		To adjust the offset of C-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

OFST-P-K	1	Bk density adj at test print reading
Detail		To adjust the offset of Bk-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

COPIER > ADJUST > PASCAL

OFST-PY3	1	Y density adj at test print reading
Detail		To adjust the offset of Y-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

OFST-PM3	1	M density adj at test print reading
Detail		To adjust the offset of M-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

OFST-PC3	1	C density adj at test print reading
Detail		To adjust the offset of C-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		-128 to 128
Default Value		According to the adjustment value of the Reader at factory shipment
Amount of Change per Unit		1

COPIER > ADJUST > PASCAL

OFST-PK3	1	Bk density adj at test print reading
Detail	To adjust the offset of Bk-color test print reading signal at auto gradation adjustment (full adjustment). When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is larger, the image after adjustment gets darker.	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Caution	After the setting value is changed, write the changed value in the service label.	
Display/Adj/Set Range	-128 to 128	
Default Value	According to the adjustment value of the Reader at factory shipment	
Amount of Change per Unit	1	

■ COLOR

COPIER > ADJUST > COLOR

ADJ-Y	1	Y-color balance adjustment
Detail	To adjust the default value of the color balance when the Y-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.	
Use Case	Upon user's request (to alleviate the variation of the density between machines)	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not use this at the normal service.	
Display/Adj/Set Range	-8 to 8	
Default Value	0	

ADJ-M	1	M-color balance adjustment
Detail	To adjust the default value of the color balance when the M-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.	
Use Case	Upon user's request (to alleviate the variation of the density between machines)	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-8 to 8	
Default Value	0	

ADJ-C	1	C-color balance adjustment
Detail	To adjust the default value of the color balance when the C-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.	
Use Case	Upon user's request (to alleviate the variation of the density between machines)	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-8 to 8	
Default Value	0	

COPIER > ADJUST > COLOR

ADJ-K	**1**	**Bk-color balance adjustment**
Detail		To adjust the default value of the color balance when the Bk-color density varies between machines. As the value is larger, the image gets darker. If the value is too large, a transfer failure and/or a fixing failure occurs.
Use Case		Upon user's request (to alleviate the variation of the density between machines)
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
OFST-Y	**1**	**Adj of Y bright area dens&color balance**
Detail		To adjust the bright area density and color balance of Y. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
Use Case		- When the background of a document cannot be read correctly - When removal of the background cannot be performed correctly and a fogging-like image appears
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-32 to 32
Default Value		0
OFST-M	**1**	**Adj of M bright area dens&color balance**
Detail		To adjust the bright area density and color balance of M. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
Use Case		- When the background of a document cannot be read correctly - When removal of the background cannot be performed correctly and a fogging-like image appears
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-32 to 32
Default Value		0

COPIER > ADJUST > COLOR

OFST-C	**1**	**Adj of C bright area dens&color balance**
Detail		To adjust the bright area density and color balance of C. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
Use Case		- When the background of a document cannot be read correctly - When removal of the background cannot be performed correctly and a fogging-like image appears
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-32 to 32
Default Value		0
OFST-K	**1**	**Adj Bk bright area dens&color balance**
Detail		To adjust the bright area density and color balance of Bk. As the value is larger, the image gets darker. Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light. Decrease the value when removal of the background is not performed correctly and a fogging-like image appears. This setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Color Balance.
Use Case		- When the background of a document cannot be read correctly - When removal of the background cannot be performed correctly and a fogging-like image appears
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-32 to 32
Default Value		0
LD-OFS-Y	**2**	**Adj Y low dens area clr balance: copy**
Detail		To adjust the color balance of the low density area of Y-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

LD-OFS-M	2	Adj M low dens area clr balance: copy
Detail		To adjust the color balance of the low density area of M-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

LD-OFS-C	2	Adj C low dens area clr balance: copy
Detail		To adjust the color balance of the low density area of C-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

LD-OFS-K	2	Adj Bk low dens area clr balance: copy
Detail		To adjust the color balance of the low density area of Bk-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

MD-OFS-Y	2	Adj Y mid dens area clr balance: copy
Detail		To adjust the color balance of the medium density area of Y-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

MD-OFS-M	2	Adj M mid dens area clr balance: copy
Detail		To adjust the color balance of the medium density area of M-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

MD-OFS-C	2	Adj C mid dens area clr balance: copy
Detail		To adjust the color balance of the medium density area of C-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

MD-OFS-K	2	Adj Bk mid dens area clr balance: copy
Detail		To adjust the color balance of the medium density area of Bk-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

HD-OFS-Y	2	Adj Y hi dens area clr balance: copy
Detail		To adjust the color balance of the high density area of Y-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

HD-OFS-M	2	Adj M hi dens area clr balance: copy
Detail		To adjust the color balance of the high density area of M-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

HD-OFS-C	2	Adj C hi dens area clr balance: copy
Detail		To adjust the color balance of the high density area of C-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

COPIER > ADJUST > COLOR

HD-OFS-K	2	Adj Bk hi dens area clr balance: copy
Detail		To adjust the color balance of the high density area of Bk-color for copy operation. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Copy> Options> Color Balance> Fine Adjust Density Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density
Supplement/Memo		In the main menu, different density values can be set for copy operation and file storage. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

PL-OFS-Y	2	Adj Y-clr low dens area clr balance: PDL
Detail		To adjust the color balance of the low density area of Y-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PL-OFS-M	2	Adj M-clr low dens area clr balance: PDL
Detail		To adjust the color balance of the low density area of M-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

COPIER > ADJUST > COLOR

PL-OFS-C	2	Adj C-clr low dens area clr balance: PDL
Detail		To adjust the color balance of the low density area of C-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PL-OFS-K	2	Adj Bk-clr low dens area clr balance:PDL
Detail		To adjust the color balance of the low density area of Bk-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PM-OFS-Y	2	Adj Y-clr mid dens area clr balance: PDL
Detail		To adjust the color balance of the medium density area of Y-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

COPIER > ADJUST > COLOR

PM-OFS-M	2	Adj M-clr mid dens area clr balance: PDL
Detail		To adjust the color balance of the medium density area of M-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PM-OFS-C	2	Adj C-clr mid dens area clr balance: PDL
Detail		To adjust the color balance of the medium density area of C-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PM-OFS-K	2	Adj Bk-clr mid dens area clr balance:PDL
Detail		To adjust the color balance of the medium density area of Bk-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

COPIER > ADJUST > COLOR

PH-OFS-Y	2	Adj Y-clr hi dens area clr balance: PDL
Detail		To adjust the color balance of the high density area of Y-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PH-OFS-M	2	Adj M-clr hi dens area clr balance: PDL
Detail		To adjust the color balance of the high density area of M-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

PH-OFS-C	2	Adj C-clr hi dens area clr balance: PDL
Detail		To adjust the color balance of the high density area of C-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". Note that the density value must be within the rage from -8 to 8. e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-8 to 8
Default Value		0
Additional Functions Mode		Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

COPIER > ADJUST > COLOR

PH-OFS-K	2	Adj Bk-clr hi dens area clr balance: PDL
Detail		To adjust the color balance of the high density area of Bk-color at PDL print. The target data is the data generated by the printer driver and stored in Mail Box. As the value is larger, the image gets darker. A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value. e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1". ■ HV-PRI

COPIER > ADJUST > HV-PRI

PRIMARY	1	Adjustment of primary charging current
Detail		To adjust the offset of the primary charging current. As the value is changed by 1, the current is changed by 50 micro A.
Use Case		- When the output difference from the initial value is large due to the failure in Primary Charging Assembly High Voltage Transformer - When changing the primary charging current and then checking the high voltage output
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-10 to 6
Unit		uA
Default Value		0
Amount of Change per Unit		50

DIS-TGY	2	Adj env Vpp ctrl Y tgt current: 1/1 SPD
Detail		To adjust the target current for Y-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

COPIER > ADJUST > HV-PRI

DIS-TGM	2	Adj env Vpp ctrl M tgt current: 1/1 SPD
Detail		To adjust the target current for M-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

DIS-TGC	2	Adj env Vpp ctrl C tgt current: 1/1 SPD
Detail		To adjust the target current for C-color in environment Vpp control at 1/1 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

DIS-TGY2	2	Adj env Vpp ctrl Y tgt current: 2/3 SPD
Detail		To adjust the target current for Y-color in environment Vpp control at 2/3 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

COPIER > ADJUST > HV-PRI

DIS-TGM2	2	Adj env Vpp ctrl M tgt current: 2/3 SPD
Detail		To adjust the target current for M-color in environment Vpp control at 2/3 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

DIS-TGC2	2	Adj env Vpp ctrl C tgt current: 2/3 SPD
Detail		To adjust the target current for C-color in environment Vpp control at 2/3 speed. As the value is changed by 1, the voltage changes by 50 V.
Use Case		When an image failure (sand-like image/image smear) occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		-10 to 15
Unit		V
Default Value		0
Supplement/Memo		Sand-like image: white dots on a halftone image, black dots on white background, etc.
Amount of Change per Unit		50

DHT-ON	2	Setting of Drum Heater (Bk) temperature
Detail		To set the temperature of the Drum Heater (Bk).
Use Case		- When the density of Bk is lowered at the time of continuous print - When uneven density at approx. 264 mm intervals in horizontal scanning direction on Bk halftone image occurs after making a large quantity of prints and then leaving the machine not being used for a long time
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not use this at the normal service. - When 0 is set, image smear may occurs in an HH environment. - When 6 is set, deterioration of the developer becomes faster.
Display/Adj/Set Range		0 to 6
Default Value		2
Amount of Change per Unit		1

COPIER > ADJUST > HV-PRI

DIS-TGY3	**2**	**Adj env Vpp ctrl Y tgt current: 1/2 SPD**
Detail	To adjust the target current for Y-color in environment Vpp control at 1/2 speed. As the value is changed by 1, the voltage changes by 50 V.	
Use Case	When an image failure (sand-like image/image smear) occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-10 to 15	
Unit	V	
Default Value	0	
Supplement/Memo	Sand-like image: white dots on a halftone image, black dots on white background, etc.	
Amount of Change per Unit	50	
DIS-TGM3	**2**	**Adj env Vpp ctrl M tgt current: 1/2 SPD**
Detail	To adjust the target current for M-color in environment Vpp control at 1/2 speed. As the value is changed by 1, the voltage changes by 50 V.	
Use Case	When an image failure (sand-like image/image smear) occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-10 to 15	
Unit	V	
Default Value	0	
Supplement/Memo	Sand-like image: white dots on a halftone image, black dots on white background, etc.	
Amount of Change per Unit	50	
DIS-TGC3	**2**	**Adj env Vpp ctrl C tgt current: 1/2 SPD**
Detail	To adjust the target current for C-color in environment Vpp control at 1/2 speed. As the value is changed by 1, the voltage changes by 50 V.	
Use Case	When an image failure (sand-like image/image smear) occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not use this when the machine is operating correctly.	
Display/Adj/Set Range	-10 to 15	
Unit	V	
Default Value	0	
Supplement/Memo	Sand-like image: white dots on a halftone image, black dots on white background, etc.	
Amount of Change per Unit	50	
CHG-TBL	**2**	**For R&D**
Default Value	0	

■ HV-TR

COPIER > ADJUST > HV-TR

PRE-TR	1	Set Pre-transfer charge current adj VL
Detail		To set the output adjustment value of pre-transfer charging current. As the value is changed by 1, the current is changed by 5 micro A. When the toner scattering occurs at the image end side, decrease the value.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When an image failure (leopard patterns on Bk solid image) occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-30 to 40
Unit		uA
Default Value		0
Amount of Change per Unit		5

2TR-TGT1	2	Sec trns indiv set tgt crrnt adj: set 1
Detail		To adjust the target current of secondary transfer for setting 1. Setting 1 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV1, TR-PPR1, TR-CLR1 and TR-DUP1. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

COPIER > ADJUST > HV-TR

2TR-TGT2	2	Sec trns indiv set tgt crrnt adj: set 2
Detail		To adjust the target current of secondary transfer for setting 2. Setting 2 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV2, TR-PPR2, TR-CLR2 and TR-DUP2. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

2TR-TGT3	2	Sec trns indiv set tgt crrnt adj: set 3
Detail		To adjust the target current of secondary transfer for setting 3. Setting 3 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV3, TR-PPR3, TR-CLR3 and TR-DUP3. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

COPIER > ADJUST > HV-TR

2TR-TGT4	2	Sec trns indiv set tgt crrnt adj: set 4
Detail		To adjust the target current of secondary transfer for setting 4. Setting 4 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV4, TR-PPR4, TR-CLR4 and TR-DUP4. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

2TR-TGT5	2	Sec trns indiv set tgt crrnt adj: set 5
Detail		To adjust the target current of secondary transfer for setting 5. Setting 5 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV5, TR-PPR5, TR-CLR5 and TR-DUP5. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

COPIER > ADJUST > HV-TR

2TR-TGT6	2	Sec trns indiv set tgt crrnt adj: set 6
Detail		To adjust the target current of secondary transfer for setting 6. Setting 6 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV6, TR-PPR6, TR-CLR6 and TR-DUP6. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

2TR-TGT7	2	Sec trns indiv set tgt crrnt adj: set 7
Detail		To adjust the target current of secondary transfer for setting 7. Setting 7 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV7, TR-PPR7, TR-CLR7 and TR-DUP7. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

COPIER > ADJUST > HV-TR

2TR-TGT8	2	Sec trns indiv set tgt crrnt adj: set 8
Detail		To adjust the target current of secondary transfer for setting 8. Setting 8 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV8, TR-PPR8, TR-CLR8 and TR-DUP8. When this condition is satisfied, the target current that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the current is changed by 2 micro A. +: Increase -: Decrease Increase the value when low-voltage mottled image or toner scattering on solid image occurs. Decrease the value when high-voltage mottled image or density loss due to excessive transfer occurs.
Use Case		When an image failure (mottled image, density loss due to excessive transfer, toner scattering on solid image, etc.) occurs on all paper types
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		2

2TR-SHR1	2	Sec trns indiv set ppr allot voltg:set 1
Detail		To adjust the paper allotted voltage of secondary transfer for setting 1. Setting 1 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV1, TR-PPR1, TR-CLR1 and TR-DUP1. When this condition is satisfied, the paper allotted voltage that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the voltage is changed by 100 V. +: Increase -: Decrease
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the paper type occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		V
Default Value		0
Amount of Change per Unit		100

COPIER > ADJUST > HV-TR

2TR-SHR2	2	Sec trns indiv set ppr allot voltg:set 2
Detail		To adjust the paper allotted voltage of secondary transfer for setting 2. Setting 2 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV2, TR-PPR2, TR-CLR2 and TR-DUP2. When this condition is satisfied, the paper allotted voltage that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the voltage is changed by 100 V. +: Increase -: Decrease
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the paper type occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		V
Default Value		0
Amount of Change per Unit		100

2TR-SHR3	2	Sec trns indiv set ppr allot voltg:set 3
Detail		To adjust the paper allotted voltage of secondary transfer for setting 3. Setting 3 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV3, TR-PPR3, TR-CLR3 and TR-DUP3. When this condition is satisfied, the paper allotted voltage that is set here is applied to the Secondary Transfer Outer Roller. As the value is changed by 1, the voltage is changed by 100 V. +: Increase -: Decrease
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the paper type occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Increase/decrease the value by 1 while checking the symptom each time.
Display/Adj/Set Range		-10 to 10
Unit		V
Default Value		0
Amount of Change per Unit		100

Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR2	**2**	**Sec trns indiv setting color mode: set 2**
Detail	To set B&W/color for setting 2. Setting 2 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV2, TR-PPR2, TR-CLR2 and TR-DUP2. When this condition is satisfied, the target current that is set in 2TR-TGT2 and paper allotted voltage that is set in 2TR-SHR2 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR3	**2**	**Sec trns indiv setting color mode: set 3**
Detail	To set B&W/color for setting 3. Setting 3 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV3, TR-PPR3, TR-CLR3 and TR-DUP3. When this condition is satisfied, the target current that is set in 2TR-TGT3 and paper allotted voltage that is set in 2TR-SHR3 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR4	**2**	**Sec trns indiv setting color mode: set 4**
Detail	To set B&W/color for setting 4. Setting 4 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV4, TR-PPR4, TR-CLR4 and TR-DUP4. When this condition is satisfied, the target current that is set in 2TR-TGT4 and paper allotted voltage that is set in 2TR-SHR4 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	

COPIER > ADJUST > HV-TR

TR-CLR5	**2**	**Sec trns indiv setting color mode: set 5**
Detail	To set B&W/color for setting 5. Setting 5 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV5, TR-PPR5, TR-CLR5 and TR-DUP5. When this condition is satisfied, the target current that is set in 2TR-TGT5 and paper allotted voltage that is set in 2TR-SHR5 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR6	**2**	**Sec trns indiv setting color mode: set 6**
Detail	To set B&W/color for setting 6. Setting 6 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV6, TR-PPR6, TR-CLR6 and TR-DUP6. When this condition is satisfied, the target current that is set in 2TR-TGT6 and paper allotted voltage that is set in 2TR-SHR6 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR7	**2**	**Sec trns indiv setting color mode: set 7**
Detail	To set B&W/color for setting 7. Setting 7 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV7, TR-PPR7, TR-CLR7 and TR-DUP7. When this condition is satisfied, the target current that is set in 2TR-TGT7 and paper allotted voltage that is set in 2TR-SHR7 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	
TR-CLR8	**2**	**Sec trns indiv setting color mode: set 8**
Detail	To set B&W/color for setting 8. Setting 8 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV8, TR-PPR8, TR-CLR8 and TR-DUP8. When this condition is satisfied, the target current that is set in 2TR-TGT8 and paper allotted voltage that is set in 2TR-SHR8 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs due to the color mode occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 2 1: Black mode, 2: Color mode	
Default Value	1	

COPIER > ADJUST > HV-TR

TR-DUP1	**2**	**Sec trns indiv setting feed side: set 1**
Detail	To set the feed side for setting 1. Setting 1 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV1, TR-PPR1, TR-CLR1 and TR-DUP1. When this condition is satisfied, the target current that is set in 2TR-TGT1 and paper allotted voltage that is set in 2TR-SHR1 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite	
Default Value	1	

TR-DUP2	**2**	**Sec trns indiv setting feed side: set 2**
Detail	To set the feed side for setting 2. Setting 2 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV2, TR-PPR2, TR-CLR2 and TR-DUP2. When this condition is satisfied, the target current that is set in 2TR-TGT2 and paper allotted voltage that is set in 2TR-SHR2 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite	
Default Value	1	

TR-DUP3	**2**	**Sec trns indiv setting feed side: set 3**
Detail	To set the feed side for setting 3. Setting 3 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV3, TR-PPR3, TR-CLR3 and TR-DUP3. When this condition is satisfied, the target current that is set in 2TR-TGT3 and paper allotted voltage that is set in 2TR-SHR3 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite	
Default Value	1	

TR-DUP4	**2**	**Sec trns indiv setting feed side: set 4**
Detail	To set the feed side for setting 4. Setting 4 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV4, TR-PPR4, TR-CLR4 and TR-DUP4. When this condition is satisfied, the target current that is set in 2TR-TGT4 and paper allotted voltage that is set in 2TR-SHR4 are applied to the Secondary Transfer Outer Roller.	
Use Case	When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite	
Default Value	1	

COPIER > ADJUST > HV-TR

TR-DUP5	2	Sec trns indiv setting feed side: set 5
Detail		To set the feed side for setting 5. Setting 5 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV5, TR-PPR5, TR-CLR5 and TR-DUP5. When this condition is satisfied, the target current that is set in 2TR-TGT5 and paper allotted voltage that is set in 2TR-SHR5 are applied to the Secondary Transfer Outer Roller.
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
Default Value		1

TR-DUP6	2	Sec trns indiv setting feed side: set 6
Detail		To set the feed side for setting 6. Setting 6 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV6, TR-PPR6, TR-CLR6 and TR-DUP6. When this condition is satisfied, the target current that is set in 2TR-TGT6 and paper allotted voltage that is set in 2TR-SHR6 are applied to the Secondary Transfer Outer Roller.
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
Default Value		1

TR-DUP7	2	Sec trns indiv setting feed side: set 7
Detail		To set the feed side for setting 7. Setting 7 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV7, TR-PPR7, TR-CLR7 and TR-DUP7. When this condition is satisfied, the target current that is set in 2TR-TGT7 and paper allotted voltage that is set in 2TR-SHR7 are applied to the Secondary Transfer Outer Roller.
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
Default Value		1

TR-DUP8	2	Sec trns indiv setting feed side: set 8
Detail		To set the feed side for setting 8. Setting 8 is the combination condition of environment, paper type (paper weight), color mode and feed side that are set in TR-ENV8, TR-PPR8, TR-CLR8 and TR-DUP8. When this condition is satisfied, the target current that is set in 2TR-TGT8 and paper allotted voltage that is set in 2TR-SHR8 are applied to the Secondary Transfer Outer Roller.
Use Case		When an image failure (mottled image/density loss due to excessive transfer/toner scattering on solid image) that differs on the 1st/2nd side occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 4 1: 1-sided, 2: Auto 2-sided, 3: Multi-purpose Tray 2-sided, 4: POD Deck Lite
Default Value		1

COPIER > ADJUST > HV-TR

1TR-TGY	2	Adj Y pry trns ATVC tgt crrnt:1/1 speed
Detail		To adjust the offset of the target current for Y-color upon primary transfer ATVC control at 1/1 speed. As the value is changed by 1, the offset is changed by 1.0 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to the primary transfer occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		1.0

1TR-TGM	2	Adj M pry trns ATVC tgt crrnt:1/1 speed
Detail		To adjust the offset of the target current for M-color upon primary transfer ATVC control at 1/1 speed. As the value is changed by 1, the offset is changed by 1.0 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to the primary transfer occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		1.0

1TR-TGC	2	Adj C pry trns ATVC tgt crrnt:1/1 speed
Detail		To adjust the offset of the target current for C-color upon primary transfer ATVC control at 1/1 speed. As the value is changed by 1, the offset is changed by 1.0 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to the primary transfer occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		1.0

COPIER > ADJUST > HV-TR

1TR-TGK1	2	Adj Bk pry trns ATVC tgt crrnt:1/1 speed
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in black mode at 1/1 speed. As the value is changed by 1, the offset is changed by 1.0 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to the primary transfer occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		1.0

1TR-TGK4	2	Adj clr Bk pry trn ATVC tgt crrnt:1/1SPD
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in color mode at 1/1 speed. As the value is changed by 1, the offset is changed by 1.0 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to the primary transfer occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		1.0

2EL	2	Set of Sec Trns Static Eliminator bias
Detail		To adjust the application bias of the Secondary Transfer Static Eliminator. As the value is changed by 1, the bias is changed by 500 V. Increase the value when the Static Eliminator trace (crow's footprint image) occurs. Decrease the value when the Static Eliminator trace (water-drop image) or separation failure occurs. If the bias after the adjustment is out of the range (between -4000 and 0 V), it is forcibly set to the upper/lower limit value.
Use Case		When an image failure (Static Eliminator trace, separation failure, etc.) due to the Secondary Transfer Static Eliminator occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		If the value is too large, the Static Eliminator trace occurs again.
Display/Adj/Set Range		-8 to 6
Unit		V
Default Value		0
Related Service Mode		COPIER> ADJUST> HV-TR> 2ELSW
Amount of Change per Unit		1

COPIER > ADJUST > HV-TR

POSTSW-K	**2**	**Pre-trns charging assembly ON/OFF**
Detail	To set ON/OFF of the Pre-transfer Charging Assembly.	
Use Case	When an image failure (image smear due to the drum) occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	When 0 is set, black mottled image or leopard patterns (horizontal long lines) might occur.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	1	
2TC-I11	**2**	**For R&D**
2ELSW	**2**	**Sec Trns Static Eliminator bias ON/OFF**
Detail	To set ON/OFF of the Secondary Transfer Static Eliminator application bias.	
Use Case	When an image failure (soiled back of the paper due to secondary transfer) occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	1	
Related Service Mode	COPIER> ADJUST> HV-TR> 2EL	
1TR-TGY2	**2**	**Adj Y pry trns ATVC tgt crrnt:2/3 speed**
Detail	To adjust the offset of the target current for Y-color upon primary transfer ATVC control at 2/3 speed. As the value is changed by 1, the offset is changed by 0.7 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.	
Use Case	When an image failure due to inappropriate primary transfer current setting occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-10 to 10	
Unit	uA	
Default Value	0	
Amount of Change per Unit	0.7	
1TR-TGM2	**2**	**Adj M pry trns ATVC tgt crrnt:2/3 speed**
Detail	To adjust the offset of the target current for M-color upon primary transfer ATVC control at 2/3 speed. As the value is changed by 1, the offset is changed by 0.7 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.	
Use Case	When an image failure due to inappropriate primary transfer current setting occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-10 to 10	
Unit	uA	
Default Value	0	
Amount of Change per Unit	0.7	

COPIER > ADJUST > HV-TR

1TR-TGC2	2	Adj C pry trns ATVC tgt crrnt:2/3 speed
Detail		To adjust the offset of the target current for C-color upon primary transfer ATVC control at 2/3 speed. As the value is changed by 1, the offset is changed by 0.7 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.7

1TR-TK12	2	Adj Bk pry trns ATVC tgt crrnt:2/3 speed
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in black mode at 2/3 speed. As the value is changed by 1, the offset is changed by 0.7 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.7

1TR-TGY3	2	Adj Y pry trns ATVC tgt crrnt:1/2 speed
Detail		To adjust the offset of the target current for Y-color upon primary transfer ATVC control at 1/2 speed. As the value is changed by 1, the offset is changed by 0.5 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.5

COPIER > ADJUST > HV-TR

1TR-TGM3	2	Adj M pry trns ATVC tgt crrnt:1/2 speed
Detail		To adjust the offset of the target current for M-color upon primary transfer ATVC control at 1/2 speed. As the value is changed by 1, the offset is changed by 0.5 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.5

1TR-TGC3	2	Adj C pry trns ATVC tgt crrnt:1/2 speed
Detail		To adjust the offset of the target current for C-color upon primary transfer ATVC control at 1/2 speed. As the value is changed by 1, the offset is changed by 0.5 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.5

1TR-TK13	2	Adj Bk pry trns ATVC tgt crrnt:1/2 speed
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in black mode at 1/2 speed. As the value is changed by 1, the offset is changed by 0.5 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.5

COPIER > ADJUST > HV-TR

1TR-TK42	2	Adj clr Bk pry trn ATVC tgt crrnt:2/3SPD
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in color mode at 2/3 speed. As the value is changed by 1, the offset is changed by 0.7 micro A. Increase the value when spots, leopard pattern image, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when white spots, image fogging due to transfer memory, drum memory due to strong transfer current or mottled image due to surface texture of heavy paper 1/2 occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		uA
Default Value		0
Amount of Change per Unit		0.7

1TR-TK43	2	Adj clr Bk pry trn ATVC tgt crrnt:1/2SPD
Detail		To adjust the offset of the target current for Bk-color upon primary transfer ATVC control in color mode at 1/2 speed. As the value is changed by 1, the offset is changed by 0.5 micro A. Increase the value when spots, mottled image, or image failure due to insufficient transfer current occurs. Decrease the value when image fogging due to transfer memory or drum memory due to strong transfer current occurs.
Use Case		When an image failure due to inappropriate primary transfer current setting occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		0.5

CLN1-I1	2	Adj upstm clean current:1/1SPD, img form
Detail		To adjust the current flowing to the ITB Cleaning Roller (Upstream) when forming an image at 1/1 speed. As the value is changed by 1, the current is changed by 1 micro A.
Use Case		- When cleaning failure occurs - When cleaning failure is not solved although the current flowing to the ITB Cleaning Roller (Downstream) at the time of image formation is adjusted
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.

■ FEED-ADJ

COPIER > ADJUST > FEED-ADJ

REGIST	1	Adj of paper leading edge margin: plain
Detail		To adjust the leading edge margin on plain paper by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. +: Leading edge margin becomes smaller. (An image moves upward.) -: Leading edge margin becomes larger. (An image moves downward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

ADJ-C1	2	Write start pstn in horz scan:Cassette 1
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 1. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-C2	2	Write start pstn in horz scan:Cassette 2
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 2. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-C3	2	Write start pstn in horz scan:Cassette 3
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 3. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

ADJ-MF	2	Write start pstn in horz scan: MP tray
Detail	To adjust the image write start position in the horizontal scanning direction when picking up paper from the Multi-purpose Tray. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

ADJ-DK	2	Write start pstn in horz scan: Deck Lite
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper from the POD Deck Lite. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

ADJ-REFE	2	Write start pstn in horz scan: 2nd side
Detail	To adjust the image write start position on the 2nd side in the horizontal scanning direction. As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

COPIER > ADJUST > FEED-ADJ

REG-DUP1	2	Adj ppr lead edge margin: 1/1 SPD, 2nd
Detail	To adjust the leading edge margin on the 2nd side at 1/1 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

REG-DUP2	2	Adj ppr lead edge margin: 2/3 SPD, 2nd
Detail	To adjust the leading edge margin on the 2nd side at 2/3 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

PFIX-FAN	2	Set Pre-fix Feed Attraction Fan airflow
Detail	To set the airflow amount of the Pre-fixing Feed Attraction Fan in order to adjust the suction feeding capability of the Pre-fixing Feed Unit. Heavy paper of small irregular size can be fed when full speed is set, but noise becomes louder. In addition, wrinkles on thin paper may be alleviated. When 0 is set, the fan rotates at full speed for heavy paper 5 and paper with 200 mm or less in length in feed direction and 181 g/m2 or more in weight. The fan rotates at half speed for other papers. When 1 is set, the fan rotates at full speed for thin paper 1/2 and recycled paper 1 in addition to the above papers. The fan rotates at half speed for other papers. When 2 is set, the fan always rotates at full speed.	
Use Case	- Upon user's request (to improve feeding performance of small size paper) - When wrinkles occur with thin paper	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	- When full speed is set, noise becomes larger. - When half speed is set, a jam might occur unless an upward curl is added to paper depending on the paper type.	
Display/Adj/Set Range	0 to 2 0: Full speed for heavy paper 5 and paper with 200 mm or less in length in feed direction and 181 g/m2 or more in weight. Half speed for other papers. 1: Full speed for papers mentioned above, thin paper 1/2 and recycled paper 1. Half speed for other papers. 2: Full speed	
Default Value	0	

COPIER > ADJUST > FEED-ADJ

ADJ-MDK1	2	Write pstn in horz scan:Multi Deck(Upr)
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Upper). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the paper width is larger than 320 mm, execute mechanical adjustment.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-MDK2	2	Write pstn in horz scan:Multi Deck(Mid)
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Middle). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the paper width is larger than 320 mm, execute mechanical adjustment.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

ADJ-MDK3	2	Write pstn in horz scan:Multi Deck(Lowr)
Detail		To adjust the image write start position in the horizontal scanning direction when feeding paper from the Multi Deck (Lower). As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the paper width is larger than 320 mm, execute mechanical adjustment.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

PFIX-SPD	2	Adj of Pre-fix Feed Motor speed
Detail		To adjust the speed of the Pre-fixing Feed Motor. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. Increase the value if a jam occurs as the result that the trailing edge of thin paper or recycled paper winds around the Secondary Transfer Outer Roller.
Use Case		When the trailing edge of thin paper or recycled paper winds around the Secondary Transfer Outer Roller, and a jam occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		%
Default Value		0
Amount of Change per Unit		0.1

EXT-SPD	2	Adj of Delivery Motor speed
Detail		To adjust the speed of the Delivery Motor. The rotation speed of the Outer Delivery Roller changes in the case of the straight delivery and 2-sided delivery. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and fixing side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is created between the Outer Delivery Roller and Fixing Assembly, and consequently a jam due to paper bending might occur.
Use Case		- When uneven gloss occurs - When noise comes from the Outer Delivery Drive Assembly - When a jam occurs because paper winds around the Fixing Assembly
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

TBLT-SPD	1	Fine adjustment of ITB speed
Detail		To make a fine adjustment of the ITB speed. As the value is changed by 1, the speed of the ITB Drive Motor is changed by 0.025 %. +: The speed is increased. -: The speed is decreased. When the speed is changed, the image magnification ratio in vertical scanning direction is changed. The adjustment result is reflected to 1/1 speed, 2/3 speed, and 1/2 speed. If blur image (uneven density at random intervals) is not alleviated by COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3, increase the speed (1 to 4).
Use Case		When blur image (uneven density at random intervals) occurs
Adj/Set/Operate Method		1) Enter the setting value (1 to 4; switch negative/positive by -/+ key) and press OK key. 2) Output an halftone image. If blur image is alleviated, execute step 3 and later. If not, change the setting value to 5 to 8, and check again. 3) Change the magnification ratio in vertical scanning direction in "Fine Adjust Zoom" in Settings/Registration as needed. 4) Change the leading edge margin in COPIER> ADJUST> FEED-ADJ> REGIST as needed. 5) Adjust the color displacement in vertical scanning direction in "Auto Correct Color Mismatch" in Settings/Registration.
Caution		- Use this mode when blur image (uneven density at random intervals) is not alleviated by COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3. - The operation is enabled when the setting value of COPIER> OPTION> IMG-TR> ITB-TYPE is "1". - If the setting value is out of the range between -4 and 0, uneven density at intervals of other circumference might get worse. - After execution, check magnification ratio in vertical scanning direction and leading edge margin, and then execute "Auto Correct Color Mismatch".
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Related Service Mode		COPIER> ADJUST> IMG-REG> DRM-SPD1/2/3 COPIER> ADJUST> FEED-ADJ> REGIST COPIER> OPTION> IMG-TR> ITB-TYPE
Additional Functions Mode		Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Image Position> Fine Adjust Zoom Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch
Amount of Change per Unit		0.025

REG-DUP3	2	Adj ppr lead edge margin: 1/2 SPD, 2nd
Detail		To adjust the leading edge margin on the 2nd side at 1/2 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

DCR1-SPD	2	Adj of Decurler Feed Motor 1 speed
Detail		To adjust the speed of the Decurler Feed Motor 1. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and decurler side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is formed between the delivery side and the Buffer Decurler, and it may cause scratch on an image or uneven gloss.
Use Case		- When uneven gloss occurs - When scratch on an image occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		0.1

DCR2-SPD	2	Adj of Decurler Feed Motor 2 speed
Detail		To adjust the speed of the Decurler Feed Motor 2. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and decurler side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is formed between the delivery side and the Buffer Decurler, and it may cause scratch on an image or uneven gloss.
Use Case		- When uneven gloss occurs - When scratch on an image occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		0.1

LP-CST	1	Adj pre-rgst arch amnt:1st side,Cassette
Detail		To adjust the arch amount before registration for the 1st side of paper when feeding paper from a cassette. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		When skew occurs on the 1st side at the time of picking up paper from a cassette
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, paper wrinkles or paper bending may occur.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

LP-DK	1	Adj pre-rgst arch amnt: 1st, Deck Lite
Detail		To adjust the arch amount before registration for the 1st side of paper when feeding paper from POD Deck Lite. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		When skew occurs on the 1st side at the time of picking up paper from POD Deck Lite
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, paper wrinkles or paper bending may occur.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

LP-DUP	1	Adj pre-rgst arch amount: 2nd side
Detail		To adjust the arch amount before registration for the 2nd side of paper. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		When skew occurs on the 2nd side
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, paper wrinkles or paper bending may occur.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

LP-MDK	1	Adj pre-rgst arch amnt: 1st, Multi Deck
Detail		To adjust the arch amount before registration for the 1st side of paper when feeding paper from the Multi Deck. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		When skew occurs on the 1st side at the time of picking up paper from Multi Deck
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, paper wrinkles or paper bending may occur.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

LP-MF	**1**	**Adj pre-rgst arch amount: 1st, MP Tray**
Detail	To adjust the arch amount before registration for the 1st side of paper when feeding paper from the Multi-purpose Tray. As the value is changed by 1, the arch amount is changed by 0.1 mm. +: Increase -: Decrease	
Use Case	When skew occurs on the 1st side at the time of picking up paper from the Multi-purpose Tray	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	If the value is too large, paper wrinkles or paper bending may occur.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

REG-1	**2**	**Adj ppr lead edge margin: 1/1 SPD, 1st**
Detail	To adjust the leading edge margin on the 1st side at 1/1 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

REG-2	**2**	**Adj ppr lead edge margin: 2/3 SPD, 1st**
Detail	To adjust the leading edge margin on the 1st side at 2/3 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

COPIER > ADJUST > FEED-ADJ

REG-3	2	Adj ppr lead edge margin: 1/2 SPD, 1st
Detail		To adjust the leading edge margin on the 1st side at 1/2 speed by changing the timing to turn ON the Registration Motor. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

REG-MF-1	1	Adj ppr lead edge margin: 1/1 SPD, MP
Detail		To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 1/1 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

REG-MF-2	1	Adj ppr lead edge margin: 2/3 SPD, MP
Detail		To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 2/3 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

REG-MF-3	1	Adj ppr lead edge margin: 1/2 SPD, MP
Detail	To adjust the leading edge margin by changing the timing to turn ON the Registration Motor when feeding paper from the Multi-purpose Tray at 1/2 speed. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. -: Leading edge margin becomes larger. (An image moves downward.) +: Leading edge margin becomes smaller. (An image moves upward.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.	
Use Case	When replacing the DC Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

REV-SPD	2	Adj of Reverse Motor speed
Detail	To adjust the speed of the Reverse Motor. The rotation speed of the Reverse Roller changes in the case of the reverse delivery and 2-sided delivery. As the value is changed by 1, the speed is changed by 0.1 %. +: The speed is increased. -: The speed is decreased. If the value is too large, paper is pulled by both the delivery side and fixing side, and consequently noise might occur and/or the motor might become out of sync. If the value is too small, arch is created between the Reverse Roller and Fixing Assembly, and consequently a jam due to paper bending might occur.	
Use Case	- When uneven gloss occurs - When noise comes from the Outer Delivery Drive Assembly - When a jam occurs because paper winds around the Fixing Assembly	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-30 to 30	
Unit	%	
Appropriate Target Value	0	
Default Value	0	
Amount of Change per Unit	0.1	

PREG-SPD	2	Adj of Pre-registration Motor speed
Detail	To adjust the speed of the Pre-registration Motor. As the value is changed by 1, the speed is changed by 0.1%.	
Use Case	When analyzing the cause of a problem	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-30 to 30	
Unit	%	
Default Value	0	
Amount of Change per Unit	0.1	

COPIER > ADJUST > FEED-ADJ

REG-REV1	2	Adj of Reg Roller rvrs rotn amnt:1/1SPD
Detail		To adjust the reverse rotation amount of the Registration Roller at side registration correction. (1/1 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
Use Case		- When skew correction is insufficient - When leading edge of paper is bent or flipped
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

REG-REV2	2	Adj of Reg Roller rvrs rotn amnt:2/3SPD
Detail		To adjust the reverse rotation amount of the Registration Roller at side registration correction. (2/3 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
Use Case		- When skew correction is insufficient - When leading edge of paper is bent or flipped
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

REG-REV3	2	Adj of Reg Roller rvrs rotn amnt:1/2SPD
Detail		To adjust the reverse rotation amount of the Registration Roller at side registration correction. (1/2 speed) As the value is changed by 1, the reverse rotation amount is changed by 0.1 mm. Increase the value when skew occurs. Decrease the value when the leading edge of paper is bent or flipped.
Use Case		- When skew correction is insufficient - When leading edge of paper is bent or flipped
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

REG-SPD1	1	Adj of Registration Motor speed: 1/1SPD
Detail		To adjust the speed of the Registration Motor at 1/1 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
Use Case		- When the image at the leading edge of paper shrinks or expands in the feed direction - When an image failure (wavy-line image) occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Default Value		0
Amount of Change per Unit		0.1

REG-SPD2	1	Adj of Registration Motor speed: 2/3SPD
Detail		To adjust the speed of the Registration Motor at 2/3 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
Use Case		- When the image at the leading edge of paper shrinks or expands in the feed direction - When an image failure (wavy-line image) occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Default Value		0
Amount of Change per Unit		0.1

REG-SPD3	1	Adj of Registration Motor speed: 1/2SPD
Detail		To adjust the speed of the Registration Motor at 1/2 speed. As the value is changed by 1, the speed is changed by 0.1%. Increase the value if the image at the leading edge of paper shrinks in the feed direction, and decrease the value if it expands. Decrease the value when an image failure (wavy-line image) occurs. If these symptoms are not alleviated after adjustment is made, replace the Registration Roller.
Use Case		- When the image at the leading edge of paper shrinks or expands in the feed direction - When an image failure (wavy-line image) occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Default Value		0
Amount of Change per Unit		0.1

COPIER > ADJUST > FEED-ADJ

CT1-PKLV	2	Adj of paper surface height: Cassette 1
Detail		To adjust the pickup position of the Cassette 1. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
Use Case		- When a pickup failure occurs - When double feed occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		0.5

CT2-PKLV	2	Adj of paper surface height: Cassette 2
Detail		To adjust the pickup position of the Cassette 2. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
Use Case		- When a pickup failure occurs - When double feed occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		0.5

CT3-PKLV	2	Adj of paper surface height: Cassette 3
Detail		To adjust the pickup position of the Cassette 3. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
Use Case		- When a pickup failure occurs - When double feed occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		0.5

COPIER > ADJUST > FEED-ADJ

DK1-PKLV	2	Adjustment of paper surface height: Deck
Detail		To adjust the pickup position of POD Deck Lite. +: Move up -: Move down Increase the value when a pickup failure occurs, and decrease the value when double feed occurs.
Use Case		- When a pickup failure occurs - When double feed occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is too large, double feed may occur. If the value is too small, an pickup failure may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Amount of Change per Unit		0.5

REG-STOP	2	Adj of stop position before registration
Detail		To adjust the position where a paper stops immediately before registration. As the value is changed by 1, the stop position is moved by 0.1 mm. If degree of skew varies after replacement of the Registration Sensor/Registration Unit or when the Pre-registration Roller has worn out, make an adjustment a little at a time while checking the symptom.
Use Case		When skew correction is insufficient
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Be sure to increase the value a little at a time. If the value is too large, wrinkles occur.
Display/Adj/Set Range		-30 to 30
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

CIS-INIT	2	Entr Contact Img Sns adj VL: fcty shpmt
Detail		To enter the adjustment value of the Contact Image Sensor at factory shipment. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label together with the value of L-INIT (left edge margin value).
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value and press OK key.
Display/Adj/Set Range		4817 to 5100
Unit		pixel
Appropriate Target Value		4958
Default Value		According to the setting at shipment
Related Service Mode		COPIER> ADJUST> FEED-ADJ> L-INIT
Amount of Change per Unit		1

COPIER > ADJUST > FEED-ADJ

L-INIT	2	Entr left edge margin adj VL at shipment
Detail		To enter the adjustment value of the left edge margin at factory shipment. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label together with the value of CIS-INIT (Contact Image Sensor).
Use Case		When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Default Value		According to the setting at shipment
Related Service Mode		COPIER> ADJUST> FEED-ADJ> CIS-INIT
Amount of Change per Unit		0.1

REG-L	1	Adj of left edge registration position
Detail		To adjust the left edge registration position by changing the image write start position in horizontal scanning direction. Adjust the value of "i" to be 20 mm by checking the image adjustment chart. As the value is changed by 1, the image is moved by 0.1 mm. +: Toward rear (Left margin becomes larger.) -: Toward front (Left margin becomes smaller.) When CIS-OFF is 0, this setting is enabled.
Use Case		- At initial installation - When checking image displacement at replacement of the Registration Unit/Contact Image Sensor/ITB/Scanner Unit
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Default Value		0
Related Service Mode		COPIER> OPTION> FEED-SW> CIS-OFF
Amount of Change per Unit		0.1

■ CST-ADJ

COPIER > ADJUST > CST-ADJ

MF-A4R	1	Adj of MP Tray A4R paper width
Detail		To adjust the width of A4R paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A4R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255

COPIER > ADJUST > CST-ADJ

MF-A6R	**1**	**Adj of MP Tray A6R paper width**
Detail		To adjust the width of A6R paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A6R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
MF-A4	**1**	**Adj of MP Tray A4 paper width**
Detail		To adjust the width of A4 paper in the Multi-purpose Tray. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Multi-purpose Tray Paper Width Detection PCB or registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
MDK1-A4	**1**	**Adj of Multi Deck (Upper) A4 paper width**
Detail		To adjust the width of A4 paper in the Multi Deck (Upper). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK1-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK1-A4
MDK1-A5R	**1**	**Adj of Multi Deck(Upper) A5R paper width**
Detail		To adjust the width of A5R paper in the Multi Deck (Upper). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK1-A5R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK1-A5R

COPIER > ADJUST > CST-ADJ

MDK2-A4	1	Adj of Multi Deck (Mid) A4 paper width
Detail		To adjust the width of A4 paper in the Multi Deck (Middle). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK2-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK2-A4

MDK2-A5R	1	Adj of Multi Deck (Mid) A5R paper width
Detail		To adjust the width of A5R paper in the Multi Deck (Middle). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK2-A5R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK2-A5R

MDK3-A4	1	Adj of Multi Deck (Lower) A4 paper width
Detail		To adjust the width of A4 paper in the Multi Deck (Lower). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK3-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK3-A4

MDK3-A5R	1	Adj of Multi Deck(Lower) A5R paper width
Detail		To adjust the width of A5R paper in the Multi Deck (Lower). When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Detection PCB or registering a new value, execute COPIER> FUNCTION> CST> MDK3-A5R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> FUNCTION> CST> MDK3-A5R

COPIER > ADJUST > CST-ADJ

PDK-A4	1	Adj of POD Deck Lite A4 paper width
Detail		To adjust the width of A4 paper in the POD Deck Lite. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Sensor PCB or registering a new value, execute COPIER> FUNCTION> CST> PDK-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Paper Width Sensor PCB or registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 1023
Default Value		0
Related Service Mode		COPIER> FUNCTION> CST> PDK-A4

PDK-A5R	1	Adj of POD Deck Lite A5R paper width
Detail		To adjust the width of A5R paper in the POD Deck Lite. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When replacing the Paper Width Sensor PCB or registering a new value, execute COPIER> FUNCTION> CST> PDK-A5R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Paper Width Sensor PCB or registering a new value
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range		0 to 1023
Default Value		0
Related Service Mode		COPIER> FUNCTION> CST> PDK-A5R

■ MISC

COPIER > ADJUST > MISC

SEG-ADJ	1	Set criteria for text/photo: front side
Detail		To set the judgment level of text/photo original in Text/Photo/Map mode. As the value is larger, the original is more likely judged as a photo document, and as the value is smaller, the original is more likely judged as a text document.
Use Case		When adjusting the classification level of text and photo in Text/Photo/Map mode
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-4 to 4
Default Value		0

K-ADJ	1	Set criteria for black text: front side
Detail		To set the judgment level of black characters at text processing. As the value is increased, the text tends to be detected as black.
Use Case		When preferring the text to be judged as black
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-3 to 3
Default Value		0

COPIER > ADJUST > MISC

ACS-ADJ	**1**	**Set criteria for B&W/color in ACS:front**
Detail	To set the judgment level of B&W/color original in ACS mode. As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.	
Use Case	When adjusting the color recognition level in ACS mode	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	

ACS-EN	**2**	**Set judgment area in ACS mode:front**
Detail	To set the judgment area in ACS mode. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the judgment area in ACS mode	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	1	

ACS-CNT	**2**	**Set jdgmt pixel count area in ACS:front**
Detail	To set the area where the pixel is counted to judge the color presence in ACS mode. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the area where the pixel is counted to judge the color presence in ACS mode	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	

ACS-EN2	**2**	**Set ACS mode jdgmt area in DADF mode**
Detail	To set the judgment area in ACS mode at DADF reading. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the judgment area in ACS mode at DADF reading	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	1	

ACS-CNT2	**2**	**Set ACS jdgmt pixel count area in DADF**
Detail	To set the area where the pixel is counted to judge the color presence in ACS mode at DADF reading. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the area where the pixel is counted to judge the color presence in ACS mode at DADF reading	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	

COPIER > ADJUST > MISC

WT-ER-LV	**1**	**Set Drum Clean/Waste Toner Feed Mtr SPD**
Detail	To set the speed of Drum Cleaning/Waste Toner Feed Drive Motor (M30). Increase the value when uneven density at 10 mm intervals occurs.	
Use Case	When uneven density at 10 mm intervals occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Take necessary action in accordance with the instructions from the Quality Support Division.	
Display/Adj/Set Range	0 to 3 0: 120 %, 1: 150 %, 2: 160 %, 3: 170 %	
Unit	%	
Default Value	0	
SEG-ADJ3	**1**	**Set criteria for text/photo: back side**
Detail	To set the judgment level of text/photo original in Text/Photo/Map mode when reading the back side. As the value is larger, the original is more likely judged as a photo document, and as the value is smaller, the original is more likely judged as a text document.	
Use Case	When adjusting the classification level of text and photo in Text/Photo/Map mode on the back side	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-4 to 4	
Default Value	0	
K-ADJ3	**1**	**Set Bk text jdgmt stdrd: back side**
Detail	To set the judgment level of black characters for text processing when reading the back side. As the value is larger, the text tends to be detected as black.	
Use Case	When preferring the text to be judged as black on the back side	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	
ACS-ADJ3	**1**	**Set criteria for B&W/color in ACS:back**
Detail	To set the judgment level of B&W/color original in ACS mode when reading the back side. As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.	
Use Case	When adjusting the color recognition level in ACS mode on the back side	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	
ACS-EN3	**2**	**Set judgment area in ACS mode:back**
Detail	To set the judgment area in ACS mode when reading the back side. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the judgment area in ACS mode on the back side	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	1	

COPIER > ADJUST > MISC

ACS-CNT3	2	Set jdgmt pixel count area in ACS:back
Detail	To set the area where the pixel is counted to judge the color presence in ACS mode when reading the back side. As the value is larger, the judgment area is widened.	
Use Case	When adjusting the area where the pixel is counted to judge the color presence in ACS mode on the back side	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	

SH-ADJ	1	Adj of sharpness: Copyboard, DADF front
Detail	To adjust the sharpness of image in copyboard reading mode and image on the front side in duplex stream reading mode that is set in Settings/Registration menu. As the value is larger, the image gets sharper. If the value is too large, moire is likely to occur in an output image of COPY and SEND. To match the image quality with that of the back side in the duplex stream reading mode, decrease the value when moire on the front side is stronger than the back side and increase the value when it is weaker.	
Use Case	When moire frequently occurs on images of COPY and SEND output	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	

SH-ADJ2	1	Adjustment of sharpness: DADF back side
Detail	To adjust the sharpness of image on the back side in duplex stream reading mode that is set in Settings/Registration menu. As the value is larger, the image gets sharper. If the value is too large, moire is likely to occur in an output image of COPY and SEND. To match the image quality with that of the front side in the duplex stream reading mode, decrease the value when moire on the front side is stronger than the back side, and increase the value when it is weaker.	
Use Case	When moire frequently occurs on images of COPY and SEND output	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	

FAN-HIGH	2	Adj Fix Heat Fan rotn: hi temp at print
Detail	To adjust the number of rotations of the Fixing Heat Fan when temperature inside the machine rises high during printing. Decrease the value when the drive noise from the fan at high temperature is loud.	
Use Case	Upon user's request (to reduce fan drive noise at high temperature)	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	80 to 100	
Unit	%	
Default Value	100	
Amount of Change per Unit	1	

COPIER > ADJUST > MISC

FAN-STBY	2	Adj Fixing Heat Fan rotations: standby
Detail		To adjust the number of rotations of the Fixing Heat Fan at standby. As the value is increased, high frequency noise from the fan at standby can be alleviated, but drive noise becomes louder.
Use Case		Upon user's request (to alleviate high frequency noise from the fan at standby)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		As the value is larger, drive noise from the fan becomes louder.
Display/Adj/Set Range		2450 to 3500
Unit		rpm
Default Value		2450
Amount of Change per Unit		1

■ SENS-ADJ

COPIER > ADJUST > SENS-ADJ

UP-ED-OF	2	Adj ITB upstream displace correct amount
Detail		To adjust the displacement correction amount at upstream side of the ITB by changing the tilt of the ITB Displacement Sensor 2. If the upstream side of the ITB is displaced, the degree of color displacement in horizontal scanning direction becomes larger in the following order: Bk, C, M, and Y. As the value is changed by 1, the correction amount is changed by 20 micro m. If Y-color is displaced toward front relative to Bk-color, increase the value.
Use Case		When color displacement (Bk<C<M<Y) occurs in horizontal scanning direction
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		um
Default Value		0
Amount of Change per Unit		20

■ EXP-LED

COPIER > ADJUST > EXP-LED

PR-EXP-Y	2	Adj Clean Pre-expo LED(Y) current:1/1SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (Y) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		- When drum ghost (uneven density at intervals of drum circumference) occurs - When potential is not applied well
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > EXP-LED

PR-EXP-M	2	Adj Clean Pre-expo LED(M) current:1/1SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (M) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		- When drum ghost (uneven density at intervals of drum circumference) occurs - When potential is not applied well
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXP-C	2	Adj Clean Pre-expo LED(C) current:1/1SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (C) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		- When drum ghost (uneven density at intervals of drum circumference) occurs - When potential is not applied well
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXP-K	2	Adj Clean Pre-expo LED(Bk) crrnt:1/1SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (Bk) at 1/1 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		- When drum ghost (uneven density at intervals of drum circumference) occurs - When potential is not applied well
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > EXP-LED

AF-EXP-K	2	Adj Cln Post-expo LED(Bk) intnsty:1/1SPD
Detail		To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 1/1 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
Use Case		When patch detection ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- As the value is increased, the life of the Photosensitive Drum is shortened. - Return the value to 0 when replacing the Photosensitive Drum.
Display/Adj/Set Range		-10 to 10
Default Value		0
Supplement/Memo		Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.
Amount of Change per Unit		5

AF-EXPK2	2	Adj Cln Post-expo LED(Bk) intnsty:2/3SPD
Detail		To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 2/3 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
Use Case		When patch detection ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- Do not use this at the normal service. - As the value is increased, the life of the Photosensitive Drum is shortened. - Return the value to 0 when replacing the Photosensitive Drum.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Supplement/Memo		Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.
Amount of Change per Unit		5

AF-EXPK3	2	Adj Cln Post-expo LED (Bk) intnsty:1/2SP
Detail		To adjust the light intensity of the Cleaning Post-exposure LED (Bk) at 1/2 speed. As the value is larger, patch detection ghost can be alleviated, but the life of the Photosensitive Drum is shortened. If the value is too large, color contrast decreases. Return the value to 0 when replacing the Photosensitive Drum.
Use Case		When patch detection ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- As the value is increased, the life of the Photosensitive Drum is shortened. - Return the value to 0 when replacing the Photosensitive Drum.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Supplement/Memo		Patch detection ghost: Patch trace transferred onto a sheet of paper which could not be removed by ITB cleaning. It is likely to occur when single Bk color is used frequently.
Amount of Change per Unit		5

COPIER > ADJUST > EXP-LED

PR-EXPY2	2	Adj Clean Pre-expo LED(Y) current:2/3SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (Y) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXPM2	2	Adj Clean Pre-expo LED(M) current:2/3SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (M) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXPC2	2	Adj Clean Pre-expo LED(C) current:2/3SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (C) at 2/3 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

COPIER > ADJUST > EXP-LED

PR-EXPY3	2	Adj Clean Pre-expo LED(Y) current:1/2SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (Y) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXPM3	2	Adj Clean Pre-expo LED(M) current:1/2SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (M) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

PR-EXPC3	2	Adj Clean Pre-expo LED(C) current:1/2SPD
Detail		To adjust the current of the Cleaning Pre-exposure LED (C) at 1/2 speed. Increase the value when drum ghost occurs, and decrease the value when potential is not applied well.
Use Case		When drum ghost occurs
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		As the value is increased, the life of the Photosensitive Drum is shortened.
Display/Adj/Set Range		-10 to 10
Unit		mA
Default Value		0
Amount of Change per Unit		10

■ P-PASCAL

COPIER > ADJUST > P-PASCAL

CS1OFWMY	**2**	**Y-clr white measure luminance:Clr Sns 1**
Detail		To adjust the Y-color white measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFWIM	**2**	**M-clr white ideal luminance: Clr Sns 1**
Detail		To adjust the M-color white ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFDMM	**2**	**Solid M-clr measure luminance: Clr Sns 1**
Detail		To adjust the solid M-color measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS1OFDMY	2	Solid Y-clr measure luminance: Clr Sns 1
Detail		To adjust the solid Y-color measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFDIM	2	Solid M-clr ideal luminance: Clr Sns 1
Detail		To adjust the solid M-color ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFDIY	2	Solid Y-clr ideal luminance: Clr Sns 1
Detail		To adjust the solid Y-color ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS1OFHMM	2	M-clr HT measured luminance: Clr Sns 1
Detail		To adjust the M-color halftone measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFHMY	2	Y-clr HT measured luminance: Clr Sns 1
Detail		To adjust the Y-color halftone measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFHIM	2	M-clr HT ideal luminance: Clr Sns 1
Detail		To adjust the M-color halftone ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS1OFHIY	2	Y-clr HT ideal luminance: Clr Sns 1
Detail		To adjust the Y-color halftone ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFDMK	2	Solid Bk-clr measure luminance:Clr Sns 2
Detail		To adjust the solid Bk-color measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFDMC	2	Solid C-clr measure luminance: Clr Sns 2
Detail		To adjust the solid C-color measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS2OFDIK	2	Solid Bk-clr ideal luminance: Clr Sns 2
Detail		To adjust the solid Bk-color ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFDIC	2	Solid C-clr ideal luminance: Clr Sns 2
Detail		To adjust the solid C-color ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFHMK	2	Bk-clr HT measured luminance: Clr Sns 2
Detail		To adjust the Bk-color halftone measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS2OFHMC	2	C-clr HT measured luminance: Clr Sns 2
Detail		To adjust the C-color halftone measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFHIK	2	Bk-clr HT ideal luminance: Clr Sns 2
Detail		To adjust the Bk-color halftone ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFHIC	2	C-clr HT ideal luminance: Clr Sns 2
Detail		To adjust the C-color halftone ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS2OFWMK	2	Bk-clr white measure luminance:Clr Sns 2
Detail		To adjust the Bk-color white measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFWMC	2	C-clr white measure luminance:Clr Sns 2
Detail		To adjust the C-color white measured luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS2OFWIK	2	Bk-clr white ideal luminance: Clr Sns 2
Detail		To adjust the Bk-color white ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

COPIER > ADJUST > P-PASCAL

CS2OFWIC	2	C-clr white ideal luminance: Clr Sns 2
Detail		To adjust the C-color white ideal luminance value detected by the Color Sensor 2. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFWMM	2	M-clr white measure luminance:Clr Sns 1
Detail		To adjust the M-color white measured luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

CS1OFWIY	2	Y-clr white ideal luminance: Clr Sns 1
Detail		To adjust the Y-color white ideal luminance value detected by the Color Sensor 1. When replacing the DC Controller PCB/clearing RAM data or when replacing the Fixing Feed Unit, enter the value of service label.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after adjustment.
Display/Adj/Set Range		0 to 1023
Default Value		According to the setting at shipment
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust
Amount of Change per Unit		1

FUNCTION

■ INSTALL

COPIER > FUNCTION > INSTALL

STRD-POS	**1**	**Scan position auto adj in DADF mode**
Detail		To automatically adjust the reading start position at DADF reading
Use Case		At DADF installation/uninstallation
Adj/Set/Operate Method		1) Close the DADF. 2) Select the item, and then press OK key. The operation automatically stops after the adjustment. 3) Write the value displayed by COPIER> ADJUST> ADJ-XY> STRD-POS in the service label.
Caution		Write the adjusted value in the service label.
Display/Adj/Set Range		At normal termination: OK, At abnormal termination: NG
Related Service Mode		COPIER> ADJUST> ADJ-XY> STRD-POS

CARD	**1**	**Card number setting**
Detail		To set the card number to be used for Card Reader. A series of numbers from the entered number to the number of cards specified by CARD-RNG can be used.
Use Case		- At installation of the Card Reader - When replacing the HDD
Adj/Set/Operate Method		1) Enter the number, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		The card management information (department ID and password) is initialized.
Display/Adj/Set Range		0 to 2001
Default Value		0

AINR-OFF	**1**	**ON/OFF of warm-up rotation deactivation**
Detail		To set ON/OFF to disable execution of warm-up rotation. Warm-up rotation can be omitted when turning OFF/ON the power to check the image, etc. after the adjustment of warm-up rotation, etc. This mode is executed when warm-up rotation is not needed.
Use Case		- At installation - When replacing the Developing Assembly
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to enable the operation (cancel disabling) before the machine is used by the user. The operation is automatically enabled by executing INISET-Y/M/C/K/4.
Display/Adj/Set Range		0 to 1 0: OFF (warm-up rotation enabled), 1: ON (warm-up rotation disabled)
Default Value		0
Related Service Mode		COPIER> FUNCTION> INSTALL> INISET-Y/M/C/K/4

COPIER > FUNCTION > INSTALL

E-RDS	1	ON/OFF of Embedded-RDS
Detail		To set whether to use the Embedded-RDS.
Use Case		When using Embedded-RDS
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range		0 to 1 0: Not used, 1: Used (All the counter information is sent.)
Default Value		It differs according to the location.
Related Service Mode		COPIER> FUNCTION> INSTALL> RGW-PORT, COM-TEST, COM-LOG, RGW-ADR COPIER> FUNCTION> CLEAR> ERDS-DAT
Supplement/Memo		Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol

RGW-PORT	1	Set port number of Sales Co's server
Detail		To set the port number of the sales company's server to be used for Embedded-RDS.
Use Case		When using Embedded-RDS
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range		1 to 65535
Default Value		443
Related Service Mode		COPIER> FUNCTION> INSTALL> E-RDS, COM-TEST, COM-LOG, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT
Supplement/Memo		Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol

COM-TEST	1	Dspl connect result w/ Sales Co's server
Detail		To display the result of the connection test with the sales company's server.
Use Case		When using Embedded-RDS
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range		During operation: ACTIVE, When connection is completed: OK, When connection is failed: NG
Related Service Mode		COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-LOG, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT

COM-LOG	1	Dspl connect error w/ Sales Co's server
Detail		To display error information when the connection with the sales company's server failed.
Use Case		When using Embedded-RDS
Adj/Set/Operate Method		N/A (Display only)
Caution		Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range		Year, date, time, error code, error detail information (maximum 128 characters)
Related Service Mode		COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, RGW-ADR COPIER>FUNCTION>CLEAR>ERDS-DAT
Supplement/Memo		Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol

COPIER > FUNCTION > INSTALL

RGW-ADR	1	URL setting of Sales Company's server
Detail		To set the URL of the sales company's server to be used for Embedded-RDS.
Use Case		When using Embedded-RDS
Adj/Set/Operate Method		1) Select the URL. 2) Enter the URL, and then press OK key. 3) Turn OFF/ON the main power switch.
Caution		- Do not use Shift-JIS character strings. - Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range		URL
Default Value		https://a01.ugwdevice.net/ugw/agentif010
Related Service Mode		COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, COM-LOG COPIER>FUNCTION>CLEAR>ERDS-DAT
Supplement/Memo		Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol

CNT-DATE	1	Set counter send start date to SC server
Detail		To set the year, month, date, hour and minute to send counter information to the sales company's server. This is displayed only when the Embedded-RDS third-party extended function is available.
Use Case		When the Embedded-RDS third-party expanded function is available
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		YYYYMMDDHHMM (12 digits) YYYY: Year, MM: Month, DD: Date, HH: Hour, MM: Minute
Default Value		000000000000

CNT-INTV	1	Set counter send interval to SC server
Detail		To set the interval of sending counter information to the sales company's server in a unit of one hour. This is displayed only when the Embedded-RDS third-party extended function is available.
Use Case		When using the Embedded-RDS third-party extended function
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 168 (= 1 week)
Unit		hour
Default Value		24
Related Service Mode		COPIER> OPTION> IMG-FIX> PO-CNT
Amount of Change per Unit		1

INIT-ITB	1	Creation of ITB edge profile
Detail		To create the initial ITB edge profile to be used for the ITB displacement correction control. The initial ITB edge profile is created after neutral position of the Steering Roller is determined by the ITB displacement correction control.
Use Case		When replacing the ITB
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > INSTALL

CDS-CTL	**1**	**Setting of country/area when CDS is used**
Detail		To set country/area to enable CDS.
Use Case		When enabling CDS
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		CA (Canada), LA (Latin America), HK (Hong Kong) and the country/area specified in COPIER> OPTION> FNC-SW> CONFIG.
Default Value		It differs according to the location.
Related Service Mode		COPIER> OPTION> FNC-SW> CONFIG
Supplement/Memo		CDS: Contents Delivery System
SPLY-H	**1**	**[Not used]**
STIR	**1**	**Stirring of developer of any color**
Detail		To stir developer of any color. Execute this item after specifying a color in CLR-SET.
Use Case		- At installation - When replacing the Developing Assembly/developer - When an image failure occurs
Adj/Set/Operate Method		1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Required Time		160 sec
Related Service Mode		COPIER> FUNCTION> INSTALL> CLR-SET
INISET	**1**	**Exe Dev Ass'y (any clr) ini install mod**
Detail		To automatically execute operation necessary for initial installation of the Developing Assembly of any color. Execute this item after specifying a color in CLR-SET.
Use Case		- At installation - When replacing the Developing Assembly
Adj/Set/Operate Method		1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.
Display/Adj/Set Range		During operation: xxx second (remaining time), At normal termination: OK, At abnormal termination: NG
Unit		sec
Required Time		350 sec
Related Service Mode		COPIER> FUNCTION> INSTALL> CLR-SET
Amount of Change per Unit		1

COPIER > FUNCTION > INSTALL

CLR-SET	1	Spec color for Dev Ass'y-related process
Detail		To set the color of the Developing Assembly/Drum Unit subject to SPLY-H/STIR/INISET/ DRMRESET. Depending on the setting value, multiple colors can be selected. Only Bk can be selected when the setting values are as follow: Y: 0, M: 0, C: 0, K: 1, and 4: 0. Y and C can be selected when the setting values are as follow: Y: 1, M: 0, C: 1, K: 0, and 4: 0. All 4 colors can be selected when the setting values are as follow: Y: 0, M: 0, C: 0, K: 0, and 4: 1 (Y/M/C/K is arbitrary).
Use Case		- At installation - When replacing the Developing Assembly/Drum Unit/developer - When an image failure occurs
Adj/Set/Operate Method		Enter the setting value for each color, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Clear, 1: Select
Default Value		0
Related Service Mode		COPIER> FUNCTION> INSTALL> SPLY-H, STIR, INISET COPIER> FUNCTION> INSTALL> DRMRESET

HD-CRYP	1	Exe HDD Encrypt Board ini install mod
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To automatically execute operation necessary for initial installation of the HDD Data Encryption/ Mirroring Kit. By turning OFF the main power switch after execution, the HDD Data Encryption/Mirroring Kit can be installed.
Use Case		When replacing the HDD Data Encryption/Mirroring Kit
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

BIT-SVC	1	OFF/ON of Web service function of E-RDS
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to use Web service function of Embedded-RDS. When 0 is set, authentication information cannot be obtained from Embedded-RDS.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1

DRMRESET	1	Forcible exe of any drums rerplce
Detail		When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation to the Drum Unit for any color. Specify the color in CLR-SET. When this item is executed, laser power values, etc., that were corrected according to drum counter for the color, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.
Use Case		When replacing the Drum Unit
Adj/Set/Operate Method		1) Specify a color in CLR-SET. 2) Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> INSTALL> CLR-SET

■ CCD

COPIER > FUNCTION > CCD

DF-WLVL1	**1**	**White level adj in book mode: color**
Detail		To adjust the white level for copyboard scanning automatically by setting a paper which is usually used by the user on the Copyboard Glass.
Use Case		- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Set a paper on the Copyboard Glass. 2) Select the item, and then press OK key.
Caution		Be sure to execute DF-WLVL2 in a row.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> CCD> DF-WLVL2
DF-WLVL2	**1**	**White level adj in DADF mode: color**
Detail		To adjust the white level for DADF scanning automatically by setting a paper which is usually used by the user on the DADF.
Use Case		- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Set paper on the DADF. 2) Select the item, and then press OK key.
Caution		Be sure to execute this item after DF-WLVL1.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> CCD> DF-WLVL1
DF-LNR	**1**	**Deriving of DADF front/back linearity**
Detail		To derive the front/back side linearity characteristics in the use of DADF based on the scanning data of the DADF complex chart (No. 2, No. 10).
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Enter the value of the reader's service label. COPIER> ADJUST> CCD> DFCH-R2, DFCH-G2, DFCH-B2, DFCH-K2, DFCH-R10, DFCH-G10, DFCH-B10, DFCH-K10, DFCH2R2, DFCH2G2, DFCH2B2, DFCH2K2, DFCH2R10, DFCH2G10, DFCH2B10, DFCH2K10 2) Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> ADJUST> CCD> DFCH-R2, DFCH-G2, DFCH-B2, DFCH-K2, DFCH-R10, DFCH-G10, DFCH-B10, DFCH-K10, DFCH2R2, DFCH2G2, DFCH2B2, DFCH2K2, DFCH2R10, DFCH2G10, DFCH2B10, DFCH2K10
MTF-CLC	**1**	**Deriving of MTF filter coefficient**
Detail		To derive the MTF filter coefficient to be set for ASIC based on the MTF value of the DADF complex chart.
Use Case		When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > CCD

DF-WLVL3	1	White level adj in book mode: B&W
Detail		To adjust the white level for copyboard scanning automatically by setting a paper which is usually used by the user on the Copyboard Glass.
Use Case		- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Set a paper on the Copyboard Glass. 2) Select the item, and then press OK key.
Caution		Be sure to execute DF-WLVL4 in a row.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> CCD> DF-WLVL4

DF-WLVL4	1	White level adj in DADF mode: B&W
Detail		To adjust the white level for DADF scanning automatically by setting the paper which is usually used by the user on the DADF.
Use Case		- When replacing the Copyboard Glass - When replacing the Scanner Unit - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		1) Set paper on the DADF. 2) Select the item, and then press OK key.
Caution		Be sure to execute this item after DF-WLVL3.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> CCD> DF-WLVL3

BW-TGT	1	Set of B&W shading target value
Detail		After the white level data (X/Y/Z) for the Standard White Plate is set, read the Standard White Plate and set the black and white shading target value.
Use Case		When replacing the Copyboard Glass/Scanner Unit
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure to execute this item after execution of COPIER> ADJUST> CCD>W-PLT-X, W-PLT-Y, W-PLT-Z.
Related Service Mode		COPIER> ADJUST> CCD> W-PLT-X/Y/Z, SH-TRGT

■ DPC

COPIER > FUNCTION > DPC

DPC	1	Exe of potential control: 1/1 speed
Detail		To execute potential control for the Photosensitive Drum manually. (It is usually executed automatically.) When this item is executed, the same condition is set for development of plain paper and coated paper.
Use Case		When identifying the cause at the occurrence of E060
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Since the same condition is set for development of plain paper and coated paper groups, be sure to execute D-max control for both groups after execution of this item.

OFST	1	Adj Potential Ctrl PCB detect potential
Detail		To adjust the detection potential offset value of the Potential Sensor automatically.
Use Case		When diagnosing failure of the Potential Sensor or replacing the sensor
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		An error is displayed when open circuit/connection failure/installation failure occurs to the Potential Sensor at the time of replacement. In this case, manually set the value to 0 by EPOTOFST and then make an adjustment.
Related Service Mode		COPIER> ADJUST> V-CONT> EPOTOFST

COPIER > FUNCTION > DPC

DRM-RSET	1	Forcible exe of all clr drums rerplce
Detail	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to drum counter for all colors, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.	
Use Case	When replacing the Drum Units for all colors	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Be sure to execute this item after replacement of the Drum Units for all colors.	
Display/Adj/Set Range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)	

DRMRSETY	1	Forcible exe of Y Drum replacement mode
Detail	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to Y drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.	
Use Case	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.	
Display/Adj/Set Range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)	

DRMRSETM	1	Forcible exe of M Drum replacement mode
Detail	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to M drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.	
Use Case	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.	
Display/Adj/Set Range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)	

COPIER > FUNCTION > DPC

DRMRSETC	**1**	**Forcible exe of C Drum replacement mode**
Detail	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to C drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.	
Use Case	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.	
Display/Adj/Set Range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)	
DRMRSETK	**1**	**Forcible exe of Bk Drum replacement mode**
Detail	When replacement of Drum Unit is completed within 30 minutes, warm-up rotation may not be executed at power-off/on because of high fixing temperature. In such cases, drum potential becomes unstable, causing an image failure to occur. To prevent this symptom, this item forcibly executes the same operation (drum replacement mode) as warm-up rotation. At this time, laser power values, etc., that were corrected according to Bk drum counter, total charging time, target Vd values for potential control and drum durability are reset. Drum replacement mode is automatically disabled after execution.	
Use Case	- When detection of the Drum Unit replacement has failed - When the Drum Unit used in other machine for a while is used as a dummy unit	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Use a Drum Unit that is not close to the end of life as a dummy unit. When using a Drum Unit that is close to the end of life, it affects the life of developer, etc.	
Display/Adj/Set Range	0 to 1 0: Disabled (Not executed), 1: Enabled (Executed)	
DPC2	**2**	**Exe of potential control: 2/3 speed**
Detail	To execute potential control for the Photosensitive Drum manually. (It is usually executed automatically.) When this item is executed, the same condition is set for development of plain paper and coated paper.	
Use Case	When identifying the cause at the occurrence of E060	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Since the same condition is set for development of plain paper and coated paper groups, be sure to execute D-max control for both groups after execution of this item.	
DPC3	**2**	**Exe of potential control: 1/2 speed**
Detail	To execute potential control for the Photosensitive Drum manually. (It is usually executed automatically.) When this item is executed, the same condition is set for development of plain paper and coated paper.	
Use Case	When identifying the cause at the occurrence of E060	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Since the same condition is set for development of plain paper and coated paper groups, be sure to execute D-max control for both groups after execution of this item.

COPIER > FUNCTION > CST

MF-A4R	**1**	**Reg Multi-purpose Tray A4R stdrd width**
Detail		To register the standard value of A4R paper width (210 mm) on the Multi-purpose Tray. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MF-A4R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Set A4R paper on the Multi-purpose Tray, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MF-A4R, and write it down on the service label.
Related Service Mode		COPIER> ADJUST> CST-ADJ> MF-A4R
MF-A6R	**1**	**Reg Multi-purpose Tray A6R stdrd width**
Detail		To register the standard value of A6R paper width (105 mm) on the Multi-purpose Tray. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MF-A6R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Set A6R paper on the Multi-purpose Tray, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MF-A6R, and write it down on the service label.
Related Service Mode		COPIER> ADJUST> CST-ADJ> MF-A6R
MF-A4	**1**	**Reg Multi-purpose Tray A4 standard width**
Detail		To register the standard value of A4 paper width (297 mm) on the Multi-purpose Tray. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MF-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When registering a new value
Adj/Set/Operate Method		1) Set A4 paper on the Multi-purpose Tray, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MF-A4, and write it down on the service label.
Related Service Mode		COPIER> ADJUST> CST-ADJ> MF-A4
MDK1-A4	**1**	**Reg Multi Deck (Upper) A4 standard width**
Detail		To register the standard value of A4 paper width (297 mm) on the Multi Deck (Upper). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK1-A4.
Use Case		-When registering the standard value of A4 paper width on the Multi Deck (Upper) -DC Controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A4 paper on the Multi Deck (Upper), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK1-A4, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK1-A4

COPIER > FUNCTION > CST

MDK1-A5R	1	Reg Multi Deck (Upper) A5R stdrd width
Detail		To register the standard value of A5R paper width (148.5 mm) on the Multi Deck (Upper). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK1-A5R.
Use Case		-When registering the standard value of A5R paper width on the Multi Deck (Upper) -DC controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A5R paper on the Multi Deck (Upper), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK1-A5R, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK1-A5R

MDK2-A4	1	Reg Multi Deck (Middle) A4 stdrd width
Detail		To register the standard value of A4 paper width (297 mm) on the Multi Deck (Middle). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK2-A4.
Use Case		-When registering the standard value of A4 paper width on the Multi Deck (Middle) -DC controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A4 paper on the Multi Deck (Middle), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK2-A4, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK2-A4

MDK2-A5R	1	Reg Multi Deck (Middle) A5R stdrd width
Detail		To register the standard value of A5R paper width (148.5 mm) on the Multi Deck (Middle). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK2-A5R.
Use Case		-When registering the standard value of A5R paper width on the Multi Deck (Middle) -DC controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A5R paper on the Multi Deck (Middle), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK2-A5R, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK2-A5R

MDK3-A4	1	Reg Multi Deck (Lower) A4 standard width
Detail		To register the standard value of A4 paper width (297 mm) on the Multi Deck (Lower). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK3-A4.
Use Case		-When registering the standard value of A4 paper width on the Multi Deck (Lower) -DC controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A4 paper on the Multi Deck (Lower), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK3-A4, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK3-A4

COPIER > FUNCTION > CST

MDK3-A5R	**1**	**Reg Multi Deck (Lower) A5R stdrd width**
Detail		To register the standard value of A5R paper width (148.5 mm) on the Multi Deck (Lower). Make a fine adjustment by COPIER> ADJUST> CST-ADJ> MDK3-A5R.
Use Case		-When registering the standard value of A5R paper width on the Multi Deck (Lower) -DC controller PCB exchange/ RAM clear.
Adj/Set/Operate Method		1) Set A5R paper on the Multi Deck (Lower), and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> MDK3-A5R, and write it down on the service label.
Display/Adj/Set Range		0 to 255
Related Service Mode		COPIER> ADJUST> CST-ADJ> MDK3-A5R
CST1-FCK	**1**	**Pre-feed operation check: Cassette 1**
Detail		To execute the pre-feed control to check whether paper in the Cassette 1 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
Use Case		When identifying the cause (pickup failure, skew feed, etc.)
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
CST2-FCK	**1**	**Pre-feed operation check: Cassette 2**
Detail		To execute the pre-feed control to check whether paper in the Cassette 2 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
Use Case		When identifying the cause (pickup failure, skew feed, etc.)
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
CST3-FCK	**1**	**Pre-feed operation check: Cassette 3**
Detail		To execute the pre-feed control to check whether paper in the Cassette 3 is fed to the pre-feed position. If it operates normally, only a sheet of paper is picked up and stopped at the pre-feed position.
Use Case		When identifying the cause (pickup failure, skew feed, etc.)
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
DK1-FCK	**1**	**Checking of Deck individual delivery**
Detail		To check whether individual delivery of POD Deck Lite that is isolated from the host machine can be performed. If it operates normally, only a sheet of paper is delivered.
Use Case		When identifying the cause (pickup failure, skew feed, etc.)
Adj/Set/Operate Method		1) Isolate the POD Deck Lite from the host machine. 2) Select the item, and then press OK key.
Caution		Isolate the POD Deck Lite before execution.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > CST

DK1-INT1	1	Initialization at Deck parts replacement
Detail		To execute initialization of POD Deck Lite at parts replacement. By executing this item, the lifter moves up from the lower limit position and stops when the Paper Surface Sensor detects paper top face. The travel distance is reflected to the paper level detection control.
Use Case		When replacing the Pickup Unit/PCB/compartment
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Required Time		30 sec

DK1-SPAD	1	Setting of Deck Lifter stop position
Detail		To set stop position of the lifter when opening the compartment. When 0 is set, the lifter moves down to the lower limit position when the compartment is opened. When 1 is set, the lifter stops at pickup position. When opening the compartment under this condition, height of the Pre-separation Plate can be adjusted. Even 1 is set, the value is returned to 0 when the compartment is opened.
Use Case		When adjusting pre-separation position after replacing the Pickup Unit/compartment
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Stop at lower limit position (normal), 1: Stop at pickup position
Default Value		0

PDK-A4	1	Rgst POD Deck Lite A4 standard width
Detail		To register the standard value of A4 paper width (297 mm) on the POD Deck Lite. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> PDK-A4.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Paper Width Sensor PCB or registering a new value
Adj/Set/Operate Method		1) Set A4 paper on the POD Deck Lite, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> PDK-A4, and write it down on the service label.
Display/Adj/Set Range		0 to 1023
Default Value		0
Related Service Mode		COPIER> ADJUST> CST-ADJ> PDK-A4

PDK-A5R	1	Rgst POD Deck Lite A5R standard width
Detail		To register the standard value of A5R paper width (148.5 mm) on the POD Deck Lite. Make a fine adjustment by COPIER> ADJUST> CST-ADJ> PDK-A5R.
Use Case		- When replacing the DC Controller PCB/clearing RAM data - When replacing the Paper Width Sensor PCB or registering a new value
Adj/Set/Operate Method		1) Set A5R paper on the POD Deck Lite, and set the guide so that it fits the paper width. 2) Select the item, and then press OK key. The value is registered after automatic adjustment.
Caution		After execution, check the registered value by COPIER> ADJUST> CST-ADJ> PDK-A5R, and write it down on the service label.
Display/Adj/Set Range		0 to 1023
Default Value		0
Related Service Mode		COPIER> ADJUST> CST-ADJ> PDK-A5R

COPIER > FUNCTION > CST

DK1-LIFT	1	Drive of POD Deck Lite Lifter Motor
Detail		To drive the Lifter Motor of the POD Deck Lite. When descent timeout alarm (04-1537) occurs, the lifter wire may be wound in the opposite direction. The Lifter Motor is driven for approximately 5 seconds to wind the wire correctly.
Use Case		At recovery from descent timeout alarm
Adj/Set/Operate Method		1) Close the compartment. 2) Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

■ CLEANING

COPIER > FUNCTION > CLEANING

TBLT-CLN	1	Cleaning of ITB
Detail		To execute four idle rotations of the ITB and clean the ITB. By applying reverse bias to the Primary Transfer Roller that is engaged to the ITB (for 3 rotations of the ITB), it makes toner on the ITB easier to be removed. During that time, the Secondary Transfer Outer Roller is disengaged. After that, high voltage is applied to the Static Fur Brush (for 1 rotation of the ITB) just like at the time of image formation, and toner is collected. The ITB stops after 4 rotations in total.
Use Case		- When image failure occurs periodically due to the assumption of soiled ITB - When contacting with the ITB at the time of periodical replacement, etc.
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

WIRE-CLN	1	Cleaning of Charge Wire(1-reciprocation)
Detail		To clean the Primary Charging Wire and the Pre-transfer Charging Wire simultaneously (1 reciprocations).
Use Case		- When replacing the Primary Charging Assembly/Pre-transfer Charging Assembly - When replacing the Charging Wire - When an image failure (vertical lines) occurs
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

TB-INSD	1	Cleaning of inner surface of ITB
Detail		To execute two idle rotations of the ITB and clean inner surface of the ITB and Primary Transfer Roller. During the cleaning, the Primary Transfer Roller is engaged to the ITB and high voltage is applied to the Static Fur Brush just like at the time of image formation. First rotation of the ITB: The Secondary Transfer Outer Roller is engaged to the ITB and positive/reverse secondary transfer high voltage bias is alternately applied for every one rotation of the roller. Second ration of the ITB: The Secondary Transfer Outer Roller is disengaged. The ITB stops after 2 rotations in total.
Use Case		- When image failure occurs periodically due to the assumption of inside ITB or Primary Transfer Roller soiling - When contacting with the inside of ITB at the time of periodical replacement
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > CLEANING

BK-BNDEX	**1**	**Toner supply to Photosensitive Drum**
Detail		To form the toner band on the Photosensitive Drum, and collect it with the Drum Cleaning Blade to decrease friction between the two. All Photosensitive Drums and the ITB perform idle rotation, and stop after toner cleaning.
Use Case		When image smear occurs due to the Drum Cleaning Blade
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
WIRE-EX	**1**	**Cleaning of Charge Wire(5-reciprocation)**
Detail		To clean the Primary Charging Wire and the Pre-transfer Charging Wire simultaneously (5-reciprocation). Polish new Charging Wires to remove foreign matters or protrusions.
Use Case		- When replacing the Primary Charging Assembly/Pre-transfer Charging Assembly - When replacing the Charging Wire - When an image failure (vertical lines) occurs
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
2TR-CLN	**1**	**Clean of Secondary Transfer Outer Roller**
Detail		To clean paper dust adhered on the Secondary Transfer Outer Roller. Both the Primary Transfer Roller and the Secondary Transfer Outer Roller are engaged to the ITB. The Process Unit does operation that is the same at image formation. It forms 4 toner bands which the 4 colors are laid on top of another on the ITB. The base voltage (Vb) calculated with the Secondary Transfer ATVC control is applied to the Secondary Transfer Outer Roller until the toner bands pass through, so that toner is adhered on the Secondary Transfer Outer Roller. After the toner bands passed, Secondary Transfer Outer Roller cleaning control is executed (positive/reverse bias is applied every 2 rotations of the roller). Toner is adhered on the ITB. When the toner adhered on the ITB passed through the ITB Cleaning Unit, the operation is stopped.
Use Case		- When the backside of the paper is soiled by the Secondary Transfer Outer Roller - When contacting with the Secondary Transfer Outer Roller at the time of jam processing, etc.
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
FXD-CL-E	**1**	**Refresh of Fixing Belt**
Detail		To execute refresh operation of the Fixing Belt. Degree of scratches caused by paper edges is alleviated, so glossy lines in the feed direction can be alleviated.
Use Case		When an image failure (glossy lines) occurs due to scratches on the Fixing Belt caused by paper edges
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure not to execute this item frequently. Otherwise, the life of the Fixing Belt is shortened.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Additional Functions Mode		Adjustment/Maintenance> Refresh Fixing Roller

COPIER > FUNCTION > CLEANING

FX-CL-FQ	1	Setting of Fixing Belt refresh
Detail		To set refresh operation of the Fixing Belt. - Contact time: Amount of time where the Fixing Refresh Roller is in contact with the belt in a single refresh operation - Frequency: Interval (the number of sheets) (on 80 g/m2, A4 size conversion basis, it differs according to the paper type) - Temperature control: Fixing temperature control table to be applied at refresh operation
Use Case		When an image failure (lines in vertical scanning direction) occurs due to scratches on the Fixing Belt caused by paper edges
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When contact time or frequency is increased, the life of the Fixing Refresh Roller is shortened. When the control temperature rises, the effect of the refresh increases, but an image failure (lines, etc.) may occur.
Display/Adj/Set Range		0 to 3 (Contact time) 300 to 30000 (Frequency) 0 to 4 (Temperature control)
Default Value		0, 3000, 0

D-CLN-4	2	Cleaning of Photosensitive Drum
Detail		To perform idle rotation of the Photosensitive Drum for 1 minute. Image smear is alleviated.
Use Case		When image smear occurs
Adj/Set/Operate Method		Select the item, and then press OK key. When it is completed, it automatically stops.
Caution		If lines in horizontal scanning direction appear after execution, execute "Clean Inside Main Unit" in Settings/Registration menu.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Additional Functions Mode		Adjustment/Maintenance> Maintenance> Clean Inside Main Unit

DVS-CLNY	2	Refresh of Y-color Developing Cylinder
Detail		To execute refresh operation of the Y-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Use Case		When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG

COPIER > FUNCTION > CLEANING

DVS-CLNM	2	Refresh of M-color Developing Cylinder
Detail		To execute refresh operation of the M-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Use Case		When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG

DVS-CLNC	2	Refresh of C-color Developing Cylinder
Detail		To execute refresh operation of the C-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Use Case		When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG

DVS-CLNK	2	Refresh of Bk-color Developing Cylinder
Detail		To execute refresh operation of the Bk-color Developing Cylinder. 1. Drive the Toner Stirring Screw only 2. Drive the Developing Cylinder only 3. Drive both the Toner Stirring Screw and the Developing Cylinder at low speed Developer coating failure which occurs at continuous printing of low duty images can be alleviated. However, once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Use Case		When developer coating failure occurs at continuous printing of low duty images in a high temperature and high humidity environment
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Once the operation is executed, it cannot be executed again until 2000 sheets are fed.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK! When the operation is executed while the number of fed sheets is less than 2000 from the previous execution: NG

■ FIXING

COPIER > FUNCTION > FIXING

NIP-CHK	**1**	**Check of fixing nip width**
Detail		To check visually whether the fixing nip width is appropriate by making an output. If it is not appropriate, a fixing failure or a feeding failure may occur.
Use Case		- When replacing the fixing-related parts (Fixing Belt Unit, Pressure Belt Unit) - When an image failure/fixing feeding failure occurs
Adj/Set/Operate Method		1) Set paper for test print on a paper source. - A4/LTR - Plain paper (75 to 90 g/m2)/Coated paper (106 to 128 g/m2) 2) Set "1" ("Gradation" screen) in COPIER> TEST> PG> TXPH. 3) Set the density for each color according to the paper type. - Plain paper: Set DENS-Y/M/C to "0" and DENS-K to "255" (solid black) - Coated paper: Set DENS-Y/K to "0" and DENS-M/C to "255" (solid blue), or set DENS-Y/M/C to "0" and DENS-K to "128" (black halftone) 4) TYPE to "5" (whole-area halftone image) The machine outputs a test print. 5) Set the output made in step 4 on the Multi-purpose Tray (or Cassette 1 if the tray is not available). 6) Select the item in NIP-CHK, and then press OK key. A sheet of paper is stopped at the fixing nip for 10 seconds and then is automatically delivered. 7) Measure the nip widths at 3 locations. It is judged as normal if the values are as follow: 15.5 +/- 1.0 mm at the center of the nip trace, and 17.5 +/- 1.0 mm at 15 mm from right and left edges of paper.
Related Service Mode		COPIER> TEST> PG> TXPH, DENS-Y/M/C/K, TYPE
FX-UHP	**1**	**Exe Fixing Belt displacement crrct ctrl**
Detail		To execute Fixing Belt displacement correction control.
Use Case		When checking Fixing Belt displacement correction control
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!, At timeout: NG
FX-LHP	**1**	**Exe Press Belt displacement crrct ctrl**
Detail		To execute Pressure Belt displacement correction control.
Use Case		When checking Pressure Belt displacement correction control
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!, At timeout: NG

■ PANEL

COPIER > FUNCTION > PANEL

LCD-CHK	**1**	**Check of LCD Panel dot missing**
Detail		To check whether there is a missing dot on the LCD Panel of the Control Panel.
Use Case		When replacing the LCD Panel
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Check that the LCD Panel lights up in the order of white, black, red, green and blue. 3) Press STOP key to terminate checking.
LED-CHK	**1**	**Lighting check of Control Panel LED**
Detail		To check whether the LED on the Control Panel lights up.
Use Case		When replacing the LCD Panel
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Check that the LED lights up in the order. 3) Use LED-OFF to terminate checking.

COPIER > FUNCTION > PANEL

LED-OFF	**1**	**Terminate Control Panel LED light check**
Detail		To terminate the lighting check of LED on the Control Panel.
Use Case		During execution of LED-CHK
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> FUNCTION> PANEL> LED-CHK
KEY-CHK	**1**	**Check of Control Panel key input**
Detail		To check the key input on the Control Panel.
Use Case		When replacing the LCD Panel
Adj/Set/Operate Method		1) Select the item and press the key on the Control Panel. 2) Check that the input value is displayed. 3) Cancel the selection to terminate checking.
TOUCHCHK	**1**	**Adj of coordinate pstn of Touch Panel**
Detail		To adjust the coordinate position on the Touch Panel of the Control Panel.
Use Case		When replacing the LCD Panel
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Press the nine "+" keys in sequence.

■ PART-CHK

COPIER > FUNCTION > PART-CHK

CL	**1**	**Specification of operation Clutch**
Detail		To specify the Transfer Cleaning Clutch (CL1) to operate.
Use Case		When replacing the clutch/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 6 1: (Multi-drawer Paper Deck) Upper Deck Pickup Clutch (CL101) 2: (Multi-drawer Paper Deck) Upper Deck Pull-out Clutch (CL102) 3: (Multi-drawer Paper Deck) Middle Deck Pickup Clutch (CL201) 4: (Multi-drawer Paper Deck) Middle Deck Pull-out Clutch (CL202) 5: (Multi-drawer Paper Deck) Lower Deck Pickup Clutch (CL301) 6: (Multi-drawer Paper Deck) Lower Deck Pull-out Clutch (CL302) During operation: ACTIVE, When operation finished normally: OK!
Default Value		0
CL-ON	**1**	**Operation check of Clutch**
Detail		To start operation check of the Transfer Cleaning Clutch (CL1). During operation, ON/OFF is repeated at intervals of 3 seconds.
Use Case		When replacing the clutch/checking the operation
Adj/Set/Operate Method		1) Drive the ITB and Drum (COPIER> FUNCTION> MISC-P> MAIN-DRV). 2) Select the item, and then press OK key. 3) Check the gear of the Transfer Cleaning Assembly.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Default Value		0

COPIER > FUNCTION > PART-CHK

FAN	**1**	**Specification of operation Fan**
Detail		To specify the Fan to operate.
Use Case		When replacing the fan/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 28 1: Primary Charging Suction Fan (FM2) 2: Primary Charging Exhaust Fan (FM3) 3: Developing and Pre-transfer Charging Fan (FM4) 4: Color Cleaning Fan (FM5) 5: Fixing Heat Fan (FM6) 6: IH Power Supply Fan (FM7) 7: Power Supply Fan 1 (FM8) 8: Power Supply Fan 2 (FM9) 9: Power Supply Cooling Fan (38V) (FM14) 10: Pressure Belt Cooling Fan (Front) (FM15) 11: Pressure Belt Cooling Fan (Rear) (FM16) 12: Hopper Cooling Suction Fan (FM18) 13: Hopper Cooling Exhaust Fan (FM22) 14: Decurler Suction Fan (FM30) 15: Decurler Side Exhaust Fan (FM31) 16: Decurler Lower Exhaust Fan (FM32) 17: Developing Cooling Exhaust Fan (FM40) 18: Developing Cooling Suction Fan (Y) (FM41) 19: Developing Cooling Suction Fan (M) (FM42) 20: Developing Cooling Suction Fan (C) (FM43) 21: Fixing Belt Edge Cooling Fan 1 (FM45) 22: Fixing Belt Edge Cooling Fan 2 (FM46) 23: Delivery Upper Cooling Fan (FM47) 24: Delivery Lower Cooling Fan (FM48) 25: Reverse Exhaust Fan 1 (FM49) 26: Reverse Exhaust Fan 2 (FM50) 27: Reverse Exhaust Fan 3 (FM51) 28: 24V Power Supply Fan (FM52) During operation: ACTIVE, When operation finished normally: OK!
Default Value		1
FAN-ON	**1**	**Operation check of Fan**
Detail		To start operation check of the Fan specified by FAN.
Use Case		When replacing the fan/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.

COPIER > FUNCTION > PART-CHK

MTR	1	Specification of operation motor
Detail		To specify the Motor to operate.
Use Case		When replacing the motor/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 24 1: Duplex Left Motor (M32) 2: Duplex Right Motor (M33) 3: Registration Motor (M34) 4: Pre-registration Motor (M36) 5: Delivery Motor (M37) 6: Reverse Motor (M38) 7: Cassette 1 Vertical Path Motor (M39) 8: Cassette 1 Pickup Motor (M43) 9: Cassette 2 Pickup Motor (M44) 10: Cassette 3 Pickup Motor (M45) 11: Decurler Feeding Motor 1 (M51) 12: Decurler Feeding Motor 2 (M52) 13: Pre-fixing Feed Motor (M63) 14: Cassette 2/3 Vertical Path Motor (M67) 15: (POD Deck Lite) Pickup Buffer Motor (M66) 16: (POD Deck Lite) Deck Pickup Motor (M1) 17: (POD Deck Lite) Deck Pull-outMotor (M2) 18: (Multi-drawer Paper Deck) Vertical Path Upper Feed Motor (M002) 19: (Multi-drawer Paper Deck) Vertical Path Lower Feed Motor (M003) 20: (Multi-drawer Paper Deck) Horizontal Path Feed Motor (M004) 21: (Multi-drawer Paper Deck) Pickup Motor (M001) 22: Fixing Motor (348 mm/s) (M48) 23: Fixing Motor (248 mm/s) (M48) 24: Fixing Motor (174 mm/s) (M48) During operation: ACTIVE, When operation finished normally: OK!
Default Value		1

MTR-ON	1	Operation check of motor
Detail		To start operation check of the motor specified by MTR. The operation automatically stops after operation of 5 seconds.
Use Case		When replacing the motor/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		While the Toner Container Drive Motor is active, be sure to remove the Toner Container. Otherwise, toner leakage may occur in the machine.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > PART-CHK

SL	**1**	**Specification of operation solenoid**
Detail		To specify the Solenoid to operate.
Use Case		When replacing the solenoid/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 11 1: Registration Patch Shutter Solenoid (SL1) 2: Delivery Upper Cooling Switch Flapper Solenoid (SL10) 3: Patch Sensor Solenoid (Bk) (SL11) 4: Color Sensor Solenoid (SL12) 5: Cassette 1 Pickup Solenoid (SL13) 6: Cassette 2 Pickup Solenoid (SL14) 7: Cassette 3 Pickup Solenoid (SL15) 8: (Multi-drawer Paper Deck) Upper Deck Pickup Roller Release Solenoid (SL101) 9: (Multi-drawer Paper Deck) Middle Deck Pickup Roller Release Solenoid (SL201) 10: (Multi-drawer Paper Deck) Lower Deck Pickup Roller Release Solenoid (SL301) 11: (POD Deck Lite) Deck Pickup Roller Release Solenoid (SL1) During operation: ACTIVE, When operation finished normally: OK!
Default Value		1
SL-ON	**1**	**Operation check of solenoid**
Detail		To start operation check of the solenoid specified by SL. The operation stops after "ON for 0.5 sec" => "OFF for 10 sec" => "ON for 0.5 sec" => "OFF for 10 sec" => "ON for 0.5 sec".
Use Case		When replacing the solenoid/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
FIN-CL	**1**	**Specification of operation clutch:Fin-W1**
Detail		To specify the clutch for the finisher to operate.
Use Case		When replacing the clutch/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		101: Saddle Fold Roller Disengagement Clutch
Default Value		1
Related Service Mode		COPIER> FUNCTION> PART-CHK> FINCL-ON
Supplement/Memo		Product name of Fin-W1: Finisher-W1, Saddle Finisher-W1
FINCL-ON	**1**	**Operation check of clutch: Fin-W1**
Detail		To start operation check of the clutch for the finisher specified by FIN-CL.
Use Case		When replacing the clutch/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> PART-CHK> FIN-CL
Supplement/Memo		Product name of Fin-W1: Finisher-W1, Saddle Finisher-W1
FIN-FAN	**1**	**Specification of operation fan: Fin-W1**
Detail		To specify the fan for the finisher to operate.
Use Case		When replacing the fan/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 6 1: Power Cooling Fan 1, 2 to 4: Not used, 5: Upper Delivery Fan, 6: Lower Delivery Fan
Default Value		1
Related Service Mode		COPIER> FUNCTION> PART-CHK> FINFANON
Supplement/Memo		Product name of Fin-W1: Finisher-W1, Saddle Finisher-W1

COPIER > FUNCTION > PART-CHK

FINFANON	**1**	**Operation check of fan: Fin-W1**
Detail		To start operation check of the fan for the finisher specified by FIN-FAN.
Use Case		When replacing the fan/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> PART-CHK> FIN-FAN
Supplement/Memo		Product name of Fin-W1: Finisher-W1, Saddle Finisher-W1
FIN-MTR	**1**	**Specification of operation motor: Fin-W1**
Detail		To specify the motor for the finisher to operate.
Use Case		When replacing the motor/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 209 1: Inlet Feed Motor, 2: Shift Feed Motor, 3: Buffer Front Feed Motor, 4: Buffer Motor, 5: Delivery Motor, 6: Horizontal Registration Detection Unit Move Motor, 7: Horizontal Registration Shift Motor, 8: Feed Roller Disengage Motor 9: Front Alignment Motor, 10: Rear Alignment Motor, 11: Processing Stopper Move Motor, 12: Assist Motor, 13: Stack Delivery Auxiliary Tray Motor, 14: Paddle Rotation Motor, 15: Paddle Lift Motor, 16: Paper Trailing Edge Drop Motor, 17: Feed Belt Move Motor, 18: Swing Guide Motor, 19: Stack Delivery Motor, 20: Upper Guide Motor, 21: Staple Move Motor 22: Tray A Lift Motor, 23: Tray B Lift Motor 24: Punch Motor 25: Not used 26: Processing Feed Motor, 27: Inlet Roller Disengage Motor, 28: Delivery Angle Adjustment Motor 29 to 100: Not used 101: Saddle Feed Motor, 102: Saddle Alignment Guide Motor, 103: Saddle Lead Edge Stopper Motor, 104: Saddle Roller Guide Motor, 105: Saddle Paper Push-On Plate Motor, 106: Saddle Fold/Feeder Motor, 107: Saddle Delivery Belt Motor, 108: Saddle Press Motor, 110: Saddle Trailing Edge Holding Motor, 111: Saddle Trailing Edge Moving Motor, 112: Saddle Alignment Roller Motor, 113: Saddle Tapping Motor, 114: Saddle Lead-in Roller Disengage Motor, 115: Saddle Clamp Motor 116 to 200: Not used 201: Stack Retainer Motor 202: Upper Neat Stack Unit Front Alignment Motor, 203: Upper Neat Stack Unit Rear Alignment Motor, 204: Upper Neat Stack Unit Alignment Plate Lifting Motor 205: Lower Neat Stack Unit Front Alignment Motor, 206: Lower Neat Stack Unit Rear Alignment Motor, 207: Lower Neat Stack Unit Alignment Plate Lifting Motor, 208: Lower Neat Stack Unit Return Roller Lifting Motor, 209: Upper Neat Stack Unit Return Roller Lifting Motor
Default Value		1
Related Service Mode		COPIER> FUNCTION> PART-CHK> FINMTRON

■ CLEAR

COPIER > FUNCTION > CLEAR

ERR	1	Clear of error code
Detail		To clear error codes (E000, E001, E002, E003, E717, E719).
Use Case		At error occurrence
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.

DC-CON	1	RAM clear of DC Controller PCB
Detail		To clear the RAM data of the DC Controller PCB.
Use Case		When clearing RAM data of the DC Controller PCB
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.

R-CON	1	RAM clear of Reader Controller PCB
Detail		To clear the RAM data of the Reader Controller PCB.
Use Case		When clearing RAM data of the Reader Controller PCB
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.

JAM-HIST	1	Clear of jam log
Detail		To clear the jam log.
Use Case		When clearing the jam log
Adj/Set/Operate Method		Select the item, and then press OK key.

COPIER > FUNCTION > CLEAR

ERR-HIST	**1**	**Clear of error code log**
Detail		To clear the error code log.
Use Case		When clearing the error code log
Adj/Set/Operate Method		Select the item, and then press OK key.
PWD-CLR	**1**	**Clear of system administrator password**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the password of the system administrator set in Settings/Registration menu.
Use Case		When clearing the password of the system administrator
Adj/Set/Operate Method		Select the item, and then press OK key.
ADRS-BK	**1**	**Clear of address book**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the address book data.
Use Case		When clearing the address book data
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		The address book data is cleared after the main power switch is turned OFF/ON.
CNT-MCON	**1**	**Clear of Main Controller service counter**
Detail		To clear the service counter counted by the Main Controller PCB.
Use Case		When clearing the service counter counted by the Main Controller PCB
Adj/Set/Operate Method		Select the item, and then press OK key.
CNT-DCON	**1**	**Clear of DC Controller service counter**
Detail		To clear the service counter (FIN-STPR, SDL-STPL, SADDLE) counted by the DC Controller PCB.
Use Case		When clearing the service counter counted by the DC Controller PCB
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> COUNTER> DRBL-2> FIN-STPR, SDL-STPL COPIER> COUNTER> MISC> SADDLE
MMI	**1**	**Clear of Settings/Registration set VL**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the Settings/Registration setting values. - Preferences (excluding values for Paper Type Management Settings) - Adjustment/Maintenance - Function Settings - Set Destination (excluding Address Lists) - Management Settings (excluding Department ID Management)
Use Case		When clearing various setting values of Settings/Registration menu
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		The setting value is cleared after the main power switch is turned OFF/ON.

COPIER > FUNCTION > CLEAR

MN-CON	**1**	**RAM clear of MNCON PCB SRAM Board**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the RAM data of the Main Controller PCB SRAM Board. All data on the SRAM Board is initialized.
Use Case		When clearing RAM data of the Main Controller PCB SRAM Board
Adj/Set/Operate Method		1) Select the item, and then press OK key. The machine is automatically rebooted. 2) Turn OFF/ON the main power switch.
Caution		- Be sure to get approval from the user by telling that all images in Inbox will be deleted. - Since the file management information is initialized, images on the HDD cannot be read. - Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. - The RAM data is cleared after the main power switch is turned OFF/ON.
CARD	**1**	**Clear of card ID-related data**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the data related to the card ID (department).
Use Case		When clearing the data related to the card ID
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		The data is cleared after the main power switch is turned OFF/ON.
CA-KEY	**2**	**Init of key pair, certificate and CRL**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To simultaneously delete the key pair, certificate and CRL which are additionally registered by the user, and return to the default state.
Use Case		When a service person replaces/discards the device
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Check that OK is displayed. 3) Turn OFF/ON the main power switch.
Caution		- Unless this item is executed at the time of replacement/discard of the device, the key pair, certificate and CRL which are additionally registered by the user remain in the HDD, which is a problem in terms of security. - Do not execute this item carelessly because the key pair,certificate and CRL which are additionally registered are deleted when it is executed. If they are deleted mistakenly, they need to be again registered by the user. If no CA certificate and key pair are additionally registered, the machine condition becomes the same as the one at the time of factory - When NG is displayed in 2), there is a possibility that deletion was not executed. In this case, surely execute the deletion by initializing the HDD, etc.
Display/Adj/Set Range		At normal termination: OK, At abnormal termination: NG
Supplement/Memo		After this function is executed, the registered key pair, certificate and CRL are initialized upon turning OFF and the ON the main power, and the key pair, certificate and CRL registered at the time of factory shipment are decompressed from the archive.

COPIER > FUNCTION > CLEAR

ERDS-DAT	**1**	**Initialization of E-RDS SRAM data**
Detail	To initialize the SCM value of the Embedded-RDS stored in the SRAM. SCM values are ON/OFF of Embedded-RDS, server's port number, server's SOAP URL, and communication schedule with the server (how often the data is acquired), etc. The value set by COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG is cleared.	
Use Case	When upgrading the Bootable in the E-RDS environment	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	The method of using the SRAM in Embedded-RDS differs depending on the Bootable version. Therefore, unless the SRAM data is cleared at the time of version upgrade, data inconsistency occurs.	
Display/Adj/Set Range	At normal termination: OK, At abnormal termination: NG	
Related Service Mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG	
USBM-CLR	**1**	**Initialize USB MEAP priority rgst info**
Detail	To initialize the registered ID data retained in the OS field by calling the API provided by the OS.	
Use Case	When a failure occurs in USB MEAP priority registration	
Adj/Set/Operate Method	Select the item, and then press OK key.	
FX-L-CLR	**1**	**Clear of Fixing Motor current value log**
Detail	To clear the log of current value of the Fixing Motor. Use this mode when resetting the log (FX-MTR2 to 5) without replacing the Pressure belt Unit.	
Use Case	- When E008-0001 occurs - When resetting the current value of the Fixing Motor at the time other than at replacement of the Pressure Belt Unit	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Related Service Mode	COPIER> DISPLAY> FIXING> FX-MTR2 - 5 COPIER> COUNTER> DRBL-1> FX-BLT-L	
Supplement/Memo	When the counter value (FX-BLT-L) is cleared at replacement of the Pressure Belt Unit, the log of current value of the Fixing Motor is also cleared.	
JV-CACHE	**1**	**Cache clear of JAVA application**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the cache information used by JAVA application.	
Use Case	When initializing the JAVA application	
Adj/Set/Operate Method	Select the item, and then press OK key.	
LANG-CLR	**2**	**Uninstallation of language files**
Detail	To uninstall the language files other than English and Japanese files. When rebooting the machine after execution, language files other than English and Japanese files are deleted, and language displayed on the screen becomes English.	
Use Case	When uninstalling language files	
Adj/Set/Operate Method	1) Select the item, and then press OK key. 2) Reboot the machine.	
FIN-MCON	**1**	**Clearing Finisher info in controller**
Detail	To clear the Finisher information which is stored in the Main Controller. Malfunction occurs if replacing the Finisher with a different type of it without cleaning the information. After execution, reset the Delivery Tray again in Settings/Registration> Function Settings> Common> Paper Output Settings> Output Tray Settings.	
Use Case	When switching to a different type of Finisher in the field	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	After execution, set the Delivery Tray of the Finisher again.	
Additional Functions Mode	Function Settings> Common> Paper Output Settings> Output Tray Settings	

COPIER > FUNCTION > CLEAR

DK-RCV	**1**	**Clearing of POD Deck Lite alarm**
Detail		To clear the descent timeout alarm (04-1537) occurred in the POD Deck Lite.
Use Case		At recovery from descent timeout alarm
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.

■ MISC-R

COPIER > FUNCTION > MISC-R

SCANLAMP	**1**	**Lighting check of Scanner Unit (frt) LED**
Detail		To light up the LED of the Scanner Unit (for front side) for 3 sec. Check whether there is a missing block or no lighting in LED.
Use Case		When replacing the LED of the Scanner Unit
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
1PSCLB-A	**1**	**DADF 2 faces color differ crrct (front)**
Detail		To acquire scanning data on the front side in order to correct the color difference between the front and back side at the time of duplex stream reading. A significant color difference may occur between the front and back side of the image scanned on DADF caused by variations in the LED and changes in durability. Such a color difference is corrected by executing 1PSCLB-B following 1PSCLB-A.
Use Case		When a significant color difference occurs between the front and back side at DADF duplex reading
Adj/Set/Operate Method		1) Set paper on the DADF. 2) Select the item, and then press OK key.
Caution		Do not turn OFF/ON the main power switch before executing 1PSCLB-B even though OK is displayed by 1PSCLB-A.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> MISC-R> 1PSCLB-B
1PSCLB-B	**1**	**DADF 2 faces color differ crrct (back)**
Detail		To acquire scanning data on the back side in order to correct the color difference between the front and back side at the time of duplex stream reading. A significant color difference may occur between the front and back side of the image scanned on DADF caused by variations in the LED and changes in durability. Such a color difference is corrected by executing 1PSCLB-B following 1PSCLB-A.
Use Case		When a significant color difference occurs between the front and back side at DADF duplex reading
Adj/Set/Operate Method		1) Set the document used by 1PSCLB-A on DADF, so that the front side is faced down and the cyan image is placed at the left rear side. 2) Select the item, and then press OK key.
Caution		Do not turn OFF/ON the main power switch before executing 1PSCLB-B even though OK is displayed by 1PSCLB-A.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> MISC-R> 1PSCLB-A
1PCLBSET	**1**	**DADF 2 faces color differ crrct ref side**
Detail		To set which side (the front or back side) should be the reference side when correcting a color difference at the time of duplex stream reading. The correction result is reflected after executing the following operation: specify the reference side, execute a series of color difference correction processing, and then turn OFF/ON the power.
Use Case		Before correcting color difference in DADF duplex reading
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 2 0: N/A, 1: Front side, 2: Back side
Default Value		0

COPIER > FUNCTION > MISC-R

1PCLBUDR	1	DADF 2 faces clr differ crrct lowr limit
Detail		To keep colors which do not need to be corrected at DADF duplex stream reading, the correction amount is adjusted so that the effect of correction is weakened. The result is reflected when correction of color difference is executed again after the setting is made. When 1 is set, unnecessary correction is not executed, but an expected effect may not be obtained for other colors.
Use Case		When color difference occurs on the colors which did not have any difference before correction
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Expected correction result may not be obtained.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

1PCLBOVR	1	DADF 2 faces clr differ crrct upr limit
Detail		Excessive correction is sometimes made when correcting color difference in duplex stream reading. To prevent it happens, adjust the correction amount to weaken the effect of the correction. The result is reflected when correction of color difference is executed again after the setting is made. When 1 or 2 is set, excessive correction is not executed, but an expected effect may not be obtained for other colors.
Use Case		When color difference occurs on the colors which did not have any difference before correction
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Expected correction result may not be obtained.
Display/Adj/Set Range		0 to 2 0: No control, 1: Weak control, 2: Strong control

SCANLMP2	1	Lighting check of Scanner Unit (bck) LED
Detail		To light up the LED of the Scanner Unit (for back side) for 3 sec. Check whether there is a missing block or no lighting in LED.
Use Case		When replacing the LED of the Scanner Unit
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

RD-SHPOS	2	Moving to Reader Scanner Unit fix pstn
Detail		To move the Reader Scanner Unit to the position where it is secured in when moving. When moving the Reader after installation, the Reader Scanner Unit may move and get damage. By moving the Scanner Unit to the specified position and securing it in place with a screw before moving, damage can be prevented.
Use Case		When moving the Reader after installation
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure to move the Scanner Unit to the fixing position and secure it in place with a screw when moving the Reader after installation. Otherwise, the Scanner Unit may get damage.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

■ MISC-P

COPIER > FUNCTION > MISC-P

P-PRINT	1	Output of service mode setting value
Detail		To print the service mode setting value. Text data is saved in HDD as a file (P-PRINT-RPT.TXT).
Use Case		Before executing the CLEAR service mode
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> FUNCTION> CLEAR COPIER> FUNCTION> MISC-P> RPT-FILE

COPIER > FUNCTION > MISC-P

HIST-PRT	**1**	**Output of jam and error log**
Detail	To print the jam log and error log. Text data is saved in HDD as a file (HIST-PRT-RPT.TXT).	
Use Case	When printing the jam/error log	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	
TRS-DATA	**2**	**Moving memory reception data to Inbox**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To move data received in memory to Fax/I-Fax Inbox> Memory RX Inbox.	
Use Case	When moving the data received in memory to Inbox	
Adj/Set/Operate Method	1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.	
USER-PRT	**1**	**Settings/Registration menu list output**
Detail	To output Settings/Registration menu list. Text data is saved in HDD as a file (USER-PRT-RPT.TXT).	
Use Case	When outputting Settings/Registration menu list.	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	
Supplement/Memo	It takes approximately 3 seconds before printing starts.	
LBL-PRNT	**1**	**Output of service label**
Detail	To output the service label.	
Use Case	When outputting the service label	
Adj/Set/Operate Method	1) Place A4/LTR paper in Cassette 1. 2) Select the item, and then press OK key.	
PRE-EXP	**1**	**Lighting-up of Cleaning Pre-exposure LED**
Detail	To light up the Cleaning Pre-exposure LED (Y/M/C/Bk). Open the Front Cover, and check visually that the LEDs light up. It automatically stops after all LEDs light up.	
Use Case	When checking lighting of the Cleaning Pre-exposure LED	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Drum memory may occur, so be sure not to execute this item frequently.	
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!	
D-PRINT	**1**	**Output of service mode (DISPLAY)**
Detail	To output items displayed by DISPLAY in service mode. Items output by P-PRINT, LBL-PRNT and HIST-PRT, and ALARM are excluded. Text data is saved in HDD as a file (D-PRINT-RPT.TXT).	
Use Case	When checking items in DISPLAY	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	
1ATVC-EX	**1**	**Execute of primary transfer ATVC control**
Detail	To execute the primary transfer ATVC control to optimize the primary transfer voltage.	
Use Case	- At occurrence of the primary transfer failure - When replacing the Primary Transfer Roller and ITB	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!	

COPIER > FUNCTION > MISC-P

ENV-PRT	**1**	**Temp&hmdy/surface temp of Fix Belt**
Detail		To output data of the temperature and humidity inside the machine/surface temperature of the Fixing Belt as a log. Text data is saved in HDD as a file (ENV-PRT-RPT.TXT).
Use Case		When figuring out the past temperature inside the machine/fixing temperature information at problem analysis
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> MISC-P> RPT-FILE
ITB-ROT	**2**	**Idle rotation of ITB**
Detail		If the machine is not used for a long time, lines in horizontal scanning direction appear on the image due to trace of roller on the ITB. Normally, if the machine is not used for 60 hours or more, idle rotation of the ITB is executed at warm-up rotation performed first time for the day to remove the trace of roller. If image failure is not alleviated, execute idle rotation of the ITB manually. If image failure due to leaving the machine unused for a long time occurs frequently, extend idle rotation time by ITBROTSW.
Use Case		- At installation - When lines in horizontal scanning direction appear on coated paper or halftone image after the machine is not used for a long time
Adj/Set/Operate Method		Select the item, and then press OK key.
Required Time		2 - 3 min
Related Service Mode		COPIER> OPTION> FNC-SW> ITBROTSW
ATR-EX	**2**	**Execution of ATR control**
Detail		To execute the ATR control for all colors.
Use Case		- At occurrence of E020 - When checking the result of ATR control
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
INTR-EX	**2**	**Exe of warm-up rotation at 1st power-on**
Detail		To execute the regular warm-up rotation performed first time for the day excluding the Photosensitive Drum idle rotation and Charging Wire cleaning.
Use Case		- When restarting potential control after execution of COPIER> OPTION> IMG-FIX> PO-CNT - When the D-max control condition is changed
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> OPTION> IMG-FIX> PO-CNT
PJH-P-1	**1**	**Detail info of print job log: 100 jobs**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To print the print job log for the latest 100 jobs with detailed information. In the case of less than 100 jobs, the log of all print jobs is printed. Text data is saved in HDD as a file (PJH-P-1-RPT.TXT).
Use Case		When printing the print job log with detailed information
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> FUNCTION> MISC-P> RPT-FILE

COPIER > FUNCTION > MISC-P

PJH-P-2	**1**	**Detail info of print job log: all jobs**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To print the log of all print jobs stored in the machine with detailed information (for maximum 5000 jobs). The difference between PJH-P-1 and this item is only the number of jobs printed. Text data is saved in HDD as a file (PJH-P-2-RPT.TXT).
Use Case		When printing the print job log with detailed information
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> FUNCTION> MISC-P> RPT-FILE
PT-LPADJ	**1**	**Adj of Patch Sensor light intensity**
Detail		To execute correction of patch intensity and correction of background.
Use Case		When replacing the Patch Sensor
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
AT-IMG-X	**1**	**Exe image position correction control**
Detail		To execute a series of image position correction control operation at parts replacement. Image position correction control is usually executed at the specific timing according to the operation status and environment change. The setting is linked with Settings/Registration> Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch.
Use Case		- When removing the Drum Unit - When releasing the ITB pressure
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
GRID-ADJ	**1**	**Primary Charge Wire height adj PG outpt**
Detail		To print the Primary Charging Wire height adjustment PG (Bk). When replacing the Primary Charging Assembly or adjusting the height of Primary Charging Wire, check whether there is a density difference in the output PG between the front side and rear side. PG can be output only under the following conditions. - Paper type: Plain paper 1/2 - Paper size: A3+ 329.0 mm x 483.0 mm (13" x 19")/A3/SRA3/Ledger 279.4 mm x 431.8 mm (11" x 17")*/A3+ 305.0 mm x 457.0 mm (12" x 18") - Paper source: Cassette 1 Under conditions other than those mentioned above, "NG" is displayed and a blank paper is output.
Use Case		- When replacing the Primary Charging Assembly - When adjusting the height of Primary Charging Wire
Adj/Set/Operate Method		Select the item, and then press OK key while <READY> is displayed.
Caution		- This item must be executed after <READY> is displayed. While <WAIT> is displayed, this item is not executed even if OK key is pressed. - When outputting PG using paper other than A3 extra-long paper which size is 329.0 mm x 483.0 mm (13" x 19"), soiled back of the paper due to secondary transfer may occur. When soiled back of paper occurs, execute cleaning of roller from Settings/Registration menu.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
Additional Functions Mode		Adjustment/Maintenance> Clean Roller
Supplement/Memo		* Ledger 279.4 mm x 431.8 mm (11" x 17") is supported with DCON Ver. 4.01 or later.
CP-PRINT	**1**	**Output color assurance-related info**
Detail		To output color assurance-related information collectively. Text data is saved in HDD as a file (CP-PRINT-RPT.TXT).
Use Case		When collectively checking the service mode data required for color assurance service
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		COPIER> FUNCTION> MISC-P> RPT-FILE

COPIER > FUNCTION > MISC-P

USBH-PRT	**1**	**Output of USB device information report**
Detail	To output information of the connected USB memory device in the form of a report. Text data is saved in HDD as a file (USBH-PRT-RPT.TXT).	
Use Case	When outputting information in the USB memory device in the form of a report	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	
SPIT-EX	**2**	**Execution of toner ejection**
Detail	To supply new toner by ejecting the toner in the Developing Assembly. Use this mode when the image density is low or coarseness occurs on halftone image after the machine is left for a long time.	
Use Case	When image failures (light image, coarseness) occur after the machine is left for a long time (e.g. summer vacation)	
Adj/Set/Operate Method	Select the item, and then press OK key.	
DRUM-TH	**1**	**Drum Thermopile operation check**
Detail	To check if the Drum Thermopile detects the surface temperature of the Photosensitive Drum correctly. The operation status and the surface temperature are displayed.	
Use Case	When replacing the Drum Thermopile	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK! -58 to 64	
Unit	deg C	
Amount of Change per Unit	1	
RPT-FILE	**1**	**Saving of service report as a file**
Detail	To save the report of various service modes in HDD as a file. The files can be obtained using SST or a USB memory device after starting the machine in download mode.	
Use Case	When obtaining the report as a file instead of printing the report out	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT2USB	
Supplement/Memo	File size: Approx. 1 MB at a maximum	
RPT2USB	**1**	**Write service report file to USB memory**
Detail	To store the report file of service mode saved in HDD by RPT-FILE to a USB memory device.	
Use Case	When storing the report file of service mode to a USB memory device	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	
TNRB-PRT	**1**	**Output of Toner Container ID report**
Detail	To output the ID of the Toner Container in the form of a report. Text data is saved in HDD as a file (TNRB-PRT-RPT.TXT).	
Use Case	When checking the ID of the Toner Container	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Display/Adj/Set Range	Character string (4 digits)	
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE	

COPIER > FUNCTION > MISC-P

INITITB2	**1**	**Developer ejection at ITB initialization**
Detail	To execute developer ejection at ITB initialization.	
Use Case	- When high-voltage mottled image occurs on halftone image - When an image failure (mottled image) occurs after replacement of the ITB - When using special paper after replacement of the ITB while developer is deteriorated	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Toner is consumed	
DET-C-Y	**1**	**Y-clr Primary Charge Ass'y connct detect**
Detail	To detect whether the Y-color Primary Charging Assembly is electrically connected in a proper manner.	
Use Case	When replacing the Primary Charging Assembly	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.	
Related Service Mode	COPIER> FUNCTION> INSTALL> AINR-OFF	
DET-C-M	**1**	**M-clr Primary Charge Ass'y connct detect**
Detail	To detect whether the M-color Primary Charging Assembly is electrically connected in a proper manner.	
Use Case	When replacing the Primary Charging Assembly	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.	
Related Service Mode	COPIER> FUNCTION> INSTALL> AINR-OFF	
DET-C-C	**1**	**C-clr Primary Charge Ass'y connct detect**
Detail	To detect whether the C-color Primary Charging Assembly is electrically connected in a proper manner.	
Use Case	When replacing the Primary Charging Assembly	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Be sure to disable the execution of warm-up rotation in AINR-OFF before execution. After the detection is completed, enable it again.	
Related Service Mode	COPIER> FUNCTION> INSTALL> AINR-OFF	
DEV-RCVR	**2**	**Exe toner density normalization process**
Detail	To execute the process to normalize toner density in the Developing Assembly when the Hopper Unit is replaced due to Toner Density Sensor output upper limit error (E025-0151/0251/0351/0451) caused by error in the Hopper Unit. After replacement of the Hopper Unit, set the target color to "1" with CLR-SET and execute SPLY-H so that toner is supplied to the Hopper Unit. After that, by executing this service mode, toner is supplied to the Developing Assembly and stirred, so that toner density becomes normal. The color is identified by the machine automatically.	
Use Case	When replacing/repairing the Hooper Unit at the occurrence of E025-0x51	
Adj/Set/Operate Method	1) Select the item, and then press OK key. 2) When it is completed normally, execute auto gradation adjustment (full adjustment).	
Caution	- Before executing this service mode, be sure to set the target color to "1" with CLR-SET and execute SPLY-H. - If this service mode ends up as abnormal termination, it cannot be executed again. In this case, replace the Developing Assembly of the corresponding color.	
Display/Adj/Set Range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG	
Related Service Mode	COPIER> FUNCTION> INSTALL> CLR-SET, SPLY-H	

COPIER > FUNCTION > MISC-P

ACCPST	1	Acceptance of delivery option config
Detail	To make the host machine recognize the delivery option being connected. Execute this item when the connected delivery option is removed. In a case where an option is added, it is recognized automatically; therefore, there is no need to execute this item.	
Use Case	When the connected delivery option is removed	
Adj/Set/Operate Method	Select the item, and then press OK key.	
Caution	Unless this item is executed after removal of delivery option, a message indicating that the equipment cannot be recognized appears every time the power is turned ON.	
Display/Adj/Set Range	During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG	

PSCL-PRT	1	Output grdtn/clr tone crrct log report
Detail	To output the execution log of auto gradation adjustment/auto correction color tone in the form of a report.	
Use Case	When checking the correction log	
Adj/Set/Operate Method	Select the item, and then press OK key.

COPIER > FUNCTION > MISC-P

DET-GAP	1	Exe Color Sensor interval diagnosis proc
Detail		To execute process to diagnose whether the interval between the Color Sensor and the Backup Roller is appropriate. When this item is executed, a sheet of chart is fed and the solid white area is read by the Color Sensor. Based on the difference between the read maximum and minimum luminance, flapping level of a paper between the sensor and the roller is detected. When difference in luminance exceeds the specified value, it is judged that the interval is too wide and "NG" is displayed. In such case, adjust the Backup Roller position or reinstall the Color Sensor if it is an option.
Use Case		- When replacing the Color Sensor - When replacing the Fixing Feed Unit
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		- Do not use this item when the Color Sensor is not installed. - Use Canon-recommended standard paper. If paper weight is small, the process may result in failure even though the interval is appropriate.
Display/Adj/Set Range		During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG

COPIER > FUNCTION > SYSTEM

DOWNLOAD	1	Shift to download mode
Detail		To make the machine enter the download mode and wait for a command. Perform downloading by SST or a USB flash drive.
Use Case		At upgrade
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Perform downloading by SST or a USB flash drive.
Caution		Do not turn OFF/ON the power during downloading.
Supplement/Memo		SST: Service Support Tool

COPIER > FUNCTION > SYSTEM

CHK-TYPE	**1**	**Spec HD-CLEAR/HD-CHECK exe partition No.**
Detail		To specify the partition number of the HDD to execute HD-CLEAR/HD-CHECK.
Use Case		When executing HD-CLEAR/HD-CHECK
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 65535 0: Entire HDD 1 to 4: Image accumulation area 5: Universal file storage area 6 to 8: Universal file storage area (temporary file) 9: PDL file storage area 10: Program file storage area 11: MEAP application 12: Address book/transfer setting 13: MEAP storage data 14: System log storage area 15: Advanced Box area 16: Delivery server area 17 to 65535: Not used
Related Service Mode		COPIER> FUNCTION> SYSTEM> HD-CLEAR, HD-CHECK
Supplement/Memo		Universal file: Management information of user setting data, various log data, PDL spool data, and image data, etc.
HD-CHECK	**1**	**Entire HDD check and recovery**
Detail		To check the entire HDD and execute recovery processing.
Use Case		When E602/E614 (file corruption, etc.) occurs
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure to execute this item after CHK-TYPE.
Display/Adj/Set Range		During operation: %, When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> SYSTEM> CHK-TYPE
HD-CLEAR	**1**	**Initialization of specified partition**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To initialize the HDD partition specified by CHK-TYPE.
Use Case		When initializing the HDD partition
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		Be sure to execute this item after CHK-TYPE.
Display/Adj/Set Range		When operation finished normally: OK!
Related Service Mode		COPIER> FUNCTION> SYSTEM> CHK-TYPE
DSRAMBUP	**2**	**Backup of DC Controller PCB SRAM**
Detail		To back up the setting data in SRAM of the DC Controller PCB.
Use Case		When replacing the DC Controller PCB for troubleshooting at the time of problem occurrence
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

COPIER > FUNCTION > SYSTEM

DSRAMRES	2	Restore of DC Controller PCB SRAM
Detail		To restore the setting data which has been backed up in SRAM of the DC Controller PCB.
Use Case		When replacing the DC Controller PCB for troubleshooting at the time of problem occurrence
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

RSRAMBUP	2	Backup of Reader Controller PCB SRAM
Detail		To back up the setting data in SRAM of the Reader Controller PCB.
Use Case		When replacing the Reader Controller PCB for troubleshooting at the time of problem occurrence
Adj/Set/Operate Method		Select the item, and then press OK key.
Caution		During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!

RSRAMRES	2	Restore of Reader Controller PCB SRAM
Detail		To restore the setting data which has been backed up in SRAM of the Reader Controller PCB.
Use Case		When replacing the Reader Controller PCB for troubleshooting at the time of problem occurrence
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with the old setting data and the new data is deleted.
Related Service Mode		COPIER> FUNCTION> SYSTEM> RERAMBUP

REBOOT	2	Reboot of host machine
Detail		To reboot the host machine.
Use Case		For customization
Adj/Set/Operate Method		Select the item, and then press OK key.

OPTION

■ FNC-SW

COPIER > OPTION > FNC-SW

PO-CNT	1	ON/OFF of potential control function
Detail		To set ON/OFF of potential control function.
Use Case		When replacing the Potential Control PCB
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to set the value back to 1 after servicing.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1

COPIER > OPTION > FNC-SW

MODEL-SZ	**1**	**Fix magnifictn dspl&DADF orgnl dtct size**
Detail	To set the fixed magnification ratio display and the original detection size with DADF. It is set automatically at the time of installation of the Reader according to the location.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: AB configuration (6R5E) for Japan, 1: Inch configuration (5R4E) for North/Middle/South America, 2: A configuration (3R3E) for Europe, 3: AB/Inch configuration (6R5E) for Asia, Oceania, South America	
Default Value	It differs according to the location.	
SCANSLCT	**2**	**ON/OFF of scan area calculate function**
Detail	To set ON/OFF of the function to calculate scanning area based on the specified paper size. When 1 is set and the paper size is larger than the original size, productivity is decreased because the scanning area gets larger.	
Use Case	When matching the scanning area with the paper size	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF (Calculate based on the detected original size), 1: ON (Calculate based on the specified paper size)	
Default Value	0	
SENS-CNF	**2**	**Setting of original detection size**
Detail	To set original detection size according to AB configuration/Inch configuration/A configuration. Set 1 (Inch configuration) or 0 (A configuration) for Inch/A configuration machine.	
Use Case	When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: AB configuration, 1: Inch configuration	
Default Value	0	
CONFIG	**1**	**Set country/regn/lang/location/ppr size**
Detail	To set the country/region, language, location, paper size configuration for multiple system software in HDD.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	XX YY.ZZ.AA XX: Country/region JP: Japan, US: USA, GB: Great Britain, FR: France, DE: Germany, IT: Italy, AU: Australia, SG: Singapore, NL: Netherlands, KR: Korea, CN: China, TW: Taiwan, ES: Spain, SE: Sweden, PT: Portugal, NO: Norway, DK: Denmark, FI: Finland, PL: Poland, HU: Hungary, CZ: Czech Republic, SI: Slovenia, GR: Greece, EE: Estonia, RU: Russia, AD: Andorra, AL: Albania, AM: Armenia, AR: Argentina, AT: Austria, BA: Bosnia and Herzegovina, BE: Belgium, BG: Bulgaria, BO: Bolivia, BR: Brazil, CA: Canada, CH: Switzerland, CL: Chile, CY: Cyprus, HR: Croatia, ID: Indonesia, IE: Ireland, IL: Israel, IN: India, IS: Iceland, LU: Luxembourg, LV: Latvia, MX: Mexico, MY: Malaysia, NZ: New Zealand, PE: Peru, PH: Philippines, PY: Paraguay, RO: Romania, SK: Slovakia, TH: Thailand, TR: Turkey, UA: Ukraine, UY: Uruguay, VE: Venezuela, VN: Vietnam YY: Language (Fixed; e.g. ja: Japanese) ZZ: Location (Fixed; e.g. 00: CANON) AA: Paper size configuration (00: AB configuration, 01: Inch configuration, 02: A configuration, 03: Inch/AB configuration)	

COPIER > OPTION > FNC-SW

W/SCNR	**1**	**Setting of Reader Unit installation**
Detail	To set installation state of the Reader Unit. Once the Reader Unit is detected at the start of the machine, 1 is set automatically.	
Use Case	When installing/removing the Reader Unit	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Not installed, 1: Installed	
Default Value	According to the setting at shipment	
ORG-LGL	**2**	**Special paper size set in DADF mode: LGL**
Detail	To set the size of special paper (LGL configuration) that cannot be recognized in DADF stream reading mode.	
Use Case	- Upon user's request - When picking up special paper size original from DADF	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 10 0: LEGAL-R, 1: FOOLSCAP-R, 2: OFICIO-R, 3: FOLIO-R, 4: Australian FOOLSCAP-R, 5: Ecuador OFICIO-R, 6: Bolivia OFICIO-R, 7: Argentine OFICIO-R, 8: Argentine LEGAL-R, 9: Government LEGAL-R, 10: Mexico OFICIO-R	
Default Value	0	
ORG-LTR	**2**	**Special paper size set in DADF mode: LTR**
Detail	To set the size of special paper (LTR configuration) that cannot be recognized in DADF stream reading mode.	
Use Case	- Upon user's request - When picking up special paper size original from DADF	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: LETTER, 1: EXECUTIVE, 2: Argentine LETTER, 3: Government LETTER	
Default Value	0	
ORG-B5	**2**	**Special paper size set in DADF mode: B5**
Detail	To set the size of special paper (B5) that cannot be recognized in DADF stream reading mode.	
Use Case	- Upon user's request - When picking up special paper size original from DADF	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: B5, 1: Korean government office paper	
Default Value	0	
MODELSZ2	**2**	**Ppr size dtct global support in bookmode**
Detail	To set whether to enable global support of original size detection at Copyboard reading.	
Use Case	Upon user's request (original consists of mixed media (AB/Inch configuration))	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	- Do not use this at the normal service. - The Document Size Sensor (Photo Sensor) is additionally required to correctly detect the original size when the original consists of mixed media (AB/Inch configuration).	
Display/Adj/Set Range	0 to 1 0: Detected with detection size according to location, 1: Detected with AB/Inch mixed media.	
Default Value	0	

COPIER > OPTION > FNC-SW

SVMD-ENT	2	Setting of entry method to service mode
Detail		To set the way to get in service mode to prevent information leak.
Use Case		As needed
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Factory default 1: [Settings/Registration] - Pressing [4] and [9] at the same time - [Settings/Registration]
Default Value		0

FXWRNLVL	2	Set Fix Belt Unit fed sht warn dspl lvl
Detail		To set the threshold value for the number of fed sheets to indicate the warning message that the Fixing Belt Unit is near the end of life.
Use Case		When switching the warning level of the Fixing Belt Unit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3 0: Error display threshold value 1: The value 10,000 smaller than the error display threshold value 2: The value 20,000 smaller than the error display threshold value 3: The value 30,000 smaller than the error display threshold value
Default Value		2

KSIZE-SW	2	Set of Chinese paper (K-size) support
Detail		To set to detect/display the Chinese paper (K-size paper: 8K, 16K). When MODEL-SZ is 0, this setting is enabled.
Use Case		When using K-size paper
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Not supported, 1: Supported
Default Value		JP:0, USA:0, EUR:0, AU:0, CN:1, KR:0, TW:0, ASIA:0
Related Service Mode		COPIER> OPTION> FNC-SW> MODEL-SZ

ORG-A4R	2	Special paper size set in DADF mode: A4R
Detail		To set the size of special paper (A4R) that cannot be recognized in DADF stream reading mode. When picking up A4R size original from the DADF of the Inch/AB configuration models, the size is converted into the specified size so that an image can be formed properly.
Use Case		- Upon user's request - When picking up special paper size original from DADF
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: A4R, 1: FOLIO-R
Default Value		0

PDF-RDCT	2	PDF reduction set at forwarding
Detail		To set whether to reduce the image for transmission when converting the image received by IFAX into PDF for e-mail/file transmission.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: With the current setting, 1: Image reduction
Default Value		0

COPIER > OPTION > FNC-SW

REBOOTSW	2	Restart setting at E240 error occurrence
Detail		To set whether to reboot in the case of E240 error. In the case of E240 error, the machine is automatically rebooted due to the possibility of continuous operation of the drive system while the spooled print job is cleared. Print job can be obtained if selecting the setting not to reboot.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not use this at the normal service. - Be sure to get approval from the user by telling the possibility of continuous operation of the drive system in the case of E240 error.
Display/Adj/Set Range		0 to 1 0: Rebooted, 1: Not rebooted
Default Value		0

SJB-UNW	2	Reserve upper limit of secure print job
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the upper limit for the number of reserved jobs in secured print job.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2 0: 50 jobs, 1: 90 jobs, 2: No limit
Default Value		0

CARD-RNG	2	Card number setting (department number)
Detail		To set the number of cards (departments) that can be used with the Card Reader.
Use Case		When setting the number of cards (departments)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1000
Unit		sheet
Default Value		1000
Amount of Change per Unit		1

ARCDT-SW	1	ON/OFF of ARCDAT control
Detail		To set ON/OFF of ARCDAT control. When 1 is set, the result of ARCDAT control is not reflected to LUT. When the hue variation occurs in the case of failure value displayed in COPIER> DISPLAY> HT-C, turn OFF the ARCDAT control once and check the hue. If hue variation is alleviated, analyze the cause of ARCDAT control error (developer, Patch Sensor, etc.).
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to set 0 again when ARCDAT control recovers.
Display/Adj/Set Range		0 to 1 0: ON, 1: OFF
Default Value		0
Related Service Mode		COPIER> DISPLAY> HT-C

COPIER > OPTION > FNC-SW

SJOB-CL	**1**	**Set of scan job canceling by logout**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to cancel the scan job in operation by logout of the user.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		The job with scanning completed cannot be canceled.
Display/Adj/Set Range		0 to 2 0: Cancel only scan job in waiting state, 1: Cancel all scan jobs, 2: Not canceled
Default Value		0
PT3-INEX	**2**	**Set to allow paper type "Type 3" info**
Detail		To set whether to allow to use the paper type "Type 3" information with the following functions. - Individual import/export from RUI - Distribution of device information - Import/export from paper type management plug-in for iWEMC
Use Case		When importing/exporting paper type Type 3
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Prohibited, 1: Allowed
Default Value		0
Additional Functions Mode		Device Management> Device Information Distribution Settings> Set Auto Distribution> Paper Information Device Management> Device Information Distribution Settings> Manual Distribution> Paper Information
Supplement/Memo		Device Management> Device Information Distribution Settings> Set Auto Distribution> Paper Information Device Management> Device Information Distribution Settings> Manual Distribution> Paper Information On the above screens, the setting can be switched all, custom type, or paper database. On the list of individual import/export from RUI, custom type or paper database can be specified.
UNLMTBND	**1**	**Over 400 binders print job support set**
Detail		To set whether to support print job that exceeds 400 binders. With the setting to support, the machine makes prints by sharing binders according to job attribution. Set 1 if job with large quantity of binders* is not printed.
Use Case		When supporting print job that exceeds 400 binders
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Automatic setting (When the print server has not yet been connected: not supported; When the print server is connected: supported), 1: Not supported
Default Value		0
Supplement/Memo		*: A job that requires finishing (such as stapling) in one job. Does not apply in the case of executing finishing with multiple sets of output.

COPIER > OPTION > FNC-SW

MIBCOUNT	**2**	**Scope range set of Charge Counter MIB**
Detail		To set the range of counter information that can be obtained as MIB (Management Information Base).
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2 0: All charge counters are obtained, 1: Only the displayed counter* is obtained, 2: All charge counters are not obtained *: Counter specified by the following: COPIER> OPTION> USER> COUNTER 1 to 6
Default Value		0
Related Service Mode		COPIER> OPTION> USER> COUNTER1 - 6
CNTR-SW	**1**	**Init of parts counter replacement timing**
Detail		To return the estimated life of parts counter to the initial value. If either "00000000" or a value before the specification change is displayed in the estimated life value of the parts counter, set 0 after upgrading of the firmware.
Use Case		- When either "00000000" or a value before the specification change is displayed in the estimated life value of the parts counter - When changing the state back to the initial state after entering the estimated life value manually
Adj/Set/Operate Method		1) Enter 0, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0: Returned to the initial value
Default Value		0
W/RAID	**1**	**Set HDD Encrypt/Mirror Kit inst state**
Detail		To set installation state of the HDD Data Encryption/Mirroring Kit. When it is installed, set 1. When it is removed, set 0.
Use Case		When installing/removing the HDD Data Encryption/Mirroring Kit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Not installed, 1: Installed
Default Value		0
PSWD-SW	**1**	**Set password type to enter service mode**
Detail		To set the type of password that is required to enter when getting into service mode. Two types are available: one for "service technician" and the other for "system administrator + service technician". When selecting the type for "system administrator + service technician", enter the password for service technician after the password entry by the user's system administrator.
Use Case		Upon request from the user who concerns security
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2 0: No password, 1: Service technician, 2: System administrator + service technician
Default Value		0

COPIER > OPTION > FNC-SW

SM-PSWD	2	Password setting for service technician
Detail		To set password for service technician that is used when getting into service mode.
Use Case		When password is required to get into service mode
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to select 1 or 2 with PSWD-SW in advance.
Display/Adj/Set Range		1 to 99999999
Default Value		11111111
Related Service Mode		COPIER> OPTION> FNC-SW> PSWD-SW

RPT2SIDE	1	Set of service report 1-/2-sided output
Detail		To set whether to use 1-sided or 2-sided for report output of service mode.
Use Case		When making 2-sided report output to reduce the number of output pages
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: 1-sided, 1: 2-sided
Default Value		1

PSCL-MS	1	Set of auto gradation adj target speed
Detail		To set the speed to execute auto gradation adjustment. When 0 is set, it is executed only at 1/1 speed. When 2 is set, it is executed at 1/1, 2/3 and 1/2 speeds.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 3 0: 1/1 speed only 1: Not used 2: 1/1 speed, 2/3 speed, 1/2 speed 3: Not used
Default Value		0
Supplement/Memo		When real-time multiple tone control is executed, the result of gradation adjustment is reflected to the image density correction table based on speed that was created last time.

INVALPDL	1	Disabling of PDL license
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To disable the registered PDL license. When 1 is set, PDL is disabled even if a PDL license is registered. This is set to the machines installed at convenience stores, which do not allow PDL to be used.
Use Case		When prohibiting the use of PDL
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Registered PDL license is enabled, 1: Disabled
Default Value		0

COPIER > OPTION > FNC-SW

CDS-FIRM	**1**	**Set to allow firmware update by admin**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow the user (administrator) to perform firmware update linked with CDS and collection of log files. When 1 is set, "Deliver Update" is added to remote UI, and "Firmware Update" is added to the Register/Update Software menu of local UI. Log files can be collected from remote UI.
Use Case		When allowing the administrator to update the firmware and collect log files
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Disabled, 1: Enabled
Default Value		JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0
Related Service Mode		COPIER> OPTION> FNC-SW> LCDSFLG
Supplement/Memo		CDS: Contents Delivery System
CDS-MEAP	**1**	**Set to allow MEAP installation by admin**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow the user (administrator) to install MEAP applications and enable iR options from CDS. When 1 is set, Updater can be activated from Settings/Registration menu.
Use Case		When allowing the administrator to install MEAP applications and enable iR options from CDS
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Disabled, 1: Enabled
Default Value		1
Supplement/Memo		CDS: Contents Delivery System
CDS-UGW	**1**	**Set to allow firmware update from UGW**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow update of the firmware from the UGW server. When 1 is set, Updater accepts the operation from the UGW server in cooperation with CDS.
Use Case		When allowing update of the firmware from the UGW server
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Disabled, 1: Enabled
Default Value		0
Supplement/Memo		CDS: Contents Delivery System
LOCLFIRM	**1**	**Set to allow firmware update by file**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow the user (administrator) to update the firmware from the remote UI using a local file. This update is executed as a measure for vulnerability in emergency situations.
Use Case		When prohibiting the administrator to update the firmware using a file
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Prohibited, 1: Allowed
Default Value		1

COPIER > OPTION > FNC-SW

RSHDW-SW	**1**	**ON/OFF of remote shutdown**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. A shared multi-function machine is not likely to be shut down at power failure. Set ON/OFF of the remote shutdown function to prevent accident. When 1 is set, the machine can be shut down from the remote shutdown menu displayed on the remote UI.
Use Case		When preventing an accident at specified power-off time
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
T1HP-POS	**1**	**Setting of Primary Transfer Roller HP**
Detail		To set whether to consider the state that the Primary Transfer Rollers for Y, M, C are engaged to the ITB as the home position of the rollers. Set 0 when prioritizing FCOT in color mode. In the initial state, the Primary Transfer Rollers of 4 colors are engaged to the ITB. Set 1 when prioritizing FCOT in black mode. In the initial state, only the Primary Transfer Roller of Bk is engaged to the ITB.
Use Case		Upon user's request (Frequency to use color/B&W)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Engagement position, 1: Disengagement position
Default Value		0
Related Service Mode		COPIER> OPTION> DSPLY-SW> FCOT-DSP
MC-FANSW	**1**	**Setting of Controller Cooling Fan speed**
Detail		To set whether to make the Controller Cooling Fan 1 and 2 rotate at full speed. When 1 is set, the heat exhaust efficiency is enhanced.
Use Case		- When HDD damage occurs multiple times - When the machine is installed in a high temperature environment in which HDD damage is likely to occur
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Half speed, 1: Full speed
Default Value		0
BXNUPLOG	**2**	**ON/OFF of Nup log at Inbox print**
Detail		To set whether to keep Nup log at Inbox print.
Use Case		When not keeping Nup log at printing from Mail Box
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
BUSI-SW	**1**	**Setting of customized function**
Detail		To set the function in accordance with the customized specification.
Use Case		When installing a customized machine
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Standard, 1: Customization
Default Value		0

COPIER > OPTION > FNC-SW

SDLMTWRN	**1**	**ON/OFF cpcty warn dspl: E-mail/I-Fax TX**
Detail	To set whether to display the warning message when sending data that exceeds the upper limit value for the transmission data size via E-mail/I-Fax.	
Use Case	For customization	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
FAX-INT	**2**	**Set FAX RX print interruption oprtn mode**
Detail	To set the mode performing interruption operation of FAX reception print automatically.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	- Do not set this item while charge management (charging by Coin Manager, a device alone, etc.) is used. - During an ongoing job for which delivery setting (offset, stapling, etc.) is made, interruption operation is performed between sets.	
Display/Adj/Set Range	0 to 1 0: Normal, 1: Interruption operation mode	
Default Value	0	
CDS-LVUP	**1**	**Set to allow CDS periodical update**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow periodical update by CDS. When 1 is set, the user administrator/service technician can set the periodical update function from Settings/Registration menu/service mode. With this setting, Updater performs periodical update.	
Use Case	When allowing the administrator to perform periodical update	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to1 0: Disabled, 1: Enabled	
Default Value	The value differs according to the location.	
Supplement/Memo	CDS: Contents Delivery System	

COPIER > OPTION > FNC-SW

AMSOFFSW	**1**	**OFF of AMS mode**
Detail		Usually, AMS mode is enabled automatically when the following conditions are satisfied. - AMS license which is an iR option is installed. - AMS-supported Login application is activated. Set 1 when preferring to disable AMS mode. For North/Middle/South America and for Europe, the default is 1. Set 0 when preferring to enable AMS mode.
Use Case		- When preferring to disable AMS mode - When preferring to enable AMS mode (for North/Middle/South America and for Europe)
Adj/Set/Operate Method		1) Press Counter button, and check that "ACCESS MANAGEMENT SYSTEM" is displayed on the Device Configuration screen. 2) Set the service mode to 1. 3) Turn OFF/ON the main power switch. 4) Check that AMS is disabled. Press Counter button, and check that "ACCESS MANAGEMENT SYSTEM" is not displayed on the Device Configuration screen.
Display/Adj/Set Range		0 to 1 0: AMS mode enabled, 1: AMS mode disabled
Default Value		JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0
Supplement/Memo		AMS: Access Management System When the device is in AMS mode, "ACCESS MANAGEMENT SYSTEM" is displayed in Check Counter> Check Device Configuration.
UA-OFFSW	**1**	**ON/OFF of unified auth function**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of the Unified Authentication function. Set the value to 0 when not preferring to use the Unified Authentication function because of security concern.
Use Case		Upon user's request (not to use the Unified Authentication function)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: ON, 1: OFF
Default Value		0
MIB-NVTA	**1**	**RFC-compatible character stringMIB write**
Detail		As default, MIB object which NVT-ASCII can be written exists in order to link with LUI entry value. This violates RFC order, so a problem like garbled 2-byte characters may occur in the SNMP monitoring system, such as the 3rd vendor's MPS. Whether non-RFC-compatible character strings are written in MIB can be set using this mode. When 1 is set, only the character strings which are strictly compatible with RFC are written. (Writing operation is executed from the SNMP manager.) LUI is not linked.
Use Case		Upon user's request (operation with RFC-compatible system)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3 0: Compatible in a conventional manner, 1: RFC-compatible, 2 to 3: Not used
Default Value		0

COPIER > OPTION > FNC-SW

SVC-RUI	**1**	**Enabling of RUI function for servicing**
Detail	To set whether to enable the remote UI function for servicing (not provided to end users). When 0 is set, the remote UI function is disabled. When setting the value other than 0, remote UI function is enabled. The value entered becomes password to use the remote UI function. The setting is reset when the main power switch is turned OFF/ON.	
Use Case	When preferring to use the import function of background image file of main menu	
Adj/Set/Operate Method	Enter the setting value (other then 0), and then press OK key.	
Caution	The setting is reset when the main power switch is turned OFF/ON.	
Display/Adj/Set Range	0 to 65535	
Default Value	0	
LCDSFLG	**1**	**Enabling of local CDS server**
Detail	To set whether to use the local CDS server. When CDS-FIRM is 1, this settings is enabled. When this setting is enabled, the "Connected Server Settings" screen is displayed in Settings/Registration> Management Settings> License/Other> Register/Update Software> Software Management Settings.	
Use Case	When using the local CDS server	
Adj/Set/Operate Method	Enter 1, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Not used, 1: Used	
Default Value	0	
Related Service Mode	COPIER> OPTION> FNC-SW> CDS-FIRM	
Additional Functions Mode	Management Settings> License/Other> Register/Update Software> Software Management Setting> Setting	
Supplement/Memo	When local CDS is used, iW EMC/MC device firmware update plug-in is required.	
BXSHIFT	**1**	**Setting of binding at 0mm binding margin**
Detail	To set whether to judge the job as a job "without binding" when storing a PDL job in Inbox while the binding margin is set to "0". By setting the binding margin to 0 mm while "0" is set, the job is processed as "without binding". "Booklet" in "Options" on the Inbox screen can be also used. When "1" is set, it is judged as "with binding" even the binding margin is 0 mm so "Booklet", which has an exclusive relationship with "binding", cannot be used.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Without binding, 1: With binding	
Default Value	0	
SELF-CHK	**2**	**For R&D**
NO-LGOUT	**1**	**ON/OFF of Logout button**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to display the [Logout] button. When 0 is set, [Logout] button is displayed on the screen, and logout with the ID key is enabled. (Normal) When 1 is set, [Logout] button is not displayed, and logout with the ID key is disabled.	
Use Case	When hiding the Logout button for customization	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Display (normal), 1: Hide (customization)	
Default Value	0	

COPIER > OPTION > FNC-SW

T-DLV-BK	**1**	**Set Bk pre-toner low alarm notice timing**
Detail	To set the timing (toner level) to notify the pre-toner low alarm for Bk-color. When the toner level in the Toner Container reaches the setting value (%), the alarm (10-0020 (Bk)) is notified.	
Use Case	When changing the timing to notify the end of life according to the usage status	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	Since toner level is calculated based on the toner supply count, some errors may occur.	
Display/Adj/Set Range	0 to 40	
Unit	%	
Default Value	It differs according to the location.	
Related Service Mode	COPIER> OPTION> FNC-SW> T-DLV-CL	
Amount of Change per Unit	1	
T-DLV-CL	**1**	**Set YMC pre-toner low alarm notice tmg**
Detail	To set the timing (toner level) to notify the pre-toner low alarm for Y/M/C-color. When the toner level in the Toner Container reaches the setting value (%), the alarm (10-0017 (Y)/ 0018 (M)/0019 (C)) is notified.	
Use Case	When changing the timing to notify the end of life according to the usage status	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	Since toner level is calculated based on the toner supply count, some errors may occur.	
Display/Adj/Set Range	0 to 40	
Unit	%	
Default Value	It differs according to the location.

Amount of Change per Unit	1	
JM-ERR-D	**2**	**Set of error display of 0CAF jam (DCON)**
Detail	To set whether to display 0CAF jam as the error "E996-0CAF". In the case of a jam, log cannot be obtained depending on the timing. By selecting 1 when the 0CAF jam occurs, it is displayed as an error so that the log can be obtained.	
Use Case	When obtaining a log at the occurrence of 0CAF jam	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Display as a jam, 1: Display as an error	
Default Value	0	
Related Service Mode	COPIER> OPTION> FNC-SW> JM-ERR-R	
JM-ERR-R	**2**	**Set of error display of 0071 jam (RCON)**
Detail	To set whether to display 0071 jam as the error "E996-0071". In the case of a jam, log cannot be obtained depending on the timing. By selecting 1 when the 0071 jam occurs, it is displayed as an error so that the log can be obtained.	
Use Case	When obtaining a log at the occurrence of 0071 jam	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Display as a jam, 1: Display as an error	
Default Value	0	
Related Service Mode	COPIER> OPTION> FNC-SW> JM-ERR-D	

COPIER > OPTION > FNC-SW

USRTR-RD	1	Record of complete of instruct to user
Detail		To record whether instructions regarding safety have been provided to the user. After provision of instructions is completed, set 1. The result can be output with P-PRINT.
Use Case		When provision of instructions to the user is completed
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Not completed, 1: Completed
Default Value		0
Related Service Mode		COPIER> FUNCTION> MISC-P> P-PRINT

DLV-FAN	2	Adj Delivery Upper Cooling Fan airflow
Detail		To adjust the airflow amount of the Delivery Upper Cooling Fan when feeding coated paper 1/2. Increase the value when uneven gloss occurs. Because the airflow amount increases, uneven gloss is alleviated, but noise becomes louder. Decrease the value when thin glossy lines appear. When the value falls within the range from -2 to 0, the fan stops.
Use Case		When an image failure (uneven gloss/glossy lines) occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		As the value is larger, noise becomes louder.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		10

ITB-HREG	2	ON/OFF of ITB displace correct control
Detail		To set ON/OFF of the ITB displacement correction control. By setting 1 when the control is not executed correctly due to failure of the ITB Displacement Sensor, printing can be continued temporarily until replacement of the part.
Use Case		When continuing printing temporarily while ITB displacement correction control cannot be executed
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		- Use this item only as a temporary measure. - When 1 is set, color displacement may occur. Be sure to set the value back to 0 immediately after completion of the measure.
Display/Adj/Set Range		0 to 1 0: ON, 1: OFF
Default Value		0

CLN-RT	2	Set real-time multi tone ptch clean time
Detail		To set the duration to clean the patch formed at real-time multiple tone control. As the value is incremented by 1, the duration is increased by approx. 3.3 seconds.
Use Case		When multiple tone patch cleaning failure occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As the value is larger, productivity is decreased.
Display/Adj/Set Range		0 to 3
Default Value		0
Amount of Change per Unit		1

COPIER > OPTION > FNC-SW

PBJ-ORD	**2**	**Set perfect binding job execution order**
Detail	To set whether to execute jobs including perfect binding job in the order they are sent. Normally, a perfect binding job becomes standby state during glue temperature control. When 0 is set, non perfect binding job that is sent during glue temperature control is executed before perfect binding job. When 1 is set, perfect binding job is suspended until glue temperature control is completed. Once the control is completed, the job is resumed. Since the succeeding non perfect binding job is not processed before the perfect binding job, all jobs are executed in the order they are sent. When PRISMAsync print server is connected, the value is automatically set to 1.	
Use Case	When executing jobs including perfect binding jobs in the order they are sent	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Normal (Perfect binding job may be processed after succeeding job), 1: Execute jobs in the order they are sent	
Default Value	0	
IMGWIDTH	**2**	**Set of print width priority mode: 13x19**
Detail	To set whether to put priority on securing print width over registration accuracy with 13 x 19 size paper. When 1 is set, print width becomes 323 mm.	
Use Case	When securing print width with 13 x 19 size paper	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Registration accuracy priority, 1: Print width priority	
Default Value	0	
ITBROTSW	**2**	**Set ITB idle rotn time: warm-up rotation**
Detail	To set the idle rotation time of the ITB at warm-up rotation performed first time for the day. If the machine is not used for a long time, lines in horizontal scanning direction appear on the image due to trace of roller on the ITB. Normally, if the machine is not used for 60 hours or more, idle rotation of the ITB is executed at warm-up rotation performed first time for the day to remove the trace of roller. Increase the value (extend idle rotation time) if image failure is not alleviated by regular idle rotation after the machine is not used for 7 days or more.	
Use Case	When lines in horizontal scanning direction appear on coated paper or halftone image after the machine is not used for a long time	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	Be sure to get approval from the user by telling that startup takes time.	
Display/Adj/Set Range	0 to 4 0: OFF, 1: ON, 2: ON (extend for 60 seconds), 3: ON (extend for 120 seconds), 4: ON (extend for 180 seconds)

UI-CUSTM	2	ON/OFF of custom menu screen display
Detail		To set whether to display the custom menu screen on the Control Panel.
Use Case		When not displaying the custom menu screen on the Control Panel
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1

SCT-BTN	1	Set of shortcut button upper limit
Detail		To set an upper limit on the number of "shortcut buttons" that appear at the top of the Control Panel screen.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When 1 is set, the number of shortcut buttons that can be set increases from 2 to 4. However, the buttons become smaller in width, and the number of characters that can be displayed decreases. Depending on the MEAP application allocated to the shortcut button, the character strings may not be fully displayed. Since the character strings displayed on the shortcut button are specified by the MEAP application, they cannot be changed. Therefore, if the number of characters are too many, foregoing symptom occurs. To prevent the symptom, a measure such as decreasing the number of characters on the MEAP application side needs to be taken.
Display/Adj/Set Range		0 to 1 0: 2 buttons, 1: 4 buttons
Default Value		0
Supplement/Memo		The settings for shortcut buttons are made in [Top Buttons Settings] which is displayed by pressing Advanced Menu button in upper right of the screen.

COPIER > OPTION > DSPLY-SW

USER-DSP	**1**	**ON/OFF of SSO-H login user name**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to display the name of the user who logs in using MEAP authentication (SSO-H) on the upper left area of the Control Panel screen.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	0	

SDTM-DSP	**1**	**ON/OFF of auto shutdown shift time**
Detail	To set whether to display "Auto Shutdown Time" in Settings/Registration menu.	
Use Case	When switching to display or hide auto shutdown time	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When "Hide" is set, auto shutdown time is reset. (Auto shutdown is not performed.)	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	JP:0, USA:0, EUR:1, AU:0, CN:0, KR:0, TW:0, ASIA:0	
Additional Functions Mode	Preferences> Timer/Energy Settings> AutoShutdown Time	

WT-WARN	**1**	**Dspl/hide of Wst Tonr Cntner prep mssg**
Detail	To set whether to display the preparation warning message of the Waste Toner Container on the status area of LUI.	
Use Case	When there is no need to notify the preparation timing of the Waste Toner Container to the user	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	1	

PRCLNSW	**2**	**ON/OFF Fix Pressure Belt clean message**
Detail	To set whether to display the message prompting to clean the Fixing Pressure Belt. The timing to display the message can be adjusted in COPIER> OPTION> CLEANING> PR-CLN.	
Use Case	When a soiled image occurs because toner adheres to the Fixing Pressure Belt	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
Related Service Mode	COPIER> OPTION> CLEANING> PR-CLN	

COPIER > OPTION > DSPLY-SW

RFREQ-SW	**1**	**Real-time multi tone ctrl frqcy set sw**
Detail		To set whether to enable the execution frequency of the real-time multiple tone control set in service mode (R-FREQ-S). When 0 is set, the control is executed at the same frequency as when "Use Standard Settings" is selected in "Gradation Adjustment During Printing" in Settings/Registration menu. The setting of R-FREQ-S is ignored. When 1 is set, it is executed at the same frequency as when "Use Service Mode Settings" is selected in "Gradation Adjustment During Printing" (at the frequency set by R-FREQ-S). The above setting is linked with the setting of "Gradation Adjustment During Printing". The setting is switched to "Use Standard Settings" when 0 is set, whereas it is switched to "Use Service Mode Settings" when 1 is set.
Use Case		When hue variation occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Use Standard Settings, 1: Use Service Mode Settings
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-MCON> R-FREQ-S
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Gradation Adjustment During Printing
DIE-DSP	**2**	**ON/OFF die total counter dspl: P-Puncher**
Detail		To set whether to display the total counter of die on the Professional Puncher on the Toner/Other screen.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Supplement/Memo		Product name of P-Puncher: Multi Function Professional Puncher-A1
OIL-DSP	**2**	**ON/OFF die lubricant warn dspl:P-Puncher**
Detail		To set whether to display the Professional Puncher die lubrication warning message and the warning deletion screen. When 1 is set, the die lubrication warning message is displayed on the status line of the Control Panel after performing the specified number of punches. In addition, [Initialize After Puncher Unit Die Lubrication] is displayed in [Settings/Registration]. By executing this item after lubrication, the lubrication counter is initialized and the die lubrication warning message is cleared. Set 0 when lubrication is performed regularly because of no need for warning. In this case, both the die lubrication warning message and the warning deletion screen are not displayed.
Use Case		Upon user's request (no need for warning of lubrication)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
Related Service Mode		COPIER> COUNTER> DRBL-2> OIL-DIE
Additional Functions Mode		Adjustment/Maintenance> Maintenance> Initialize After Replacing Parts> Initialize After Puncher Unit Die Lubrication
Supplement/Memo		Product name of P-Puncher: Multi Function Professional Puncher-A1

COPIER > OPTION > DSPLY-SW

T-LW-BK	**1**	**Set toner level warning mssg dspl timing**
Detail		To set the threshold value for the toner level in the Toner Container. When the toner level becomes below the threshold value while TNR-WARN is 0, a toner level warning message "Toner is low. Replacement not yet needed." is displayed on the Control Panel. As the value is incremented by 1, the threshold value is increased by 1%. As the value is larger, the timing to display the message becomes earlier.
Use Case		When changing the timing to display the toner level warning message for the user to whom toner is not delivered automatically
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 40
Default Value		It differs according to the location.
Related Service Mode		COPIER> OPTION> DSPLY-SW> TNR-WARN
Supplement/Memo		It is not linked with COPIER> OPTION> FNC-SW> T-DLV-BK.
Amount of Change per Unit		1
T-LW-CL	**1**	**Set Y/M/C Tonr Cont level warn thrshld**
Detail		To set the threshold value for the toner level in the Y/M/C-color Toner Container. When the toner level becomes below the threshold value while TNR-WARN is 0, a toner level warning message "Toner is low. Replacement not yet needed." is displayed on the Control Panel. As the value is incremented by 1, the threshold value is increased by 1%. As the value is larger, the timing to display the message becomes earlier.
Use Case		When changing the timing to display the toner level warning message for the user to whom toner is not delivered automatically
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 40
Unit		%
Default Value		It differs according to the location.
Related Service Mode		COPIER> OPTION> DSPLY-SW> TNR-WARN
Supplement/Memo		It is not linked with COPIER> OPTION> FNC-SW> T-DLV-CL.
Amount of Change per Unit		1

■ NETWORK

COPIER > OPTION > NETWORK

IFAX-LIM	2	No. of max print lines at IFAX reception
Detail		To set the maximum number of lines for e-mail text to be printed when receiving IFAX. Setting of this item can prevent endless printing of the attached file data in the case of receiving an error e-mail or failure in interpretation of the context. When receiving an e-mail text without attached file while 0 is set, only the header/footer is printed in 1 sheet.
Use Case		When preventing endless print in the case of failure in reception
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999 0: E-mail text not printed, 999: Unlimited
Default Value		500

SMTPTXPN	2	Setting of SMTP transmission port number
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set SMTP transmission port number.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		25

SMTPRXPN	2	Setting of SMTP reception port number
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set SMTP reception port number.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		25

POP3PN	2	Setting of POP3 reception port number
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set POP3 reception port number.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		110

FTPTXPN	2	Specify SEND destination port (FTP) No.
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To specify destination port (FTP) number for SEND.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		21

COPIER > OPTION > NETWORK

STS-PORT	**2**	**ON/OFF of TOT sync status comctn port**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of Inquiry/Response (sync)-mode status communication port with T.O.T. Set 1 when connecting PC and the machine with crossover cable in case of using Service NAVI.
Use Case		When Service NAVI is used
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
CMD-PORT	**2**	**ON/OFF TOTasync command comctn port**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of asynchronous command communication port with T.O.T. Set 1 when connecting PC and the machine with crossover cable in case of using Service NAVI.
Use Case		When Service NAVI is used
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
NS-CMD5	**2**	**Limit CRAM-MD5 auth method: SMTP auth**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of CRAM-MD5 authentication method at the time of SMTP authentication.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0
NS-GSAPI	**2**	**Limit GSSAPI auth method: SMTP auth**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of GSSAPI authentication method at the time of SMTP authentication.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0
NS-NTLM	**2**	**Limit NTLM auth method: SMTP auth**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of NTLM authentication method at the time of SMTP authentication.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0

COPIER > OPTION > NETWORK

NS-PLNWS	2	Limit plaintext auth: SMTP auth, encry
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of PLAIN/LOGIN authentication, which is plaintext authentication, at the time of SMTP authentication under the environment where the communication packet is encrypted.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0

NS-PLN	2	Limit plaintext auth: SMTP auth, noencry
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of PLAIN/LOGIN authentication, which is plaintext authentication, at the time of SMTP authentication under the environment where the communication packet is not encrypted.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0

NS-LGN	2	Limit LOGIN authentication: SMTP auth
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of LOGIN authentication at the time of SMTP authentication.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: SMTP server-dependent, 1: Not used
Default Value		0

MEAP-PN	2	Set of HTTP port No. of MEAP application
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set HTTP port number of MEAP application.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not specify port 8080 when the print server is connected. Otherwise, you cannot browse the device RUI in which MEAP authentication application is running (Port 8080 is reserved for redirection of EFI Controller to the iR side.)
Display/Adj/Set Range		1 to 65535
Default Value		8000

CHNG-STS	2	Set of TOT status connection port number
Detail		To set the port number for status connection with T.O.T.
Use Case		When Service NAVI is used
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 65535
Default Value		20010

COPIER > OPTION > NETWORK

CHNG-CMD	**2**	**Set of TOT command connection port No.**
Detail		To set the port number for command connection with T.O.T.
Use Case		When Service NAVI is used
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 65535
Default Value		20000
MEAP-SSL	**2**	**HTTPS port setting of MEAP**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the port of HTTPS server in the case of using SSL with HTTP of MEAP.
Use Case		When setting HTTPS port for MEAP
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 65535
Default Value		8443
LPD-PORT	**2**	**Setting of LPD port number**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the LPD port number.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 65535
Default Value		515
WUEV-SW	**2**	**Setting of sleep notification execution**
Detail		To set whether to notify the sleep mode to the application (imageWARE, etc) on the network when shifting to/recovering from the sleep mode.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Notified, 1: Not notified
Default Value		0
WUEV-INT	**2**	**Setting of sleep notification interval**
Detail		To set the interval of sleep notification. When WUEV-SW is 0, this setting is enabled.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		60 to 65535
Unit		sec
Default Value		600
Related Service Mode		COPIER> OPTION> NETWORK> WUEV-SW
Amount of Change per Unit		1

COPIER > OPTION > NETWORK

WUEV-POT	2	Port number setting for sleep notice
Detail		To set port number of the PC to notify the sleep mode. When WUEV-SW is 0, this setting is enabled.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 65535
Default Value		11427
Related Service Mode		COPIER> OPTION> NETWORK> WUEV-SW

WUEV-RTR	2	Setting of sleep notification range
Detail		To set the number of available routers to the target for sleep notification. When WUEV-SW is 0, this setting is enabled.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 254
Default Value		3
Related Service Mode		COPIER> OPTION> NETWORK> WUEV-SW

WUEN-LIV	2	Recovery time setting after sleep notice
Detail		To set the time from the sleep start from network without job assignment until the mode is shifted to the sleep mode.
Use Case		When setting the startup time after sleep notification
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 600
Unit		sec
Default Value		15
Amount of Change per Unit		1

IFX-CHIG	1	Set operation by IFAX recv e-mail text
Detail		To set the number of characters for the IFAX received e-mail text, so that the e-mail is not printed/forwarded when the characters in the text is less than the number of specified characters. If an e-mail text consists of linefeed codes only, the machine outputs blank paper. In such case, specify 2 (number of characters) so that there will be no output of blank paper. In the case of specifying any number other than 0, header/footer is printed/forwarded in 1 sheet only if the e-mail (body) text is less than the specified value while no TIFF file is attached. As the value is incremented by 1, the number of target characters in e-mail body text is increased by 1 character.
Use Case		When reducing printouts of blank paper due to e-mail received by IFAX
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to get approval from the user by telling that e-mail text is not printed if the number of characters is less than the specified value.
Display/Adj/Set Range		0 to 999 0: E-mail text is not ignored.
Unit		char
Default Value		0
Amount of Change per Unit		1

COPIER > OPTION > NETWORK

DNSTRANS	**1**	**Setting of DNS transfer priority**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set priority order of the protocol (IPv4/IPv6) to be used for DNS query. In the case of using both IPv6 and IPv4 while the DNS server supports IPv4, it takes time because of timeout when executing DNS query with priority on IPv6. When 0 is set, time can be shortened.
Use Case		When it takes time to execute DNS query with priority on IPv6 because the DNS server supports IPv4
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: IPv4, 1: IPv6
Default Value		1
PROXYRES	**2**	**Setting of proxy response to Windows**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to provide proxy response or return the device status when an inquiry is received via Windows while the device is in sleep mode.
Use Case		When executing status response for query from Windows correctly
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: No proxy response, 1: Proxy response
Default Value		1
WOLTRANS	**1**	**Setting of sleep recovery protocol**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the protocol for recovery from sleep mode according to the value of WOL (Wake On LAN) trans. The machine recovers from sleep mode by receiving particular network packets. When the number of supported network protocols is increased, the types of network packets which activate recovery from sleep mode vary. However, there is a possibility that the existing network protocol is actually used. Select a type of network protocol which activates recovery from sleep mode according to the usage environment.
Use Case		When selecting protocol for sleep recovery
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 3 1: WSD and SNMP, 2: WSD and CPCA, 3: CPCA and SNMP
Default Value		1
802XTOUT	**1**	**Set of IEEE802.1X authentication timeout**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set timeout value for IEEE802.1X authentication. If the device executes 802.1X authentication, change the wait time for response from the authentication server.
Use Case		When response from the authentication server is slow/fast
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		10 to 120
Unit		sec
Default Value		30
Amount of Change per Unit		1

COPIER > OPTION > NETWORK

IKERETRY	1	Set IKE packet transmission retry times
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the number of retries in the case of no response from the communication target at the time of IKE packet transmission.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3
Default Value		2

SPDALDEL	2	Initialization of SPD value
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To initialize all the SPD values that are under management. SPD values can be initialized without clearing SRAM.
Use Case		At the time of SPD value mismatch when IPSec Board is added
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

NCONF-SW	1	ON/OFF of Network Configurator function
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of Network Configurator function. If the user does not use the function, set 0 to prevent remote attack through network.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1

IKEINTVL	1	Set IKE packet transmit retry interval
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set retry interval in the case of no response from the communication target at the time of IKE packet transmission.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 10
Unit		sec
Default Value		5
Amount of Change per Unit		1

SP-LINK	1	Mode setting at 1W sleep
Detail		To set the condition to shift to sleep mode. When 0 is set, 10Base-T standby is executed, therefore standby power 1W can be realized. When 1 is set, the machine enters sleep mode after negotiation (same as conventional machines).
Use Case		When shifting to sleep mode after negotiation (same as conventional machines)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: 10Base-T standby, 1: Shift to sleep mode after negotiation
Default Value		0

COPIER > OPTION > NETWORK

AFS-JOB	**1**	**Set of FAX server job reception port**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the reception port of the fax server to which a fax client sends jobs.
Use Case		When changing the job reception port of the fax server
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		20317
AFC-JOB	**1**	**Set of FAX client job sending port**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the port of a fax client from which jobs are sent to the fax server.
Use Case		When changing the job sending port of a fax client
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		20317
AFC-EVNT	**1**	**Set of FAX client event reception port**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the event notification reception port of a fax client.
Use Case		When changing the event notification reception port of a fax client
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535
Default Value		29400
ILOGMODE	**1**	**Setting of filter log target packet**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the target packet to be recorded in the filter log. Usually, only the unicast packets to the machine are recorded in the filter log by PFW (personal firewall). When 1 is set, address filter is enabled for all protocols so all packets are recorded in the filter log. However, logs of multicast/broadcast packets sent from a harmless device or an address that are subject to rejection and have no direct relation to the machine are also recorded, and consequently the number of logs is increased.
Use Case		Upon user's request (to collect all filter logs)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When 1 is set, the number of logs is increased because logs of packets which have no direct relation to the machine are recorded.
Display/Adj/Set Range		0 to 1 0: Unicast packets to the machine only, 1: All packets
Default Value		0

COPIER > OPTION > NETWORK

ILOGKEEP	1	Set of IP address block log hold time
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the retention time from the log time of IP block. When access is made again from a same IP address which was blocked before, if it is within the retention time from the previous log time, its log is not recorded. If access is frequently made from a same IP address, the log record of the UI might be filled with its logs. If the user considers that a single log for a same IP address is enough, set the longer retention time.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 48 0: 1 minute (special mode), 1 to 48: 1 hour to 48 hours
Default Value		1

IPTBROAD	1	Set to allow broad/multicast packet TX
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to permit transmission of broadcast packets and multicast packets. When 0 is set, transmission of broadcast packets and multicast packets is permitted without specifying an exception address. It is permitted within the device even if it is rejected in the default setting of the IPv4/v6 transmission filter. Set 1 when the user does not want to send them.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5 0: Enabled, 1: Disabled, 2 to 5: Not used
Default Value		0

PFWFTPRT	1	Set of RST reply at IP filter FTP SEND
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. When FTP SEND is executed using an IP filter by which packets from a specific remote PC are rejected, SYN is returned to the port 113 if the PC supports authentication of the FTP port 113. However, since the IP filter blocks the packets, the block logs are increased and the performance is lowered. When 1 is set, RST is returned to the port 113 without blocking packets.
Use Case		When executing FTP SEND against the OS which supports authentication of the FTP port 113 while the IP filter is enabled
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

COPIER > OPTION > NETWORK

IPMTU	1	Setting of MTU size of network packet
Detail		To set MTU size of network packet. This item is used when performing SEND communication between locations connected with Ethernet in a field environment where MTU black hole problem occurs.
Use Case		When MTU black hole problem occur
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		With IPv6, use of MTU which size is less than 1280 bytes is not recommended by RFC. Therefore, when setting IPv6 to ON and MTU to 7 or smaller, communication using IPv6 may not be available.
Display/Adj/Set Range		1 to 10 1: 600 bytes, 2: 700 bytes, ..., 9: 1400 bytes, 10: 1500 bytes
Unit		byte
Default Value		10
Supplement/Memo		MTU: A unit of transmission showing the maximum value of data which can be sent per 1 transfer (1 frame) in a network MTU black hole: A problem which occurs when ICMP packet is being filtered by firewall, etc. (Since the message does not reach the sender, the sender is not aware of the packet being lost, which then results in time-out.)
Amount of Change per Unit		100

DDNSINTV	1	Set of DDNS periodical update interval
Detail		In the conventional machines, DNS registration is executed only once at startup, so the registered contents are deleted in an environment where the DNS server settings are deleted at intervals. To set the interval of DDNS periodical update for not deleting the registered contents.
Use Case		When the DNS server settings are deleted at intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 48 0: No periodical update, 1: 1-hour interval, 2: 2-hour interval, ..., 47: 47-hour interval, 48: 48-hour interval
Unit		hour
Default Value		24
Amount of Change per Unit		1

NWLOGINT	2	For R&D
Default Value		0

PRCLTYPE	2	Setting of dedicated protocol type
Detail		To switch the type of dedicated protocol.
Use Case		Upon user's request (Assumed to make change from the default value only for customization.)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: TYPE 0 (Compatible in conventional manner), 1: TYPE 1
Default Value		0

COPIER > OPTION > NETWORK

VLAN-SW	2	ON/OFF VLAN participation packets send
Detail		To set whether to send packets for participating in dynamic VLAN. Packets are sent at startup, when LAN cable is connected or when the device recovers from deep sleep.
Use Case		When participating in dynamic VLAN
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF (Packets are not sent), 1: ON (Packets are sent)
Default Value		0
Related Service Mode		COPIER> OPTION> NETWORK> VLAN-PKT
Supplement/Memo		VLAN (Virtual LAN): A method for realizing grouping of terminals depending on the HUB, switch connection port, MAC address, protocol, etc. If IP address of the machine has not been set, an IP address is assigned after participating in VLAN.

VLAN-PKT	2	No. of VLAN participation packet to send
Detail		To set the number of packets for participating in VLAN. 3 sets of packets multiplied by the setting value are sent.
Use Case		When participating in dynamic VLAN
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		This setting is ignored when the setting is made not to send packets for participating in VLAN (VLAN-SW=0).
Display/Adj/Set Range		0 to 10
Default Value		1
Related Service Mode		COPIER> OPTION> NETWORK> VLAN-SW
Supplement/Memo		VLAN (Virtual LAN): A method for realizing grouping of terminals depending on the HUB, switch connection port, MAC address, protocol, etc. If IP address of the machine has not been set, an IP address is assigned after participating in VLAN.

RAWTOUT	2	Set of reception timeout at printing
Detail		To set the duration of time before disconnecting the connection when packet reception is delayed during printing with RAW/LPR setting. If connection is not disconnected after making prints from a Windows PC via network, failure such as unable to make print from other devices occurs. In such case, shorten the timeout time so that connection is disconnected earlier.
Use Case		When failure (unable to make print, etc.) occurs on the network where a Windows PC is connected
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 5 1: 1 minute, 2: 3 minutes, 3: 5 minutes, 4: 10 minutes, 5: 60 minutes
Unit		min
Default Value		5
Amount of Change per Unit		1

COPIER > OPTION > NETWORK

NT-EX	1	ON/OFF NTLMv2 authentication:SMB connect
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to use NTLMv2 authentication (expansion security authentication) method when establishing connection with a file server where domain is managed in Active Directory with SMB. Set 1 when prioritizing security or when user authentication with a file server which OS is Windows Vista/Server 2008 or later fails. Set 0 when user authentication fails in an environment other than the foregoing environment.
Use Case		- Upon user's request (to prioritize security) - When user authentication fails
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
Supplement/Memo		NTLM: A user authentication method for network logon, which was generally used in the OS for Windows NT Series prior to Windows NT 4.0

■ ENV-SET

COPIER > OPTION > ENV-SET

ENVP-INT	1	Temp&hmdy/Fx Blt sface temp log get cycl
Detail		To set the cycle to collect log of the temperature and humidity inside the machine and the surface temperature of the Fixing Belt. As the value is changed by 1, the cycle is changed by 1 min. Collected log can be displayed in COPIER> DISPLAY> ENVRNT.
Use Case		At problem analysis
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 480
Unit		min
Default Value		60
Related Service Mode		COPIER> DISPLAY> ENVRNT
Amount of Change per Unit		1

DRY-CISU	1	ON/OFF of condensation prevention mode
Detail		To set ON/OFF of condensation prevention mode. Set 1 when an image failure or E225 occurs due to condensation in the Scanner Unit. From the next startup, the Scanner Unit (for front side) stops the fan for 15 sec and the Scanner Unit (for back side) lights LED for 30 sec.
Use Case		When droplets appear on the Scanner Unit due to condensation and image failure or E225 occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF (Normal mode), 1: ON (Condensation prevention mode)
Default Value		0

■ CLEANING

COPIER > OPTION > CLEANING

W-CLN-P	2	Set Prmry Chg Wire clean intvl: lst rotn
Detail		To set the paper interval for automatic cleaning of the Primary Charging Wire. The Primary Charging Wire is cleaned (1 reciprocation) at the time of last rotation after completion of job with every specified number of sheets. When W-CLN-PH is 1, this settings is enabled.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		50 to 10000
Unit		sheet
Default Value		2000
Related Service Mode		COPIER> OPTION> CLEANING> W-CLN-PH
Amount of Change per Unit		1

W-CLN-T	2	Set Pre-trn Chg Wire clean intvl:lst rtn
Detail		To set the paper interval for automatic cleaning of the Pre-transfer Charging Wire. Cleaning is executed at the time of last rotation after completion of job with every specified number of sheets. When W-CLN-PH is 1, this settings is enabled.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		50 to 10000
Unit		sheet
Default Value		2000
Related Service Mode		COPIER> OPTION> CLEANING> W-CLN-PH
Amount of Change per Unit		1

OHP-PTH	2	Set of ITB clean transp threshold value
Detail		When a large number of transparencies is fed, surface active agent which coats the surface of an transparency adheres to the ITB, and consequently the transfer efficiency is lowered, causing an image failure. After feeding a certain number of transparencies, a patch is formed on the ITB, and the ITB Cleaning Blade scrapes it off together with surface active agent. This setting is used to set the threshold value for the number of fed transparency which is the condition to execute ITB cleaning.
Use Case		When an image failure occurs due to lowering of the transfer efficiency
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100 0: Not executed
Unit		sheet
Default Value		0
Amount of Change per Unit		1

COPIER > OPTION > CLEANING

W-CLN-PH	2	ON/OFF of Charging Wire auto cleaning
Detail		To set ON/OFF of automatic cleaning of the Primary Charging Wire and Pre-transfer Charging Wire. When 1 is set, W-CLN-P and W-CLN-T are enabled.
Use Case		When switching ON/OFF of automatic cleaning
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
Related Service Mode		COPIER> OPTION> CLEANING> W-CLN-P, W-CLN-T

PR-CLN	2	Set of Pressure Belt cleaning interval
Detail		To set the interval to execute the Pressure Belt cleaning. Cleaning is executed every time the specified number of sheets (setting value x 1000 sheets) are fed.
Use Case		When adjusting the frequency of the Pressure Belt cleaning according to the usage status
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 100 1: 1,000 sheets, ... 100: 100,000 sheets
Unit		sheet
Default Value		20
Amount of Change per Unit		1000

DEV-EXT	2	Dev Cylndr idle rtn time extsn:wrmup rtn
Detail		To set whether to extend idle rotation time of the Developing Cylinder at warm-up rotation in a high temperature and high humidity environment. When 1 is set, toner of all colors are consumed at warm-up rotation.
Use Case		When an image failure (dark lines in vertical scanning direction) occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		The warm-up rotation time and consumption of toner of all colors are increased only in a high temperature and high humidity environment. If lines appear every morning, ask the user which is preferable: clean inside the machine by him/herself as needed or set the value of this item to 1.
Display/Adj/Set Range		0 to 1 0: 60 seconds, 1: 120 seconds
Default Value		0

CLN-TM	2	Set inside the machine cleaning time
Detail		To set the time to execute "Clean Inside Main Unit" in Settings/Registration menu. When outputting low duty images in a high temperature and high humidity environment, dark lines in vertical scanning direction or density difference in horizontal scanning direction may occur due to toner adhered on the surface of the Photosensitive Drum. In such case, the symptom may be alleviated by ejecting toner onto the Photosensitive Drum and executing cleaning for a longer time so that adhered toner can be removed.
Use Case		When an image failure (dark lines in vertical scanning direction) occurs
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Toner consumption at "Clean Inside Main Unit" is increased.
Display/Adj/Set Range		0 to 2 0: 60 seconds, 1: 120 seconds, 2: 180 seconds
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Maintenance> Clean Inside Main Unit

COPIER > OPTION > CLEANING

ROT-COND	2	Setting of fusion prevention mode
Detail		To set the mode to prevent fusion of toner on the Photosensitive Drum. In an HH (high temperature and high humidity) environment, in order to prevent fusion of toner, toner band is formed on the Photosensitive Drum at real-time multiple tone control or idle rotation of the Photosensitive Drum is executed every time a specified number of sheets is fed. Set 1 or 2 when white dots occur at intervals of drum circumference in an HH environment. Fusion can be prevented by adjusting the length of toner band, frequency of idle rotation, and fogging removal potential Vback. As the value is larger, fusion can be reduced, but increase in toner consumption, decrease in productivity, and fogging deterioration occur.
Use Case		When white dots occur at intervals of drum circumference in an HH environment
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- Take necessary action in accordance with the instructions from the Quality Support Division. - When 1 or 2 is set, increase in toner consumption, decrease in productivity, and fogging deterioration occur. - Be sure to execute auto gradation adjustment (full adjustment) after the setting is changed.
Display/Adj/Set Range		0 to 4 0: Small effect on prevention (idle rotation when absolute moisture content is 12.3 g/m3 or higher) 1: Moderate effect on prevention (idle rotation when absolute moisture content is 9.6 g/m3 or higher) 2: Large effect on prevention (idle rotation when absolute moisture content is 9.6 g/m3 or higher) 3 and 4: For R&D use
Default Value		0
Related Service Mode		COPIER> ADJUST> V-CONT> VBACK-Y/M/C, VBACK2-Y/M/C, VBACK3-Y/M/C
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Correct Color Cast

■ FEED-SW

COPIER > OPTION > FEED-SW

EVLP-SPD	1	Envelope feeding speed setting
Detail		To set the envelope feeding speed. By feeding an envelope at 2/3 speed (default) in the case of a high humidity environment, the glue flap may adhere at the time of fixing. As a result of that, the envelope may not be opened. By setting to 1/1 speed, adhesion can be prevented, but fixing might be deteriorated in a low humidity environment.
Use Case		When a glue flap of envelope adheres
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		The fixing performance is decreased by setting 1/1 speed in a low temperature environment.
Display/Adj/Set Range		0 to 1 0: 2/3 speed, 1: 1/1 speed
Default Value		0

COPIER > OPTION > FEED-SW

DK5-REST	1	Adj paper level for Multi Deck (Upper)
Detail		To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Upper) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		The number of remaining papers varies according to the air-floatation condition.
Display/Adj/Set Range		0 to 5
Unit		sheet
Default Value		0
Additional Functions Mode		Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity
Amount of Change per Unit		20

DK6-REST	1	Adj paper level for Multi Deck (Middle)
Detail		To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Middle) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		The number of remaining papers varies according to the air-floatation condition.
Display/Adj/Set Range		0 to 5
Unit		sheet
Default Value		0
Additional Functions Mode		Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity
Amount of Change per Unit		20

COPIER > OPTION > FEED-SW

DK7-REST	1	Adj paper level for Multi Deck (Lower)
Detail		To adjust the threshold value of paper level for the "auto deck change" in the Multi Deck (Lower) with emphasising high productivity. When increasing the setting value for the case that too many paper are remained in the Deck, the paper can be used almost to the limit to perform the "auto deck change" with emphasising high productivity. When the value increase by 1, the paper level is decreased by approx. 20 sheets. When the setting value is maximum, the paper level is "0" and the "auto deck change" with emphasising high productivity is performed.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		The number of remaining papers varies according to the air-floatation condition.
Display/Adj/Set Range		0 to 5
Unit		sheet
Default Value		0
Additional Functions Mode		Function Settings> Common> Paper Feed Settings> Paper Drawer Auto Selection On/Off> Optimal Productivity
Amount of Change per Unit		20

INSRT-SW	1	Insert ppr presence/absence jdgmt ON/OFF
Detail		To set whether to perform paper presence/absence judgment by the Inserter before starting a job. When 1 is set, a job is started before paper detection is performed so productivity is improved.
Use Case		Upon user's request (to improve productivity when using the Inserter)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		If there is no insertion sheet in the Inserter while 1 is set, pages will be out of order. Consequently, a lot of papers being fed from the host machine will be handled as jam papers.
Display/Adj/Set Range		0 to 1 0: ON (Starts pickup after confirming the presence of papers), 1: OFF (Starts pickup without judging paper presence or absence)
Default Value		0

COPIER > OPTION > FEED-SW

PINT-REG	2	Set img pstn crrct exe condtn: ppr intvl
Detail		To set the mode (frequency) to execute image position correction control at paper interval. As default, when any of the following conditions reaches the specified value, the control is executed. - Interval (the number of sheets): 1000 sheets - Change in temperature of the Laser Scanner Unit: 2 deg C - Change in temperature of the host machine: 2 deg C - Time interval: 10 minutes Since each specified value differs depending on mode, execution frequency can be selected according to the usage status. As the execution frequency is higher, color displacement is less likely to occur, but productivity is decreased. This control is executed at warm-up rotation performed first time for the day and after jam processing regardless of the setting value.
Use Case		Upon user's request (to reduce occurrence of color displacement/to shorten the control time at paper interval)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		To change the setting, check user's tolerable range of color displacement and productivity.
Display/Adj/Set Range		0 to 10 0: Default mode 1: Color displacement top priority mode (The highest frequency) 2: Color displacement priority mode (Higher frequency than that of default) 3: Environment change support mode (More sensitive to change in temperature of the host machine than that of default) 4: Sleep support mode (More sensitive to change in temperature of the Laser Scanner Unit and shorter time interval than those of default) 5: FCOT priority mode (Less sensitive to change in temperature of the Laser Scanner Unit/host machine than that of default) 6: Productivity priority mode (Lower frequency than that of default) 7: Productivity top priority mode (No correction) 8 to 10: For R&D use
Default Value		0

DK4-TURN	1	ON/OFF POD-D Lite Pickup Roll last rotn
Detail		To set whether to execute last rotation of the Pickup Roller on the POD Deck Lite for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.
Use Case		- When frequency of use is relatively low - When pickup jam tends to occur
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

COPIER > OPTION > FEED-SW

DK5-TURN	1	ON/OFF M-Deck (Upr) Pickup Rol last rotn
Detail		To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Upper) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.
Use Case		- When frequency of use is relatively low - When pickup jam tends to occur
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

DK6-TURN	1	ON/OFF M-Deck (Mid) Pickup Rol last rotn
Detail		To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Middle) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.
Use Case		- When frequency of use is relatively low - When pickup jam tends to occur
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

DK7-TURN	1	ON/OFF M-Deck (Low) Pickup Rol last rotn
Detail		To set whether to execute last rotation of the Pickup Roller on the Multi Deck (Lower) for 50 msec after completion of job. As the usage is extended, a part of the Separation Roller engaged with the Pickup Roller becomes worn and the roller stops rotating. As a result of that, jam may occur. By rotating the Pickup Roller after completion of job, it can reduce wear of the Separation Roller.
Use Case		- When frequency of use is relatively low - When pickup jam tends to occur
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

DK1-AIR	1	ON/OFF of POD Deck Lite air assist
Detail		To set ON/OFF of the POD Deck Lite air assist. When 0 (initial setting) is set, the air assist is OFF for plain paper or heavy paper 1, and ON for coated paper, textured paper, heavy paper 2 to 5, transparency, etc. When a jam or double feed error frequently occurs with plain paper, etc., set the value to 1. When the transfer performance is low with coated paper, textured paper, etc., set the value to 2.
Use Case		- When a jam or double feed error frequently occurs with plain paper or heavy paper 1 - When the transfer performance is low with coated paper, textured paper, etc.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 2 0: Initial setting, 1: ON, 2: OFF
Default Value		0

COPIER > OPTION > FEED-SW

DK2-AIR	**1**	**ON/OFF of Multi Deck (Upper) air assist**
Detail	To set ON/OFF of the Multi Deck (Upper) air assist. When the value is 0, the air assist becomes ON according to the paper type or size. When the value is 1, the air assist is ON by fixing the air flow for all paper types and sizes. When the value is 2, the air assist is OFF for all paper types and sizes. If a jam or double feed error frequently occurs, set the value to 1. If the transfer performance is low, set the value to 2.	
Use Case	- When a jam or double feed error frequently occurs - When the transfer performance is low	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 2 0: automatic, 1: ON (Fixation air capacity), 2: OFF	
Default Value	0	
DK3-AIR	**1**	**ON/OFF of Multi Deck (Middle) air assist**
Detail	To set ON/OFF of the Multi Deck (Middle) air assist. When the value is 0, the air assist becomes ON according to the paper type or size. When the value is 1, the air assist is ON by fixing the air flow for all paper types and sizes. When the value is 2, the air assist is OFF for all paper types and sizes. If a jam or double feed error frequently occurs, set the value to 1. If the transfer performance is low, set the value to 2.	
Use Case	- When a jam or double feed error frequently occurs - When the transfer performance is low	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 2 0: automatic, 1: ON (Fixation air capacity), 2: OFF	
Default Value	0	
DK4-AIR	**1**	**ON/OFF of Multi Deck (Lower) air assist**
Detail	To set ON/OFF of the Multi Deck (Lower) air assist. When the value is 0, the air assist becomes ON according to the paper type or size. When the value is 1, the air assist is ON by fixing the air flow for all paper types and sizes. When the value is 2, the air assist is OFF for all paper types and sizes. If a jam or double feed error frequently occurs, set the value to 1. If the transfer performance is low, set the value to 2.	
Use Case	- When a jam or double feed error frequently occurs - When the transfer performance is low	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 2 0: automatic, 1: ON (Fixation air capacity), 2: OFF	
Default Value	0	
TFL-RTC	**1**	**Set delvry dest at rcvry after tray full**
Detail	To select the delivery destination for a job with multiple pages after recovering the Delivery Tray that reaches the full level. When 0 is set, a job is output from the delivery destination again from which the last job was delivered. When 1 is set, a job is output from the delivery destination which priority is set as high at "Output Tray Settings" in Settings/Registration menu.	
Use Case	When changing the delivery tray	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Output from the tray from which the last job was output, 1: Output from the delivery destination which priority is high among the delivery trays	
Default Value	0	

COPIER > OPTION > FEED-SW

D-MXDSZ	**1**	**Set prdctvty priority:mix media, 2-sided**
Detail	At a 2-sided job while media are mixed, productivity is decreased because paper circulation inside the machine is stopped. When 1 is set, productivity is improved because paper circulation is not stopped.	
Use Case	Upon user's request (to improve productivity when media are mixed)	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Normal mode, 1: Productivity priority mode	
Default Value	1	
USZ-FEED	**1**	**ON/OFF Job set/ppr source ppr size chck**
Detail	To set whether to check if the paper size set for the job matches the paper size set on the paper source. When 1 is set, papers are picked up without checking even user defined size papers that differ from the job setting size are set on a paper source.	
Use Case	When forcibly picking up papers even the paper size setting differs between a job and a paper source	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: ON, 1: OFF	
Default Value	0	
CIS-LED	**2**	**ON/OFF of CIS light intensity auto adj**
Detail	To set whether to adjust light intensity of CIS automatically. If an error occurs at pre-sampling of color paper or pre-printed paper, set 1. Adjust light intensity by CIS-LV.	
Use Case	When an error occurs at pre-sampling of color paper or pre-printed paper	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Automatic adjustment, 1: Manual adjustment	
Default Value	0	
Related Service Mode	COPIER> OPTION> FEED-SW> CIS-LV	
CIS-LV	**2**	**Manual adjustment of CIS light intensity**
Detail	To adjust light intensity of CIS manually. If an error occurs at pre-sampling of color paper or pre-printed paper, increase/decrease the value from 12. Increase the value for color paper of deep color, and decrease the value for glossy paper. When CIS-LED is 1, this setting is enabled.	
Use Case	When an error occurs at pre-sampling of color paper or pre-printed paper	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 16	
Default Value	12	
Related Service Mode	COPIER> OPTION> FEED-SW> CIS-LED	
CIS-SW	**2**	**ON/OFF of CIS dtct threshold VL auto adj**
Detail	To set whether to automatically adjust the threshold value at which CIS detects paper edge. If an error occurs at pre-sampling, set 1. Adjust the threshold value by CIS-TH.	
Use Case	When an error occurs at pre-sampling of color paper or pre-printed paper	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: Automatic adjustment, 1: Manual adjustment	
Default Value	0	
Related Service Mode	COPIER> OPTION> FEED-SW> CIS-TH	

COPIER > OPTION > FEED-SW

CIS-TH	2	Manual adj of CIS detect threshold value
Detail		To manually adjust the threshold value at which CIS detects paper edge. If the edge of color paper of deep color cannot be detected, decrease the value.
Use Case		When an error occurs at pre-sampling of color paper or pre-printed paper
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 4 0: Color paper (deep color), 1: Color paper (pale color), 2: Normal, 3: Glossy paper (low luminance), 4: Glossy paper (high luminance)
Default Value		2
Related Service Mode		COPIER> OPTION> FEED-SW> CIS-SW

CST1-PSP	2	Set Cassette 1 Pickup Roller eng/diseng
Detail		To set whether to disengage the Pickup Roller of the Cassette 1 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
Use Case		When Pickup Roller trace occurs on the 2nd sheets and later
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
Display/Adj/Set Range		0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
Default Value		0

CST2-PSP	2	Set Cassette 2 Pickup Roller eng/diseng
Detail		To set whether to disengage the Pickup Roller of the Cassette 2 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
Use Case		When Pickup Roller trace occurs on the 2nd sheets and later
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
Display/Adj/Set Range		0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
Default Value		0

CST3-PSP	2	Set Cassette 3 Pickup Roller eng/diseng
Detail		To set whether to disengage the Pickup Roller of the Cassette 3 during paper feeding after pickup. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
Use Case		When Pickup Roller trace occurs on the 2nd sheets and later
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
Display/Adj/Set Range		0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
Default Value		0

COPIER > OPTION > FEED-SW

DK1-ALVD	2	Deck Air Float Fan airflow amnt: dwstm
Detail		To adjust the airflow amount of the Air Floatation Fan (Downstream) of the POD Deck Lite or Multi Deck (Upper). When making an adjustment, be sure to adjust the setting of DK1-ALVU.
Use Case		When double-feed occurs.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Related Service Mode		COPIER> OPTION> FEED-SW> DK1-ALVU
Supplement/Memo		"Deck" means either POD Deck Lite or Multi Deck (Upper) depending on which equipment is connected to the host machine.

DK1-ALVU	2	Deck Air Float Fan airflow amnt:upstream
Detail		To adjust the airflow amount of the Air Floatation Fan (Upstream) of the POD Deck Lite or Multi Deck (Upper). When making an adjustment, be sure to adjust the setting of DK1-ALVD.
Use Case		When double-feed occurs.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Related Service Mode		COPIER> OPTION> FEED-SW> DK1-ALVD
Supplement/Memo		"Deck" means either POD Deck Lite or Multi Deck (Upper) depending on which equipment is connected to the host machine.

DK1-LDWN	2	Set ppr surface level down: Deck standby
Detail		To set whether to lower the paper surface level in the POD Deck Lite below pickup position during standby. When a trace which looks like that the Pickup Roller had contact with a paper occurs, set 1. It returns to pickup position at the time of starting a job.
Use Case		When Pickup Roller trace occurs on transparency or the 1st sheet of coated paper in an LL environment
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, FCOT becomes longer.
Display/Adj/Set Range		0 to 1 0: Normal (Pickup Roller is in contact), 1: Paper surface level moves down
Default Value		0

DK1-PSP	2	Setting of Deck Pickup Roller eng/diseng
Detail		To set whether to disengage the Pickup Roller of the POD Deck Lite or Multi Deck every time paper is picked up. When 0 is set, it remains in contact for plain paper, but it is disengaged for coated paper. When 1 is set, it is disengaged regardless of paper type.
Use Case		When Pickup Roller trace occurs on the 2nd sheets and later
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the machine is continued to be used while the setting value is 1, the life of the solenoid becomes shorter.
Display/Adj/Set Range		0 to 1 0: Engaged for plain paper and disengaged for coated paper 1: Disengaged regardless of paper type
Default Value		0

COPIER > OPTION > FEED-SW

PDK-REST	**1**	**Set Deck ppr lvl thrshld: prdctvty prrty**
Detail	To set the threshold value for paper level to be determined as "no paper" in the Deck. As the value is increased, papers remaining in the Deck at the time of switching paper source by auto cassette change decrease. However, in some cases, the machine keeps pickup operation until paper runs out. As a result of that, adjustment needs to be made so productivity may decrease. Therefore, thickness of paper needs to be taken into consideration when making the setting. In case of heavy paper, keep the setting value as 0. In case of thin paper, set a relatively large value.	
Use Case	Upon user's request (to use up paper in the Deck)	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	As the value is increased, the machine keeps pickup operation until paper runs out so productivity may be decreased.	
Display/Adj/Set Range	0 to 5 0: Maximum paper level, ... 5: Minimum paper level	
Default Value	0	
DK2-ALVU	**2**	**M-Deck(Mid) Air Float Fan airflow: upstm**
Detail	To adjust the airflow amount of the Air Floatation Fan (Upstream) of the Multi Deck (Middle). When making an adjustment, be sure to adjust the setting of DK2-ALVD.	
Use Case	When double-feed occurs.	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.	
Display/Adj/Set Range	-10 to 10	
Default Value	0	
Related Service Mode	COPIER> OPTION> FEED-SW> DK2-ALVD	
DK2-ALVD	**2**	**M-Deck(Mid) Air Float Fan airflow: dwstm**
Detail	To adjust the airflow amount of the Air Floatation Fan (Downstream) of the Multi Deck (Middle). When making an adjustment, be sure to adjust the setting of DK2-ALVU.	
Use Case	When double-feed occurs.	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.	
Display/Adj/Set Range	-10 to 10	
Default Value	0	
Related Service Mode	COPIER> OPTION> FEED-SW> DK2-ALVU	
DK3-ALVU	**2**	**M-Deck(Low) Air Float Fan airflow: upstm**
Detail	To adjust the airflow amount of the Air Floatation Fan (Upstream) of the Multi Deck (Lower). When making an adjustment, be sure to adjust the setting of DK3-ALVD.	
Use Case	When double-feed occurs.	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	If the value is large, uneven transfer may occur. If the value is small, double feed may occur.	
Display/Adj/Set Range	-10 to 10	
Default Value	0	
Related Service Mode	COPIER> OPTION> FEED-SW> DK3-ALVD	

COPIER > OPTION > FEED-SW

DK3-ALVD	2	M-Deck(Low) Air Float Fan airflow: dwstm
Detail		To adjust the airflow amount of the Air Floatation Fan (Downstream) of the Multi Deck (Lower). When making an adjustment, be sure to adjust the setting of DK3-ALVU.
Use Case		When double-feed occurs.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is large, uneven transfer may occur. If the value is small, double feed may occur.
Display/Adj/Set Range		-10 to 10
Default Value		0
Related Service Mode		COPIER> OPTION> FEED-SW> DK3-ALVU

CIS-OFF	1	Set left edge reg position adj control
Detail		To set ON/OFF of left edge registration position adjustment control. If adjusting image position when feeding paper from a cassette/deck while the setting value is 0 (control: ON), the result may not be reflected correctly due to the effects of automatic adjustment. When image position cannot be completely adjusted automatically or the adjustment result is not reflected correctly, change the setting value to 1 (control: OFF) and manually adjust image position when feeding paper from a cassette/deck. After the adjustment is completed, set the value back to 0.
Use Case		When adjusting image position on paper which is fed from a cassette/deck at initialization or before execution of REG-L
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to set the value back to 0 after manual adjustment.
Display/Adj/Set Range		0 to 1 0: ON, 1: OFF
Default Value		0
Related Service Mode		COPIER> ADJUST> FEED-ADJ> REG-L

COPIER > OPTION > FEED-SW

REG-RCPR	2	Set side registration displace tolerance
Detail		To set the tolerance for paper displacement at side registration. As the value is changed by 1, the tolerance is changed by 0.1 mm. Use this item when any of the cases of the conditions a and b respectively are met at the same time. a. Conditions that worsen scratches caused by paper edges - When outputting a large volume of papers which sizes and paper types are the same - When mainly using a cassette - When mainly using small size heavy papers - When mainly performing 1-sided jobs b. Conditions that are less affected by deterioration of registration for front and back sides - When accuracy of registration for front and back sides are not particularly important - When mainly using paper which length in feed direction is short (a measure of length: 270.0 mm or less) - When mainly using paper which paper weight is small (a measure of weight: 150 g/m2 or less) There is not much influence if paper length in feed direction is short even though paper weight is large.
Use Case		When an image failure occurs due to scratches on the Fixing Belt/ITB by paper edges
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the value is increased in the following cases, decrease in registration accuracy (inappropriate left edge margin, skew, trapezoid) may occur. - When using multiple types of paper and making small volume of prints with each of them - When accuracy of registration for the front and back sides are particularly important (e.g.: saddle job, trimming at lower process, business card/ledger/pre-printed paper/tab paper, etc.) - When mainly using paper which length in feed direction is long (a measure of length: 279.4 mm or more)
Display/Adj/Set Range		0 to 25
Unit		mm
Appropriate Target Value		0
Default Value		0
Amount of Change per Unit		0.1

CIS-MLT	2	Set side register adj mode: MP Tray, 2nd
Detail		To set how to adjust the side registration position on the 2nd side at the time of pickup from the Multi-purpose Tray. When 0 is set, left edge registration position on the 2nd side always become constant (nominal position). When 1 is set, the position on the 2nd side is adjusted to be aligned with left edge registration position detected on the 1st side.
Use Case		When side registration positions on the front and back sides are not aligned at the time of pickup from the Multi-purpose Tray
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Always at a certain position, 1: Align the position on the 2nd side with it on the 1st side
Default Value		0

■ IMG-SPD

COPIER > OPTION > IMG-SPD

TAB-SW	1	ON/OFF of cleaning at tab paper feeding
Detail		To set whether to execute cleaning when tab paper is fed. When printing an image on a whole tab area of tab paper, the backside of the succeeding paper is soiled. When 1 is set, cleaning is executed every time a tab paper is fed. Soiled back can be prevented, but productivity decreases.
Use Case		- When the backside of the succeeding paper to tab paper is soiled - Upon user's request (to improve quality)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to get approval from the user in advance by telling that backside is not soiled by cleaning, but productivity decreases.
Display/Adj/Set Range		0 to 2 0: OFF, 1: ON, 2: Not used
Default Value		0

PSCHG-SW	2	Real-time multi tone ctrl:ini rtn,SPD sw
Detail		To set whether to execute real-time multiple tone control at initial rotation when switching the process speed. When 1 is set, productivity is improved, but hue stability is decreased.
Use Case		Upon user's request (to improve productivity when media are mixed)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, hue variation may occur.
Display/Adj/Set Range		0 to 1 0: ON, 1: OFF
Default Value		0

■ IMG-RDR

COPIER > OPTION > IMG-RDR

DFDST-L1	1	Adj dust detect level: ppr intvl, DADF
Detail		To adjust dust detection level with dust detection correction control that is executed at paper interval in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
Use Case		- When black line occurs due to dust - Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
Display/Adj/Set Range		0 to 255 0: OFF
Default Value		200

COPIER > OPTION > IMG-RDR

DFDST-L2	1	Adj dust detect level: after job, DADF
Detail		To adjust dust detection level with dust detection correction control that is executed after the job is completed in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
Use Case		- When black line occurs due to dust - Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
Display/Adj/Set Range		0 to 255 0: OFF
Default Value		200

DF2DSTL1	1	Dust detect level: ppr intvl, back, DADF
Detail		To adjust dust detection level with dust detection correction control that is executed at paper interval by the Scanner Unit (for back side) in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
Use Case		- When black line occurs due to dust - Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
Display/Adj/Set Range		0 to 255 0: OFF
Default Value		200

DF2DSTL2	1	Dust detect level: after job, back, DADF
Detail		To adjust dust detection level with dust detection correction control that is executed by the Scanner Unit (for back side) after the job is completed in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
Use Case		- When black line occurs due to dust - Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
Display/Adj/Set Range		0 to 255 0: OFF
Default Value		200

■ IMG-MCON

COPIER > OPTION > IMG-MCON

PASCAL	**1**	**Use/no use of auto gradation adj data**
Detail		To set to use/not to use the gradation adjustment data gamma LUT that is generated by auto gradation adjustment (full/quick adjustment) control. Whether to use gamma LUT at the time of image formation can be selected.
Use Case		When PASCAL-related failure occurs/when identifying the cause of PASCAL-related failure
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3 0: Initial LUT is used (Auto gradation adjustment is not used), 1: Auto gradation adjustment is used, 2 to 3: Not used
Default Value		1
PRN-FLG	**2**	**Select of image area flag (PDL image)**
Detail		To set the image area flag for image processing which is performed when a PDL image fails to be compressed at a specified compression rate. If an image fails to be compressed at a specified compression rate, the following processing is performed by default: - Processing to prioritize text reproduction - Replacement of Bk-color with single Bk-color Set 1 when moire occurs or jaggy is significant. Set 2 when not preferring to replace Bk-color with single Bk-color.
Use Case		- When moire occurs or jaggy is significant in case of printing an image containing many halftone dots or photos - When avoiding to replace Bk-color with single black color
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		This setting trades off with reproducibility of text.
Display/Adj/Set Range		0 to 2 0: High screen ruling, gray compensation LUT 1: Error diffusion, gray compensation LUT 2: High screen ruling, normal LUT
Default Value		0
SCN-FLG	**2**	**Select of image area flag (copy image)**
Detail		To set the image area flag for image processing which is performed when a scanned image fails to be compressed at a specified compression rate. If an image fails to be compressed at a specified compression rate, processing to prioritize reproduction of text is performed by default. Set 1 when an image contains many halftone photo images. Set 2 when an image contains many printed photos.
Use Case		When copying an image which contains many halftone and photos
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		This setting trades off with reproducibility of text.
Display/Adj/Set Range		0 to 2 0: Text, 1: Halftone photo image, 2: Printed photos
Default Value		0

COPIER > OPTION > IMG-MCON

TMIC-BK	**2**	**ON/OFF of TMIC Bk_LUT end edge correct**
Detail	To set ON/OFF of the trailing edge adjustment of Bk_LUT for PDL and for copy which are used by TMIC. When the trailing edge adjustment is set to ON, the density of the high density area becomes high, and consequently text and thin lines become clear. While an image becomes clear, the hue of the gradation area of photos, etc. is changed.	
Use Case	When thin lines are partly missing or characters are faded	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: ON for PDL, OFF for copy 1: OFF for PDL, OFF for copy 2: ON for PDL, ON for copy 3: OFF for PDL, ON for copy	
Default Value	2	

DH-MODE	**2**	**Set ptch data at Dhalf except full adj**
Detail	To set whether to use the high-density patch data that has been scanned by D-half control of full adjustment at the time of D-half control other than full adjustment.	
Use Case	At image adjustment	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Used, 1: Not used	
Default Value	0	

MIX-FLG	**2**	**Set img processing at img composition**
Detail	To set the image processing which is performed when an image fails to be compressed at a specified compression rate by the Main Controller upon image composition.	
Use Case	When an image processing failure occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)	
Default Value	0	

REPORT-Z	**1**	**Set of image processing at report print**
Detail	To set the image processing which is performed when printing a report.	
Use Case	When there is a request for image improvement	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with a single Bk color. Error diffused image.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image.) 3: Equivalent to scanned photo mode (Black text is reproduced with 4 colors. Screen processed image.)	
Default Value	0	

COPIER > OPTION > IMG-MCON

IFXEML-Z	**1**	**Set img proc at clr iFAX,mail recv print**
Detail	To set the image processing which is performed when printing color iFAX or received e-mail.	
Use Case	When there is a request for image improvement	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)	
Default Value	0	
BMLNKS-Z	**1**	**Set img proc at BMLinkS reception print**
Detail	To set the image processing which is performed when printing received BMLinkS.	
Use Case	When there is a request for image improvement	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: Equivalent to PDL text mode (Black text is reproduced with 4 colors. Error diffused image. The hue of the photo area is more vivid than that of 2.) 1: Equivalent to PDL photo mode (Black text is reproduced with 4 colors. Screen processed image.) 2: Equivalent to scanned text mode (Black text is reproduced with a single Bk color. Error diffused image. The hue of the photo area might be different from that of 0.) 3: Equivalent to scanned photo mode (Black text is reproduced with a single Bk color. Screen processed image.)	
Default Value	0	
REDU-CNT	**2**	**Set toner deposit amount limt at clr adj**
Detail	To set whether to limit the toner deposit amount at color adjustment (color balance, fine adjustment of density). When 0 is set, the color adjustment value is reflected to an image precisely, but toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.	
Use Case	- Upon user's request - When reflecting the color adjustment value to an image precisely	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	When 0 is set, toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.	
Display/Adj/Set Range	0 to 1 0: Toner deposit amount is not limited. 1: Toner deposit amount is limited to the specified amount.	
Default Value	1	

COPIER > OPTION > IMG-MCON

VP-ART	**2**	**Setting of line art processing**
Detail	To set outline processing for line art on scalable PDF. In the outline processing, a binary image outline is extracted in the field which is recognized as line art, and is converted into vector data. Specify whether to convert the binary image outline into vector data or to recognize it as one line (as a thin line). For the thin line, the line width can be specified. Change this value when you want to obtain an output of a wide-width line as one line rather than as an outline (when you want to prioritize edit operation as a line rather than image quality).	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 99	
Default Value	1	
VP-TXT	**2**	**Set of character vectorization process**
Detail	To set vectorization processing for text on scalable PDF. In the vectorization processing, a binary image outline is extracted in the field which is recognized as text, and is converted into vector data. In regular vectorization, function approximation is not used for small text not to change the image quality. When the value is changed, function approximation processing is executed for small text, which realizes smooth text although the image quality is changed. Change this value when you want to prioritize smoothness in small text.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 99	
Default Value	1	
PASCL-TY	**2**	**Set of paper type for auto gradation adj**
Detail	Auto gradation adjustment is normally executed with the recommended paper specified for each location. However, if you want to change the paper type, use this setting to change the paper type.	
Use Case	When executing the auto gradation adjustment using a paper other than the recommended paper type	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not change the setting in the normal operation.	
Display/Adj/Set Range	1 to 3 1: GF-C081 (For Japan), 2: Hammermill 28lb (For USA), 3: Canon Oce Top Colour 100gsm (For EU. Except for Japan and USA.)	
Default Value	It differs according to the location.	
AST-SEL	**2**	**Adj of advanced smoothing effect**
Detail	To adjust the smoothing effect which is set in the advanced smoothing UI. Set 3 if no smoothing effect is obtained even though "Strong" is set in the advanced smoothing UI. Set 0 if too much effect is obtained even though "Weak" is set.	
Use Case	When image failures (jaggy, moire) occur	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3	
Default Value	2	

COPIER > OPTION > IMG-MCON

BGE-OFS	**2**	**Fine adj background (background removal)**
Detail		To make a fine adjustment of the background adjustment (background removal) level which can be set manually. Break up the adjustment values into smaller ones when user does not satisfy with the default adjustment values.
Use Case		When color fogging occurs on the output image when copying yellowed blank paper as an original
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Since the background color is set to be washed out with this mode, not only the background of yellowed blank paper, but also other light colors (light blue, etc.) are washed out.
Display/Adj/Set Range		-15 to 15
Default Value		0
Additional Functions Mode		Copy> Options> Density> Background Density
TGT-3	**1**	**Multi tone ctrl ptch dens crrct: 1/2 SPD**
Detail		To set the extent of patch density target value at 1/2 speed that has been corrected by real-time multiple tone control to be reflected to other speeds in % (percentage).
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100
Default Value		50
AFTR-FB	**2**	**Real-time multi tone ctrl crrct: lst rtn**
Detail		To set the extent of the correction result of real-time multiple tone control to be reflected at the time of last rotation in % (percentage).
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100
Unit		%
Default Value		30
Amount of Change per Unit		1
DITH-FB	**2**	**Real-time multi tone ctrl crrct: dither**
Detail		To set the extent of gradation that has been corrected by real-time multiple tone control to be reflected to other dithering methods in % (percentage). Increase the value when dithering occurs.
Use Case		When the error diffusion hue is not appropriate
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100
Unit		%
Default Value		10
Amount of Change per Unit		1

COPIER > OPTION > IMG-MCON

EXPFL-C	1	Set C-clr exposure modulation parameter
Detail		To set the C-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decease the value when toner scattering occurs.
Use Case		When fading, toner scattering, or crash characters occur
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute auto gradation adjustment (full adjustment).
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		0 to 5 0: OFF, 1 to 5: Parameter
Default Value		3

EXPFL-K	1	Set Bk-clr exposure modulation parameter
Detail		To set the Bk-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decease the value when toner scattering occurs.
Use Case		When fading, toner scattering, or crash characters occur
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute auto gradation adjustment (full adjustment).
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		0 to 5 0: OFF, 1 to 5: Parameter
Default Value		3

EXPFL-M	1	Set M-clr exposure modulation parameter
Detail		To set the M-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decease the value when toner scattering occurs.
Use Case		When fading, toner scattering, or crash characters occur
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute auto gradation adjustment (full adjustment).
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		0 to 5 0: OFF, 1 to 5: Parameter
Default Value		3

EXPFL-Y	1	Set Y-clr exposure modulation parameter
Detail		To set the Y-color exposure modulation parameters (7 types of dithering x 7 environment classifications). Increase the value when fading occurs, and decease the value when toner scattering occurs.
Use Case		When fading, toner scattering, or crash characters occur
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute auto gradation adjustment (full adjustment).
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		0 to 5 0: OFF, 1 to 5: Parameter
Default Value		3

COPIER > OPTION > IMG-MCON

FL-FB	**2**	**Real-time multi tone ctrl crrct: full**
Detail		To set the extent of gradation to which full correction has been applied by real-time multiple tone control to be reflected in % (percentage).
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100
Unit		%
Default Value		100
Amount of Change per Unit		1
HIGH-C	**2**	**For R&D**
Default Value		50
HIGH-Y	**2**	**For R&D**
Default Value		50
HIGH-M	**2**	**For R&D**
Default Value		50
INT-FB	**2**	**Real-time multi tone ctrl crrct: simple**
Detail		To set the extent of gradation to which simple correction (5-patch interruption) has been applied by real-time multiple tone control to be reflected in % (percentage).
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 100
Unit		%
Default Value		30
Amount of Change per Unit		1
LOW-C	**2**	**For R&D**
Default Value		-30
LOW-Y	**2**	**For R&D**
Default Value		-30
LOW-M	**2**	**For R&D**
Default Value		-30
LPMAX-K	**2**	**For R&D**
Default Value		50
LPMIN-K	**2**	**For R&D**
Default Value		-30
PTN-AFTR	**2**	**Multi tone ctrl patch pattern: lst rotn**
Detail		To set the patch pattern to be used for real-time multiple tone control at last rotation.
Use Case		When hue variation occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 7
Default Value		1

COPIER > OPTION > IMG-MCON

PTN-INT	**2**	**Multi tone ctrl patch pattern: interrupt**
Detail	To set the patch pattern to be used for real-time multiple tone control at interruption.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	1 to 7	
Default Value	1	
PTN-MNG	**2**	**Multi tone ctrl ptch:wrmup rtn,1st pw-on**
Detail	To set the patch pattern to be used for real-time multiple tone control at warm-up rotation performed first time for the day.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	1 to 7	
Default Value	7	
R-FREQ-S	**2**	**Set real-time multiple tone ctrl frqcy**
Detail	To set the frequency to execute real-time multiple tone control. As the value is larger (excluding 3), hue becomes stable, but productivity is decreased and toner consumption is increased. This setting is linked with the item displayed in Settings/Registration menu when IMGC-ADJ is set to 1.	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	In exchange for stability of hue, productivity is decreased and toner consumption is increased.	
Display/Adj/Set Range	0 to 3 0: Normal, 1: Hue improvement mode 1, 2: Hue improvement mode 2, 3: OFF	
Default Value	0	
Related Service Mode	COPIER> OPTION> DSPLY-SW> IMGC-ADJ, RFREQ-SW	
S-DITH	**1**	**Multi tone control dither: ppr interval**
Detail	To set the combination of dithering methods to be used for real-time multiple tone control at paper interval. Use 3 of the following methods: low screen ruling, high screen ruling, copy, or error diffusion (6 types).	
Use Case	When hue variation occurs (type of patch pattern)	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	1 to 7	
Default Value	1	
TGT-2	**1**	**Multi tone ctrl ptch dens crrct: 2/3 SPD**
Detail	To set the extent of patch density target value at 2/3 speed that has been corrected by real-time multiple tone control to be reflected to other speeds in % (percentage).	
Use Case	When hue variation occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 100	
Unit	%	
Default Value	100	
Amount of Change per Unit	1	

COPIER > OPTION > IMG-MCON

R-V-MULT	**2**	**Set real-time multiple tone ctrl exe SPD**
Detail		To set the process speed at which the real-time multiple tone control is executed. When 0 is set, the control is executed only at the latest process speed. When 1 is set, it is executed at all process speeds. Since the execution frequency of the control is increased, productivity is decreased and toner consumption is increased.
Use Case		- When color difference occurs among media - When color difference occurs even if execution frequency is changed by R-FREQ-S
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, productivity is decreased and toner consumption is increased.
Display/Adj/Set Range		0 to 1 0: Latest process speed only, 1: All process speeds
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-MCON> R-FREQ-S
R-ACT-TM	**2**	**Multi tone ctrl after being left unatndd**
Detail		To set the interval to execute real-time multiple tone control while the machine is left unattended.
Use Case		- When hue variation occurs after leaving the machine unattended while sleep is OFF - When the user does not execute auto gradation adjustment
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 or 2 is set, productivity is decreased and toner consumption is increased.
Display/Adj/Set Range		0 to 2 0: OFF, 1: 1 hour, 2: 30 minutes
Default Value		0
R-LTMP	**2**	**Set multi tone ctrl exe: chg frqcy chng**
Detail		To set whether to execute the real-time multiple tone control when automatically changing the charging frequency in a low temperature environment.
Use Case		When hue varies for each job in a low temperature environment
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
CPSCR-SW	**2**	**Setting of copy screen**
Detail		To set the copy screen. When coarseness occurs on a copy image, set 1.
Use Case		When coarseness occurs on a copy image
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute full adjustment of auto gradation adjustment.
Caution		- Be sure to execute auto gradation adjustment (full adjustment) after adjustment. - Moire or decrease in contrast may occur at copy.
Display/Adj/Set Range		0 to 1 0: Default, 1: Low screen ruling
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust

COPIER > OPTION > IMG-MCON

PDMX-O-Y	2	Adj Y-clr density:printer PASCAL control
Detail		To adjust the Y-color density at printer PASCAL control. Increase the value if Y-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
Use Case		When the density is not appropriate after execution of printer PASCAL control
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute printer PASCAL control.
Display/Adj/Set Range		-5 to 5
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-DEV> DMX-OF-Y

PDMX-O-M	2	Adj M-clr density:printer PASCAL control
Detail		To adjust the M-color density at printer PASCAL control. Increase the value if M-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
Use Case		When the density is not appropriate after execution of printer PASCAL control
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute printer PASCAL control.
Display/Adj/Set Range		-5 to 5
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-DEV> DMX-OF-M

PDMX-O-C	2	Adj C-clr density:printer PASCAL control
Detail		To adjust the C-color density at printer PASCAL control. Increase the value if C-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
Use Case		When the density is not appropriate after execution of printer PASCAL control
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute printer PASCAL control.
Display/Adj/Set Range		-5 to 5
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-DEV> DMX-OF-C

PDMX-O-K	2	Adj Bk density:printer PASCAL control
Detail		To adjust the Bk-color density at printer PASCAL control. Increase the value if Bk-color density after execution of printer PASCAL control is low. Decrease the value if the density is high.
Use Case		When the density is not appropriate after execution of printer PASCAL control
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Execute printer PASCAL control.
Display/Adj/Set Range		-5 to 5
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-DEV> DMX-OF-K

■ IMG-LSR

COPIER > OPTION > IMG-LSR

PRI-FAN	**2**	**Set of Primary Charging Fan forcible ON**
Detail		To set the timing to forcibly turn ON the Primary Charging Suction Fan, Primary Charging Exhaust Fan and Developing and Pre-transfer Charging Fan. When 1 is set, they are always turned ON by full speed and when 2 is set, they are always turned ON by half speed while power is ON.
Use Case		When an image smear due to the drum occurs
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2 0: Cancel forcible ON, 1: Always ON by full speed, 2: Always ON by half speed
Default Value		0
IMG-MODE	**2**	**Setting of dark green moire alleviation**
Detail		To set the moire alleviation mode that occurs with dark green color. When 1 is set, moire is alleviated by changing screen angle of Y-color.
Use Case		When moire occurs with dark green color
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, uneven density may occur in the case that Y-color and Bk-color are mixed.
Display/Adj/Set Range		0 to 1 0: Standard, 1: Moire alleviation mode
Default Value		0
LS-LP-Y	**2**	**ON/OFF Y uneven dens:6mm/9mm intvl prev**
Detail		To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with Y-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
Use Case		When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
Adj/Set/Operate Method		1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

COPIER > OPTION > IMG-LSR

LS-LP-M	2	ON/OFF M uneven dens:6mm/9mm intvl prev
Detail		To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with M-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
Use Case		When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
Adj/Set/Operate Method		1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LS-LP-C	2	ON/OFF C uneven dens:6mm/9mm intvl prev
Detail		To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with C-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
Use Case		When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
Adj/Set/Operate Method		1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		COPIER> TEST> PG> TYPE

LS-LP-K	2	ON/OFF Bk uneven dens:6mm/9mm intvl prev
Detail		To set whether to change the arch gain amount when uneven density at 6 mm/9 mm intervals occurs with Bk-color. Intervals of uneven density differ depending on process speed. - 1/1 speed, 1/2 speed: Integral multiple of 6 mm - 2/3 speed: Integral multiple of 9 mm
Use Case		When uneven density at intervals of integral multiple of 6 mm/9 mm occurs
Adj/Set/Operate Method		1) Enter "1", and then press OK key. 2) Check whether uneven density can be alleviated. 3) Specify "5" or "17" in TYPE and output PG. 4) Check that there is no moire on the PG. If there is moire, replace the Laser Scanner Unit.

■ IMG-DEV

COPIER > OPTION > IMG-DEV

INTPPR-1	**2**	**Set wire clean interval in ppr interval**
Detail		To set the paper interval for automatic cleaning of the Primary Charging Wire and Pre-transfer Charging Wire. Decrease the value when the density varies, and increase the value to reduce downtime.
Use Case		- When density varies - When downtime occurs due to cleaning
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 9999
Unit		sheet
Default Value		4000
Amount of Change per Unit		1
DEVL-PTH	**1**	**Low duty toner eject image duty total VL**
Detail		To set the total value of the image duty, which is the condition to perform the low duty toner ejection sequence. When any of the average image duty of 4 colors indicates the threshold value or below, low duty toner ejection sequence is executed at the paper interval calculated by dividing the total value by the value of "threshold value - average image duty value". (The value specified in DEVL-VTH is used as a threshold value.)
Use Case		While printing low duty (low image ratio) images, - When graininess (coarseness) occurs - When low productivity or high toner consumption is pointed out by the user
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this when the machine is operating correctly.
Display/Adj/Set Range		0 to 4 0: 50 %, 1: 100 %, 2: 150 %, 3: 200 %, 4: 250 %
Unit		%
Default Value		1
Related Service Mode		COPIER> OPTION> IMG-DEV> DEVL-VTH
Amount of Change per Unit		50
CDEV-IDL	**2**	**ON/OFF Dev Ass'y (YMCBk) first idle rotn**
Detail		To set whether to perform idle rotation of the Developing Assembly (Y/M/C/Bk) at first time for the day.
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
PCHINT-1	**2**	**Adj of ATR patch ppr interval: 1st limit**
Detail		To adjust the paper interval which patch detection is performed by ATR control. (1st limit)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 4 0: 25 sheets, 1: 50 sheets, 2: 100 sheets, 3: 150 sheets, 4: 200 sheets
Unit		sheet
Default Value		1

COPIER > OPTION > IMG-DEV

PCHINT-2	2	Adj of ATR patch ppr interval: 2nd limit
Detail		To adjust the paper interval which patch detection is performed by ATR control. (2nd limit)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 4 0: 100 sheets, 1: 200 sheets, 2: 300 sheets, 3: 400 sheets, 4: 500 sheets
Unit		sheet
Default Value		1
Amount of Change per Unit		100

PCHINT-V	2	Adj ATR patch VD counter total VL intvl
Detail		To adjust the interval calculated by the total video counter value at which the patch detection is performed in ATR control and weighting at high duty. If any of the average image duty of 4 colors indicates the threshold value or higher, the patch detection of ATR control is executed at the paper interval calculated by dividing the total standard value by the average image duty value. Patch detection is normally executed at the paper interval per 200 sheets; however, if the foregoing condition is satisfied, detection will be executed even though it does not reach the specified number of sheet. When the negative value is specified, weighting (6.5 times) is applied to the video counter total value only if a new Toner Container is set and also in case of high duty (threshold value: 80% or higher). As the value is changed by 1, the total standard value of video counter is changed by 1000%. When 0 or higher value is specified, weighting is always applied when the duty value indicates the threshold value or higher. Combination of threshold value and weighting differs depending on the setting value. Total standard value of video counter is fixed to 6000%.
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-10 to 10 -10: Total standard value 10000%, -9: 9000%, -8: 8000%, -7: 7000%, -6: 6000%, -5: 5000%, -4: 4000%, -3: 3000%, -2: 2000%, -1: 1000% 0: Threshold value 80% / weighting 6.5 times, 1: 60% / 6.5 times, 2: 40% / 6.5 times, 3: 20% / 6.5 times, 4: 80% / 8 times, 5: 60% / 8 times, 6: 40% / 8 times, 7: 20% / 8 times, 8: 80% / 10 times, 9: 60% / 10 times, 10: 40% / 10 times
Default Value		-6

DMX-OF-Y	2	Adj of Y-color density at D-max control
Detail		To adjust Y-color density at D-max control. Increase the value if density of solid area on Y-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
Use Case		When density of solid area on an image is not appropriate even performing auto gradation adjustment
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		-3 to 3
Default Value		0

COPIER > OPTION > IMG-DEV

DMX-OF-M	2	Adj of M-color density at D-max control
Detail		To adjust M-color density at D-max control. Increase the value if density of solid area on M-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
Use Case		When density of solid area on an image is not appropriate even performing auto gradation adjustment
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		-3 to 3
Default Value		0

DMX-OF-C	2	Adj of C-color density at D-max control
Detail		To adjust C-color density at D-max control. Increase the value if density of solid area on C-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
Use Case		When density of solid area on an image is not appropriate even performing auto gradation adjustment
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		-3 to 3
Default Value		0

DMX-OF-K	2	Adj of Bk-color density at D-max control
Detail		To adjust Bk-color density at D-max control. Increase the value if density of solid area on Bk-color image is low even when auto gradation adjustment is executed. Decrease the value if the density is high.
Use Case		When density of solid area on an image is not appropriate even performing auto gradation adjustment
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. 3) Execute full adjustment of auto gradation adjustment.
Caution		Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.
Display/Adj/Set Range		-3 to 3
Default Value		0

PRI-SHUT	**1**	**Set Pry/Pre-trn Chg Shutter close timing**
Detail	To set the time from when the Photosensitive Drum stops to when the Primary/Pre-transfer Charging Shutter is closed. With the Primary/Pre-transfer Charging Shutter control, the Primary/Pre-transfer Charging Shutter is closed after up to 255 minutes of the stop of the Photosensitive Drum to prevent image smear due to nitrogen oxide. Decrease the value to close the shutter earlier when image smear occurs first time for the day. Depending on the value, the shutter is closed before the machine shifts to sleep mode, so that the first copy time becomes longer for the time to open the shutter again (approx. 13 seconds). As the value is reduced, the life of the Primary/Pre-transfer Charging Wire Cleaning Pad is shortened because cleaning of the Charging Wire is performed every time the shutter is closed.	
Use Case	When image smear occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	- If the shutter is closed before the machine shifts to sleep mode, the first copy time becomes longer for the time to open it again. - As the value is reduced, the life of the Primary/Pre-transfer Charging Wire Cleaning Pad is shortened.	
Display/Adj/Set Range	0 to 120	
Unit	min	
Appropriate Target Value	120	
Default Value	120	
Amount of Change per Unit	1	
ADJVPP-1	**2**	**Adj of dev AC bias Vpp: 1/1 SPD**
Detail	To adjust Vpp of the developing AC bias at 1/1 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	
ADJVPP-2	**2**	**Adj of dev AC bias Vpp: 2/3 SPD**
Detail	To adjust Vpp of the developing AC bias at 2/3 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	

COPIER > OPTION > IMG-DEV

ADJVPP-3	2	Adj of dev AC bias Vpp: 1/2 SPD
Detail	To adjust Vpp of the developing AC bias at 1/2 speed. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	

DRBNDSW1	2	ON/OFF of drum toner band formation
Detail	To set whether to form toner band on the Photosensitive Drum. Interval to form toner band can be set by DRBNDTM1 (during last rotation)/DRBNDTM2 (at paper interval).	
Use Case	When flip of the Cleaning Blade/fusion occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When 1 is set, toner consumption is increased and productivity is decreased.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
Related Service Mode	COPIER> OPTION> IMG-DEV> DRBNDTM1/2	

DRBNDTM1	2	Set drum toner band form intvl: lst rotn
Detail	To set the number of sheets as the intervals to form toner band on the Photosensitive Drum at last rotation.	
Use Case	When flip of the Cleaning Blade/fusion occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	10 to 1000	
Unit	sheet	
Default Value	50

ADJVPP-Y	**2**	**Adj of Y-color developing AC bias Vpp**
Detail	To set the developing AC bias Vpp for Y-color. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	
ADJVPP-M	**2**	**Adj of M-color developing AC bias Vpp**
Detail	To set the developing AC bias Vpp for M-color. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	
ADJVPP-C	**2**	**Adj of C-color developing AC bias Vpp**
Detail	To set the developing AC bias Vpp for C-color. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-4 to 2	
Default Value	0	
ADJVPP-K	**2**	**Adj of Bk-color developing AC bias Vpp**
Detail	To set the developing AC bias Vpp for Bk-color. Increase the value when low density, white spots, or uneven density at certain intervals on a solid image occurs. Decrease the value when coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs.	
Use Case	- When low density, white spots, or uneven density at certain intervals occurs - When coarseness, uneven density at certain intervals on a halftone image, or ring marks occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.

DEVLVTHY	2	Set toner eject Y-clr img duty threshold
Detail		To set the threshold value of the Y-color image duty (average image ratio) where the low duty toner ejection sequence is executed. There are 5 selections for setting value and threshold value changes according to the temperature inside the machine. As the value is larger, coarseness is decreased, but productivity is lowered and toner consumption is increased. As the value is smaller, productivity and toner consumption are improved, but coarseness gets worse.
Use Case		When coarseness (graininess) occurs on low duty image (image with low image ratio)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		- As the value is larger, productivity is decreased but toner consumption is increased. - Increase the value by 1 while checking the symptom each time.
Display/Adj/Set Range		1 to 5 1: 1.0%, 1.5%, 2.0%, 2.5%, 3.0% (When the temperature inside the machine is as follow: below 40 deg C, 40 deg C or higher and below 42 deg C, 42 deg C or higher and below 44 deg C, and 44 deg C or higher) 2: 1.5%, 2.0%, 2.5%, 3.0%, 3.5% 3: 2.0%, 2.5%, 3.5%, 4.5%, 5.0% 4: 3.0%, 4.0%, 5.0%, 6.0%, 7.0% 5: 5.0%, 7.0%, 9.0%, 10.0%, 10.0%

DEV-STOP	2	Set continuous printing pause interval
Detail		To set the interval (number of sheets) to pause print operation at continuous printing. When either 0, 1, or 2 is set, drive of the Developing Cylinder is forcibly stopped and then restarted after a specified number of sheets is fed regardless of the density control. Developer coating failure which occurs at continuous printing can be prevented. When 3 is set, print operation is not paused.
Use Case		When all the following conditions are satisfied - The setting value of R-FREQ-S is "3" - Frequency of real-time multiple tone control is changed in Settings/Registration menu - Upon user's request (to improve productivity)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		If the interval is wide, developer coating failure may occur.
Display/Adj/Set Range		0 to 3 0: 150 sheets, 1: 500 sheets, 2: 1000 sheets, 3: OFF
Unit		sheet
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-MCON> R-FREQ-S

SCWSP-Y1	1	Fine adj Dev Ass'y (Y) Screw rotn:1/1SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Y) at 1/1 speed. If uneven density at certain intervals occurs with Y-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

SCWSP-M1	1	Fine adj Dev Ass'y (M) Screw rotn:1/1SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (M) at 1/1 speed. If uneven density at certain intervals occurs with M-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

COPIER > OPTION > IMG-DEV

SCWSP-C1	1	Fine adj Dev Ass'y (C) Screw rotn:1/1SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (C) at 1/1 speed. If uneven density at certain intervals occurs with C-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

SCWSP-K1	1	Fine adj Dev Ass'y(Bk) Screw rotn:1/1SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Bk) at 1/1 speed. If uneven density at certain intervals occurs with Bk-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/1 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

SCWSP-Y2	1	Fine adj Dev Ass'y (Y) Screw rotn:2/3SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Y) at 2/3 speed. If uneven density at certain intervals occurs with Y-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 2/3 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.

Default Value		0

COPIER > OPTION > IMG-DEV

SCWSP-Y3	1	Fine adj Dev Ass'y (Y) Screw rotn:1/2SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Y) at 1/2 speed. If uneven density at certain intervals occurs with Y-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/2 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

SCWSP-M3	1	Fine adj Dev Ass'y (M) Screw rotn:1/2SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (M) at 1/2 speed. If uneven density at certain intervals occurs with M-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/2 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

SCWSP-C3	1	Fine adj Dev Ass'y (C) Screw rotn:1/2SPD
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (C) at 1/2 speed. If uneven density at certain intervals occurs with C-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/2 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0

COPIER > OPTION > IMG-DEV

SCWSP-K3	**1**	**Fine adj Dev Ass'y(Bk) Screw rotn:1/2SPD**
Detail		To make a fine adjustment of the number of rotations of the Toner Stirring Screw of the Developing Assembly (Bk) at 1/2 speed. If uneven density at certain intervals occurs with Bk-color, use this item as a temporary measure until the Developing Assembly is replaced. As the value is increased, the number of rotations of the screw is increased so uneven density at certain intervals which occurs at 1/2 speed is temporarily alleviated. When the Developing Assembly is replaced, the value is returned to 0.
Use Case		When taking a temporary measure until the Developing Assembly is replaced in the case of occurrence of uneven density at certain intervals
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Be sure to replace the Developing Assembly as soon as possible because this is a temporary measure in the case that there is no spare assembly on hand.
Display/Adj/Set Range		-10 to 10
Default Value		0
DVS-REF1	**2**	**Set Dev Cylinder refresh exe interval**
Detail		To set the intervals to execute refresh operation of the Developing Cylinder at continuous printing. As the value is larger, execution interval becomes shorter (productivity is decreased). Increase the value when developer coating failure occurs. If uneven density at certain intervals occurs, decrease the value as a temporary measure until the Developing Assembly is replaced.
Use Case		When developer coating failure/uneven density at certain intervals occurs at continuous printing of low duty images in a high temperature and high humidity environment
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		If the value is large, productivity is decreased. If the value is too large, uneven density at certain intervals or soiled image due to leakage of developer may occur. If the value is too small, developer coating failure may occur.
Display/Adj/Set Range		-8 to 8
Default Value		0
DVS-REF2	**2**	**For R&D**
Default Value		0
DVS-REF3	**2**	**For R&D**
Default Value		0
DVSCT-Y2	**2**	**For R&D**
Default Value		0
DVSCT-M2	**2**	**For R&D**
Default Value		0
DVSCT-C2	**2**	**For R&D**
Default Value		0
DVSCT-K2	**2**	**For R&D**
Default Value		0
DVSCT-Y3	**2**	**For R&D**

DVSCT-M3	**2**	**For R&D**
Default Value		0
DVSCT-C3	**2**	**For R&D**
Default Value		0

COPIER > OPTION > IMG-DEV

DVSCT-K3	2	For R&D
Default Value	0	

4CBKSPIT	2	Set YMC developer eject intvl: single Bk
Detail	To set the interval to execute ejection of Y/M/C-color developer in single Bk-color mode at process speed other than 1/1 speed and in color mode where single Bk-color is mixed. Set 1 when noise occurs due to the Cleaning Blade. As the Photosensitive Drum gets closer to the end of life, flip of the Cleaning Blade or image smear due to the Drum Unit occurs. When the Drum Unit (Y/M/C) is replaced as a countermeasure, set 1.	
Use Case	In single Bk-color mode at process speed other than 1/1 speed or in color mode where single Bk-color is mixed, - When noise occurs due to the Cleaning Blade - When replacing the Drum Unit (Y/M/C) as a measure against flip of the Cleaning Blade and image smear	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When 1 or 2 is set, increase in toner consumption and decrease in productivity occur.	
Display/Adj/Set Range	0 to 2 0: N/A, 1: 30 seconds, 2: 2 minutes	
Default Value	0	

AT-SPIT	2	ON/OFF low duty toner ejection control
Detail	To set whether to execute toner ejection control at continuous printing of low duty images. If hue variation occurs by outputting high duty image (photo, etc.) after continuous printing of low duty images, set 1.	
Use Case	When hue variation occurs at the time of switching from low duty image to high duty image	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When 1 is set, productivity is decreased and toner consumption is increased.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	

■ MG-TR

COPIER > OPTION > MG-TR

2TR-RVON	2	Set end white spot crrct ctrl user set
Detail	To set whether to enable the trailing edge white spot correction control in Settings/Registration menu. When 1 is set, user settings on the correct trail end toner application screen are enabled. If ON is set, weak bias is applied to the paper trailing edge, and white spots at the trailing edge are alleviated. When 0 is set, user settings are disabled.	
Use Case	When an image failure (white spots on the trailing edge) occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	1	

COPIER > OPTION > MG-TR

BK-4C-SW	**2**	**Set clean failure prev mode: single Bk**
Detail	To set whether to bring the Photosensitive Drums for all colors into contact with the ITB in single Bk mode. If black mode is used frequently, paper dust is accumulated on the Drum Cleaning Blade (Bk) so an image failure may occur. When 1 is set, all Photosensitive Drums are brought into contact with the ITB so cleaning failure due to paper dust can be prevented. There is not much influence on the life of the Photosensitive Drum (Y, M, C) and the ITB.	
Use Case	When an image failure due to paper dust occurs in case of frequent use of single Bk mode	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
2TR-TYPE	**1**	**[Not used]**
2TR-P-SW	**2**	**Set ppr intvl sec trn bias: dens lvl dif**
Detail	To set the bias applied to the Secondary Transfer Outer Roller at paper interval during secondary transfer ATVC control. In the normal operation, weak negative bias is applied to extend the life of the roller. When small size memory (difference in density level) occurs, set 1. With this setting, positive bias is applied, so difference in density level is alleviated.	
Use Case	When small size memory occurs	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	When 1 is set, the life of the Secondary Transfer Outer Roller is shortened and soiled back of the paper may occur.	
Display/Adj/Set Range	0 to 1 0: Weak negative bias (normal), 1: Positive bias	
Default Value	0	
Supplement/Memo	Small size memory: A phenomenon where difference in density level between A3 feeding area and non-feeding area (right and left edges) occurs with paper larger than A3. It is likely to become obvious when printing a solid image on a paper larger than A3 after making a large number of outputs with A3 paper.	

■ IMG-FIX

COPIER > OPTION > IMG-FIX

LL-DWN	**1**	**Set of low temp environment mode level**
Detail	To set ON/OFF of fixing improvement mode when fixing performance right after the start of printing is low in a low temperature environment. As the value is larger, fixing performance is improved, but the machine is likely to go into the down sequence (approx. 90% productivity). When setting IMGC-ADJ to 1, this setting can be also made in Settings/Registration> Adjustment/ Maintenance> Low Temperature Environment Mode.	
Use Case	When fixing performance right after the start of printing is low	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 4 0: OFF, 1: Level 1, 2: Level 2, 3: Level 3, 4: Level 4	
Default Value	0	
Related Service Mode	COPIER> OPTION> DSPLY-SW> IMGC-ADJ	
Additional Functions Mode	Adjustment/Maintenance> Low Temperature Environment Mode	

COPIER > OPTION > IMG-FIX

FX-MODE	1	Set productivity/qlty priority: mix ppr
Detail		To set whether productivity or image quality is to be prioritized when paper types are mixed. When 0 to 2 is set, productivity is prioritized over image quality. Waiting time for fixing temperature control is shortened, but image failure or feed failure may occur depending on media or environment. When 3 is set, the machine waits until reaching the control temperature for optimal image quality so that productivity is decreased.
Use Case		At print while types of paper are mixed
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 3 0: Productivity priority (normal), 1: Productivity priority (thin paper), 2: Productivity priority (heavy paper), 3: Image quality priority
Default Value		0
Additional Functions Mode		Productivity/Image Quality Priority (Different Paper Types)

FX-SPD-1	2	Adjustment of fixing speed: thin paper 2
Detail		To adjust fixing speed when feeding thin paper 2 (52 to 63 g/m2). Increase the value when discharge mark due to separating discharge/smeared image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied.
Use Case		When discharge mark due to separating discharge/smeared image due to fixing/image failure on the trailing edge occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		%
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-FIX> FX-SPD-2 to 8
Additional Functions Mode		Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
Supplement/Memo		Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smeared image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.
Amount of Change per Unit		0.1

COPIER > OPTION > IMG-FIX

FX-SPD-2	2	Adj fix speed: no-coat, textured ppr 1/2
Detail		To adjust fixing speed when feeding non-coated paper (64 to 105 g/m2) and textured paper 1/2 (80 to 105 g/m2). Increase the value when discharge mark due to separating discharge/smeared image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied.
Use Case		When discharge mark due to separating discharge/smeared image due to fixing/image failure on the trailing edge occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		%
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-FIX> FX-SPD-1, 3 to 8
Additional Functions Mode		Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
Supplement/Memo		Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smeared image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.

Related Service Mode		COPIER> OPTION> IMG-FIX> FX-SPD-1 to 2, 4 to 8
Additional Functions Mode		Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
Supplement/Memo		Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smeared image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.
Amount of Change per Unit		0.1

FX-WUT	2	Set of Fixing Assembly warm-up time
Detail		To set the warm-up time of the Fixing Assembly, which is performed first time for the day. Use 0 (initial value) in the normal operation. Extend the time as needed when a fixing failure occurs first time for the day. As the value is incremented by 1, the time is increased by 60 seconds.
Use Case		- When a fixing failure occurs first time for the day - In the environment of 15 deg C or lower - When using media out of the specifications
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 3 0: Initial value, 1: Initial value + 60 seconds, 2: Initial value + 120 seconds, 3: Initial value + 180 seconds
Unit		sec
Default Value		0
Amount of Change per Unit		60

COPIER > OPTION > IMG-FIX

TMP-ST1	**1**	**Adj of standby 1 fixing temperature**
Detail	To adjust the startup/standby 1 fixing control temperature.	
Use Case	When a fixing failure occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	When -3 or less is set, a fixing failure might occur.	
Display/Adj/Set Range	-4 to 4	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	

TMP-ST2	**1**	**Adj of standby 2 fixing temperature**
Detail	To adjust the standby 2 fixing control temperature.	
Use Case	- When a fixing failure occurs - When reducing control temperature cooling wait time for frequently used papers	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	When -3 or less is set, a fixing failure might occur.	
Display/Adj/Set Range	-4 to 4	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	

TMP-ST1L	**1**	**Adj of standby 1 pressure temperature**
Detail	To adjust the standby 1 pressure control temperature.	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 4 0: 0 deg C, 1: +5 deg C, 2: +10 deg C, 3: +15 deg C, 4: +20 deg C	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	

TMP-ST2L	**1**	**Adj of standby 2 pressure temperature**
Detail	To adjust the standby 2 pressure control temperature.	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 4 0: 0 deg C, 1: +5 deg C, 2: +10 deg C, 3: +15 deg C, 4: +20 deg C	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	

COPIER > OPTION > IMG-FIX

TMP-OHT	**2**	**Adj of fixing temperature: transparency**
Detail	To adjust the fixing control temperature while transparency is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	
TMP-L	**2**	**Adj of pressure temperature: plain paper**
Detail	To adjust the pressure control temperature while plain paper is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When a failure due to temperature occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-1 to 3	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	
DWN-TMP	**2**	**Adj of down sequence temp threshold VL**
Detail	To adjust the threshold value of the temperature at which the machine goes into the down sequence. Use 0 (initial value) in the normal operation. As the value is smaller, the machine is less likely to enter the down sequence. When -4 is set, the down sequence actually becomes OFF.	
Use Case	When making adjustments according to the environment and media	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-4 to 1 -4: -10 deg C, -3: -6 deg C, -2: -4 deg C, -1: -2 deg C, 0: 0 deg C, 1: +3 deg C	
Unit	deg C	
Default Value	0	
Supplement/Memo	Conditions in which the machine is likely to go into the down sequence (the center temperature is likely to be lowered): 500 sheets or more of continuous prints in small size, LL or lower temperature environment, input voltage lower than the rated voltage	

COPIER > OPTION > IMG-FIX

EDG-WAIT	**2**	**Edge heat stby set: thin/pln1,2/rcycl1,2**
Detail	To set ON/OFF of job standby in the case of temperature rise at the edge of "Thin, Plain 1, Plain 2, Recycled 1 and Recycled 2," and adjust the job acceptance judgment temperature when ON is set. Use 0 (OFF) in the normal operation. When hot offset due to temperature rise at the paper edge occurs, set 1 to 3 (ON). 1 to 3: Job acceptance judgment temperature differs by 5 deg C.	
Use Case	When hot offset occurs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When 1, 2, or 3 is set, job standby occurs after small size sheets are continuously fed.	
Display/Adj/Set Range	0 to 3 0: OFF 1: ON (Job acceptance judgment temperature: Initial value) 2: ON (Job acceptance judgment temperature: Initial value - 5 deg C) 3: ON (Job acceptance judgment temperature: Initial value - 10 deg C)	
Default Value	0	
FX-FAN1	**2**	**Adj of Press Belt Cooling Fan ON temp**
Detail	To adjust the temperature condition which the Pressure Belt Cooling Fan is turned ON during/after a job. Use 0 (initial value) in the normal operation.	
Use Case	When changing the temperature condition to which the Pressure Belt Cooling Fan is turned ON	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-1 to 4 -1: -5 deg C, 0: 0 deg C, 1: +5 deg C, 2: +10 deg C, 3: +15 deg C, 4: +20 deg C	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	5	
FX-FAN2	**2**	**Adj of Press Belt Cooling Fan OFF temp**
Detail	To adjust the temperature condition which the Pressure Belt Cooling Fan is turned OFF during/after a job. Use 0 (initial value) in the normal operation.	
Use Case	When changing the temperature condition to which the Pressure Belt Cooling Fan is turned OFF	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2 -2: -6 deg C, -1: -3 deg C, 0: 0 deg C, 1: +3 deg C, 2: +6 deg C	
Unit	deg C	
Default Value	0	
Amount of Change per Unit	3	
NIP-DWN	**2**	**[Not used]**
NIP-DWN2	**2**	**Adj of fixing nip pressure amount 2**
Detail	To adjust the pressure amount of the fixing nip when feeding large size of non-coated paper (151 to 300 g/m2), coated paper (221 to 300 g/m2) and textured paper (181 to 300 g/m2). As the value is larger, pressure is increased.	
Use Case	When an image failure or a feeding failure due to nip pressure occurs	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Caution	Fixing at the paper edge might be deteriorated.	
Display/Adj/Set Range	-3 to 3	
Default Value	0	

COPIER > OPTION > IMG-FIX

NIP-DWN3	2	Adj of fixing nip pressure amount 3
Detail		To adjust the pressure amount of the fixing nip when feeding postcard, envelope, small size of non-coated paper (151 to 300 g/m2), coated paper (221 to 300 g/m2) and textured paper (181 to 300 g/m2). As the value is larger, pressure is increased.
Use Case		When an image failure or a feeding failure due to nip pressure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Fixing at the paper edge might be deteriorated.
Display/Adj/Set Range		-3 to 3
Default Value		0

NIP-DWN1	2	Adj of fixing nip pressure amount 1
Detail		To adjust the pressure amount of the fixing nip when feeding non-coated paper (52 to 150 g/m2), coated paper (106 to 220 g/m2), textured paper (80 to 180 g/m2), transparency and label. As the value is larger, pressure is increased.
Use Case		When an image failure or a feeding failure due to nip pressure occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Fixing at the paper edge might be deteriorated.
Display/Adj/Set Range		-3 to 3
Default Value		0

FX-ERRSW	2	ON/OFF of Fixing Belt Unit life judgment
Detail		To set whether to judge the life of the Fixing Belt Unit using the number of fed sheets. The number of fed sheets is counted by COPIER> COUNTER> DRBL-1> FX-BLT-U. When 1 is set, FX-U-ERR is enabled.
Use Case		When enabling the judgment of the Fixing Belt Unit life
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		COPIER> COUNTER> DRBL-1> FX-BLT-U COPIER> OPTION> IMG-FIX> FX-U-ERR

FX-U-ERR	2	Set Fix Belt Unit life error thresholdVL
Detail		To set the threshold value for the number of fed sheets which an error indicating that the Fixing Belt Unit reaches its life is displayed when the life of the Fixing Belt Unit is judged by the number of fed sheets. The number of fed sheets is counted by COPIER> COUNTER> DRBL-1> FX-BLT-U. When FX-ERRSW is 1, this setting is enabled.
Use Case		When enabling the judgment of the Fixing Belt Unit life
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 4 1: 400,000 sheets, 2: 600,000 sheets, 3: 800,000 sheets, 4: 1,000,000 sheets
Unit		sheet
Default Value		4
Related Service Mode		COPIER> COUNTER> DRBL-1> FX-BLT-U COPIER> OPTION> IMG-FIX> FX-ERRSW
Amount of Change per Unit		200000

COPIER > OPTION > IMG-FIX

L-WAIT	**2**	**ON/OFF of standby: Press Belt temp rise**
Detail		To set ON/OFF of standby mode at temperature rising of Pressure Belt and the threshold value. When 1, 2, or 3 is set, the machine enters standby mode to cool down when temperature exceeds the specified temperature, so image failure which occurs at temperature rising of the Pressure Belt can be prevented.
Use Case		When wrinkles or rain-like spots occur on coated paper due to temperature rising of the Pressure Belt
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1, 2, or 3 is set, the machine may enter standby mode (approx. 30 sec) due to temperature rising of the Pressure Belt during a job.
Display/Adj/Set Range		0 to 3 0: OFF, 1: ON (Judgment temperature table value), 2: ON (Judgment temperature table value -3 deg C), 3: ON (Judgment temperature table value -6 deg C)
Default Value		0
FX-MODE1	**1**	**Set of heavy 5/6 productivity priority**
Detail		To set whether to prioritize productivity when printing on heavy paper 5/6. When 1 is set, productivity for heavy paper 5/6 is improved, but a fixing failure may occur. When setting PR/GL-SW to 1, this setting can be also made in Settings/Registration> Function Settings> Common> Print Settings> Heavy Paper 5/6 Productivity Priority.
Use Case		When disabling/enabling productivity priority for heavy paper 5/6 according to the usage status
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Productivity priority is disabled, 1: Productivity priority is enabled
Default Value		0
Related Service Mode		COPIER> OPTION> DSPLY-SW> IMGC-ADJ
Additional Functions Mode		Function Settings> Common> Print Settings> Heavy Paper 5/6 Productivity Priority
FX-MODE2	**1**	**Set coat ppr productivity/gloss priority**
Detail		To set whether productivity or gloss is to be prioritized when printing on coated paper. When 1 is set, productivity for coated paper is improved, but deterioration of gloss occurs. When 2 is set, gloss is improved, but productivity is decreased. When setting PR/GL-SW to 1, this setting can be also made in Settings/Registration> Function Settings> Common> Print Settings> Coated Paper Productivity/Gloss Priority.
Use Case		When switching productivity/gloss priority for coated paper according to the usage status
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 2 0: Normal, 1: Productivity priority, 2: Gloss priority
Default Value		0
Related Service Mode		COPIER> OPTION> DSPLY-SW> IMGC-ADJ
Additional Functions Mode		Function Settings> Common> Print Settings> Coated Paper Productivity/Gloss Priority

COPIER > OPTION > IMG-FIX

FX-FAN3	2	Adj of Delivery Edge Cooling Fan ON temp
Detail		To set the threshold value of temperature to turn ON the Delivery Edge Cooling Fan. As the value is smaller, an image failure at mixed paper weight/mixed paper size can be alleviated, but waiting time tends to be longer. As the value is larger, waiting time becomes shorter, but an image failure is likely to occur.
Use Case		When an image failure (spots), uneven gloss, a separation failure, or a feeding failure occurs due to temperature rising of the Fixing Belt
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		As the value is small, waiting time tends to be longer. As the value is large, an image failure is likely to occur.
Display/Adj/Set Range		-2 to 2
Unit		deg C
Default Value		0
Amount of Change per Unit		2

FX-FAN4	2	Adj Delivery Edge Cooling Fan OFF temp
Detail		To set the threshold value of temperature to turn OFF the Delivery Edge Cooling Fan. As the value is smaller, an image failure at mixed paper weight/mixed paper size can be alleviated, but waiting time tends to be longer. As the value is larger, waiting time becomes shorter, but an image failure is likely to occur.
Use Case		When an image failure (spots), uneven gloss, a separation failure, or a feeding failure occurs due to temperature rising of the Fixing Belt
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		As the value is small, waiting time tends to be longer. As the value is large, an image failure is likely to occur.
Display/Adj/Set Range		-2 to 2
Unit		deg C
Default Value		0
Amount of Change per Unit		2

COPIER > OPTION > IMG-FIX

FX-SPD-4	2	Adj fix speed: no-coat, textured ppr 7/8
Detail		To adjust fixing speed when feeding non-coated paper (221 to 300 g/m2) and textured paper 7/8 (221 to 300 g/m2). Increase the value when discharge mark due to separating discharge/smeared image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied.
Use Case		When discharge mark due to separating discharge/smeared image due to fixing/image failure on the trailing edge occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		%
Default Value		0
Related Service Mode		COPIER> OPTION> IMG-FIX> FX-SPD-1 to 3, 5 to 8
Additional Functions Mode		Preferences> Paper Settings> Paper Type Management Settings> Details/Edit> Adjust Fixing Speed
Supplement/Memo		Discharge mark due to separating discharge: A phenomenon that horizontal lines appear on the next image due to potential difference on the Fixing Belt caused by discharge from the trailing edge of paper delivered from the Fixing Unit. It is likely to occur with Bk-color halftone image on plain paper after continuous feeding of highly-resistive papers in a low humidity environment. Smeared image due to fixing: A phenomenon that an image failure occurs near the center of a paper because not-yet-fixed area on the waved paper comes into contact with the Fixing Belt due to slow fixing speed. Image failure on the trailing edge: A phenomenon that an image failure occurs on the trailing edge because warped trailing edge comes into contact with the Fixing Belt or the Fixing IH Unit due to fast fixing speed.
Amount of Change per Unit		0.1

COPIER > OPTION > IMG-FIX

FX-SPD-5	2	Adj of fixing speed: coated paper 1/2/3
Detail		To adjust fixing speed when feeding coated paper 1/2/3 (106 to 180 g/m2). Increase the value when discharge mark due to separating discharge/smeared image due to fixing occurs. Decrease the value when an image failure occurs on the trailing edge. The value (-20 to 20) set in "Adjust Fixing Speed" in Settings/Registration menu is added to the setting value. If the total value exceeds the specified range (-20 to 20), either the minimum value (-20) or the maximum value (20) is applied.
Use Case		When discharge mark due to separating discharge/smeared image due to fixing/image failure on the trailing edge occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		%
Default Value		0

TMP-EM1	2	Adj of fixing temperature: textured 1
Detail		To adjust the fixing control temperature while textured paper 1 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
Use Case		When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-2 to 2
Default Value		0

TMP-EM2	2	Adj of fixing temperature: textured 2
Detail		To adjust the fixing control temperature while textured paper 2 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.
Use Case		When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-2 to 2
Default Value		0

COPIER > OPTION > IMG-FIX

TMP-EM3	**2**	**Adj of fixing temperature: textured 3**
Detail	To adjust the fixing control temperature while textured paper 3 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	
TMP-EM4	**2**	**Adj of fixing temperature: textured 4**
Detail	To adjust the fixing control temperature while textured paper 4 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	
TMP-EM5	**2**	**Adj of fixing temperature: textured 5**
Detail	To adjust the fixing control temperature while textured paper 5 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	
TMP-EM6	**2**	**Adj of fixing temperature: textured 6**
Detail	To adjust the fixing control temperature while textured paper 6 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-2 to 2	
Default Value	0	
TMP-EM7	**2**	**Adj of fixing temperature: textured 7**
Detail	To adjust the fixing control temperature while textured paper 7 is fed. As the value is increased, gloss and productivity are improved. As the value is decreased, uneven gloss and wrinkles are alleviated and performance of paper separation is improved.	
Use Case	When deterioration of gloss, fixing performance or feeding performance occurs due to fixing control temperature

Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

RDEV-SP4	2	RCON device special settings 4
Detail		To execute the device special setting.
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

RDEV-SP5	2	RCON device special settings 5
Detail		To execute the device special setting.
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

RDEV-SP6	2	RCON device special settings 6
Detail		To execute the device special setting.
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

RDEV-SP7	2	RCON device special settings 7
Detail		To execute the device special setting.
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

COPIER > OPTION > CUSTOM

RDEV-SP8	2	RCON device special settings 8
Detail		To execute the device special setting.
Use Case		For customization
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Use this mode only when specific instructions are given.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0

MEDIASP1	2	Customized media individual setting 1
Detail		To make special settings to customized media.
Use Case		Upon user's request (to make special settings to customized media)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0
Additional Functions Mode		Register Paper Type, etc

MEDIASP2	2	Customized media individual setting 2
Detail		To make special settings to customized media.
Use Case		Upon user's request (to make special settings to customized media)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		00000000 to 11111111
Default Value		0
Additional Functions Mode		Register Paper Type, etc

PAP-TYPE	2	[For customization]

COPY-LIM	1	Setting of upper limit for copy
Detail		To set the upper limit value for copy.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 9999
Default Value		9999

COPIER > OPTION > USER

SLEEP	**1**	**ON/OFF of auto sleep function**
Detail		To set ON/OFF of auto sleep function.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
Additional Functions Mode		Preferences> Timer/Energy Settings> Auto Sleep Time
Supplement/Memo		The time to shift to the sleep mode can be set in Settings/Registration> Preferences> Timer/Energy Settings> Auto Sleep Time.
SIZE-DET	**2**	**ON/OFF of original size detect function**
Detail		To set ON/OFF of original size detection function.
Use Case		Upon user's request (The LED is too bright, etc.)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
COUNTER1	**1**	**Display of software counter 1**
Detail		To display counter type for software counter 1 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		N/A (Display only)
Caution		Display only. No change is available.
Display/Adj/Set Range		0 to 999 0: No registration
Default Value		The value differs according to the location.
COUNTER2	**1**	**Setting of software counter 2**
Detail		To set counter type for software counter 2 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999
Default Value		The value differs according to the location.
COUNTER3	**1**	**Setting of software counter 3**
Detail		To set counter type for software counter 3 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999
Default Value		The value differs according to the location.

COPIER > OPTION > USER

COUNTER4	1	Setting of software counter 4
Detail		To set counter type for software counter 4 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999
Default Value		The value differs according to the location.

COUNTER5	1	Setting of software counter 5
Detail		To set counter type for software counter 5 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999
Default Value		0

COUNTER6	1	Setting of software counter 6
Detail		To set counter type for software counter 6 on the Counter Check screen.
Use Case		Upon user/dealer's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 999
Default Value		0

DATE-DSP	2	Setting of date/time display format
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set date/time display format according to the country or region. After the display format is set with this mode, the order of date is reflected to the followings: Preferences> Timer/Energy Settings> Date/Time Settings, and report output.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 2 0: YYMM/DD, 1: DD/MMYY, 2: MM/DD/YY
Default Value		The value differs according to the location.
Additional Functions Mode		Preferences> Timer/Energy Settings> Date/Time Settings

MB-CCV	2	Control card usage limit for Mail Box
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of control card for Mail Box.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Unlimited, 1: Limited
Default Value		0

COPIER > OPTION > USER

CONTROL	**1**	**Charge setting of PDL job**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set charge count transmission of PDL job to the connected charge management device (Coin Manager or non-Canon-made control card).
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: No charge, 1: Charge
Default Value		0
Related Service Mode		COPIER > OPTION > ACC > COIN
B4-L-CNT	**1**	**Count setting of B4 size**
Detail		To set B4 count with software counter 1 to 8 as to whether B4 is counted as large size or small size. Selecting 1 counts B4 or larger size paper as large size while paper smaller than B4 size as small size.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Small size, 1: Large size
Default Value		0
Related Service Mode		COPIER> OPTION> CUSTOM> SC-L-CNT
TRY-STP	**2**	**Set of suspension at full Finisher Tray**
Detail		To set whether to suspend or continue output when the full Finisher Tray is detected. When 1 is set, the detection of full stacking by the number of sets is ignored to continue output in the staple mode. When full stacking is detected by the height of the tray, the output is stopped.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		Fin-AM1 0 to 1 0: At detection of full tray, 1: Detection of height only Fin-T1 0 to 1 0: Detection of full stacking by the number of sets or detection of height, 1: Detection of height only
Default Value		0
MF-LG-ST	**2**	**ON/OFF of long original mode display**
Detail		To set whether to display the long original switch. When 1 is set, [Long Original] button is displayed in Copy> Options screen and the long length paper can be used.
Use Case		Upon user's request (to use long original or long length paper)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		It differs according to the location.
Additional Functions Mode		Copy> Options

COPIER > OPTION > USER

CNT-DISP	**2**	**ON/OFF of serial No. display**
Detail	To set whether to display the serial number on the Counter Check screen.	
Use Case	When not displaying the serial number on the Counter Check screen	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Display, 1: Hide	
Default Value	0	
COPY-JOB	**1**	**Setting of copy job reservation**
Detail	To set to enable/disable copy job reservation when the Card Reader/Coin Manager is used.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Enabled, 1: Disabled	
Default Value	0	
OP-SZ-DT	**2**	**ON/OFF of orgnl size detect:open Cpybrd**
Detail	To set ON/OFF of original size detection while the Copyboard is opened. When 0 is set, enter original size manually from the Control Panel. When 1 is set, original size is detected automatically.	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
JOB-INVL	**2**	**Job intvl setting at interruption copy**
Detail	To set output interval between jobs at the time of interruption copy. Sorting is difficult after interruption copy because of the continuous output of the next job. Paper interval becomes longer when starting pickup for the next job after the last sheet of the previous job is delivered.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 2 0: Continuous output of the interruption copy and the next job 1: Starting pickup for the next job after the interruption copy is delivered all. 2: Starting pickup for the next job after the previous job is delivered all. (For all jobs)	
Default Value	0	
TAB-ROT	**1**	**Set of landscape img rotn at PDL:tab ppr**
Detail	To set whether to rotate landscape image by 180 degrees when PDL print is made on tab paper. When 1 is set, image is rotated.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Not rotated, 1: Rotated	
Default Value	0	

COPIER > OPTION > USER

PR-PSESW	**1**	**ON/OFF of output stop button display**
Detail		To set whether to display [Stop] button on Status Monitor/Cancel screen.
Use Case		- Upon user's request - When promptly stopping the print job in operation or under reservation
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		1
IDPRN-SW	**1**	**Charge target job set of dept mngm cntr**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the job type that advances the department management counter.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: PRINT category: Inbox Print, Report Print, PDL Print COPY category: COPY 1: PRINT category: Report Print, PDL Print COPY category: COPY, Inbox Print
Default Value		0
CPRT-DSP	**1**	**[For customization]**
PCL-COPY	**2**	**Set of PCL COPIES command control method**
Detail		To set the binder control method of COPIES command with PCL. Select whether to use the control method of Canon-made PCL or use the same control method of non-Canon-made PCL.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 65535 0: Control method of Canon-made PCL (following the value of COPIES command that is specified for each page to control on a page basis) 1: Control method of non-Canon-made PCL (handling the value of COPIES command, which is specified for page 1 when collating, as bind figure while the value of COPIES command for the next page or later is invalid. Same control applies as Canon-made PCL when not collating) 2 to 65535: For future use
Default Value		0
CNT-SW	**1**	**Set default dspl items on charge counter**
Detail		To set default display items of the charge counter on the Counter Check screen.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this mode overseas (outside Japan).
Display/Adj/Set Range		0 to 1 0:Type1 , 1:Type2
Default Value		0
Related Service Mode		COPIER> OPTION> FNC-SW> CONFIG

TAB-ACC	**1**	**Set of auto cassette change: tab paper**
Detail	To set to enable/disable auto cassette change when tab paper runs out.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Be sure to instruct the user to thoroughly comply the following: - Use tab paper with the same number of tabs. - Set tab paper. Be sure to comply the above; otherwise, proper print is not available and it can cause soiling inside the machine because of toner.	
Display/Adj/Set Range	0 to 1 0: Auto cassette change disabled, 1: Auto cassette change enabled	
Default Value	0	
BCNT-AST	**1**	**Set of Inbox print charge target job**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the job type that advances the counter in Inbox print with the eM Controller (ASSIST).	
Use Case	When switching the job type that is subject to counting of the Inbox print with the eM Controller	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: PDL job, 1: Copy job	
Default Value	0	
PRJOB-CP	**2**	**Set count TX at RX/report print**
Detail	To set to enable/disable a page-basis count pulse transmission to the charge management device at the time of RX print or report print.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: No transmission, 1: Transmission	
Default Value	0	
DFLT-CPY	**1**	**Setting of color mode for copy**
Detail	To set the default color mode for copy operation. To reflect the change, it is necessary to initialize the default settings of copy function in one of the following two ways. - Settings/Registration> Function Settings> Copy> Change Default Settings> Initialize - Main Menu> Copy> Logo icon in upper right of the screen> Change Default Settings> Initialize	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Initialize the default settings of copy function.	
Caution	Be sure to initialize the default settings of copy function after change.	
Display/Adj/Set Range	0 to 2 0: Based on Auto/ACS/Printer Driver settings, 1: Color mode, 2: Black mode	
Default Value	0	
Additional Functions Mode	Function Settings> Copy> Change Default Settings> Initialize Function Settings> Copy> Select Color Settings for Copy> Use Auto (Color/Black & White)	

COPIER > OPTION > USER

DFLT-BOX	**1**	**Setting of color mode for Mail Box scan**
Detail		To set the default color mode for Mail Box scan operation. To reflect the change, it is necessary to initialize the default settings of scan and store function in the screen displayed by pressing [Scan] in the main menu with one of the following methods. - Settings/Registration> Function Settings> Store/Access Files> Common Settings> Scan and Store Settings/Access Stored Files Settings> Change Default Settings> Initialize - Logo icon in upper right of the screen> Change Default Settings> Initialize
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Initialize the default settings of scan and store function.
Caution		Be sure to initialize the default settings of scan and store function after change.
Display/Adj/Set Range		0 to 2 0: Based on Auto/ACS settings, 1: Color mode, 2: Black mode
Default Value		0
Additional Functions Mode		Main Menu> Scan and Store> Mail Box> (Box number)> Scan Function Settings> Store/Access Files> Common Settings> Scan and Store Settings/Access Stored Files Settings> Change Default Settings> Initialize
DOC-REM	**1**	**ON/OFF of original removal message**
Detail		To set whether to display the message to remove original when scanning with DADF without opening/closing DADF after scanning with the Copyboard.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0
DPT-ID-7	**2**	**Password entry set at dept ID reg/auth**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to enter a password at the time of registration/authentication of department ID. With 1 is set, entry of 7-digit password is required beside department ID.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Department ID only, 1: 7-digit (password) entry
Default Value		0
RUI-RJT	**2**	**Connct set at invalid auth from remoteUI**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to disconnect HTTP port when the machine receives invalid authentication from remote UI 3 times.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Continued connection, 1: Disconnected
Default Value		0

COPIER > OPTION > USER

FREG-SW	2	ON/OFF MEAP counter free reg area dspl
Detail		To set whether to display the free register area of MEAP counter for SEND.
Use Case		At problem analysis
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not use this at the normal service. - Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0

IFAX-SZL	2	Setting of IFAX send size limit
Detail		To set for restricting data size at the time of IFAX transmission that does not go through the server. When 0 is set, it is to be #830 error in the case of sending data that exceeds the upper limit value. In the case that the data goes through the server, the size of transmission data is always restricted regardless of the setting.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Limited, 1: Unlimited (Restriction applies when data goes through the server.)
Default Value		1

IFAX-PGD	2	Set page split TX at IFax Simple mode TX
Detail		To set whether to perform split-data transmission on a page basis in the case that the transmission size in I-Fax Simple mode exceeds the upper limit value.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		In the case to enable split-data transmission, be sure to receive approval from the user in advance by explaining the following: - No guarantee for page order on the reception side - There is a possibility of interruption of other received jobs between pages.
Display/Adj/Set Range		0 to 1 0: Disabled, 1: Enabled
Default Value		0

MEAPSAFE	2	Setting of MEAP safe mode
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set safe mode for MEAP platform. MPSF is displayed on the Control Panel in safe mode. In safe mode, MEAP application is stopped while just the system application, which starts with initial state, is activated. This mode enables obtaining log for cause analysis of MEAP failure.
Use Case		Perform system recovery processing when MEAP platform fails to be activated due to resource conflict between MEAP applications, service registration or use order.
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Normal mode, 1: Safe mode
Default Value		0

COPIER > OPTION > USER

TRAY-FLL	**2**	**Set of target tray for tray full notice**
Detail	To set the tray which is the target of an output tray full notification.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: All trays to which paper can be output, 1: All trays which are specified as the dedicated trays	
Default Value	0	
PRNT-POS	**2**	**ON/OFF of all pauses at error job cancel**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to pause the print operation of following jobs when a job is canceled due to an error inside the machine (#037, etc.) except service calls during PDL print.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	
AFN-PSWD	**2**	**Setting of Set/Reg menu access limit**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set restriction on accessing Settings/Registration menu by entering password. When 1 is set, password entry of system administrator is required after pressing Settings/ Registration key.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Password is not required, 1: Password is required	
Default Value	0	
PTJAM-RC	**2**	**Auto reprint setting at PDL print jam**
Detail	To set whether to automatically restart printing after clearing jam that occurs with PDL print.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Not automatically reprinted, 1: Automatically reprinted	
Default Value	1	
PDL-NCSW	**2**	**Card mngm setting for PDL print job**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to make PDL print job be subject to card management by the Card Reader. When 1 is set, PDL print is available only when the card ID of the card inserted to the Card Reader matches the department ID.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: PDL print is available with no card inserted. 1: PDL print is available only when the card ID matches the department ID in the case that the card is inserted.	
Default Value	0	

COPIER > OPTION > USER

SLP-SLCT	2	Usage setting of network applications
Detail	To set whether to use network-related applications. For this machine to recover from sleep mode 1 through network, a particular packet needs to be received; however, the existing network-related application does not send this packet. When 0 is set, network-related application is not used. Therefore, the machine cannot recover from sleep mode 1 through network when it enters sleep mode 1. When 1 is set, the machine does not shift to sleep mode 1 so that it can recover from the mode through network.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Do not use this at the normal service.	
Display/Adj/Set Range	0 to 1 0: Not used (Shift to sleep mode 1 is available.) 1: Used (Shift to sleep mode 1 is not available.)	
Default Value	0	

CNCT-RLZ	2	Setting of connection serialize function
Detail	Connection serialize is a function to assure job grouping function of imageWARE Output Manager Select Edition V1.0. When 1 is set, job rearrangement can be avoided because the machine does not receive job data from other connection until it completes job data reception from the current connection.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	

COUNTER7	1	Setting of software counter 7
Detail	To set counter type for software counter 7 on the Counter Check screen.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 999 0: No registration	
Default Value	0	

COUNTER8	1	Setting of software counter 8
Detail	To set counter type for software counter 8 on the Counter Check screen.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 999 0: No registration	
Default Value	0	

2C-CT-SW	2	Set of color counter at 2-color mode
Detail	To set whether to use the single color counter or full color counter for count-up in 2-color mode.	
Use Case	When supporting 2-color mode	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Single color counter, 1: Full color counter	
Default Value	JP:0, USA:1, EUR:1, AU:1, CN:1, KR:1, TW:1, ASIA:1	

COPIER > OPTION > USER

LDAP-SW	**1**	**Set of search condition for LDAP server**
Detail	To set the condition to search e-mail address, etc. from LDAP server.	
Use Case	When specifying condition to search e-mail address, etc. from LDAP server	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 5 0: Includes the next, 1: Not include the next, 2: Equivalent to the next, 3: Not equivalent to the next, 4: Starts with the next, 5: Finishes with the next	
Default Value	4	
FROM-OF	**1**	**Deletion of e-mail sender's address**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to delete the sender's address (From) at the time of e-mail transmission.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Retained, 1: Deleted	
Default Value	0	
DOM-ADD	**2**	**Additional entry of e-mail destn domain**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to automatically add the domain specified in Settings/Registration menu to the sending address (To) entered at the time of e-mail transmission. If specifying "xxx.com" as a domain in Settings/Registration menu in advance, just entering "aaa" enables to display "aaa@xxx.com" when sending e-mail.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Not added, 1: Added	
Default Value	0	
FILE-OF	**1**	**File send prohibition to entered address**
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to prohibit the file transmission to entered address. When 1 is set, file transmission is not available by entering the address because "File" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.	
Display/Adj/Set Range	0 to 1 0: Allowed, 1: Prohibited	
Default Value	0	

COPIER > OPTION > USER

MAIL-OF	1	E-mail TX prohibition to entered address
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to prohibit the e-mail transmission to entered address. When 1 is set, e-mail transmission is not available by entering the address because "E-mail" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
Display/Adj/Set Range		0 to 1 0: Allowed, 1: Prohibited
Default Value		0

IFAX-OF	1	IFAX send prohibition to entered address
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to prohibit the I-Fax transmission to entered address. When 1 is set, I-Fax transmission is not available by entering the address because "I-Fax" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
Display/Adj/Set Range		0 to 1 0: Allowed, 1: Prohibited
Default Value		0

LDAP-DEF	1	Set LDAP server search initial condition
Detail		To set initial condition for search target attribute that is specified at the time of LDAP server details search.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 6 0: Name, 1: E-mail, 2: FAX, 3: Organization, 4: Organization unit, 5: No registration 1 (any setting), 6: No registration 2 (any setting)
Default Value		0

FINGM-SW	2	ON/OFF fingerprint removal button dspl
Detail		To set whether to display the fingerprint removal button with which printing is performed after the fixing operation is once executed as a measure to prevent fingerprint at the time of paper pickup from the Multi-purpose Tray. By pressing the button, the number of fixing operation is increased so printing performance is decreased significantly.
Use Case		When fingerprint appears due to paper pickup from the Multi-purpose Tray
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0

COPIER > OPTION > USER

DK3-ASST	**1**	**Set of Multi Deck (Middle) Air Heater**
Detail	To set the condition to turn ON the Air Heater at the Multi Deck (Middle) in accordance with media/ environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. When 2 is set, the heater is always ON regardless of media and environment.	
Use Case	Upon user's request (to shorten the wait time)	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.	
Display/Adj/Set Range	0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)	
Default Value	0	
FREE-DSP	**2**	**ON/OFF of charge disable screen**
Detail	To set whether to display "Use Charge Management" screen for switching between charge and no charge in Settings/Registration menu. The hardware switch for switching charge/no charge in the Coin Manager enables the mode in which all the services are available for free (store manager mode) by temporarily releasing the charging system. When 1 is set, the mode can be switched with the software switch even without the hardware switch.	
Use Case	When enabling all the services to be provided for free by temporarily releasing the charging system	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	0	
TNRB-SW	**2**	**ON/OFF of Toner Container counter dspl**
Detail	To set whether to display the Toner Container counter on the Counter Check screen.	
Use Case	When preferring not to show the screen to users	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 3 0: Hide, 1: Display (Toner Container counter only), 2: Display (Toner Container counter + ejection counter), 3: Display (Toner Container counter + unidentified counter)	
Default Value	It differs according to the location.	

COPIER > OPTION > USER

FX-CLNLV	**2**	**Setting of Fixing Belt refresh level**
Detail	If long-width paper is printed after printing a large quantity of short-width paper, light glossy lines may occur with the same width as short-width paper in the feed direction. (Example: When printing A3 paper after printing A4R paper) Auto refresh control of the Fixing Belt is performed to prevent glossy lines, but use this mode when the symptom still occurs. As the value is increased, the effect of refresh control is improved, but the life of the Fixing Belt is shortened. Also, there is a possibility that the Fixing Belt may get damage. When setting IMGC-ADJ to 1, this setting can be also made in Settings/Registration> Adjustment/ Maintenance> Fixing Belt Auto Refresh Level.	
Use Case	When glossy lines occur in feed direction	
Adj/Set/Operate Method	1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	-5 to 5	
Default Value	0	
Related Service Mode	COPIER> OPTION> DSPLY-SW> IMGC-ADJ	
Additional Functions Mode	Adjustment/Maintenance> Fixing Belt Auto Refresh Level	
HDCR-DSW	**1**	**Dspl/hide of HDD complete delete ON/OFF**
Detail	To set whether to display "Hard Disk Data Complete Deletion" in Settings/Registration menu. When 1 is set, ON/OFF of HDD data complete deletion function is available on HDD Data Complete Deletion screen. When 0 is set, it is not displayed on the screen so the user cannot use it.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	1	
Additional Functions Mode	Management Settings> Data Management> HDD Data Complete Deletion> Hard Disk Data Complete Deletion	
DK1-ASST	**1**	**Setting of POD Deck Lite Air Heater**
Detail	To set the condition to turn ON the Air Heater at the POD Deck Lite in accordance with media/ environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. When 2 is set, the heater is always ON regardless of media and environment.	
Use Case	Upon user's request (to shorten the waiting time)	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.	
Display/Adj/Set Range	0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)	
Default Value	0	

COPIER > OPTION > USER

DK4-ASST	1	Set of Multi Deck (Lower) Air Heater
Detail		To set the condition to turn ON the Air Heater at the Multi Deck (Lower) in accordance with media/ environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. By selecting 2, the heater is always ON regardless of media and environment.
Use Case		Upon user's request (to shorten the waiting time)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.
Display/Adj/Set Range		0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)
Default Value		0

DK2-ASST	1	Set of Multi Deck (Upper) Air Heater
Detail		To set the condition to turn ON the Air Heater at the Multi Deck (Upper) in accordance with media/ environment. When the media is switched from non-coated paper to coated paper, pickup operation does not start until the temperature of the Air Heater reaches the specified temperature; thus, waiting time occurs. When 1 is set, the Air Heater is turned ON for coated paper only. When the use environment is near the threshold for turning ON/OFF the Air Heater, switching occurs frequently, which increases the wait time. By selecting 2, the heater is always ON regardless of media and environment.
Use Case		Upon user's request (to shorten the waiting time)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure to get approval from the user in advance by explaining that there is a possibility that transfer performance may decrease in a low humidity environment when 2 is set.
Display/Adj/Set Range		0 to 2 0: ON/OFF depending on the media/environment condition 1: ON for coated paper only 2: Always ON (No environment/media-dependant)
Default Value		0

DK1-BSTP	1	Set POD Lite Warming/Cooling Fan OFF tmg
Detail		During continuous pickup, the Warming/Cooling Fans blow air to paper even though there is no request for image formation at the specified timing so that paper can be picked up at once. However, if the air blowing time is long, uneven transfer may occur because of change in moisture content of the area where air is blown. Set the elapsed time of seconds since the time of request for image formation to turn OFF the Warming/Cooling Fans during continuous pickup from the POD Deck Lite. When the value is decreased, uneven transfer is alleviated, but the Warming/Cooling Fans may stop in case of the data which takes long time for RIP (conversion to bitmap data). In addition, the time between the stop of pickup preparation operation and the state which re-pickup is enabled takes approx. 15 seconds, so productivity decreases.
Use Case		When uneven transfer occurs due to change in moisture content
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 60
Unit		sec
Appropriate Target Value		20
Default Value		20
Related Service Mode		COPIER> OPTION> USER> DK2-BSTP - DK4-BSTP

USBI-DSP	**2**	**ON/OFF of USB input device driver set**
Detail		To set whether to display "Preferences> External Interface> USB Settings> Use MEAP Driver for USB Input Device". When 0 is set, the item is not displayed, and the user administrator cannot change the setting of the MEAP driver for the USB input device.
Use Case		When prohibiting the user administrator to change the setting of "Use MEAP Driver for USB Input Device"
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		1

COPIER > OPTION > USER

CTCHKDSP	**1**	**ON/OFF of [Print List] display**
Detail	To set whether to display [Print List] on the Counter Check screen. When 1 is set, model name, serial number information, counter check date and counter information can be output as Total Page Count List.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	1	
PBMAX-N3	**1**	**Set P-bind sign (thin ppr 2) max No.**
Detail	To set the maximum number of signature sheets (thin paper 2) for the Perfect Binder.	
Use Case	When increasing the maximum number of original sheets at perfect binding	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	Be sure to get approval from the user by telling that the operation cannot be guaranteed if setting more than the specified number of sheets. In addition, be sure to check that the thickness of the maximum number of signature sheets is 25 mm or less in advance.	
Display/Adj/Set Range	150 to 300	
Unit	sheet	
Default Value	200	
Related Service Mode	COPIER> OPTION> USER> PBMAX-N1/N2/T1/T2/T3	
Amount of Change per Unit	1	
USBB-DSP	**2**	**For R&D**
Default Value	0	
USBR-DSP	**2**	**ON/OFF of USB infrared device driver**
Detail	To set whether to display "Preferences> External Interface> USB Settings> Use MEAP Driver for USB Infrared Device".	
Use Case	When prohibiting the user administrator to change the setting of "Use MEAP Driver for USB Infrared Device"	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	0	
POL-SCAN	**1**	**ON/OFF of Rights Management Server set**
Detail	When 1 is set, the Rights Management Server function screen is displayed. Although the Rights Management Server function is a standard feature, set 0 if not necessary.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Hide, 1: Display	
Default Value	JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0

EXP-CRYP	**1**	**Confdntial encrypt ON/OFF:add book exprt**
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to encrypt the confidential part (password part) in the Address Book when exporting the address book and device settings via RUI. When 0 is set, the confidential part in the address book is exported without encryption.
Use Case		When there is a need to export password without encryption because of operation and tool
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Be sure not to allow the user to execute export without encryption because of security concern.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		1
SLEEP1SW	**1**	**Power supply when shifting to SLEEP1**
Detail		When shifting to SLEEP1 mode, the power stops to be supplied, so it takes time to activate after a job is received. When 1 is set, the power keeps to be supplied even after shifting to SLEEP1 mode, so the activation of job processing becomes earlier.
Use Case		Upon user's request (when job processing after shifting to SLEEP1 is slow)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
CNCL-ATH	**1**	**ON/OFF of auth at secure job stop**
Detail		To set whether to conduct authentication when stopping a secured job on the secured print screen. When 0 is set, pressing [Stop] button deletes the secure job immediately. By setting 1 when user authentication is not conducted, the authentication screen is displayed and only the jobs which authentication was succeeded are deleted, so security for the secure job is enhanced.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
SMD-EXPT	**1**	**Set export target data dspl: remote UI**
Detail		To set whether to allow export of service mode data from remote UI. When 1 is set, "service mode data" is displayed on remote UI as exportable data.
Use Case		When installing more than 1 machine at the same time (When registering the same service mode data to more than 1 machine)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0
Supplement/Memo		By selecting "service mode data" as the target data of export on remote UI after setting SMD-EXPT to 1, service mode data can be exported from remote UI.

COPIER > OPTION > USER

SNDSTREN	**1**	**Set of setting delete aftr scan and send**
Detail	To set whether to delete the transmission setting/address after transmission on the "Scan and Send" screen.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 2 0: Delete, 1: Retain only the transmission setting, 2: Retain the transmission setting and address	
Default Value	JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0	
FAXSTREN	**1**	**Set of setting delete aftr fax transmit**
Detail	To set whether to delete the transmission settings except for the address after transmission from the "Fax" screen.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: Delete, 1: Retain	
Default Value	JP:1, USA:0, EUR:0, AU:0, CN:0, KR:0, TW:0, ASIA:0	
SJ-UNMSK	**2**	**ON/OFF secured job masking cancellation**
Detail	To set whether to mask other people's secured jobs. When 0 is set, operation is not possible because other people's secured jobs are masked. When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Masking is canceled and other people's secured jobs can be operated. It is enabled at MEAP authentication.	
Use Case	When operating secured jobs in charge mode Type-C	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF (Masking enabled), 1: ON (Masking canceled)	
Default Value	0	
Related Service Mode	COPIER> OPTION> ACC> COIN	
SJ-CLMSK	**2**	**ON/OFF secured job stop button display**
Detail	To set whether to display the button to stop a secured job. When 0 is set, the stop button is displayed. When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Since the stop button is not displayed, the secured job cannot be stopped.	
Use Case	When prohibiting to stop the secured job in charge mode Type-C	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 1 0: OFF (Display), 1: ON (Hide)	
Related Service Mode	COPIER> OPTION> ACC> COIN	

COPIER > OPTION > USER

M-RNG-EX	2	ON/OFF of out of spec paper type add
Detail	To set whether to use paper types not defined in the specifications. When 0 is set, only the paper types defined in the specifications can be used. When 1 is set, coated paper/textured paper can be picked up from the cassette of the host machine and coated paper which weight is less than 100 g/m2 can be picked up from all paper sources. Select a paper type in the Control Panel menu.	
Use Case	Upon user's request (to use paper types not defined in the specifications)	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	- Be sure to get approval from the user in advance by telling that pickup operation cannot be performed depending on paper type. - Be sure to check that jam does not occur with the specified paper type after the setting has been made.	
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON	
Default Value	0	

FX-RF-SW	2	Set Fixing Belt auto refresh ctrl condtn
Detail	To set whether to make the accumulated refresh counter value as a condition to execute the auto refresh control of the Fixing Belt when the refresh level of the control is 5. Glossy lines may appear when switching from short-width paper to long-width paper. The auto refresh control is executed in order to prevent glossy lines from appearing, and the refresh level is set with FX-CLNLV. When this item is set to 1 while the setting value of FX-CLNLV is 5 (maximum), the control is executed at initial rotation regardless of the accumulated refresh counter value. Glossy lines can be alleviated, but productivity is decreased because FCOT becomes longer. In addition, the life of the Refresh Roller may advance. When the setting value of FX-CLNLV is -5 to 4, the control is not executed at initial rotation even if this item is set to 1.	
Use Case	When glossy lines appear on the paper edge at mixed paper size	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Caution	When 1 is set, productivity may be decreased or the life of the Refresh Roller may advance.	
Display/Adj/Set Range	0 to 1 0: Execute when the accumulated refresh counter value becomes the specified value or higher, 1: Execute regardless of the accumulated refresh counter value	
Default Value	0	
Related Service Mode	COPIER> OPTION> USER> FX-CLNLV	
Additional Functions Mode	Adjustment/Maintenance> Fixing Belt Auto Refresh Level

COPIER > OPTION > ACC

CARD-SW	**1**	**Screen set when Coin Manager connected**
Detail		To set coin or card that the user is prompted to insert on the Control Panel when the Coin Manager is connected.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3 0: Coin, 1: Card, 2: Coin and card, 3: Card (for customization)
Default Value		0
STPL-LMT	**2**	**Set number of sheets for saddle stitch**
Detail		To set the number of sheets for saddle stitch
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 3 0: 5 sheets without blank band (6 sheets when a cover is included) 1: 10 sheets without blank band (11 sheets when a cover is included) 2: 10 sheets with blank band (11 sheets when a cover is included) 3: 15 sheets with blank band (16 sheets when a cover is included)
Default Value		3
SC-TYPE	**2**	**[Not used]**
Default Value		0
CC-SPSW	**2**	**Support setting of control card I/F**
Detail		To set support level of control card (CCIV/CCV) interface. To keep processing performance of the printer engine, set 1. To correctly stop the output by the upper limit number of sheets, set 2.
Use Case		Upon user's request (when connecting to the external counter management system using the control card interface)
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		With priority on speed, output cannot be correctly stopped by the upper limit number of sheets. With priority on the upper limit number of sheets, processing performance of the printer engine is decreased depending on pickup location.
Display/Adj/Set Range		0 to 2 0: No support, 1: Priority on speed, 2: Priority on upper limit number of sheets
Default Value		0
UNIT-PRC	**2**	**Setting of Coin Manager currency unit**
Detail		To set currency unit to be handled with Coin Manager.
Use Case		At installation of Coin Manager
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 6 0: Japanese yen, 1: Euro, 2: Pound, 3: Swiss Franc, 4: Dollar, 5: No currency unit (no fractional unit), 6: No currency unit (with fractional unit)
Default Value		0

SRL-SPSW	1	Setting of Serial I/F Kit support
Detail		To set the support level of the Serial Interface Kit. To keep processing performance of the printer engine, set 1. To correctly stop the output by the upper limit number of sheets, set 2.
Use Case		At installation of Serial Interface Kit
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		With priority on speed, output cannot be correctly stopped by the upper limit number of sheets. With priority on the upper limit number of sheets, processing performance of the printer engine is decreased depending on pickup location.
Display/Adj/Set Range		0 to 2 0: No support, 1: Priority on speed, 2: Priority on upper limit number of sheets
Default Value		0

PDL-THR	2	Norm PDL print set: External charge mode
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the normal PDL print processing when setting external charge mode 6/7 with COIN. When 0 is set, a job is canceled. When 1 is set, a job is executed.
Use Case		When external charge mode has been set
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Cancel, 1: Execute
Default Value		0

CR-TYPE	1	Setting of Card Reader
Detail		To set the model of the Card Reader. Set 1 when connecting the Card Reader-C1. It operates even 0 is set, but recognition rate decreases.
Use Case		When connecting the Card Reader-C1
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Card Reader-F1, 1: Card Reader-C1
Default Value		0

■ INT-FACE

COPIER > OPTION > INT-FACE

IMG-CONT	1	Connection setting of print server
Detail		To set connection with print server.
Use Case		At installation
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 5 0: Print server not yet connected (normal), 1, 2: Not used, 3: Print server (color machine) connected, 4: Print server (B&W machine) connected, 5: Not used
Default Value		0

COPIER > OPTION > INT-FACE

NWCT-TM	2	Timeout setting of network connection
Detail		*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the time to keep network connection between this machine and the PC application (keep-alive setting). As the value is incremented by 1, the time is increased by 1 minute.
Use Case		When PC application is connected
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		1 to 5
Unit		min
Default Value		5
Amount of Change per Unit		1

CNT-TYPE	1	Display of print server ID
Detail		To display the ID of the print server being recognized by the machine.
Use Case		At installation of print server
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		1 to 999 1: Not yet connected, 400 to 499: EFI print server, 600 to 699: Creo print server, 700 to 799: Oce print server
Default Value		1

VTRNS-TO	2	Set image forwarding timeout time
Detail		To set image forwarding timeout time of the Open I/F PCB when the EFI Controller is connected. Use this mode only when instructed by Quality Support Division at the time of problem occurrence due to timeout. As the value is changed by 1, timeout time changes by 1 second.
Use Case		When an instruction is given from the Quality Support Division at timeout occurrence
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Do not use this at the normal service. Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		5 to 180
Unit		sec
Appropriate Target Value		15
Default Value		15
Amount of Change per Unit		1

COPIER > OPTION > INT-FACE

ERRHNDL	2	Set PS Cont-related error recover proc
Detail		To set the recovery process of the host machine and the PS Controller when a PS Controller-related error occurs. When 0 is set, print server error (E677-0080) is displayed on the Control Panel of the host machine. When 1 is set, the host machine automatically executes recovery process. Print server error is not displayed and received jobs are canceled. The PS Controller is automatically rebooted. This setting is enabled only when the PS Controller is connected.
Use Case		Upon user's request (automatic recovery at occurrence of E677-0080)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When setting 1, be sure to perform the following: - Check that the PS Controller is imagePRESS Server (supports reboot processing). - Change the setting of VTRNS-TO at the same time. - Be sure to get approval from the user in advance by telling that jobs received by the host machine are canceled when a PS Controller-related error occurs so missing of jobs or pages may occur.
Display/Adj/Set Range		0 to 9 0: Display the error only 1: Cancel the received jobs and the PS Controller is rebooted 2 to 9: Not used
Default Value		0
Supplement/Memo		Even if 1 is set, E677-0080 is displayed if automatic recovery fails.
Amount of Change per Unit		1

Adj/Set/Operate Method	1) Select ST-PCL. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PCL.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	0	

COPIER > OPTION > LCNS-TR

TR-PCL	**2**	**Transfer license key dspl: PCL function**
Detail	To display transfer license key to use PCL function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-PCL. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PCL.	
Display/Adj/Set Range	24 digits	
ST-PSLI5	**2**	**Installation state display of PS/UFR II**
Detail	To display installation state of PS/UFR II function when disabling the function with license transfer.	
Use Case	When checking whether PS/UFR II is installed	
Adj/Set/Operate Method	1) Select ST-PSLI5. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PSLI5.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-PSLI5	**2**	**Transfer license key dspl of PS/UFR II**
Detail	To display transfer license key to use PS/UFR II function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-PSLI5. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSLI5.	
Display/Adj/Set Range	24 digits	
ST-LIPS5	**2**	**Installation state display of UFR II**
Detail	To display installation state of UFR II function when disabling the function with license transfer.	
Use Case	When checking whether UFR II function is installed	
Adj/Set/Operate Method	1) Select ST-LIPS5. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-LIPS5.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-LIPS5	**2**	**Transfer lcns key dspl: UFR II function**
Detail	To display transfer license key to use UFR II function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-LIPS5. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-LIPS5.	
Display/Adj/Set Range	24 digits	

COPIER > OPTION > LCNS-TR

ST-LIPS4	**2**	**Install state display of LIPS4 func: JP**
Detail		To display installation state of LIPS4 function (JP only) when disabling the function with license transfer.
Use Case		When checking whether LIPS4 function (JP only) is installed
Adj/Set/Operate Method		1) Select ST-LIPS4. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-LIPS4.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-LIPS4	**2**	**Trns license key dspl of LIPS4 func: JP**
Detail		To display transfer license key to use LIPS4 function (JP only) when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-LIPS4. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-LIPS4.
Display/Adj/Set Range		24 digits
ST-PSPCL	**2**	**Install state dspl of PS/PCL function**
Detail		To display installation state of PS/PCL function when disabling the function with license transfer.
Use Case		When checking whether PS/PCL function is installed
Adj/Set/Operate Method		1) Select ST-PSPCL. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PSPCL.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-PSPCL	**2**	**Transfer license key dspl of PS/PCL func**
Detail		To display transfer license key to use PS/PCL function when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PSPCL. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSPCL.
Display/Adj/Set Range		24 digits
ST-PCLUF	**2**	**Install state dspl: PCL/UFR II function**
Detail		To display installation state of PCL/UFR II function when disabling the function with license transfer.
Use Case		When checking whether PCL/UFR II function is installed
Adj/Set/Operate Method		1) Select ST-PCLUF. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PCLUF.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment

COPIER > OPTION > LCNS-TR

TR-PCLUF	**2**	**Trns license key dspl of PCL/UFR II func**
Detail		To display transfer license key to use PCL/UFR II function when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PCLUF. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PCLUF.
Display/Adj/Set Range		24 digits
ST-PSLIP	**2**	**Installation state dspl of PS function**
Detail		To display installation state of PS function when disabling the function with license transfer.
Use Case		When checking whether PS function is installed
Adj/Set/Operate Method		1) Select ST-PSLIP. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PSLIP.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-PSLIP	**2**	**Transfer license key dspl of PS function**
Detail		To display transfer license key to use PS function when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PSLIP. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSLIP.
Display/Adj/Set Range		24 digits
ST-PSPCU	**2**	**Install state dspl of PS/PCL/UFR II func**
Detail		To display installation state of PS/PCL/UFR II function when disabling the function with license transfer.
Use Case		When checking whether PS/PCL/UFR II function is installed
Adj/Set/Operate Method		1) Select ST-PSPCU. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PSPCU.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-PSPCU	**2**	**Trns lcns key dspl of PS/PCL/UFR II func**
Detail		To display transfer license key to use PS/PCL/UFR II function when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PSPCU. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSPCU.
Display/Adj/Set Range		24 digits

COPIER > OPTION > LCNS-TR

ST-LXUFR	**2**	**Install state display of UFR II function**
Detail	To display installation state of UFR II function when disabling the function with license transfer.	
Use Case	When checking whether UFR II function is installed	
Adj/Set/Operate Method	1) Select ST-LXUFR. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-LXUFR.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-LXUFR	**2**	**Trns license key dspl of UFR II function**
Detail	To display transfer license key to use UFR II function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-LXUFR. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-LXUFR.	
Display/Adj/Set Range	24 digits	
ST-HDCR2	**2**	**Install state dspl:HDD Init All Data/Set**
Detail	To display installation state of HDD Initialize All Data/Settings when disabling the function with license transfer.	
Use Case	When checking whether HDD Initialize All Data/Settings is installed	
Adj/Set/Operate Method	1) Select ST-HDCR2. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-HDCR2.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-HDCR2	**2**	**Trns lcns key dspl:HDD Init All Data/Set**
Detail	To display transfer license key to use HDD Initialize All Data/Settings when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-HDCR2. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-HDCR2.	
Display/Adj/Set Range	24 digits	
ST-AFAX	**2**	**Installation state display of remote fax**
Detail	To display installation state of remote fax client function when disabling the function with license transfer.	
Use Case	When checking whether remote fax client function is installed	
Adj/Set/Operate Method	1) Select ST-AFAX. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-AFAX.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	

COPIER > OPTION > LCNS-TR

TR-AFAX	**2**	**Transfer license key dspl of remote fax**
Detail	To display transfer license key to use remote fax client function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-AFAX. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-AFAX.	
Display/Adj/Set Range	24 digits	
ST-REPDF	**2**	**Install state dspl:reader extensions PDF**
Detail	To display installation state of reader extensions PDF function when disabling the function with license transfer.	
Use Case	When checking whether reader extensions PDF function is installed	
Adj/Set/Operate Method	1) Select ST-REPDF. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-REPDF.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-REPDF	**2**	**Trns lcns key dspl:reader extensions PDF**
Detail	To display transfer license key to use reader extensions PDF function when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-REPDF. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-REPDF.	
Display/Adj/Set Range	24 digits	
ST-OOXML	**2**	**Install state display of Office Open XML**
Detail	To display installation state of Office Open XML transmission function when disabling the function with license transfer.	
Use Case	When checking whether Office Open XML transmission function is installed	
Adj/Set/Operate Method	1) Select ST-OOXML. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-OOXML.	
Display/Adj/Set Range	When operation finished normally: OK!	
Default Value	According to the setting at shipment	
TR-OOXML	**2**	**Trns lcns key display of Office Open XML**
Detail	To display transfer license key to use Office Open XML when the function is disabled with license transfer.	
Use Case	- When replacing the HDD - When replacing the device	
Adj/Set/Operate Method	1) Select ST-OOXML. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-OOXML.	
Display/Adj/Set Range	24 digits	

COPIER > OPTION > LCNS-TR

ST-2600	**2**	**Instal state dspl: IEEE2600.1 scrty func**
Detail		To display installation state of security function of IEEE2600.1 when disabling the function with license transfer.
Use Case		When checking whether security function of IEEE2600.1 is installed
Adj/Set/Operate Method		1) Select ST-2600. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-2600.
Display/Adj/Set Range		When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-2600	**2**	**Trn lcns key dspl: IEEE2600.1 scrty func**
Detail		To display transfer license key to use security function of IEEE2600.1 when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-2600. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-2600.
Display/Adj/Set Range		24 digits
ST-OPFNT	**2**	**Install state display of PCL Font Set**
Detail		To display installation state of PCL Font Set when disabling the function with license transfer.
Use Case		When checking whether PCL Font Set is installed
Adj/Set/Operate Method		1) Select ST-OPFNT. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-OPFNT.
Display/Adj/Set Range		0: Not installed, 1: Installed When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-OPFNT	**2**	**Trns license key display of PCL Font Set**
Detail		To display transfer license key to use PCL Font Set with another MFP.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-OPFNT. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-OPFNT.
Display/Adj/Set Range		24 digits
ST-NCAPT	**2**	**Install state display of NetCap func**
Detail		To display installation state of network packet capture function when disabling the function with license transfer.
Use Case		When checking whether network packet capture function is installed
Adj/Set/Operate Method		1) Select ST-NCAPT. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-NCAPT.
Display/Adj/Set Range		0: Not installed, 1: Installed When operation finished normally: OK!
Default Value		According to the setting at shipment

COPIER > OPTION > LCNS-TR

TR-NCAPT	**2**	**Transfer license key dspl of NetCap func**
Detail		To display transfer license key to use network packet capture function when the function is disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-NCAPT. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-NCAPT.
Display/Adj/Set Range		24 digits
ST-LIPSD	**2**	**Inst state display of combined license**
Detail		To display installation state of the combined license for BDL-LIPS-PS-PDFD.
Use Case		When checking whether the combined license for BDL-LIPS-PS-PDFD is installed
Adj/Set/Operate Method		1) Select ST-LIPSD. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-LIPSD.
Display/Adj/Set Range		0: Not installed, 1: Installed When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-LIPSD	**2**	**Trns lcns key dspl of combined license**
Detail		To display the transfer license key to use the combined license for BDL-LIPS-PS-PDFD when the functions are disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-LIPSD. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-LIPSD.
Display/Adj/Set Range		24 digits
ST-PCPSD	**2**	**Inst state display of combined license**
Detail		To display installation state of the combined license for BDL-PCL-PS-PDFD.
Use Case		When checking whether the combined license for BDL-PCL-PS-PDFD is installed
Adj/Set/Operate Method		1) Select ST-PCPSD. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PCPSD.
Display/Adj/Set Range		0: Not installed, 1: Installed When operation finished normally: OK!
Default Value		According to the setting at shipment
TR-PCPSD	**2**	**Trns lcns key dspl of combined license**
Detail		To display the transfer license key to use the combined license for BDL-PCL-PS-PDFD when the functions are disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PCPSD. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PCPSD.
Display/Adj/Set Range		24 digits

COPIER > OPTION > LCNS-TR

ST-PSPDF	2	Inst state dspl: PS-PDF combined license
Detail		To display installation state of the combined license for PS-PDF.
Use Case		When checking whether the combined license for PS-PDF is installed
Adj/Set/Operate Method		1) Select ST-PSPDF. 2) Enter 0, and then press OK key. When installation has been completed, the transfer license key is displayed under TR-PSPDF.
Display/Adj/Set Range		0: Not installed, 1: Installed When operation finished normally: OK!
Default Value		According to the setting at shipment

TR-PSPDF	2	Trns lcns key dspl: PS-PDF combined lcns
Detail		To display the transfer license key to use the combined license for PS-PDF when the functions are disabled with license transfer.
Use Case		- When replacing the HDD - When replacing the device
Adj/Set/Operate Method		1) Select ST-PSPDF. 2) Enter 0, and then press OK key. The transfer license key is displayed under TR-PSPDF.
Display/Adj/Set Range		24 digits

■ SERIAL

COPIER > OPTION > SERIAL

READER	1	Entry of serial number: Reader Unit
Detail		To enter the serial number of the Reader Unit using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Main Controller PCB 2.
Use Case		- At installation - When replacing the Main Controller PCB 2
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000

ADF	1	Entry of serial number: DADF
Detail		To enter the serial number of the DADF using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Main Controller PCB 2.
Use Case		- At installation - When replacing the Main Controller PCB 2
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000

DECK	1	Entry of the Serial Number:POD Deck Lite
Detail		To enter the serial number of the POD Deck Lite using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Deck Controller PCB.
Use Case		- At installation - When replacing the Deck Controller PCB
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000

COPIER > OPTION > SERIAL

PDECK1	**1**	**Entry of the Serial Number:M-Paper Deck**
Detail		To enter the serial number of the Multi-drawer Paper Deck using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Deck Driver PCB.
Use Case		- At installation - When replacing the Deck Driver PCB
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000
INS	**1**	**Entry of serial number: Inserter**
Detail		To enter the serial number of the Inserter using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Inserter Controller PCB.
Use Case		- At installation - When replacing the Inserter Controller PCB
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000
PUNCH	**1**	**Entry of serial No.:Professional Puncher**
Detail		To enter the serial number of the Professional Puncher using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Controller PCB.
Use Case		- At installation - When replacing the Controller PCB
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000
STACK1	**1**	**Entry of serial number: Stacker**
Detail		To enter the serial number of the Stacker using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Master Controller PCB.
Use Case		- At installation - When replacing the Master Controller PCB
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		9 characters
Default Value		00000000
PBINDER	**1**	**Entry of serial number: Perfect Binder**
Detail		To enter the serial number of the Perfect Binder using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Main Controller PCB 2.
Use Case		- At installation - When replacing the Main Controller PCB 2
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		8 characters
Default Value		00000000

COPIER > OPTION > SERIAL

FOLD	**1**	**Entry of serial No.: Paper Folding Unit**
Detail	To enter the serial number of the Paper Folding Unit using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Folder Controller PCB.	
Use Case	- At installation - When replacing the Folder Controller PCB	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	8 characters	
Default Value	00000000	
TRIM1	**1**	**Entry of serial number: Booklet Trimmer**
Detail	To enter the serial number of the Booklet Trimmer using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Trimmer Controller PCB.	
Use Case	- At installation - When replacing the Trimmer Controller PCB	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	8 characters	
Default Value	00000000	
TRIM2	**1**	**Entry of SN: Two-Knife Booklet Trimmer**
Detail	To enter the serial number of the Two-Knife Booklet Trimmer using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Two-Knife Booklet Trimmer Controller PCB.	
Use Case	- At installation - When replacing the Two-Knife Booklet Trimmer Controller PCB	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	8 characters	
Default Value	00000000	
FIN	**1**	**Entry of serial number: finisher**
Detail	To enter the serial number of the finisher using software keyboard so that the manufacturing history can be checked at the time of problem occurrence. The serial number is retained in the Finisher Controller PCB.	
Use Case	- At installation - When replacing the Finisher Controller PCB	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	8 characters	
Default Value	00000000	

TEST

■ PG

COPIER > TEST > PG

TYPE	**1**	**Test print**
Detail		To execute the test print.
Use Case		At problem analysis
Adj/Set/Operate Method		Enter the setting value, and then press Start key. Test print is executed.
Caution		Be sure to set the value back to 0 after the test print output.
Display/Adj/Set Range		0 to 100 0: Image from CCD (normal print), 1 to 3: For R&D use, 4: 16 gradations, 5: Whole-area halftone image, 6: Grid, 7 to 9: For R&D use, 10: MCYBk horizontal stripes, 11: For R&D use, 12: YMCBk 64 gradations, 13: For R&D use, 14: Full color 16 gradations, 15: For R&D use, 16: Image with 10% image ratio, 17 to 22: For R&D use, 23: Chart for adjusting the phase of Laser Scanner, 24: Chart for adjusting the magnification ratio of Laser Scanner, 25 to 29: For R&D use, 30: Dedicated chart used for color measurement by C3iPR (Canon Color Checker imagePRESS) and i1iSis, 31 to 46: For R&D use, 47: Dedicated chart used for color measurement by C3iPR (Canon Color Checker imagePRESS) and i1, 48 to 54: For R&D use, 55: PG for REOS, 56 to 57: For R&D use, 58: Chart for calibrating color difference on front and back sides, 59 to 100: For R&D use
Default Value		0
TXPH	**1**	**Setting of test print image mode**
Detail		To set the image mode at the time of test print output. This mode is enabled for test print only.
Use Case		At problem analysis
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 8 0: 600 dpi error diffusion (no trailing edge correction of Bk), 1: "Gradation" screen, 2: "Resolution" screen (no trailing edge correction of Bk), 3: Copy screen, 4: None, 5: 600 dpi error diffusion (with trailing edge correction of Bk), 6: "Resolution" screen (with trailing edge correction of Bk), 7: 1200 dpi error diffusion (no trailing edge correction of Bk), 8: 1200 dpi error diffusion (with trailing edge correction of Bk)
Default Value		3
THRU	**1**	**Set image correct table use: test print**
Detail		To set whether to use the image correction table at the time of test print output.
Use Case		At problem analysis
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 2 0: "Auto Adjust Gradation": ON, "Auto Correct Full Color": OFF 1: "Auto Adjust Gradation": OFF, "Auto Correct Full Color": OFF 2: "Auto Adjust Gradation": ON, "Auto Correct Full Color": ON
DENS-Y	**1**	**Adj of Y-color density at test print**
Detail		To adjust Y-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
Use Case		At test print (TYPE = 5)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 255
Default Value		128

COPIER > TEST > PG

DENS-M	**1**	**Adj of M-color density at test print**
Detail		To adjust M-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
Use Case		At test print (TYPE = 5)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 255
Default Value		128
DENS-C	**1**	**Adj of C-color density at test print**
Detail		To adjust C-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
Use Case		At test print (TYPE = 5)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 255
Default Value		128
DENS-K	**1**	**Adj of Bk-color density at test print**
Detail		To adjust Bk-color density when performing test print (TYPE = 5). As the value is larger, the image gets darker.
Use Case		At test print (TYPE = 5)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 255
Default Value		128
COLOR-Y	**1**	**Y-color output setting at test print**
Detail		To make a setting of Y-color output for test print. The setting is applied to all types. When setting COLOR-Y to 1 and other items to 0, a single Y-color is output.
Use Case		At test print
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Not output, 1: Output
Default Value		1
Related Service Mode		COPIER> TEST> PG> TYPE, COLOR-M/C/K
COLOR-M	**1**	**M-color output setting at test print**
Detail		To make a setting of M-color output for test print. The setting is applied to all types. When setting COLOR-M to 1 and other items to 0, a single M-color is output.
Use Case		At test print
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Not output, 1: Output
Default Value		1
Related Service Mode		COPIER> TEST> PG> TYPE, COLOR-Y/C/K

COPIER > TEST > PG

COLOR-C	**1**	**C-color output setting at test print**
Detail		To make a setting of C-color output for test print. The setting is applied to all types. When setting COLOR-C to 1 and other items to 0, a single C-color is output.
Use Case		At test print
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Not output, 1: Output
Default Value		1
Related Service Mode		COPIER> TEST> PG> TYPE, COLOR-Y/M/K
COLOR-K	**1**	**Bk-color output setting at test print**
Detail		To make a setting of Bk-color output for test print. The setting is applied to all types. When setting COLOR-K to 1 and other items to 0, a single Bk-color is output.
Use Case		At test print
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Not output, 1: Output
Default Value		1
Related Service Mode		COPIER> TEST> PG> TYPE, COLOR-Y/M/C
F/M-SW	**1**	**Setting of PG full color/mono color**
Detail		To set for the output in full color/monochrome color with PG.
Use Case		When separating (identifying) the cause whether it's due to color or monochrome.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Full color, 1: Single color
Default Value		0
PG-PICK	**1**	**Setting of test print paper source**
Detail		To set the paper source that is used at the time of test print output.
Use Case		- At problem analysis - At test print output
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 19 1: Cassette 1, 2: Cassette 2, 3: Cassette 3, 4 to 6: Not used, 7: POD Deck Lite, 8: Multi-purpose Tray, 9 to 16: Not used, 17: Multi Deck (Upper), 18: Multi Deck (Middle), 19: Multi Deck (Lower)
Default Value		1
2-SIDE	**1**	**Set of 1-sided/2-sided print for PG**
Detail		To set 1-sided/2-sided print for PG output.
Use Case		At problem analysis
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: 1-sided, 1: 2-sided
Default Value		0

COPIER > TEST > PG

PG-QTY	1	Setting of PG output quantity
Detail		To set the number of sheets for PG output.
Use Case		At problem analysis
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 999
Unit		sheet
Default Value		1
Amount of Change per Unit		1

FINISH	1	Option processing function test print
Detail		To execute the test print relating to option processing function.
Use Case		When checking operation of option processing function
Adj/Set/Operate Method		1) Enter the number of sheets in PG-QTY, and then press OK key. 2) Enter the setting value, and then press OK key. 3) Press Start button. The machine outputs a test print.
Display/Adj/Set Range		0 to 99 0: N/A 1: Staple (front) *1 2: Staple (2 points) *1 3: Staple (rear) *1 4: Booklet (saddle stitch) *1 5: Z-fold (single sleeve) *1 6: 2-fold *1 7: C-fold *2 8: V-fold *2 9: 4-fold *2 10: Z-fold (out-3-fold) *2 11: Punch (Inner Puncher) *3 12: Multiple-hole punch *4 13: Offset *1 14 to 99: Spare (for future use) *1 Finisher, *2 Multi-folding machine, *3 Inner Puncher, *4 Multiple-hole Puncher
Default Value		0
Related Service Mode		COPIER> TEST> PG> PG-QTY

■ NETWORK

COPIER > TEST > NETWORK

PING	**1**	**Network connection check**
Detail		To check connection between this machine and TCP/IP network.
Use Case		- When checking network connection at the time of installation - At network connection failure
Adj/Set/Operate Method		1) Turn OFF the main power switch. 2) Connect the network cable to this machine, and then turn ON the main power switch. 3) Inform the system administrator at user's site that installation of this machine is complete, and ask for network setting. 4) Ask the system administrator to check the network connection, and check the remote host address of PING transmission target. 5) Select the item and enter the remote host address, and then press OK key and Start key. OK: Connection is normal. Checking procedure is complete. NG: Connection failed. Go to step 6) if the cable connection is OK. In case of cable connection failure, connect again and then go to step 5). 6) Select the item and enter loopback address, and then press OK key and Start key. OK: TCP/IP setting of this machine is normal. Go to step 7) to check NIC. NG: TCP/IP setting of this machine has failure. Go to step 3) to check the setting again. 7) Select the item and enter the local host address, and then press OK key. OK: Network setting of this machine and NIC are normal. Inform the system administrator that the trouble is due to network environment and ask for countermeasure. NG: Connection failure/fault with NIC. Check connection of NIC/ replace NIC.
Display/Adj/Set Range		0.0.0.0 to 255.255.255.255 At normal state: OK, At failure occurrence: NG
IPV6-ADR	**1**	**Setting of PING send address (IPv6)**
Detail		To set the IPv6 address to send PING. When PING is sent to this address by PING-IP6, the network connection condition in the IPv6 environment can be checked.
Use Case		At network connection via IPv6
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		- Enter a valid character string as an address of IPv6. - Enter an address within 39 characters including hexadecimal numbers (0 to 9, a to f) and a separator (:).
Related Service Mode		COPIER> TEST> NETWORK> PING-IP6
PING-IP6	**1**	**PING transmission to IPv6 address**
Detail		To send PING to the address specified by IPV6-ADR. The network connection condition in the IPv6 environment can be checked.
Use Case		At network connection via IPv6
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		At normal termination: OK, At abnormal termination: NG
Related Service Mode		COPIER> TEST> NETWORK> IPV6-ADR

COPIER > TEST > NET-CAP

CAPOFFON	**2**	**For R&D**
STT-STP	**2**	**For R&D**
CAPSTATE	**2**	**For R&D**
PONSTART	**2**	**For R&D**
OVERWRIT	**2**	**For R&D**
PAYLOAD	**2**	**For R&D**
FILE-CLR	**2**	**For R&D**

■ P-STOP

COPIER > TEST > P-STOP

PRINTER	1	Forcible stop of paper feed
Detail		To forcibly stop paper for the next job at the specified position (only once). Leading edge of paper stops at the specified position so that the cause of a problem can be identified. Set 99 when checking an image on the ITB. When the operation is stopped forcibly, jam code "AAxx" is displayed. When a normal jam occurs at a position other than the specified position or paper is delivered without being forcibly stopped, this setting is automatically cleared.
Use Case		- When bent paper/skew/wrinkles occur - When jam occurs frequently - When checking an image on the ITB
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Execute a job (copy/test print). Paper stops at the specified position.
Caution		- Remove the paper being stopped with the normal jam removal procedure. After jam removal, the job is automatically recovered. - Display of standard jam code indicates that a jam occurs somewhere other than the specified position. Setting of forcible stop is enabled until paper stops at the specified position. - The setting is disabled for job where paper does not pass through the specified position. - Unfixed toner may be adhered on paper depending on the stop position. Thus, handle it with care.
Display/Adj/Set Range		0 to 255 0: Not forcibly stopped 1 to 3: Paper source (cassette) of the host machine 4: Pickup position of the Deck Lite 5 to 7: Paper source of the Multi Deck 11: Outlet of the Multi Deck 20: Pre-registration (1st side) 21: Pre-registration (2nd side) *1 30: Pre-fixing (1st side) 31: Pre-fixing (2nd side) *1 32: Post-fixing (1st side) 33: Post-fixing (2nd side) *1 40: Delivery outlet of the host machine 70: Duplex standby position *1 80: Multi-purpose Tray Pickup Assembly *1 99: Image check position Any values other than those mentioned above: Not used *1: Paper is stopped when a duplex job is executed (paper is stopped after being reversed).
Default Value		0

COUNTER

■ TOTAL

COPIER > COUNTER > TOTAL

SERVICE1	1	Service-purposed total counter 1
Detail		To count up when the printout is delivered outside the machine. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999

COPIER > COUNTER > TOTAL

SERVICE2	**1**	**Service-purposed total counter 2**
Detail		To count up when the printout is delivered outside the machine. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
COPY	**1**	**Total copy counter**
Detail		To count up when the printout is delivered outside the machine. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
PDL-PRT	**1**	**PDL print counter**
Detail		To count up when the printout is delivered outside the machine according to the charge counter at PDL print. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
FAX-PRT	**1**	**FAX reception print counter**
Detail		To count up when the printout is delivered outside the machine according to the charge counter at FAX reception. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
BOX-PRT	**1**	**Inbox print counter**
Detail		To count up when the printout is delivered outside the machine according to the charge counter at Inbox print. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
RPT-PRT	**1**	**Report print counter**
Detail		To count up when the printout is delivered outside the machine according to the charge counter at report print. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
2-SIDE	**1**	**2-sided copy/print counter**
Detail		To count up when the copy/printout is delivered outside the machine according to the charge counter at 2-sided copy/print. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999

COPIER > COUNTER > TOTAL

SCAN	1	Scan counter
Detail		To count the number of scan operations according to the charge counter when the scanning operation is complete. Large size: 1, Small size: 1
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999

■ PICK-UP

COPIER > COUNTER > PICK-UP

C1	1	Cassette 1 pickup total counter
Detail		Total pickup counter value of the Cassette 1 Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

C2	1	Cassette 2 pickup total counter
Detail		Total pickup counter value of the Cassette 2 Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

C3	1	Cassette 3 pickup total counter
Detail		Total pickup counter value of the Cassette 3 Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

C4	1	Not used
Default Value		0
Amount of Change per Unit		1

COPIER > COUNTER > PICK-UP

MF	**1**	**Multi-purpose Tray pickup total counter**
Detail		Total pickup counter value of the Multi-purpose Tray Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

DK	**1**	**Deck pickup total counter**
Detail		Total pickup counter value of the Deck Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

2-SIDE	**1**	**2-sided pickup total counter**
Detail		Total pickup counter value of 2-sided print Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

D1	**1**	**POD Upper Deck pickup total counter**
Detail		Total pickup counter value of the POD Upper Deck Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

COPIER > COUNTER > PICK-UP

D2	1	POD Middle Deck pickup total counter
Detail		Total pickup counter value of the POD Middle Deck Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

D3	1	POD Lower Deck pickup total counter
Detail		Total pickup counter value of the POD Lower Deck Large size: 1, Small size: 1
Use Case		At counter check
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Default Value		0
Amount of Change per Unit		1

■ FEEDER

COPIER > COUNTER > FEEDER

FEED	1	DADF original pickup total counter
Detail		DADF original pickup total counter
Use Case		When checking the consumption level of parts/replacing the parts
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Amount of Change per Unit		1

DFOP-CNT	1	DADF hinge open/close counter
Detail		DADF hinge open/close counter
Use Case		When checking the consumption level of parts/replacing the parts
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 99999999
Unit		time
Amount of Change per Unit		1

■ JAM

COPIER > COUNTER > JAM

TOTAL	1	Copier total jam counter
Detail		Total jam counter value of the copier
Use Case		When checking the total number of jams in the copier
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

FEEDER	1	DADF total jam counter
Detail		Total jam counter value of the DADF
Use Case		When checking the total number of jams in the Feeder
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

SORTER	1	Finisher total jam counter
Detail		Total jam counter value of the Finisher
Use Case		When checking the total number of jams in the Finisher
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

2-SIDE	1	Duplex Unit jam counter
Detail		Jam counter value of the Duplex Unit
Use Case		When checking the number of jams in the Duplex Unit
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

COPIER > COUNTER > JAM

MF	**1**	**Multi-purpose Tray jam counter**
Detail		Jam counter value of the Multi-purpose Tray
Use Case		When checking the number of jams in the Multi-purpose Tray
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1
C1	**1**	**Cassette 1 pickup jam counter**
Detail		Pickup jam counter value of the Cassette 1
Use Case		When checking the number of pickup jams in the Cassette 1
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1
C2	**1**	**Cassette 2 pickup jam counter**
Detail		Pickup jam counter value of the Cassette 2
Use Case		When checking the number of pickup jams in the Cassette 2
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1
C3	**1**	**Cassette 3 pickup jam counter**
Detail		Pickup jam counter value of the Cassette 3
Use Case		When checking the number of pickup jams in the Cassette 3
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1
C4	**1**	**Not used**
Default Value		0
Amount of Change per Unit		1

COPIER > COUNTER > JAM

DK	1	POD Deck Lite jam counter
Detail		Jam counter value of the POD Deck Lite
Use Case		When checking the number of jams in the POD Deck Lite
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

MDK1	1	Multi Deck (Upper) jam counter
Detail		Jam counter value of the Multi Deck (Upper)
Use Case		When checking the number of jams in the Multi Deck (Upper)
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

MDK2	1	Multi Deck (Middle) jam counter
Detail		Jam counter value of the Multi Deck (Middle)
Use Case		When checking the number of jams in the Multi Deck (Middle)
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

MDK3	1	Multi Deck (Lower) jam counter
Detail		Jam counter value of the Multi Deck (Lower)
Use Case		When checking the number of jams in the Multi Deck (Lower)
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
Caution		Clear the counter value after replacement.
Display/Adj/Set Range		0 to 9999999
Unit		time
Default Value		0
Amount of Change per Unit		1

■ MISC

COPIER > COUNTER > MISC

T-SPLY-Y	**1**	**Y toner supply counter**
Detail		Number of Y-color toner supply blocks. Counted for every one rotation of Toner Stirring Screw.
Use Case		When checking the usage status of toner
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Unit		block
Default Value		0
Amount of Change per Unit		1
T-SPLY-M	**1**	**M toner supply counter**
Detail		Number of M-color toner supply blocks. Counted for every one rotation of Toner Stirring Screw.
Use Case		When checking the usage status of toner
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Unit		block
Default Value		0
Amount of Change per Unit		1
T-SPLY-C	**1**	**C toner supply counter**
Detail		Number of C-color toner supply blocks. Counted for every one rotation of Toner Stirring Screw.
Use Case		When checking the usage status of toner
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Unit		block
Default Value		0
Amount of Change per Unit		1
T-SPLY-K	**1**	**Bk toner supply counter**
Detail		Number of Bk-color toner supply blocks. Counted for every one rotation of Toner Stirring Screw.
Use Case		When checking the usage status of toner
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Unit		block
Default Value		0
Amount of Change per Unit		1
ALLPW-ON	**1**	**For R&D**
Amount of Change per Unit		1

COPIER > COUNTER > MISC

HDD-ON	**1**	**Number of HDD start-up times**
Detail	To count up at HDD start-up.	
Use Case	When checking the usage status of the product	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Display/Adj/Set Range	0 to 99999999	
Unit	time	
Default Value	0	
Amount of Change per Unit	1	

ENT-PTH	**1**	**Entrance paper path counter: Fin-T1**
Detail	Number of sheets fed through the entrance paper path	
Use Case	When checking the usage status of the product	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Display/Adj/Set Range	0 to 99999999	
Unit	sheet	
Amount of Change per Unit	1	

TRAY-CHA	**1**	**Tray change counter: Fin-T1**
Detail	Number of switch of the tray	
Use Case	When checking the usage status of the product	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Display/Adj/Set Range	0 to 99999999	
Unit	time	
Amount of Change per Unit	1	

PUNCH	**1**	**Punch Unit operation counter: Fin-T1**
Detail	Number of punch operations	
Use Case	When checking the usage status of the product	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Display/Adj/Set Range	0 to 99999999	
Unit	time	
Amount of Change per Unit	1	

PUN-CAB	**1**	**Punch Unit Cable counter: Fin-T1**
Detail	Number of Punch Unit Cable operations	
Use Case	When checking the usage status of the product	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Display/Adj/Set Range	0 to 99999999	
Unit	time	
Amount of Change per Unit	1	

COPIER > COUNTER > MISC

PUN-WST	**1**	**Punch waste counter: Fin-T1**
Detail		To count up the amount of punch waste in the Punch Unit.
Use Case		When checking the usage status of the product
Adj/Set/Operate Method		To clear the counter value: It is cleared by reset of punch waste alarm.
Display/Adj/Set Range		0 to 99999999
Unit		time
Amount of Change per Unit		1
SADDLE	**1**	**Saddle paper path counter: Fin-T1**
Detail		Saddle paper path counter value
Use Case		When checking the usage status of the product
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Amount of Change per Unit		1
ESC-PTH	**1**	**Escape paper path counter: Fin-T1**
Detail		Escape paper path counter value
Use Case		When checking the usage status of the product
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Display/Adj/Set Range		0 to 99999999
Unit		sheet
Amount of Change per Unit		1
SUC-A-Y	**2**	**For R&D**

STK-ENTR	**1**	**Equipment received sheets: Stacker**
Detail		Total number of sheets the Stacker-F1 received from the upstream connected equipment
Use Case		When checking the usage status
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Caution		Clear the counter value after replacement.
Default Value		0
STK-CTS	**1**	**Flip Unit/Top Tray delivered sht:Stacker**
Detail		The number of sheets the Stacker-F1 fed to the Flip Unit or the Top Tray
Use Case		At counter check
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Caution		Clear the counter value after cleaning.
Default Value		0
STK-TOP	**1**	**Top Tray delivered sheets: Stacker**
Detail		Total number of sheets delivered to the Upper Tray
Use Case		When checking the usage status
Adj/Set/Operate Method		To clear the counter value: Select the item, and then press Clear key.
Caution		Clear the counter value after replacement.
Default Value		0

COPIER > COUNTER > MISC

STK-MAIN	**1**	**Stack Tray delivered sheets: Stacker**
Detail	Total number of sheets delivered to the Stack Tray	
Use Case	When checking the usage status	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Caution	Clear the counter value after replacement.	
Default Value	0	
STK-THRU	**1**	**Downstream delivered sheets: Stacker**
Detail	Total number of sheets the Stacker-F1 fed to the downstream connected equipment	
Use Case	When checking the usage status	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Caution	Clear the counter value after replacement.	
Default Value	0	
STK-EJCT	**1**	**Number of Stack Tray ejection: Stacker**
Detail	Number of times the Stack Tray comes to the ejection position at front	
Use Case	When checking the usage status	
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.	
Caution	Clear the counter value after replacement.	
Default Value	0

FEEDER

DISPLAY

FEEDER > DISPLAY

FEEDSIZE	**1**	**Dspl of original size detected by DADF**
Detail		To display the original size detected by DADF.
Use Case		At incorrect detection of original size
Adj/Set/Operate Method		N/A (Display only)
TRY-WIDE	**1**	**Distance of Original Width Detect Slider**
Detail		To display the distance between the Original Width Detection Sliders.
Use Case		At incorrect detection of original size
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 2970
Unit		mm
Amount of Change per Unit		1
SPSN-LMN	**1**	**Dspl of Post-sprtn Sensr emit voltage**
Detail		To display the light-emitting voltage value for the Post-separation Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
SPSN-RCV	**1**	**Dspl of Post-sprtn Sensr recv voltage**
Detail		To display the light-receiving voltage value for the Post-separation Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
RDSN-LMN	**1**	**Display of Lead Sensor emission voltage**
Detail		To display the light-emitting voltage value for the Lead Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255
RDSN-RCV	**1**	**Display of Lead Sensor reception voltage**
Detail		To display the light-receiving voltage value for the Lead Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023
DRSN-LMN	**1**	**Dspl of Delivery Sensor emission voltg**
Detail		To display the light-emitting voltage value for the Delivery Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255

FEEDER > DISPLAY

DRSN-RCV	1	Dspl of Delivery Sensor reception voltg
Detail		To display the light-receiving voltage value for the Delivery Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023

RGSN-LMN	1	Display of Rgst Sensor emission voltage
Detail		To display the light-emitting voltage value for the Registration Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 255

RGSN-RCV	1	Display of Rgst Sensor reception voltage
Detail		To display the light-receiving voltage value for the Registration Sensor.
Use Case		When jams frequently occur
Adj/Set/Operate Method		N/A (Display only)
Display/Adj/Set Range		0 to 1023

ADJUST

FEEDER > ADJUST

DOCST	1	Adj of DADF img lead edge margin: front
Detail		To adjust the leading edge margin on the front side at DADF reading. Execute this item when the output image after DADF installation is displaced. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)
Use Case		- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

LA-SPEED	1	Fine adj img ratio: DADF,vert scan,front
Detail		To make a fine adjustment of the front side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)
Use Case		- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		%
Default Value		0
Amount of Change per Unit		0.1

FEEDER > ADJUST

DOCST2	1	Adj of DADF img lead edge margin: back
Detail	To adjust the leading edge margin on the back side at DADF reading. Execute this item when the output image after DADF installation is displaced. When replacing the Reader Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)	
Use Case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-50 to 50	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

LA-SPD2	1	Fine adj img ratio: DADF,vert scan,back
Detail	To make a fine adjustment of the back side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)	
Use Case	- When installing DADF - When replacing the Reader Controller PCB/clearing RAM data	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-20 to 20	
Unit	%	
Default Value	0	
Amount of Change per Unit	0.1	

ADJMSCN1	1	Fine adj img ratio:2-sided,horz scan,frt
Detail	To make a fine adjustment of the front side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is enlarged by 0.1% in horizontal scanning direction.	
Use Case	When image magnification ratio on the front side and back side are different at 2-sided reading	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-10 to 10	
Unit	%	
Default Value	0	
Amount of Change per Unit	0.1	

ADJMSCN2	1	Fine adj img ratio:2-sided,horz scan,bck
Detail	To make a fine adjustment of the back side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is enlarged by 0.1% in horizontal scanning direction.	
Use Case	When image magnification ratio on the front side and back side are different at 2-sided reading	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-10 to 10	
Unit	%	
Default Value	0	
Amount of Change per Unit	0.1	

FEEDER > ADJUST

ADJSSCN1	1	Fine adj img ratio:2-sided,vert scan
Detail		To make a fine adjustment of image magnification ratio in vertical scanning direction on both the front and back sides at DADF 2-sided reading. As the value is incremented by 1, the image is reduced by 0.1% in vertical scanning direction.
Use Case		When making a fine adjustment of image magnification ratio on both the front and back sides at 2-sided printing In addition, when the image magnification ratio of the back side is different from the front side, adjust with a turn of ADJSSCN1 -> ADJSSCN2.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		0.1

ADJSSCN2	1	Fine adj img ratio:2-sided,vert scan,bck
Detail		To make a fine adjustment of the back side image magnification ratio in vertical scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is enlarged by 0.1% in vertical scanning direction.
Use Case		When image magnification ratio on the front side and back side are different at 2-sided reading Adjust with a turn of ADJSSCN1 -> ADJSSCN2.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		%
Default Value		0
Amount of Change per Unit		0.1

FUNCTION

FEEDER > FUNCTION

SENS-INT	1	Initialization of DADF Sensors
Detail		To initialize DADF Sensors. - Post-separation Sensor 1 (SR2) - Post-separation Sensor 2 (SR3) - Post-separation Sensor 3 (PCB2) - Registration Sensor (PCB3) - Lead Sensor 1 (PCB4) - Lead Sensor 2 (SR5)
Use Case		When replacing the Reader Controller PCB/Sensor
Adj/Set/Operate Method		Select the item, and then press OK key.

MTR-CHK	1	Specification of DADF operation motor
Detail		To specify the motor of DADF to operate. The motor is activated by MTR-ON.
Use Case		At operation check
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 9 0: Pickup Motor (M1), 1: Feed Motor (M2), 2: Registration Motor (M3), 3: Read Motor (M4), 4: Delivery Motor (M5), 5: Disengagement Motor 1 (M6), 6: Disengagement Motor 2 (M7), 7: Tray Lifter Motor (M8), 8: Glass Shift Motor (M9), 9: Pickup Unit Lifter Motor (M10)
Related Service Mode		FEEDER> FUNCTION> MTR-ON

FEEDER > FUNCTION

TRY-A4	**1**	**Adj of DADF Tray width detect ref 1: A4**
Detail		To automatically adjust the paper width detection reference point 1 for the DADF Original Pickup Tray. (A4)
Use Case		- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Select the item, and then press OK key.
TRY-A5R	**1**	**Adj of DADF Tray width detect ref 2: A5R**
Detail		To automatically adjust the paper width detection reference point 2 for the DADF Original Pickup Tray. (A5R)
Use Case		- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Select the item, and then press OK key.
TRY-LTR	**1**	**Adj of DADF Tray width detect ref 1: LTR**
Detail		To automatically adjust the paper width detection reference point 1 for the DADF Original Pickup Tray. (LTR)
Use Case		- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Select the item, and then press OK key.
TRY-LTRR	**1**	**Adj of DADF Tray width detect ref2: LTRR**
Detail		To automatically adjust the paper width detection reference point 2 for the DADF Original Pickup Tray. (LTRR)
Use Case		- When replacing the Original Width Volume (VR) - When replacing the Reader Controller PCB/clearing RAM data
Adj/Set/Operate Method		Select the item, and then press OK key.
FEED-CHK	**1**	**Specify DADF individual feed operation**
Detail		To specify the feed mode for DADF. Feed operation is activated by FEED-ON.
Use Case		At operation check
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 3 0: 1-sided pickup/delivery operation, 1: 2-sided pickup/delivery operation, 2: 1-sided pickup/delivery operation (with stamp), 3: 2-sided pickup/delivery operation (with stamp)
Related Service Mode		FEEDER> FUNCTION> FEED-ON
FAN-CHK	**1**	**Specification of DADF operation fan**
Detail		To specify the fan of DADF to operate. The fan is activated by FAN-ON.
Use Case		At operation check
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Motor Driver Cooling Fan (FM1), 1: Read Motor Cooling Fan (FM2)
Related Service Mode		FEEDER> FUNCTION> FAN-ON

FEEDER > FUNCTION

FAN-ON	1	Operation check of DADF fan
Detail		To start operation check of the fan specified by FAN-CHK.
Use Case		At operation check
Adj/Set/Operate Method		1) Select the item, and then press OK key. It is driven for approximately 5 seconds and is automatically stopped. 2) Press OK key. The operation check is completed.
Caution		Be sure to press the OK key again after execution. The operation automatically stops after approximately 5 seconds, but is not completed unless the OK key is pressed (STOP is not displayed).
Related Service Mode		FEEDER> FUNCTION> FAN-CHK

SL-CHK	1	Specification of DADF operation solenoid
Detail		To specify the solenoid of DADF to operate. The solenoid is activated by SL-ON.
Use Case		At operation check
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0: Disengagement Solenoid (SL1)
Related Service Mode		FEEDER> FUNCTION> SL-ON

SL-ON	1	Operation check of DADF solenoid
Detail		To start operation check of the solenoid specified by SL-CHK.
Use Case		At operation check
Adj/Set/Operate Method		1) Select the item, and then press OK key. It is driven for approximately 5 seconds and is automatically stopped. 2) Press OK key. The operation check is completed.
Caution		Be sure to press the OK key again after execution. The operation automatically stops after approximately 5 seconds, but is not completed unless the OK key is pressed (STOP is not displayed).
Related Service Mode		FEEDER> FUNCTION> SL-CHK

MTR-ON	1	Operation check of DADF motor
Detail		To start operation check of the motor specified by MTR-CHK.
Use Case		At operation check
Adj/Set/Operate Method		1) Select the item, and then press OK key. It is driven for approximately 5 seconds and is automatically stopped. 2) Press OK key. The operation check is completed.
Caution		Be sure to press the OK key again after execution. The operation automatically stops after approximately 5 seconds, but is not completed unless the OK key is pressed (STOP is not displayed).
Related Service Mode		FEEDER> FUNCTION> MTR-CHK

ROLL-CLN	1	Rotation of DADF rollers
Detail		To rotate the rollers of DADF for cleaning. Check the rollers with lint-free paper moistened with alcohol while they are rotating.
Use Case		When cleaning the rollers
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Clean the rotating rollers with lint-free paper moistened with alcohol. 3) Press OK key. The rollers stop.

FEEDER > FUNCTION

FEED-ON	**1**	**Operation check of DADF individual feed**
Detail		To start operation check of the feed mode specified by FEED-CHK.
Use Case		At operation check
Adj/Set/Operate Method		Select the item, and then press OK key.
Related Service Mode		FEEDER> FUNCTION> FEED-CHK

SORTER

ADJUST

SORTER > ADJUST

PNCH-Y	**1**	**Adj punch hole side reg position:Puncher**
Detail		To adjust the punch hole in side registration direction. As the value is incremented by 1, the punch hole moves by 0.45 mm. +: Toward rear -: Toward front
Use Case		When the punch hole is misaligned in the side registration direction
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		-5 to 5
Unit		mm
Default Value		0
Amount of Change per Unit		0.45
CV-REG-L	**1**	**Adj large cover side reg pstn: P-binder**
Detail		To adjust the position of cover whose depth is 298 mm or more in side registration direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward front -: Toward rear
Use Case		- When the cover is displaced toward front/rear - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1
CV-REG-S	**1**	**Adj small cover side reg pstn: P-binder**
Detail		To adjust the position of cover whose depth is less than 298 mm in side registration direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward front -: Toward rear
Use Case		- When the cover is displaced toward front/rear - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SORTER > ADJUST

CV-CENT	**1**	**Adj cover pstn in feed way: P-binder**
Detail		To adjust the cover position in feed direction. As the value is changed by 1, the cover is moved by 0.1 mm. +: Toward delivery direction -: Toward inlet direction
Use Case		- When the cover is displaced to the right/left - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1
CLCT-SB	**1**	**Adj stacking swback shft amnt: P-binder**
Detail		To adjust degree to push signature to the reference wall of the Stacking Assembly. As the value is changed by 1, the degree of push-on is changed by 0.1 mm. (The setting value 0 is equivalent to 10 mm.) +: Increase -: Decrease
Use Case		- When the paper stack is misaligned or gets damage - When missing pages occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0 (10 mm)
Amount of Change per Unit		0.1
ALG-F-A4	**1**	**[Not used]**
Default Value		0
ALG-R-A4	**1**	**[Not used]**
Default Value		0
ALG-F-L	**1**	**Front Align Plate shift amnt: P-binder**
Detail		To adjust the travel length of the Front Alignment Plate when aligning the signature. As the value is changed by 1, the travel length is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When misalignment in horizontal direction occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		mm
Default Value		0
Supplement/Memo		Do not usually adjust it in markets.
Amount of Change per Unit		0.1

SORTER > ADJUST

ALG-R-L	1	Rear Align Plate shift amount: P-binder
Detail		To adjust the travel length of the Rear Alignment Plate when aligning the signature. As the value is changed by 1, the travel length is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When misalignment in horizontal direction occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-30 to 30
Unit		mm
Default Value		0
Supplement/Memo		Do not usually adjust it in markets.
Amount of Change per Unit		0.1

GLUING	1	[Not used]
Default Value		0
Supplement/Memo		Do not usually adjust it in markets
Amount of Change per Unit		0.05

STK-DLV	2	Adj ppr stack feed shft amnt: P-binder
Detail		To adjust the shift amount when feeding a paper stack from the Stack Delivery Roller of the cover feed area to the trimming area. As the value is changed by 1, the shift amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When a feeding failure of paper stack to the trimming area occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

GRP-CHNG	2	Adj Main Grip shift position: P-binder
Detail		To adjust the position when the Main Grip shifts paper stack position after gluing. As the value is decreased by 1, the position is lowered by 0.1 mm. The position cannot be raised higher than the initial state.
Use Case		- When a feeding failure of paper stack to the trimming area occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 0
Unit		mm
Default Value		0 (10 mm)
Amount of Change per Unit		0.1

SORTER > ADJUST

SIZE-H	2	Adj finish size in feed way: P-binder
Detail		To adjust the finishing size in feed direction. As the value is changed by 1, the length is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When the finishing size in feed direction is not correct - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SIZE-W	2	Adj finish size in depth way: P-binder
Detail		To adjust the finishing size in depth direction. As the value is changed by 1, the length is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When the finishing size in depth direction is not correct - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

CV-LNG	2	Adj trimming position from top: P-binder
Detail		To adjust the trimming amount from the top edge of the finishing size. As the value is changed by 1, the trimming amount is changed by 0.1 mm. +: Increase -: Decrease
Use Case		- When the length from the edge of the cover to the short edge at rear side is different - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		-50 to 50
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SORTER > ADJUST

10RGT-1	**2**	**10-sht stck top R-angle accurcy:P-bind**
Detail	To adjust the trimming angle of top edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.	
Use Case	- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	
10RGT-2	**2**	**10-sht stck btm R-angle accurcy:P-bind**
Detail	To adjust the trimming angle of bottom edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle increases. -: Rotation amount decreases and trimming angle decreases.	
Use Case	- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	
10RGT-3	**2**	**10-sht fore edge R-angle accurcy:P-bind**
Detail	To adjust the trimming angle of fore edge side in the case that right angle accuracy is not appropriate when trimming 10-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.	
Use Case	- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM	
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.	
Display/Adj/Set Range	-100 to 100	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	

SORTER > ADJUST

200RGT-1	2	200-sht stck top R-angle accurcy:P-bind
Detail		To adjust the trimming angle of top edge side in the case that right angle accuracy is not appropriate when trimming 200-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.
Use Case		- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

200RGT-2	2	200-sht stck btm R-angle accurcy:P-bind
Detail		To adjust the trimming angle of bottom edge side in the case that right angle accuracy is not appropriate when trimming 200-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle increases. -: Rotation amount decreases and trimming angle decreases.
Use Case		- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

200RGT-3	2	200-sht fore edge R-angle accurcy:P-bind
Detail		To adjust the trimming angle of fore edge side in the case that right angle accuracy is not appropriate when trimming 200-sheet stack in three directions. As the value is changed by 1, the rotation amount is changed by 0.1 mm. +: Rotation amount increases and trimming angle decreases. -: Rotation amount decreases and trimming angle increases.
Use Case		- When right angle accuracy of trimmed paper stack is not appropriate - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-100 to 100
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SORTER > ADJUST

SLD-MTR	2	Adjustment of Slide Motor HP: P-binder
Detail		To adjust home position of the Slide Motor of the Perfect Binder. If blade and home position of the Slide Motor are misaligned, trimming position or finishing size will be incorrect. As the value is changed by 1, home position is changed by 0.1 mm. (Finishing size is also changed.) +: Increase(finishing size:big) -: Decrease(finishing size:small)
Use Case		- When trimming position or finishing size is not correct - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

STK-VR0	1	Entr stck thick vol 0mm adj VL:P-bind
Detail		To enter the 0 mm adjustment value of stack thickness volume attached on the Main Grip of the Perfect Binder.
Use Case		- When replacing the Paper Stack Volume Sensor - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023
Default Value		0
Amount of Change per Unit		1

STK-VR25	1	Entr stck thick vol 25mm adj VL:P-bind
Detail		To enter the 25 mm adjustment value of stack thickness volume attached on the Main Grip of the Perfect Binder.
Use Case		- When replacing the Paper Stack Volume Sensor - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1023
Default Value		0
Amount of Change per Unit		1

GLU-LOW	1	Enter glue lower limit lvl adj VL:P-bind
Detail		To enter adjustment value of glue level 1 (lower limit) of the Level Thermistor.
Use Case		When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 255
Default Value		0
Amount of Change per Unit		1

SORTER > ADJUST

GLU-UP	1	Enter glue upper limit lvl adj VL:P-bind
Detail		To enter adjustment value of glue level 2 (upper limit) of the Level Thermistor.
Use Case		When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 255
Default Value		0
Amount of Change per Unit		1

GLU-EDG1	1	Top edg proc wid: top/btm trim, P-bind
Detail		To set the edge processing width for top edge side (rear side) when trimming top and bottom with the Perfect Binder. Decrease the value when glue on the edge comes off, and increase the value when glue comes out. + : The domain that does not apply glue of end portion grows big. - : The domain that does not apply glue of end portion grows small.
Use Case		- When the glue amount applied to the paper stack is not appropriate (glue on the edge comes off, glue comes out, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5
Unit		mm
Default Value		2
Amount of Change per Unit		1

GLU-EDG2	1	Btm edg proc wid: top/btm trim, P-bind
Detail		To set the edge processing width for bottom edge side (front side) when trimming top and bottom with the Perfect Binder. Decrease the value when glue on the edge comes off, and increase the value when glue comes out. + : The domain that does not apply glue of end portion grows big. - : The domain that does not apply glue of end portion grows small.
Use Case		- When the glue amount applied to the paper stack is not appropriate (glue on the edge comes off, glue comes out, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5
Unit		mm
Default Value		2
Amount of Change per Unit		1

SORTER > ADJUST

GLU-EDG3	1	Top edg proc wid:no top/btm trim, P-bind
Detail		To set the edge processing width for top edge side (rear side) when not trimming top and bottom with the Perfect Binder. Decrease the value when glue on the edge comes off, and increase the value when glue comes out. + : The domain that does not apply glue of end portion grows big. - : The domain that does not apply glue of end portion grows small.
Use Case		- When the glue amount applied to the paper stack is not appropriate (glue on the edge comes off, glue comes out, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5
Unit		mm
Default Value		3
Amount of Change per Unit		1

GLU-EDG4	1	Btm edg proc wid:no top/btm trim, P-bind
Detail		To set the edge processing width for bottom edge side (front side) when not trimming top and bottom with the Perfect Binder. Decrease the value when glue on the edge comes off, and increase the value when glue comes out. + : The domain that does not apply glue of end portion grows big. - : The domain that does not apply glue of end portion grows small.
Use Case		- When the glue amount applied to the paper stack is not appropriate (glue on the edge comes off, glue comes out, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5
Unit		mm
Default Value		3
Amount of Change per Unit		1

GLU-AMT1	1	Glue application amount adj 1: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 0 to 1.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

SORTER > ADJUST

GLU-AMT2	1	Glue application amount adj 2: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 1.5 to 3.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLU-AMT3	1	Glue application amount adj 3: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 3.5 to 6.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLU-AMT4	1	Glue application amount adj 4: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 6.5 to 11.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

SORTER > ADJUST

GLU-AMT5	1	Glue application amount adj 5: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 11.5 to 22.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLU-AMT6	1	Glue application amount adj 6: P-bind
Detail		To adjust the glue amount applied to a paper stack (thickness of paper stack: 22.5 to 25 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLU-MOVE	1	Adj Glue Vat shift amount: P-binder
Detail		To adjust the Glue Vat shift amount at the time of glue application with the Perfect Binder. As the value is changed by 1, the shift amount is changed by 0.1 mm. +: Position of the paste moves to the front. -: Position of the paste moves to the rear.
Use Case		- When Glue Vat and the edge of paper stack is not matched at the time of glue application - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-80 to 80
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SORTER > ADJUST

GLU-TEMP	1	Set glue temperature control: P-binder
Detail		Temperature setting of glue of Perfect Binder. When replacing the Master Controller PCB/EEPROM, enter the value of service label.
Use Case		When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		145 to 165
Unit		deg C
Default Value		153
Amount of Change per Unit		1

GLUAMT1C	1	Coat ppr glu appli amnt adj 1: P-bind
Detail		To adjust the glue amount applied to a stack of coated paper (thickness of paper stack: 0 to 1.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When signature of coated papers is missed with normal application amount of glue - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLUAMT2C	1	Coat ppr glu appli amnt adj 2: P-bind
Detail		To adjust the glue amount applied to a stack of coated paper (thickness of paper stack: 1.5 to 3.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When signature of coated papers is missed with normal application amount of glue - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

SORTER > ADJUST

GLUAMT3C	1	Coat ppr glu appli amnt adj 3: P-bind
Detail		To adjust the glue amount applied to a stack of coated paper (thickness of paper stack: 3.5 to 6.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When signature of coated papers is missed with normal application amount of glue - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLUAMT4C	1	Coat ppr glu appli amnt adj 4: P-bind
Detail		To adjust the glue amount applied to a stack of coated paper (thickness of paper stack: 6.5 to 11.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When signature of coated papers is missed with normal application amount of glue - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-20 to 20
Unit		mm
Default Value		0
Amount of Change per Unit		0.05

GLUAMT5C	1	Coat ppr glu appli amnt adj 5: P-bind
Detail		To adjust the glue amount applied to a stack of coated paper (thickness of paper stack: 11.5 to 22.4 mm) with the Perfect Binder. Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is increased) -: Clearance is narrowed (application amount is decreased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.

SDL-STP	1	Adj Saddle Stitcher staple pstn: Fin-T1
Detail		Adjust the staple position for saddle stitching. As the value is incremented by 1, moves the staple position 0.5mm downward.
Use Case		When the staple position of the Saddle Stitcher is displaced.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		-3 to 3
Unit		mm
Default Value		0
Amount of Change per Unit		0.5

SDL-ALG	1	Adj Saddle Stitcher align width: Fin-T1
Detail		Adjust the travel length of the alignment plate for saddle stitching. As the value is incremented by 1, the alignment position moves to the pushing direction 0.5mm.
Use Case		When the misalignment occurs within a paper stack on the Saddle Stitcher.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1
Unit		mm
Default Value		0
Amount of Change per Unit		0.5

SBRL-MTR	1	Adj SB Roller Upper/Lower Motor HP:Pbind
Detail		[For factory adjustment] To adjust the home position of Switchback Roller Upper/Lower Motor in the Stack Tray Assembly. Set the distance between the Stack Tray and the Switchback Roller to 3 to 4 mm. As the value is changed by 1, standby position of the Switchback Roller is moved by 0.25 mm. +: Decrease -: Increase
Use Case		When replacing the Master Controller PCB/EEPROM - When setting the home position back to the factory adjustment value - When the distance between Stack Tray and Switchback Roller is not 3 to 4 mm - When misalignment of paper stack in feed direction or missing pages occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Caution		Do not use this setting except in the case of replacing the Master Controller PCB/EEPROM
Display/Adj/Set Range		-9 to 9
Unit		mm
Default Value		0
Amount of Change per Unit		0.25

ST-ALG1	1	Adj Stacker size align pstn: Fin-T1
Detail		To adjust the Stacker alignment position. As the value is incremented by 1, the alignment position moves to the pushing direction 0.42mm.
Use Case		When misalignment occurs in the Processing Tray.
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-10 to 10
Unit		mm
Default Value		-10
Amount of Change per Unit		0.42

SW-UP-RL	1	Adj of Swing Roller falling pstn: Fin-T1
Detail		To adjust the Swing Roller fall position. As the value is incremented by 1, the falling position is lowered by 0.2 mm.
Use Case		When paper fails to be transported to the Process Tray and misalignment occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-17 to 33
Unit		mm
Default Value		0
Amount of Change per Unit		0.2

PUN-V-RG	1	Adj of punch vertical rgst pstn: Fin-T1
Detail		To adjust the vertical registration position of the paper to be punched. As the value is incremented by 1, the punch hole position moves toward the edge by 1 mm.
Use Case		When misalignment of punch hole position occurs
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-4 to 2
Unit		mm
Default Value		0
Amount of Change per Unit		1

PRCS-RET	1	Adj Process Tray return amount: Fin-T1
Detail		To adjust the pull-back amount of the paper on the Process Tray. As the value is incremented by 1, the pull-back amount is decreased by 1.4 mm.
Use Case		When paper is bent with the Process Tray
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 5
Unit		mm
Default Value		0
Related Service Mode		SORTER> OPTION> PRCS-SP3/PRCS-SP1
Amount of Change per Unit		1.4

UP-CL	1	Setting of upward curl prev mode: Fin-T1
Detail		To set ON/OFF of upward curl prevention mode. Set 1 when paper leaning occurs due to upward curl on the paper delivered to the Stack Tray. If 1 is set, the downward curl prev mode(DW-CL) become invalid.
Use Case		When paper leaning occurs due to upward curl on the paper delivered to the Stack Tray
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

SORTER > ADJUST

DW-CL	**1**	**Setting downward curl prev mode: Fin-T1**
Detail		To set ON/OFF of downward curl prevention mode. Set 1 when a stacking failure occurs due to downward curl on the paper delivered to the Stack Tray. This mode becomes invalid when turn on upward curl prevention mode(UP-CL).
Use Case		When a stacking failure occurs due to downward curl on the paper delivered to the Stack Tray
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		SORTER > ADJUST > UP-CL
THC-CL	**1**	**Setting heavy ppr curl prev mode:Fin-T1**
Detail		To set ON/OFF of heavy paper curl prevention mode. Set 1 when upward curl occurs on the heavy paper delivered. When 1 is set, the amount of Stack Tray descension for stack delivery increases. The paper surface detection is performed for every sheet, not for every 5 sheets.
Use Case		-When upward curl occurs on the heavy paper delivered. -When stack over detection is earlier than an assumption.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Supplement/Memo		When satisfy even one following conditions, this mode functions. - In the case of cardboard appointment. - In the case of LDR eject and a non-sort mode. - In the case of a staple mode.
THC-PUSH	**1**	**Setting heavy ppr out prev mode:Fin-T1**
Detail		To set ON/OFF of heavy paper push-out prevention mode. Set to 1 when a sheet of paper on the stack tray, which is delivered in the previous job, is pushed out by a sheet of heavy paper in the following job. When 1 is set and all the following conditions are satisfied, the stack tray descends once before the sheet of heavy paper is delivered on the processing tray:* * Specified paper in the previous job is "plain paper". * The first-delivered paper of the following job is "heavy paper". * The length of the above-mentioned heavy paper is more than 216mm. The heavy paper push-out prevention mode does not function in the non sort mode even if the parameter is set to 1.
Use Case		When the already stacked paper is pushed out at the time of heavy paper delivery.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
OFST-STC	**1**	**Set offset stack improve mode 1:Fin-T1**
Detail		To set ON/OFF of offset stack improvement mode. Set 1 when paper is not appropriately stacked in small size offset mode (shift sort mode). (Buffer operation is not performed.)
Use Case		When paper is not appropriately stacked in the small size offset mode (shift sort mode).
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

SORTER > ADJUST

THN-STC	**1**	**Set thin ppr poor stack prev mode:Fin-T1**
Detail		To set ON/OFF of poor stack prevention mode for thin paper. Set 1 when thin paper (Less than 63g) is not appropriately stacked. (Buffer operation of thin paper of less than 63g is not performed)
Use Case		When thin paper (Less than 63g) is not appropriately stacked
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, productivity of thin paper mode (Less than 63g) deteriorates.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
STP-P-CH	**1**	**Set stpl stack displace prev mode:Fin-T1**
Detail		To set ON/OFF of staple stack displacement prevention mode. Set 1 when the paper on the top is misaligned in staple delivery mode. When 1 is set, paper stack alignment operation is executed twice immediately before stapling.
Use Case		When the paper on the top is misaligned in staple delivery mode
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
TRY-NIS	**1**	**Set tray switch noise reduct mode:Fin-T1**
Detail		To set ON/OFF of tray switching noise reduction mode. Set 1 if the operation noise is loud when switching the Stack Tray. When 1 is set, the Stack Tray rise operation becomes slow. This mode (TRY-NIS) has priority over tray switching speed-up mode (TRY-SU).
Use Case		When the operation noise at the time of switching the Stack Tray is loud
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		SORTER>ADJUST>TRY-SU
TRY-SU	**1**	**Set tray switching speedup mode: Fin-T1**
Detail		To set ON/OFF of tray switching speed-up mode. Set 1 when it takes long time to switch the Stack Tray. When 1 is set, the Stack Tray rise speed becomes fast.In addition, productivity is improved by making stack tray rise speed fast. Switching noise reduction mode (TRY-NIS) has priority over this mode (TRY-SU) .
Use Case		When the Stack Tray switching time is long
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		SORTER>ADJUST>TRY-NIS

SORTER > ADJUST

FIN-NIS	1	Set tray drive noise reduct mode: Fin-T1
Detail		To set ON/OFF of tray drive noise reduction mode. Set 1 when the Finisher operation noise is loud. When 1 is set, stack tray initialization of Finisher is minimized.
Use Case		When the Finisher operation noise is loud
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Because it is the individual treatment, do not use it with the normal product.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

1SHT-SHF	1	Set 1-sheet stack shift sorting: Fin-T1
Detail		To set ON/OFF of 1-sheet stack shift sorting on print mood. Setting the value to 1 enables 1-sheet stack shift sorting.
Use Case		When the 1-sheet shift sort enabled mode (print mode) is necessary.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

SDL-SWCH	1	Sddl stack capacity increase mode:Fin-T1
Detail		To set ON/OFF of saddle stacking capacity increase mode. Set 1 when increasing the number of sets to be stacked for saddle stitching. When 1 is set, the stacking capacity increases over the upper limit. This mode becomes invalid when turn on the saddle stack full alarm mode(SDL-ALM).
Use Case		When increasing the number of sets to be stacked for saddle stitching
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When increasing the number of sets to be stacked, the movement is not guaranteed.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		SORTER>ADJUST>SDL-ALM

SDL-ALM	1	Set sddl stack full alarm mode: Fin-T1
Detail		To set ON/OFF of saddle stack full alarm. Set 1 when disabling the stack full alarm for saddle stitching. If 1 is set, the saddle stacking capacity increase mode(SDL-SWCH) become invalid.
Use Case		When disabling the stack full alarm for saddle stitching
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, paper stack in the saddle delivery tray(top) blocks up the saddle delivery port, and may become the saddle eject sensor stay jam.
Display/Adj/Set Range		0 to 1 0: ON (Alarm detection) 1: OFF (Non Alarm detection)
Default Value		0
Related Service Mode		SORTER>ADJUST>SDL-SWCH

SORTER > ADJUST

THN-STCL	1	Poor stack prev mode: Large paper:Fin-T1
Detail		To set ON/OFF of poor stack prevention mode for large paper. When 1 is set, the stacking condition of large paper is improved, but stack delivery speed from a processing tray decreases.
Use Case		When the stacking condition of large paper is low
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, stack delivery speed from a processing tray decreases.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Supplement/Memo		When satisfy either following conditions, this mode works. - In the case of shift sort mode(large paper). - In the case of a non-sort mode(large paper) via the processing tray.

PF-LGL41	1	Adj of LGL 4-fold position (1st): PFU
Detail		To adjust the 1st fold position of LGL paper 4-fold position on Paper Folding Unit. As the value is incremented by 1, the fold position moves by 0.1 mm.
Use Case		When the fold position adjustment in Settings/Registration menu is inadequate
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-128 to 120
Unit		mm
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Adjust Action> Adjust Fold Position> Adjust Double Parallel Fold Position
Amount of Change per Unit		0.1

PF-LGL42	1	Adj of LGL 4-fold position (2nd): PFU
Detail		To adjust the 2nd fold position of LGL paper 4-fold position on Paper Folding Unit. As the value is incremented by 1, the fold position moves by 0.1 mm.
Use Case		When the fold position adjustment in Settings/Registration menu is inadequate
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-128 to 127
Unit		mm
Default Value		0
Additional Functions Mode		Adjustment/Maintenance> Adjust Action> Adjust Fold Position> Adjust Double Parallel Fold Position
Amount of Change per Unit		0.1

SC-OFST	1	Adj side registration position: Stacker
Detail		To adjust the paper position in the Stacker in side registration position. As the value is changed by 1, the position moves by 0.1 mm.
Use Case		When displacement in side registration direction occurs in the Stacker
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-220 to 220
Unit		mm
Default Value		0
Amount of Change per Unit		0.1

SORTER > ADJUST

KEY-RPT	**1**	**Adj double press judgment time: Stacker**
Detail	To adjust the threshold of the interval to be judged as "double press" of the Stack Eject button.	
Use Case	When changing the judgment conditions for "double press"	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 5000	
Unit	msec	
Appropriate Target Value	50	
Default Value	50	
Amount of Change per Unit	1	
SET-SHFT	**1**	**Adj of paper stack shift amount: Stacker**
Detail	To adjust the offset of shift amount when performing shifting between paper stacks. As the value is changed by 1, the shift amount is changed by 0.1 mm. As the value is larger, the shift amount is increased.	
Use Case	When adjusting the shift amount between paper stacks	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 150	
Unit	mm	
Default Value	150	
Amount of Change per Unit	0.1	
JOB-SHFT	**1**	**Adj shift amount between jobs: Stacker**
Detail	To adjust the offset of the shift amount between jobs when delivering paper to the Stack Tray. As the value is changed by 1, the shift amount is changed by 0.1 mm. As the value is larger, the shift amount is increased.	
Use Case	When adjusting the shift amount between jobs	
Adj/Set/Operate Method	Enter the setting value, and then press OK key.	
Display/Adj/Set Range	0 to 150	
Unit	mm	
Default Value	0	
Amount of Change per Unit	0.1	
FIN-SPD	**1**	**For R&D**
Amount of Change per Unit	1	
INS-SPD	**1**	**For R&D**
Amount of Change per Unit	1	
BND-SPD	**1**	**For R&D**
Amount of Change per Unit	1	
STK-SPD	**1**	**For R&D**
Amount of Change per Unit	1	
PFU-SPD	**1**	**For R&D**
Amount of Change per Unit	1

Display/Adj/Set Range	1 to 20	

SORTER > FUNCTION

MTR-ON	**1**	**Operation check of motor: Stacker**
Detail		To start operation check of the motor specified by MTR-CHK.
Use Case		When replacing the motor/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
SL-CHK	**1**	**Specification of solenoid: Stacker**
Detail		To specify the solenoid to operate.
Use Case		When replacing the solenoid/checking the operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 10
SL-ON	**1**	**Operation check of solenoid: Stacker**
Detail		To start operation check of the solenoid specified by SL-CHK.
Use Case		When replacing the solenoid/checking the operation
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
PORT-CHK	**1**	**Specification of port: Stacker**
Detail		To specify the port number of Stacker.
Use Case		At operation check
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		1 to 10
PORT-ON	**1**	**Operation check of port: Stacker**
Detail		To start operation check of the port specified by PORT-CHK.
Use Case		At operation check
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, When operation finished normally: OK!
CNT-FCON	**1**	**Clearing of Finisher parts counter**
Detail		To clear the parts counter counted by the Finisher Controller PCB.
Use Case		When clearing the parts counter of the Finisher
Adj/Set/Operate Method		Select the item, and then press OK key.
Display/Adj/Set Range		During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
Supplement/Memo		When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.
CNT-ICON	**1**	**Clearing of Inserter parts counter**
Detail		To clear the parts counter counted by the Inserter Controller PCB.
Use Case		When clearing the parts counter of the Inserter
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
Supplement/Memo		When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.

SORTER > FUNCTION

CNT-PCON	1	Clear Paper Folding Unit parts counter
Detail		To clear the parts counter counted by the DC Controller PCB of the Paper Folding Unit.
Use Case		When clearing the parts counter of the Paper Folding Unit
Adj/Set/Operate Method		1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		During operation: ACTIVE, Normal termination : OK!, Abnormal termination:NG
Supplement/Memo		When executing this mode, the inner count value is cleared, but the indication on the display is not cleared. After the paper feed job has been executed, actual count value appears on the display.

OPTION

SORTER > OPTION

MD-SPRTN	1	Set restricted operation at error: Fin
Detail		To set whether to run the machine (execute restricted operation) when an error occurs at Finisher. When 1 is set, the machine runs but staple operation or alignment operation is not performed.
Use Case		When preferring to run the machine at Finisher error occurrence
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		Set "0" normally.
Display/Adj/Set Range		0 to 1 0: Normal, 1: Restricted operation
Default Value		0
Additional Functions Mode		Settings/Registration > Management Settings > Device Management > limited Functions Mode

SDL-PRS	1	Set Saddle Stitcher press oprtn
Detail		To set press operation of the Saddle Stitcher. Use this item when saddle stitched booklet is swollen. If wrinkles occur, make the setting not to perform press operation.
Use Case		- When wrinkles occur due to press operation in the case that the machine is installed in a high humidity environment or thin paper is used - When saddle stitched booklet is swollen due to poor folding accuracy
Adj/Set/Operate Method		1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.
Caution		If wrinkles occur due to press operation, do not execute the operation.
Display/Adj/Set Range		0 to 5 0: Normal 1: Without press operation 2: Not used 3: Extend press operation time (enabled for booklet with 21 sheets or more) 4: With forcible press operation (enabled for booklet with 9 sheets or less) 5: Without intermittent feed
Default Value		0

SORTER > OPTION

BUFF-SW	1	ON/OFF of buffer operation(Fin-AM1/T1)
Detail		To set ON/OFF of buffer operation in the Finisher. Fin-AM1: Set 1 to 4 when misalignment occurs. When 1 is set, buffer operation is not performed for all jobs. Alignment performance is improved, but productivity is decreased. When 2 is set, buffer operation is not performed only for non-binding job. Since buffer operation is performed for binding jobs, productivity is improved, but alignment performance is decreased. When 3 is set, buffer operation is not performed only for binding job. Buffer operation is performed for non-binding job. When 4 is set, buffer operation is not performed only for binding job with coated paper. Buffer operation is performed for non-binding job and binding job with paper other than coated paper. Fin-T1: Set to 1 when misalignment occurs in the staple mode with small size paper. When 1 is set, the buffer operation is not performed in the staple mode with the small size paper.
Use Case		Fin-AM1: When misalignment of paper stack occurs (misalignment of 3 sheets at the lowest part of the stack in case of the side stitch, and 3 sheets at the middle of the stack in case of saddle stitch) Fin-T1: When misalignment occurs in the staple mode with small size paper
Adj/Set/Operate Method		Enter the setting value and press OK key.
Caution		Without performing buffer operation, productivity is decreased.
Display/Adj/Set Range		Fin-AM1: 0 to 4 0: ON, 1: OFF, 2: OFF for non-binding job only, 3: OFF for binding job only, 4: OFF for binding job with coated paper only Fin-T1: 0 to 1 0: OFF, 1: ON
Default Value		0

TRY-EJCT	1	Set delivery control: thin paper
Detail		To set the delivery control (delivery speed) for thin paper. When this setting is made, delivery control for thin paper is applied to all jobs regardless of media. When 1 is set, lifting amount of tray is changed at Lower Tray delivery.
Use Case		When a stacking failure of thin paper occurs
Adj/Set/Operate Method		1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Normal operation, 1: Change the lifting amount of the Lower Tray.
Default Value		0

PN-SKEW	1	Set punch hole position accuracy: Fin-AM
Detail		To set the accuracy of punch hole position when the punch hole is misaligned due to paper skew.
Use Case		When punch hole is misaligned by (approx.) 2 mm or more and when paper fed to the Finisher is skewed
Adj/Set/Operate Method		Enter the setting value and press OK key.
Caution		As the value is larger, skew can be corrected more accurately, but productivity is decreased.
Display/Adj/Set Range		0 to 2 0: Normal mode, 1: Skew tolerance increase mode, 2: Skew tolerance decrease mode
Default Value		0

SORTER > OPTION

TBWRNLVL	1	Set blade rplce alarm dspl intvl: P-bind
Detail		To set the interval to display the Perfect Binder Trimming Blade replacement alarm. As the value is incremented by 1, interval to display the Trimming Blade replacement alarm becomes longer for 1000 trims.
Use Case		- Upon user's request - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		10 to 100 (1,000 times units)
Unit		time
Default Value		40
Amount of Change per Unit		1000

TBPCOUNT	1	Set number of Blade Plate use: P-bind
Detail		To set the number of use per Trimming Blade Plate of Perfect Binder. Decrease the value if a trimming failure occurs. As the value is decreased by 1, timing to shift the Trimming Blade Plate becomes earlier for 10 trims (the life of the Trimming Blade Plate is shortened).
Use Case		- When a trimming failure occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		As the value is decreased, the life of the Trimming Blade Plate is shortened.
Display/Adj/Set Range		10 to 110 (10 times units)
Unit		time
Default Value		110
Amount of Change per Unit		10

TBP-POSW	1	Set of Blade Plate use position: P-bind
Detail		To set the use position of the Trimming Blade Plate of Perfect Binder. If a trimming failure occurs, enter the value larger than the one currently displayed. When the value is increased, the Trimming Blade Plate moves up so the Trimming Blade Plate position which is not yet used can be used.
Use Case		- When a trimming failure occurs - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not set the value which is the same as the current value or less. Trimming failure occurs at the position which has been already used. - When the value is changed, the setting of CUT-HLDR is also changed.
Display/Adj/Set Range		0 to 9
Default Value		0
Related Service Mode		COPIER> COUNTER> DRBL-2> CUT-HLDR

SORTER > OPTION

CURL-SW	**1**	**Setting of curl prevention mode: Fin-AM**
Detail	To set the delivery speed of the trailing edge of paper to prevent a stacking failure due to paper curl. When 1 is set, delivery speed of the trailing edge of paper is increased at Upper/Lower Tray delivery. Since the trailing edges of papers with upward curl do not stay at the delivery outlet, stacking performance improves. However, delivery control of TRY-EJCT has priority over this mode. When 2 is set, delivery speed of the trailing edge of paper is reduced at Lower Tray delivery. Since papers with downward curl do not fall off from a tray along slope of paper stack, stacking performance improves. The item can be also set with DIP switch of the Finisher (with common setting range and setting value). The latest setting value is enabled regardless of service mode/DIP switch.	
Use Case	When a stacking failure due to paper curl occurs	
Adj/Set/Operate Method	1) Enter the setting value and press OK. 2) Turn OFF/ON the main power switch.	
Caution	When 1 or 2 is set, stacking performance may decrease with non-curled paper.	
Display/Adj/Set Range	0 to 2 0: Normal operation, 1: Upward curl prevention mode, 2: Downward curl prevention mode	
Default Value	0	
TRY-OVER	**1**	**Set limit of stack capacity**
Detail	To set whether to limit the stack capacity of the Upper/Lower Tray. When 1 is set, paper can be stacked beyond the maximum stack capacity.	
Use Case	When stacking the paper beyond the maximum stack capacity of the tray	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Caution	When the stacking limit is cleared, stacking capacity increases, but stacking performance decreases. This mode is enabled when selecting "ON" for the following: Settings/Registration> Function Settings> Common Settings> Paper Output Settings> High Volume Stack Mode.	
Display/Adj/Set Range	0 to 1 0: With stacking limit, 1: Without stacking limit	
Default Value	0	
Additional Functions Mode	Settings/Registration> Function Settings> Common Settings> Paper Output Settings> High Volume Stack Mode	
ST1-LMT	**1**	**Set stck capacity limit at 1-sided:Stckr**
Detail	To set whether to limit the number of sheets to be stacked on stack area of the first Stacker at 1-sided print. When either ST1-LMT or ST1-LMT2 reaches the setting value, it is judged as full. It does not mean that the stacking is not stopped when it reaches the specified number.	
Use Case	Upon user's request	
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.	
Display/Adj/Set Range	0 to 5 0: No limit (up to 570 mm in height), 1: 5000 sheets, 2: 4000 sheets, 3: 3000 sheets, 4: 2000 sheets, 5: 1000 sheets	
Unit	sheet	
Default Value	0	
Related Service Mode	SORTER> OPTION> ST1-LMT2	

SORTER > OPTION

GLU-OF1N	1	Glu appli amnt adj 1: non-coated, P-bind
Detail		To adjust the application amount of glue at perfect binding (Non-coated paper: 50 sheets or less). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is decreased) -: Clearance is narrowed (application amount is increased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-6 to 6
Unit		mm
Default Value		0
Additional Functions Mode		Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application
Amount of Change per Unit		0.05

GLU-OF2N	1	Glu appli amnt adj 2: non-coated, P-bind
Detail		To adjust the application amount of glue at perfect binding (Non-coated paper: 51 to 100 sheets). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is decreased) -: Clearance is narrowed (application amount is increased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-6 to 6
Unit		mm
Default Value		0
Additional Functions Mode		Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application
Amount of Change per Unit		0.05

SORTER > OPTION

GLU-OF3N	1	Glu appli amnt adj 3: non-coated, P-bind
Detail		To adjust the application amount of glue at perfect binding (Non-coated paper: 101 to 150 sheets). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is decreased) -: Clearance is narrowed (application amount is increased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-6 to 6
Unit		mm
Default Value		0
Additional Functions Mode		Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application
Amount of Change per Unit		0.05

GLU-OF4N	1	Glu appli amnt adj 4: non-coated, P-bind
Detail		To adjust the application amount of glue at perfect binding (Non-coated paper: 151 sheets or more). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is decreased) -: Clearance is narrowed (application amount is increased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-6 to 6
Unit		mm
Default Value		0
Additional Functions Mode		Settings/Registration> Adjustment/Maintenance> Adjust Action> Adjust Perfect Binding Glue Application
Amount of Change per Unit		0.05

SORTER > OPTION

GLU-OF1C	1	Glu appli amnt ajd 1 at coat bind:P-bind
Detail		To adjust the application amount of glue at perfect binding (coated paper: 50 sheets or less, coated paper + plain paper: 50 sheets or less). Change the clearance between a paper stack and the glue rod when applying glue heavily. As the value is changed by 1, the clearance is changed by 0.05 mm. +: Clearance is widened (application amount is decreased) -: Clearance is narrowed (application amount is increased) Increase the value when spine is not glued properly/comes off, and decrease the value when excess glue comes out of spine.
Use Case		- When the glue amount applied to the paper stack is not appropriate (spine is not glued properly/comes off, excess glue comes out of spine, etc.) - When replacing the Master Controller PCB/EEPROM
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.

TRM-LMT	1	Set minimum trim amount: Booklet Trimmer
Detail		To set whether to adjust the minimum trimming amount of the Booklet Trimmer according to the thickness and weight of paper stack.
Use Case		When a trimming failure occurs with thick paper stack
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Trimming amount may be larger than estimation depending on paper stack.
Display/Adj/Set Range		0 to 1 0: Fixed (normal), 1: Automatic adjustment
Default Value		0

SORTER > OPTION

PRCS-SP1	**1**	**Set Process Tray stack speed: Fin-AM1/T1**
Detail		Fin-AM1: To set the stacking speed when collating heavy paper. When stacking heavy paper (181 g/m2 or more) on the Finisher Process Tray, the speed is normally decreased. When 1 is set, the stacking speed at collate mode does not decrease so productivity is improved. Fin-T1: To set feed speed to the Process Tray Stopper. When 0 is set, the buffer paper with a sort / staple mode, transportation speed to the Process Tray slows down.
Use Case		Fin-AM1: When improving productivity of collate mode for heavy paper. (181 g/m2 or more) Fin-T1: When misalignment occurs in sort/staple mode due to the buffer paper pull-back failure.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		In exchange for improvement in productivity, stacking condition may decrease.
Display/Adj/Set Range		0 to 1 0: Speed is decreased, 1: Speed is not decreased
Default Value		Fin-AM1: 0/ Fin-T1: 1
Related Service Mode		SORTER> ADJUST> PRCS-RET/SORTER> OPTION> PRCS-SP3
FIN-SP1	**2**	**Finisher special settings 1**
Detail		Execute the Finisher special settings 1.
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not use this at the normal service. - Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00000000 to 11111111
Default Value		00000000
FIN-SP2	**2**	**Finisher special settings 2**
Detail		Execute the Finisher special settings 2.
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		- Do not use this at the normal service. - Take necessary action in accordance with the instructions from the Quality Support Division.
Display/Adj/Set Range		00000000 to 11111111
Default Value		00000000
STCR-DWN	**1**	**Set occasional misalign prev mode:Fin-T1**
Detail		To set ON/OFF of occasional misalignment prevention mode. When misalignment in feed direction occurs at approx. every 30 sheets for thin/plain paper (105 g/m2 and less) at staple mode, set 1. When 1 is set, decrease quantity of swing roller drop.
Use Case		When misalignment in feed direction occurs occasionally for thin/plain paper at staple mode.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

SORTER > OPTION

BUFF-INT	1	Set Dvry Sns stationary jam prev: Fin-T1
Detail		In case of paper with excessive upward curl, paper right after the buffer paper is ejected at the Finisher hits the Stack Delivery Roller, causing Saddle Delivery Sensor stationary jam. When 1 is set, the jam can be avoided since the paper intervals between the present and the following papers after the buffer paper ejection become wider.
Use Case		When stationary jam occurs at the Stack Delivery Roller at buffer operation
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

PRCS-SP3	1	Set the feed speed to Proc Tray: Fin-T1
Detail		To set the feeding speed to the Process Tray for the non-buffered papers in the staple mode of small size paper. As the value is incremented by 1, the feeding speed of the non-buffered papers is decelerated by 50 mm/sec.
Use Case		When misalignment (buckling on the trailing edge) occurs in staple mode because non-buffered papers are pulled back too much.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Adjust the Process Tray pull-back amount again with PRCS-RET as needed.
Display/Adj/Set Range		0 to 8 0: 700 mm/s 1: 650 mm/s 2: 600 mm/s 3: 550 mm/s 4: 500 mm/s 5: 450 mm/s 6 to 8: 450 mm/s
Unit		mm/s
Default Value		0
Related Service Mode		SORTER> ADJUST> PRCS-RET SORTER> OPTION> PRCS-SP1
Amount of Change per Unit		50

NSRT-STC	1	Poor stack prev mode: non-collate:Fin-T1
Detail		To set poor stack prevention mode when not collating. Stack delivery is performed via processing tray even in non sort mode resulting in the improvement of stacking alignment.
Use Case		When the stacking condition at non-collating is poor
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		As for this mode, productivity falls
Display/Adj/Set Range		0 to 2 0: Pass through the Process Tray at 2-sided print of thin paper (Less than 63g) of standard size paper (small size paper is not covered). (Small size paper: Feed direction is the paper of less than 220mm.) 1: Pass through the Process Tray at 2-sided print of thin paper (Less than 63g) of standard size paper. Pass through the Process Tray at single-sided print of thin paper (Less than 63g) of A4R/B5R/A5R size paper. 2: Pass through the Process Tray.
Default Value		0

SORTER > OPTION

STP-MAX	1	Set max No. of sht for staple: Fin-AM1
Detail		To set the maximum number of sheets to be stapled in the Finisher.
Use Case		- Upon user's request (to increase the number of sheets to be stapled) - When decreasing the number of sheets to be stapled at the time of staple failure occurrence due to the paper type or use environment
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When setting a value larger than the default value (upper limit on the specification), staple failure may occur.
Display/Adj/Set Range		2 to 200
Unit		sheet
Default Value		100
Amount of Change per Unit		1

SDL-MAX	1	Set max No. of sht for staple: Fin-AM2
Detail		To set the maximum number of sheets to be stapled in the Saddle Finisher.
Use Case		- Upon user's request (to increase the number of sheets to be stapled) - When decreasing the number of sheets to be stapled at the time of staple failure occurrence due to the paper type or use environment
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Caution		When setting a value larger than the default value (upper limit on the specification), staple failure may occur.
Display/Adj/Set Range		2 to 50
Unit		sheet
Default Value		25
Amount of Change per Unit		1

VFLD-MAX	1	Set Saddle V-fold max No. of sht:Fin-AM2
Detail		To set the maximum number of sheets to be folded in V-shape in the Saddle.
Use Case		Upon user's request (to increase the number of sheets to be folded in V-shape in the Saddle)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When setting a value larger than the default value (upper limit on the specification), Saddle V-fold failure may occur.
Display/Adj/Set Range		1 to 50
Unit		sheet
Default Value		5
Amount of Change per Unit		1

NEAT-MIX	1	Set ppr align:mixed ppr wid dvry, Fin-AM
Detail		To set whether to enable paper alignment function when delivering papers which widths are different. When 0 is set, the setting of NEAT-SW is disabled. When 1 is set, paper alignment is performed.
Use Case		When not performing paper alignment at the time of delivering papers which widths are different
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0
Related Service Mode		SORTER> OPTION> NEAT-SW

SORTER > OPTION

NEAT-SW	1	Ppr align cndtn:mix ppr wid dvry, Fin-AM
Detail		To set the conditions for performing paper alignment when delivering papers which widths are different. When the specified condition (paper type) is satisfied while NEAT-MIX is 1, paper alignment is performed.
Use Case		When performing paper alignment with a specific paper type (neat alignment)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 2
Default Value		0
Related Service Mode		SORTER> OPTION> NEAT-MIX

TRM-CNT	1	Set of number of trim: Booklet Trimmer
Detail		To set the number of trimming by the Booklet Trimmer.
Use Case		When performing trimming precisely
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		In case of performing trimming twice, productivity may decrease.
Display/Adj/Set Range		0 to 2 0: 1 time, 1: 2 times (1 time if productivity decreases), 2: 2 times
Default Value		0

THN-TRSW	1	Set nrrw width thin ppr dvry dest:Fin-T1
Detail		To set the delivery destination for narrow width thin paper. When delivering thin/plain paper (79 g/m2 or less) which length in width direction is 140 mm or less to the First/Second Tray, delivery stationary jam may occur. When 1 is set, paper is forcibly delivered on the Escape Tray.
Use Case		When delivery stationary jam occurs at the time of delivering thin/plain paper (79g/m2 and less) which width direction is 140 mm and smaller to the First/Second Tray.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Deliver to the destination specified on UI 1: Deliver to the Escape Tray.
Default Value		0

THN-SW	1	Dvry Tr thn ppr stck cpcty incr: Fin-T1
Detail		To set whether to increase the stack capacity for thin paper (Less than 59g) of small size on the Delivery Tray. When 1 is set, the stack capacity for thin paper of small size becomes same as plain paper of small size.
Use Case		When expand the limit of stack capacity for small size of thin paper (less than 59g).
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

SORTER > OPTION

SWGUP-SW	1	Swing Unit diseng oprtn:1st thin:Fin-T1
Detail		To set whether the Swing Unit performs disengagement operation when feeding the 1st sheet of thin paper (Less than 59g). When 1 is set, the retraction is performed for the 1st sheet of thin paper. The retraction is performed only in case the paper length is 297mm or less and paper width is 210mm or less.
Use Case		When corner bend occurs on the first sheet of thin paper (Less than 59g).
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, the swing unit performs its retraction and there is accordingly a less productivity.
Display/Adj/Set Range		0 to 1 0: OFF, 1: ON
Default Value		0

CALG-SW	1	Set ctr align oprtn: corner-stpl, Fin-T1
Detail		Paper width is a change of ON/OFF of center stack alignment operation at the time of corner-staple mode in more than 257mm. When 1 is set, center stack alignment operation is not performed in the corner-staple mode.
Use Case		-When switching the alignment position from center to front/rear side in corner-staple mode. -When stack failure occurred from consecutive stacking of corner-staple mode. -In case that the paper surface detection sensor detects the paper on the stack tray too early as the stapled part of the paper stack is higher than expected.
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: OFF (Center alignment), 1: ON (Front/rear side alignment)
Default Value		0

THN-STK	1	Set thin ppr stack mthd:Low Tray, Fin-AM
Detail		To set the method for stacking thin papers on the Lower Tray. When 1 is set, the method is changed from normal delivery to the delivery method with which papers are delivered as a paper stack so stacking condition improves.
Use Case		Upon user's request (to improve stacking condition of thin papers on the Lower Tray)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Normal delivery method, 1: Stack delivery method
Default Value		0

ST1-MFH	1	Set maximum stack height: Stacker
Detail		To set the height of paper stack that can be stacked on the Stacker. When -1 is set, height is not limited. When 0 to 3550 is set, the maximum stack height is changed by 0.1 mm (0 to 355 mm) as the value is changed by 1.
Use Case		Upon user's request
Adj/Set/Operate Method		Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range		-1 to 3550 -1: No limit
Unit		mm
Default Value		-1
Amount of Change per Unit		0.1

SORTER > OPTION

WBF-IMPR	1	Waste collection improvement:P-binder
Detail		To set ON/OFF of the waste collection retry movement (improvement of waste collection movement). When the settings is 1, the waste collection re-try movement operates according to the following conditions at the cutting operation. - Bottom edge side and Fore edge side perform improvement operation regardless of a bunch thickness. - Signature sheet does not perform the improvement operation of the top edge side in the case of 99 sheets from ten sheets. - Signature sheet does perform the improvement operation of the top edge side in the case of more than 100 sheets.
Use Case		When waste jamming occurred
Adj/Set/Operate Method		1) Enter the setting value and press OK key. 2) Turn OFF/ON the main power switch.
Caution		When 1 is set, the productivity is decreased.
Display/Adj/Set Range		0 to 1 0: OFF, 1:ON
Default Value		0
Supplement/Memo		In one improvement operation, it takes 2.5 seconds.

TRY-STP	1	Set stpl copy/fold sht stack limit clear
Detail		To set whether to limit the stack capacity of the stapled copies/folded sheets. When clearing the limit, the tray height limit is applied instead.
Use Case		When stacking papers beyond the maximum number of stapled copies/folded sheets
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When the stacking limit is cleared, stacking capacity increases, but stacking performance decreases.
Display/Adj/Set Range		0 to 3 0: Normal specification 1: Clear the limit of stack capacity of the stapled copies, and apply the tray height limit 2: Clear the limit of stack capacity of the folded sheets, and apply the tray height limit 3: Clear the limit of stack capacity of both the stapled copies and folded sheets, and apply the tray height limit
Default Value		0

TRM-INIT	1	Set initialization timing: Booklet Trim
Detail		To set the timing to initialize the Booklet Trimmer. When 0 is set, initialization of the Booklet Trimmer is performed when power of the finisher is turned ON. When 1 is set, initialization of the Booklet Trimmer is performed at execution of the first saddle job after power-on of the finisher.
Use Case		Upon user's request (to reduce noise at power-on)
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		When 1 is set, booklet remains in the Booklet Trimmer may not be detected until a saddle job starts.
Display/Adj/Set Range		0 to 1 0: At power-on of the finisher, 1: At execution of the first saddle job
Default Value		0

PRESET	**1**	**preset**
Display/Adj/Set Range		0 to 10 0: External output, 1 to 3: Not used, 4: Oce Booklet maker BLM300c (SDD), 5: Oce Booklet maker BLM550 (Watkiss), 6 to 9: Not used, 10: Max Ring Binder
Default Value		0
SORTEDGE	**1**	**Limit to sort edge feed**
Detail		Several OEM devices can only handle short edge feed material. Setting this parameter to yes forces the printer to send only short edge feed material to the OEM outlet.
Display/Adj/Set Range		0 to 1 0: NO, 1: YES
Default Value		0
DOCORI	**1**	**Document deposition (face orientation)**
Display/Adj/Set Range		0 to 1 0: FACE UP, 1: FACE DOWN
Default Value		1
LSFST	**1**	**Last sheet first**
Detail		If set to no the printer will print the sheets in 1-N order. If set to yes the printer will print the sheets in N-1 order.
Display/Adj/Set Range		0 to 1 0: NO, 1: YES
Default Value		0
RCVRYMOD	**1**	**Recovery strategy**
Display/Adj/Set Range		0 to 1 0: Set based, 1: Page based
Default Value		1
HEADORI	**1**	**Header orientation**
Display/Adj/Set Range		0 to 1 0: Header up, 1: Header down
Default Value		0
STOPTYPE	**1**	**Stop type after full**
Detail		If set to soft-stop all sheets in process, at the reception of the full signal will be send to the external finisher. If set to soft-stop on set boundary all sheets in process, at the reception of the full signal will be send to the external finisher and additional sheets will be printed up to the first set boundary. If set to hard-stop before set boundary only the sheets of the set in process (excluding the last sheet) will be sent to the external finisher. If set to hard-stop on set boundary only the sheets of the set in process (including the last sheet) will be sent to the external finisher.
Display/Adj/Set Range		0 to 3 0: Soft-stop, 1: Soft-stop on set boundary, 2: Hard-stop before set boundary, 3: Hard-stop on set boundary
Default Value		0

C0PW	**1**	**C0 (Sheet exit) signal pulse-width**
Detail		Pulse-width for sheet exit signal (TE only)
Display/Adj/Set Range		5 to 250
Default Value		200
C1PW	**1**	**C1 (End of set) signal pulse-width**
Detail		Pulse-width for sheet exit signal (TE only)
Display/Adj/Set Range		5 to 250
Default Value		200
C3PW	**1**	**C3 (End of job) signal pulse-width**
Detail		Pulse-width for sheet exit signal (TE only)
Display/Adj/Set Range		5 to 250
Default Value		200
C0DLY	**1**	**C0 (Sheet exit) signal delay**
Detail		Delay between the LE/TE of the last sheet at the output of the printer and activation of sheet exit signal
Display/Adj/Set Range		0 to 5000
Default Value		0
C1DLY	**1**	**C1 (End of set) signal delay**
Detail		Delay between the LE/TE of the last sheet at the output of the printer and activation of end of set signal.
Display/Adj/Set Range		0 to 5000
Default Value		0

SORTER > MISC

C3DLY	**1**	**C3 (End of job) signal delay**
Detail		Delay between the LE/TE of the last sheet at the output of the printer and activation of end of job signal.
Display/Adj/Set Range		0 to 5000
Default Value		0
FSC2D	**1**	**First sheet delay after C2 (Cycle up)**
Detail		Minimum delay between activation of cycle up signal and the leading edge of the first sheet at the output of the printer.
Display/Adj/Set Range		0 to 60000
Default Value		0
LSC2D	**1**	**C2 (Cycle down) delay after last sheet**
Detail		Minimum delay between the TE of the last sheet at the output of the printer and the deactivation of the cycle up signal (= cycle down).
Display/Adj/Set Range		0 to 20000
Default Value		0
C4SZ	**1**	**C4 (Large paper format) threshold size**
Detail		The threshold size in X direction on which the large paper format signal is activated. (Defined in steps of 0.1 mm)
Display/Adj/Set Range		0 to 5000
Unit		mm
Default Value		2500
Amount of Change per Unit		0.1
C4SWDL	**1**	**C4 (Large paper format) switch delay**
Detail		Minimum delay between the TE of the last sheet at the output of the printer and the LE of the following sheet in case of a switch of paper format.
Display/Adj/Set Range		0 to 60000
Default Value		0
DFSHMIN	**1**	**Default minimum sheet interval time**
Detail		Minimum time between two sheet exit signals.
Display/Adj/Set Range		0 to 5000
Default Value		0
OPSHMIN	**1**	**Optional minimum sheet interval**
Detail		Minimum time between two sheet exit signals.
Display/Adj/Set Range		0 to 5000
Default Value		0
DFMINTIM	**1**	**Default minimum set interval time**
Detail		Minimum time between two end of set signals
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 60000
Default Value		0

SORTER > MISC

OPMINTIM	**1**	**Optional minimum set interval time**
Detail		Minimum time between two end of set signals
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 60000
Default Value		0
DFMINSET	**1**	**Default minimum delay between sets**
Detail		Minimum delay between the TE of the last sheet of a set at the output of the printer and the LE of the first sheet of the next set.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 60000
Default Value		0
OPMINSET	**1**	**Optional minimum delay between sets**
Detail		Minimum delay between the TE of the last sheet of a set at the output of the printer and the LE of the first sheet of the next set.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Caution		Set a value according to the connected External Finisher.
Display/Adj/Set Range		0 to 60000
Default Value		0
DFMINJOB	**1**	**Default minimum delay between jobs**
Detail		Minimum delay between the TE of the last sheet of a job at the output of the printer and the LE of the first sheet of the next job.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 60000
Default Value		0
OEMSNSR	**1**	**OEM Sensor edge selection Leading edge**
Detail		Edge of paper path sensor to base C0, C1 and C3 signal timing on.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 1 0: Leading edge, 1: Trailing edge
Default Value		0
TOUTS3	**1**	**Time out S3 (Sheet delivered)**
Detail		Maximum delay between the sheet exit signal and sheet delivered signal.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 10000
Default Value		0
TOUTS4	**1**	**Time out S4 (Set delivered)**
Detail		Maximum delay between the end of set signal and set delivered signal.
Use Case		When an External Finisher (such as a Ring Binder) is connected
Adj/Set/Operate Method		Enter the setting value, and then press OK key.
Display/Adj/Set Range		0 to 10000
Default Value		0

OPTION

BOARD > OPTION

MENU-1	**2**	**Dspl/hide of printer set menu level 1**
Detail		To set whether to display or hide the level 1 of printer setting menu.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0
MENU-2	**2**	**Dspl/hide of printer set menu level 2**
Detail		To set whether to display or hide the level 2 of printer setting menu.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0
MENU-3	**2**	**Dspl/hide of printer set menu level 3**
Detail		To set whether to display or hide the level 3 of printer setting menu.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0
MENU-4	**2**	**Dspl/hide of printer set menu level 4**
Detail		To set whether to display or hide the level 4 of printer setting menu.
Use Case		Upon user's request
Adj/Set/Operate Method		1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range		0 to 1 0: Hide, 1: Display
Default Value		0

9 Installation

How to Check this Installation Procedure

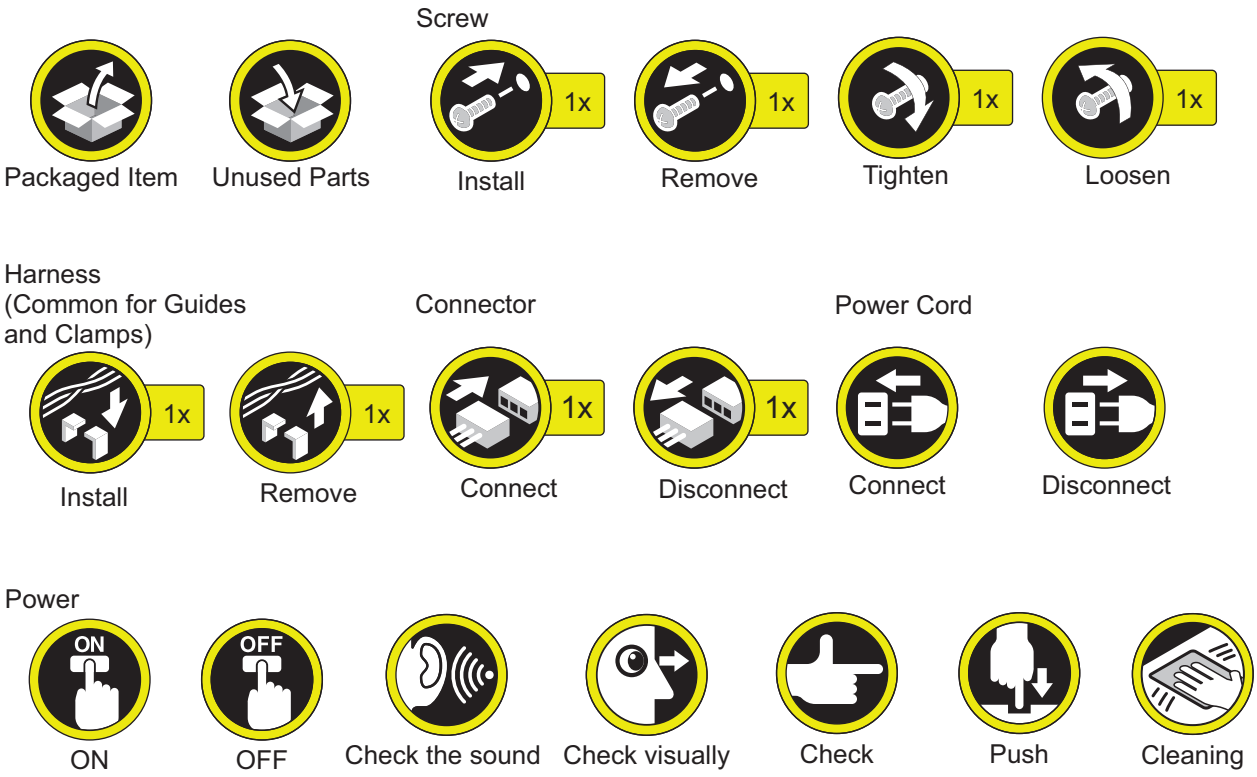
For PRISMAsync model, refer to PRISMAsync installation procedure.

Description on the Parts Included in the Package

The parts with a diagonal line in the contents list will not be used.

Symbols in the Illustration

The frequently-performed operations are described with symbols in this procedure.



Checking Before Installation

Following shows requirements for the installation site.
Therefore, it is desirable to see the installation site in advance before bringing in the machine to the user's site.

Checking Power Supply

1. There must be a properly grounded source of power that can be used exclusively by the following machines:
   - 208V/20A Model: 1 Power Plug
   - 200-240V/13A Model: 2 Power Plugs
2. Install this machine near the power outlet and leave sufficient space around the power plug so that it can be unplugged easily in an emergency.

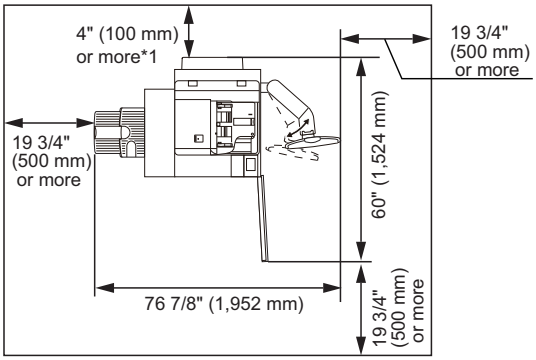
Checking the Installation Environment

1. The environment of the installation site must be in the range as shown below. Avoid installation near the faucet, water boiler, humidifier or refrigerator.
   Guaranteed range for operation/image, Temperature: 20.0 to 27.0 deg C, Humidity: 15% to 60%
2. It is desirable to hang curtains over the window if the machine is installed near the source of fire, a dusty area, or a place subject to generation of ammonia gas or direct sunlight.
3. Room odor can be bothering when running the machine for a long time in a poorly-ventilated room although the ozone amount generated while running this equipment does not harm human health. Be sure to provide adequate ventilation of the room to keep the work environment comfortable.

Checking Installation Space

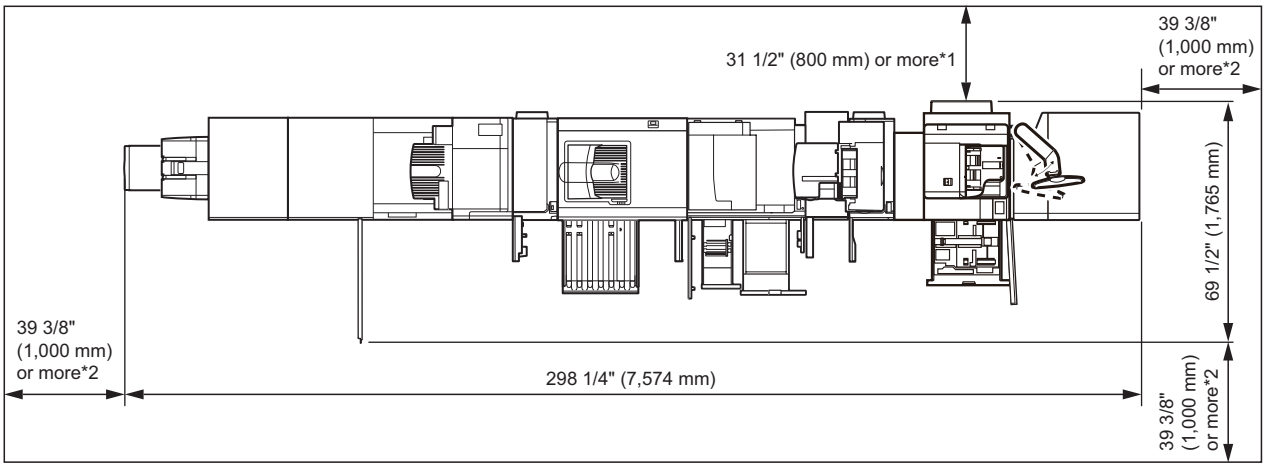
1. The caster of this equipment should be in contact with the floor. This equipment should be kept on the level.

2. The machine must be away from the wall by 100 mm or more to secure a sufficient space to operate the machine.
   - When the Copy Tray-R2, Duplex Color Image Reader Unit-K1 and Upright Control Panel-G1 are attached:



NOTE:
Make sure to provide at least 200 mm of space if you install Stack Bypass Alignment Tray-C2 and Long Sheet Tray-B1.

   - When the Two-Knife Booklet Trimmer-A1, Booklet Trimmer-F1, Booklet Finisher-W1 PRO, Paper Folding Unit-J1, High Capacity Stacker-H1, Perfect Binder-E1, Multi Function Professional Puncher-A1, Document Insertion Unit-N1, Duplex Color Image Reader Unit-K1, Upright Control Panel-G1 and Multi-drawer Paper Deck-C1 are attached:



NOTE:
In consideration of service work space, make sure to provide the following space if you attach one or more of the delivery-system / pickup-system options mentioned above:
- *1: 800 mm or more
- *2: 1000 mm or more

Allocate the amount of space indicated below if the machine is installed only with Finisher.
- *1: 100 mm
- *2: 500 mm

3. To install the host machine, install it in a well-ventilated place. Especially when there are multiple host machines, be sure to locate the machine where the machine is free from direct exhaust of other machines.
   Be sure to keep the machine away from the air-inlet duct which is used for ventilation of the room.

Points to Note at Installation Work

Take note of the following points when installing the host machine.

1. Moving the host machine from a cool place to a warm place can generate condensation, causing moisture beads on the metal surface. Using the host machine while the machine is condensed can cause image failure.
   Therefore, when moving the machine from a cool place to a warm place to install, unpack the host machine and leave it for 2 hours or more before the installation work so that the machine becomes used to the room temperature.
2. Be sure to work with a group of 4 or more people to install the host machine.

Points to Note When Moving This Host Machine

When moving this host machine after having unpacked it, be careful by placing a plate, etc. on areas with steps to prevent the casters from hitting those steps.
If the casters hit a step, the casters or the base plate may be deformed.

Order to Install the Host Machine and the Options

NOTE:
In the case of installing the Host Machine and the other options at the same time, follow the order as described below to install the options first so that the installation operability is improved.

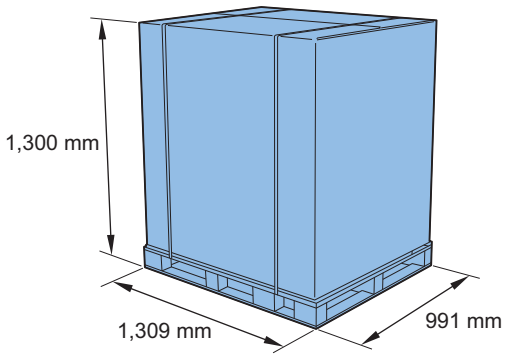
1. **Checking Before Installation**
2. **Unpacking**
3. **Checking the Contents**
4. **Installing the Image Reader Unit/Printer Cover**
5. **Installing the Upright Control Panel**
   When installing the Stack Bypass and POD Deck Lite simultaneously, it is efficient to install them before installing the Upright Control Panel.
6. **Multi-drawer Paper Deck (in the case of simultaneous installation)**
7. **Installing the External Cover**
8. **Installing the Fixing Feed Assembly**
9. **Before Installing the Waste Toner Container**
10. **Installing the Decurler Unit**
11. **Installing the Waste Toner Container**
12. **Installing the Process Unit**
13. **Installing the Black Developing Assembly**
14. **Installing the Noise Reduction Cover**
15. **Installing the Finisher Guides**
16. **Installing the Rear Curtain Unit**
17. **Installing the Others**
18. **Securing the Host Machine**
19. **Preparation for the Main Power Connection**
20. **Registering the Speed License**
21. **Turning ON the Main Power**
22. **Installing the Toner Container**
23. **Settings at Installation**
24. **Checking the K paper settings(Only for CHINA)**
25. **Installing the Cleaning Tool (Only when installing the Image Reader Unit)**
26. **Auto Gradation Adjustment**
27. **Register Paper to Adjust**
28. **Execution of Correct Shading**
29. **Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)**

30. **Image Position Adjustment**
31. **Setting the Paper Cassette**
32. **Checking the Network Connection**

Unpacking

CAUTION:
- The host machine weights Approx. 270 kg. For safety, be sure to work carefully to move and install the machine.
- Be sure to work with a group of 4 or more people to install the Host Machine.
- Be sure to do unpacking in a place where the height of the place is more than twice of the height of the package.

NOTE:
The dimension of the Host Machine and the transport container is as shown in the figure. Be sure to secure a space to unpack, and then start the installation work.



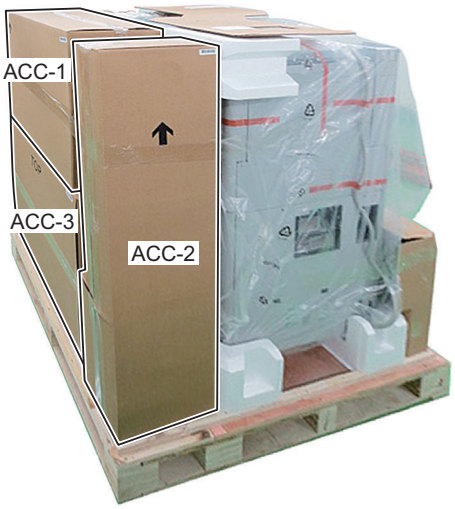
☐

1. **Remove the tapes attaching the host machine and the Accessory Box and bring down the Accessory Box from the pallet.**

CAUTION:
Be careful not to drop the Accessory Box when removing the tapes.

< Right Side of the host machine >

< Left Side of the host machine >

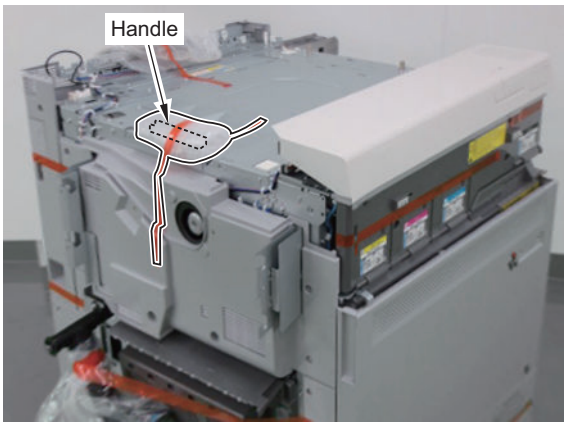


☐

2. **Pull the plastic bag all the way down.**

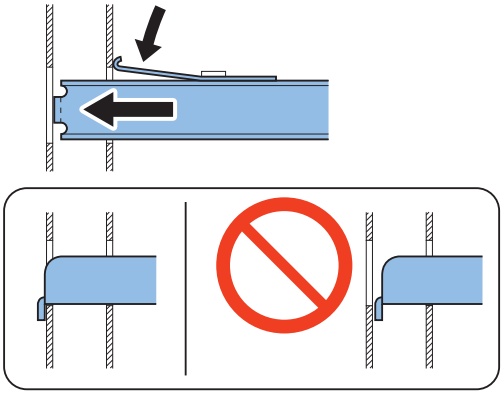
☐

3. **Remove the handle from the machine.**



☐

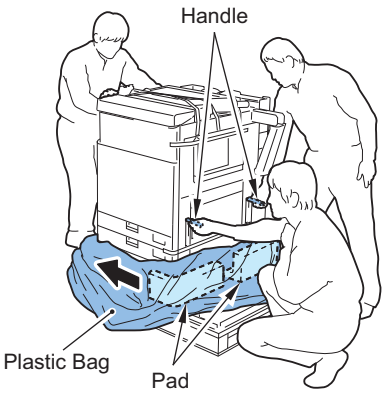
4. **Insert the handle into the slot at left rear side of the host machine while holding the Leaf Spring of the handle.**



☐

5. **Hold the handles at the right side of the host machine and lift the host machine to remove the pad.**
   Put the plastic bag aside in the direction of the arrow.

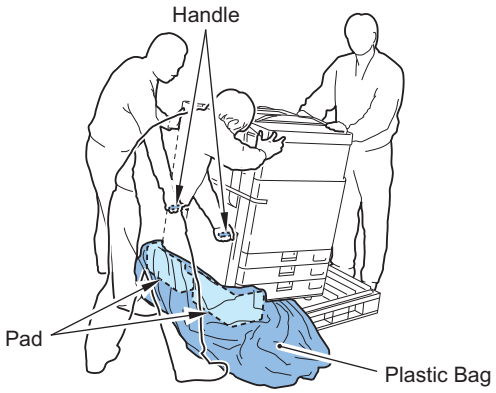
CAUTION:
Be sure not to lift the host machine too much.
Otherwise, it will lose the balance.



☐

6. **Hold the handles at the left side of the host machine and lift the host machine to remove the pad and the plastic bag.**

CAUTION:
Be sure not to lift the host machine too much.
Otherwise, it will lose the balance.



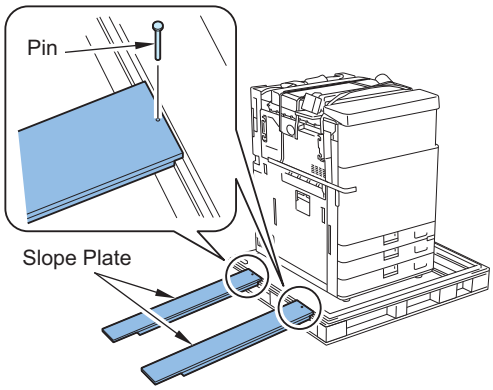
☐

7. **Take out the 2 Slope Plates stored at the right side of the Pallet and remove the 2 pins which are secured at the back of the Slope Plate with tape.**

☐

8. **Turn around the 2 Slope Plates to install as shown in the figure, and then fit the pin-holes of the pallet**

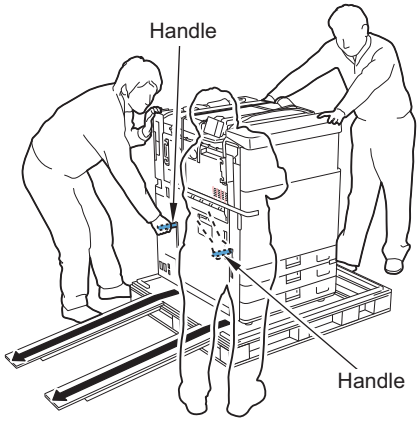
with the pin-holes of the Slope Plates to put the 2 pins into the holes.



☐

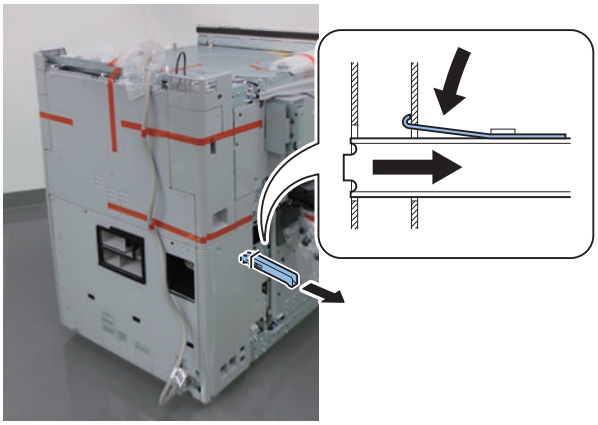
9. **Hold the handles at the left side of the host machine, and then, while supporting the corner of the host machine, fit the casters to the center of the Slope Plate to slowly bring the machine down.**

CAUTION:
Be careful not to make the casters off from the Slope Plate.

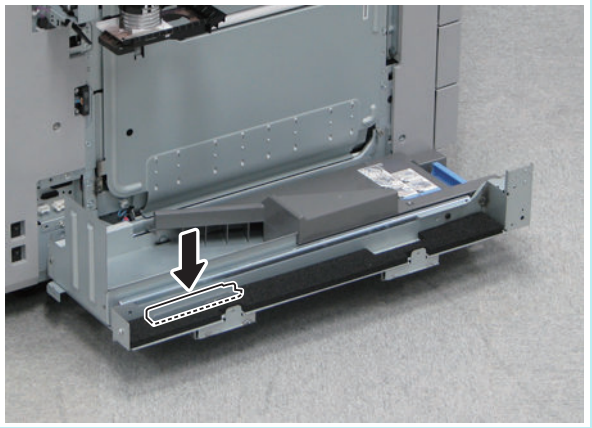


☐

10. **Remove the handle from the slot at left rear side of the host machine while holding the Leaf Spring of the handle.**



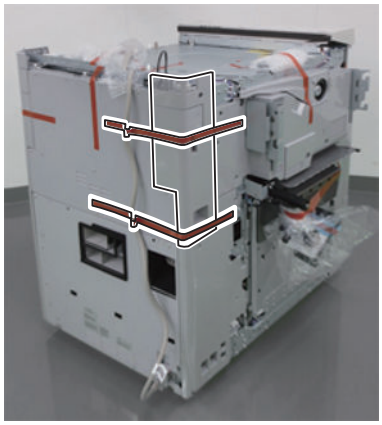
NOTE:
Store the handle after installing the Sub Frame Unit.



☐

11. **Remove the tapes to remove the Box Left Cover.**

CAUTION:
Because the Box Left Cover is not secured with the screw, be careful not to drop the Box Left Cover when removing the tapes.



☐

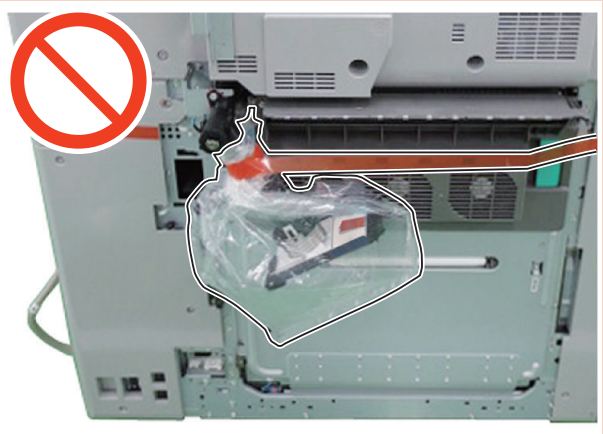
12. Remove the tapes to remove the Box Right Cover.

CAUTION:
Because the Box Right Cover is not secured with the screw, be careful not to drop the Box Right Cover when removing the tapes.

☐

13. Remove the tapes affixed to the outside of the machine and the packaging materials.

CAUTION:
Do not remove the plastic bag covering the Waste Toner Pipe in this step.



Checking the Contents

Accessory Box 1 (ACC-1)

CAUTION:
Do not unpack the Filter until just before installing the Ozone Filter.

NOTE:
- [15] to [17], [21] x 2: Used when installing the Reader Unit.
- [15], [16], [21] x 2: Used when installing the Printer Cover. If there is a possibility to replace the Printer Cover with the Image Reader Unit, be sure to keep [17].
- [10] to [14], [21] x 1, [25] to [28]: Used when installing the Upright Control Panel.
- Use the screws included in Accessory Box 1 when installing the parts included in Accessory Box 1, 2 and 6.

Installing the Image Reader Unit/Printer Cover

Follow the Installation Procedure of each option.

- Image Reader Unit: Refer to the Installation Procedure included in the package of the option.
- Printer Cover: Printer Cover: See the installation procedure of “Printer Cover-F1” on page 2480 in this manual.

Installing the Upright Control Panel

Product Name

Safety regulations require the product's name to be registered. In some regions where this product is sold, the following name may be registered instead.

- F712100

Check Item When Turning OFF the Main Power

Check that the main power is OFF.

1. **Turn OFF the main power switch.**
2. **Check that the display in the Control Panel and the lamp of the main power are turned off, and then disconnect the power plug.**

Checking the Contents

NOTE:
The color of some parts is different from the actual ones, but the shape, quantity and procedure are the same.

■ Contents of the Upright Control Panel-G1

☐ [1] Upright Control Panel X 1 	☐ [2] Control Panel Rear Cover 2 X 1 
☐ [3] Control Panel Rear Cover 3 X 1 	☐ [4] Hinge Inner Cover X 1 
☐ [5] Hinge Upper Cover X 1 	☐ [6] Hinge Lower Cover X 1 

☐ [7] Cable Clamp X 2 	☐ [8] Screw (W Sems; M4x10) X 2 
☐ [9] Screw (PTightening; M3x8) X 4 	☐ [10] Screw (TP ; M4x8) X 2 

<Others>

- Including guides

■ Contents of the Host Machine

Use the following parts included with the host machine's Accessory Box 1 (ACC-1).

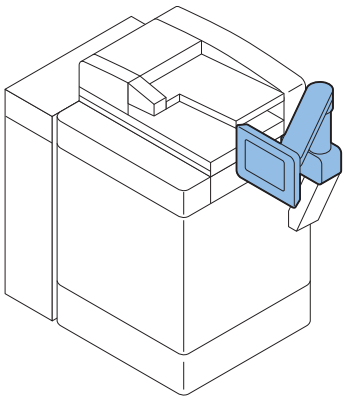
☐ [1] Upright Arm Unit X 1 	☐ [2] Base Front Cover X 1 
☐ [3] Base Rear Cover X 1 	☐ [4] Arm Rear Cover X 1 
☐ [5] Right Upper Rear Cover X 1 	☐ [6] Screw (TP; M4x10) X 2 

☐ [7] Screw (P Tightening; M4x10) X 2 	☐ [8] Screw (P Tightening; M3x8) X 2 
☐ [9] Screw (W Sems; M4x10) X 2 	☐ [10] Screw (RS Tightening; M4x8) X 1 

Points to Note at Installation

It is preferable to install the hinge of the Upright Control Panel Unit at a right angle (which is how it comes included in the package) so that it will be easier to install the Hinge Upper Cover.

Installation Outline Drawing



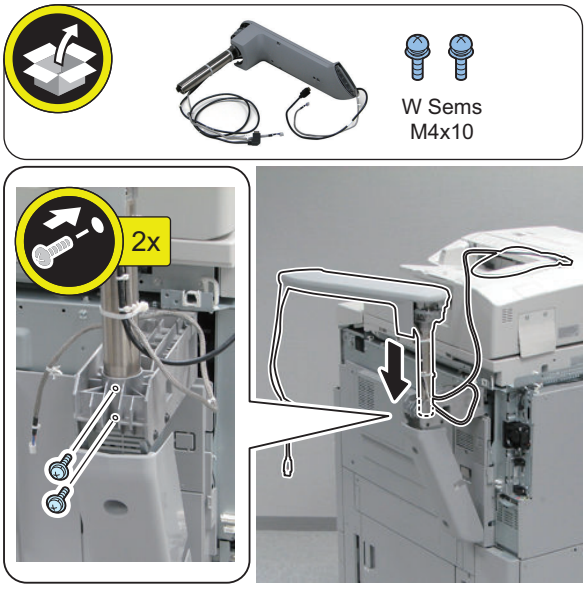
Installation Procedure

☐

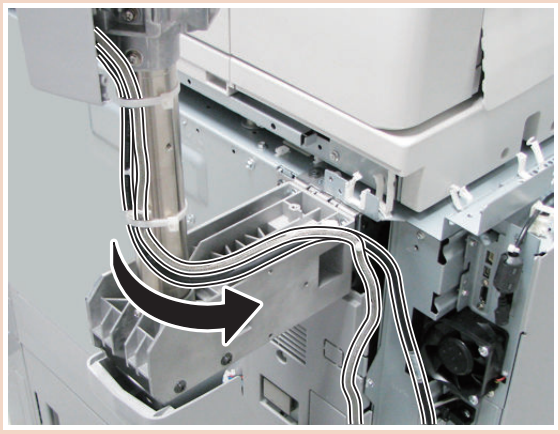
1. **Remove the tape and put the Upright Arm Unit vertically into the round hole of the Frame Base. (included with ACC-1 of the host machine)**

2. **Fit the Upright Arm Unit in the hole of the Frame Base to install the Upright Arm Unit.**
   - 2 Screw (W Sems; M4 x 10) (included with ACC-1 of the host machine)

CAUTION:
Be careful not to drop the screws because they are non-magnetic.

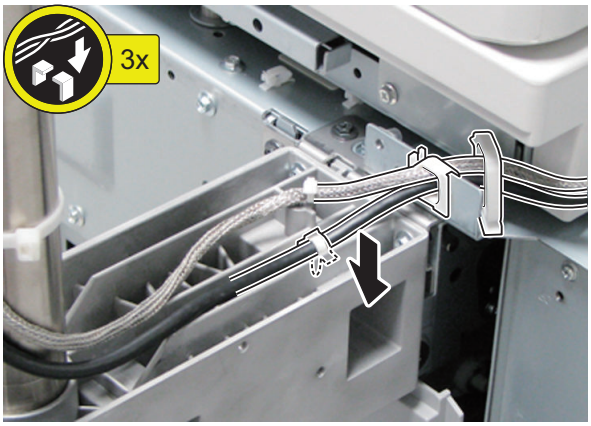


CAUTION:
Be sure to route the Power Supply Cable and the Control Panel Cable from the rear side.



☐

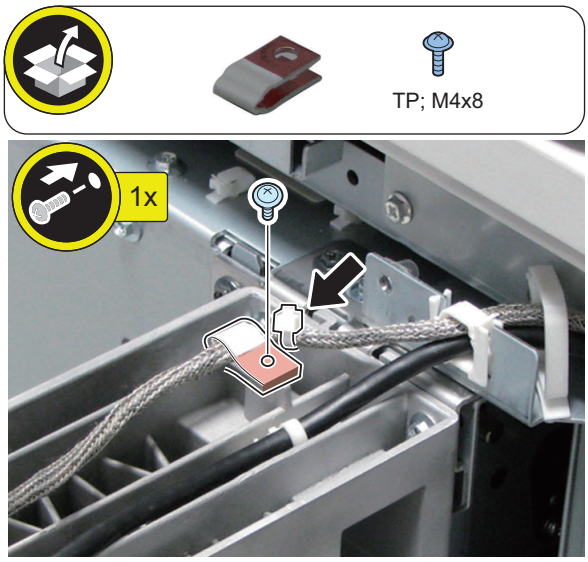
3. **Secure the Control Panel Cable and the Power Supply Cable.**
   - 1 Reuse Band (Control Panel Cable)
   - 1 Edge Saddle
   - 1 Wire Saddle



☐

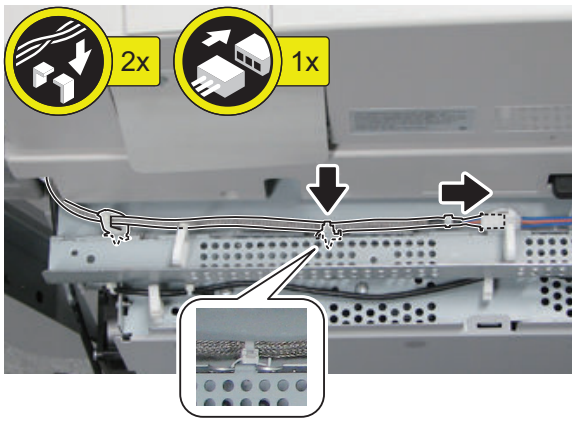
4. **Secure the Power Supply Cable with the Cable Clamp.**
   - 1 Screw (TP; M4 x 8)

CAUTION:
Secure the cable with the Harness Band on the host machine side.



☐

5. **Connect the connector of the Power Supply Cable of the Upright Arm, and secure the cable in place.**
   - 1 Wire Saddle
   - 1 Reuse Band



☐

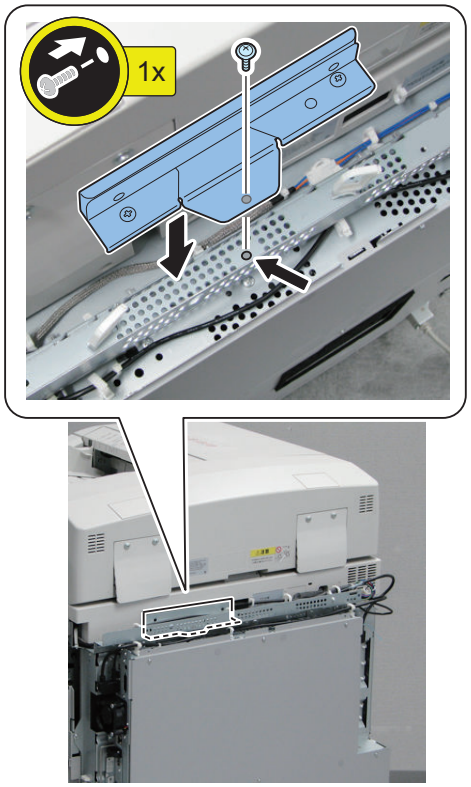
6. **When the Image Reader Unit is installed, perform steps 7 to 10 and then go to step 13 and later. When the Printer Cover is installed, go to step 11 and later.**

< In the case where the Image Reader is installed >

☐

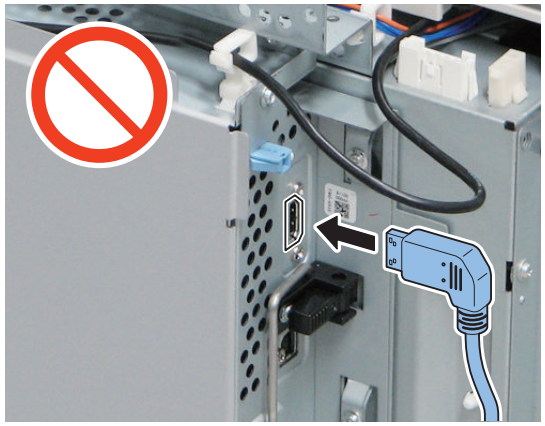
7. **Install the Reader Support Plate assembled at installation of the Image Reader Unit.**
   - 1 Screw (Use the screw removed of the Installation Procedure of the Image Reader Unit.)

NOTE:
When replacing the Laser Unit, it is necessary to lift down the Image Reader Unit from the host machine. At that time, be sure to store the Support Plate here because it will be needed later.



CAUTION:
Secure the cables according to the procedure from step 8 and later as there is a risk of malfunction.

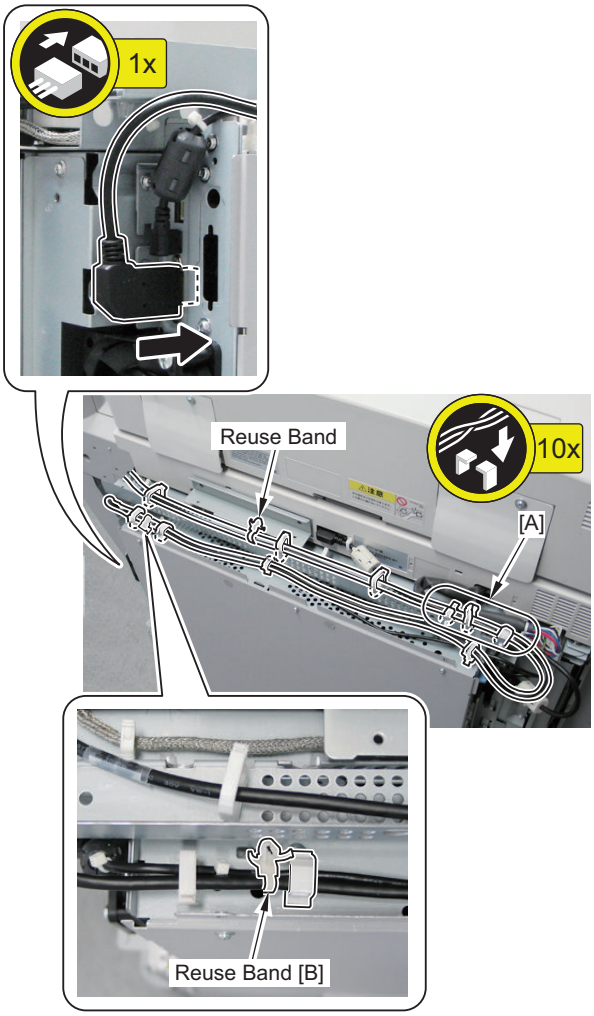
CAUTION:
Points to note when connecting the Control Panel Cable:
Do not connect the Control Panel Cable to the Image Reader Unit connection connector of the Controller Box 2. If it is connected by mistake, PCBs may become damaged.



☐

8. **Connect the Control Panel Cable to the Controller Box, and secure it together with the cables connected during installation of the Image Reader Unit.**
   - 10 Wire Saddles (Do not secure the [A] part in this step.)

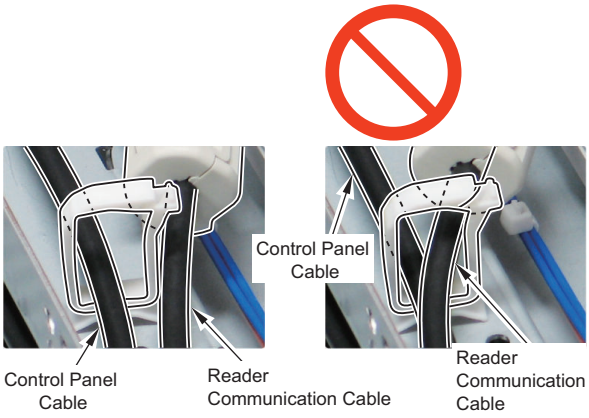
CAUTION:
- Do not secure the 2 Reuse Bands in place.
- Secure the Control Panel Cable so that the Reuse Band [B] is located as shown in the figure.

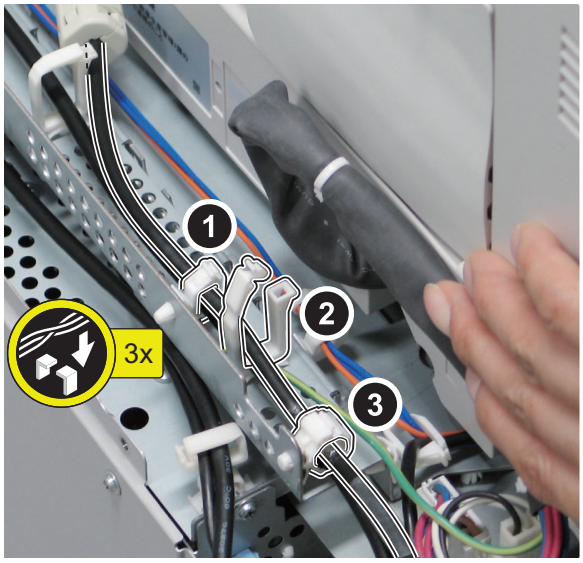


☐

9. **Secure the Reader Communication Cable. However,do not secure the "2" part in this step.**
   - 3 Wire Saddles

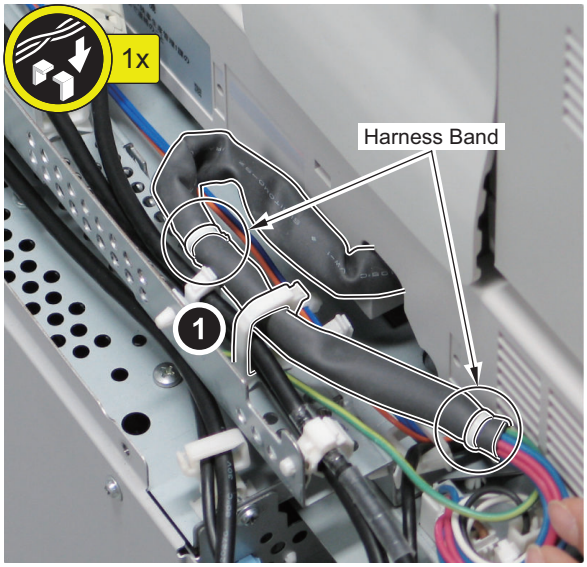
CAUTION:
Do not secure the Reader Communication Cable with the Wire Saddle around the ferrite core shown in the figure below.



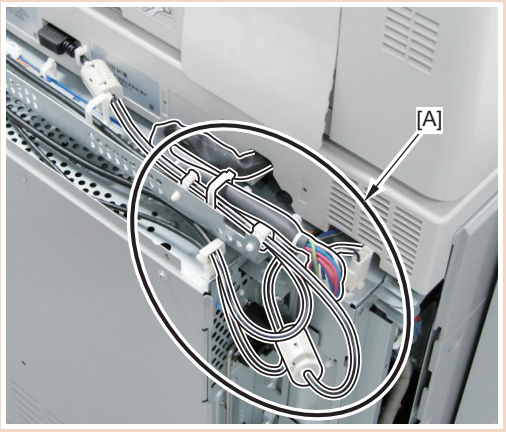


☐

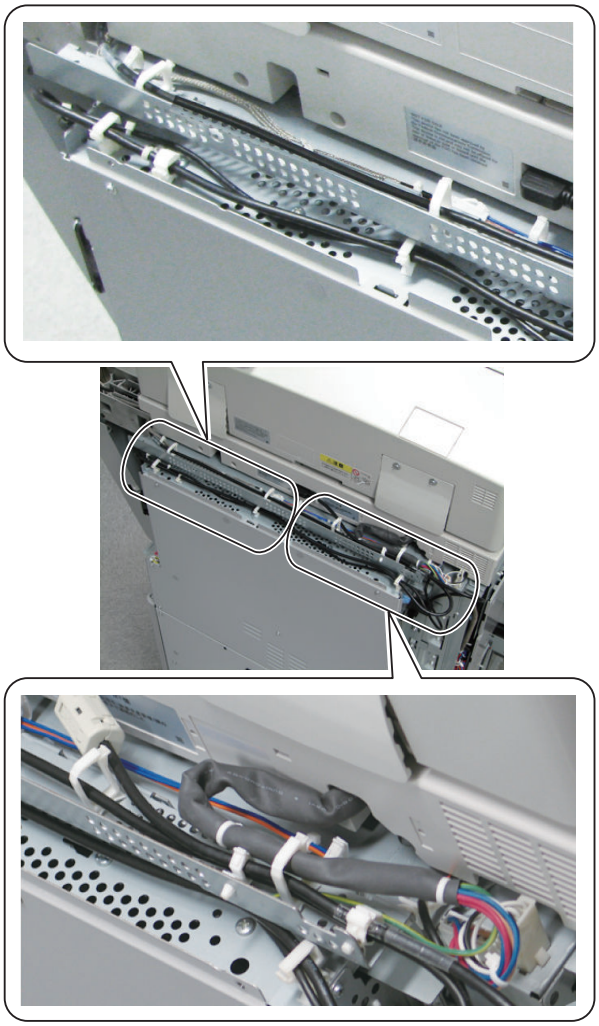
10. **Secure the part in the middle of the 2 Harness Bands attached to the Power Supply Cable using the Wire Saddle.**



CAUTION:
Be sure to allow extra slack of the cables at the [A] part for opening and closing the Controller Box.



< Overview of routing cables >

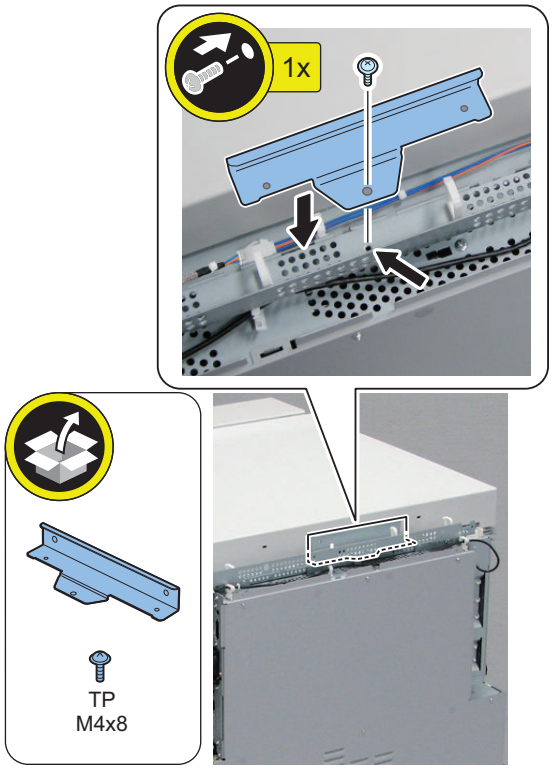


< In the case where the Printer Cover >

☐

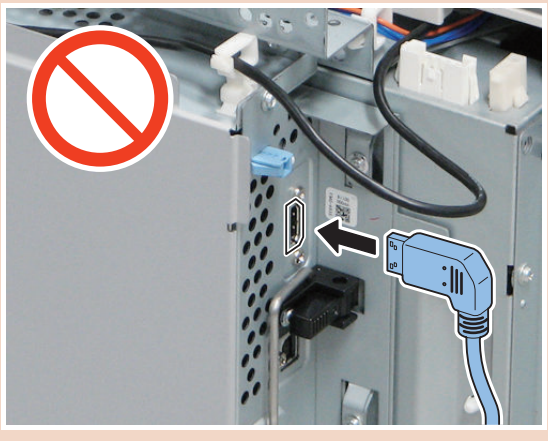
11. Install the Reader Mount (included with the Printer Cover).

- 1 Screw (TP; M4 x 8) (included with the Printer Cover)



CAUTION:
Secure the cables according to the procedure from step 12 and later as there is a risk of malfunction.

CAUTION:
Points to note when connecting the Control Panel Cable:
Do not connect the Control Panel Cable to the Image Reader Unit connection connector of the Controller Box 2. If it is connected by mistake, PCBs may become damaged.



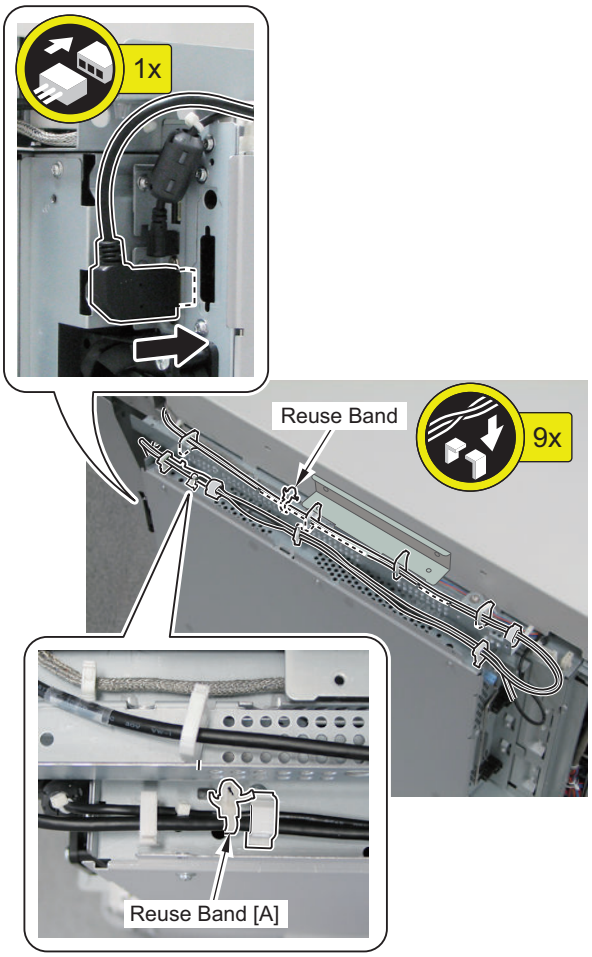
☐

12. Connect the Control Panel Cable to the Controller Box, and secure it together with the cables connected during installation of the Image Reader.

- 9 Wire Saddles

CAUTION:

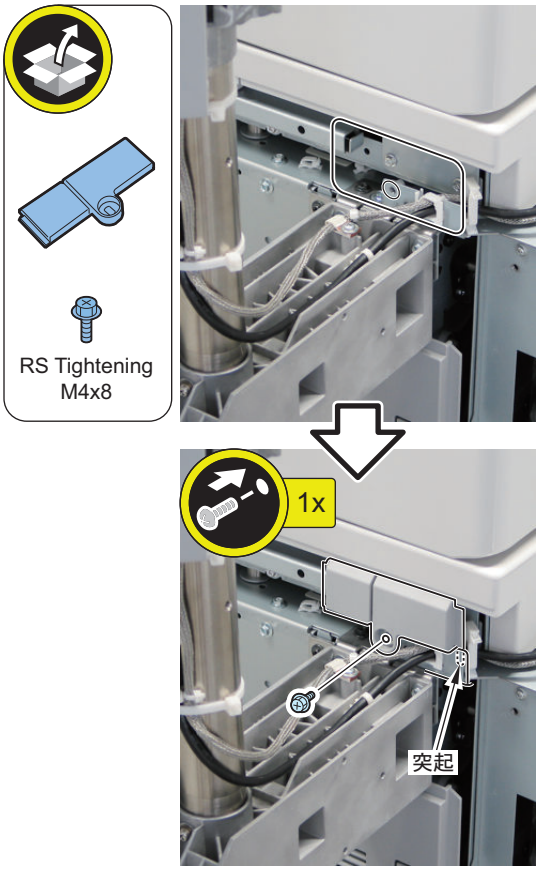
- Do not secure the 2 Reuse Bands in place.
- Secure the Control Panel Cable so that the Reuse Band [A] is located as shown in the figure.



☐

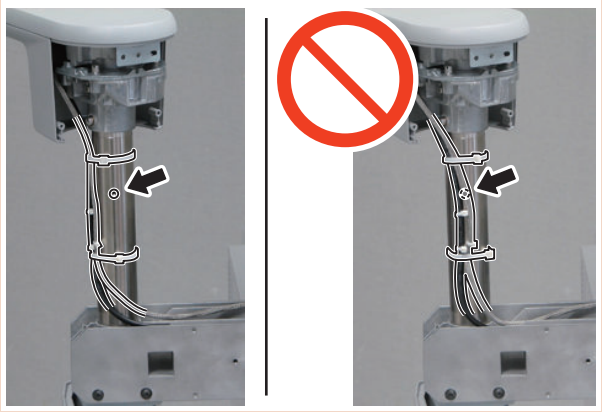
13. Install the Right Upper Rear Cover using a stubby screwdriver. (included with ACC-1 of the host machine)

- 1 Protrusion
- 1 Screw (RS Tightening; M4 x 8) (included with ACC-1 of the host machine)



CAUTION:

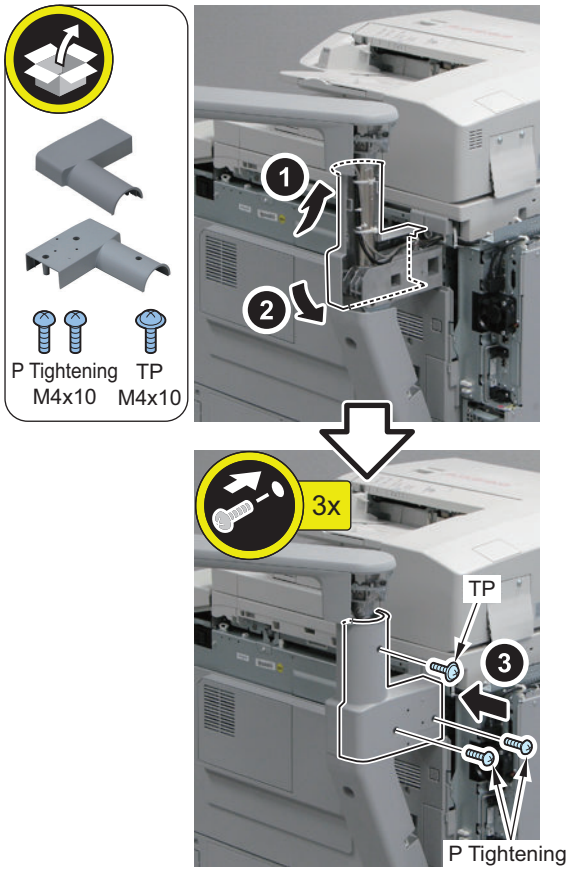
Be sure that the Control Panel Cable and the Power Supply Cable do not cover the screw hole.



☐

14. Install the Base Front Cover and the Base Rear Cover.(included with ACC-1 of the host machine)

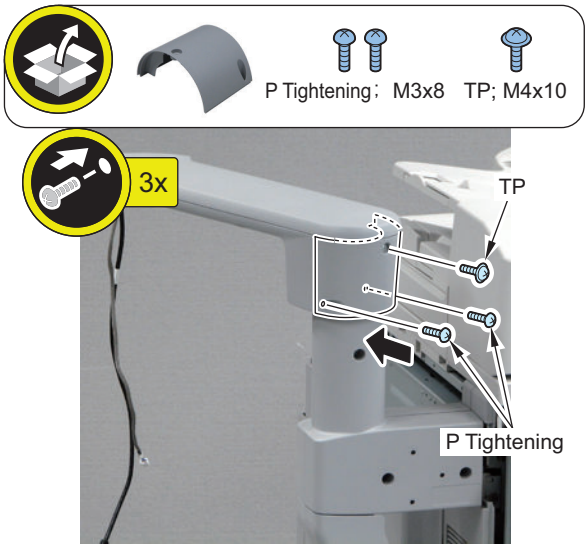
- 1 Screw (TP; M4 x 10) (included with ACC-1 of the host machine)
- 2 Screws (P Tightening; M4 x 10) (included with ACC-1 of the host machine)



☐

15. Install the Arm Rear Cover. (included with ACC-1 of the host machine)

- 1 Screw (TP; M4 x 10) (included with ACC-1 of the host machine)
- 2 Screws (P Tightening; M3 x 8) (included with ACC-1 of the host machine)

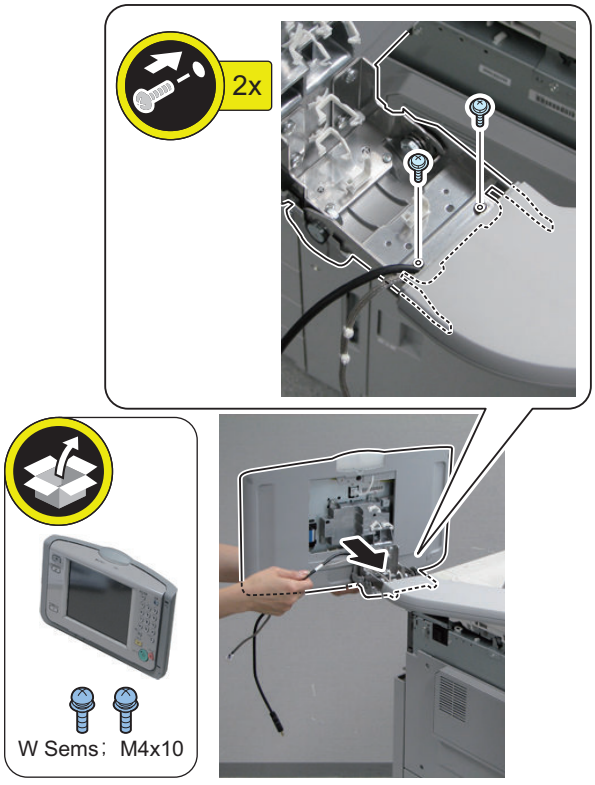


☐

16. Install the Upright Control Panel Unit.

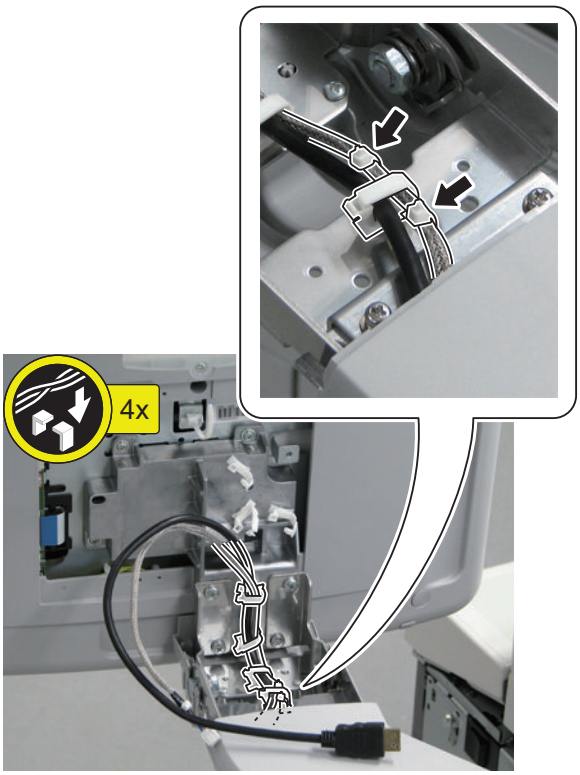
- 2 Screws (W Sems; M4 x 10)

CAUTION:
Be careful not to drop the screws because they are non-magnetic.



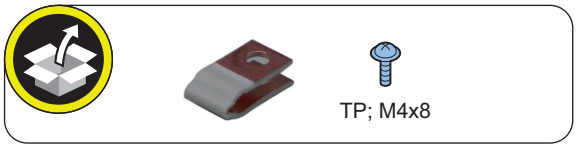
☐

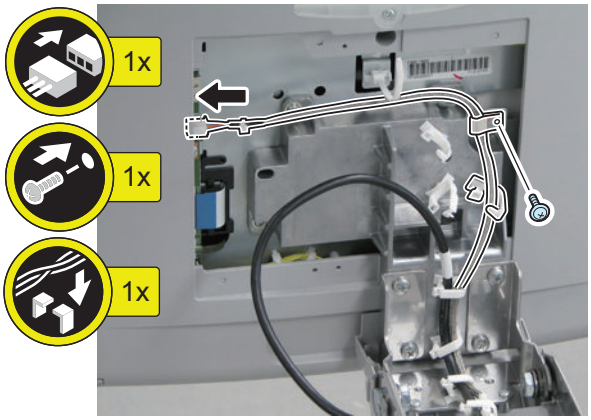
17. **Secure the Power Supply Cable and the Control Panel Cable.**
    - 4 Wire Saddles



☐

18. **Connect the Power Supply Cable, and secure the cable in place.**
    - 1 Cable Clamp
    - 1 Screw (TP; M4 x 8)
    - 1 Wire Saddle (Not to be closed here)

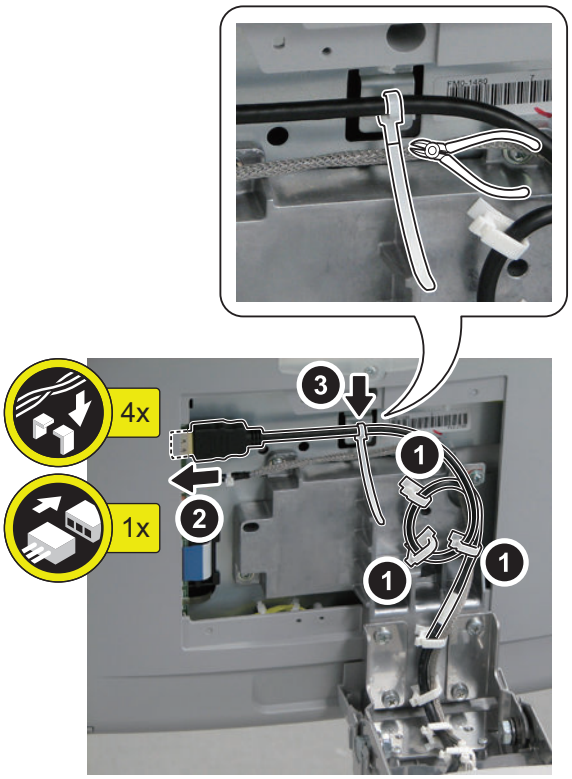




☐

19. **Secure the Control Panel Cable, and connect it.**
    - 3 Wire Saddles

20. **Secure the cable using the Reuse Band. (Cut the extra part)**

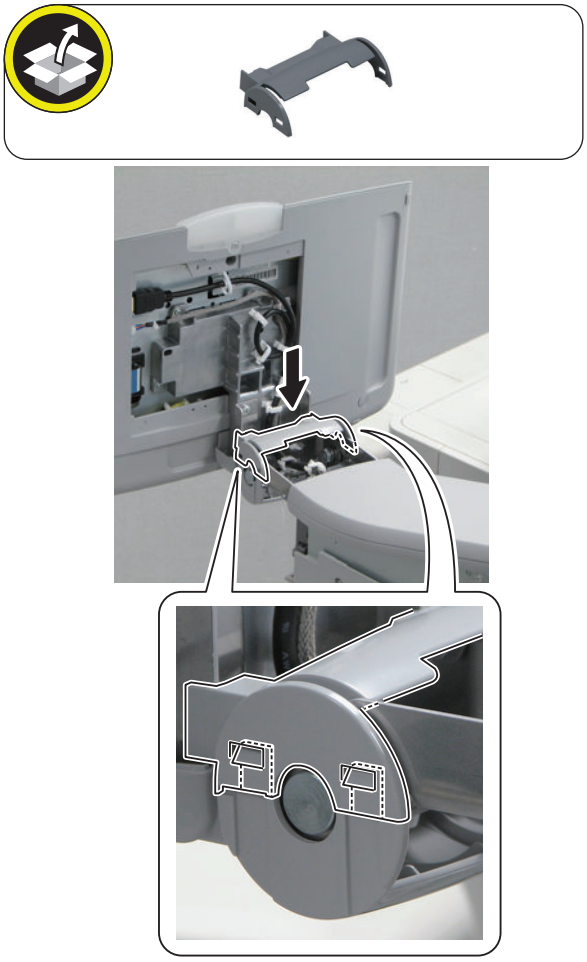


☐

21. Install the Hinge Inner Cover.

- 4 Claws

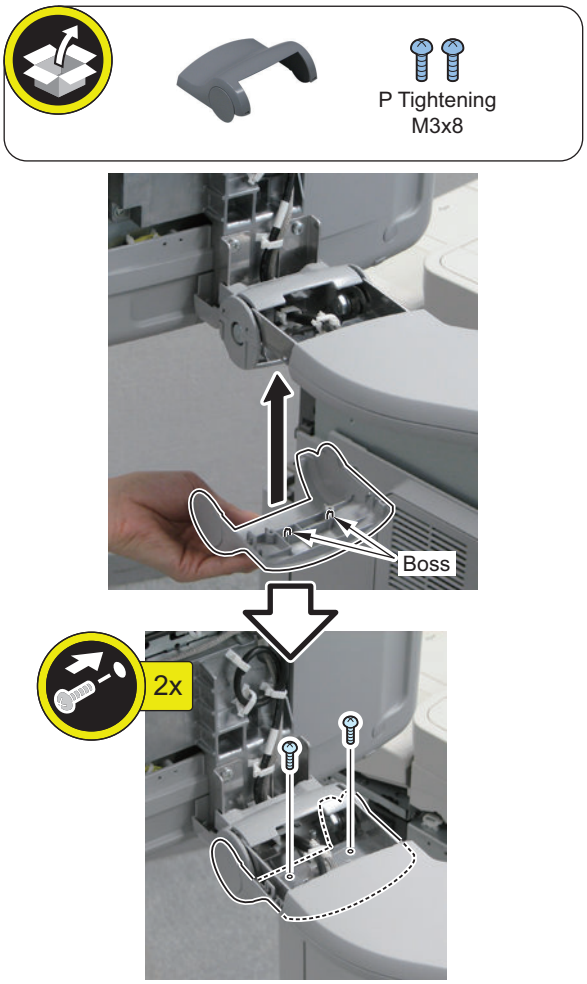
CAUTION:
Be sure that the 4 claws are properly fitted in the holes.



☐

22. Install the Hinge Lower Cover from the bottom side of the arm.

- 2 Bosses
- 2 Screws (P Tightening; M3 x 8)

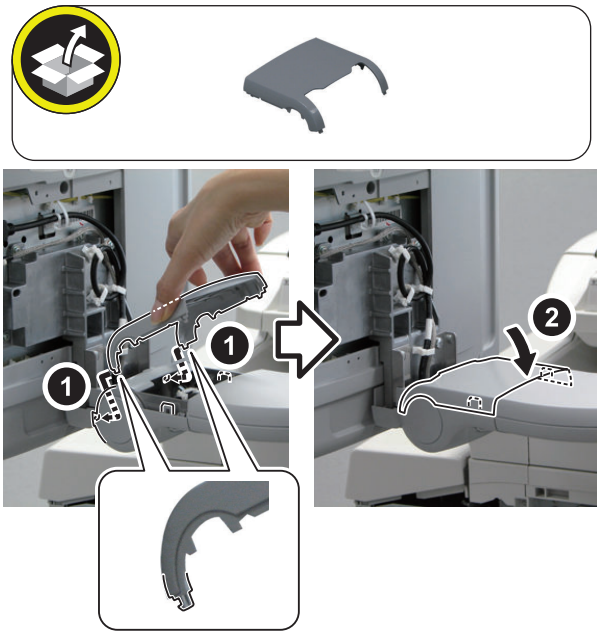


☐

23. Install the Hinge Upper Cover.

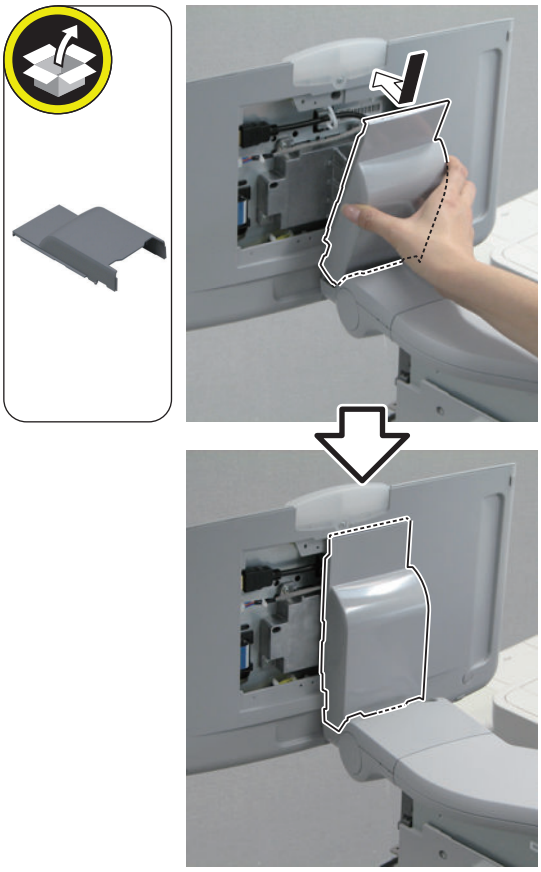
- 4 Claws

CAUTION:
Be sure to set the Control Panel Unit back at a right angle because otherwise it will be difficult to install the Hinge Upper Cover.



☐

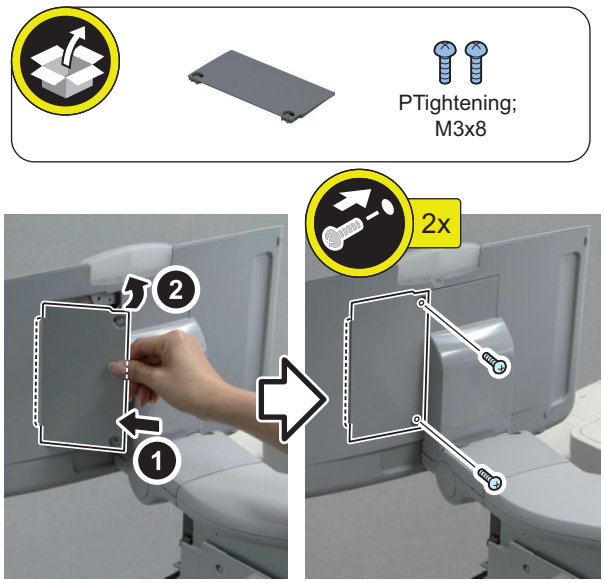
24. Install the Control Panel Rear Cover 3.



☐

25. Install the Control Panel Rear Cover 2.

- 2 Screws (P Tightening; M3 x 8)



Installing the Host Machine

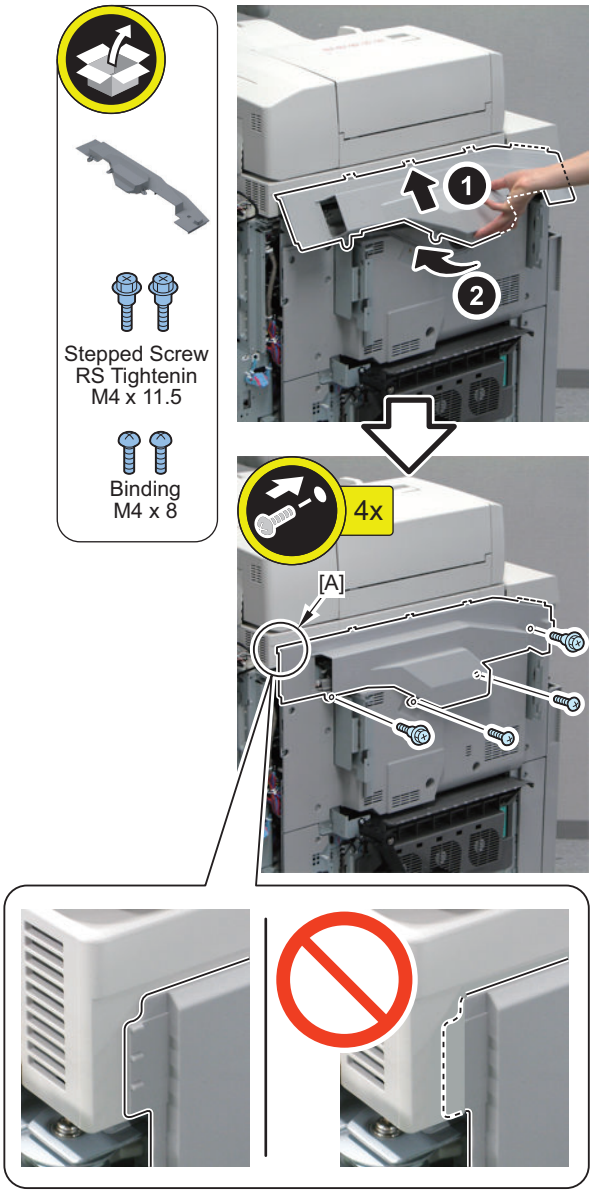
Installing the External Cover

☐

1. Install the Left Upper Cover. (included with ACC-2)

CAUTION:
Be sure to place the protrusion [A] of the cover on the outside of the Reader Left Cover.

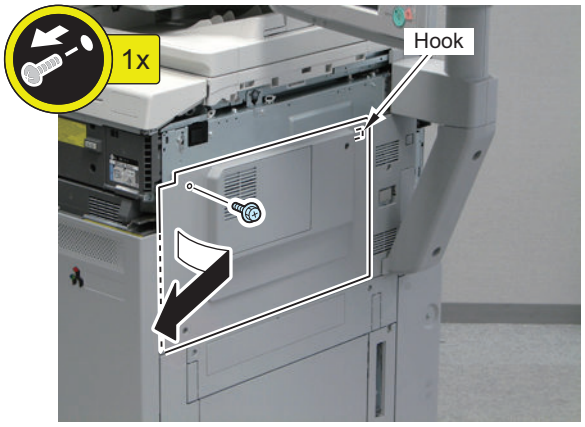
- 4 Protrusions
- 2 Stepped Screws (RS Tightening; M4x 11.5) (included with ACC-1)
- 2 Screws (Binding; M4 x 8) (included with ACC-1)



☐

2. Remove the Right Middle Front Cover 1.

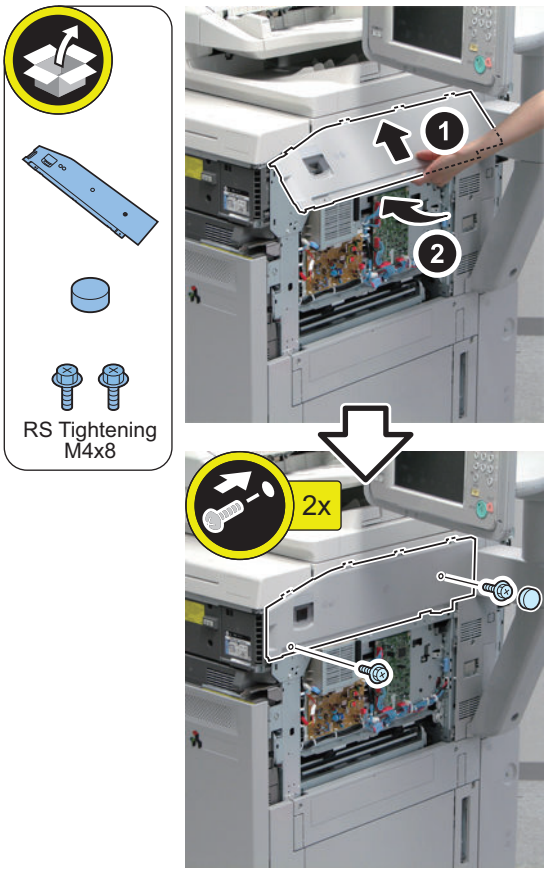
- 1 Screw
- 1 Hook



☐

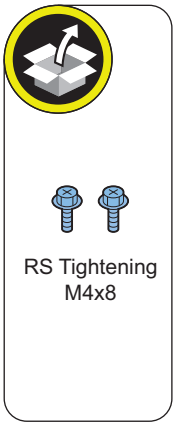
3. Right Upper Front Cover.(included with ACC-2)

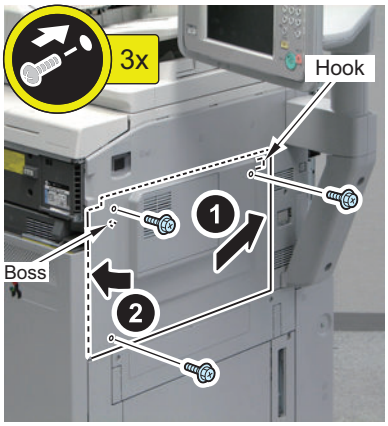
- 4 Protrusions
- 2 Screws (RS Tightening; M4 x 8) (included with ACC-1)
- 1 Rubber Cap (included with ACC-1)



☐

4. **Install the Right Middle Front Cover 1.**
   - 1 Hook
   - 1 Boss
   - 1 Screw (The screw removed in step 2)
   - 2 Screws (RS Tightening; M4 x 8) (included with ACC-1)

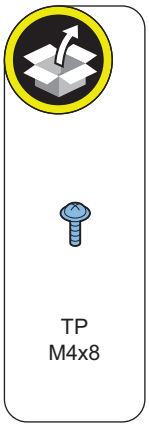


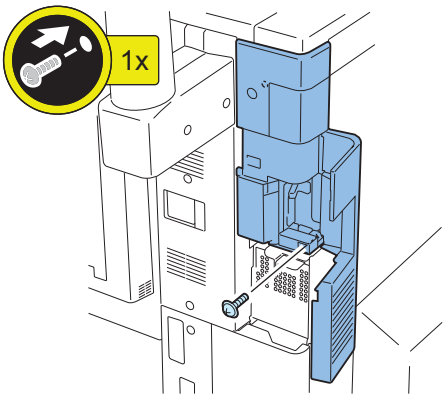


☐

5. **Open the HDD Cover and secure the Box Right Cover removed at unpacking.**
   - 1 Screw (TP; M4x8) (included with ACC-1)

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.





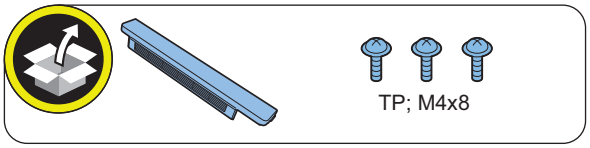
☐

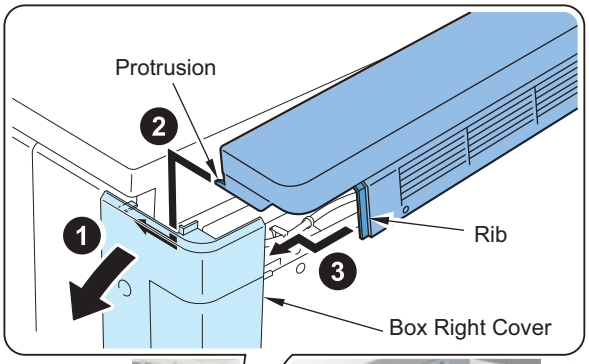
6. **Close the HDD Cover.**

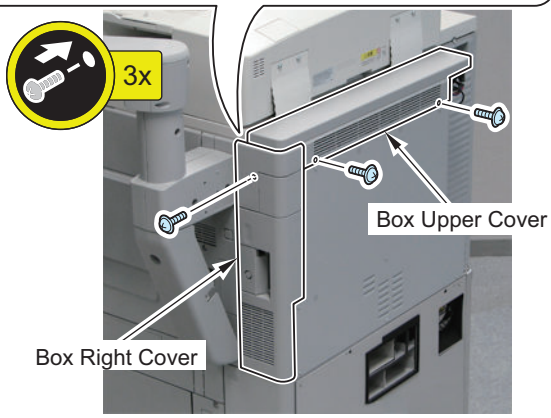
☐

7. **Install the Box Upper Cover. (included with ACC-2)**
   - 1 Protrusion
   - 1 Rib
   - 2 Screws (TP; M4x8) (included with ACC-1)

8. **Install the screw (TP; M4x8) packed with ACC-1 to secure the Box Right Cover.**





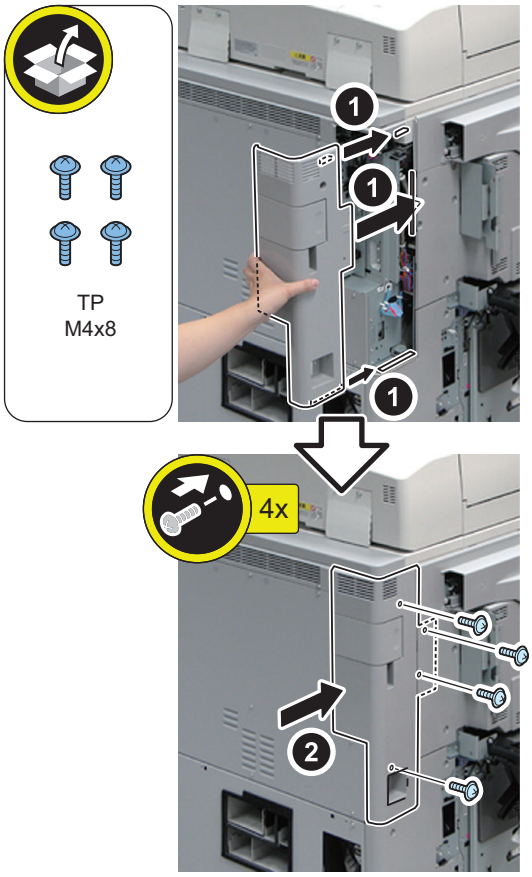


NOTE:
When installing the imagePRESS Server F200/G100 at the same time, it is efficient to install the Open I/F PCB and the Interface Cable included with imagePRESS Server F200/G100 before installing the Box Left Cover (see "Installing the Open I/F PCB" in the Installation Procedure included with imagePRESS Server F200/G100).

☐

9. **Install the Box Left Cover removed when unpacking the machine.**
   - 4 Screws (TP; M4x8) (included with ACC-1)

CAUTION:
Be careful not to trap the cable.



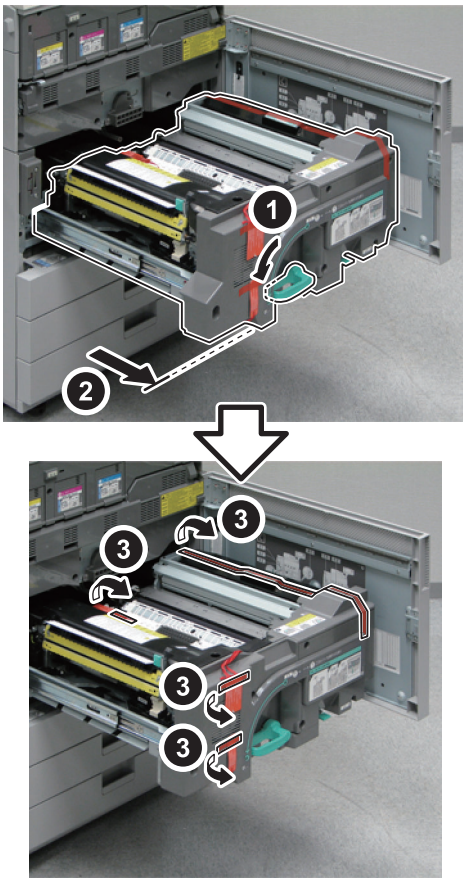
Installing the Fixing Feed Assembly

☐

1. **Open the Front Cover.**
2. **Remove the tape affixed on Release Lever.**

☐

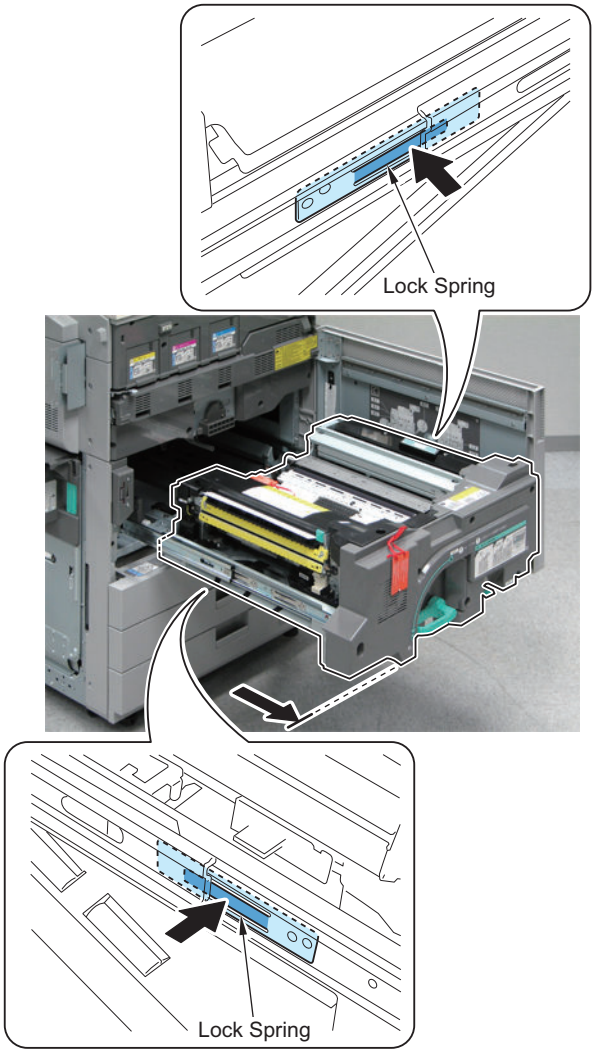
3. **Release the Release Lever, pull out the Fixing Feed Unit until it stops and remove the tapes.**



☐

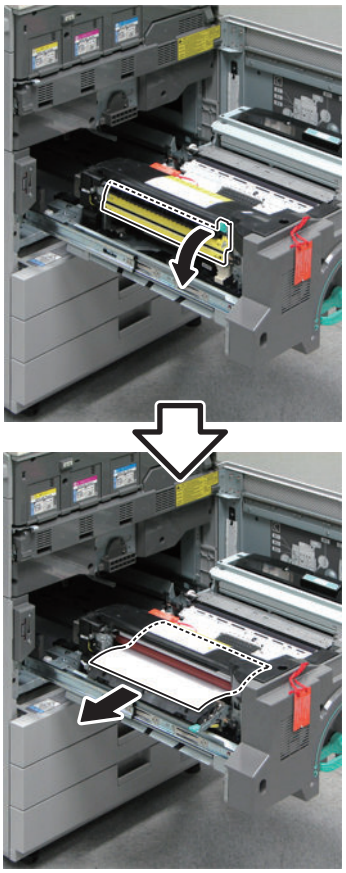
4. **Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.**

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.



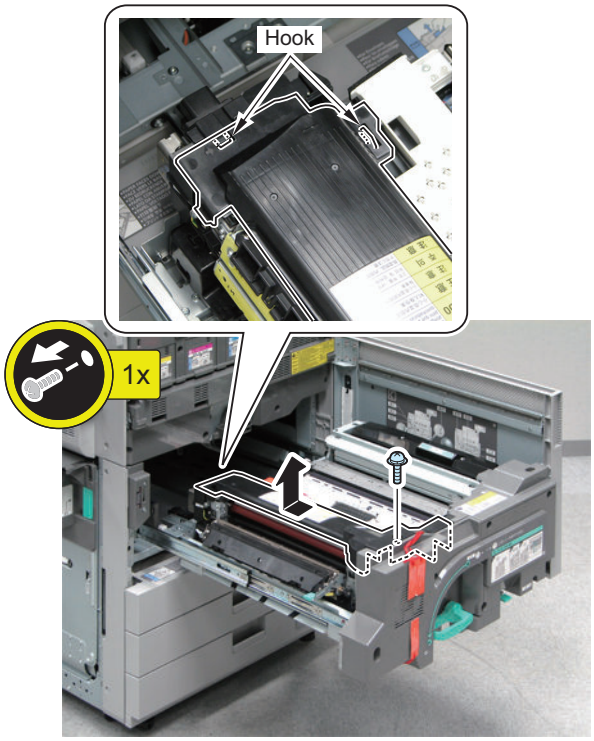
☐

5. **Open the Inner Delivery Unit and remove the paper.**



☐

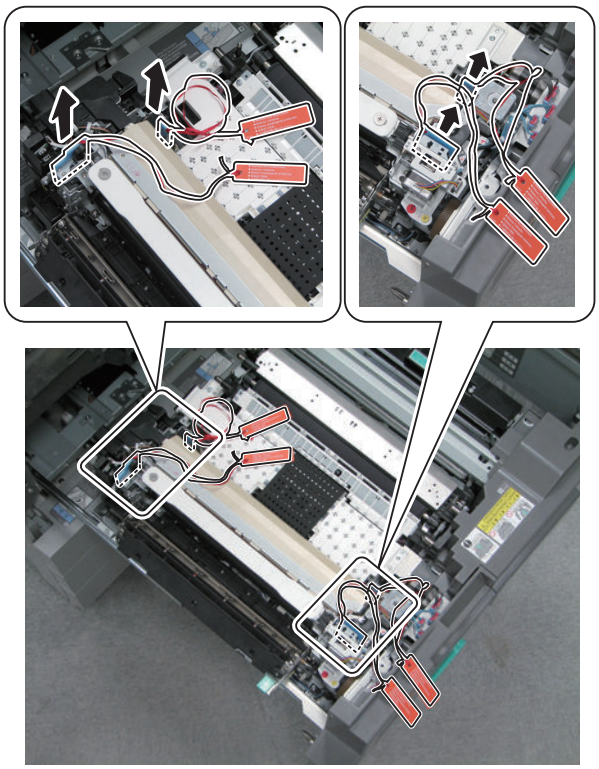
6. **Remove the Fixing Upper Cover.**
   - 1 Screw
   - 2 Hooks



☐

7. **Remove the tapes, and then remove the 4 packaging materials with tags.**

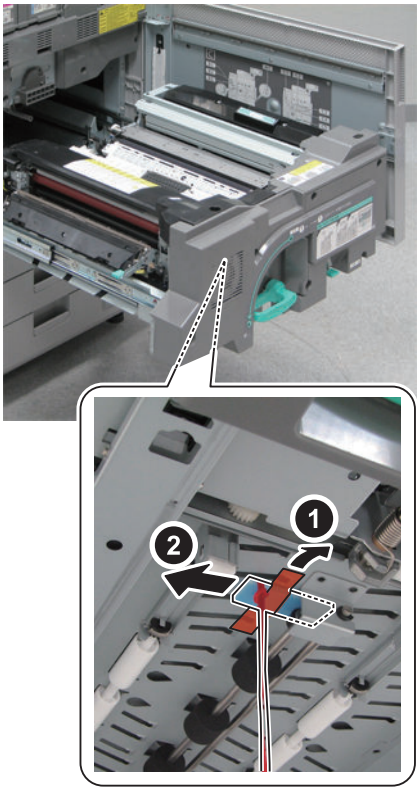
NOTE:
It is desirable to keep the removed member because it may be used when moving the host machine.



☐

8. **Remove the tape and packaging material on the bottom side of the Fixing Feed Unit.**

NOTE:
It is desirable to keep the removed member because it may be used when moving the host machine.



☐

9. **Install the Fixing Upper Cover. (1 Screw)**
10. **Close the Inner Delivery Unit.**

NOTE:
When installing the Auto Gradation Sensor, it is efficient to do so before returning the Fixing Feed Unit (see the Installation Procedure included with the Auto Gradation Sensor).

11. **Push the Fixing Feed Unit into the host machine and lock the Release Lever.**
12. **Close the Front Cover.**

Before Installing the Waste Toner Container

☐

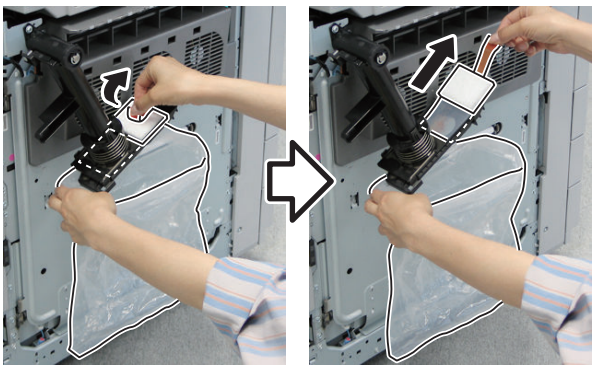
1. **Remove the plastic bag covering the Waste Toner Pipe.**

☐

2. **Remove the packing material over the plastic bag with its mouth open.**

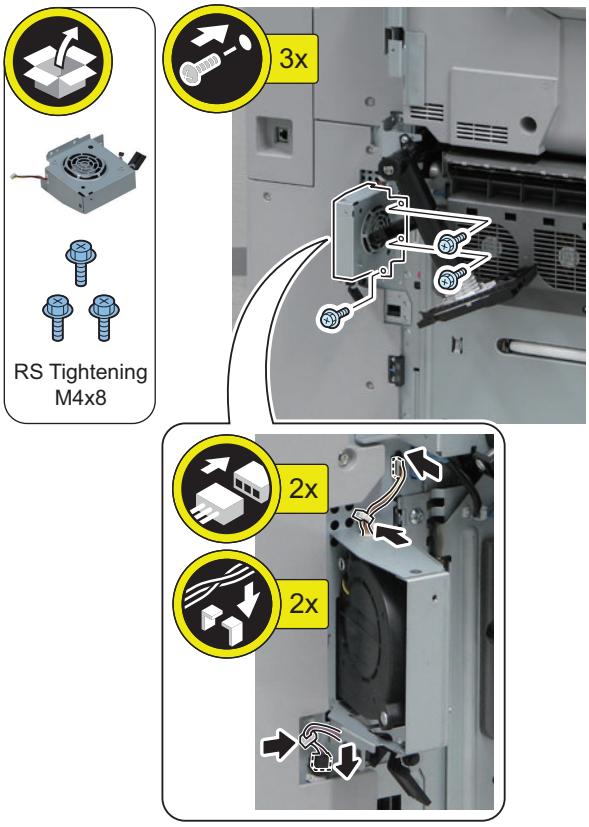
CAUTION:
Be careful not to spill toner because toner is attached to the packing material.

NOTE:
It is desirable to keep the removed member because it may be used when moving the host machine.



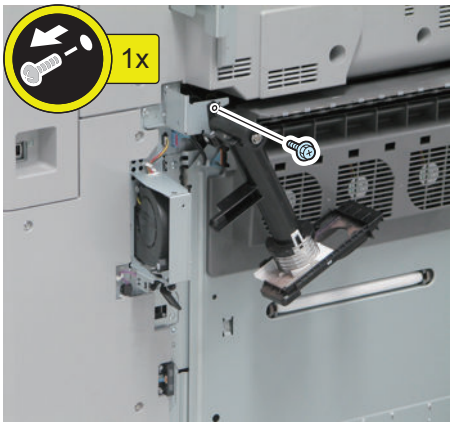
☐

3. **Install the Delivery Lower Cooling Fan. (included with ACC-1)**
   - 3 Screws (RS Tightening; M4x8) (included with ACC-1)
   - 2 Connectors
   - 2 Wire Saddles



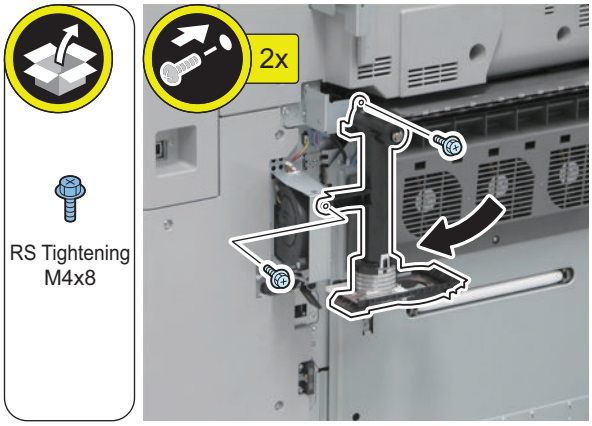
☐

4. **Remove the screw of the Waste Toner Pipe. (The removed screw will be used in step 5.)**



☐

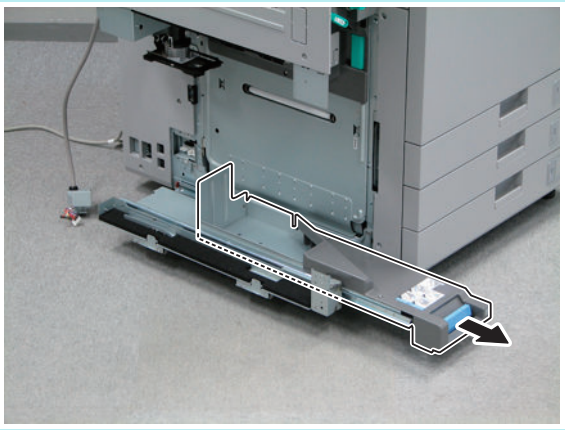
5. **Install the Waste Toner Pipe by putting it in vertical state.**
   - 1 Screw (Use the screws removed in step 4.)
   - 1 Screw (RS Tightening; M4x8) (included with ACC-1)

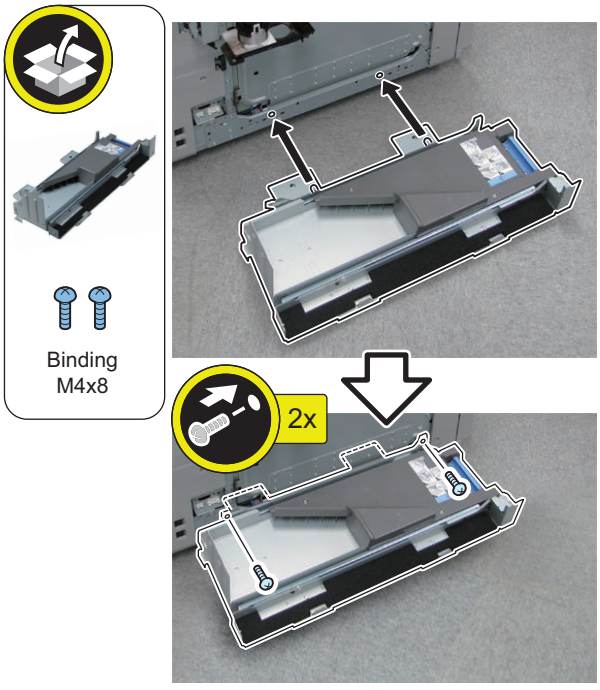


☐

6. **Install the Sub Frame Unit. (included with ACC-6)**
   - 2 Bosses
   - 2 Screws (Binding; M4x8) (included with ACC-1)

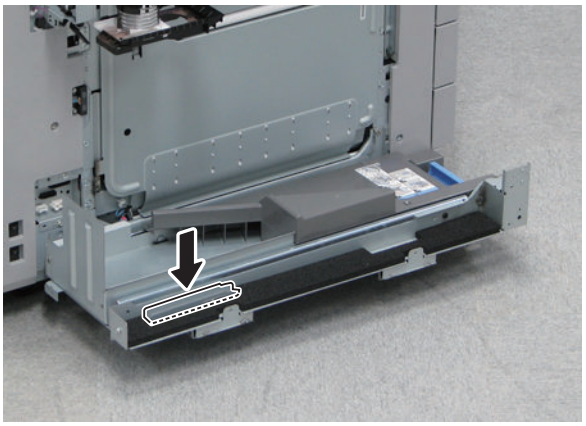
NOTE:
If it is difficult to tighten the screws on the rear side of the machine, release the lever and pull out the slider so that they can be tightened easily.





☐

7. **Store the handle.**



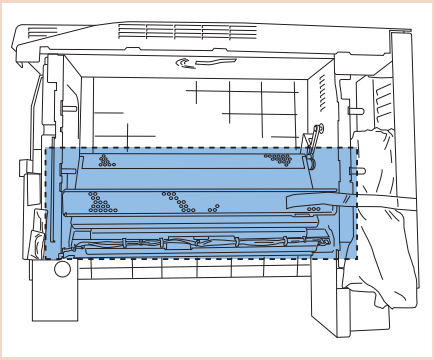
Installing the Decurler Unit

■ Unpacking

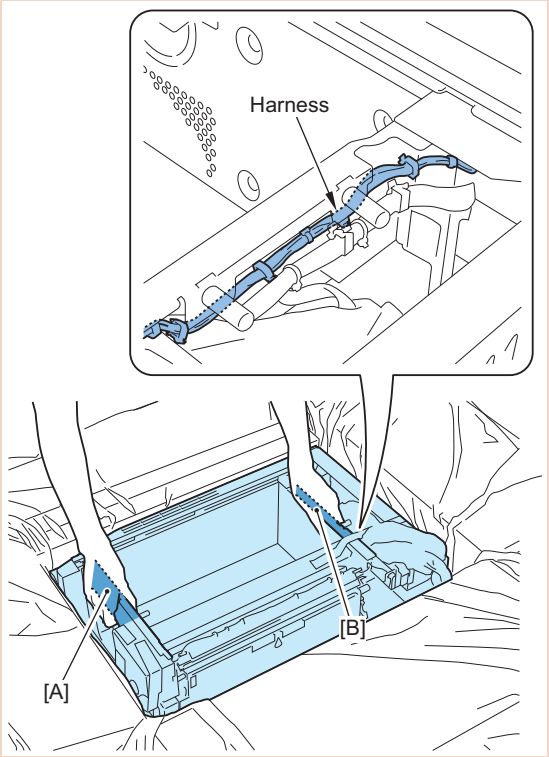
NOTE:
Be sure to open the plastic bag before starting the work. Holding the Decurler Unit (included in ACC-3) while it is still in the plastic bag may cause slipping.

CAUTION:

- Do no hold inside the dashed frame as shown in the figure; otherwise, it can cause the Paper Path Guide deformed.



- Be sure to hold Frame [A] and Frame [B] areas of the Decurler Unit. Avoid the harness to hold [B] area; otherwise, the harness can be damaged.

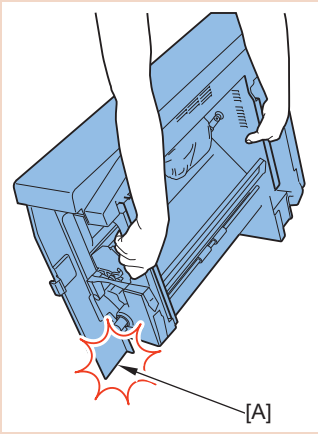


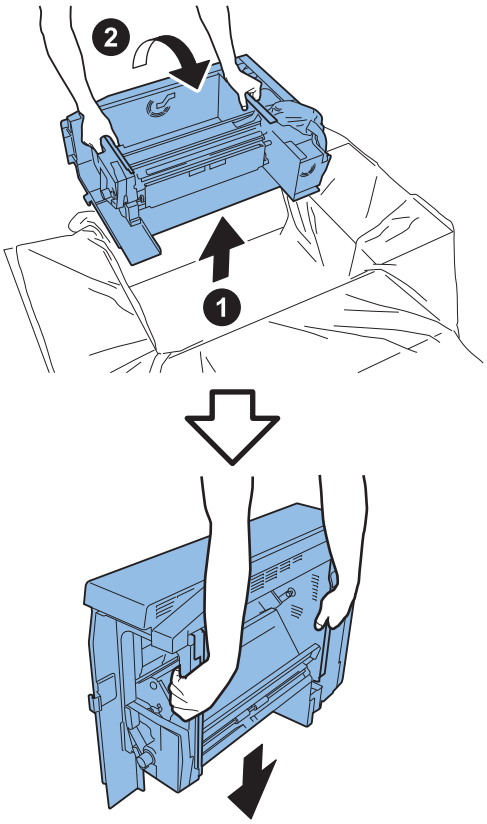
□

1. **Lift the Decurler Unit straight upward, and then place the bottom of the Decurler Unit facing down.**

CAUTION:

Do not move the Decurler Unit while making [A] area as the supporting point nor place it on the floor while the Unit is tilted; otherwise, [A] area can be deformed.

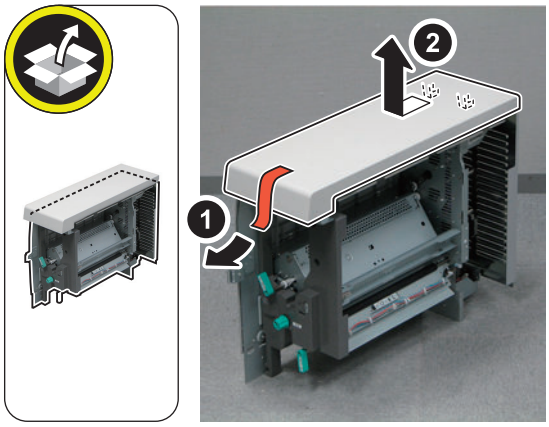




☐

2. **Remove the tape and the Decurler Upper Cover. (The removed Decurler Upper Cover will be used in step 11 of <Installation Procedure>.)**

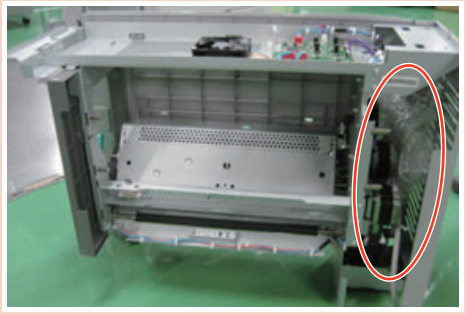
CAUTION:
Because the Decurler Upper Cover is not secured with the screw, be careful not to drop the Decurler Upper Cover when removing the tapes.



☐

3. **Remove the tapes.**

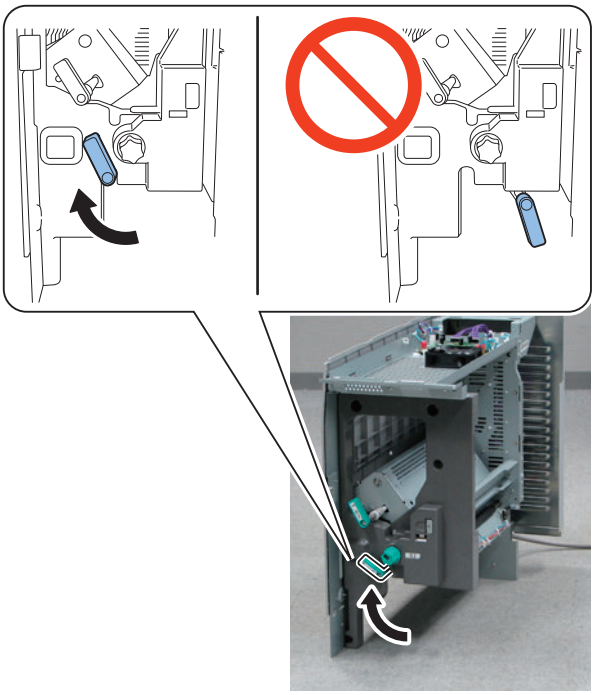
CAUTION:
Be sure to remove the packaging material from the Decurler Cable.



■ Installation Procedure

☐

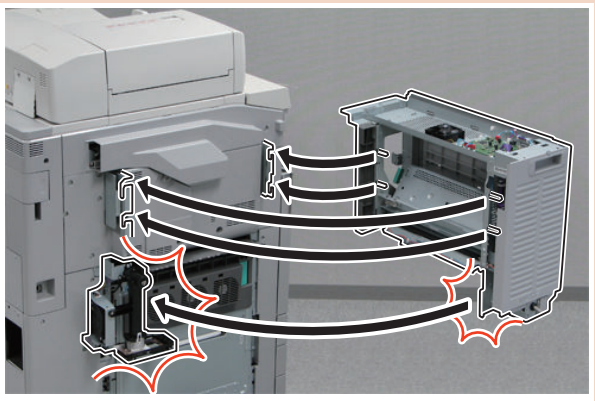
1. **Before installing the Decurler Unit to the Host Machine, check that the Jam Process Lever is positioned as shown in the figure.**

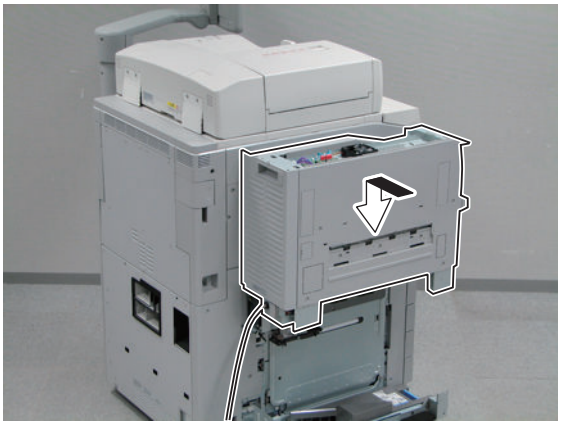


☐

2. **Put the 4 shafts of the Decurler Unit into the 4 U-shaped slots on the left side of the host machine, and install the equipment.**

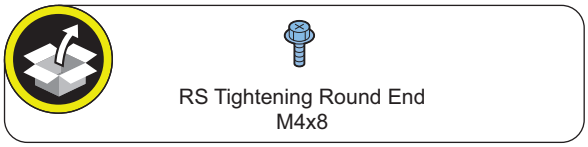
CAUTION:
Be careful not to come in contact with Waste Toner Pipe and Delivery Lower Cooling Fan at installation.

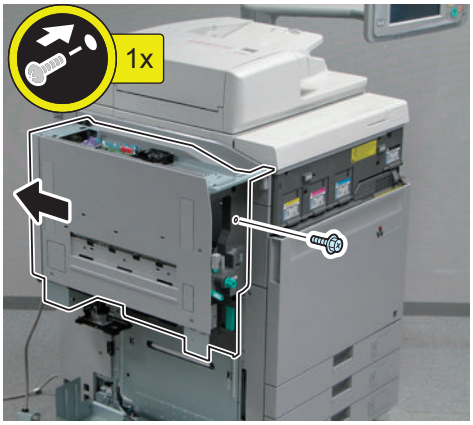




☐

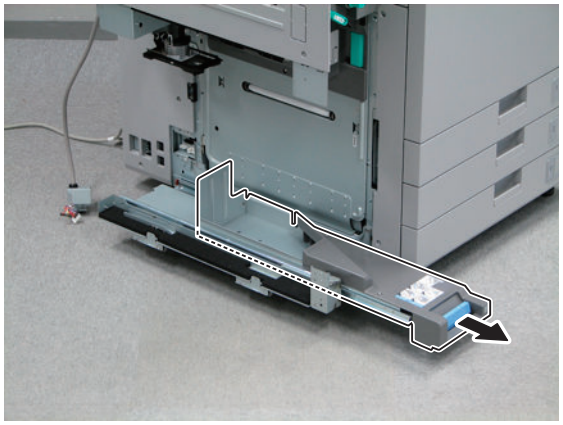
3. **Shift the Decurler Unit in the direction of the arrow, and fix it while pushing it on the Buffer Mounting Plate (Front).**
   - 1 Screw (RS Tightening Round End; M4x8) (included with ACC-4)





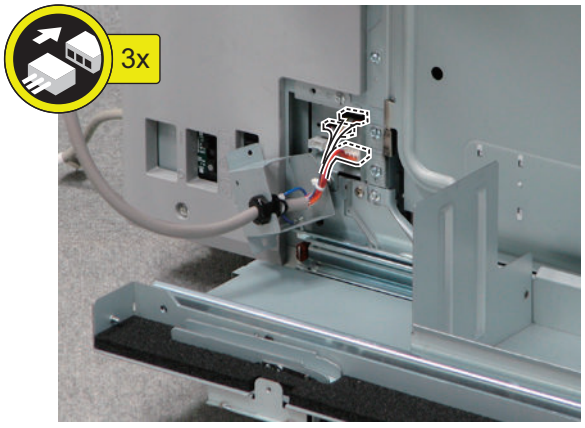
☐

4. **Release the lever and pull out the slider.**



☐

5. **Connect the 3 Connectors to the host machine.**

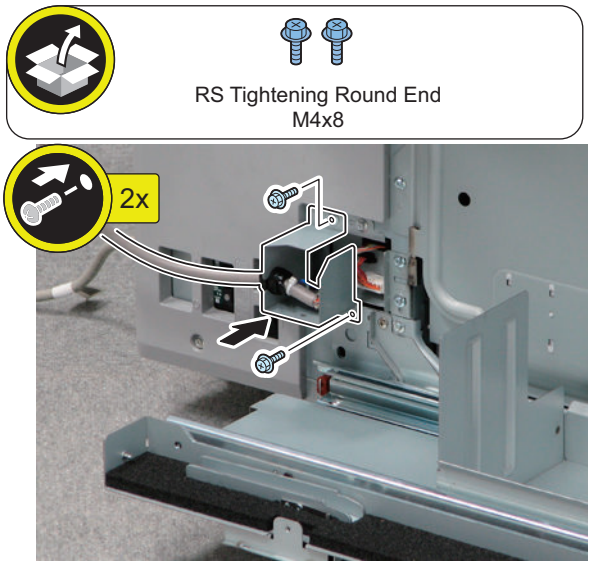


☐

6. Install the Connecting Harness Stopping Plate.

- 2 Screws (RS Tightening Round End; M4x8) (included with ACC-4)

CAUTION:
Be careful not to trap the harnesses with the Connecting Harness Stopping Plate.



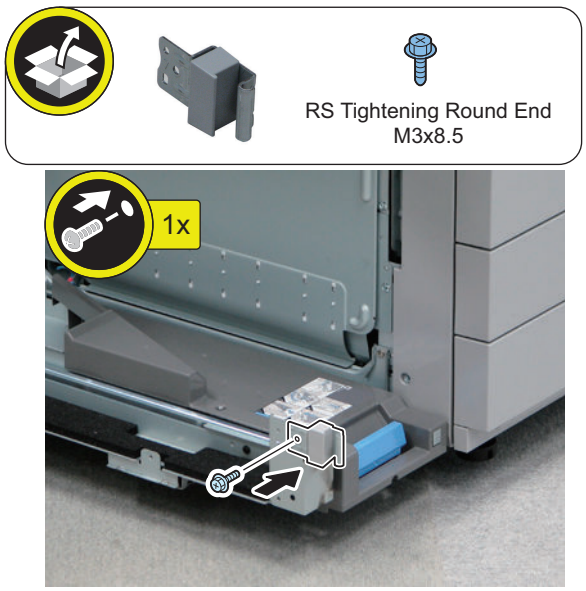
☐

7. Return the slider.

☐

8. Install the Front Cover Hinge Unit. (included with ACC-4)

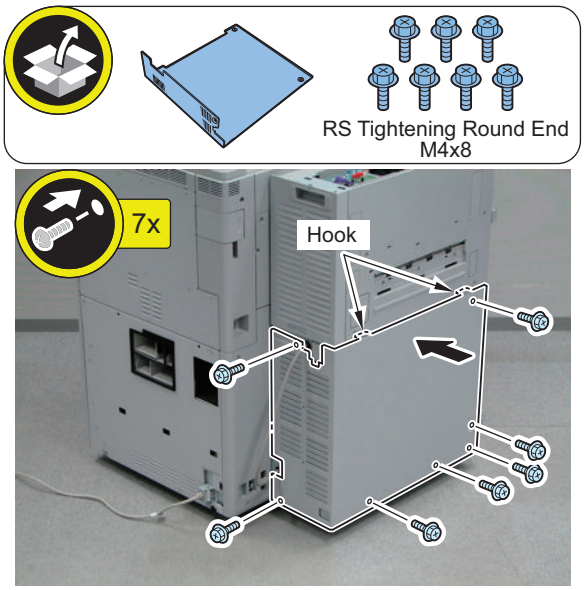
- 1 Screw (RS Tightening Round End; M3x8.5) (included with ACC-4)



☐

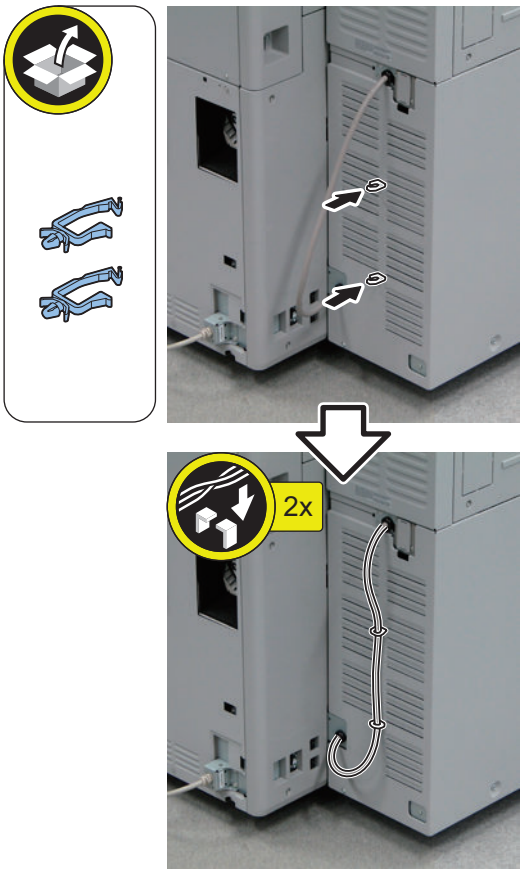
9. Install the Left Cover.(included with ACC-3)

- 2 Hooks
- 7 Screws (RS Tightening Round End; M4x8) (included with ACC-4)



☐

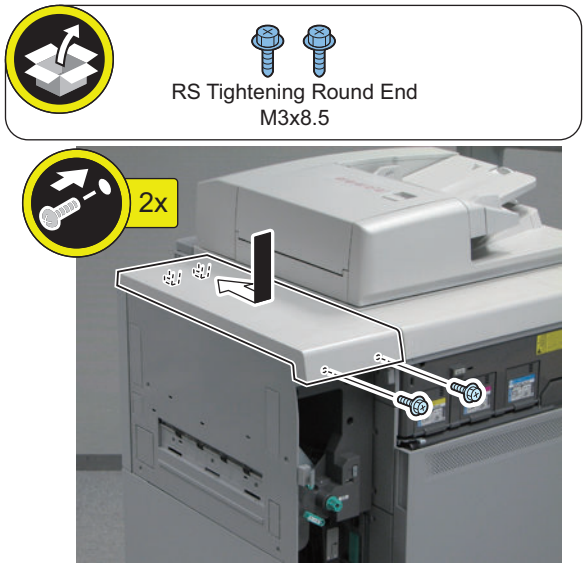
10. Install the 2 Wire Saddles and secure the Decurler Cable with them. (included with ACC-4)



☐

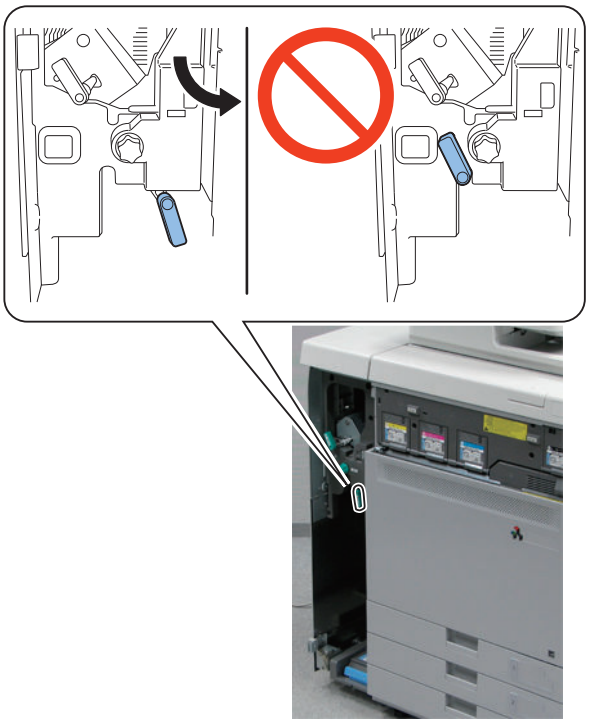
11. Install the Decurler Upper Cover removed in "Unpacking" step 2.

- 2 Hooks
- 2 Screws (RS Tightening Round End; M3x8.5) (included with ACC-4)



☐

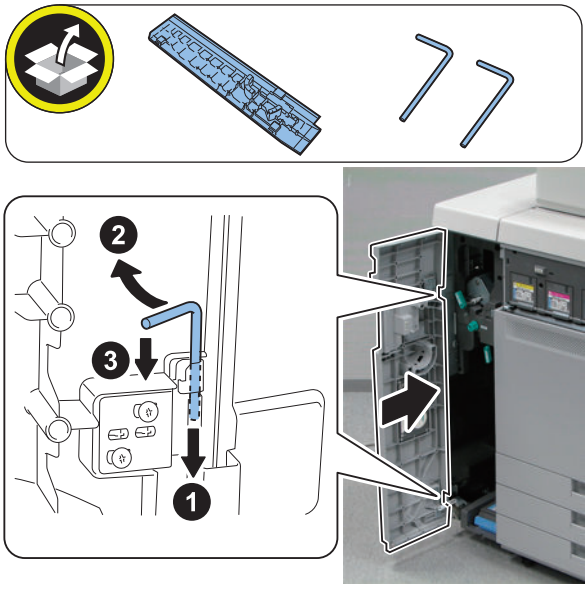
12. Rotate the Jam Process Lever in clockwise direction and make the machine in paper pass condition shown in the figure below.



☐

13. Remove the tapes on the Left Cover.

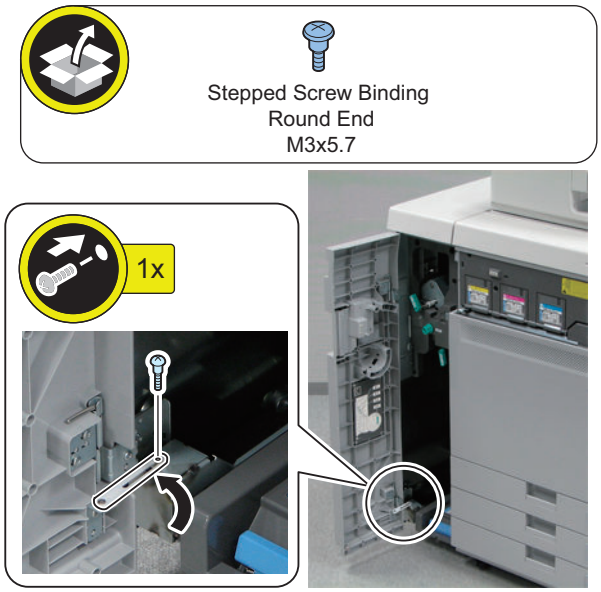
14. Align the hinge positions of the Front Left Cover and the Decurler Unit in 2 places, and insert the Hinge Shaft in the direction of the arrow. (included with ACC-4)



☐

15. Secure the Hinge Stopper.

- 1 Stepped Screw (Binding Round End; M3x5.7) (included with ACC-4)



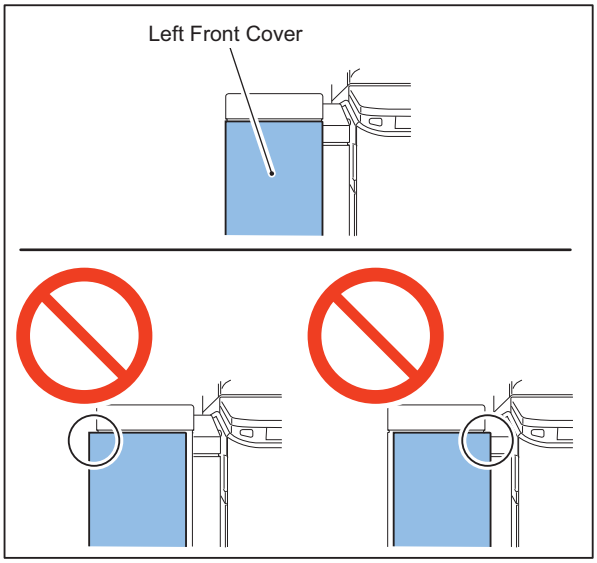
☐

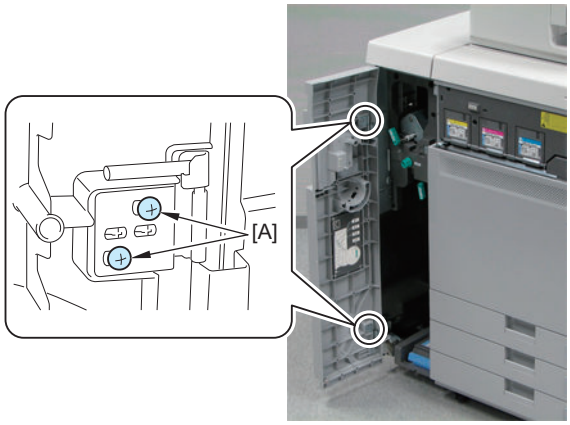
16. Close the Front Left Cover.

☐

17. When the Front Left Cover is misaligned when viewed from the front, loosen 2 screws [A], and after

adjusting the side position of the Front Left Cover, tighten screws.





Installing the Waste Toner Container

☐

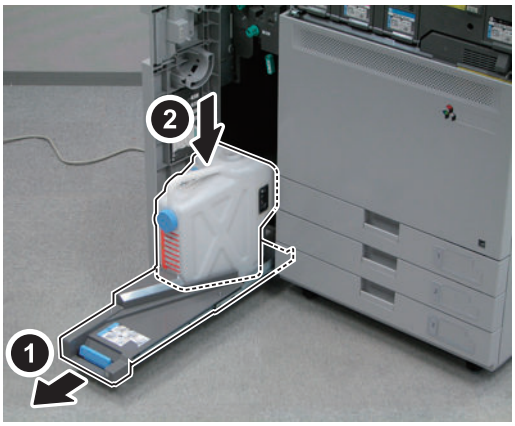
1. Change the position of the cap of the Waste Toner Container. (included with ACC-2)

☐

2. Open the Front Left Cover.

☐

3. Release the lever and pull out the slider.
4. Set the Waste Toner Container and push the slider into the machine.



☐

5. Return the slider.
6. Close the Front Left Cover.

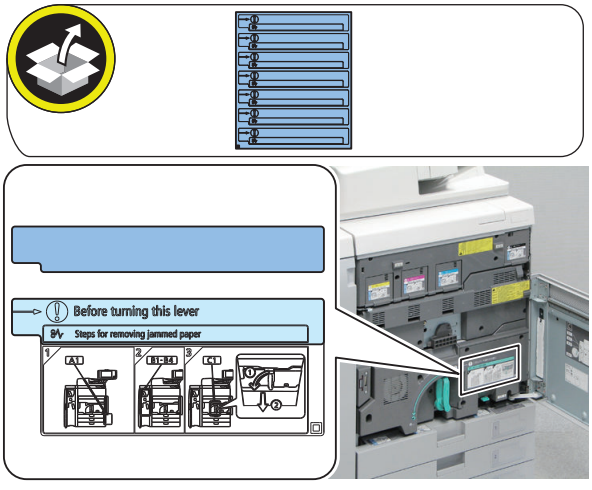
Installing the Process Unit

☐

1. Open the Front Cover.

☐

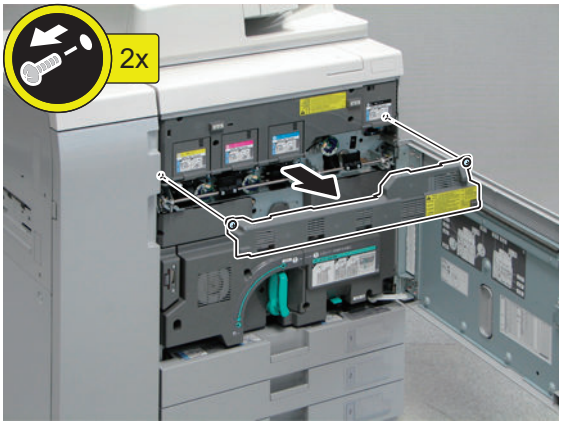
2. Affix the Jam Clearing Process Caution Label of the appropriate language as shown in the figure below. (included with Cassette 1)



☐

3. **Remove the Process Unit Front Cover.**
   - 2 Screws

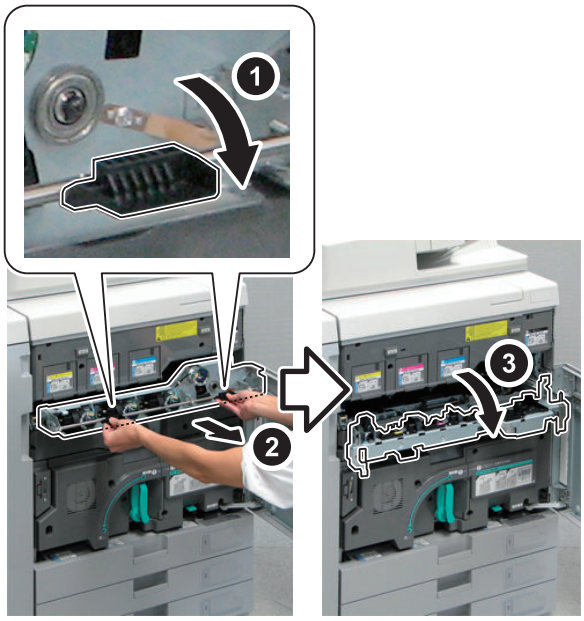
NOTE:
It is designed that the 2 screws do not come off from the cover.



☐

4. **Bring down the 2 Levers of the Process Unit Inner Cover to pull out to the front and open the Process Unit Inner Cover.**

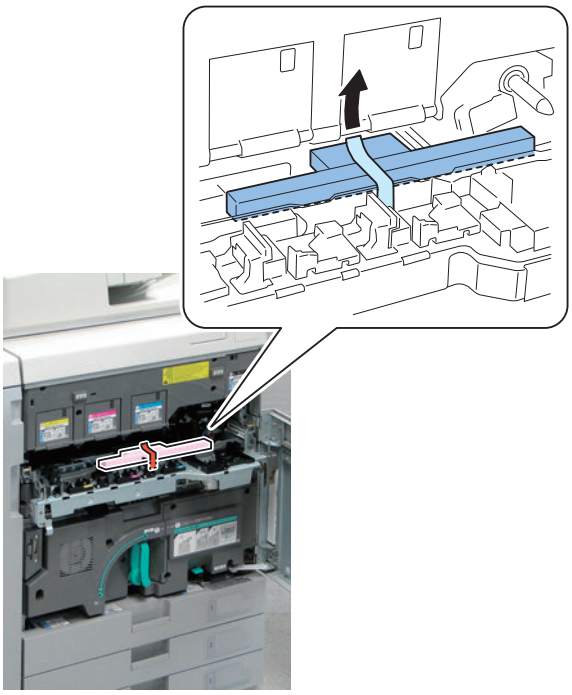
CAUTION:
There is the Drum Unit (Bk) inside the Process Unit Inner Cover. Leaving the cover opened for a long time may cause the drum to be exposed. Therefore, do not leave the cover opened for a long time.



☐

5. **Remove the tape, and remove the ITB packaging material.**

NOTE:
It is desirable to keep the packaging material because they may be used when moving the host machine.



☐

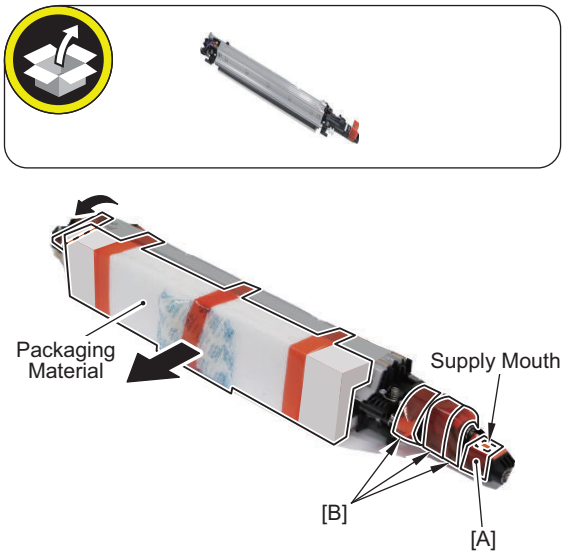
6. **Take out the Developing Assembly (Yellow) from the attached container box.**

CAUTION:
- The color is specified for the Color Developing Assembly.
- When touching the Developing Assembly (Yellow), check that no foreign particle (especially metal chip) is attached on your hands before starting the work. (If foreign particle is attached on the Sleeve, it can cause image failure).
- Do not tilt or strongly shake the Developing Assembly, but be sure to hold it in a horizontal state (otherwise, toner scattering or image failure (image loss, etc) may occur).
- Be sure to exercise these cautions while performing the following procedure.

☐

7. **Unpack the Developing Assembly (Yellow) to remove the packing material. (included with ACC-1)**

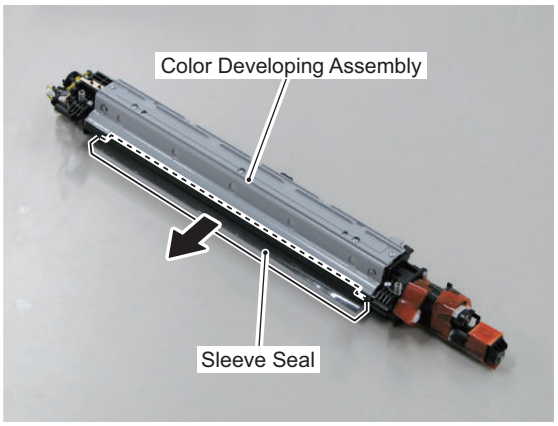
CAUTION:
- Be sure not to remove the tape [A] on the Supply Mouth until right before installing to the host machine.
- Do not remove 3 tapes [B].
- Because the 3 tapes [B] secure the roller in place to prevent it from moving when the Sleeve Seal is removed, be sure to remove the 3 tapes [B] after the Sleeve Seal.
- When removing the packaging material, pay attention not to allow the Sleeve Seal (which is to be removed in the next step) also to be removed.



☐

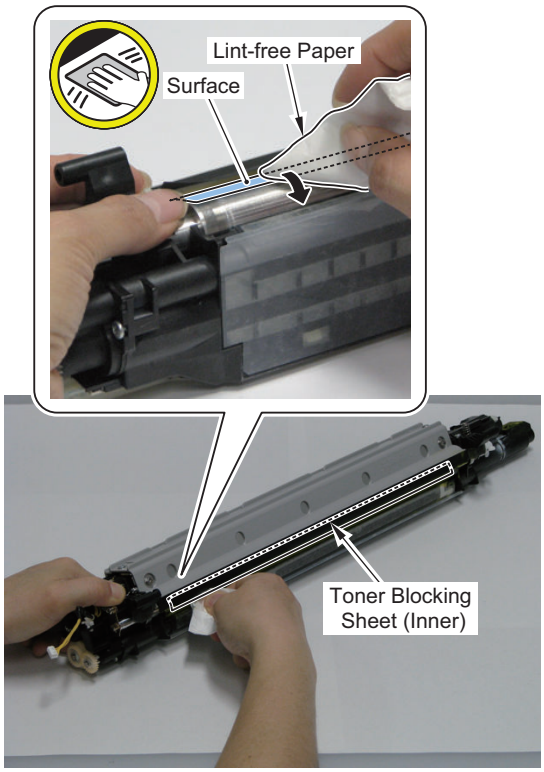
8. **Slowly remove the Sleeve Seal from the Developing Assembly (Y).**

CAUTION:
When removing the Sleeve Seal, be careful not to make any crease in the seal.
Otherwise, the Toner Blocking Sheet may be caught and damaged by the crease.



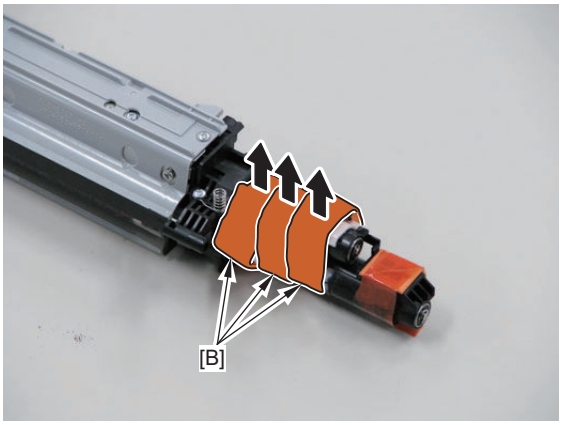
☐

9. **Check that developer is not scattered on the Toner Blocking Sheet (Inner). If it is scattered, clean it with dry lint-free Paper.**



☐

10. **Remove 3 tapes [B] securing the roller.**

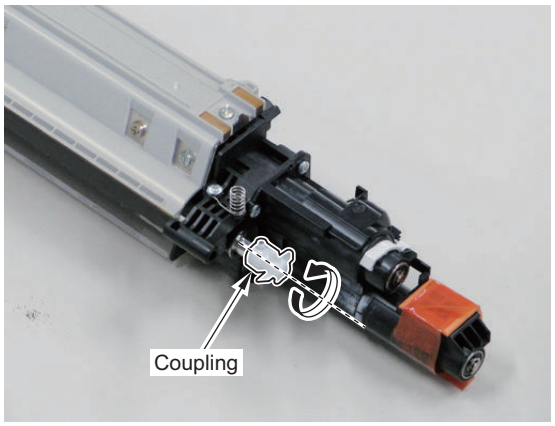


☐

11. Make the coupling of the sleeve rotate a full turn or 1.5 turns in the direction of the arrow.

CAUTION:
Do not turn the Developing Sleeve in the reverse direction.
By rotating it in the reverse direction, toner clots on the Sleeve may damage the Toner Blocking Sheet on the cylinder.

NOTE:
Toner clots are removed by rotating the Sleeve in the direction of the arrow.



☐

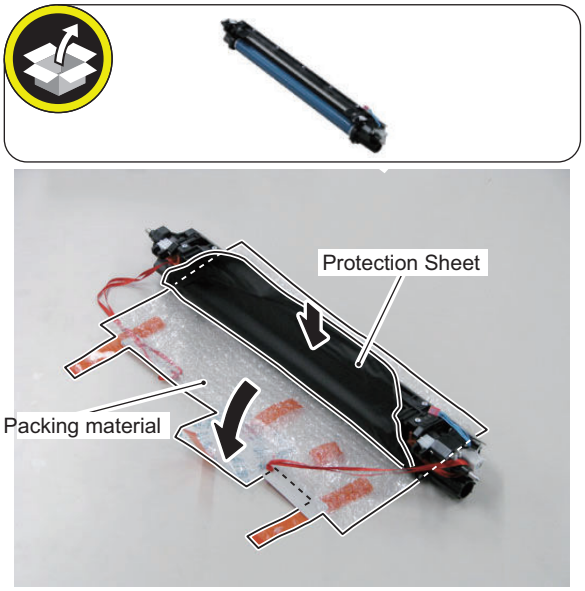
12. Take out the Drum Unit (Yellow) from the attached packing box.

CAUTION:
The color is specified for the Color Drum Unit.

☐

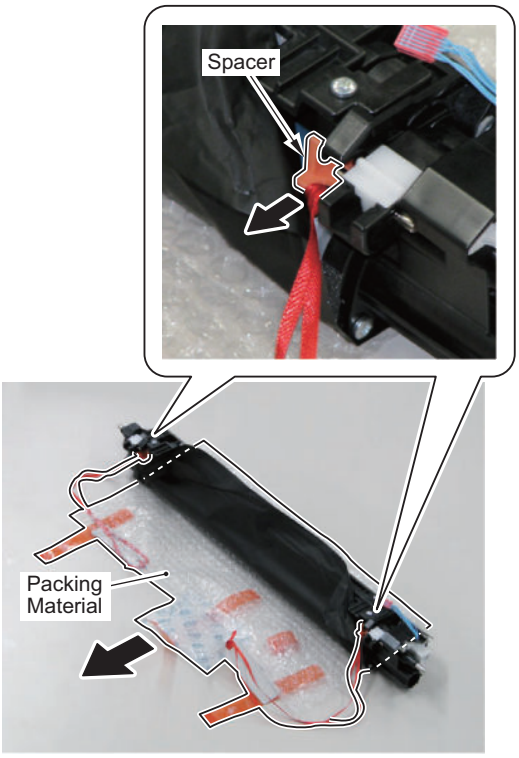
13. Unpack the Drum Unit (Yellow), and remove the packing materials. (included with ACC-1)

CAUTION:
- Do not touch the Photosensitive Drum.
- Be sure not to remove the Protection Sheet during work.



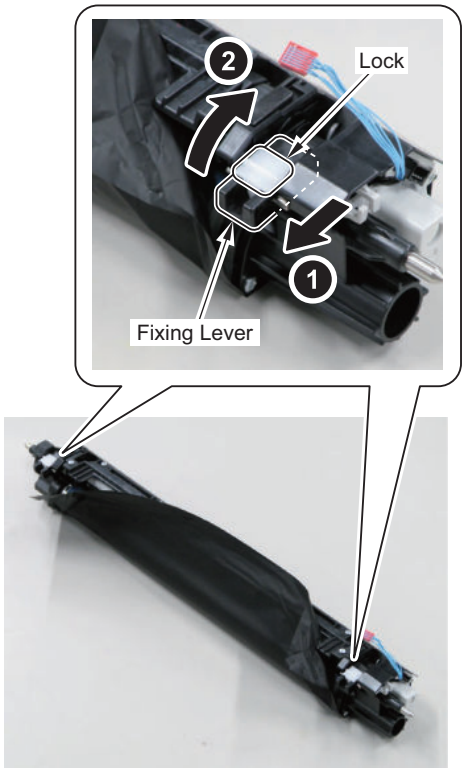
☐

14. Pull the 2 Spacers in the direction of the arrow from the Drum Unit (Yellow) to remove.



☐

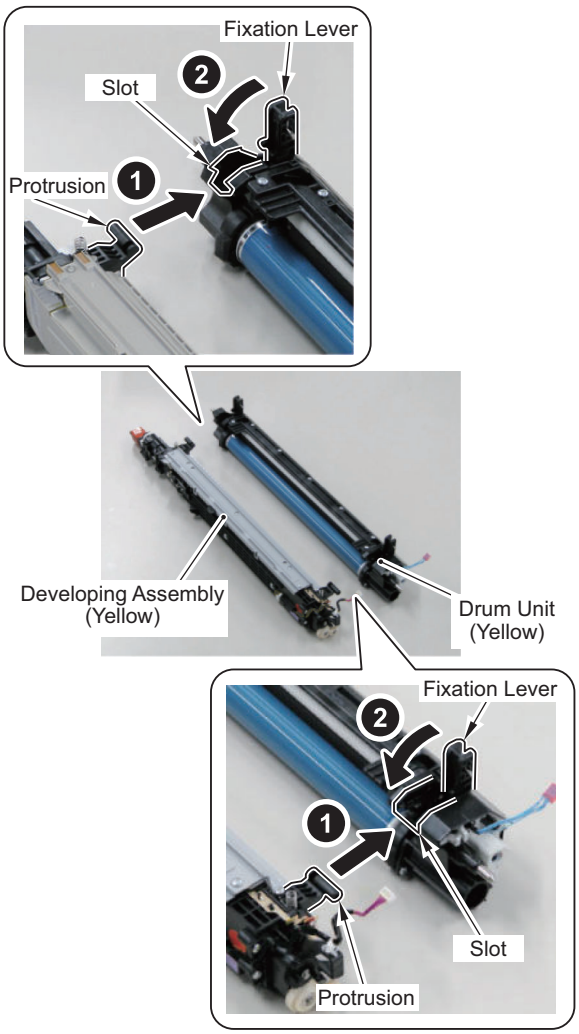
15. **Release the lock of the Fixing Levers of the Color Drum Unit (Yellow) and lift the Fixing Levers up.**



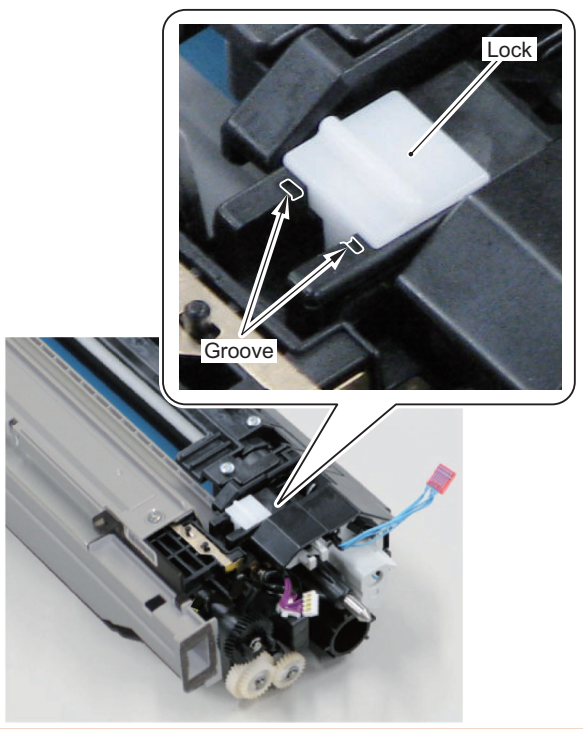
☐

16. **Fit the 2 protrusions on the Developing Assembly (Yellow) into the Drum Unit (Yellow), and combine the Developing Assembly (Yellow) and the Drum Unit (Yellow). Then, turn the Fixation Lever in the direction of the arrow and assemble the Process Unit.**

CAUTION:
- Be sure to use the correct color when assembling.
- When assembling, be sure to place the Protection Sheet or paper.

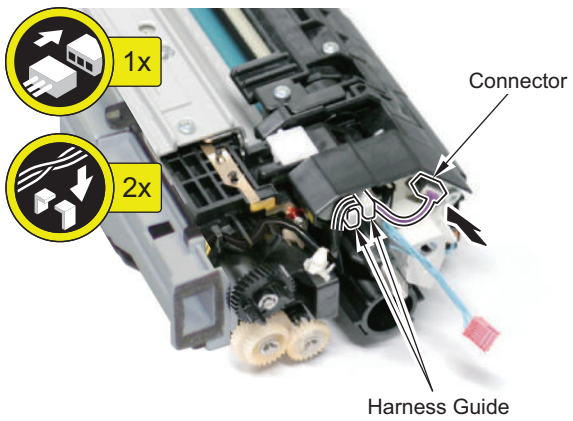


CAUTION:
Check that the lock is engaged and also check that the groove is visible as shown in the figure. (If installing the Process Unit while the Fixation Lever is not properly locked, the unit may not be able to be removed from the host machine.)



☐

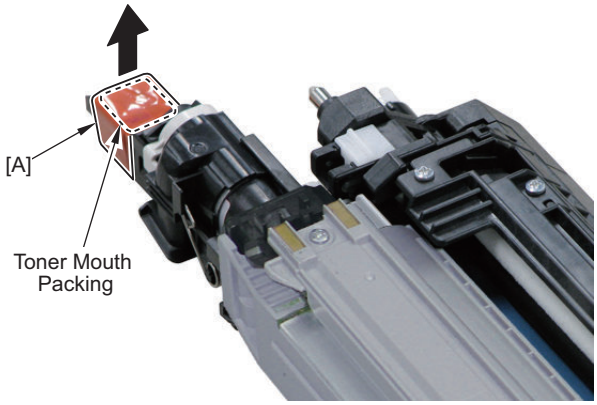
17. Secure the harness with the Harness Guides, and connect the connector.



☐

18. Remove the tape [A] on the Supply Mouth and Toner Mouth Packing.

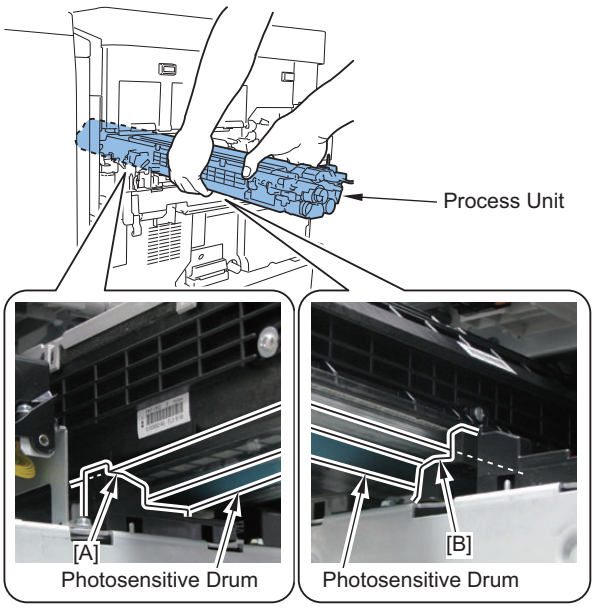
CAUTION:
Be sure to remove the Toner Mouth Packing certainly.



☐

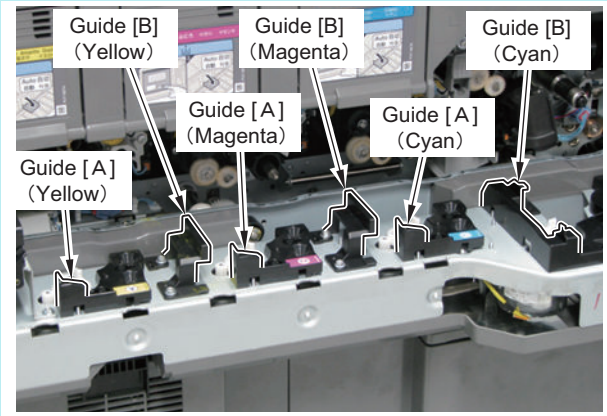
19. Hold the upper front area and the left side of the Process Unit as shown in the figure and place the rib at the right side of the Process Unit to the guide [A] of the Process Unit Inner Cover, and then fit the lower left side of the Process Unit to the guide [B] of the Process Unit Inner Cover to push in horizontally.

CAUTION:
Do not touch the Photosensitive Drum at the lower side with your hand when putting in the Process Unit.

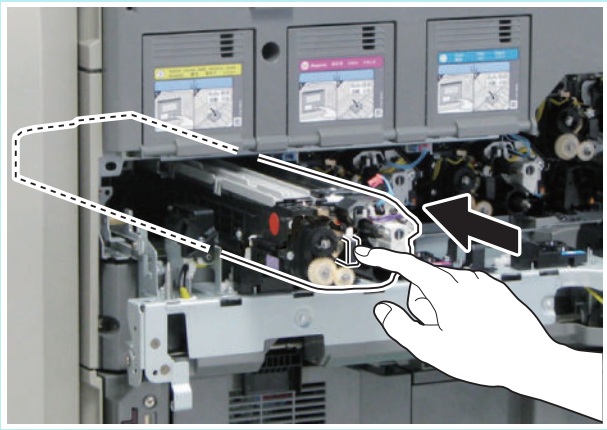


NOTE:

- The guides positions [A] and [B] of the Process Unit Inner Cover differ between the Process Cartridge (Y) (M) and the Process Cartridge (C). The positions of guide [A] and [B] are shown in the figure below.

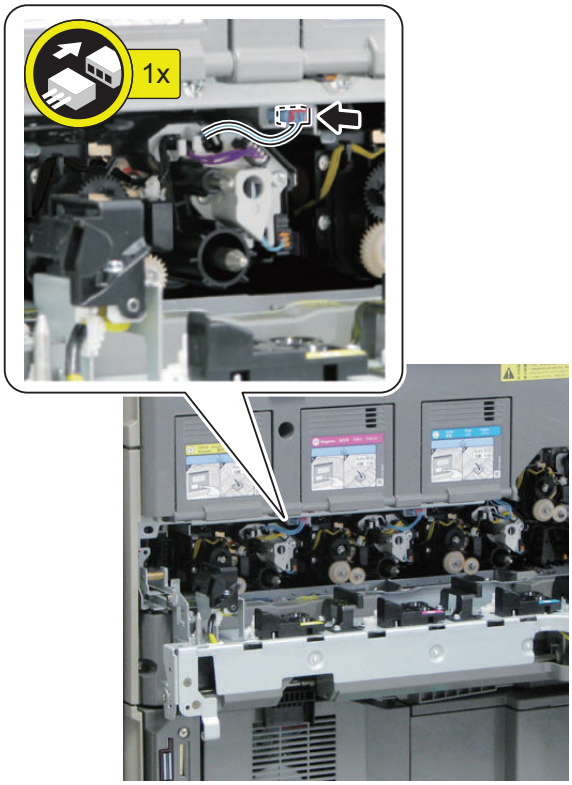


- While holding the Process Unit with both hands, insert about 2/3 of it, and then push the handle of the Process Unit with your finger as shown in the figure to insert all the way until it stops.



☐

20. Connect the Connector.



☐

21. Repeat the step 5 through 19 and install the Magenta and Cyan Process Units in the same way.

CAUTION:
Be sure to use the correct color to install.

Installing the Black Developing Assembly

☐

1. Take out the Black Developing Assembly from the attached packing box.

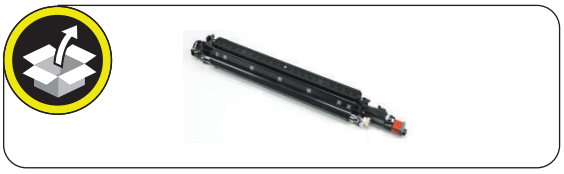
CAUTION:

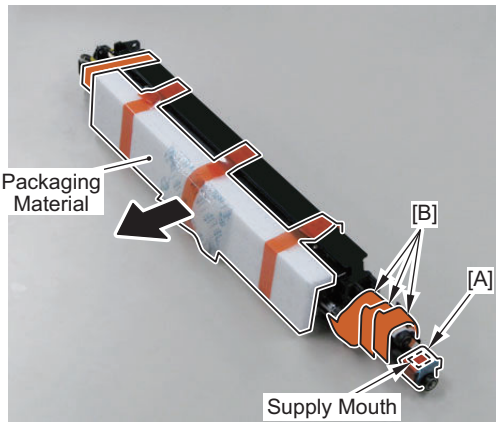
- When touching the Black Developing Assembly, check that no foreign particle (especially metal chip) is attached on your hands before starting the work. (If foreign particle is attached on the Sleeve, it can cause image failure)
- Do not tilt or strongly shake the Developing Assembly, but be sure to hold it in a horizontal state (otherwise, toner scattering or image failure (image loss, etc) may occur).
- Be sure to exercise these cautions while performing the following procedure.

☐

2. Unpack the Black Developing Assembly and remove the packing material. (included with ACC-1)

CAUTION:
- Be sure not to remove the tape [A] on the Supply Mouth until right before installing to the host machine.
- Do not remove 3 tapes [B].
- Because the 3 tapes [B] secure the roller in place to prevent it from moving when the Sleeve Seal is removed, be sure to remove the 3 tapes [B] after the Sleeve Seal.
- When removing the packaging material, pay attention not to allow the Sleeve Seal (which is to be removed in the next step) also to be removed.

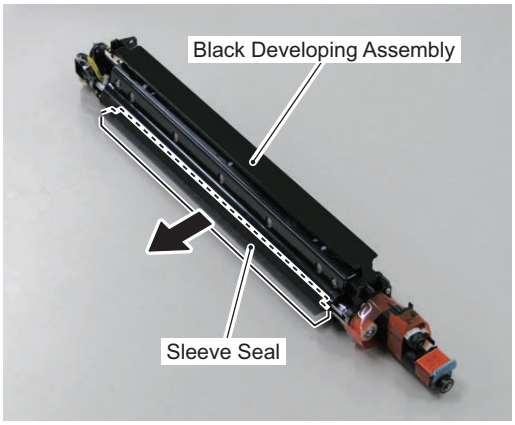




☐

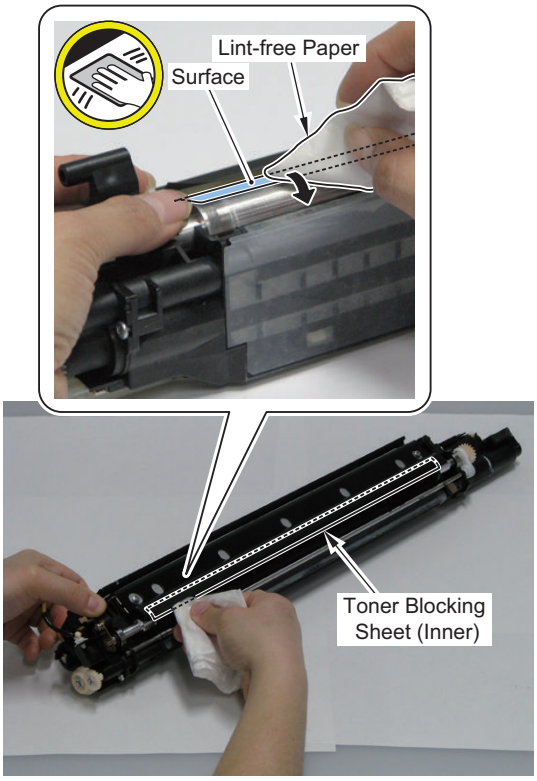
3. Remove the Sleeve Seal from the Developing Assembly (Black).

CAUTION:
When removing the Sleeve Seal, be careful not to make any crease in the seal.
Otherwise, the Toner Blocking Sheet may be caught and damaged by the crease.



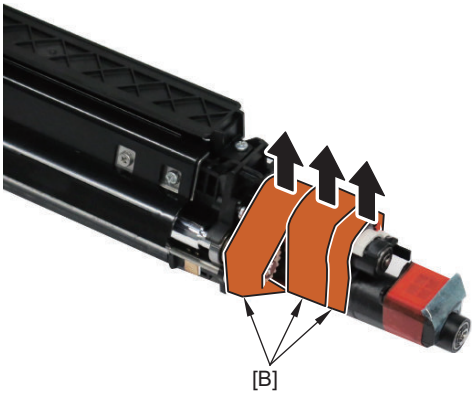
☐

4. Check that developer is not scattered on the Toner Blocking Sheet (Inner). If it is scattered, clean it with dry lint-free Paper.



☐

5. **Remove 3 tapes [B] securing the roller.**

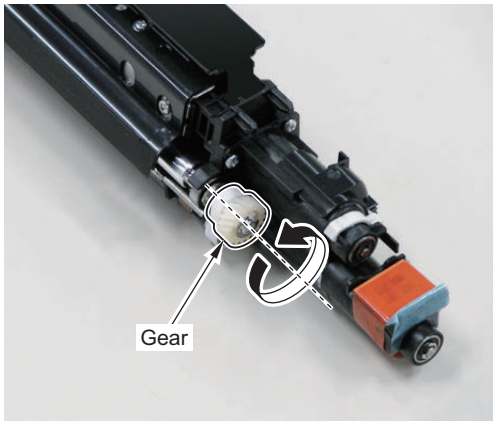


☐

6. **Make the Gear of the Sleeve rotate a full turn or 1.5 turns in the direction of the arrow.**

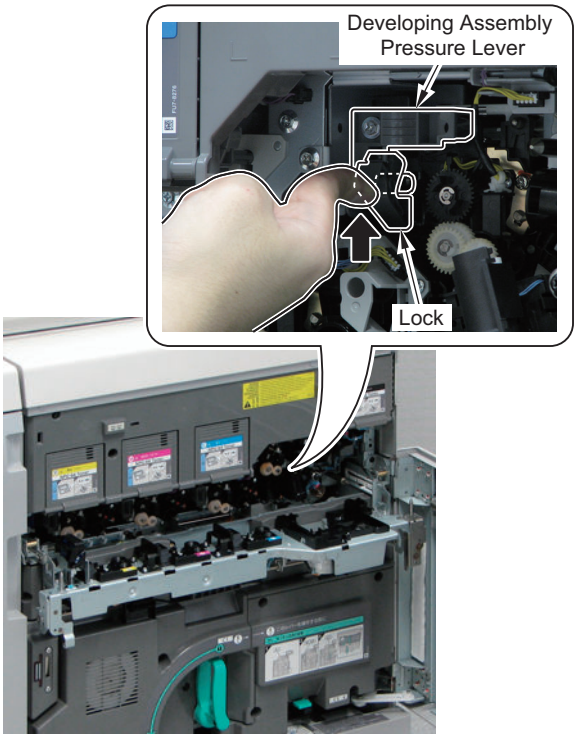
CAUTION:
Do not turn the Developing Sleeve in the reverse direction.
By rotating it in the reverse direction, toner clots on the Sleeve may damage the Toner Blocking Sheet on the cylinder.

NOTE:
Toner clots are removed by rotating the cylinder in the direction of the arrow.



☐

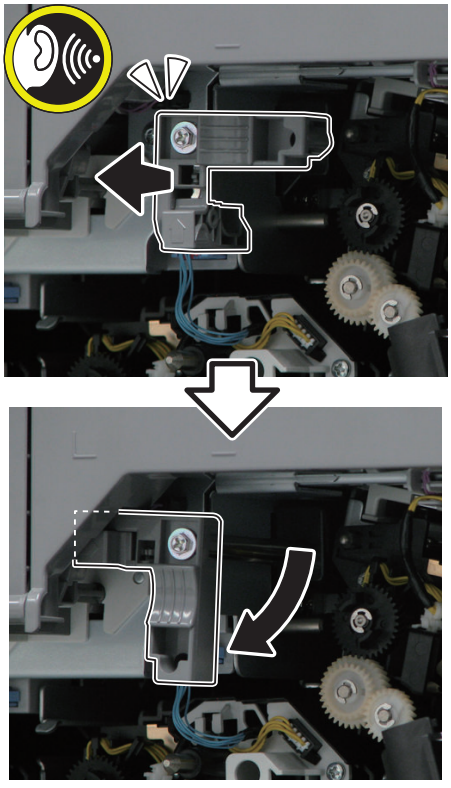
7. **Move the lock of the Developing Assembly Pressure Lever in the direction of the arrow to release the look.**



☐

8. **Pull out the Developing Assembly Pressure Lever until it stops to release the pressure.**

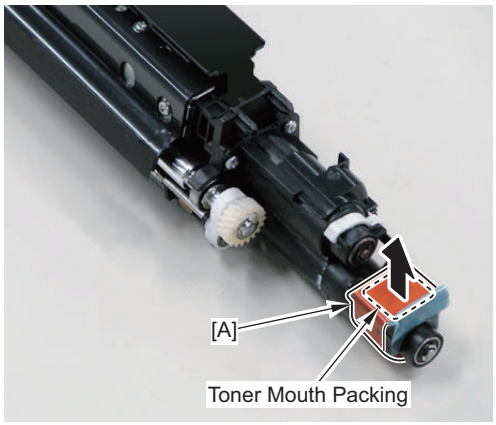
9. **Turn the Developing Assembly Pressure Lever in the direction of the arrow.**



☐

10. Remove the tape [A] on the Supply Mouth and Toner Mouth Packing.

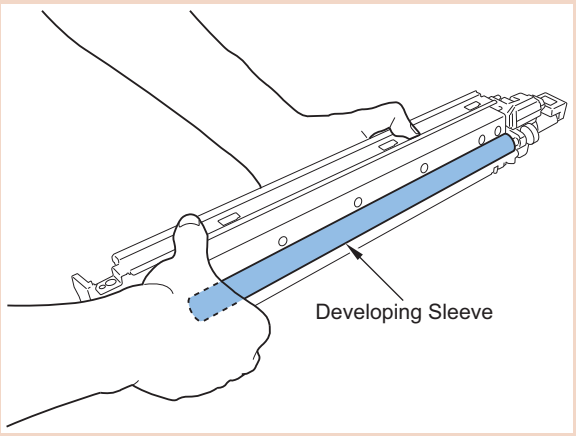
CAUTION:
Be sure to remove the Toner Mouth Packing certainly.

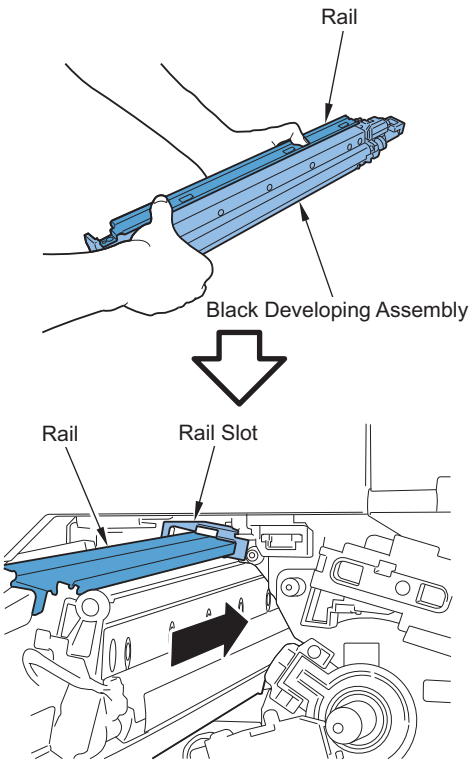


☐

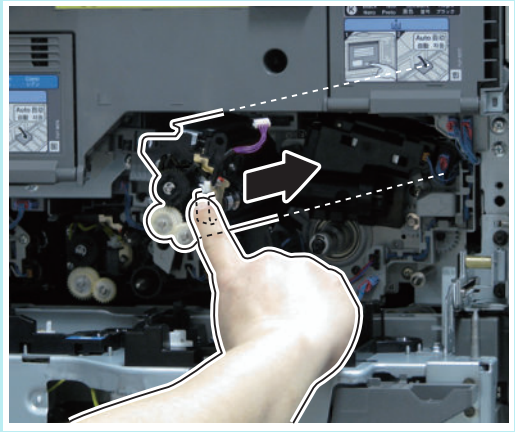
11. Hold the front right side and the left side of the Black Developing Assembly and fit the rail of the Black Developing Assembly to the rail slot to push in horizontally.

CAUTION:
Do not touch the Developing Sleeve with your hand when inserting the Black Developing Assembly.



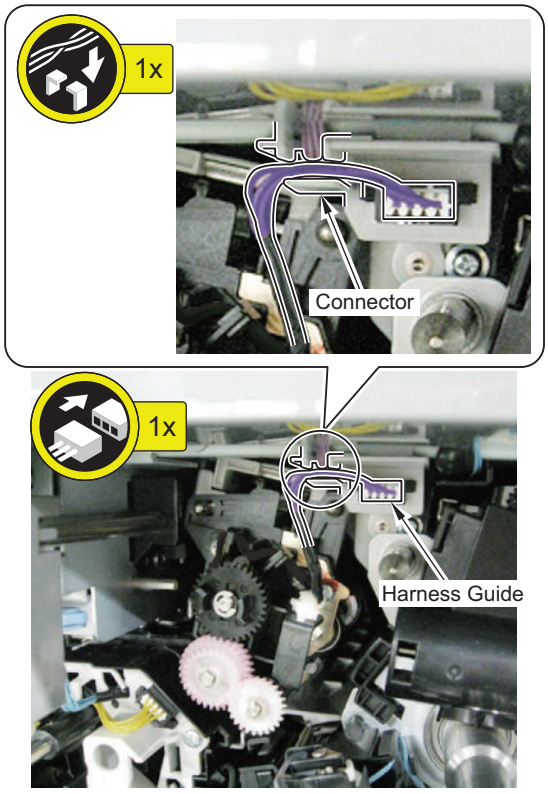


NOTE:
While holding the Black Developing Assembly with both hands, insert about 2/3 of it, and then push the handle of the Black Developing Assembly with your finger as shown in the figure to insert all the way until it stops.



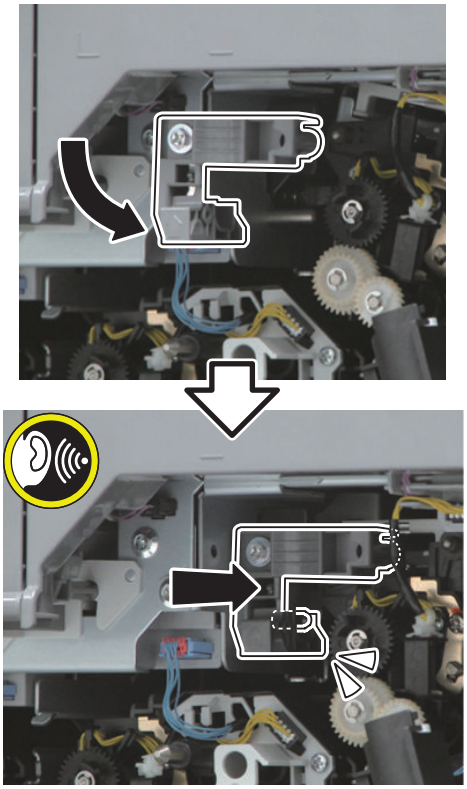
☐

12. Secure the harness with the Harness Guides, and connect the connector.



☐

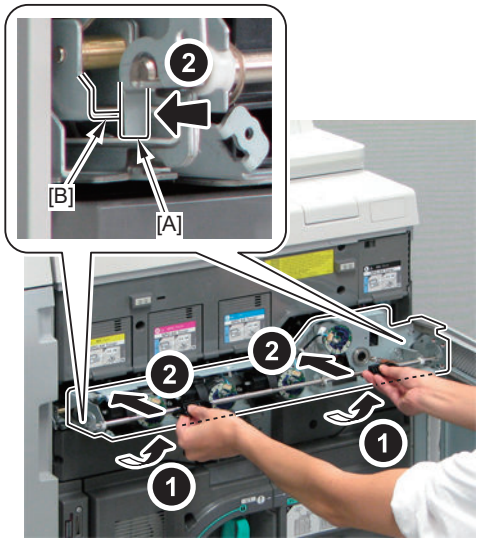
13. Turn the Developing Assembly Pressure Lever in the direction of the arrow, and push it in to apply pressure.



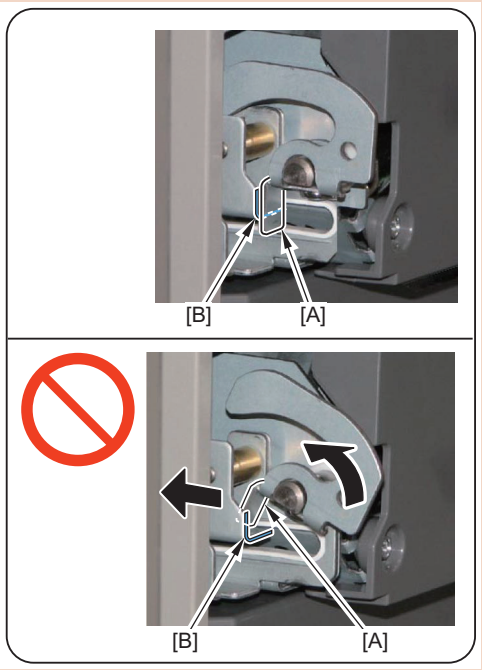
☐

14. Close the Process Unit Inner Cover.

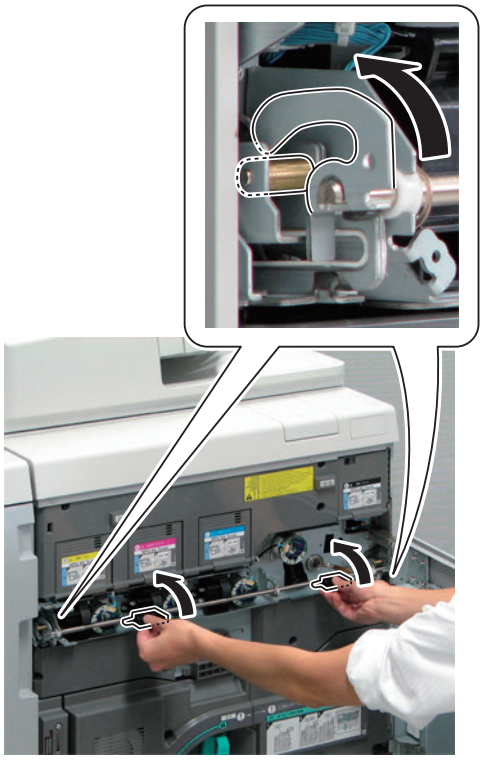
When closing the Process Unit Inner Cover, go through the following steps 1 through 3.
14-1. Hold the 2 levers and lift up the levers and Process Unit Inner Cover to the horizontal level.
14-2. While keeping the levers horizontally, push the Process Unit Inner Cover to the rear side. Then, push on the 2 Stopper Plates [A] of the right and left hooks of the Process Unit Inner Cover to the end faces [B] of the Hinge Shaft Holder at the right and left sides of the host machine.



CAUTION:
If the Process Unit Inner Cover is pushed to the rear side without keeping the levers horizontally, the 2 Stopper Plates [A] of the hooks run over the inside of the Hinge Shaft Holder at the right and left sides of the host machine. Furthermore, if the Process Unit Inner Cover is pushed to the rear side with this condition, or if the levers are raised at a 90-degree angle and the Process Unit Inner Cover is closed, the Release Arm inside the Process Unit Inner Cover may get damage.



14-3. Raise the levers at a 90-degree angle further and close the Process Unit Inner Cover. The 2 hooks (right and left) of the Process Unit Inner Cover are hooked to the Hinge Shaft at the right and left sides of the host machine to lock.

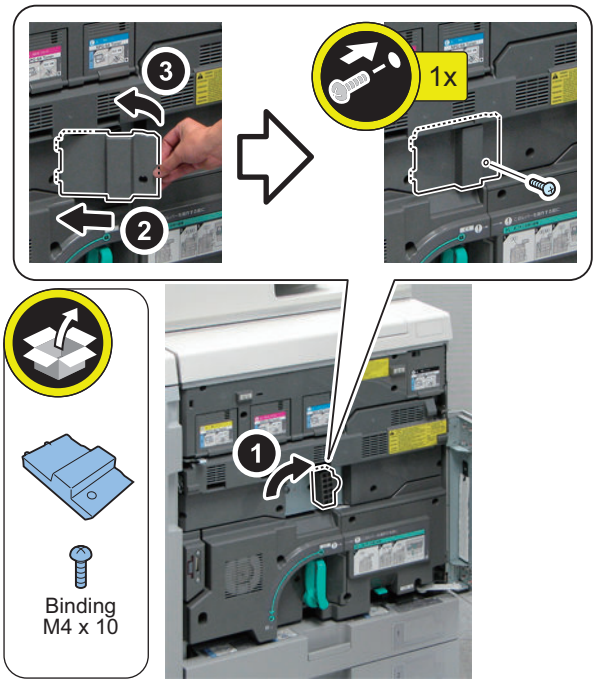


☐

15. Install the removed Process Unit Front Cover. (2 Screws)

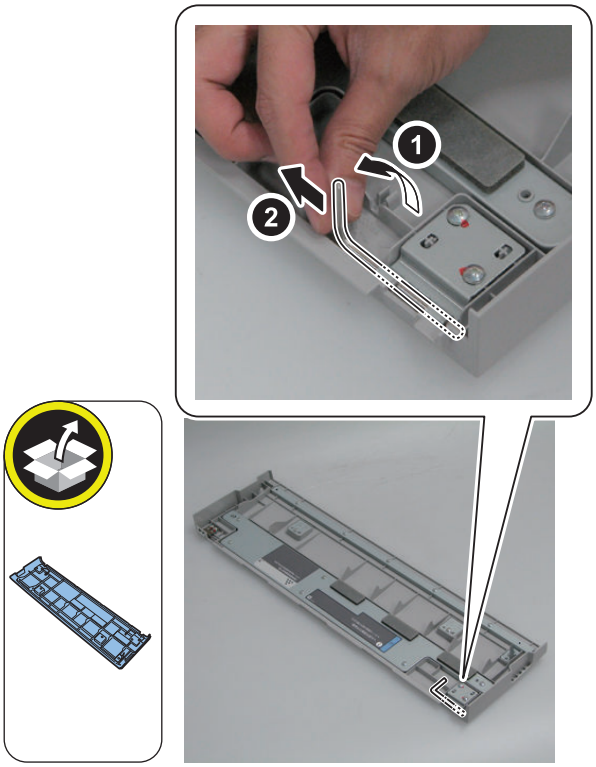
☐

16. **Turn the ITB Pressure Release Lever in the direction of the arrow to make it engaged, and then install the ITB Front Middle Cover.(included with ACC-1)**
    - 2 Protrusions
    - 1 Screw (Binding; M4 x 10) (included with ACC-1)



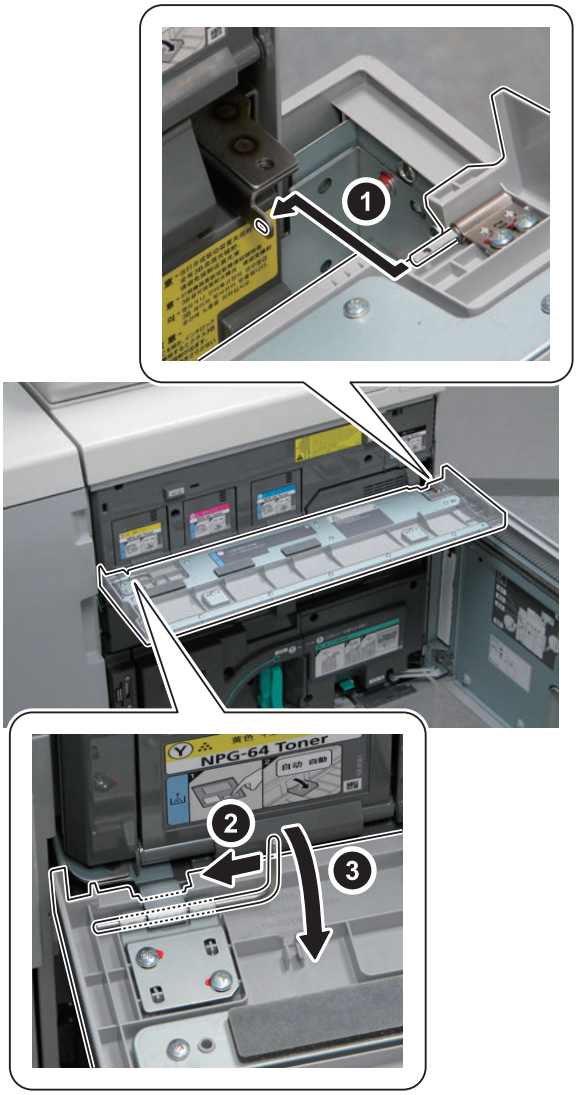
☐

17. **Remove the Hinge Shaft from the Toner Replacement Cover (included with ACC-2).**



☐

18. **Align the Right Hinge of the Toner Replacement Cover with the hinge hole of the host machine.**
19. **Install the Left Hinge Shaft and the Toner Replacement Cover.**



☐

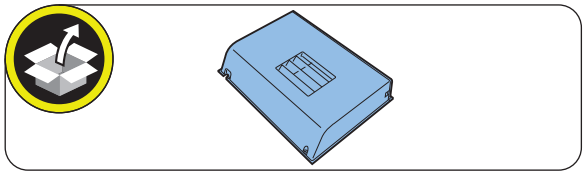
20. **Close the Toner Replacement Cover.**
21. **Close the Front Cover.**

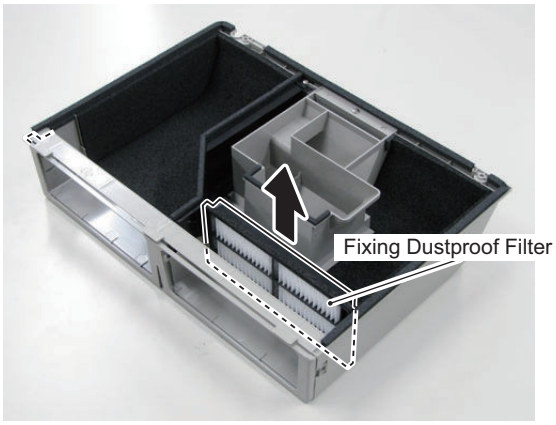
Installing the Noise Reduction Cover

CAUTION:
Do not unpack the Ozone Filter until just before installing the Ozone Filter.

☐

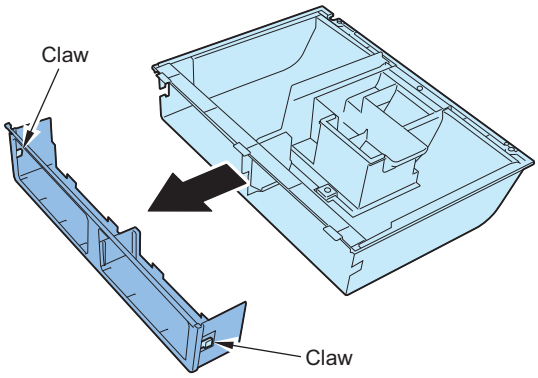
1. **Remove the Fixing Dustproof Filter from the Noise Reduction Cover. (included with ACC-1)**





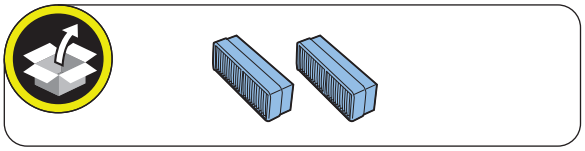
☐

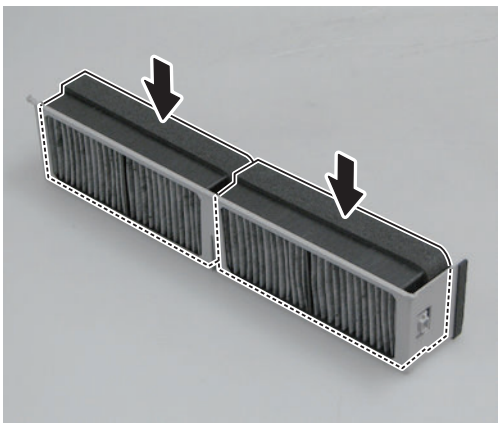
2. **Remove the Filter Case from the Noise Reduction Cover.**
   - 2 Claws



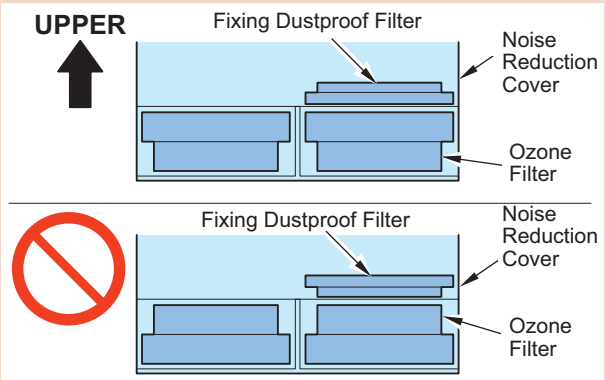
☐

3. **Open the 2 Ozone Filters included in the package and install them to the Filter Case. (included with ACC-1)**





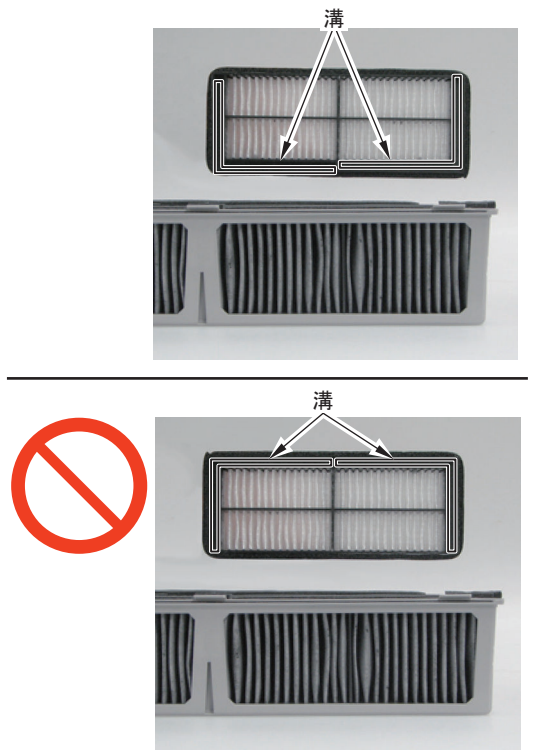
CAUTION:
Be sure to install the Filters in the correct direction.

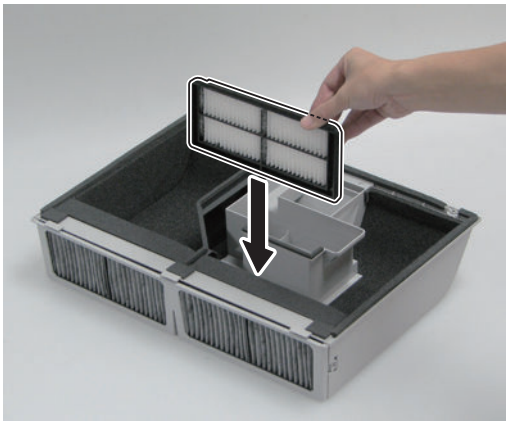


☐

4. **Install the Filter Case to the Noise Reduction Cover and install the Fixing Dustproof Filter removed in step 1.**

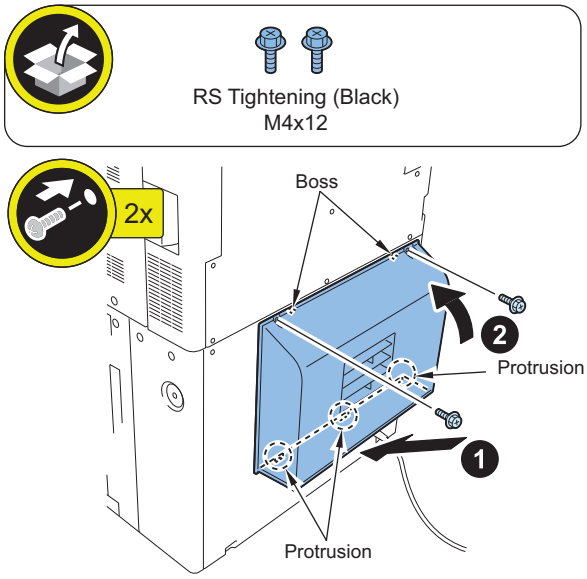
CAUTION:
Be sure to install the Fixing Dustproof Filter in the correct direction.





☐

5. **Install the Noise Reduction Cover.**
   - 3 Protrusions
   - 2 Bosses
   - 2 Screws (RS Tightening Black; M4 x 12) (included with ACC-1)

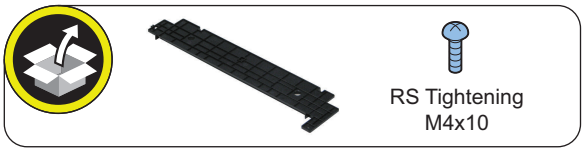


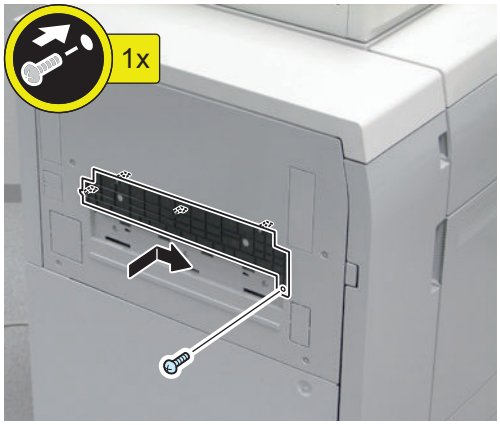
Installing the Finisher Guides

NOTE:
It is not necessary when installing the Output Tray.

☐

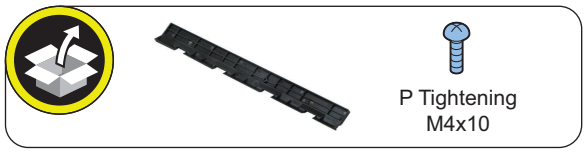
1. **Install the Finisher Guide (Upper). (included with ACC-4)**
   - 4 Hooks
   - 1 Screw (P Tightening; M4 x 10) (included with ACC-4)

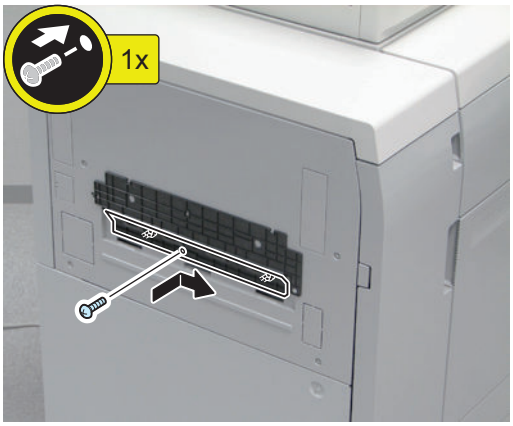




☐

2. **Install the Finisher Guide (Lower). (included with ACC-4)**
   - 2 Hooks
   - 1 Screw (P Tightening; M4 x 10) (included with ACC-4)



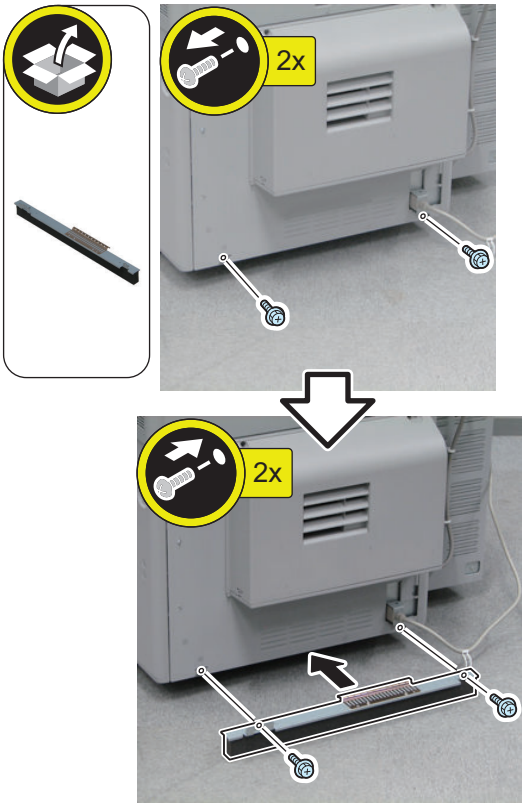


Installing the Rear Curtain Unit

CAUTION:
Be sure to install it after moving the machine to the installation site. The host machine can be moved at least back and forth even after the unit is installed.

☐

1. **Remove the 2 screws, and install the Rear Curtain Unit using the removed screws. (included with ACC-2)**

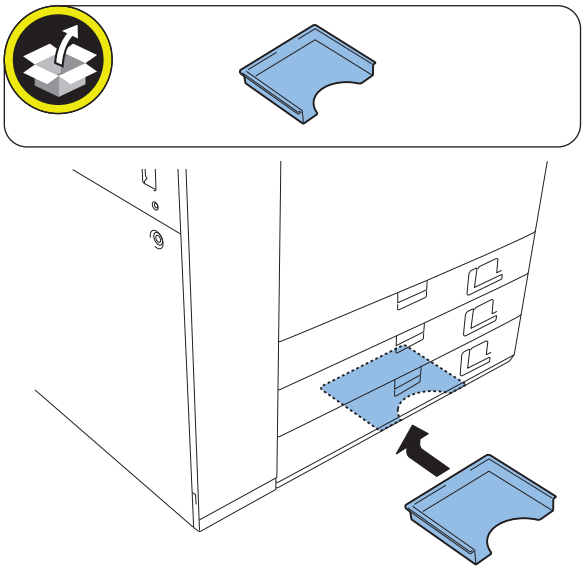


Installing the Others

< Service Book Holder >

☐

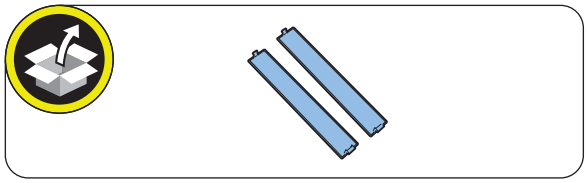
1. Remove the release paper from the back side of the Service Book Holder, and affix the holder on the Base Plate of the host machine. (included with ACC-1)

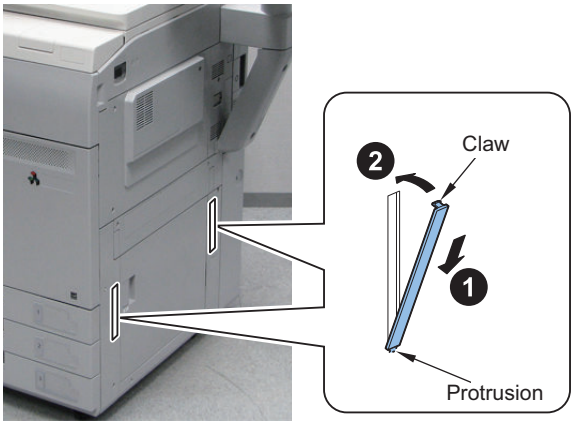


< Handle Cover >

☐

1. Install the 2 Handle Covers. (included with ACC-1)
   - 2 Protrusions
   - 2 Claws



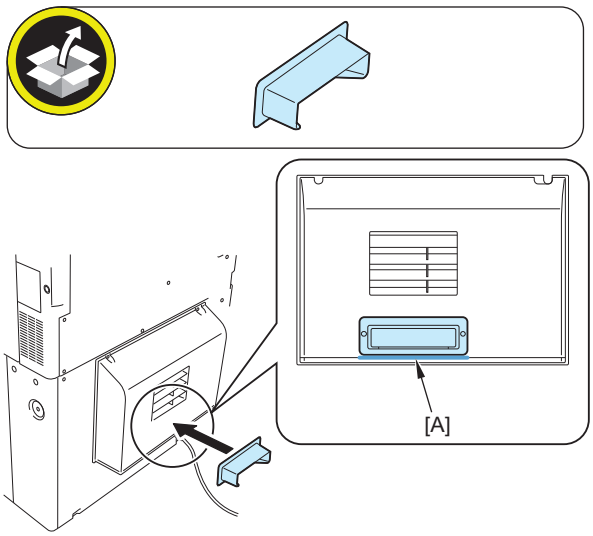


< Cover Spacer >

☐

1. If it is difficult to secure work space at rear side of the machine, install the Cover Spacer on the Noise Reduction Cover in the lower rear side.
   - Parts No.: FL2-9160

NOTE:
Be sure that the spacer is not overlapped with the [A] area when installing it.



Securing the Host Machine

☐

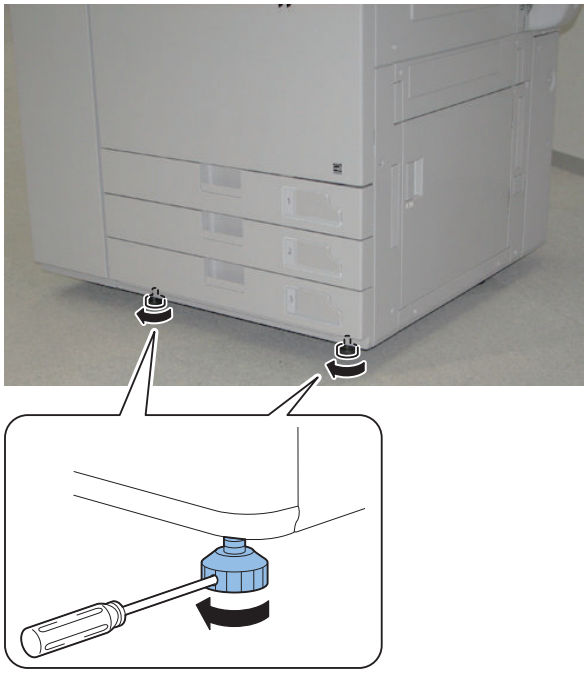
1. **Confirm the position to install the host machine and turn the 2 adjusters with your hand until they closely contact the floor.**

NOTE:
If you failed to turn the adjusters with your hand, use a screwdriver so that they can be turned by your hand.

☐

2. **Use a screwdriver to turn the adjusters in the direction of the arrow to make them secured.**

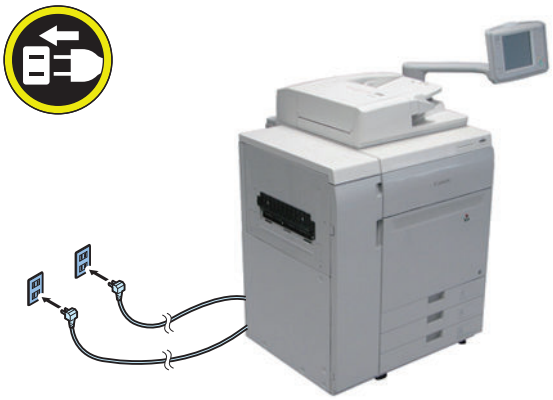
NOTE:
Securing of the adjuster is not earthquake resistant.



Preparation for the Main Power Connection

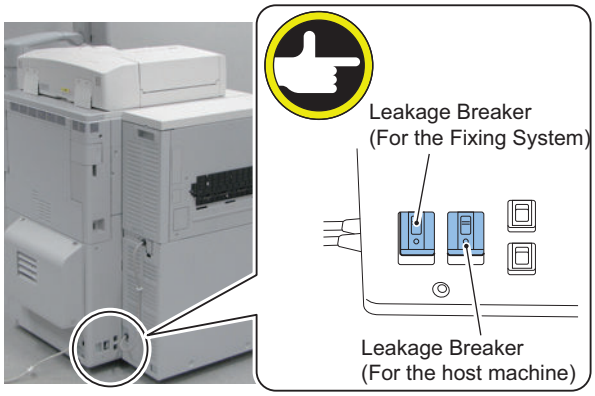
☐

1. **Insert the power plug into the outlet. In the case of 200-240V/13A Model, connect the 2 power plugs of the machine to different power outlets.**
   - USA (120V region): 208V/20A machines: 1 power plug
   - Other regions: 200-240V/13A machine: 2 power plugs



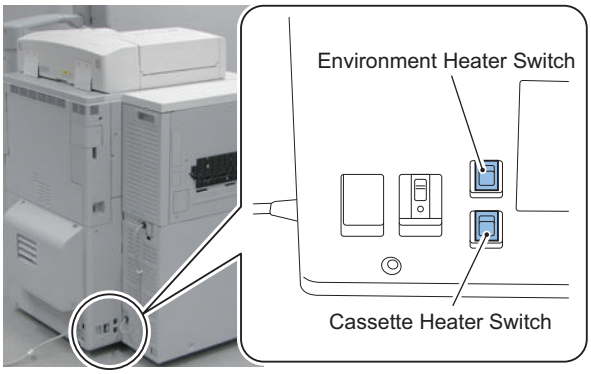
☐

2. **Check that the Leakage Breakers are turned ON.**
   - USA (120V region): 208V/20A machines: 1 Leakage Breaker
   - Other regions: 200-240V/13A machine: 2 Leakage Breakers



☐

3. **Turn ON the Environment Heater Switch and the Cassette Heater Switch in accordance with the installation environment.**
   In the case of a high humidity environment or low temperature environment, turn ON the Environment Switch.
   Turn ON the Cassette Heater Switch if the installation environment is a high temperature and high humidity environment.



Registering the Speed License

CAUTION:
- Before performing this procedure, it is necessary to obtain the license key of the speed license.
- With this product, license of engine speed needs to be entered depending on location or model.

☐

1. **Remove the Protection Sheet on the Control Panel.**

☐

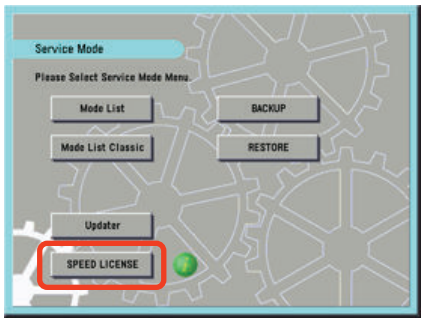
2. **An error message “E612-0007” is displayed.**

☐

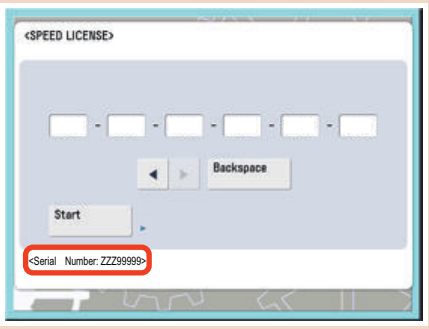
3. **Enter service mode.**

☐

4. **Press [SPEED LICENSE].**

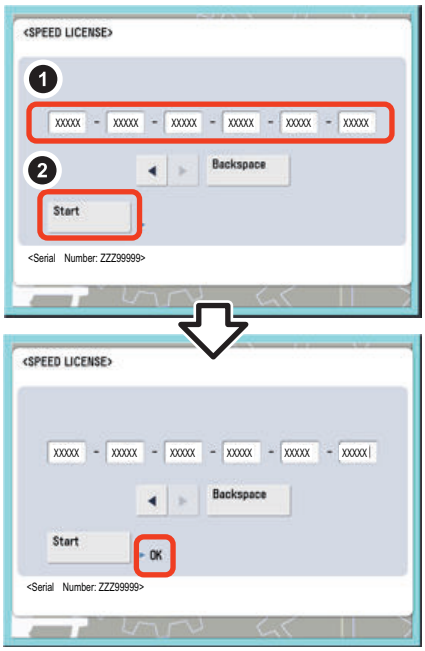


CAUTION:
Check that the serial number of the machine at acquisition of the license and the serial number displayed on the license No. input screen are the same.



☐

5. **Enter the license number and press [Start]. Then, "OK" is displayed.**



☐

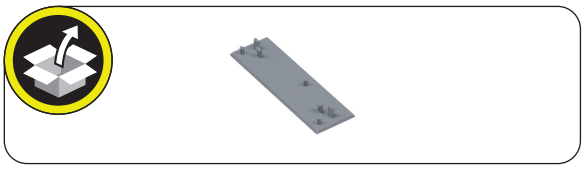
6. **Turn OFF the main power switch.**

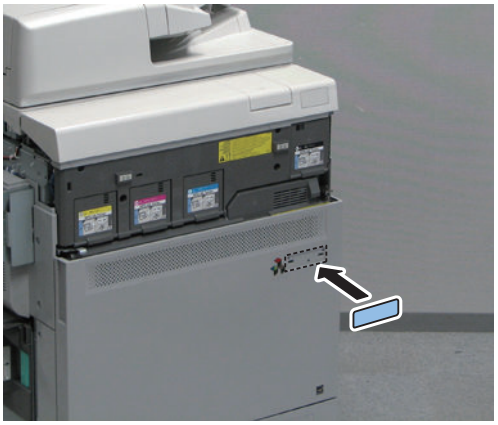
NOTE:
Turning OFF the Main Power
1. Turn OFF the main power switch.
2. Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.

☐

7. **Install the Name Plate of the product according to the speed license. (included with Cassette 1)**

CAUTION:
Be sure to bring back the unused Name Plates.





Turning ON the Main Power

CAUTION:
If "E750-0003" occurs when the optional Auto Gradation Sensor is installed at the same time, check the versions of "DC-CON" and "DSUB3 (Auto Gradation Sensor)", and update them to the appropriate combination of versions (DC-CON: v30.31, DSUB3: 30.01 or later).

■ In the Case of Image Reader Unit has been installed

☐

1. **Turn ON the main power switch.**

2. **When the message appears to prompt a shutdown, turn OFF and then ON the main power switch.**

NOTE:
Although a message "Remove the toner cartridge" is indicated on UI, continue by executing following steps.

3. **Enter the following Service Mode (Level 1), make sure that the setting value is “1”.**
   - COPIER > OPTION > FNC-SW > W/SCNR
4. **Exit the Service Mode.**

■ In the Case of Printer Cover has been installed

☐

1. **Turn ON the main power switch.**
2. **When the message appears to prompt a shutdown, turn OFF and then ON the main power switch.**

NOTE:
Although a message "Remove the toner cartridge" is indicated on UI, continue by executing following steps.

3. **Select "0" for the following service mode (level 1).**
   - COPIER > OPTION > FNC-SW > W/SCNR
4. **When installing the imagePRESS Server F200/G100 at the same time, set the value of the following service mode (Level 1) to "3".**
   - COPIER > OPTION > INT-FACE > IMG-CONT
5. **Exit the Service Mode.**
6. **Turn OFF and then ON the main power switch when the setting has been changed in step 4.**

Installing the Toner Container

Follow the instruction on the UI to install the Toner Container.

☐

1. **Open the Toner Replacement Cover.**
2. **Select all colors from the “Replacement Required List” and press “Remove Toner Container” button.**

NOTE:
The Toner Container is not installed when installing the Host Machine.

3. **The Toner Container Replacement Door is automatically open.**

NOTE:
Although a message telling “Remove the black toner cartridge” is displayed on the UI, ignore the message because the Toner Container is not installed when installing the Host Machine.

4. **Shake the Toner Container approx. 10 times.**
5. **Turn the safety cap of the Toner Container to remove.**
6. **Set a new Toner Container and close the Toner Container Replacement Door.**

NOTE:
Toner supply starts automatically when the Front Upper Cover is closed. (Approx. 6 minutes)

7. **Repeat the procedure from step 4 to 6 to install the Toner Containers in other colors as well.**

CAUTION:
Be sure to use the correct color to install.

8. **Close the Toner Replacement Cover.**

Settings at Installation

CAUTION:
Be sure to execute service mode after the machine enters in a standby state.

☐

1. **Enter the Service Mode.**
   - SITUATION > Installation > ITB install setting
2. **Execute the ITB neutral position adjustment. (Approx. 6 minutes)**
   - INIT-ITB
3. **Execute the primary transfer ATVC control. (Approx. 1 minute)**
   - 1ATVC-EX
4. **Execute auto registration. (Approx. 1 minute)**
   - AT-IMG-X
5. **Exit the Service Mode.**

Checking the K paper settings (Only for CHINA)

☐

Check the following service mode, and change the setting value if different.

1. **Enter service mode (level 1).**
2. **Check that the setting value of COPIER > OPTION > FNC-SW > MODEL-SZ is "0".**
3. **Enter service mode (level 2).**
4. **Check that the setting value of COPIER > OPTION > FNC-SW > MODELSZ2 is "0".**
5. **Check that the setting value of COPIER > OPTION > FNC-SW > KSIZE-SW is "1".**
6. **When having changed the setting, turn OFF and then ON the main power to enable the setting value.**

Installing the Cleaning Tool (Only when installing the Image Reader Unit)

CAUTION:

- It cannot be installed to the Front Cover and the left side of the DADF External Cover because the Cleaning Cloth will fly out when opening/closing the covers.
- It cannot be installed to the right side of the host machine when the Voice Guidance or Multi Deck is installed.
- Be sure to install the Cleaning Cloth Storage Box to a position after checking with the user on where to install it.

☐

1. **Clean the position where the Cleaning Cloth Storage Box is to be installed with lint-free paper moistened with alcohol.**

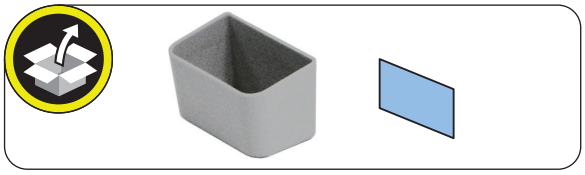
< Recommendation 1: Top side of decurler unit >

< Recommendation 2: Right side of the host machine >

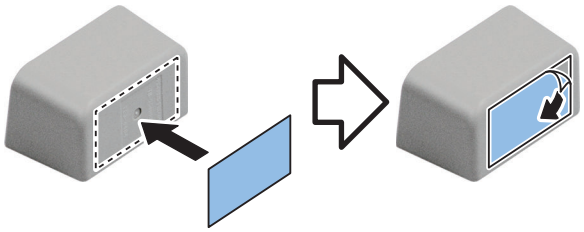
☐

2. **Remove one side of the release paper of the double-sided tape.**

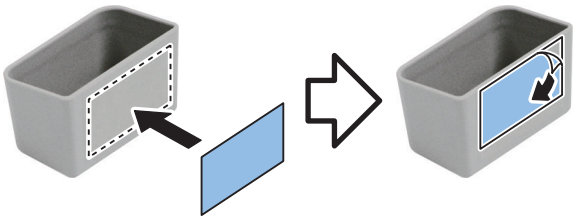
3. **Affix the double-sided tape to the Cleaning Cloth Storage Box at a position as shown in the figure, and remove the release paper of the double-sided tape.**



< Recommendation 1: Top side of decurler unit >



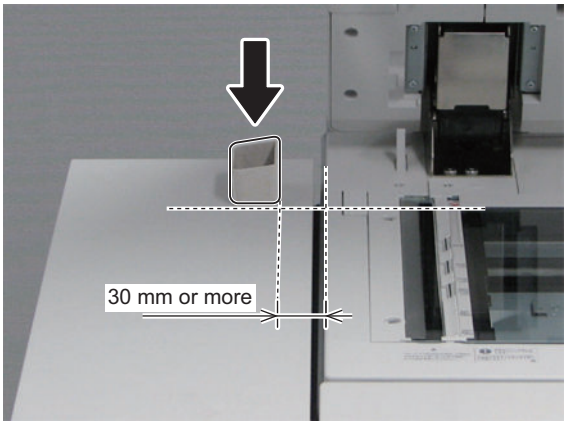
< Recommendation 2: Right side of the host machine >



☐

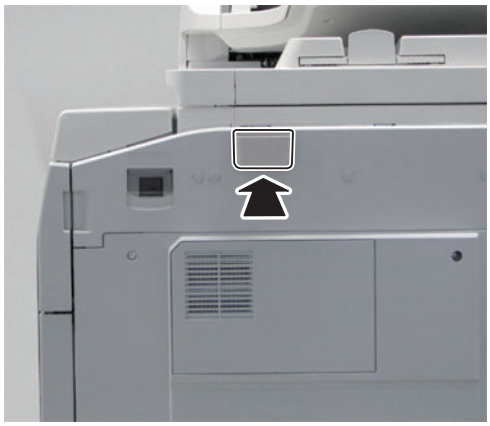
4. **Install the Cleaning Cloth Storage Box.**

<Recommendation 1: Top side of decurler unit>



<Recommendation 2: Right side of the host machine>

CAUTION:
Be sure to avoid screw holes when installing it.



☐

5. **Place the Cleaning Cloth in the Cleaning Cloth Storage Box.**

Auto Adjust Gradation

Execute the Auto Gradation Adjustment to the following 3 modes: [Thin 1/Plain/Heavy 1-4], [Heavy 5], and [Heavy 6]. However, when using 2 or more types of paper, it is necessary to execute all the modes corresponding to the types of paper.
"Heavy 5" and "Heavy 6" are selectable only when the Multi Deck, POD Deck Lite, and Multipurpose Tray Pickup Unit are installed.

CAUTION:
Points to Note at Installation of the Printer Cover:
The following conditions must be met to execute auto gradation adjustment on a machine with Printer Cover installed.

- Auto Gradation Sensor has been installed
- When installing it and the imagePRESS Server F200/G100 at the same time: The Open I/F PCB included with the imagePRESS Server F200/G100 has been installed, and the value in service mode (Level 1) > COPIER > OPTION > INT-FACE > IMG-CONT has been set to "3".
- When the imagePRESS Server F200/G100 is not installed: The printer driver license (imagePRESS Printer Kit-D1, imagePRESS PS Printer Kit-E1/E2) has been installed in advance.

CAUTION:

- Note that if a type of paper to which auto gradation adjustment is not performed is used, it may cause negative effects on image or the host machine.
- In the case that both the Image Reader Unit and the Auto Gradation Sensor are installed, select which one to be used in [Select Method] before executing the adjustment.
  - When using the Image Reader Unit: Select [Use Scanner].
  - When using the Auto Gradation Sensor: Select [Do Not Use Scanner].
- Be sure to use standard type paper to execute the adjustment.

	When using the Scanner	When not using the Scanner
Paper size	A3 or 11"x17"	A3 or 11"x17", 305x457 mm, 320x450 mm (SRA3) or 330x483 mm
Standard type Paper weight (Canon-recommended paper)	• Thin 1/Plain/Heavy 1-4 USA: Hammermill Color Copy Digital 28lb (105gsm) EUR: CANON-OCE Top Colour 100gsm • Heavy 5 USA: Mohawk Options Navajo Smooth Brilliant White 90lb. Cover / 243gsm EUR: CANON-OCE Top Colour 250gsm • Heavy 6 USA: Hammermill Color Copy Digital Cover 100lb (271gsm) EUR: CANON-OCE Top Colour 300gsm	
Number of sheets to be used	3 sheets or more	10 sheets or more

☐

1. **Clean the Copyboard Glass surface of the host machine.**
2. **Log in as a system manager.**
   Factory default password is as follows.
   - System administration division ID: 7654321
   - System administration password: 7654321

CAUTION:
When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

3. **Select [Settings/Registration] > [Adjustment/Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation].**

NOTE:
Perform step 4 when pickup system options are installed.

4. **Display the heavy paper mode of auto gradation adjustment.**
   Change the setting of [Adjustment Level] to [By Paper Type Group], and then press [OK].

NOTE:
Three mode buttons "Thin 1/Plain/Heavy 1-4", "Heavy 5" and "Heavy 6" are displayed on the screen at auto gradation adjustment.

5. **In the case that both the Image Reader Unit and the Auto Gradation Sensor are installed, select which one to be used in [Select Method].**
6. **Place standard type paper in a cassette. (See "Setting the Paper Cassette" on page 2469)**

CAUTION:
Since the amount of toner and print speed are adjusted according to paper type, be sure to select a correct paper type.

7. **Select [Initialize When Using Full Adjust] and press [OK]. (The color of the button changes to orange.)**
8. **Press [Full Adjust]. If the setting of [Adjustment Level] is changed o [By Paper Type Group] in step 4, select [Thin 1/Plain/Heavy 1-4] and then press [Full Adjust].**
9. **Select the paper source (the paper source where standard type paper is loaded) for test print, and press [OK].**

10. **Press [Start Printing].**

NOTE:
By pressing [Start Printing] while [Do Not Use Scanner] is selected, test print and adjustment are performed automatically.

11. **From this point on, follow the instruction on UI.**
12. **When the Multi Deck, POD Deck Lite, and Multi-purpose Tray Pickup Unit are installed, make the settings of "Heavy 5" and "Heavy 6" by the same procedure mentioned above.**

Register Paper to Adjust

NOTE:
- When auto gradation adjustment is executed with "Thin 1/Plain/Heavy 1-4", "Heavy 5" and "Heavy 6", be sure to perform [Register Paper to Adjust] for each mode in the following steps.
- In the case that the Scanner is not used, the step to scan an image is not needed.

☐

1. **Place standard type paper and paper which is used by the user in paper sources and make settings. (See "Setting the Paper Cassette" on page 2469)**
2. **Log in as a system manager.**
   Factory default password is as follows.
   - System administration division ID: 7654321
   - System administration password: 7654321

CAUTION:
When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

NOTE:
If the three mode buttons are displayed, be sure to select "Thin 1/Plain/Heavy 1-4", "Heavy 5" or Heavy 6" after [Auto Adjust Gradation], and then select [Register Paper to Adjust].

3. **Select Settings/Registration > [Adjustment/ Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation] > [Register Paper to Adjust].**
4. **Select [Paper to Adjust 1] and press [Next].**
5. **Select [Standard] and press [Next].**
6. **Select the paper source where standard type paper is loaded and press [Next].**
7. **Press [Start Printing].**
8. **Set the output image on the Copyboard and press [Start Scanning].**
9. **Select the paper which is used by the user and press [Next].**
10. **Press [Start Printing].**
11. **Set the output image on the Copyboard and press [Start Scanning].**
12. **Select Settings/Registration > [Adjustment/ Maintenance] > [Adjust Image Quality] > [Auto Adjust Gradation] > "Details of Selected Paper", and check that paper which is used by the user is displayed.**

NOTE:
Check with the user if the paper displayed on the screen is the one which is used for auto gradation adjustment. If it is not correct, change the paper to the one used for auto gradation adjustment in [Select Paper to Adjust]. Note that the standard type paper means Canon-recommneded paper. In the case of using the recommended paper, be sure to select "standard paper type".

13. **Set the adjustment level according to the user's request in the case that the Multi Deck, POD Deck Lite, or Multi-purpose Tray Pickup Unit is installed.**
    - In the case of surely control hue on heavy paper and coated paper: Make the setting for each paper type
    - In the case of saving time and effort by sacrificing hue on heavy paper and coated paper: Make the setting as default ("Thin 1/Plain/Heavy 1-4")

Execution of Correct Shading

CAUTION:
Be sure to use the largest size of Canon-recommended paper or the largest size of paper which the user uses (It is preferable to use 320 x 450 mm (SRA3) or 330 x 483 mm).
Do not use special paper (color paper, coated paper, texture paper, etc.).

☐

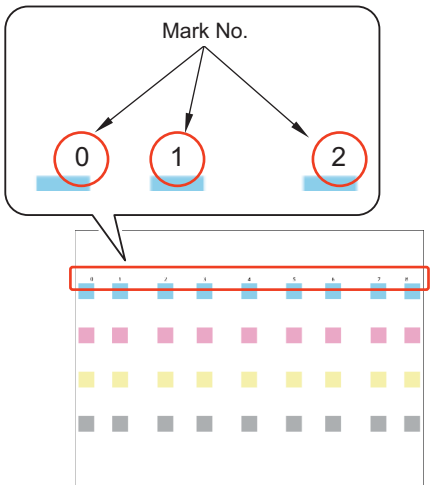
1. **Select [Settings/Registration] > [Adjustment/ Maintenance] > [Adjust Image Quality] > [Correct Shading].**
2. **Select the method for correct shading.**
   - To perform densitometer correction
   - To perform visual correction
   - To perform print server correction

■ To perform Densitometer Correction

☐

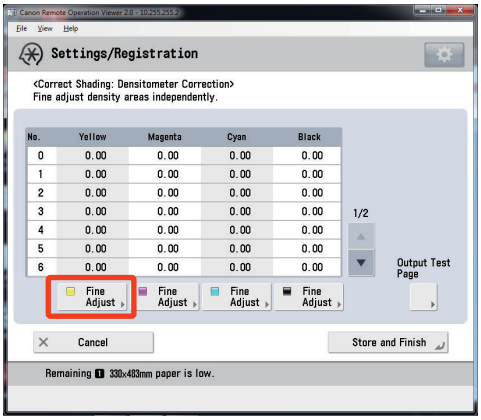
1. **Press [Densitometer Correction] > [Start Printing]. (Test page 1 with marks from 0 to 8 is output.)**
2. **Measure the density (Y, M, C, Bk) of the output image with a densitometer.**

NOTE:
Mark No. to be displayed vary according to the paper size.
- 320 x 450 mm (SRA3), 330 x 483 mm: 0 to 8
- A3 or 11"x17", 305 x 457 mm: 1 to 7



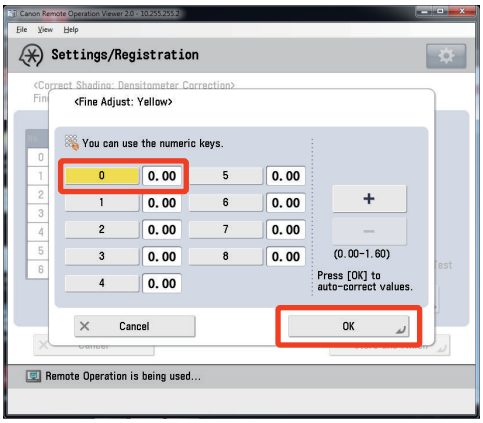
NOTE:
In steps 3 to 5, the procedure is described using the screen for yellow.

3. **Press [Fine Adjust] of the target color to make entries.**



4. **Select the number same as that of the target Mark No..**
5. **Enter all the values for yellow measured in step 2, and press [OK].**

NOTE:
- The density adjustment is performed based on all the density values of mark numbers from 0 to 8. If all mark numbers from 0 to 8 are shown on the test page, make sure to gauge and enter the density values for all imprinted mark numbers.
- If the mark numbers 0 and 8 are not shown on the test page, gauge and enter the density values for all the imprinted mark numbers from 1 to 7 and make sure that the density values for the mark numbers 0 and 8 are set to '0'. If you enter the density values other than '0' for the mark numbers 0 and 8, you cannot perform density adjustment precisely.

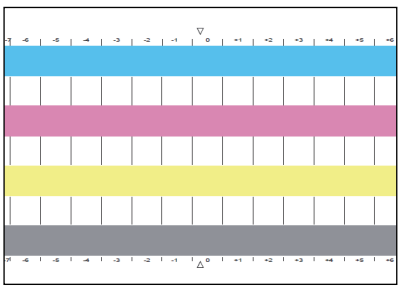


6. **Repeat steps 3 to 5 to enter the measured values for other colors.**
7. **Check that the entered values are correct, and then press [Store and Finish].**
8. **Press [OK], and exit from [Correct Shading] screen.**

■ To perform Visual Correction

☐

1. **Press [Visual Correction] > [Output Test Page] > [Start Printing]. (Test page 2 with mark numbers from -7 to +6 is output.)**



2. **Visually check the test page, and press [Fine Adjust] for the color that requires adjustment.**
3. **Select the number that requires adjustment, enter the density value which is a measured value of the same mark number on the test page, and press [OK].**

4. **Press [Output Test Page] > [Start Printing]. (Test page 2 with marks from -7 to +6 is output.)**
5. **View the output test page 2 and confirm that there is no uneven density.**
6. **Press [Store and Finish].**
7. **Press [OK] and exit the [Correct Shading] screen.**
8. **Execute the Auto Gradation Adjustment (Full Adjust) again.**

■ To perform Print Server Correction

CAUTION:
Perform print server correction from the imagePRESS server side.
Implement after completing the installation of host machine and imagePRESS Server.
For details, see the chapter of "Perform shading correction" of "Color Printing" included in the package of imagePRESS Server.

Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

☐

1. **Log in as a system manager.**
   Factory default password is as follows.
   - System administration division ID: 7654321
   - System administration password: 7654321

CAUTION:
When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions from the user administrator.

2. **Select Settings/Registration > [Adjustment/ Maintenance] > [Adjust Image Quality] > [Register Correction Pattern], and press [Yes].**

CAUTION:
It is required that auto gradation adjustment has been executed.

3. **Select the destination for registration, and press [Next].**
4. **Select the paper which is used by the user and press [Next].**

CAUTION:
- Select the paper used for auto gradation adjustment.
- If paper has been registered for auto gradation adjustment, select the registered paper.

5. **Select the paper source where paper which is used by the user is loaded and press [OK].**
6. **Press [Start Printing].**
7. **Set the output image on the Copyboard and press [Start Scanning].**
8. **If there are 2 or more papers which either was used for auto gradation adjustment or has been registered, repeat steps 2 to 7 as necessary. At that time, be sure to register each paper to different destination. (Up to 4 papers can be registered.)**

Image Position Adjustment <Overview>

■ Checking the paper size

- The image position adjustment is executed based on the following premises: paper sizes of A3 and LDR are 297mm X 420mm and 279mm X 432mm, respectively. Therefore, if the trailing edge margin and right edge margin do not become the reference value 2.5mm after the adjustment, the paper size may not be the regular size so check the paper size being used.
- In leading edge right angle adjustment, it is assumed that the four corners of paper are at a right angle.

■ Paper type

Following papers are recommended for the image margin adjustment:
- GF-C081 (81.4gsm)
- OK Top Coated + (128gsm)
- Hammermill Color Copy Digital 28lb (105gsm)
- CANON-OCE TOP COLOR 100gsm

Because the foregoing papers are recommended as the general papers, so it is acceptable to use papers which a user frequently uses for the image position adjustment. Be sure not to use recycled paper, textured paper, and vellum paper because variation in feeding performance is more likely to occur with them.

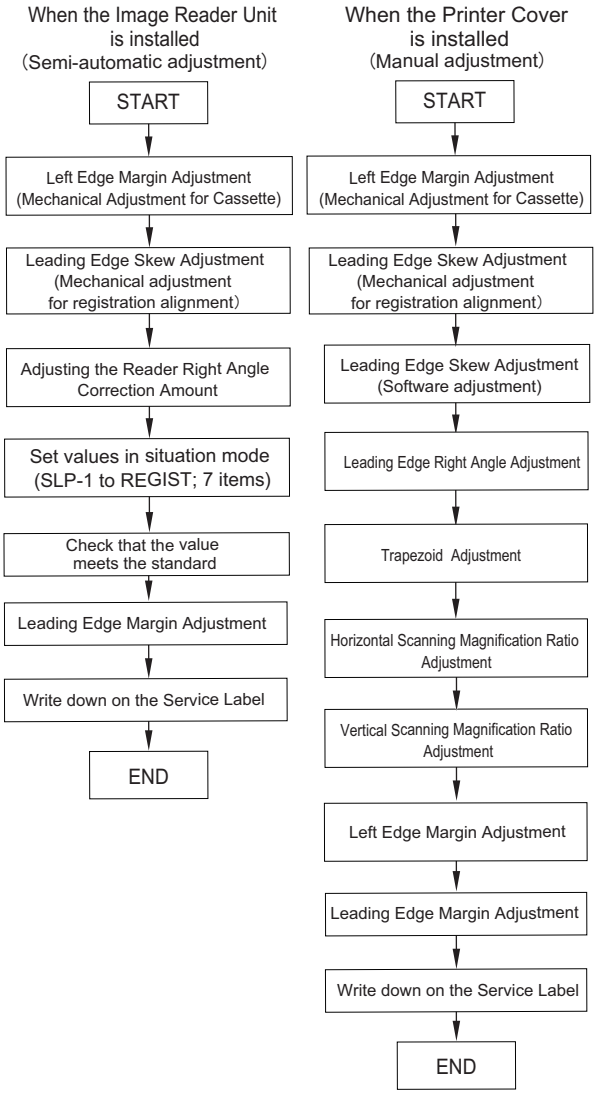
■ Adjustment Flow and Standard

CAUTION:
- The test print used for adjustment must be magenta halftone image.
- In the case of halftone images delivered face-down, the leading edge of the formed image comes to the trailing edge side with respect to the feed direction. Be sure to pay attention to the leading edge and the trailing edge during measurement.

Check that each image position is within the specified range in accordance with "Checking/Adjusting Image Position". If it is out of the specified range, make an adjustment in accordance with "Adjustment method" of each item.

NOTE:
The following adjustment can be performed semi-automatically only when the Image Reader Unit is installed.
Semi-automatic adjustment: When the positions of images on 2-sided prints/copies are not aligned between the front and back sides, you can make adjustments at a time by reading a test page by the reader using a guide sheet.
- When the Image Reader Unit is installed (semi-automatic adjustment): Proceed to "Adjustment using the scanner (semi-automatic adjustment)" on page 983
- When the Printer Cover is installed (manual adjustment): Proceed to "Adjustment without using the scanner (manual adjustment)" on page 1009

< Adjustment flow >



< Adjustment using the scanner (semi-automatic adjustment) >

Left edge margin (Mechanical Adjustment for Cassette, Execute with all paper sources)
- L4 = 2.5 +/-1.0 mm or less

Lading edge skew (Mechanical Adjustment for Registration Alignment)
- -0.5 </= L1 - L2 </= +0.5 mm

Adjusting the Reader Right Angle Correction Amount
- D = (d1 + d2) / 2

Image Position Adjustments
- REG-L-1M (Left Edge Margin): +/- 5 or less
- REGIST1M (Leading Edge Margin): +/- 5 or less
- MAG-H-1M (Horizontal Scanning Magnification Ratio): +/- 20 or less
- MAG-V-1M (Vertical Scanning Magnification Ratio): +/- 20 or less
- SLP-1M (Leading Edge Skew): +/- 5 or less
- ANGLE-1M (Leading Edge Right Angle): +/- 5 or less

- TRPZ-1M (Trapezoid): +/- 5 or less

Leading edge margin

- L3 = 4.0 +/-0.5 mm or less

< Adjustment without using the scanner (manual adjustment) >

Left edge margin (Mechanical Adjustment for Cassette, Execute with all paper sources)

- L4 = 2.5 +/-1.0 mm or less

Lading edge skew (Mechanical Adjustment for Registration Alignment)

- -0.5 </= L1 - L2 </= +0.5 mm

Leading edge skew (Software Adjustment)

- -0.3 </= L1 - L2 </= +0.3 mm

Leading edge right angle (based on an assumption that right angle accuracy of paper is correct)

- -0.5 </= (L4 - L5) x 280/400 </= +0.5 mm

Trapezoid

- -0.5 </= Lx1 - Lx2 </= +0.5 mm

Magnification ratio in horizontal scanning direction

- A3 paper: Ly = 292 +/-0.6 mm or less
- LDR paper: Ly = 274.4 +/-0.5 mm or less

Magnification ratio in vertical scanning direction

- A3 paper: Lx = 412 +/-0.8 mm or less
- LDR paper: Lx = 423.8 +/-0.8 mm or less

Left edge margin (Software Adjustment)

- L4 = 2.5 +/-0.5 mm or less

Leading edge margin

- L3 = 4.0 +/-0.5 mm or less

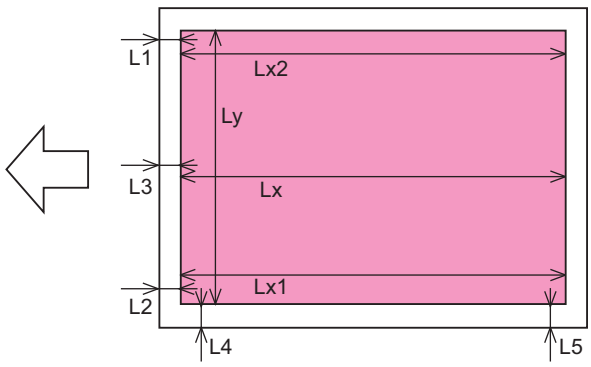


Image Position Adjustment <Checking/Adjusting>

Go through the following procedure for image adjustment.

■ Adjustment using the scanner (semi-automatic adjustment)

● Left Edge Margin Adjustment (Mechanical Adjustment for Cassette Execute with all paper sources)

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1/2/3
2. **In following service mode (Level 1), check that each value is within the range of +/- 10.**
   - COPIER > DISPLAY > CST-STS > REG-L-C1 (Cassette 1)
   - COPIER > DISPLAY > CST-STS > REG-L-C2 (Cassette 2)
   - COPIER > DISPLAY > CST-STS > REG-L-C3 (Cassette 3)

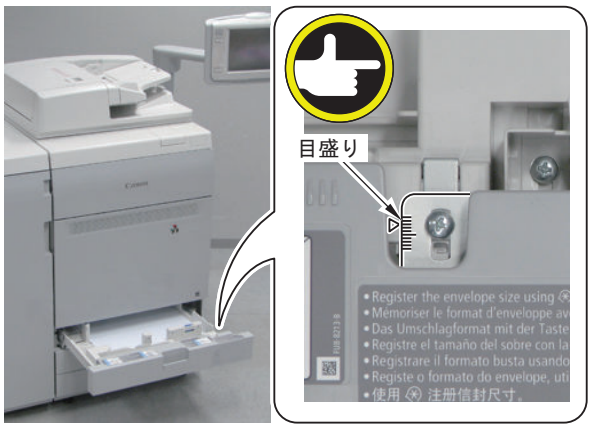
NOTE:
- Display range: -100 to 100 (0.1 mm per increment)
- If the value is "+": The paper is displaced to the front with respect to the feed direction.
- If the value is "-": The paper is displaced to the rear with respect to the feed direction.

3. **If the margin is within the range, proceed to "Adjustment Method step 7".**
   If it is not within the range, execute adjustment by following the procedure below.

< Adjustment Method >

☐

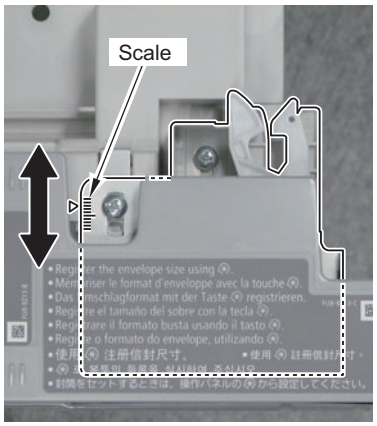
1. **Pull out the Cassette.**
2. **Check the position of the scale of the Cassette Lock Unit.**



3. **Loosen the 2 screws of the Cassette Lock Unit.**

4. **According to the scale in which the position was checked in step 2, adjust the position of the Cassette Lock Unit.**
   - Rough indication: 1.0 mm per increment
   - If the value is "+": Move it toward the front by the amount of "REG-L-xx".
   - If the value is "-": Move it toward the rear by the amount of "REG-L-xx".
     Example: If the value of "REG-L-xx" is "+30", move the Cassette Button Link Unit toward the front by 3 mm.

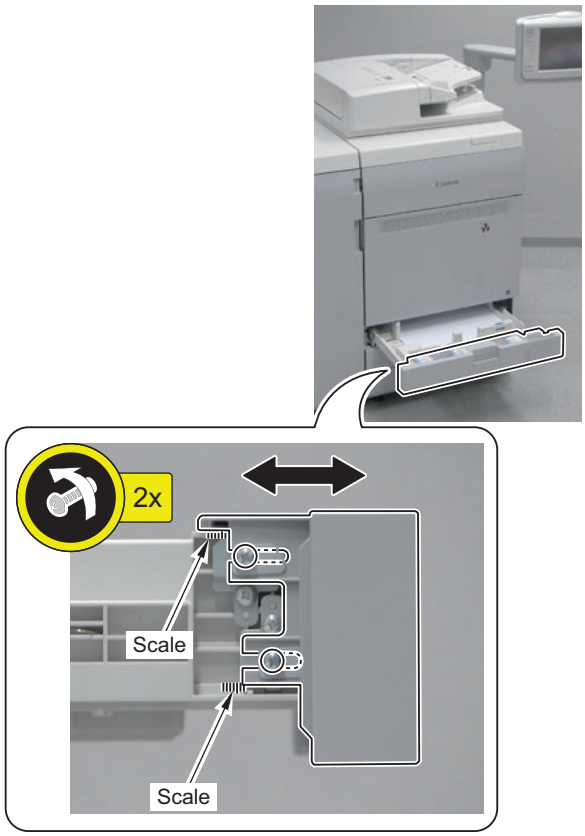
CAUTION:
Be careful not to move a cassette too much; otherwise, it may not be able to be installed in the host machine.



5. **Tighten the 2 screws loosened in step 3.**
6. **Perform printing again from the paper source where adjustment has been made, and check that the value is within the specified range. When the result is out of the specified range, repeat steps 1 to 5.**

NOTE:
If you are concerned with alignment of the Cassette Cover, adjust the right and left sides of the cover as necessary.

7. **Loosen the 2 screws and adjust the position of the Cassette Cover by referring to the scale.**
   When moving the Cassette Lock Unit, adjust the left side of the Cassette Cover by shifting it with the same shifting amount of the unit.
8. **Tighten the 2 screws that were loosened.**



9. **Exit service mode.**

CAUTION:
When "Mechanical Adjustment for Cassette Execute" has been performed, be sure to perform the following "Cassette pull-in Check".

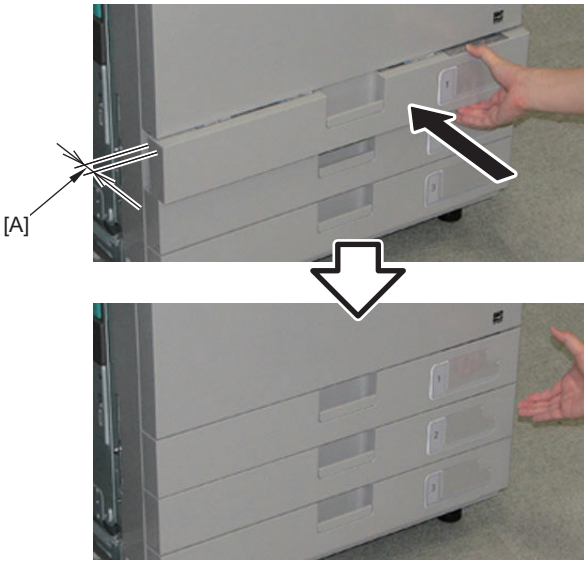
<Cassette pull-in Check>

☐

1. **Open the Left Cover.**
2. **Open the cassette 200 mm or more.**

NOTE:
The pull-in mechanism is activated by opening the cassette 200 mm or more.

3. **Push back the cassette until it is 15 mm [A] from the Front Cover of the host machine, and let go of the cassette.**



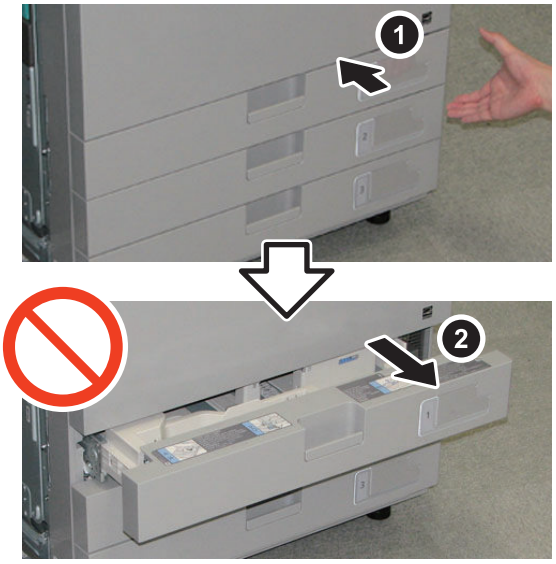
< Appropriate >

The latch is locked, and the level difference between the Cassette Front Cover and other external covers is within the appropriate range when viewed from the left side. Adjustment is not necessary.

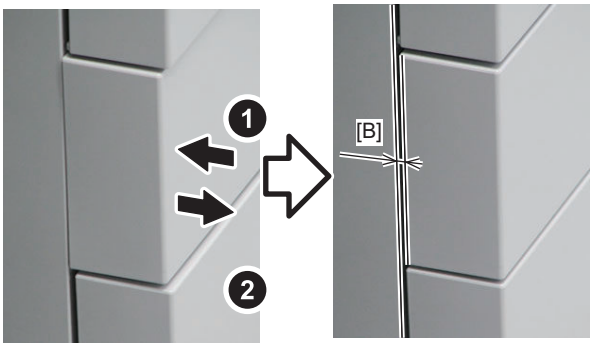
- The level difference [A] between the cassette and other covers (the Front Cover and other Cassette Front Covers) on the front side should be 2 mm or less.
- The gap [B] from the cover on the rear side should be 4 to 5 mm.

< Semi-closed >

The cassette has been excessively pulled in. The gap from other external covers is eliminated by further pushing the cassette in this situation, but adjustment is needed from a functional point of view.



By further pushing the cassette in this situation, a gap [B] is generated between the cassette and the cover on the rear side. Measure and write down the gap [B].



Perform "Adjusting the Cassette Front Cover", and then perform "Adjusting the Pull-in Guide" as needed.

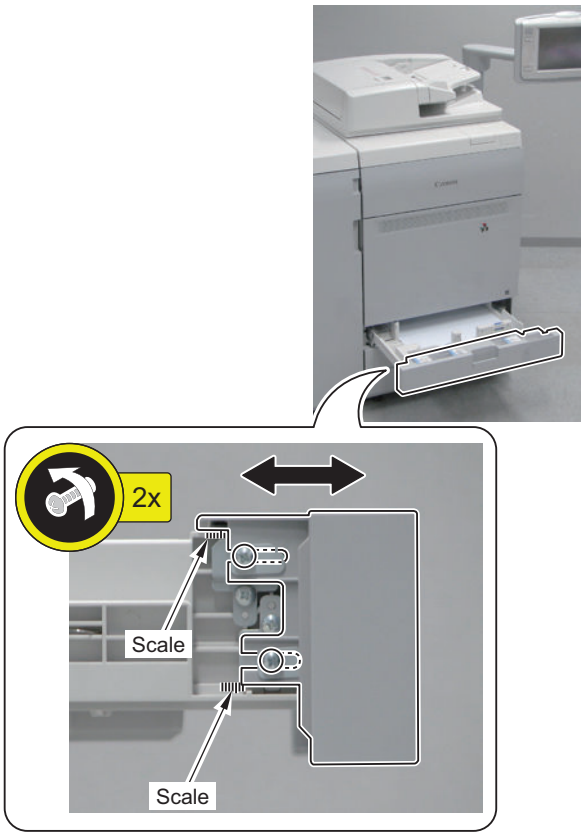
< Latch not locking >

The cassette has not been pulled in enough. The cassette is not latched and comes out. Perform "Adjust the Pull-in Guide".

<Adjusting the Cassette Front Cover>

1. **Pull out the cassette.**
2. **Loosen the 2 adjustment screws on the left side, and move the Cassette Front Cover as needed using the 2 scales as reference until the gap [B] from the cover on the rear side you wrote down in "Checking Method" changes to a value within the appropriate range.**

NOTE:
While the appropriate range of the gap is 4 to 5 mm in normal circumstances, in the case of a semi-closed cassette, adjust the gap to a value within 5 mm.



3. **Tighten the 2 adjustment screws you loosened in step 2.**
4. **Perform the procedure of "Checking Method" again. If the gap is still out of the appropriate range, perform "Adjusting the Pull-in Guide".**

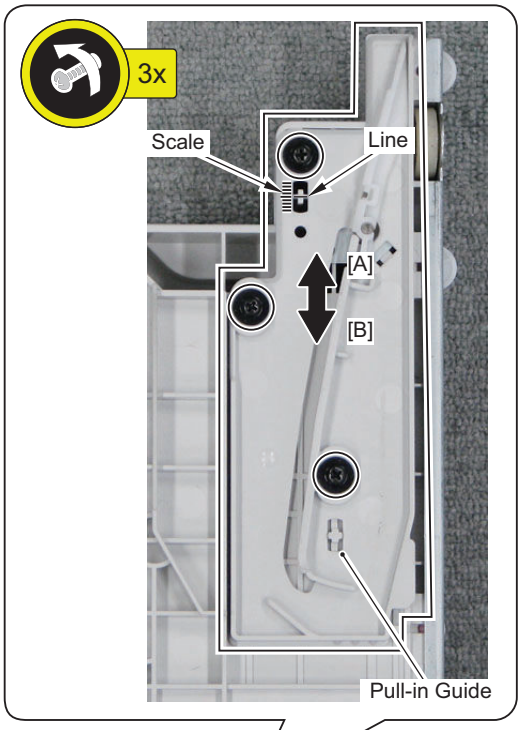
<Adjusting the Pull-in Guide>

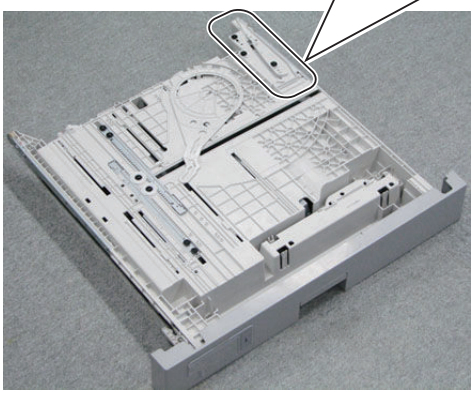
1. **Remove the cassette.**
2. **Loosen the 3 adjustment screws on the rear side of the cassette. Using the scale and the boss line as**

reference, move the position of the Pull-in Guide for 1 division of the scale.

NOTE:
Check the initial position on the scale (because the position at the time of shipment is not always at the center).

- In the case of a semi-closed cassette: Move the Pull-in Guide for 1 division of the scale upward (toward the rear side [A] of the host machine) so that the amount the cassette is pulled in is reduced.
- In the case of latch not locking: Move the Pull-in Guide for 1 division of the scale downward (toward the front side [B] of the host machine) so that the amount the cassette is pulled in is increased.



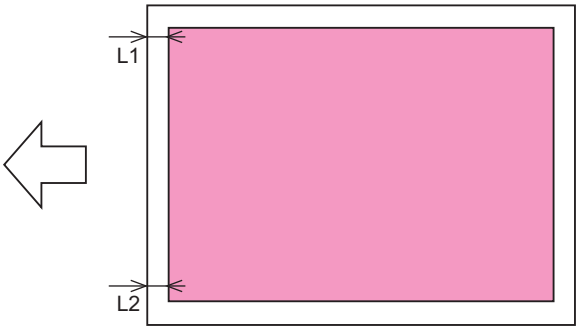


3. **Tighten the 3 adjustment screws you loosened in step 2.**
4. **Perform the procedure of "Checking Method" again, and adjust the gap until it becomes an appropriate value.**

● Leading Edge Skew Adjustment (Mechanical Adjustment for Registration Alignment)

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the values of the leading edge skew of the image satisfy "-0.5 </= L1 - L2 </= +0.5 mm". When the result is out of the specified range, perform adjustment by following the following procedure.**



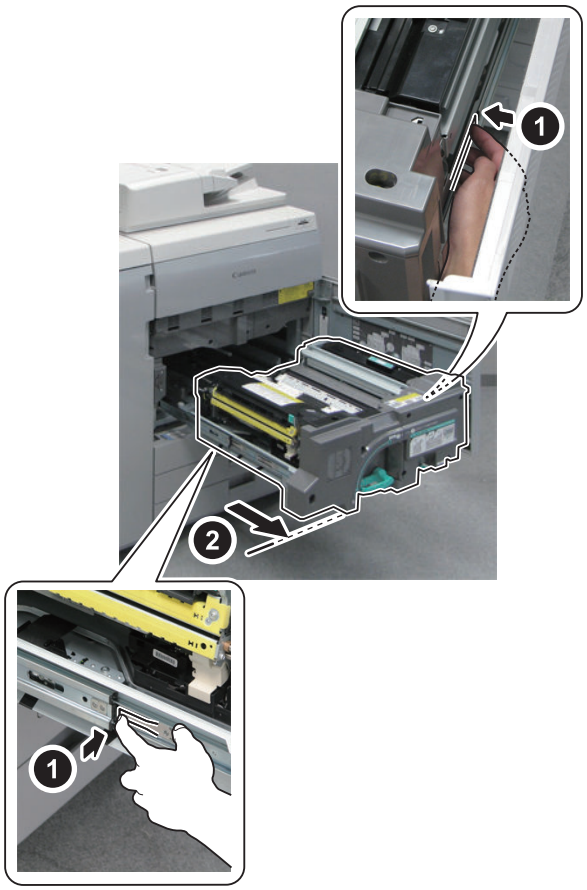
< Adjustment method >

☐

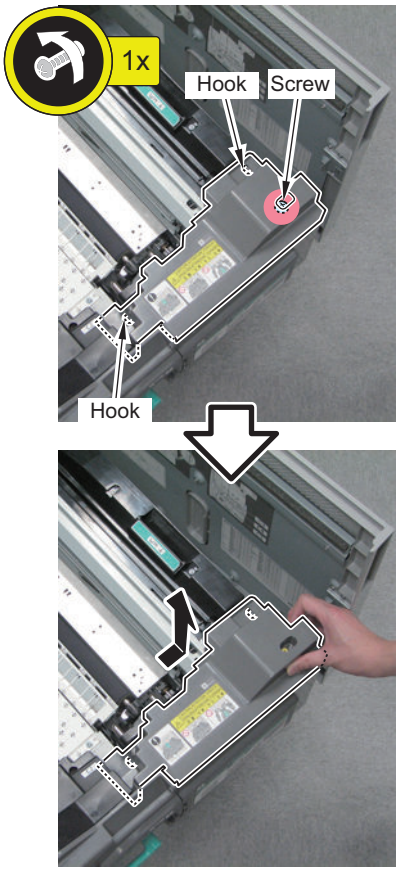
1. **Open the Front Cover and pull out the Fixing Feed Unit.**

2. **Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.**

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.

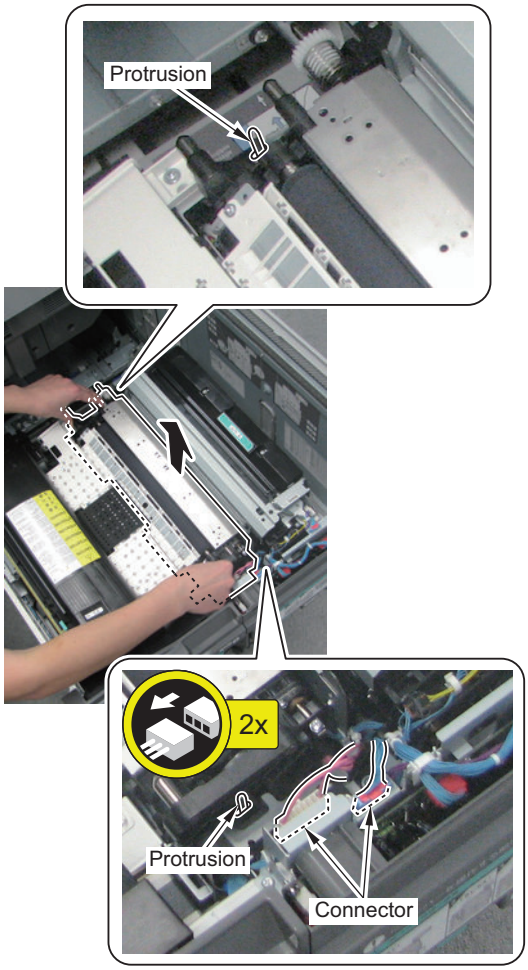


3. **Remove the Fixing Feed Inner Cover.**
   - 1 Screw
   - 2 Hooks



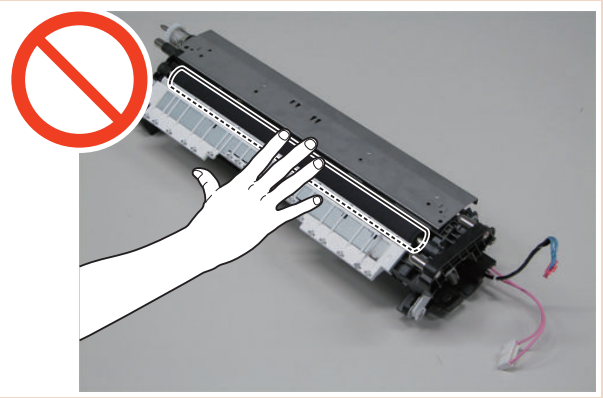
4. Remove the Secondary Transfer Outer Unit.

- 2 Connectors
- 2 Protrusions

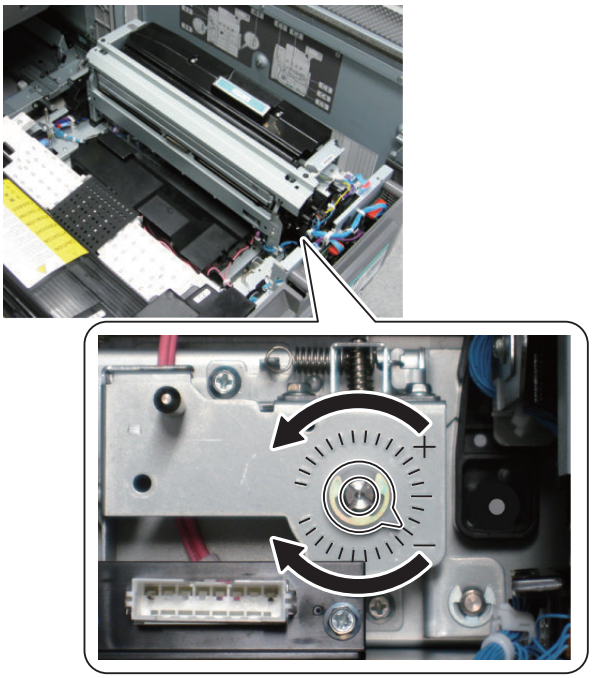


5. Loosen the 4 screws.

CAUTION:
Do not touch the surface of the Secondary Transfer Outer Roller.



6. **Adjust the Registration Adjustment Shaft by turning it with a screwdriver.**
   - In case of L1 - L2 > 0.5 mm: Turn to - direction
   - In case of L1 - L2 < -0.5 mm: Turn to + direction
     e.g.: In case of L1 - L2 = 0.6, turn the shaft to - direction by 6 scales.
     1 scale mark of the dial: 0.1mm



7. **Install the Secondary Transfer Outer Unit (2 Connectors).**

CAUTION:
When installing the Secondary Transfer Outer Unit to the Fixing Feed Unit, be sure to do so after releasing the pressure applied on the Secondary Transfer Outer Roller. (Otherwise, the Secondary Transfer Outer Roller may be deformed, or the ITB may be damaged.)
< How to release the pressure applied on the Secondary Transfer Outer Roller >
The pressure on the Secondary Transfer Outer Roller can be released by turning the gear and changing the direction of the cam. Be sure to keep the Secondary Transfer Outer Roller lowered.

8. **Tighten the 4 screws loosened in step 5.**

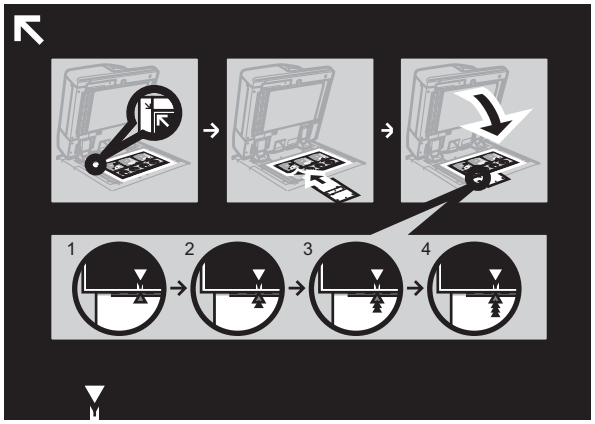
CAUTION:
When tightening the screws, be sure to tighten them in the order from (1) to (2).

9. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**

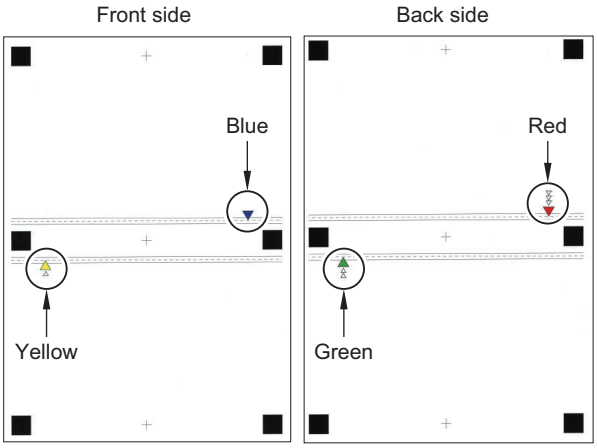
● Adjusting the Reader Right Angle Correction Amount

When the positions of images on 2-sided prints/copies are not aligned between the front and back sides, make adjustments by reading a test page by the reader using a guide sheet.

Guide sheet



Test page (2-sided)

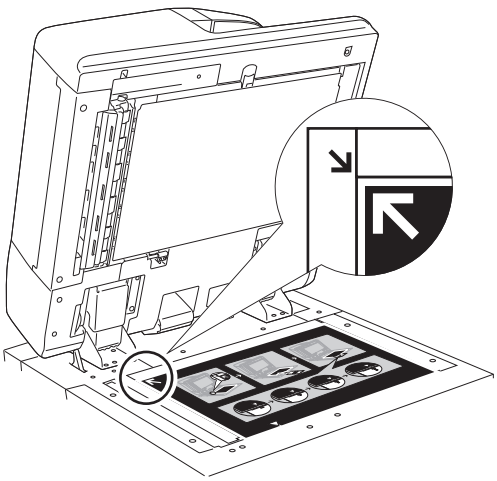


CAUTION:

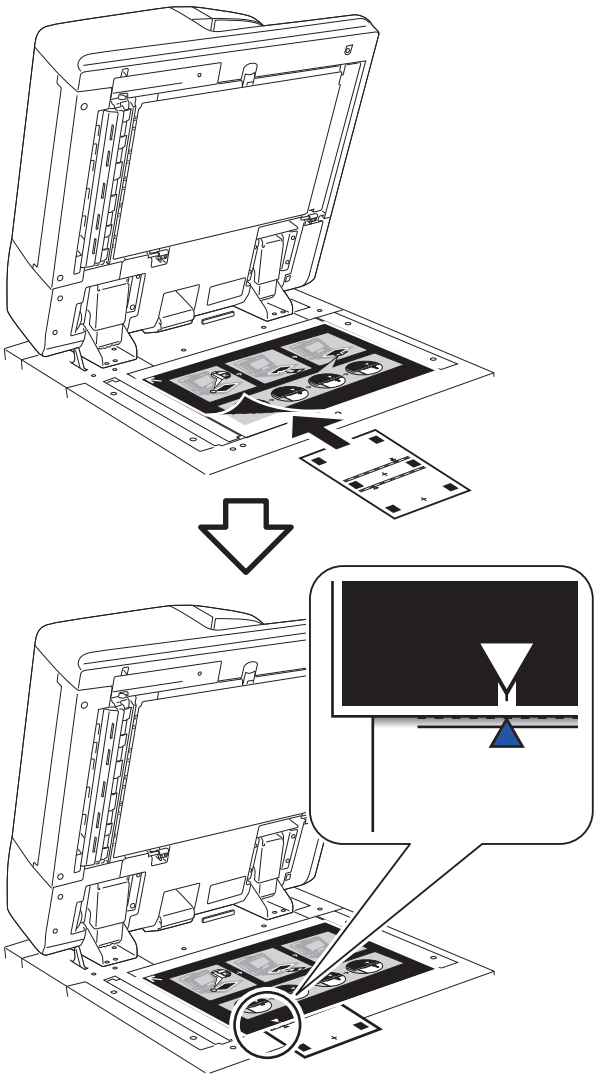
- Be sure to clean the Copyboard Glass and the back side of the feeder before adjustment.
- Use data for the guide sheet (for A3, for 11x17) provided separately.
- Print the guide sheet under the following conditions: When the guide sheet is not properly printed, accurate adjustment result may not be obtained.
  Use a sheet of paper whose size is the same as the size data of the guide sheet to create a guide sheet.
  Paper that is 200 g/m2 or above is recommended.
  Set the magnification ratio to 100% magnification.

NOTE:
When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions of the user administrator.

1. **Select [Settings/Registration] > [Preferences] > [Paper Settings] > [Paper Type Management Settings].**
2. **Select paper to use for adjustment, press [Duplicate], and then name and save the paper.**
3. **Make settings of the duplicated paper in [Paper Settings].**
4. **Press [Paper Type Management Settings], select the type of duplicated paper from the list, and then press [Details/Edit].**
5. **Press [Change] of <Adjust Image Position>, and press [Use Scanner].**
6. **Set the number of test page to output to 1, and press [Next].**
7. **Select the paper source where paper used for the adjustment is loaded, and press [Start Printing] (a test page is output).**
8. **Place the guide sheet on the Copyboard Glass, and align the arrow mark of the guide sheet with that of the Copyboard Glass.**



9. **Align the triangle mark of the guide sheet with the triangle mark (blue) which is for the first scanning of the test page.**



10. **Close the feeder, and press [Start Scanning].**

NOTE:
Be careful not to move the guide sheet when closing the feeder.

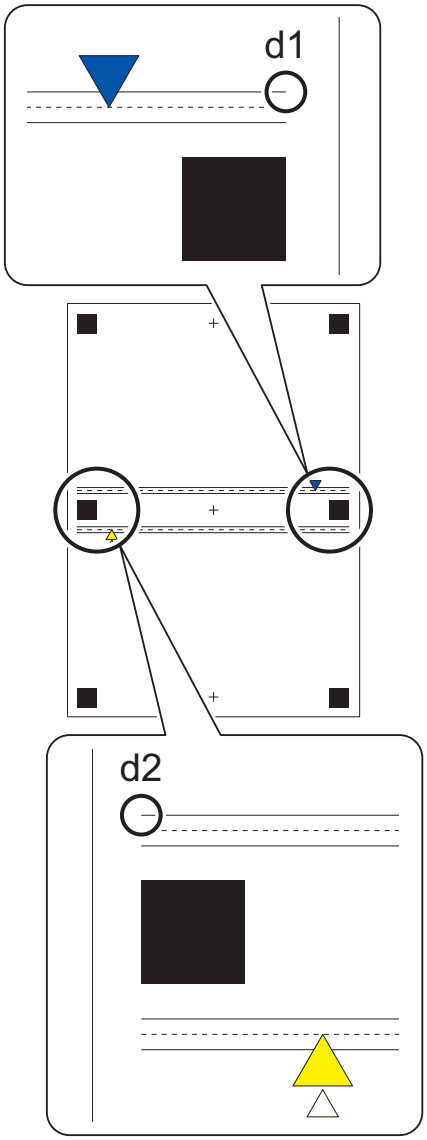
11. **According to the instruction on the screen, scan the test page by setting the yellow, green, and red triangle marks for the second, third, and fourth scanning, respectively.**
12. **When multiple test pages were output, repeat the steps 9 to 11 for the number of test pages output.**
    The adjustment is finished when all the test pages have been scanned. Scan the test pages in the order they were output.

☐

13. After scanning is finished, perform the steps 5 to 7, and output 1 test page.

☐

14. Measure the amount of displacement between the front and back sides of d1 (blue side) and d2 (yellow side) of the test page that was output.



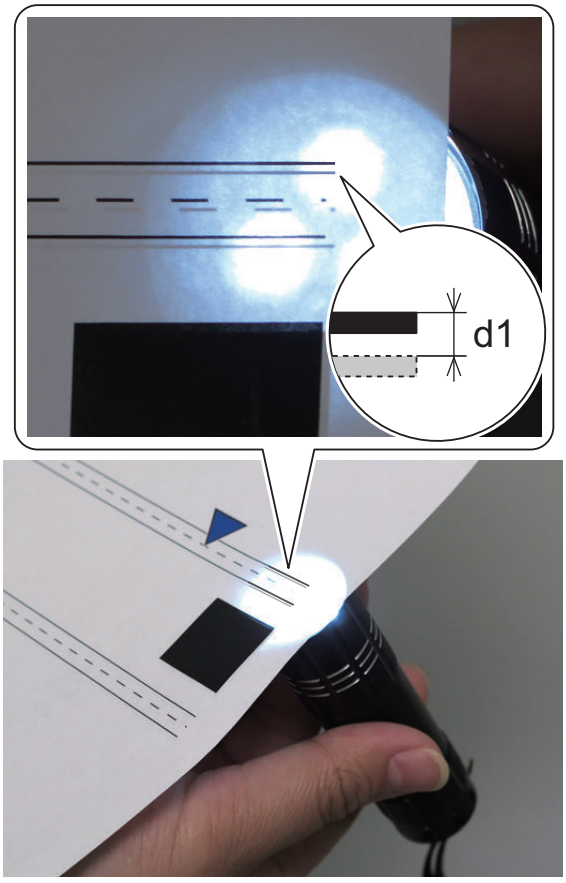
☐

14-1. Expose d1 (blue side) to the light from the back side (red and green side), and measure the amount of displacement between the front and back of d1.

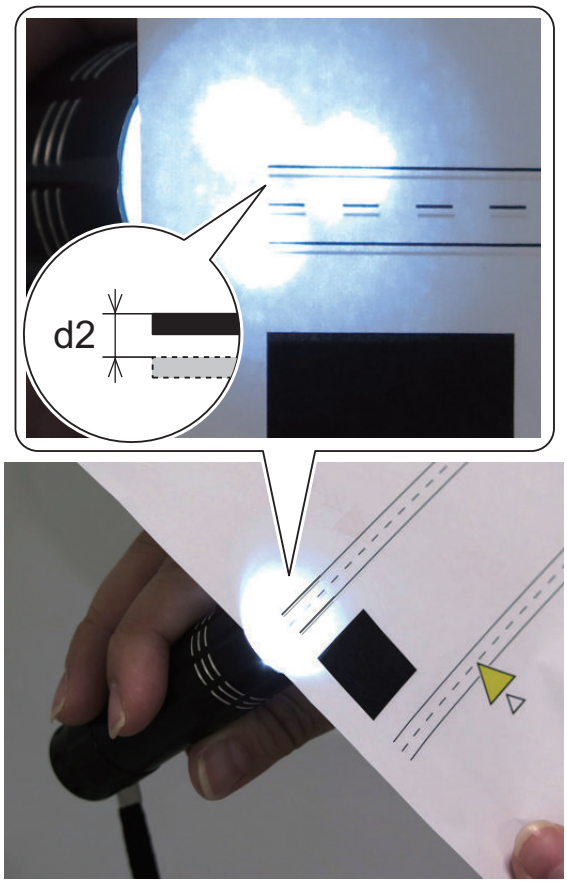
CAUTION:

- Be sure to measure the amount of displacement either between the upper sides of the lines or between the lower sides of the lines.
- Use the lines on the front side (blue and yellow side) as a reference.

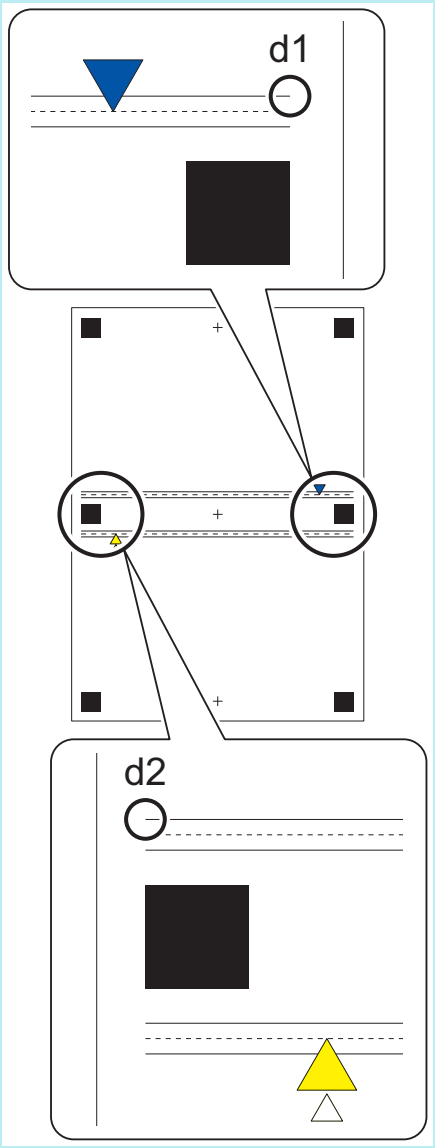
NOTE:
The gray part in dashed lines shows a line printed on the back (red and green side) from which the light is exposed.



□
14-3. Measure d2 (yellow side) in the same way.



NOTE:
Be sure to calculate D (the amount of displacement) in step 14-4 using the values measured in the direction shown in the figure below.



☐

14-4. When d1 and d2 are 0.5 mm or less, respectively, end the adjustment. If more than 0.5 mm, calculate D which is the amount of displacement between the front and back as shown below:

- D = (d1 + d2)/2

NOTE:
When improving the accuracy further from 0.5 mm upon user's request, perform the following steps:

< Example of measuring D >

Yellow side Blue side

Ex.1:

d2 = -0.7 d1 = -0.4

D = ((-0.7) + (-0.4))/2 = -0.55

Ex.2:

d2 = +0.5 d1 = +0.4

D = ((+0.5) + (+0.4))/2 = +0.45

Ex.3:

d2 = -0.7 d1 = +0.4

D = ((-0.7) + (+0.4))/2 = -0.15

Ex.4:

d2 = +0.5 d1 = -0.4

D = ((+0.5) + (-0.4))/2 = +0.05

☐

15. **Enter the measured D in the following service mode (Level 1). (Unit: 0.01 mm)**
    Service Mode > COPIER > ADJUST > ADJ-XY > RDR-ANG2
    Ex.: Enter "-55" in the case of D = -0.55 mm.
    Enter "55" in the case of D = +0.55 mm.

☐

16. **Perform the steps 4 to 11, and output 1 test page.**

☐

17. **Measure the D (amount of displacement between the front and back) and if the further adjustment is necessary, go back to step 5, output 1 test page, and then perform the adjustment again.**

NOTE:
If the adjustment is performed again, adjust by adding to the value displayed for RDR-ANG2 as the reference.

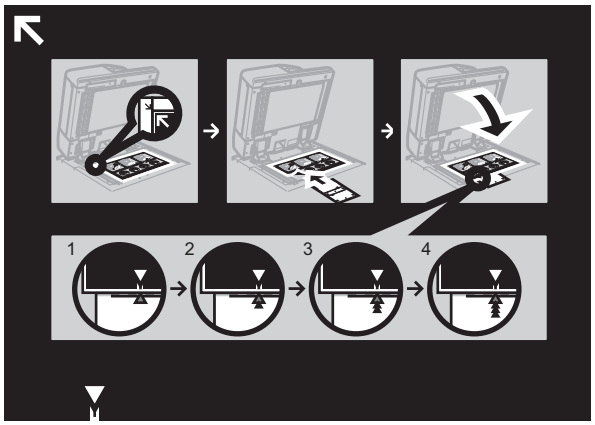
• Image Position Adjustments

Perform the following procedures to adjust the image position.

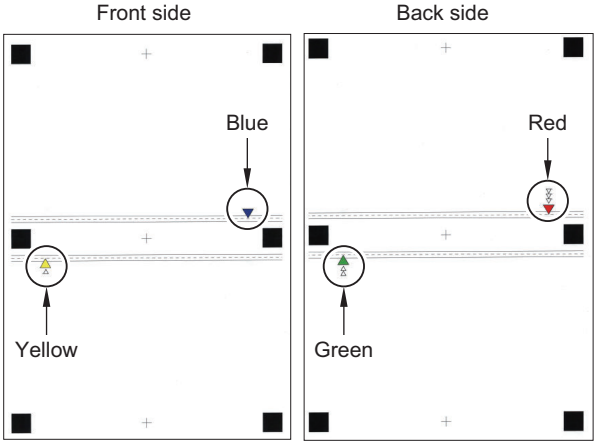
- Leading Edge Skew Adjustment (Software Adjustment)
- Leading Edge Right Angle Adjustment
- Trapezoid Adjustment
- Horizontal Scanning Magnification Ratio Adjustment
- Vertical Scanning Magnification Ratio Adjustment
- Left Edge Margin Adjustment
- Leading Edge Margin Adjustment

When the positions of images on 2-sided prints/copies are not aligned between the front and back sides, make adjustments by reading a test page by the reader using a guide sheet.

Guide sheet



Test page (2-sided)



CAUTION:
- Be sure to clean the Copyboard Glass and the back side of the feeder before adjustment.
- Use data for the guide sheet (for A3, for 11x17) provided separately.
- Before performing the adjustment, be sure to print the guide sheet under the following conditions:
  When the guide sheet is not properly printed, accurate adjustment result may not be obtained.
  Use a sheet of paper whose size is the same as the size data of the guide sheet to create a guide sheet.
  Paper that is 200 g/m2 or above is recommended.
  Set the magnification ratio to 100% magnification.

NOTE:
- **If "Adjusting the Reader Right Angle Correction Amount" has been performed just before this adjustment, the values scanned in the procedure can be used, and the output of the first test page (steps 1 to 11) can be omitted.**
- **In the case of performing "Adjusting the Reader Right Angle Correction Amount" and this adjustment separately, it is necessary to duplicate 2 types of paper "for adjustment" and "for checking" and output the test page 2 times.**

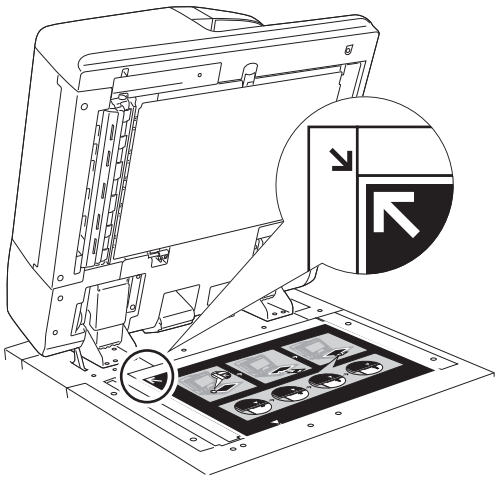
□

NOTE:
When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions of the user administrator.

1. **Select [Settings/Registration] > [Preferences] > [Paper Settings] > [Paper Type Management Settings].**
2. **Select paper to use for adjustment, press [Duplicate], and then save the paper under a new name (for adjustment).**
3. **Make settings of the duplicated paper (for adjustment) in [Paper Settings].**
4. **Press [Paper Type Management Settings], select the type of duplicated paper (for adjustment) from the list, and then press [Details/Edit].**
5. **Press [Change] of <Adjust Image Position>, and press [Use Scanner].**
6. **Set the number of test pages to output to 1, and press [Next].**
7. **Select the paper source where paper used for the adjustment is loaded, and press [Start Printing] (a test page is output).**

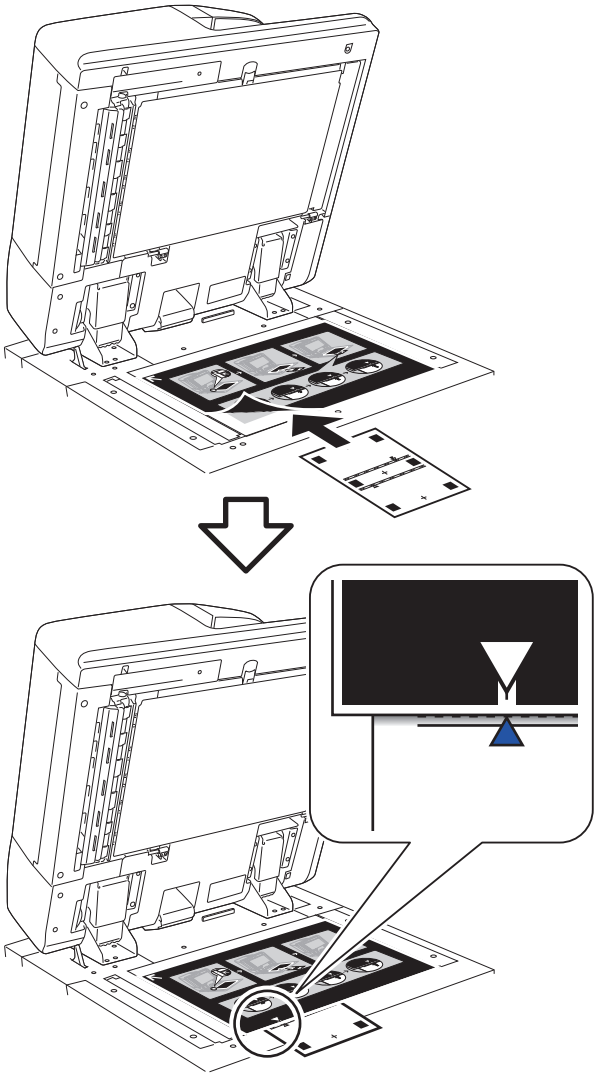
□

8. **Place the guide sheet on the Copyboard Glass, and align the arrow mark of the guide sheet with that of the Copyboard Glass.**



□

9. **Align the triangle mark of the guide sheet with the triangle mark (blue) which is for the first scanning of the test page.**



☐

10. Close the feeder, and press [Start Scanning].

NOTE:
Be careful not to move the guide sheet when closing the feeder.

☐

11. According to the instruction on the screen, scan the test page by setting the yellow, green, and red triangle marks for the second, third, and fourth scanning, respectively.

CAUTION:
Do not change the paper settings scanned in [Paper Settings] (or the scan results will be overwritten).
If settings of another paper have been configured before adjusting the image position, start from step 8 to scan the test page again.

☐

12. Enter service mode > SITUATION > Installation > Semi-automatic image position adjustment.

13. Add the value shown in the scan result (with "M" at the end) to the setting value.

Example 1: When the left edge margin REG-L-1M = 4, REG-L = 3
4 + 3 = 7, therefore enter "7" for REG-L.
Example 2: When the left edge margin REG-L-1M = 4 = -4, REG-L = -3
(-4) + (-3) = -7, therefore enter "-7" for REG-L.

Adjustment item	Scan result	Setting value
Left edge margin	REG-L-1M	REG-L
Leading edge margin	REGIST1M	REGIST
Horizontal scanning magnification ratio	MAG-H-1M	MAG-H
Vertical scanning magnification ratio	MAG-V-1M	MAG-V
Leading edge skew	SLP-1M	SLP-1
Leading edge right angle	ANGLE-1M	ANGLE-1
Trapezoid	TRPZ-1M	TRPZ-1

☐

14. Perform steps 1 to 7 again to duplicate the paper type used as "for checking" aside from the paper type used as "for adjustment", and output a sheet of test page.

15. Perform steps 8 to 11 again to scan the test page.

CAUTION:
Do not change the paper settings scanned in [Paper Settings] (or the scan results will be overwritten).
If settings of another paper have been configured before checking the standard value, scan the test page again.

16. Enter service mode > SITUATION > Installation > Semi-automatic image position adjustment.

17. Check again that the value displayed in the scan result (with "M" at the end) meets the standard.

Scan result	Standard
REG-L-1M	+/-5 or less
REGIST1M	+/-5 or less
MAG-H-1M	+/-20 or less
MAG-V-1M	+/-20 or less
SLP-1M	+/-5 or less
ANGLE-1M	+/-5 or less
TRPZ-1M	+/-5 or less

18. If the value does not meet the standard, repeat steps 13 to 17.

19. After the adjustment, delete all the paper types that have been duplicated.

• Leading Edge Margin Adjustment

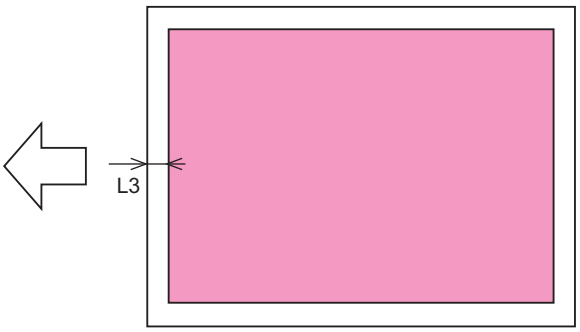
☐

1. After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.

- COPIER > TEST > PG > TYPE = 5
- COPIER > TEST > PG > COLOR-M = 1
- COPIER > TEST > PG > COLOR-Y/C/Bk = 0
- COPIER > TEST > PG > PG-PICK = 1

2. Check that the leading edge margin L3 is within the range indicated below. When the result is out of the specified range, perform adjustment by following the following procedure.

- L3: 4.0 +/-0.5 mm



< Adjustment method >

☐

1. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > FEED-ADJ > REGIST**
   - Setting range: - 100 to 100 (0.1 mm per increment))
   - When the setting value is increased by "1", the leading edge margin is decreased by 0.1 mm.
2. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
3. **If the values of the following service modes have been changed, write down the new adjustment value in the service label.**
   - REG-L
   - REGIST
   - MAG-H
   - MAG-V
   - SLP-1
   - ANGLE-1
   - TRPZ-1
4. **Exit service mode.**

■ Adjustment without using the scanner (manual adjustment)

● Left Edge Margin Adjustment (Mechanical Adjustment for Cassette Execute with all paper sources)

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from each cassette.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1/2/3
2. **In following service mode (Level 1), check that each value is within the range of +/- 10.**
   - COPIER > DISPLAY > CST-STS > REG-L-C1 (Cassette 1)
   - COPIER > DISPLAY > CST-STS > REG-L-C2 (Cassette 2)
   - COPIER > DISPLAY > CST-STS > REG-L-C3 (Cassette 3)

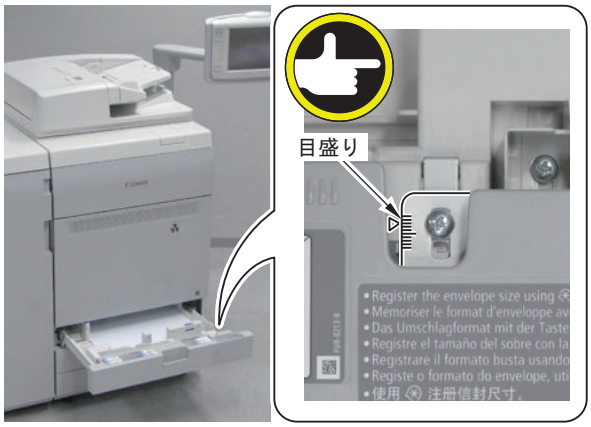
NOTE:
- Display range: -100 to 100 (0.1 mm per increment)
- If the value is "+": The paper is displaced to the front with respect to the feed direction.
- If the value is "-": The paper is displaced to the rear with respect to the feed direction.

3. **If the margin is within the range, proceed to "Adjustment Method step 7".**
   If it is not within the range, execute adjustment by following the procedure below.

< Adjustment Method >

☐

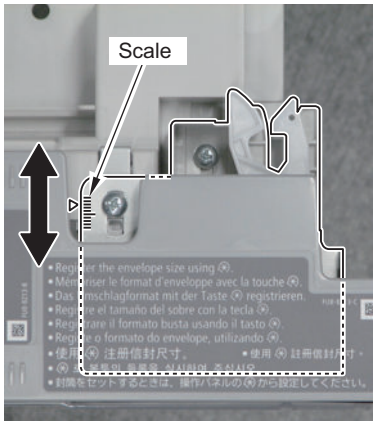
1. **Pull out the Cassette.**
2. **Check the position of the scale of the Cassette Lock Unit.**



3. **Loosen the 2 screws of the Cassette Lock Unit.**

4. **According to the scale in which the position was checked in step 2, adjust the position of the Cassette Lock Unit.**
   - Rough indication: 1.0 mm per increment
   - If the value is "+": Move it toward the front by the amount of "REG-L-xx".
   - If the value is "-": Move it toward the rear by the amount of "REG-L-xx".
     Example: If the value of "REG-L-xx" is "+30", move the Cassette Button Link Unit toward the front by 3 mm.

CAUTION:
Be careful not to move a cassette too much; otherwise, it may not be able to be installed in the host machine.

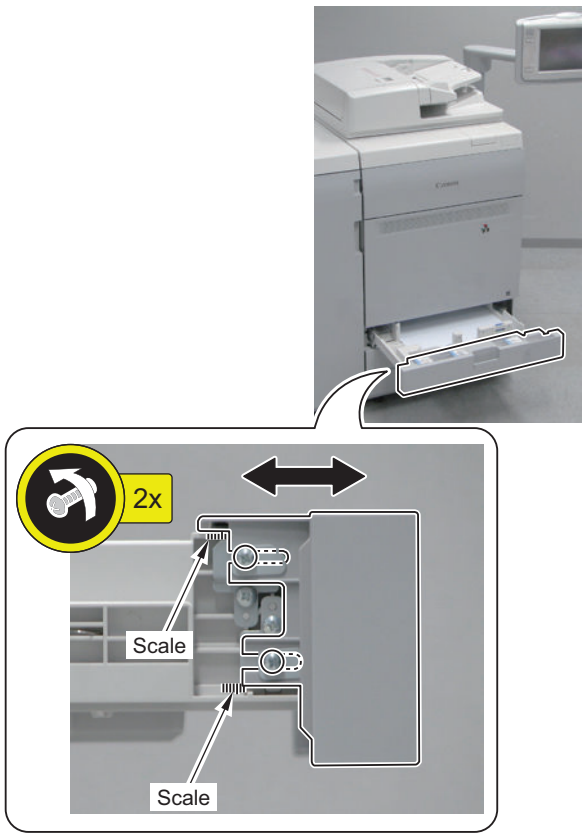


5. **Tighten the 2 screws loosened in step 3.**
6. **Perform printing again from the paper source where adjustment has been made, and check that the value is within the specified range. When the result is out of the specified range, repeat steps 1 to 5.**

NOTE:
If you are concerned with alignment of the Cassette Cover, adjust the right and left sides of the cover as necessary.

7. **Loosen the 2 screws and adjust the position of the Cassette Cover by referring to the scale.**
   When moving the Cassette Lock Unit, adjust the left side of the Cassette Cover by shifting it with the same shifting amount of the unit.

8. **Tighten the 2 screws that were loosened.**



9. **Exit service mode.**

CAUTION:
When "Mechanical Adjustment for Cassette Execute" has been performed, be sure to perform the following "Cassette pull-in Check".

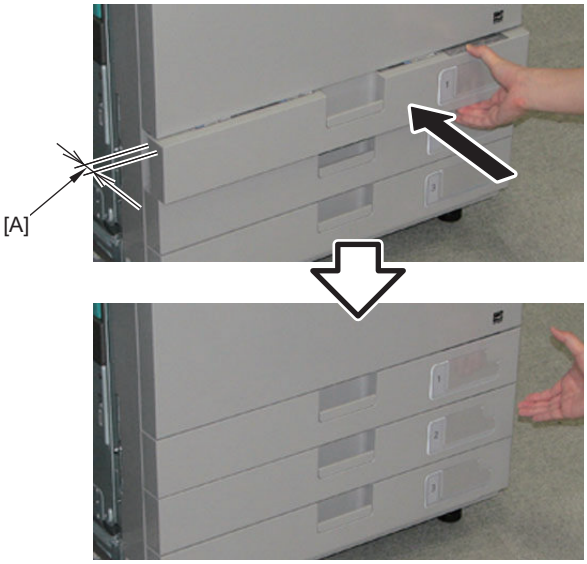
<Cassette pull-in Check>

☐

1. **Open the Left Cover.**
2. **Open the cassette 200 mm or more.**

NOTE:
The pull-in mechanism is activated by opening the cassette 200 mm or more.

3. **Push back the cassette until it is 15 mm [A] from the Front Cover of the host machine, and let go of the cassette.**



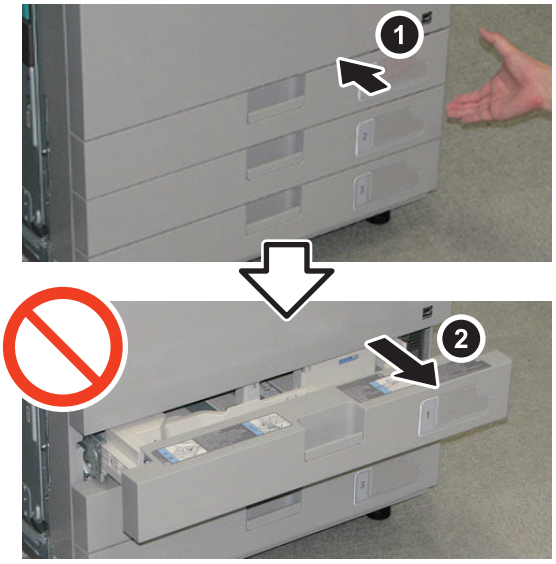
< Appropriate >

The latch is locked, and the level difference between the Cassette Front Cover and other external covers is within the appropriate range when viewed from the left side. Adjustment is not necessary.

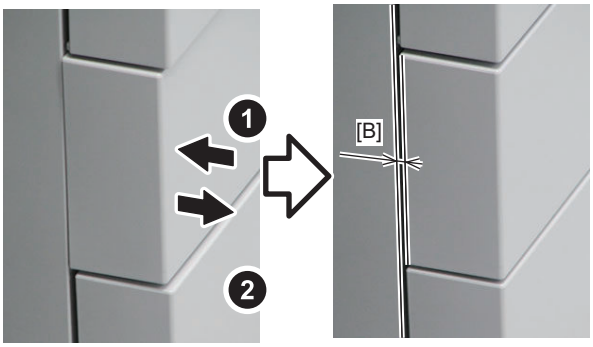
- The level difference [A] between the cassette and other covers (the Front Cover and other Cassette Front Covers) on the front side should be 2 mm or less.
- The gap [B] from the cover on the rear side should be 4 to 5 mm.

< Semi-closed >

The cassette has been excessively pulled in. The gap from other external covers is eliminated by further pushing the cassette in this situation, but adjustment is needed from a functional point of view.



By further pushing the cassette in this situation, a gap [B] is generated between the cassette and the cover on the rear side. Measure and write down the gap [B].



Perform "Adjusting the Cassette Front Cover", and then perform "Adjusting the Pull-in Guide" as needed.

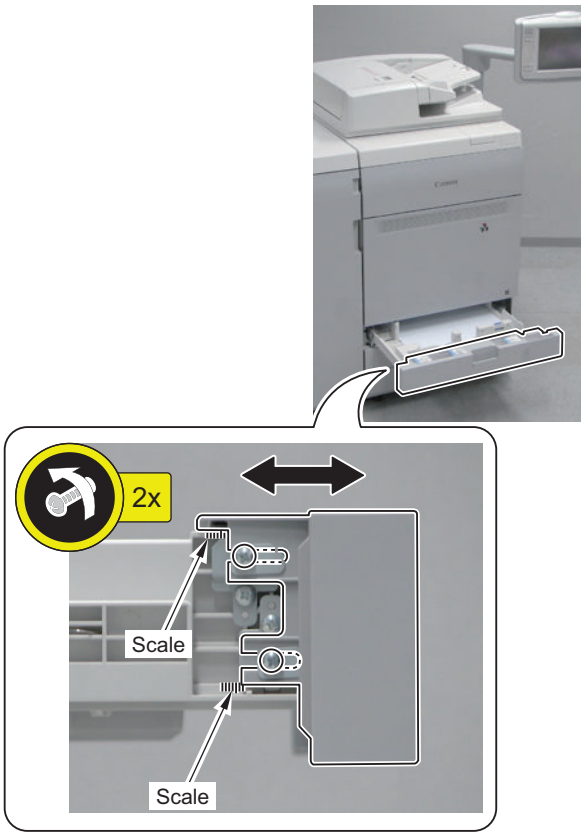
< Latch not locking >

The cassette has not been pulled in enough. The cassette is not latched and comes out. Perform "Adjust the Pull-in Guide".

<Adjusting the Cassette Front Cover>

1. **Pull out the cassette.**
2. **Loosen the 2 adjustment screws on the left side, and move the Cassette Front Cover as needed using the 2 scales as reference until the gap [B] from the cover on the rear side you wrote down in "Checking Method" changes to a value within the appropriate range.**

NOTE:
While the appropriate range of the gap is 4 to 5 mm in normal circumstances, in the case of a semi-closed cassette, adjust the gap to a value within 5 mm.



3. **Tighten the 2 adjustment screws you loosened in step 2.**
4. **Perform the procedure of "Checking Method" again. If the gap is still out of the appropriate range, perform "Adjusting the Pull-in Guide".**

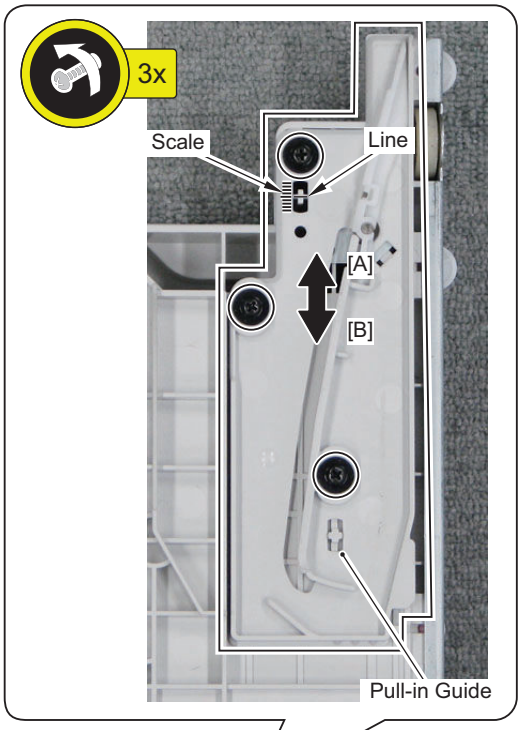
<Adjusting the Pull-in Guide>

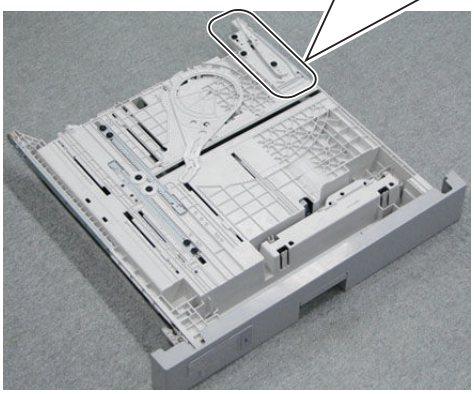
1. **Remove the cassette.**
2. **Loosen the 3 adjustment screws on the rear side of the cassette. Using the scale and the boss line as**

reference, move the position of the Pull-in Guide for 1 division of the scale.

NOTE:
Check the initial position on the scale (because the position at the time of shipment is not always at the center).

- In the case of a semi-closed cassette: Move the Pull-in Guide for 1 division of the scale upward (toward the rear side [A] of the host machine) so that the amount the cassette is pulled in is reduced.
- In the case of latch not locking: Move the Pull-in Guide for 1 division of the scale downward (toward the front side [B] of the host machine) so that the amount the cassette is pulled in is increased.



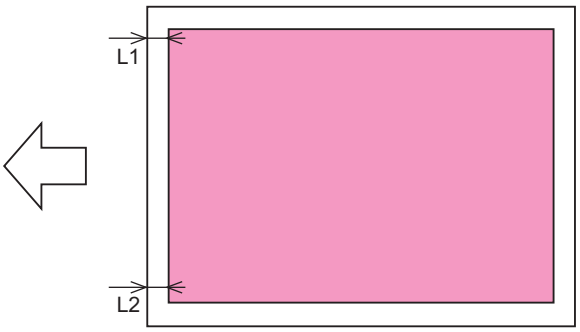


3. **Tighten the 3 adjustment screws you loosened in step 2.**
4. **Perform the procedure of "Checking Method" again, and adjust the gap until it becomes an appropriate value.**

● Leading Edge Skew Adjustment

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the leading edge skew on the image is as follow. When the result is out of the specified range, perform adjustment by following the following procedure.**
   - If the result is -0.5 ≦ L1 - L2 ≦ +0.5 mm: Go to mechanical adjustment for registration alignment
   - If the result is as follow -0.3 ≦ L1 - L2 ≦ +0.3 mm: Go to software adjustment



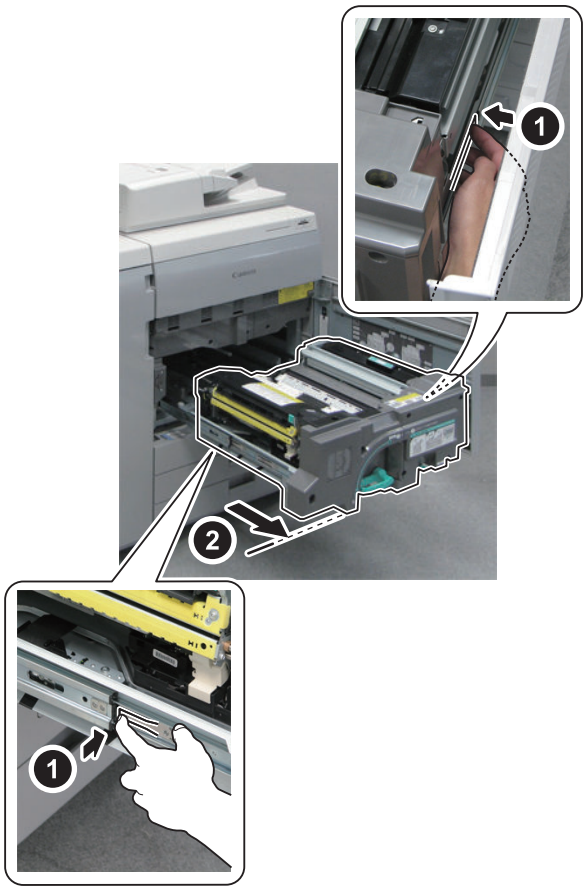
<Adjustment method (mechanical adjustment for registration alignment)>

☐

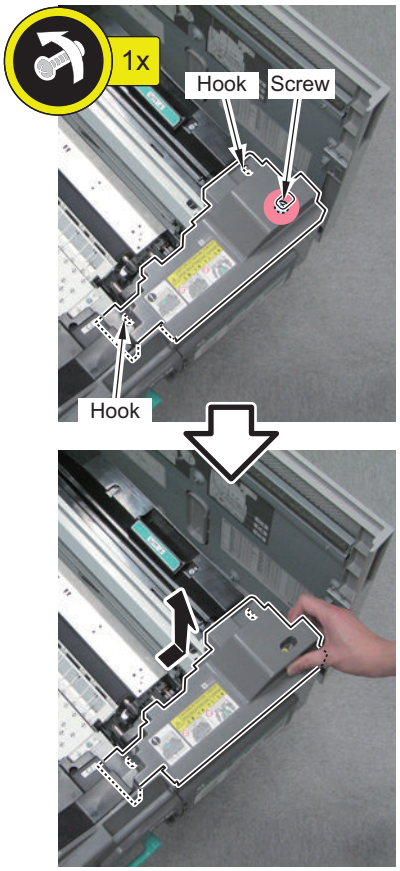
1. **Open the Front Cover and pull out the Fixing Feed Unit.**

2. **Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.**

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.

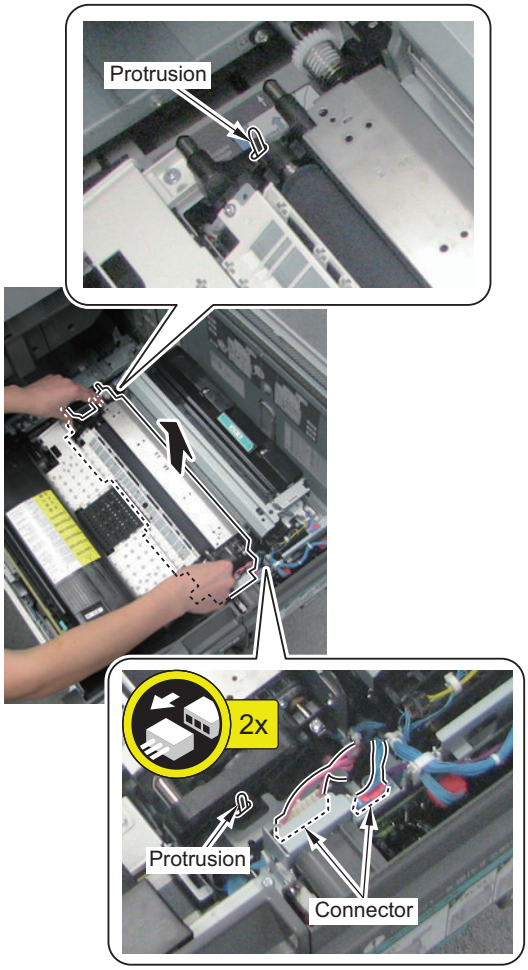


3. **Remove the Fixing Feed Inner Cover.**
   - 1 Screw
   - 2 Hooks



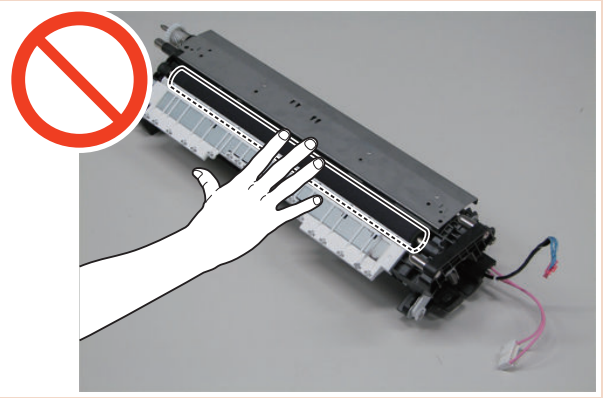
4. Remove the Secondary Transfer Outer Unit.

- 2 Connectors
- 2 Protrusions

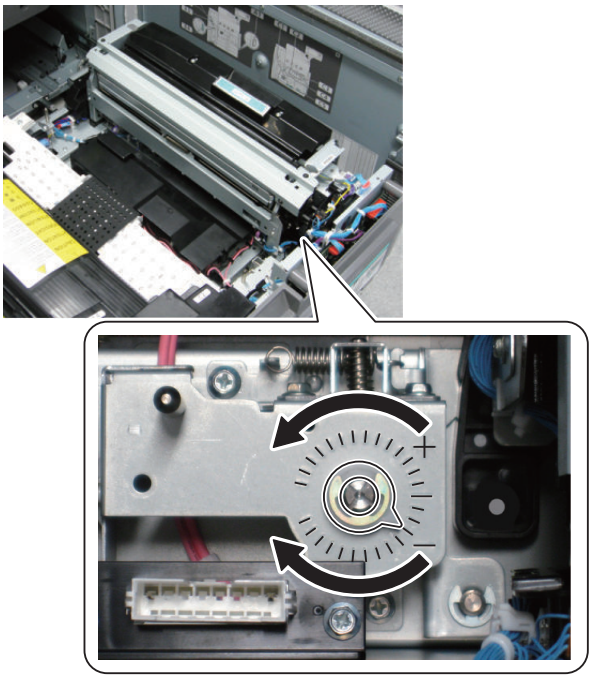


5. Loosen the 4 screws.

CAUTION:
Do not touch the surface of the Secondary Transfer Outer Roller.



6. **Adjust the Registration Adjustment Shaft by turning it with a screwdriver.**
   - In case of L1 - L2 > 0.5 mm: Turn to - direction
   - In case of L1 - L2 < - 0.5 mm: Turn to + direction
     e.g.: In case of L1 – L2 = 0.6, turn the shaft to - direction by 6 scales.
     1 scale mark of the dial: 0.1mm



7. **Install the Secondary Transfer Outer Unit (2 Connectors).**

CAUTION:
When installing the Secondary Transfer Outer Unit to the Fixing Feed Unit, be sure to do so after releasing the pressure applied on the Secondary Transfer Outer Roller. (Otherwise, the Secondary Transfer Outer Roller may be deformed, or the ITB may be damaged.)
< How to release the pressure applied on the Secondary Transfer Outer Roller >
The pressure on the Secondary Transfer Outer Roller can be released by turning the gear and changing the direction of the cam. Be sure to keep the Secondary Transfer Outer Roller lowered.

8. **Tighten the 4 screws loosened in step 5.**

CAUTION:
When tightening the screws, be sure to tighten them in the order from (1) to (2).

9. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
   - If - 0.5 ≦ L1 – L2 ≦ + 0.5 mm: Go to software adjustment
   - If -0.3mm </= L1 - L2 </= +0.3mm or less: Go to leading edge right angle adjustment

< Adjustment method (Software Adjustment) >

☐

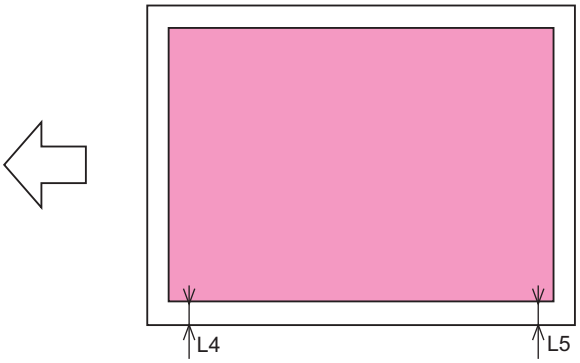
1. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > SLP-1**
   - Setting range: -10 to 10 (0.1 mm per increment)
   - When the value is increased by "1", the leading edge skew (L1 - L2) is increased by 0.1 mm.
2. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
3. **Write down the new adjustment value in the service label.**
   - SLP-1

NOTE:
The same test print image can be used to check the image of the following image adjustments.

• Leading Edge Right Angle Adjustment (based on an assumption that right angle accuracy of paper is correct)

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the leading edge right angle on the image is - 0.5 ≦ (L4 - L5) x 280/400 ≦ + 0.5 mm. When the result is out of the specified range, perform adjustment by following the following procedure.**



< Adjustment method >

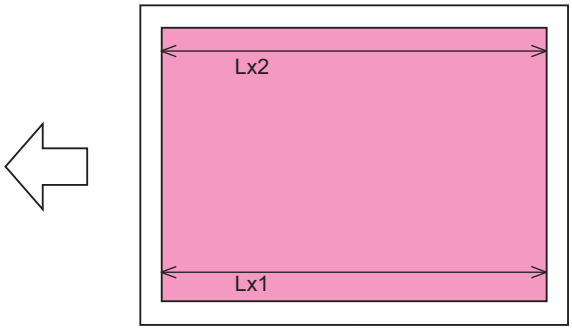
☐

1. **Measure the leading edge right angle ((L4 – L5) × 280/400).**
2. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > ANGLE-1**
   - Setting range: -10 to 10 (0.1 mm per increment)
   - When the value is increased by "1", the leading edge right angle ((L4 – L5) × 280/400) is increased by 0.1 mm.
     E.g. (in the case of A3 paper): When L4 = 2.5 and L5 = 1.5, (2.5 - 1.5) x 280/400 = 0.7; therefore, the value to enter is "-7".
3. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
4. **Write down the new adjustment value in the service label.**
   - ANGLE-1

● Trapezoid Adjustment

□

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that trapezoid of the image is - 0.5 </= Lx1 - Lx2 </= + 0.5 mm. When the result is out of the specified range, perform adjustment by following the following procedure.**



< Adjustment method >

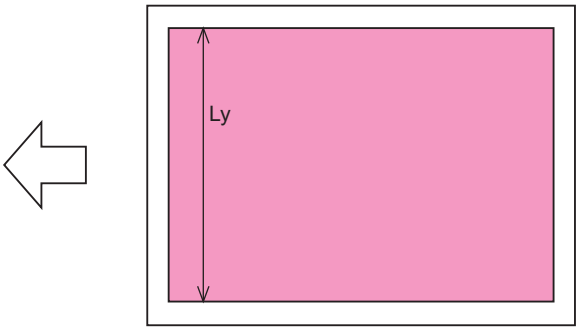
□

1. **Measure trapezoid (Lx1 - Lx2).**
2. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > TRPZ-1**
   - Setting range: -10 to 10 (0.1 mm per increment)
   - When the value is increased by "1", the trapezoid (Lx1 - Lx2) is increased by 0.1 mm.
     E.g. (in the case of A3 paper): When Lx1=412 and Lx2 = 411.4, 412-411.4 = 0.6; therefore, the value to enter is "-6".
3. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
4. **Write down the new adjustment value in the service label.**
   - TRPZ-1

● Horizontal Scanning Magnification Ratio Adjustment

□

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the horizontal scanning magnification ratio is within the specified range. When the result is out of the specified range, perform adjustment by following the following procedure.**
   - A3 paper: Ly = 292 +/- 0.6 mm
   - LDR paper: Ly = 274.4 +/- 0.5 mm



< Adjustment method >

□

1. **Measure the horizontal scanning magnification ratio.**
   - In case of A3 paper: (Ly/292 - 1) x 100 (%)
   - In case of LDR paper: (Ly/274.4 - 1) x 100 (%)
2. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > MAG-H**
   - Setting range: -100 to 100 (0.01% per increment)
   - When the value is increased by "1", the horizontal scanning magnification ratio is increased by 0.01%
     E.g. (in the case of A3 paper): When Ly = 291, (291/292 - 1) x 100 = -0.342... (The value is rounded off to two decimal places)
     When the actually measured value is smaller than the nominal value (292 mm), the value of the ratio becomes "- (negative)"; therefore, the value to enter is "+34".
3. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
4. **Write down the new adjustment value in the service label.**
   - MAG-H

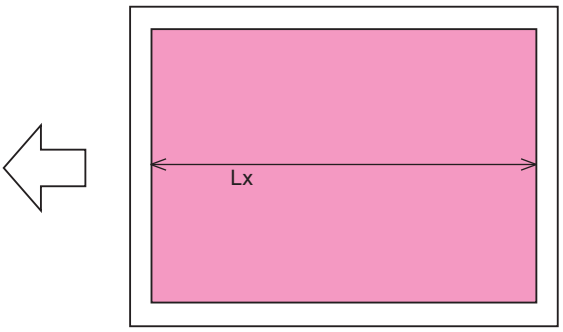
● Vertical Scanning Magnification Ratio Adjustment

□

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the vertical scanning magnification ratio is within the specified range. When the result is out**

of the specified range, perform adjustment by following the following procedure.

- A3 paper: Lx = 412 +/- 0.8 mm
- LDR paper: Lx = 423.8 +/- 0.8 mm



< Adjustment method >

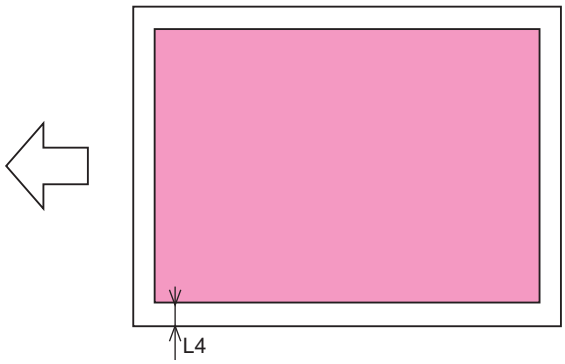
☐

1. **Measure the vertical scanning magnification ratio.**
   - A3 paper: (Lx/412 - 1) x 100 (%)
   - LDR paper: (Lx/423.8 - 1) x 100 (%)
2. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > IMG-REG > MAG-V**
   - Setting range: -100 to 100 (0.01 % per increment)
   - When the value is increased by "1", the vertical scanning magnification ratio is increased by 0.01 %.
     E.g. (in the case of A3 paper): When Ly = 411, (411/412-1) x 100 = - 0.242... (The value is rounded off to two decimal places)
     When the actually measured value is smaller than the nominal value (412 mm), the value of the ratio becomes "- (negative)"; therefore, the value to enter is "+ 24".
3. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
4. **Write down the new adjustment value in the service label.**
   - MAG-V

● Left Edge Margin Adjustment (Software Adjustment)

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the left edge margin is within the range indicated below. When the result is out of the specified range, perform adjustment by following the following procedure.**
   - L4: 2.5 +/- 0.5 mm



< Adjustment Method >

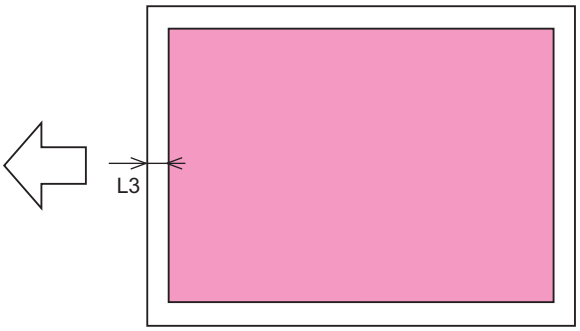
☐

1. **Adjust the value of the following service mode (Level 1): COIPIER > ADJUST > FEED-ADJ > REG-L**
   - Setting range: -100 to 100 (0.1 mm per increment)
   - As the value is incremented by "1", the left edge margin is increased by 0.1 mm.
2. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
3. **Write down the new adjustment value in the service label.**
   - REG-L

● Leading Edge Margin Adjustment

☐

1. **After setting the service mode (level 1) as follow, press the Start key and output a test print from the Cassette 1.**
   - COPIER > TEST > PG > TYPE = 5
   - COPIER > TEST > PG > COLOR-M = 1
   - COPIER > TEST > PG > COLOR-Y/C/Bk = 0
   - COPIER > TEST > PG > PG-PICK = 1
2. **Check that the leading edge margin L3 is within the range indicated below. When the result is out of the specified range, perform adjustment by following the following procedure.**
   - L3: 4.0 +/-0.5 mm



< Adjustment Method >

☐

1. **Adjust the value of the following service mode (Level 1): COPIER > ADJUST > FEED-ADJ > REGIST**
   - Setting range: -100 to 100 (0.1 mm per increment)
   - When the setting value is increased by "1", the leading edge margin is decreased by 0.1 mm.
2. **Perform printing again from the Cassette 1, and check that the value is within the specified range.**
3. **Write down the new adjustment value in the service label.**
   - REGIST
4. **Exit service mode.**

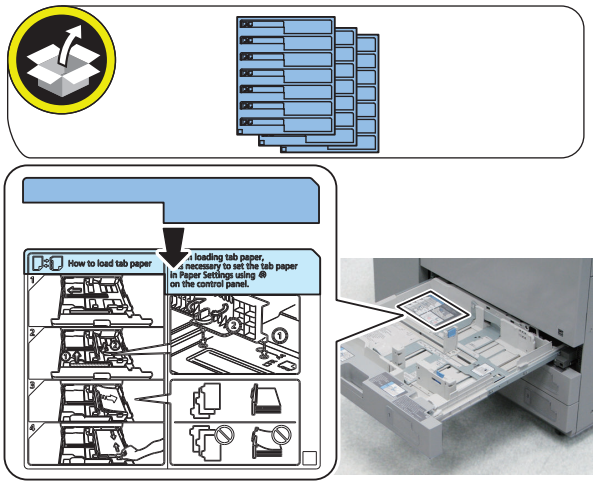
Setting the Paper Cassette

☐

1. **While pulling the Handle Lever toward the front, pull out the cassette toward the front.**

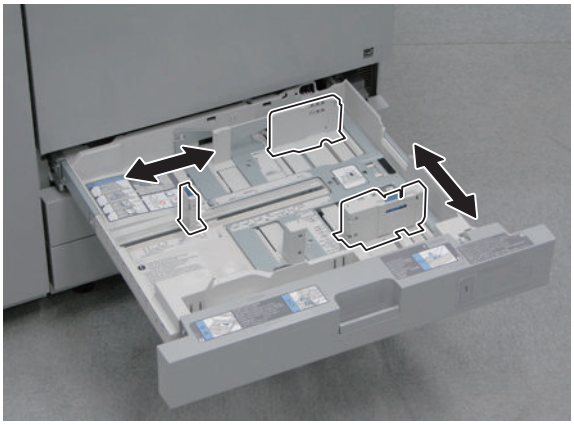
☐

2. **Affix the Tab Paper Setting Label of the appropriate language as shown in the figure below. (included with Cassette 1)**



☐

3. **Hold the Lever of the Side Guide Plate to set the Side Guide Plate to the specified size.**
4. **Hold the Lever of the Trail Edge Guide Plate to set the Trail Edge Guide Plate to the specified size.**

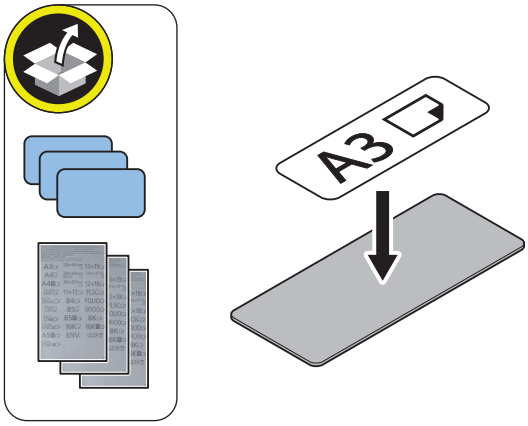


☐

5. **Place papers and insert the cassette.**

☐

6. **Affix the Paper Size Label according to the size of paper being set to the Media Indication Sheet. (included with Cassette 1)**



☐

7. **Insert the Media Indication Sheet to the Media Plate Holder on the front side of the cassette.**

□

8. **Set other cassettes in the same way.**

NOTE:
Paper size is set to be automatically recognized.

□

9. **Register the type of paper loaded in the paper source.**
   1. Select Settings/Registration > [Preferences] > [Paper Settings] > [Paper Settings].
   2. Select the paper source where paper is loaded, and press [Set].
   3. Select the paper type same as that of the loaded paper, and press [OK] > [OK].

NOTE:
- If the corresponding paper type is not displayed on the simple settings screen, press [Detailed Settings] and make a selection on the detailed settings screen.
- If the type of loaded paper is not displayed on the detailed settings screen, you can register it. For details, refer to the e-Manual.

Checking the Network Connection

■ Overview

If the user's network environment is TCP/IP, use the Ping function to check that the network setting is properly performed.
If the user's network environment is IPX/SPX or Apple Talk, there is no need to check the network environment.

■ Checking the Network Connection

CAUTION:
Be sure to use the network cable with Category 5e or higher. In addition, a sealed type (STP cable) is recommended. Using the non-shield type can affect the peripheral electrical equipment through the network cable.

1. **Turn OFF the main power switch.**
2. **Connect the network cable to the host machine and turn ON the main power switch.**
3. **Inform the system administrator at the installation site that installation of the host machine is complete, and then, ask for the network setting.**

NOTE:
Network setting cannot be executed unless logging in as an administrator.
Factory default password is as follows.
- System administration division ID: 7654321
- System administration password: 7654321

CAUTION:
To perform the network setting, the following Settings/Registration items must be set "ON".
- Settings/Registration > [Preferences] > [Network] > [Confirm Network Connection Set. Changes]
- Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [Use IPv4]

4. **Turn OFF and then ON the main power.**

■ Operation Procedure Using Ping

1. **Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]**
2. **Enter the IP address with the numeric keypad on the Control Panel and press "Execute" key. "Response from the host" is displayed if Ping command is succeeded while "no response from the host" is displayed if failed.**

■ Checking by the Remote Host Address

Using the remote host address to execute Ping can check whether connection to the network is enabled or not.
Remote host address: IP address of PC terminal connected/running on TCP/IP network environment that connects to this equipment.

1. **Inform the system administrator about checking of the network connection using Ping.**
2. **Confirm the remote host address with the system administrator.**
3. **Enter the remote host address to Ping.**
   - The network is properly connected if the message say "Response from the host".
   - The network is not properly connected if the message say "No response from the host", therefore, execute the following troubleshooting.

Network Troubleshooting

■ Checking Connection of the Network Cable

To check whether the network cable is properly connected to the Ethernet Port.

■ Operation Procedure Using Ping

1. **Ask the network administrator at the user's site to write down the IP address of the PC that is connected to the network.**
2. **Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address of the PC with the numeric keypad and press Execute key.**
   - The network is properly connected if the message say "Response from the host".
   - If the message say "No response from the host", check the following.

NOTE:
The IP address of the PC can be checked by the following procedure:
Select the following on a Windows PC: Start > Program > Accessory > Command Prompt; and enter "ipconfig" and press Enter key to display information of the IP address.

■ Checking the Network Setting of the Host Machine

Check if the IP address specified in the host machine is correct.

1. **Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [IP address setting]; and write down the address in the IP address field.**
2. **Select the following:Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address.**
   - The IP address specified in the host machine is correct if the message say "Response from the host".
   - If the message say "No response from the host", check the following.

NOTE:
When setting the address by manually input, set the Subnet Mask by following the instruction of the administrator.

■ Checking Network Function on the Main Controller

Perform checking by the loopback address.

1. **Select the following: Settings/Registration > [Preferences] > [Network] > [TCP/IP Settings] > [IPv4 Settings] > [PING Command]; and enter the IP address, "127.0.0.1" with the numeric keypad and enter Execute key.**
   - The network function of the Main Controller is working properly if the message say "Response from the host".
   - If the message say "No response from the host", the network function of the Main Controller is faulty.
2. **Replace with a Main Controller that works properly, and then check connection.**

When Relocating the Machine

NOTE:
If packing materials such as fixing material which were removed on the installation are not available, it is recommended to use cushioning materials that matches to them.

When moving the machine to another floor

If you need to relocate the machine (move to another floor, etc) after installation, be sure to perform the following work in advance.

☐

1. **Move the Scanner Unit to the position where it is going to be secured.**
   - Service Mode (Level 2) > COPIER > FUNCTION > MISC-R > RD-SHPOS

☐

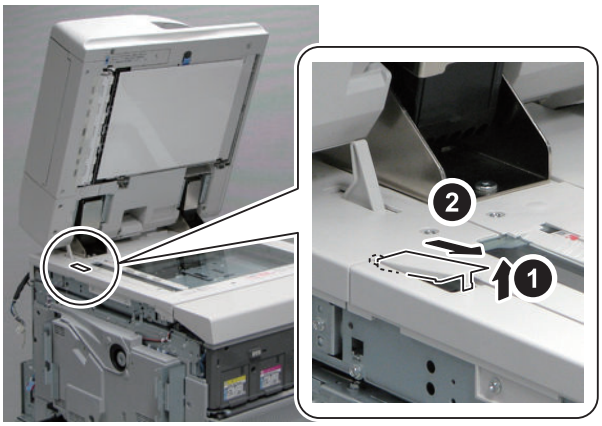
2. **Turn OFF the main power switch.**
3. **Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.**

☐

4. **Remove the options.**

☐

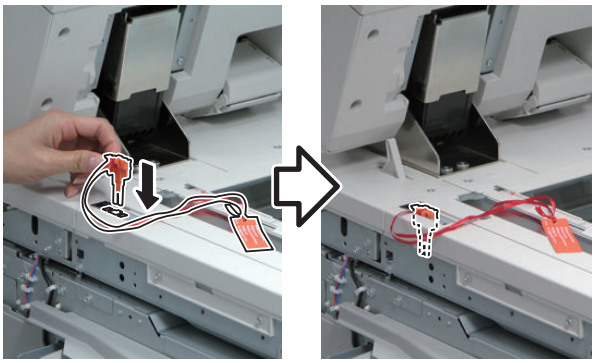
5. **Open the DADF, and remove the Left Upper Small Cover using a flat-blade screwdriver.**
   - 1 Claw
   - 1 Protrusion



☐

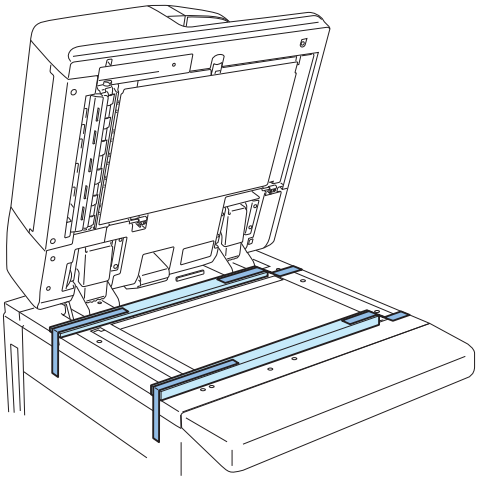
6. **Secure the Scanner Unit with the Scanner Fixation Tool that have been kept in a safe place since image Reader Unit installation.**

NOTE:
Be sure to push it in until it clicks.



☐

7. **Install the Packing Materials that were removed during installation.**



☐

8. **Close the DADF.**

☐

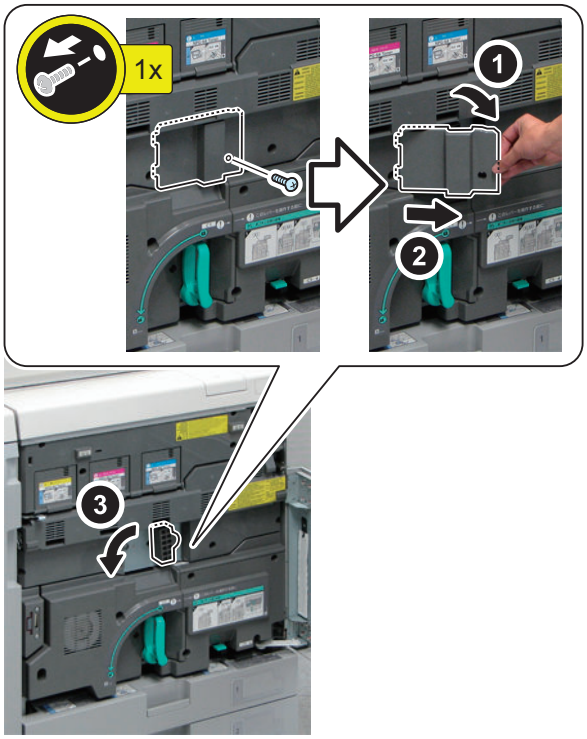
9. **Open the Front Cover.**

☐

10. **Remove the ITB Front Middle Cover.**
    - 1 Screw
    - 2 Protrusions

11. **Turn the ITB Pressure Release Lever in the direction of the arrow to release the pressure.**

CAUTION:
Be sure not to pull out the Fixing Feed Unit until power is turned on after relocation.

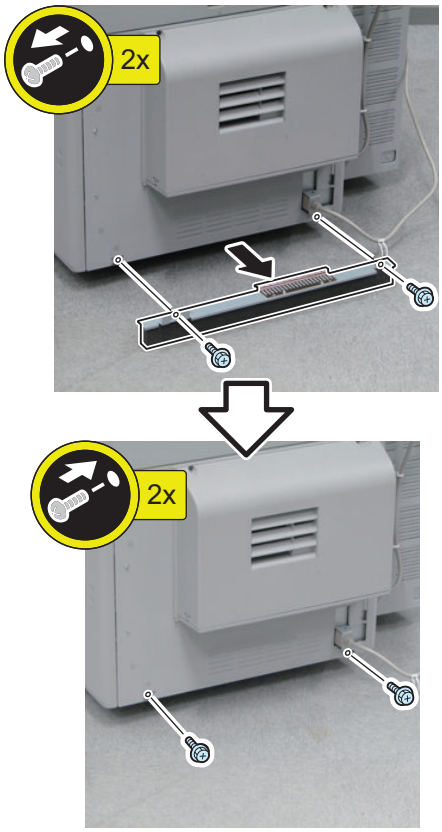


☐

12. **Close the Front Cover.**

☐

13. **Remove the Rear Curtain Unit. Install the screws removed previously to their original position.**



☐

14. **Lift the host machine off the floor by turning the 2 adjusters with a screwdriver.**

15. **When moving the machine, grasp the Handles and move the host machine.**

NOTE:
When moving the machine, be careful not to bump into the arm of the Upright Control Panel.

☐

16. **At reinstallation after moving the machine, remove the installed packaging materials.**

17. **Remove the Scanner Fixation Tool, and install the Left Upper Small Cover.**

18. **Put the ITB Pressure Release Lever back to the original position to apply pressure and install the ITB Front Middle Cover. (1 Screw)**

19. **Install the Rear Curtain Unit.**

20. **Secure the host machine in place by turning the 2 adjusters with a screwdriver.**

☐

21. **After turning ON the power, execute ITB neutral position adjustment.**
    - Service Mode (Level1) > COPIER > FUNCTION > INSTALL > INIT-ITB

☐

22. **Execute auto registration.**
    - Service Mode (level 1) > COPIER > FUNCTION > MISC-P > AT-IMG-X

☐

23. **The paper feed direction may tilt because of the change in floor surface condition; thus, be sure to execute the image position adjustment.**
    Refer to the Service Manual > Installation > Image Position Adjustment

When moving the machine by truck

If you need to relocate the machine after installation by truck or other means of transportation, be sure to perform the following work in advance.

☐

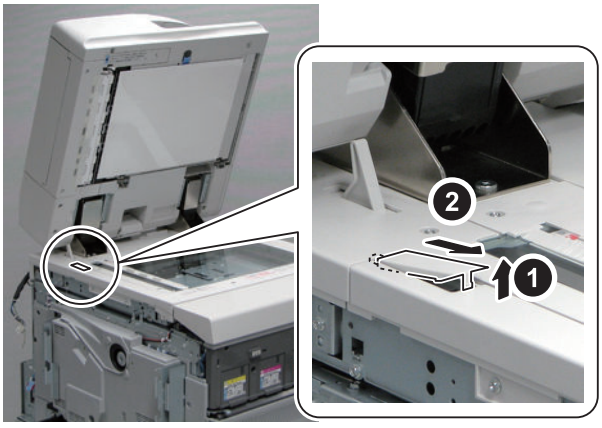
1. **Move the Scanner Unit to the position where it is going to be secured.**
    - Service Mode (Level 2) > COPIER > FUNCTION > MISC-R > RD-SHPOS

☐

2. **Turn OFF the main power switch.**
3. **Check that the control panel display and the main power lamp are OFF, and then disconnect the power plug.**

☐

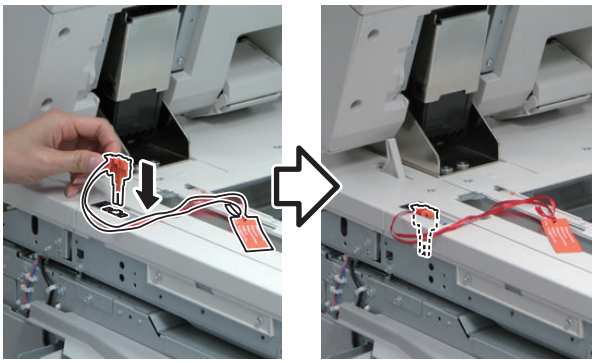
4. **Open the DADF, and remove the Left Upper Small Cover using a flat-blade screwdriver.**
    - 1 Protrusion
    - 1 Claw



☐

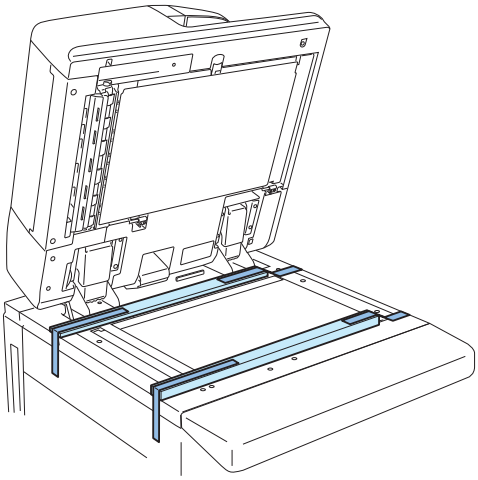
5. **Secure the Scanner Unit with the Scanner Fixation Tool that have been kept in a safe place since image Reader Unit installation.**

NOTE:
Be sure to push it in until it clicks.



☐

6. **Install the Packing Materials that were removed during installation.**



☐

7. **Close the DADF.**

☐

8. **Open the Front Cover.**

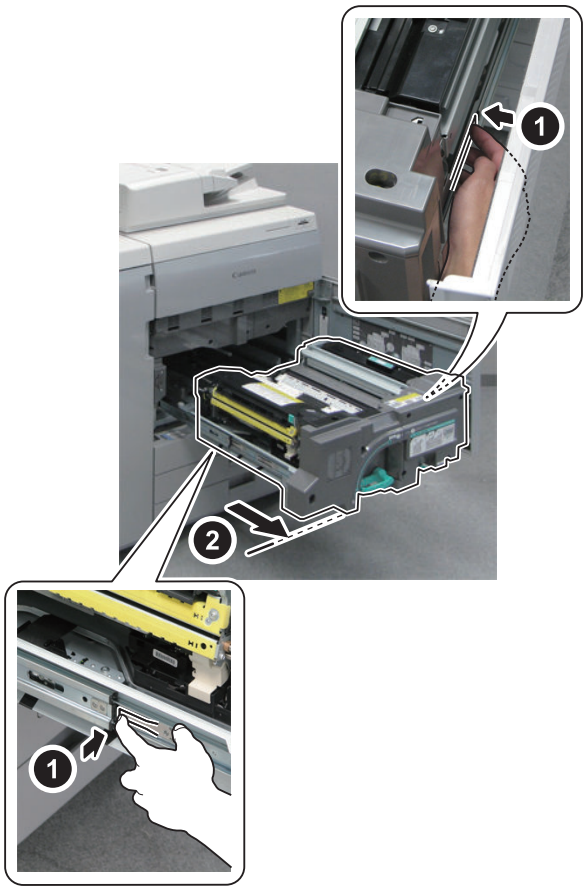
CAUTION:
If this equipment will be moved in simplified packaging using a truck, it is desirable to perform the following steps.
It is recommended to attach the Fixation Members that were removed during installation.

☐

9. **Release the Lock Lever, and pull out the Fixing Feed Unit.**

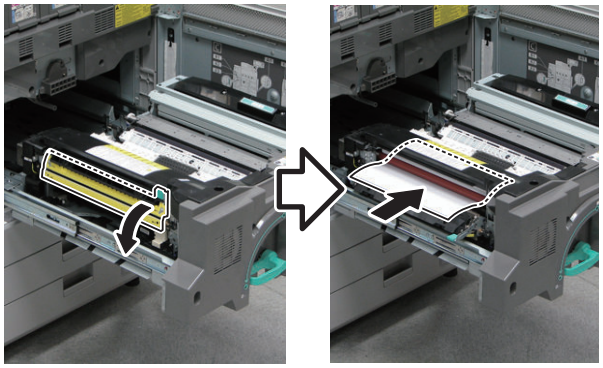
10. **Push the 2 Lock Springs of the Rails (both sides) to release the lock and further pull out the Fixing Feed Unit until it stops.**

CAUTION:
Do not release the Lock Springs at the rear side of the Rails (both sides); otherwise the Frame of the Fixing Feed Unit can be off.



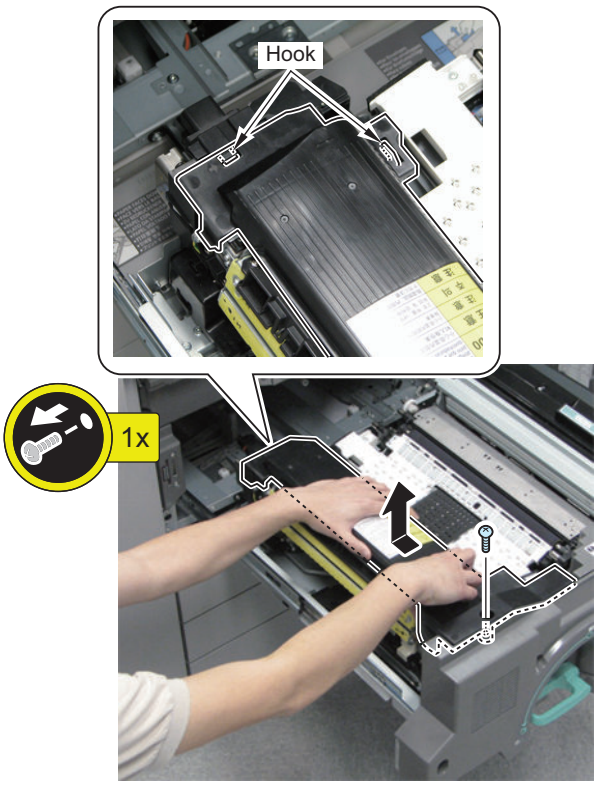
☐

11. **Open the Inner Delivery Unit, and insert a sheet of paper between the Pressure Belt and the Fixing Refresh Roller.**



☐

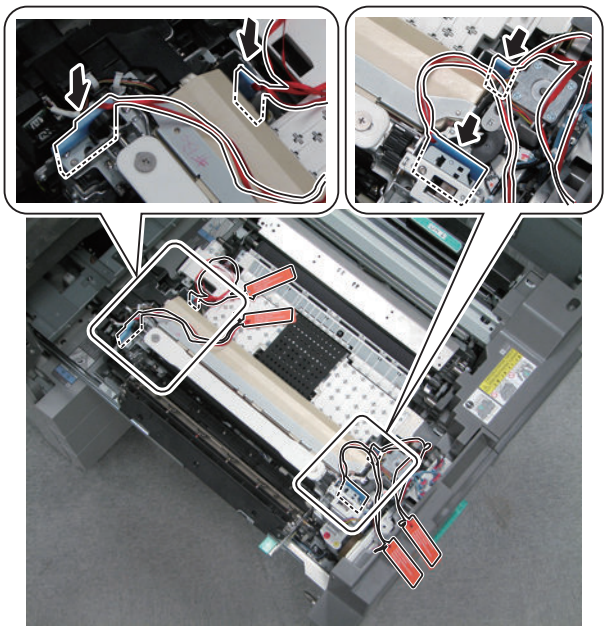
12. **Remove the Fixing Upper Cover.**
    - 1 Screw
    - 2 Hooks



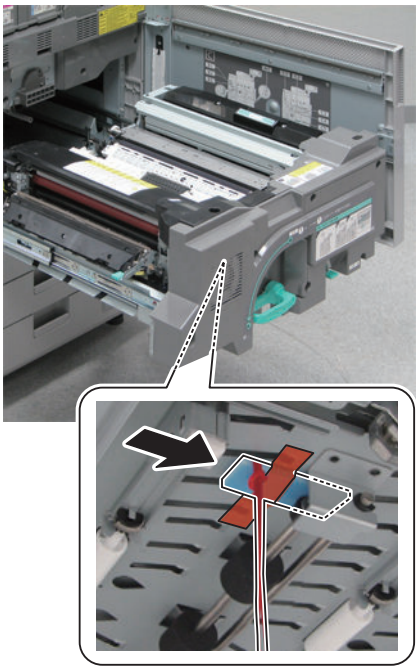
☐

13. Install the 5 packing materials that were removed during installation.

<Top side: 4 locations>



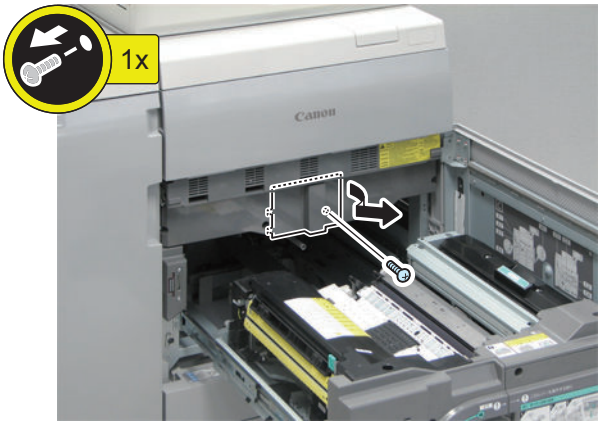
<Bottom side: 1 location>



☐

14. Remove the ITB Front Middle Cover.

- 1 Screw
- 2 Protrusions



☐

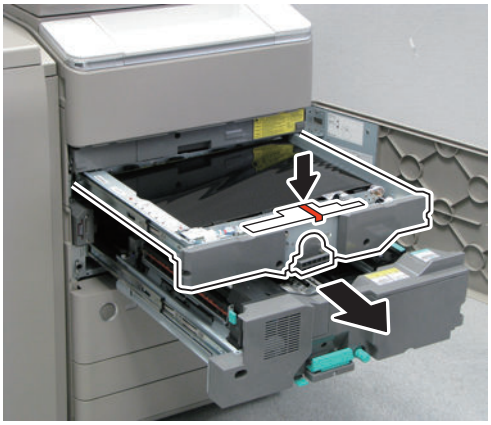
CAUTION:
Be sure to pull out the Fixing Feed Unit without fail before releasing the ITB Pressure Release Lever.

15. Turn the ITB Pressure Release Lever in the direction of the arrow to release the pressure.

☐

16. Hold the handle to pull out the ITB Unit.

17. **Install the packing material that were removed during installation.**



☐

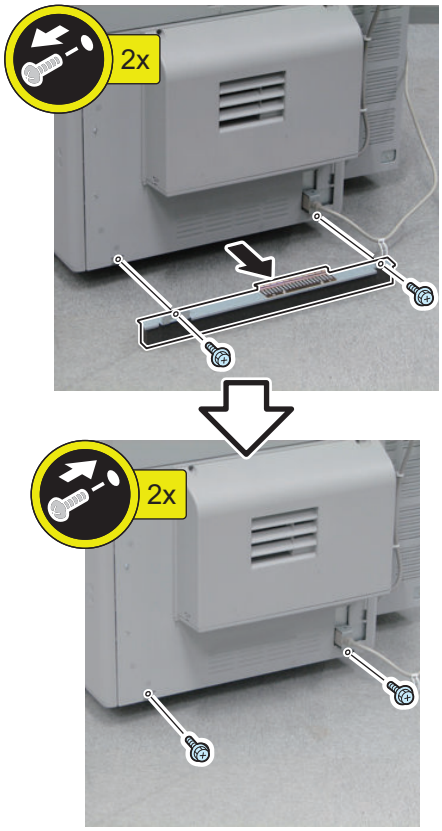
18. **Close the ITB Unit (Do not lock the Release Lever)**
19. **Install the Fixing Upper Cover. (2 Hooks, 1 Screw)**
20. **Close the Inner Delivery Unit.**

NOTE:
If any tag is attached to the packaging material, move it to outside the cover and secure by tape.

21. **Push the Fixing Feed Unit into the host machine and lock the Release Lever.**
22. **Close the Front Cover.**

☐

23. **Remove the Rear Curtain Unit. Install the screws removed previously to their original position.**
    - 2 Screws

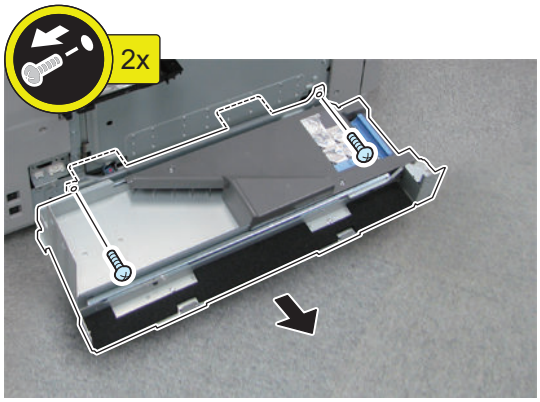


☐

24. **Remove the following parts in the reverse order you used.**
    - Waste Toner Container (Refer to “Installing the Waste Toner Container” on page 2416)
    - Decurler Unit (Refer to “Installing the Decurler Unit” on page 2410)

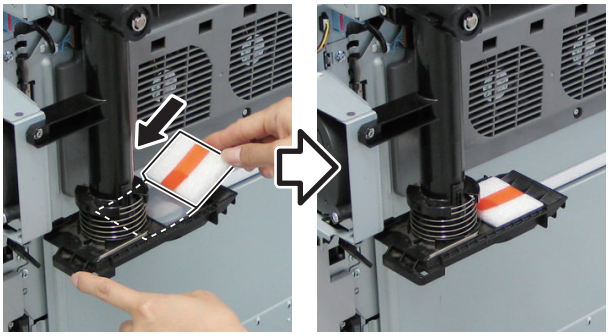
☐

25. **Remove the Sub Frame Unit.**
    - 2 Screws

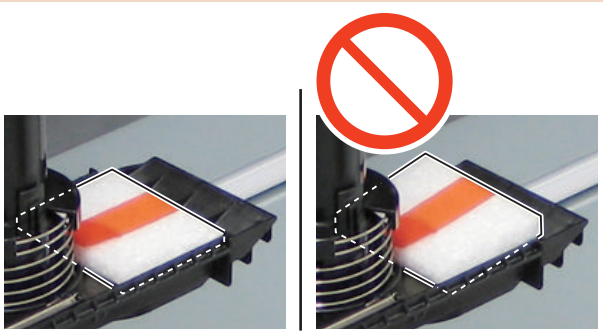


☐

26. While holding down the Primary Shutter of the Waste Toner Pipe, install the packing material that was removed at installation.

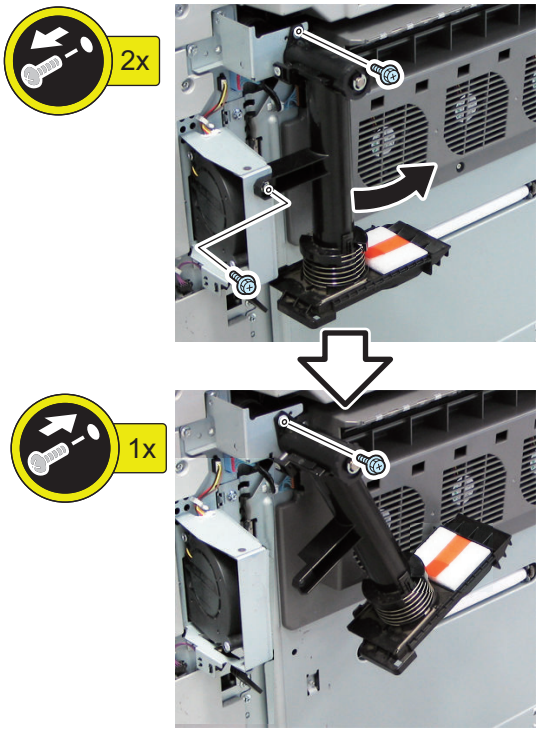


CAUTION:
Be sure that the packing material is installed properly.



☐

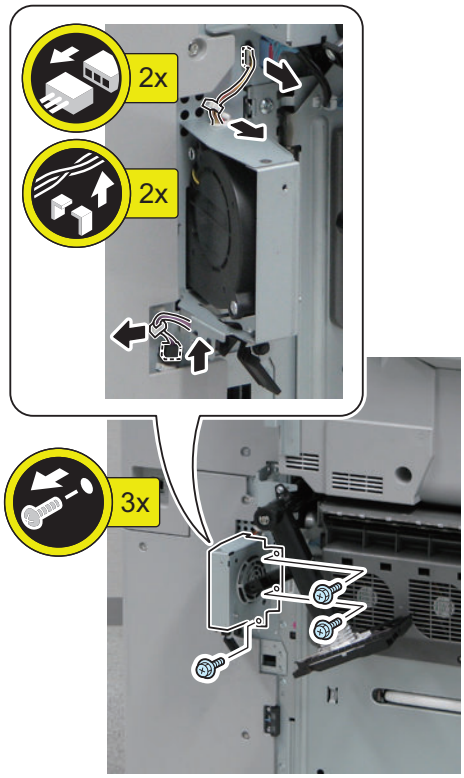
27. Remove the 2 screws, and install the Waste Toner Pipe with the screw as shown in the figure.
The screw will be used after the machine is relocated.



☐

28. Remove the Delivery Lower Cooling Fan.

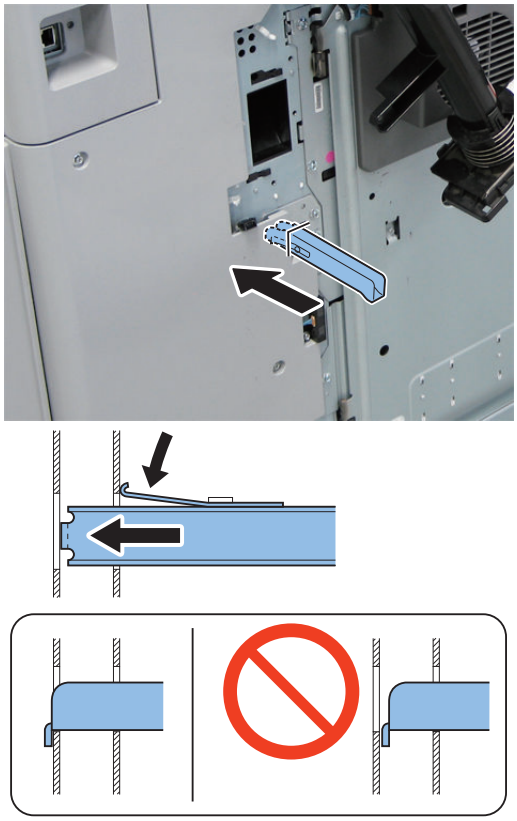
- 2 Wire Saddles
- 2 Connectors
- 3 Screws



☐

29. When moving the machine, grasp the Handles and move the host machine.

30. **Install the handle that was stored in the Sub Frame Unit to the host machine.**



☐

31. **Lift the host machine off the floor by turning the 2 adjusters with a screwdriver.**

32. **When moving the machine, grasp the Handles and move the host machine.**

CAUTION:
- When moving the machine, be careful not to bump into the arm of the Upright Control Panel.
- The Upright Control Panel should be removed and packed when being transported.
- When moving by a truck, it is recommended to tape and secure all movable locations (all doors and Upright Control Panel Arm).

☐

33. **At reinstallation after moving the machine, remove the installed packaging materials.**

34. **Remove the Scanner Fixation Tool, and install the Left Upper Small Cover.**

35. **Put the ITB Pressure Release Lever back to the original position to apply pressure and install the ITB Front Middle Cover. (1 Screw)**

36. **Install the Sub Frame Unit and Delivery Lower Cooling Fan. (Refer to "Before Installing the Waste Toner Container" on page 2408)**

37. **Install the Decurler Unit. (Refer to "Installing the Decurler Unit" on page 2410)**

38. **Install the Waste Toner Container. (Refer to "Installing the Waste Toner Container" on page 2416)**

39. **Install the Rear Curtain Unit.**

40. **Secure the host machine in place by turning the 2 adjusters with a screwdriver.**

☐

41. **After turning ON the power, execute ITB neutral position adjustment.**
    - Service Mode (Level1) > COPIER > FUNCTION > INSTALL > INIT-ITB

☐

42. **Execute auto registration.**
    - Service Mode (Level 1) > FUNCTION > CLEANING > FXD-CL-E

☐

43. **Execute cleaning operation of the Fixing Belt.**
    - Service Mode (Level 1) > FUNCTION > CLEANING > FXD-CL-E

44. **The paper feed direction may tilt because of the change in floor surface condition; thus, be sure to execute the image position adjustment.**
    Refer to the Service Manual > Installation > Image Position Adjustment

Printer Cover-F1

Points to Note at Installation

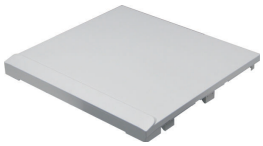
After installing this equipment, the following are necessary to perform auto gradation adjustment:

- Installation of the Auto Gradation Sensor
- Installation of the printer driver license (imagePRESS Printer Kit/imagePRESS PS Printer Kit) or installation of imagePRESS Server G100/F200

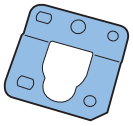
Checking the Contents

■ Contents of the Equipment

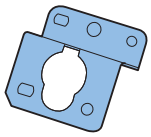
☐ [1] Printer Cover X 1



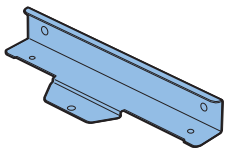
☐ [2] Rear Fixation Plate L X 1



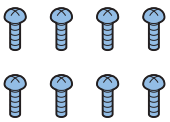
☐ [3] Reader Fixation Plate R X 1



☐ [4] Reader Mount X 1



☐ [5] Screw (P Tightening; M4x10) X 8



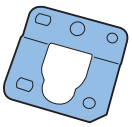
☐ [6] Screw (RS Tightening; M4x8) X 2

☐ [7] Screw (TP; M4x8) X 1

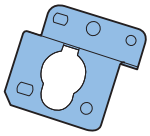
■ Contents of the Host Machine

Use the following parts included with the host machine's Accessory Box 1 (ACC-1).

☐ [1] Rear Fixation Plate L X 1



☐ [2] Reader Fixation Plate R X 1



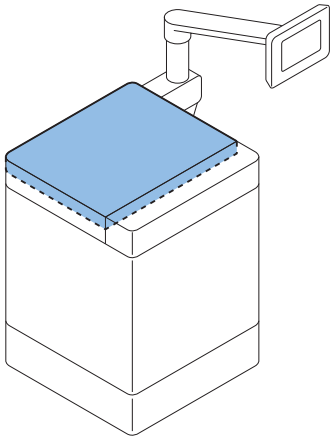
☐ [3] Screw (RS Tightening; M4x8) X 2

Check Item When Turning OFF the Main Power

Check that the main power is OFF.

1. **Turn OFF the main power switch.**
2. **Check that the display in the Control Panel and the lamp of the main power are turned off, and then disconnect the power plug.**

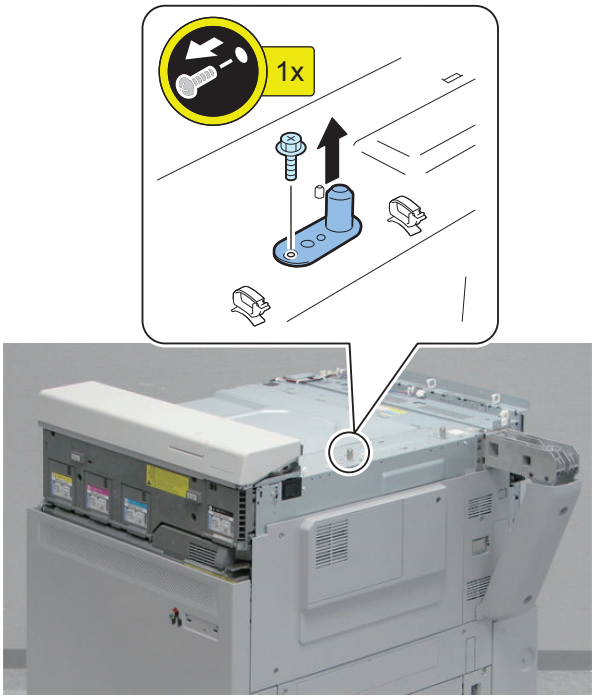
Installation Outline Drawing



Installation Procedure

☐

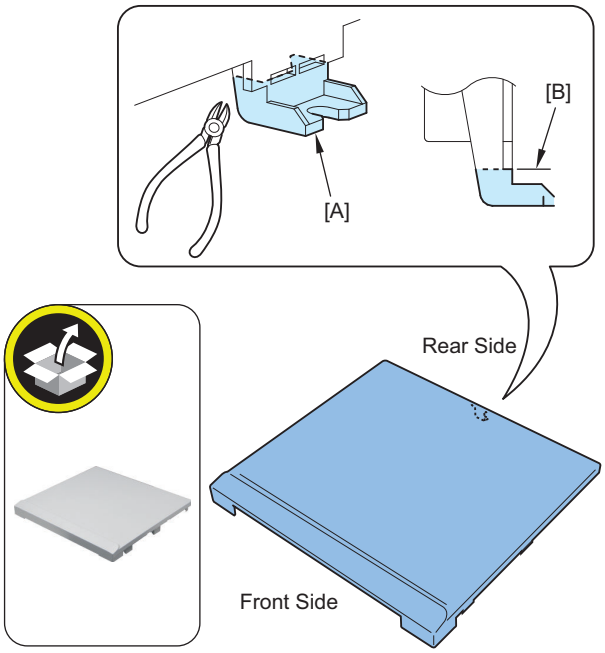
1. **Remove the Reader Positioning Shaft. (the removed Reader Positioning Shaft is used in step 6)**
   - 1 screw (the removed screw is used in step 6)



☐

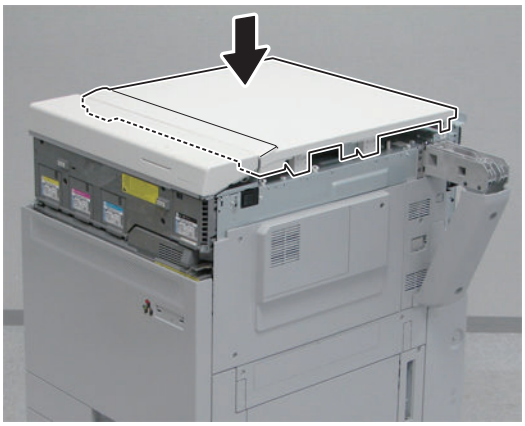
2. **Cut the [A] part on the rear side of the Printer Cover with nippers using the edge [B] as a reference.**

CAUTION:
Be sure to check that there is no burr.



☐

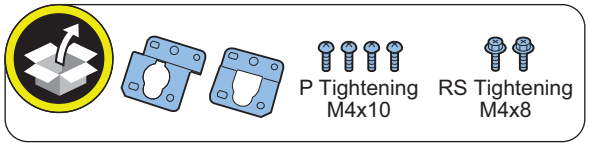
3. **Place the Printer Cover.**

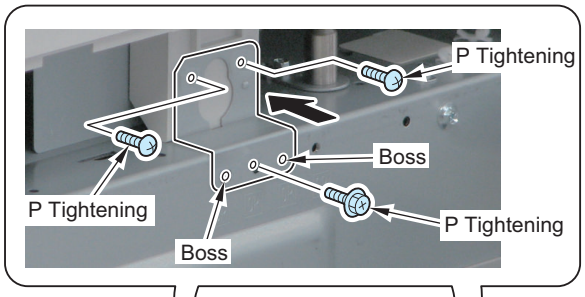


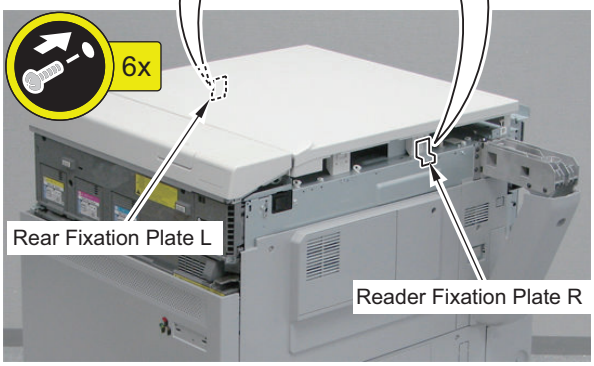
☐

4. **Place the Printer Cover, and install the Reader Fixation Plate R and the Rear Fixation Plate L to the installation position at the rear side.**
   - 2 Bosses each
   - 2 Screws (P Tightening; M4x10) each
   - Screw (RS Tightening; M4x8) each

CAUTION:
When placing the Printer Cover, be careful not to trap cables at rear side of the host machine.

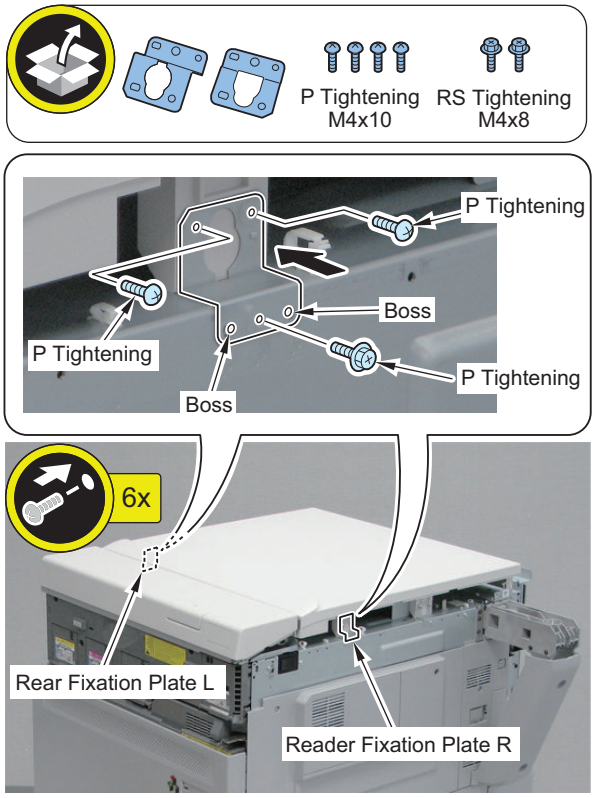






☐

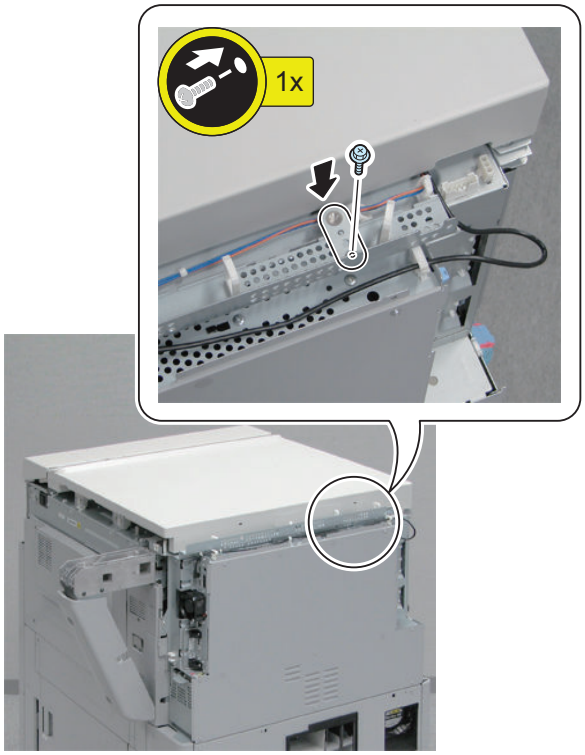
5. **Install the Reader Fixation Plate R and the Reader Fixation Plate L to the installation position at the front side. (included with ACC-1 of the host machine)**
   - 2 Bosses each
   - 2 Screws (P Tightening; M4x10) each
   - 1 Screw (RS Tightening;: M4x8) each (included with ACC-1 of the host machine)



☐

6. **Install the Reader Positioning Shaft (removed in step 1) and the Reader Mount.**
   - Screw (the screw removed in step 1)

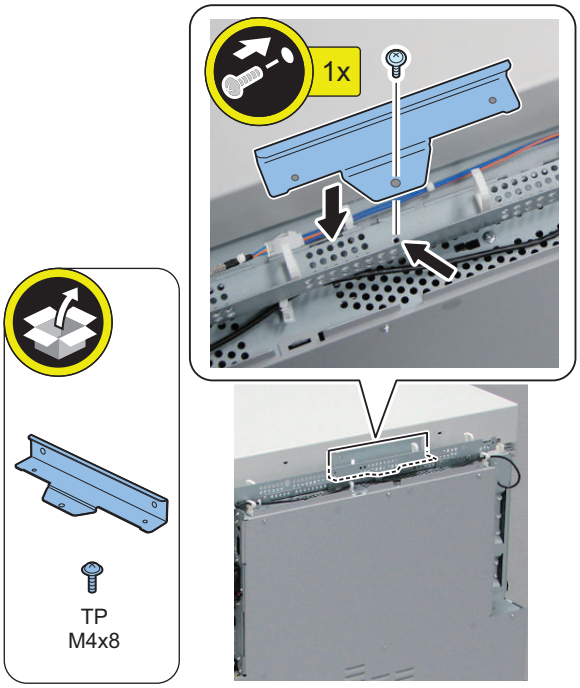
CAUTION:
Be careful not to trap the cables under the Reader Positioning Shaft.



NOTE:
Step 7 is when installing the PRISMASync Controller.In other cases, the Reader Support Plate is installed during installation of the Upright Control Panel.

☐

7. **Install the Reader Mount.**
   - 1 Screw (TP; M4x8)



☐

8. **Perform the procedure from "Installing the Upright Control Panel" in "Installation" in the host machine's Service Manual after completing step 7.**

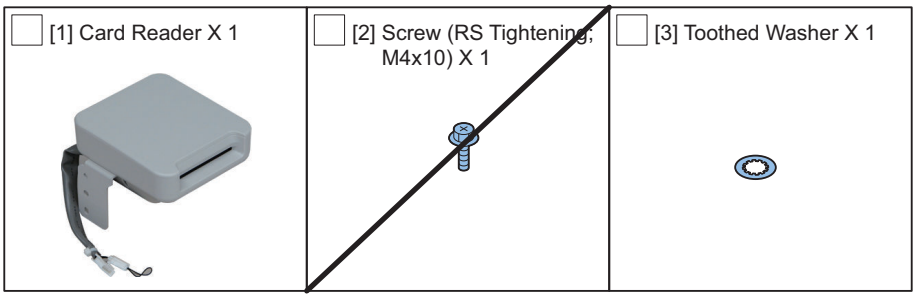
Copy Card Reader-F1

Points to Note Before Installation

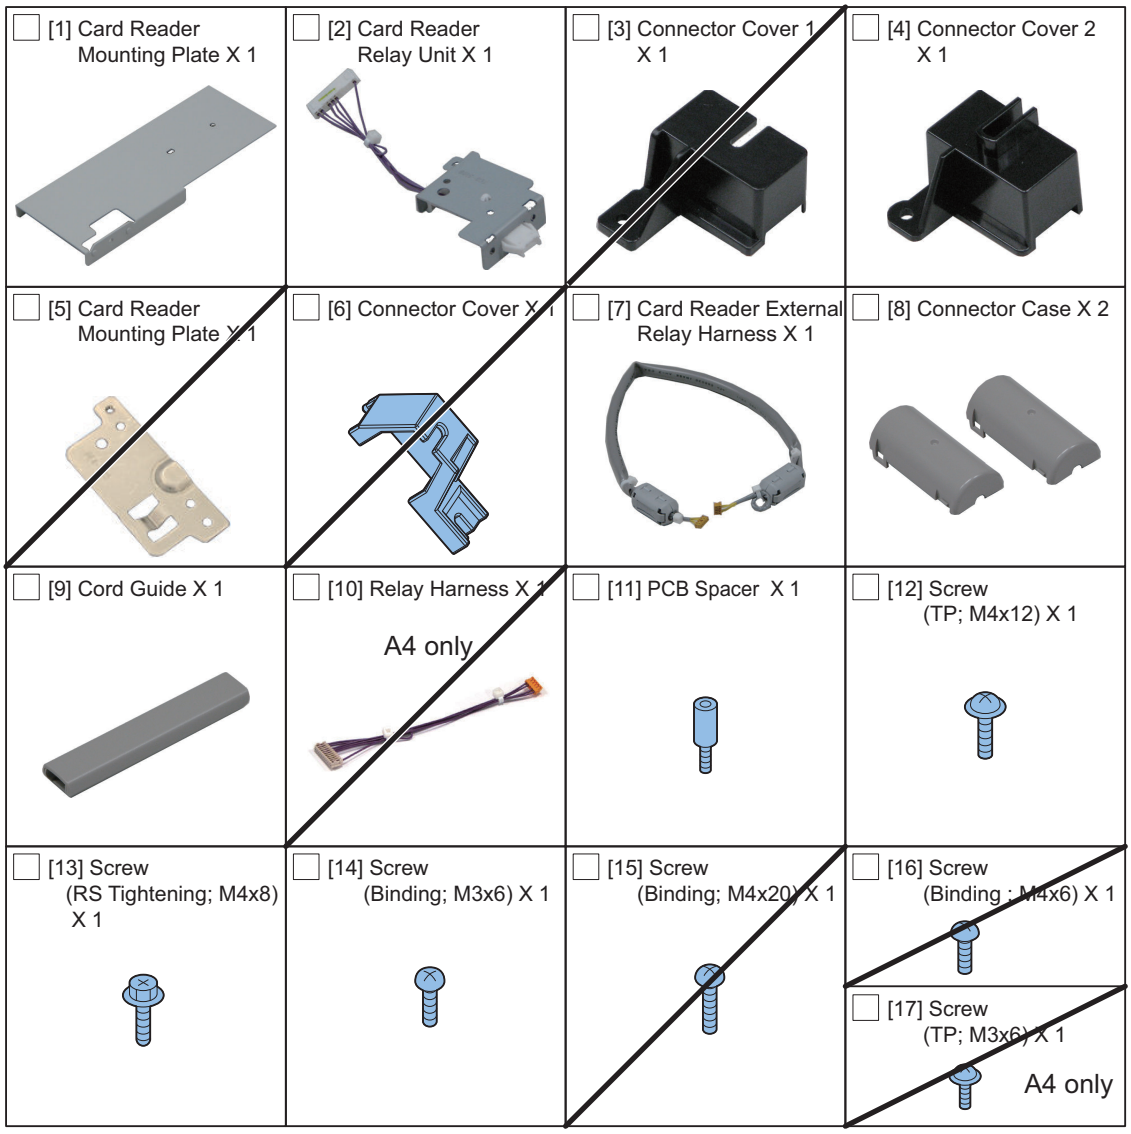
The Copy Card Reader Attachment is required for the installation of the equipment.

Checking the Contents

■ Copy Card Reader-F1



■ Copy Card Reader Attachment-A3/A4

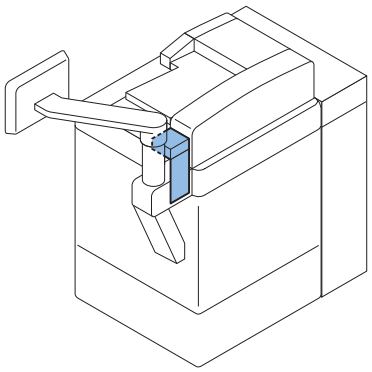


Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the host machine.**
2. **Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.**

Installation Outline Drawing

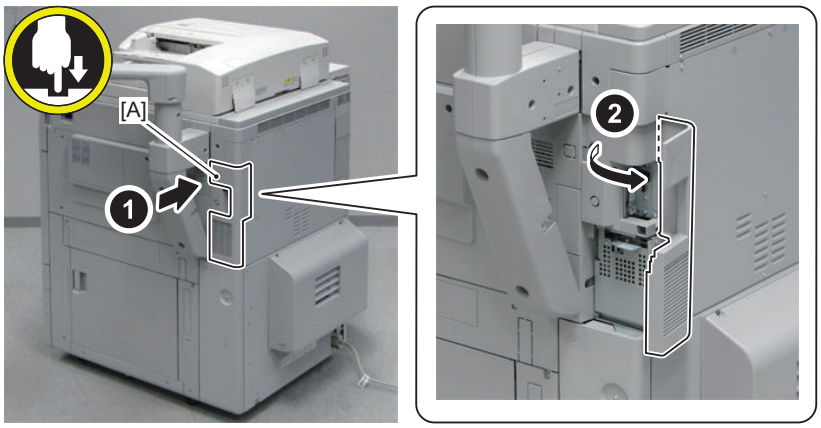


Installation Procedure

CAUTION:
After Card Reader is installed, get in Service Mode (Level 1) with this equipment: COPIER > FUNCTION > INSTALL > CARD; and then enter the card number to use.
If the card number fails to be entered, the card will not be recognized even if the card is inserted.

☐

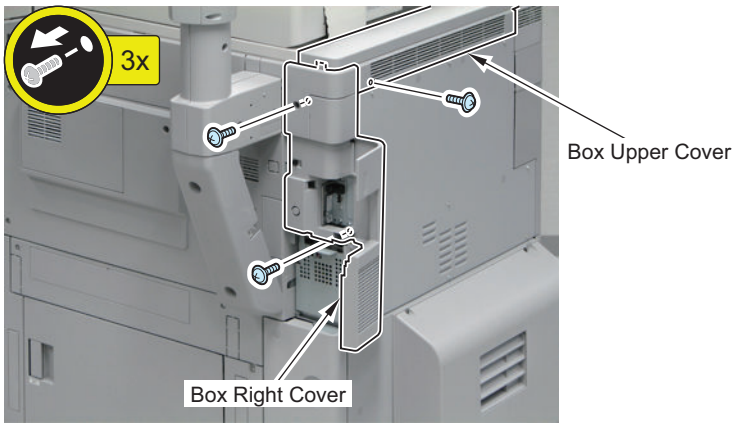
1. **Push the [A] part, and open the HDD Cover.**

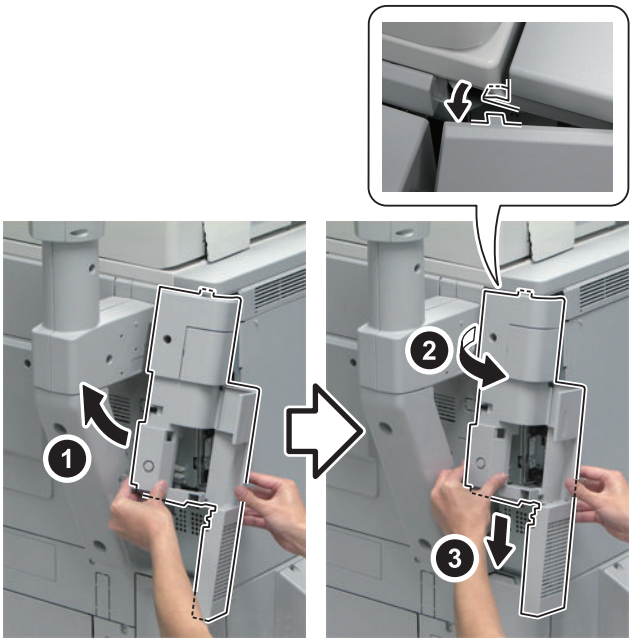


☐

2. **Remove the screw of the Box Upper Cover. (Removed screw will be used at step 18.)**

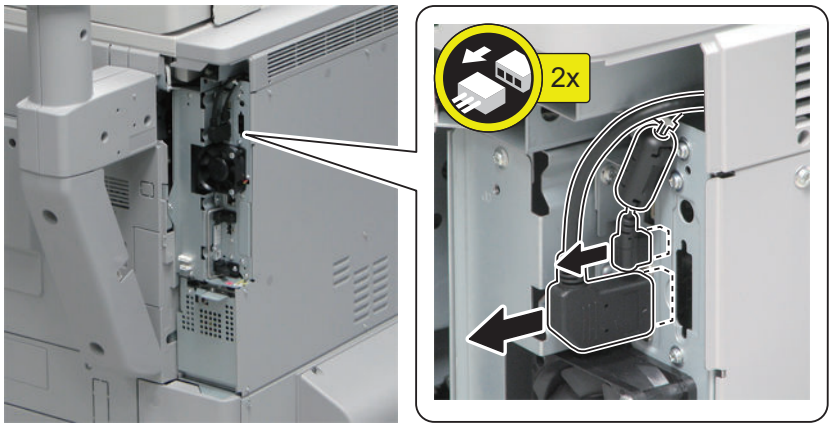
3. **Remove the Box Right Cover.**
   - 2 Screws (Removed screw will be used at step 17.)
   - 1 Hook





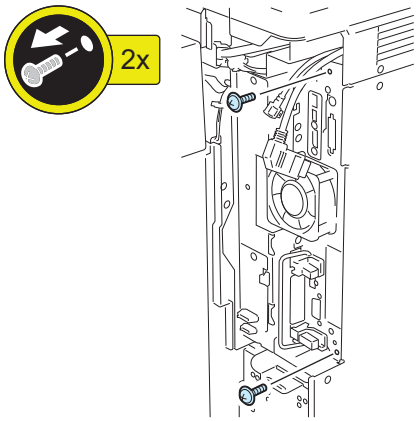
☐

4. **Remove the USB Cable and the Control Panel Cable.**



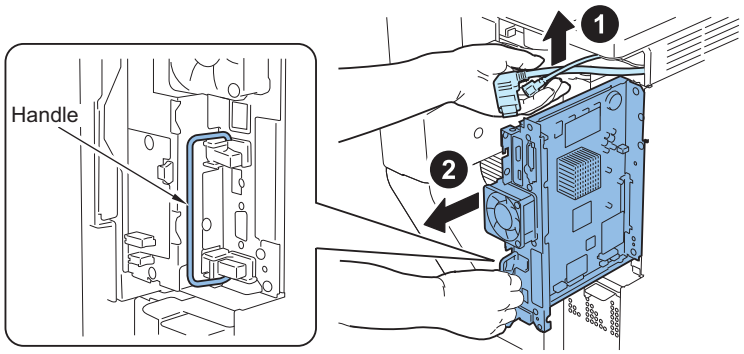
☐

5. **Remove the 2 screws of the Main Controller PCB 1. (Removed screw will be used at step 11.)**

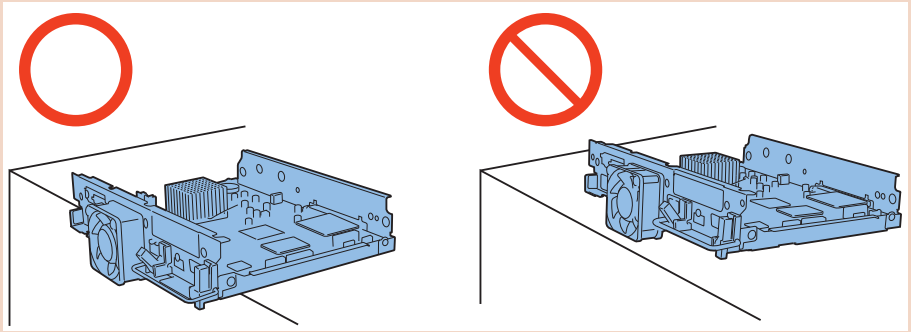


☐

6. **While holding the cable, remove the Main Controller PCB 1 by holding the handle.**

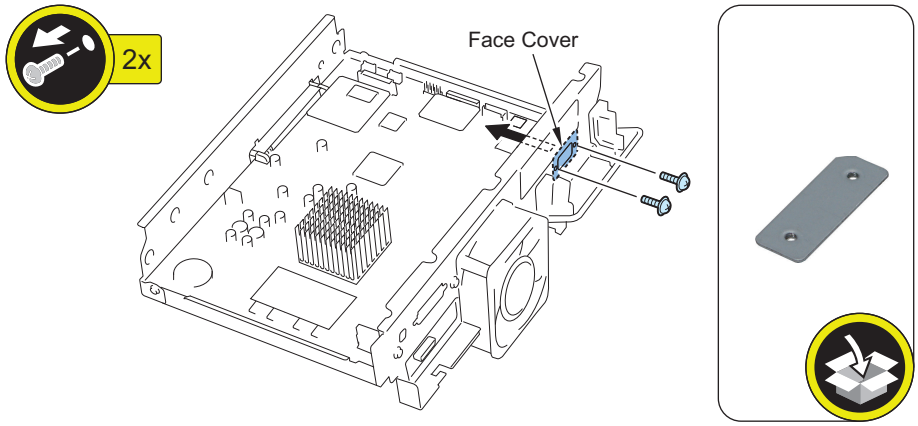


CAUTION:
Place the removed Main Controller PCB 1 as shown in the figure.
Reason: Because the fan is protruded, performing work while the Main Controller PCB 1 is tilted (not placed flatly on a surface) may cause damage to the PCB.



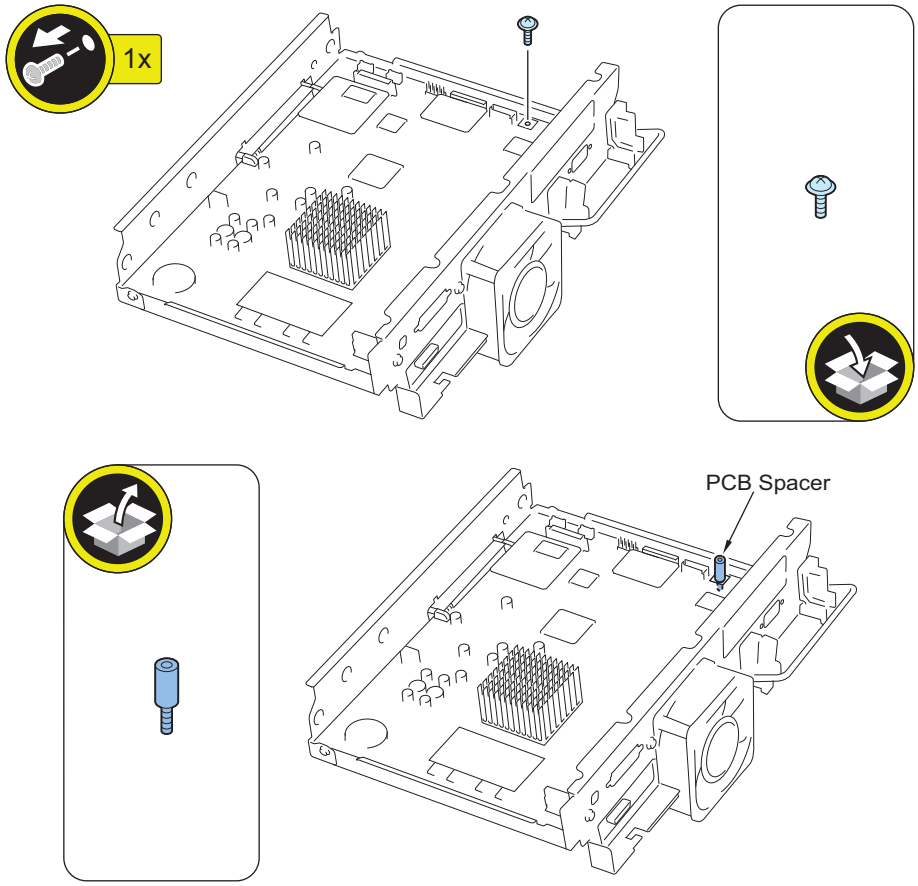
☐

7. **Remove the Face Cover. (Do not reuse the removed Face Cover.)**
   - 2 Screws (Removed screw will be used at step 9.)



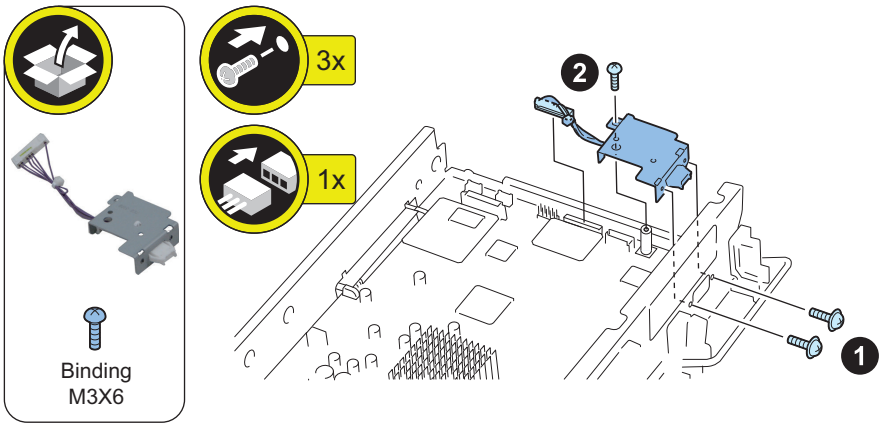
☐

8. **Remove the screw, and install the PCB Spacer. (Do not reuse the removed screw.)**



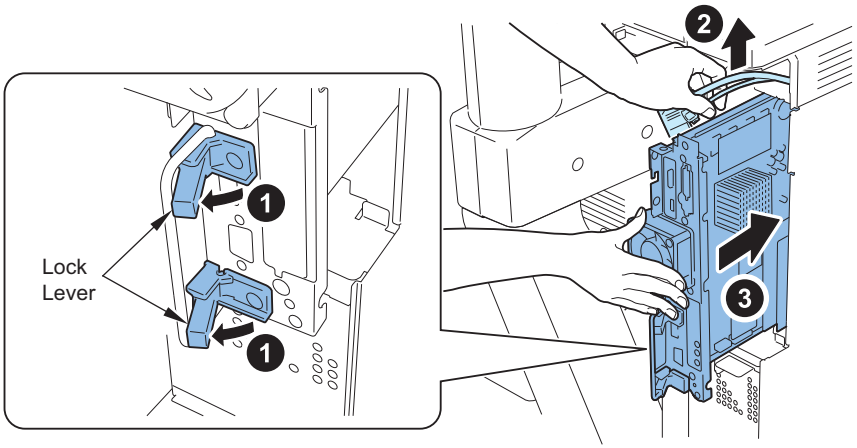
☐

9. **Install the Card Reader Relay Unit.**
   - 2 Screws (Use the screws removed at step 7.)
   - 1 Screw (Binding; M3 x 6)
   - 1 Connector



☐

10. **Release the 2 Lock Levers in the direction of the arrows, and uniformly push in the Main Controller PCB 1 with both hands until it stops while holding the cable.**

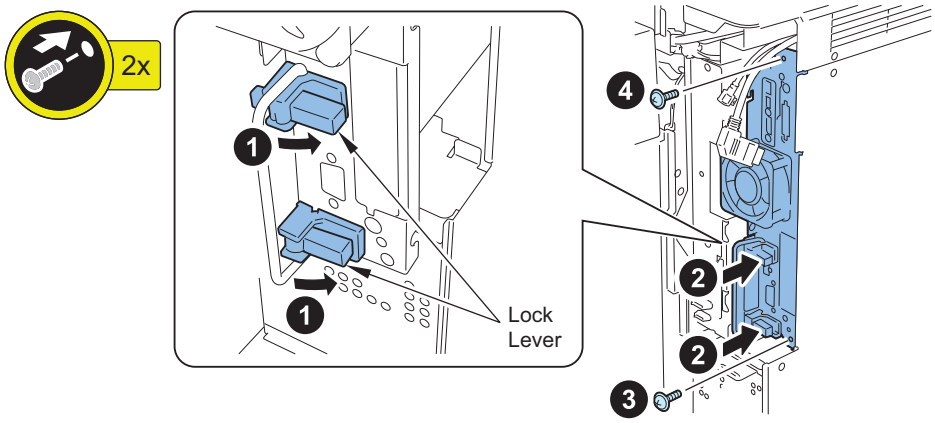


☐

11. Press 2 Lock Levers down to push the Main Controller PCB 1 and secure.

- 2 Screws (Removed screws at step 5: Install in order of bottom and top.)

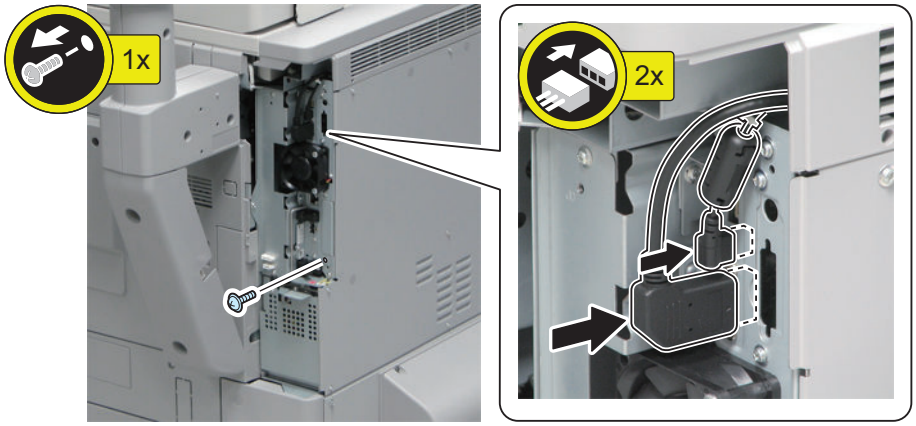
CAUTION:
Keep the order of steps 1 thru 4 shown in the figure since there is the case that a connector of the Main Controller PCB 1 is not connected.



☐

12. Install the USB Cable and the Control Panel Cable.

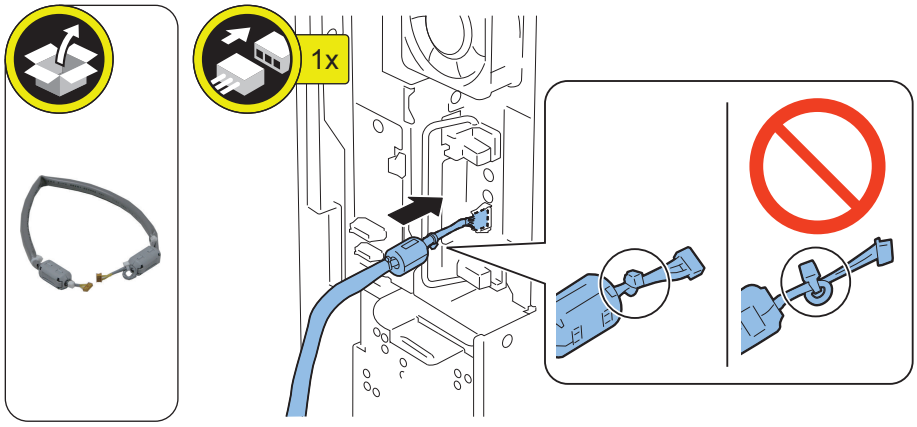
13. Remove the screw. (Removed screw will be used at step 15.)



☐

14. Connect the Card Reader External Relay Wire Harness.

CAUTION:
Be sure to pay attention to the direction in which to connect the cable.

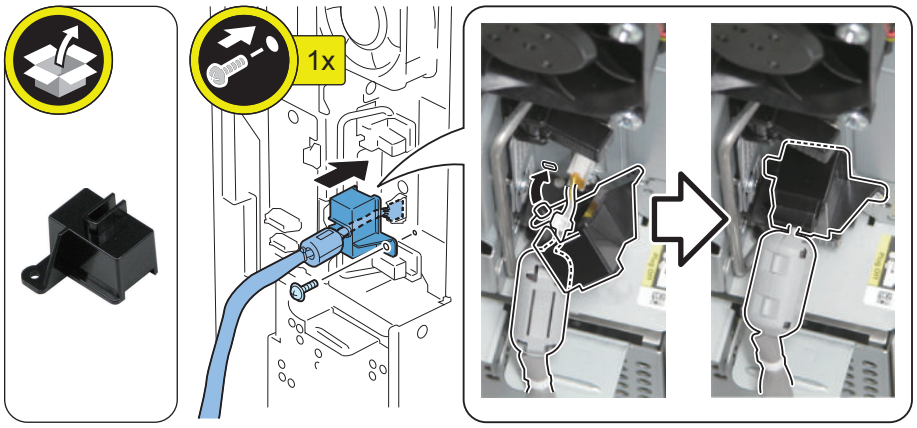


☐

15. Install the Connector Cover 2 to the Card Reader External Relay Harness and secure it in place.

- 1 Screw (Use the screws removed at step 13.)

CAUTION:
Install it so that the harness band of the Card Reader External Relay Harness can be inside of the Connector Cover 2.



☐

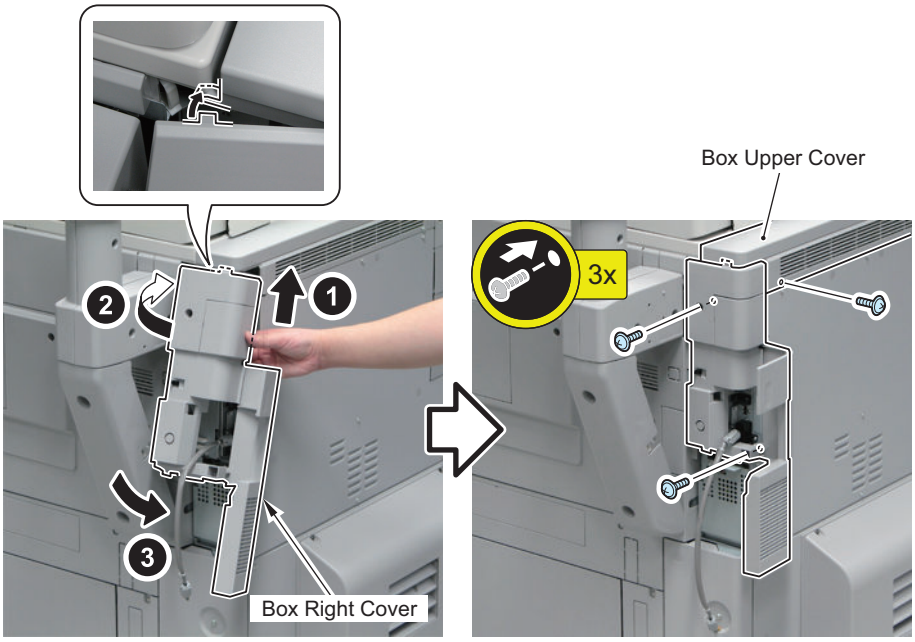
16. Put the Card Reader External Relay Harness into the Box Right Cover.

☐

17. Install the Box Right Cover.

- 1 Hook
- 2 Screws (Use the screws removed at step 3.)

18. Install the screw of the Box Upper Cover. (Use the screws removed at step 2.)



☐

19. Close the HDD Cover.

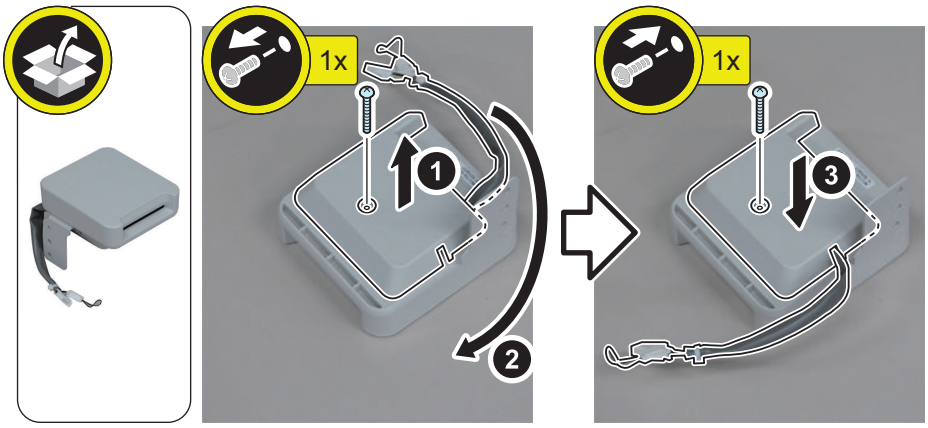
☐

20. Remove the Lower Cover of the Card Reader Unit, and change the position of the cable.

- 1 Screw

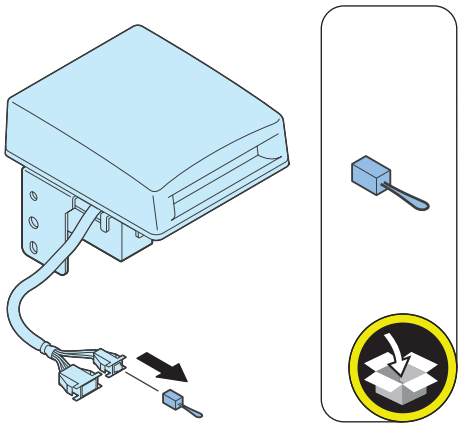
21. Install the Lower Cover of the Card Reader Unit.

- 1 Screw



☐

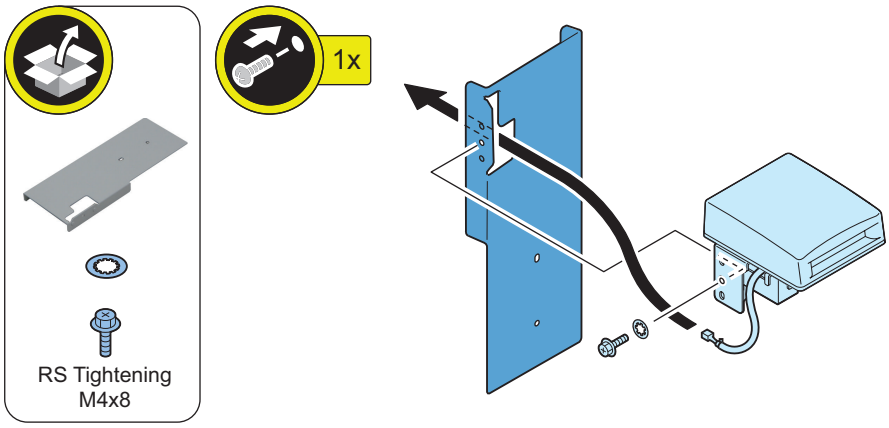
22. Remove the Short Connector in the Card Reader. (Do not reuse the removed Short Connector.)



☐

23. Install the Card Reader by putting its cable through the hole of the Card Reader Mounting Plate.

- 1 Toothed Washer
- 1 Screw (RS Tightening; M4 x 8)

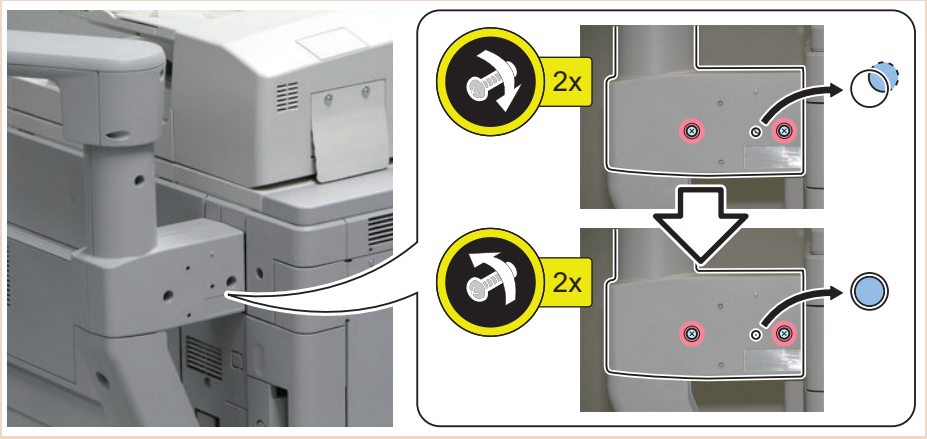


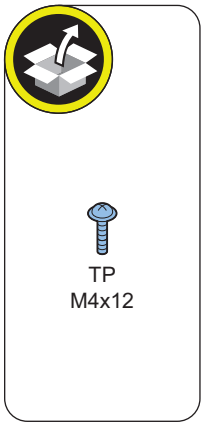
☐

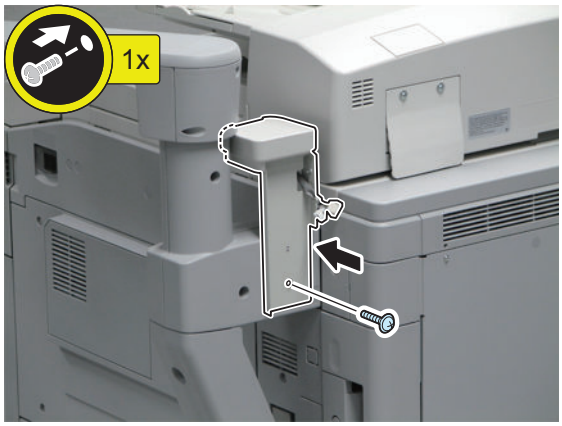
24. Install the assembled Card Reader Unit.

- 1 Screw (TP; M4 x 12)

CAUTION:
When it is difficult to install the screw of the Card Reader Unit due to the position of the screw hole having been shifted, be sure to loosen the 2 screws of the Base Rear Cover, adjust the position of the screw hole, and then tighten the loosened screws.





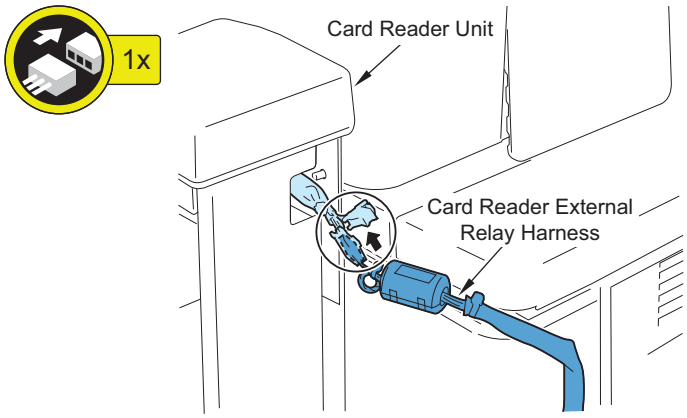


< In the case of the Multi-drawer Paper Deck installed >

CAUTION:
Install it without pinching the Interface Cable of the Multi-drawer Paper Deck.

☐

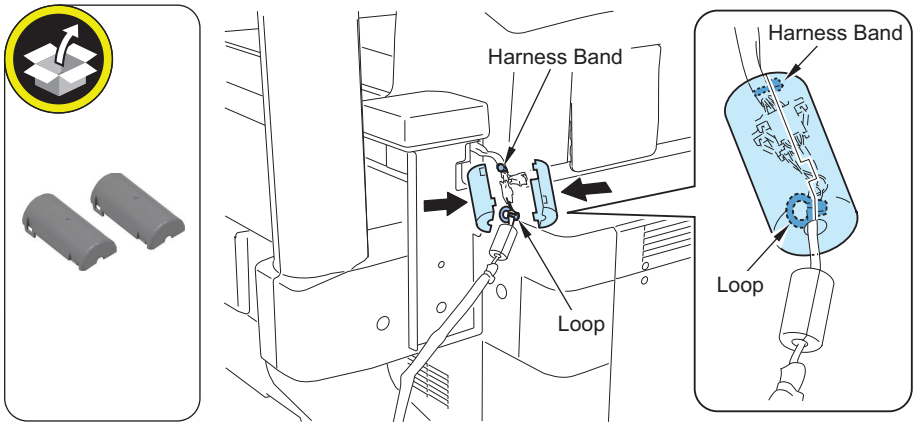
25. Connect the connectors of the Card Reader External Relay Harness and the Card Reader Unit.



☐

26. Install the 2 Connector Cases.

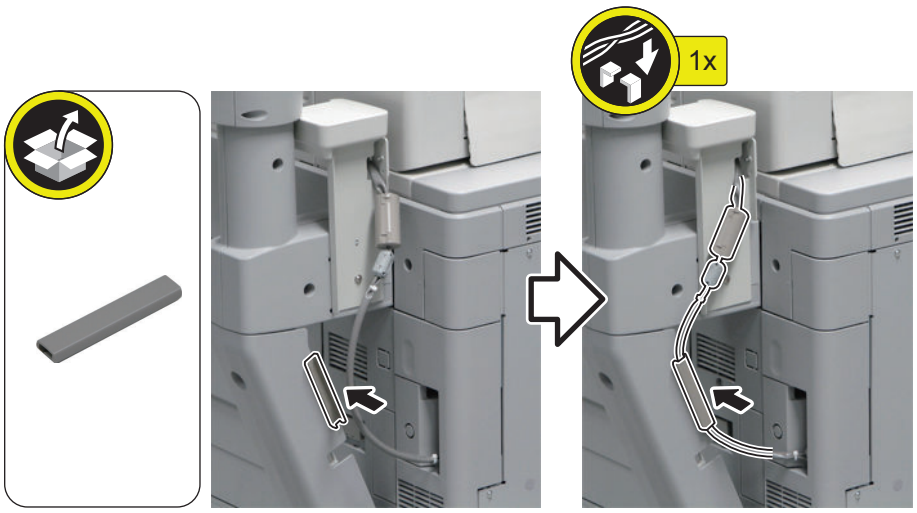
CAUTION:
Install so that the harness band and the Loop of the Card Reader External Relay Harness can be inside of the Connector Cases.



☐

27. Remove the cover of the Cord Guide, and affix it to the area indicated in the figure.

28. **Put the Card Reader External Relay Harness through the Cord Guide, and install the cover of the guide.**



< In the case of the Multi-drawer Paper Deck installed >

☐

29. **Connect the Power Plug into the outlet.**
30. **Turn ON the main power switch.**

Setting After Installation

☐

1. **Check the model of the Card Reader.**
   - Check that the setting value is "0" in the following Service Mode (Level 1) > COPIER > OPTION > ACC > CR-TYPE.
2. **Set the number of card (number of department) that can be used with the Card Reader.**
   - Service Mode (Level 2) > COPIER > OPTION > FNC-SW > CARD-RNG
3. **Use Service Mode to enter the minimum card number to be used by a user (1 to 2001).**
   - Service Mode (Level 1) > COPIER > FUNCTION > INSTALL > CARD
     From the entered card number, 1000 cards can be used.
4. **To enable the setting value, turn OFF/ON the main power switch.**

5. **Insert the card with the registered card No. and make sure that it is in standby.**

NOTE:
After setting, if a request arises from a user and changing the number of card (number of department), make a following setting. In that case, the current counter information by department will be reset.

- Execute in Service Mode (Level 1) > COPIER > FUNCTION > CLEAR > CARD.
- Specify the value in Service Mode (Level 2) > COPIER > OPTION > FNC-SW > CARD-RNG.
- To enable the setting value, turn OFF/ON the main power switch.
- After that, go through the procedure from step 3.

Voice Guidance Kit-F2

Points to Note Before Installation

Image Reader Unit is necessary to operate this equipment.

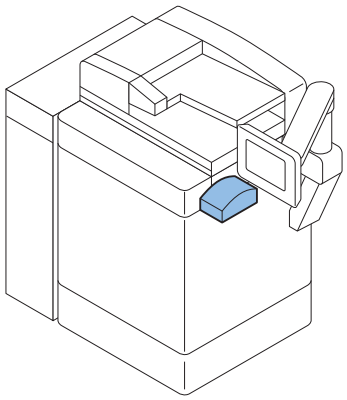
Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the host machine.**
2. **Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.**

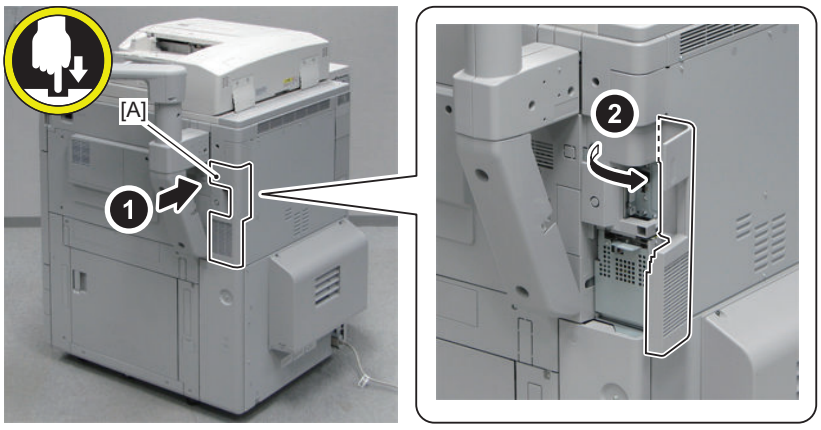
Installation Outline Drawing



Installation Procedure

☐

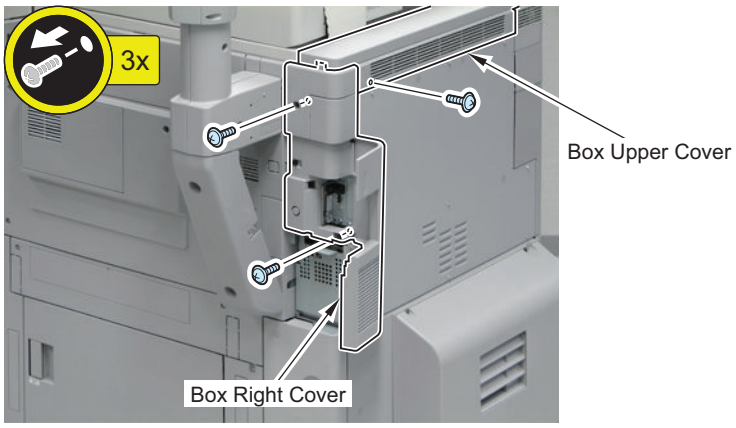
1. **Push the [A] part, and open the HDD Cover.**

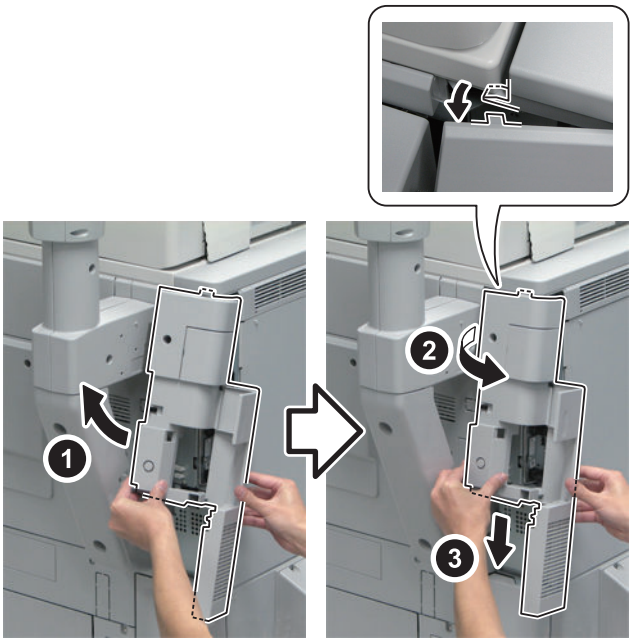


☐

2. **Remove the screw of the Box Upper Cover. (Removed screw will be used at step 14.)**

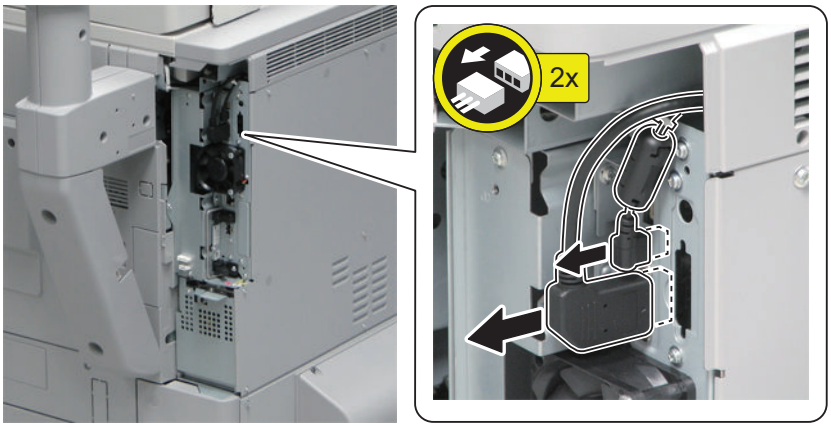
3. **Remove the Box Right Cover.**
   - 2 Screws (Removed screw will be used at step 13.)
   - 1 Hook





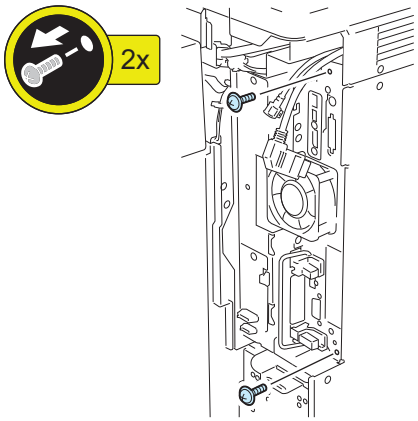
☐

4. **Remove the USB Cable and the Control Panel Cable.**



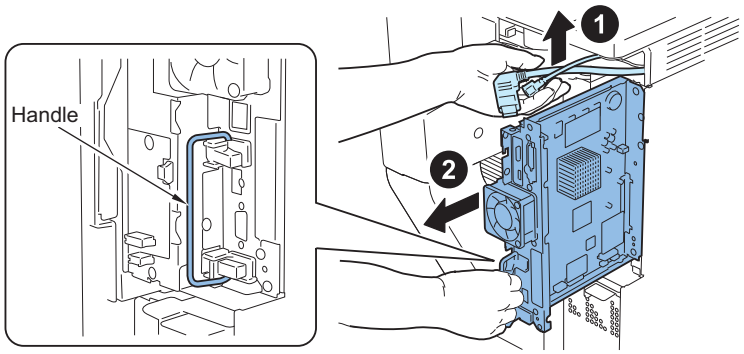
☐

5. **Remove the 2 screws of the Main Controller PCB 1. (Removed screw will be used at step 10.)**

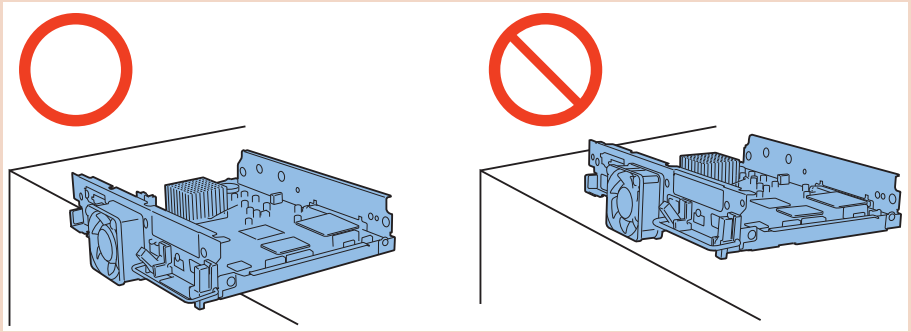


☐

6. **While holding the cable, remove the Main Controller PCB 1 by holding the handle.**

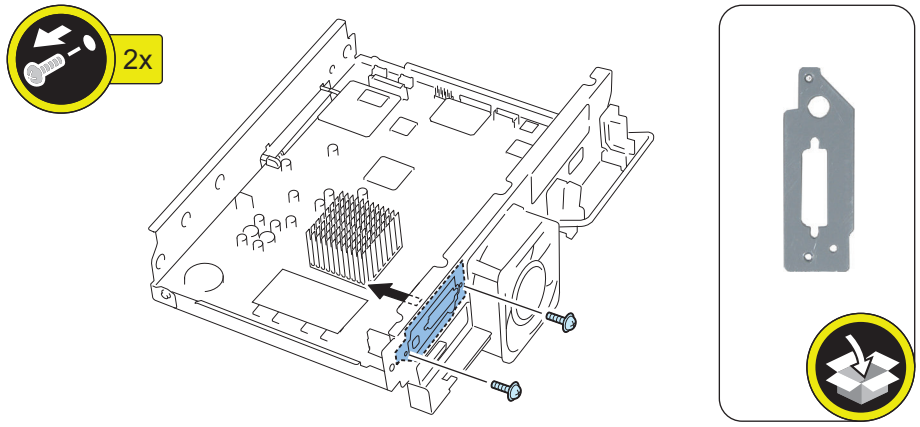


CAUTION:
Place the removed Main Controller PCB 1 as shown in the figure.
Reason: Because the fan is protruded, performing work while the Main Controller PCB 1 is tilted (not placed flatly on a surface) may cause damage to the PCB.



☐

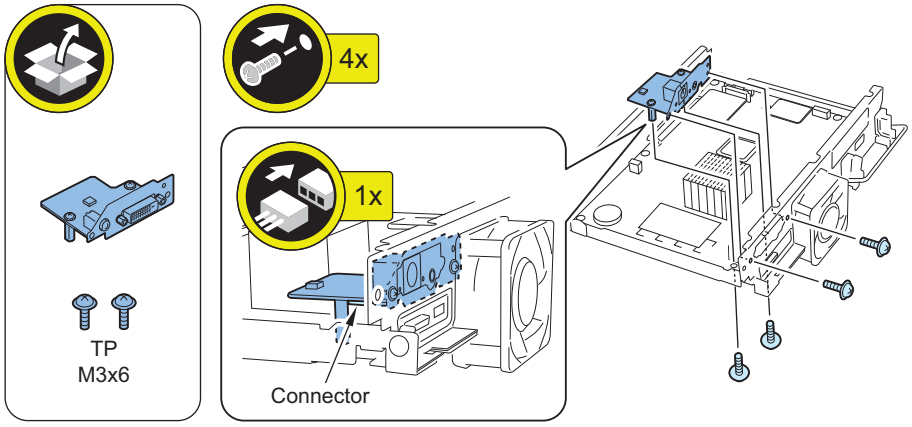
7. **Remove the Voice Operation Board Support Plate from Main Controller PCB 1.**
   (Do not reuse the removed Voice Operation Board Support Plate.)
   - 2 Screws (The removed screws are used in step 8.)



☐

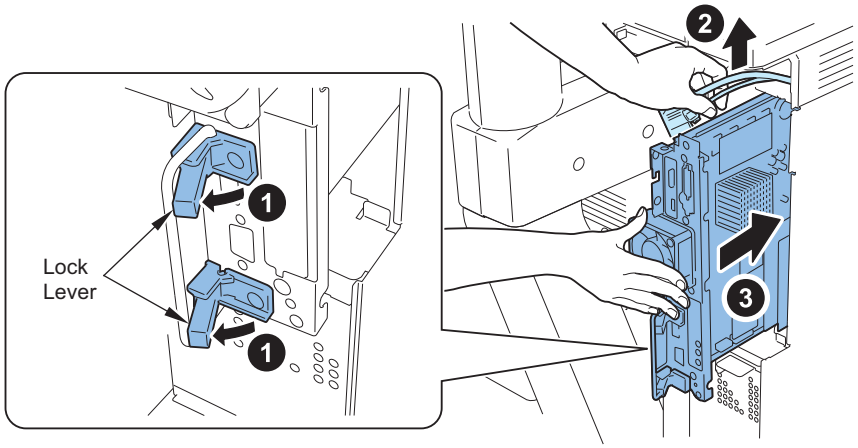
8. **Install the Voice Guidance Board Unit.**
   - 1 Connector
   - 2 Screws (The removed screws are used in step 7.)
   - 2 screws (TP; M3 x 6)

NOTE:
Check that the connector is connected properly.



☐

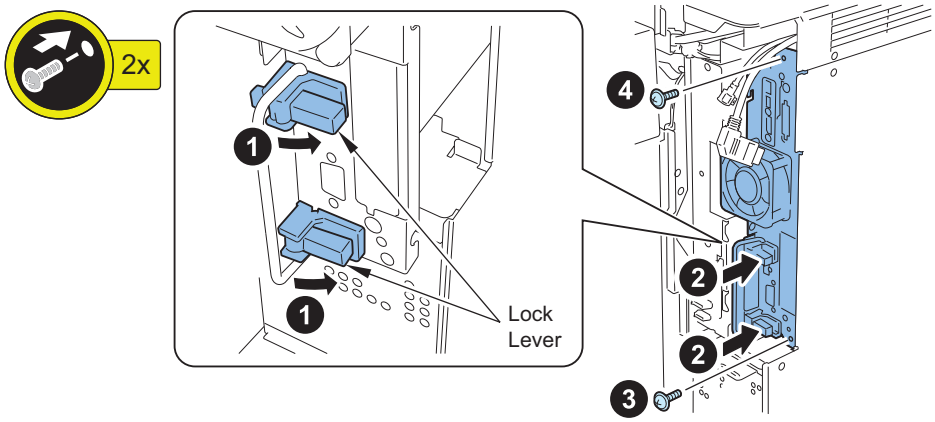
9. **Release the 2 Lock Levers in the direction of the arrows, and uniformly push in the Main Controller PCB 1 with both hands until it stops while holding the cable.**



☐

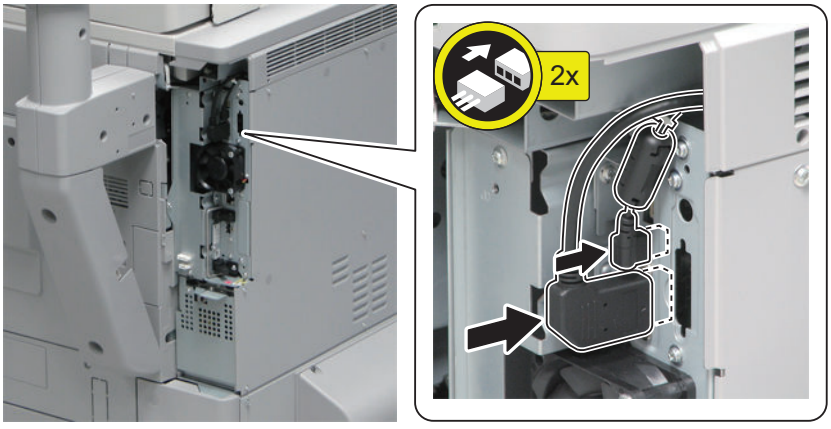
10. **Press 2 Lock Levers down to push the Main Controller PCB 1 and secure.**
    - 2 Screws (Removed screws at step 5: Install in order of bottom and top.)

CAUTION:
Keep the order of steps 1 thru 4 shown in the figure since there is the case that a connector of the Main Controller PCB 1 is not connected.



☐

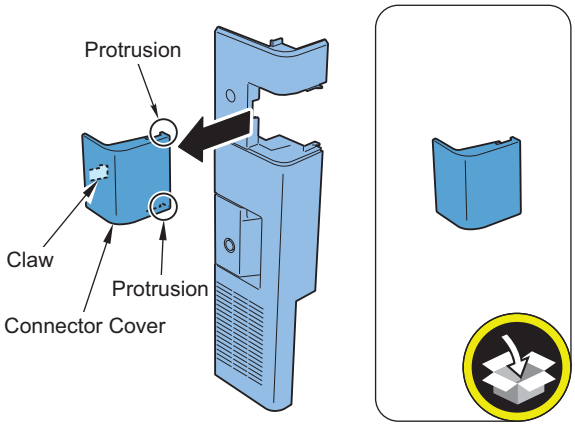
11. **Install the USB Cable and the Control Panel Cable.**



☐

12. Remove the Connector Cover from the Box Right Cover.

- 1 Claw
- 2 Protrusions

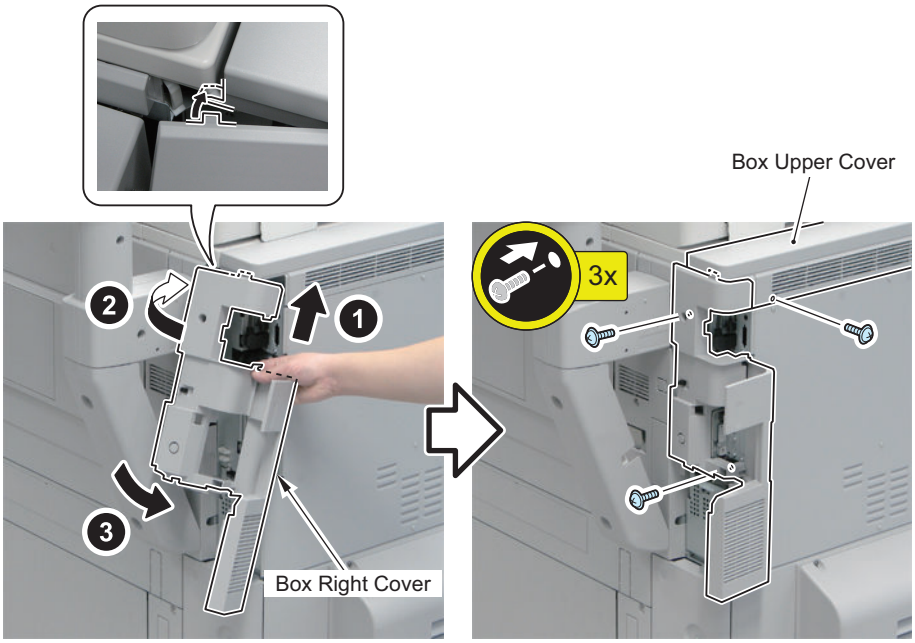


☐

13. Install the Box Right Cover.

- 1 Hook
- 2 Screws (Use the screws removed at step 3.)

14. Install the screw of the Box Upper Cover. (Use the screws removed at step 2.)

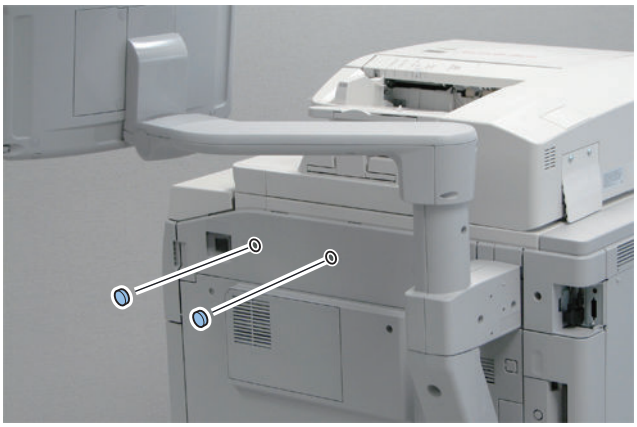


☐

15. Close the HDD Cover.

☐

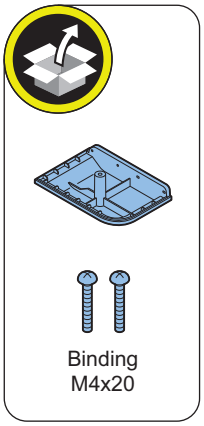
16. Remove the 2 Rubber Caps from Right Upper Front Cover. (Do not reuse the removed Rubber Caps.)

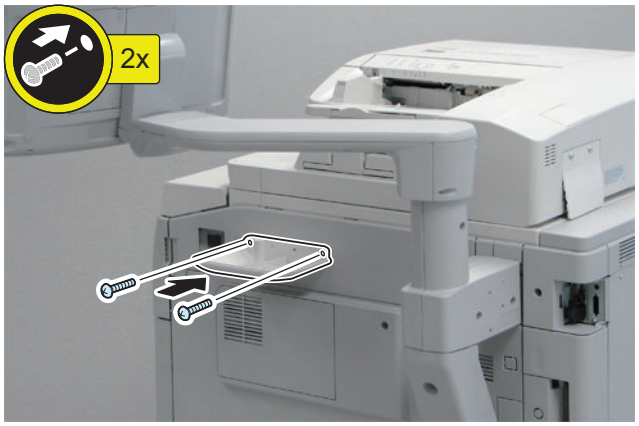


☐

17. Install the Speaker Unit (Lower).

- 2 Screws (Binding; M4 x 20)

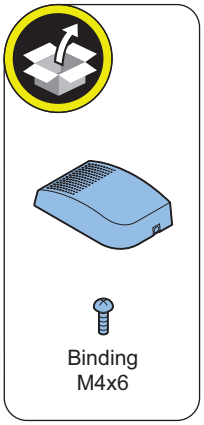


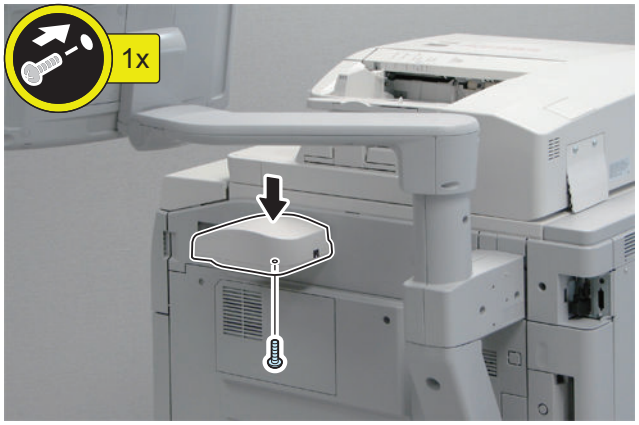


☐

18. Install the Speaker Unit (Upper).

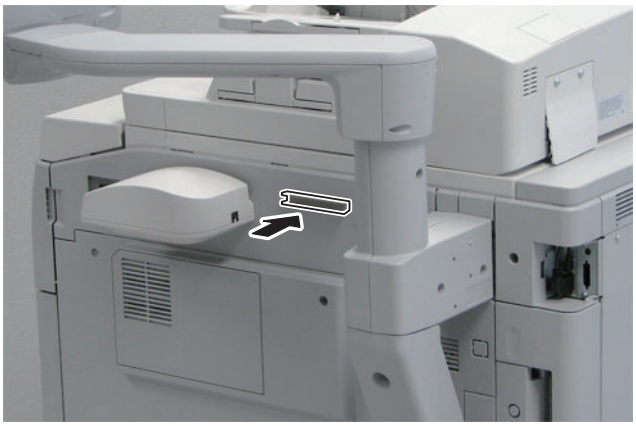
- 1 Screw (Binding; M4x 6)





☐

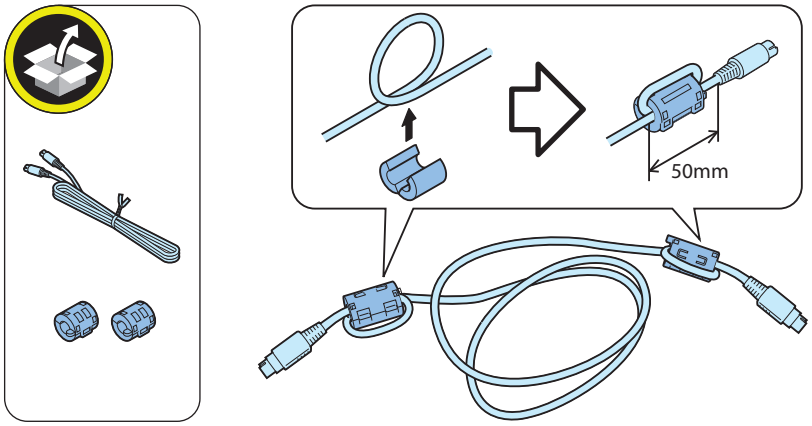
19. Remove the cover of the Cord Guide, and affix it to the area indicated in the figure.



☐

20. Install the 2 Ferrite Cores to both edges of the Speaker Cable.

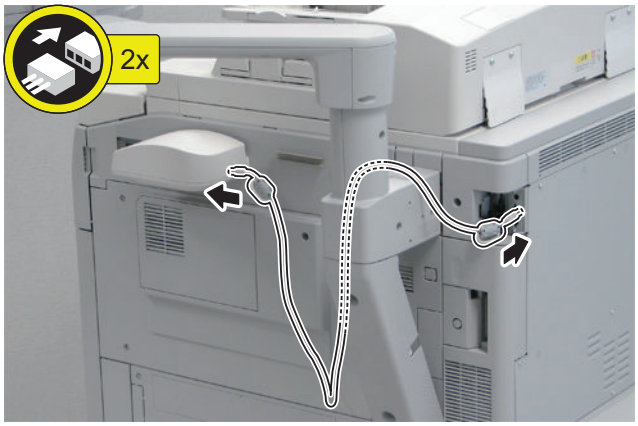
CAUTION:
Be sure to install the Ferrite Core within 50 mm from the edge of the Speaker Cable.



☐

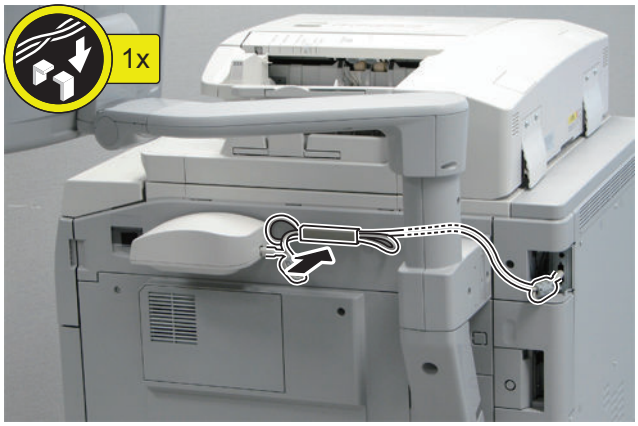
21. Insert the Speaker Cable to the Voice Guidance Board and the Speaker Unit.

NOTE:
Pass the Speaker Cable on the upper side of the Base Cover.

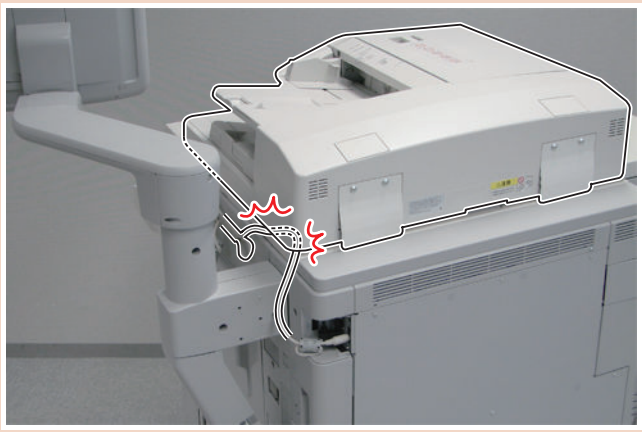


☐

22. Put the Speaker Cable through the Cord Guide and install the Cord Guide Cover.



CAUTION:
Do not leave a slack in the Speaker Cable as it may be caught when opening and closing the DADF.



☐

23. Connect the Power Plug into the outlet.

24. Turn ON the Main Power Switch.

Checking After Installation

☐

1. **[Settings/Registration] > [Preferences] > [Accessibility] > [Voice Navigation Settings] > and make sure that [Use Voice Navigation] is [ON].**
2. **[Settings/Registration] > [Preferences] > [Accessibility] > [Voice Navigation Settings] > and make sure that [Voice Guide from Speakers] is displayed.**

Operation Check

< When Starting to Use >

1. Press reset key 3 secs or more.
2. If the display in panel screen is boxed with red frame, “Voice Guidance Kit” is available.

If “Voice Guidance Kit” doesn’t properly operate, check the below.

- Make the following selection; Service Mode (Level 1) > COPIER > DISPLAY > VERSION, and check that TTS-JA/TTS-EN/TTS-IT/TTS-FR/TTS-DE/TTS-ES are installed correctly.

< When Disusing >

1. Hold down the Reset Key or Voice Recognition button for more than 3 seconds.

Reader Heater Unit

Product Name

Safety regulations require the product's name to be registered. In some regions where this product is sold, the following name may be registered instead.

- F154549

Checking the Contents (Asia only)

<Reader Heater Unit-G1>

[1] Reader Heater X1	[2] Flat Screw (M4x4) X4	[3] Heater Sheet X 1 sheet Use 3 of them
	 * Binding screw can also be used.	
Checking the Parts to be Installed (Except for Asia)

Each parts of the Reader Heater Unit are provided as service parts, order as necessary to prepare parts below.

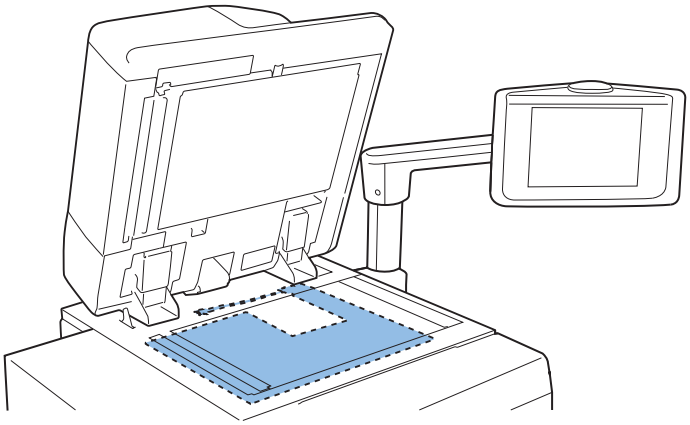
NO.	Parts name	Parts Number.	Q'ty
[1]	Reader Heater (200V)	FK2-7164-000	1 pc
[2]	Flat Screw (M4 x4)	XA9-1956-000	4 pc
[3]	Heater Sheet	FC8-6060-000	1 sheet

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the host machine.**
2. **Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.**

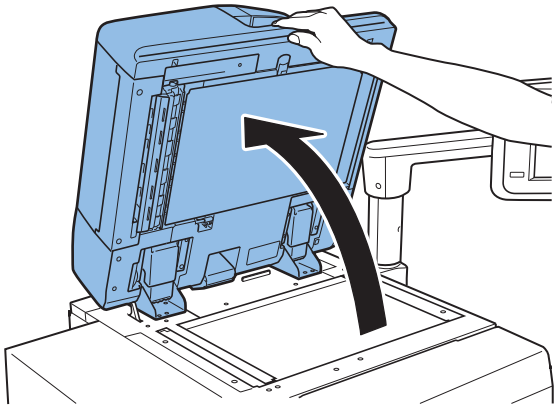
Installation Outline Drawing



Installation Procedule

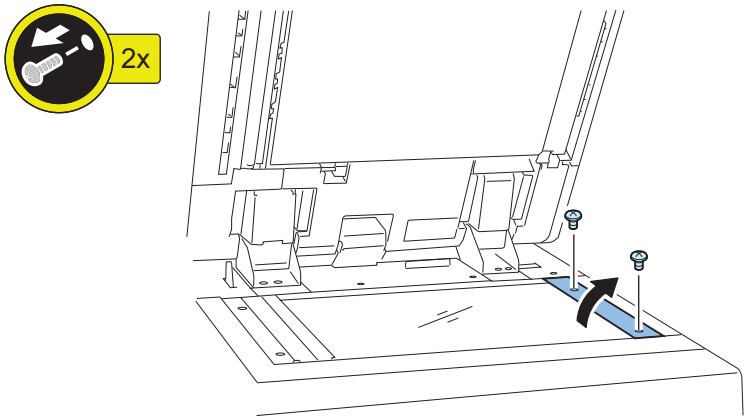
☐

1. **Open the DADF.**



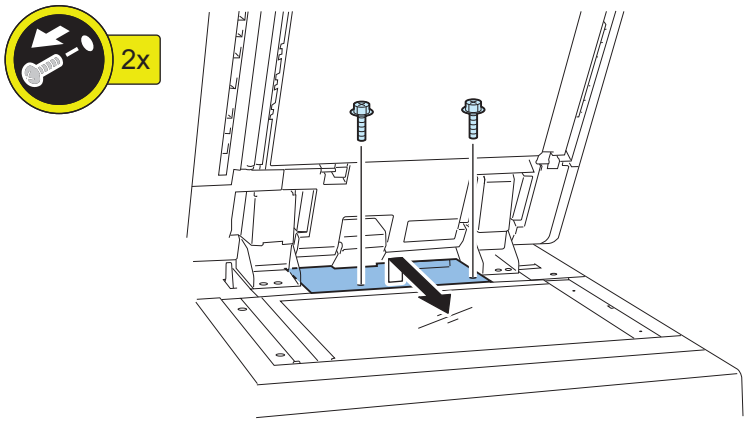
☐

2. **Remove the Right Retainer Cover.**
   - 2 Screws



☐

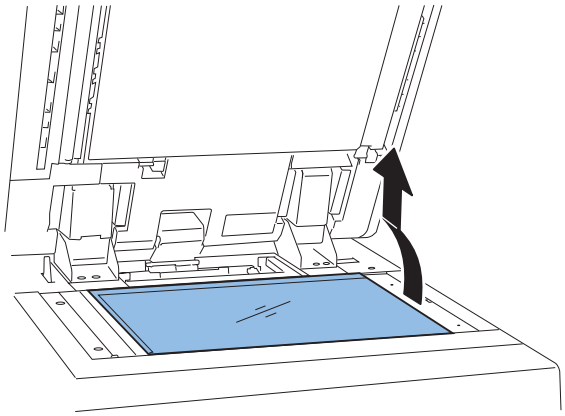
3. **Remove the DF Cable Cover.**
   - 2 Screws



☐

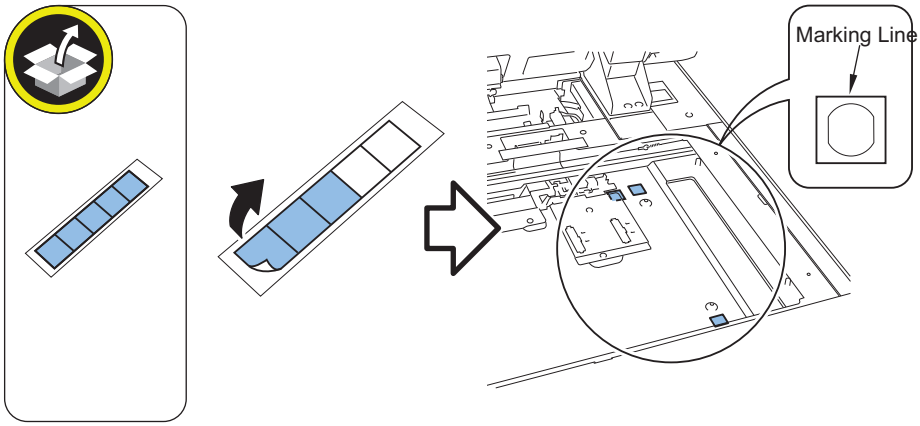
4. **Remove the Copyboard Glass.**

CAUTION:
When removing the Copyboard Glass, be sure not to get your fingers touched with the glass surface or the backside of the white plate.
In case the glass is soiled, clean it with lint-free paper.



☐

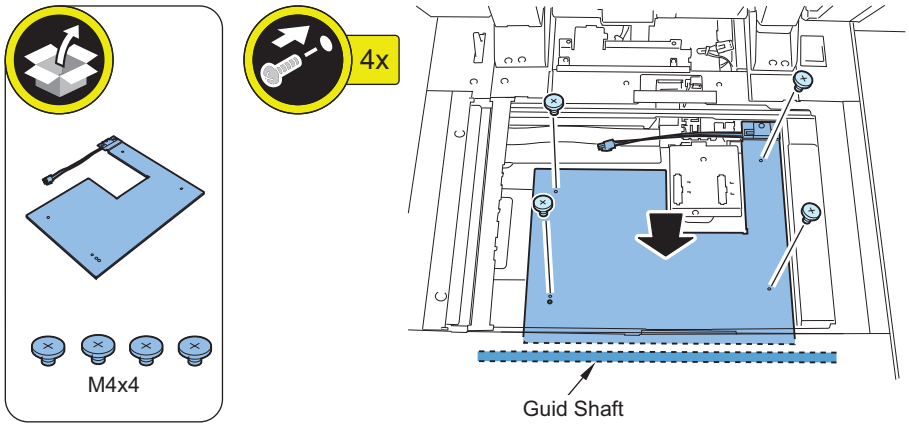
5. **Align the 5 Heater Sheets in the marking line and put them on.**



☐

6. **Install the Reader Heater.**
   - 4 Screws (Flat-head; M4 x 4)
     (*Binding screw can also be used.)

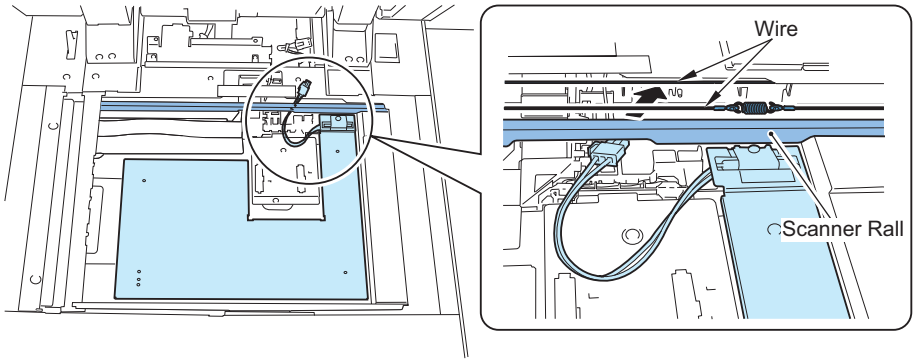
CAUTION:
Do not scratch the surface of the Guide Shaft.



☐

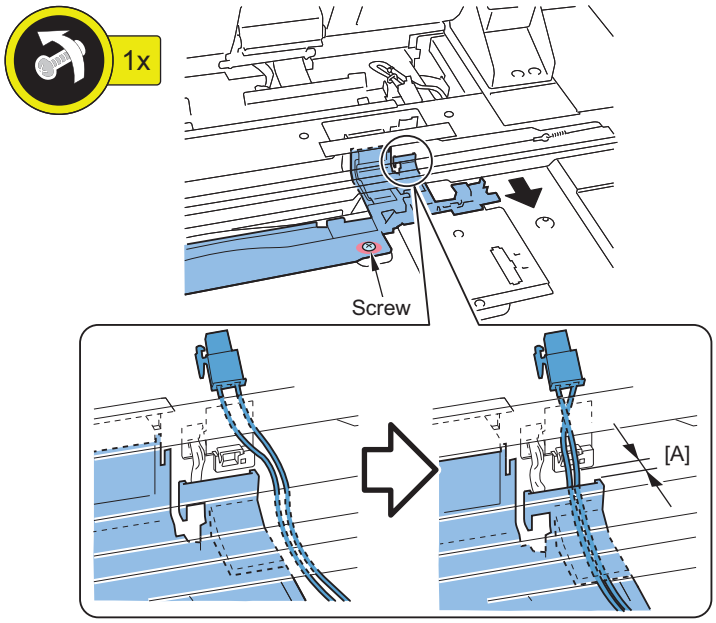
7. **Pass the connector under the scanner rail.**

CAUTION:
Do not scratch surface of the wire and the Scanner Rail.



☐

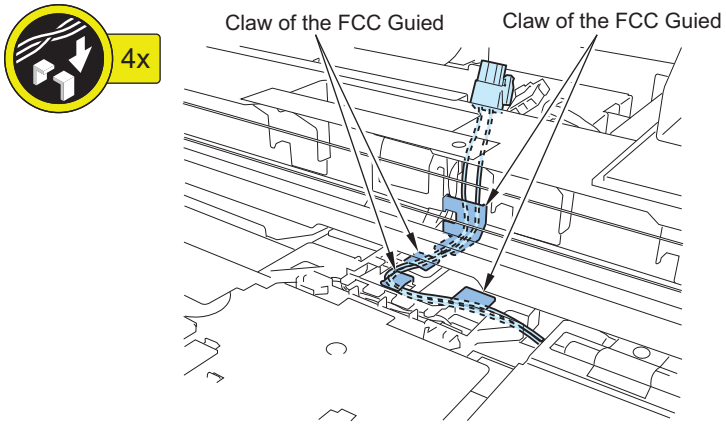
8. **Loosen the screw and shift the harness guide in the direction of the arrow to make a space [A] to pass the harness.**



☐

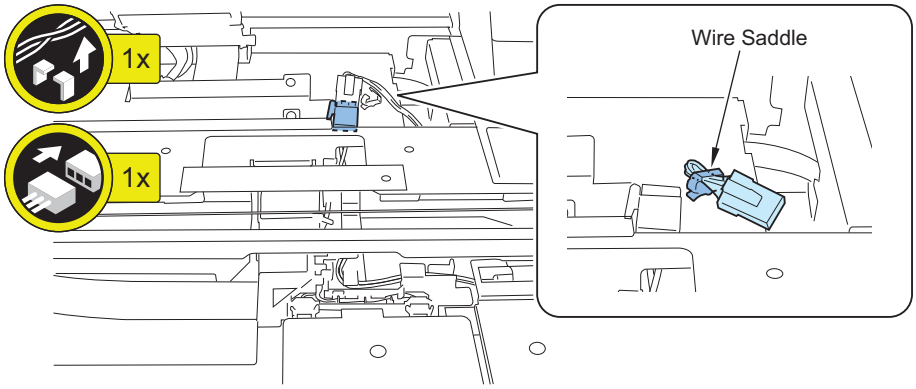
9. **Put the harness along the claws of FFC guide in the 4 places.**

NOTE:
Make sure to keep the harness tightly put.



☐

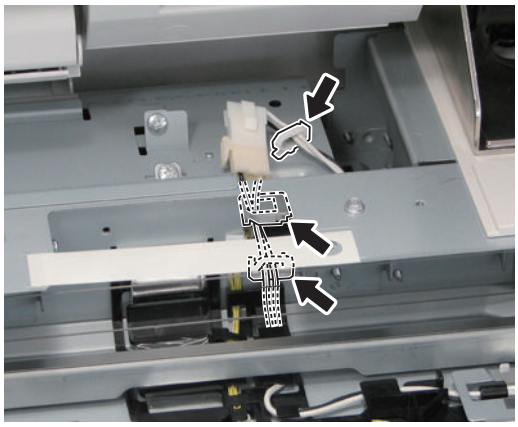
10. **Release the wire saddle and connect the connector.**



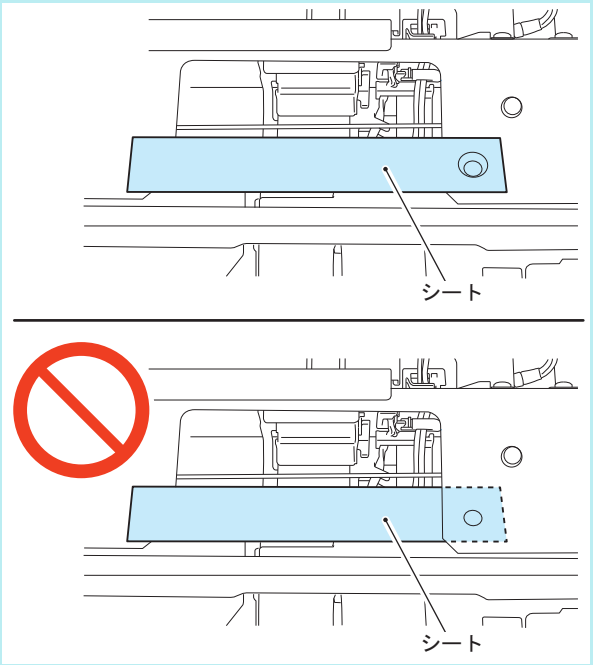
☐

11. Fix the harness.

- 2 Edge Saddles
- 1 Wire Saddle



NOTE:
Be sure to check that the sheet is on the plate.



☐

12. Aligning with the boss, tighten the screw that has been loosened in step 8). (2 Screws)

☐

13. Install the removed cover.

- Copy board glass
- DF cable cover (2 Screws)
- Right retainer cover (2 Screws)

☐

14. Clouse the DADF.

15. Turn ON the environment switch.

16. Insert the power plug to the outlet.

17. **Turn ON the main power switch.**

Cassette Heater Unit for Host Machine

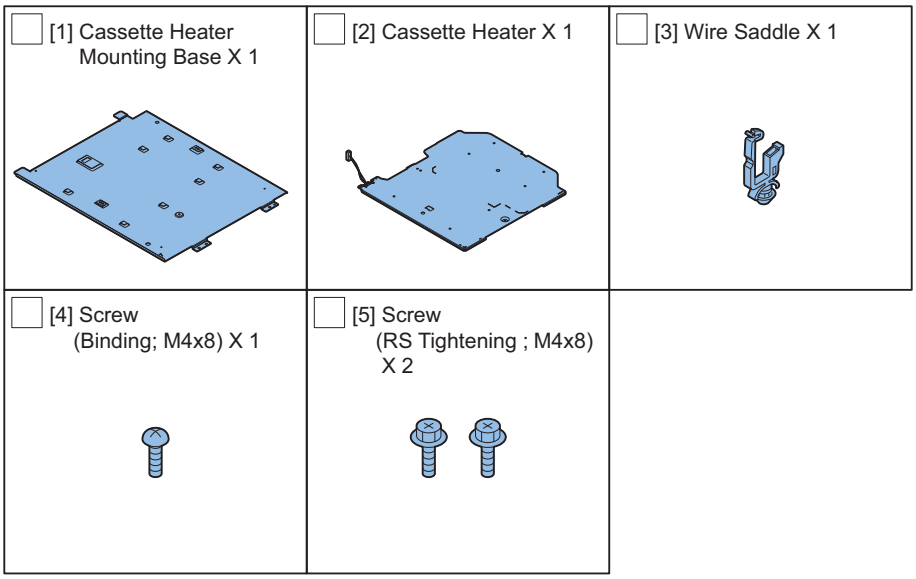
Product Name

Safety regulations require the product's name to be registered.
In some regions where this product is sold, the following name may be registered instead.

- F276801

Checking the Parts to be Installed

Prepare the following parts because each part of the Cassette Heater Unit is assigned as service part.



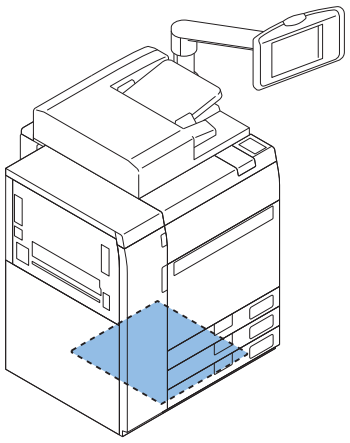
No	Parts name	Parts Number	Q'ty
[1]	Cassette Heater Mounting Base	FE2-0010-000	1pc
[2]	Cassette Heater	FM0-4834-000	1pc
[3]	Wire Saddle	WT2-5694-000	1pc
[4]	Screw (Binding; M4x8)	XA9-1031-000	1pc
[5]	Screw (RS Tightening; M4x8)	XB3-6400-805	2pc

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the host machine.**
2. **Be sure that display in the Control Panel and the lamp of the main power supply are turned off, then disconnect the power plug.**

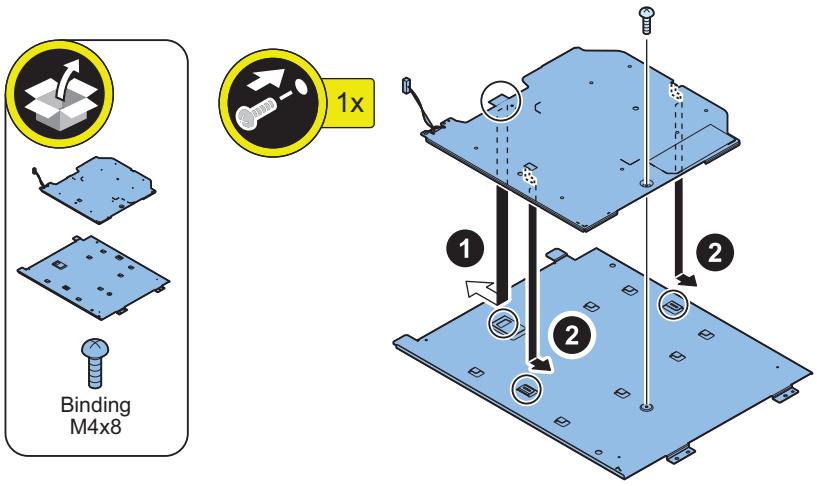
Installation Outline Drawing



Installation Procedure

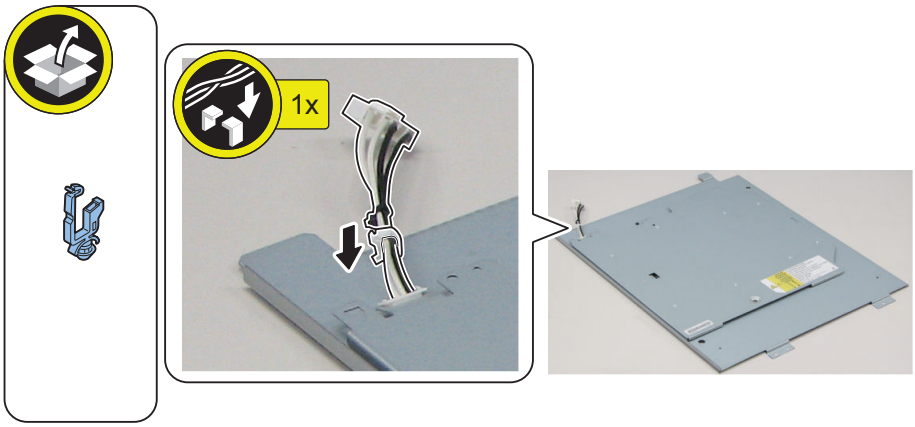
☐

1. **Install the Cassette Heater to the Cassette Heater Mounting Base.**
   - 3 Hooks
   - 1 Screw (Binding; M4 x 8)



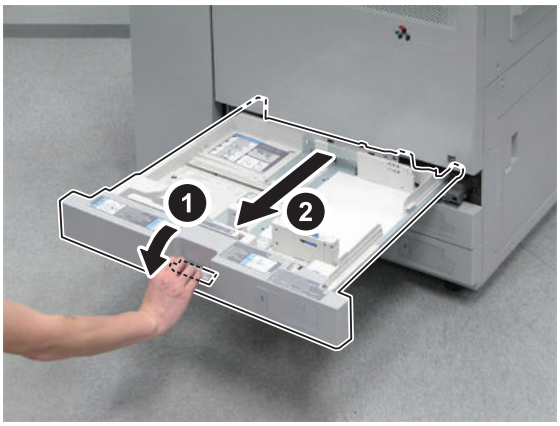
☐

2. **Install the Wire Saddle, and secure the cable in place.**



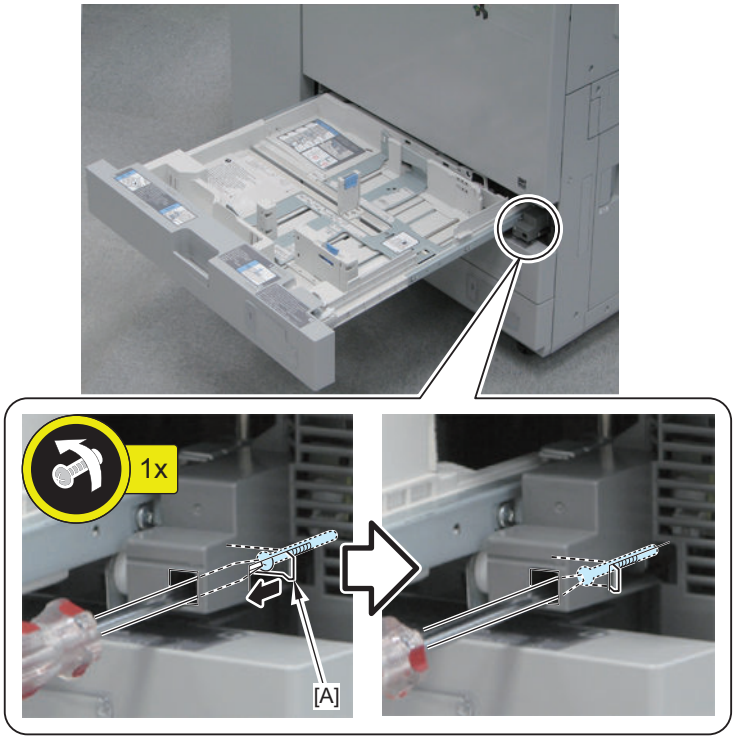
☐

3. **Pull the Open/Close Lever, and pull out the Cassette 1.**



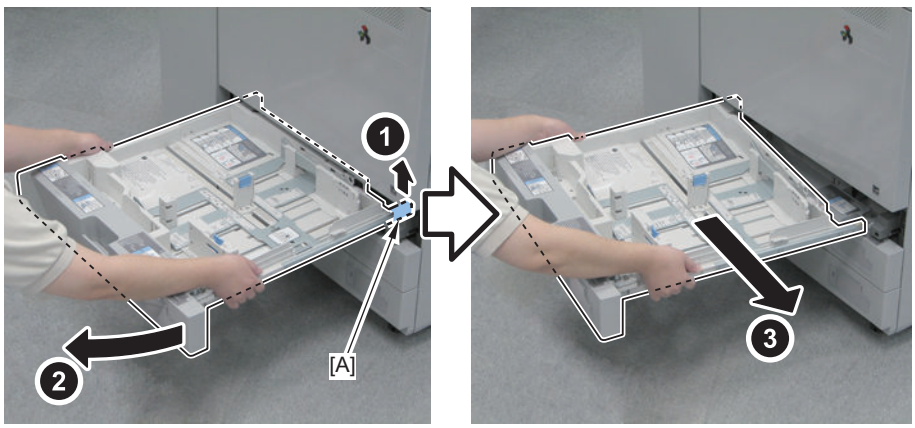
☐

4. **Move the stopper [A] to the front until it stops while loosening the screw.**



☐

5. **Remove the Cassette 1 while lifting the [A] part of the Cassette 1.**

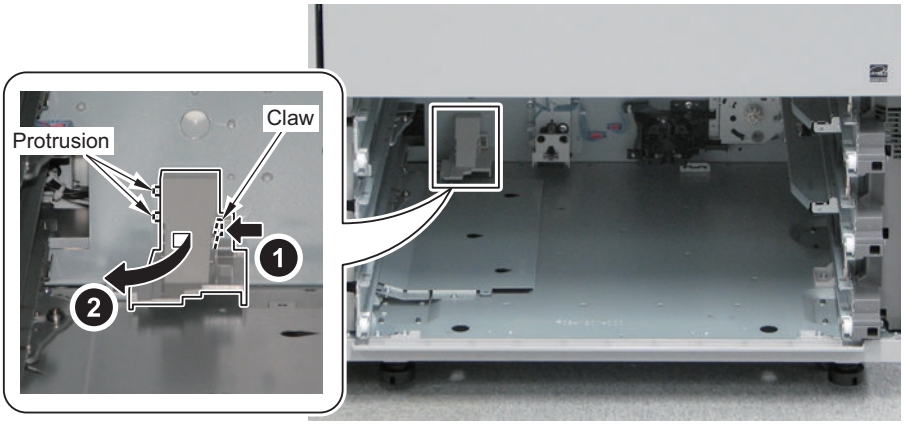


☐

6. **Remove other cassettes in the same way.**

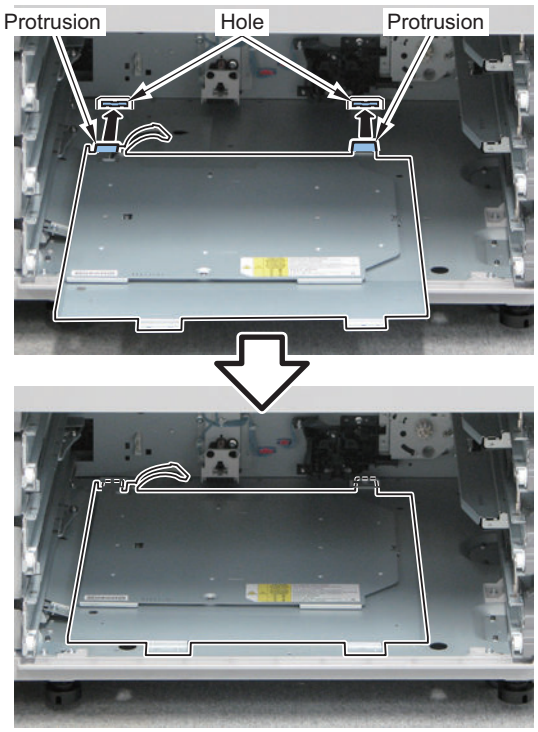
☐

7. **Remove the Connector Cover.**
   - 1 Claw
   - 2 Protrusions



☐

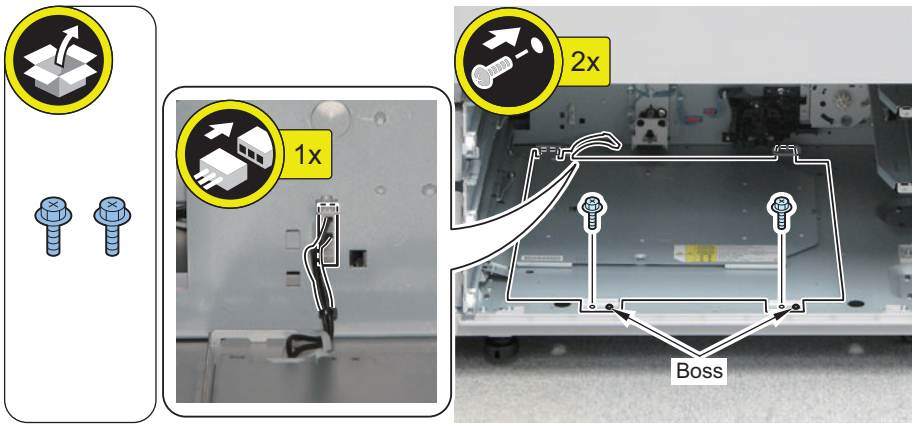
8. **Fit the 2 protrusions of the Cassette Heater Unit into the holes of the host machine.**



☐

9. Install the Cassette Heater Unit.

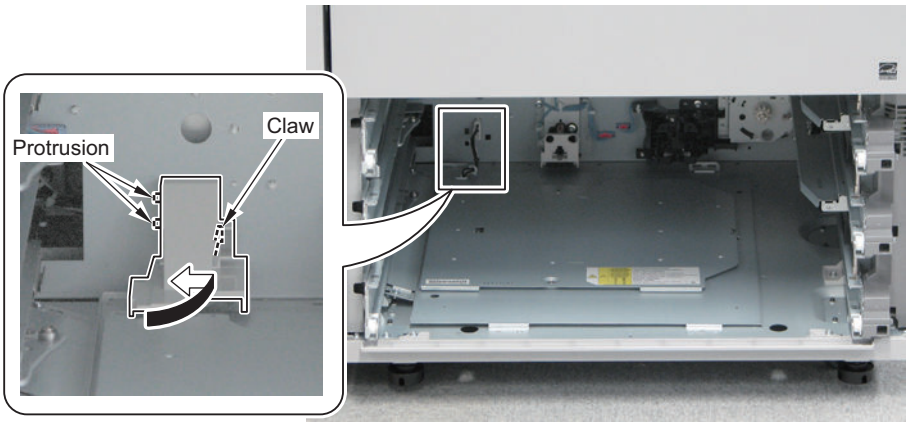
- 2 Bosses
- 2 Screws (RS Tightening; M4 x 8)
- 1 Connector



☐

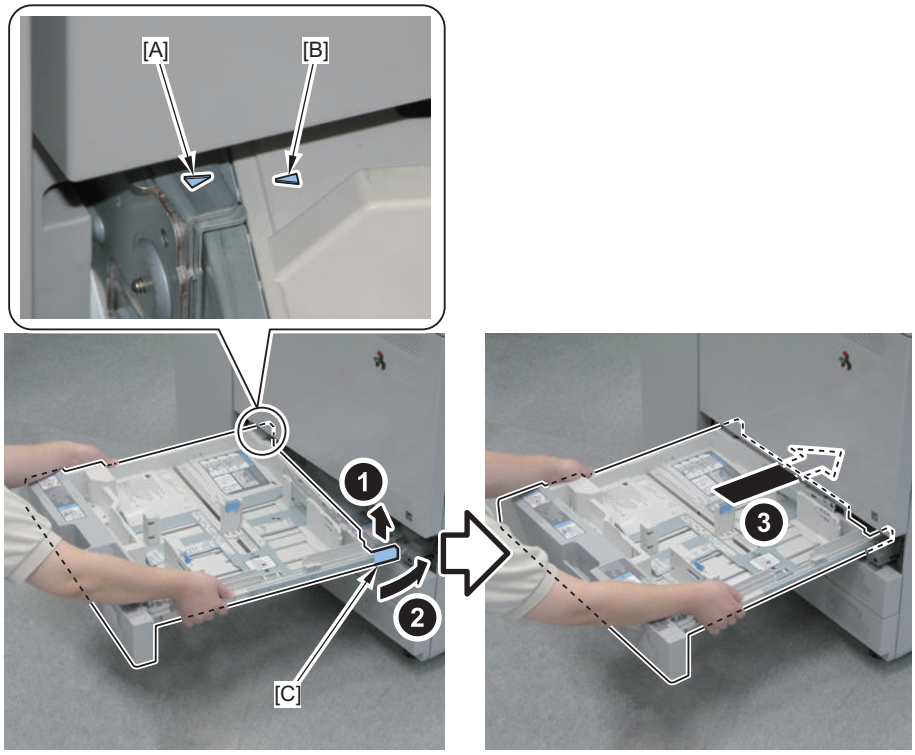
10. Install the Connector Cover.

- 2 Protrusions
- 1 Claw



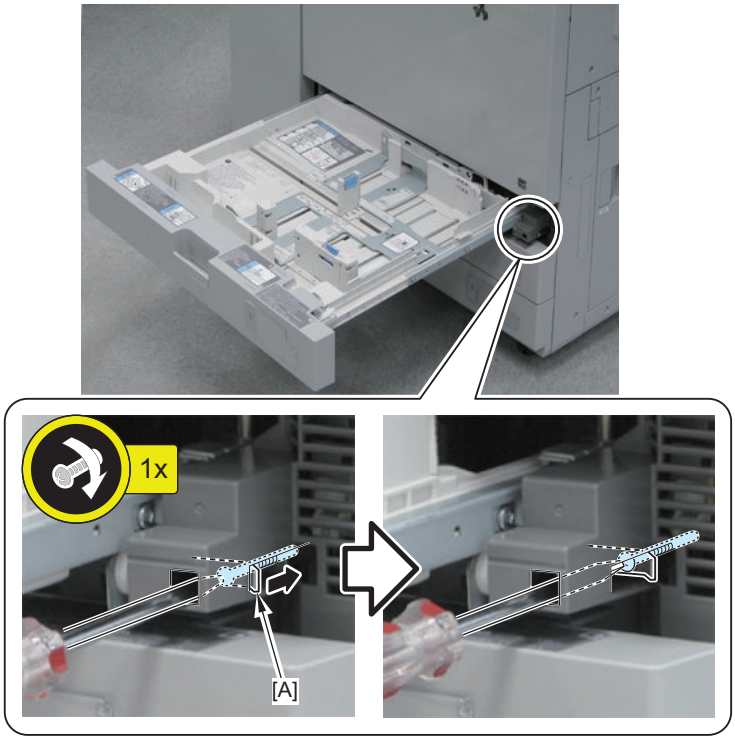
☐

11. **Align the position of the marking [A] on the machine with that of the marking [B] on the cassette. Install the cassette while lifting the [C] part of the cassette.**



☐

12. **Move the stopper [A] to the rear until it stops while loosening the screw.**



☐

13. **Close the Cassette.**

14. **Install other cassettes in the same way.**

☐

15. **Turn on the Environment Heater Switch.**
16. **Insert the power plug to the outlet.**
17. **Turn ON the main power switch.**

Cassette Heater Unit for POD Deck Lite

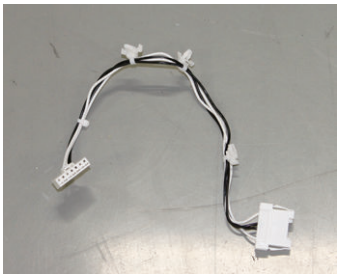
Checking the Parts to be Installed

Each part of the Cassette Heater Unit for the POD Deck Lite is supplied as a service part, so prepare the following parts. Also, use the appropriate Cassette Heater Unit for each country.

☐ [1] Cassette Heater Unit X 1

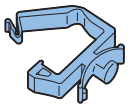
☐ [2] Screw (TP ; M3x6) X 1

☐ [3] Cassette Heater Harness X 1



☐ [4] Switch Unit X 1

☐ [5] Wire Saddle X 1



No	Parts name	Parts Number	Q'ty
[1]	Cassette Heater Unit	FM1-D634-000	1pc.
[2]	Screw (TP ; M3x6)	XB6-7300-605	1pc.
[3]	Cassette Heater Harness (120V)	FM1-E857-000	1pc.
	Cassette Heater Harness (230V)	FM1-E858-000	1pc.
[4]	Switch Unit	FM1-E859-000	1pc.
[5]	Wire Saddle	WT2-6108-000	1pc.

*As for the change of the part number, please refer to the latest parts catalog.

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the Host Machine.**

2. **Be sure that Control Panel Display and Main Power Lamp are both turned OFF, and then disconnect the power plug.**

CAUTION:
When installing the Cassette Heater Unit to the POD Deck Lite, take the following precautions.
a. The AC power plug of the Host Machine must have been removed from the outlet.
b. Install the Heater after installing the Host Machine and POD Deck Lite.

Release the POD Deck Lite from the Host Machine

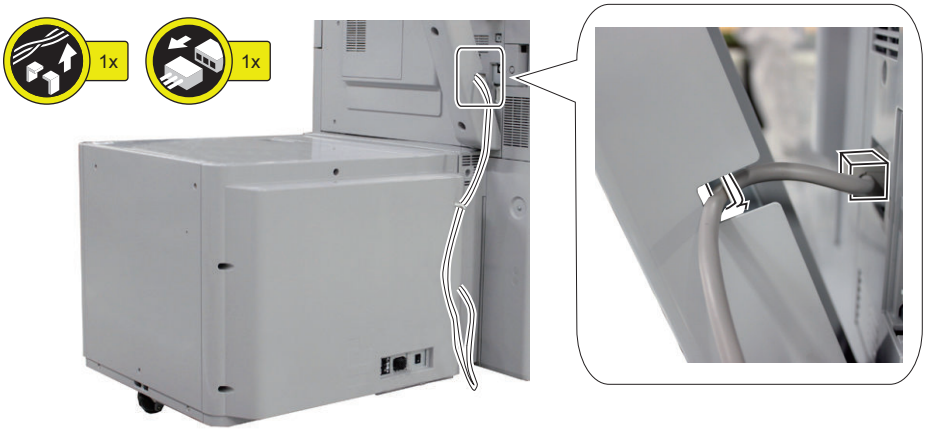
If the POD Deck Lite have been connecting to the Host Machine, release the POD Deck Lite from the Host Machine as follows.

☐

1. **Disconnect the Power Cord from the POD Deck Lite. Disconnect the plug end of the power cord from the external power outlet.**

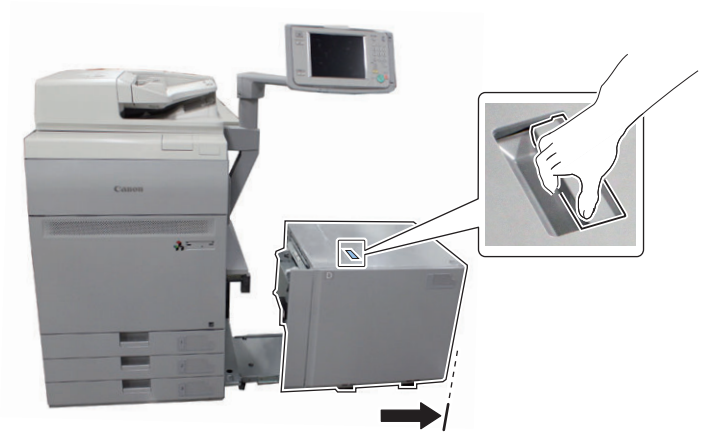
☐

2. **Remove the cable.**
   - 1 Wire Saddle
   - 1 Connector



☐

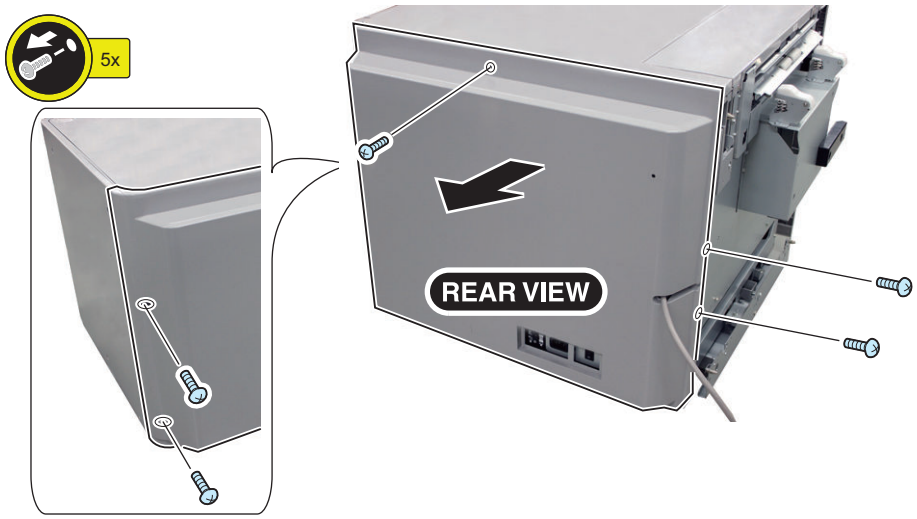
3. **Pull the deck release lever to release the POD Deck Lite from the Host Machine, and then move the POD Deck Lite until it stops.**



Installation Procedure

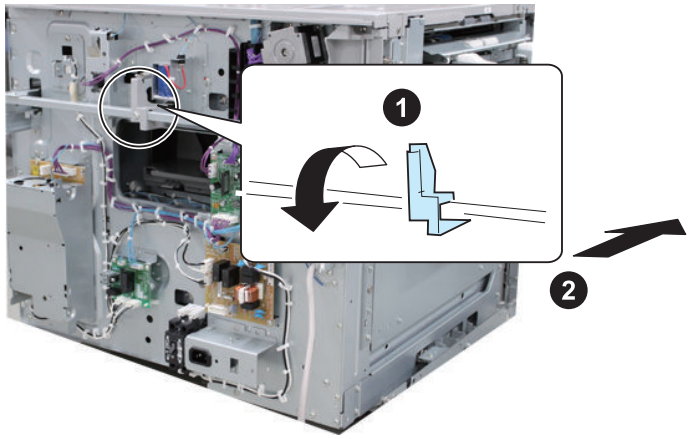
☐

1. **Remove the Rear Cover.**
   - 5 Screws



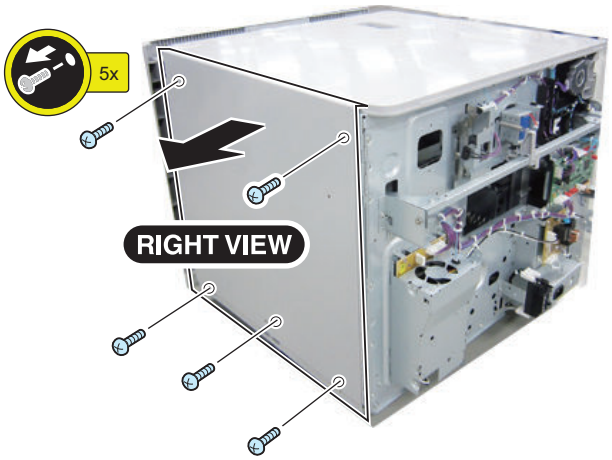
☐

2. **Pull the releasing lever to open the Deck Unit.**



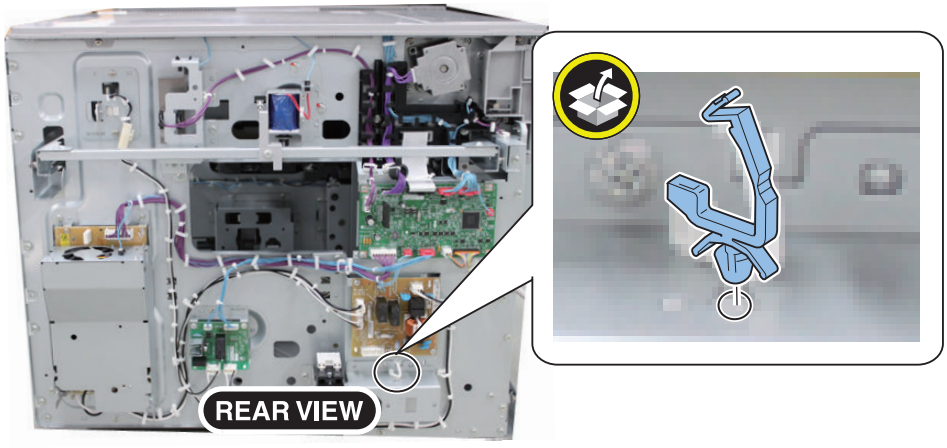
☐

3. **Remove the Right Cover.**
   - 5 Screws



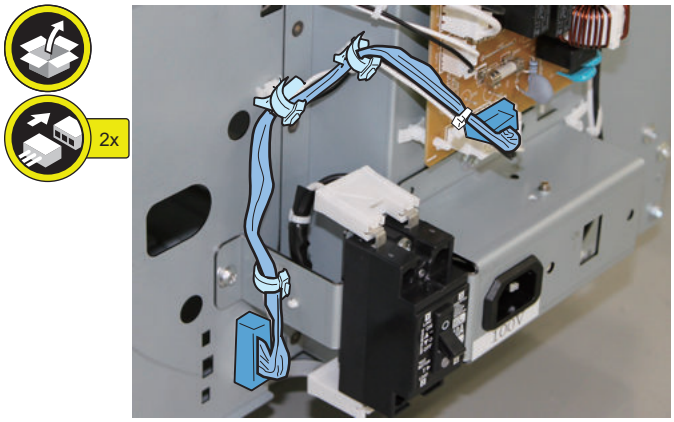
☐

4. **Install the Wire Saddle.**
   - 1 Wire Saddle



☐

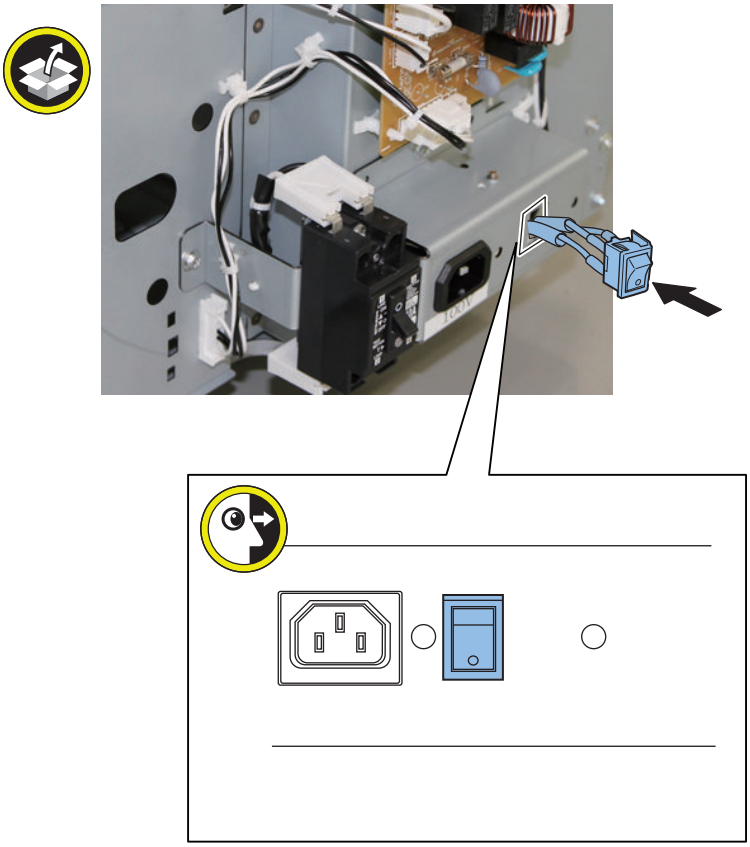
5. **Install the Cassette Heater Harness.**
   - 3 Reuse Bands
   - 2 Connectors



☐

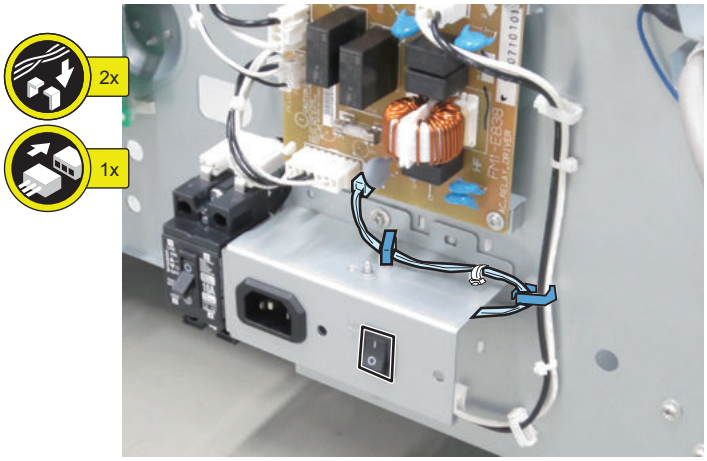
6. **Install the Switch Unit.**

NOTE:
When installing the Switch Unit to the POD Deck Lite, make sure that the circle mark of the switch is the lower side.



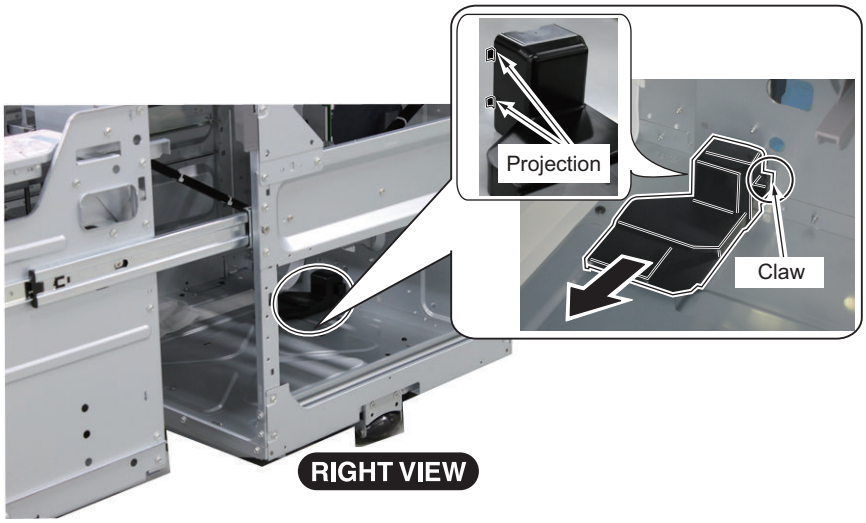
☐

7. **Install the Harness of the Switch Unit as shown in the figure.**
   - 2 Wire Saddles
   - 1 Connector



☐

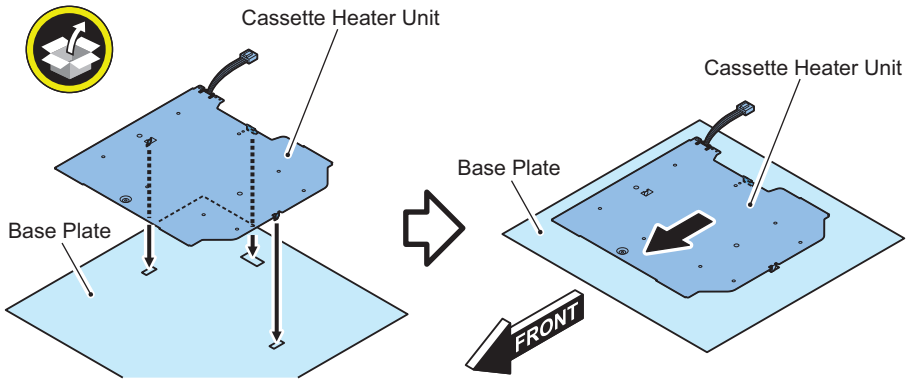
8. **Remove the Heater Connector Cover inside POD Deck Lite. (The removed Heater Connector Cover will be used in "Installation Procedure" step 9)).**
   - 2 Projections
   - 1 Claw



☐

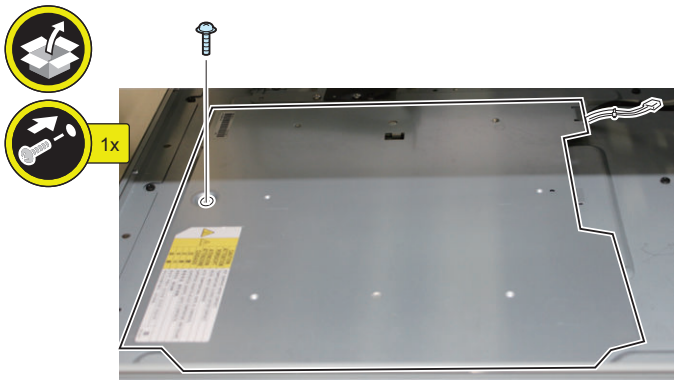
9. **Set the Cassette Heater Unit inside the POD Deck Lite.**
   - 3 Claws

NOTE:
Be sure that the claws are properly fitted in the holes on the Base Plate.



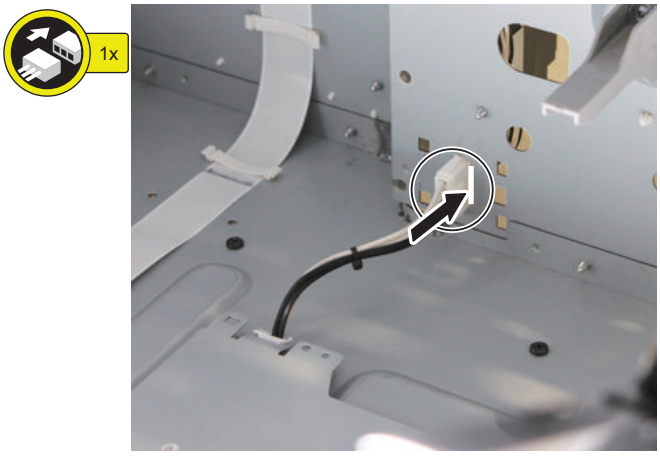
☐

10. **Fix the Cassette Heater Unit.**
   - 1 Screw (TP; M3x6)



☐

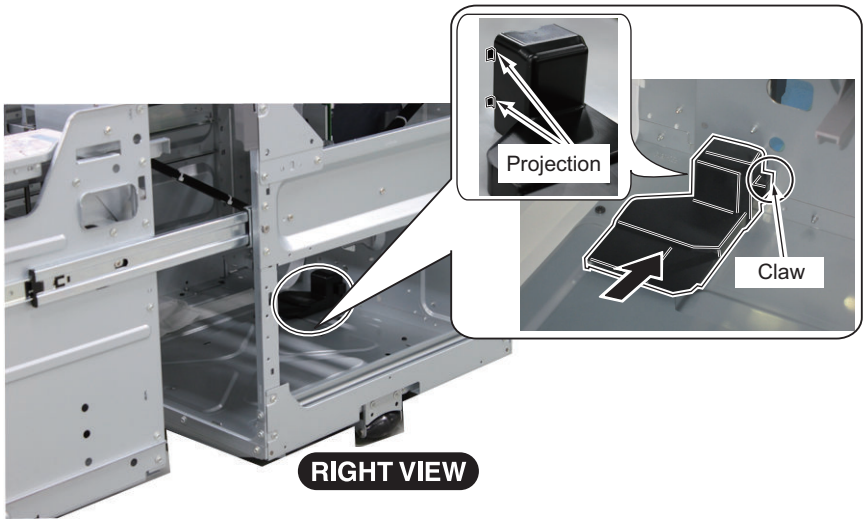
11. **Connect the connector of Cassette Heater Unit.**
   - 1 Connector



☐

12. Install the Heater Connector Cover. (Use the Cover removed in step 5).)

- 2 Projections
- 1 Claw



☐

13. Restore the removed covers.

- Right cover <5 Screws (Binding; M4x8)>
- Rear cover <5 Screws (Binding; M4x8)>

☐

14. If having released POD Deck Lite from the Host Machine, connect it to Host Machine.

- 1 Connector
- 1 Wire Saddle

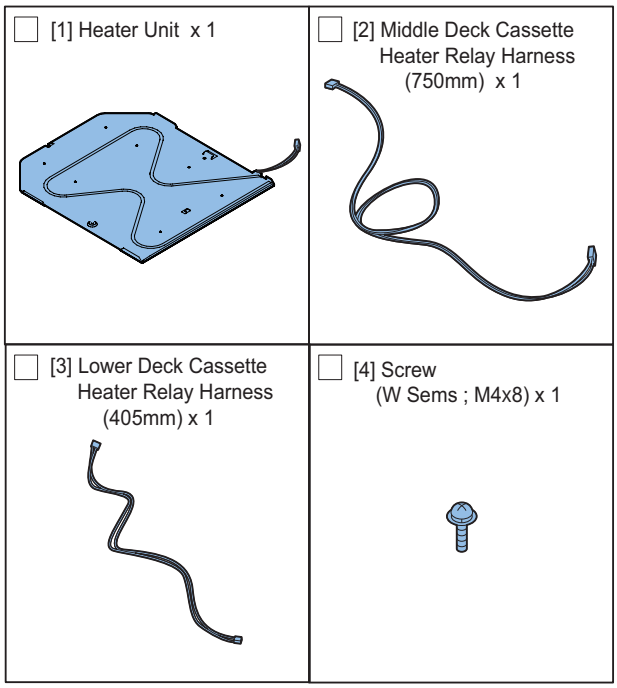
☐

15. Connect the Power Cord removed in "Release the POD Deck Lite from the Host Machine" step 1) to POD Deck Lite.

Paper Deck Heater Unit

Checking the Parts to be Installed

Each part of the Paper Deck Heater Unit for the Paper Deck is supplied as a service part, so prepare the following parts.
Also, use the appropriate Paper Deck Heater Unit for each country.



No	Parts name	Parts Number	Q'ty
[1]	Heater Unit (120V)	FM3-3771-000	1pc.
	Heater Unit (230V)	FM3-3772-000	1pc.
[2]	Middle Deck Cassette Heater Relay Harness (750mm)	FG3-4325-000	1pc.
[3]	Lower Deck Cassette Heater Relay Harness (405mm)	FG3-4326-000	1pc.
[4]	Screw (W Sems ; M4x8)	FC7-7646-000	1pc.

*As for the change of the part number, please refer to the latest parts catalog.

Check Items when Turning OFF the Main Power

☐
Check that the main power switch is OFF.

1. **Turn OFF the main power switch of the Host Machine.**
2. **Be sure that Control Panel Display and Main Power Lamp are both turned OFF, and then disconnect the power plug.**

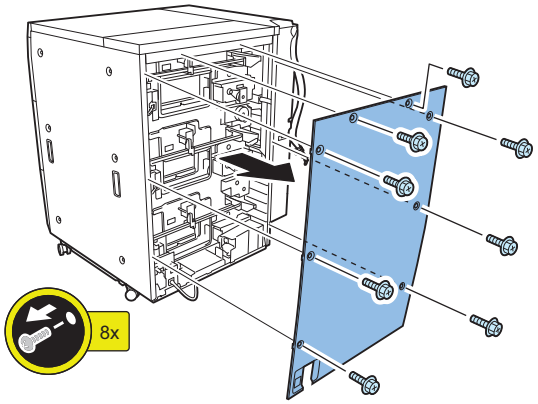
CAUTION:
When installing the Paper Deck Heater Unit to the Paper Deck, take the following precautions.
a. The AC power plug of the Host Machine must have been removed from the outlet.
b. Install the Paper Deck Heater Unit after installing the Host Machine and Paper Deck.

Installation Procedure

NOTE:
Following explains installation of the Paper Deck Heater Unit to the Middle Deck. Same procedure applies to installation of the Paper Deck Heater Unit to the Lower Deck.

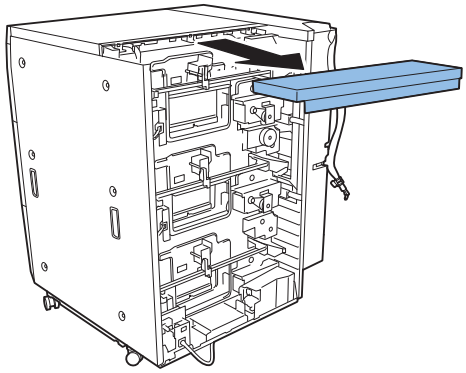
☐

1. **Remove the Deck Rear Right Cover.**
   - 8 Screws



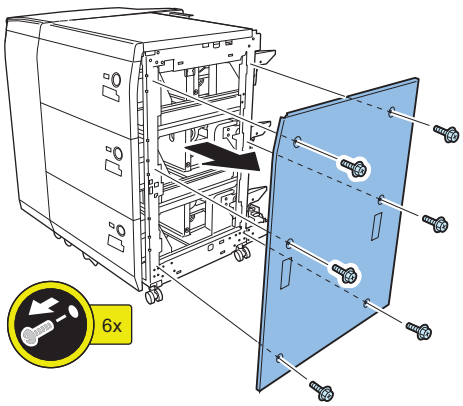
☐

2. **Remove the Deck Upper Rear Cover.**



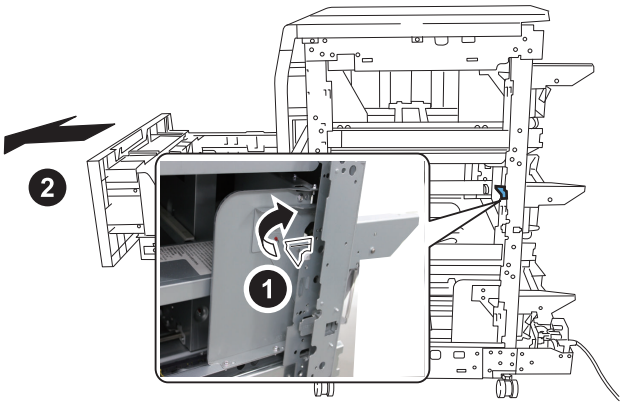
☐

3. **Remove the Deck Right Cover.**
   - 6 Screws



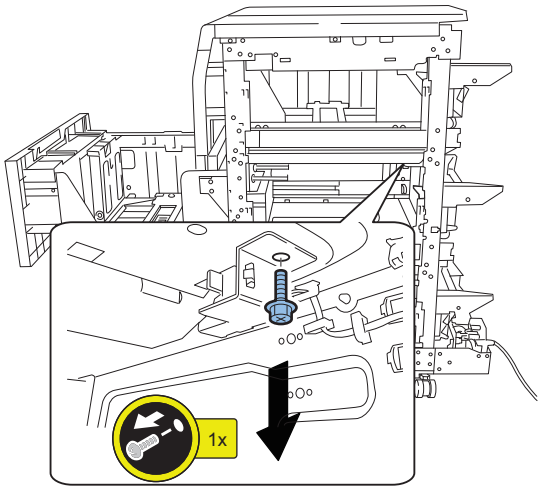
☐

4. **Open the Middle Deck manually with pressing the latch.**



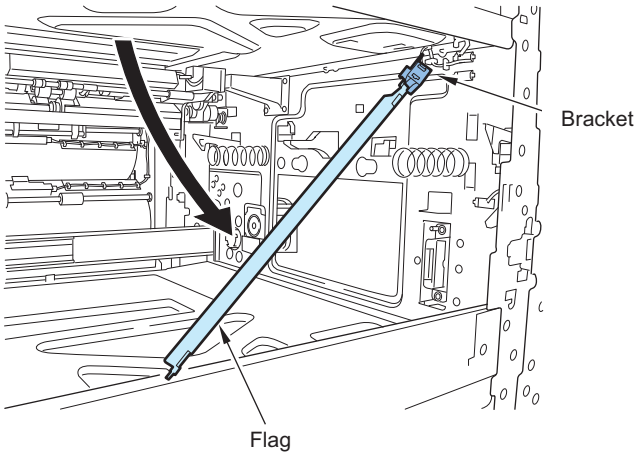
☐

5. **Remove the screw securing the Foreign Substance Sensor Bracket.**
   - 1 Screw



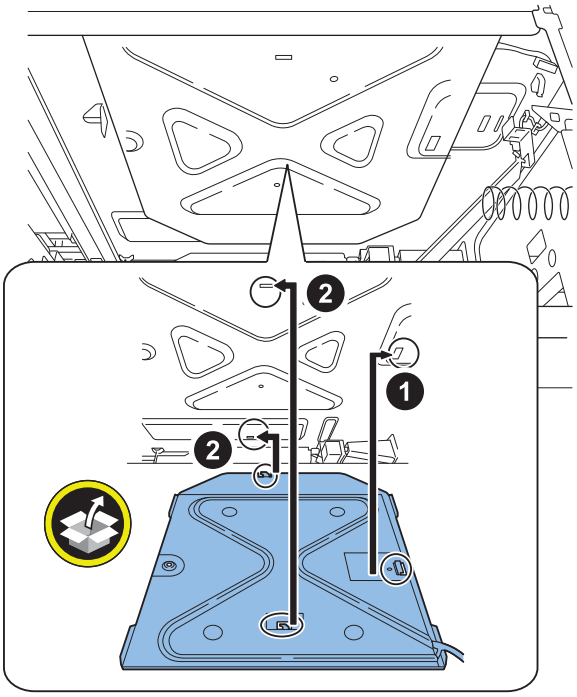
☐

6. **While the Sensor Harness is connected, remove the Foreign Substance Sensor Bracket and the Foreign Substance Sensor Flag.**



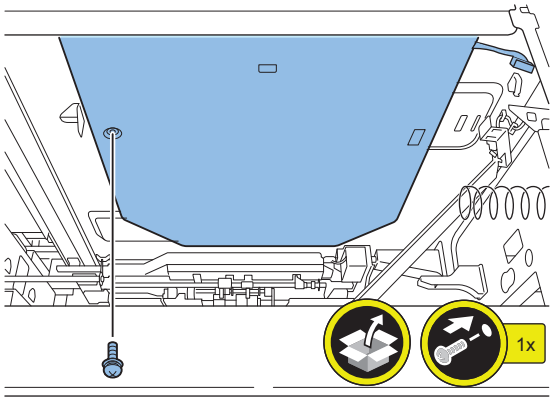
☐

7. **Install the Heater Unit.**
   - 3 Claws



☐

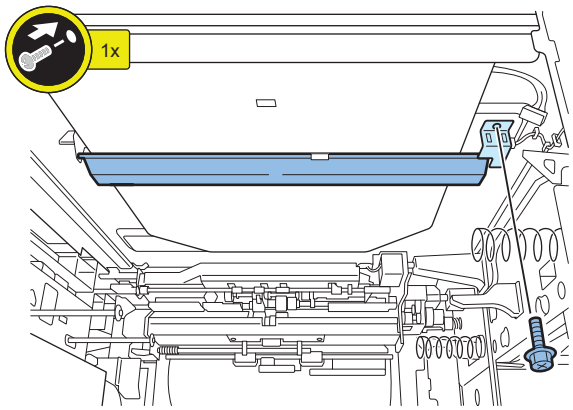
8. **Secure the Heater Unit.**
   - 1 Screw (W Sems; M4x8)



☐

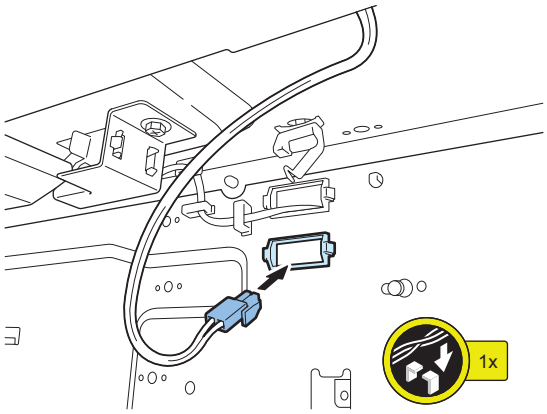
9. **Install the Foreign Substance Sensor Flag and the Foreign Substance Sensor Bracket to the original position.**
   - 1 Screw ((RS Tightening; M4x8)

NOTE:
Check that the sensor and the connector are securely connected and attached to the base.



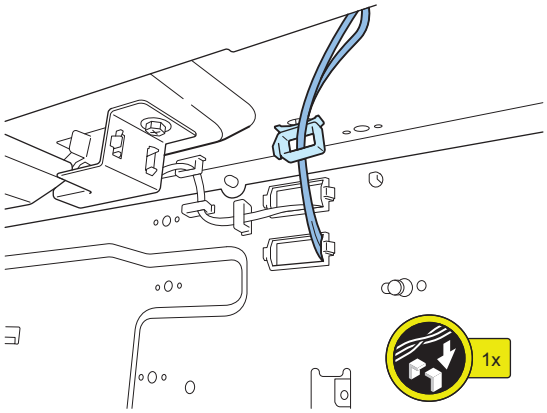
☐

10. **Pass the Heater Unit Harness through the Square Bush at the lower side.**



☐

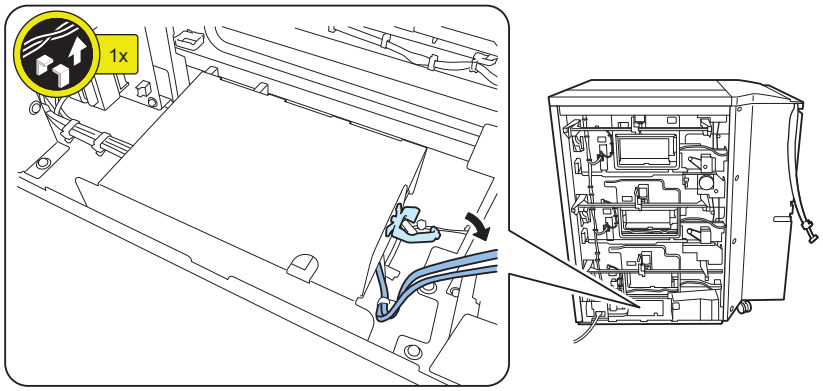
11. **Secure the Heater Unit Harness and close the Middle Deck.**
   - 1 Wire Saddle



☐

12. Release the AC Distribution PCB Harness.

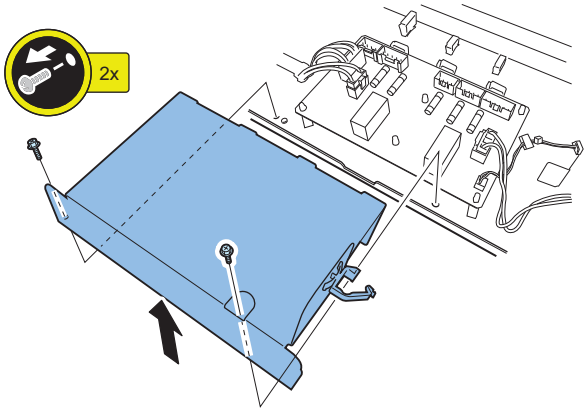
- 1 Wire Saddle



☐

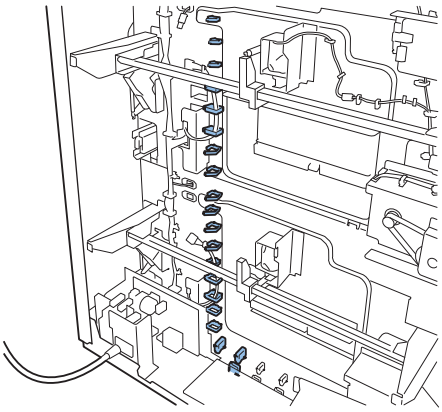
13. Remove the AC Distribution PCB Cover.

- 2 Screws

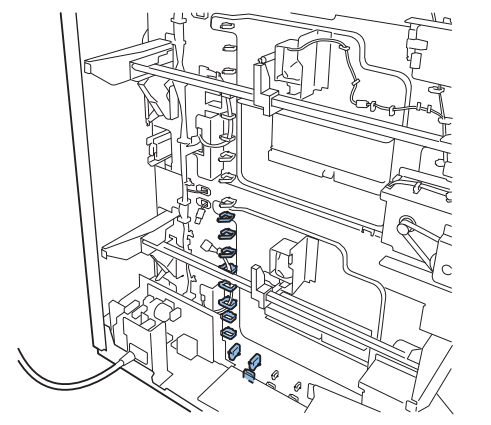


☐

14. Open the 20 Wire Saddles.



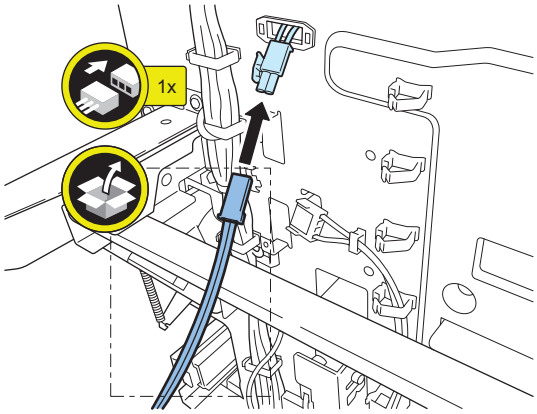
NOTE:
When installing the Paper Deck Heater Unit to the Lower Deck, open the 11 Wire Saddles.



☐

15. Connect the 2-pin connector side of the Middle Deck Cassette Heater Relay Harness to the Heater Unit Harness.

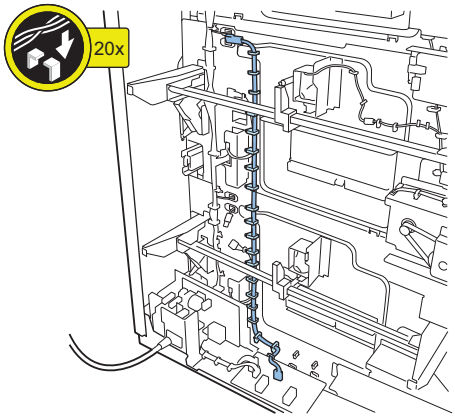
- 1 Connector



☐

16. **Secure the Middle Deck Cassette Heater Relay Harness.**
    - 20 Wire Saddles

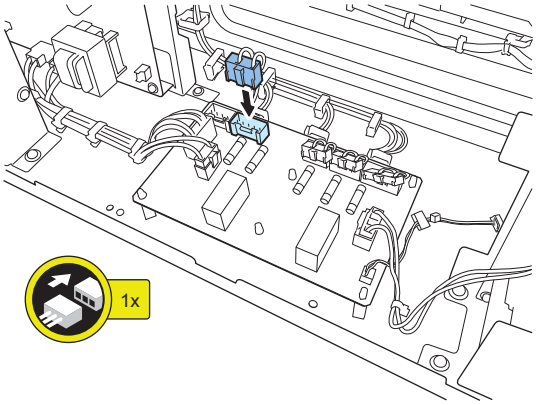
NOTE:
When installing the Paper Deck Heater Unit to the Lower Deck, secure the Lower Deck Cassette Heater Relay Harness with the 11 Wire Saddles.



☐

17. **Install the 5-pin connector side of the Middle Deck Cassette Heater Relay Harness to CN4 on the AC Distribution PCB.**
    - 1 Connector

NOTE:
When installing the Paper Deck Heater Unit to the Lower Deck, install the 4-pin connector side of the Lower Deck Cassette Heater Relay Harness to CN3 on the AC Distribution PCB.



☐

18. **Install the AC Distribution PCB Cover.**
    - 2 Screws (RS Tightening; M4 x 8)
    - 1 Wire Saddle

☐

19. **Install the Deck Right Cover.**
    - 6 Screws (RS Tightening; M4 x 8)

☐

20. **Install the Deck Upper Rear Cover.**

☐

21. **Install the Deck Rear Right Cover.**
    - 8 Screws (RS Tightening; M4 x 8)

☐

22. **Turn on the Cassette Heater Switch.**

☐

23. **Insert the power plug to the outlet.**

☐

24. **Turn ON the main power switch.**

USB Device Port-A3/Multimedia Reader/Writer-A3

Points to Note at Installation

- When installing the Multimedia Reader/Writer, the USB Device Port must be installed beforehand.
- The Multimedia Reader/Writer cannot be used in combination with the Card Reader.

Checking the Contents

■ USB Device Port-A3

[1], [3], [4]: Use these when installing the Card Reader (sales company's option).

☐ [1] Card Reader Support X 1 	☐ [2] DUH-V3 Board X 1 	☐ [3] DP Cushion X 4 
☐ [4] Device Port Label X 1 without LED indication 	☐ [5] DP USB Cable X 1 	☐ [6] Screw (TP Round End; M3x6) X 6 
< Contents that are not used >

The following parts are not used for this equipment.

☐ [1] Device Port Cover X 1 	☐ [2] Case Plate X 1 	☐ [3] DP Cushion X 4

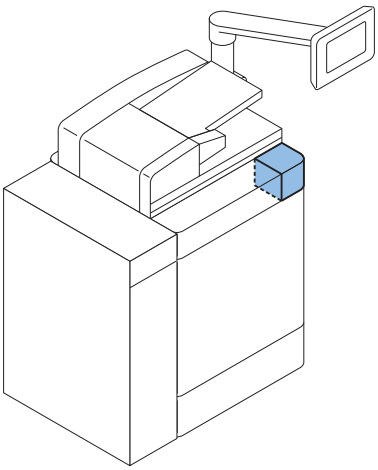
Check Items when Turning OFF the Power

Check that the main power is OFF.

1. **Turn OFF the main power switch.**
2. **Check that display in the Control Panel and the lamp of the main power are turned off.**

Installation Outline Drawing



Installation Procedure

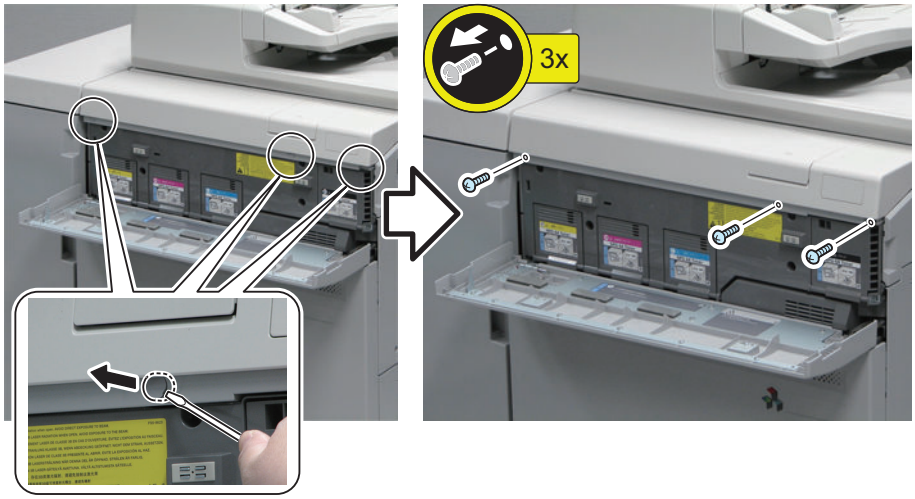
■ Installing the USB Device Port

☐

1. **Open the Toner Replacement Cover.**

☐

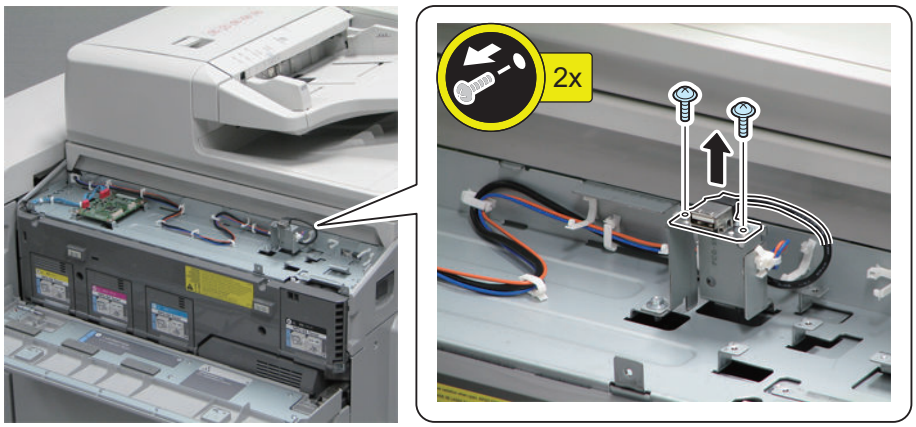
2. **Remove the Upper Front Cover.**
   - 3 Rubber Caps
   - 3 Screws
   - 3 Hooks



☐

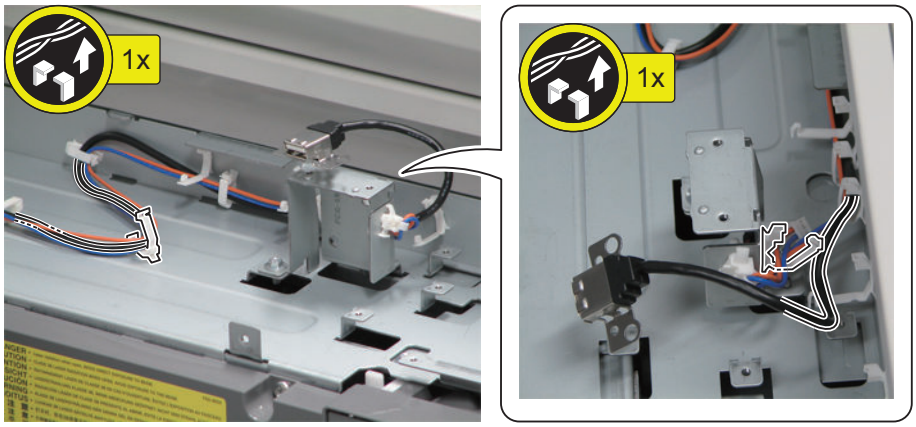
3. **Remove the USB Cable.**
   - 2 Screws (The removed screw will be used in step 8.)

CAUTION:
Be careful not to drop the screws.



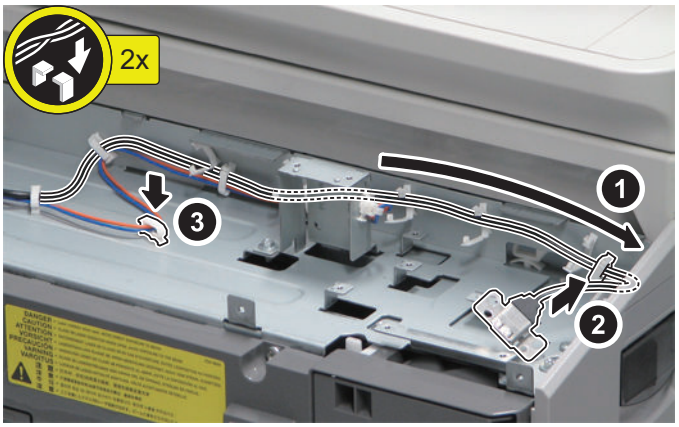
☐

4. **Free only the USB Cable from the 2 Wire Saddles. (Be sure not to close the 2 Wire Saddles.)**



☐

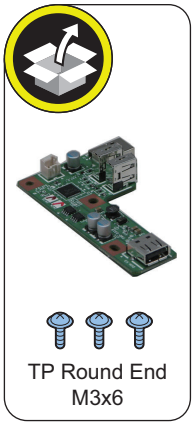
5. **Pull the slack of the USB Cable in the direction of the arrow [1], secure it with the Wire Saddle [2] at the right edge, and close the Wire Saddle [3].**

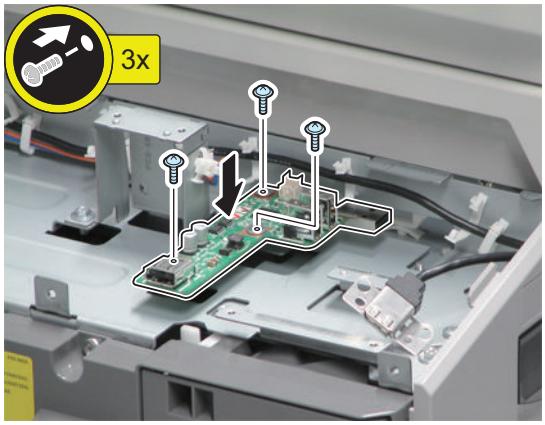


☐

6. **Install the DUH-V3 Board.**
   - 3 Screws (TP Round End, M3 x 6)

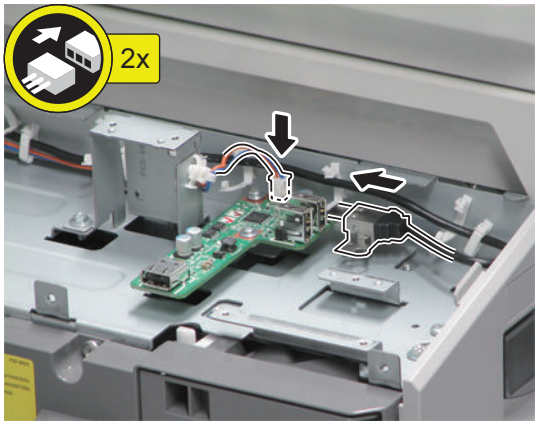
CAUTION:
Be careful not to damage the PCB.





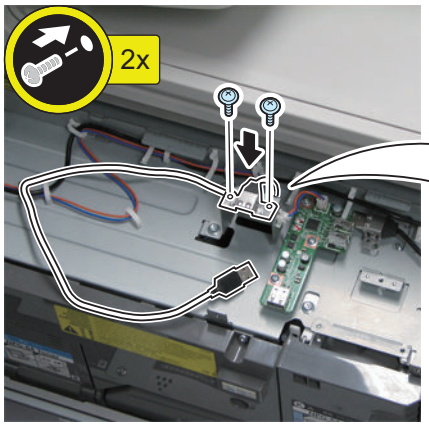
☐

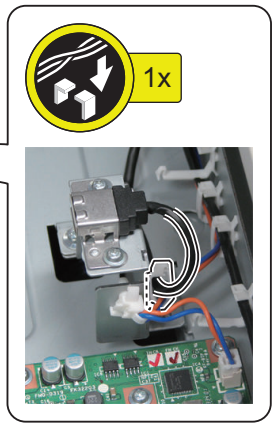
7. **Connect the Connector and the USB Cable.**



☐

8. **Install the DP USB Cable.**
   - 2 Screws (Use the screws removed in step 3.)
   - 1 Wire Saddle

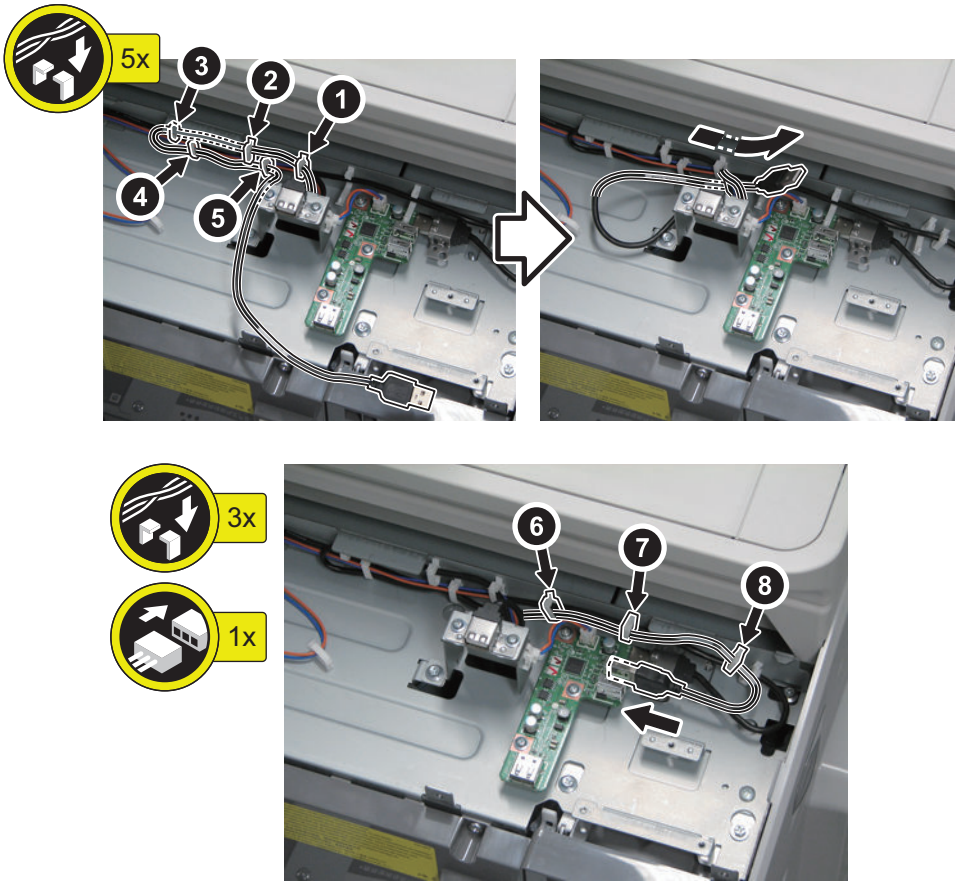




☐

9. **Connect the DP USB Cable.**
   - 8 Wire Saddles

CAUTION:
Be sure to route the cable in the order shown in the figure to prevent the cable from overlapping itself.



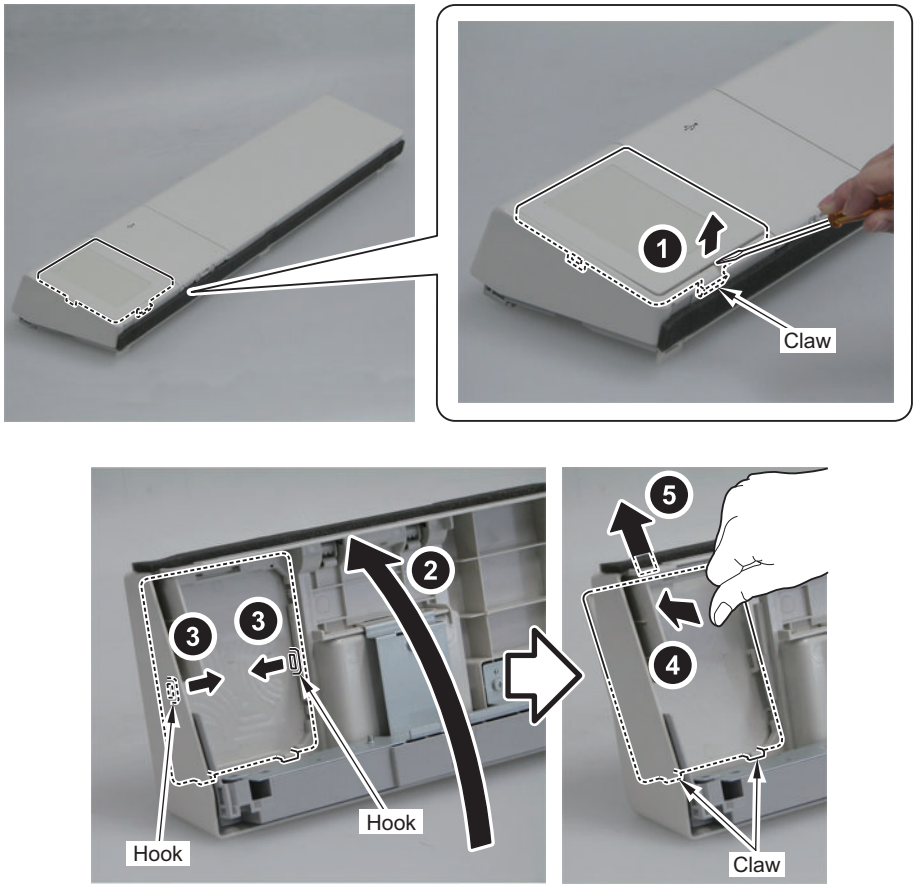
☐

10. **If you are going to install the Card Reader (sales company's option), proceed to "Installing the Card Reader".**
    If you are going to install the Multimedia Reader/Writer, proceed to "Installing the Multimedia Reader/Writer".

■ Installing the Card Reader

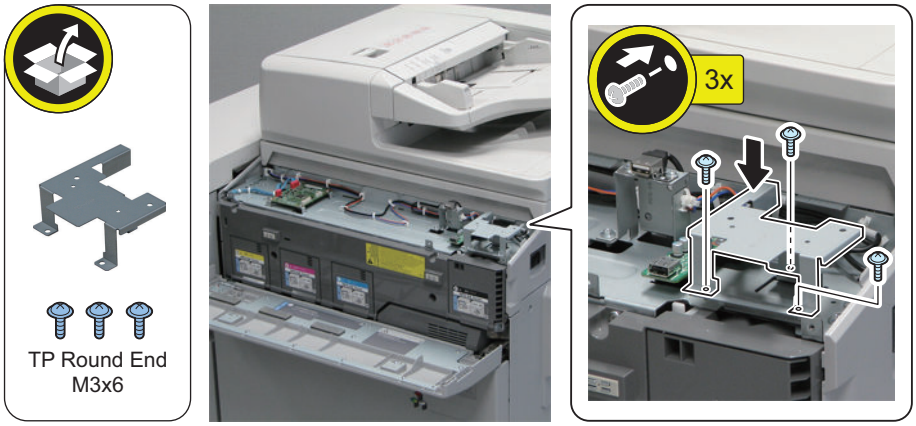
☐

1. **Remove the Device Port Cover from the Upper Front Cover (removed in step 2 of the "Installing the USB Device Port") with a flat-blade screwdriver.(The removed Device Port Cover will be used in step 9.)**
   - 3 Claws
   - 2 Hooks



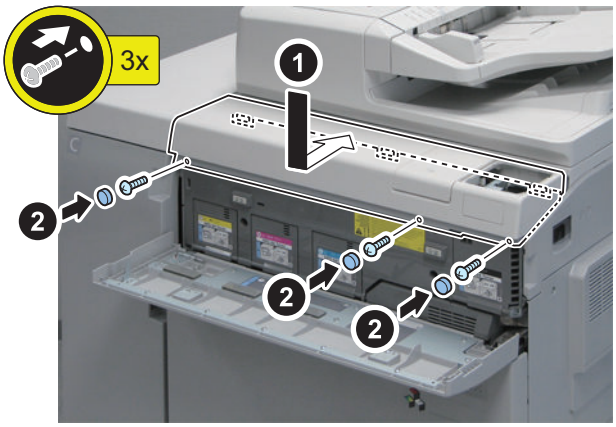
☐

2. **Install the Card Reader Support.**
   - 2 Bosses
   - 3 Screws (TP Round End; M3 x 6)



☐

3. **Install the Upper Front Cover.**
   - 3 Hooks
   - 3 Screws
   - 3 Rubber Caps

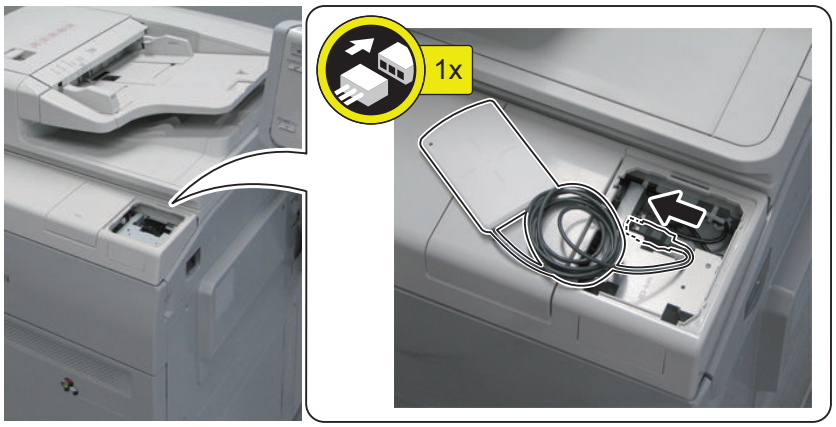


☐

4. **Close the Toner Replacement Cover.**

☐

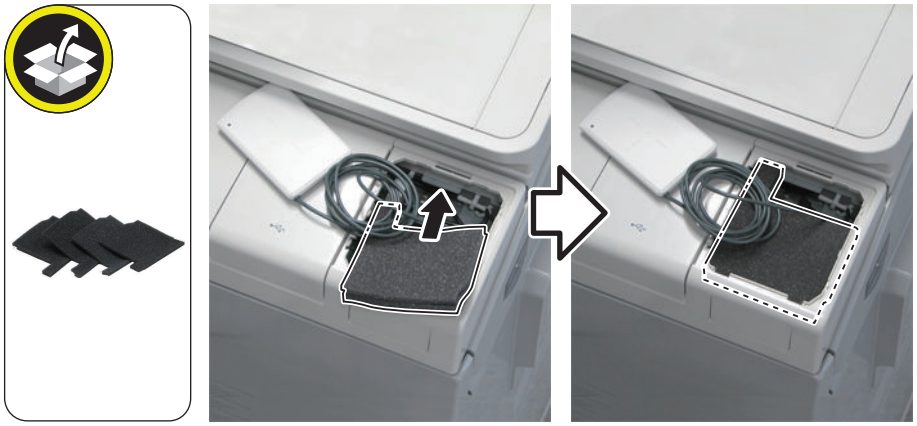
5. **Connect the Card Reader to the DUH-V3 Board.**



☐

6. **Install the DP Cushion.**

NOTE:
Be sure to adjust the number of cushions according to how the cable of the Card Reader is stored.



☐

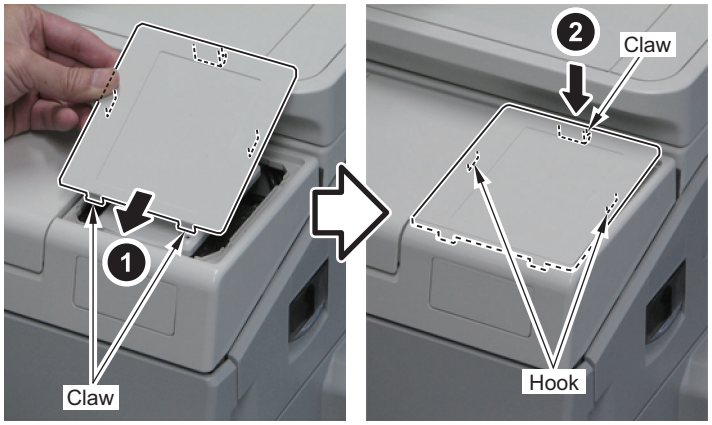
7. **Route the cables in the free space.**

☐

8. **Place the Card Reader in the center.**

☐

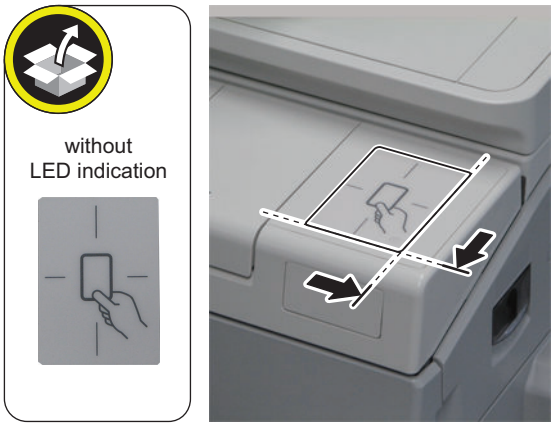
9. **Install the Device Port Cover you removed in step 1.**
   - 3 Claws
   - 3 Hooks



☐

10. **Affix the Device Port Label to the place shown in the figure.**

CAUTION:
Standard for affixing the Device Port Label
The label should be affixed within the depressed area.
The gap from the edge of the depressed area should be 0.5 mm or less.



☐

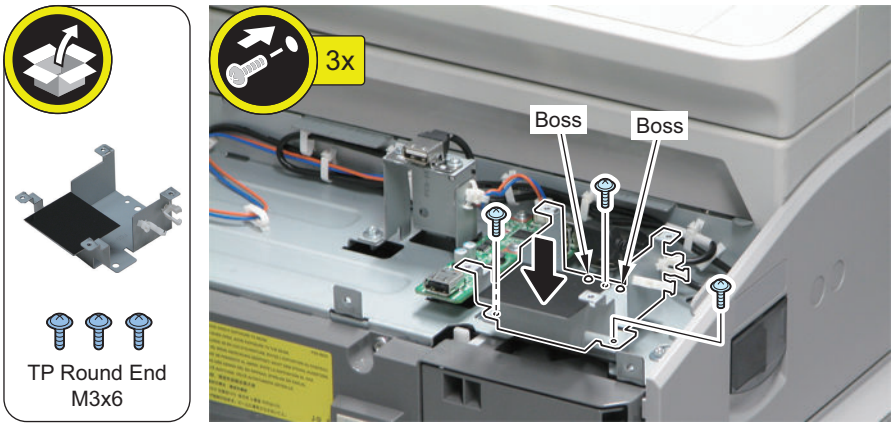
11. **Insert the power plug into the outlet.**

12. **Turn ON the main power switch.**

■ Installing the Multimedia Reader/Writer

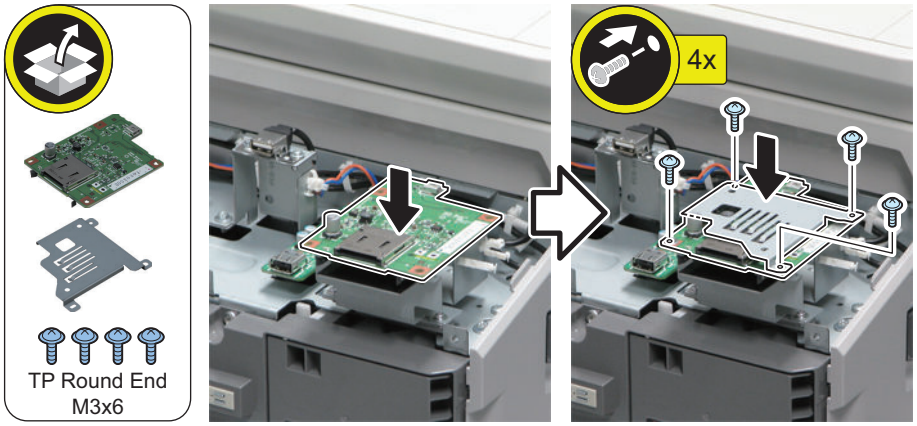
☐

1. **Install the Media Reader Mounting Plate Unit.**
   - 2 Bosses
   - 3 Screws (TP Round End; M3 x 6)



☐

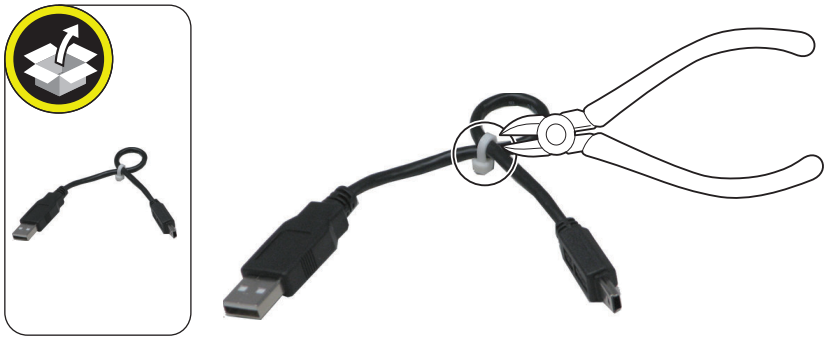
2. **Install the Multimedia Card Slot and the Slot Holder.**
   - 4 Screws (TP Round End; M3 x 6)



☐

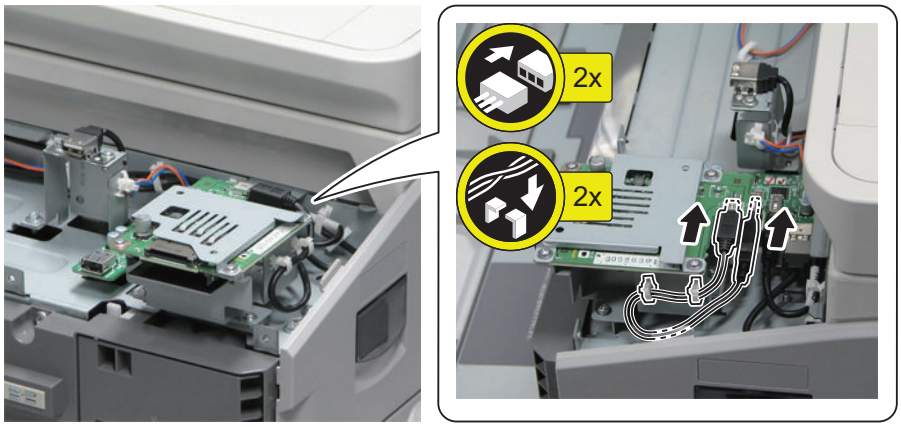
3. **Cut off the Harness Band of the USB Cable.**

CAUTION:
Be careful not to damage the cable covering.



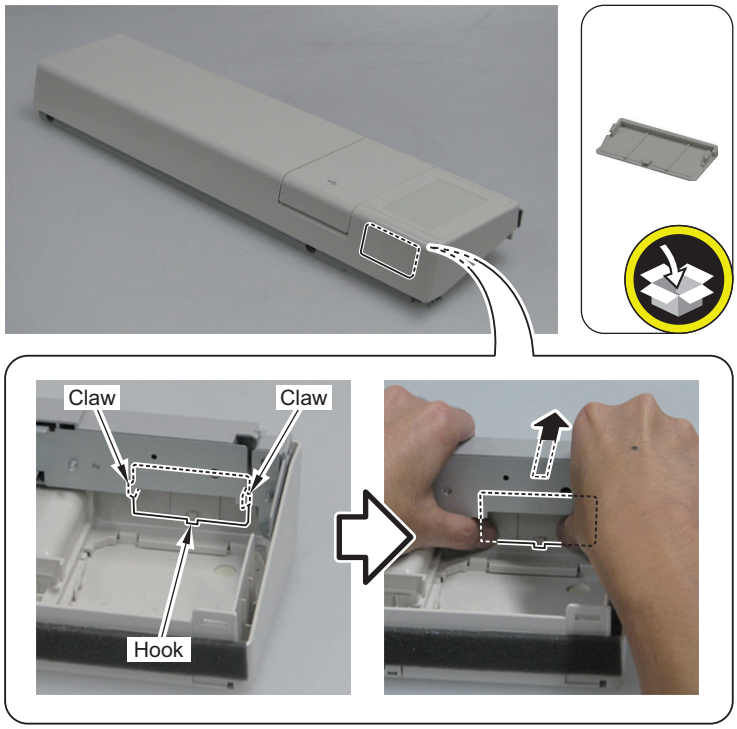
☐

4. **Connect the USB Cable.**
   - 2 Wire Saddles



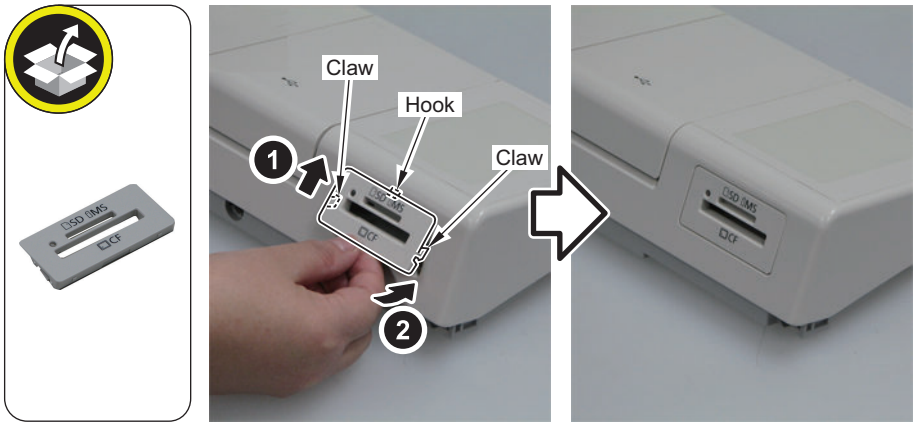
☐

5. **Remove the Face Cover of the Upper Front Cover, which was removed in step 2 of "Installing the USB Device Port", by pushing it from inside. (Do not reuse the removed Face Cover.)**
   - 2 Claws
   - 1 Hook



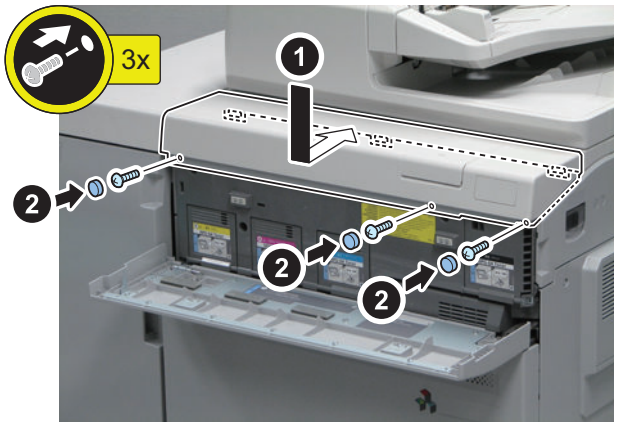
☐

6. **Install the Media Reader Cover.**
   - 1 Hook
   - 2 Claws



☐

7. **Install the Upper Front Cover.**
   - 3 Hooks
   - 3 Screws
   - 3 Rubber Caps



☐

8. **Close the Toner Replacement Cover.**

☐

9. **Insert the power plug into the outlet.**
10. **Turn ON the main power switch.**
11. **Next, proceed to "Operation Check".**

Operation Check (USB Device Port, Multimedia Reader/Writer)

NOTE:
- Connect a USB memory device to the USB Device Port and perform the operation check.
- To the Multimedia Reader/Writer, Memory Media of the SD Card, Memory Stick, and CF Card can be connected. With one of the 3 types of Memory Media, perform the oepration check.
- When changing the settings upon user's request, it is required to log in as a system manager in accordance with instructions from the user administrator.

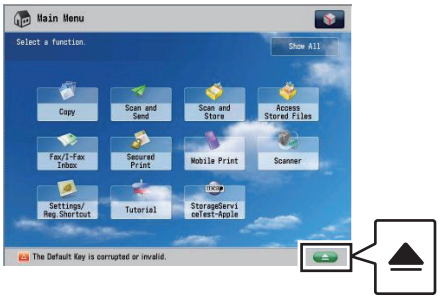
■ 1. Writing Check

☐

1. **Select "1" for the following Service Mode (Level 2) (Default value "0").**
   - COPIER > OPTION > DSPLY-SW > UI-MEM
2. **To make the setting value effective, turn OFF/ON the main power of the Host Machine.**

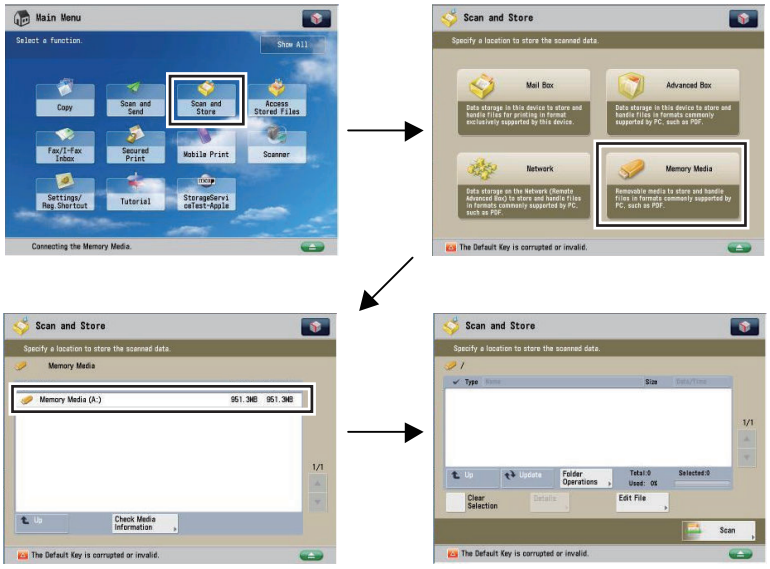
☐

3. **Mount the Memory Media to the Multimedia Card Reader/Writer(Check that the Mount Mark is indicated in the bottom right.).**



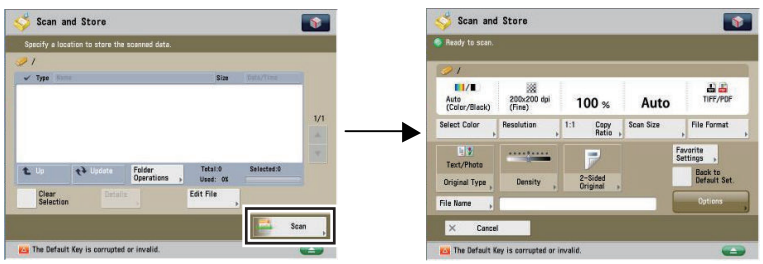
☐

4. **Make the following selection:[Scan and Store] > [Memory Media] > [Memory Media (A:)]**



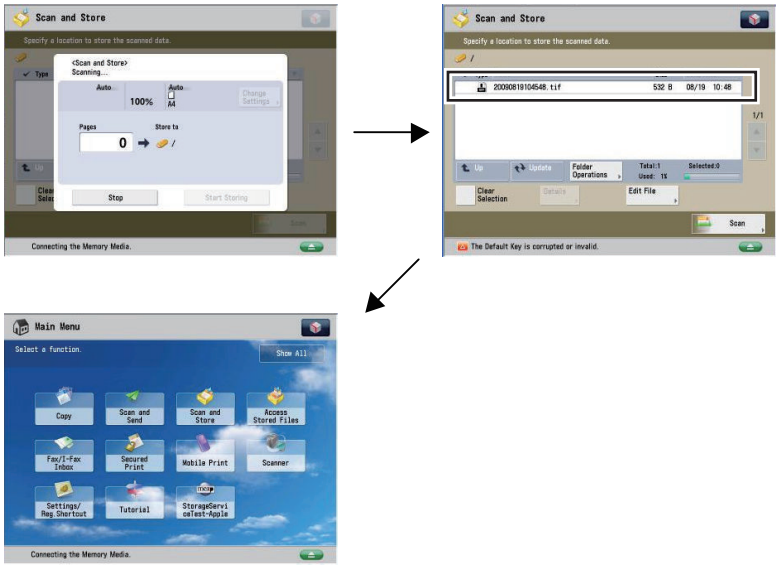
☐

5. **Set originals to Copyboard, and press the [Scan] button. Then, press the Start button on the Control Panel.**



□

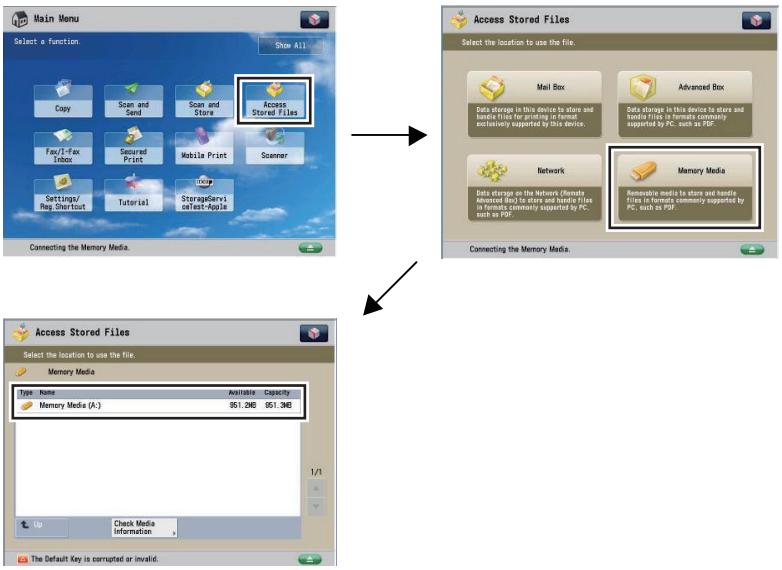
6. **After scanning of the original is completed, press [Start Storing].**
   Confirm that data is stored in the media and press [Main Menu] on the Control Panel.



■ 2. Reading Check

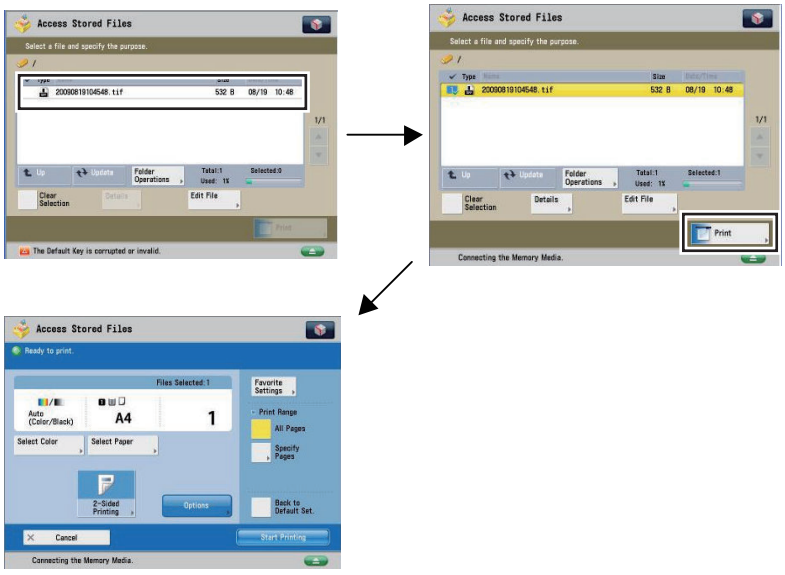
□

1. **Make the following selection from Main Menu: [Access Stored Files] > [Memory Media] > [Memory Media(A:)]**



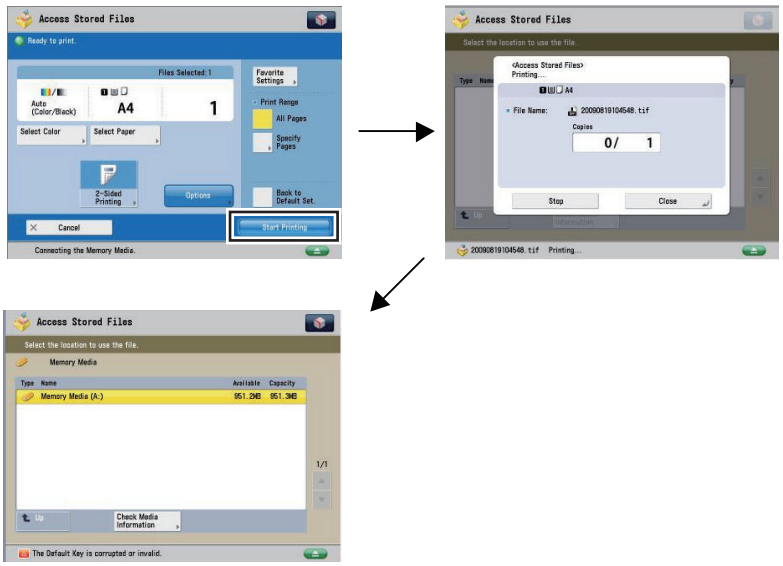
☐

2. **Select the files stored in step 4 to 6, and then press the [Print] button.**



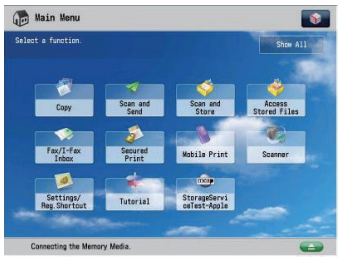
☐

3. **Press the [Start Printing] button, and print the file. Then check that the file is printed correctly.**



☐

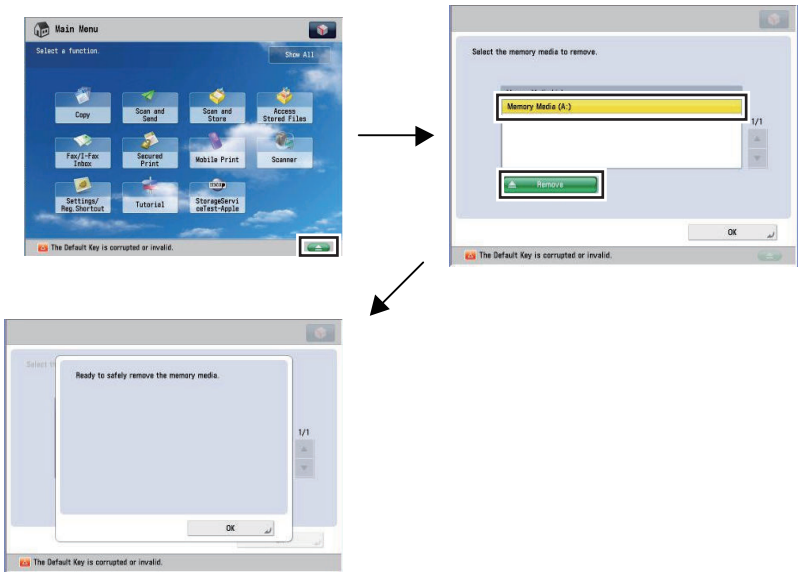
4. **Press the [Main Menu] button on the Control Panel.**



■ 3. Memory Media Removal

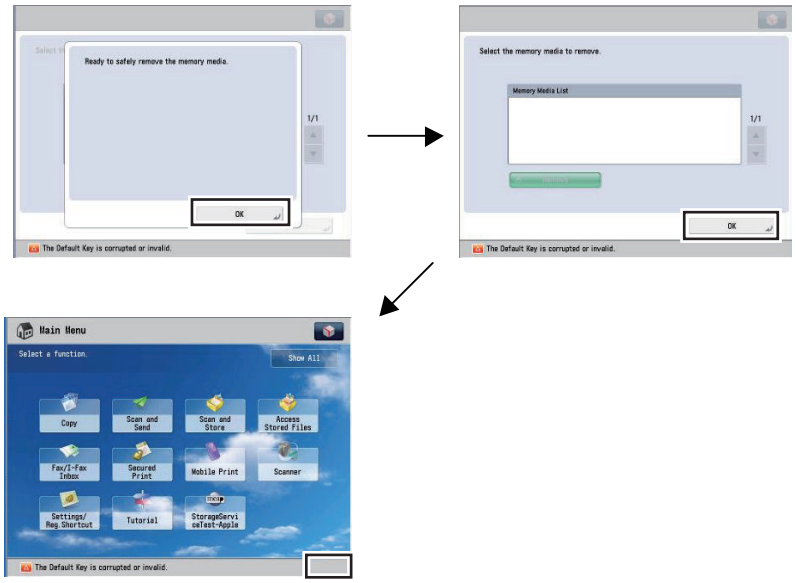
□

1. **Press the [Mount Mark] in the bottom right. Then, select the memory media to be removed, and press the [Remove] button.**



□

2. **Press the [OK] button. Then, check that the Mount Mark is not indicated in the bottom right on the Main Menu screen.**



HDD-related Option

Points to Note at Installation

- When installing the HDD Data Encryption & Mirroring Kit, the data on the HDD will be erased. Be sure to back up/export the data as necessary. For details, refer to "Backup Data List" in the Service Manual.
- The system software needs to be installed after installing the kits.

CAUTION:
Points to note when installing the HDD Data Encryption & Mirroring Kit
Always perform "Setting before turning OFF the power" before turning off the host machine. Refer to "Setting before turning OFF the power" for details.

Combination of HDD Options

When installing the HDD options, refer to the pages indicated in the following table.

- 3.5inch/1TB HDD-M1
- Removable HDD Kit-AB2
- HDD Data Encryption & Mirroring Kit-E2

Reference Pages in the Manual According to Product Combination:

Title	Reference Pages
TYPE-1	“[TYPE-1] Removable HDD Kit” on page 2559
TYPE-2	“[TYPE-2] Option HDD + HDD Data Encryption & Mirroring Kit” on page 2581
TYPE-3	“[TYPE-3] HDD Data Encryption & Mirroring Kit” on page 2601
TYPE-4	“[TYPE-4] Option HDD + Removable HDD Kit + HDD Data Encryption & Mirroring Kit” on page 2619
TYPE-5	“[TYPE-5] Removable HDD Kit + HDD Data Encryption & Mirroring Kit” on page 2648

☐ [1] Removable HDD Unit X 1 	☐ [2] Fan Duct X 1 	☐ [3] Fan Keyboard Unit X 1 ☐ [4] Fan Unit X 1 	☐ [5] HDD Face Plate X 1 	☐ [6] IVDR2 Cable X 1 ☐ [7] Fan Cable X 1 	☐ [8] Conversion Connector X 2 Use 1 of them 	☐ [9] Gasket Cover Plate X 1 ☐ [10] Screw (TP Round End; M3x6) X 2 	☐ [11] Screw (P Tightening; M4x10) X 2 	☐ [12] Inch Screw X 1  Be sure to use the inch screws.

☐ [13] R-HDD Label X 1 	☐ [14] Shutdown Caution Label X 1 	☐ [15] Handle Label X 1 

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

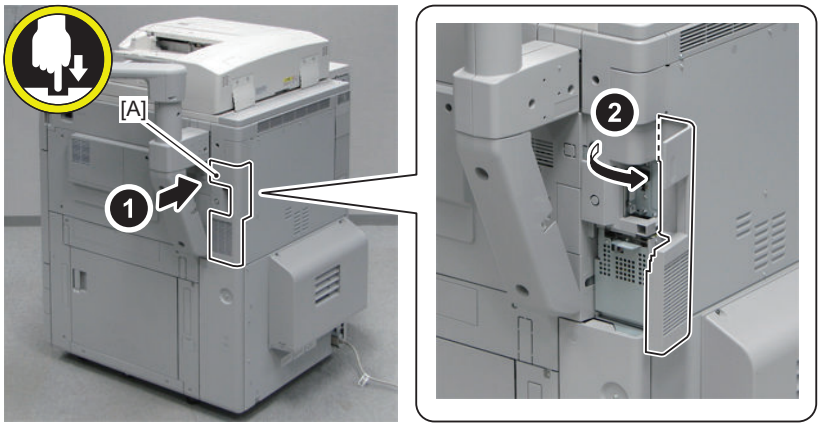
1. **Turn OFF the main power switch.**
2. **Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.**

Installation Procedure

■ Removing the HDD Unit

☐

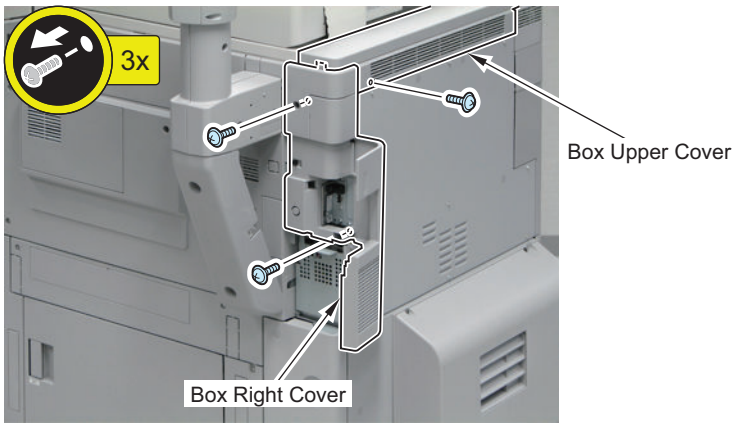
1. **Push the [A] part, and open the HDD Cover.**

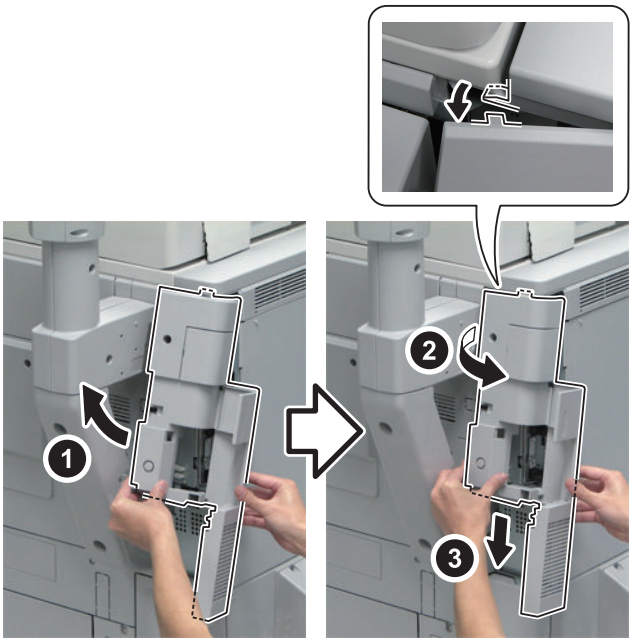


☐

2. **Remove the screw of the Box Upper Cover.**

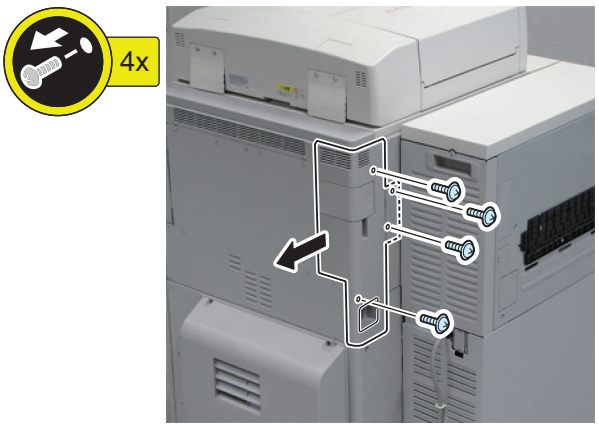
3. **Remove the Box Right Cover.**
   - 2 Screws
   - 1 Hook





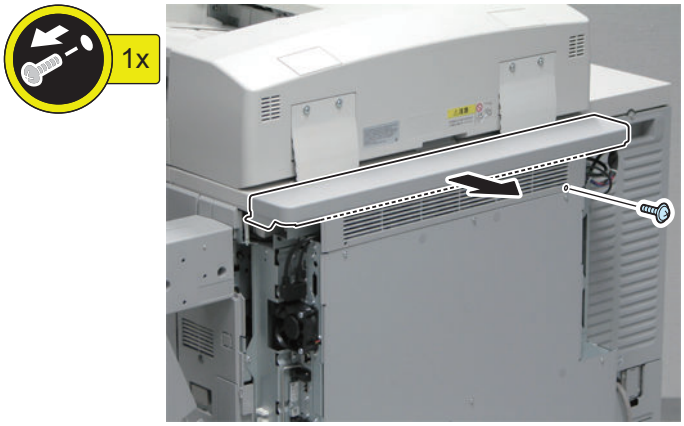
☐

4. **Remove the Box Left Cover.**
   - 4 Screws



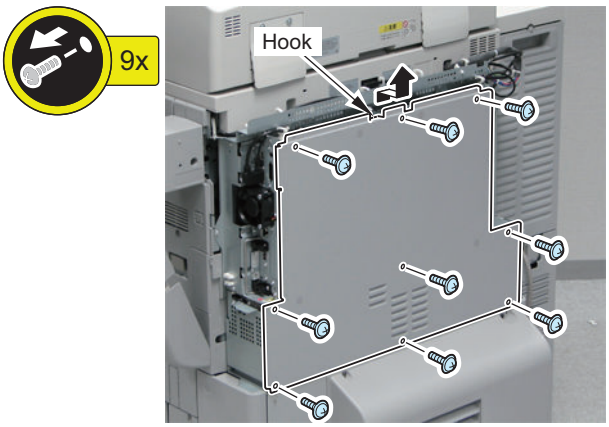
☐

5. **Remove the Box Upper Cover.**
   - 1 Screw



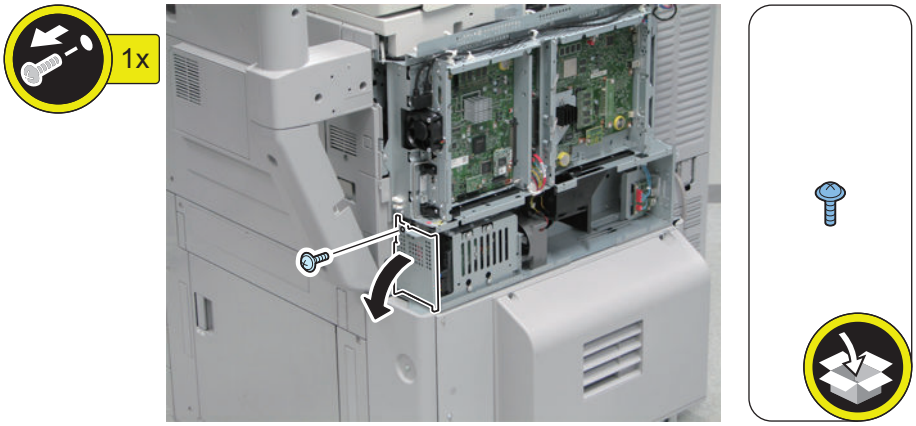
☐

6. **Remove the Rear Upper Cover.**
   - 9 Screws
   - 1 Hook



☐

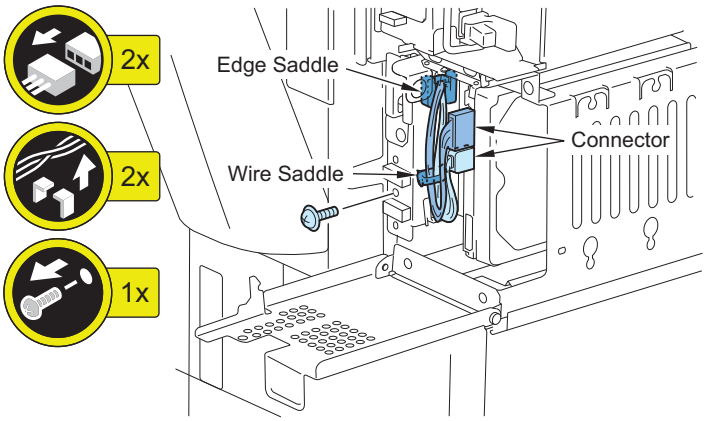
7. **Open the HDD Lid.**
   - 1 Screw (The removed screw will no longer be used.)



☐

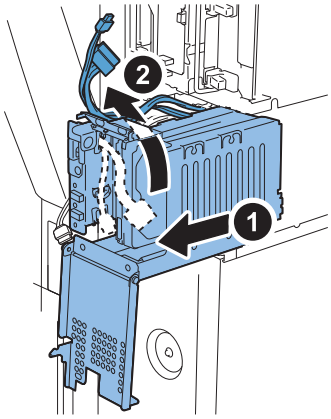
8. **Remove the Signal Cable and the Power Cable from the HDD.**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Edge Saddle

9. **Remove the screw of the HDD Unit. (The removed screw will be used in step 8 of "Installing the Removable HDD Unit".)**

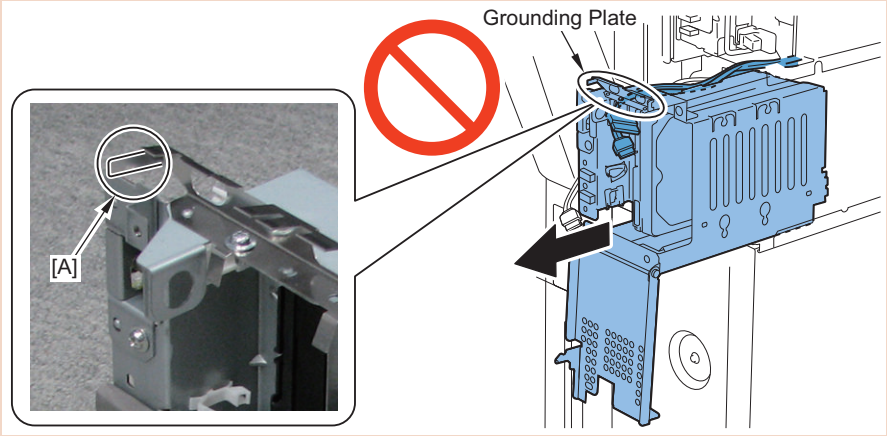


☐

10. **Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.**

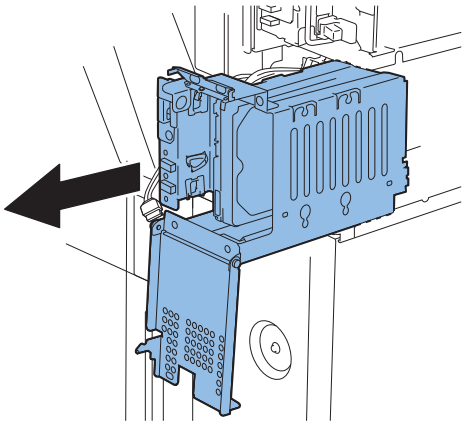


CAUTION:
- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.



☐

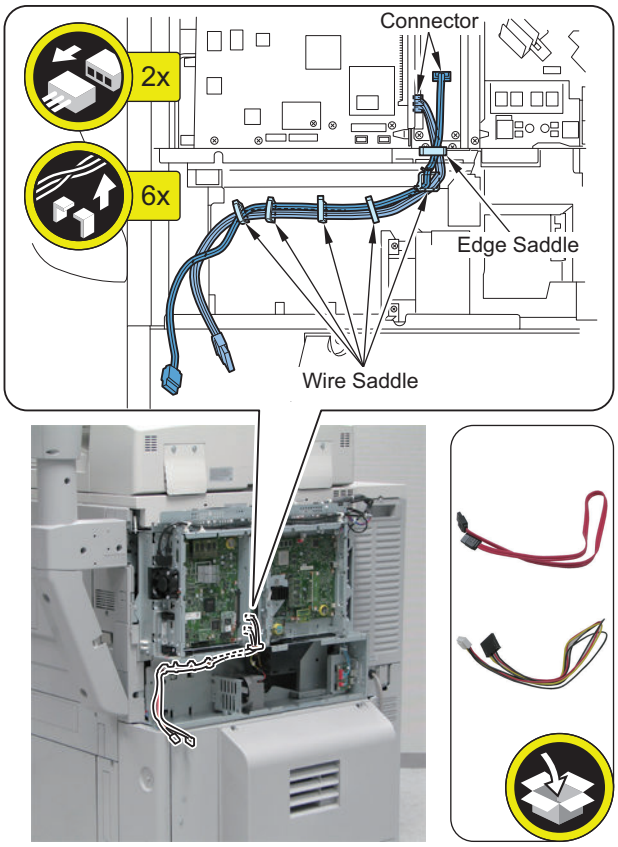
11. Remove the HDD Unit from the host machine.



☐

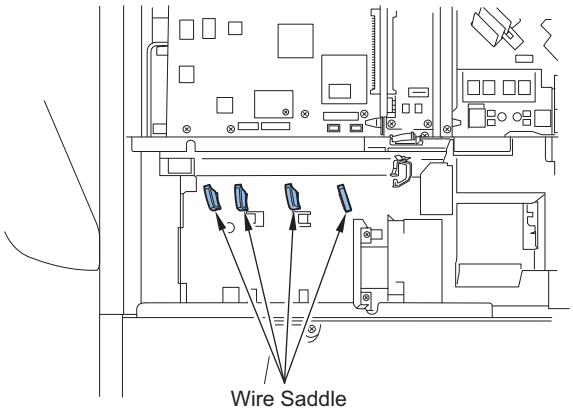
12. Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles



☐

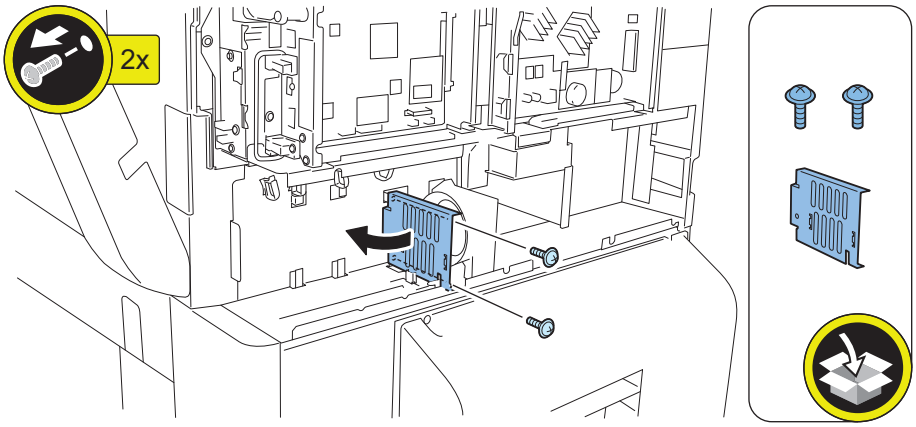
13. **Close the 4 Wire Saddles [A].**



■ Installing the Fan Duct / Fan Keyboard Unit

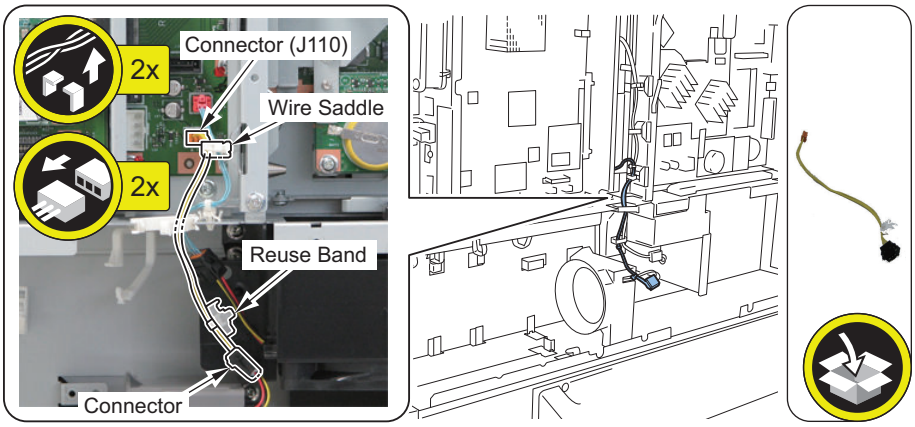
☐

1. **Remove the plate. (The removed plate and screws will no longer be used.)**
   - 2 Screws



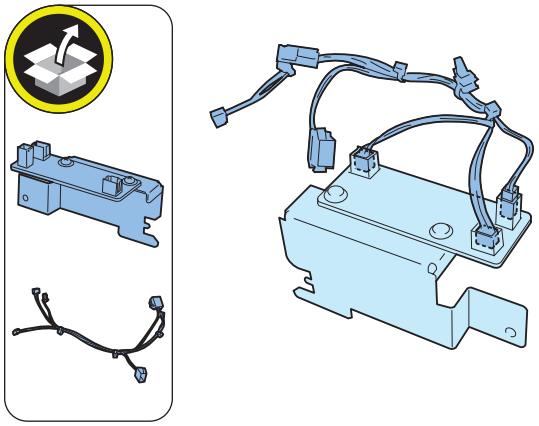
☐

2. **Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Reuse Band



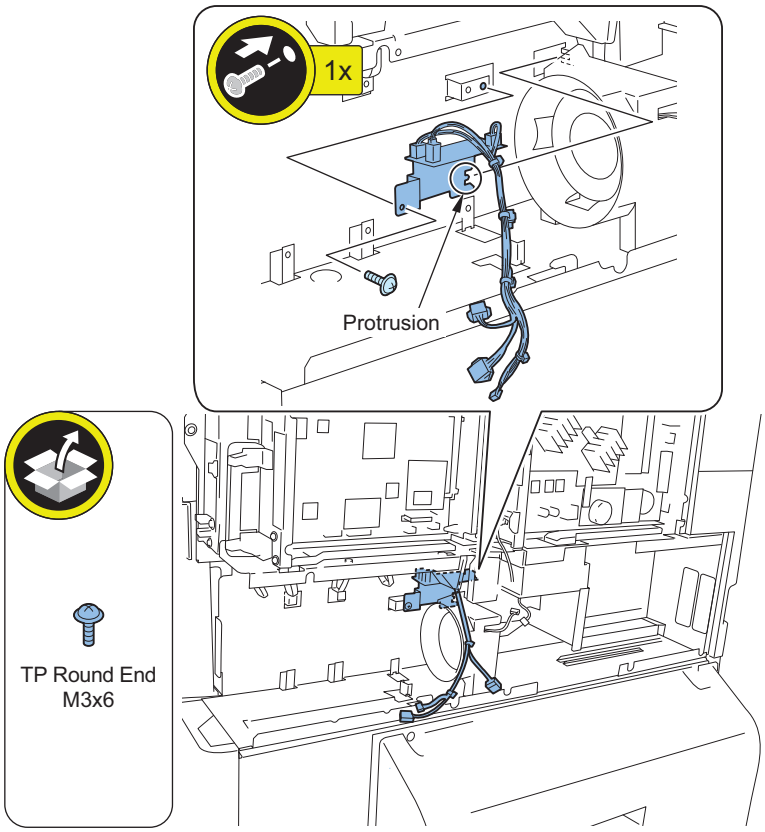
☐

3. **Install the included in Fan Cable to the Fan Keyboard Unit.**
   - 3 Connectors



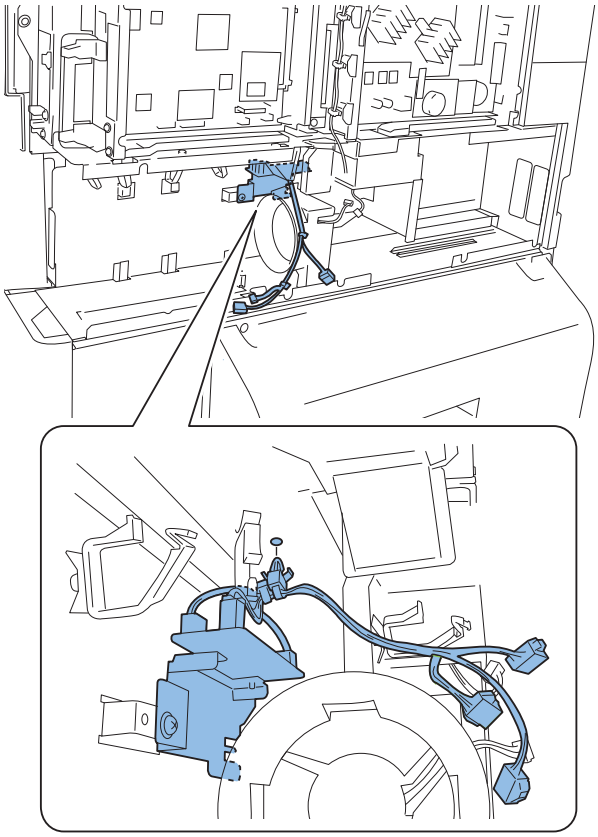
☐

4. **Install the Fan Keyboard Unit.**
   - 1 Protrusion
   - 1 Screw (TP Round End; M3 x 6)



☐

5. Insert the Reuse Band of the Fan Cable.

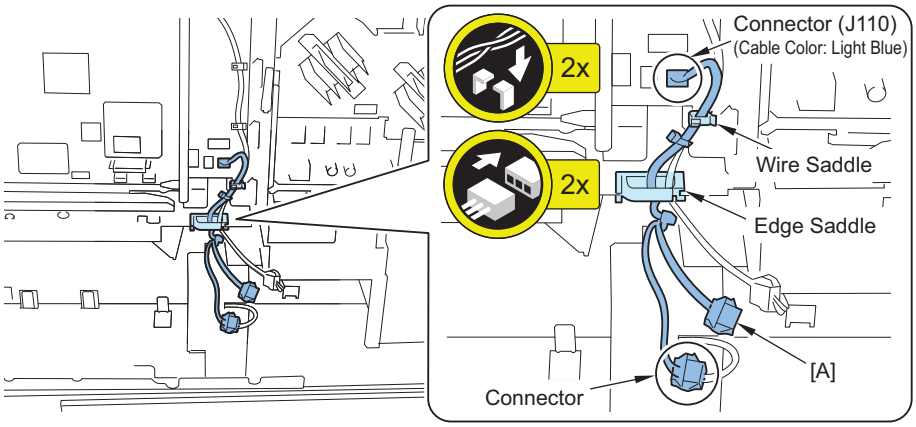


☐

6. Connect the 2 Connectors of the Fan Cable.

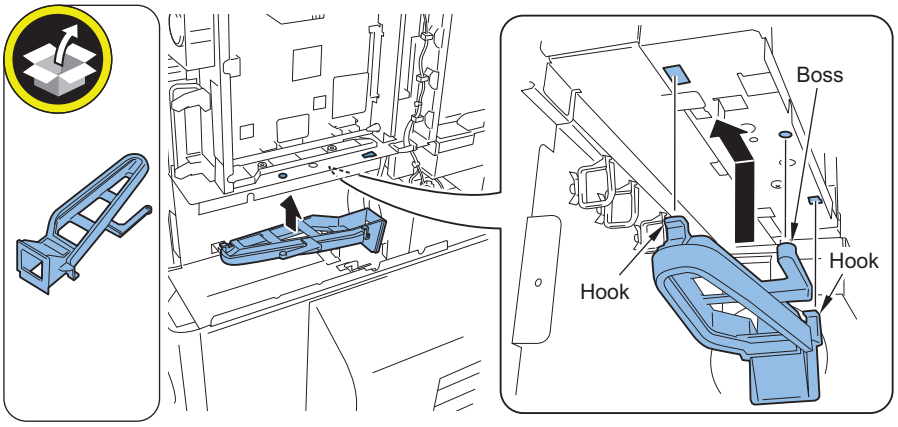
- 1 Wire Saddle (To be closed)
- 1 Edge Saddle (To be kept open)

NOTE:
The connector [A] will be used to connect in the step 4 of “Installing the Removable HDD Unit”.



☐

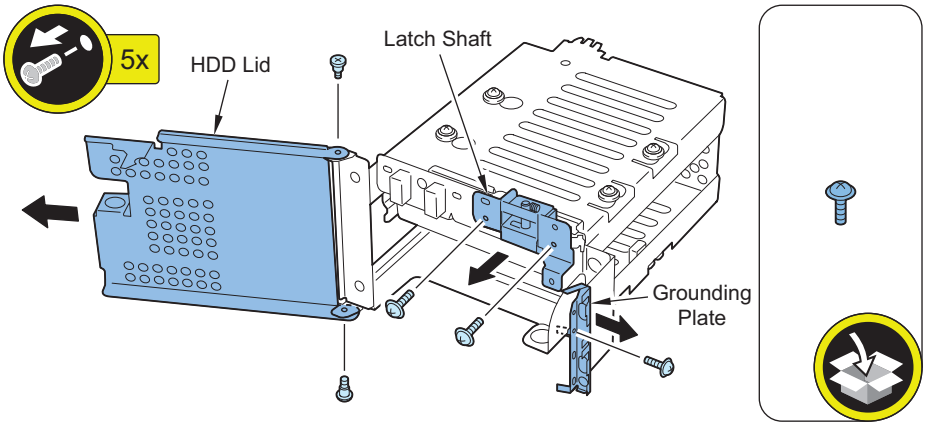
7. **Slide the Fan Duct in the arrow direction, and install.**
   - 2 Hooks
   - 1 Boss



■ Replacing to the Removable HDD Unit

☐

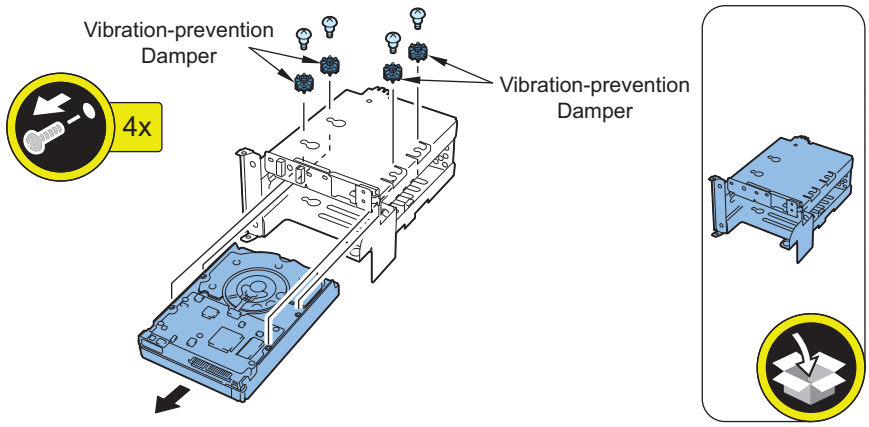
1. **Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)**
   - 2 Screws
2. **Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)**
   - 2 Screws
3. **Remove the Grounding Plate. (The removed Grounding Plate will be used in step 13.)**
   - 1 Screw (The removed screw will no longer be used.)



☐

4. **Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)**
   - 4 Screws (The removed screws will be used in step 19.)
   - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 19.)

CAUTION:
Hold and support the HDD with a hand to prevent from dropping off.

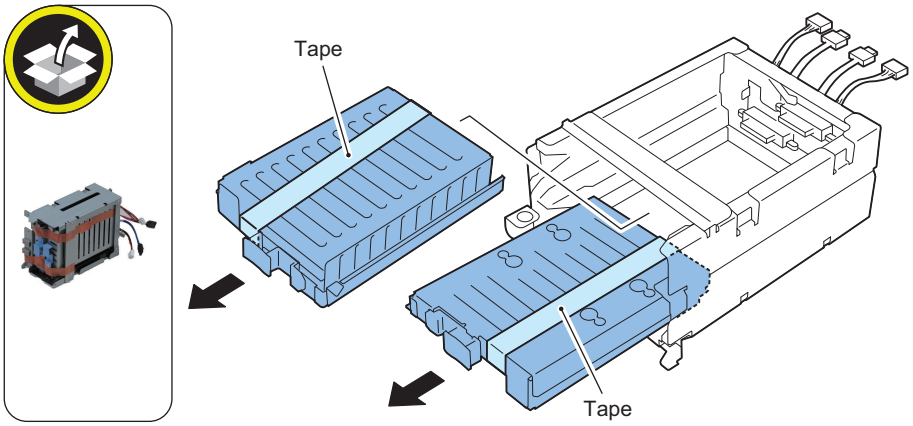


☐

5. **Remove the tape affixed to the outside of the Removable HDD Unit.**

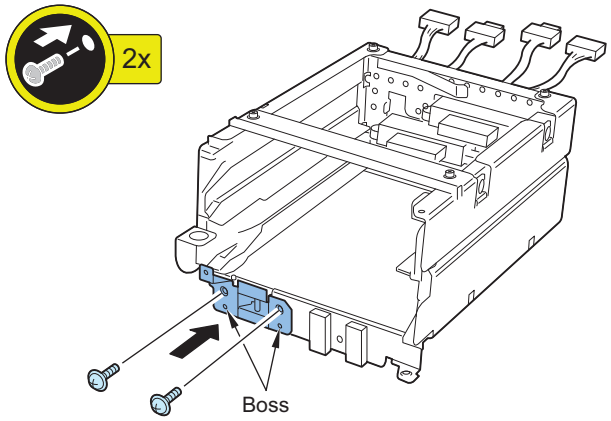
☐

6. **Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.**



☐

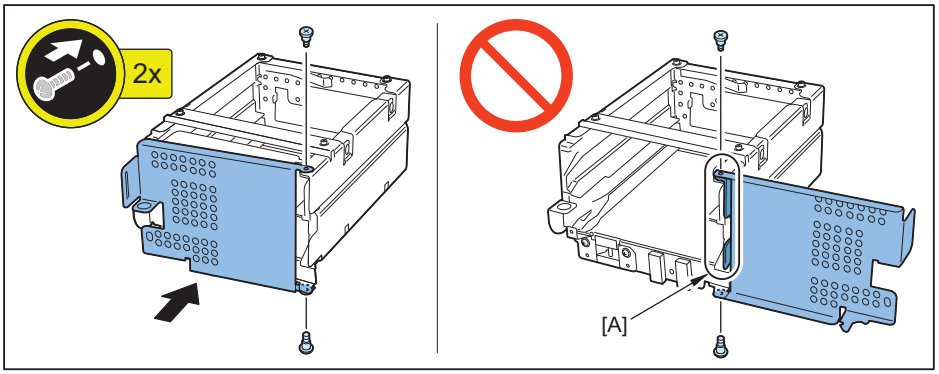
7. **Install the Latch Shaft removed at step 2 to the Removable HDD Unit.**
   - 2 Bosses
   - 2 Screws (Use the screws removed in step 2.)



☐

8. **Install the HDD Lid removed at step 1 to the Removable HDD Unit.**
   - 2 Screws (Use the screws removed in step 1.)

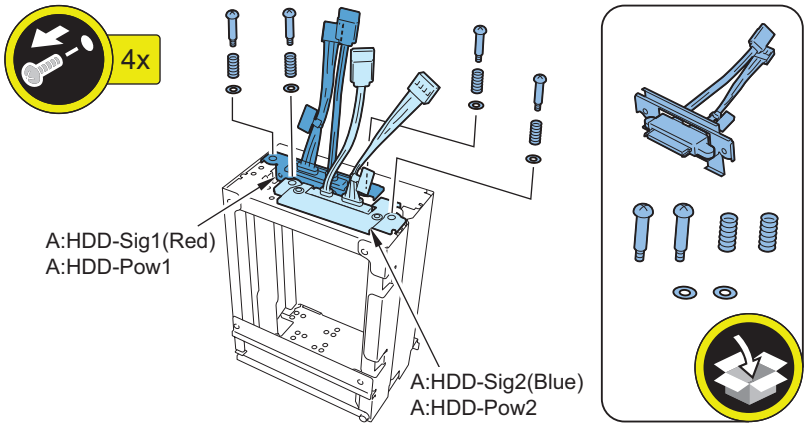
NOTE:
When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.



☐

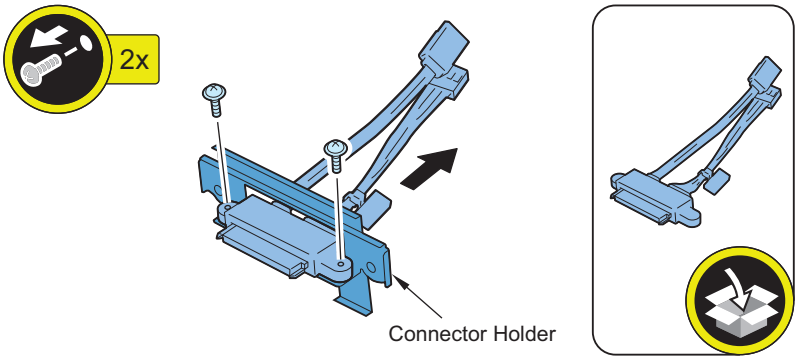
9. **Remove the IVDR4 Cable (A:HDD-Sig1(Red)/A:HDD-Pow1) and the IVDR4B Cable (A:HDD-Sig2(Blue)/A:HDD-Pow2) from the Removable HDD Unit.**
   - 4 Drawer Stepped Screws
   - 4 Drawer Springs
   - 4 Spacers

NOTE:
- Two each of the drawer stepped screws, the drawer springs, and the spacers are reused at step 12.
- The removed IVDR4B Cable (A: HDD-Sig2 (Blue)/A: HDD-Pow2), 2 Drawer Stepped Screws, 2 Drawer Springs, and 2 Spacers each will not be used.



☐

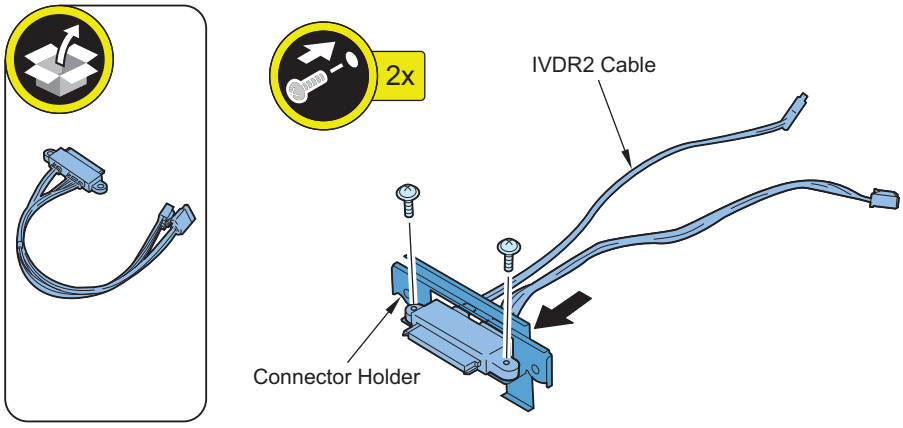
10. **Remove the Connector Holder Plate from either IVDR4 Cable (A:HDD-Sig1(Red)/A:HDD-Pow1) which was removed in step 9. (The removed cable will no longer be used.)**
    - 2 Screws (The removed screws will be used in step 11.)



☐

11. Install the Connector Holder Plate which was removed in step 10 to the IVDR2 Cable.

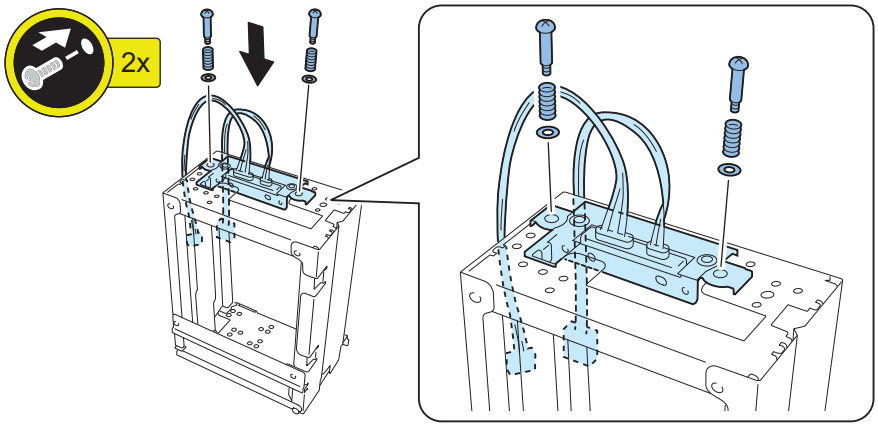
- 2 Screws (Use the screws removed in step 10.)



☐

12. Install the IVDR2 Cable to the Removable HDD Unit.

- 2 Spacers
- 2 Drawer Springs
- 2 Drawer Stepped Screws
  (Use the Spacers, the Drawer Springs, and the Drawer Stepped Screws removed in step 9.)



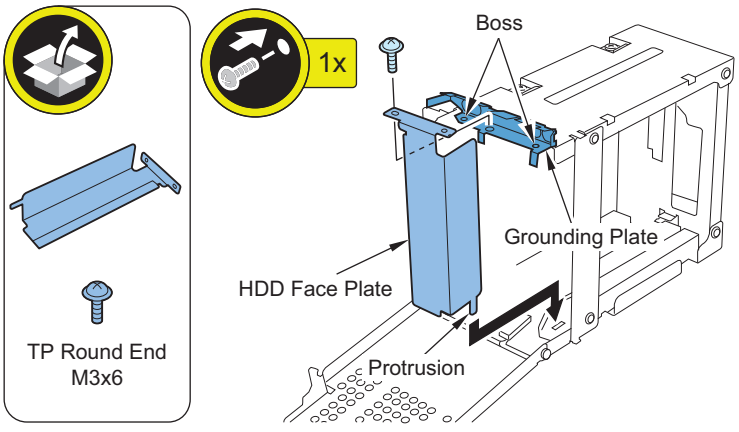
☐

13. Install the Grounding Plate removed at step 3.

- 2 Bosses

14. Fit the protrusion on the HDD Face Plate into the hole on the mold part, and install it.

- 1 Screw (TP Round End; M3 x 6)



☐

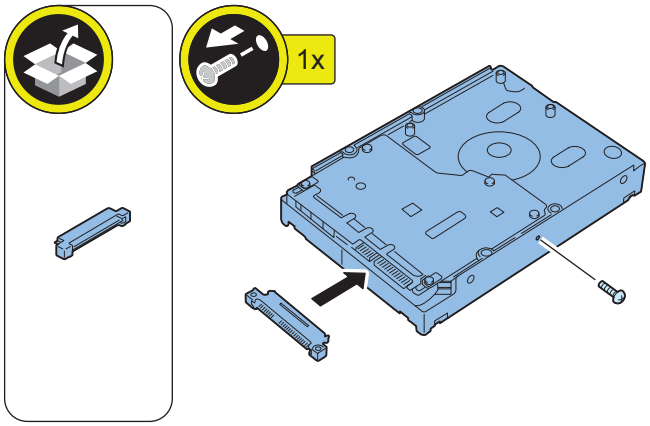
15. Close the HDD Lid.

< Disassembling and Assembling of the HDD Removed from the Host Machine >

☐

16. Remove the screw of the HDD removed at step 4. (The removed screw will be used in step 18.)

17. Install the Conversion Connector to the HDD.



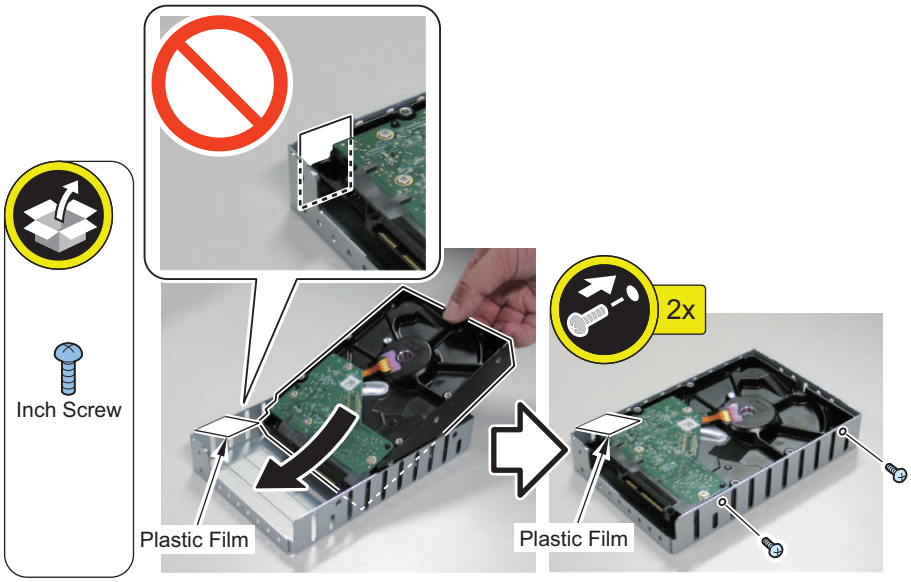
☐

18. Install the HDD in the Removable HDD Case as shown in the figure.

- 1 Screw (Use the screw removed in step 16.)
- 1 Inch Screw

CAUTION:

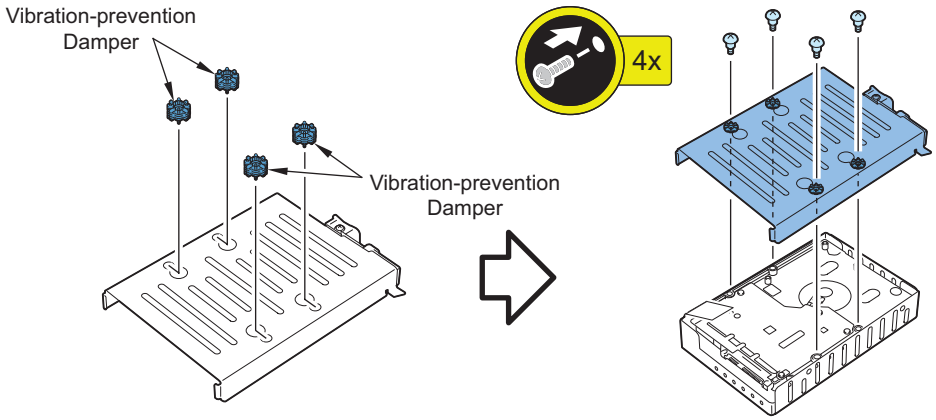
- Be sure to check that the Plastic Film is over the PCB of the HDD.
- The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 19) from coming in contact with the PCB of the HDD, resulting in short circuit.



☐

19. Install the Removable HDD Case Cover to the HDD.

- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
- 4 Screws (Use the screws removed in step 4.)

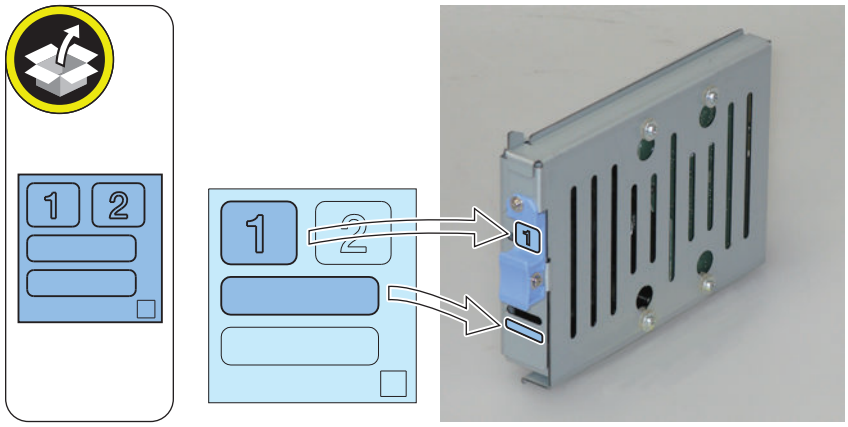


☐

20. Affix the No.1 of the R-HDDLabel to the handle of the assembled Removable HDD.

21. Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

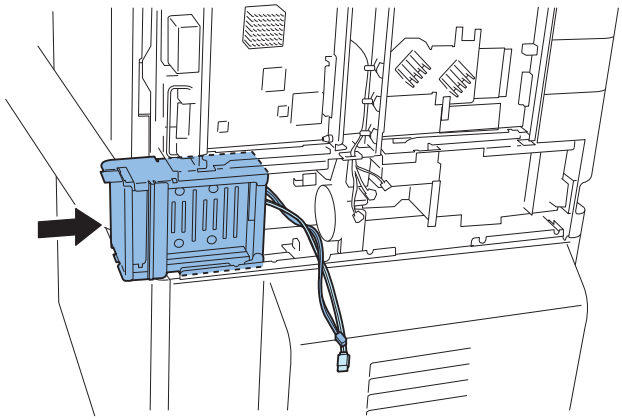
CAUTION:
Be sure that the Removable HDD is in the correct direction.



■ Installing the Removable HDD Unit

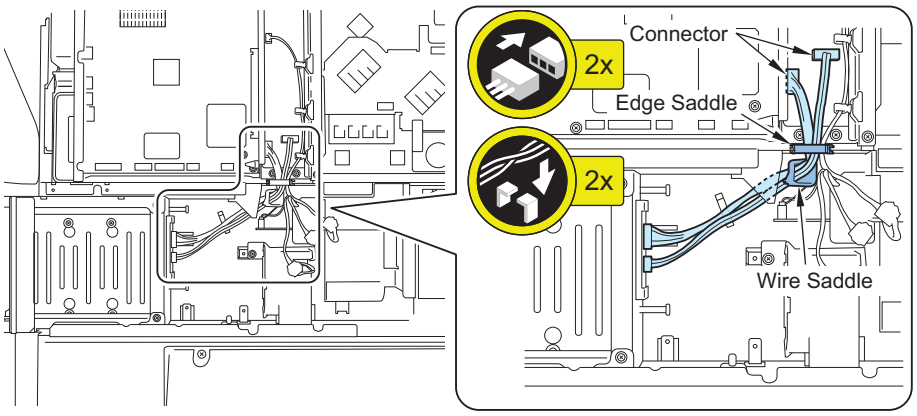
☐

1. Insert 2/3 of the Removable HDD Unit along the rail on the host machine.



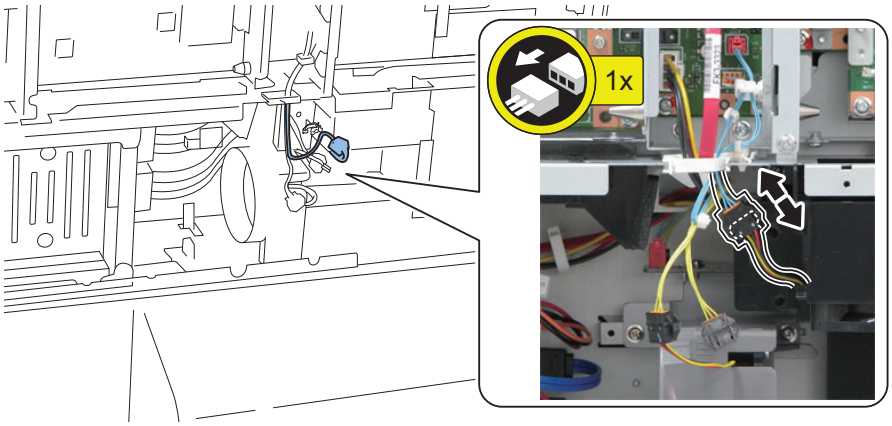
☐

2. **Connect 2 connectors of the IVDR2 Cable.**
   - 1 Wire Saddle
   - 1 Edge Saddle



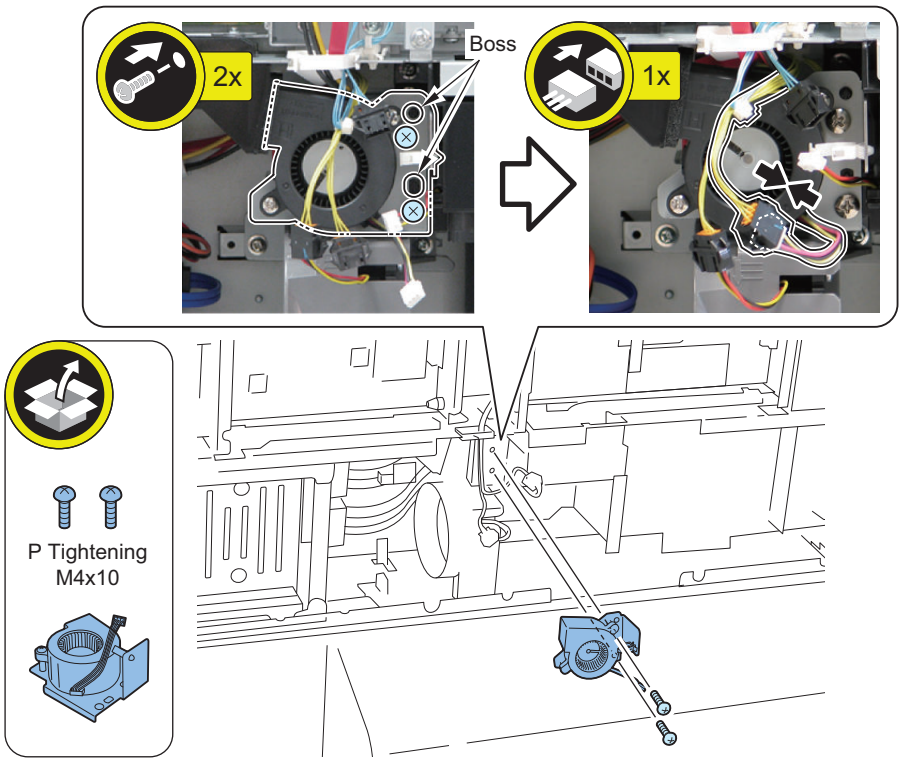
☐

3. **To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.**



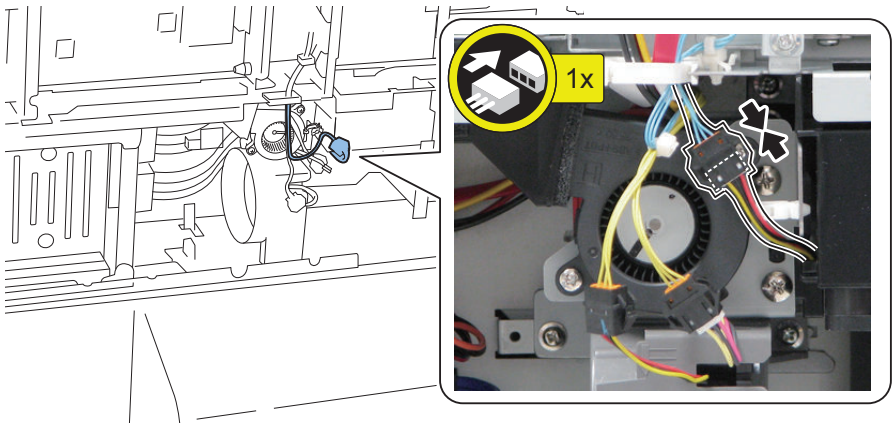
☐

4. **Install the Fan Unit, and connect the connector to the yellow cable.**
   - 2 Bosses
   - 2 Screws (P Tightening; M4 x 10)



☐

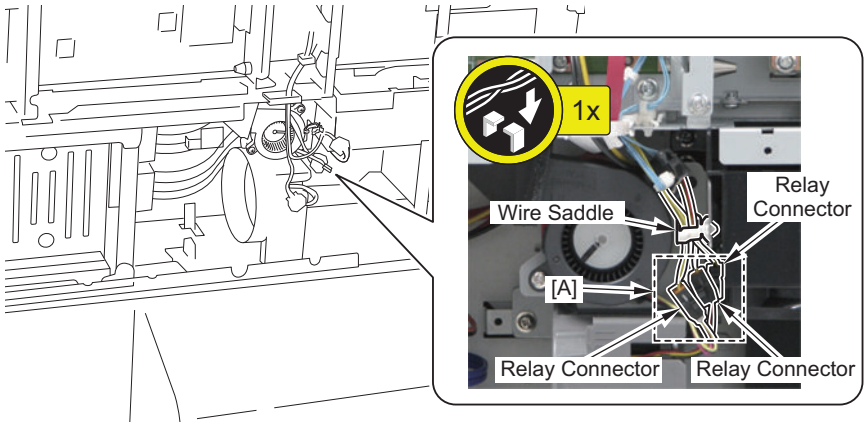
5. **Connect the Fan Cable of the host machine disconnected in step 3 to the light blue cable.**



☐

6. **Secure 3 cables with the Wire Saddle.**

CAUTION:
- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.

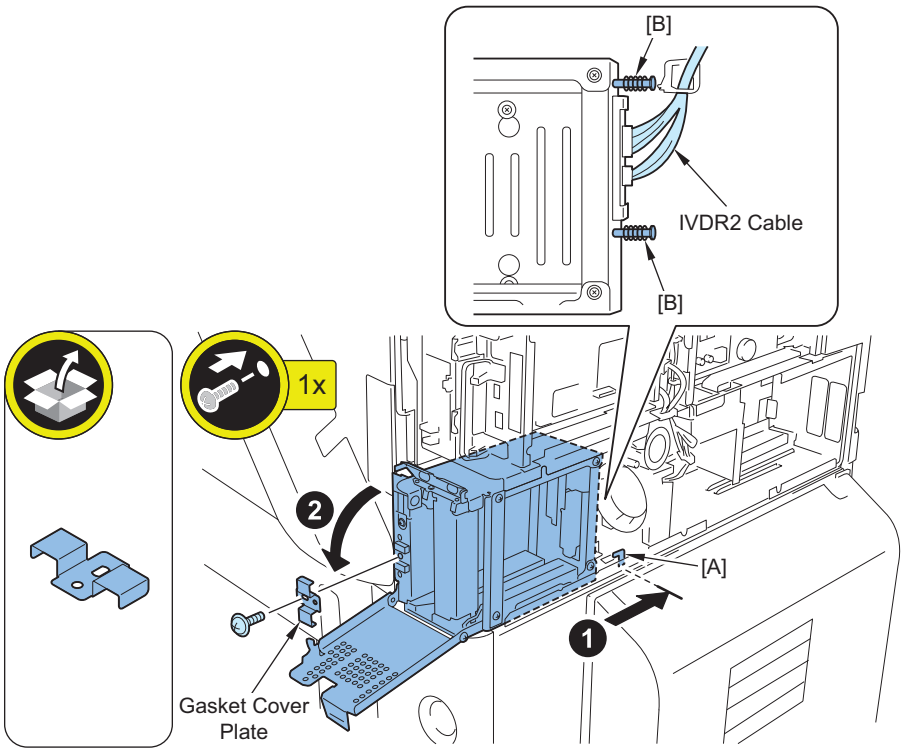


☐

7. **Insert the Removable HDD Unit all the way to the hook [A].**

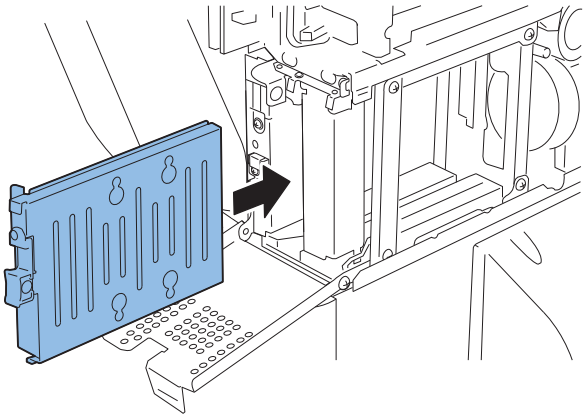
CAUTION:
Check that the IVDR2 Cable does not come in contact with the [B] part (the drawer stepped screw/drawer spring).

8. **Open the HDD Lid, install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.**
   - 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)



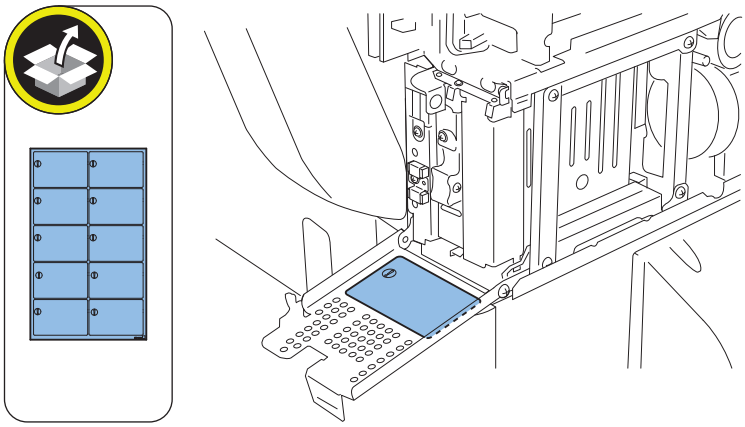
☐

9. **Insert the Removable HDD along the rail of the Removable HDD Unit.**



☐

10. **Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.**

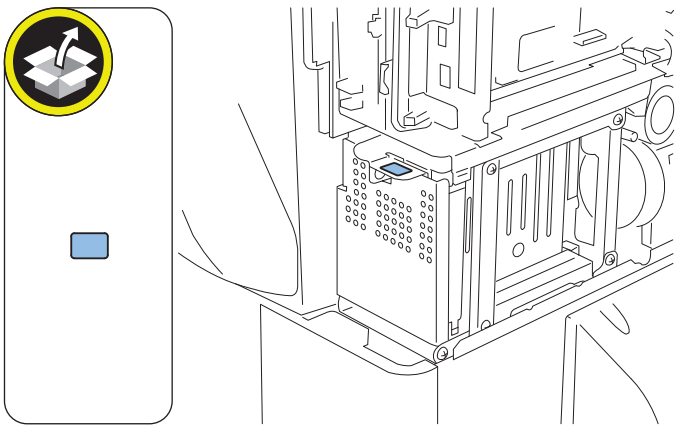


☐

11. **Close the HDD Lid.**

☐

12. **Affix the Handle Label on the Handle part of the HDD Lid.**

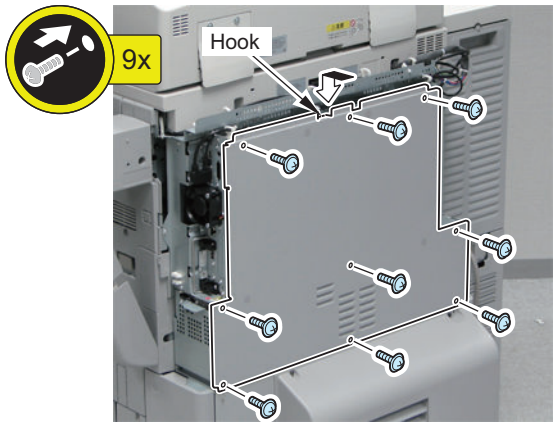


☐

13. Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

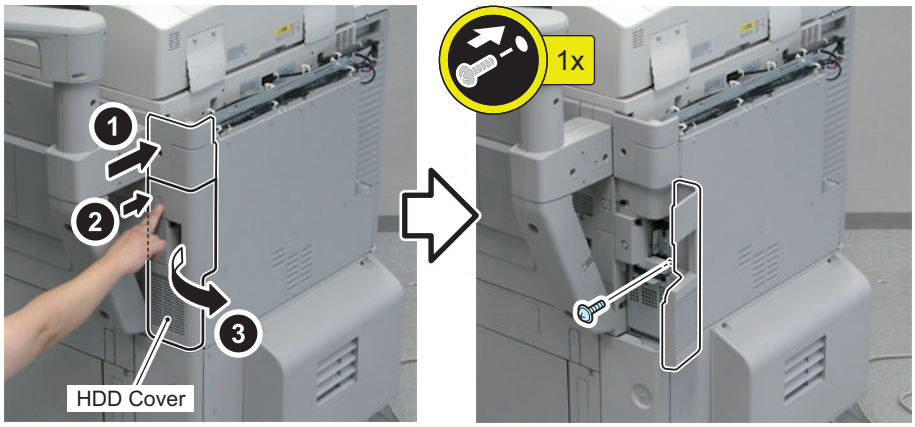
CAUTION:
When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.



☐

14. Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.



☐

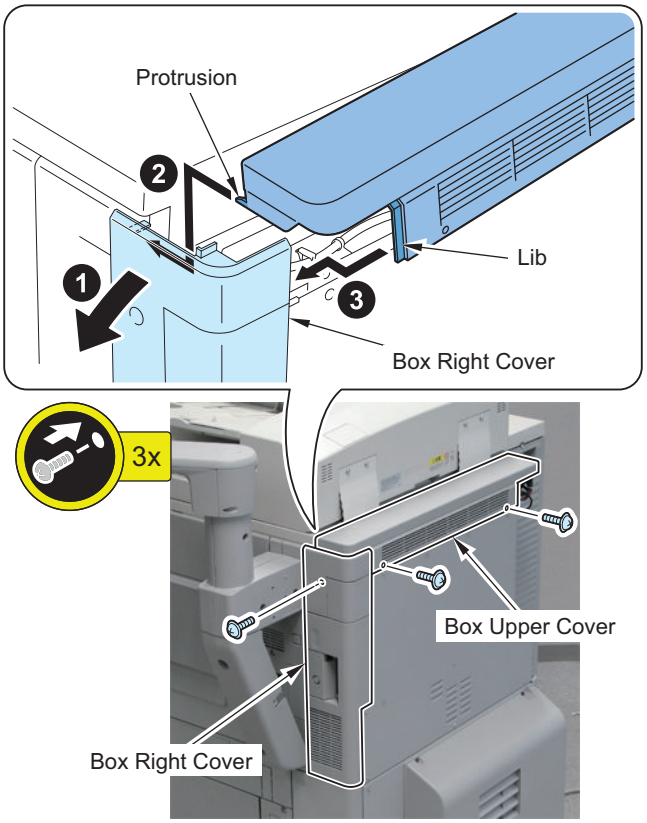
15. Close the HDD Cover.

☐

16. Install the Box Upper Cover.

- 1 Protrusion
- 1 Lib
- 2 Screws

17. Install the screw of the Box Right Cover.

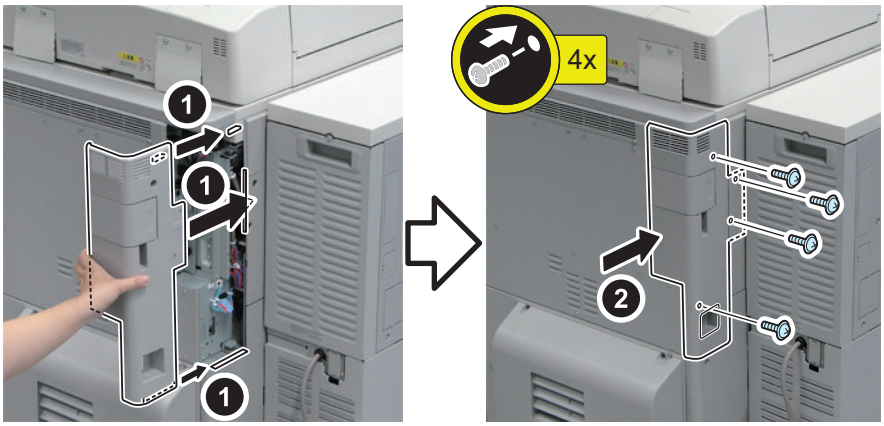


☐

18. Install the Box Left Cover.

- 4 Screws

CAUTION:
Be careful not to trap the cable.



☐

19. Connect the power plug to the outlet.

20. Turn ON the main power switch.

[TYPE-2] Option HDD + HDD Data Encryption & Mirroring Kit

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.
If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Checking the Contents

■ Option HDD

☐ [1] HDD X 1 	☐ [2] Vibration-prevention Dumper X 4 	☐ [3] Inch Screw X 2  Be sure to use the inch screws.
☐ [4] Inch Stepped Screw X 4  Be sure to use the inch screws.	☐ [5] Gasket X 1 	

■ HDD Data Encryption & Mirroring Kit

☐ [1] Signal Cable (450mm; A:Cont-Sig (Red)) X 1 	☐ [2] Power Cable (430mm; A:Cont-Pow) X 1 	☐ [3] Signal Cable (340mm; A:HDD-Sig1 (Red)) X 1 ☐ [4] Signal Cable (370mm; A:HDD-Sig2 (Blue)) X 1 	☐ [5] Power Cable (320mm; A:HDD-Pow1) X 1 	☐ [6] Power Cable (430mm; A:HDD-Pow2) X 1 
☐ [7] LED Cable (290mm; A:LED-Sig) X 1 	☐ [8] LED Board (A:LED) X 1 	☐ [9] Encryption Board X 1 ☐ [10] Wire Saddle (Small) X 5 	☐ [11] Wire Saddle (Middle) X 1 	☐ [12] Wire Saddle (Large) X 1 

☐ [1] Screw (TP ; M3x6) X 5 	☐ [2] LED Label X 1 

< Others >

- Including guides

Setting Before Turning OFF the Power

CAUTION:
Be sure to turn OFF the main power after executing this service mode setting.
Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.
When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

☐

1. **Execute the following service mode (level 1).**
   COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

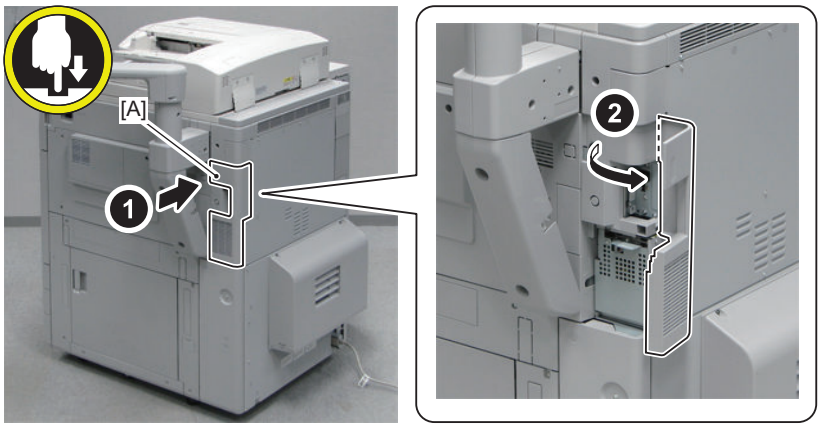
1. **Turn OFF the main power switch.**
2. **Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.**

Installation Procedure

■ Removing the HDD Unit

☐

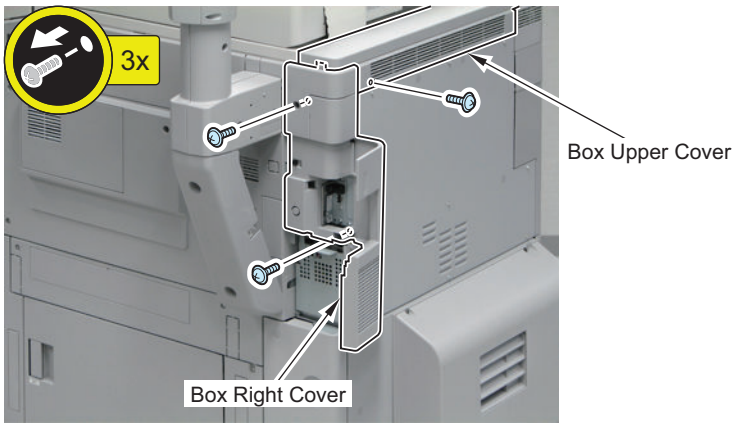
1. **Push the [A] part, and open the HDD Cover.**

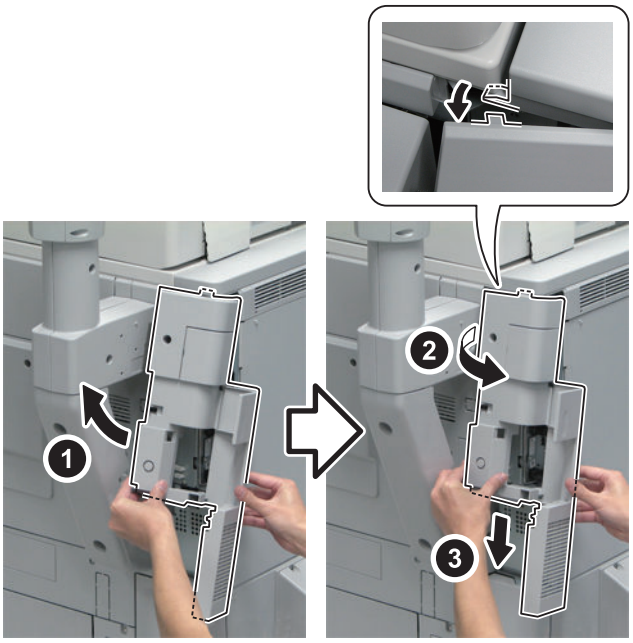


☐

2. **Remove the screw of the Box Upper Cover.**

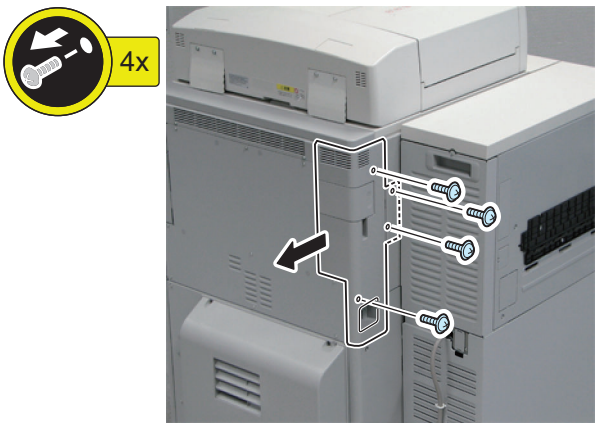
3. **Remove the Box Right Cover.**
   - 2 Screws
   - 1 Hook





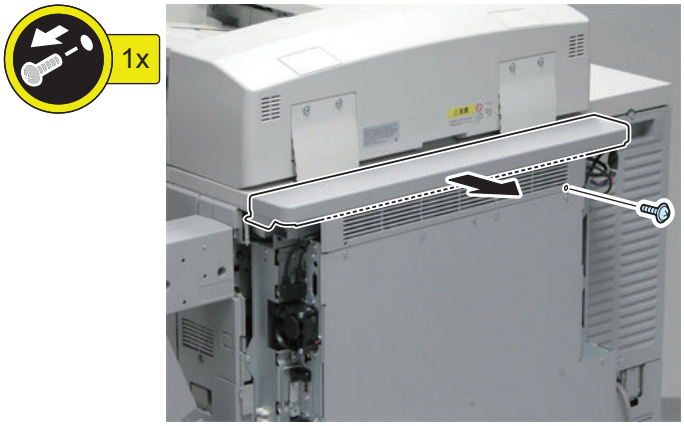
☐

4. **Remove the Box Left Cover.**
   - 4 Screws



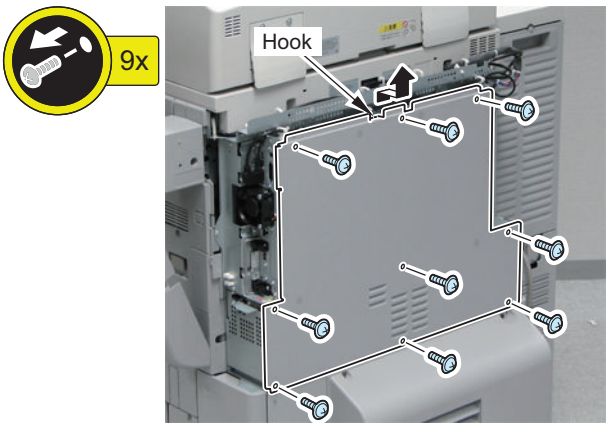
☐

5. **Remove the Box Upper Cover.**
   - 1 Screw



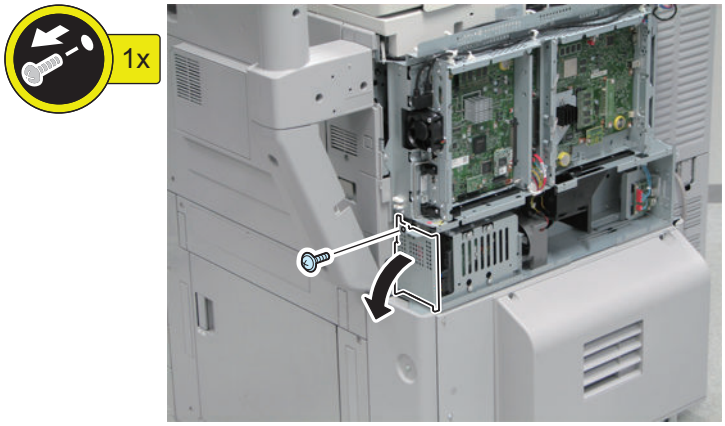
☐

6. **Remove the Rear Upper Cover.**
   - 9 Screws
   - 1 Hook



☐

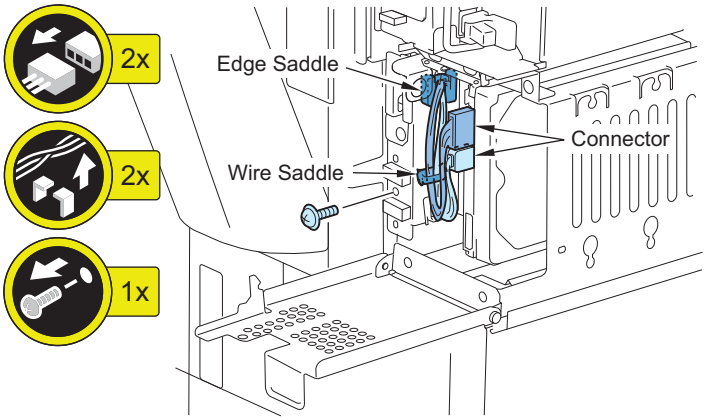
7. **Open the HDD Lid.**
   - 1 screw (The removed screw will be used in step 7 of "Installing the HDD Unit".)



☐

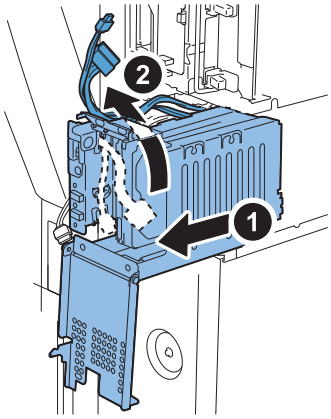
8. **Remove the Signal Cable and the Power Cable from the HDD.**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Edge Saddle

9. **Remove the screw of the HDD Unit. (The removed screw will be used in step 5 of "Installing the HDD Unit".)**

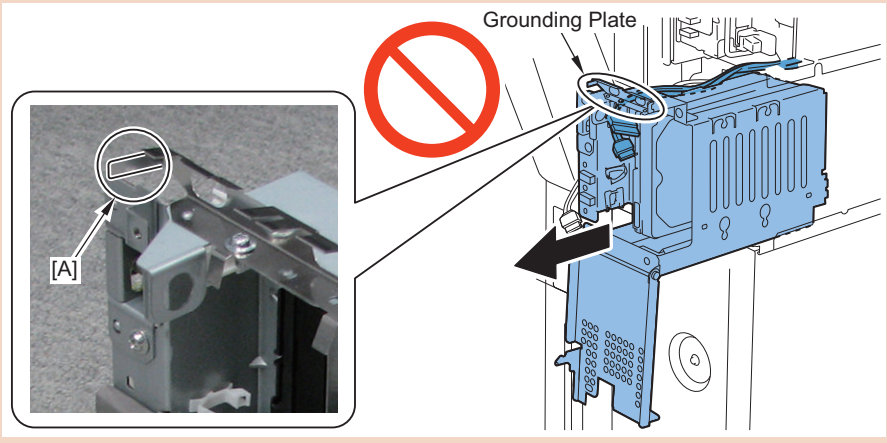


☐

10. **Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.**

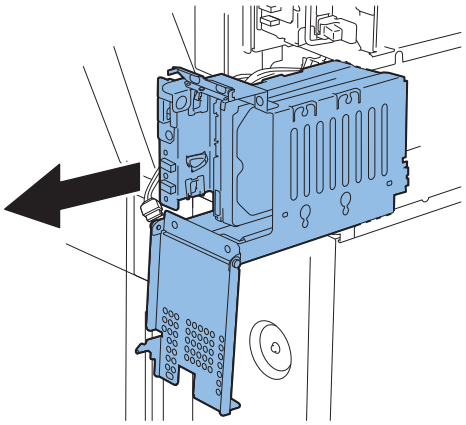


CAUTION:
- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.



☐

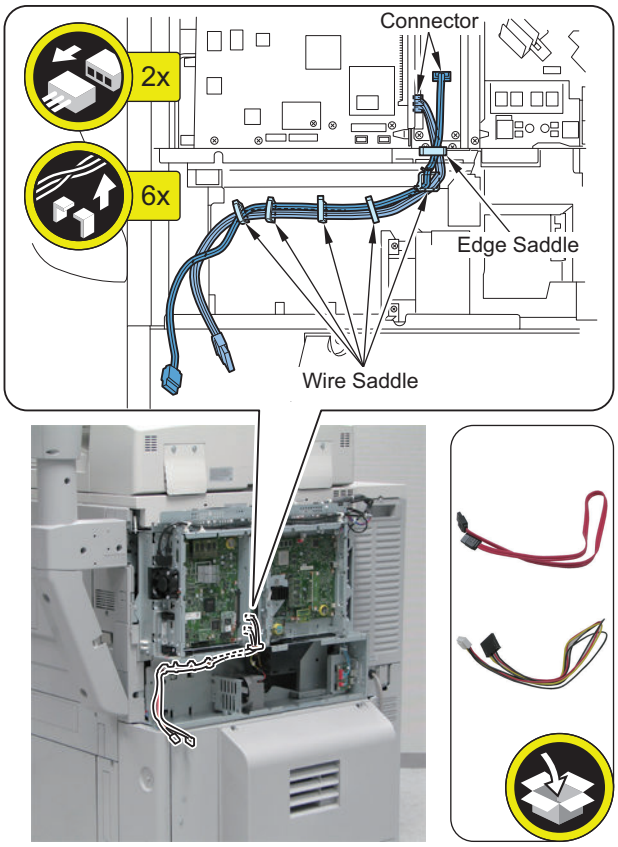
11. Remove the HDD Unit from the host machine.



☐

12. Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles

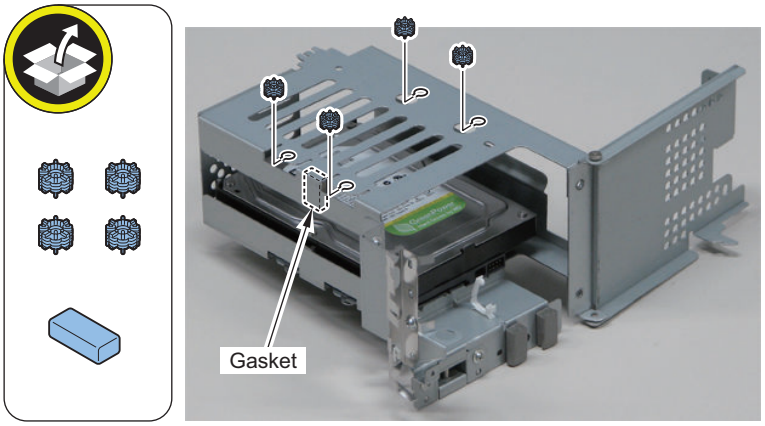


■ Adding a HDD

☐

1. Install the 4 Anti-vibration Dampers to the removed HDD Unit.

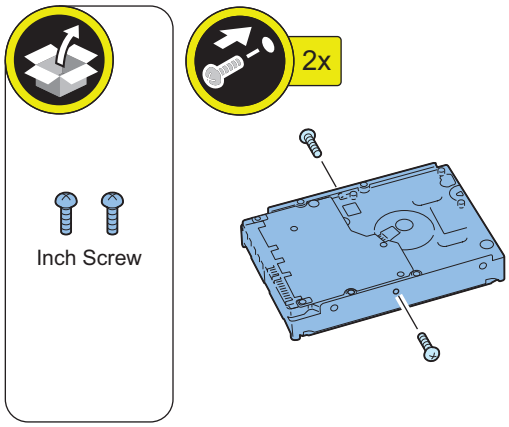
2. **Remove the release paper of the Gasket, and affix the Gasket to the position inside the HDD Unit shown in the figure.**



☐

3. **Tighten the 2 Inch Screws to the Option HDD.**

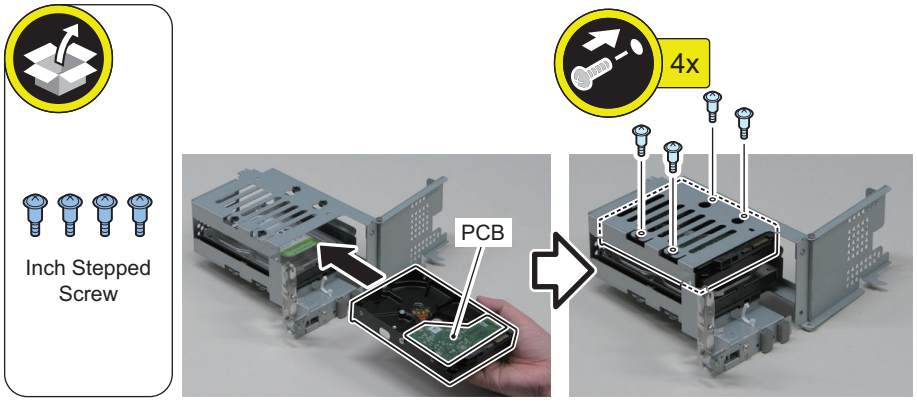
NOTE:
Be sure to use Inch Screws.



☐

4. **While holding the Option HDD, install it to the HDD Unit by inserting its PCB side into the HDD Unit.**
   - 4 Inch Stepped Screws

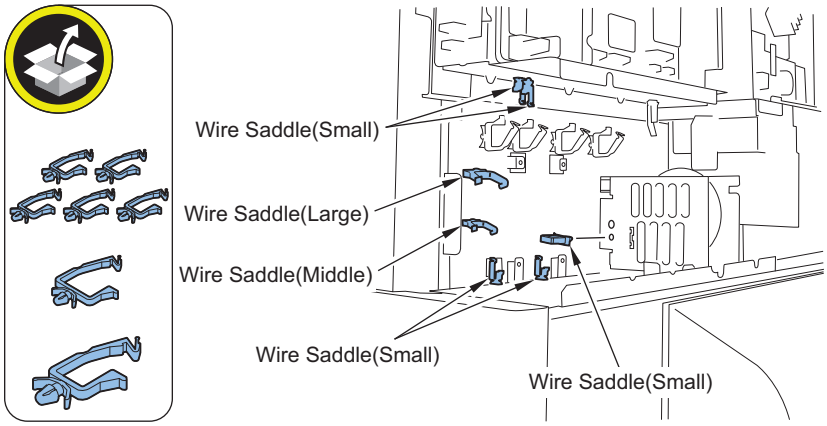
NOTE:
- Be sure to use Inch Stepped Screws.
- Do not remove the Gasket affixed to the inside of the HDD Unit when installing the HDD.



■ Installing the Encryption Board

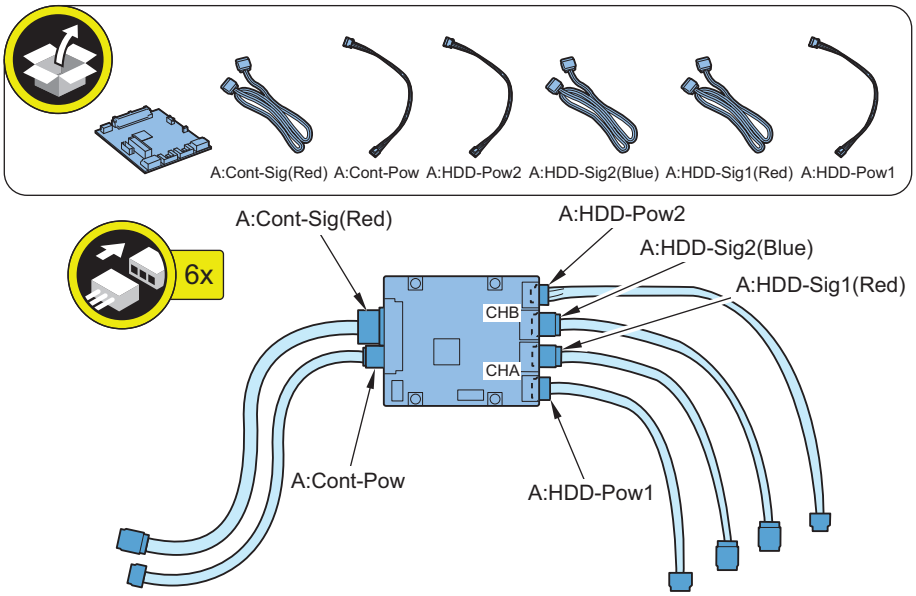
☐

1. **Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 5 Wire Saddles (Small).**



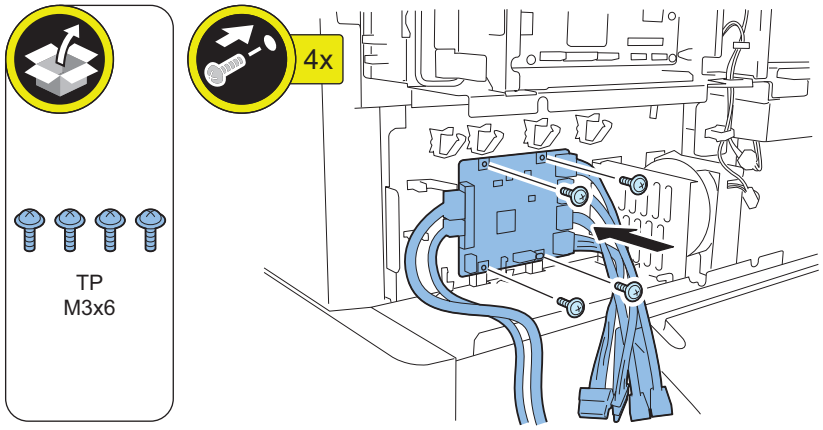
☐

2. **Connect the Signal Cable and Power Cable to the Encryption Board.**
   - Signal Cable (450 mm; A:Cont-Sig (Red))
   - Power Cable (430 mm; A:Cont-Pow)
   - Power Cable (430 mm; A:HDD-Pow2)
   - Signal Cable (370 mm; A:HDD-Sig2 (Blue))
   - Signal Cable (340 mm; A:HDD-Sig1 (Red))
   - Power Cable (320 mm; A:HDD-Pow1)



☐

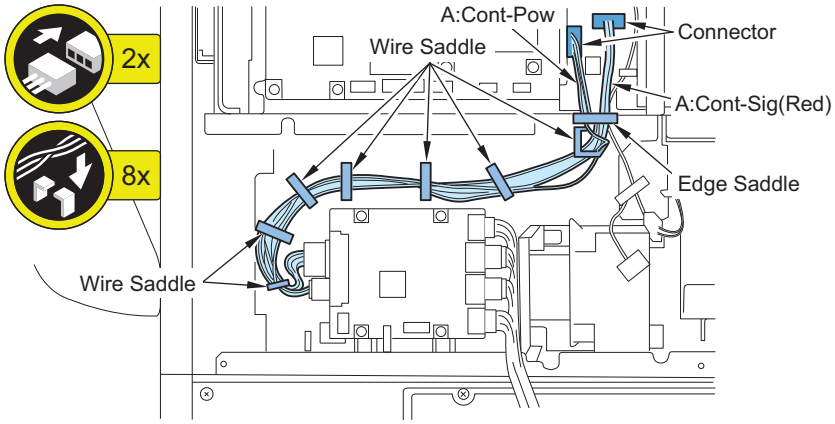
3. **Install the Encryption Board.**
   - 4 Screws (TP; M3 x 6)



☐

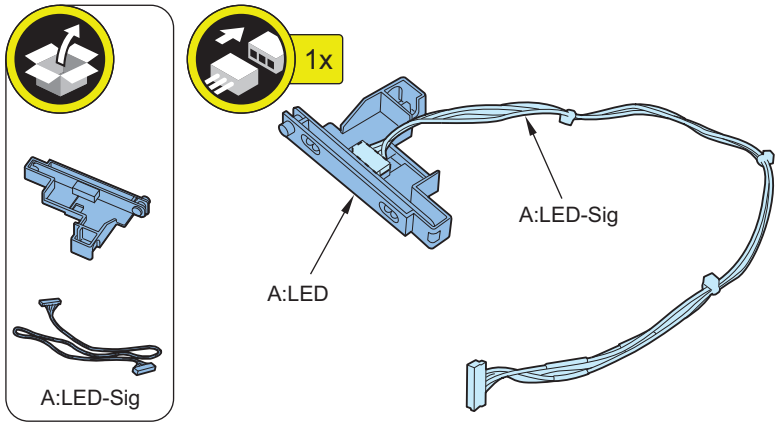
4. **Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).**
   - 2 Connectors
   - 1 Edge Saddle (To be closed)
   - 7 Wire Saddles (To be kept open)

CAUTION:
Route cables equally to eliminate unnecessary slack.



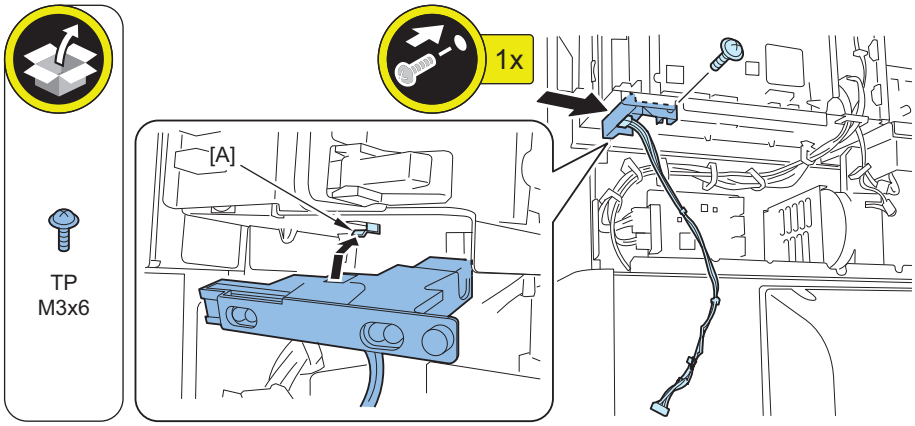
☐

5. **Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).**



☐

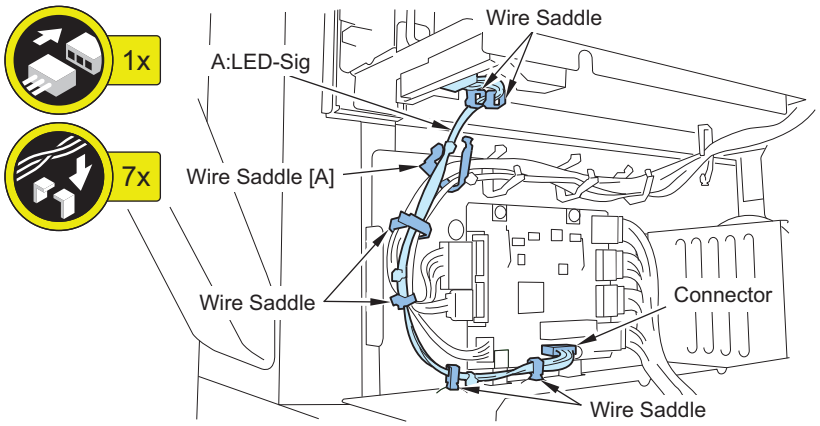
6. **Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.**
   - 1 Screw (TP; M3 x 6)



☐

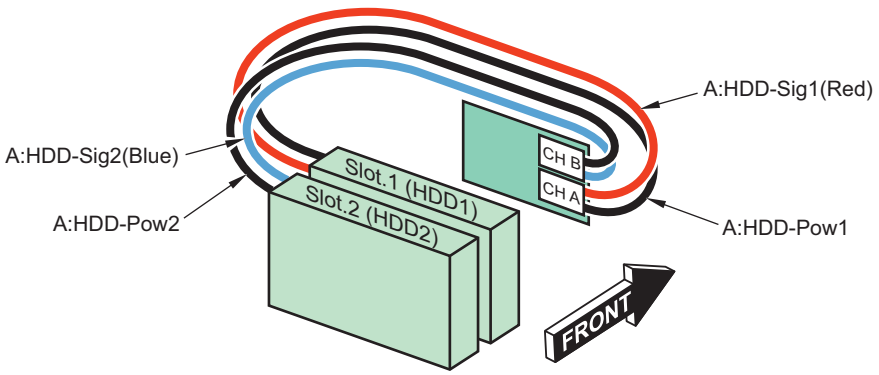
7. **Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.**
   - 1 Connector
   - 7 Wire Saddles (Keep the Wire Saddle [A] open.)

CAUTION:
Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.



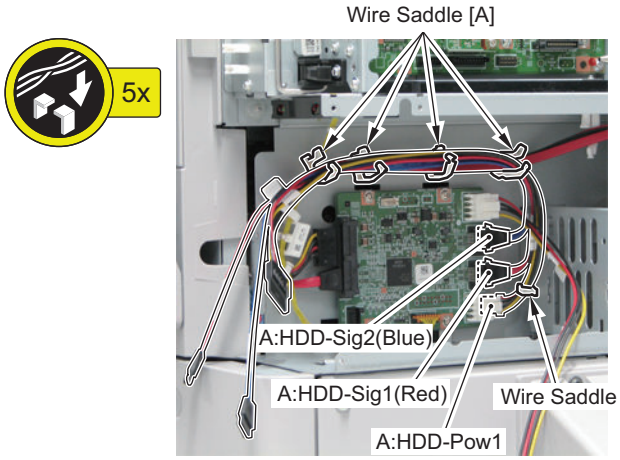
■ Installing the HDD Unit

NOTE:
The following shows the combination of the HDD and the Encryption Board.
- Connect Slot.1 to “CH A” (Host machine's HDD)
- Connect Slot.2 to “CH B” (Option HDD)



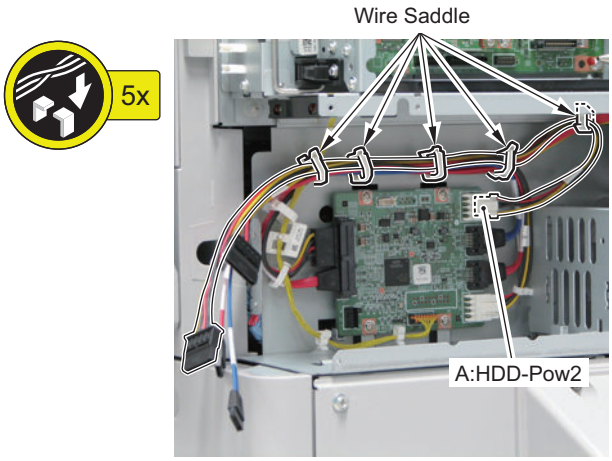
□

1. **Pass the 3 cables through the 5 Wire Saddles as shown in the figure. (Keep the 4 Wire Saddles [A] open.)**



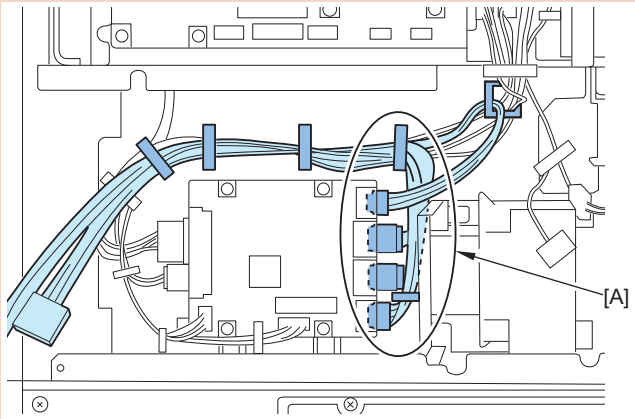
☐

2. **As shown in the figure, secure the Power Cable (430 mm; A:HDD-Pow2) with the 5 Wire Saddles, and close all the Wire Saddles.**



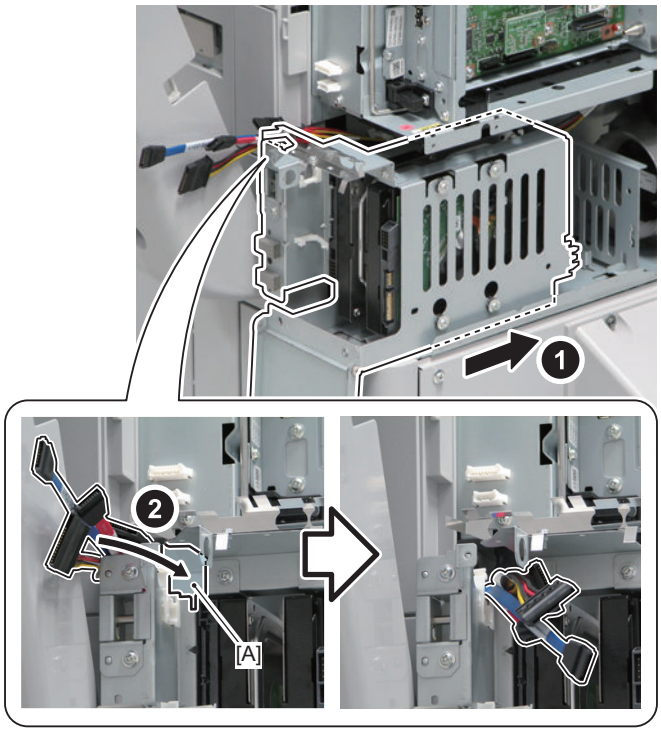
CAUTION:

- Be sure to take up slack of the cables.
- Be sure to tuck the [A] part of the cables to the rear side.



☐

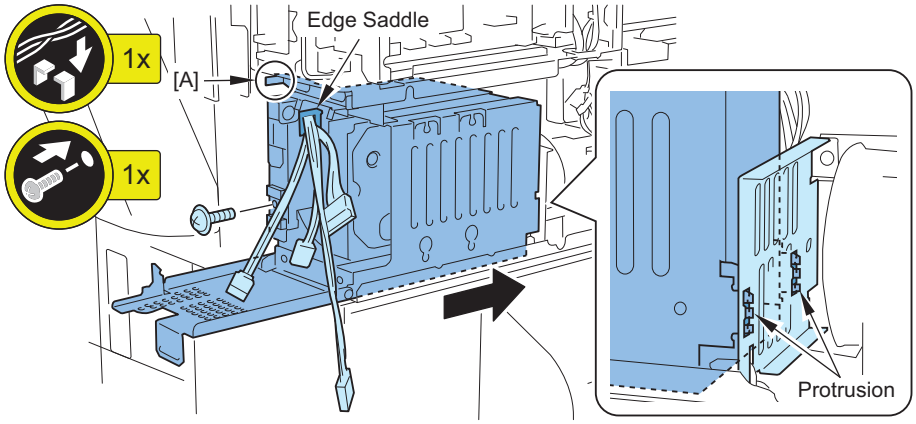
3. **Insert the HDD Unit approx. 2/3 along the rails of the host machine, and pass the 4 cables through the [A] part.**



☐

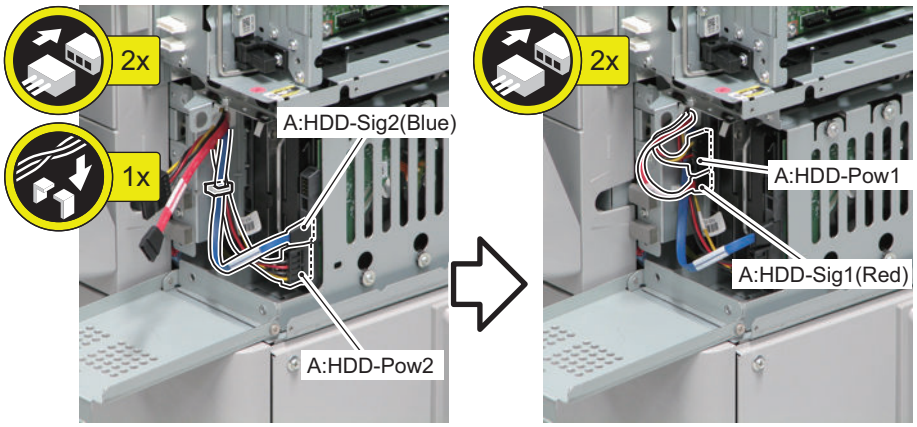
4. **Insert the HDD Unit until it stops.**
   - 2 Protrusions
5. **Secure the 4 cables with the Edge Saddle, and install the HDD Unit.**
   - 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

CAUTION:
Do not deform the [A] part of the Grounding Plate.

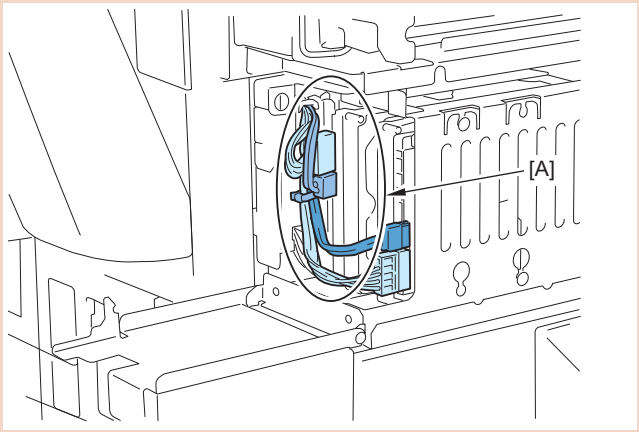


☐

6. **Connect the Signal Cable and the Power Cable to the HDD.**
   - Connect the Signal Cable (370 mm; A:HDD-Sig2 (Blue)) and the Power Cable (430 mm; A:HDD-Pow2) to Slot.2, and fix with the wire saddle.
   - Connect the Power Cable (320 mm; A:HDD-Pow1) and the Signal Cable (340 mm; A:HDD-Sig1 (Red)) to Slot.1.



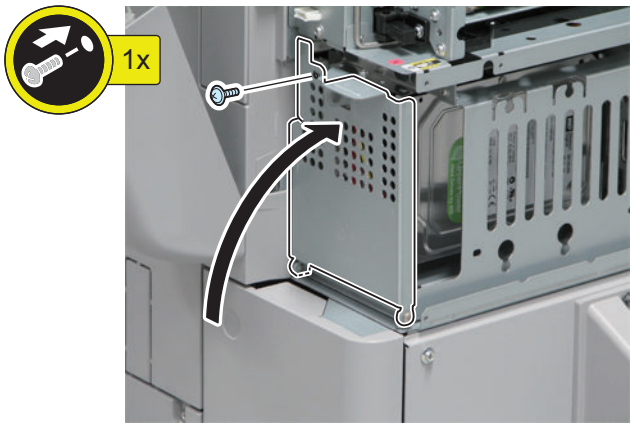
CAUTION:
If there is extra slack of the cables, be sure to tuck them in the [A] part.



☐

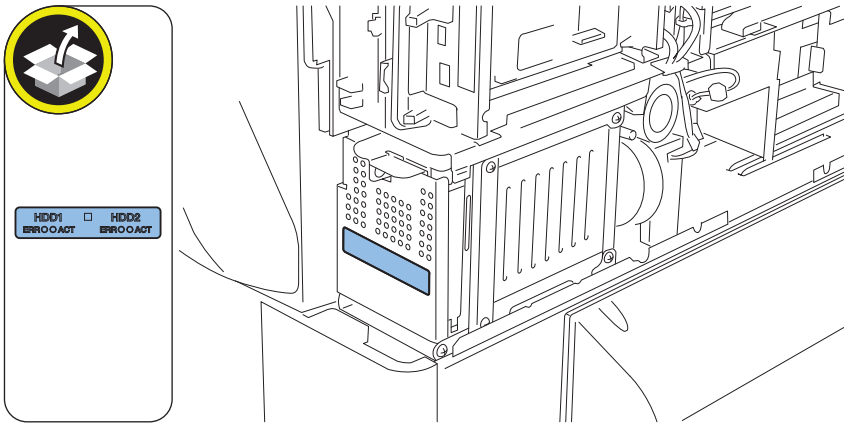
7. **Close the HDD Lid, and tighten the screw. (Use the screw removed in step 7 of "Removing the HDD Unit".).**

CAUTION:
Be careful not to trap the Cable.



☐

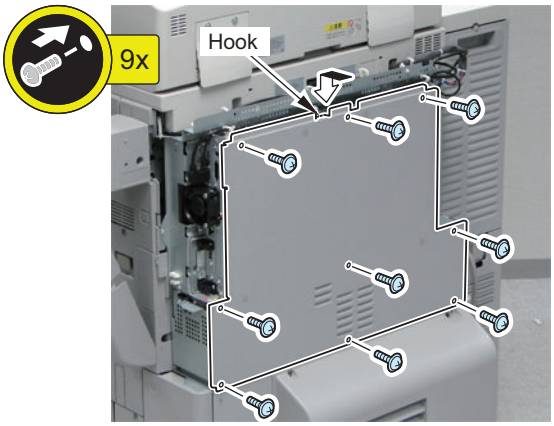
8. **Affix the LED Label according to align with the ruled line on the HDD Lid.**



☐

9. **Install the Rear Upper Cover.**
   - 1 Hook
   - 9 Screws

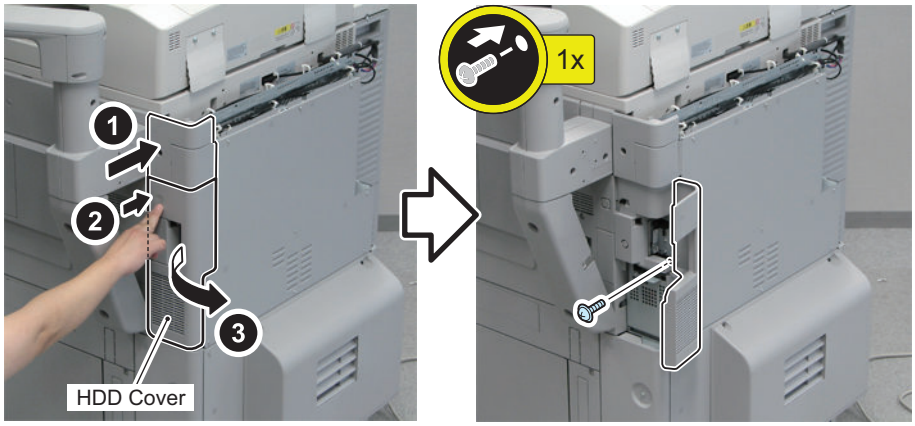
CAUTION:
When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.



☐

10. Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.



☐

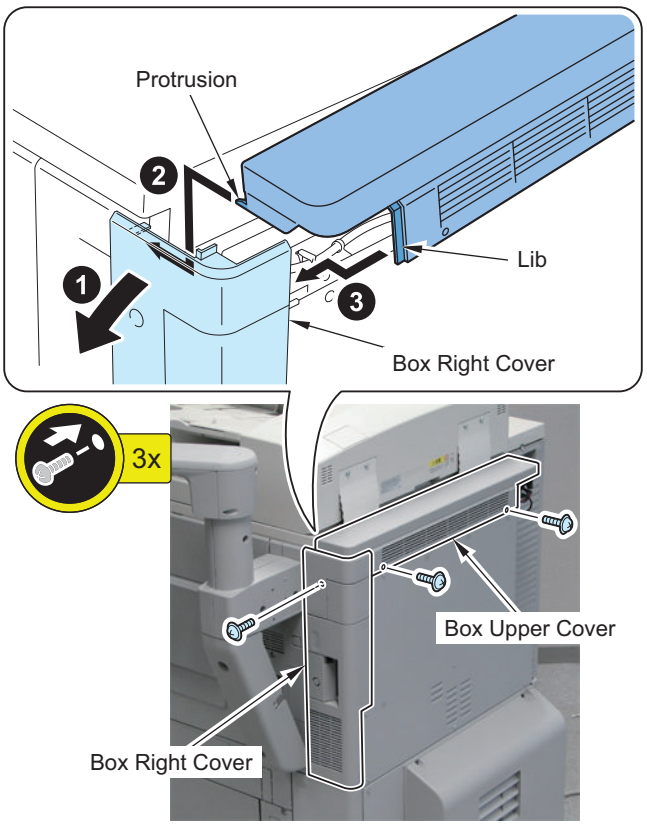
11. Close the HDD Cover.

☐

12. Install the Box Upper Cover.

- 1 Protrusion
- 1 Lib
- 2 Screws

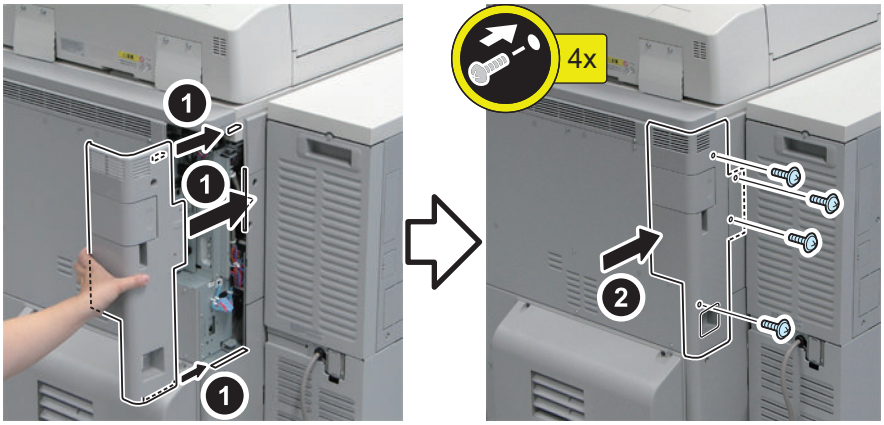
13. Install the screw of the Box Right Cover.



☐

14. **Install the Box Left Cover.**
    - 4 Screws

CAUTION:
Be careful not to trap the cable.



☐

15. **Connect the power plug to the outlet.**

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

■ 1. Requirements

1. **PC**
   Service Support Tool in the version that supports this host machine must be installed.
2. **Cross Ethernet Cable**

■ 2. Preparing for the Installation of the System Software of Host machine

1. **If both PC and the machine are on, turn them off.**
2. **Connect the PC and the host machine using an Cross Ethernet cable.**
3. **Turn on the PC.**
4. **Start up the host machine in download mode (safe mode).**

■ 3. Selecting the System Software

1. **Set the CD containing the latest System Software in the PC on which the SST is used.**
2. **Start up the SST.**
3. **Click ‘Register Firmware’.**
4. **Select the drive in which the System Software CD has been set, and click ‘SEARCH’.**
5. **Click ‘REGISTER’.**
6. **Click OK.**

■ 4. Downloading the System Software

1. **Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.**
2. **When initialization is completed, the host machine is automatically restarted and it enters download mode.**
3. **Select the version to be downloaded and click "Start".**
4. **When download is completed, the host machine is automatically restarted.**
5. **When writing of the firmware is completed, the host machine is automatically restarted.**
6. **Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.**
7. **Terminate the SST.**
8. **Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.**
9. **Check the version of the downloaded firmware in service mode.**

Checking the Security Version

1. **Press the Counter key (123 key) on the control panel.**
2. **Press the [Check Device Configuration] key appearing on the control panel.**
3. **Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.**
   When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:
The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:
< Confirming the Security Mark >
When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark () is displayed on the lower left corner of a panel screen.

Setting for Mirroring

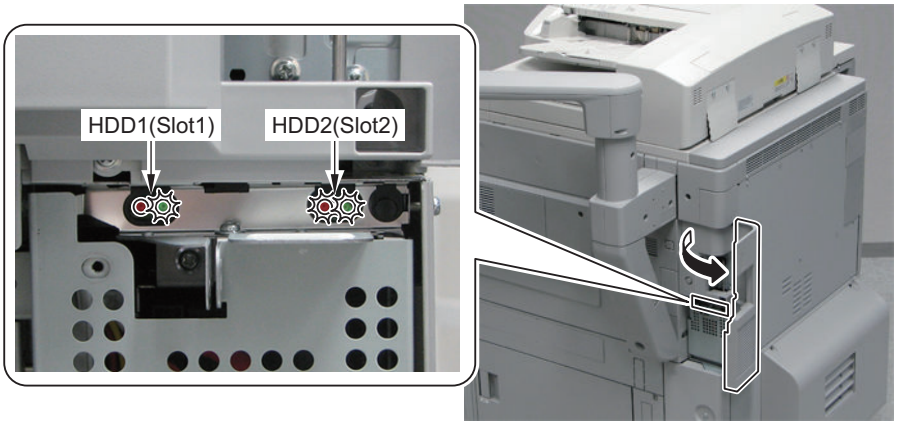
1. **Specify the setting for Mirroring.**
   - Service Mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID; select “1” for W/RAID.
2. **Turn OFF/ON the main power switch to enable the setting value.**
3. **Check that the UI screen is started normally.**

4. **Open the HDD Cover, and observe the LED to check that mirroring is normally executed.**
   - The green LED of HDD1 (Slot.1) is flashing.
   - The green and red LEDs of HDD2 (Slot.2) are flashing.

CAUTION:
Re-building process starts after setting W/RAID to “1”.
When the error indicating the message of “Need to replace Hard Disk (Contact with Service Technician)” on the UI occurs, re-execute the re-building process as follows;

1. Check the lighted Red LED is for the HDD2.
2. Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to “0”.
3. Turn OFF/ON the main power switch of the host machine to enable the setting value.
4. Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to “1”.
5. Turn OFF/ON e the main power switch of the host machine to enable the setting value.

The abovementioned procedure is limited only for the re-building process at the initial installation. The error occurred at re-building process during operation is not targeted.



Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:
At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.
Completion of the Installation Work:
Ask the system administrator to make sure that '2.01' is indicated for ‘Canon MFP Security Chip’ as the version information of the security chip by referring to the description of Checking the Security Version.
Maintenance of the Security Functions:
Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.
After installing this product, execute the image quality adjustment shown below. (Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust)
- Register Paper to Adjust
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

[TYPE-3] HDD Data Encryption & Mirroring Kit

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.
If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Setting Before Turning OFF the Power

CAUTION:
Be sure to turn OFF the main power after executing this service mode setting.
Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.
When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

☐

1. **Execute the following service mode (level 1).**
   COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

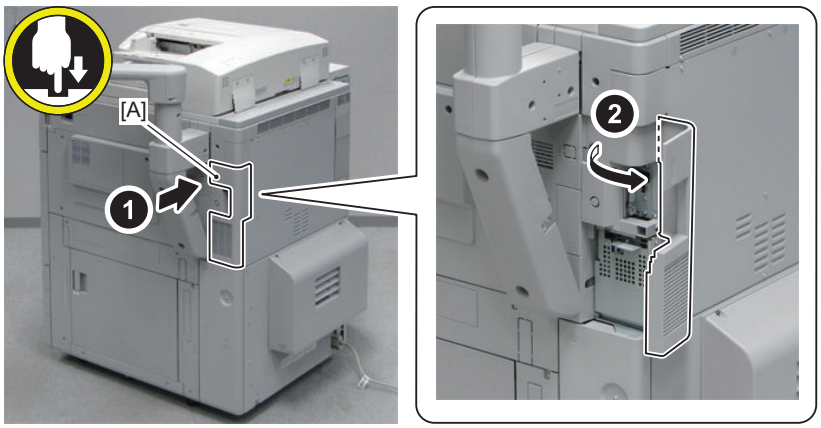
1. **Turn OFF the main power switch.**
2. **Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.**

Installation Procedure

■ Removing the HDD Unit

☐

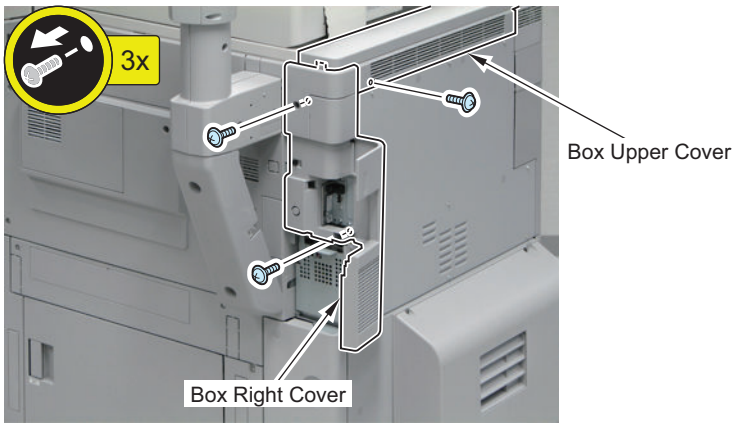
1. **Push the [A] part, and open the HDD Cover.**

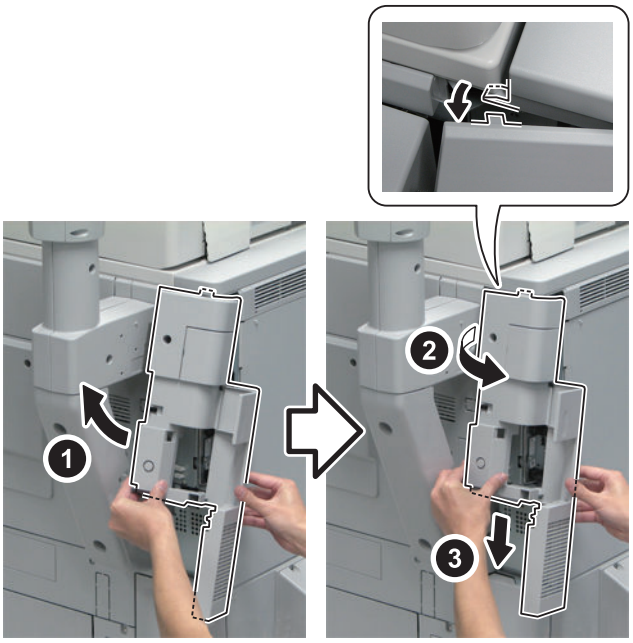


☐

2. **Remove the screw of the Box Upper Cover.**

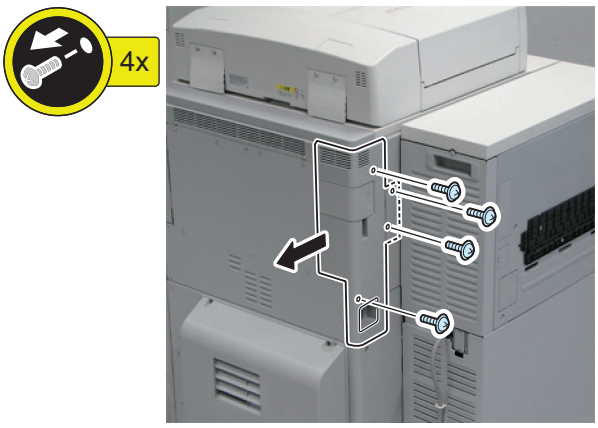
3. **Remove the Box Right Cover.**
   - 2 Screws
   - 1 Hook





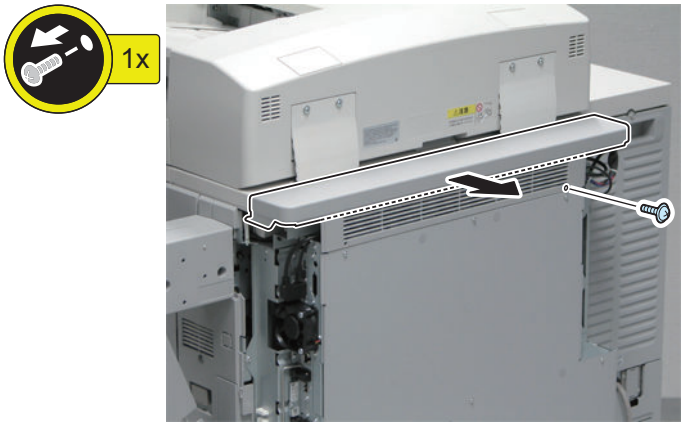
☐

4. **Remove the Box Left Cover.**
   - 4 Screws



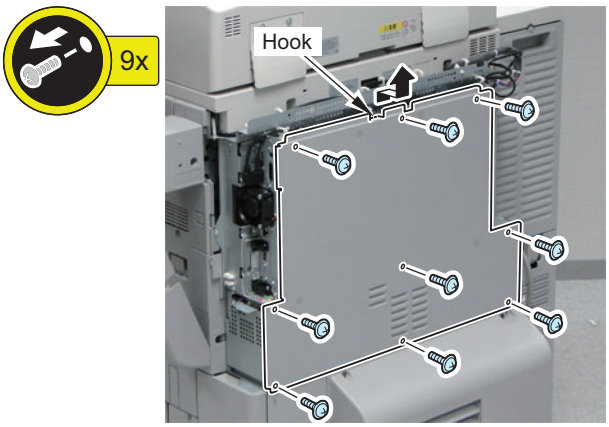
☐

5. **Remove the Box Upper Cover.**
   - 1 Screw



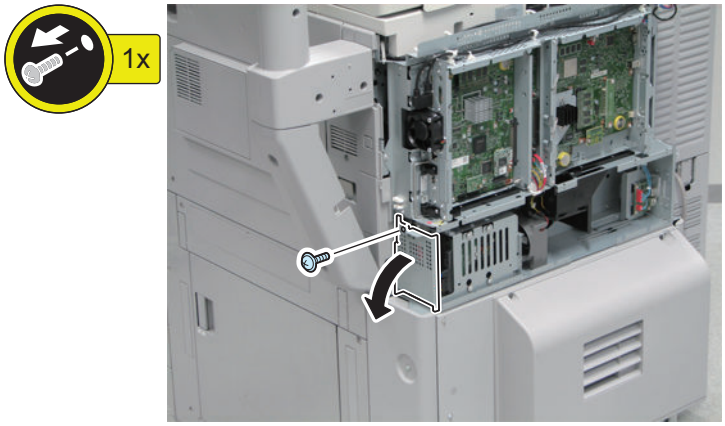
☐

6. **Remove the Rear Upper Cover.**
   - 9 Screws
   - 1 Hook



☐

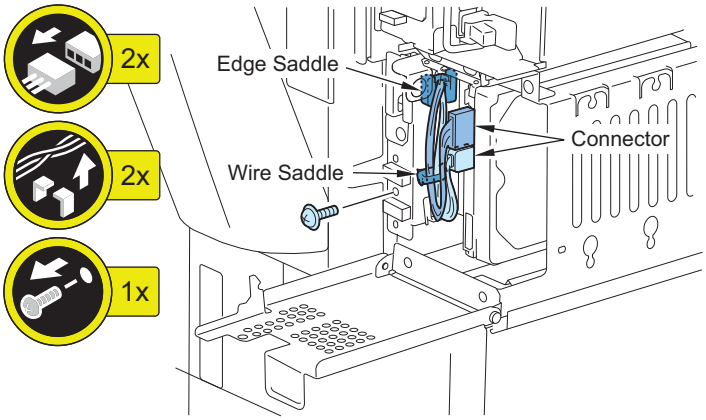
7. **Open the HDD Lid.**
   - 1 screw (The removed screw will be used in step 7 of "Installing the HDD Unit".)



☐

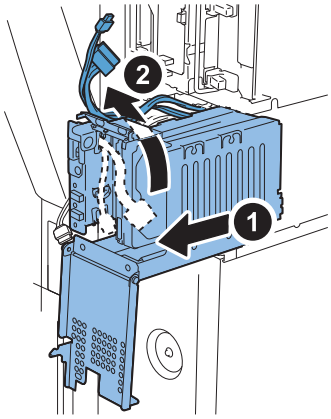
8. **Remove the Signal Cable and the Power Cable from the HDD.**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Edge Saddle

9. **Remove the screw of the HDD Unit. (The removed screw will be used in step 5 of "Installing the HDD Unit".)**

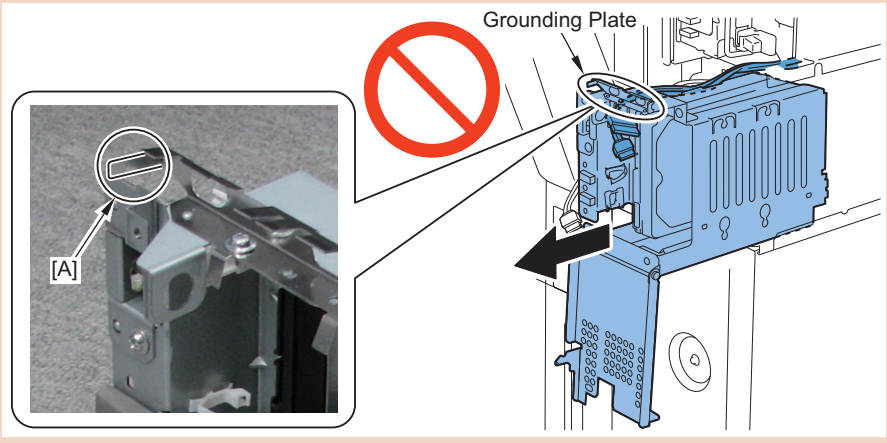


☐

10. **Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.**

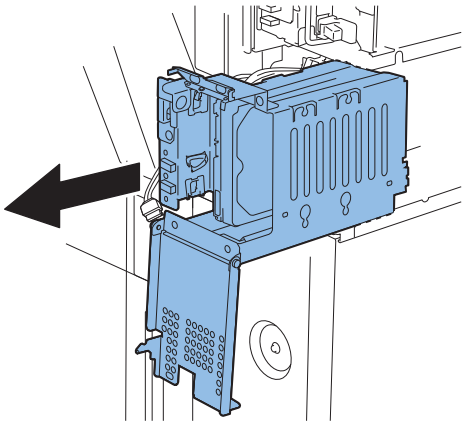


CAUTION:
- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.



☐

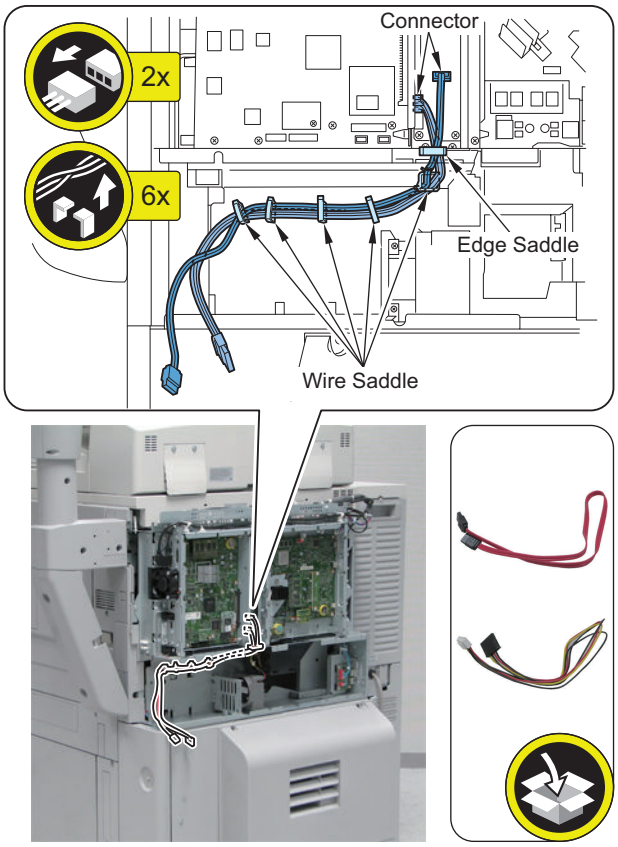
11. Remove the HDD Unit from the host machine.



☐

12. Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

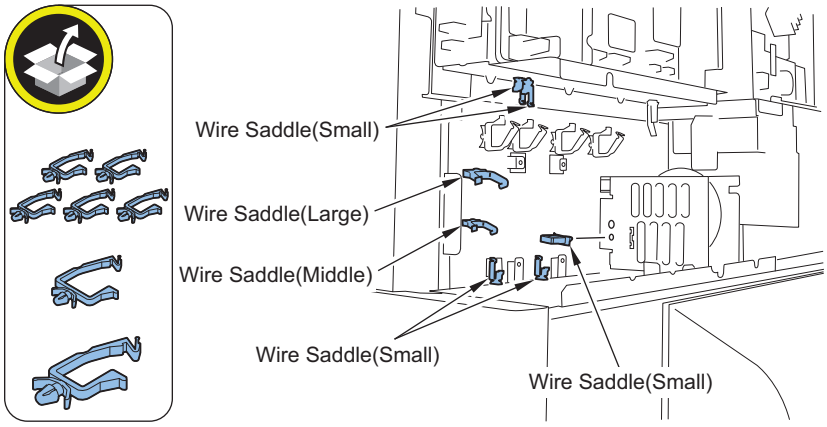
- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles



■ Installing the Encryption Board

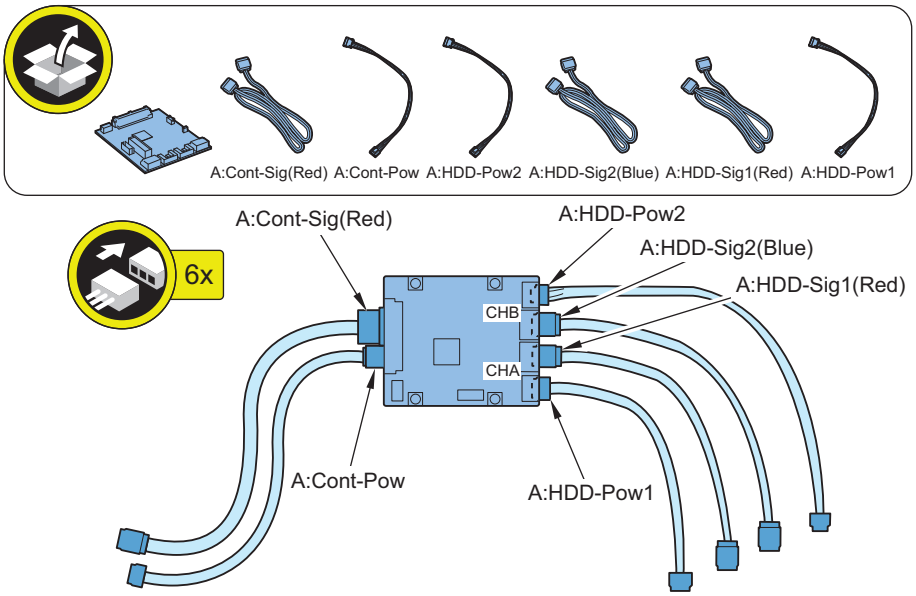
□

1. **Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 5 Wire Saddles (Small).**



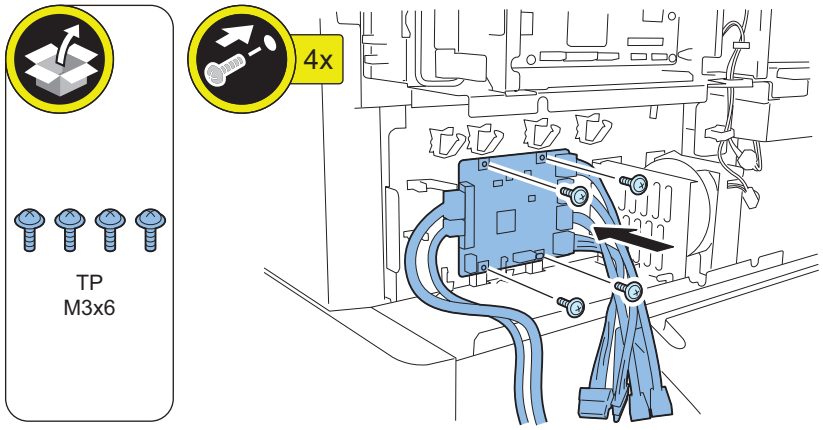
□

2. **Connect the Signal Cable and Power Cable to the Encryption Board.**
   - Signal Cable (450 mm; A:Cont-Sig (Red))
   - Power Cable (430 mm; A:Cont-Pow)
   - Power Cable (430 mm; A:HDD-Pow2)
   - Signal Cable (370 mm; A:HDD-Sig2 (Blue))
   - Signal Cable (340 mm; A:HDD-Sig1 (Red))
   - Power Cable (320 mm; A:HDD-Pow1)



☐

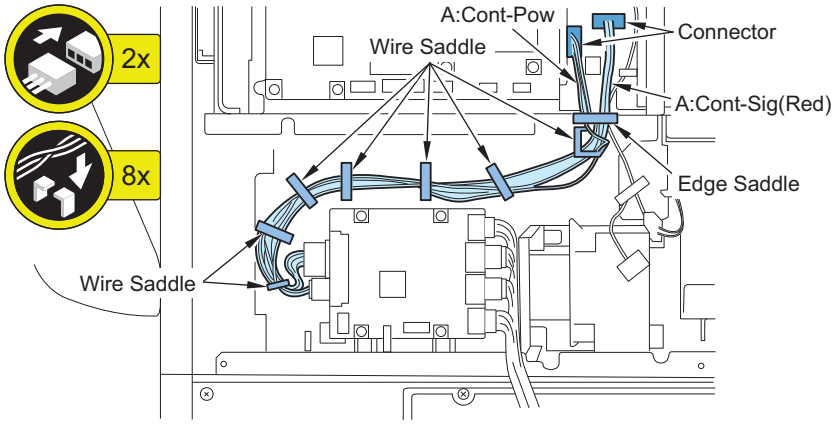
3. **Install the Encryption Board.**
   - 4 Screws (TP; M3 x 6)



☐

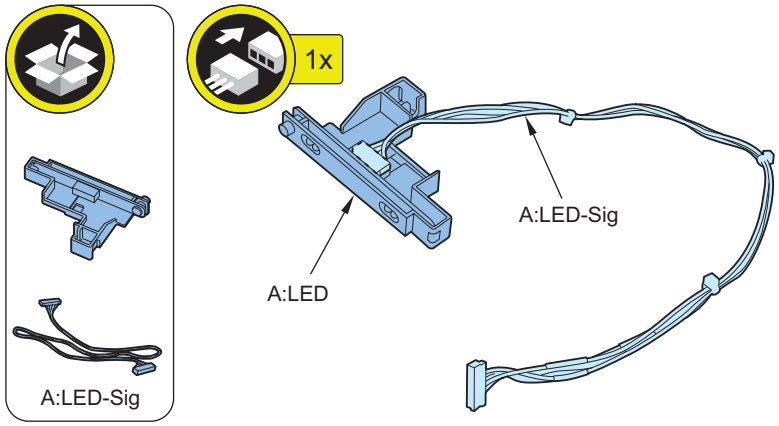
4. **Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).**
   - 2 Connectors
   - 1 Edge Saddle (To be closed)
   - 7 Wire Saddles (To be kept open)

CAUTION:
Route cables equally to eliminate unnecessary slack.



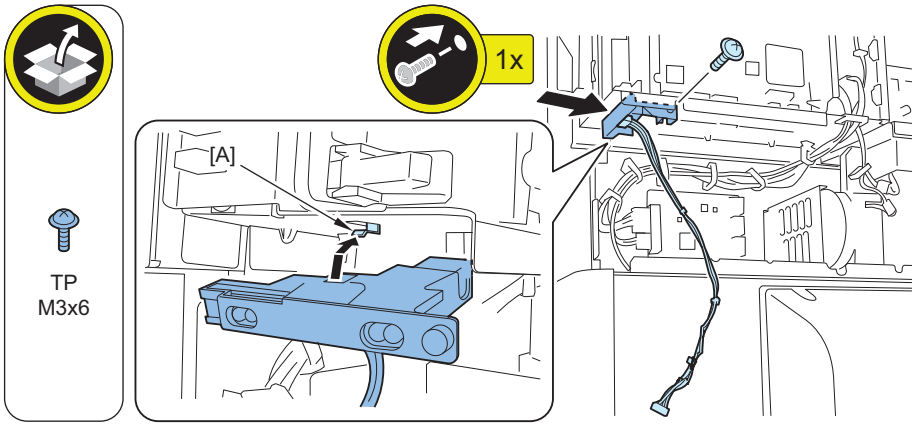
☐

5. **Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).**



☐

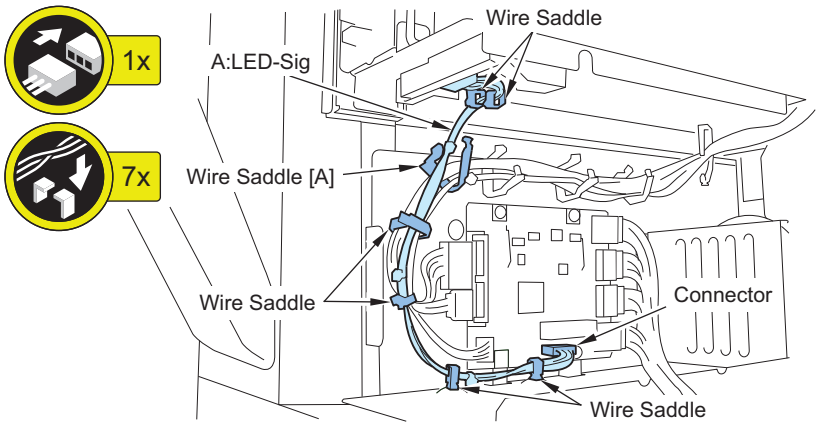
6. **Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.**
   - 1 Screw (TP; M3 x 6)



☐

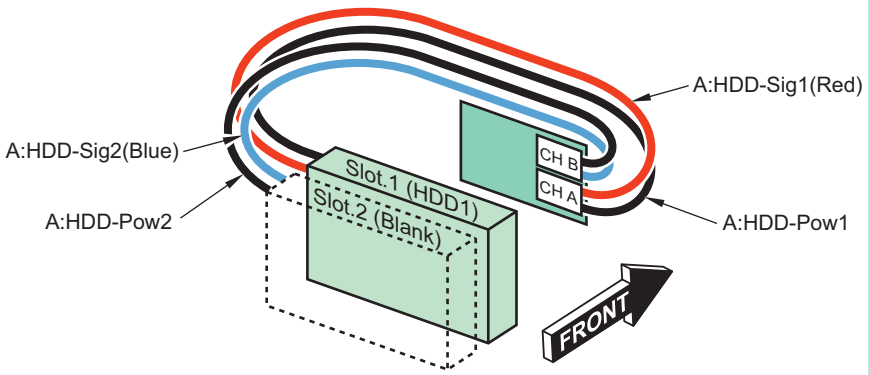
7. **Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.**
   - 1 connector
   - 7 Wire Saddles (Keep the Wire Saddle [A] open.)

CAUTION:
Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.



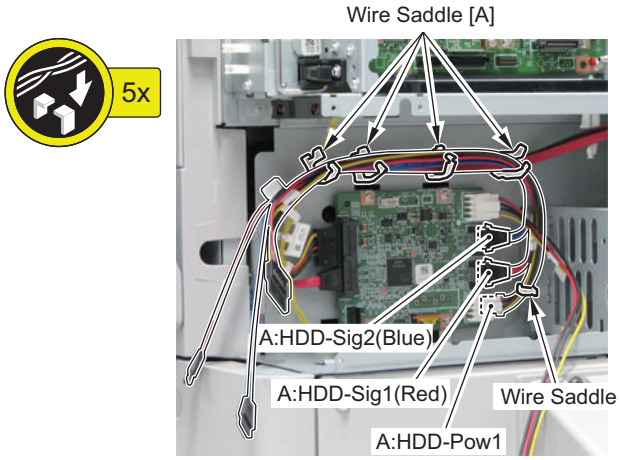
■ Installing the HDD Unit

NOTE:
The following shows the combination of the HDD and the Encryption Board.
- Connect Slot.1 to “CH A” (Host machine's HDD)
- No HDD to Slot.2



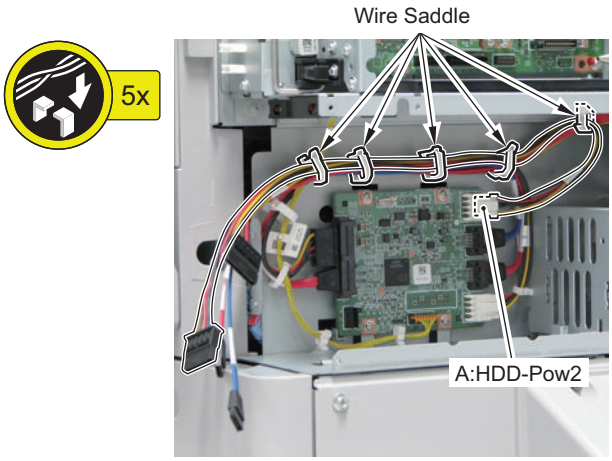
☐

1. **Pass the 3 cables through the 5 Wire Saddles as shown in the figure. (Keep the 4 Wire Saddles [A] open.)**



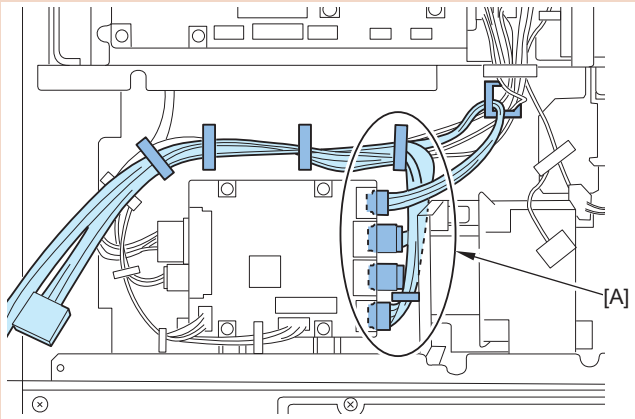
☐

2. **As shown in the figure, secure the Power Cable (430 mm; A:HDD-Pow2) with the 5 Wire Saddles, and close all the Wire Saddles.**



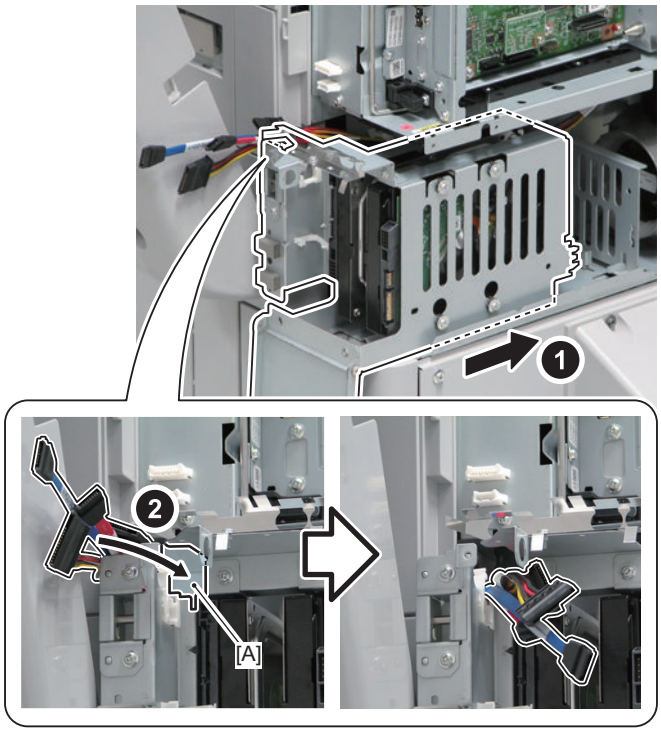
CAUTION:

- Be sure to take up slack of the cables.
- Be sure to tuck the [A] part of the cables to the rear side.



☐

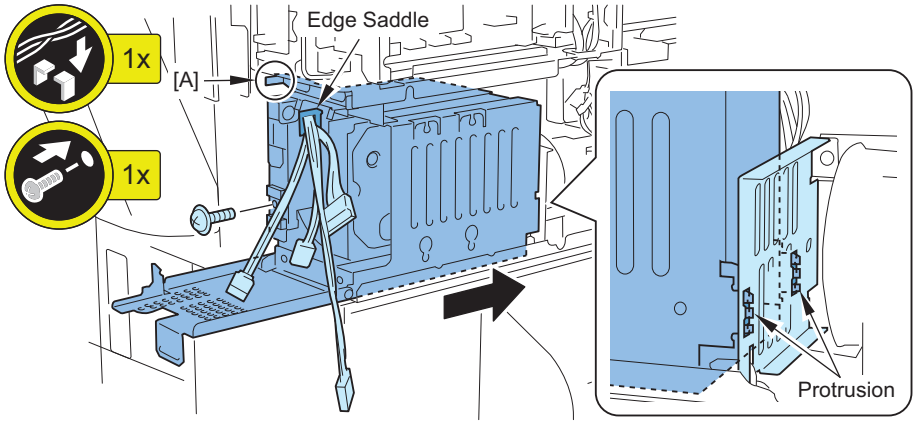
3. **Insert the HDD Unit approx. 2/3 along the rails of the host machine, and pass the 4 cables through the [A] part.**



☐

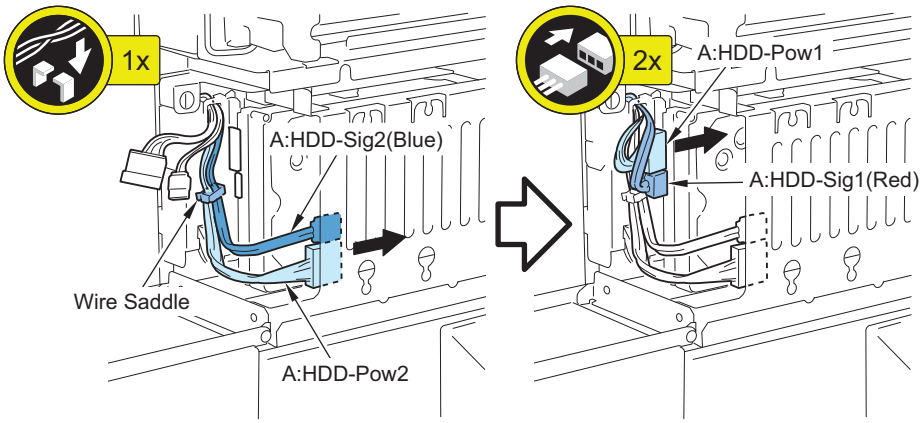
4. **Insert the HDD Unit until it stops.**
   - 2 Protrusions
5. **Secure the 4 cables with the Edge Saddle, and install the HDD Unit.**
   - 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)

CAUTION:
Do not deform the [A] part of the Grounding Plate.

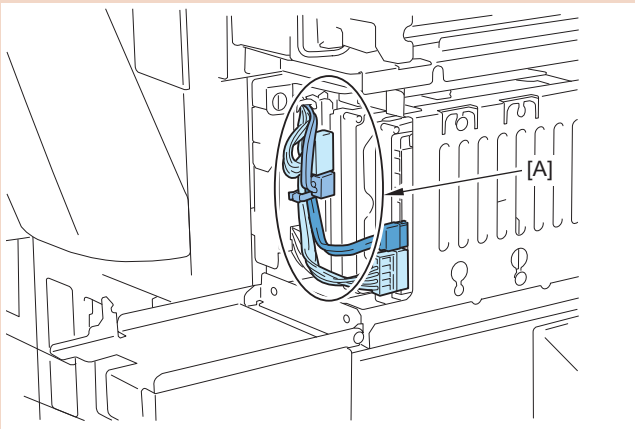


☐

6. **Connect the Signal Cable and the Power Cable to the HDD.**
   - Fix the Power Cable (430 mm; A:HDDPow2) and Signal Cable (370 mm; A:HDD-Sig2 (Blue)) with the wire saddle, and insert the connector into the empty space of Slot.2 side.
   - Connect the Power Cable (320 mm; A:HDD-Pow1) and the Signal Cable (340 mm; A:HDD-Sig1 (Red)) to Slot.1.



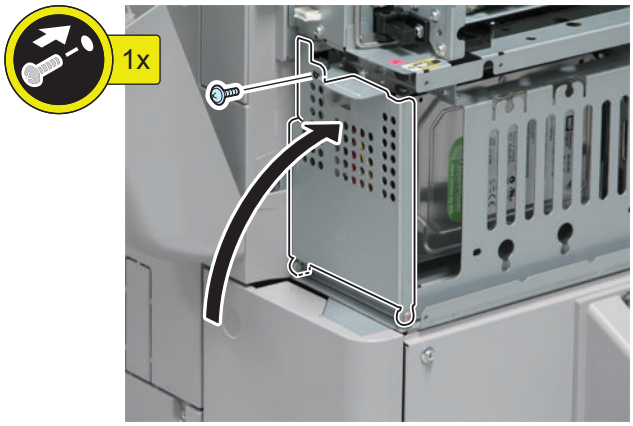
CAUTION:
If there is extra slack of the cables, be sure to tuck them in the [A] part.



☐

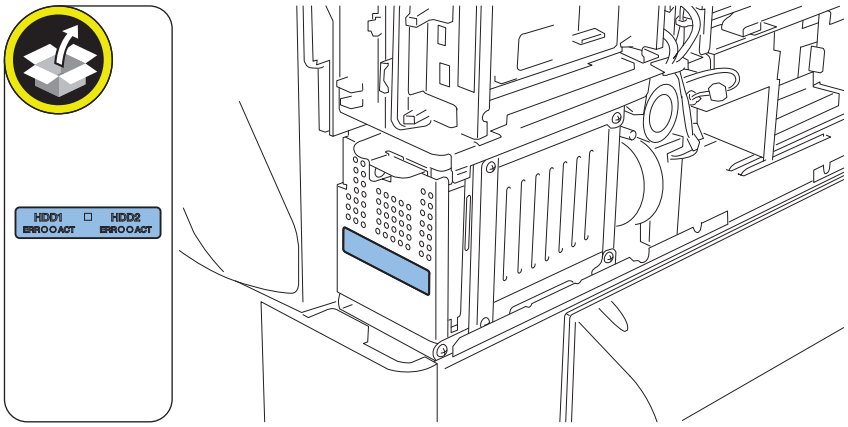
7. **Close the HDD Lid, and tighten the screw. (Use the screw removed in step 7 of "Removing the HDD Unit".).**

CAUTION:
Be careful not to trap the Cable.



☐

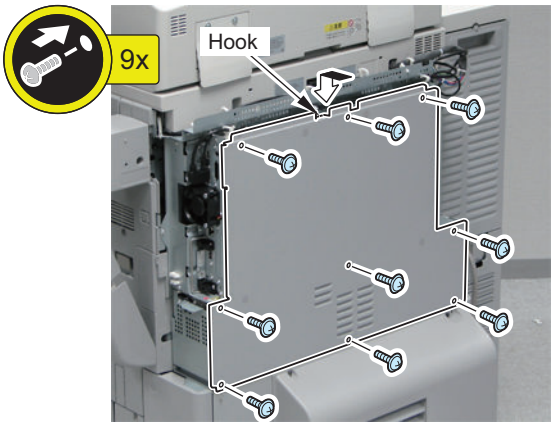
8. **Affix the LED Label according to align with the ruled line on the HDD Lid.**



☐

9. **Install the Rear Upper Cover.**
   - 1 Hook
   - 9 Screws

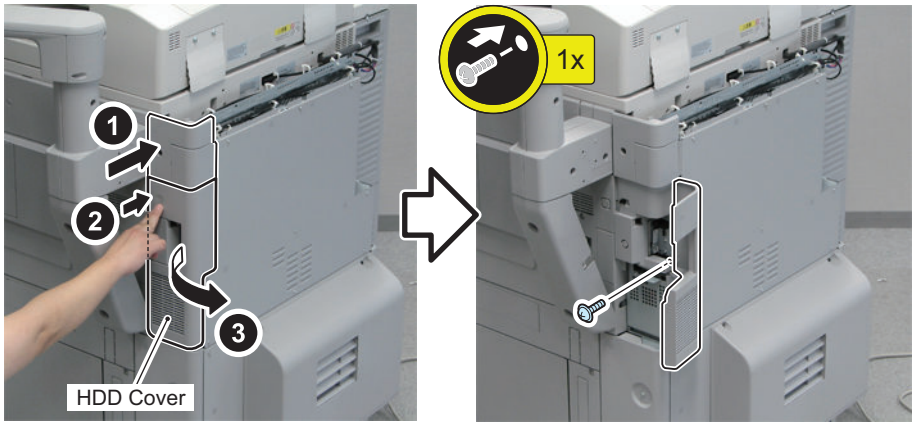
CAUTION:
When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.



☐

10. Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.



☐

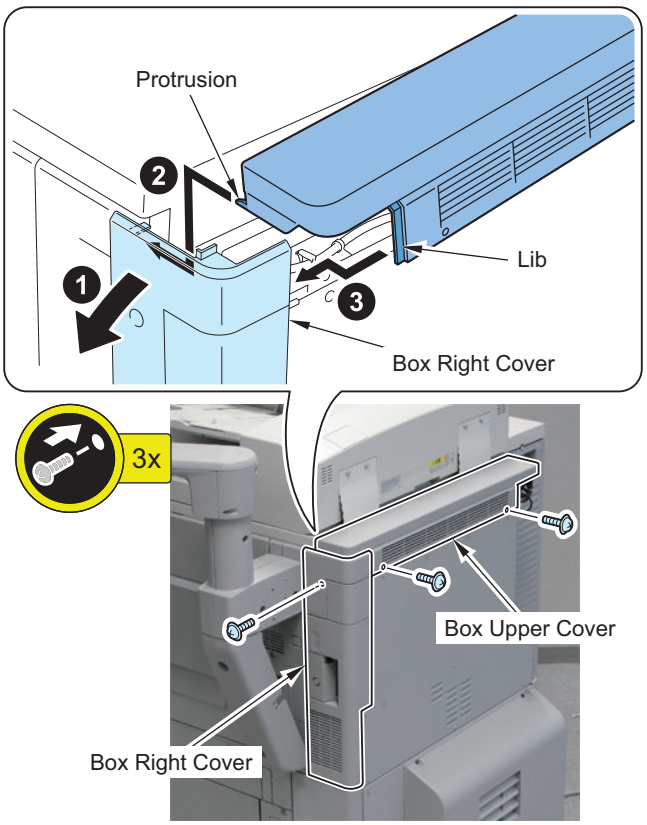
11. Close the HDD Cover.

☐

12. Install the Box Upper Cover.

- 1 Protrusion
- 1 Lib
- 2 Screws

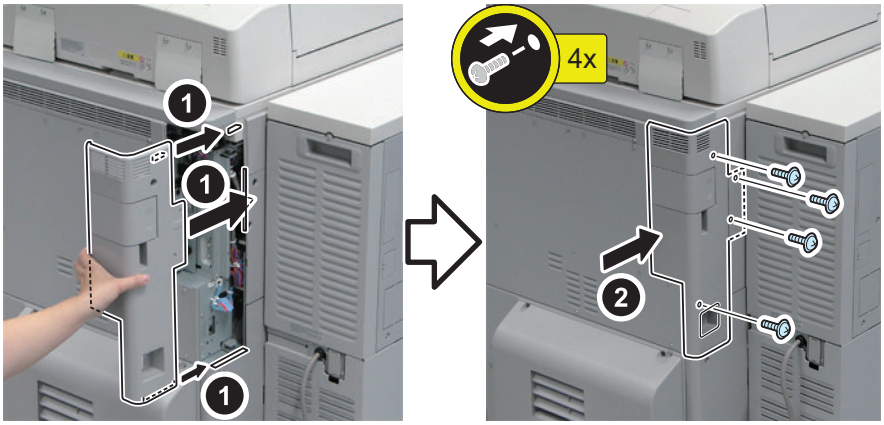
13. Install the screw of the Box Right Cover.



☐

14. **Install the Box Left Cover.**
    - 4 Screws

CAUTION:
Be careful not to trap the cable.



☐

15. **Connect the power plug to the outlet.**

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

■ 1. Requirements

1. **PC**
   Service Support Tool in the version that supports this host machine must be installed.
2. **Cross Ethernet Cable**

■ 2. Preparing for the Installation of the System Software of Host machine

1. **If both PC and the machine are on, turn them off.**
2. **Connect the PC and the host machine using an Cross Ethernet cable.**
3. **Turn on the PC.**
4. **Start up the host machine in download mode (safe mode).**

■ 3. Selecting the System Software

1. **Set the CD containing the latest System Software in the PC on which the SST is used.**
2. **Start up the SST.**
3. **Click ‘Register Firmware’.**
4. **Select the drive in which the System Software CD has been set, and click ‘SEARCH’.**
5. **Click ‘REGISTER’.**
6. **Click OK.**

■ 4. Downloading the System Software

1. **Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.**
2. **When initialization is completed, the host machine is automatically restarted and it enters download mode.**
3. **Select the version to be downloaded and click "Start".**
4. **When download is completed, the host machine is automatically restarted.**
5. **When writing of the firmware is completed, the host machine is automatically restarted.**
6. **Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.**
7. **Terminate the SST.**
8. **Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.**
9. **Check the version of the downloaded firmware in service mode.**

Checking the Security Version

1. **Press the Counter key (123 key) on the control panel.**
2. **Press the [Check Device Configuration] key appearing on the control panel.**
3. **Make sure that '2.01' is displayed in 'Canon MFP Security Chip' as version information of the security chip.**
   When several Encryption Boards are installed, multiple version information is displayed.

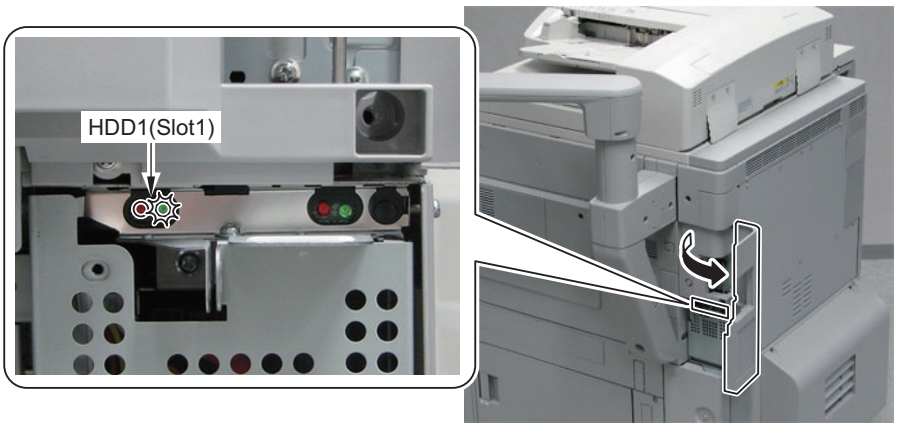
CAUTION:
The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:
< Confirming the Security Mark >
When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark ( ) is displayed on the lower left corner of a panel screen.

Checking After Installation

1. **Open the HDD Cover, and observe the LED to check that there is no error in communication with the HDD.**
   - The green LED of HDD1 (Slot.1) is flashing.



Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:
At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.
Completion of the Installation Work:
Ask the system administrator to make sure that '2.01' is indicated for ‘Canon MFP Security Chip’ as the version information of the security chip by referring to the description of Checking the Security Version.
Maintenance of the Security Functions:
Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.
After installing this product, execute the image quality adjustment shown below.
(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust)
- Register Paper to Adjust
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

[TYPE-4] Option HDD + Removable HDD Kit + HDD Data Encryption & Mirroring Kit

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.
If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Setting Before Turning OFF the Power

CAUTION:
Be sure to turn OFF the main power after executing this service mode setting.
Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.
When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

☐

1. **Execute the following service mode (level 1).**
   COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

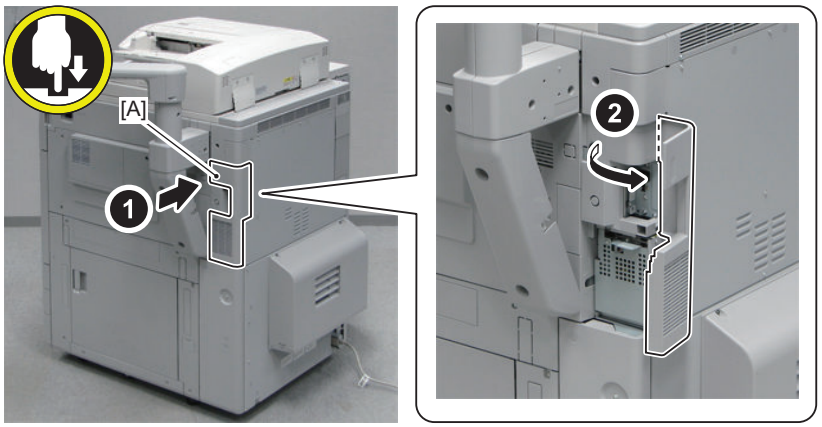
1. **Turn OFF the main power switch.**
2. **Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.**

Installation Procedure

■ Removing the HDD Unit

☐

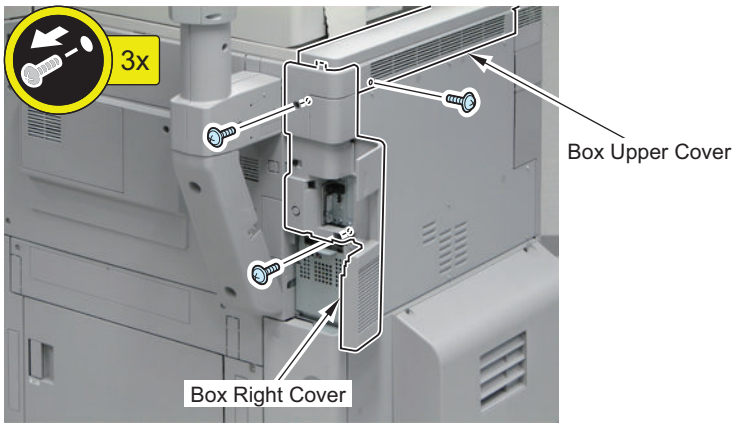
1. **Push the [A] part, and open the HDD Cover.**

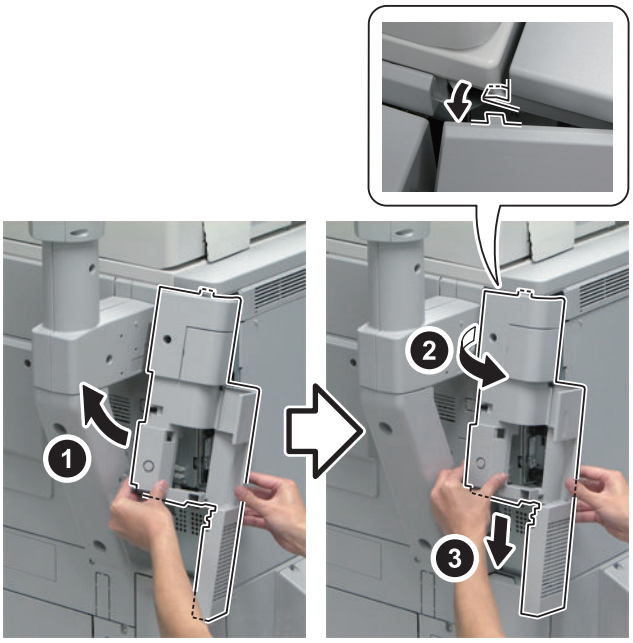


☐

2. **Remove the screw of the Box Upper Cover.**

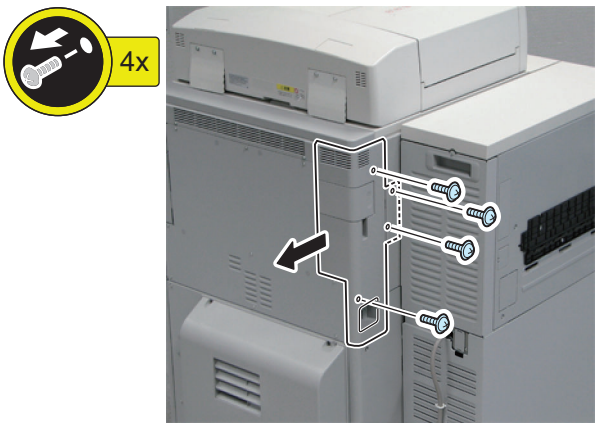
3. **Remove the Box Right Cover.**
   - 2 Screws
   - 1 Hook





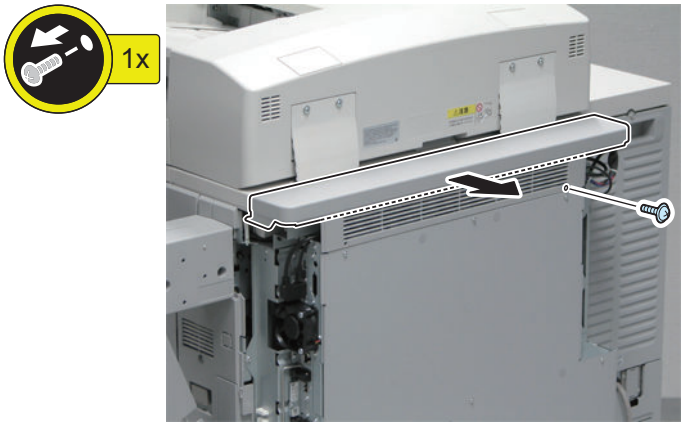
☐

4. **Remove the Box Left Cover.**
   - 4 Screws



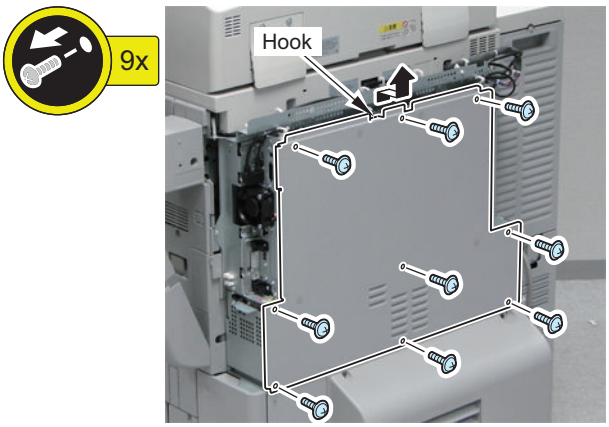
☐

5. **Remove the Box Upper Cover.**
   - 1 Screw



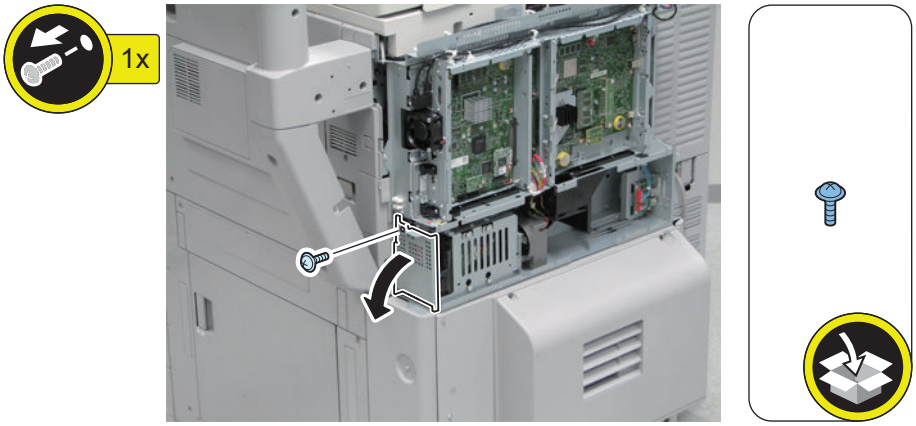
☐

6. **Remove the Rear Upper Cover.**
   - 9 Screws
   - 1 Hook



☐

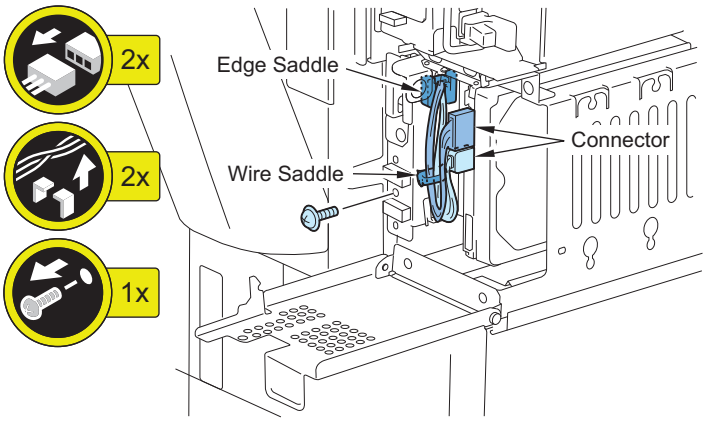
7. **Open the HDD Lid.**
   - 1 Screw (The removed screw will no longer be used.)



☐

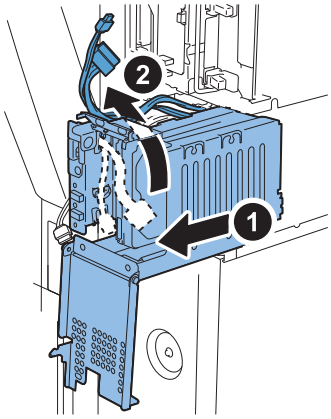
8. **Remove the Signal Cable and the Power Cable from the HDD.**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Edge Saddle

9. **Remove the screw of the HDD Unit. (The removed screw will be used in step 10 of "Installing the Removable HDD Unit".)**

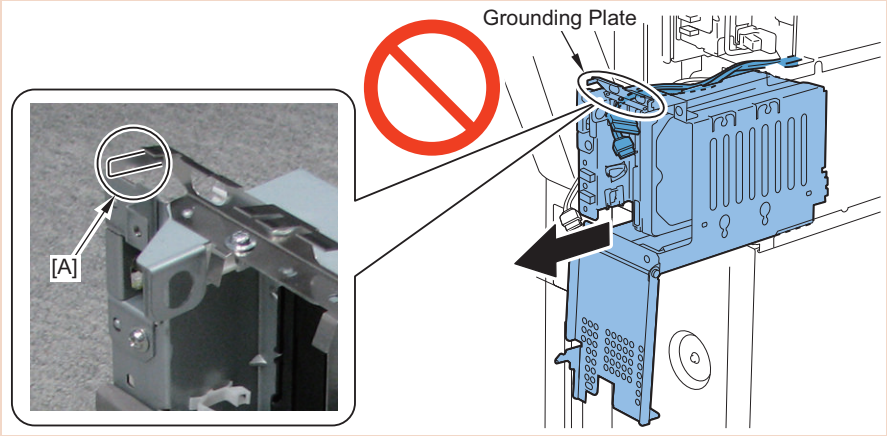


☐

10. **Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.**

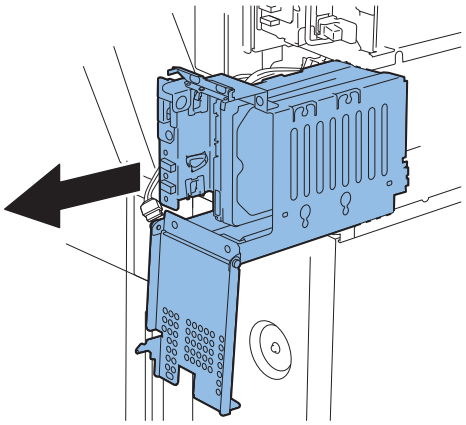


CAUTION:
- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.



☐

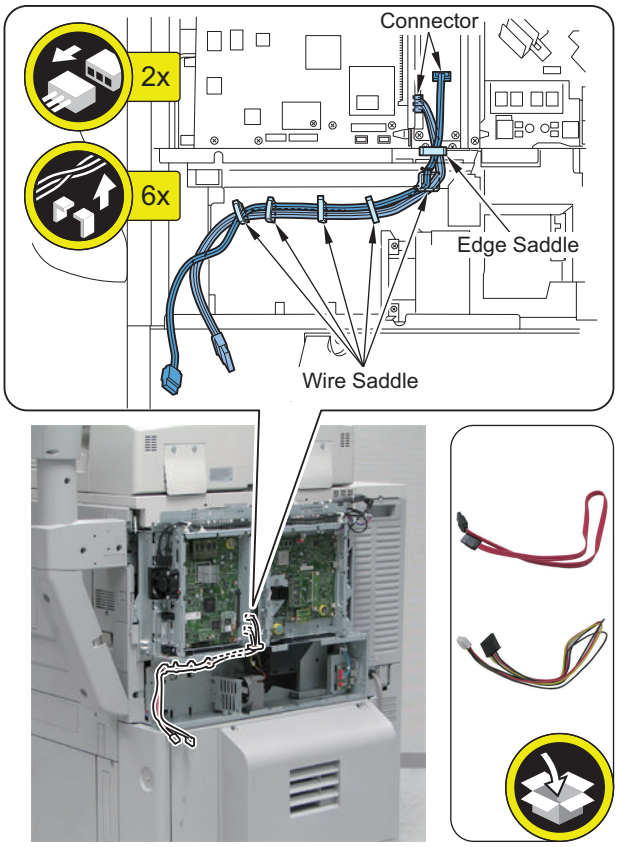
11. Remove the HDD Unit from the host machine.



☐

12. Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

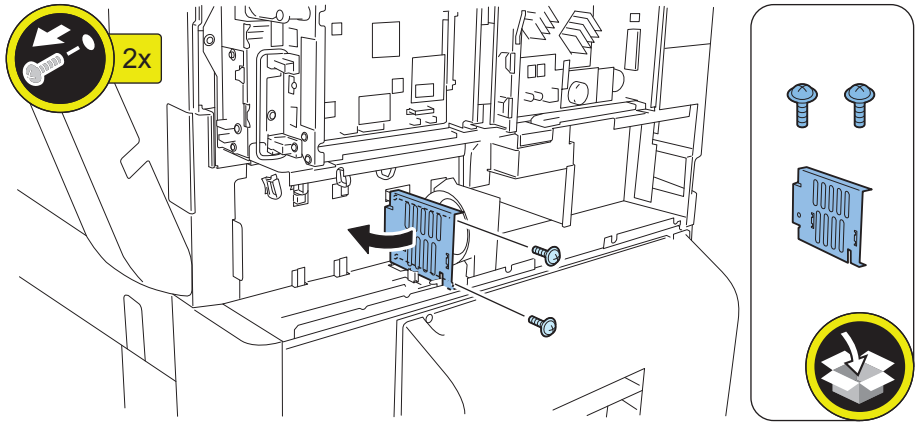
- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles



■ Installing the Fan Duct / Fan Keyboard Unit

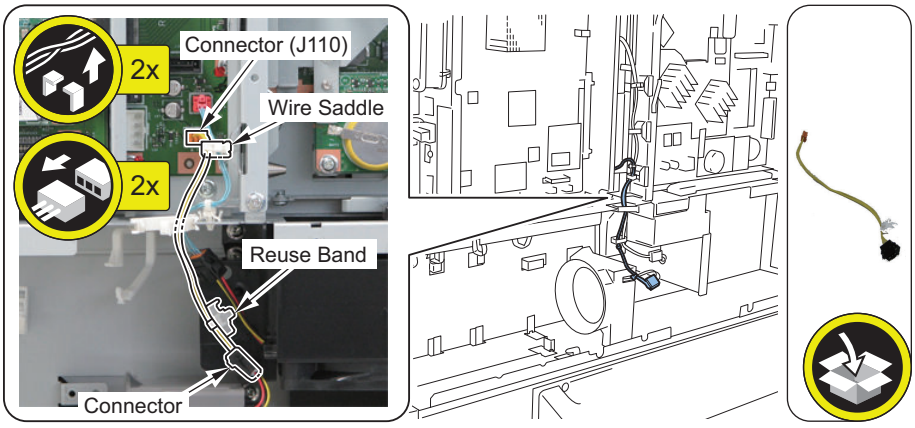
☐

1. **Remove the plate. (The removed plate and screws will no longer be used.)**
   - 2 screws



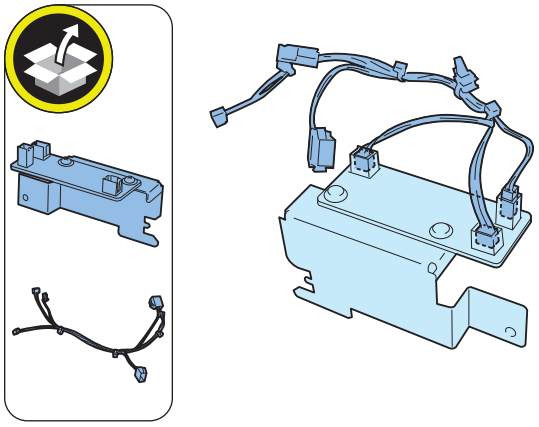
☐

2. **Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Reuse Band



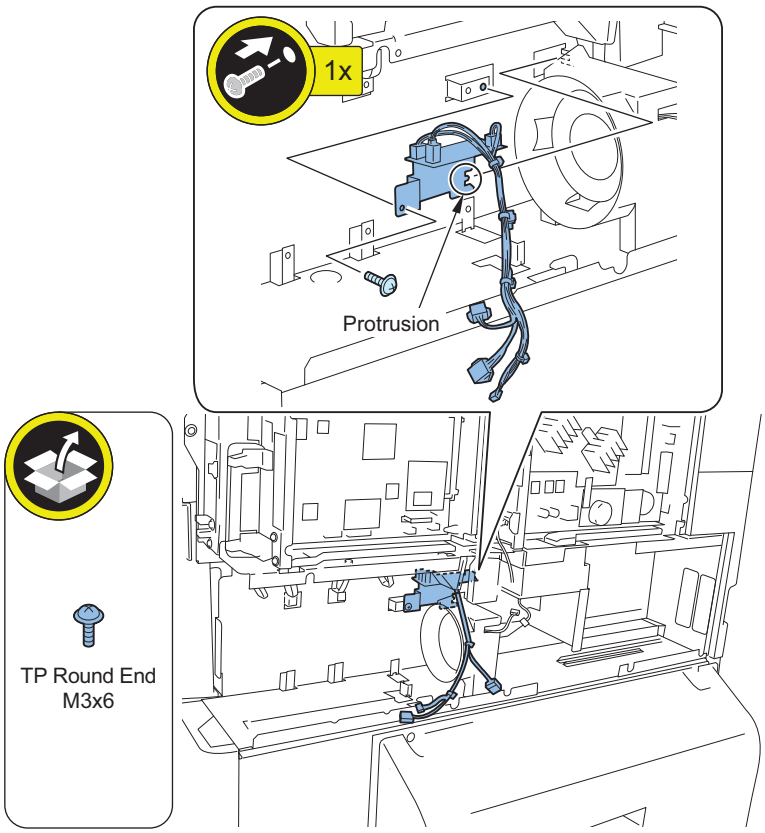
☐

3. **Install the included in Fan Cable to the Fan Keyboard Unit.**
   - 3 Connectors



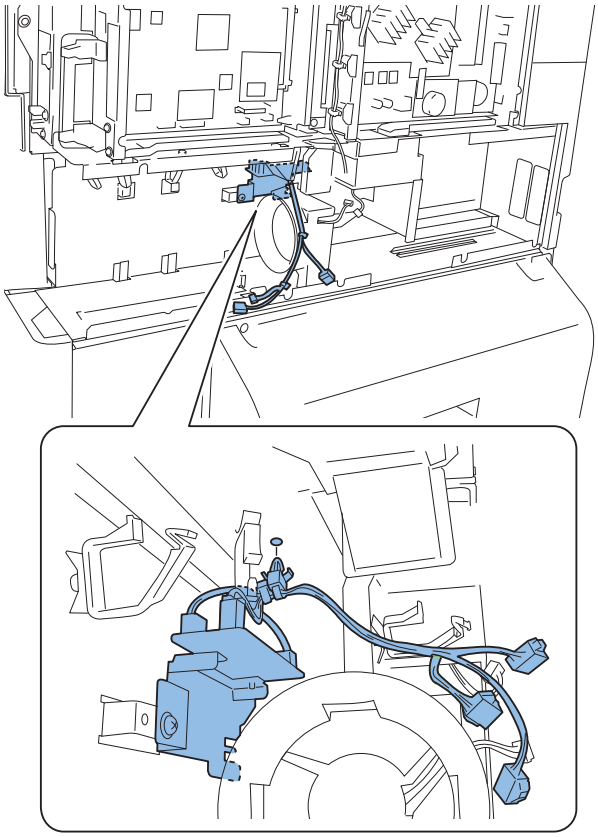
☐

4. **Install the Fan Keyboard Unit.**
   - 1 Protrusion
   - 1 Screw (TP Round End; M3 x 6)



☐

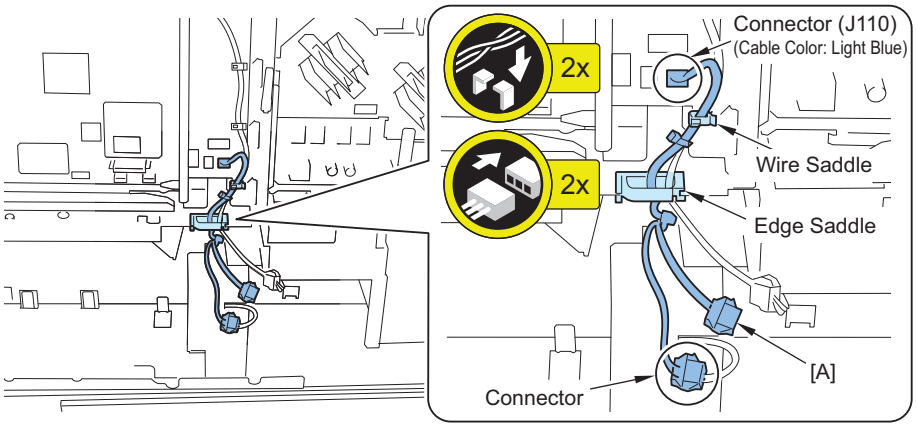
5. **Insert the Reuse Band of the Fan Cable.**



☐

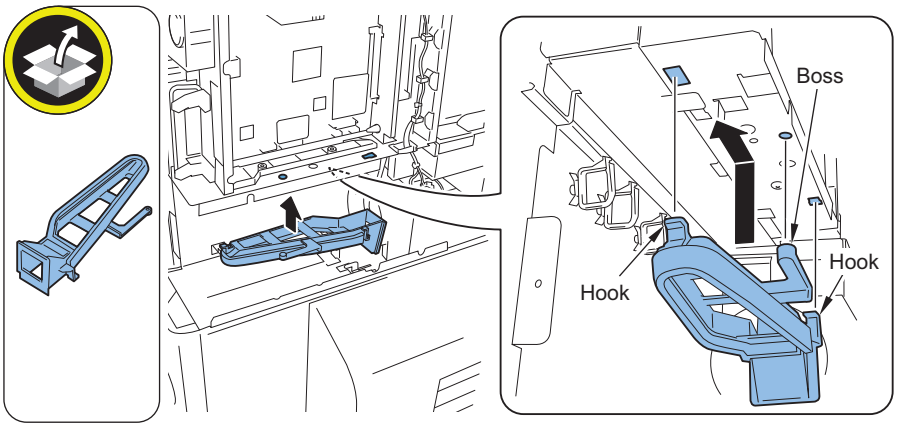
6. **Connect the 2 Connectors of the Fan Cable.**
   - 1 Wire Saddle(To be closed)
   - 1 Edge Saddle (To be kept open)

NOTE:
The connector [A] will be used to connect in the step 6 of “Installing the Removable HDD Unit”.



☐

7. **Slide the Fan Duct in the arrow direction, and install.**
   - 2 Hooks
   - 1 Boss

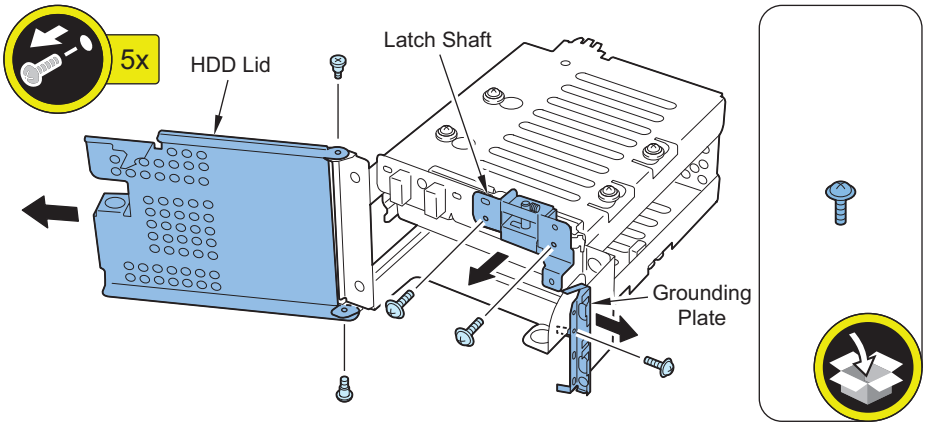


■ Replacing to the Removable HDD Unit

☐

1. **Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)**
   - 2 Screws
2. **Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)**
   - 2 Screws

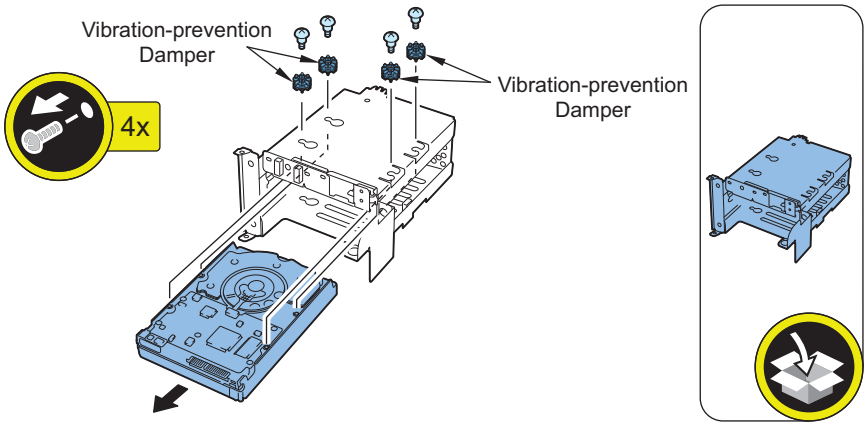
3. **Remove the Grounding Plate. (The removed Grounding Plate will be used in step 9.)**
   - 1 Screw (The removed screw will no longer be used.)



☐

4. **Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)**
   - 4 Screws (The removed screws will be used in step 13.)
   - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 13.)

CAUTION:
Hold and support the HDD with a hand to prevent from dropping off.

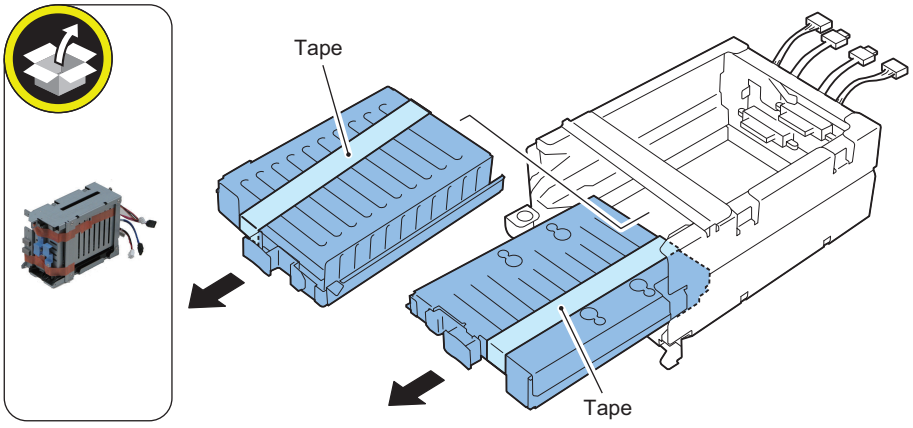


☐

5. **Remove the tape affixed to the outside of the Removable HDD Unit.**

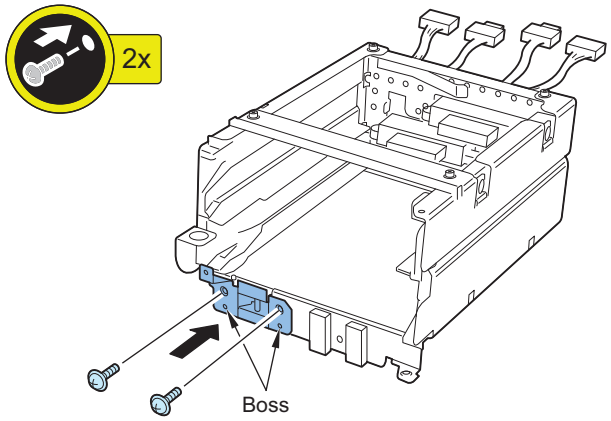
☐

6. **Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.**



☐

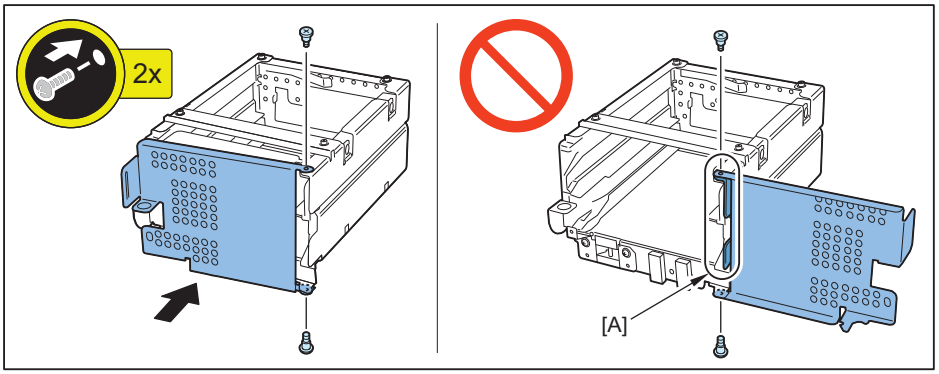
7. **Install the Latch Shaft removed at step 2 to the Removable HDD Unit.**
   - 2 Bosses
   - 2 Screws (Use the screws removed in step 2.)



☐

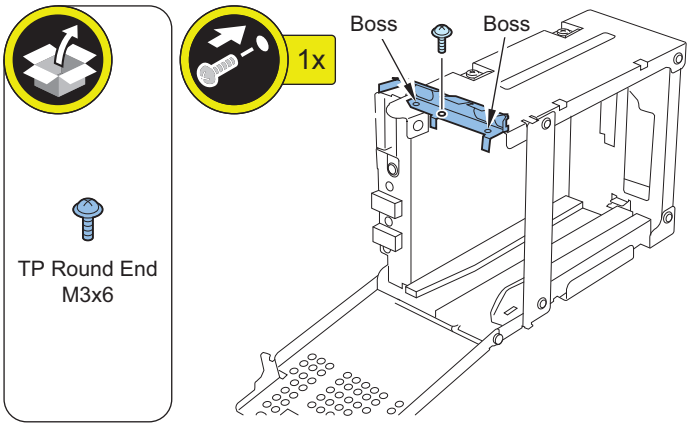
8. **Install the HDD Lid removed at step 1 to the Removable HDD Unit.**
   - 2 Screws (Use the screws removed in step 1.)

NOTE:
When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.



☐

9. **Install the Grounding Plate removed at step 3.**
   - 2 Bosses
   - 1 Screw (TP Round End; M3 x 6)

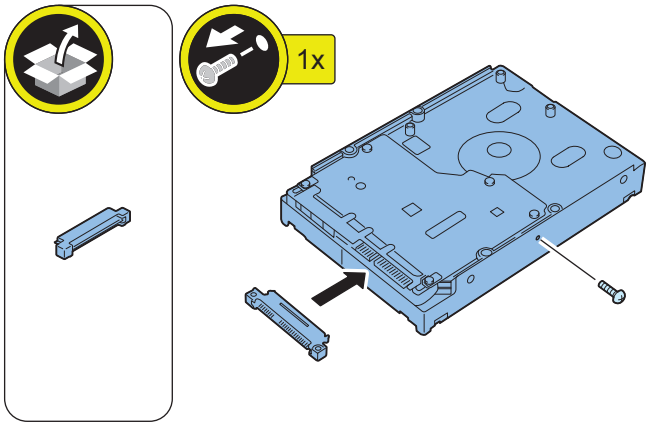


< Disassembling and Assembling of the HDD Removed from the Host Machine (the First HDD) >

☐

10. Remove the screw of the HDD. (The removed screw will be used in step 13.)

11. Install the Conversion Connector to the HDD.

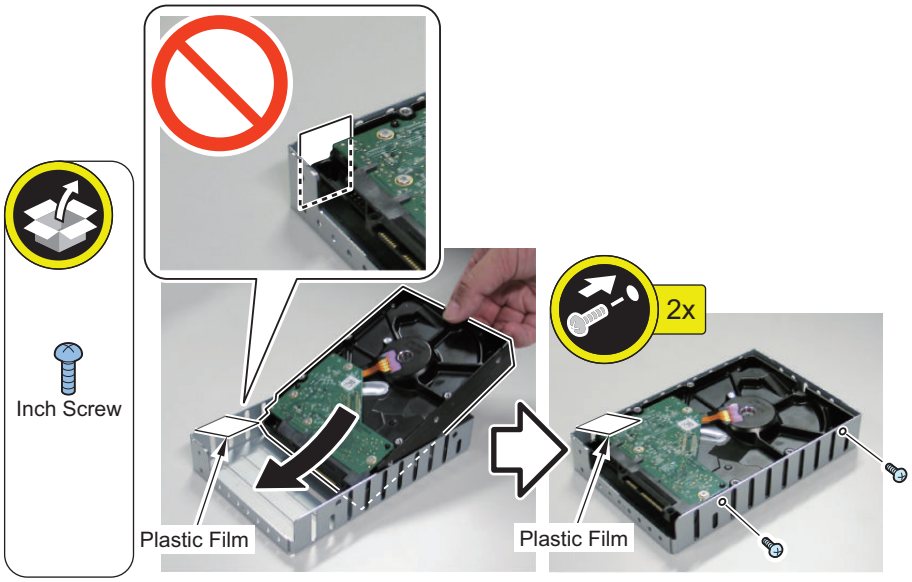


☐

12. Install the HDD in the Removable HDD Case as shown in the figure.

- 1 Screw (Use the screw removed in step 10.)
- 1 Inch Screw (Included in the Removable HDD Kit.)

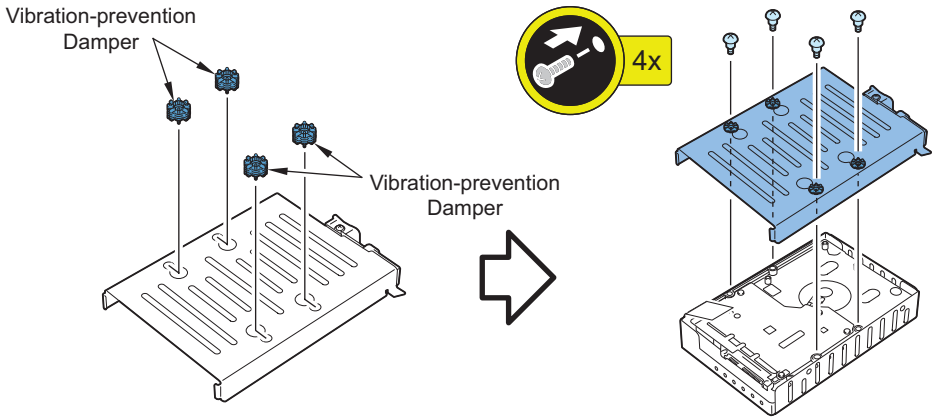
CAUTION:
The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 13) from coming in contact with the PCB of the HDD, resulting in short circuit.
Be sure to check that the Plastic Film is over the PCB of the HDD.



☐

13. Install the Removable HDD Case Cover to the HDD.

- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
- 4 Screws (Use the screws removed in step 4.)

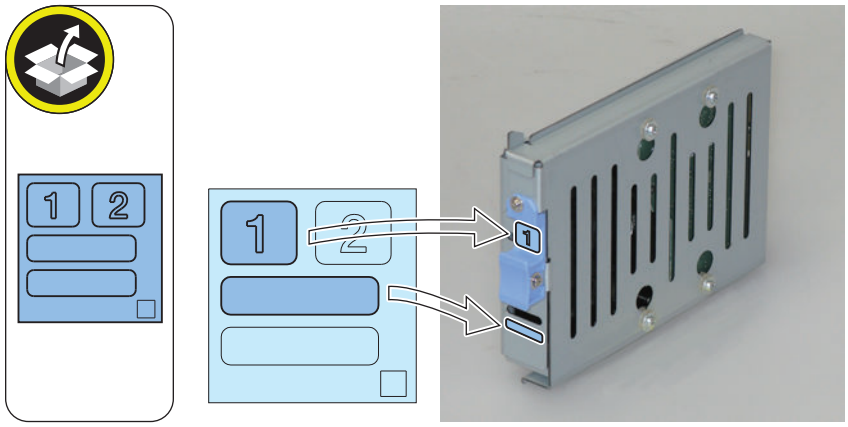


☐

14. Affix the No.1 of the R-HDDLabel to the handle of the assembled Removable HDD.

15. Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

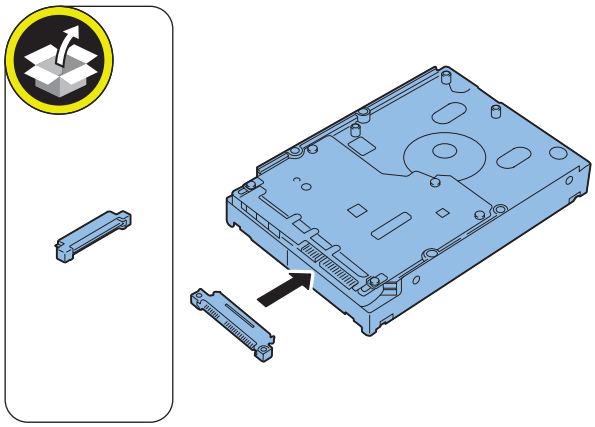
CAUTION:
Be sure that the Removable HDD is in the correct direction.



< Assembling the Option HDD (the Second HDD) >

☐

16. Install the Conversion Connector to the Option HDD.

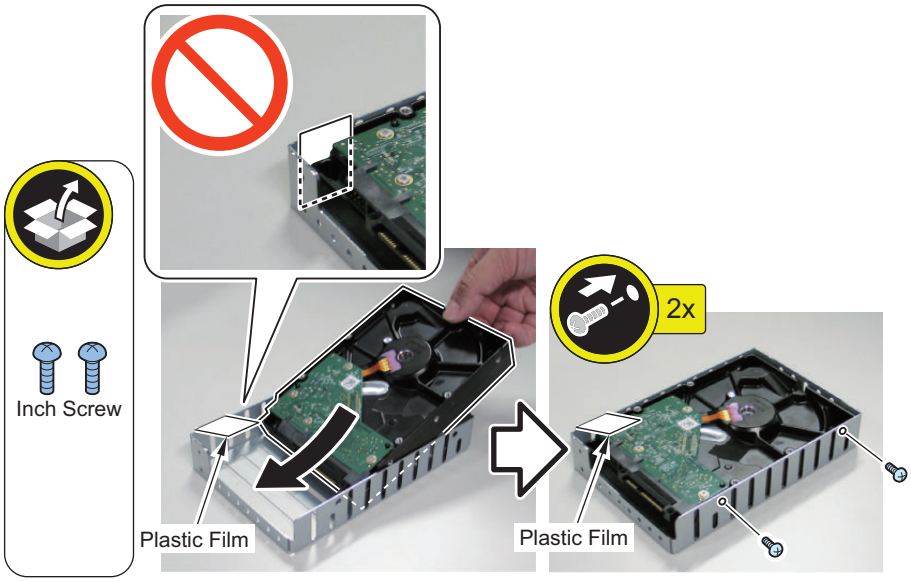


☐

17. Install the Option HDD in the Removable HDD Case as shown in the figure.

- 2 Inch Screws

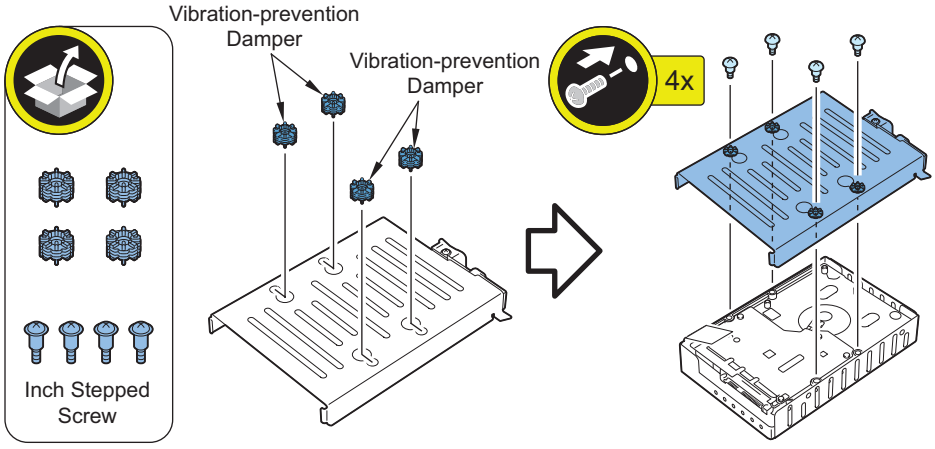
CAUTION:
The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 18) from coming in contact with the PCB of the HDD, resulting in short circuit.
Be sure to check that the Plastic Film is over the PCB of the HDD.



☐

18. Install the Removable HDD Case Cover to the HDD.

- 4 Vibration-prevention Dampers
- 4 Inch Stepped Screws

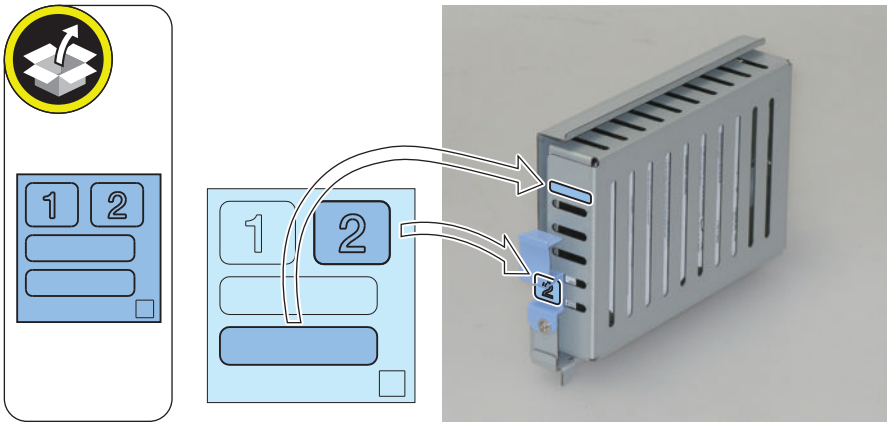


☐

19. Affix the No.2 of the R-HDDLabel to the handle of the assembled Removable HDD.

20. Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

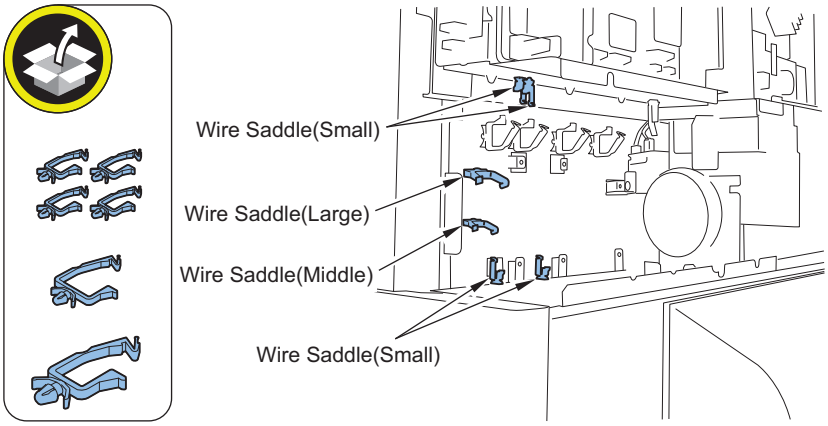
CAUTION:
Be sure that the Removable HDD is in the correct direction.



■ Installing the Encryption Board

☐

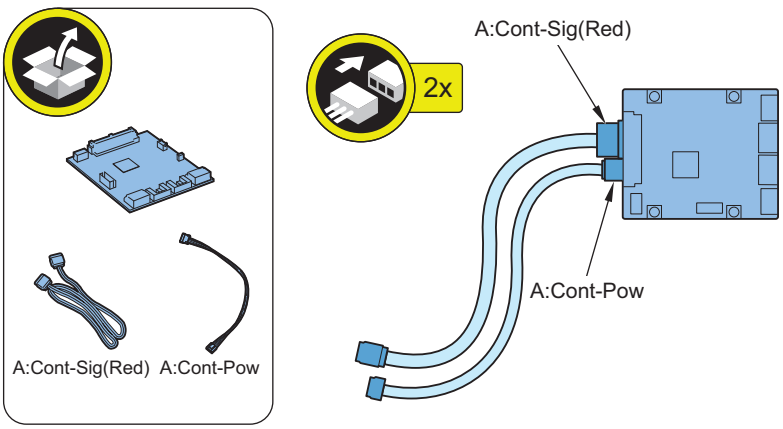
1. Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 4 Wire Saddles (Small).



☐

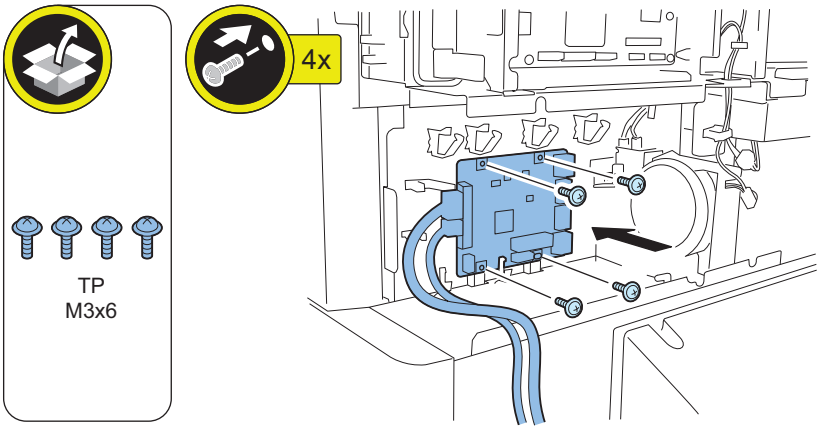
2. Connect the Signal Cable and Power Cable to the Encryption Board.

- Signal Cable (450 mm; A:Cont-Sig (Red))
- Power Cable (430 mm; A:Cont-Pow)



☐

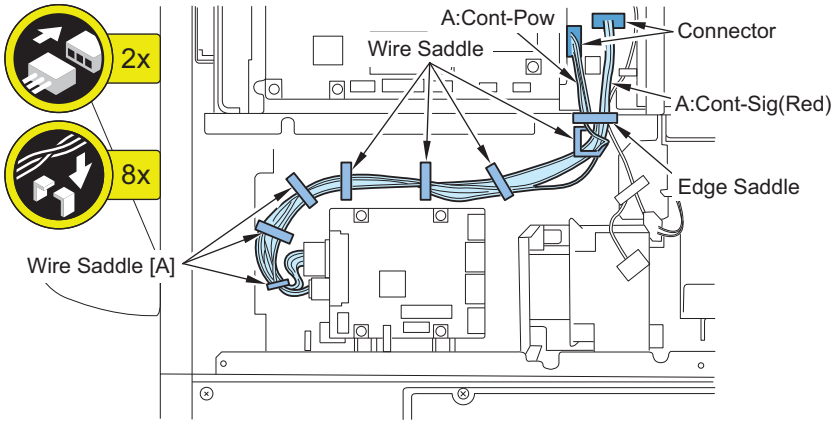
3. **Install the Encryption Board.**
   - 4 Screws (TP; M3 x 6)



☐

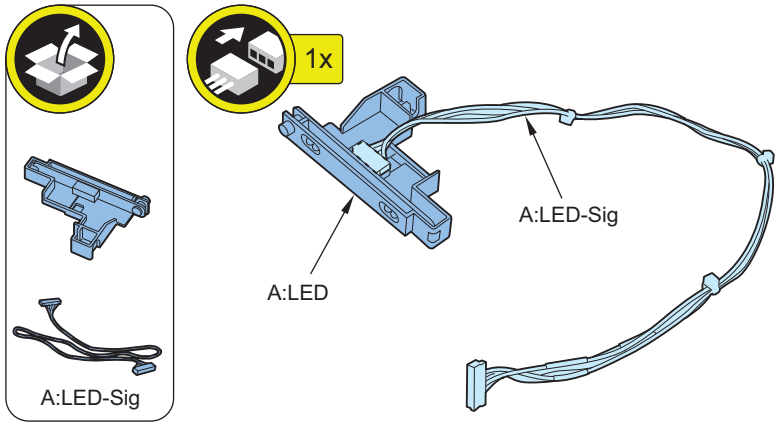
4. **Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).**
   - 2 Connectors
   - 1 Edge Saddle
   - 7 Wire Saddles (Keep the 3 Wire Saddles [A] open.)

CAUTION:
Route cables equally to eliminate unnecessary slack.



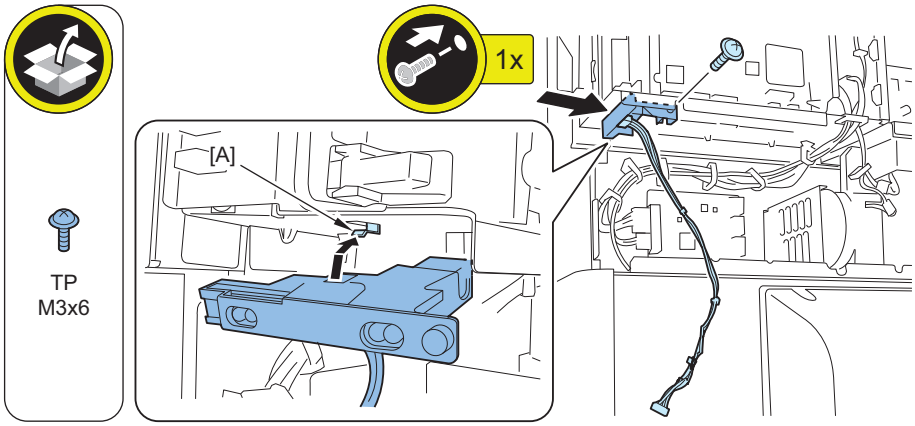
☐

5. **Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).**



☐

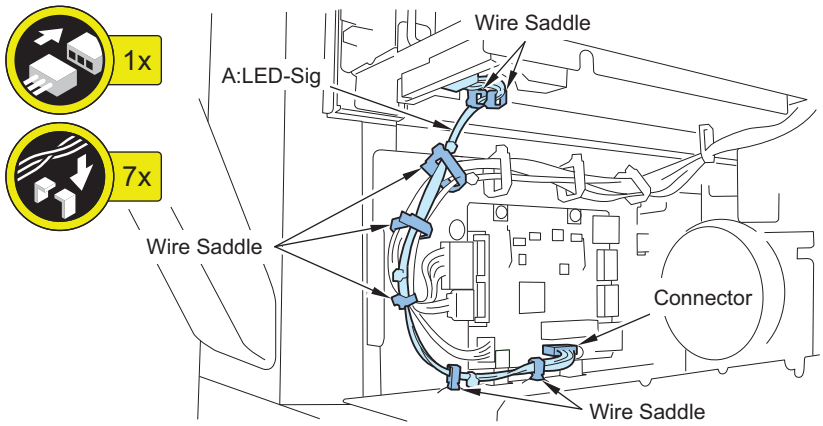
6. **Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.**
   - 1 Screw (TP; M3 x 6)



☐

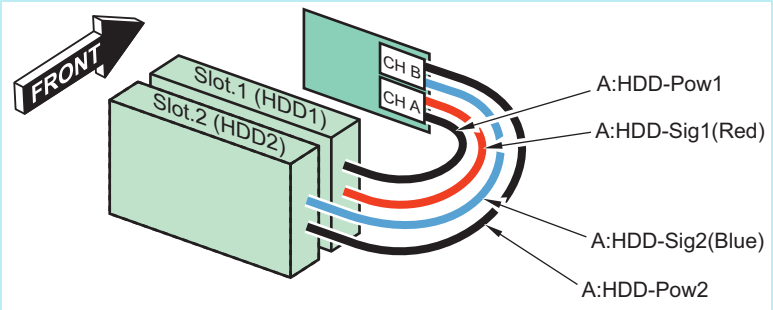
7. **Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.**
   - 1 Connector
   - 7 Wire Saddles

CAUTION:
Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.



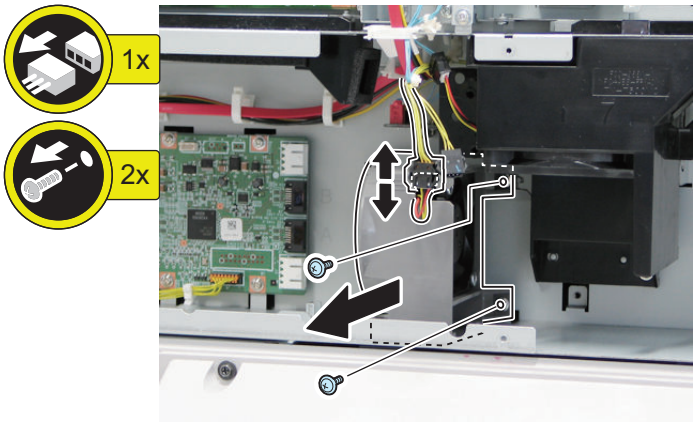
■ Installing the Removable HDD Unit

NOTE:
The following shows the combination of the HDD and the Encryption Board.
- Connect Slot.1 to “CH A” (Host machine's HDD)
- Connect Slot.2 to “CH B” (Option HDD)



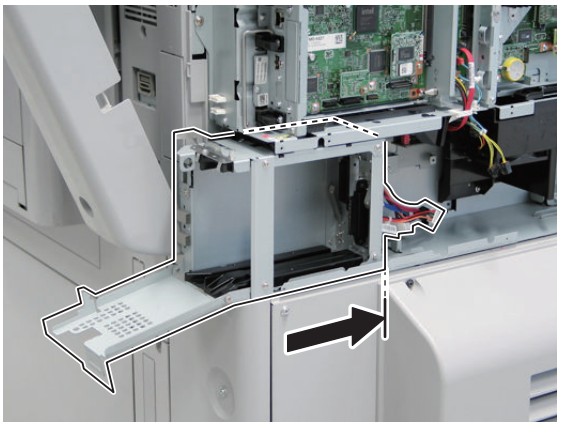
☐

1. **Remove the HDD Cooling Fan to make it easier to connect the cable.**
   - 1 Connector
   - 2 Screws (The removed screws will be used in step 4.)



☐

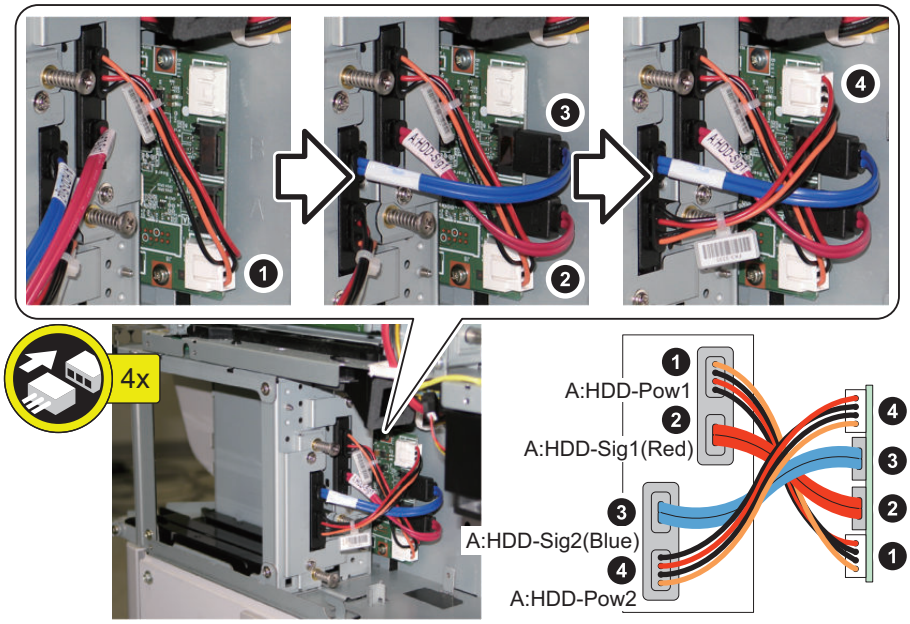
2. **Insert 2/3 of the Removable HDD Unit along with the rail on the host machine.**



☐

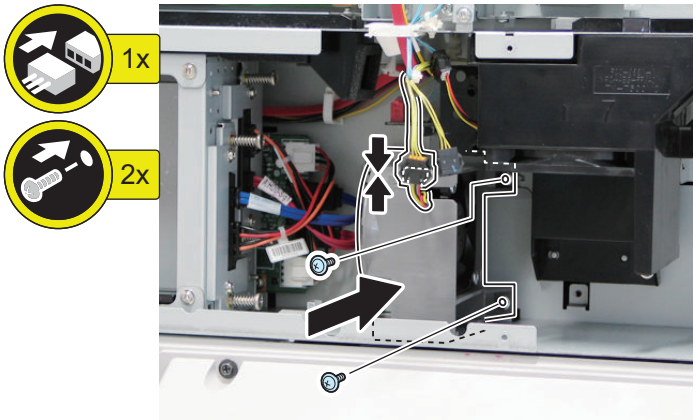
3. **Connect the Signal Cable and the Power Cable to the Encryption Board.**
   - Power Cable (A:HDD-Pow1)
   - Signal Cable (A:HDD-Sig1 (Red))
   - Signal Cable (A:HDD-Sig2 (Blue))
   - Power Cable (A:HDD-Pow2)

CAUTION:
Be sure to connect the cable in the following order.



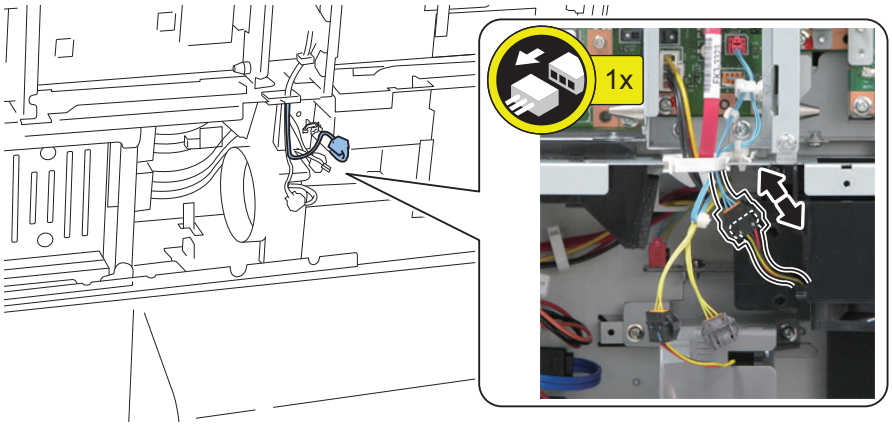
☐

4. **Install the removed HDD Cooling Fan.**
   - 2 Screws (Use the screws removed in step 1.)
   - 1 Connector



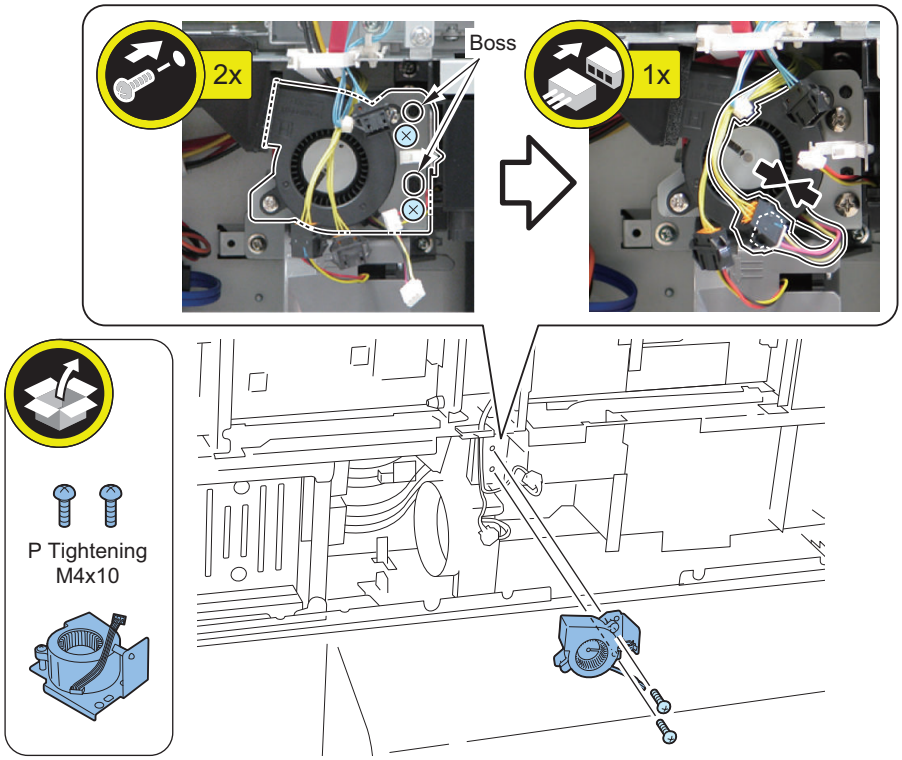
☐

5. **To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.**



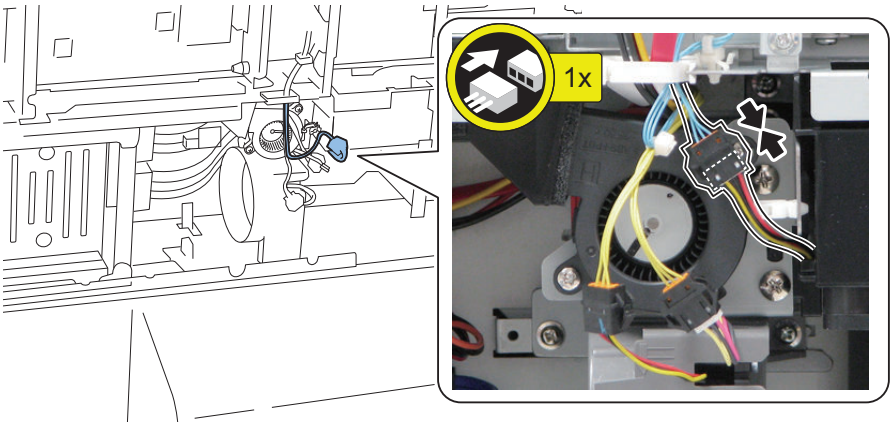
☐

6. **Install the Fan Unit, and connect the connector to the yellow cable.**
   - 2 Bosses
   - 2 Screws (P Tightening; M4 x 10)



☐

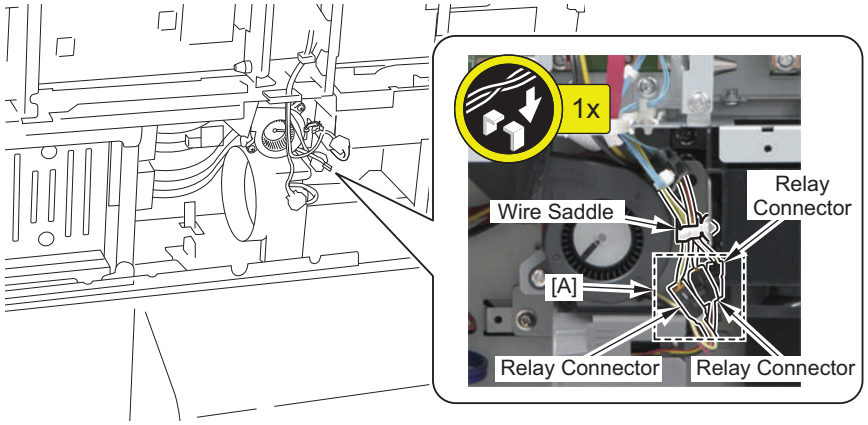
7. **Connect the Fan Cable of the host machine disconnected in step 5 to the light blue cable.**



☐

8. **Secure 3 cables with the Wire Saddle.**

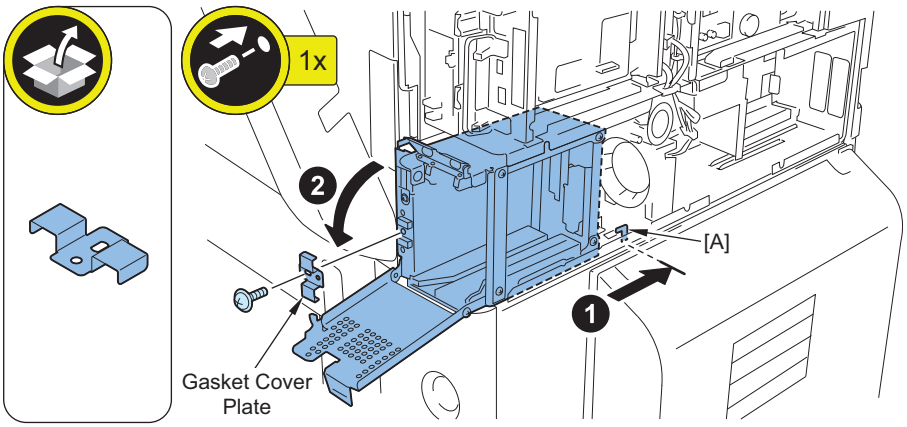
CAUTION:
- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.



☐

9. **Insert the Removable HDD Unit all the way to the hook [A].**

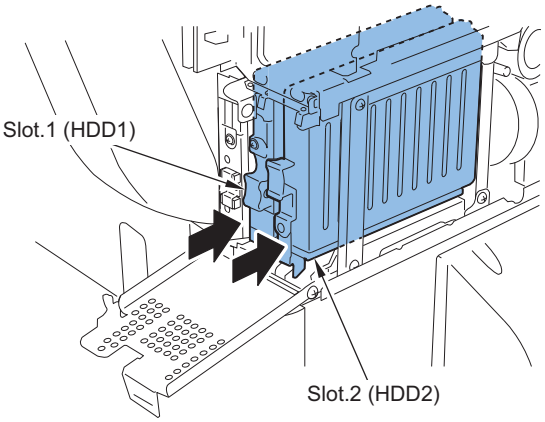
10. **Install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.**
    - 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)



☐

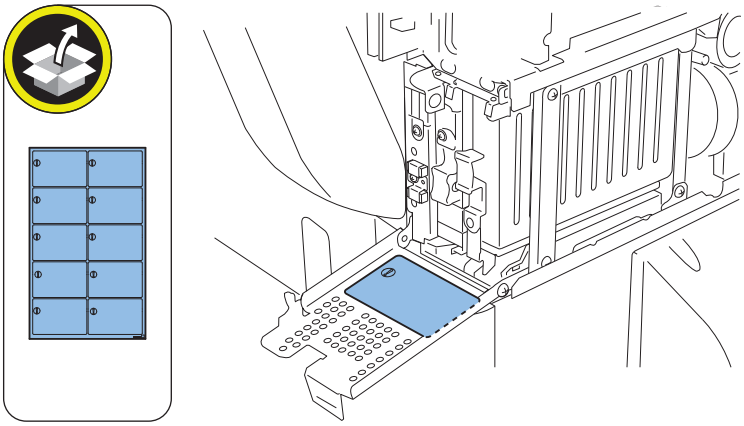
11. Insert the Removable HDD along the rail of the Removable HDD Unit.

CAUTION:
Be sure to insert the No.1 HDD to the Slot.1 and the No.2 HDD to the Slot.2.



☐

12. Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.

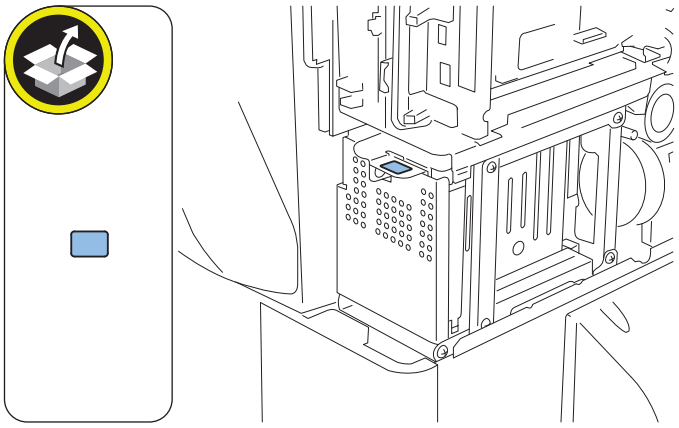


☐

13. Close the HDD Lid.

☐

14. Affix the Handle Label on the Handle part of the HDD Lid.

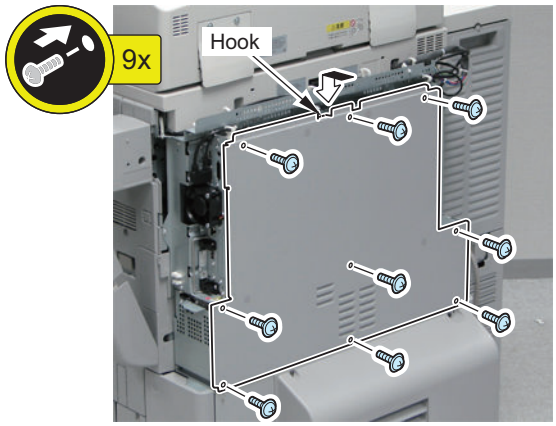


☐

15. Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

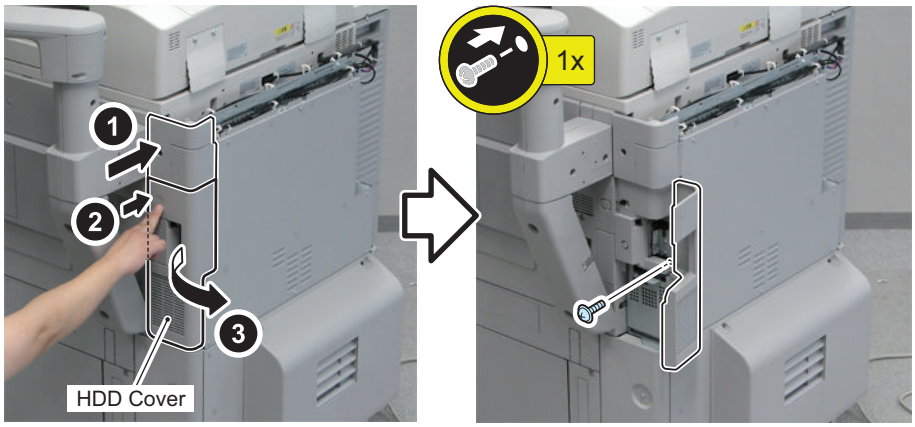
CAUTION:
When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.



☐

16. Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.



☐

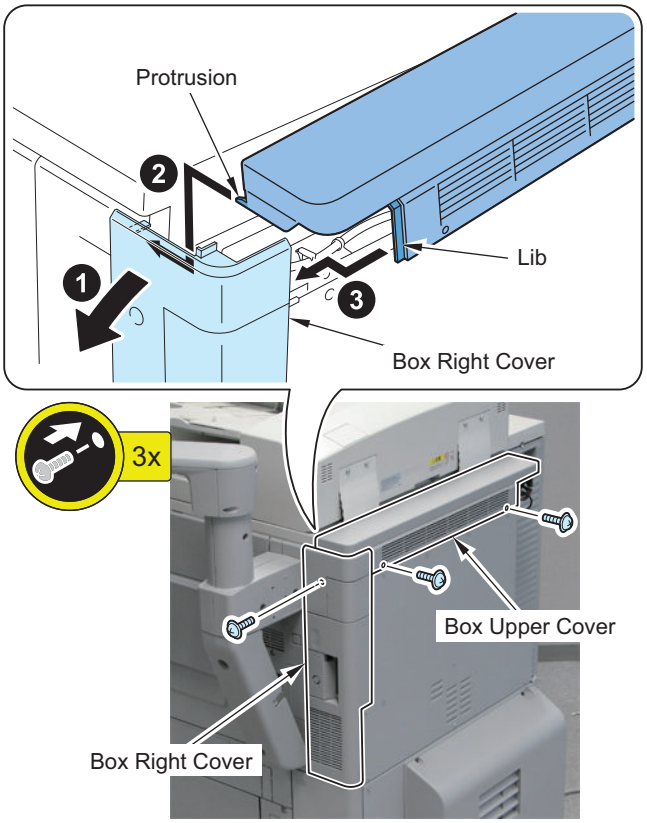
17. Close the HDD Cover.

☐

18. Install the Box Upper Cover.

- 1 Protrusion
- 1 Lib
- 2 Screws

19. Install the screw of the Box Right Cover.

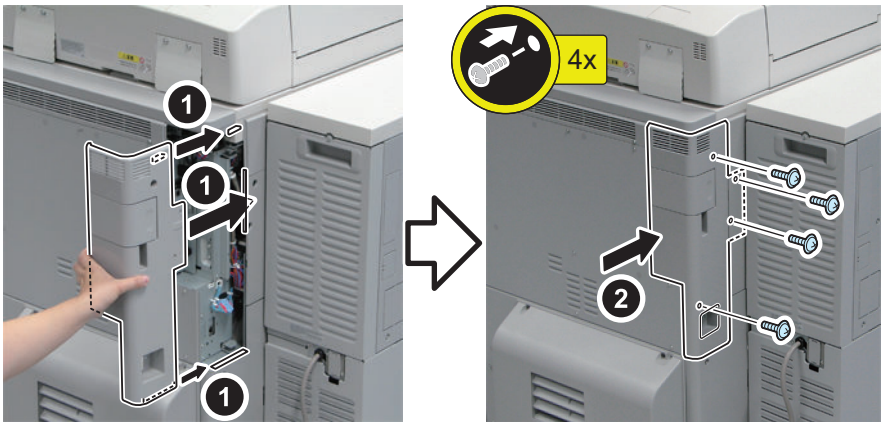


☐

20. Install the Box Left Cover.

- 4 Screws

CAUTION:
Be careful not to trap the cable.



☐

21. Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

■ 1. Requirements

1. **PC**
   Service Support Tool in the version that supports this host machine must be installed.
2. **Cross Ethernet Cable**

■ 2. Preparing for the Installation of the System Software of Host machine

1. **If both PC and the machine are on, turn them off.**
2. **Connect the PC and the host machine using an Cross Ethernet cable.**
3. **Turn on the PC.**
4. **Start up the host machine in download mode (safe mode).**

■ 3. Selecting the System Software

1. **Set the CD containing the latest System Software in the PC on which the SST is used.**
2. **Start up the SST.**
3. **Click ‘Register Firmware’.**
4. **Select the drive in which the System Software CD has been set, and click ‘SEARCH’.**
5. **Click ‘REGISTER’.**
6. **Click OK.**

■ 4. Downloading the System Software

1. **Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.**
2. **When initialization is completed, the host machine is automatically restarted and it enters download mode.**
3. **Select the version to be downloaded and click "Start".**
4. **When download is completed, the host machine is automatically restarted.**
5. **When writing of the firmware is completed, the host machine is automatically restarted.**
6. **Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.**
7. **Terminate the SST.**
8. **Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.**
9. **Check the version of the downloaded firmware in service mode.**

Checking the Security Version

1. **Press the Counter key (123 key) on the control panel.**
2. **Press the [Check Device Configuration] key appearing on the control panel.**
3. **Make sure that '2.01' is displayed in ‘Canon MFP Security Chip’ as version information of the security chip.**
   When several Encryption Boards are installed, multiple version information is displayed.

CAUTION:
The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:
< Confirming the Security Mark >
When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark ( ) is displayed on the lower left corner of a panel screen.

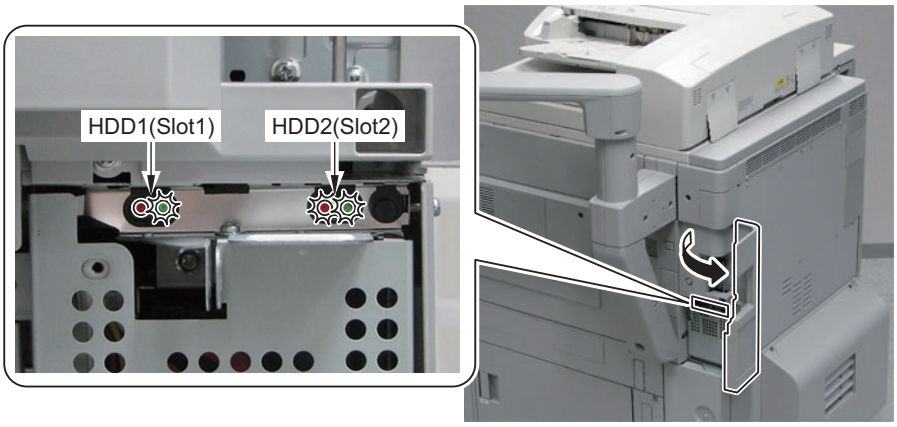
Setting for Mirroring

1. **Specify the setting for Mirroring.**
   - Service Mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID; select “1” for W/RAID.
2. **Turn OFF/ON the main power switch to enable the setting value.**
3. **Check that the UI screen is started normally.**
4. **Open the HDD Cover, and observe the LED to check that mirroring is normally executed.**
   - The green LED of HDD1 (Slot.1) is flashing.
   - The green and red LEDs of HDD2 (Slot.2) are flashing.

CAUTION:
Re-building process starts after setting W/RAID to “1”.
When the error indicating the message of “Need to replace Hard Disk (Contact with Service Technician)” on the UI occurs, re-execute the re-building process as follows;

1. Check the lighted Red LED is for the HDD2.
2. Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to “0”.
3. Turn OFF/ON the main power switch of the host machine to enable the setting value.
4. Set Service mode (level 1) > COPIER > OPTION > FNC-SW > W/RAID to “1”.
5. Turn OFF/ON e the main power switch of the host machine to enable the setting value.

The abovementioned procedure is limited only for the re-building process at the initial installation. The error occurred at re-building process during operation is not targeted.



Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:
At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.
Completion of the Installation Work:
Ask the system administrator to make sure that '2.01' is indicated for ‘Canon MFP Security Chip’ as the version information of the security chip by referring to the description of Checking the Security Version.
Maintenance of the Security Functions:

Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.
After installing this product, execute the image quality adjustment shown below.
(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust)
- Register Paper to Adjust
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

[TYPE-5] Removable HDD Kit + HDD Data Encryption & Mirroring Kit

Points to Note when Unpacking HDD Data Encryption & Mirroring Kit

A security sticker is attached to the kit package to indicate that the package has not been opened. Check to see that the package has not been opened in any way and the sticker is not torn.
If the package appears to have been opened or the sticker is torn, check to make sure that the user has done so intentionally.

Setting Before Turning OFF the Power

CAUTION:
Be sure to turn OFF the main power after executing this service mode setting.
Turning OFF the main power without executing service mode causes "E602-5001 (procedure error before installing the HDD Encryption Board)" to occur when turning ON the main power after installing the Encryption Board.
When this error occurs, the machine needs to be returned again to the initial state in which no Encryption Board is installed.

□

1. **Execute the following service mode (level 1).**
   COPIER > FUNCTION > INSTALL > HD-CRYP

Check Items when Turning OFF the Main Power

Check that the main power switch is OFF.

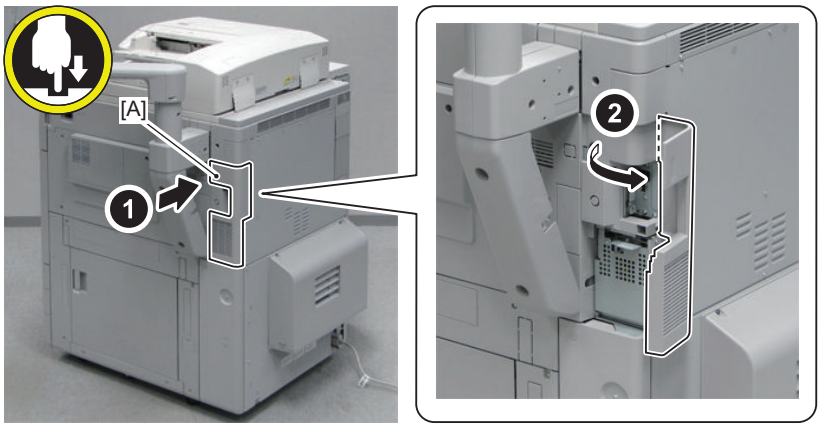
1. **Turn OFF the main power switch.**
2. **Check that the Control Panel Display and the Main Power Lamp are turned OFF, and then disconnect the power plug.**

Installation Procedure

■ Removing the HDD Unit

□

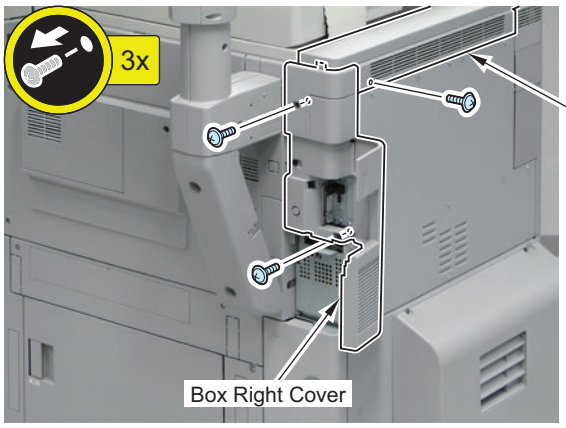
1. **Push the [A] part, and open the HDD Cover.**

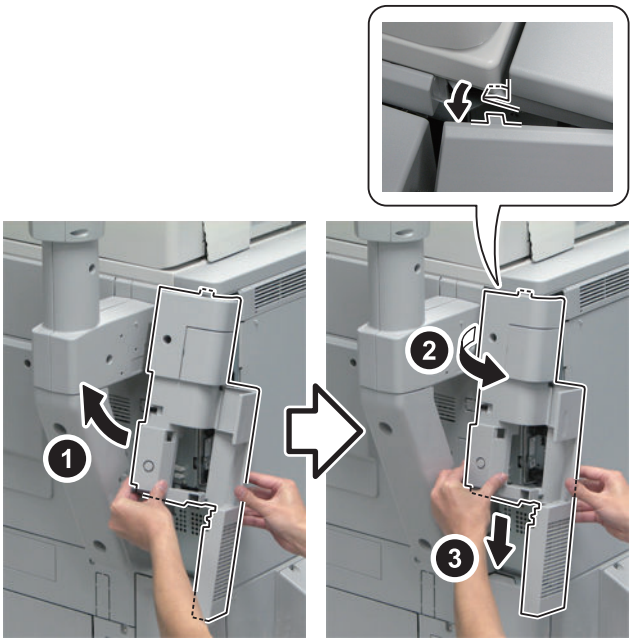


□

2. **Remove the screw of the Box Upper Cover.**

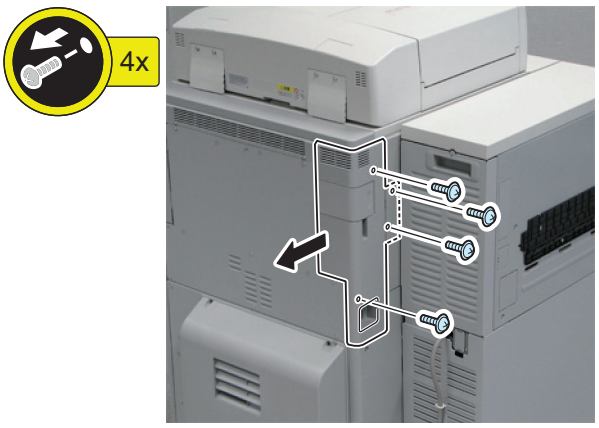
3. **Remove the Box Right Cover.**
   - 2 Screws
   - 1 Hook





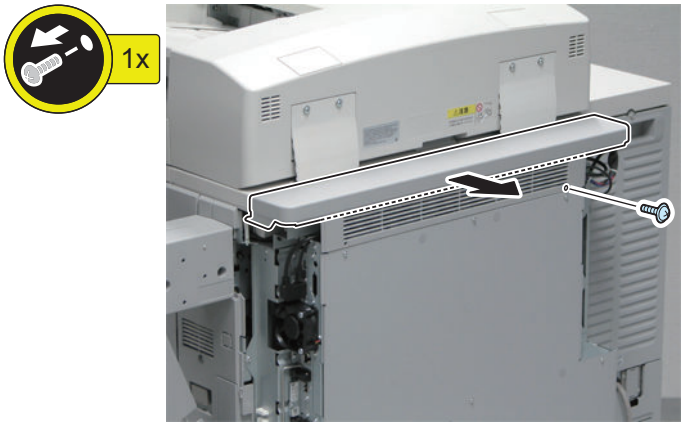
☐

4. **Remove the Box Left Cover.**
   - 4 Screws



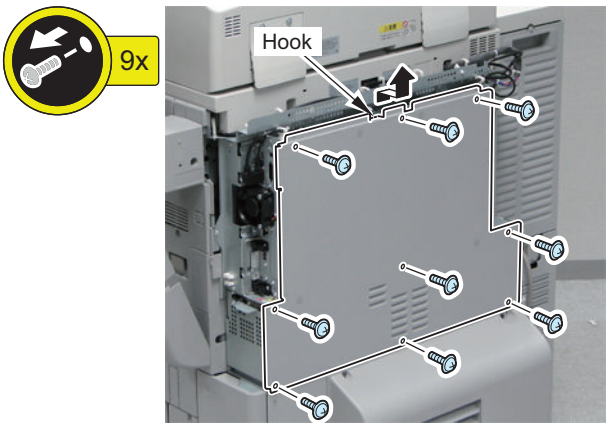
☐

5. **Remove the Box Upper Cover.**
   - 1 Screw



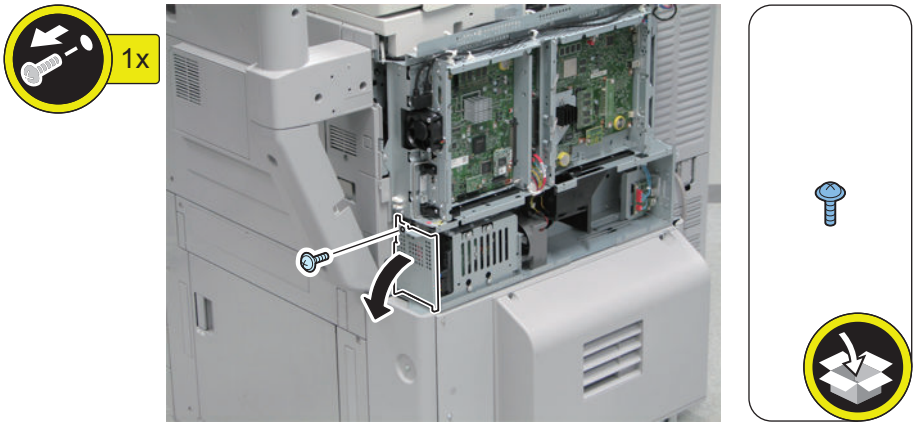
☐

6. **Remove the Rear Upper Cover.**
   - 9 Screws
   - 1 Hook



☐

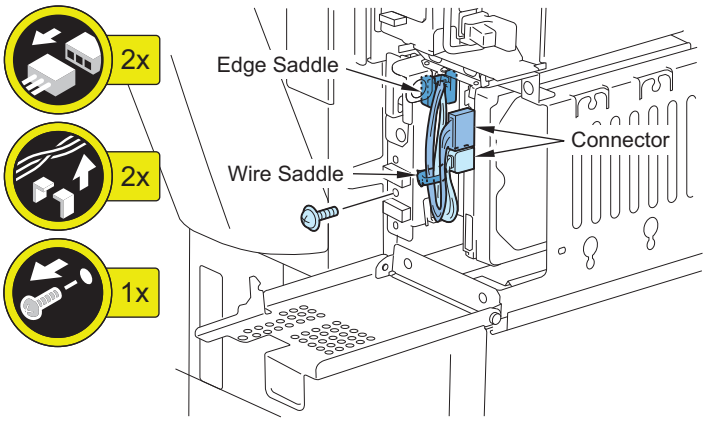
7. **Open the HDD Lid.**
   - 1 Screw (The removed screw will no longer be used.)



☐

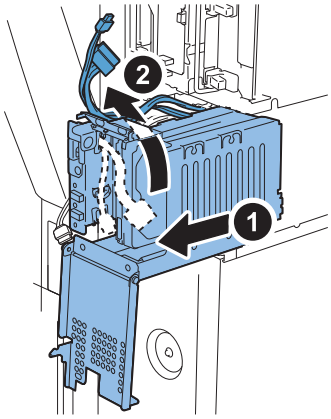
8. **Remove the Signal Cable and the Power Cable from the HDD.**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Edge Saddle

9. **Remove the screw of the HDD Unit. (The removed screw will be used in step 10 of "Installing the Removable HDD Unit".)**

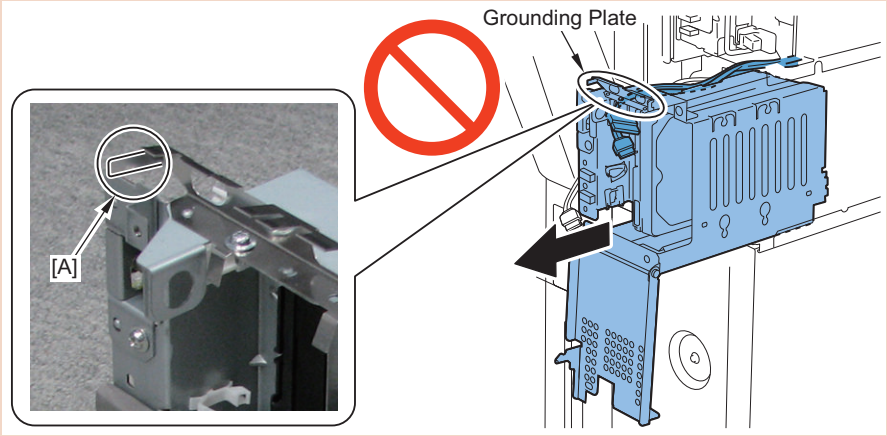


☐

10. **Pull the HDD Unit slightly from the host machine, and remove the cable in the arrow direction.**

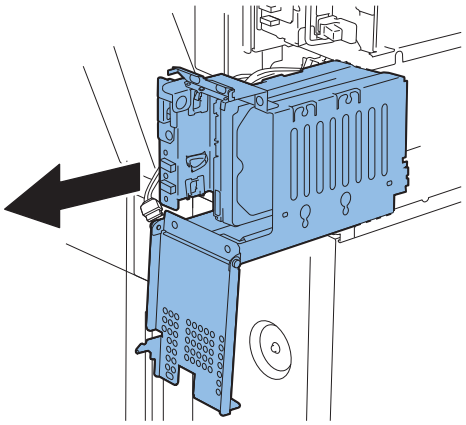


CAUTION:
- When pulling out the HDD Unit, be sure that the Signal Cable and the Power Cable are not caught by the Grounding Plate.
- Do not deform the [A] part of the Grounding Plate.



☐

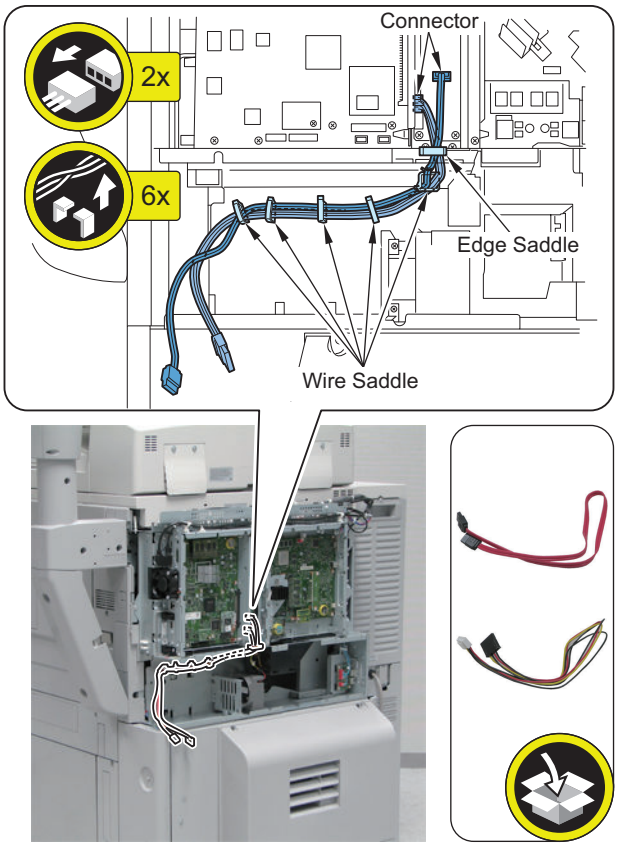
11. Remove the HDD Unit from the host machine.



☐

12. Remove the Signal Cable and the Power Cable of the host machine. (The removed cables will no longer be used.)

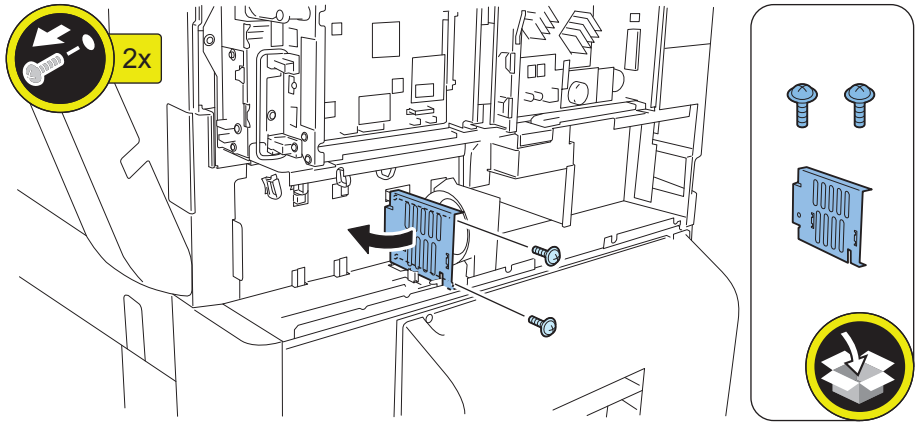
- 2 Connectors
- 1 Edge Saddle
- 5 Wire Saddles



■ Installing the Fan Duct / Fan Keyboard Unit

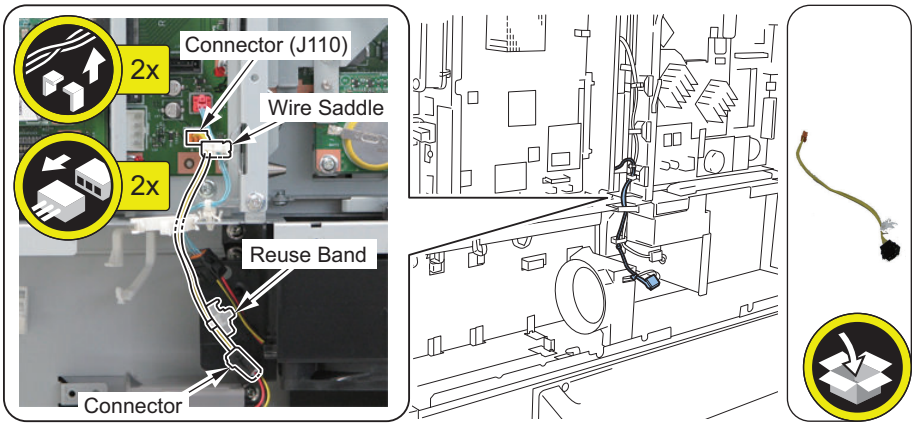
☐

1. **Remove the plate. (The removed plate and screw will no longer be used.)**
   - 2 screws



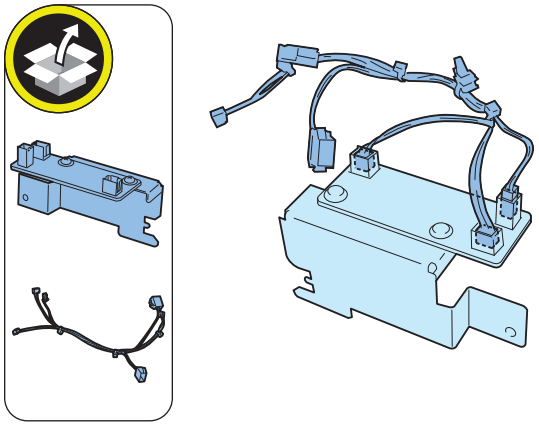
☐

2. **Disconnect the Fan Cable of the host machine with the Relay Connector. (The removed Fan Cable will no longer be used.)**
   - 2 Connectors
   - 1 Wire Saddle
   - 1 Reuse Band



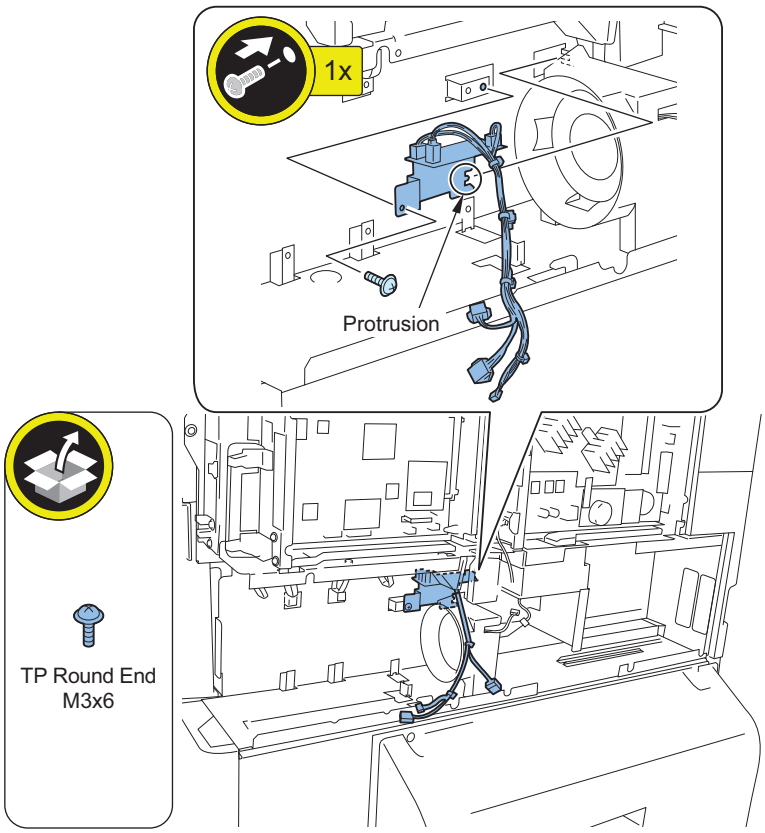
☐

3. **Install the included in Fan Cable to the Fan Keyboard Unit.**
   - 3 Connectors



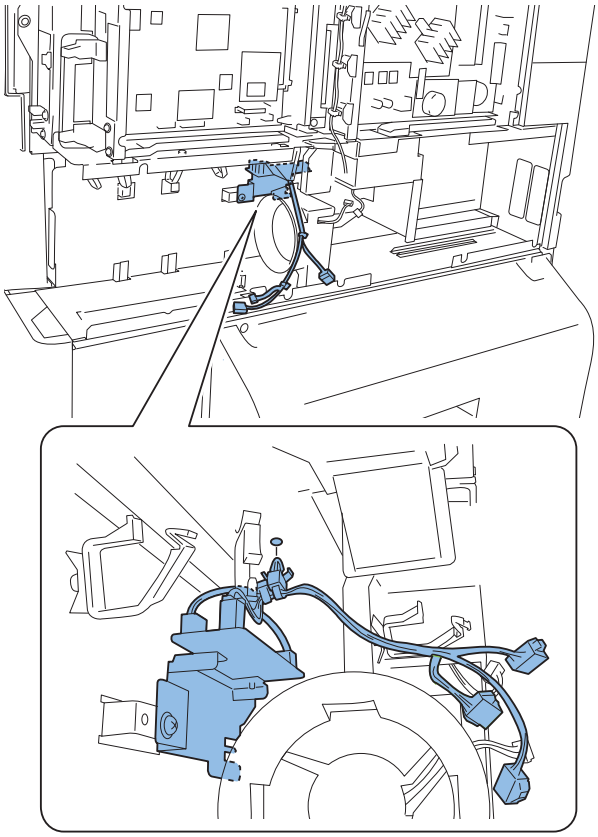
☐

4. **Install the Fan Keyboard Unit.**
   - 1 Protrusion
   - 1 Screw (TP Round End; M3 x 6)



☐

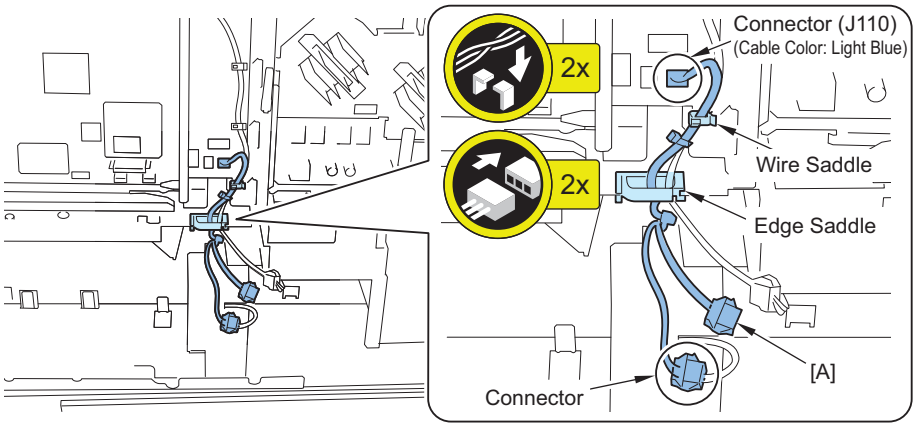
5. **Insert the Reuse Band of the Fan Cable.**



☐

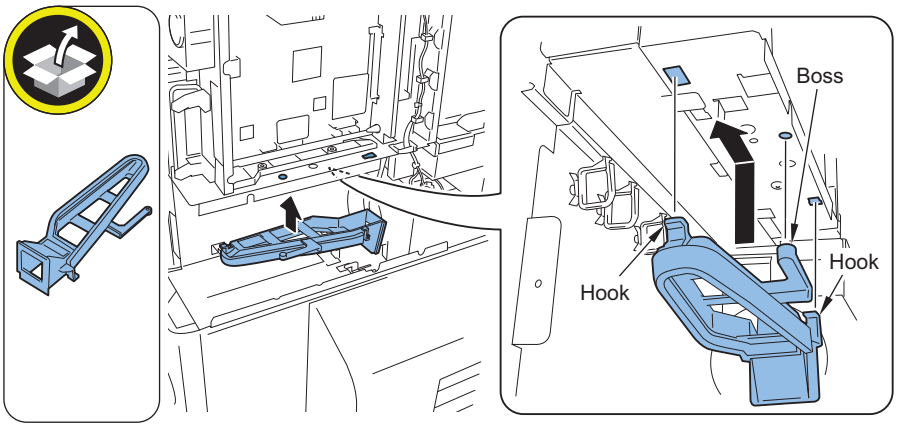
6. **Connect the 2 Connectors of the Fan Cable.**
   - 1 Wire Saddle (To be closed)
   - 1 Edge Saddle (To be kept open)

NOTE:
The connector [A] will be used to connect in the step 6 of “Installing the Removable HDD Unit”.



☐

7. **Slide the Fan Duct in the arrow direction, and install.**
   - 2 Hooks
   - 1 Boss

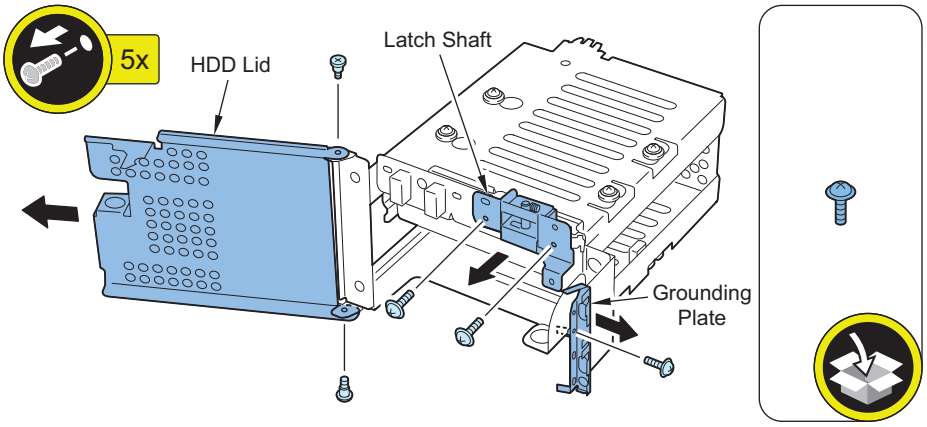


■ Replacing to the Removable HDD Unit

☐

1. **Remove the HDD Lid from the HDD Unit removed from the host machine. (The removed HDD Lid and screws will be used in step 8.)**
   - 2 Screws
2. **Remove the Latch Shaft. (The removed Latch Shaft and screws will be used in step 7.)**
   - 2 Screws

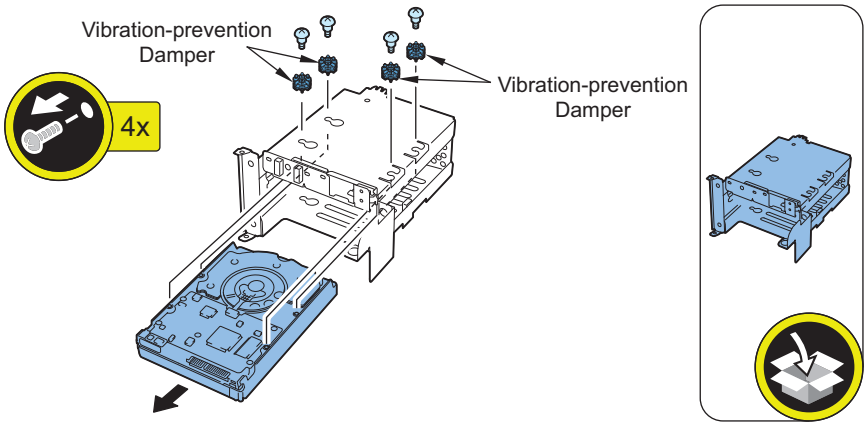
3. **Remove the Grounding Plate. (The removed Grounding Plate will be used in step 9.)**
   - 1 Screw (The removed screw will no longer be used.)



☐

4. **Remove the HDD from the HDD Unit. (The HDD Unit will no longer be used.)**
   - 4 Screws (The removed screws will be used in step 14.)
   - 4 Vibration-prevention Dampers (The removed Vibration-prevention Dampers will be used in step 14.)

CAUTION:
Hold and support the HDD with a hand to prevent from dropping off.

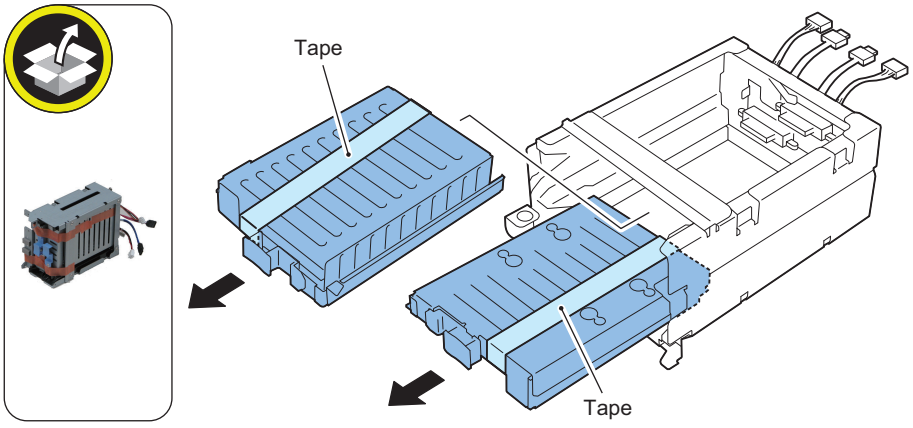


☐

5. **Remove the tape affixed to the outside of the Removable HDD Unit.**

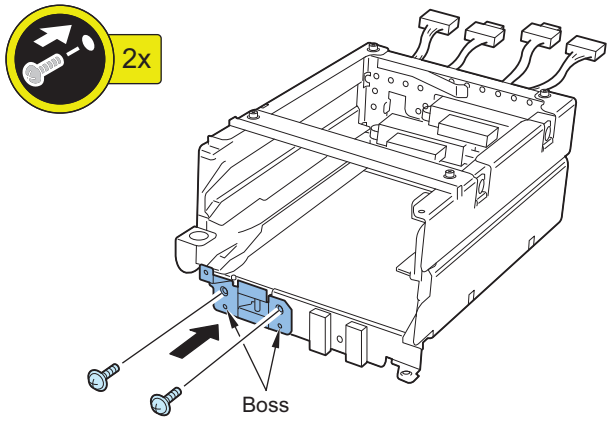
☐

6. **Take out 2 Removable HDD Cases and 2 Covers, and remove the tape.**



☐

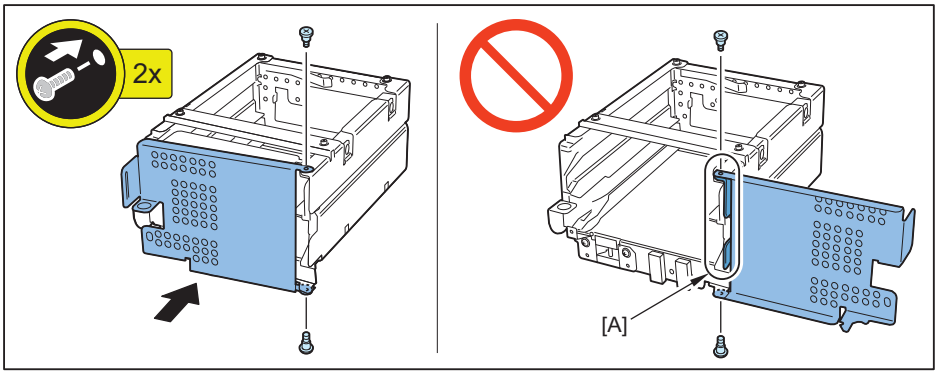
7. **Install the Latch Shaft removed at step 2 to the Removable HDD Unit.**
   - 2 Bosses
   - 2 Screws (Use the screws removed in step 2.)



☐

8. **Install the HDD Lid removed at step 1 to the Removable HDD Unit.**
   - 2 Screws (Use the screws removed in step 1.)

NOTE:
When installing the HDD Lid while it is fully open, the [A] part is caught by the lid so the lid cannot be closed. Therefore, be sure to install it while it is halfway closed.

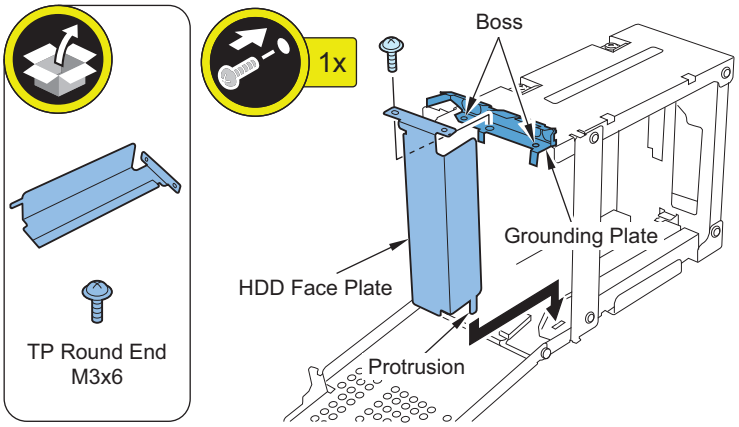


☐

9. **Install the Grounding Plate removed at step 3.**
   - 2 Bosses

10. Fit the protrusion on the HDD Face Plate into the hole on the mold part, and install it.

- 1 Screw (TP Round End; M3 x 6)

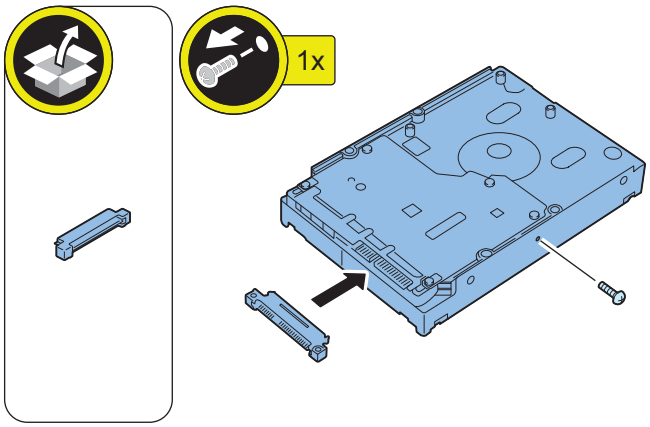


< Disassembling and Assembling of the HDD Removed from the Host Machine >

☐

11. Remove the screw of the HDD. (The removed screw will be used in step 13.)

12. Install the Conversion Connector to the HDD.

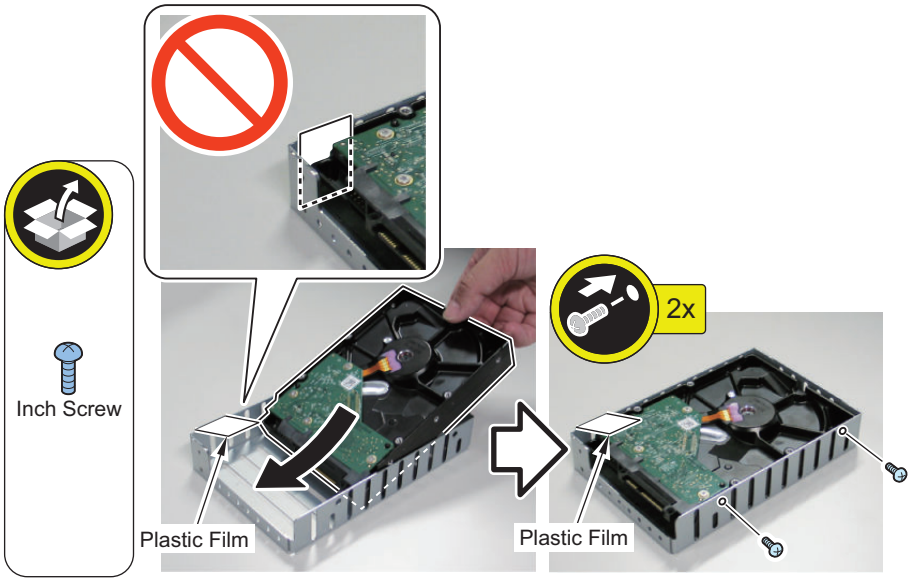


☐

13. Install the HDD in the Removable HDD Case as shown in the figure.

- 1 Screw (Use the screw removed in step 11.)
- 1 Inch Screw

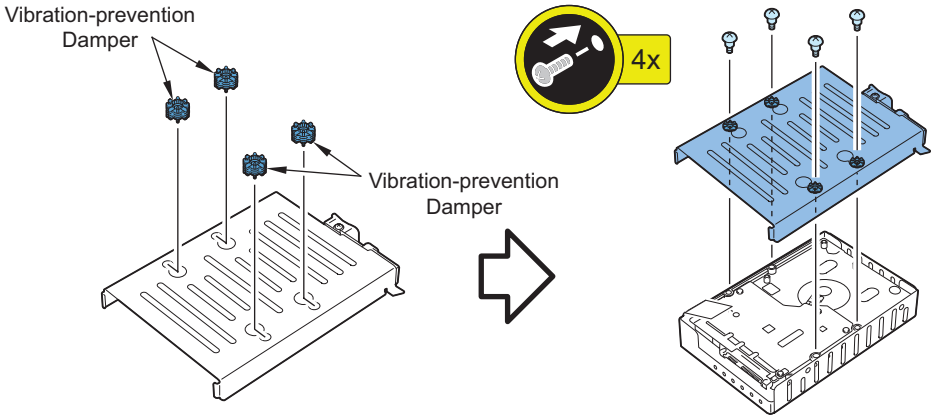
CAUTION:
The Plastic Film is the part for preventing the gasket attached inside the Removable HDD Case (to be installed in step 14) from coming in contact with the PCB of the HDD, resulting in short circuit.
Be sure to check that the Plastic Film is over the PCB of the HDD.



☐

14. Install the Removable HDD Case Cover to the HDD.

- 4 Vibration-prevention Dampers (Use the Vibration-prevention Dampers removed in step 4.)
- 4 Screws (Use the screws removed in step 4.)

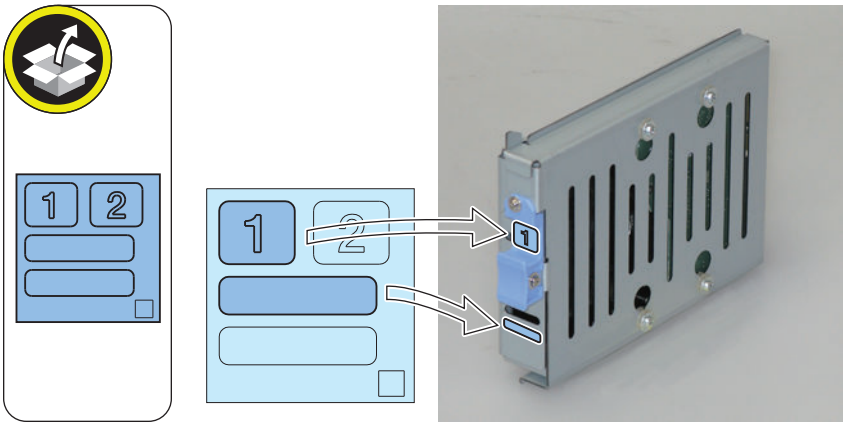


☐

15. Affix the No.1 of the R-HDDLabel to the handle of the assembled Removable HDD.

16. Write down the serial number of the host machine to a plain label, and affix it to the area indicated in the figure.

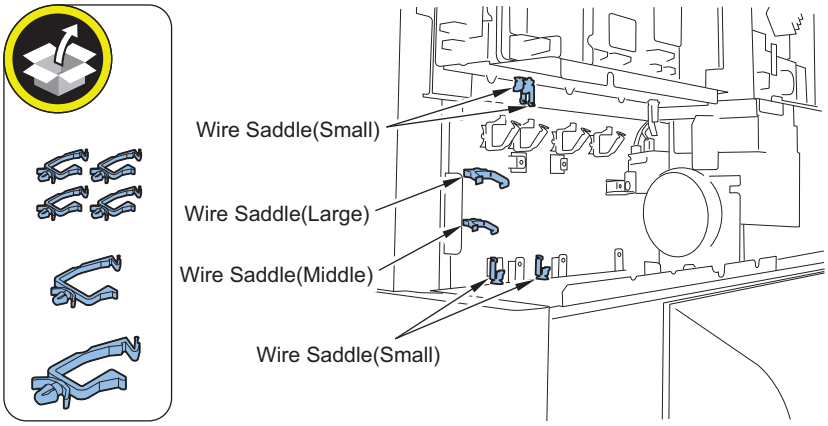
CAUTION:
Be sure that the Removable HDD is in the correct direction.



■ Installing the Encryption Board

☐

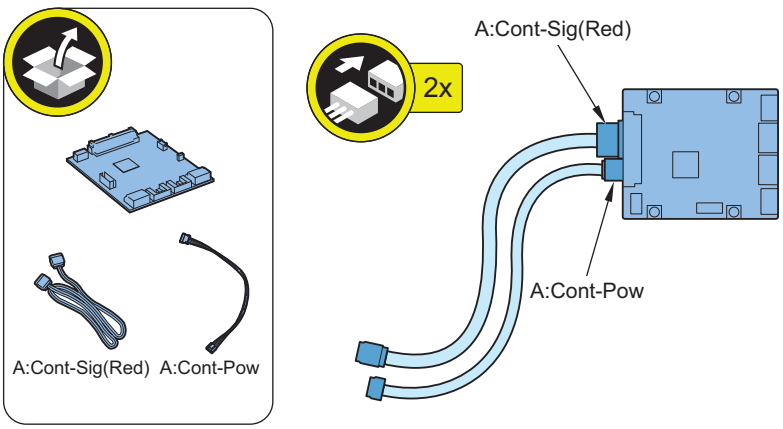
1. Install the 1 Wire Saddle (Large), 1 Wire Saddle (Middle), and 4 Wire Saddles (Small).



☐

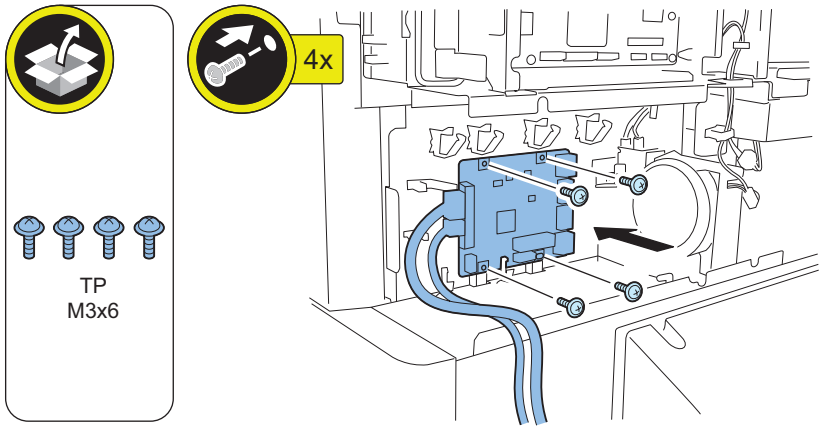
2. Connect the Signal Cable and Power Cable to the Encryption Board.

- Signal Cable (450 mm; A:Cont-Sig (Red))
- Power Cable (430 mm; A:Cont-Pow)



☐

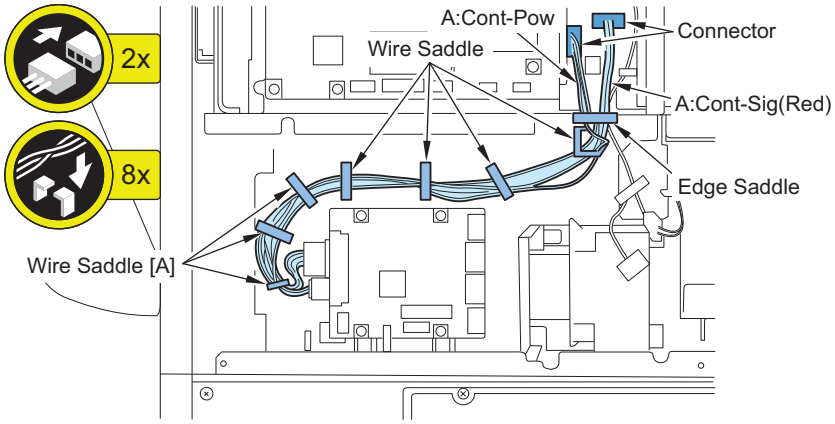
3. **Install the Encryption Board.**
   - 4 Screws (TP; M3 x 6)



☐

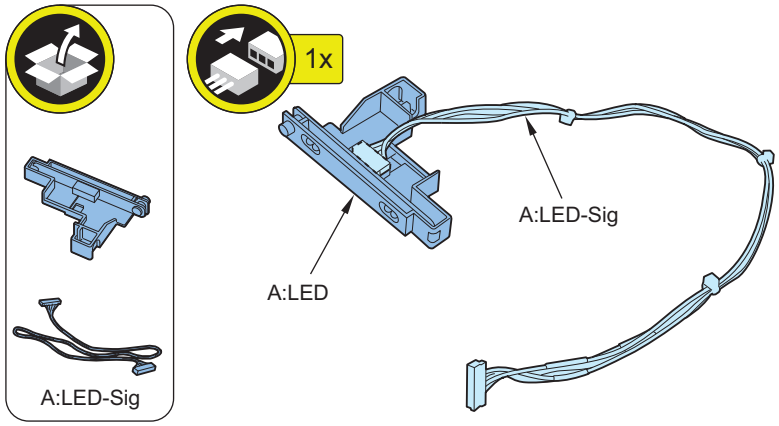
4. **Connect the Signal Cable (450 mm; A:Cont-Sig (Red)) and the Power Cable (430 mm; A:Cont-Pow).**
   - 2 Connectors
   - 1 Edge Saddle
   - 7 Wire Saddles (Keep the 3 Wire Saddles [A] open.)

CAUTION:
Route cables equally to eliminate unnecessary slack.



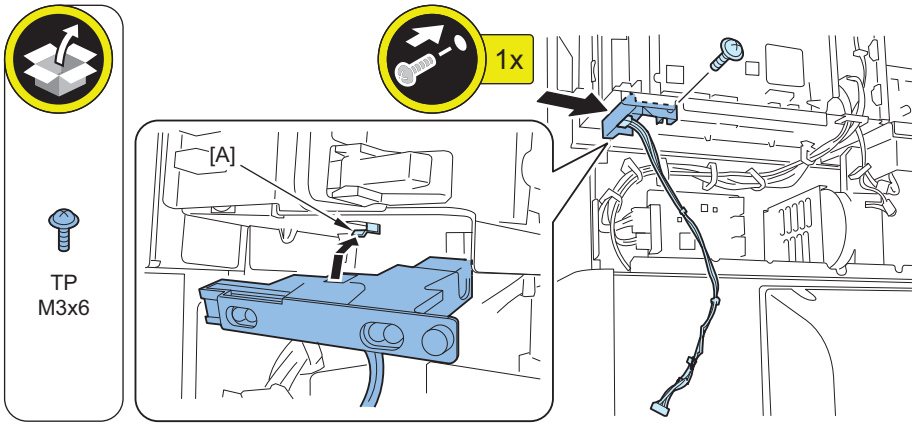
☐

5. **Install the LED Cable (290 mm; A:LED-Sig) to the LED Board (A:LED).**



☐

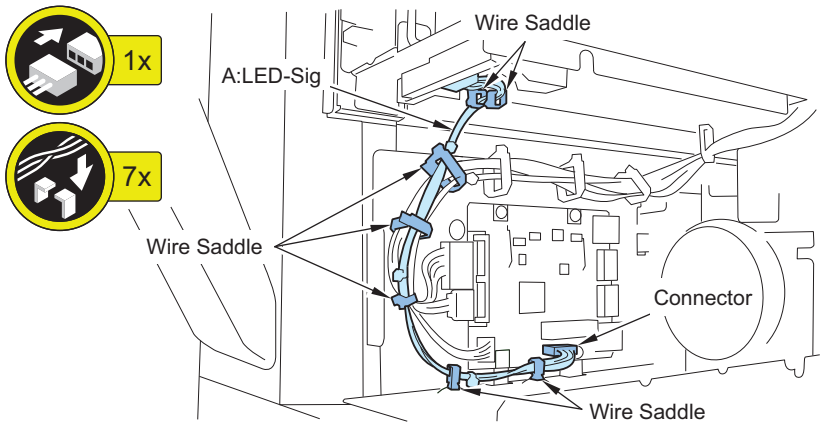
6. **Insert the LED Board (A:LED) to the hook part [A] of the host machine to install.**
   - 1 Screw (TP; M3 x 6)



☐

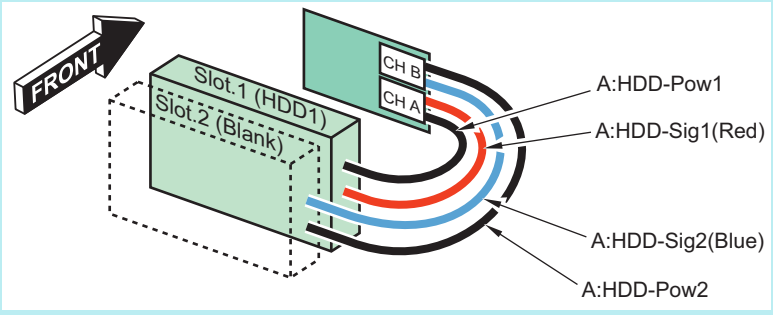
7. **Connect the LED Cable (290 mm; A:LED-Sig) to the Encryption Board.**
   - 1 Connector
   - 7 Wire Saddles

CAUTION:
Since it can be operated without the LED Cable (290 mm; A:LED-Sig) connection, check the connection at the installation.



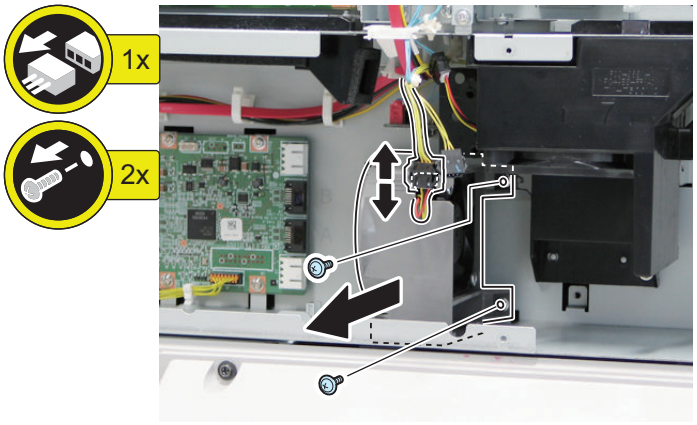
■ Installing the Removable HDD Unit

NOTE:
The following shows the combination of the HDD and the Encryption Board.
- Connect Slot.1 to “CH A” (Host machine's HDD)
- No HDD to Slot.2



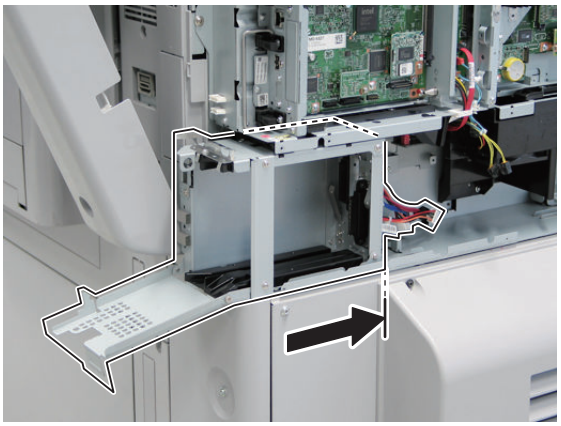
☐

1. **Remove the HDD Cooling Fan to make it easier to connect the cable.**
   - 1 Connector
   - 2 Screws (The removed screws will be used in step 4.)



☐

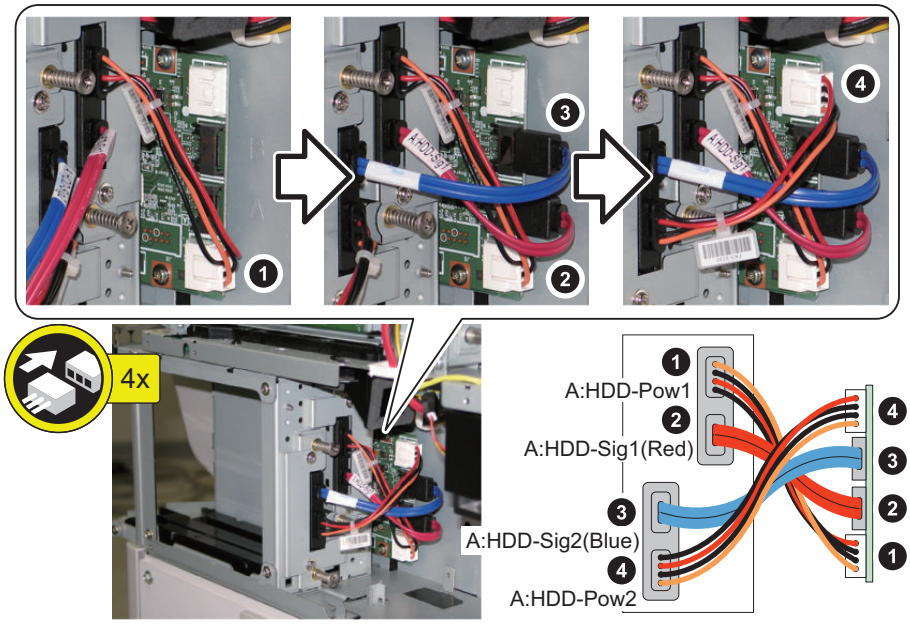
2. **Insert 2/3 of the Removable HDD Unit along with the rail on the host machine.**



☐

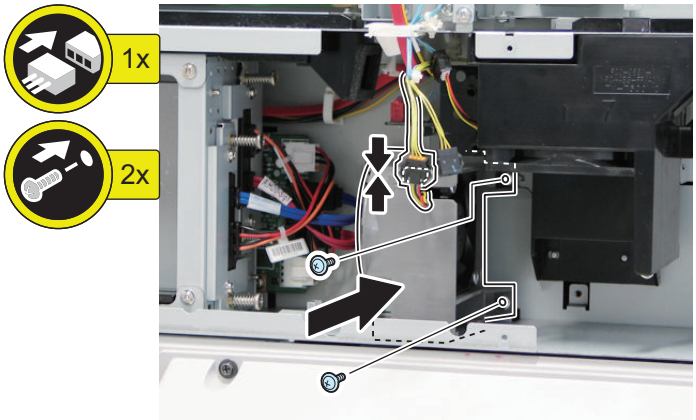
3. **Connect the Signal Cable and the Power Cable to the Encryption Board.**
   - Power Cable (A:HDD-Pow1)
   - Signal Cable (A:HDD-Sig1 (Red))
   - Signal Cable (A:HDD-Sig2 (Blue))
   - Power Cable (A:HDD-Pow2)

CAUTION:
Be sure to connect the cable in the following order.



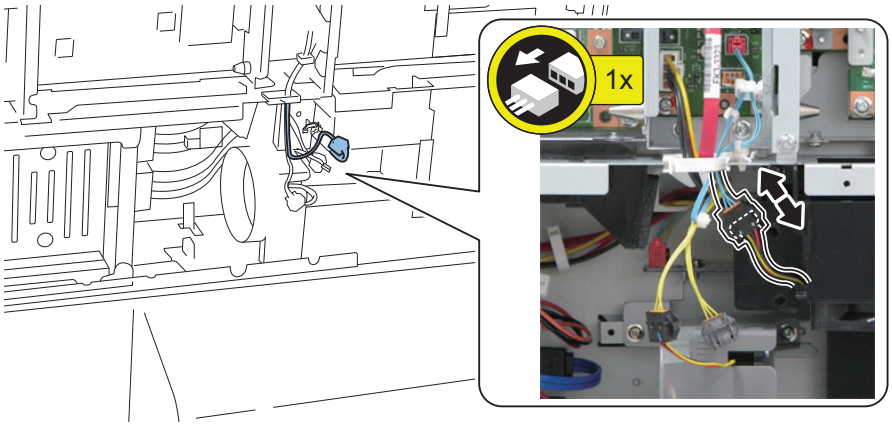
☐

4. **Install the removed HDD Cooling Fan.**
   - 2 Screws (Use the screws removed in step 1.)
   - 1 Connector



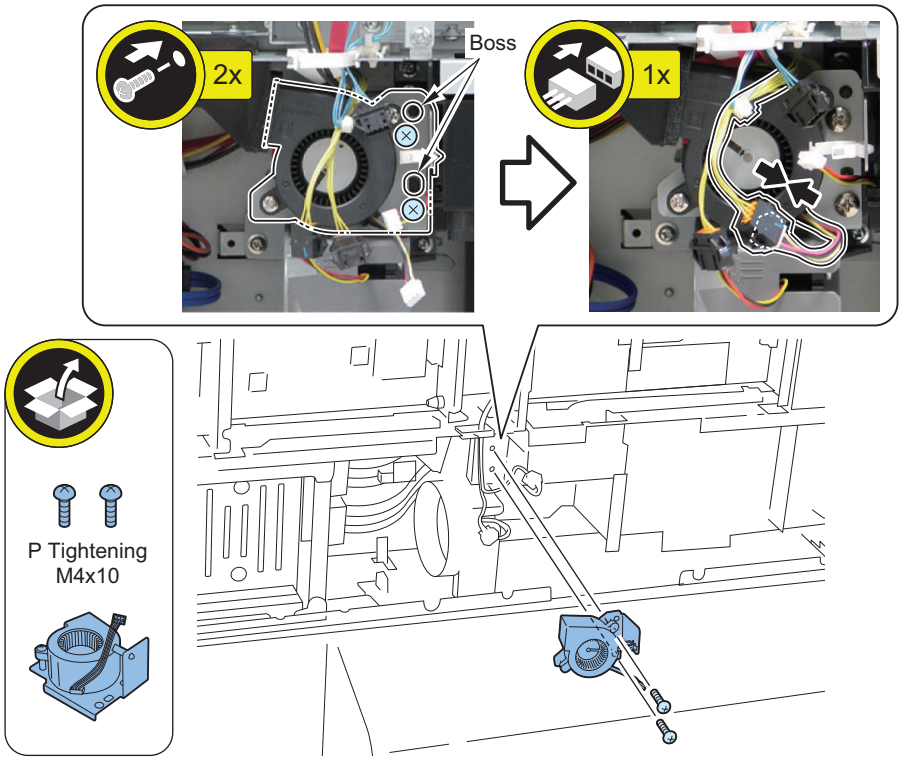
☐

5. **To make installation of the Fan Unit easier, disconnect the connector of the Fan Cable of the host machine.**



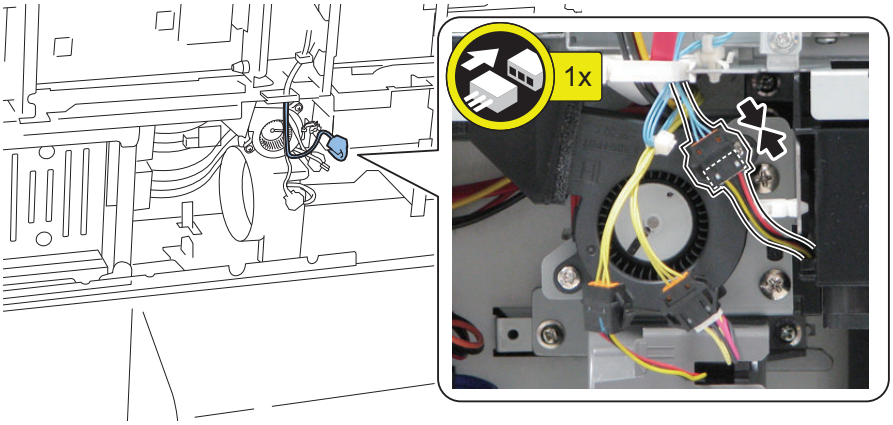
☐

6. **Install the Fan Unit, and connect the connector to the yellow cable.**
   - 2 Bosses
   - 2 Screws (P Tightening; M4 x 10)



☐

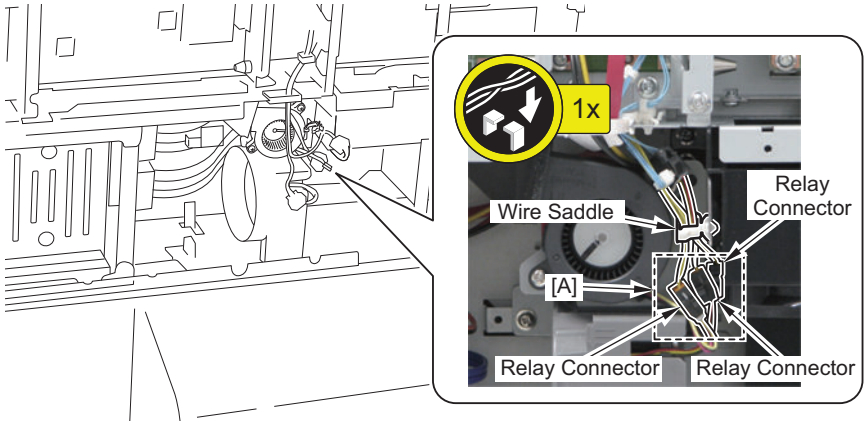
7. **Connect the Fan Cable of the host machine disconnected in step 5 to the light blue cable.**



☐

8. **Secure 3 cables with the Wire Saddle.**

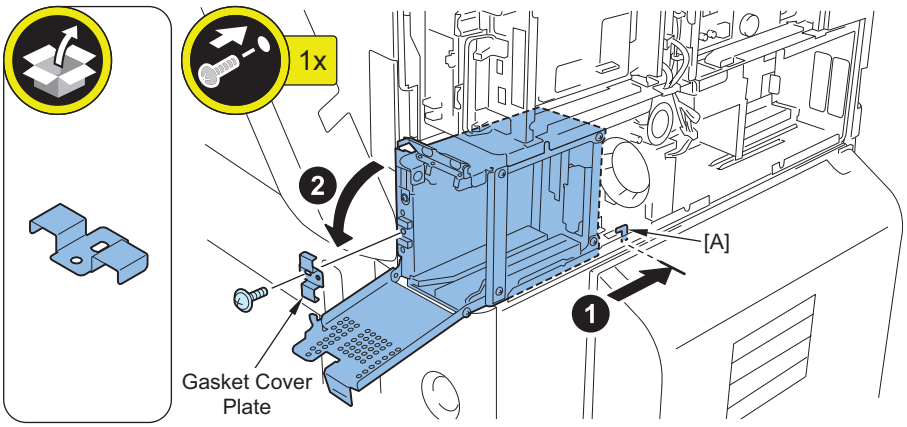
CAUTION:
- When securing the cables, the 3 Relay Connectors should be below the Wire Saddle.
- Tuck the Relay Connectors into the clearance [A] to prevent them from blocking the fan.



☐

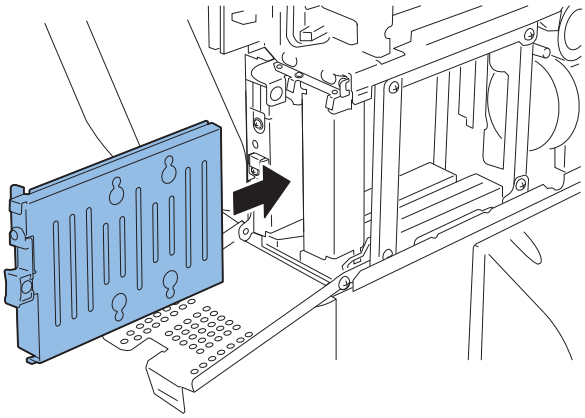
9. **Insert the Removable HDD Unit all the way to the hook [A].**

10. **Install the Gasket Cover Plate to the gasket, and secure the Removable HDD Unit.**
    - 1 Screw (Use the screw removed in step 9 of "Removing the HDD Unit".)



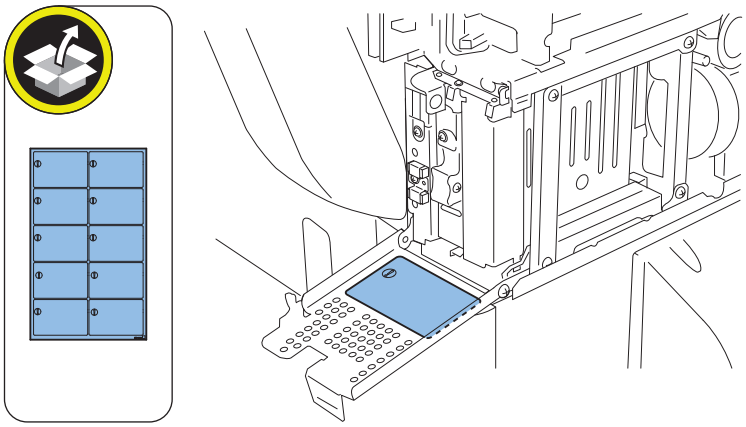
☐

11. Insert the Removable HDD along the rail of the Removable HDD Unit.



☐

12. Affix the Shutdown Caution Label for applicable language to align with the ruled line on the HDD Lid.

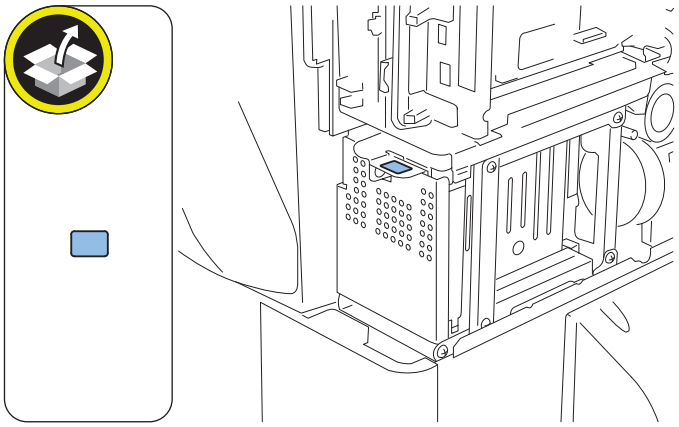


☐

13. Close the HDD Lid.

☐

14. Affix the Handle Label on the Handle part of the HDD Lid.

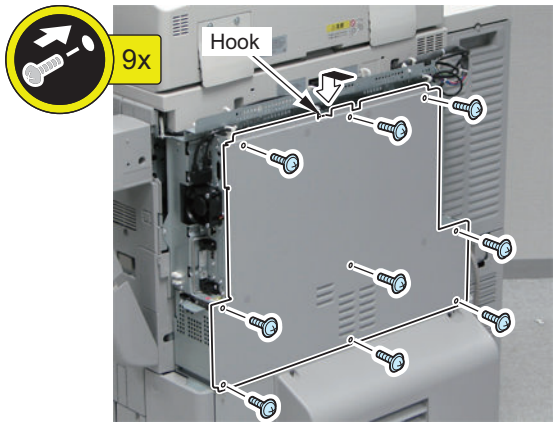


☐

15. Install the Rear Upper Cover.

- 1 Hook
- 9 Screws

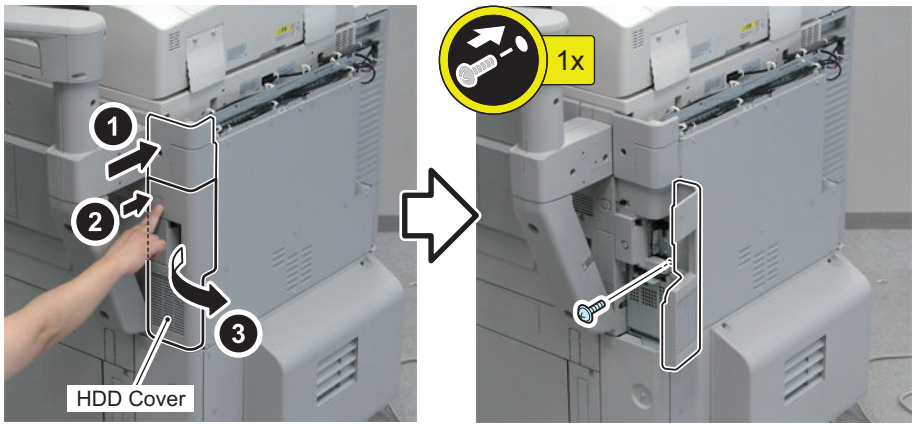
CAUTION:
When installing the Rear Upper Cover, tighten the screws while the Controller Box Unit is secured to the host machine.



☐

16. Install the Box Right Cover. Open the HDD Cover, and install the screw.

NOTE:
Be sure to install the screw at upper side after installing the Box Upper Cover.



☐

17. Close the HDD Cover.

☐

18. Install the Box Upper Cover.

- 1 Protrusion
- 1 Lib
- 2 Screws

19. Install the screw of the Box Right Cover.

☐

20. Install the Box Left Cover.

- 4 Screws

CAUTION:
Be careful not to trap the cable.

☐

21. Connect the power plug to the outlet.

Installing the System Software Using the SST

The system data stored on the HDD and used to control the host machine will be lost when the machine is first started up after installing this product. It is important to install the system software used to control the host machine so that the machine may start up properly after installation of this product. Details follow.

■ 1. Requirements

1. **PC**
   Service Support Tool in the version that supports this host machine must be installed.
2. **Cross Ethernet Cable**

■ 2. Preparing for the Installation of the System Software of Host machine

1. **If both PC and the machine are on, turn them off.**
2. **Connect the PC and the host machine using an Cross Ethernet cable.**
3. **Turn on the PC.**
4. **Start up the host machine in download mode (safe mode).**

■ 3. Selecting the System Software

1. **Set the CD containing the latest System Software in the PC on which the SST is used.**
2. **Start up the SST.**
3. **Click ‘Register Firmware’.**
4. **Select the drive in which the System Software CD has been set, and click ‘SEARCH’.**
5. **Click ‘REGISTER’.**
6. **Click OK.**

■ 4. Downloading the System Software

1. **Click "Start Assist Mode" and click "Initialize" according to the instruction on the screen.**
2. **When initialization is completed, the host machine is automatically restarted and it enters download mode.**
3. **Select the version to be downloaded and click "Start".**
4. **When download is completed, the host machine is automatically restarted.**
5. **When writing of the firmware is completed, the host machine is automatically restarted.**
6. **Perform upgrading according to the instruction on the screen. When it is completed, it is automatically restarted.**
7. **Terminate the SST.**
8. **Disconnect the Cross Ethernet Cable from the machine, and connect the user's network cable to the machine.**
9. **Check the version of the downloaded firmware in service mode.**

Checking the Security Version

1. **Press the Counter key (123 key) on the control panel.**
2. **Press the [Check Device Configuration] key appearing on the control panel.**
3. **Make sure that '2.01' is displayed in ‘Canon MFP Security Chip’ as version information of the security chip.**
   When several Encryption Boards are installed, multiple version information is displayed.

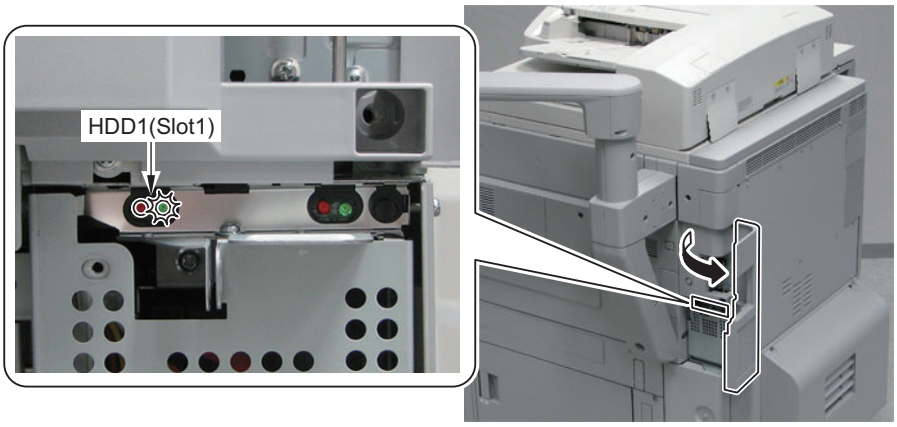
CAUTION:
The user will be able to make sure that the encryption board fitted with a security chip of the correct version with CC Certification is functioning normally by referring to the version information indicated for 'Canon MFP Security Chip'.

Checking the Security Mark

The user may check the security mark, appearing on the control panel when using the host machine to make sure that an appropriate level of security is being maintained. The mark appears when the machine is equipped with an Encryption Board and the board is operating correctly. The Users Guide provides the following description in connection with the security mark:
< Confirming the Security Mark >
When the HDD Data Encryption & Mirroring Kit is operating normally, a security mark ( ) is displayed on the lower left corner of a panel screen.

Checking After Installation

1. **Open the HDD Cover, and observe the LED to check that there is no error in communication with the HDD.**
   - The green LED of HDD1 (Slot.1) is flashing.



Reporting to the System Administrator at the End of the Work

When you have completed all installation work, report to the system administrator for the following:
At the point when installation is completed, make explanations about how to check that the appropriate security function has been added and enabled so that, when the function becomes uncontrolled, the system administrator can immediately detect the problem and request <Servicing work when a failure occurs>.
Completion of the Installation Work:
Ask the system administrator to make sure that '2.01' is indicated for ‘Canon MFP Security Chip’ as the version information of the security chip by referring to the description of Checking the Security Version.
Maintenance of the Security Functions:
Ask the system administrator to check the security mark to make sure that the security functions are maintained each time the host machine is started up by referring to the description of Checking the Security Mark.

Executing Image Quality Adjustment

When this product is installed, the HDD is initialized, and the data of image quality adjustment is also initialized.
After installing this product, execute the image quality adjustment shown below.
(Refer to "Installing the Host Machine" for the procedure.)

- Auto Adjust Gradation (Full Adjust)
- Register Paper to Adjust
- Auto Correct Color Tone Settings (Only when installing the Image Reader Unit)

APPENDICES

Service Tools

List of Special Tools

When servicing this machine, the special tools shown below are required besides the standard tools.

Tool name	Tool No.	Rank	Configuration	Use/Remarks
Digital multi-meter	FY9-2002	A		Used for supplementary electricity check of the electricity check
Door Switch	TKN-0093	A		
Tester Auxiliary Pin	FY9-3038	A		
Tester Auxiliary Pin (L-shaped)	FY9-3039	A		Supplementary electricity check
CA-1 Test Sheet	FY9-9030	A		For image adjustment/ check
Loupe	CK-0056	B		For image check
Cleaning tool	-	A		For cleaning the Feed Guide / Not a service tool. One for each package of the host machine at the time of shipment.

Tool name	Tool No.	Rank	Configuration	Use/Remarks
Waste Toner Bag	FC0-2235	A		For disposing waste toner A set of 5 bags
Waste Toner Band	FC0-2236	A		For fixing the Waste Toner Joint
Waste Toner Joint	FC0-2237	A		For disposing waste toner
Tospearl 240	FY9-6007-000	B		Lubricant for the Drum Cleaning Blade
Electrode for potential sensor check	FY9-3059	B		For checking the surface potential sensor zero level

Reference: Rank
A: Tool each service engineers should have 1 pc per engineer
B: Tool a group of approx. 5 engineers should have 1 pc per group

Solvents and Oils

Item	Uses	Parts No.	Remarks
Alcohol	Cleaning; e.g.,	-	• Do not bring near fire. • Procure locally. • Substitute: IPA(isopropy alcohol)
Molykote EM-50L	Lubrication; e.g., Bearing part of the finisher	HY9-0007	
Super Lubu Grease	Worm gear part of Primary Charging Assembly and Pre-transfer Charging Assembly.	FY9-6005	• 85g
EU-1	Lubrication; e.g., scanner rail.	FY9-6028	• Synthetic oil NTN Corporation EU-1 • Tool No.: FY9-6028 (50 cc)

Item	Uses	Parts No.	Remarks
Barrierta Grease	Lubrication; e.g., edge of secondary transfer outer roller, drum heater sliding area.	FY9-6008	• 75g
Tospearl 240 Grease	Drum Cleaning Blade Lubricant.	FY9-6007	
SE1107 Grease	Apply to the gear of the fixing assembly	FY9-6036	• 10g
HANARL UD-321		FY9-6037	• Quick-drying grease(Since it is quick-drying and transparent, caution is required to identify the area where it is applied.)

■ Locations of Use for HANARL UD-321

Grease to be used	Unit name	Parts name	Parts number	Application position
HANARL UD-321 FY9-6037	Process Unit	Bushing	FL2-0415	Inner circumference
	Process Unit	Bushing	FL2-8598	Inner circumference
	Reverse Delivery Door	21T Gear	FU6-0092	Gear teeth surface
	Reverse Delivery Door	17T Gear	FU6-0152	Gear teeth surface
	Reverse Delivery Inner Unit	22T Gear	FU6-0689	Inner circumference of gear
	Cassette	Lock Arm A	FC9-7259	Inner diameter of shaft fitting part
	Cassette	Side Guide Rack	FE3-6359	Sliding area of cassette deck
	Duplex Upper Guide	16T Gear	FU9-0155	Teeth surface
	Duplex Upper Guide	14T Gear	FU6-0694	Teeth surface
	Duplex Upper Guide	24T Gear	FU8-0083	Teeth surface
	Duplex Upper Guide	19T Gear	FU5-0629	Teeth surface
	Pickup Unit	Pickup Release Arm	FC0-9434	Sliding area
	Pickup Unit	Paper Detection Lever	FC0-9793	Inner circumference
	Pickup Unit	19T Gear	FC0-9798	Teeth surface, inner circumference
	Pickup Unit	48T Gear	FC0-9799	Teeth surface, inner circumference
	Pickup Unit	Ring	FE2-0286	Whole area
	Pickup Unit	Roller Support	FL0-1895	Sliding area
	Pickup Unit	15T Gear	FU9-0983	Teeth surface, inner circumference
	Pickup Unit	Disengagement Holder	FC0-9423	Sliding area
HANARL UD-321 FY9-6037	Pickup Unit	52T Gear	FU0-0117	Teeth surface
	ITB Unit	27T Gear / 21T Pulley	FU0-0111	Teeth surface of large-diameter gear
	Developing Drive Unit (Bk)	49T/21T Gear	FU8-0090	Gear teeth surface
	Registration Unit	Bushing	FC0-9808	Inner circumference of rib
	Duplex Lower Guide	Slave Roller Assembly	FM0-3008	Both ends, around shaft
	Duplex Lower Guide	Slave Roller Assembly	FM0-3009	Both ends, around shaft

CAUTION:
When replacing the foregoing parts as a unit, there is no need to apply grease because unit has been assembled after grease application.
However, when replacing the parts as a single part, apply grease (HANARL UD-321) to the application position described in the table because no grease is applied to the part.
Since HANARL UD-321 is quick-drying and transparent, caution is required to identify the area where it is applied.

Operator Maintenance

Overview

■ Introduction

The operator maintenance means some parts of replacement of the periodically replaced parts/durables and consumables, maintenance such as cleaning, and imageadjustment performed by the user (operator) that have been conventionally performed by the service technician at the user's site.
The operator maintenance allows the user to perform maintenance and image adjustment without the need for the visit of the service technician to the user's site,resulting in the reduced downtime of the machine. It also enables periodic maintenance that achieves improved image quality of the outputs and ensures safety.

Preparation for Introduction

■ Target Parts

Following shows the target parts to be replaced/cleaned by the operator.

● Replacement parts

Category	Parts name	Parts number	Estimated life (sheets)			Quantity	Parts replaced by operator
			imagePRESS C850	imagePRESS C750	imagePRESS C650/C65		
Transfer Area System	Secondary Transfer Outer Roller	FC0-9786	900,000	750,000	600,000	1	Secondary Transfer Unit
Fixing System	Fixing Assembly / Fixing Belt Unit	FM1-C721	600,000	500,000	400,000	1	Fixing Assembly
	Fixing Assembly / Pressure Belt Unit	FM1-C722	600,000	500,000	400,000	1	
	Fixing Assembly / Pressure Sub Thermistor (Rear)	FK2-7870	1,200,000	1,000,000	600,000	1	
	Fixing Assembly / Pressure Sub Thermistor (Front)	FK2-7871	1,200,000	1,000,000	600,000	1	

● Parts to Be Cleaned

Category	Parts name	Parts number	Cleaning timing (sec.)	Quantity	Parts to be cleaned by operator	Remarks
			imagePRESS C850/ C750/C650/C65			
Parts to Be Cleaned	Fixing Refresh Roller	-	3,600	1	Fixing Refresh Roller	The counter value in service mode indicates the time (the number of seconds) during which the Refresh Roller is engaged. Equivalent to 600,000 sheets under normal conditions

■ Allocation of Works

● Operator

- Replacement/cleaning of operator maintenance parts

● Service technician

- Initial registration to use operator maintenance

- Reconditioning of the Fixing Assembly *
- Registration of the Backup Fixing Assembly *
- Troubleshooting

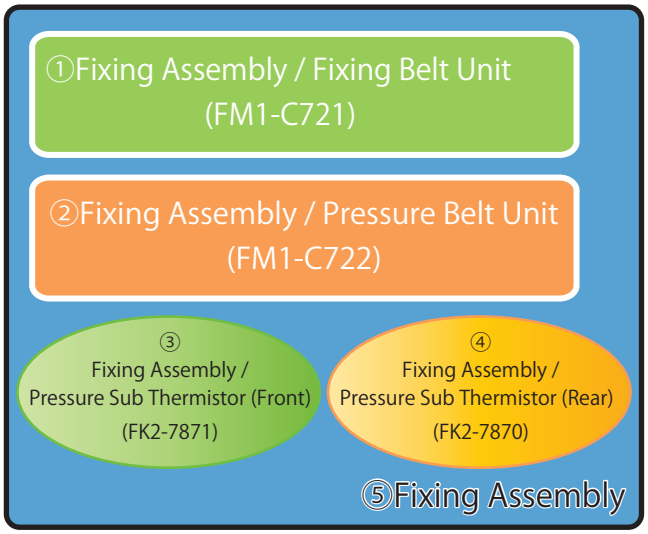
* Required for the operation in which the Fixing Assembly is reconditioned See the next page for details.

■ Operator Maintenance Mode Settings

● Operator Maintenance Mode

There are the following 2 types of operations depending on the administration of each sales company.

- Operation in which the Fixing Assembly is reconditioned
  The service technician replaces sub parts inside the Fixing Assembly which has been replaced by the operator to use the Fixing Assembly again.
  Enter and manage the counter of each sub part one by one when replacing the Fixing Assembly.



Replacement by the operator
⑤ Fixing Assembly

Replacement by the service technician
① Fixing Assembly / Fixing Belt Unit
② Fixing Assembly / Pressure Belt Unit
③ Fixing Assembly / Pressure Sub Thermistor (Front)
④ Fixing Assembly / Pressure Sub Thermistor (Rear)

- Operation in which the Fixing Assembly is not reconditioned
  The operator always replaces the Fixing Assembly with a new one.
  Clear the counters of all the sub parts at a time when replacing the Fixing Assembly.

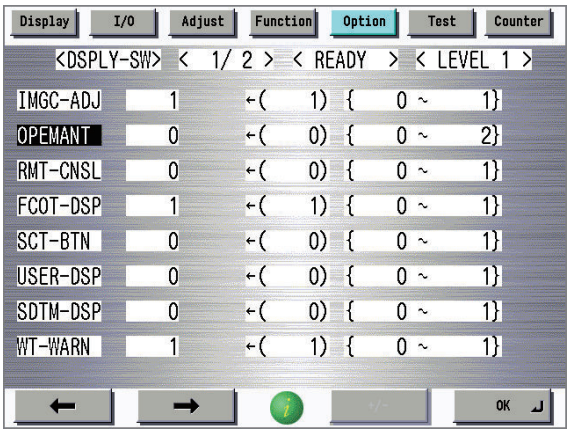
When using operator maintenance mode, operator maintenance mode needs to be set to ON in service mode.

< Display of operator maintenance mode >

Setting value	Description
0	No Display
1	Display (When the Fixing Assembly is reconditioned)
2	Display (When the Fixing Assembly is not reconditioned)

● Steps to Operator Maintenance Mode settings

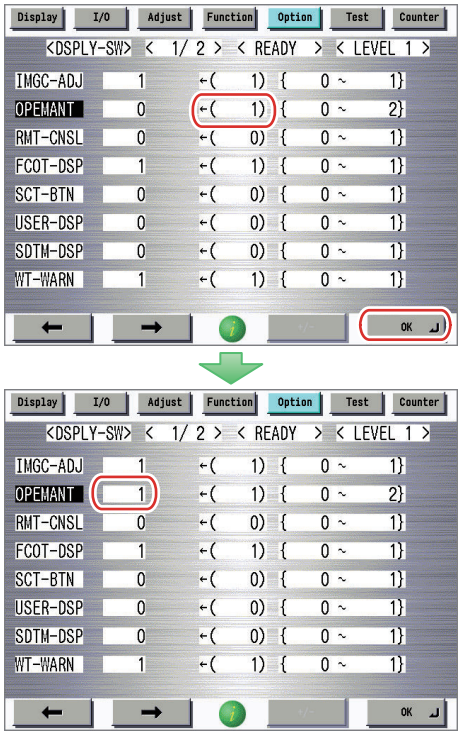
1) Start [Service Mode] at Level 1.
2) Press [COPIER] > [OPTION] > [DSPLY-SW] > [OPEMANT].



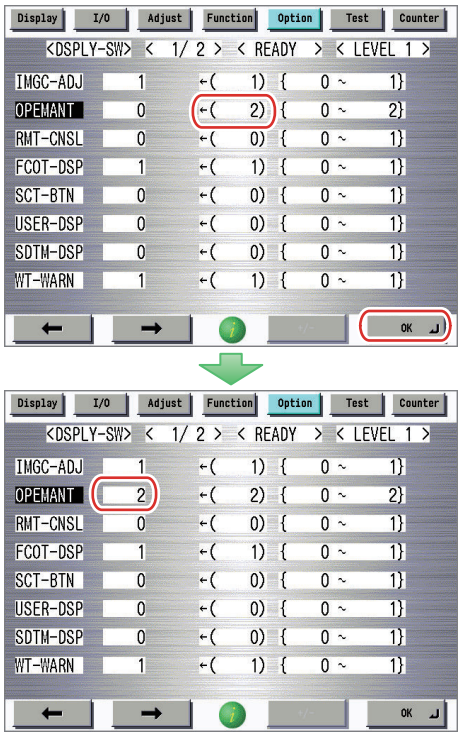
NOTE:
Be sure to refer to the correct step according to the following instruction since the step differs depending on whether the Fixing Assembly is reconditioned.

- For the operation in which the Fixing Assembly is reconditioned, perform the step 3-1.
- For the operation in which the Fixing Assembly is not reconditioned, perform the step 3-2.

3-1) Press the numeric key [1] on the control panel (the setting value is changed to 1) and press [OK]. (The data is reflected to the setting value field.)



3-2) Press the numeric key [2] on the control panel (the setting value is changed to 2) and press [OK]. (The data is reflected to the setting value field.)



4) Turn OFF and then ON the main power.

● Operator Maintenance-related setting items (service mode)

To set ON/OFF Operator Maintenance Mode

Item		Description
OPEMANT		ON/OFF of operator maintenance mode
(Lv.1) COPIER > OPTION > DSPLY-SW	Details	To set ON/OFF of operator maintenance mode. When 0 is set, operator maintenance mode is not displayed. When 1 or 2 is set, "Operator Maintenance Mode" is displayed in Settings/Registration menu. When 1 is set, sub parts counter can be managed individually at replacement of the Fixing Assembly. When 2 is set, sub parts counters are cleared collectively at replacement of the Fixing Assembly.
	Use case	When starting operator maintenance
	Adj/set/operate method	1. Enter the setting value, and then press OK key. 2. Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 2 0: OFF 1: ON (Manage the Fixing Assembly sub parts counter individually) 2: ON (Clear the Fixing Assembly sub parts counters collectively)
	Default value	0

To display/hide logs

Item		Description
OPLOG-SW		Dspl/hide of error log in operator mntc
(Lv.2) COPIER > OPTION > DSPLY-SW	Details	To set whether to display or hide error/jam/alarm-2 log in operator maintenance mode.

Item		Description
(Lv.2) COPIER > OPTION > DSPLY-SW	Use case	Upon user's request
	Adj/set/operate method	1. Enter the setting value, and then press OK key. 2. Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: Hide, 1: Display
	Default value	0

To set the warning message display timing

Item		Description
OP-ALMT		Set warning mssg timing in operator mntc
(Lv.2) COPIER > OPTION > DSPLY-SW	Details	To set the timing to display warning message of parts replacement/cleaning counter in operator maintenance mode. With this setting, warning message is displayed once before reaching the specified life of parts or number of sheets for cleaning.
	Use case	Upon user's request
	Adj/set/operate method	1. Enter the setting value, and then press OK key. 2. Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: At 100%, 1: At 90% and 100%
	Default value	0

To display/hide the following items on the Replaceable Parts screen

Item		Description
FX-BLT-U		ON/OFF of Fixing Belt Unit parts counter
(Lv.1) COPIER > COUNTER > DB1-SW	Details	To set whether to display the Fixing Belt Unit parts counter in the operator maintenance mode. When 0 is set, the operator is not notified although the parts counter reaches the specified value.
	Use case	When not displaying the parts counter in the operator maintenance mode
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
FX-BLT-L		ON/OFF of Pressure Belt Unit prts cntr
(Lv.1) COPIER > COUNTER > DB1-SW	Details	To set whether to display the Pressure Belt Unit parts counter in the operator maintenance mode. When 0 is set, the operator is not notified although the parts counter reaches the specified value.
	Use case	When not displaying the parts counter in the operator maintenance mode
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
2TR-ROLA		ON/OFF Sec Transfer Out Roller prts cntr
(Lv.1) COPIER > COUNTER > DB1-SW	Details	To set whether to display the Secondary Transfer Outer Roller parts counter in the operator maintenance mode. When 0 is set, the operator is not notified although the parts counter reaches the specified value.

Item		Description
(Lv.1) COPIER > COUNTER > DB1-SW	Use case	When not displaying the parts counter in the operator maintenance mode
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
FXLW-TH1		ON/OFF Press Sub Thrmstr(Rear) prts cntr
(Lv.1) COPIER > COUNTER > PD1-SW	Details	To set whether to display the Pressure Sub Thermistor (Rear) parts counter in the operator maintenance mode. When 0 is set, the operator is not notified although the parts counter reaches the specified value.
	Use case	When not displaying the parts counter in the operator maintenance mode
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
FXLW-TH2		ON/OFF Press Sub Thrmstr (Frt) prts cntr
(Lv.1) COPIER > COUNTER > PD1-SW	Details	To set whether to display the Pressure Sub Thermistor (Front) parts counter in the operator maintenance mode. When 0 is set, the operator is not notified although the parts counter reaches the specified value.
	Use case	When not displaying the parts counter in the operator maintenance mode
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1
FX1-RFRL		ON/OFF Fix Refresh Roll clean cntr dspl
(Lv.1) COPIER > COUNTER > CLN-SW	Details	To set whether to display the Fixing Refresh Roller cleaning counter in operator maintenance mode.
	Use case	When not displaying the cleaning counter in operator maintenance mode
	Adj/set/operate method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
	Display/adj/set range	0 to 1 0: OFF, 1: ON
	Default value	1

To change the timing of parts replacement/cleaning

Item		Description
FX-BLT-U		Fixing Belt Unit parts counter
(Lv.1) COPIER > COUNTER > DRBL-1	Details	1st line: Total counter value from the previous replacement 2nd line: Estimated life value When the counter value is cleared, the values of FX-U-TM1 to 5, FX-U-STR, FX1-RFRL, FX-RF-RL and FX-R-TM are also cleared.
	Use case	When checking the consumption level of parts/replacing the parts
	Adj/set/operate method	To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.

Item		Description
(Lv.1) COPIER > COUNTER > DRBL-1	Caution	Clear the counter value after replacement.
	Display/adj/set range	0 to 99999999
	Default value	0
	Related service mode	COPIER> COUNTER> CLEANING> FX1-RFRL COPIER> COUNTER> FIXING> FX-CNT, FX-RF-RL COPIER> COUNTER> DRBL-1> FX-BLT-L COPIER> DISPLAY> FIXING> FX-U-TM1 - 5, FX-U-STR, FX-R-TM
FX-BLT-L		Pressure Belt Unit parts counter
(Lv.1) COPIER > COUNTER > DRBL-1	Details	1st line: Total counter value from the previous replacement 2nd line: Estimated life value Clear the counter value after replacing the Pressure Belt Unit. The log of current value and running time of the Pressure Belt Unit (Fixing Motor) are also cleared.
	Use case	When checking the consumption level of parts/replacing the parts
	Adj/set/operate method	To clear the counter value: Select the item, and then press Clear key. To change the estimated life: Select the item, enter the value, and then press OK key.
	Caution	- Clear the counter value after replacement. Otherwise, E008-0001 may occur. - When the counter value is cleared, the log of current value of the Fixing Motor is also cleared.
	Display/adj/set range	0 to 99999999
	Default value	0

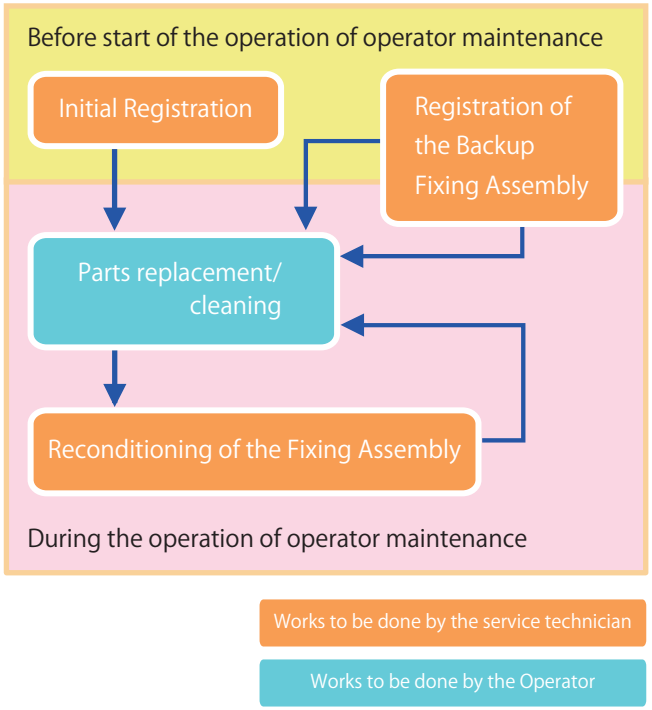
Workflow upon Introduction of Operator Maintenance

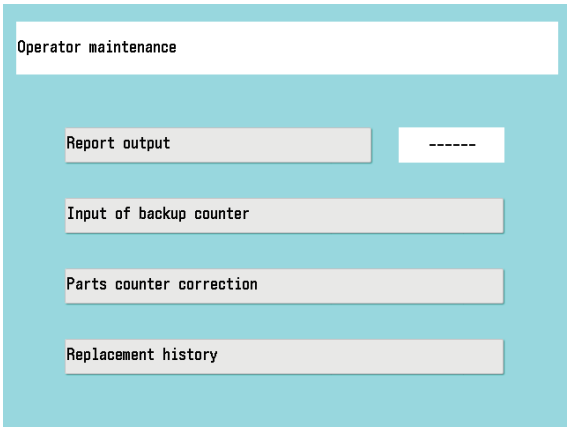
■ Overview

● Overall flow



● Menu of Fixing Assembly Operator Maintenance (service mode)

For the operation in which the Fixing Assembly is reconditioned (setting of the display of operator maintenance mode (OPEMANT): 1), register the Fixing Assembly ID or make settings for the reconditioning of Fixing Assembly in service mode.
There are the following 4 menus in the menu of Fixing Assembly Operator Maintenance.



Menu	Description
Report output	Used to check the counters when reconditioning the Fixing Assembly, and record which parts have been replaced.
Input of backup counter	Used to register the information of the new Fixing Assembly. Also used to clear the backup counter of the parts that have been replaced when reconditioning the Fixing Assembly.

Menu	Description
Parts counter correction	Used to register/modify the information of the Fixing Assembly which is currently installed.
Replacement history	Displays the history of Fixing Assembly replacements and counter clearings by the operator. Used to correct the counters when a Fixing Assembly has been replaced multiple times with the ID unknown.

■ Initial Registration

The following shows what to be performed by the service technician when starting the operation of operator maintenance.

1. Set ON for operator maintenance mode.
2. Register the ID of the Fixing Assembly installed in the host machine.
3. Register the ID of the new Fixing Assembly.

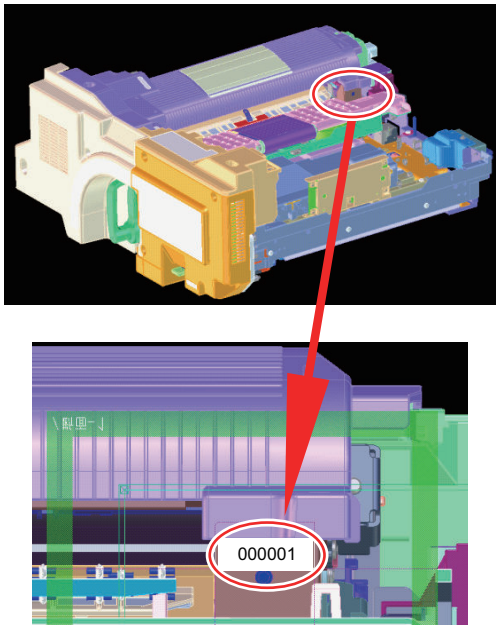
● 1. Set ON for operator maintenance mode.

For Setting Procedure, see “Steps to Operator Maintenance Mode settings” on page 2686.

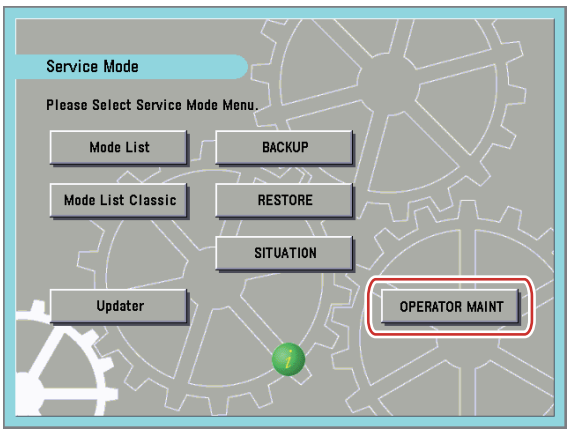
● 2. Register the ID of the Fixing Assembly installed in the host machine.

NOTE:
For the operation in which the Fixing Assembly is reconditioned (setting of the display of operator maintenance mode (OPEMANT): 1), perform the following.

1. Check the ID label for operator maintenance affixed to the Fixing Assembly, and write down the ID.

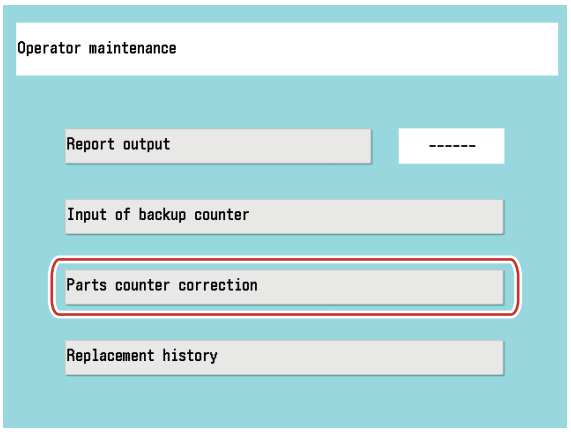


2. **In [Service Mode] screen, press [OPERATOR MAINT].**

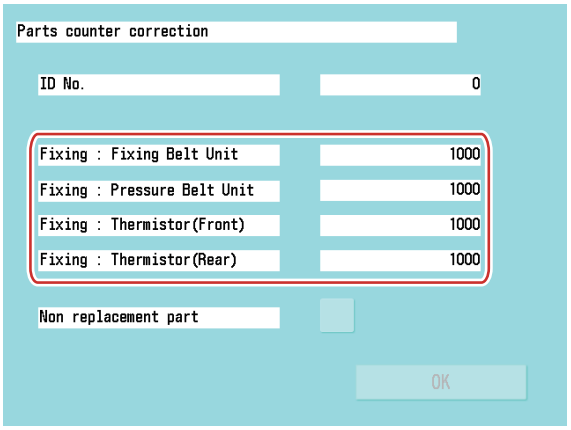


-> Fixing assembly operator maintenance screen is shown.

3. **Press [Parts counter correction].**

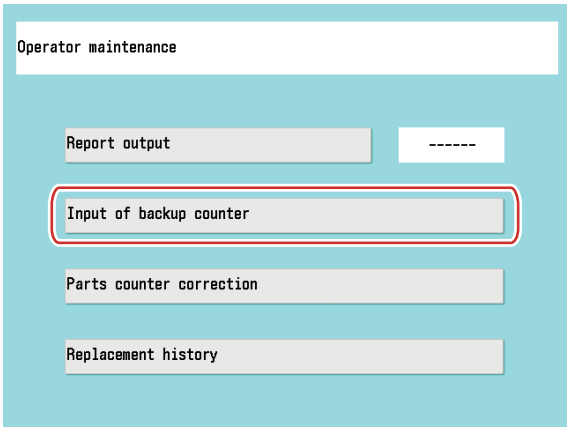


4. **In Parts Counter Correction screen, write down the counters of the following 4 sub parts.**
   - Fixing : Fixing Belt Unit
   - Fixing : Pressure Belt Unit
   - Fixing : Thermistor (Front)
   - Fixing : Thermistor (Rear)

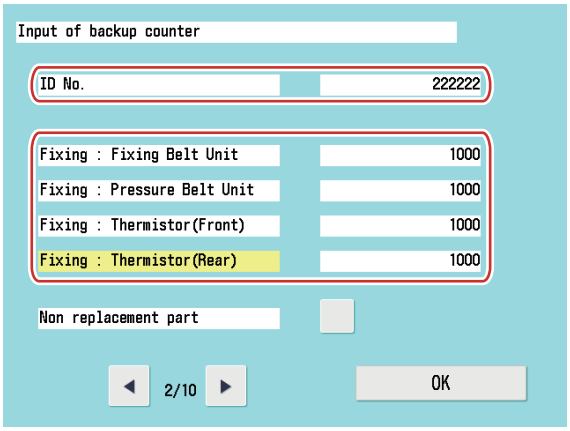


5. **Press the reset key to return to the Fixing Assembly operator maintenance screen.**

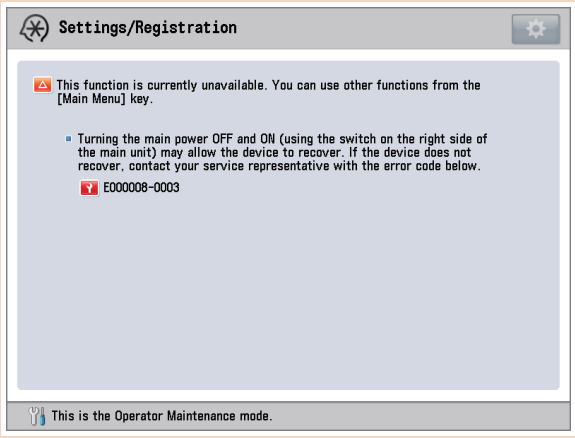
6. **Press [Input of backup counter].**



7. **Press [ID No.], and enter the ID written down in step 1 using the numeric keys.**
8. **Press [Fixing : Fixing Belt Unit], and enter the counter value written down in step 4 using the numeric keys. Enter the counter values of the other 3 sub parts in the similar way.**



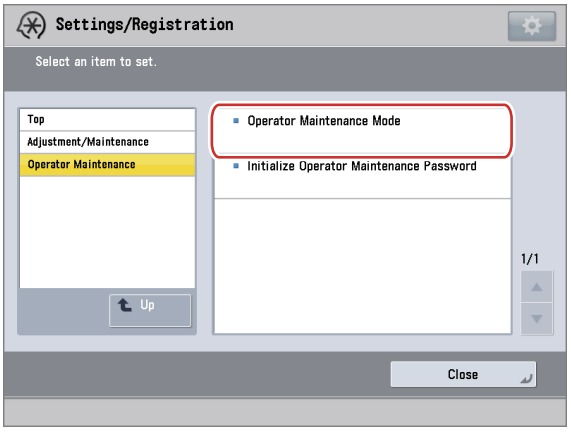
CAUTION:
Note that if a value larger than the specified value has been entered by mistake, an error screen will appear when the counter is cleared (step 16).



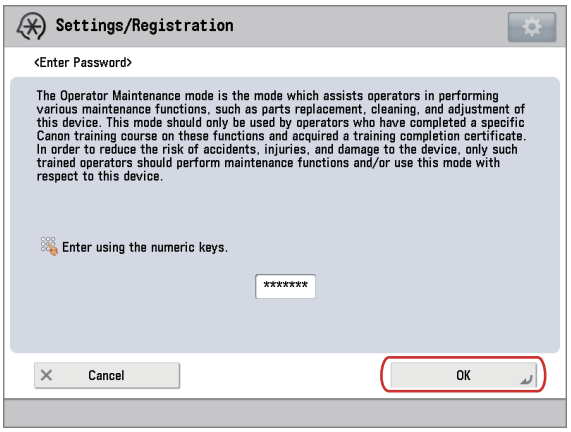
If the error screen appears, enter the correct counter value, and restart the host machine.

9. **Press [OK].**
10. **Press the Reset key to exit service mode.**

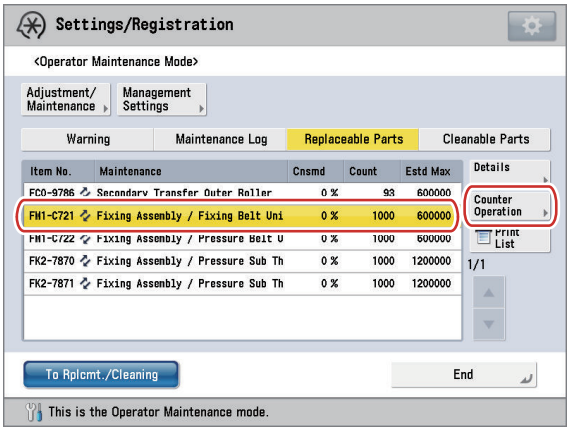
11. **Press [Settings/Registration] > [Adjustment/Maintenance] > [Operator Maintenance] > [Operator Maintenance Mode].**



12. **Enter the password and press [OK].**

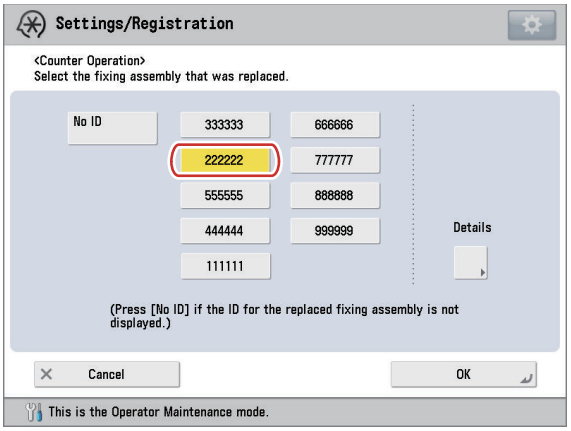


13. **In the Replaceable Parts screen, select the parts of the Fixing Assembly, and press [Counter Operation].**



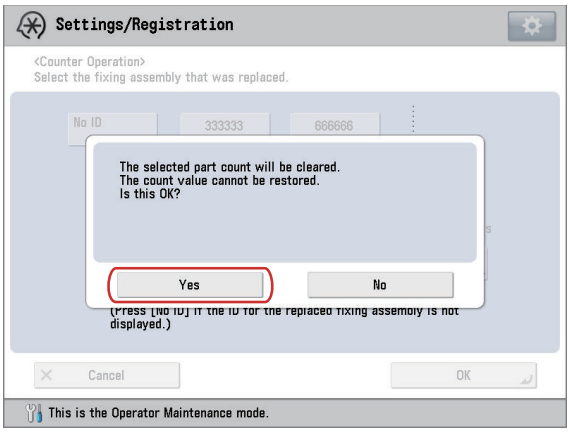
14. **In the Counter Operation screen, select the ID of the Fixing Assembly installed in the host machine which was input in step 7.**

NOTE:
At the start of operation, the Fixing Assembly is operating with "No ID".
Although no Fixing Assembly is actually replaced, select the ID of the Fixing Assembly which is installed in the host machine.
This determines the connection between the installed Fixing Assembly and the backup counter.



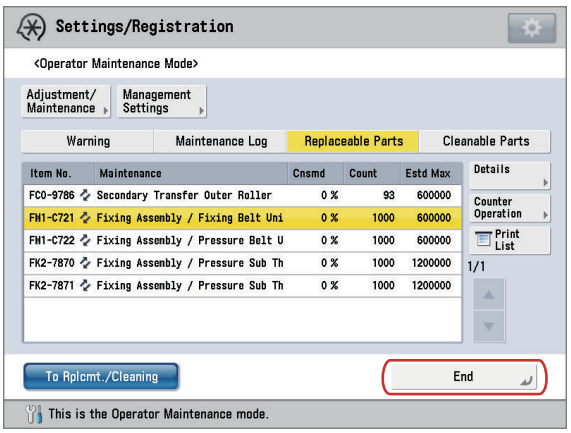
15. **Press [OK].**
    -> The confirmation screen for clearing the counter will appear.

16. **Press [Yes].**

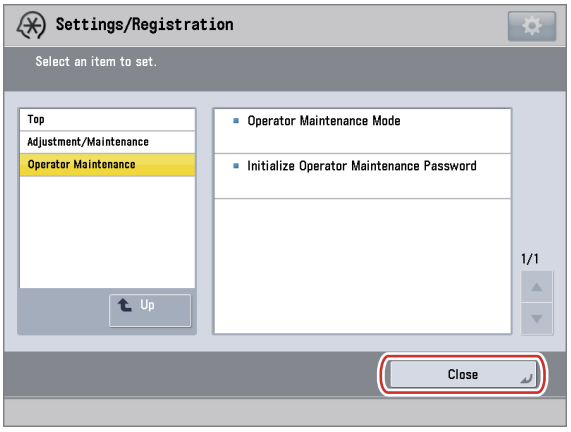


-> The count clear completion screen will appear.

17. **Press [End].**



18. **Press [Close].**



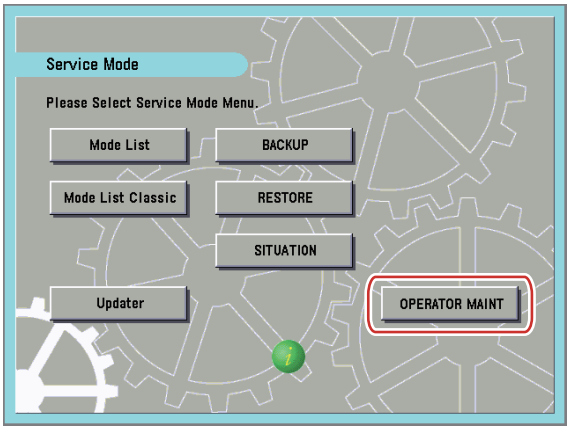
● 3. Register the ID of the new Fixing Assembly.

Register the ID of the new Fixing Assembly to be stored at the user's site.
For details, refer to “Registration of the New Fixing Assembly” on page 2701 on the next page.

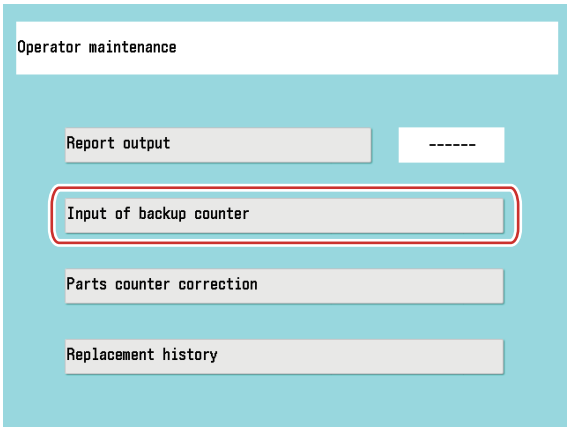
■ Registration of the New Fixing Assembly

NOTE:
Up to 10 Fixing Assembly IDs can be registered.

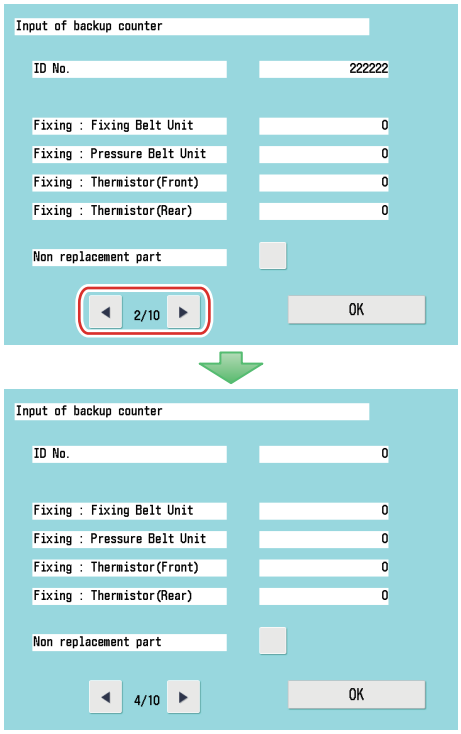
1. **Check the ID label for operator maintenance affixed to the Fixing Assembly, and write down the ID.**
2. **In [Service Mode] screen, press [OPERATOR MAINT].**



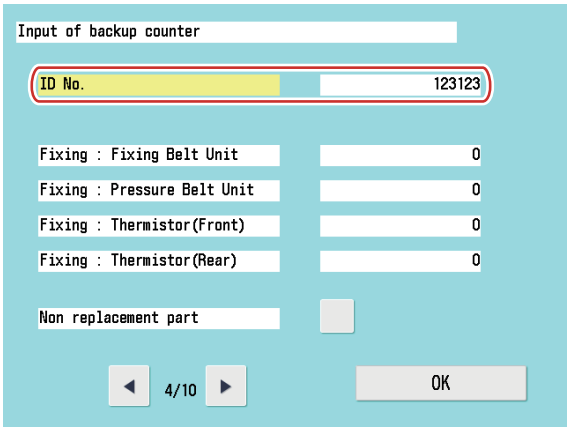
3. **Press [Input of backup counter].**



4. **Press the left arrow or right arrow key to display a screen in which no ID is registered.**



5. **Press [ID No.], and enter the ID written down in step 1 using the numeric keys.**



6. **Press [OK].**

7. **Press the Reset key to exit service mode.**

■ Reconditioning of the Fixing Assembly

The following shows what to be performed by the service technician after the operator has replaced the Fixing Assembly.

1. Apply grease to the tooth surface of the gear of the Fixing Drive Unit.
2. Output the counter report of the Fixing Assembly which is to be reconditioned.
3. Recondition the Fixing Assembly.
4. Clear the backup counter of the sub parts replaced when reconditioning the Fixing Assembly.

● 1. Apply grease to the tooth surface of the gear of the Fixing Drive Unit.

Procedure: “Removing the Fixing Assembly” on page 843

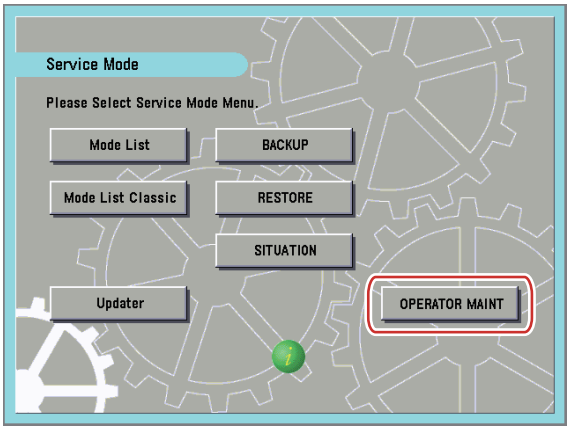
NOTE:
This is usually performed when replacing the Fixing Assembly; however, since it is not performed by the operator at the time of Fixing Assembly replacement, it should be performed by the service technician.

● 2. Output the counter report of the Fixing Assembly which is to be reconditioned.

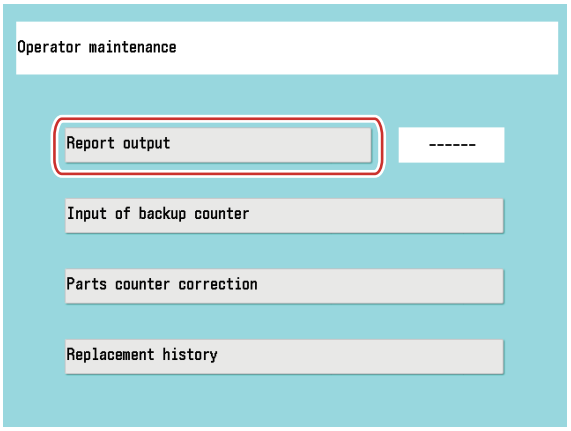
NOTE:
- Used to check the counters when reconditioning the Fixing Assembly, and record which parts have been replaced.
- All the parts counters of the Fixing Assembly registered in the backup counter are output.

CAUTION:
If [To Rplcmt./Cleaning] in operator maintenance mode is pressed immediately after outputting a report, wait time of approx. 2 minutes is required in order to protect the device.

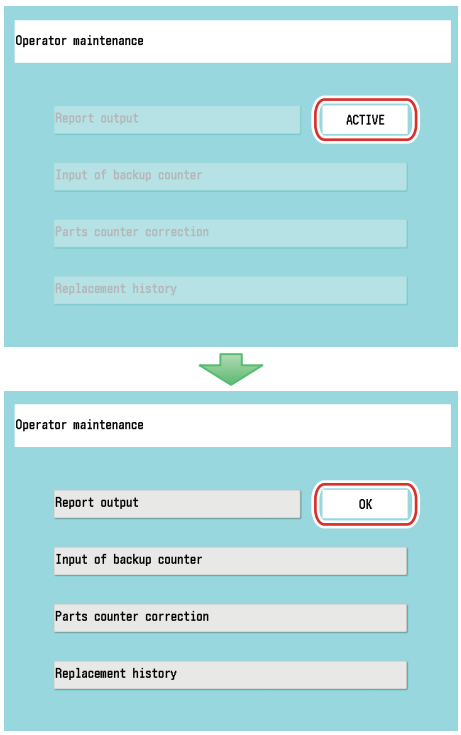
1. In [Service Mode] screen, press [OPERATOR MAINT].



2. Press [Report output].



3. **The status field changes from "ACTIVE" to "OK", and then the report is output.**



4. **Press the Reset key to exit service mode.**
5. **When the Fixing Assembly is reconditioned (sub parts are replaced) at the service office, include a report in the packaging box of the Fixing Assembly which is to be reconditioned.**

● 3. Recondition the Fixing Assembly

1. **Check the report output in "2. Output the counter report of the Fixing Assembly which is to be reconditioned." on page 2703 and replace the sub parts whose degree of wear has exceeded 100%.**

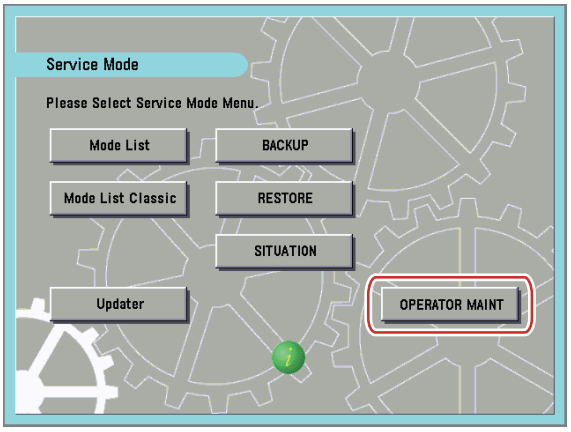
   Refer to the following for the part replacement procedure.

Replacement parts	Reference
Fixing Assembly: Fixing Belt Unit	"Removing the Fixing Belt Unit" on page 809
Fixing Assembly: Pressure Belt Unit	"Separating the Pressure Belt Unit and the Pressure Heater" on page 828
Fixing Assembly: Thermistor (Front)	"Removing the Pressure Sub Thermistor (Front)" on page 838
Fixing Assembly: Thermistor (Rear)	"Removing the Pressure Sub Thermistor (Rear)" on page 839

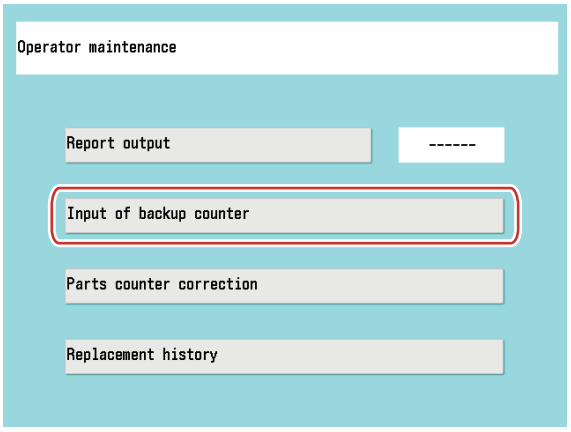
2. **Select the check boxes of the replaced parts in the report.**
3. **Include the report in the packaging box of the Fixing Assembly which has been reconditioned.**

● 4. Clear the backup counter of the sub parts replaced when reconditioning the Fixing Assembly.

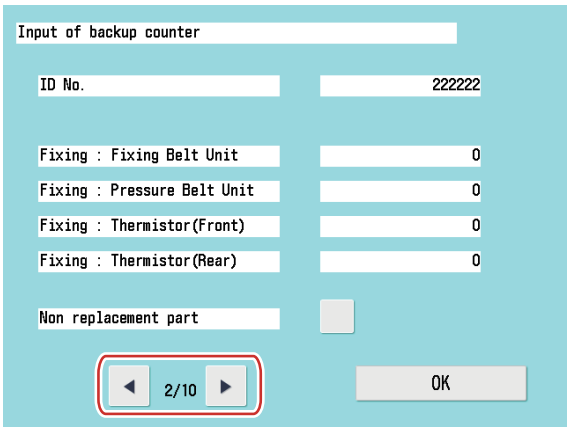
1. **In [Service Mode] screen, press [OPERATOR MAINT].**



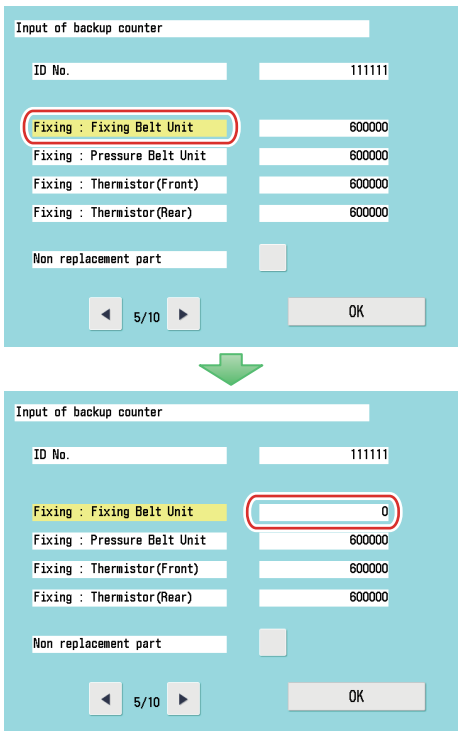
2. **Press [Input of backup counter].**



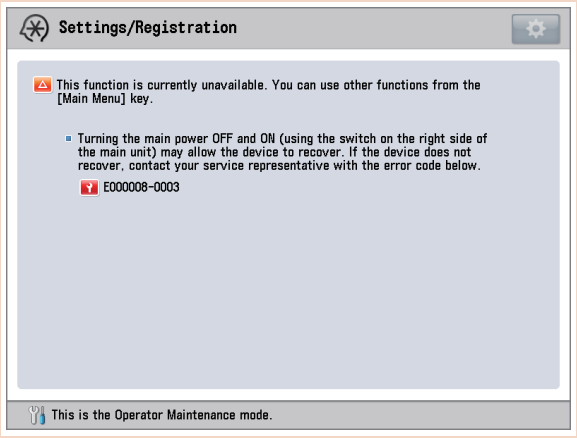
3. **Press the left arrow or right arrow key until the ID of the Fixing Assembly which has been reconditioned is displayed.**



4. **Select the sub parts which have been replaced, and press the Clear key to clear the counters.**

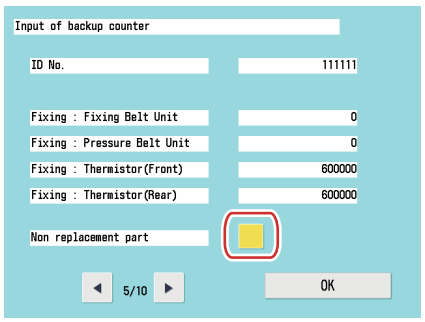


CAUTION:
Note that if the counter is not cleared and the counter value exceeds the specified value, an error screen will appear when the counter is cleared after the operator has replaced the Fixing Assembly.



For the remedy to be performed when the error screen appears, refer to the troubleshooting “When the service technician forgot to clear the counter of the Fixing Assembly which has been reconditioned” on page 2707.

NOTE:
When reconditioning the Fixing Assembly by replacing those other than sub parts (such as a gear or motor), keep the button on the right side of [Non replacement] selected.



5. **Press [OK].**
6. **Press the Reset key to exit service mode.**
7. **Keep the Fixing Assembly which has been reconditioned at user site.**

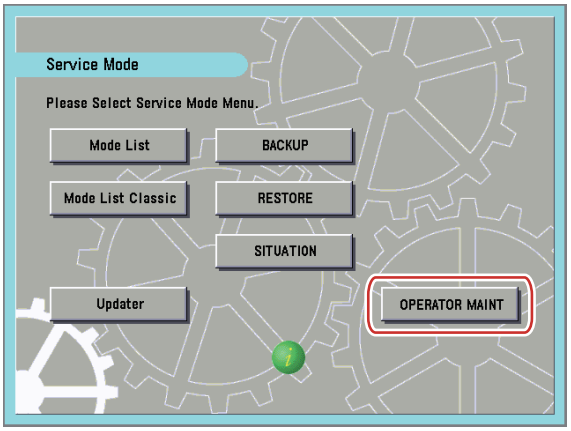
■ Countermeasure for Trouble

● When the service technician forgot to register the Fixing Assembly ID

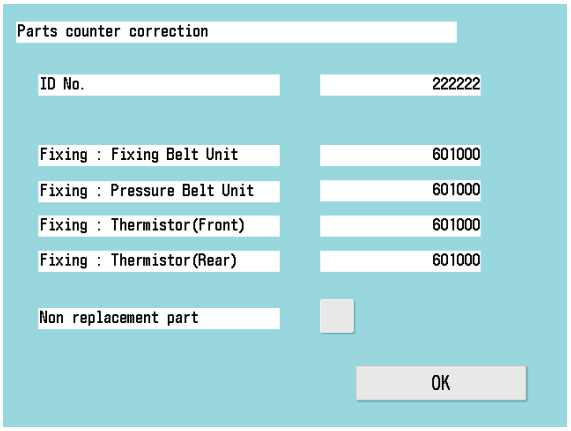
1. **Have the operator proceed with the replacement of the Fixing Assembly while "No ID" is selected.**
2. **Register the ID by referring to “2. Register the ID of the Fixing Assembly installed in the host machine.” on page 2696**

● When the service technician forgot to clear the counter of the Fixing Assembly which has been reconditioned

1. **Prepare the report included in the packaging box of the Fixing Assembly which has been replaced by the operator, and check the replaced sub parts and the part counter values.**
2. **In [Service Mode] screen, press [OPERATOR MAINT].**

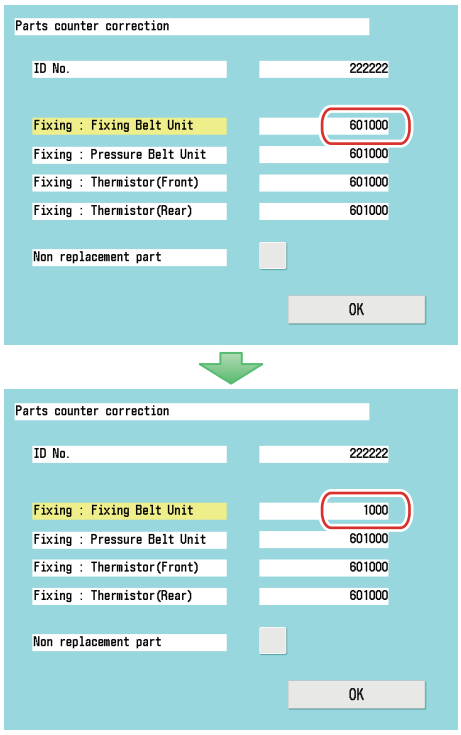


3. **Press [Parts counter correction].**
   -> The screen to modify the parts counters of the Fixing Assembly which is currently installed in the host machine is displayed.



4. **Select the sub parts checked in step1.**

5. **Using the numeric keys, enter the value obtained by subtracting the part counter value checked in step 1 from the displayed (current) counter value.**
   [e.g.]
   - Part checked in step 1: Fixing Assembly : Fixing Belt Unit
   - Part counter value checked in step 1: 600000
   - Current counter value: 601000
     601000 - 600000 = 1000
     -> Select "Fixing Assembly : Fixing Belt Unit", and enter "1000".



6. **Press [OK].**

7. **Press the Reset key to exit service mode.**

Audit log	HDD	Clear	-	-	-	-	-	Clear	-	-	-	-	-	-	-	-	-	Clear

Note 1: The following items will be deleted.
- Preferences > Paper Settings > B5/EXEC Paper Selection
- Preferences > Paper Settings > A5R/STMTR Paper Selection

Note 2: The following items will be deleted.
- Function Settings > Common > Paper Feed Settings > Paper Drawer Auto Selection ON/OFF

Note 3: The following items will be deleted. Function Settings > Common > Scan Settings > Scanner Noise Settings, Function Settings > Common > Scan Settings > Timing to Raise Feeder Tray, and Function Settings > Common > Scan Settings > Streak Prevention
Note 4: Clearing MN-CONT changes the memory reception setting to OFF, therefore the image data stored in the Memory RX Inbox will be printed automatically after the host machine is restarted. After the data is printed, the data will be deleted from the Memory RX Inbox.
Note 5: Since passwords are stored using TPM encryption, passwords that were backed up after initialization of all data/settings cannot be restored. When all data/settings have been initialized, initialize the password with the switch license for password initialization. [Reference] Because the TPM encryption key is updated when all data/settings are initialized, the backed-up password can no longer be read.
Note 6: After the backup key information in the HDD is cleared, it is automatically restored from the key in the SRAM (MCON2). When the HDD and Main Controller PCB 2 are replaced simultaneously, the key information is not automatically restored.
Note 7: After the key information in the SRAM (MCON2) is cleared, it is automatically restored from the backup key in the HDD. When the HDD and Main Controller PCB 2 are replaced simultaneously, the key information is not automatically restored.
Note 8: When the TPM setting is "ON", the error code is displayed. After restart and initialization of all data/settings, it is restored from the error state by setting the TPM setting to "ON" again.
Note 9: After executing each CLEAR operation, the key information in the SRAM can be automatically restored from the common backup key in the HDD, and the TPM setting becomes "ON". However, only the UI display is "OFF", so it is required to change the TPM setting to "ON" manually.
Note 10: By initializing all data/settings, the TPM setting is changed to "OFF".

Stored data	Storage location	Backup method

Old model	iR-ADV (1) (iR-ADV 1st generation)	iR-ADV (2) (iR-ADV 2nd generation)
imageRUNNER in general	iR ADVANCE C2030/C2025/C2020 Series	iR ADVANCE C2230/C2225/C2220 Series
	iR ADVANCE C5051/5045/5035/5030 Series	iR ADVANCE C5255/C5250/C5240/C5235 Series
	iR ADVANCE C7065/C7055 Series	iR ADVANCE C7280/C7270/C7260 Series
	iR ADVANCE C9075PRO/C9070PRO/C9065PRO/C9060PRO Series	iR ADVANCE C9280 PRO/9270 PRO Series
	iR ADVANCE 4045/4035/4025 Series	iR ADVANCE 4245/4235/4225 Series
	iR ADVANCE 6075/6065/6055 Series	iR ADVANCE 6275/6265/6255 Series
	iR ADVANCE 8105/8095/8085 Series	iR ADVANCE 8205/8285/8295 Series

Note 11: Detailed parameters cannot be imported by default. Only basic parameters can be imported. Detailed parameters can also be imported if reception is not restricted in the user mode device information distribution settings. However, it is not recommended to import detailed parameters to/from different models.
Note 12: Detailed parameters cannot be imported by default. Only basic parameters can be imported. Detailed parameters can also be imported if reception is not restricted in the user mode device information distribution settings. However, it is not recommended to import detailed parameters to/from different models. Data can be import/export only from/to another host machine of the same model.
Note 13: "Copy" and "Store/Access Files" are not supported.
Note 14: If the machine can be activated with download mode in safe mode at the time of HDD failure, backup of Meapback may be possible in some cases. In this case, install the system after replacing the HDD, and check that the machine starts normally. Then, active the download mode in safe mode, and restore the backup data so that data can be restored while retaining Meapback information.
Note 15: Between machines of the same model only
Note 16: Available only when the user logs in as an administrator.
Note 17: Between machines of the same model only It is not possible to restore this item alone. "Mail Box Settings", "Image data in Mail Box", and "Registration form of image composition" will also be restored.
Note 18: Only "Web Access Favorites" can be backed up.
Note 19: Only when the MEAP application has a backup function.

Note 20: This does not apply to data retained only by the MEAP application. This applies only to data registered in MEAP application management information data.
Note 21: Backup is available only for TPM PCB failure. The data cannot be restored to other machines where the TPM setting is set to "ON".
Note 22: Data can be backed up using SramImg, DSRAMBUP, or RSRAMBUP as before.
Note 23: Service mode setting values can be backed up and restored by the user from RUI only when COPIER > OPTION > USER > SMD-EXPT is set to "ON". As for service mode setting values, the host machine's HDD or a connected USB flash drive can be selected as the backup destination on the service mode top screen.
Note 24: Exported audit logs cannot be restored back to the export source device.
Note 25: Only "Send" can be backed up between machines of different models.

Soft Counter List

Soft counter specifications

The numbers entered for software counters are classified as follows:

No.	Counter Details
000 to 099	Remote copy
100 to 199	Total
200 to 299	Copy
300 to 399	Print
400 to 499	Copy and print
500 to 599	Scan
600 to 699	Box
700 to 799	Reception print
800 to 899	Report print
900 to 999	Transmission

Meanings of symbols in tables

- L: Large size (larger than B4 size)
- S: Small size (smaller than B4 size)
- S: Small size (smaller than B4 size)
  It can be changed by the service mode (COPIER > OPTION > USER > B4-L-CNT) so that the paper larger than B4 size can be counted as large size paper.
- Copy: Local copy + remote copy
- Copy A: Local copy + remote copy + box print
- Print: PDL print + report print + box print
- Print A: PDL print + report print
- Scan: Black and white scan + color scan

Removal

Overview

- User data kept by the machine contains address books and inbox documents that users can recognize.
- By using the copy, print, or send function, there is also information left on the HDD of MFPs that is generally not recognizable but can be recovered as documents. (Refer to the illustration on the next page.)
- For security, the user mode is provided to delete data on SRAM and perform overwrite deletion to render user data on HDD unrecoverable.

■ User data delete

- To delete user data, execute Settings/Registration > Management Settings > Data Management > Initialize All Data/Settings in user mode. Performing Initialize All Data/Settings returns user mode setting values to their factory defaults.
- Usually, one overwrite is enough. Note that increasing the number of overwrite increases the time required for the deletion operation.

NOTE:
- When you perform Initialize All Data/Settings, license and data of MEAP application are initialized to the state same as when the HDD is replaced. If MEAP application may be used by other users after the machine is removed, disable the MEAP application and uninstall it in advance.
- Performing Initialize All Data/Settings does not delete the license of the system option.

■ Deletion of Service Mode Settings

The service mode setting values may have been changed at the user's request. In that case, the service mode setting values should be changed back to the default values before removing the machine.

Work Procedure

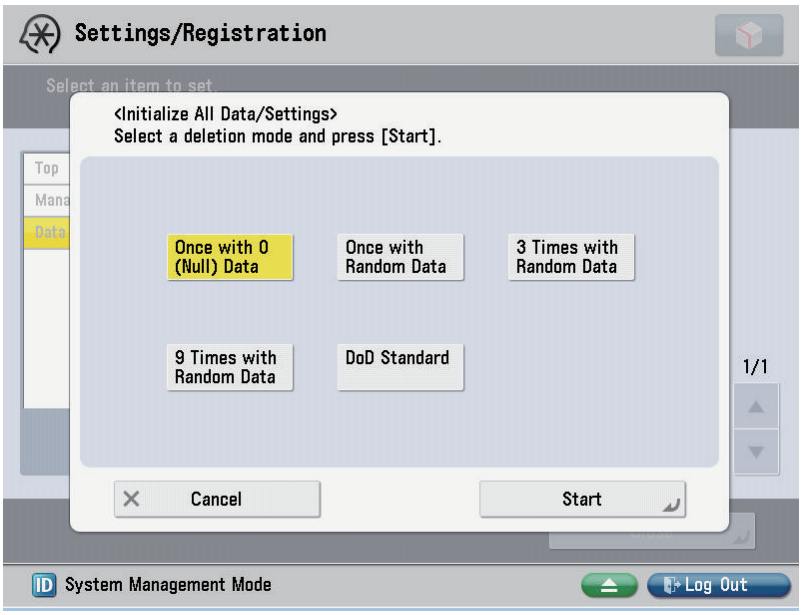
If the user uses MEAP applications, ask the user to uninstall the MEAP applications if necessary.

■ User data delete procedure

1. **Management Settings > Data Management > Initialize All Data/Settings**
2. **Select a deletion mode**

3. **Select [Start]**

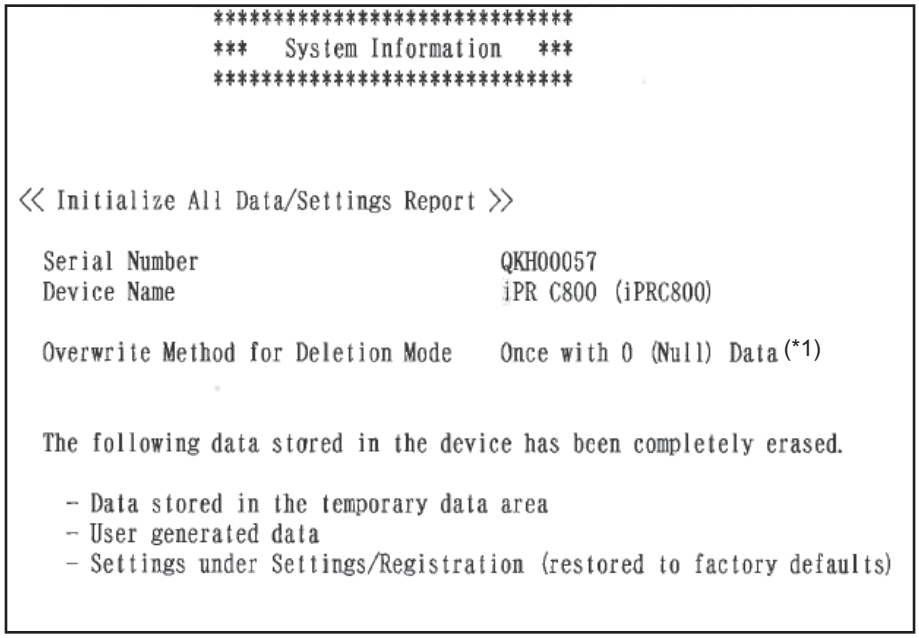
If the user has not given any instruction on which item in the deletion mode should be used, select the default "Once with 0 (Null) Data".



NOTE:

- When all the data are initialized, the user data on the HDD and the user data on the SRAM of the Main Controller PCB 2 are deleted. For the items to be deleted, refer to the backup list.
- Performing "Initialize All Data" turns auto gradation adjustment values and TPM settings to OFF. Therefore, to enable normal operation the next time, the operation performed at installation is necessary.
- Performing Initialize All Data/Settings does not delete the license of the system option.
- In the case of "Once with 0(Null)Data", it takes it more than three hours to be completed.

Report output upon completion of Initialize All Data/Settings
With MN-CONT, a report is output after executing Initialize All Data/Settings. Consider using this report to provide to user as a material to inform of work details when executing Initialize All Data/Settings upon user's request.
Operation after Initialize All Data/Settings
The machine is started normally at restart after Initialize All Data/Settings without displaying the message (Turn OFF the main power supply on the right side of the machine) on the screen to prompt shutdown. The report is output after startup.



```
                ******************************
                ***   System Information   ***
                ******************************

<< Initialize All Data/Settings Report >>

  Serial Number                       QKH00057
  Device Name                         iPR C800 (iPRC800)

  Overwrite Method for Deletion Mode  Once with 0 (Null) Data (*1)

  The following data stored in the device has been completely erased.

    - Data stored in the temporary data area
    - User generated data
    - Settings under Settings/Registration (restored to factory defaults)
```

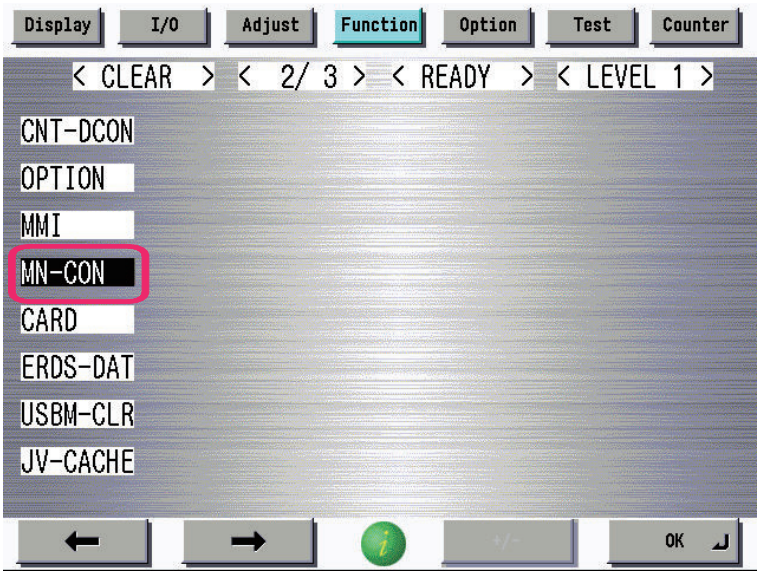
*1 display following one.
"Once with 0 (Null) Data"

"Once with Random Data"
"3 Times with Random Data"
"9 Times with Random Data"
"DoD Standard"
Limitations

- The language of the report is only English, and cannot be changed.
- The report is output without fail (a function to select ON/OFF of report output is not provided).
- There is no second output of report when the machine is turned ON without paper.
- Only the output of this report remains in the job log.

■ Deletion of Service Mode Setting Values

Service Mode Lev1 > Function> CLEAR > MN-CONT



NOTE:
When MN-CON clear is executed, the address book on the SRAM of the Main Controller PCB 2 is not deleted. As for the user data, initialize all the data.
