Important Notices

Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products.

This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

Following "Trademarks" and "Copyright" are not applicable if they are not supported by laws and regulations in the country or region that this document and products are used in.

Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

Use of this manual should be strictly supervised to avoid disclosure of confidential information.

Explanation of Symbols

The following symbols are used throughout this Service Manual.

Symbols	Explanation	Symbols	Explanation
3	Check.		Remove the claw.
	Check visually.		Insert the claw.
200	Check a sound.		Push the part.
1x	Disconnect the connector.		Connect the power cable.
1x	Connect the connector.		Disconnect the power cable.
1x	Remove the cable/wire from the cable guide or wire saddle.	P	Turn on the power.
	Install the cable/wire to the cable guide or wire saddle.	OFF	Turn off the power.
	Remove the screw.		Loosen the screw.
	Install the screw.		Tighten the screw.

Symbols	Explanation	Symbols	Explanation
	Cleaning is needed.		Measurement is needed.

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.

In the diagrams, **TET** represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

 In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*" indicates that the DRMD signal goes on when '0'.

In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine.

Notes on works	. 4

Laser

Laser Safety

Since radiation emitted inside this machine is completely confined with protective housings and external covers, the laser beam cannot escape from the machine during any phase of normal use by users.

Therefore, this machine is classified as a Class 1 laser product under the international standard IEC60825-1 that is regarded as safe during normal use.

How to Handle the Laser Scanner Unit

This machine is classified as a Class 1 laser product.

However, the laser scanner unit contains source of Class 3B laser beam and exposure to the beam may cause eye injuries. Therefore, be sure not to disassemble the laser scanner unit. No adjustment can be made to the laser scanner unit in the machine in the field.

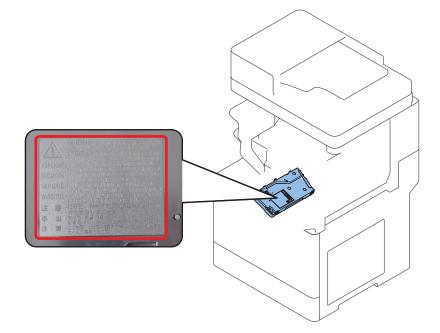

The mark or the warning label shown in the following figure is affixed on the laser scanner unit.

Dieses Gerät ist der Klasse 1 der Laserprodukte zugeordnet.

Allerdings enthält die Laserscannereinheit eine Laserstrahlquelle der Klasse 3B, die Augenschäden verursachen kann, wenn man in diesen Strahl blickt.

Deshalb darf die Laserscannereinheit nicht zerlegt werden. An der Laserscannereinheit kann keine Justage vor Ort vorgenommen werden.

Das in dem folgenden Bild dargestellte Kennzeichen bzw. der Warnaufkleber ist auf der Laserscannereinheit angebracht.

Power Supply / Lithium Battery

Power Supply

• As a general rule, do not use extension cords.

If an extension cord must be used, however, use one for local rated voltage and over, untie the cord binding, and insert the power plug completely into the extension cord outlet to ensure a firm connection between the power cord and the extension cord.

CAUTION:

Do not plug multiple cords together to an extension cord. It may cause a fire or electrical shock.

• The socket-outlet shall be installed near the equipment and shall be easily accessible.

Notes When Handling a Lithium Battery

Dispose of used batteries according to the instructions.

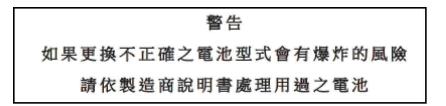

A CAUTION:

Risk of explosion if battery is replaced by an incorrect type.

The following warnings are given to comply with Safety Principles (EN60950-1).

A CAUTION:

Wenn mit dem falschen Typ ausgewechselt, besteht Explosionsgefahr. Gebrauchte Batterien gemäß der Anleitung beseitigen.

Turn power switch ON

The machine is equipped with 2 power switches: main power switch and control energy saver key. The machine goes on when the main power switch is turned on (i.e., other than in low power mode, sleep mode).

Do not turn off the main power switch while the progress bar is indicated, during which access is made to the HDD. If deprived of power, the HDD can suffer a fault (E602).

Toner Safety

Toner is a nontoxic matter composed of plastic, iron and a trace of pigments.

CAUTION:

Never throw toner in flames to avoid explosion.

Handling Adhered Toner

- Use dry tissue paper to wipe off toner adhered to skin or clothes and wash in water.
- · Never use warm water for cleaning up toner to prevent toner particles from being gelated to soak into fibers permanently.
- · Toner particles are reactive with vinyl polymers. Avoid contacting these materials.

Notes on works

Points to Note Before Servicing

- At servicing, be sure to turn OFF the power source according to the specified steps and disconnect the power plug.
- Be sure to disconnect the power plug on a regular basis and remove dust and dirt accumulated around the outlet with dry cloth.

CAUTION:

Leaving the power plug connected for a long time in an environment having a lot of dust, moisture, or oily smoke will cause a fire. (Because dust accumulated in the surrounding area will absorb moisture and cause an insulation failure)

· Be careful not to be injured by burrs of edges, sharp corners or protrusions.

CAUTION:

Hazardous area such as corners, edges, springs and other sharp sections may be remaining on products. Always be aware of the presence of hazardous area to avoid injury caused by contacting and/or striking those area, by not overconcentrating on service work.

Points to Note at Cleaning

When performing cleaning using organic solvent such as alcohol, be sure to check that the component of solvent is vaporized completely before assembling.

Notes on Assembly/Disassembly

Follow the items below to assemble/disassemble the device.

- 1. Disconnect the power plug to avoid any potential dangers during assembling/disassembling works.
- 2. If not specially instructed, reverse the order of disassembly to reinstall.
- 3. Ensure to use the right screw type (length, diameter, etc.) at the right position when assembling.
- 4. To keep electric conduction, binding screws with washers are used to attach the grounding wire and the varistor. Ensure to use the right screw type when assembling.
- 5. Unless it is specially needed, do not operate the device with some parts removed.
- 6. Never remove the paint-locked screws when disassembling.

CAUTION:

English

CAUTION

The fuse may be in the neutral, and that the mains shall be disconnected to de-energize the phase conductors.

German

VORSICHT

Die Sicherung kann sich im Nullleiter befinden und das Hauptnetz muss abgetrennt werden, um die Phasenleiter stromlos zu machen.

Technical Explanation (Device)

Functional Configuration	. 26
Original Exposure System	.27
Controller System	.49
Laser Exposure System	. 54
Image Formation System	. 57
Fixing System	.63
Pickup Feed System	. 71
External Auxiliary System	. 89

Functional Configuration

This machine consists of 6 major blocks: Original Exposure and Feed System, Controller System, Laser Exposure System, Image Formation System, Fixing System, and Pickup Feed System.

Original Exposure System

Features

Reader Assembly

• Color reproducibility has been improved by adopting a scanner unit with 3-line CIS installed, as compared with the conventional models.

Specifications

Reader Assembly

Item	Specification/Function
Туре	Built in with Printer model,
	No stream by Platen/Stream feed by ADF

Dust Detection Control

When reading an original, the original reading position is changed according to the presence/absence of dust on the Stream Reading Glass or the Guide Plate of the ADF, or image correction is performed to prevent the dust from being printed on the image.

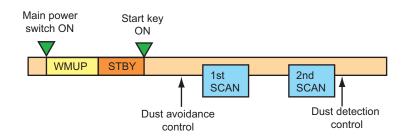

Control timing

Dust detection

At job completion

Dust evasion

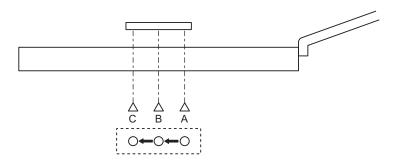

• When a job starts

Control description

At job completion (dust detection)

The Reading Sensor performs dust detection at a reading position. When it detects any dust, the sensor is moved to the position B if the sensor position is A, or to the position C if the position is B. This position will be the reading position for the next job.

At the start of a job and paper interval (dust evasion)

The Scanner Unit does not move.

Reading is performed at the position determined by the control performed at job completion or at the start of a job, and image correction is performed if dust is detected at that position.

Related service mode

- Adj dust detect level: ppr intvl, DADF: Service mode > COPIER > OPTION > IMG-RDR > DFDST-L1

Guide Plate dust detection/correction control

Overview

The Guide Plate facing the Stream Reading Glass is static for the ADF on this machine. Because of this, a false detection may occur with the conventional detection method for stream reading as it is not possible with that method to discriminate the dust adherent to the Guide Plate from the dust adherent to the glass when the Stream Reading Glass is read without paper. As measures against this issue, the ADF on this machine performs dust detection both before and during the feed and determines whether the dust is adherent to the Guide Plate or not based on the following criteria.

- The dust detected both before and during the feed: dust adherent to the glass (the dust that should be evaded)
- The dust detected before the feed but not during the feed: dust adherent to the Guide Plate (the dust that do not need to be evaded)

Timing of control

Guide Plate dust detection control is performed starting when an original passes through the specified location at the following timing.

- At the start-up of a stream reading job
- At paper interval

Control Description

Guide Plate dust detection/correction is performed with the following steps.

- 1. A dust detection is performed with a scan before the feed.
- 2. A dust detection is performed with a scan during the feed.
- 3. Dust detection correction is performed for the dust that are determined to be adherent to the glass

Non-continuous Dust Detection/Correction Control

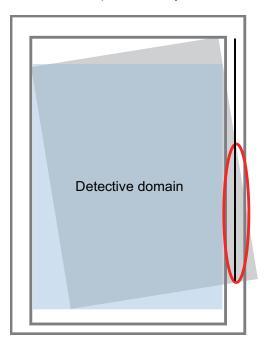

Overview

This detects and corrects non-continuous streaks when stream reading is performed. This function can be set to enable/disable by turning ON/OFF of "Streak Prevention". Settings/Registration > Function Settings > Common > Scan Settings > Streak Prevention

Control Description

The horizontal scanning range for the original is detected for the skew detection/correction.

When soiling outside of the original range is detected, image failure may be caused by correction outside the original range entering inside the image after correcting skew. To prevent this, the correction processing application range is set from the image leading edge based on the skew detection result and the process is only executed within the range.

Dust evasion at stream reading

Overview

When dust is detected with the aforementioned Guide Plate dust detection, the scanning position is shifted to prevent the dust from being scanned next time and thereafter.

Timing of control

The shit in scanning position for dust evasion is performed at the end of a stream reading job.

Control Description

When dust is detected during a stream reading job, the scanning position is shifted or shifted back for approximately 0.5 mm. If dust is detected consecutively for a specified number of times, an alarm is generated to prompt the user to clean the glass. When the cover is opened, the count of the consecutive detections is reset.

Image processing

The functions of the PCBs used for image processing are shown below.

- Main Controller PCB Shading correction (executed per job)
 - Color displacement correction in vertical scanning direction

Scanner Unit PCB

Driving the Scanner Unit, analog image processing, A/D conversion

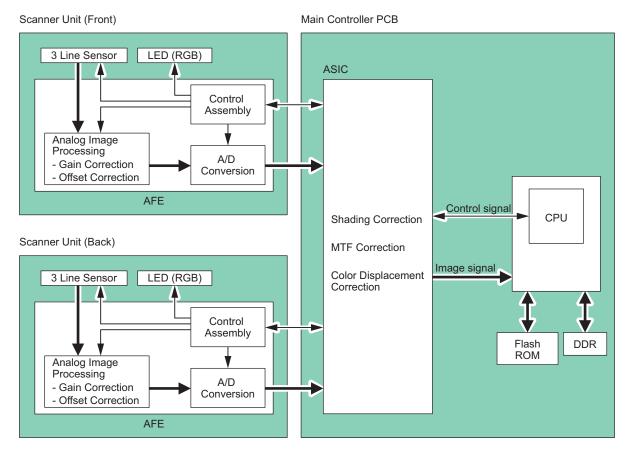

Image processing is performed line by line for each image with the Main Controller PCB. The main functions are shown below.

Main Controller PCB

- Shading correction
- · Color displacement correction in vertical scanning direction
- Skew detection/correction

Scanner Unit PCB (in the Scanner Unit)

- · Driving the Scanner Unit
- · Gain correction of the Reading Sensor output, Offset correction

Skew Detection/Correction

Overview

With this equipment, images are rotated on the output (skew correction) based on the amount of skew measured (skew detection) during feed at stream reading.

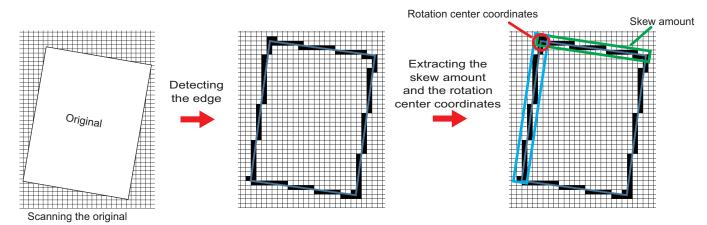

This function makes it possible to achieve both increased productivity and noise reduction at the same time as a result of the configuration without a mechanism that makes the skew between the leading edge of the original and the horizontal scanning direction line for image reading (registration mechanism) closer to parallel by pressing the original against the roller.

Skew Detection Control

The Skew Detection Control system determines skew from a scanned image for detection instead of using sensors.

- The flow of skew detection is shown below.1. Extracting the edge
 - The Skew Detection Control system binarizes the image and detects the shadow of the original on the opposed plate as the edge of the original.
- Extracting the skew amount and the rotation center coordinates
 Extract the skew amount and the rotation center coordinates that will be the reference for the correction from the data of the detected edge of the original.

2. Technical Explanation (Device)

Adjustment of the leading edge margin

Adjusts the leading edge of the scanned image after skew correction if the leading edge position of the image is not appropriate.

Adjustment of the left edge margin

Adjusts the left edge of the scanned image after skew correction if the left edge position of the image is not appropriate.

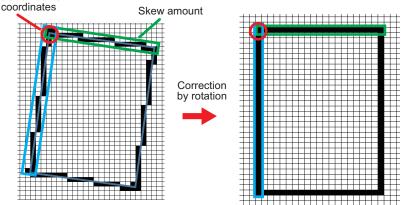

Angle correction

Corrects rotation angle on the scanned image after skew correction if the trailing edge of the image is missing.

Skew Correction Control

The Skew Correction Control system corrects a skew by rotating the image data according to the detected skew angle.

Rotation center

Parallelogram correction

Corrects the angle of the image to be 90 degrees by outputting the image while shifting it towards the horizontal scanning direction.

Front and Back Difference Correction Adjustment

Corrects a skew by estimating skew amount on the back side from the skew detection result on the front side.

Shading Correction

• Overview

Even if the original density is even, output of the CIS Reading Sensor in the Scanner Unit may not become even. A control that corrects variations in the output is shading correction.

Main causes of uneven output of the Reading Sensor are shown below.

- Variation in sensitivity of pixel of the Reading Sensor
- · Uneven light intensity of the lens
- · Uneven light intensity of the LED and light guide plate
- Deterioration of the LED
- · Variations in luminance between at the position of the Standard White Plate and at the reading position

To correct unevenness of the Reading Sensor output, shading correction is performed.

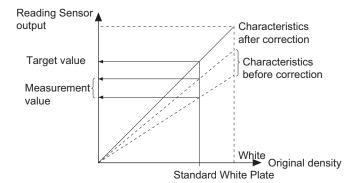

In shading correction, there is a type of shading correction that is executed per job.

• Shading Correction (Common to Reader and ADF)

Shading correction is performed for each scanning of original.

With this operation, light of LED Lamp is emitted to the Standard White Plate, and the reflected light is converted into digital data at the analog image processing part of the Scanner Unit PCB. The amount of digitized reflected light is input to the shading correction circuit in the Main Controller PCB as the shading coefficient. In the shading correction circuit, the stored target value and the shading coefficient are compared, and the difference is determined as the shading correction value.

With this shading correction value, variation of pixel of the Reading Sensor of each scan is corrected to make the image density level even.

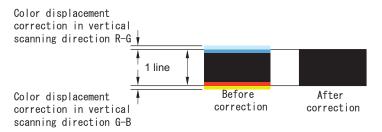

Shading correction (ADF side)

Positional relationship between the CIS Reading Sensor and the Standard White Plate differs between at the Reader side and at the ADF side. Therefore, when performing shading correction to the Reading Sensor at ADF side, the correction value stored in advance needs to be taken into consideration. This corrects difference in image density caused by positional relationship.

Color Displacement Correction Processing in Vertical Scanning Direction

Color displacement correction control in the vertical scanning direction is used to correct displacement of R, G, and B by shifting the pixels in the vertical scanning direction (by less than 1 pixel) to align the red (R) and blue (B) images with green (G) when the scanned R, G, and B images are not accurately overlapped at color scanning.

Example: A scanned image of a black line where red (R) is displaced upward and blue (B) is displaced downward with respect to green (G)

As for the color displacement correction value in the vertical scanning direction, there are two types of reader scans as shown below. These correction values have been adjusted at the time of shipment, and stored as service mode values. (In COPIER > ADJUST > CCD)

100-RG, 100-BG, 100DF-RG, 100DF-GB, 100DF2GB, 100DF2RG

When a job is started, color displacement correction processing is performed based on the saved color displacement correction values.

Service Mode

- GB clr displc correct: back, vert scan (Lv.2) : COPIER > ADJUST > CCD > 100DF2GB
- RG clr displc correct: back, vert scan (Lv2) : COPIER > ADJUST > CCD > 100DF2RG

Gain Correction of the Reading Sensor Output, Offset Correction

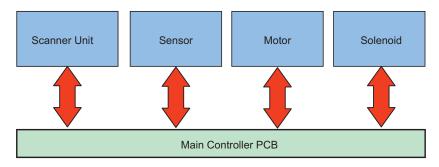

The analog video signal output from the Reading Sensor has its amplification ratio aligned with a fixed value (gain correction) and has its output voltage when there is no incident light aligned with a fixed value (offset correction).

ADF scan operation sequence (common to both 2-sided/1-sided)

The operation sequence for original scan with the ADF is shown below.

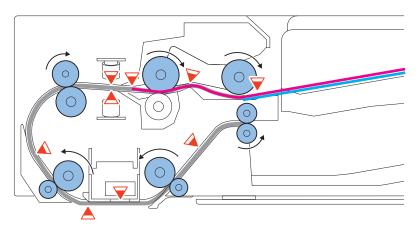

Loading original (2 sheets of original)

As an example, 2 sheets of original are loaded.

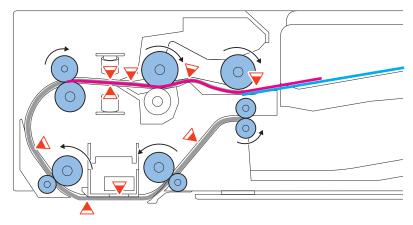

No.	Code	Name	
[1]	SR4204	Original Sensor	
[2]	SR4205	Pre-separation Sensor	
[3]	REG	Post-separation Sensor	
[4]	JUSO (T)	Double Feed Detection PCB (Reception)	
[5]	JUSO (R)	Double Feed Detection PCB (Transmission)	
[6]	SR4206	Lead Sensor	
[7]	-	Reading position for the front side	
[8]	-	Reading position for the back side	
[9]	SR2	Delivery Sensor	

Separation sequence (first sheet)

For the first sheet, from the start of separation to the Post-separation Sensor

A sheet of original is picked up from the top of the stack by driving the Pickup Roller and the Separation Roller.

For the first sheet, from the Post-separation Sensor to the Pullout Roller

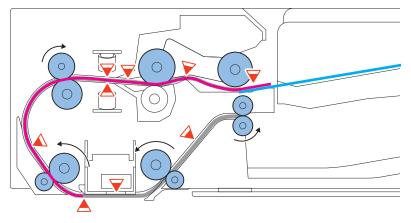

The picked-up original is fed from the Separation Roller to the Pullout Roller.

The Double Feed Sensor located between the Separation Roller and the Pullout Roller detects double feed of original.

When conditions are met, the feed is suspended before the original reaches the Pullout Roller.

Note that the ADF on this machine does not perform registration processing as corrections are made on originals with rotation using the skew detection/correction functions.

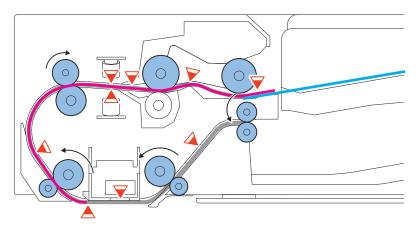

Reading sequence

For the first sheet, from the Pullout Roller to the reading point

The original that enters the Lead Roller is fed to the Lead Sensor at the reading speed, and the image is read.

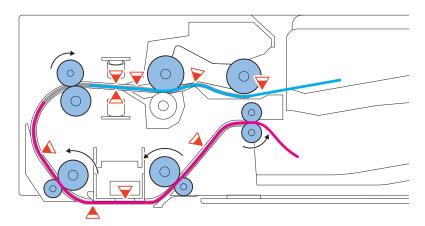

Separation sequence (next sheet)

For the second sheet, from the start of separation (when the Pre-separation or the Post-separation Sensor is turned off after the first sheet passes through)

Once the trailing edge of the first sheet is detected, separation control for the second sheet is started. The trailing edge of the first sheet is detected with the Pre- and Post-Separation Sensors.

Delivery sequence

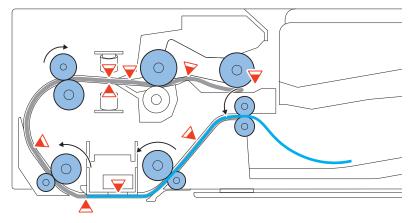

The second sheet reaches to the temporary stop position and the first sheet is delivered

If the paper interval detected with the Post-separation Sensor is less than the specified distance, the second paper is temporarily stopped at the temporary stop position until the paper interval reaches the specified distance.

The first sheet that passed through both the front side and back side reading position is delivered to the Delivery Tray at the process speed.

The delivery is determined to be completed when it is detected that the trailing edge of the original passed through the Delivery Roller after the completion of reading.

The delivery of the second sheet

The delivery of the second sheet is controlled in the same manner as that for the first sheet after the reading of the second sheet is completed.

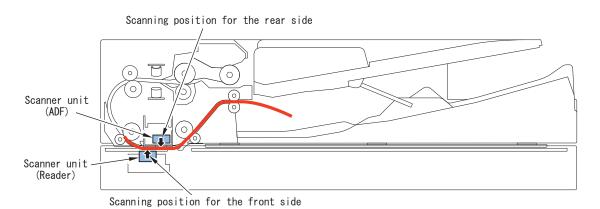

The Feed Motor stops when the trailing edge of the second sheet passes through the Delivery Sensor.

After the job is completed, the Delivery LED blinks and prompts the user to remove the original.

Scanner Unit Configurations

The Contact Image Sensor (CIS) is used to expose and read the original, and image reading is performed line by line.

Duplex Reading Control

2-sided originals are read using simultaneous duplex reading.

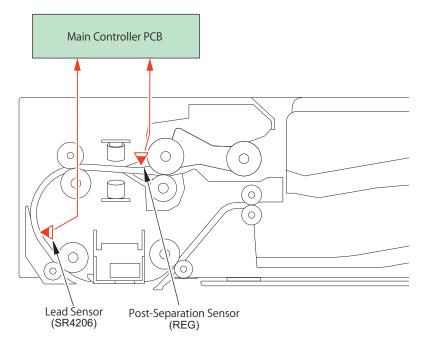

With one feed, the Scanner Unit of the Reader Unit reads the front side and the Scanner Unit of the ADF reads the back side so that both sides can be read without reversing the paper.

Original size detection

As this machine does not have a function to detect the length of original, the size of original is calculated based on the time difference between the timings of detection of original by the Post-separation Sensor (REG) and by the Read Sensor (SR4206).

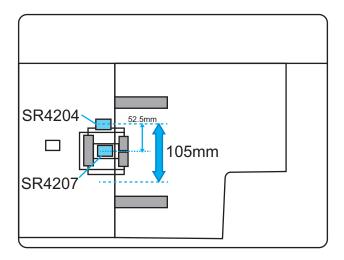

Original Detection

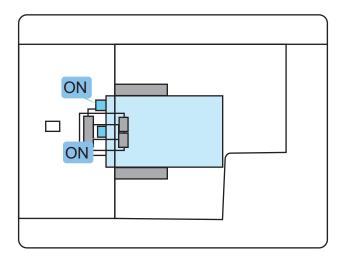

Overview

• The ADF on this machine has the 2 Original Sensors located near the Pickup Roller to detect the presence/absence of originals. (See the figures shown below)

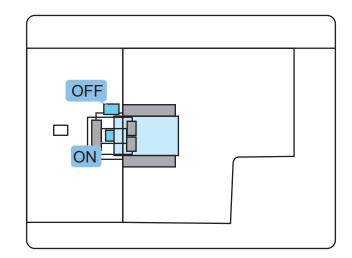

Originals with a width of 105 mm or larger and with a width of less than 105 mm are both detected by using both the Original Sensor (small size paper) (SR4207) and the Original Sensor (SR4204).

• When an original with a width of 105 mm or larger is placed

Both the Original Sensor (small size paper) (SR4207) and the Original Sensor (SR4204) detect the original (ON). • When an original with a width of less than 105 mm is placed

The Original Sensor (small size paper) (SR4207) detects the original (ON) while the Original Sensor (SR4204) does not detect it (OFF).

· When an original is not placed properly

]

If the Original Sensor (small size paper) (SR4207) detects the original (ON) and the Original Sensor (SR4204) detects it (ON) after a short time lag, it is determined that the original was not placed properly. Then, the feed is stopped, and a message that prompts the user to replace the original is displayed.

Place the originals again.
Cancel

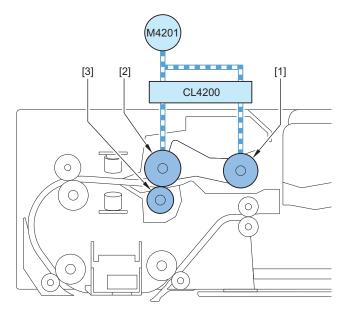

Pickup Operation

The pickup operation is performed by the Pickup Roller, Separation Roller, and the Feed Roller.

The Pickup Roller and the Feed Roller are driven by the ADF Motor (M4201).

The ADF Separation Clutch is connected when starting pickup, thereby transmitting the drive of the ADF Motor to each roller to perform pickup.

After pickup is finished, the ADF Separation Clutch is disconnected or the Feed Motor is stopped.

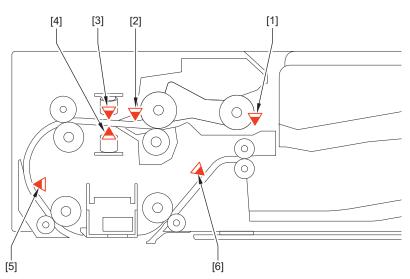

No.	Name
[1]	Pickup Roller
[2]	Feed Roller
[3]	Separation Roller
M4201	ADF Motor
CL4200	ADF Separation Clutch

Jam detection

This machine detects original jams using the sensors shown in the figure below.

When a jam occurs, the machine records the information as a code.

This machine's jam code can be checked in service mode of the host machine or by outputting a jam/error log report from service mode.

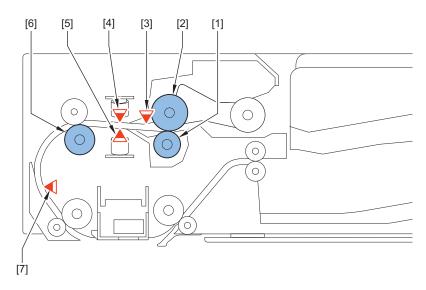

No.	Code	Name		
[1]	SR4205	Pre-separation Sensor		
[2]	REG	Post-separation Sensor		
[3]	JUSO (R)	ouble Feed Detection PCB (Transmission)		
[4]	JUSO (T)	Double Feed Detection PCB (Reception)		
[5]	SR4206	Lead Sensor		
[6]	SR2	Delivery Sensor		

Double feed detection control

This machine has the Double Feed Detection PCBs to detect double feed of paper.

The Double Feed Detection PCBs located between the Feed Roller and the After Separation Feed Roller detect double feed.

- 1. The Double Feed Detection PCBs calculate the threshold value for double feed detection by checking the sensor level at job start-up with no original.
- 2. During a job, the PCBs cooperate with the Post-separation Sensor (REG) to detect originals.
- 3. The detected data is compared with the threshold calculated at job start-up to determine if a double feed has occurred.
- 4. Once It is determined that a double feed has occurred, the machine stops the feed operation recognizing it as a jam.

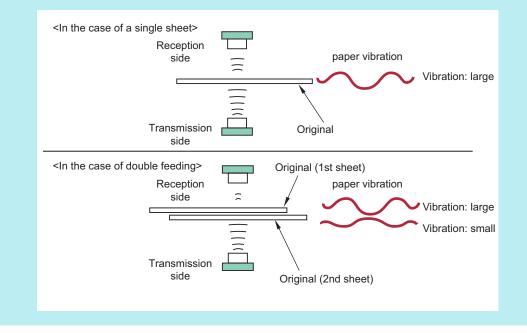

No.	Code	Name		
[1]	-	Separation Roller		
[2]	-	Feed Roller		
[3]	REG	Post-Separation Sensor		
[4]	JUSO (R)	Double Feed Detection PCB (Reception)		
[5]	JUSO (T)	Double Feed Detection PCB (Transmission)		
[6]	-	After Separation Feed Roller		
[7]	SR4206	Lead Sensor		

NOTE:

The Double Feed Detection PCBs use an ultrasonic sensor.

With the ultrasonic method, the oscillation portion emits ultrasonic wave and applies it to paper surface. New ultrasonic wave is generated as the paper surface vibrates, and the reception side reads the ultrasonic wave. Double feed is detected taking advantage of the fact that oscillation becomes smaller when a 2nd sheet of paper is present.

	0094	Initial stationary jam -		-
	0095	Pickup error Document Sensor		SR4204
	0096	Limited functions jam*2	-	-

*1:It occurs when a software sequence error has occurred for some reasons. The machine is recovered by opening and then closing the cover to remove jammed paper.

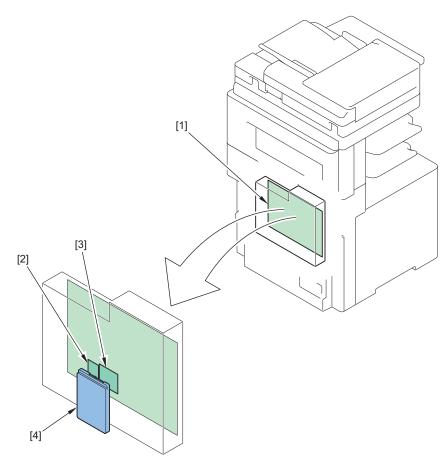

*2: Limited functions jam is a jam for preventing an original to be left inside the machine when a problem which requires the machine moves to limited functions mode occurs. If an error occurs for some reasons, a jam message is displayed to prompt the user to perform jam removal. After that, an error is displayed, and the device enters limited functions mode. The machine recovers when the cause of the error is solved.

If this jam occurs, refer to the error log, and perform the remedy for the error code which has occurred at the same time.

Startup Sequence

Screen sequence and internal processing sequence

NOTE:

To achieve faster startup, the progress bar and the active PCB are not synchronized. For this reason, the progress bar cannot be utilized for troubleshooting. For information about troubleshooting, refer to "Related error codes (major error codes)" shown below.

NOTE:

When system verification* at startup is ON, startup of system software takes more time than when OFF.

*: Settings/Registration (login as an administrator) > [Management Settings] > [Security Settings] > [System verification at startup] Note that when the machine is recovering from sleep mode or at Quick Startup, system verification is not performed even it is set to ON.

Related error codes (major error codes):

· E602-0001: HDD detection error

- · E614-0001: Flash PCB detection error
- E614-0002: Error in file system on the Flash PCB
- E614-4001: Error in file system on the Flash PCB
- E614-4002: Error in file system on the Flash PCB
- E748-2010: Flash PCB error / HDD error

NOTE:

When the following errors occur, the system of the host machine has not been started normally. Therefore the error code is not recorded in the log.

E602-XX01, E614-XX01, E748-2010

Shutdown Sequence

Before shutting down the power supply, it is necessary to perform the HDD completion process (Purpose: to prevent damage on the HDD) and execute the fixing disengagement operation. This sequential process is called "shutdown sequence". The shutdown sequence has been manually executed with the legacy (existing) models (by holding down the power supply switch on the Control Panel for a specific duration).

With this machine, the Main Controller PCB detects turning OFF the Main Power Supply Switch, and the shutdown sequence is started and executed automatically.

Note that the maximum shutdown time with this equipment is 110 seconds.

NOTE:

When the power supply is stopped without advance shutdown of the equipment, or the complete deletion process of the HDD (deletion of the primary file) failed to be completed within the shutdown time (max. 110 sec.), data matching is checked at startup. The progress bar is displayed during the data checking.

Function

Automatic recovery from sleep mode

- The machine automatically recovers from sleep mode by staying in the designated area for more than a certain period of time. The time spent in the area varies based on the setting of sensitivity (4 levels).
- The sensor determines whether a person approaches the above mentioned area is a user. If a person approaches the machine from the front side, it starts the operation to recover from sleep mode early. If a person approaches the machine from the side, the sensor judges whether he/she is just a passer to prevent recovery by mistake.

CAUTION:

Recovery time depends on the time for recovery from sleep mode of the host machine. The Motion Sensor outputs the trigger for recovery from sleep mode. Operation of the Motion Sensor is the same for recovery from Deep Sleep and from Sleep 1, but time for recovery differs depending on the recovery process of the host machine.

The machine is not recovered by a passer.

- Reduce unnecessary power consumption
- The machine may recover from sleep mode if walking speed is slow. However, if no operation is performed for a certain period of time, it moves to sleep mode again.

CAUTION:

Since the detection is performed by outputting a certain frequency from the output part and receiving the reflection wave by the reception part; thus, do not block the sensor area.

Settings / Registration

Preferences > Timer / Energy Settings > Use Motion Sensor

In Settings / Registration, you can disable the sensor and select the sensor sensitivity.

2. Technical Explanation (Device)

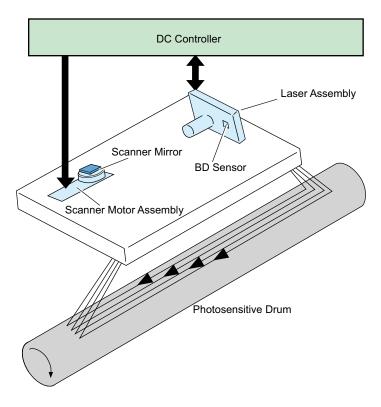

CAUTION:

- The motion sensor detects people or objects that approach the sensor on the front side of the machine. Operation may become unstable if objects are left near the sensor or the machine is placed in a location where there is heavy human traffic.
- The motion sensor uses ultrasonic waves, and thus may encounter problems due to other sources of ultrasonic waves in its environment.
- If you feel that something is wrong with the motion sensor, change the sensitivity setting or turn the motion sensor off in [Settings / Registration] > [Preferences] > [Timer/Energy Settings] > [Use Motion Sensor] > [Sensor Sensitivity].

Laser Exposure System

Overview

The laser exposure system forms a static latent image on the Photosensitive Drum by laser exposure. The Laser Scanner Unit consists of the Laser Assembly and the Scanner Motor, and is controlled by the signal input from the DC Controller PCB.

Laser ON/OFF Control

Purpose

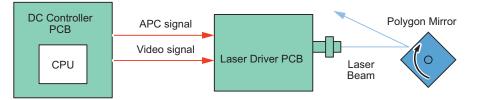

Turns the laser beam ON and OFF according to the combination of laser control signals.

Execution timing

After turning ON the power

Control description

The DC Controller performs the register setting of the Laser Polygon Control ASIC on the Laser Driver PCB. This Laser Polygon Control ASIC switches between four modes (Forced OFF mode, APC mode, Print mode, and Standby mode).

Mode	Laser status	Remarks
Forced OFF mode	OFF	Clears the light intensity setting determined by the APC.
APC mode	ON	Adjusts laser light intensity
Print mode	ON/OFF	Emits the laser according to the video signal
Stanby mode	OFF	The machine is in standby mode

Purpose

Rotates the Scanner Motor at a specific speed.

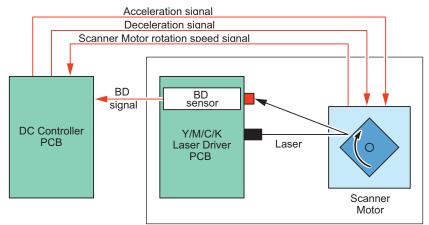

Execution timing

At power-on, and at printing

Control description

The Scanner Motor rotation speed is controlled by the DC Controller PCB.

- 1. The DC Controller PCB outputs Scanner Motor control signals (acceleration signals and deceleration signals) to the Scanner Motor to rotate the Polygon Mirror.
- The DC Controller PCB stabilizes the Scanner Motor rotation speed, referring to the motor's rotation speed signals. (From when the Scanner Motor starts rotation until it reaches the target revolutions and the machine starts image formation process)
- 3. When laser beams are emitted at image formation, the DC Controller PCB detects the BD signal.
- 4. The DC Controller PCB controls the Scanner Motor control signals (acceleration signals and deceleration signals) based on the input timing of the BD signal to control the Scanner Motor rotation speed.

Laser Scanner Unit

Related error codes

• E110-0001

Laser Scanner Motor startup error

E110-0002
 Laser Scanner Motor rotation error

APC (Auto Power Control)

Purpose

Ensures constant laser beam light intensity for each line.

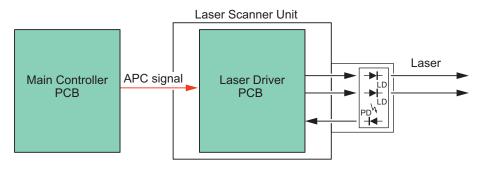

Execution timing

For each line (before writing the image)

Control description

1. The Main Controller PCB outputs the APC signal to the Laser Driver IC in the Laser Driver PCB.

 The APC mode is set for the Laser Driver PCB's IC, and the laser diode of each color is forcibly activated. The photo diode (PD) monitors the laser diode (LD), and the Laser Driver IC adjusts the output of laser diode until the laser light intensity reaches a specified level.

Related error codes

• E100-0004:Laser Scanner error

Purpose

Corrects the displacement of each color's laser write start position due to Polygon Mirror accuracy and Polygon Motor rotation accuracy.

Execution timing

At power-on, and at printing

Control description

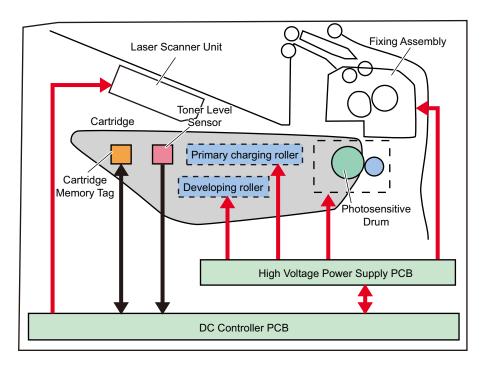

- 1. The DC Controller PCB measures the BD interval after the completion of constant speed rotation control of the Scanner Motor.
- 2. The DC Controller PCB calculates the correction value from the displacement of the BD interval.
- 3. The write start position is corrected by adjusting the write start timing based on the above correction value.

Image Formation System

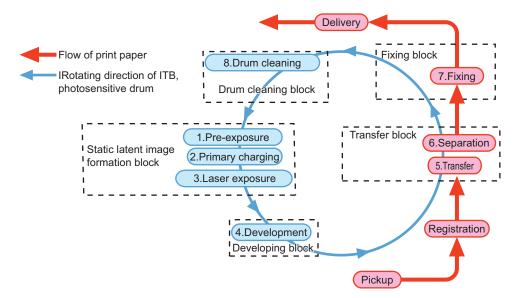

Overview

The image formation system forms a toner image on the paper.

The DC Controller controls the Laser Scanner Unit and High-Voltage Power Supply to form the toner image on the Photosensitive Drum, and transfers and fixes this to the paper.

Print Process

No	Block name	Process name	Description
1	Static latent image forma- tion block	Pre-exposure	To prevent uneven density with the print image, residual charge on the Photosensitive Drum is removed before the primary charging.
2		Primary charging	The surface of the Photosensitive Drum is uniformly charged with negative potential.

No.	Block name	Process name	Description	
3	Static latent image forma- tion block	Laser beam exposure	With irradiation of laser beam, a static latent image is formed on the surface of the Photosensitive Drum. (Image exposure: Area exposed by laser is the image area)	
4	Developing block	Development	With the dry, 2-component AC developing method, toner that has been negatively charged by the Developing Cylinder is attached to the Photo sensitive Drum.	
5	Transfer block	Transfer	Toner on the Photosensitive Drum is transferred to a paper.	
6		Separation	With the curvature separation method, the paper is separated from the ITB. Thin paper's elastic force is small, so the electric charge of the paper surface at the back is weakened with the Static Eliminator to be separated easier.	
7	Fixing block	Fixing	Toner on the paper is fixed on the paper using heat and pressure.	
8	Drum cleaning block	Drum cleaning	The Cleaning Blade removes the residual toner attached on the Photosen- sitive Drum.	

Cartridge

Configuration

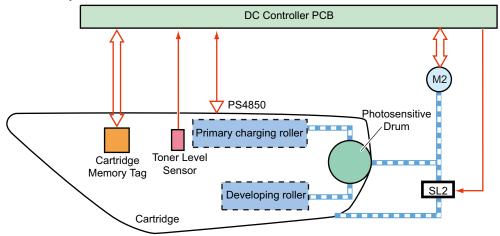

Parts Configuration

The cartridge of this machine is drum integrated type and forms a visible image on the Photosensitive Drum with toner.

- Photosensitive Drum
- Developing Assembly
- Primary Charging Roller
- · Memory tag
- Toner level sensor

Drive Configuration

DC Controller drives the Drum Motor (M2) to rotate the Photosensitive Drum and the Developing Roller. The Primary Charging Roller is driven and rotated by the Photosensitive Drum.

Cartridge State Detection

Purpose

DC Controller detects and memorizes the state of the cartridge by reading/writing the data saved in the Cartridge Memory. When the Cartridge Memory cannot be detected or non-genuine/incorrect cartridge is detected, the DC Controller notifies the Main Controller and displays a warning message.

Overview

The cartridge of this machine is equipped with the Cartridge Memory, and the status of a cartridge can be detected by reading the information on it.

Execution Condition/Timing

- When the door is closed after replacement of the cartridge.
- At power-on (excluding high-speed start mode)

Description

This machine reads information on the Cartridge Memory and obtains the following status.

- Toner color in the cartridge
- · Cartridge model
- Cartridge malfunctions
- Detection of ancorrect cartridge

The description is displayed on the control panel.

Cannot recogniz	e the toner cartridge.	Pull out the toner cartridge, th	nen insert it again
or information a	bout remaining toner	won't be detected properly.	
≡ To	ner	Toner cartridge may be malfi	unctioning.
	ror continues to occur	, the toner cartridge may be ma	alfunctioning
	tot be a Canon produc	t.	Close

Cartridge Life Detection

Overview

To notify the replacement timing of the cartridge, the life/remaining days are displayed. The life and remaining days can be checked from following menu and service mode.

Consumption confirmation

Control Panel : Status Monitor > Consumables / Others > Check Consumables

Transfer

Overview

The transfer block consists of 2 steps, and transfers the toner image on the Photosensitive Drum surface to the paper.

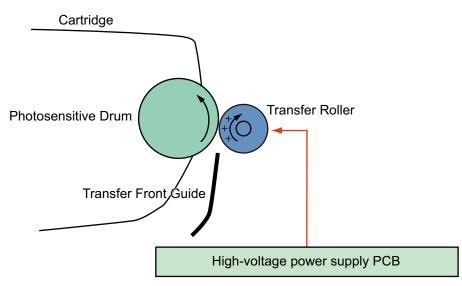

No.	Name
1	Photosensitive Drum
2	Transfer Roller
3	Pre-transfer Guide
4	Static Eliminator
5	Preprinting Paper
6	Pre-transfer Guide Bias
7	Transfer Bias
8	Static Eliminator Bias

Transfer Bias Control

To transfer toner on the Photosensitive Drum to paper, the transfer bias generated by the High-Voltage Power Supply PCB (HVT_PCA) is applied to the Transfer Roller.

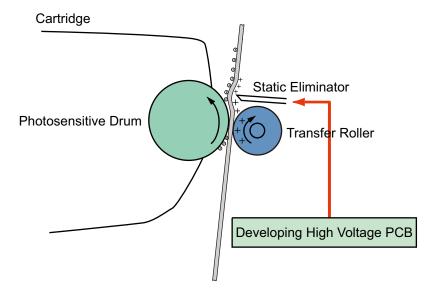

The bias value is determined by the environment, paper type and other factors.

Separation

On this machine, the paper is separated from the Photosensitive Drum by the elasticity of the paper and the curvature of the drum.

Furthermore, the Static Eliminator reduces potential on the back side of paper for stability of paper feed and image quality.

Service Mode

 Invalidate setting of the static elimination control COPIER > OPTION > FEED-SW > SP-SW

Overview

Image failure due to change of the environment or deterioration of the Photosensitive Drum is prevented to ensure stabilized print.

PASCAL control

To stabilize the gradation density characteristics of the image.

This control is executed at auto adjust gradation. Gradation density of the patch pattern on the test print is scanned by the Reader to create an image density correction table.

Based on the table, image gradation density characteristics that vary due to environmental change or deterioration of the Photosensitive Drum are corrected.

Control timing

Execution of auto adjust gradation ([Settings/Registration]) > [Auto Adjust Gradation]

Control description

- 1. When the specified conditions are satisfied, the Main Controller PCB prints memorized patch patterns.
- 2. Set the test print on the reader.
- 3. The reader scans the gradation density of the patch patterns from the test prints.
- 4. The Main Controller creates an image density correction table from the data of gradation density of the patch pattern scanned by the Reader.

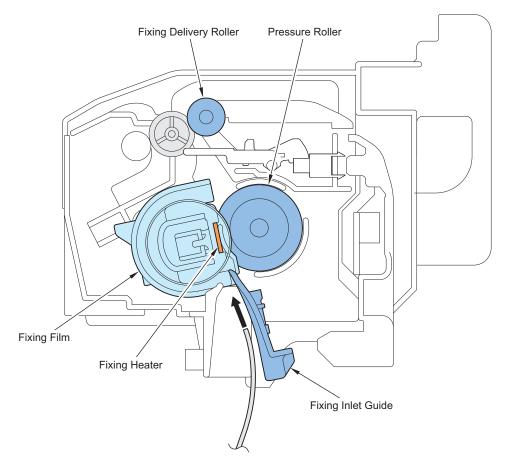

Related service mode

- Default display setting of auto adjust gradation COPIER > OPTION > USER > DFLT-ADJ
- Setting of gradation adjustment data: COPIER > OPTION > IMG-MCON > PASCAL
- Setting of the paper type to be used for auto adjust gradation: COPIER > OPTION > IMG-MCON > PASCL-TY

Fixing System

Features

This machine uses the on-demand fixing method for fixing.

Replaceability of the Fixing Assembly

- · Easy replacement without screws or tools and can be replaced by users.
- Replace the whole Fixing Assembly since the Fixing Film Unit or Pressure Roller etc. are not set as sub parts.

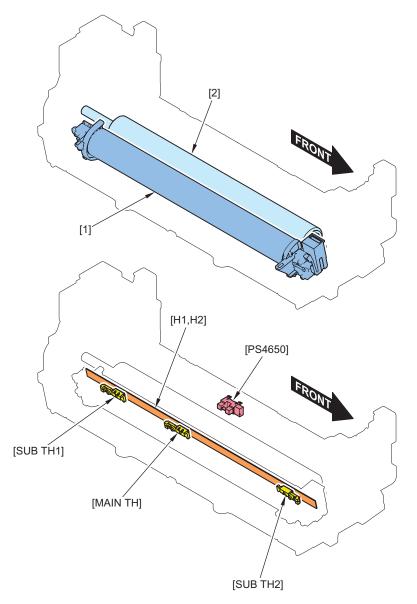

Detection of whether the Fixing Assembly is new

- Whether the Fixing Assembly is new can be detected.
- The parts counter of the Fixing Assembly is automatically initialized when the Fixing Assembly is replaced.

Intervals of failed images

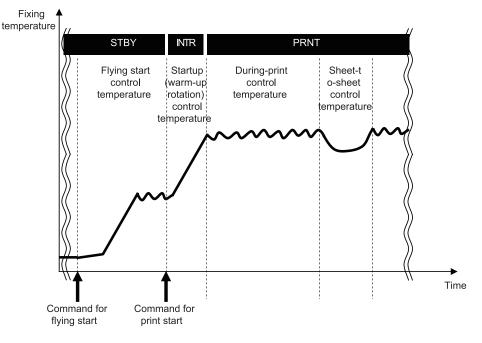

- Fixing Film: Approximately 77mm
- Fixing Pressure Roller: Approximately 79mm

Major Components

Symbol	Part name	Function/Method
[1]	Fixing Film Unit	A toner image on paper is fixed by applying heat and pressure.
[2]	Pressure Roller	
H1/H7	Fixing Heater	Ceramic Heater
MAIN TH	Main Thermistor	This is engaged with Heater.
		Temperature control and abnormal temperature rise detection
SUB TH2	Sub Thermistor (Front)	This is engaged with Heater.
		Temperature control, abnormal temperature rising detection, edge
		temperature-rising/cooling control
SYB TH1	Sub Thermistor (Rear)	This is engaged with Heater.
		Temperature control, abnormal temperature rising detection, edge
		temperature-rising/cooling control
PS4650	Fixing Delivery Sensor	Jam Detection

Fixing temperature control

Standby Temperature Control

This is a control to pre-heat the Fixing Assembly to reduce time to start printing.

Flying Start

Print Temperature Control

This is a control to increase fixing temperature to the target level and keep it during printing.

- Startup (initial rotation) temperature control
- Print temperature control
- · Paper interval temperature control

Down Sequence Control

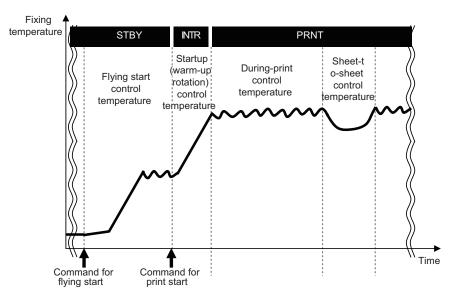

This is a control to prevent fixing failure due to temperature increase at the edge or temperature decrease. Productivity (throughput) decreases.

• Down Sequence due to Cartridge Temperature Rise

Related error codes

- E000-0001
 - Error in temperature rising of Fixing Assembly
- E001-0001
 Fixing Assembly: Abnormally high temperature 1
- E001-0002
- Fixing Assembly: Abnormally high temperature 2 • E001-0004
- Fixing Assembly: Abnormally high temperature 3 • E003-0001
- Fixing Assembly: Abnormally low temperature 1

Standby Temperature Control

Flying Start

Purpose

To reduce time to print the first sheet.

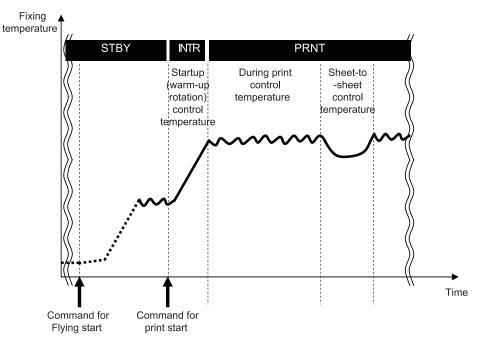

Execution condition/timing

- When using the Numeric Keypad on the Control Panel/Touch Panel
- At power-on of the Main Power
- · When recovering to standby mode
- At completion of jam removal

Control description

The temperature control target is set, and start the Fixing Heater.

Print Temperature Control

Startup (initial rotation) temperature control

A fixing temperature is increased to a printable temperature after receiving a command to start printing.

Print Temperature Control

This is a control to set an optimal target temperature to prevent fixing error or high temperature offset. Temperature is controlled to keep the specified target temperature during printing.

Setting the target temperature

A target temperature is determined according to the paper type/size, time which elapsed from when the last job finished, and fixing temperature when startup control started.

Down Sequence Control

Down Sequence due to the Cartridge Temperature Rise

Purpose

To prevent the Drum Cleaning Blade from flipping when cartridge temperature rises during continuous paper feed by estimating the temperature of the cartridge and enter down sequence.

Startup conditions

Enter down sequence stepwise according to the environment temperature and number of continuously printed sheets.

At 1-sided printing

Environment temperature*1	1/2 speed
32.5 deg C or more	601 images or more
28 to 32.5 deg C	2251 images or more
Lower than 8.5 deg C	-

At 2-sided printing

Environment temperature*1	1/2 speed	(1/2 speed)
32.5 deg C or more	251 to 500 images	501 images or more
28 to 32.5 deg C	501 to 1060 images	1061 images or more
Lower than 28 deg C	-	1001 images or more

*1: It can be checked in the following service mode. COPIER > DISPLAY > ANALOG > TEMP

COFIER > DISFLAT > ANALOG > 1

*2: Not entering down sequence

*3: Inactive time is approximately 2 minutes

Operation

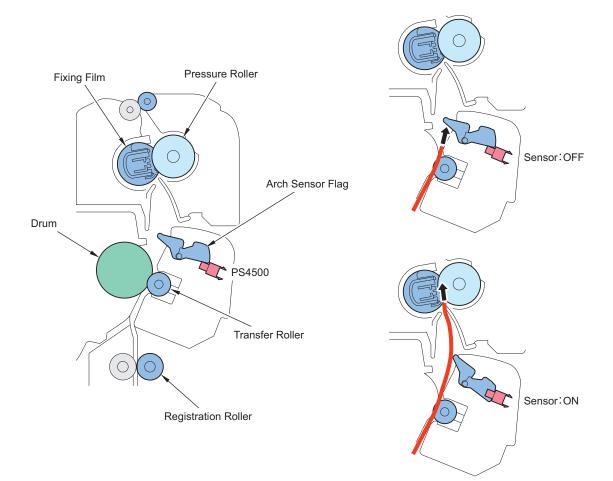

Prevent temperature rise of cartridge by reducing the speed to 1/2 speed or inactive+1/2 speed

Pre-fixing Arch Control

Purpose

To prevent the image on the drum to be affected from a shock which occurs when the trailing edge of the paper pulled by the Fixing Drive passes through the Registration Roller by constantly creating an optimal arch between the transfer and fixing areas.

2. Technical Explanation (Device)

Startup conditions

This control is performed every time the paper is fed.

Operation

The Arch Sensor detects a paper arch between the transfer nip and fixing nip, and changes the drive speed of the Fixing Motor.

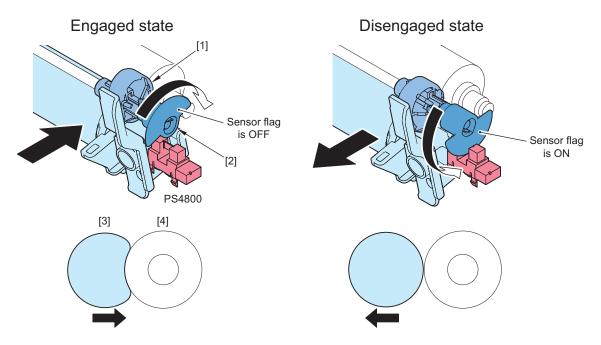

Related service mode

 Setting of the fixing speed when feeding envelopes COPIER > OPTION > FEED-SW > EVLP-FS

Fixing Film Unit engagement/disengagement control

Control description

The Fixing Film Unit is disengaged from the Fixing Pressure Roller under a specific condition in order to prevent deformation of the Fixing Film/Fixing Pressure Roller due to heat and pressure that arise when the drive of the Fixing Pressure Roller stops, and to improve jam removability.

No.	Name
[1]	Pressure Release Gear
[2]	Cam Gear
[3]	Fixing Film
[4]	Fixing Pressure Roller
PS4800	Fixing Pressure Release Sensor

Execution condition/timing

Engagement operation

· When the Fixing Pressure Roller is in a disengaged position at the start of a job

Disengagement operation

- · When the Power Switch is OFF
- At occurrence of a jam
- At occurrence of an error
- When the specified period of time has passed since printing is finished.

Related error codes

• E840-0001: Pressure release mechanism error

Fixing Assembly detection

Presence of the Fixing Assembly is judged by a Fixing Assembly detection signal, which is input to the DC Controller at warmup rotation (at power-on/recovery from sleep mode/closing of the cover). When it is judged that the Fixing Assembly is absent, the machine displays the message "Set the Fixing Assembly." on the Control Panel and stops operation.

Check Errors	
The fixing assembly is not set.	
Refer to the manual to set the fixing assembly correctly.	
Set the fixing assembly.	

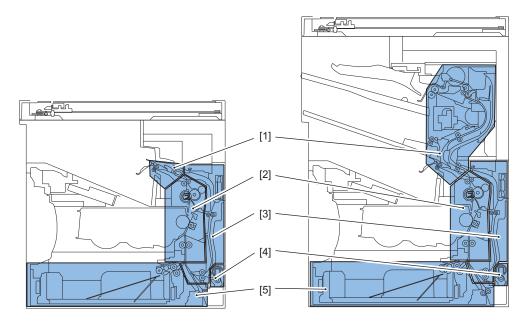

Protection Function

This machine is equipped with protection functions that result in error occurrences when activated. The following errors do not need to be cleared.

Code	De- tails	Title	Description
E000	0001	Fixing temperature rising er- ror	Fixing temperature did not become a certain temperature although the specified time had passed after cold start.
E001	0001	Fixing Assembly: Abnormal-	Temperature of the Main Thermistor reached or exceeded specified value.
	0002	ly high temperature	Temperature of the Sub Thermistor 1 reached or exceeded specified value.
	0004		Temperature of the Sub Thermistor 2 reached or exceeded specified value.
E003	0001	Abnormal low temperature of the Fixing Assembly	Temperature of the Main Thermistor reached or fallen below the specified value.
E004	0004	Mismatch of Fixing Assem- bly type	 Absent of the Fixing Assembly was detected according to the Fixing Assembly connection judged result Temperature of the Main Thermistor and Sub Thermistor reached or fallen below the specified value.
E014	0001	Fixing Motor rotation error	Startup has not been completed after a specified period of time has passed from the start of the Fixing Motor.
	0002		Number of rotation of the Fixing Motor has become the same or less than the specified value

Multi-purpose Tray Pickup Assembly

Parts / Drive Configuration

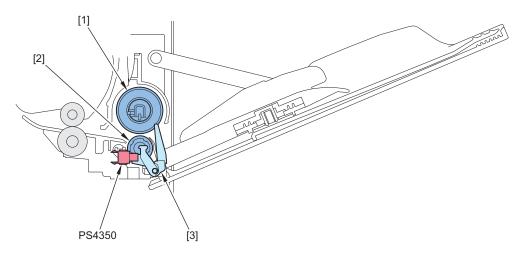

With the rotation of the Multi-Purpose Tray Pickup Solenoid (SL1) and the Drum Motor (M02), paper is picked up from the Multi-Purpose Tray Pickup Unit.

Symbol	Parts name
1	Multi-purpose Tray Pickup Roller
2	Multi-purpose Tray Separation Roller
SL1	Multi-purpose Tray Pickup Solenoid
M02	Drum Motor

Paper Detection

The Multi-purpose Tray Paper Sensor (PS4350) detects whether there is paper.

Symbol	Parts name
1	Multi-purpose Tray Pickup Roller
2	Multi-purpose Tray Separation Roller
3	Multi-purpose Tray Paper Detection Flag
PS4350	Multi-purpose Tray Paper Detection Sensor

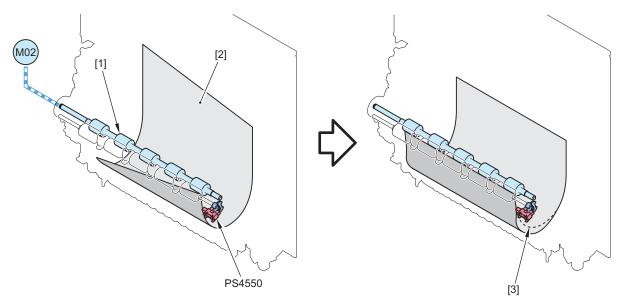

Paper Size Detection

This machine does not have a function for detecting paper size. The user has to specify the paper size in the Multi-purpose Tray using the Control Panel. Or, the user has to register the fixed size in the Settings/Registration menu.

Registration Assembly

Registration Control

This control corrects paper skew and aligns the leading edge of the paper with that of the image.

Symbol	Parts name
1	Registration Roller
2	Paper
3	Slack
PS4550	Registration Sensor
M02	Drum Motor

Skew Correction Control

The paper leading edge runs into the stopped Registration Roller, thereby forming a slack (arch) in order to correct the skew.

Registration Control

This control stops paper at the registration position, aligns the image on the Drum with the paper at a specified timing, and then performs paper feed.

Related Service Mode

- Adjustment of registration start timing (Plain paper) COPIER > ADJUST > FEED-ADJ > REGIST
- Adjustment of registration start timing (Heavy paper)
 COPIER > ADJUST > FEED-ADJ > RG-HF-SP
- Adjustment of registration start timing (Plain paper 2nd side) COPIER > ADJUST > FEED-ADJ > REG-DUP1
- Adjustment of registration start timing (MP Tray, plain paper) COPIER > ADJUST > FEED-ADJ > REG-MF

Process Tray Assembly (Model with Built-in Finisher Only)

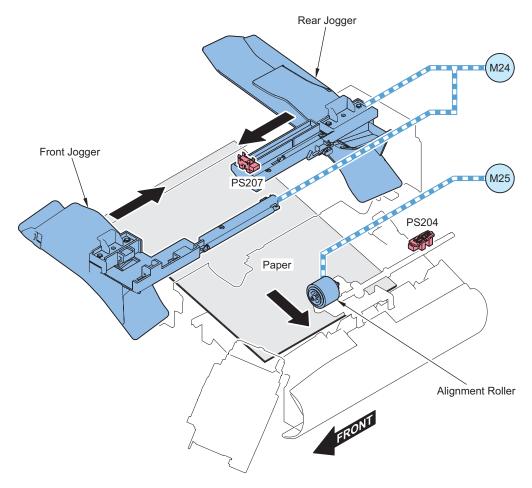

After aligning, shifting and stapling fed paper, the Process Tray Assembly ejects the paper onto the Output Tray. The name and role of each of the Process Tray Assembly parts are as follows.

Name	Role
Jogger Unit	Performs alignment along the leading edge of paper.
Top Feed Feed Unit	Performs alignment along the left edge of paper.
Staple Unit	Performs stapling.

Alignment Operation

With a paper stack on the Holding Tray, the Y Alignment Motor (M25) performs alignment along the leading edge while the Jogger Motor (M24) performs one along the left edge.

The Y Alignment Home Position Sensor (PS204) and the Jogger Home Position Sensor (PS207) detect the home position of the alignment member.

When Offset and Collate is enabled, paper stacked on the Process Tray is sorted into bundles, aligned along the near or the far side to the host machine.

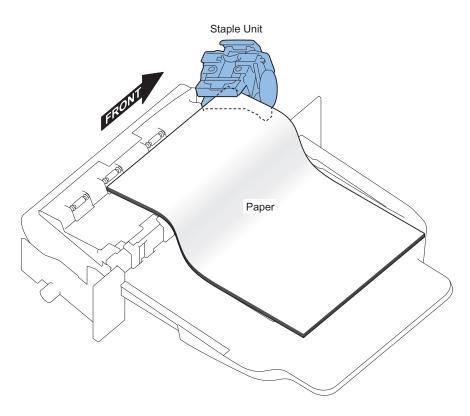

Related Error Codes

- E530-8001: Jogger error
- E577-8001: Y Alignment Motor error

Stapling

Overview

Stapling is to staple the specified number of sheets of paper together.

Staple Unit

The Staple Motor drives the cam to perform stapling.

The Staple Home Position Sensor detects the cam's home position.

The Staple Alert Sensor detects whether a Staple Cartridge is placed inside the Staple Unit.

The Staple Ready Sensor detects whether there are staples inside the Staple Cartridge and whether the Staple Unit is operational.

Paper sizes available for stapling

A4; LTR; LGL; user-specified size (210 × 279.4mm - 215.9 × 355.6mm)

Weight/ maximum number of sheets available for stapling

60 to 90 g/m2: 30 sheets 91 to 120 g/m2: 20 sheets

Related Error Codes

- E531-8001: Staple Repositioning error
- E531-8002: Stapler error

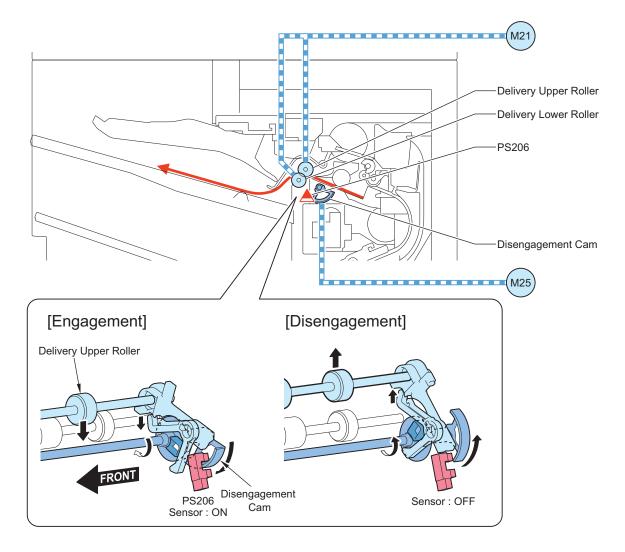

Stack Delivery

After aligned, a paper stack is ejected from the Holding Tray to the Output Tray.

The Alignment Motor (M25) performs disengagement/engagement of the Stack Delivery Roller, while the Alienation Home Position Sensor (PS206) detects its status.

The Delivery Motor (M21) ejects paper onto the Output Tray.

2. Technical Explanation (Device)

Related Error Code

· E568-8001: Stack Delivery Roller disengagement error

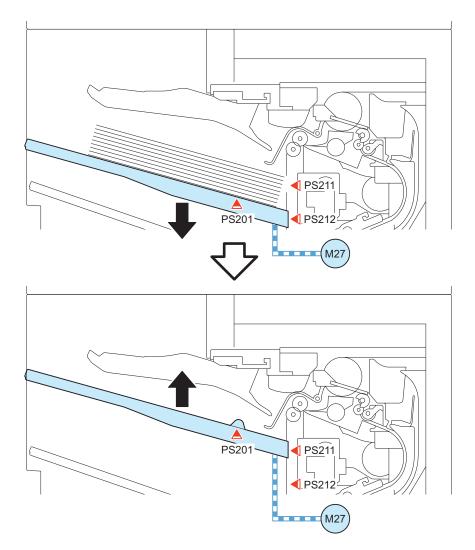

Stack Tray Assembly (Model with Built-in Finisher Only)

Tray Lifting

The Tray Lifting Motor (M27) operates the lifting/lowering of Tray 1.

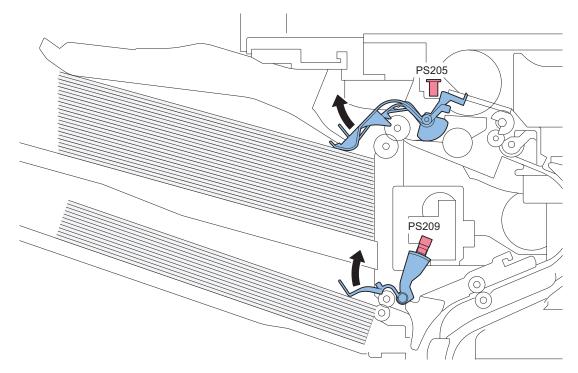

After paper is delivered, Tray 1 descends by defined range. Then, Tray 1 ascends until the Output Tray 1 Upper Limit Detection Sensor (PS211) detects the surface of stacked paper.

The Output Tray 1 Lower Limit Sensor (PS212) detects the tray's lower limit.

Paper in Tray Full Detection

The Delivery Tray Full Sensors (PS205/PS209) detect a paper stack in the Output Tray as full.

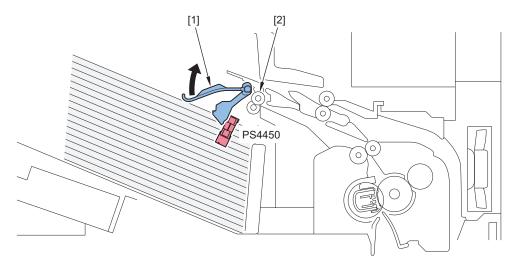

Delivery Assembly

Delivery Paper Full Detection

The Delivery Paper Full Sensor (PS4450) detects delivered paper as full after detecting paper delivery for a certain period of time.

Printing stops once detected as full.

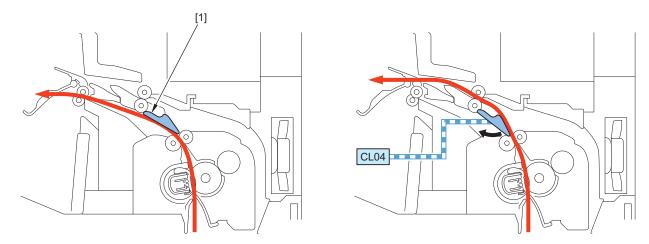

Symbol	Parts name
1	Delivery Full Flag
2	Delivery Roller
PS4450	Delivery Paper Full Sensor

Reverse/Duplex Assembly

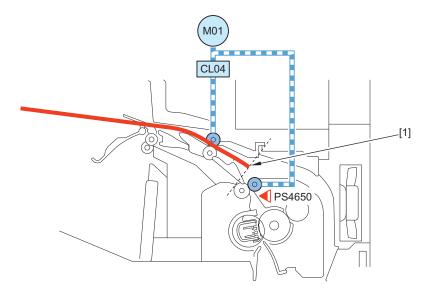

Duplex Reverse Control

With the Reverse Flapper, the feed path is switched from the Delivery Mouth to the Reverse Mouth to perform the reverse operation.

The Reverse Flapper [1] is operated by the Duplex Reverse Clutch (CL4).

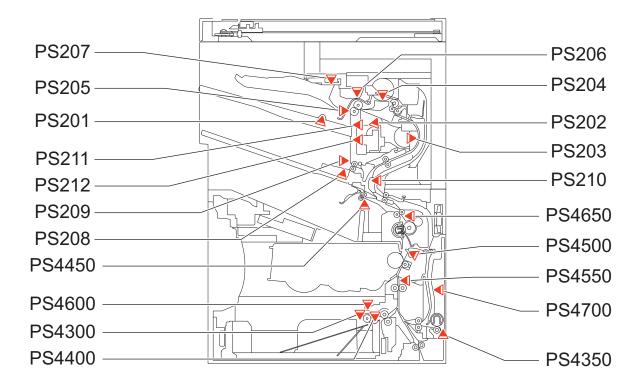

Paper stops at the Duplex Reverse Stop Position and receives the reverse operation.

Symbol	Parts name
1	Duplex Reverse Stop Position
M01	Fixing Motor
CL04	Duplex Reverse Clutch
PS4650	Fixing Delivery Sensor

Jam Detection

This equipment performs jam detection with the use of the sensors listed in the figure.

FM3	Cartridge Upper Fan
FM4	Cartridge Lower Fan
[1]	Controller Fan

Internal power supply

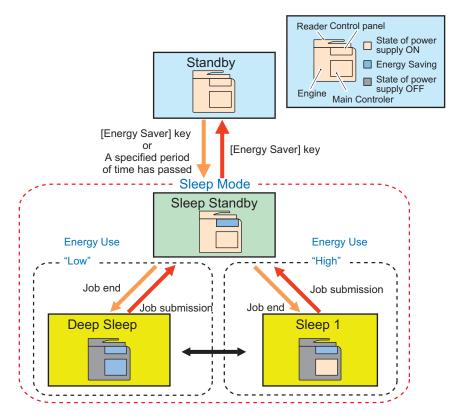

Power-saving Function

Overview

This machine has the following power supply mode: "Standby" and "Sleep".

"Sleep" is further divided into the following 5 modes: "Sleep Standby", "Sleep 1", "Sleep 1 (when [Consider Network Connection] is enabled)", "Sleep Exit", and "Deep Sleep".

2. Technical Explanation (Device)

*The time specified in Settings/Registration> Preferences> Timer/Energy Settings> Auto Sleep Time

Standby

The state where the machine is operating or can start operation immediately and all the power is supplied.

The machine enters Sleep mode when the [Energy Saver] key on the Control Panel is pressed or the specified period of time has passed.

The machine enters this mode when the Touch Panel Display on the Control Panel is tapped during Sleep Standby.

Sleep Standby

The state where only the Control Panel is turned OFF and power is supplied to all the other parts. The machine enters Deep Sleep/Sleep 1 if there is no job after checking whether there is a job. The machine enters this mode when a job is submitted during Sleep (Deep Sleep/Sleep 1).

Sleep 1

The state where the Control Panel is turned OFF and power is supplied only to the processing circuitry for the printer and scanner. The All-night/Non-all-night Power Supply is supplied to the controller.

The machine enters this mode from Sleep Standby during Sleep if Sleep Mode Energy Use is set "High" in Settings/Registration > Preferences > Timer/Energy Settings > Sleep Mode Energy Use.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

Sleep 1 (when [Consider Network Connection] is enabled)

The state where the Control Panel is turned OFF and only the All-night Power (5 V) is supplied to the printer/scanner/controller. This mode should be selected in advance in order to allow the machine to respond to requests for exiting Sleep from external sources such as faxes or the network.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

CAUTION:

The machine can enter this mode if Settings/Registration > Preferences > Timer/Energy Settings > Sleep Mode Energy Use > Low > Consider Network Connection has been turned ON.

The machine does not enter this mode if a 2-, 3-, or 4-line Fax or a coin vendor is connected.

The machine does not enter Deep Sleep when this mode is activated.

Sleep Exit

The machine first enters this mode when returning to Standby from Sleep. The state where power supply is maintained to return from Sleep.

Deep Sleep

The state where the Control Panel is turned OFF and only the All-night Power (5 V) is supplied.

The machine enters this mode from Sleep Standby during Sleep.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Sleep Exit first, and then Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

The machine does not enter this mode when any of the following "Conditions for Not Entering Deep Sleep" applies.

Conditions for Not Entering Deep Sleep Mode (Check Items)

Settings of Settings/Registration

When the following settings are enabled in the [Settings/Registration] menu, the machine does not enter Deep Sleep mode. The corresponding items are shown below.

Preferences > Timer/Energy Settings

- Sleep Mode Energy Use > High
- Sleep Mode Energy Use > Low > Compensate for Network Comm.
- · Within the time specified in Auto Sleep Time

Preferences > Network

- NetWare Settings > Use NetWare > ON
- AppleTalk Settings > Use AppleTalk > ON
- TCP/IP Settings > BMLinkS Settings > Use BMLinkS > ON (*1)
- IEEE 802.1X Settings > Use IEEE 802.1X > ON
- TCP/IP Settings > IPv4 Settings > IP Address Settings > Auto IP > ON
- TCP/IP Settings > DNS Settings > mDNS Settings > Use mDNS > ON
- Google Cloud Print Settings > Use Google Cloud Print > ON (*2)
- TCP/IP Settings > SIP Settings > NGN Settings > Use NGN > ON (*1)
- Direct Connection Settings > Use Direct Connection > ON

Function Settings > Receive/Forward

- Fax Settings >Select RX Mode > Fax/Tel (Auto Switch) (*1)
- Fax Settings > Remote RX > ON (*1)
- Fax Settings > Set Number Display > ON (*1)

Function Settings > Send

• Fax Settings > Modem Dial-in Settings > ON (*1)

Other Settings

- Volume Settings key > Fax Volume Settings > Incoming Fax Ring > ON (*1)
- *1: This may not be displayed depending on the country/region, model, and configuration of the options.
- *2: This must be already registered on Google Cloud Print in advance.

Hardware status

· It is connected to the coin vendor.

System Performance Status

· The system is running/communicating.

CAUTION:

The system is in a running/communicating state for approx. 10 minutes after startup in many cases.

To realize faster startup, power configuration has been changed to always supply power to the Low Voltage Power Supply PCB and Main Controller PCB. Consequently, the Touch Panel can be operated 4 seconds after turning ON the Main Power Switch.

Even when the Main Power Supply Switch is OFF, power is supplied to the following PCBs:

	Quick startup setting ON	Quick startup setting OFF
Low-Voltage Power Supply PCB	Power is supplied	Power is supplied
Main Controller PCB	Power is supplied	OFF

NOTE:

The quick startup function can be set from "Settings/Registration".

- Settings/Registration > Preferences > Timer/Energy Settings > Quick Startup Settings for Main Power [On]: Quick startup is executed (default)
 [Off]: Quick startup is not executed
 - [Off]: Quick startup is not executed

Disconnect the power plug when performing work with the possibility to come in contact with the PCBs above. If a conductive material comes in contact with the PCB, short circuit may occur in the PCB, and may cause damage on it. The following label is used at the place where attention is required.

Conditions for not executing quick startup

This machine does not execute quick startup if the following conditions are met at first startup after the power plug is connected to the outlet.

Connection status of the hardware

• The coin vendor is connected.

Either of the following network settings is set to "ON":

Settings/Registration > Preferences > Network

- AppleTalk Settings > Use AppleTalk > ON
- Select Wired/Wireless LAN > Wireless LAN
- Bluetooth Settings > ON

When the machine starts up right after it is shut down under any of the following conditions

· During operation/communication of the system

Others

- 110 hours or more have elapsed after quick startup.
- · The power of this product is turned ON again within 20 seconds after turning it OFF
- · Startup after 8 hours or more have passed since the power of this product was turned OFF
- · The next time the power is turned ON after turning OFF the power of this product from remote UI
- · The next time the power is turned ON after occurrence of the error code
- The next time the power is turned ON after shifting to the service mode screen

Preface

Outline

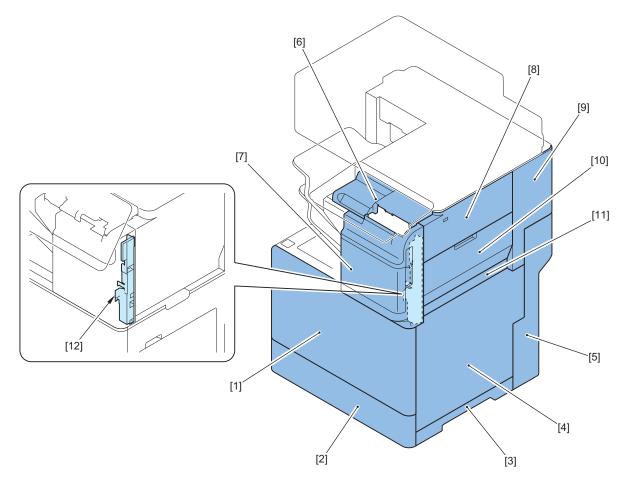

This chapter describes disassembly and assembly procedures of the host machine. The service technician is to identify the cause of host machine failures according to follow the disassembly procedures of each part to replace the defective parts or the consumable parts.

- Before disassembling or assembling the host machine, be sure to disconnect the power cord from the outlet.
- When the Drum Cartridge is removed from the host machine before disassembling and assembling, be sure to put the Photosensitive Drum in a protective bag even in a short period to prevent the adverse effect of light.
- · Assembling procedures are followed by the reverse of disassembly unless any specification.
- Note the length, diameters and positions of screws when assembling the host machine. Be sure to use the screws in the original position.
- Do not run the host machine with any parts removed as a general rule.
- Ground yourself by touching the metal part of the host machine before handling the PCB to reduce the possibility of damage caused by static electricity.
- When replacing the part that the rating plate or the product code label is attached, be sure to remove the rating plate or the product code label and attach it to the replacing part.

Original Exposure/Feed System

Removing the ADF

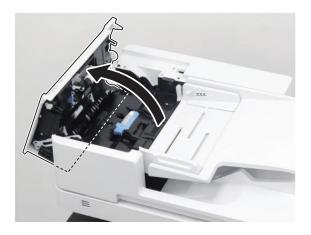

- Preparation (Without Finisher Model)
- 1. "Removing the Rear Cover" on page 123
- Procedure (For Models without the Finisher)

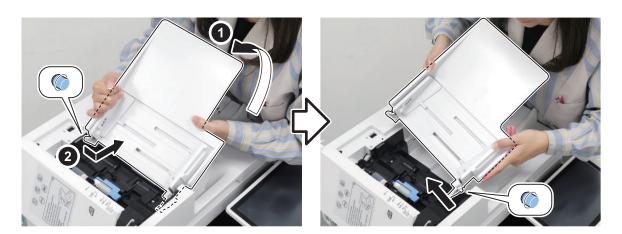

CAUTION:

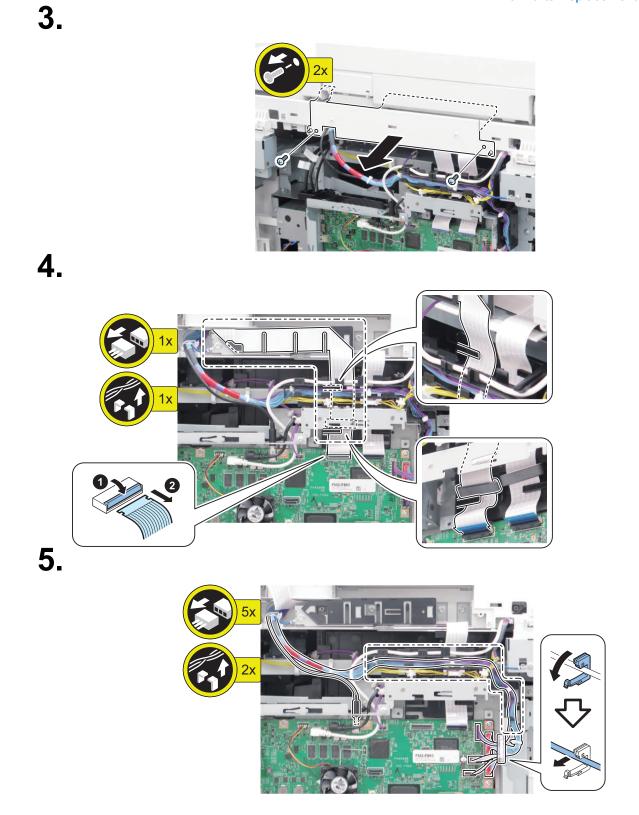

2.

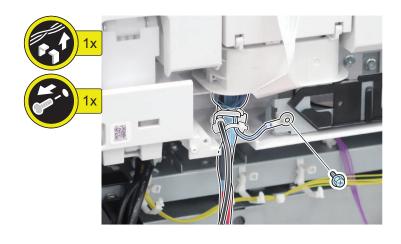

Be careful not to damage the white sheets and the White Plate of the ADF Unit when disassembling/assembling.

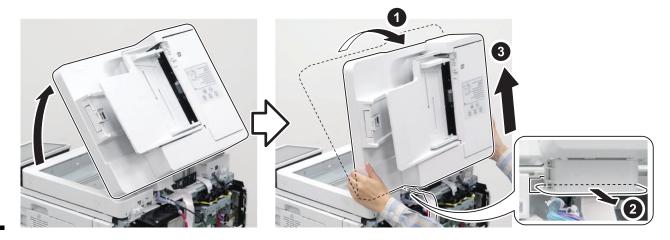

CAUTION:

When installing the ADF Unit, be sure to insert the rib of the Harness Cover into the guide of the Reader Unit.

Preparation (With Finisher Model)

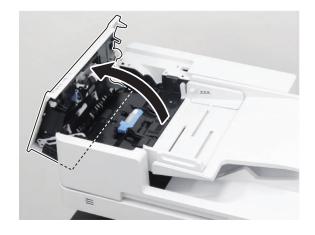

- 1. "Removing the Finisher Rear Cover" on page 132
- 2. "Removing the Rear Cover" on page 123
- 3. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 177

Procedure (For Models with the Finisher)

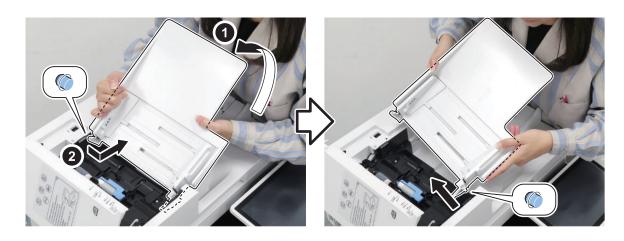

CAUTION:

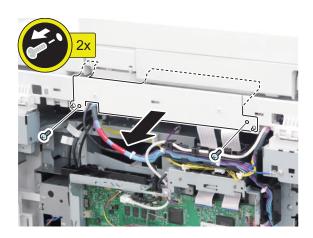

Be careful not to damage the white sheets and the White Plate of the ADF Unit when disassembling/assembling.

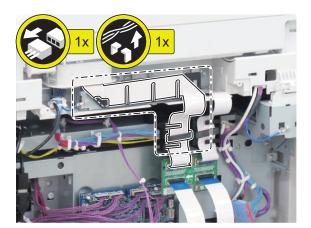

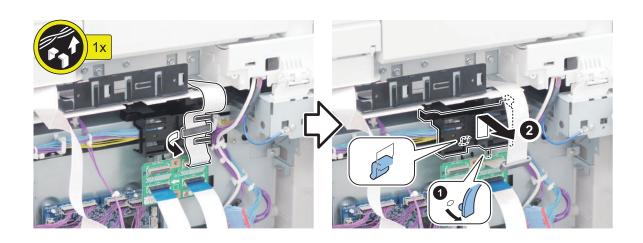

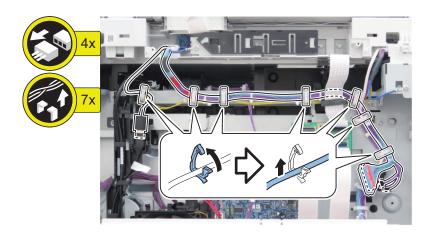

4.

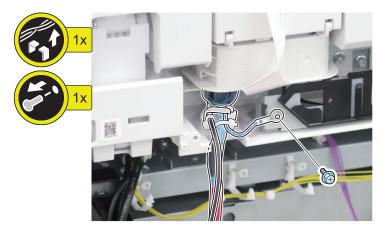

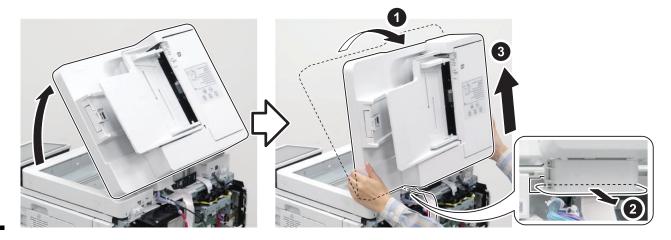

5.

6.

CAUTION:

When installing the ADF Unit, be sure to insert the rib of the Harness Cover into the guide of the Reader Unit.

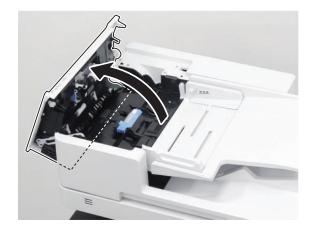

Removing the ADF Pickup Unit

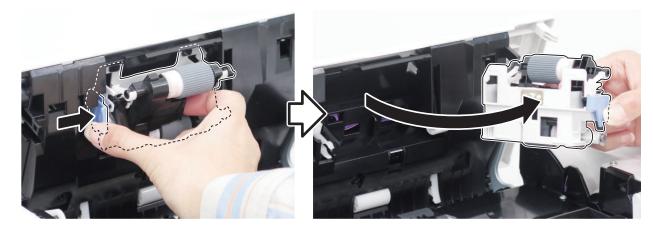

Procedure

CAUTION:

Do not touch the surface of the roller when disassembling/assembling.

NOTE:

When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode. • COPIER > COUNTER > DRBL-2 > DF-PU-RL

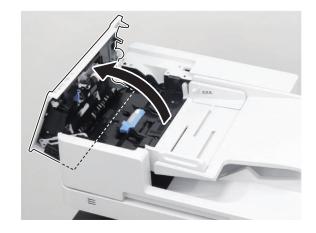

Removing the ADF Separation Unit

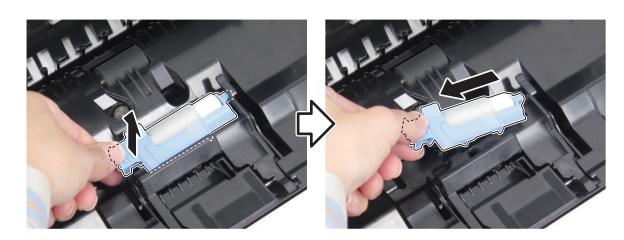

Procedure

CAUTION:

Do not touch the surface of the roller when disassembling/assembling.

NOTE:

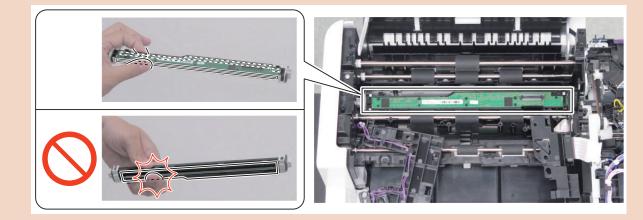

When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode. • COPIER > COUNTER > DRBL-2 > DF-SP-RL

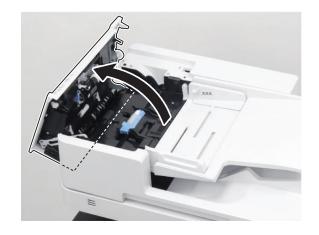

Removing the Scanner Unit (Back)

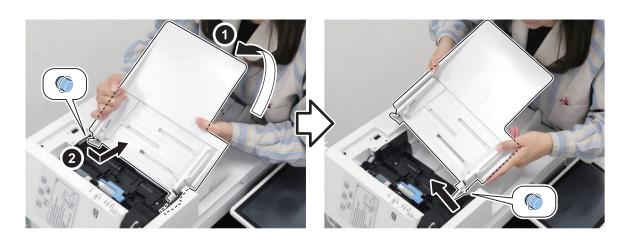

Procedure

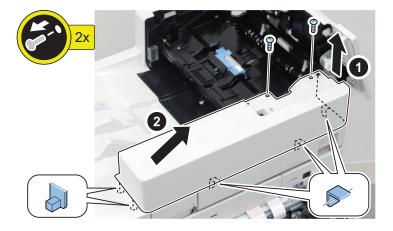

CAUTION:

Be careful not to touch the sensor part of the Scanner Unit (Back) when disassembling/assembling. Be sure to hold the side surfaces.

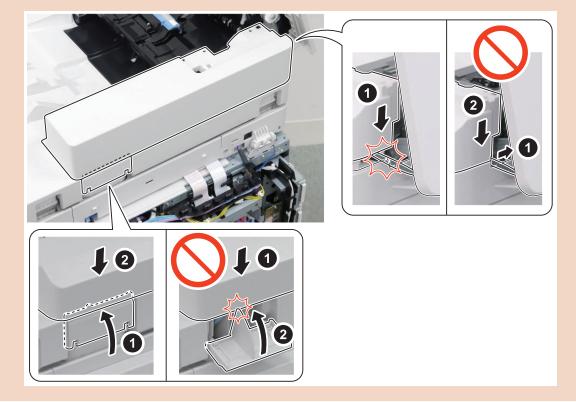

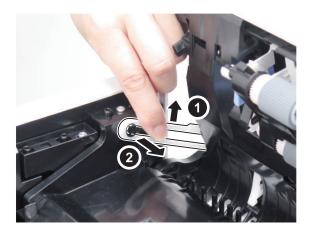

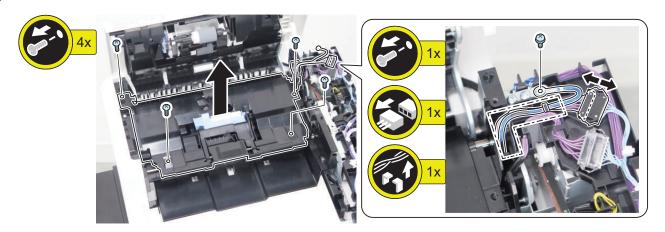

- Be careful not to trap the harness with the ADF Rear Cover.
- Close the Harness Connection Cover first, and then install the ADF Rear Cover.

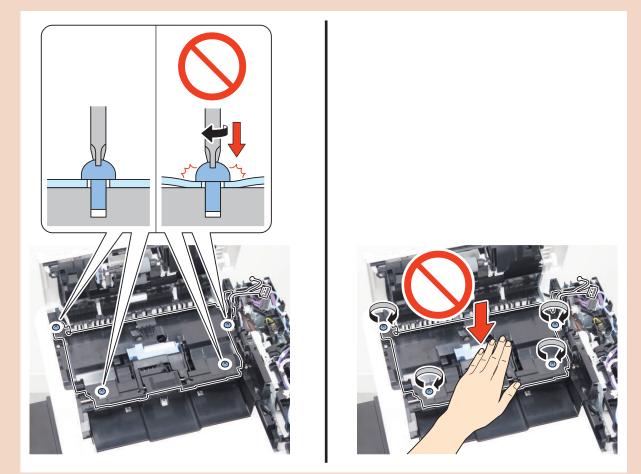

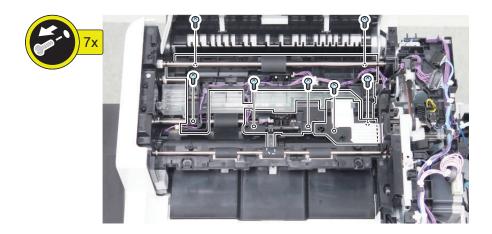

Points to note when tightening screws to install the Separation Guide

Tightening the screws in the following manner deforms the Separation Guide and may cause feed failure when feeding heavy paper.

- Pressing the screwdriver hard while tightening the screws
- · Pressing down the Separation Guide with a hand while tightening the screws

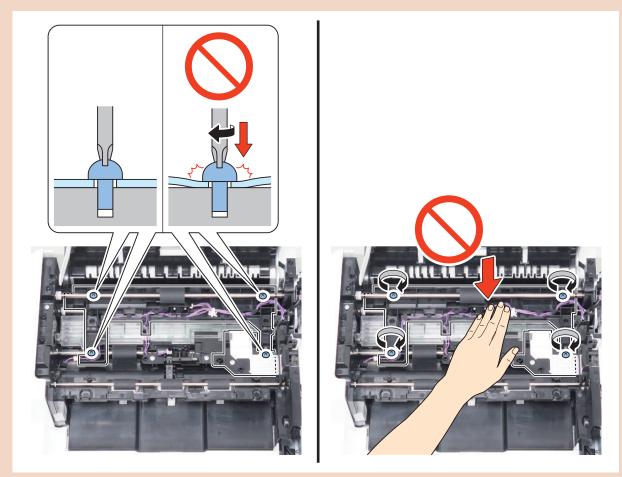

In the case that feed failure occurs, loosen the screws and tighten them again carefully so as not to apply too much force. Take the same caution also when installing the Separation Guide at the time of replacement of the Delivery Sensor, Double Feeding Detection PCB (Transmission) or Lead Sensor.

Points to note when tightening screws to install the Sensor Holder

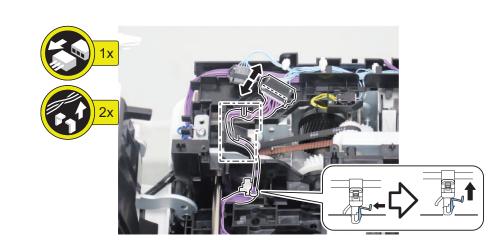

Tightening the screws in the following manner deforms the Sensor Holder and may cause image failure (right angle accuracy, parallelism and/or skew) when feeding paper.

- Pressing the screwdriver hard while tightening the screws
- · Pressing down the Sensor Holder with a hand while tightening the screws

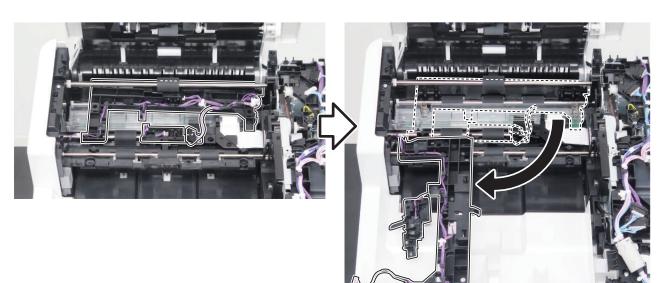

In the case that image failure (right angle accuracy, parallelism, skew) occurs, loosen the screws and tighten them again carefully so as not to apply too much force.

Take the same caution also when installing the Sensor Holder at the time of replacement of the Lead Sensor.

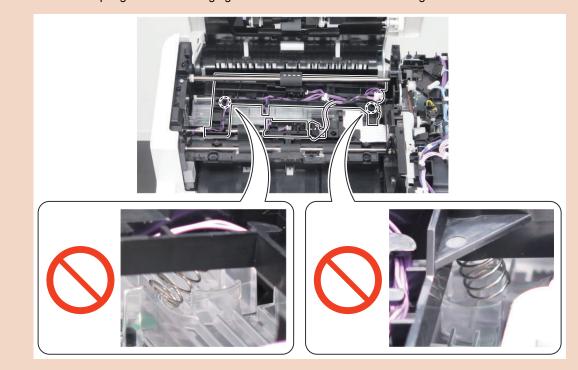

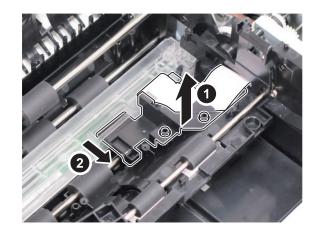

7.

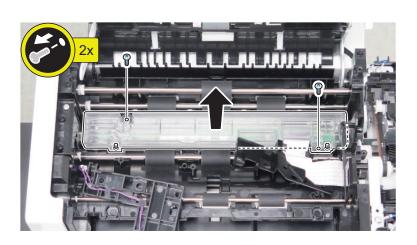

9. CAUTION:

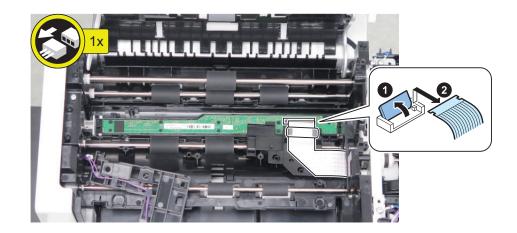

Make sure that the springs in the following figure are not deformed when installing the CIS Cover.

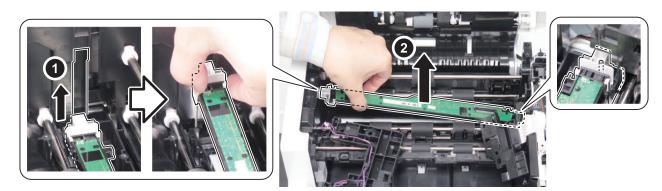

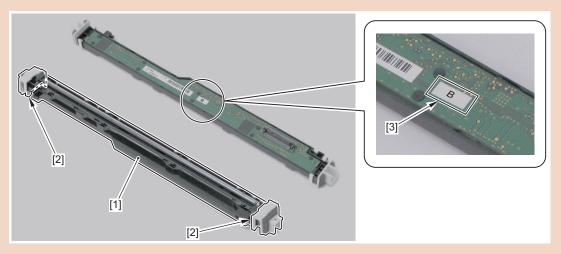

11.

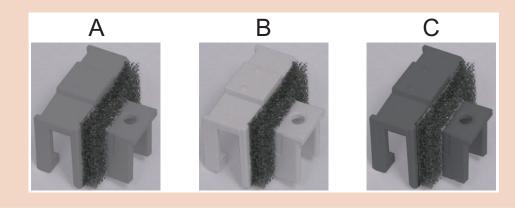

When replacing the Scanner Unit (Back) [1], be sure to replace the Scanner Unit (Back) [1] and the Spacers [2], which are included in the package of the service part, at the same time. If different spacers are used, image reading error may occur.

- If the Spacers are mixed or lost, be sure to check the Scanner Unit Rank Label [3] being used and use the Spacers appropriate for the rank of the Scanner Unit (Back).
- There are three ranks available for the Scanner Unit (Back), and there are spacers suitable for each rank.

Rank	Color of the Spacer
A	Gray
В	Titanium white
С	Standard black

13. Adjustment after Replacement

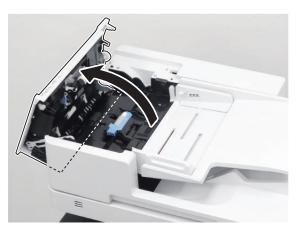

"After Replacing the Scanner Unit (Back)" on page 255

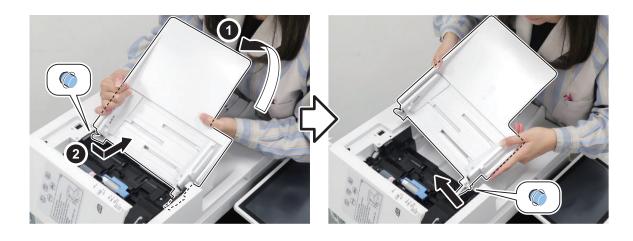

Removing the ADF Feed Frame

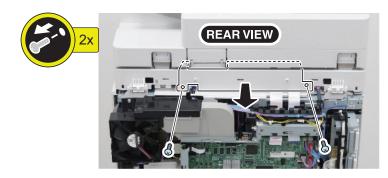

Preparation (Without Finisher Model)

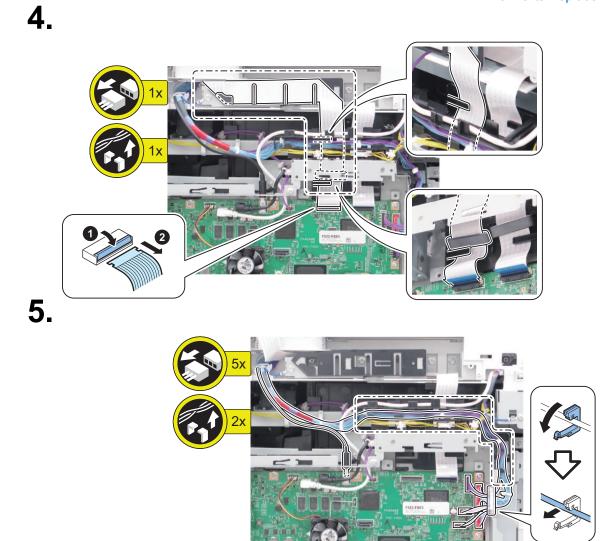

1. "Removing the Rear Cover" on page 123

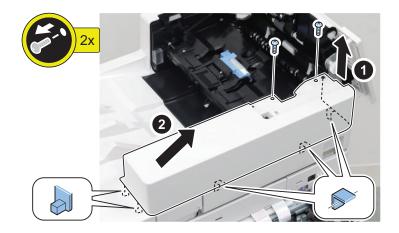

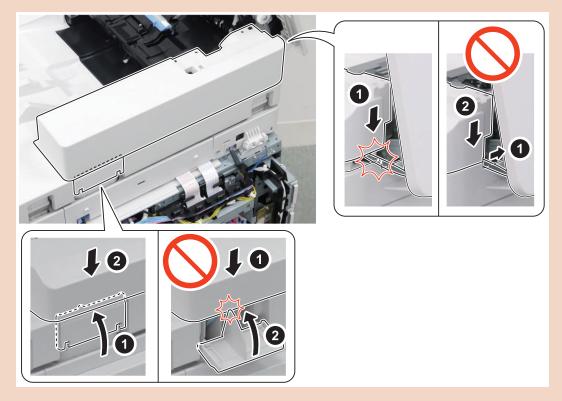

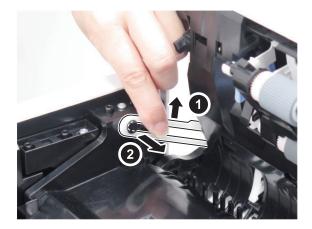

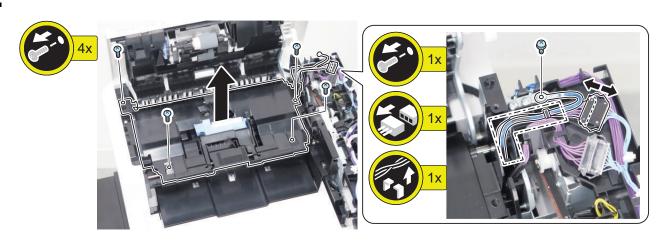

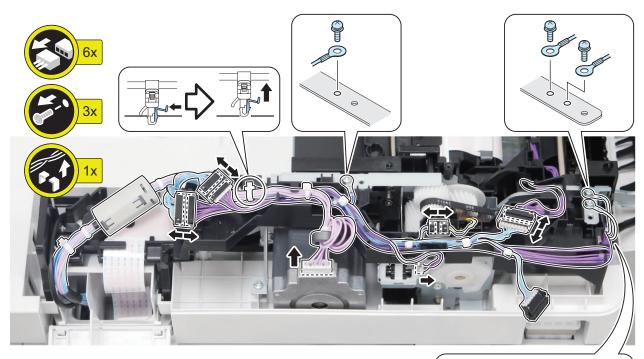

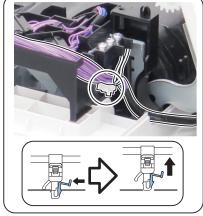

- Be careful not to trap the harness with the ADF Rear Cover.
- Close the Harness Connection Cover first, and then install the ADF Rear Cover.

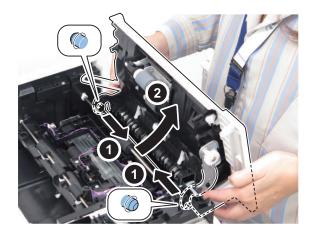

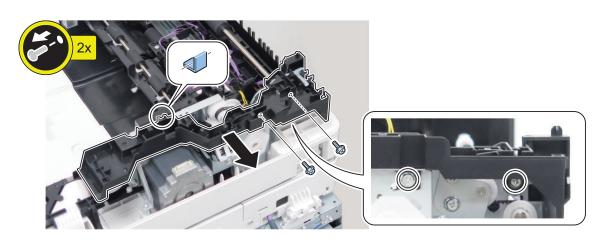

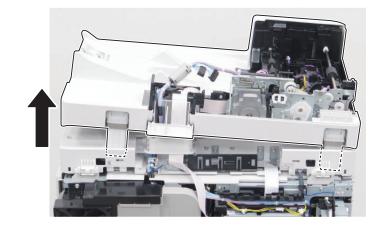

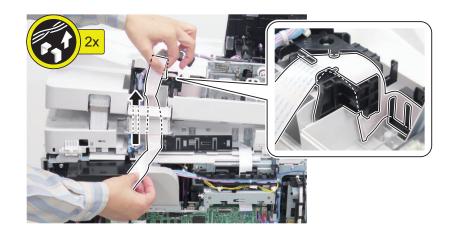

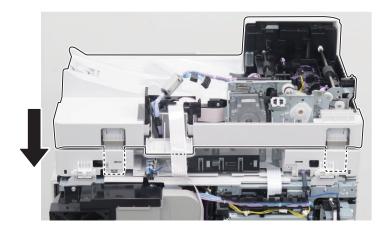

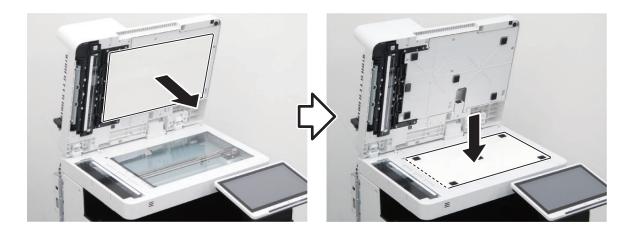

12.

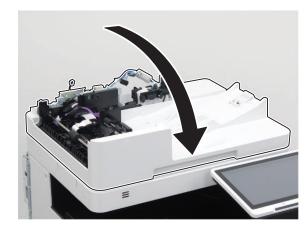

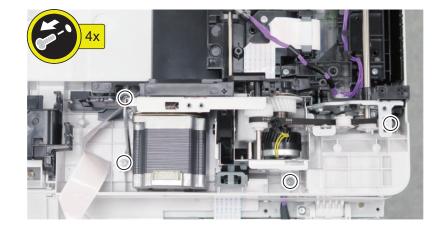

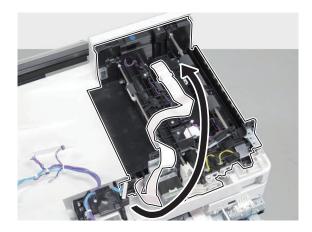

18.

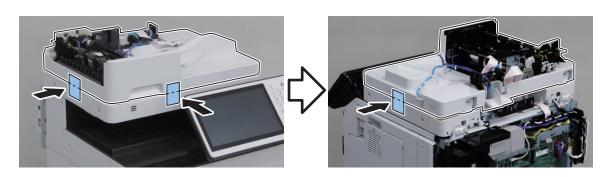

17.

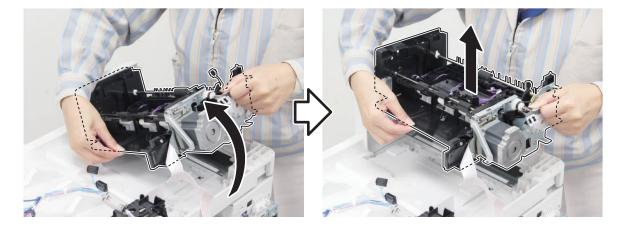

CAUTION:

Be careful of the ADF as it opens abruptly when the Feed Frame Unit is removed.

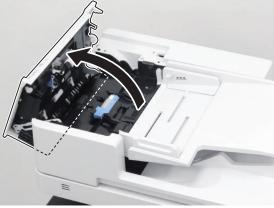

22.

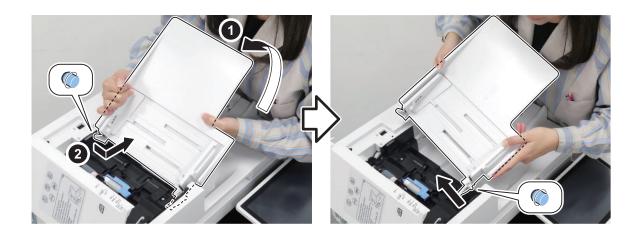

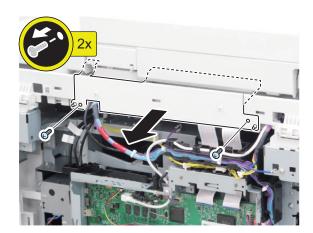

Preparation (With Finisher Model)

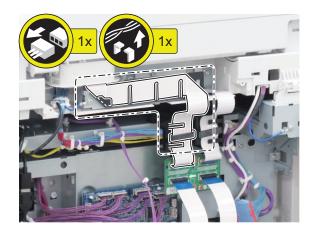

- 1. "Removing the Finisher Rear Cover" on page 132
- 2. "Removing the Rear Cover" on page 123
- 3. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 177

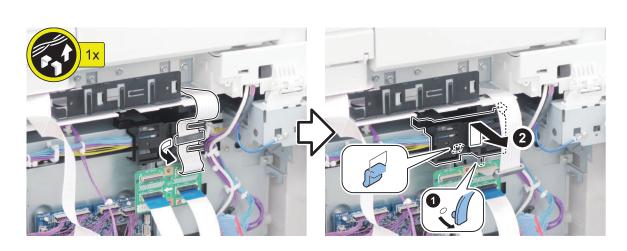

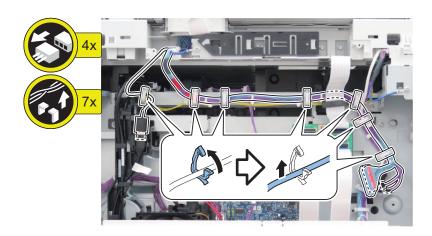

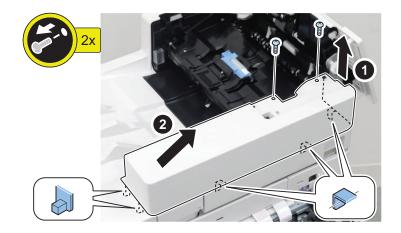

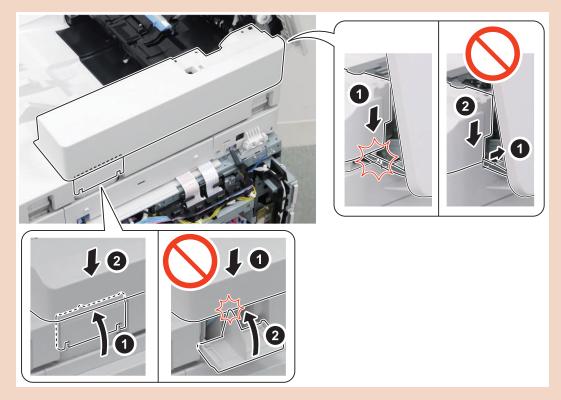

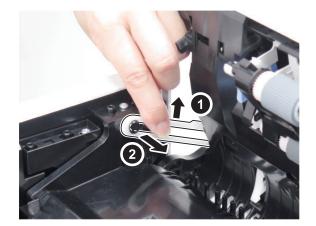

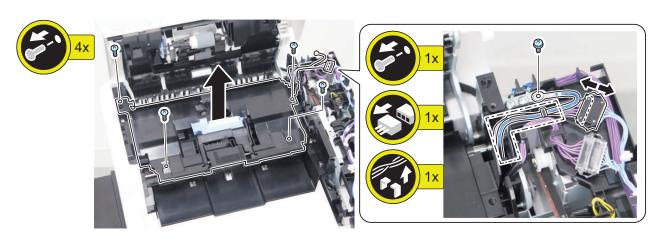

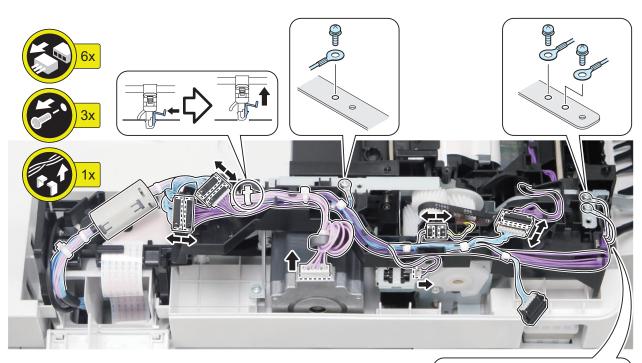

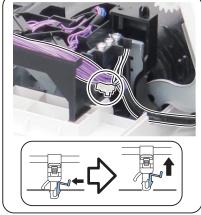

- Be careful not to trap the harness with the ADF Rear Cover.
- Close the Harness Connection Cover first, and then install the ADF Rear Cover.

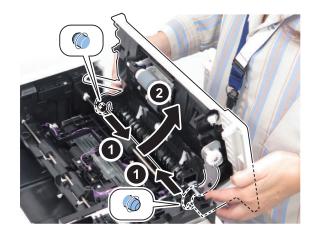

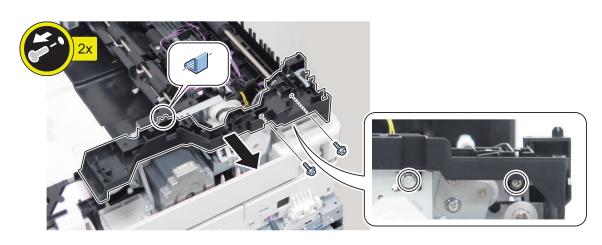

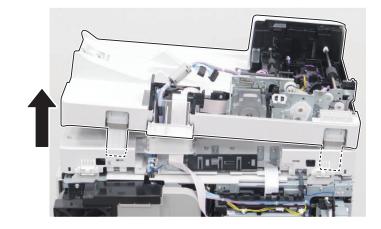

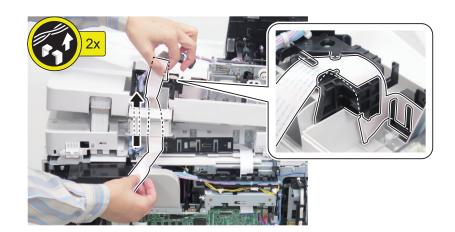

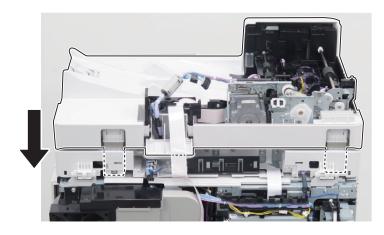

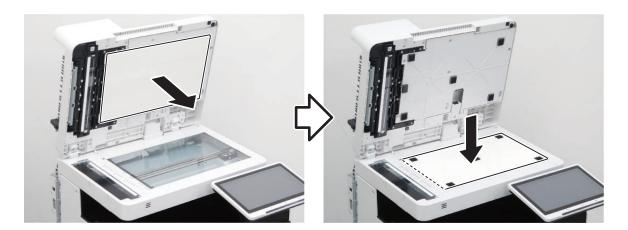

13.

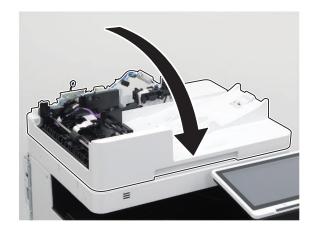

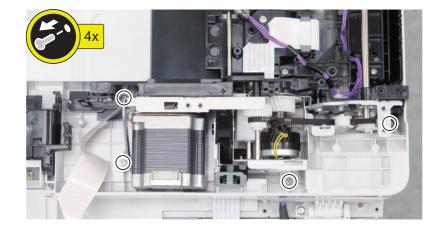

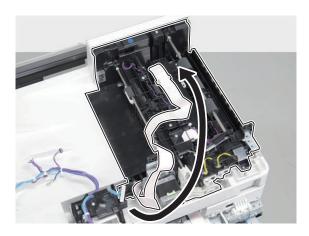

18.

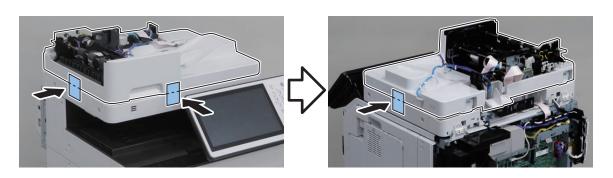

CAUTION:

Be careful of the ADF as it opens abruptly when the Feed Frame Unit is removed.

Removing the Copyboard Glass Unit

Procedure

CAUTION:

- When removing the Copyboard Glass, be careful not to touch the 2 glass surfaces.
- If the surfaces become dirty, clean it with the Glass Cleaning Sheet.

1.

3. Actions after Parts Replacement

"After Replacing the Copyboard Glass" on page 254

Removing the Scanner Unit (Front)

Preparation

1. "Removing the Copyboard Glass Unit" on page 170

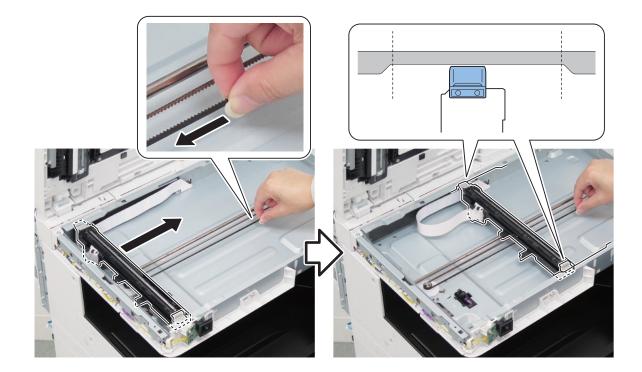

Procedure

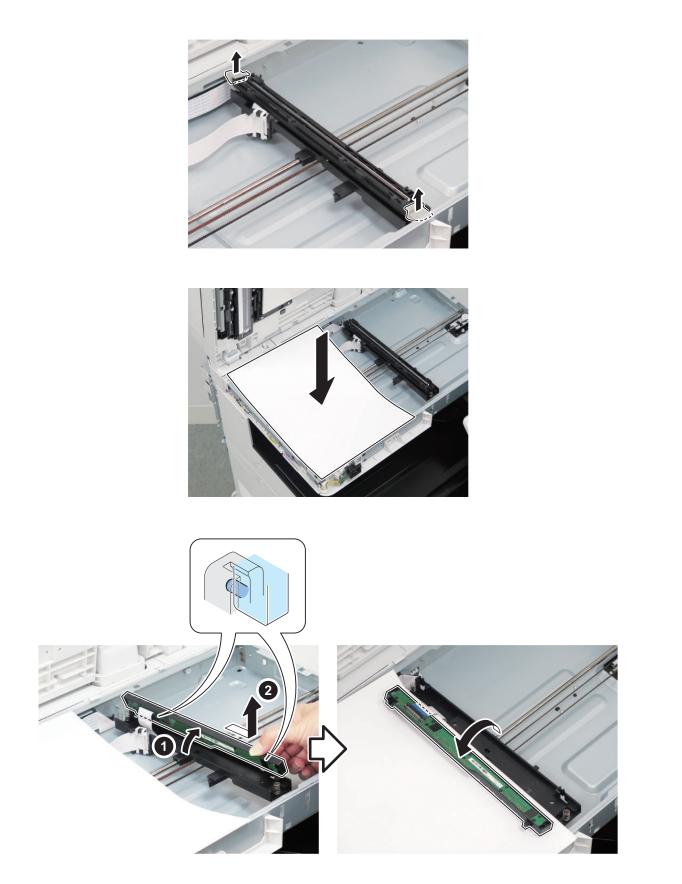

CAUTION:

1.

Be careful not to touch the sensor part of the Scanner Unit (Front) when disassembling/assembling.

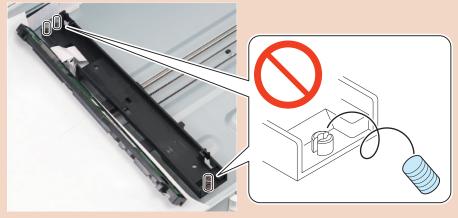

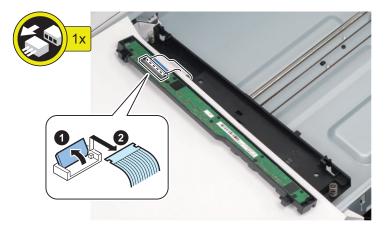

4.

CAUTION:

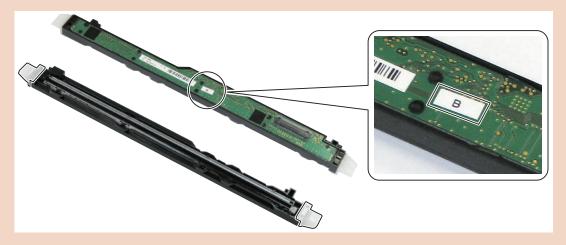

Be careful not to drop the spring(s) when replacing the part.

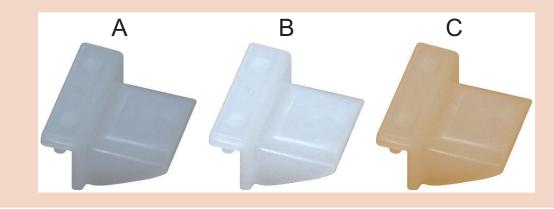

CAUTION:

When replacing the Scanner Unit (Front), be sure to replace the Scanner Unit (Front) and the Spacers, which are included in the package of the service part, at the same time. If different spacers are used, image reading error may occur.

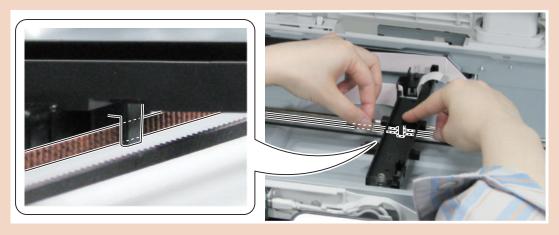

- If the Spacers are mixed or lost, be sure to check the Scanner Unit Rank Label being used and use the Spacers appropriate for the rank of the Scanner Unit (Front).
- There are three ranks available for the Scanner Unit (Front), and there are spacers suitable for each rank.

Rank	Color of the Spacer
A	Gray
В	White
С	Brown

CAUTION:

Be sure that the groove of the Scanner Unit Holder is hooked on the belt when assembling.

Pickup Feed System

Image Position Adjustment

NOTE:

By making an adjustment on the 1st side, the margin on the 2nd side is also changed. If the difference between the 1st and the 2nd sides is +/- 0.5 mm or less, do not adjust the 2nd side.

Reference: Standard value (front side, back side)

Leading edge: 5.0 mm +/- 2.0 mm Left edge: [A4] 2.5 mm +/- 2.0 mm, [LTR] 4.2 +/- 2.0 mm

1. Set the following values for the service modes.

COPIER > TEST > PG > TYPE = 5 COPIER > TEST > PG > COLOR-K = 1 COPIER > TEST > PG > COLOR-Y/M/C = 0 COPIER > TEST > PG > 2-SIDE = 1 COPIER > TEST > PG > PG-PICK = each paper source

2. Press the Start key.

A test print (2-sided print) is output from each paper source.

3. Check the output test print.

NOTE:

At 2-sided printing, paper is output with the 1st side up and 2nd side down. When checking the leading edge margin on the 1st side, check the up side of paper, and check the trailing margin with respect to the feed direction.

4. If outside of standard, perform software adjustment.

Software Adjustment

Software adjustment is an adjustment method to adjust the image position by changing the service mode setting value. Follow the procedure shown below to adjust the positions of the leading edge and left edge of paper.

1. Execute the following service modes to adjust the image position on the leading edge.

COPIER > ADJUST > FEED-ADJ > REGIST : Adjustment of the registration start timing

COPIER > ADJUST > FEED-ADJ > REG-DUP1 : Adjustment of the margin on the leading edge of paper (2nd side of plain paper)

As the input value is changed by 1, the margin on the leading edge of paper is changed by 0.1 mm.

To perform adjustment for one paper type at a time, use the following service mode.

COPIER > ADJUST > FEED-ADJ > REG-DUP1 : Adjustment of the margin on the leading edge of paper (2nd side of plain paper)

COPIER > ADJUST > FEED-ADJ > REG-MF : Adjustment of the margin on the leading edge of paper (plain/recycled/ thin paper, Multi-purpose Tray) 2. Execute the following service modes to adjust the image position on the left edge.

Front side: Adjustment of the image write start position in the horizontal scanning direction at pickup from the Cassette 1 to 4 and the Multi-purpose Tray

COPIER > ADJUST > FEED-ADJ > ADJ-C1 COPIER > ADJUST > FEED-ADJ > ADJ-C2 COPIER > ADJUST > FEED-ADJ > ADJ-C3 COPIER > ADJUST > FEED-ADJ > ADJ-C4 COPIER > ADJUST > FEED-ADJ > ADJ-MF

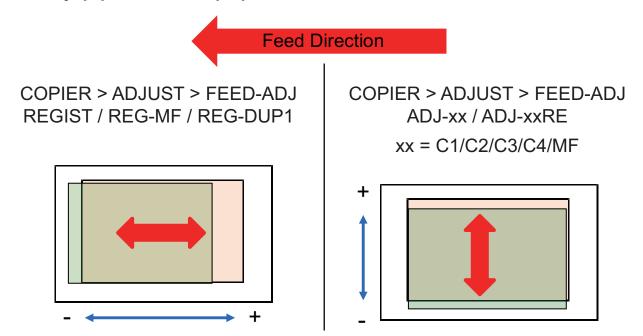

Back side: Adjustment of the image write start position in the horizontal scanning direction for the 2nd side of paper picked up from the Cassette 1 to 4 and the Multi-purpose Tray

COPIER > ADJUST > FEED-ADJ > ADJ-C1RE COPIER > ADJUST > FEED-ADJ > ADJ-C2RE COPIER > ADJUST > FEED-ADJ > ADJ-C3RE COPIER > ADJUST > FEED-ADJ > ADJ-C4RE COPIER > ADJUST > FEED-ADJ > ADJ-MFRE

As the input value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm.

Reference: Standard value (front side, back side)

Leading edge: 5.0 mm +/- 2.0 mm Left edge: [A4] 2.5 mm +/- 2.0 mm, [LTR] 4.2 +/- 2.0 mm

3. If the service mode setting value has been changed, write down the new adjustment value on the service label.

Original Feed System

Skew Adjustment (at Stream Scanning of Originals)

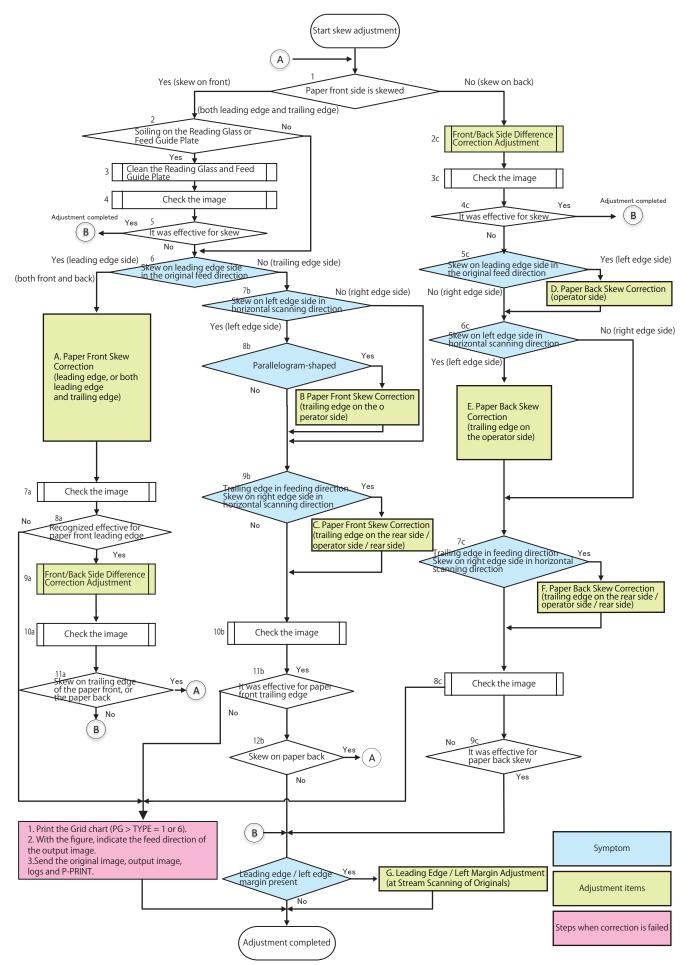

If the images from stream scanned originals are skewed after the adjustments of the printer side is complete, perform skew adjustment according to the workflow.

CAUTION:

The correction may not be performed under the following usage conditions because the skew cannot be detected.

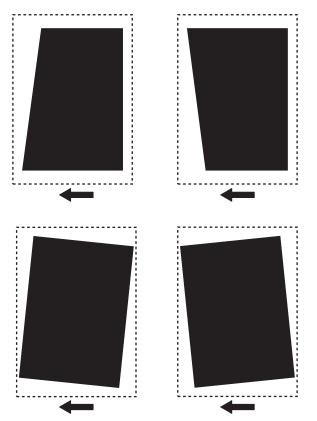

- The Reading Glass or Feed Guide is soiled.
- The edge of original is bent / torn / missing.
- Translucent or thin originals are used.
- E202-0010 or E202-0002 is in the error log and not remedied, which occurs system degraded.

Workflow2

A. Paper Front Skew Correction (Leading Edge, or Both Leading Edge and Trailing Edge)

Correct skew with the following procedure if a skew occurs on leading edge, or both leading edge and trailing edge (on the front side of paper).

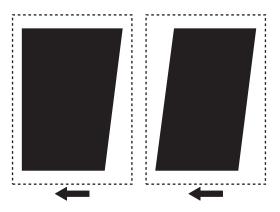

- 1. "Right Angle Adjustment (Slant Adjustment)" on page 236
- 2. "Light intensity adjustment" on page 237
- 3. "Automatic Adjustment of the Stream Reading Position (Automatic Adjustment of the Reading Position at ADF Reading)" on page 238
- 4. "White Level Adjustment" on page 238
- 5. Check the image again. If the leading edge on the front side of the paper is corrected, perform "Difference correction adjustment of front and back sides". If a skew is occurring on the trailing edge of the front side of the paper, or back side of the paper, perform the appropriate skew correction item. If the skew on the front side is not corrected, contact the support department of the sales company.

"Front/Back Side Difference Correction Adjustment" on page 238

B. Paper Front Skew Correction (Trailing Edge on the Operator Side)

Correct skew with the following procedure if a skew occurs on trailing edge on the operator side (on the front side of paper).

1. "Parallelogram Correction" on page 238

2. Check the image again. If a skew is occurring on the back side of the paper, perform the appropriate skew correction item. If the skew on the front side is not corrected, contact the support department of the sales company.

C. Paper Front Skew Correction (Trailing Edge on the Rear Side / Operator Side / Rear Side)

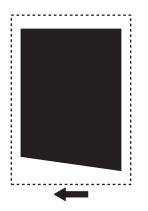

Correct skew with the following procedure if a skew occurs on trailing edge on the rear side / operator side / rear side (on the front side of paper).

- 1. "Angle Correction (Front / Back)" on page 239
- Check the image again. If a skew is occurring on the back side of the paper, perform the appropriate skew correction item. Check the image again. If a skew has not been corrected on the front side of the paper, contact the support department of the sales company.

D. Paper Pack Skew Correction (Operator Side)

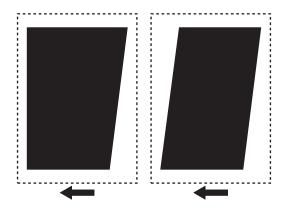

Correct skew with the following procedure if a skew occurs on the operator side (on the back side of paper).

- 1. "Front/Back Side Difference Correction Adjustment" on page 238
- 2. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

E. Paper Back Skew Correction (Trailing Edge on the Operator Side)

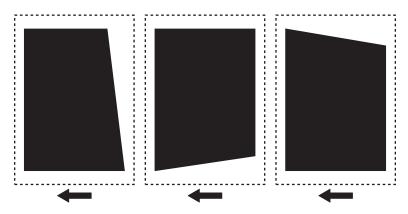

Correct skew with the following procedure if a skew occurs on trailing edge on the operator side (on the back side of paper).

- 1. "Right Angle Adjustment (Slant Adjustment)" on page 236
- 2. "Light intensity adjustment" on page 237
- 3. "White Level Adjustment" on page 238
- 4. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

F. Paper Back Skew Correction (Trailing Edge on the Rear Side / Operator Side / Rear Side)

Correct skew with the following procedure if a skew occurs on trailing edge on the rear side / operator side / rear side (on the back side of paper).

- 1. "Angle Correction (Front / Back)" on page 239
- 2. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

G. Edge Margin Adjustment after the Skew Adjustment (at Stream Scanning of the Originals)

When the leading edge / left edge margin of the image is out of the standard range after skew correction, adjust the leading edge / left edge margin using a test chart.

Reference: Standard value

- Leading edge: 4.0+1.5/-1.0 mm (front side, back side)
- Left edge: 2.5+/-1.5 mm (front side) / 2.5 + / -2.0 mm (back side)

1. "Creating the Test Charts for Image Position Adjustment" on page 239

- 2. Adjust the leading edge margin of the image after skew correction in the following service modes.
 - FEEDER > ADJUST > ADJ-T1 (Front)
 - FEEDER > ADJUST > ADJ-T2 (Back)

NOTE:

- Amount of change per 1 setting value 0.1 mm
- Adjustment range -15 to 15

3. Adjust the left edge margin of the image after skew correction in the following service modes.

- FEEDER > ADJUST > ADJ-L1 (Front)
- FEEDER > ADJUST > ADJ-L2 (Back)

NOTE:

- Amount of change per 1 setting value 0.1 mm
- Adjustment range -30 to 30

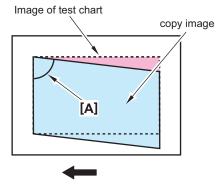

Right Angle Adjustment (Slant Adjustment)

NOTE:

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

Adjustment of the Paper Front Reading

- 1. Prepare the test chart according to the link. "Creating the Test Charts for Image Position Adjustment" on page 239
- 2. Set the following service mode to "1". FEEDER > OPTION > SKW-SW
- 3. Place the test chart on the ADF and make a 1-sided copy.
- 4. Check whether the angle [A] of the copied paper is a right angle. If it is not right-angled, adjust it as follows.

Feed direction

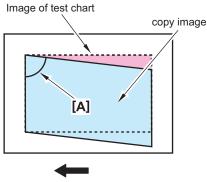

5. Loosen the 4 Right Hinge Fixation Screws, make adjustment by moving the hinge installation position back and forth, and then temporarily fix the screws.

- 6. Place the test chart on the ADF to make a 1-sided copy again.
- 7. Repeat steps 4 and 5 until the skew amount falls within the specified range.
- 8. When the skew amount is within the range, tighten the Fixation Screws you loosened.

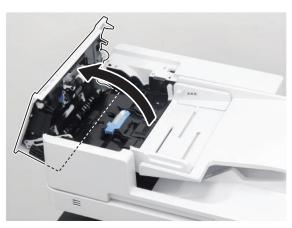

Adjustment of the Paper Back Reading

- 1. Place the test chart facing down on the ADF and make a 2-sided copy.
- 2. Check whether the angle [A] of the copied paper is a right angle. If it is not right-angled, adjust it as follows.

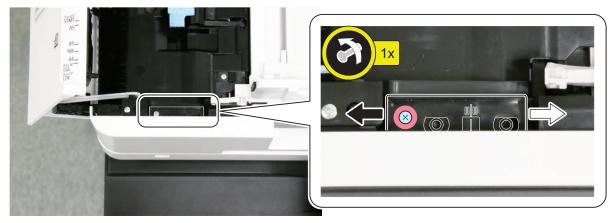

Feed direction

3. Open the Feeder Cover.

- 4. Loosen the screw and adjust the position of the guide for the CIS Adjustment Holder.
 - [A] = Less than 90 degrees: Move the guide to the right (direction of the white arrow).
 - [A] = 90 degrees or more: Move the Guide to the left (direction of the black arrow).

- 5. Tighten the screw after adjustment.
- 6. Make a 2-sided copy of the test chart again, and check that the [A] is a right angle.
- 7. Close the Feeder Cover.
- Set the following service mode to "0". FEEDER > OPTION > SKW-SW

Light intensity adjustment

NOTE:

- This mode automatically performs adjustment.
- If "NG" is displayed after executing this mode, check that PCB and each connector are properly connected.

1. Execute the following service mode with the ADF closed. COPIER > FUNCTION > CCD > CL-AGC

Automatic Adjustment of the Stream Reading Position (Automatic Adjustment of the Reading Position at ADF Reading)

NOTE:

- · If the DADF is opened during adjustment, restart the adjustment.
- Enter the value after adjustment on the Service Label (on the back of the Reader Front Cover or Printer Front Cover). (The adjustment result is reflected to COPIER > ADJUST > ADJ-XY > STRD-POS.)
 COPIER > ADJUST > ADJ-XY > STRD-POS

1. Execute the following service mode item. COPIER > FUNCTION > INSTALL > STRD-POS

NOTE:

If "NG" is displayed after executing this mode, execute "Right Angle Adjustment (Slant Adjustment)" on the service manual.

2. Turn OFF/ON the main power of the Host Machine.

White Level Adjustment

1. Place a sheet of blank A4 or LTR size paper on the Copyboard Glass and close the ADF.

CAUTION:

When executing the white level adjustment using paper with smaller width, adjustment may not be executed properly.

- 2. Execute the service mode item. COPIER > FUNCTION > CCD > DF-WLVL1
- 3. Remove the blank paper from the Copyboard Glass, and place it on the Document Pickup Tray of ADF.
- Execute the service mode item.
 COPIER > FUNCTION > CCD > DF-WLVL2

Front/Back Side Difference Correction Adjustment

NOTE:

This mode automatically feed the original and performs adjustment.

- 1. Place the white color chart (included in the package) or plain paper on the ADF, and then execute the following service mode.
 - FEEDER > FUNCTION > ADJ-SKW

Parallelogram Correction

Perform parallelogram correction if a scanned image is parallelogram-shaped.

- 1. Correct the parallelogram in the following service modes.
 - FEEDER > ADJUST > ADJ-PAR1 (Front)
 - FEEDER > ADJUST > ADJ-PAR2 (Back)

NOTE:

- As the value is increased by 1, the image is corrected clockwise by 0.01 degree.
- As the value is decreased by 1, the image is corrected counterclockwise by 0.01 degree.

Angle Correction (Front / Back)

If the trailing edge of the scanned image is missing, perform angle correction.

1. Correct the amount of rotation in the following service modes.

- FEEDER > ADJUST > ADJ-ROT1 (Front)
- FEEDER > ADJUST > ADJ-ROT2 (Back)

NOTE:

- As the value is increased by 1, the image is corrected clockwise by 0.01 degree.
- As the value is decreased by 1, the image is corrected counterclockwise by 0.01 degree.

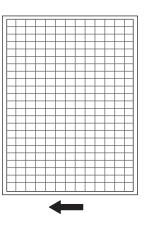

Image Position Adjustment (at Stream Scanning of Originals)

Adjust the image position of the side / leading edge using a test chart.

Creating the Test Charts for Image Position Adjustment

CAUTION:

Create the test charts for image position adjustment after completing adjustments on the printer side.

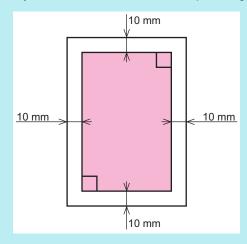

- 1. After setting the service modes as follows, press the Start key to output the test chart.
 - COPIER > TEST > PG > TYPE = 1 or 6
 - COPIER > TEST > PG > PG-PICK = To set the Pickup Cassette for test print output.

NOTE:

Pressing "i" (Information Button) displays the TYPE number.

NOTE:

- If the specified test chart cannot be output, draw a test chart on A3 or LDR paper with a rectangle whose four corners are 10
 mm smaller than the paper.
- To draw characters and marks so that you can see the direction of the copied image.

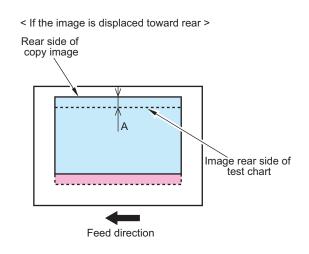

Side Registration Adjustment

NOTE:

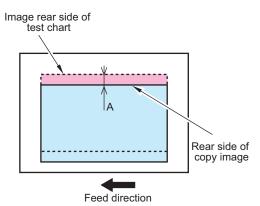

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

Adjustment of the Paper Front / Back Reading

- 1. Set the following service mode to "1". FEEDER > OPTION > SKW-SW
- 2. Place the test chart on the ADF and make a 1-sided copy.
- 3. Overlay the copied paper onto the test chart.
- 4. Check whether the rear side of the copied image is within the standard.
 - Standard: A =< 1 mm

< If the image is displaced toward front >

5. If it is not within the standard range, make an adjustment with the following service modes.

COPIER > ADJUST > ADJ-XY > ADJ-Y-DF

COPIER > ADJUST > ADJ-XY > ADJ-Y-DF2

If the copied image is displaced toward the front side: Increase the value (the image moves toward the rear side)
If the copied image is displaced toward the rear side: Decrease the value (the image moves toward the front side)
Amount of change per 1 setting value 0.1 mm

Adjustment range -15 to 15

- 6. Copy the test chart again, and check that the image is within the ranges of the standard.
- 7. Write down the adjusted value in the service label (on the back of the Reader Front Cover).
- Set the following service mode to "0". FEEDER > OPTION > SKW-SW

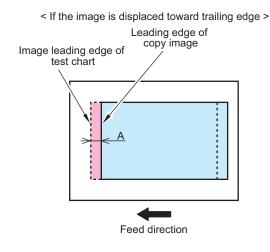

Leading Edge Margin Adjustment

NOTE:

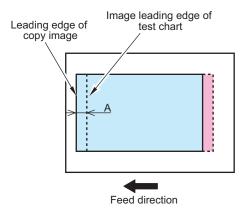

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

Adjustment of the Paper Front / Back Reading

- Set the following service mode to "1". FEEDER > OPTION > SKW-SW
- 2. Place the test chart on the ADF and make a 1-sided copy.
- 3. Overlay the copied paper onto the test chart.
- 4. Check that the leading edge of the copied image is within the standard range.
 - Standard: A =< 1 mm

< If the image is displaced toward leading edge >

If it is not within the standard range, make an adjustment with the following service modes.
 FEEDER > ADJUST > DOCST

FEEDER > ADJUST > DOCST2

- If the copied image is displaced toward the trailing edge: Increase the value (move the image toward the leading edge)
 If the copied image is displaced toward the leading edge: Decrease the value (move the image toward the trailing edge)
 Amount of change per 1 setting value 0.1 mm
 Adjustment range -30 to 30
- 6. Copy the test chart again, and check that the image is within the ranges of the standard.
- 7. Write down the adjusted value in the service label (on the back of the Reader Front Cover).
- Set the following service mode to "0". FEEDER > OPTION > SKW-SW

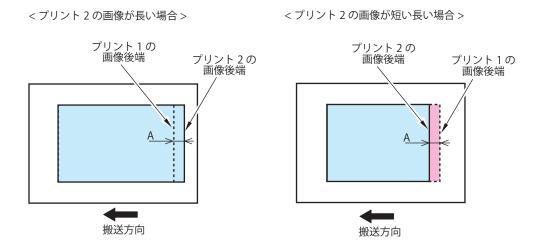

Magnification Ratio Adjustment

NOTE:

- There are two adjustment methods: One for Paper Front Reading (Scanner Unit on the Reader side), and the other for Paper Back Reading (Scanner Unit on the DADF side).
- · This adjustment is performed by comparing the images printed with the stream reading and the copyboard reading.

Adjustment of the Paper Front Reading

- 1. Prepare the test chart according to the link. "Creating the Test Charts for Image Position Adjustment" on page 239
- 2. Place a test chart on the Copyboard Glass of the connected device, and make a print. This is called Print 1.
- 3. Place a test chart on the Document Pickup Tray, and make a 1-sided print. This is called Print 2.
- 4. Overlay the Print 2 onto the Print 1.
- 5. Check if the trailing edge of the image on the Print 2 is within the standard range. Standard: A \leq 1 mm

6. If it is not within the standard range, make adjustments with the following service modes.

FEEDER > ADJUST > LA-SPEED

- If the image on the Print 2 is longer: Increase the numeric value (i.e., make the stream reading speed "faster")
- If the image on the Print 2 is shorter: Decrease the numeric value (i.e., make the stream reading speed "slower")
- Amount of change per unit: 0.01%
- Adjustment range: -200 to +200
- 7. Make a print with the test chart again, and check that the image is within the standard range.

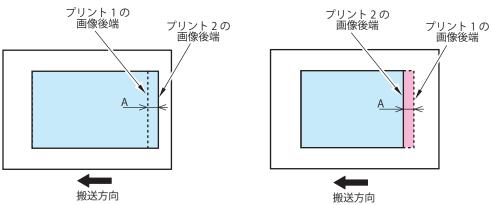

Adjustment of the Paper Back Reading

- 1. Prepare the test chart according to the link. "Creating the Test Charts for Image Position Adjustment" on page 239
- 2. Place a test chart on the Copyboard Glass of the connected device, and make a print. This is called Print 1.
- 3. Place a test chart facing down on the Document Pickup Tray, and make a 2-sided print. This is called Print 2.
- 4. Overlay the Print 2 onto the Print 1.

5. Check if the trailing edge of the image on the Print 2 is within the standard range.

Standard: A≦1 mm

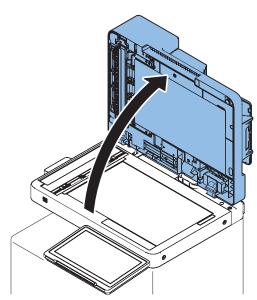

- 6. If it is not within the standard range, make adjustments with the following service modes.
 - If the image on the Print 2 is longer: Increase the numeric value (i.e., make the length of the image in the vertical scanning direction shorter).
 - If the image on the Print 2 is shorter: Decrease the numeric value (i.e., make the length of the image in the vertical scanning direction longer).
 - Amount of change per unit: 0.01%
 - Adjustment range: -200 to +200

FEEDER > ADJUST > LA-SPD2

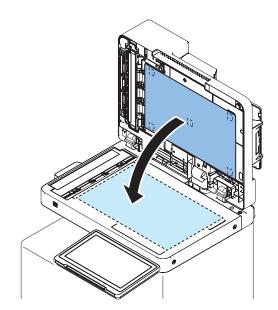

7. Make a print with the test chart again, and check that the image is within the standard range.

Original Exposure System

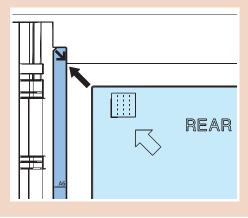

2.

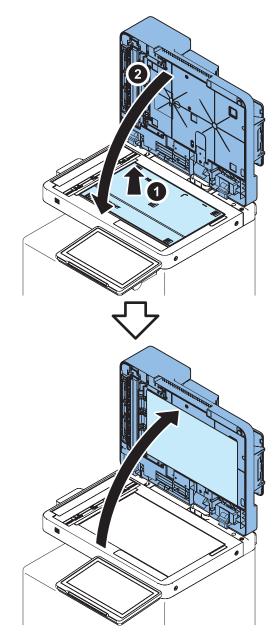

3.

CAUTION:

Align the White Plate with the Index.

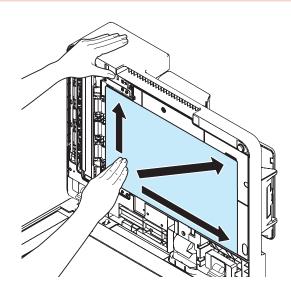

4.

CAUTION:

If the White Plate is pressed from top to bottom, it is placed on the Index Sheet, so be sure to press it from bottom to top.

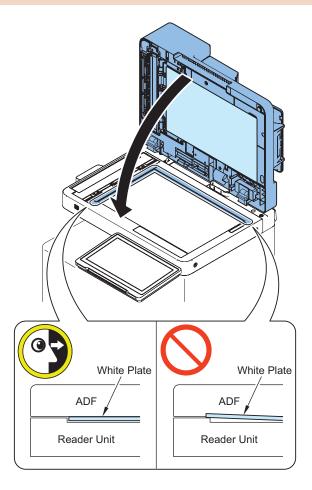

5.

CAUTION:

Check that the White Plate is not placed on the Index Sheet with this equipment closed.

- Be sure that there is no gap between the White Plate and the Index Sheet.
- The gap between the White Plate and the Index Sheet must be 0.3 mm or less as a reference.

Actions at Parts Replacement

Main Controller PCB

Actions before Parts Replacement

- 1. Output the latest service mode setting values.
 - COPIER > FUNCTION > MISC-P > P-PRINT
- 2. Perform backup in the following service mode (Lv.2). COPIER > FUNCTION > SYSTEM > DSRAMBUP

Actions after Parts Replacement

1. Upgrade the firmware for correcting its combination to ensure that the machine operates properly.

NOTE:

It is recommended to use the automatic update function.

2. Perform either of the followings according to the backup status.

When backup completed successfully

Execute the following service mode (Lv.2) to restore the backup data.

COPIER > FUNCTION > SYSTEM > DSRAMRES

When backup does not complete successfully

Enter the values written on the service label (on the Front Door of the host machine) in the following service modes.

- COPIER > ADJUST > ADJ-XY >
- COPIER > ADJUST > CCD >
- COPIER > ADJUST > PASCAL >
- FEEDER > ADJUST >

List of Service Mode Items to Enter Values

Service mode path	Service mode items to enter values
COPIER > ADJUST > ADJ-XY >	ADJ-X, ADJ-Y, ADJ-S, STRD-POS, ADJ-X-MG, ADJ-Y-DF, ADJY-DF2
COPIER > ADJUST > CCD >	100-GB, 100-RG, 100DF-GB, 100DF-RG, 100DF2GB, 100DF2RG, DFCH2B10, DFCH2B2, DFCH2G10, DFCH2G2, DFCH2R10, DFCH2R2, DFCH-B10, DFCH-B2, DFCH-G10, DFCH-G2, DFCH-R10, DFCH-R2, MTF2-M1, MTF2-M2, MTF2-M3, MTF2-M4, MTF2-M5, MTF2-M6, MTF2-M7, MTF2-M8, MTF2-M9, MTF2-S1, MTF2-S2, MTF2-S3, MTF2-S4, MTF2-S5, MTF2-S6, MTF2-S7, MTF2-S8, MTF2-S9, MTF3-M1, MTF3-M2, MTF3-M3, MTF3-M4, MTF3-M5, MTF3-M6, MTF3-M7, MTF3-M8, MTF3-M9, MTF3-S1, MTF3-S2, MTF3-S3, MTF3-S4, MTF3-S5, MTF3-S6, MTF3-S7, MTF3-S8, MTF3-S9, MTF-M1, MTF-M2, MTF-M3, MTF-M4, MTF-M5, MTF-M6, MTF-M7, MTF-M8, MTF-M9, MTF-S1, MTF-S2, MTF-S3, MTF-S4, MTF-S6, MTF-S7, MTF-S8, MTF-S9, W-PLT-X, W-PLT-Z, DFTAR2-B, DFTAR2-G, DFTAR2-R, DFTAR3-B, DFTAR3-G, DFTAR3-R, DFTAR-B, DFTAR-G, DFTAR-R, DFTBK-B, DFTBK-G, DFTBK-R
COPIER > ADJUST > PASCAL >	OFST-P-K
FEEDER > ADJUST >	LA-SPEED, LA-SPD2, DOCST, DOCST2, ADJ-DL, ADJ-DROT, ADJ-DT

3. Execute the following service mode to adjust the Scanner Unit white level.

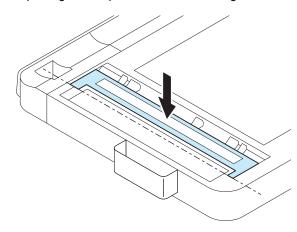

COPIER > FUNCTION > CCD > CL-AGC

4. Follow the steps shown below to adjust the ADF white level.

- Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
- Place an A4 or LTR size paper on the ADF and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL2

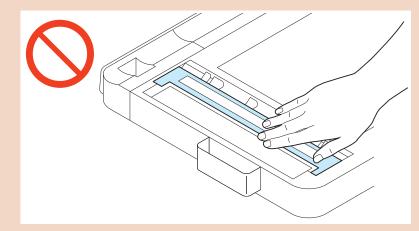

5. Follow the steps shown below to perform the paper back shading correction.

- Cleaning the reading side 1
 Locations for cleaning: Stream Reading Glass for front side, Stream Reading Glass for back side Cleaning method: Clean with the cloth stored in the Reader Assembly.
- Paper back shading correction 1
 Close the ADF, and execute the following service mode.
 COPIER > FUNCTION > CCD > BK-SHD1
- 3. Paper back shading correction 2 Set the white sheet included in the package at the position shown in the figure below.

CAUTION:

Do not touch the upper surface of the white sheet.

Close the ADF, and execute the following service mode. COPIER > FUNCTION > CCD > BK-SHD2

4. Cleaning the reading side 2

Remove the White Plate and perform the cleaning again.

- · Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side
- Cleaning method: Clean with the cloth stored in the Reader Assembly.
- Paper back shading correction 3 Close the ADF, and execute the following service mode. COPIER > FUNCTION > CCD > BK-SHD3
- 6. Execute the following service mode to calculate the MTF filter coefficient. COPIER > FUNCTION > CCD > MTF-CLC
- 7. Derive the ADF front and back linearity characteristics. COPIER > FUNCTION > CCD > DF-LNR
- 8. In the following menu, execute the auto gradation adjustment. Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation

DC Controller PCB

Before Parts Replacement

CAUTION:

When replacing the DC Controller PCB, be sure to use a new one. Do not use the DC Controller PCB which was used with another machine.

- 1. Execute the following service mode to output setting values for just in case of restoration failure of backup data. COPIER > FUNCTION > MISC-P > P-PRINT
- 2. Execute the following service mode to back up the service mode setting values. (Lv.2) COPIER > FUNCTION > SYSTEM > DSRAMBUP During execution, "ACTIVE" flashes in the status column of the service mode. It takes approx. 2 minutes. Upon success, [OK!] is displayed in the status column.
- 3. After confirming that [OK!] is displayed in the status column of the service mode, turn OFF the power of the machine.

During Parts Replacement

CAUTION:

Once the DC Controller PCB was replaced with a brand-new one, make sure to perform a version update. Otherwise, the functionalities available with the latest version will not perform properly.

CAUTION: Auto-update is available only when the following service mode (Lv. 2) is set to 1 or 2. COPIER > OPTION > FNC-SW > VER-CHNG

- 1. Update the DCON version in accordance with one of the following screen messages.
 - <When the update button is displayed>
 - 1. If the following message is displayed on the screen, press [Update] to auto-update the DCON version.

The versions of some optional devices are inappropriate for the current version of the main unit. Press [Update] to update to the most appropriate versions.
Press [Update] to restart the device. (Update may take about 5 to 10 minutes.)
نه Skip لوغانی

Screen sample

<When the update button is not displayed>

1. If the following message is displayed on the screen, press [Close].

The versions of some optional devices are inappropriate for the current version of the main unit. The version of the main unit needs to be updated.

Screen sample

- 2. Enter the following service mode (Lv. 2) and set the value to "2."
- COPIER > OPTION > FNC-SW > VER-CHNG
- 3. Turn OFF and then ON the main power.
- 4. Once the update button is displayed, press [Update] to auto-update the DCON version.
- 2. If setting value data was backed up before the parts replacement, execute the following service mode (Lv. 2) to restore the backed-up setting value data.

COPIER > FUNCTION > SYSTEM > DSRAMRES

During the execution, "ACTIVE" flashes in the status column of the service mode.

The execution takes approx. 2 minutes. Upon success, [OK!] is displayed in the status column.

3. If setting values were not backed up before the replacement due to e.g. damaged DC Controller PCB, or if the backedup data could not be restored in the previous step, enter the value of each service mode item on the service label or P-PRINT as listed before the parts replacement.

Overview

The following describes the tasks when replacing the HDD. Note that procedures to backup/restore the data in the HDD is required when replacing the HDD.

*1: Remote UI > Settings/Registration > Management Settings > Data Management > Import or Export

*2: Remote UI > Settings/Registration > Management Settings > User Management > Authentication Management > User

Management

*3: Remote UI > Quick Menu > Export

*4: Remote UI > Settings/Registration > Management Settings > Data Management > Back Up or Restore

*5: Remote UI > Service Management Service

*6: Remote UI > Settings/Registration > Management Settings > Device Management > Save Audit Log

Audit log that was exported cannot be put back to the device from which the log was exported.

- *7: Settings/Registration > Management Settings > Data Management > TPM Settings
- *8: Download mode > [5]: Backup/Restore > [3] : MEAP Backup > Meapback.bin

Backup is possible using SST or USB memory

The data saved using a MEAP application can be backed up only when the MEAP application has a backup function.

*9: Backup Method using DCM When You set it in COPIER> OPTION> USER> SMD-EXPT> ON, a backup/restore is possible in Service Mode Settings from the Remote UI.

There is a backup button on the TOP page of the service mode.

- Remote UI > Settings/Registration > Management Settings > Data Management > Import/Export All
- Remote UI > Settings/Registration > Management Settings > Data Management > Import/Export
- Service mode top screen > BACKUP
- Web Service

*10: The setting value that was set when the main power was turned OFF the last time is automatically backed up to the Flash PCB. When a HDD is replaced with a new one, the setting value is automatically inherited from the Flash PCB at the time of HDD formatting.

*11: iWEMC DAM plug-in

Actions before Parts Replacement

- 1. Backup the required data based on the "Table: Backup List" on page 252.
- 2. Execute the following service mode and printout the setting data to be ready in case of failing to restore the data.

COPIER > FUNCTION > MISC-P > USER-PRT COPIER > FUNCTION > MISC-P > P-PRINT

Actions after Parts Replacement

1. HDD format

Start the machine in safe mode, and format all partitions using SST or a USB memory.

- 2. Turning OFF and ON the main power switch.
- 3. Restoring the backup data
- 4. Resetting/registering the data

While referring to the list which was printed before replacement, reset/register the data.

- 5. When the user generates and adds the encryption key, certificate and/or CA certificate, request the user to generate them again.
- 6. Execute auto gradation adjustment.
 - Execute auto gradation adjustment.Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust

After Replacing the Copyboard Glass

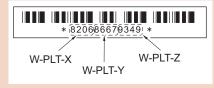

Adjustment after Replacement

1. Enter the value (XXXXYYYYZZZZ) shown on the Barcode Label affixed at the upper right of the Copyboard Glass

COPIER > ADJUST > CCD > W-PLT-X COPIER > ADJUST > CCD > W-PLT-Y COPIER > ADJUST > CCD > W-PLT-Z

CAUTION:

Be sure to execute the White Plate data adjustment before the Scanner Unit white level adjustment and ADF while level adjustment.

2. Scanner Unit white level adjustment

```
COPIER > FUNCTION > CCD > CL-AGC
```

3. ADF white level adjustment

- Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
- Place an A4 or LTR size paper on the ADF and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL2
- 4. Write down the values on the service label for the Reader (on the Front Door of the host machine).

COPIER > ADJUST > CCD > W-PLT-X COPIER > ADJUST > CCD > W-PLT-Y COPIER > ADJUST > CCD > W-PLT-Z

After Replacing the Scanner Unit (Front)

Adjustment after Replacement

- 1. Execute the following service mode to perform automatic adjustment of the reader shading position. COPIER > FUNCTION > INSTALL > RDSHDPOS
- 2. Execute the following service mode to perform the black and white reference level adjustment for the Scanner Unit. COPIER > FUNCTION > CCD > CL-AGC
- 3. Execute the following service mode to perform automatic adjustment of the reading position during DADF reading. COPIER > FUNCTION > INSTALL > STRD-POS
- 4. Follow the steps shown below to adjust the ADF white level.
 - 1. Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL2

5. In the following service modes, enter the values shown on the label included with the Scanner Unit.

COPIER > ADJUST > CCD > MTF-xxx COPIER > ADJUST > CCD > MTF2-xxx

- 6. In the following service mode, calculate the MTF filter coefficient. COPIER > FUNCTION > CCD > MTF-CLC
- 7. From the following menu, execute the auto gradation adjustment. Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation
- 8. Set the white color chart on the ADF Feeder Tray.
- 9. Execute skew adjustment (front and back difference correction adjustment). FEEDER > FUNCTION > ADJ-SKW
- 10. Write down the values on the service label for the Reader (on the Front Door of the host machine).
 - COPIER > ADJUST > CCD > MTF-xxx
 - COPIER > ADJUST > CCD > MTF2-xxx
 - FEEDER > ADJUST > ADJ-DT
 - FEEDER > ADJUST > ADJ-DL
 - FEEDER > ADJUST > ADJ-DROT

After Replacing the Scanner Unit (Back)

Adjustment after Replacement

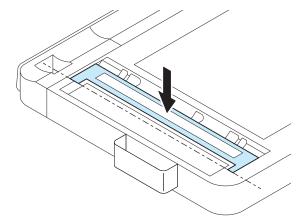

1. Execute the following service mode to adjust the Scanner Unit white level.

COPIER > FUNCTION > CCD > CL-AGC

- 2. Follow the steps shown below to adjust the ADF white level.
 - Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL2
- 3. Follow the steps shown below to perform the paper back shading correction.
 - Cleaning the reading side 1
 Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side Cleaning method: Clean with the cloth stored in the Reader Assembly.
 - Paper back shading correction 1
 Close the ADF, and execute the following service mode.
 COPIER > FUNCTION > CCD > BK-SHD1

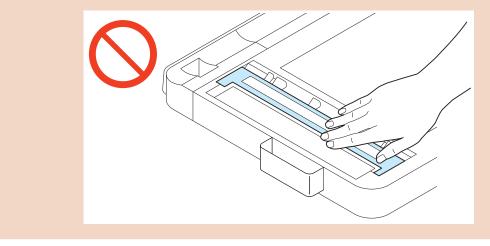

3. Paper back shading correction 2

Set the white sheet included in the package at the position shown in the figure below.

CAUTION:

Do not touch the upper surface of the white sheet.

Close the ADF, and execute the following service mode. COPIER > FUNCTION > CCD > BK-SHD2

4. Cleaning the reading side 2

Remove the White Plate and perform the cleaning.

- · Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side
- Cleaning method: Clean with the cloth stored in the Reader Assembly.
- 5. Paper back shading correction 3
 - Close the ADF, and execute the following service mode. COPIER > FUNCTION > CCD > BK-SHD3
- 4. In the following service modes, enter the values shown on the label included with the Scanner Unit. COPIER > ADJUST > CCD > MTF3-xxx
- 5. Execute the following service mode to calculate the MTF filter coefficient. COPIER > FUNCTION > CCD > MTF-CLC
- 6. In the following menu, execute the auto gradation adjustment. Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation
- 7. Set the white color chart included in the package on the ADF Feeder Tray.
- 8. Execute skew adjustment (difference correction adjustment of front and back sides). FEEDER > FUNCTION > ADJ-SKW

9. Write down the values on the service label for the Reader (on the Front Door of the host machine).

- COPIER > ADJUST > CCD > MTF3-xxx
- FEEDER > ADJUST > ADJ-DT
- FEEDER > ADJUST > ADJ-DL
- FEEDER > ADJUST > ADJ-DROT

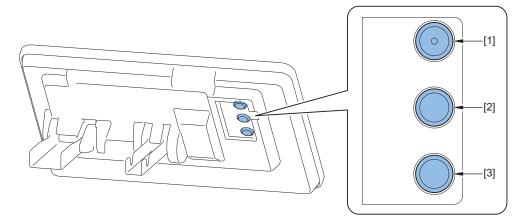

Control Panel Unit

When replacing the Touch Panel Uit, LCD Unit or the Control Panel CPU PCB, perform the following work.

Actions at Parts Replacement

Control Panel Adjustment

- 1. Open the Hard Key Cover in rear side of the Control Panel.
- 2. Enter the Service Mode.
- 3. Press the Hard Key [1] 3 times to enter the coordinate adjustment mode.

4. Press "+" indicated on the Control Panel in order. The coordinate adjustment mode is automatically closed when all 9 "+" is pressed.

NOTE:

When the adjustment is not operated adequately, Re-adjust from procedure 3 after pressing all 9 "+" is pressed.

6. Adjustment

Troubleshooting

Initial Check	.260
Troubleshooting Items	.261
Test Print	.270
Startup System Failure Diagnosis	.275
Controller Self Diagnosis	.281
Debug Log	.285

Initial Check

Initial check items list

Item	No.	Detail	Check
Site Environment	1	The voltage of the power supply is as rated (±10%).	
	2	The site is not a high temperature / humidity environment (near a water faucet, water boiler, humidifi er), and it is not in a cold place. The machine is not near a source of fi re or dust.	
	3	The site is not subject to ammonium gas.	
	4	The site is not exposed to direct rays of the sun. (Otherwise, provide curtains.)	
	5	The site is well ventilated, and the fl oor keeps the machine level.	
	6	The machine's power plug remains connected to the power outlet.	
Checking the Paper	7	The paper is of a recommended type.	
	8	The paper is not moist. Try paper fresh out of package.	
Checking the Placement of Paper	9	Check the cassette and the manual feed tray to see if the paper is not in excess of a specifi c level.	
	10	If a transparency is used, check to make sure that it is placed in the correct orientation in the manual feed tray.	
Checking the Durables	11	Check the table of durables to see if any has reached the end of its life.	
Checking the Periodically Replaced Parts	12	Check the scheduled servicing table and the periodically replaced parts table, and replace any part that has reached the time of replacement.	

Troubleshooting Items

Parts and Drum Pitch Related to Periodical Image Failure

Name		Duter Circumference (mm)
Registration Roller	Approx.48	
Photosensitive Drum	Approx.94	
Primary Charging Roller	Approx.38	
Transfer Roller	Approx.45	
Developing Cylinder	Approx.63	
Fixing Film	Approx.77	
Pressure Roller	Approx.79	

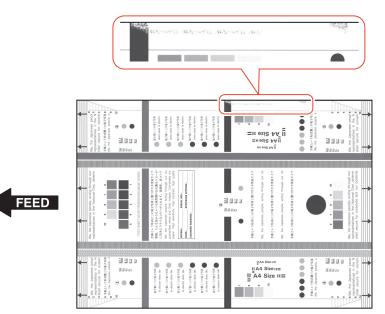

CAUTION:

The outer circumference may be different from the width of the image failure depending on the factors including processing speed and/or amount of image shrink/expansion.

Images are missing or appear faint

Symptom

Images are missing or appear faint.

Cause

Fixing error.

Fixing temperature is too low to melt toner, failing to fix toner onto paper properly and causing missing or faint images.

Condition

- Fixing temperature is too low relative to the temperature required to fix toner onto paper.
- · Likely to occur toward an edge of A4, LTR or LGL.

Field remedy

 Select the items in Settings/Registration menu. [Settings/Registration > [Preferences] > [Paper Settings] > [Paper Settings] 2. Select a paper source and press the [Set] button

D Administrator	\$

Ghost images appear in the interval of 75.4 mm

Symptom

Ghost images appear in the interval of 75.4 mm.

7. Troubleshooting

Cause

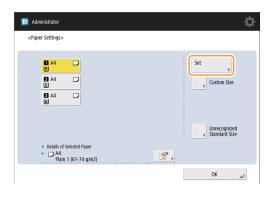

Fixing temperature is so high that some toner remains on the fixing film after fixing takes place. This residue is fixed on paper as the fixing film makes another rotation.

Condition

Fixing temperature is too high relative to the temperature required to fix toner onto paper.

Field remedy

- 1. Select the items in Settings/Registration menu.
 - [Settings/Registration] > [Preferences] > [Paper Settings] > [Paper Settings]
- 2. Select a paper source and press the [Set] button

3. For existing paper types, select alternative paper types as indicated in the table below.

Remedies to be performed when E602-xxxx or E614-xxxx error is displayed

Remedy procedure for E602 or E614 differs according to the status of the screen where error is displayed. Check the remedy procedure by referring to the following flow chart.

7. Troubleshooting

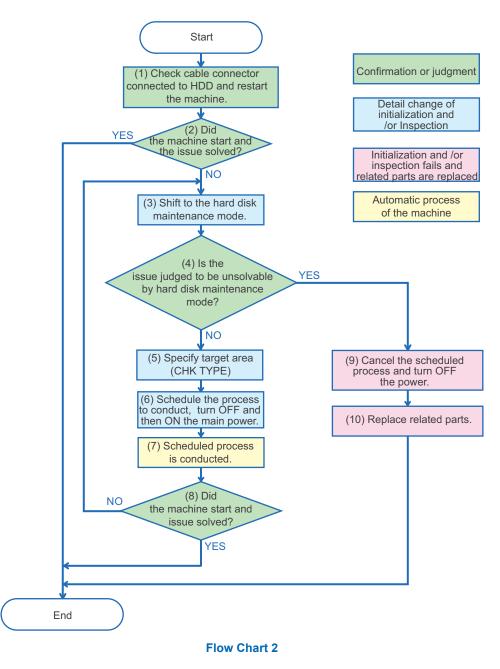

Flow Chart 1

Turn OFF the main power.					
++					
E602-0801 ++					
Cannot access the hard disk.					
If the optional removable hard disk is use, check it is connected then restart the machine.					
IF this is error tou occur, content your service representative.					

Display Sample : If an error code is displayed on a black screen

Execute a remedy described in service mode by referring to Error / Jam / Alarm in the Service Manual. If an error code and a message is displayed on a black screen (as above), shift to the hard disk maintenance mode referring to the Flow Chart 2 and execute the remedy described in Error / Jam / Alarm in the Service Manual.

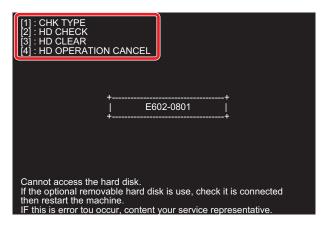

CAUTION:

Numbers in the Flow Chart 2 are corresponding to the procedure numbers. Check the remedy procedure by referring to the flow chart.

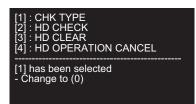

- 1. Check cable connector connected to the hard disk and restart the machine.
- 2. Check if the machine is started normally. If the machine is started normally, the analysis is complete.

3. If the machine is not started normally, execute key operation to shift to the service mode for shifting to hard disk maintenance mode.

Example of hard disk maintenance mode screen

- 4. Determine if the issue is solved in the hard disk maintenance mode.
 - Proceed to 5 for diagnosis for the first time or trying to restore with the hard disk maintenance mode.
 - If the issue cannot be solved by hard disk maintenance (HD-CHECK/HD-CLEAR is not executed or issue unsolved even executed), proceed to 9.
- 5. Press "1" of Numeric Keypad, then two digits number to specify the target area (CHK TYPE).

CAUTION:

The CHK - TYPE to be specified needs to be entered in two digits even the number to be specified is one digit. Enter "01" to specify "1" and enter "04" to specify "4".

For example, in the case of the above display (E602-0801), specify No. 8 because Partition No. 8 is in error. (Enter the number as "08")

If you made a mistake, press "1" again then enter two digits number.

- 6. Specify and schedule the process stated as a remedy for error code by referring to the Flow chart No.6, "Error / Jam / Alarm" in the Service Manual. Then turn OFF and then ON the main power of the machine.
 - To schedule disk check (COPIER > FUNCTION > SYSTEM >HD-CHECK), select [2]:HD-CHECK.
 - To schedule formatting (COPIER / FUNCTION / SYSTEM /HD-CLEAR), select [3]:HD CLEAR.

NOTE:

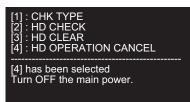

When the menu [2] to [4] is selected, key cannot be re-entered. If you made a wrong selection, Turn OFF and then ON the main power of the machine, shift to hard disk maintenance mode and specify again.

7. Scheduled process is automatically executed.

8. If the process is complete and the machine is restarted normally, analysis is complete.

The same black screen and the error code is displayed, shift back to the hard disk maintenance mode and conduct other maintenance.

9. Consider the HDD cannot be restored, select [4] and cancel the schedule. Switch OFF the main power of the machine.

CAUTION:

Replacing HDD without canceling the schedule causes the scheduled process is executed to replaced HDD at the next normal startup.

When replacing parts, specify [4] to cancel the schedule.

10. Refer to the Service Manual to replace the related parts.

NOTE:

Related parts for E602

- · Harness between main controller PCB and the HDD
- HDD
- Main Controller PCB
- Related parts for E614
 - Flash PCB
 - Main Controller PCB

How to use the test print

Grid (TYPE=1)

Check item	Check method	Assumed cause
Right angle accura- cy/Straight line accu- racy	Check whether lines in the horizontal/vertical scanning directions are paralleled to the paper and these lines are at right angles to one another.	
Side registration	U U U U U U U U U U U U U U U U U U U	Floor at the installation site is extremely distor- ted, or the feed system failure is considered.
Magnification ratio	Check whether the grid is printed at 9.99mm intervals. (Check the image on the second side at duplex printing.)	Rollers' feed system failure or laser exposure system failure (drum, Laser Scanner) is considered.

17 gradations (TYPE=2/3)

Check item	Check method	Assumed cause
Gradation	Check whether gradation in density is made appropriately.	Drum failure, laser exposure system failureor developing system failure is considered.
Black line	Check whether black lines appear on the image.	Laser light path failure, developing system failure, cleaning (drum) failure or transfer roller failure is considered.
White line	Check whether white lines appear on the image.	Developing system failure is considered.

Solid white (TYPE=4)

Check item	Check method	Assumed cause
Fogging	55, 5 11	Drum failure, laser exposure system failureor developing
		system failure is considered.

■ Halftone (TYPE=5/6/11/12/13/14)

NOTE:

When outputting a halftone test print, be sure to use PG TYPE:6 except in the following cases.

1. When checking the image of side registration adjustment, use PG TYPE:11.

Check item	Check method	Assumed cause
Transfer fail- ure	Check the evenness of halftone density. Check whether uneven image or foggy image appears.	Transfer system failure or transfer roller failure is considered.
Black line	Check whether black lines appear on the image.	Laser light path failure, grid failure, developing system fail- ure, cleaning (drum) failure or transfer roller failure is con- sidered.
White line	Check whether white lines appear on the image.	Developing system failure is considered.
Uneven pitch	Check whether lines appear on the image in the horizontal scanning direction.	Drum failure, developing system failure, laser exposure system failure or drive-related failure is considered.
Uneven densi- ty(rear/front)	Check the density difference between the front and rear sides.	Drum failure or developing system failure is considered.
Side registra- tion	Check the left margin.	Floor at the installation site is extremely distorted, or the feed system failure is considered.
Shock	Check whether horizontal lines appear on the image.	Rollers' feed system failure or laser exposure system failure (drum, Laser Scanner) is considered.

Solid black (TYPE=7)

Check item	Check method	Assumed cause
Transfer fail-	Check the evenness of halftone density. Check whether	Transfer system failure is considered.
ure	uneven image or foggy image appears.	

7. Troubleshooting

Horizontal line (TYPE=8/9/10)

-
-

Check item	Check method	Assumed cause
Black line	Check whether black lines appear on the image.	Laser light path failure, developing system failure, cleaning (drum) failure or transfer roller failure is considered.
White line	Check whether white lines appear on the image.	Developing system failure is considered.
	Check whether lines appear on the image in the horizontal scanning direction.	Drum failure, developing system failure, laser exposure system failure or drive-related failure is considered.
Uneven densi-	Check the density difference between the front and rear	Drum failure or developing system failure isconsidered.
ty(rear/front)	sides.	

Startup System Failure Diagnosis

Overview

The purpose of this diagnosis is to identify the cause when the host machine would not start up.

A combination of the following three identification methods is used to identify the cause.

- · A method for identifying the failure on the basis of the LED/LCD display status
- A method for identifying the failure on the basis of the power supply/signal route
- · Identification of the location of the controller-related failure with the controller self-diagnosis function

The diagnosis is made according to the startup system failure diagnosis flow in order to perform basic identification of the cause and perform the remedy.

If it turned out that the failure was caused by the controller or the Power Supply Assembly, perform a controller self-diagnosis or check the Power Supply Assembly, and perform the remedy.

If the diagnosis result shows that replacement of parts is required, perform the works in the order shown below.

- 1. Check if the connectors (of a cable, etc.) are connected properly.
- 2. Replace the cable.
- 3. Replace the parts.

After performing the works shown above, be sure to restart the host machine and check if the symptom occurs again.

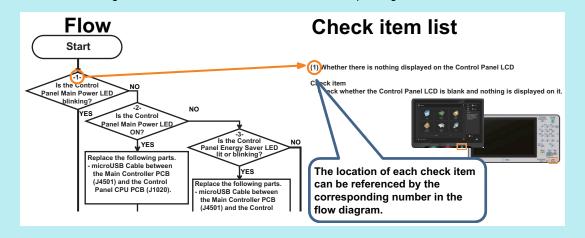

WARNING:

When a tester is used to perform a check, the AC voltage may be measured. There is a possibility of electrical shock, so caution is required during the work.

NOTE:

The numbers such as (1) and (2) shown in the flow diagram indicate that there is a check item table showing the items to be checked in the flow chart, location, and procedure.

Each number in the flow diagram is linked with the item number of the corresponding check item table to be referenced.

CAUTION:

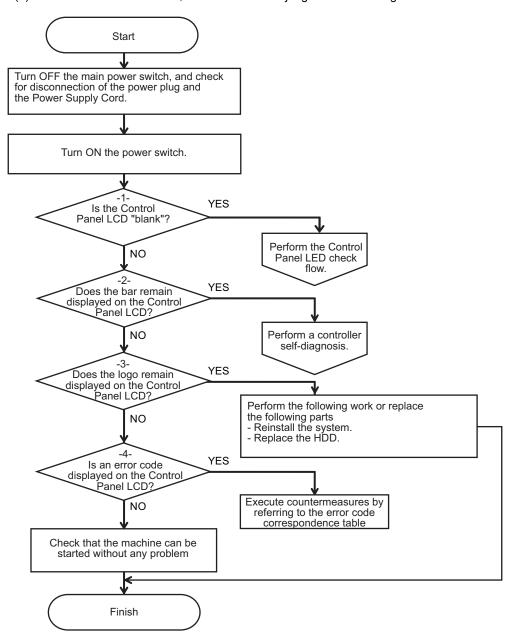

Before using a tester to perform a check, be sure to turn OFF the Environment Heater Switch. If a check is performed with the Environment Heater Switch ON, the diagnosis may not be performed correctly.

NOTE:

When replacing the cable, disconnect the cable from the connector and check the continuity.

If the host machine would not start up, follow the flow shown below to identify the location of the trouble. If a number (1) or (2) is shown in a flow chart box, be sure to make a judgement according to the check item table.

(1) Whether there is nothing displayed on the Control Panel LCD

Check item

Check whether the Control Panel LCD is blank and nothing is displayed on it.

If it is blank, see "Control Panel LED Check Flow" on page 278 to perform the remedy.

(2) Whether the bar remains displayed on the Control Panel LCD

Check item

Check whether the bar remains displayed on the Control Panel LCD.

If the bar remains displayed, see "Controller Self Diagnosis" on page 281 to perform the remedy.

(3) Whether the logo remains displayed on the Control Panel LCD

Check item

Check whether the logo remains displayed on the Control Panel LCD.

If the logo remains displayed, re-install the system software or replace the HDD.

- See the Chapter 4, "Firmware Management" of the "imageRUNNER ADVANCE System Service Manual" to re-install the system software.
- See "Removing the HDD" on page 178 to replace the HDD.

(4) Whether an E code is displayed on the Control Panel LCD

Check item

Check whether an E-code is displayed on the Control Panel LCD.

E602-0001 An error has occurre Turn OFF the main	
	Turn the main power OFF and ON (using the switch on the right side of the main unit).
	 If the device still does not operate normally, contact your service representative with the error code below.
	E2 E000602-0001

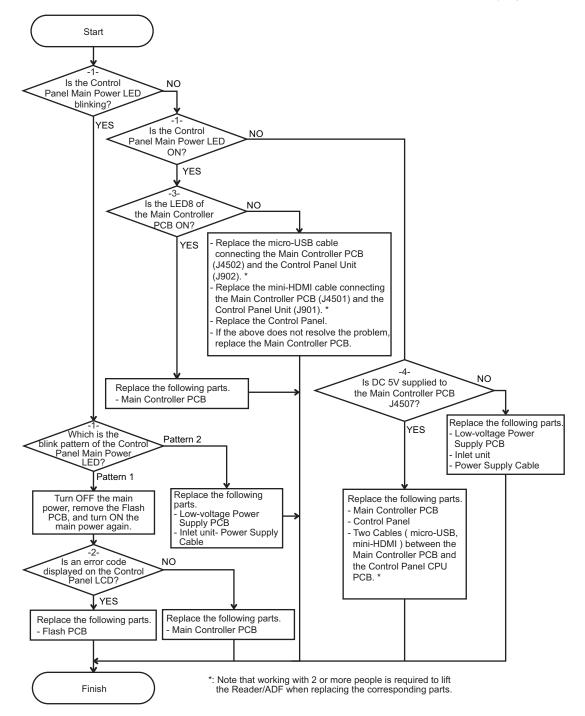

Display sample of an E-code

If an displayed error code starts with E602 or E614, see "Remedies to be performed when E602-xxxx or E614-xxxx error is displayed" on page 265 to perform the remedy.

If the error codes other than above is displayed, see "Error Code" on page 311 to perform the remedy.

Control Panel LED Check Flow

Follow the flow shown below to identify the location of failure according to the Control Panel LED status and take measurements. If a number (1) or (2) is shown in a flow chart box, be sure to refer to the check item table and make a judgment.

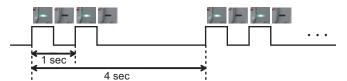

(1) Control Panel Main Power LED is blinking / ON

Check item

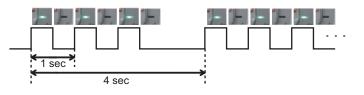

Blink pattern of the Control Panel Main Power LED

Pattern 1 (The Main Power LED blinks 2 times in 4 seconds: Controller error)

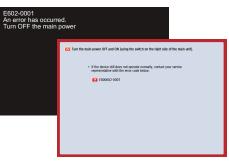

(2) E-code is displayed on the Control Panel LCD

Check item

Check whether E-code is displayed on the Control Panel.

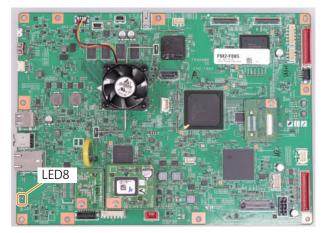

E-code display example

(3) Is the LED8 of the Main Controller PCB ON?

Check item

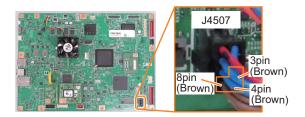

Check whether the LED8 of the Main Controller PCB is ON.

(4) Is power supplied to the Main Controller PCB?

Check item

Check whether DC 5V supplied to the Main Controller PCB J4507 pin3, pin4 and pin8.

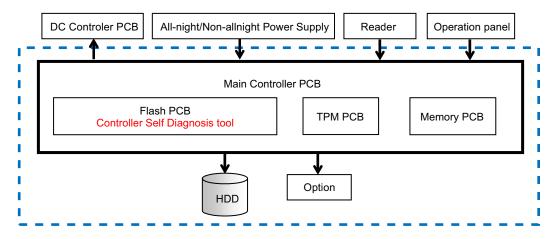

Controller Self Diagnosis

In order to reduce the time for identifying the cause of error occurred in the field and improve the accuracy of identifying the error locations, operation of the controller system error diagnosis tool added to the host machine and the remedies for errors are described.

- This manual can be used when the host machine is in the following conditions.
 - When a failure of the Main Controller PCB and the related PCBs (child PCBs such as TPM installed on the Main Controller PCB) is suspected

PCBs and units diagnosed by the tool are as follow:

The area framed in blue (dotted line) in the figure shows the components to be checked by the controller system error diagnosis tool.

The Main Controller PCB, child PCBs installed on the Main Controller PCB and HDD are automatically checked, and the result is displayed on the Control Panel.

Boot Method

1. Turn ON the Main Power Supply Switch while pressing the service button '3'.

Reference example

2. Keep pressing the service button (for approx. 20 seconds) until the following screen appears on the Control Panel.

BOX Checker Ver 0. 58 SCENARIO-1 Processing BoxMode check start. . .

SN-1 IA-DDR2 SDRAM check start. . .

NOTE:

When this tool is not installed correctly, the regular Startup screen is displayed.

In this case, perform the following remedy.

Turn OFF the Main Power Switch again, and execute steps 1 and 2 shown above.

If this tool still does not boot, it means that BCT (Box Checker Test) is deleted, so install BCT.

If BCT is not installed correctly, "- - . - -" is displayed in Service Mode (BCT) in the host machine.

COPIER > DISPLAY > VERSION > BCT

Diagnosis Time

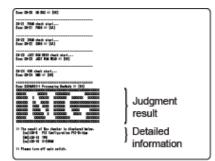

Diagnosis is completed in approx. 3 minutes. The result is displayed on the Control Panel.

When the diagnosis result is normal

When an error is detected by diagnosis

Detailed information is displayed under the judgment result. In detailed information, the name of the test where the error was detected is displayed.

How to view the error result

The following screen is an enlarged view of the detailed information indicated above. Explanation of the detailed error information is described.

>> The result of Box checker is displayed below.
 [no] : SN-9 PCI Configuration PCI-Bridge
 [NG] : SN-13 TPM
 [no] : SN-19 O-SDRAM
 >> Please Turn off main switch.

[NO] means that optional PCBs are not mounted.

A fault has occurred when [NO] is displayed irrespective of whether the Option PCB is attached. [NG] means that an error occurred to PCBs mounted as standard.

Controller Self Diagnosis Table

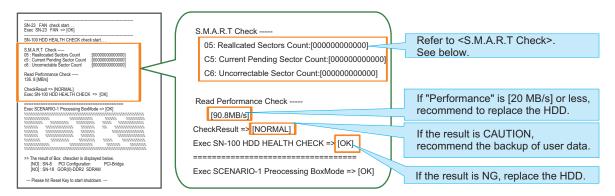

The error locations are identified according to the following table.

Test name	Detailed test name	Presumed failure loca- tion	Remedy	Relevant Er- ror Code
SN-1 MN- DDR3 SDRAM	Check the SDRAM of the Main Controller PCB	Main Controller PCB	Replacement of the Main Controller PCB	-
SN-2 SM BUS MN DDR3 On Board	Check the circuit in the Main Controller PCB	Main Controller PCB	Replacement of the Main Controller PCB	-
SN-5 PCI Con- figuration Cai- man	Check the circuit in the Main Controller PCB	Main Controller PCB	Replacement of the Main Controller PCB	-
SN-8 CPLD	Check the circuit in the Main Controller PCB	Main Controller PCB	Replacement of the Main Controller PCB	-
SN-9 LANC FLASH	Check the circuit in the Main Controller PCB	Main Controller PCB	Replacement of the Main Controller PCB	-

S.M.A.R.T Check

S.M.A.R.T Check	Description	Remedy
		If a numeric value besides [000000000000] is displayed, backup is recommended to avoid losing customer data.
5		If a numeric value apart from [0000000000000] is displayed, backup is recommended to avoid losing customer data.
c6: Uncorrectable Sector Count: [000000000000]	Number of defective sectors (uncorrect- able sectors) which do not allow alter- native processing	 If a numeric value apart from [000000000000] is displayed, backup is recommended to avoid losing customer data. Replace the HDD * Alarm 31-0008 may have occurred in the Host Machine.

Limitations

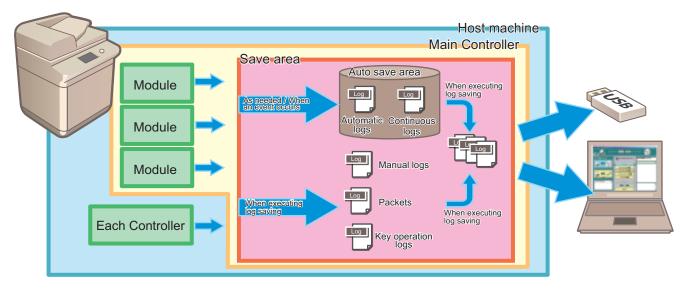

- If there is a problem with the test name (SN-1, 2, 8, 12), this diagnosis tool itself will not startup.
- When no PCBs are installed on the Main Controller PCB, the following judgment results are displayed. Standard PCB: [NG]
 - Optional PCB: [OK]

However, [NO] is displayed in detailed error information for optional PCBs.

Debug Log

Function Overview

As for debug log, following logs are available: continuous log that saves the operation log, automatic log that is saved when an event occurs, manual log which is collected and saved each time at log saving, packet log, and key operation log.

NOTE:

Debug logs are used for analysis of program operations of the machine and identification of the problem by the developer. This machine has a function for compiling operation history of each software module as debug logs and outputting them as unified logs for analyzing problems.

Since the frequency of outputting debug logs and the type of logs can be changed by the settings, the settings need to be changed according to the trouble that occurs and the situation.

Types of Debug Logs

Types of Debug	Description
Logs	
Sublogs	Manual logs
	Logs collected in each module and controller are archived and can be collected when log saving is executed. Logs of the Main Controller, RCON, and DCON are saved together with automatic logs as up to 10 logs in total.
	Automatic logs
	Logs that are automatically saved to the machine when an event (exceptional behavior, error code, or reboot)
	occurs.
	Logs of the Main Controller, RCON, and DCON are saved together with manual logs as up to 10 logs in total.
	Continuous logs
	Logs that are continuously saved while the machine is running.
	Up to 100 logs of only the Main Controller can be stored.
Key operation logs	History of key operations.
	Log collection starts by enabling the setting and starting the function.
	Logs that are archived and can be collected when log saving is executed.
Network packet	Logs of network packet data sent from or received by the host machine.
logs	Log collection starts by enabling the setting and starting the function.
	Logs that are archived and can be collected when log saving is executed.

Storage location and types of Sublogs

The locations where Sublogs are stored and the types of logs are shown below. Logs may be stored in controllers and parts other than those shown below.

Туре	Automatic logs	Manual logs	Continuous logs
Main Controller	Yes (more detailed than continu- ous logs)	Yes (more detailed than continu- ous logs)	Yes
DCON	Yes	Yes	No
RCON	Yes	Yes	No

Cases Where Debug Logs Need to Be Collected

- When the result of identification of the cause shows that the trouble was caused by host machine (firmware, hardware-related controller)
- When the failure occurs only at the customer's site and cannot be reproduced by the department in charge of quality management or Canon Inc.

Sublogs

Sublog is the general term for the unified logs for analyzing problem in which operation histories of software modules are compiled as debug logs.

When a problem relating to the host machine occurs in the field and it is difficult to identify the cause of it at the user site, collecting Sublogs and sending them to Design Dept./R&D can improve the efficiency of analyzing the problem and reduce the time it takes to deal with the problem.

CAUTION:

- Sublogs are basically stored in volatile memory. Therefore, almost all information will be erased by turning OFF and ON the power before saving the log data. When obtaining the log data, make sure to implement the operation to save the log data (manually saving log) before turning OFF and ON the power.
- I order to prevent failure of collecting necessary information because the log is overwritten with the succeeding process, be sure to collect the Sublog while the symptom has occurred or immediately after the occurrence.
- Once the Sublog files are collected, they are deleted from the machine. In the case of collecting Sublogs consecutively, the number of continuous log files may be fewer than usual.

Key operation logs

This function collects the history of key operations in order to distinguish between a failure of the Main machine and an operation error of the user in the case of trouble of erroneous fax transmission.

If it cannot be denied the possibility that the user operation caused the error, collect the key operation logs.

The key operation log are stored/recovered in a form included in the Sublog files.

The following confidential information in the stored key operation log is masked.

- Personal identification number, PIN code, password, etc., to be entered
- · Information that is hidden by turned letters on the UI screen

CAUTION:

To obtain permission from a user in advance for recording key operations for failure analysis.

Network packet logs

This function collects the transmitted and received network packet data as a debug log in the storage (capture). When it is expected that the trouble was caused by network, collect network packet logs.

NOTE:

To use this function, you need to register a license, so you need to ask the Support Dept. of the sales company to issue a license.

CAUTION:

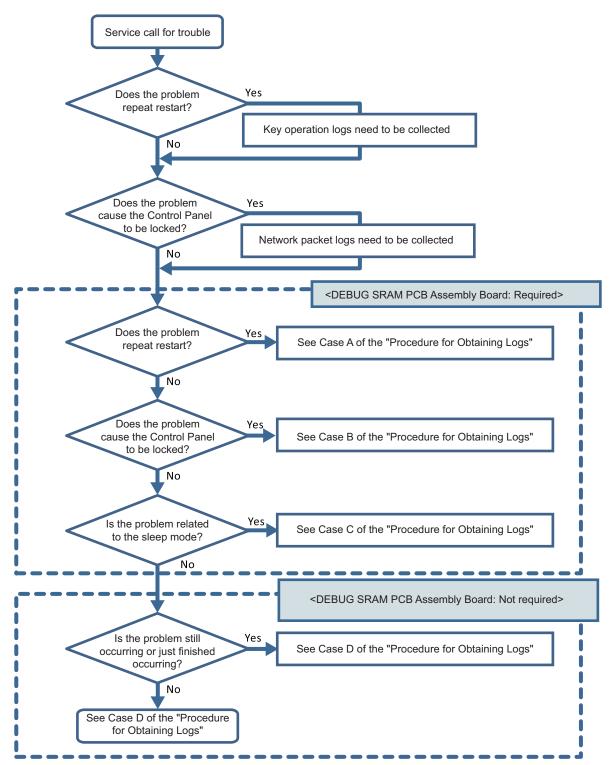

When obtaining the network packet log, explain to the user and obtain permission before proceeding.

CAUTION:

Under heavy network load environment, packets can be dropped.

Flow of Determining the Procedure for Collecting Logs

Check the following flow to determine the procedure for collecting logs according to the type of problem.

When the user's operation such as wrong fax transmission may be the cause of the problem, enable [Store Key Operation Log].

Procedure for Collecting Logs

Log Collection Procedure List

Problem Case	Details of Problem	DEBUG SRAM PCB ASS'Y Board	Procedure for Obtaining Logs
Case A	Problem that repeats re- start	Necessary	 Refer to "Preparation" on page 290 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the set- tings. Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293 immediately after restart. Save and collect reports by referring to "Saving and Collecting Report Files" on page 295. Collect debug logs by referring to "Collection of Log" on page 295.
Case B	Problem causing the Control Panel to be locked	Necessary	 Refer to "Preparation" on page 290 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the set- tings. Turn OFF and then ON the power immediately after the Control Panel is locked. Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293 after startup. Save and collect reports by referring to "Saving and Collecting Report Files" on page 295. Collect debug logs by referring to "Collection of Log" on page 295.
Case C	Problem related to the sleep mode	Necessary	 Refer to "Preparation" on page 290 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the set- tings. After the problem occurs, turn OFF and then ON the power if necessary, and execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293. Save and collect reports by referring to "Saving and Collecting Report Files" on page 295. Collect debug logs by referring to "Collection of Log" on page 295.
Case D	Problem when execut- ing a job (Example: Printing is not per- formed, etc.)	Not necessary	 Execute log saving while the problem is occurring by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293. Saving of Manual Logs_ Network Packet Logs and Key Operation Logs Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293. Collect debug logs by referring to "Collection of Log" on page 295.
	When an E code error has occurred	Not necessary	Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293. However, if the background of the Control Panel is blank and an error code is displayed in text, logs cannot be obtained.
Case E	Problems other than above	Not necessary	Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 293. Check with the user on the date and time when the problem occurred and the procedure.

Saving and Collecting Debug Logs

Tools Required

The following tools are necessary to save/collect debug logs of the machine.

Exporting to a USB Device

· USB device

When exporting debug logs to a USB device, use a USB device in which the system software for the machine is registered using SST.

Since the size and number of log files to collect varies according to the device status and the logs that have been saved, the size of the collected files may be several hundred MB. Therefore, it is recommended to use a USB device with 1 GB or more of free space.

The USB device must be formatted with the FAT file system.

CAUTION:

Be sure to check that the USB device has 1 GB or more of free space before collecting a log. If capacity of the USB device is insufficient, logs that failed to be saved will be deleted so that analysis of the symptom cannot be performed.

Exporting to a PC

- PC with SST installed
- Network connection cable

When exporting debug logs to a PC, a PC with SST installed and a network connection cable are required.

Common (When Exporting to a USB Device, or When Exporting to a PC)

- DEBUG SRAM PCB Assembly Board
 - In the following conditions, debug logs cannot be saved, therefore the DEBUG SRAM PCB Assembly Board is required.
 - · When restart is repeated
 - When all the operations of the device are frozen and manual logs cannot be collected.
 - When the machine would not recover from sleep mode

Refer to the following regarding installation on to the Controller PCB.

Reference example of installation

Work Flow

The flow of saving/collecting Sublogs is shown below.

1. Preparation

Refer to "Flow of Determining the Procedure for Collecting Logs" on page 287, and make the preparation as needed according to a situation where an event has occurred.

2. Reproduction of the symptom Reproduce the symptom.

3. Saving Manual Logs

Save manual logs that require manual operation.

4. Output of reports

Output reports necessary for escalation.

5. Collecting log files

Start the machine in download mode, and save (collect) the log files to a USB device or a PC.

CAUTION:

In the case of analysis using Sublog, the following information needs to be obtained together with the Sublog.

- · Symptom that has occurred (from service technician's viewpoint as far as possible)
- · Date and time of the event (from an hour before the event to an hour after the event)
- Reports (P-Print, HIST-PRT, job logs, communication management report, etc.)
- Printed data and original at the time of reproduction (depends on the trouble that has occurred)

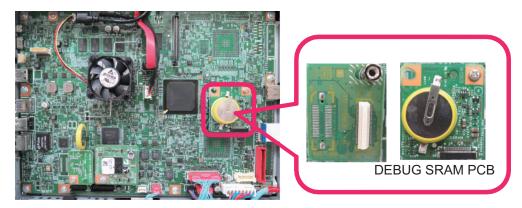

Besides Sublog, the above-mentioned information is required due to the following reasons:

- Failures such as a process being stopped due to an error or an unintended behavior are easy to find, but failures such as "the behavior is slow" are difficult to analyze based on operation logs only.
- Since the number and size of the files are huge, the information helps to find the operation log where the problem occurred.
- When R&D reproduces the failure, it is necessary to use information such as the procedure used by the customer, frequency of use, and job data at the time of occurrence of the failure.
- 6. Remove the board installed in step 1 and return the settings back to the original values.

Preparation

Follow the procedure shown below to make preparations for collecting debug logs.

1. Refer to "Flow of Determining the Procedure for Collecting Logs" on page 287 and when it is judged that DEBUG SRAM PCB ASS'Y Board is required, install the board.

- 2. Refer to "Flow of Determining the Procedure for Collecting Logs" on page 287 and when it is judged that collection of the key operation logs is required, enable [Store Key Operation Log] by following the procedure shown below.
 - 1. Select [Settings/Registration] > [Management Settings] > [Device Management] > [Store Key Operation Log].
 - 2. Select [ON] and press [OK] to start saving key operation logs.

CAUTION:

When collecting the key operation logs, be sure to obtain user's permission in advance.

- 3. Refer to "Flow of Determining the Procedure for Collecting Logs" on page 287 and when it is judged that collection of the network packet logs is required, enable the network packet log collection function by following the procedure shown below and start the function.
 - Enter a license in the following menu to enable network packet capture. [Settings/Registration] > [Management Settings] > [License/Other] > [Register License]

NOTE:

Use the license issued by the Support Dept. of the sales company to activate it.

- Enable the setting (ON) in the following menu.
 [Settings/Registration] > [Preferences] > [Network] > [Store Network Packet Log]
- Set "1" in the following service mode (Lv.2).
 Service mode > COPIER > TEST > NET-CAP > CAPOFFON
- 4. Refer to "Initial setting of the network packet log collection function" on page 292, and configure the required option settings.
- Set "0" or "1" in the following service mode (Lv.2) to start capture of network packets. Service mode > COPIER > TEST > NET-CAP > STT-STP
 - 0: Not automatically collect at startup (factory default setting)
 - 1: Automatically collects at startup
- 6. Execute the following service mode (Lv.2) to check the status of the capture.

Service mode > COPIER > TEST > NET-CAP > CAPSTATE

The following types of status are displayed.

- RUNNING: Packets are being captured.
- STOP: Packet capturing is stopped.
- HDDFULL: The maximum amount of 1 GB of packets has been captured.
- 4. When an instruction to change the automatic log settings is given by the Support Dept. of the sales company, change the settings by referring to "Automatic Log Settings" on page 291.

Automatic Log Settings

Automatic log is collected triggered by "occurrence of an unexpected error", "occurrence of an error code" or "restart of the machine".

If you want to change the triggers, change the setting in the following service mode.

COPIER > Function > DBG-LOG > LOG-TRIG

However, there is no need to change the setting unless otherwise instructed by the Support Dept. of the sales company. The events that trigger collection of automatic logs and their setting values are shown below.

List of conditions for automatic saving of logs and setting values

Setting value	Event condition for saving automatic log
101 (Default setting)	When an unexpected error occurs, an error code occurs, or the machine is restarted
111	Only when an unexpected error occurs
121	Only when an error code occurs
131	Only when the machine is restarted
201	When an unexpected error occurs, an error code occurs, the machine is restarted, or an alarm occurs
211	When an unexpected error occurs or an alarm occurs
221	When an error code occurs or an alarm occurs
231	When the machine is restarted or an alarm occurs
291	Only when an alarm occurs
301	When an unexpected error occurs, an error code occurs, the machine is restarted, or a jam occurs
311	When an unexpected error occurs or a jam occurs
321	When an error code occurs or a jam occurs
331	When the machine is restarted or a jam occurs
391	Only when a jam occurs

The procedure for changing the log auto save conditions with LOG-TRIG is indicated below.

- Press [LOG-TRIG], enter the value for the conditions you want to set, and press [OK].
 "ACTIVE!" flashes in the display column, and the log settings in the machine are changed.
- 2. When [OK!] is displayed in the display column, the work is complete. If the processing fails, "NG" is displayed. It is not necessary to restart the device.

NOTE:

- A value between 0 and 99999 can be set, but make sure to set the value instructed by the Support Dept. of your sales company. Operations are not guaranteed when value other than the above is set.
- The displayed setting is not changed simply by changing the setting or pressing [DEFAULT]. It is necessary to exit the DBG-LOG screen once by pressing the [Reset] key, etc. and then display it again, after performing these operations.

Executing Auto Saving (Reference Example)

An example of executing auto saving using LOG-TRIG is shown below so that you can experience the log collection work. It is an example of log collection in the event of jam in the Delivery Assembly during copy operation.

- 1. Connect a USB device to the machine while the machine is ready for operation.
- 2. Set "301" in the following service mode (Lv.2).
 - COPIER > Function > DBG-LOG > LOG-TRIG
- 3. Make a copy. Open the Delivery Feed Assembly before paper is delivered from the Delivery Assembly to generate a jam.
- 4. When a jam occurs, confirm "Storing System Information..." is displayed at the bottom of the Control Panel.

• Initial setting of the network packet log collection function

When collecting the network packet logs, configure the initial settings as needed.

Setting the overwrite function

1. To enable this function, set "1" in the following service mode (Lv.2).

Service mode > COPIER > TEST > NET-CAP > OVERWRIT

NOTE:

When this setting is enabled, old logs will be overwritten. If the symptom cannot be reproduced, disable this setting (setting value: 0) and secure logs (save them using SST or USB).

After securing the logs, enable the setting (setting value: 1) again.

Behavior when HDD reaches the limit

- When this setting is enabled (setting value: 1), the following behaviors will occur when the HDD reaches the limit.
 - When overwrite setting is ON
 - The oldest packet file is deleted. This "oldest file" is judged not by the date and time allocated to the file but by the last update time of the file.
 - If the HDD reaches the maximum size while retrieving packets, the oldest file will be deleted, and CAPSTATE
 of the capture, which continues the retrieval process for the file which is being saved, remains "RUNNING".
 - When overwrite setting is OFF
 - The capture is stopped.
 - The CAPSTATE of the capture will be "HDDFULL". However, STT-STP will remain as Start (1) status. By changing STT-STP (0) to STTSTP (1), the capture resumes.
 - When the capture resumes, the capture starts if HDDFULL has been solved.
 - The CAPSTATE of the capture will be "RUNNING".
 - If HDDFULL has not been solved, an error is generated as the result of resuming the capture.
 - The CAPSTATE of the capture remains "HDDFULL".
 - If the capture is stopped while the CAPSTATE is "HDDFULL", the CAPSTATE of the capture remains "STOP".

Setting the encryption function

1. To enable this function, set "2" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > ENCDATA

- 0: Encrypted when data is extracted (factory default setting).
- 1: Not encrypted when data is extracted.
- 2: When data is extracted, a ciphertext file and a plaintext file are extracted.

The extension of extracted packet data will be "XXX.can" when encryption settings are enabled.

The extension of extracted packet data will be "XXX.cap" when encryption settings are disabled.

This setting only applies when extracting data by the USB flash drive.

NOTE:

When SST is used to collect data, both plaintext data and ciphertext data are extracted, and this setting is ignored.

Setting the payload drop function

1. To enable this setting, set "1" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > PAYLOAD

- 0: Not drop the payload (factory default settings)
- 1: Drop the payload

The obtained packet data includes a header part and data part. The header part includes data such as the TCP header and IP header. The data part includes the actual data.

Enabling this function discards the actual payload data and extracts only the data from the header part, which has the following effects.

- · Can be used when customer data is not allowed to be extracted
- · Can be used in an environment where traffic is highly overloaded

Header part	
Data part	Discarded part

Packet data structure image

Setting the filter function

- 1. To enable this function, set "1" in the following service mode (Lv.2).
 - COPIER > TEST > NET-CAP > SIMPFILT
 - 0: All data is collected without being filtered (factory default setting).
 - 1: Data is filtered.

If this function is enabled, only packet data that includes the machine's MAC address in the packet header is captured.

Setting the startup collection function

1. To enable this function, set "1" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > PONSTART

- 0: Not automatically collect at startup (factory default setting)
- 1: Data is filtered.

If this function is enabled, only packet data that includes the machine's MAC address in the packet header is captured.

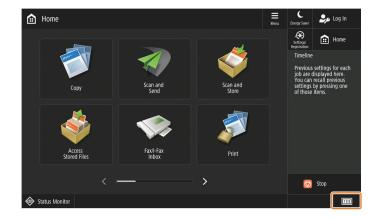

Saving of Manual Logs, Network Packet Logs and Key Operation Logs

Follow the procedure shown below to save debug logs (manual logs, network packet logs, and key operation logs) that require manual operation to the save area of the host machine.

1. After the symptom has reproduced, hold down the Counter key on the Control Panel for 10 seconds.

CAUTION:

If power is turned OFF during the period from when the symptom occurs to when this procedure is completed, necessary log data will be deleted so that analysis cannot be performed.

2. When the software numeric keypad is displayed, press the numeric keys 1, 2, and 3, in that order.

						C Energy Saver		
<counter device="" information=""></counter>			IP Ad	dress: 192.168.201	I. 7	Settings/		Home
= 101 Total 1				▶ 0000000	5	1	2 ABC	3 DEF
 108 Total (Black & Whi 232 Copy (Full Color + 				 0000000 0000000 			-	$\overline{}$
 232 Copy (rull Color + 149 Total A (Full Color 				▶ 0000000		GHI	JKL	MO

Ŏ		*	0	#
		с	// R	eset
				Stop
				123
		Start		

CAUTION:

- While logs are being saved, other operations cannot be performed.
- If the above screen or message is not displayed, press the Reset button and then try again from step 2.

NOTE:

When network packet logs have been collected and necessary network packets have been captured, stop the capture from the following menu.

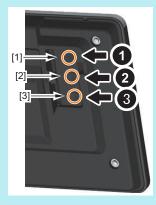

[Settings/Registration] > [Preferences] > [Network] > [Store Network Packet Log]

When this setting is disabled, all the service mode settings configured in step 3 are initialized.

Note that after completion of analysis of the network trouble, be sure to disable the network capture function. It is therefore necessary to disable and then transfer the license, but it is not necessary to transfer the LMS license after that.

NOTE:

When the Control Panel cannot be operated, store the log by the following button operation. Service Button 1 > Service Button 2 > Service Button 3 (hold down only this button)

Saving and Collecting Report Files

Follow the procedure shown below to save report files to the the Main Unit internal storage and collect them using a USB device.

1. Execute the following service mode to save report files.

COPIER > Function > MISC-P > RPT-FILE

Display	I/0	Adjust	Function	Option	Test	Counter
< M)	ISC-P >	< 2/	2> <se< td=""><td>RVICE ></td><td>< LEVE</td><td>L1></td></se<>	RVICE >	< LEVE	L1>

-	→			+,	/-		OK L

Collection of Log

Save the Sublogs stored in the host machine to a USB device or a PC with SST installed. The procedure for storing Sublogs to a USB device differs from that for storing Sublogs to a PC

• Collecting into a USB Device

To save (collect) Sublogs to a USB device, perform the procedure shown below to collect the logs. If SST is used to save (collect) Sublogs to a PC, this work is not necessary.

1. Connect the USB flash drive to the machine.

2. Execute the following service mode.

COPIER > Function > SYSTEM > DOWNLOAD

Display I/O	Adjust	Function 0	ption Test Con	Inter
< SYSTEM	> < 1/	1> < REAL	DY > < LEVEL 1	>
DOWNLOAD				
CHK-TYPE	0	<(0)	{ 0 - 65535}	
HD-CHECK	0	<(0)	{ 0 - 1}	
HD-CLEAR	0	<(0) ·	{ 0 - 1}	
R-REBOOT				
		🥥 🗕	+/- OK	<u>ل</u> د

3. The host machine will enter download mode. Press [8] on the Numeric Keypad.

[[[[[Root Menu (USB) <v25.12>]]]]]]] (v25.12)</v25.12>	
[4] : Clear/Gamat [5] : Backup/Restore [8] : Download File	
[9]: Version Information	

4. [Download File Menu] will appear. Press a numeric key for the file to download.

[[[[[[Download File Menu (USB) <v25.12>]]]]]] (v25.12) [1]: SUBLOG Download [4]: ServicePrint Download [5]: NetCap Download [C]: Return to Menu

- Press [1] key to download Sublog.
- Press [4] to download Service Print.
- Press [5] to download network packet log.
- 5. The files to be downloaded and the number of files are displayed. Check the following items and press [0] on the Numeric Keypad.
 - Whether the manual log that was saved at the time of reproduction of the symptom is displayed under Event Logs
 - Whether the date and time at which the symptom was reproduced is within the period of Continuous Log Example: When the symptom was reproduced at 9:40 on April 14, 2017 and a manual log was saved Check that the manual log that was generated at 9:40 on April 14, 2017 is displayed under Event Logs. Check whether 9:40 on April 14, 2017 is included in the logged period(from 8:03:33 on March 22, 2017 to 9:45:14 April 14, 2017) of the ContinuousLog.

[[[[[[Sublog Download (EventLog + CuntinuousLog)]]]] Event Logs (lastest 10 files) : 20170414_09-40-UPN00003-V2512_Debuglog@Cnt123 20170404_16-02-22200000-V0254_ServiceCall-E719-000 20170328_08-22-ZZZ00000-V0254_exception	Check that the manual logs that have been saved when the symptom occurs.
ContinuousLog : Period : 20170322_0803-33 to 20170414_0945-14	
Toral : 102files / Execute ? / -(OK) : 0 / (CANCEL) : Any other keys -	Continuous log: Check that the date and time at which the symptom occurred are included within the collection period of continuous logs.

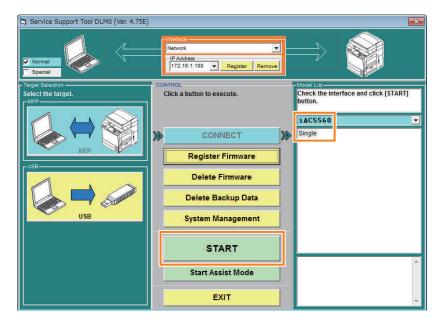

- 6. When downloading the log files is complete, the following message will appear. Press any key.

Saving to a PC with SST installed

Follow the procedure shown below to save (collect) Sublogs to a PC using SST. If a USB device is used to save (collect) Sublogs, this work is not necessary.

- 1. Connect a PC with SST installed to the network where the host machine is connected.
- 2. Start SST, and select the model name of the machine from Model List. Press the Start button.

3. Click [Upload Data].

4. Check that continuous logs are stored in the device.

When connection with the device is completed, the screen shown below will appear. Select [Upload Data]. The set of data stored in the device is shown on the right. Click "+" at "Log" to expand the tree, and check that there are continuous logs (date_model number_clog.bin).

ServiceSupportTool DLM20 (Ver. 4.75E)		
		Init SMPW
FileSave -	Control Click the button of the task to be executed.	SelectableData Select the data to be uploaded, then click [Start] button.
Folder Name Memo	executed.	20161108_13-46
	Shutdown/Restart	
	Return to Main Menu	

5. Select the data to upload, and click [Start].

Select the check box on the left of "Log", and click the "Start" button. It is not necessary to select MeapBack.bin and SramImg.bin because they are not necessary for analysis.

ServiceSupportTool DLM20 (Ver. 4.75E)

Checking the Saved Files

NOTE:

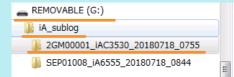

If log files are stored in the USB flash drive, the path to the storage destination is different by the platform version.

Platform version prior to 3.7

They are stored in the root directory of USB flash drive.

Platform version 3.7 or later

Folders of "iA_sublog" and "model name + serial number + date (year, month, day + hour, minute, second)" are automatically created in the root directory of USB flash drive and files are stored in the latter folder.

20180718_07-52-2GM00001-V1006_Debuglog@Cnt123.bin

P-PRINT-RPT.TXT

Sublog files

Check the saved log files whether the necessary log has been collected.

- Whether it is a log file of the target model (It contains the serial number of the target machine.)
- Whether the time and date the symptom occurred is included in the logged period. (Date and time in the log file name represent those of when the log collection is started. There are files with dates before the symptom occurs.)

Storage locations of log files

Storage locations of log files are shown below. When using USB device: Root folder of the USB device When using SST: PC's C:\ServData\<model name>\serial number folder

How to check the continuous log files

The continuous log files are stored in the log file storage location.

Check the names (date and time) of the files that end with "clog.bin" to see whether the date and time the symptom was reproduced is included.

In the case of the following figure, the oldest continuous log is 08:03:33 on March 22, 2017 and the latest file is 08:43:44 on April 14, 2017. The date and time the symptom was reproduced should be included within the period.

20161013_1733-36_ZZZ999999_1406_clog.bin

Data and time when a file was archived (year, month, day, hour, minute, second). Serial Number Firmware Version Identification indicating that it is a continuous log

File name of continuous log

How to check the manual log files and automatic (event) log files

The manual log files and automatic (event) log files are stored in the log file storage location. At the time of collection, these logs will be archived as a one binary file (the name of the file ends with "_SAFE.bin").

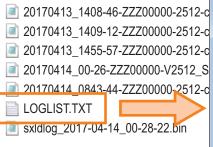

YYYYMMDD_HH-MM Serial Number Firmware Version

Which logs have been stored in this binary file is described in LOGLIST.TXT stored in the log file storage location. Open this file to check the manual logs and automatic (event) logs.

CAUTION:

If a manual log was saved when the symptom was reproduced, check that a log with the date and time immediately after the reproduction is included.

If there is no log file collected immediately after the symptom was reproduced, the file may have been overwritten and lost.

20170328_08-18-ZZZ00000-V0254_exception 20170328_08-22-ZZZ00000-V0254_exception 20170404_16-02-ZZZ00000-V0254_ServiceCall-E719-0001 20170404_16-04-ZZZ00000-V0254_ServiceCall-E719-0001 20170414_09-40_ZZZ00000_V0254_Debuglog@Cnt123 UPDATELOG_LOG

20161013_10-10_ZZZ99999_V 1308_Debuglog@Cnt123

Data and time when key operation was performed (year, month, day, hour, minute, second).

File name of manual log

20161012_14-48_ZZZ99999_V1406_Fatal00-exception

Data and time when Serial Number Firmware Version (year, month, day, hour, minute, second).

Cause of occurrence

20161012_14-48_ZZZ99999_V1406_ServiceCall-E719-0031

Data and time when Serial Number Firmware Version Cause of occurrence (year, month, day, hour, minute, second).

File name of automatic log

How to check the network packet log files

The network packet log file is stored in the "NC + date" folder created in the log file storage location. Open the folder and check that two types of files have been saved: a plaintext file which file name starts with "NC" and ends with ".cap", and a ciphertext file which file name starts with "NC" and ends with ".can".

Name	Date modified	Туре
NC0110041155.can	1/22/2015 11:34 AM	CAN File

Service Mode Relating to Debug Logs

Although the procedure for collecting debug logs of this equipment is as indicated above, there are other service modes related to debug logs.

Use the following service modes (Lv.2) as needed.

COPIER > Function > DBG-LOG > HIT-STS

COPIER > Function > DBG-LOG > DEFAULT

COPIER > Function > DBG-LOG > LOG-DEL

NOTE:

If log collection is continued or setting change is repeated when an abnormality is found in operation of the function related to debug logs, temporary files or log files may be remained in the machine. In that case, execute "DEFAULT" in service mode to clear the settings related to debug logs and repeat the operation again.

Confirming the Existence of Debug Logs (HIT-STS)

This service mode confirms whether debug logs exist in the auto save area. "OK!" is displayed if logs exist in the auto save area.

NOTE:

"OK!" is displayed even after pressing the Counter key + numeric keys 1, 2, and 3.

Initializing the Debug Log Settings (DEFAULT)

This service mode changes all the settings related to debug logs back to the default (settings at the time of shipment).

- Be sure to perform when returning the device to the customer after completion of trouble investigation. (Operations required)
- Execute this service mode when resetting the settings related to debug logs during investigation of log collection and perform the operation again.

However, note that the log files automatically saved to the debug log save area in the controller are kept within the range not exceeding the upper limit.

If you want to delete the saved logs (want to use HIT-STS), use "LOG-DEL" indicated later.

Deleting the Automatically Saved Log Files (LOG-DEL)

This service mode deletes the automatically saved and stored log files. The settings of log operation such as trigger for saving log are not cleared.

Although it is not used normally (the upper limit of the number of saved logs is automatically controlled by firmware), it is necessary to delete logs with LOG-DEL once when judging whether logs are collected using HIT-STS after changing the trigger for saving log.

(It is because OK is displayed in HIT-STS as long as the saved logs exist.)

Error/Jam/Alarm

Outline	.304
Error code notation	.305
Pickup Position Code	. 306
Pickup size	. 307
Points to Note When Clearing MN-	
CON	.309
Points to Note When Clearing HDD.	.310
Error Code	.311
Jam Code	.366
Alarm Code	373

Outline

This chapter describes various codes which are displayed when a failure occurs on the product. These are classified into 3 codes as follows.

Code type	Explanation
Error code	This code is displayed when an error occurs on the machine.
Jam code	This code is displayed when a jam occurs inside the machine.
Alarm code	This code is displayed when a function of the machine is malfunctioned.

Error code notation

An error code is shown in 7-digit [E000XXX] on the display on the operation panel. However, [000] in 2 to 4 digit is not used. Thus, an error code is described as [EXXX] using 5 to 7 digit in the service manual. (e.g.: E012 = E000012)

Pickup Position Code

When a jam occurs, the pickup location is indicated with the following pickup position code. (On the jam display screen, the pickup position code is shown in the "P" column.)

Disp	lay	I/0	Adjust	Fur	iction	Op	tion Test	Counter
	< JA	4 >	< 1/	7 >	< RI	EAD	Y > < LE	VEL 1 >
No.	DATE	TIME1	TIME2	L	CODE	Ρ	CNTR	SIZE
01	0401	1618	1620	02	1400	00	473634	
02	0401	1422	1423	00	0205	F0	503838	A4
03	0325	1056	1057	00	0205	F0	251303	A4
04	0324	1057	1059	00	0D93	F0	502120	
05	0316	1721	1721	00	0205	F0	500558	A4
06	0313	1557	1558	00	0113	01	469400	A4
07	0311	0939	0941	00	0205	01	499686	A4
08	0311	0930	0930	00	0113	02	499603	A4
	←		→	(1			

Display example of pickup position code

Pickup position code	Pickup position
00	At Finisher jam/At error avoidance jam/At ADF jam without pickup operation (at SEND, Inbox, etc.)
01	Cassette 1
02	Cassette 2
03	Cassette 3
04	Cassette 4
05	Multi-purpose Tray Pickup Assembly
F0	2-sided

Pickup size

When a jam occurs, a paper size is displayed. (The row displaying "SIZE" on the jam screen refers to the paper size.)

Disp	lay	I/0	Adjust	Function	Optio	n Tes	t Counter
	< JAN	4 >	< 1/	7 > < R	EADY	> < L	FVFL 1 >
No.	DATE	TIME1	TIME2	L CODE	P CI	ITR	SIZE
01	0401	1618	1620	02 1400	00	473634	
02	0401	1422	1423	00 0205	F0	503838	A4
03	0325	1056	1057	00 0205	F0	25130(A4
04	0324	1057	1059	00 0093	F0	50212(
05	0316	1721	1721	00 0205	F0	500558	A4
06	0313	1557	1558	00 0113	01	46940(A4
07	0311	0939	0941	00 0205	01	49968(A4
08	0311	0930	0930	00 0113	02	49960(A4
	←	-	→	0			

Due to the limitation of displayable number of characters, some paper size names are omitted. The following is the list of displayed row of texts and corresponding paper sizes.

* The following is based on the display specification and not all paper sizes can actually be used.

Points to Note When Clearing MN-CON

- Execution of clearing MN-COM deletes all data in Address Book, Forwarding Settings, Settings/Registration (Adjustment/ Maintenance, Function Settings, Set Destination, Management Settings, TPM Settings), etc. Before execution of this operation, ask user to back up the data and get approval for this operation.
- Clearing MN-CON will clear the service mode setting values. Be sure to enter the service mode setting values again in accordance with the configuration of the options of the host machine and requests from the user.
- When clearing MN-CON while any login application other than User Authentication is, error such as not displayed login screen occurred. In this case, access SMS once and switch login application to User Authentication to recover to the normal status.

Points to Note When Clearing HDD

As a remedy for error codes (E602-XXXX), HDD partition is selected and the target partition may be cleared. When clearing partition, be sure to check which data will be deleted by referring Detail of HDD partition and explain to the user before starting work.

Error Code

Error Code Details

E000-0001-05	Fixing Assembly: Temperature rise failure
Detection Description	The Fixing Assembly does not reach the specified temperature within the specified time after cold starting.
Remedy	 [Related parts] Fixing Assembly Harness between the DC Controller PCB and the Drawer Connector DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] This symptom may occur also when the device is used in an environment where room temperature is too low.
E001-0001-05	Fixing Assembly: Abnormally high temperature 1
Detection Description	The Main Thermistor temperature raise to more than the specified level.
Remedy	[Related parts] - Fixing Assembly - Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E001-0002-05	Fixing Assembly: Abnormally high temperature 2
Detection Description	The Sub Thermistor 1 temperature raise to more than the specified level.
Remedy	[Related parts] - Fixing Assembly - Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E001-0004-05	Fixing Assembly: Abnormally high temperature 3
Detection Description	The Sub Thermistor 2 temperature raise to more than the specified level.
Remedy	[Related parts] - Fixing Assembly - Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E003-0001-05	Fixing Assembly: Abnormally low temperature
Detection Description	The Main Thermistor temperature remained lower than the specified level.
Remedy	[Related parts] - Fixing Assembly - Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E004-0001-05	Drive Circuit Unit error
Detection Description	Drive Circuit Unit error
Remedy	[Related parts] - Fixing Assembly - Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.

E004-0004-05	Mismatching Fixing Type
Detection Description	- "Fixing Assembly Absence" was detected as a result of the Fixing Assembly Connection Determination
	- The temperature of the Main Thermistor and the Sub Thermistor was lower than the specified level.
Remedy	[Related parts] - Fixing Assembly
	- Harness between the DC Controller PCB and the Drawer Connector - DC Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E004-0005-05	Low Voltage Power Supply Unit
Detection Description	When an error occurred in the communication with the effective value detection IC.
Remedy	[Related parts]
	- Low Voltage Power Supply PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E012-0001-05	Drum Motor startup error
Detection Description	The startup of Drum Motor does not complete within the specified period of time after start.
Remedy	[Related parts]
	- Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB
	- DC Controller PCB
	- Main Drive Unit
	[Remedy] Check/replace the related harness/cable, connector and parts.
E012-0002-05	During Motor Detation array
E012-0002-05	Drum Motor Rotation error
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation.
	The number of rotations of the Drum Motor decreased to less than the specified value during
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2)
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB
Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit
Detection Description Remedy	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts.
Detection Description Remedy E014-0001-05	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts]
Detection Description Remedy E014-0001-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1)
Detection Description Remedy E014-0001-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB
Detection Description Remedy E014-0001-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1)
Detection Description Remedy E014-0001-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB
Detection Description Remedy E014-0001-05 Detection Description Remedy	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
Detection Description Remedy E014-0001-05 Detection Description Remedy E014-0002-05	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
Detection Description Remedy E014-0001-05 Detection Description Remedy E014-0002-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] Drum Motor (M2) Harness between the Drum Motor and the DC Controller PCB DC Controller PCB Main Drive Unit [Renedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor rotation error The number of rotations of the Fixing Motor decreased to less than the specified value during operation. [Related parts] - Fixing Motor (M1)
Detection Description Remedy E014-0001-05 Detection Description Remedy E014-0002-05 Detection Description	The number of rotations of the Drum Motor decreased to less than the specified value during operation. [Related parts] - Drum Motor (M2) - Harness between the Drum Motor and the DC Controller PCB - DC Controller PCB - Main Drive Unit [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor startup error The startup of the Fixing Motor does not complete within the specified period of time after start. [Related parts] - Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor (M1) - Harness between the Fixing Motor and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. Fixing Motor rotation error The number of rotations of the Fixing Motor decreased to less than the specified value during operation. [Related parts]

E015-0001-05	Cassette 1 Lifter Motor error			
Detection Description	The paper surface could not be detected by the Paper Surface Sensor after the Lifter Motor was driven.			
Remedy	 [Related parts] Cassette 1 Lifter Motor (M3) DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. 1. Remove the paper in the cassette and open/close the cassette. 2. Check the operation of the Lifter Motor in light of whether the Paper Level Lever can be lowered. a. When the motor is operated: 1. Check the installation condition of the Cassette 1 Paper Surface Sensor (PS4400) 2. Check the harness/connector between the DC Controller PCB (J14) and the Cassette 1 Paper Surface Sensor (PS4400/J4400) 3. Check the Cassette 1 Paper Surface Sensor (PS4400) 4. Replace the DC Controller PCB b. When the motor is not operated, take the following steps: 1. Check the condition of the gear on the side of the host machine (if there is any cut or if it swings) 3. Replace the DC Controller PCB 			
E015-0002-05	Cassette 2 Lifter Motor error			
Detection Description	The paper surface could not be detected by the Paper Surface Sensor after the Lifter Motor was driven.			
Remedy	[Related parts] - Cassette 2 Lifter Motor - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. 1. Remove the paper in the cassette and open/close the cassette. 2. Check the operation of the Lifter Motor in light of whether the Paper Level Lever can be lowered. a. When the motor is operated: 1. Check the installation condition of the Cassette 2 Paper Surface Sensor 2. Check the harness/connector between the DC Controller PCB and the Cassette 2 Paper Surface Sensor 3. Check the Cassette 2 Paper Surface Sensor 4. Replace the DC Controller PCB b. When the motor is not operated, take the following steps: 1. Check the harness/connector between the DC Controller PCB (J301) and the Cassette 2 Lifter Motor 2. Check the condition of the gear on the side of the host machine (if there is any cut or if it swings) 3. Replace the Cassette 2 Lifter Motor 4. Replace the Cassette 2 Lifter Motor 4. Replace the Cassette 2 Lifter Motor 4. Replace the Cassette 2 Lifter Motor			

E015-0003-05	Cassette 3 Lifter Motor error
Detection Description	The paper surface could not be detected by the Paper Surface Sensor after the Lifter Motor was driven.
Remedy	 [Related parts] Cassette 3 Lifter Motor DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. 1. Remove the paper in the cassette and open/close the cassette. 2. Check the operation of the Lifter Motor in light of whether the Paper Level Lever can be lowered. a. When the motor is operated: 1. Check the installation condition of the Cassette 3 Paper Surface Sensor 2. Check the harness/connector between the DC Controller PCB and the Cassette 3 Paper Surface Sensor 3. Check the Cassette 3 Paper Surface Sensor 4. Replace the DC Controller PCB b. When the motor is not operated, take the following steps: 1. Check the harness/connector between the DC Controller PCB (J301) and the Cassette 3 Lifter Motor 2. Check the condition of the gear on the side of the host machine (if there is any cut or if it swings) 3. Replace the DC Controller PCB
E015-0004-05	Cassette 4 Lifter Motor error
Detection Description	The paper surface could not be detected by the Paper Surface Sensor after the Lifter Motor was driven.
Remedy	 [Related parts] Cassette 4 Lifter Motor DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. 1. Remove the paper in the cassette and open/close the cassette. 2. Check the operation of the Lifter Motor in light of whether the Paper Level Lever can be lowered. a. When the motor is operated: Check the installation condition of the Cassette 4 Paper Surface Sensor Check the harness/connector between the DC Controller PCB and the Cassette 4 Paper Surface Sensor Check the Cassette 4 Paper Surface Sensor Replace the DC Controller PCB When the motor is not operated, take the following steps: Check the condition of the gear on the side of the host machine (if there is any cut or if it swings) Replace the DC Controller PCB
E020-04C0-05	Detection of Cartridge Shipping Lock
Detection Description	A shipping lock was detected during the detection of presence/absence of cartridge.
Remedy	 [Related parts] Toner cartridge [Remedy] Check/replace the related harness/cable, connector and parts. 1. Remove the shipping lock of the toner cartridge. 2. Replace the toner cartridge.
E021-0001-05	Drum Motor error
Detection Description	No changes are made in the Developing Disengagement Sensor within the specified period of time after the operation of the Developing Disengagement Solenoid.
Remedy	[Related parts] - Drum Motor (M2) - Developing Disengagement Solenoid (SL2) - Toner cartridge [Remedy] Check/replace the related harness/cable, connector and parts.

E066-0001-05	Environment Sensor Abnormal Warning
Detection Description	When the Environment Sensor detects an AD value of 0 to 60 or 220 to 225
Remedy	[Related parts] - Environment Sensor (TH4200)
E100-0004-05	Laser Scanner error
Detection Description	The light intensity settings to the Laser Driver failed.
Remedy	[Related parts] - Laser Scanner Unit - Harness between the Laser Scanner Unit and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E110-0001-05	Laser Scanner Motor startup error
Detection Description Remedy	The startup of the Laser Scanner Motor does not complete. [Related parts] - Laser Scanner Unit - Harness between the Laser Scanner Unit and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E110-0002-05	Laser Scanner Motor rotation error
Detection Description	A BD Detection error occurs during the operation of the Laser Scanner Motor.
Remedy	[Related parts] - Laser Scanner Unit - Harness between the Laser Scanner Unit and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E196-0001-05	DOM Write/Deed error
E196-0001-05	ROM Write/Read error
Detection Description	ROM Write/Read error ROM Write/Read error occurs at startup.
Detection Description	ROM Write/Read error occurs at startup. [Related parts] - DC Controller PCB - Finisher Controller PCB - Option Cassette Controller PCB [Remedy] 1. Install firmware
Detection Description Remedy	ROM Write/Read error occurs at startup. [Related parts] - DC Controller PCB - Finisher Controller PCB - Option Cassette Controller PCB [Remedy] 1. Install firmware 2. Check/replace the related harness/cable, connector and parts.
Detection Description Remedy E196-0002-05	ROM Write/Read error occurs at startup. [Related parts] - DC Controller PCB - Finisher Controller PCB - Option Cassette Controller PCB [Remedy] 1. Install firmware 2. Check/replace the related harness/cable, connector and parts. Option ROM Write/Read error
Detection Description Remedy E196-0002-05 Detection Description	ROM Write/Read error occurs at startup. [Related parts] - DC Controller PCB - Finisher Controller PCB - Option Cassette Controller PCB [Remedy] 1. Install firmware 2. Check/replace the related harness/cable, connector and parts. Option ROM Write/Read error An Option ROM Write/Read error occurs at startup. [Related parts] - Harness between the DC Controller PCB and the Finisher Controller PCB - Harness between the DC Controller PCB and the OP Cassette Controller PCB - Finisher Controller PCB - OP Cassette Controller PCB - DC Controller PCB - Remedy] 1. Install firmware

E202-0001-04	Scanner Unit HP error
Detection Description	The HP of the Scanner Unit could not be detected when starting scanning operation.
Remedy	 [Related parts] R1.00 Harness between the CIS HP Sensor (J4205) and the Main Controller PCB (UN81/J4005) Harness between the Reader Motor (J4305) and the Main Controller PCB (UN81/J4005) Harness between the Main Controller PCB (J4507) and the Low-voltage Power Supply PCB CIS HP Sensor Reader Motor Low-voltage Power Supply PCB (UN01) Reader Assembly Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. At initial operation of the Reader startup after the main power is turned ON, check if the Reader Motor operates (whether the Scanner Unit moves or operation sound is heard). If it operates, check whether load on the Timing Belt for moving CIS is appropriate. If it is appropriate, replace the CIS HP Sensor. If it is not appropriate (overloaded), check/replace the Timing Belt, Drive Gear and pulley. Check/replace the CIS Holder (soiling or damage on the surface). Check/replace the related harness/cable, connector and parts.
E202-0002-04	Scanner Unit HP error
Detection Description	The HP of the Scanner Unit could not be detected when completing scanning operation.
Remedy	 [Related parts] R1.00 Harness between the CIS HP Sensor (J4205) and the Main Controller PCB (UN81/J4005) Harness between the Reader Motor (J4305) and the Main Controller PCB (UN81/J4005) Harness between the Main Controller PCB (J4507) and the Low-voltage Power Supply PCB CIS HP Sensor Reader Motor Low-voltage Power Supply PCB (UN01) Reader Assembly Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. At initial operation of the Reader startup after the main power is turned ON, check if the Reader Motor operates (whether the Scanner Unit moves or operation sound is heard). If it operates, check whether load on the Timing Belt for moving CIS is appropriate. If it is appropriate, replace the CIS HP Sensor. If it is not appropriate (overloaded), check/replace the Timing Belt, Drive Gear and pulley. Check/replace the CIS Holder (soiling or damage on the surface). Check/replace the related harness/cable, connector and parts.
E202-0003-04	Reader Scanner Unit HP error
Detection Description	An error in the Reader Scanner Unit position was detected when reading of a job was started.
Remedy	 [Related parts] Harness between the Main Controller PCB and the Scanner Unit HP Sensor (PS_A1/J5002) Harness between the Main Controller PCB and the Scanner Motor (STM1/J5015) Scanner Unit HP Sensor (PS_A1) Scanner Motor (STM1) Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E227-0001-04	Power supply error
Detection Description	The Main Controller PCB did not detect 24 V when the main power was turned ON.
Remedy	[Related parts] - Harness between the Main Controller PCB (J4507) and the Low-voltage Power Supply PCB - Low-voltage Power Supply PCB (UN01) - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E246-0001-00	System error
Detection Description	System error
Remedy	Contact the service company office

8. Error/Jam/Alarm

E246-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E246-0003-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E246-0004-00	System error
Detection Description	System error
Remedy	Contact the service company office
E246-0005-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E247-0001-00	System error
Detection Description	System error
Remedy	Contact the service company office
E247-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E247-0003-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E247-0004-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E248-0001-04	Reader backup error
Detection Description	Reading error was detected when the Controller IC of the Main Controller PCB read the Reader backup value in the Flash PCB.
Remedy	 [Related parts] R1.00 Flash PCB (UN91) Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. After performing the remedy, enter the value of the service label again. 1. After executing "COPIER> FUNCTION> CLEAR> R-CON", turn OFF and then ON the main power, and check whether the error is cleared. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.
E248-0002-04	Reader backup error
Detection Description	The Controller IC of the Main Controller PCB failed to rewrite the Reader backup value in the Flash PCB.
Remedy	 [Related parts] R1.00 Flash PCB (UN91) Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. After performing the remedy, enter the value of the service label again. 1. After executing "COPIER> FUNCTION> CLEAR> R-CON", turn OFF and then ON the main power, and check whether the error is cleared. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.

E270-0001-04	Scanner Unit (Reader) communication error
Detection Description	The vertical scanning synchronous signal (VSYNC) was not transmitted appropriately at the Scanner Unit (Reader) side communicating with the R-CON.
Remedy	 [Related parts] Flat Cable between the Main Controller PCB and Scanner Unit (Reader) (Unit of replacement: Flat Cable) Scanner Unit (Unit of replacement: Scanner Unit) Main Controller PCB (Unit of replacement: Main Controller PCB) [Remedy] Check/replace the related harness/cable, connector and parts.
E270-0101-04	Scanner Unit (DADF) communication error
Detection Description	The vertical scanning synchronous signal (VSYNC) was not transmitted appropriately at the Scanner Unit (DADF) side communicating with the R-CON.
Remedy	 [Related parts] Flat Cable between the Main Controller PCB and Scanner Unit (DADF) (Unit of replacement: Flat Cable) Scanner Unit (Unit of replacement: Scanner Unit) Main Controller PCB (Unit of replacement: Main Controller PCB) [Remedy] Check/replace the related harness/cable, connector and parts.
E280-0001-04	Scanner Unit communication error
Detection Description	Communication between the Main Controller and the Scanner Unit (front) was not started within the specified period of time.
Remedy	 [Related parts] R1.00 Harness between the Scanner Unit (front) and the Main Controller PCB Scanner Unit (front) Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E280-0002-04	Scanner Unit communication error
Detection Description	Disconnection of FFC between the Main Controller and the Scanner Unit (front) was detected.
Remedy	[Related parts] R1.00 - Harness between the Scanner Unit (front) and the Main Controller PCB - Scanner Unit (front) - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E280-0003-04	Scanner Unit (Reader) communication error
Detection Description	Reading or writing error was detected between the Main Controller PCB and the Scanner Unit (Reader).
Remedy	 [Related parts] Flat Cable between the Main Controller PCB and Scanner Unit (Reader) (Unit of replacement: Flat Cable) Scanner Unit (Unit of replacement: Scanner Unit) Main Controller PCB (Unit of replacement: Main Controller PCB) [Remedy] Check/replace the related harness/cable, connector and parts.
E280-0005-04	Scanner Unit (Paper Front) communication error
Detection Description	CIS Unit of a different model was installed.
Remedy	[Remedy] Replace the Scanner Unit (CIS) with the one for the model. (Unit of replacement: CONTACT IMAGE SENSOR ASSEMBLY) [Caution] The parts numbers of the Scanner Unit differs depending on the model. Be sure to use the correct one.

E280-0101-04	Scanner Unit communication error
Detection Description	Communication between the Main Controller and the Scanner Unit (back) was not started within the specified period of time.
Remedy	 [Related parts] R1.00 Harness between the Scanner Unit (back) and the Main Controller PCB Scanner Unit (back) ADF UNIT Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E280-0102-04	Scanner Unit communication error
Detection Description	Disconnection of FFC between the Main Controller and the Scanner Unit (back) was detected.
Remedy	[Related parts] R1.00 - Harness between the Scanner Unit (back) and the Main Controller PCB - Scanner Unit (back) - ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E280-0103-04	Scanner Unit (DADF) communication error
Detection Description	Disconnection of FFC between the Main Controller PCB and the DADF Scanner Unit was detected.
Remedy	[Related parts] - Harness between the DADF Scanner Unit (J1102) and the Main Controller PCB(UN1/J105) [Remedy]Check/replace the harness between the DADF Scanner Unit and the Main Controller PCB.
E280-0105-04	Scanner Unit (Paper Back) communication error
Detection Description	CIS Unit of a different model was installed.
Remedy	[Remedy] Replace the Scanner Unit (CIS) with the one for the model. (Unit of replacement: CONTACT IMAGE SENSOR ASS'Y SET) [Caution] The parts numbers of the Scanner Unit differs depending on the model. Be sure to use the correct one.
E302-0001-04	Error in paper front white shading
Detection Description	An error in the shading value was detected at white shading.
Remedy	 [Related parts] R1.00 Harness between the Scanner Unit (front) and the Main Controller PCB Scanner Unit (front) Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E302-0002-04	Error in paper front black shading
Detection Description	An error in the shading value was detected at black shading.
Remedy	[Related parts] R1.00 - Harness between the Scanner Unit (front) and the Main Controller PCB - Scanner Unit (front) - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.

E302-0101-04	Error in paper back white shading
Detection Description	An error in the shading value was detected at white shading.
Remedy	[Related parts] R1.00 - Harness between the Scanner Unit (back) and the Main Controller PCB - Scanner Unit (back) - ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E302-0102-04	Error in paper back black shading
Detection Description	An error in the shading value was detected at black shading.
Remedy	[Related parts] R1.00 - Harness between the Scanner Unit (back) and the Main Controller PCB - Scanner Unit (back) - ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E315-0007-00	Image process device timeout error
Detection Description	Image compression process was not completed within the specified period of time (120 sec) at scanning.
Remedy	 [Related parts] Harness between the CIS Unit and Main Controller PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts.
E315-000D-00	Image process device timeout error
Detection Description	Processing of a JBIG-compressed data was not completed within the specified period of time (120 sec) at printing or SEND.
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-000F-00	Image process device timeout error
Detection Description	Duplication of image data in the memory was not completed within the specified period of time (120 sec).
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-0027-00	Image process device timeout error
Detection Description	Image processing (change in magnification ratio, rotating, and shifting) was not completed normally within the specified period of time (120 sec).
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-0033-00	Image process device timeout error
Detection Description	Processing to clear image data in the memory was not completed normally within the specified period of time (120 sec).
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.

E315-0035-00	Image process device timeout error
Detection Description	Processing to clear image data in the memory was not completed normally within the specified period of time (120 sec).
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-0500-00	Image process device timeout error
Detection Description	Transfer of image signal was not completed within the specified period of time (120 sec) at scanning.
Remedy	 [Related parts] Harness between the CIS Unit and Main Controller PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the latest system software using SST or a USB flash drive. Check/replace the related harness/cable, connector and parts.
E315-0510-00	Image process device timeout error
Detection Description	Image processing was not completed within the specified period of time (30 sec) at scanning.
Remedy	 [Related parts] Harness between the CIS Unit and Main Controller PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the latest system software using SST or a USB flash drive. Check/replace the related harness/cable, connector and parts.
E315-0520-00	Image process device timeout error
Detection Description	Image processing was not completed within the specified period of time (120 sec) at scanning.
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-0530-00	Image process device error
Detection Description	Compression processing of the scanned image into JPEG was terminated abnormally.
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.
E315-0531-00	Image process device timeout error
Detection Description	Compression processing of the scanned image into JPEG was not completed within the specified period of time (120 sec).
Remedy	 [Related parts] Harness between the Reader Controller PCB and Main Controller PCB Main Controller PCB Reader Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts.
E315-0540-00	Image process device error
Detection Description	An error occurred during decompression of JPEG.
Remedy	Perform the following in the order while checking whether the error is cleared.1. Reinstall the latest system software using SST or a USB flash drive.2. Check/replace the Main Controller PCB.
E315-0541-00	Image process device timeout error
Detection Description	Decompression of JPEG was not completed within the specified period of time (120 sec).
Remedy	Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB.

E315-0561-00	Image process device timeout error
Detection Description	Image transfer was not completed within the specified period of time (60 sec) after the start of printing.
Remedy	 [Related parts] Harness between the Reader Controller PCB and Main Controller PCB Main Controller PCB Reader Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts.
E350-0001-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E350-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E350-0003-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E350-3000-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E351-0000-00	System error
Detection Description	Main Controller PCB communication error.
Remedy	Check/replace the Main Controller PCB
E354-0001-00	System error
Detection Description	System error
Remedy	Contact the service company office
E354-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E355-0001-00	System error
Detection Description	System error
Remedy	Contact the service company office
E355-0002-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
E355-0003-00	System error
Detection Description	System error
Remedy	Contact to the sales company.
-	
E355-0004-00	System error
Detection Description Remedy	System error Contact to the sales company.
-	
E423-0001-04	ADF error
Detection Description	An access error to SDRAM for controlling ADF that is installed on the Main Controller PCB was detected.
Remedv	Check/replace the Main Controller PCB

E503-0062-02	Internal communication error
Detection Description	CAN-CPU detected an internal communication error.
Remedy	[Related parts] - Finisher Controller PCB - Harness between the DC Controller PCB and the Finisher Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E530-8001-02	Jogger failure
Detection Description	A change of the Jogger HP Sensor cannot be detected after the start of jogger control.
Remedy	[Related parts] - Jogger Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E531-8001-02	Staple Ready error
Detection Description	The Staple Unit does not turn to the "Ready" state.
Remedy	[Related parts] - Jogger Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E531-8002-02	Staple failure
Detection Description	The Staple Unit does not return to the HP within the specified period of time from the operation start of the Staple Motor.
Remedy	[Related parts] - Jogger Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E540-8001-02	Bin 1 Upper Limit Detection error
Detection Description	The Bin 1 Upper Limit Sensor does not react within the specified period of time after start of lift- up.
Remedy	[Related parts] - Delivery Lifter Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E540-8002-02	Bin 1 Lower Limit Detection error
Detection Description	The Bin 1 Lower Limit Sensor does not react even after the specified period of time after start of lift-up.
Remedy	[Related parts] - Delivery Lifter Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.

E540-8003-02	Bin 1 Lifter Sensor failure
Detection Description	Both the Bin 1 Upper Limit Sensor and the Bin 1 Lower Limit Sensor detected ON during tray initialization.
Remedy	[Related parts] - Delivery Lifter Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E551-8001-02	Finisher Fan failure
Detection Description	Finisher Fan Lock is detected.
Remedy	[Related parts] - Jogger Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E568-8001-02	Stack Delivery Roller disengagement failure
Detection Description	When Y Alignment Motor is operated, the Stack Delivery Roller HP Sensor does not change.
Remedy	[Related parts] - Upper Feed Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E577-8001-02	Y Alignment Motor failure
Detection Description	When Y Alignment Motor is operated, the Y Alignment Motor HP Sensor does not change.
Remedy	[Related parts] - Upper Feed Unit - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E602-0001-00	HDD error
Detection Description	HDD failed to be Ready, or HDD was not formatted. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the related harness/cable and connector. 2. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 3. Reinstall the system software using SST or a USB flash drive. 4. Check/replace the related parts.
E602-0020-00	HDD error
Detection Description	Corruption of database managing user mode/service mode data was detected.
Remedy	 While this error occurs, backup of the setting values is disabled. In addition, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power. 2. enter safe mode, and format the HDD using a USB flash drive. 3. Replace the HDD.

	HDD error
Detection Description	An error was detected in the PDL-related file storage area. (Initialization failed at startup or I/C error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". The turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the Syste Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". The turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
602-0111-00	HDD error
Detection Description	An error was detected in the PDL-related file storage area. (File could not be written in the HD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". The turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the Syste Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". The turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe more Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.

E602-0201-00	HDD error
Detection Description	An error was detected in the storage area of image data after startup. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-0211-00	HDD error
Detection Description	An error was detected in the storage area of image data after startup. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0301-00	HDD error
Detection Description	An error was detected in the MEAP-related area. (Initialization failed at startup or I/O error at startup)
	When this error occurs, the system has not been started normally. Therefore, it may not be
	recorded in the error log.
Remedy	[Related parts] R2.00
	- Harness between the Main Controller PCB and the HDD
	- HDD
	- Main Controller PCB
	[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to
	4.
	1. Check the related harness/cable and connector.
	2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CHECK". Then,
	turn OFF and then ON the main power.
	3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "3", and execute "HD-CLEAR". Then,
	turn OFF and then ON the main power to delete the data in the corresponding partition.
	5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.
	Then format the HDD using SST or a USB flash drive.
	Check/replace the related parts.[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.
	Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-0611-00	HDD error
Detection Description	An error was detected in the storage area of image data after startup. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CHECK". Then, turn OFF and then ON the main power. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0701-00	HDD error
Detection Description	An error was detected in general application temporary area (temporary file). (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-0711-00	HDD error
Detection Description	An error was detected in general application temporary area (temporary file). (File could not be written in the HDD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0801-00	HDD error
Detection Description	An error was detected in the general application-related area. (Initialization failed at startup or I/ error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 t 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Ther turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the Syste Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Ther turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mod Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-0811-00	HDD error
Detection Description	An error was detected in the general application-related area. (File could not be written in the HD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 tf 4. Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Ther turn OFF and then ON the main power. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then turn OFF and then ON the main power to delete the data in the corresponding partition. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mod Then format the HDD using SST or a USB flash drive. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0901-00	HDD error
Detection Description	An error was detected in PDL spool data (temporary file). (Initialization failed at startup or I/O error
	at startup)
	When this error occurs, the system has not been started normally. Therefore, it may not be
	recorded in the error log.
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD
	- HDD
	- Main Controller PCB
	[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.
	1. Check the related harness/cable and connector.
	2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
	 Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CLEAR". Then,
	turn OFF and then ON the main power to delete the data in the corresponding partition.
	5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
	6. Check/replace the related parts.
	[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.
	Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-0911-00	HDD error
Detection Description	An error was detected in PDL spool data (temporary file). (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00
	 Harness between the Main Controller PCB and the HDD HDD
	- Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When
	prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to
	4.
	 Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CHECK". Then,
	turn OFF and then ON the main power.
	3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System
	Service Manual.
	4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "9", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
	5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.
	Then format the HDD using SST or a USB flash drive.
	6. Check/replace the related parts.
	[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1001-00	HDD error
Detection Description	An error was detected in the SEND-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1011-00	HDD error
Detection Description	An error was detected in the SEND-related area. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1101-00	HDD error
Detection Description	An error was detected in the update-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be
	recorded in the error log.
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD
	- HDD Main Controller DCD
	- Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When
	prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.
	1. Check the related harness/cable and connector.
	2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
	3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then,
	turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.
	Then format the HDD using SST or a USB flash drive.
	6. Check/replace the related parts.
	[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1111-00	HDD error
Detection Description	An error was detected in the update-related area. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00
	 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB
	[Remedy] Perform the following in the order while checking whether the error is cleared. When
	prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.
	1. Check the related harness/cable and connector.
	2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then,
	turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System
	turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	 turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.
	 turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
	 turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.

602-1201-00	HDD error
Detection Description	An error was detected in the license-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". The turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
602-1211-00	HDD error
Detection Description	An error was detected in the license-related area. (File could not be written in the HDD after start or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Althout the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". The turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the Syste Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.

E602-1301-00	HDD error
Detection Description	An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1311-00	HDD error
Detection Description	An error was detected in the system area. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1371-00	System verification error
Detection Description	At startup, a verification error occurred due to invalid data of a MEAP login application.
Remedy	[Remedy] 1. Set the following service mode setting value to 1: COPIIER > OPTION > USER > MEAPSAFE 2. Turn OFF and then ON the main power. 3. Reinstall the corresponding MEAP application from RUI. [Caution] After performing the remedy work, return the MEAPSAFE value to 0 and turn OFF and then ON the main power.

E602-1372-00	Verification error by "Falsification detection at startup" function
Detection Description	At startup, a verification error occurred due to invalid data in the MEAP area.
Remedy	 [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power, and check whether the error is cleared. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain necessary backup data referring to "Appendix > Backup Data List" in System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. Re-install MEAP application(s) via RUI and restore the backup data. [Reference] Restore the backup data if the data has been deleted.
E602-1401-00	HDD error
Detection Description	An error was detected in SWAP (temporary file/alternative memory area). (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1411-00	HDD error
Detection Description	An error was detected in SWAP (temporary file/alternative memory area). (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1701-00	HDD error
Detection Description	An error was detected in the debug log area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "17", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "17", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1711-00	HDD error
Detection Description	An error was detected in the debug log area. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "17", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "17", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1801-00	HDD error
Detection Description	An error was detected in the image data storage area in Advanced Box. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "18", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "18", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1811-00	HDD error
Detection Description	An error was detected in the image data storage area in Advanced Box. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD
	- HDD
	- Main Controller PCB
	[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.
	 Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "18", and execute "HD-CHECK". Then,
	turn OFF and then ON the main power.
	3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "18", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and format the HDD using SST or a USB flash drive.
	 Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-1901-00	HDD error
Detection Description	An error was detected in the storage area of data for printing. (Initialization failed at startup or I/O error at startup)
	When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD
	- Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When
	prioritizing clearing of the error, skip Remedies 2 and 3.
	Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.
	 Check the related harness/cable and connector. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CHECK". Then,
	turn OFF and then ON the main power.
	3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
	 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and format the HDD using SST or a USB flash drive.
	 Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1911-00	HDD error
Detection Description	An error was detected in the storage area of data for printing. (File could not be written in the HDD after startup or I/O error after startup)
Remedy	[Related parts] R2.00 - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-2000-00	HDD error
Detection Description	I/O error was detected in the file system after startup.
Remedy	 Perform the following in the order while checking whether the error is cleared. 1. Check that the HDD optional board is properly installed. 2. Turn ON the main power, and check whether the error is cleared. 3. Execute the key clear using SST (to make an unformatted disk). [CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD. 4. enter safe mode, and format the HDD using SST or a USB flash drive.
E602-2001-00	HDD error
Detection Description	Mismatch on encryption operation
Remedy	 Perform the following in the order while checking whether the error is cleared. 1. Check that the Main Controller PCB is installed properly. 2. Turn ON the main power, and check whether the error is cleared. 3. Execute the key clear using SST (to make an unformatted disk). [CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD. 4. enter safe mode, and format the HDD using SST or a USB flash drive.
E602-2002-00	HDD error
Detection Description	Failure of encryption board and others
Remedy	 Perform the following in the order while checking whether the error is cleared. 1. Turn ON the main power, and check whether the error is cleared. 2. Execute the key clear using SST (to make an unformatted disk). [CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD. 3. enter safe mode, and format the HDD using SST or a USB flash drive. 4. Replace the Main Controller PCB.
E602-5001-00	Encryption Chip error
Detection Description	Error of the encryption chip on the Main Controller
Remedy	[Related parts] Main Controller PCB [Remedy] Replace the Main Controller PCB

E602-5002-00	HDD error
Detection Description	A non-genuine HDD was detected.
Remedy	 Replace the HDD with a genuine one. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual. Format the HDD using SST or a USB flash drive.
E602-FF01-00	HDD error
Detection Description	An unidentified HDD error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Main Controller PCB HDD [Reference] For backup and restoration, refer to "Appendix> Backup Data List" in the System Service Manual. [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the related harness/cable and connector. 2. Format the HDD using SST or a USB flash drive. 3. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E602-FF11-00	HDD error
Detection Description	An unidentified HDD error was detected after startup.
Remedy	 [Related parts] R2.00 Main Controller PCB HDD [Reference] For backup and restoration, refer to "Appendix> Backup Data List" in the System Service Manual. [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check the related harness/cable and connector. 2. Format the HDD using SST or a USB flash drive. 3. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.
E604-0512-00	Faulty/insufficient image memory (Main Controller PCB1)
Detection Description	No necessary memory at Main Controller PCB 1
Remedy	Make the Memory capacity at Main Controller PCB 1 as indicated by 0512.
E604-1024-00	Faulty/insufficient image memory (Main Controller PCB1)
Detection Description	No necessary memory at Main Controller PCB 1
Remedy	Make the Memory capacity at Main Controller PCB 1 as indicated by 1024.
E604-1536-00	Faulty/insufficient image memory (Main Controller PCB1)
Detection Description	No necessary memory at Main Controller PCB 1
Remedy	
	Make the Memory capacity at Main Controller PCB 1 as indicated by 1536.
E613-0512-00	Make the Memory capacity at Main Controller PCB 1 as indicated by 1536. Faulty/insufficient image memory
E613-0512-00 Detection Description	
	Faulty/insufficient image memory
Detection Description	Faulty/insufficient image memory No necessary memory at Main Controller PCB
Detection Description Remedy	Faulty/insufficient image memory No necessary memory at Main Controller PCB Make the Memory capacity at Main Controller PC as indicated by 0512.
Detection Description Remedy E613-1024-00	Faulty/insufficient image memory No necessary memory at Main Controller PCB Make the Memory capacity at Main Controller PC as indicated by 0512. Faulty/insufficient image memory
Detection Description Remedy E613-1024-00 Detection Description	Faulty/insufficient image memory No necessary memory at Main Controller PCB Make the Memory capacity at Main Controller PC as indicated by 0512. Faulty/insufficient image memory No necessary memory at Main Controller PCB Make the Memory capacity at Main Controller PCB Make the Memory capacity at Main Controller PCB as indicated by 1024.
Detection Description Remedy E613-1024-00 Detection Description Remedy	Faulty/insufficient image memory No necessary memory at Main Controller PCB Make the Memory capacity at Main Controller PC as indicated by 0512. Faulty/insufficient image memory No necessary memory at Main Controller PCB

E613-2048-00	Memory error
Detection Description	Memory of the Main Controller PCB is faulty.
Remedy	Make the Memory capacity at Main Controller PCB as indicated by 2048.
E614-0001-00	Flash PCB error
Detection Description	The Flash PCB could not be recognized, or the Flash PCB was not formatted.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the necessary application software once the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Replace the Main Controller PCB.
E614-0002-00	Error in system on the Flash PCB
Detection Description	The file system could not be initialized normally at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Reference] For backup and restoration, refer to "Appendix> Backup Data List" in the System Service Manual. [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the necessary application software once the error is cleared. After turning OFF the main power, remove and then install the Flash PCB to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Replace the Main Controller PCB.
E614-0006-00	Error in system on the Flash PCB
Detection Description	Bootable was not found on the Flash PCB.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the necessary application software once the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Replace the Main Controller PCB.
E614-0071-00	System verification error
Detection Description	At normal startup, an error may occur due to invalid data of the firmware for startup. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.
Remedy	 [Related parts] Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Start the machine in safe mode, and reinstall the system using SST or a USB flash drive. * [2]: Select Update (Overwrite all) to update the system. 2. Replace the FLASH PCB, and reinstall the system software using SST or a USB flash drive.

E614-0072-00	System verification error
Detection Description	At normal startup, an error may occur due to invalid data of the firmware for safe mode startup. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.
Remedy	[Related parts] - Flash PCB
	[Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.
E614-0073-00	System verification error
Detection Description	At startup in safe mode, an error may occur due to invalid data of the startup firmware. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.
Remedy	[Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.
E614-0074-00	Start system verification function error
Detection Description	At startup in safe mode, an error may occur due to invalid data of the firmware for safe mode
	startup.
	When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.
Remedy	[Related parts] - Flash PCB
	[Remedy]
	1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.
E614-0101-00	Error in system on the Flash PCB
Detection Description	An error was detected in the system area. (Initialization failed at startup or I/O error at startup)
	When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	recorded in the error log. [Related parts] R2.00 - Flash PCB - Main Controller PCB
Remedy	recorded in the error log. [Related parts] R2.00 - Flash PCB - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then,
Remedy	recorded in the error log. [Related parts] R2.00 - Flash PCB - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System
Remedy	recorded in the error log. [Related parts] R2.00 - Flash PCB - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
Remedy E614-0111-00	recorded in the error log. [Related parts] R2.00 - Flash PCB - Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.

Error in system on the Flash PCB
An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Althoug the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Ther turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.
Error in system on the Flash PCB
An error was detected in the system area. (File could not be written in the Flash PCB after startup or I/O error after startup)
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.
Error in system on the Flash PCB
An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.

Error in system on the Flash PCB
An error was detected in the system area. (File could not be written in the Flash PCB after startup or I/O error after startup)
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.
Error in system on the Flash PCB
Logical partition error was detected. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.
Error in system on the Flash PCB
Logical partition error was detected. (File could not be written in the Flash PCB after startup or I/O error after startup)
 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.

E614-0501-00	Error in file system on the Flash PCB
Detection Description	An error was detected in the general application-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and reinstall the system software using SST or a USB flash drive. 6. Check/replace the related parts.
E614-0511-00	Error in file system on the Flash PCB
Detection Description	An error was detected in the general application-related area. (File could not be written in the Flash PCB after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. enter safe mode, and reinstall the system software using SST or a USB flash drive. 6. Check/replace the related parts.
E614-0601-00	Error in system on the Flash PCB
Detection Description	An error was detected in the license-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.

E614-0611-00	Error in system on the Flash PCB
Detection Description	An error was detected in the license-related area. (File could not be written in the Flash PCB after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB.
E614-0701-00	Error in file system on the Flash PCB
Detection Description	An error was detected in system setting value (service mode, etc.) storage area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. Check/replace the related parts.
E614-0711-00	Error in file system on the Flash PCB
Detection Description	An error was detected in system setting value (service mode, etc.) storage area. (File could not be written in the Flash PCB after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. Check/replace the related parts.

E614-4000-00	Error in system on the Flash PCB
Detection Description	The OS could not be recognized. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 Perform the following in the order while checking whether the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Check that the HDD and the cables are properly installed. enter safe mode, and format the HDD using SST or a USB flash drive. If another error occurs, clear the error by performing the remedy for it. Replace the Main Controller PCB.
E614-4001-00	Error in system on the Flash PCB
Detection Description	The OS boot file was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 Perform the following in the order while checking whether the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Check that the HDD and the cables are properly installed. enter safe mode, and format the HDD using SST or a USB flash drive. If another error occurs, clear the error by performing the remedy for it. Replace the Main Controller PCB.
E614-4002-00	Error in system on the Flash PCB
Detection Description	The OS kernel was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 Perform the following in the order while checking whether the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Check that the HDD and the cables are properly installed. enter safe mode, and format the HDD using SST or a USB flash drive. If another error occurs, clear the error by performing the remedy for it. Replace the Main Controller PCB.
E614-4003-00	Error in system on the Flash PCB
Detection Description	The OS boot loader was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 Perform the following in the order while checking whether the error is cleared. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Check that the HDD and the cables are properly installed. enter safe mode, and format the HDD using SST or a USB flash drive. If another error occurs, clear the error by performing the remedy for it. Replace the Main Controller PCB.
E614-4010-00	Error in system on the Flash PCB
Detection Description	The OS in safe mode could not be recognized. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	Perform the following in the order while checking whether the error is cleared.1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.

E614-4011-00	Error in system on the Flash PCB
Detection Description	The file for booting the OS in safe mode was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	Perform the following in the order while checking whether the error is cleared.1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
E614-4012-00	Error in system on the Flash PCB
Detection Description	The kernel in safe mode was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	Perform the following in the order while checking whether the error is cleared.1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
E614-9000-00	Error in system on the Flash PCB
Detection Description	SRAM device access-related error (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	Perform the following in the order while checking whether the error is cleared.1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
E614-9001-00	Error in system on the Flash PCB
E614-9001-00 Detection Description	Error in system on the Flash PCB Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
	Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be
Detection Description	Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.
Detection Description Remedy	 Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
Detection Description Remedy E614-9002-00	 Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Error in system on the Flash PCB Setting file error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be
Detection Description Remedy E614-9002-00 Detection Description	 Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Error in system on the Flash PCB Setting file error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.
Detection Description Remedy E614-9002-00 Detection Description Remedy	 Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. Error in system on the Flash PCB Setting file error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Plash PCB, reinstall the system software using SST or a USB flash drive.

E614-9004-00	Error in system on the Flash PCB
Detection Description	Startup error was detected. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly.
	2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
E614-FF01-00	Error in system on the Flash PCB
Detection Description	An unidentified Flash error was detected at startup. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.
E614-FF11-00	Error in system on the Flash PCB
Detection Description	An unidentified Flash error was detected at startup. (File could not be written in the Flash PCB after startup or I/O error after startup)
Remedy	 [Related parts] R2.00 Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB.
E615-0001-00	Error in self-diagnosis of the encryption module
Detection Description	An error was detected in self-diagnosis of the encryption library.
Remedy	 [Remedy] Perform the following in the order while checking whether the error is cleared. Reinstall the necessary application software and restore the backup data once the error is cleared. 1. After reinstalling the system software using SST or a USB memory, turn OFF and then ON the main power. 2. Obtain the necessary backup data by referring to the backup data list. 3. enter safe mode, and execute [4] Clear/Format> [2] Flash Format (Flash format) using a USB memory. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB memory. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual.

E674-0001-07	Fax Board communication error
Detection Description	An error was detected for the specified number of times in communication with the Fax Board.
Remedy	[Related parts] R1.00
	- Harness between the Fax Board and the Main Controller PCB
	- Fax Board - Main Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E674-0002-07	Fax Board communication error
Detection Description	An error was detected for the specified number of times in communication with the Fax Board.
Remedy	[Related parts] R1.00 - Harness between the Fax Board and the Main Controller PCB
	- Fax Board
	- Main Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E674-0004-07	Fax Board communication error
Detection Description	A communication error occurred when accessing the modem IC used for fax.
Remedy	[Related parts] R1.00
	- Harness between the Fax Board and the Main Controller PCB - Fax Board
	- Main Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E674-0008-07	Fax Board communication error
Detection Description	A communication error occurred when accessing the port IC used for fax.
Remedy	[Related parts] R1.00
	- Harness between the Fax Board and the Main Controller PCB
	- Fax Board
	 Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E674-0010-07	Fax Board communication error
Detection Description	A communication error occurred when opening the Timer Device used for fax.
Remedy	Check/replace the Main Controller PCB
E674-0011-07	Fax Board communication error
Detection Description	A communication error occurred when starting the Timer Device used for fax.
Remedy	Check/replace the Main Controller PCB
E674-0020-07	Fax Board communication error
Detection Description	An error occurred in the modem IC used for fax.
Remedy	[Related parts] R1.00
	- Harness between the Fax Board and the Main Controller PCB - Fax Board
	- Main Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E674-0021-07	Fax Board communication error
Detection Description	A Fax Board for non-supported modem has been connected.
Remedy	Replace it with a genuine Fax Board.
E674-0030-07	Fax Board communication error
Detection Description	Check sum error
Remedy	System software download for 2 line FAX

E674-0100-07	Fax Board communication error
Detection Description	After completion of fax communication, writing of the communication information (log) failed, and the log could not be read.
Remedy	Turn OFF and then ON the main power. If it occurs when the power is turned OFF and then ON after executing FAX > Clear > ALL, execute FAX > Clear > ALL and turn OFF and then ON the power again. [CAUTION] The previous communication information (log) will be cleared by turning OFF and then ON the main power.
E674-0300-07	Fax configuration error
Detection Description	It was detected that there was a Fax Board for multiple lines installed while the IP Fax license was enabled.
Remedy	 Remove the Fax Board for multiple lines to use the machine as an IP Fax model. Uninstall the IP Fax license to use the machine as a G3 Fax model.
E674-0301-07	Fax configuration error
Detection Description	It was detected that there was no 1-line Fax Board installed while the IP Fax license was enabled.
Remedy	 Install the Fax Board (1-line) to use the machine as an IP Fax model. Uninstall the IP Fax license and install the G3 Fax Board to use the machine as a G3 Fax model.S15
E677-0001-00	Print server error
Detection Description	Abnormality detected on the exhaust fan operation of printer server
Remedy	 Check supplying power to the exhaust fan Exhaust fan replacement
E677-0003-00	Print server error
Detection Description	An error in the fan of the Print Server was detected.
Remedy	[Related parts] R1.00 - Print Server Fan - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E677-0004-00	Print server error
Detection Description	Abnormality detected on the CPU fan operation of printer server
Remedy	 Check supplying power to the CPU fan CPU fan replacement
E677-0010-00	Print server error
Detection Description	Failure was detected in operation of the CPU fan on the print server.
Remedy	 Replace the board of the print server. Reinstall the Print Server (For details, refer to "Service Manual image PASS P2.")
E677-0080-00	Print server error
Detection Description	Error is detected at the Mother Board check when print server is started.
Remedy	 Check the cable connection and turn OFF and then ON the power. Reinstall the print server (For details, refer to "Service Manual image PASS P2.")
E713-0000-02	UFDI communication error.
Detection Description	Communication error with the Finisher.
Remedy	[Related parts] - Finisher Controller PCB - Harness between the Finisher Controller PCB and the DC Controller PCB - DC Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts.
E719-0021-00	Coin vendor error
Detection Description	Communication with the coin vendor could not be established at startup of the host machine.
Remedy	 Check/replace the cable between the charging management equipment and the host machine. Check the power of the charging.

E719-0022-00	Coin vendor error
Detection Description	Communication with the coin vendor could not be established at startup of the host machine.
Remedy	 Check/replace the cable between the charging management equipment and the host machine. Check the power of the charging.
E719-0031-00	Error in serial communication at the start of the New Card Reader
Detection Description	Failure in communication with the serial New Card Reader at start-up.
Remedy	 Check if the cable of the serial New Card Reader is disconnected. Take out the serial New Card Reader. COPIER > Function > CLEAR > CARD COPIER > Function > CLEAR > ERR
E719-0032-00	Error in serial communication at the start of the New Card Reader
Detection Description	Communication failed in the middle of the operation although communication with the serial New Card Reader was successful at start-up.
Remedy	- Check if the cable of the serial New Card Reader is disconnected.
E720-0001-00	Error due to non-compatible Finisher
Detection Description	Non-compatible Finisher was connected.
Remedy	Connect either the Staple Finisher-Y1 or Saddle Stitch Finisher-Y1.
E730-C001-00	Error in HDD access
Detection Description	An error occurred when accessing the HDD.
Remedy	 [Related parts] R1.00 Harness between the Main Controller PCB and the HDD HDD Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Format the HDD and reinstall the system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts.
E731-3000-00	Main Controller PCB error
Detection Description	Unable to recognize the SURF Board.
Remedy	Check/replace the Main Controller PCB
E731-3001-00	Main Controller PCB error
Detection Description	Failure of SURF initialization.
Remedy	Check/replace the Main Controller PCB
E731-3002-00	Main Controller PCB error
Detection Description	Failure of SURF initialization.
Remedy	Check/replace the Main Controller PCB
E731-3015-00	Main Controller PCB error
Detection Description	Video data is not transmitted to CL1-G even though there is no problem in the software.
Remedy	Check/replace the Main Controller PCB
E732-0001-04	Communication error
Detection Description	DDI-S communication error.
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.

E732-0010-00	Communication error
Detection Description	A signal to start image transfer could not be detected at scanning although the specified period of time (120 sec) has passed.
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E732-0020-00	Communication error
Detection Description	A communication error of the Main Controller PCB was detected.
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E732-0021-00	Communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB was detected.
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E732-0022-00	Communication error
Detection Description	A communication error between the Reader Controller PCB and the Main Controller PCB was detected.
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E732-0023-04	Communication error
Detection Description	DDI-S communication error (SPRDY-S detection error)
Remedy	[Related parts] R1.00 - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (J4001, 4002) - READER ADF UNIT - Main Controller PCB [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally.
E732-0F01-04	Communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0001 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E732-0F20-00	Communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0020 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.

E732-0F21-00	Communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0021 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E732-0F22-00	Communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0022 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E732-0F23-04	Communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0023 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E732-8888-00	Communication error
Detection Description	Scanner for a different model was detected at communication with the Reader.
Remedy	Replace the Reader Unit with the one for this model.
E732-9999-00	Reader detection error
Detection Description	The Reader was detected with a printer model for the first time. Only the message "Turn OFF and then ON the power" is displayed on the screen instead of displaying an error code. The error log is recorded in "COPIER> DISPLAY> ERR".
Remedy	[Remedy] Turn OFF and then ON the main power.
E733-0000-05	Printer communication error
Detection Description	A communication error between the DC Controller PCB and the Main Controller PCB was detected at startup.
Remedy	[Related parts] R1.00 - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES
E733-0001-05	Printer communication error
Detection Description	A communication error between the DC Controller PCB and the Main Controller PCB was detected.
Remedy	[Related parts] R1.00 - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

E733-0002-05	Printer communication error
Detection Description	Signal error was detected after establishment of communication between the DC Controller PCB and the Main Controller PCB.
Remedy	[Related parts] R1.00 - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES
E733-0004-05	Printer communication error
Detection Description	Signal error was detected after establishment of communication between the DC Controller PCB and the Main Controller PCB.
Remedy	 [Related parts] R1.00 Harnesses between the DC Controller PCB and the Main Controller PCB DC Controller PCB Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES
E733-0005-05	Printer communication error
Detection Description	Signal error was detected after establishment of communication between the DC Controller PCB and the Main Controller PCB.
Remedy	[Related parts] R1.00 - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES
E733-0006-05	Communication error between the Main Controller PCB and the DC Controller PCB
Detection Description	Communication error between the Main Controller PCB and the DC Controller PCB
Remedy	 Reinstall the system software using SST or a USB flash drive. Replace the Main Controller PCB. Replace the DC Controller PCB.
E733-0010-05	Printer communication error
Detection Description	A communication error between the DC Controller PCB and the Main Controller PCB was detected.
Remedy	[Related parts] R1.00 - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. - Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

E733-0F00-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0000 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E733-0F01-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0001 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E733-0F02-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0002 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E733-0F04-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0002 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E733-0F05-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0002 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted after log collection.
E733-0F06-05	Printer communication error
Detection Description	Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0006 is generated.
Remedy	It is not necessary to perform a remedy because the machine is automatically rebooted.
E733-9999-05	Printer communication error
Detection Description	The Finisher connection information error was detected between the DC Controller PCB and the Main Controller PCB.
Remedy	Turn OFF and then ON the power
E733-F000-05	Printer communication error
Detection Description	Disconnection of a cable between the Main Controller PCB and the DC Controller PCB was detected.
Remedy	[Remedy] Check/replace the harness between the DC Controller PCB and the Main Controller PCB.
E733-F001-05	Printer communication error
Detection Description	Disconnection of a cable between the Main Controller PCB and the DC Controller PCB was detected.
Remedy	[Remedy] Check/replace the harness between the DC Controller PCB and the Main Controller PCB.
E733-F002-05	Printer communication error
Detection Description	Disconnection of a cable between the Main Controller PCB and the DC Controller PCB was detected.
Remedy	[Remedy] Check/replace the harness between the DC Controller PCB and the Main Controller PCB.

E743-0000-04	DDI communication error
Detection Description	Software sequence error
Remedy	[Remedy] Collect debug log and contact to the sales company.
E744-0001-00	Language file error
Detection Description	The language file in HDD was not supported by the version of Bootable.
Remedy	Reinstall the correct language file using SST or USB memory reinstall the entire software.
E744-0003-00	Language file error
Detection Description	The language file to be switched to that was described in the Config.txt in HDD was not found.
Remedy	Reinstall the correct language file using SST or USB memory reinstall the entire software.
E744-0004-00	Language file error
Detection Description	Switching to the language file in the HDD failed.
Remedy	Reinstall the correct language file using SST or USB memory reinstall the entire software.
E744-2000-00	Controller firmware mismatch
Detection Description	Invalid controller firmware was detected.
Remedy	Replace the ECO-ID PCB with the one for this model.
E744-5000-07	Mismatch of software version for fax
Detection Description	After the Fax Board (option) has been installed, mismatch of version of software in the Fax Board
	was detected at transmission and reception.
Remedy	Upgrade the system software version to the latest one.
E746-0011-00	Voice Board error
Detection Description	Because both the voice composition board and the composition recognition board are inserted.
Remedy	Insert only 1 board of the appropriate voice board.
E746-0021-00	Image Analysis Board error
E746-0021-00 Detection Description	Self-check NG of Image Analysis Board
	Self-check NG of Image Analysis Board Perform the following in the order while checking whether the error is cleared.
Detection Description	Self-check NG of Image Analysis Board
Detection Description	 Self-check NG of Image Analysis Board Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or
Detection Description Remedy	 Self-check NG of Image Analysis Board Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or the system software which version is supported by this model using SST or a USB flash drive.

E746-0031-00	TPM error
Detection Description	A communication error has occurred between the Main Controller PCB and the TPM PCB at startup.
Remedy	Check/replace the TPM PCB. [Reference] After replacing the TPM PCB, if the TPM key was backed up, restore the key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power.
E746-0032-00	TPM error
Detection Description	Mismatch of the TPM key was detected.
Remedy	 Perform the following in the order while checking whether the error is cleared. 1. Format the HDD and reinstall the system software using SST or a USB flash drive. 2. Replace the TPM PCB. [Reference] After replacing the TPM PCB, if the TPM key was backed up, restore the key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power.
E746-0033-00	TPM error
E746-0033-00 Detection Description	TPM error It was detected that data in TPM was inconsistent.
Detection Description	It was detected that data in TPM was inconsistent. If the TPM key was backed up, - Restore the TPM key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. If the TPM key was not backed up,
Detection Description Remedy	It was detected that data in TPM was inconsistent. If the TPM key was backed up, - Restore the TPM key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. If the TPM key was not backed up, - Format the HDD and reinstall the system software using SST or a USB flash drive.
Detection Description Remedy	It was detected that data in TPM was inconsistent. If the TPM key was backed up, - Restore the TPM key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". If the error is not cleared, format the HDD and reinstall the system software using SST or a USB flash drive. TPM version error TPM PCB which cannot be used in this machine was installed. Install the TPM PCB for this model.

E748-2001-00	Main Controller PCB access error			
Detection Description	Main Controller PCB memory access error.			
Remedy	Check/replace the Main Controller PCB			
E748-2010-00	Flash PCB error / HDD error			
Detection Description	IPL (startup program) was not found, or the HDD could not be recognized.			
Remedy	 [Related parts] R2.00 Harnesses between the Main Controller PCB and the HDD HDD Flash PCB Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Disconnect the cable between the Main Controller PCB and the HDD, and turn ON the main power. a. When the error code has not been changed: 1. Obtain the necessary backup data by referring to the backup data list. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Restore the backup data. b. When the error code has been changed to another one, see the remedy for the corresponding code. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. 			
E748-2011-00	Flash PCB error			
Detection Description	OS was not found at startup.			
Remedy	After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.			
E748-2012-00	Flash PCB error			
Detection Description	Cannot mount the OS in safe mode startup or No OS startup script			
Remedy	After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.

E748-4910-00	Main Controller PCB access error		
Detection Description	Main controller board access errors		
Remedy	Check/replace the Main Controller PCB		
E748-7011-00	Start system verification function error		
Detection Description	At startup, an error may occur due to invalid data of the OS boot loader on the flash PCB. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.		
Remedy	[Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.		
E748-7021-00	Start system verification function error		
Detection Description	At startup, an error may occur due to invalid data of the OS kernel on the flash PCB. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.		
Remedy	[Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.		
E748-7022-00	Start system verification function error		
Detection Description	At startup, an error may occur due to invalid data of the OS kernel on the flash PCB. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log.		
Remedy	[Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive.		
E748-9000-00	System error		
Detection Description	System error		
Remedy	Contact to the sales company.		
E753-0001-00	Download Error		
Detection Description	Update of the system software failed.		
Remedy	Perform the following in the order while checking whether the error is cleared.1. Turn OFF and then ON the main power.2. Reinstall the system software using SST or a USB flash drive.3. Replace the FLASH PCB, and reinstall the system software.4. Collect debug log and contact the sales company.		
E760-0001-00	Main Controller PCB internal error		
Detection Description	An error was detected in the Main Controller PCB.		
Remedy	Check/replace the Main Controller PCB		

E804-0000-00	Cartridge Fan error
Detection Description	A lock for the Cartridge Upper Fan (FM3) or the Cartridge Lower Fan (FM4) is detected during the sleep mode.

[Reference] If a lock for the Cartridge Upper Fan (FM4) is detected during operation, display E 805-0002.
E805-0001-05	Cartridge Upper Fan error.
Detection Description	It was detected that the Cartridge Upper Fan was locked.
Remedy	Replacement of Cartridge Upper Fan.
E805-0002-05	Cartridge Lower Fan error.
Detection Description	It was detected that the Cartridge lower Fan was locked.
Remedy	Replacement of the Cartridge Lower Fan.
E805-0008-05	Duplex Fan error.
Detection Description	It was detected that the Finisher Fan was locked.
Remedy	Replacement of the Duplex Fan.
E805-0009-05	Laser Scanner Fan error.
Detection Description	It was detected that the Laser Scanner Fan was locked.
Remedy	Replacement of the Laser Scanner Fan.
E808-0001-05	Low Voltage Power Supply Failure
Detection Description	- 24V Power Supply error
Remedy	[Related parts]
	 Low Voltage Power Supply Unit [Remedy] Check/replace the related harness/cable, connector and parts.
5040 0004 05	
E840-0001-05	Pressure Release Mechanism error
Detection Description Remedy	An error was detected at the pressure/separation operation. [Related parts]
Remedy	- Fixing Assembly
	- DC Controller PCB
	[Remedy] Check/replace the related harness/cable, connector and parts.
E880-0001-00	Controller Fan error
Detection Description	It was detected that the Controller Fan was locked.
Remedy	 [Related parts] R1.00 Cable between the Main Controller PCB (UN25/J15) and the Controller Fan (FM12) Controller Fan (FM12) Main Controller PCB (UN25) [Remedy] Perform the following in the order while checking whether the error is cleared. Check the connectors of the Controller Fan. Visually check rotation of the Controller Fan. If it is not rotated, replace the Controller Fan. If it is rotated, replace the Main Controller PCB.

E880-0003-00	Controller Fan error		
Detection Description	It was detected that the Controller Fan was locked.		
Remedy	 [Related parts] R1.00 Cable between the Main Controller PCB and the Controller Fan Controller Fan Main Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. Check the connectors of the Controller Fan. Visually check rotation of the Controller Fan. a. If it is not rotated, replace the Controller Fan. b. If it is rotated, replace the Main Controller PCB. 		
E880-0005-00	Error in Controller Fan		
Detection Description	Fan lock of the HDD Cooling Fan was detected		
Remedy	Check if the connector is connected. It the connection is OK, replace the HDD Cooling Fan.		
E881-0001-00	Board over heat error		
Detection Description	Abnormal temperature of the Main Controller CPU was detected.		
Remedy	 [Remedy] Perform the following in the order while checking whether the error is cleared. a. If the error occurred during a service visit and then occurred again, replace the Main Controller PCB. b. If the error does not occur during a service visit but is found in the log: Clean the inlet on the side where the fan is installed and remove dust. Remove dust from the Controller fan. If the space on the side where the fan is installed is less than 10 cm, ask the customer to secure enough space. 		
E996-0001-05	Error for collecting sequence jam log (Printer)		
Detection Description	Error for collecting jam log (Printer)		
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-R" to "1", it is handled as an error instead of a jam from the first occurrence.		
E996-007F-04	Error for collecting sequence jam log (Printer)		
Detection Description	Error for collecting jam log (Printer)		
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence.		
E996-0CE0-05	Error for collecting sequence jam log (Printer)		
Detection Description	Error for collecting jam log (Printer)		
Remedy	[Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence.		

Jam Code

Jam Type

Туре	Overview of detection	Check items (in arbitrary order)
DELAY	 A delay jam occurs when a sensor was not turned ON although a specified period of time had passed after the start of detection by the sensor. Remaining paper at the upstream of the target sensor Soiling on the target sensor Displacement of the target sensor position Failure of the target sensor Soiling (grease)/deterioration/failure of a drive motor loo upstream of the target sensor Soiling (paper dust)/deterioration/failure of a drive rolle cated upstream of the target sensor 	
STNRY	A stationary jam occurs when a sensor was not turned OFF although a specified period of time had passed after the sensor was turned ON.	 Remaining paper near the target sensor Soiling on the target sensor Displacement of the target sensor position Failure of the target sensor Soiling (grease)/deterioration/failure of a drive motor located upstream of the target sensor Soiling (paper dust)/deterioration/failure of a drive roller located upstream of the target sensor
DOOR OP	A door open jam occurs when a sensor detected door open during printing operation.	Door open during printing
COVER OP	A door open jam occurs when a sensor detected cover open during printing operation.	Cover open during printing
ADF OPEN	A door open jam occurs when a sensor detected ADF open during printing operation.	ADF open during printing
SEQUENCE	A sequence jam occurs when there was an error in sensor detection signal at printing operation se- quence. Since the jam may occur due to sporadic noise with software of each equipment or communication line (interruption of communication), failure of the part is not the cause of the jam. After the jam is removed, the machine works.	 Opening/closing of the door Turning OFF and then ON the power Error near the target sensor (soiling/displacement/failure of the sensor, error in harness/open circuit of harness, soiling (grease)/deterioration/failure of a drive motor, or soiling (paper dust)/deterioration/failure of a drive roller)
POWER ON	A power-on jam occurs when a sensor detected ON state at power-on.	 Remaining paper in the machine Soiling on the target sensor Failure of the target sensor Foreign matter on the target sensor (paper dust, paper lint)
ERROR	An error avoidance jam occurs when an error in the machine (excluding parts failure) was detected. Printing operation is suspended to avoid error oc- currence by error code; therefore, parts failure is not the cause of the jam. After the jam is removed, the machine works. If it is due to parts failure, an error code instead of the error avoidance jam is displayed on UI and printing operation is suspended. In such case, serv- ice technician should perform remedial work for the error code.	 Opening/closing of the door after jam removal Turning OFF and then ON the power after jam removal
SIZE ERR	A size error jam occurs when the difference be- tween the paper length detected by the Cassette Guide Plate/specified on the Control Panel and the length measured by the Registration Sensor is out of the specified range.	 Difference in paper size Wrong paper size setting Error in the Document Size Sensor (soiling/displacement/ failure of the sensor) Error in the Paper Size Detection Unit (failure of mechanical structure for size detection, failure of the Guide Plate, or fail- ure of the Cassette Size Switch)
P-STOP	Forcible stop of paper feed It occurs when a sheet of paper stops at the position specified in service mode.	Using at problem analysis.

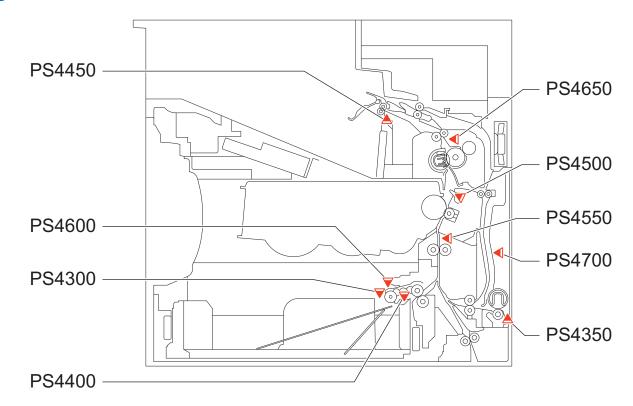

Туре	Overview of detection	Check items (in arbitrary order)
Wrapping jam	When the first sensor after the fixing roller is turned ON is turned OFF immediately detection after the detection. Alternatively, when the second sensor after fixing roller is turned ON and immediately after detection, the first sensor is detection turned OFF.	 Failure of the target sensor Fixing Assembly failure Paper Type Confirmation (Check if paper type cannot be

Jam screen display specification

Due to one jam code being used for multiple options, the illustration for the different option may be displayed on the jam screen. In this case, "1/2" or similar information is displayed on top left side of the screen and this area can be pushed. This operation can be used to switch information on the screen.

UniFlow (Advanced Scanning)

ACC ID	Jam Code	ТҮРЕ	Sensor Name/Description	Sensor ID
01	0025	OTHER	Detected skew greater than the maximum correctable amount	[1],[2]
01	0026	OTHER	Unable to detect skew due to unexpected originals	[1],[2]

■ 010025: Jam Code (UniFlow) 0025

Detection Description

Jam Type: Other Jams Detected skew greater than the maximum correctable skew amount when performing Advanced Scan.

Remedy

- 1. Set the original again by following the displayed instruction.
 - When setting originals with mixed Free sizes, set each sheet of original to align with the center.

CAUTION:

Be aware that an image loss or a paper jam may be caused if the center of the original is off by 10 mm or more from the center of the Tray.

• When setting originals with mixed standard size paper, set by aligning the edge of originals to the rear of feeder.

NOTE:

Adjust by aligning the Side Guide Plate (Paper Guide) to the large paper.

2. Perform skew adjustment referring to chapter 6 "Adjustment".

010026: Jam Code (UniFlow) 0026

Detection Description

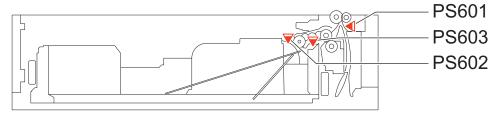

Jam Type: Other Jams

Detected skew greater than the maximum correctable skew amount when performing Advanced Scan.

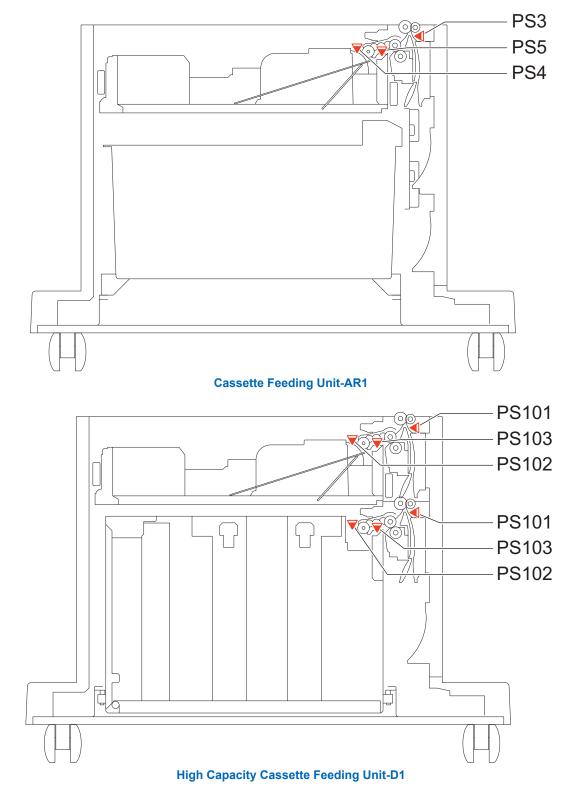

Remedy

- 1. Check if the original size is out of specification.
- 2. If the original is bent, modify it.
- 3. Change the original stacking direction (with the less damaged end of the original as its leading edge).
- 4. Change the document reading method.
 - Settings/Registration > Function Settings > Common > Scan Settings > Original Thickness Defaults for Scan from Feeder

Alarm Code

Alarm Code Details

00-0085	A notice of state
A. Operation / B. Cause / C. Remedy	-
00-0246	Error code display (4-digit)
A. Operation / B. Cause / C. Remedy	Soft counter PCB cannot write normally
00-0247	Error code display (4-digit)
A. Operation / B. Cause / C. Remedy	Soft counter PCB cannot restore data
01-0002	No change in device status after specified period of time has passed (RDS server creates)
A. Operation / B. Cause / C. Remedy	-
01-0005	Restricted operation notification
A. Operation / B. Cause / C. Remedy	The device entered limited function mode for some reason. * Not displayed on service mode history due to the alarm being generated by UGW
04-0076	OP Cassette 2 Memory Error
A. Operation / B. Cause / C. Remedy	Cause: Communications cannot be made with the Control PCB of OP Cassette 2 or data error occurs. Remedy: 1. Check on the connection of OP Cassette 2 2. Check on the connector of the Control PCB of OP Cassette 2 3. Replacement of the Control PCB of OP Cassette 2 4. Replacement of the DC Controller PCB
04-0077	OP Cassette 3 Memory Error
A. Operation / B. Cause / C. Remedy	Cause: Communications cannot be made with the Control PCB of OP Cassette 3 or data error occurs. Remedy: 1. Check on the connection of OP Cassette 3 2. Check on the connector of the Control PCB of OP Cassette 3 3. Replacement of the Control PCB of OP Cassette 3 4. Replacement of the DC Controller PCB
04-0078	OP Cassette 4 Memory Error
A. Operation / B. Cause / C. Remedy	Cause: Communications cannot be made with the Control PCB of OP Cassette 4 or data error occurs. Remedy: 1. Check on the connection of OP Cassette 4 2. Check on the connector of the Control PCB of OP Cassette 4 3. Replacement of the Control PCB of OP Cassette 4 4. Replacement of DC Controller PCB
10-0020	Toner (Bk) prior notification alarm
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > TONER-K.

10-0094	Toner memory detection error (Bk):
A. Operation / B. Cause / C. Remedy	 Communication error with the memory of toner (Bk) was detected. Cause: Memory of toner (Bk) could not be detected. 1. Remove and then install the Toner Cartridge. 2. Check for any scar or soiling on the memory area of the Toner Cartridge. 3. Check the connector between the memory detection area and the DC Controller PCB. 4. Check for any soiling or damage on the memory detection area. 5. Replace the Toner Cartridge (Bk)
10-0098	Cartridge memory detection alarm
A. Operation / B. Cause / C. Remedy	Cause: Memory of cartridge could not be detected.Measures:1. Remove and then install the Cartridge.2. Check for any scar or soiling on the memory area of the Cartridge.3. Replace the Cartridge.
10-0100	Toner Bottle replacement completion alarm
A. Operation / B. Cause / C. Remedy	Replacement of Toner Bottle was detected. 10-0100-0071: New Toner Bottle replacement detection (Bk) 10-0100-0072: New Toner Bottle replacement detection (Y) 10-0100-0073: New Toner Bottle replacement detection (M) 10-0100-0074: New Toner Bottle replacement detection (C) 10-0100-0081: Toner Bottle premature removal detection (Bk) 10-0100-0082: Toner Bottle premature removal detection (Y) 10-0100-0083: Toner Bottle premature removal detection (C) 10-0100-0084: Toner Bottle premature removal detection (C) 10-0100-0181: Unidentified Toner Bottle detection (Bk) 10-0100-0182: Unidentified Toner Bottle detection (Y) 10-0100-0183: Unidentified Toner Bottle detection (M) 10-0100-0184: Unidentified Toner Bottle detection (C) Some alarm codes may not be generated depending on models.
10-0404	Toner Bottle empty alarm (Bk)
A. Operation / B. Cause / C. Remedy	Toner Bottle empty was detected.
10-F020	Toner (Bk) high consumption alarm
A. Operation / B. Cause / C. Remedy	It was detected that the target part was at a high level of daily consumption.
13-0027	For R&D
A. Operation / B. Cause / C. Remedy	
13-002B	For R&D
A. Operation / B. Cause / C. Remedy	
13-0FFC	For R&D
A. Operation / B. Cause / C. Remedy 13-0FFD	For R&D
A. Operation / B. Cause / C. Remedy	
13-0FFF	For R&D
A. Operation / B. Cause / C. Remedy	

14-0007	
14-0002	For R&D
A. Operation / B. Cause / C. Remedy	
31-0006	HDD failure when equipped with the mirroring function
A. Operation / B. Cause / C. Remedy	HDD failure when equipped with the mirroring function
31-0008	HDD failure prediction alarm
A. Operation / B. Cause / C. Remedy	 Movement: HDD failure is expected to occur in a short time due to occurrence of physical error in HDD. It does not occur in the HDD of mirroring configuration. Cause: Error in the S.M.A.R.T. value of HDD Measures: Back up the data stored in HDD. Replace the HDD. Restore the data. S.M.A.R.T. (Self-Monitoring Analysis and Reporting Technology): Self-diagnosis function built in the HDD. The occurrence rate of reading error, reading and writing speed, the total number of Motor start-up and stop times, the total length of power-on time, etc. are monitored.
31-0009	FLASH failure prediction alarm
A. Operation / B. Cause / C. Remedy	Cause: Error in the S.M.A.R.T. value of FLASH memory It indicates a physical error of the FLASH memory, which is expected to soon lead to a failure. *: S.M.A.R.T. (Self-Monitoring Analysis and Reporting Technology) = It is a self-diagnosis function built in the FLASH memory, and monitors the occurrence rate of reading errors, reading/writing speed, total number of times of motor start-up/stop, total length of power-on time, etc. Continuously using the machine without taking any measures may lead to E614. Measures: Back up the data stored in the FLASH memory, and restore the data after replacing the FLASH memory.
31-0060	Warning in accessing the NVRAM
A. Operation / B. Cause / C. Remedy	Communication with EEPROM in the DCON PCB was not available. Remedy: Replace the DCON PCB.
31-0061	Warning in accessing the NVRAM
31-0061 A. Operation / B. Cause / C. Remedy	Warning in accessing the NVRAM Communication with EEPROM in the DCON PCB was not available. Remedy: Replace the DCON PCB.
A. Operation / B. Cause /	Communication with EEPROM in the DCON PCB was not available. Remedy:
A. Operation / B. Cause / C. Remedy	Communication with EEPROM in the DCON PCB was not available. Remedy: Replace the DCON PCB.

40-0013	Tranfer Roller life value reaching alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > TR-ROLL.					
40-0076	Fixing Assembly prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > FX-UNIT.					
40-0080	Cassette 1 Feed Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C1-FD-RL.					
40-0081	Cassette 1 Separation Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C1-SP-RL.					
40-0083	Cassette 2 Feed Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C2-FD-RL.					
40-0084	Cassette 2 Separation Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C2-SP-RL.					
40-0086	Cassette 3 Feed Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C3-FD-RL.					
40-0087	Cassette 3 Separation Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PM- DLV-D > C3-SP-RL.					

40-0089	Cassette 4 Feed Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PN $DLV-D > C4-FD-RL$.					
40-0090	Cassette 4 Separation Roller prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > PI DLV-D > C4-SP-RL.					
40-0092	Separation Roller (DADF) prior notification alarm					
A. Operation / B. Cause / C. Remedy	DLV-D > DF-SP-RL.					
40-0125	Pickup Roller (DADF) prior notification alarm					
A. Operation / B. Cause / C. Remedy	The life value of a target part reached the number of days left as set in COPIER > OPTION > DLV-D > DF-PU-RL.					
43-0013	Transfer Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	The counter of the Transfer Roller was cleared.					
43-0076	Fixing Assembly replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Completion of Fixing Assembly replacement was detected.					
43-0077	Multi-purpose Tray Feed Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Multi-purpose Tray Feed Roller counter was cleared.					
43-0078	Multi-purpose Tray Separation Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Multi-purpose Tray Separation Roller counter was cleared.					
43-0080	Cassette 1 Feed Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 1 Feed Roller counter was cleared.					
43-0081	Cassette 1 Separation Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 1 Separation Roller counter was cleared.					
43-0083	Cassette 2 Feed Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 2 Feed Roller counter was cleared.					
43-0084	Cassette 2 Separation Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 2 Separation Roller counter was cleared.					
43-0086	Cassette 3 Feed Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 3 Feed Roller counter was cleared.					
43-0087	Cassette 3 Separation Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 3 Separation Roller counter was cleared.					
43-0089	Cassette 4 Feed Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 4 Feed Roller counter was cleared.					
43-0090	Cassette 4 Separation Roller replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Cassette 4 Separation Roller counter was cleared.					

43-0092	Separation Roller (DADF) replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Separation Roller (DADF) counter was cleared.					
43-0125	Pickup Roller (DADF) replacement completion alarm					
A. Operation / B. Cause / C. Remedy	Pickup Roller (DADF) counter was cleared.					
50-0010	Alarm due to original separation failure					
A. Operation / B. Cause / C. Remedy	Movement: Nothing in particular. Cause: Condition unable to separate 1st sheet of original from the ADF occurs 3 times. Measures: Check the rotation of the Delivery Reversal Motor (M12) -> Check the operation of th Pickup Solenoid (SL5) -> Check the life of the Pickup and Feed Rollers and Separation Pad -> Check if the paper lint is at the pickup slot.					
50-0015	Failure of the ADF Double Feed Sensor					
A. Operation / B. Cause / C. Remedy	Cause:					
60-0001	Shift Tray alarm					
A. Operation / B. Cause / C. Remedy						
70-0071	Verification error by Falsification detection at startup function					
A. Operation / B. Cause / C. Remedy	Cause:					
70-0086	For R&D					
A. Operation / B. Cause / C. Remedy						
70-0087	Firmware combination mismatch					
A. Operation / B. Cause / C. Remedy	Cause: An option with the firmware which version is newer than that of the firmware installed in the host machine was detected. It is an alarm when the automatic update cancellation message is displayed on the Control Panel. Detection condition: When the following two conditions are satisfied: 1. "1" is set in COPIER>Option>FNC-SW>VER-CHNG. 2. The version of the firmware installed in the option that has been installed to the host machine is newer than that of the firmware in the host machine. Timing: At startup Movement/symptom: Cancel the automatic update. Measures: Update the firmware of the host machine.

Service Mode

Overview	410
COPIER (Service mode for printer)	427
FEEDER (ADF service mode)	622
BOARD (Option board setting mode)	
	629
FAX (Serivce Mode for FAX)	630

Overview

It is possible to see each item of service mode so that those who access to service mode can understand how to use them. The main types of this machine's service mode are shown below.

Basic Operations

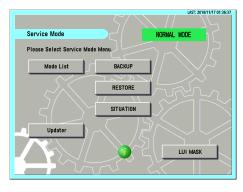

This section describes the basic operation of service mode.

Entering Service Mode

For information on how to enter service mode, contact the Support Dept. of the sales company.

Service Mode Menu

Press the button in the service mode menu to display the initial screen of each mode. The differences between these modes are described below.

Top Screen

MODELIST

In this mode, functions for referring to each item in service mode, etc. are available.

Updater

This button is used to access the CDS and UGW servers and update system software.

BACKUP

This button is used to back up the service mode setting values.

RESTORE

This button is used to restore the service mode setting values backed up by [BACKUP].

SITUATION

This function displays service mode items according to the situation.

LUI MASK

This button is used to display a mask screen to prevent operations from being performed from the Control Panel while the service mode is being accessed from a remote PC.

NOTE:

For the detailed information on how to use Updater, BACKUP, and RESTORE, refer to the imageRUNNER ADVANCE System Service Manual.

Description of Service Mode Items

The description of the initial screen, the main items, the intermediate items and the sub items can be displayed. After selecting any item of the initial screen, main item, the intermediate item or the sub item, pressing "i" (Information Button) displays the description of the selected item (hereinafter referred to as the service mode contents).

CAUTION:

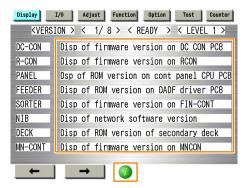

- Displayed language of the service mode contents can be selected from J/E/F/I/G/S/C/K/T.
- · The service mode contents can be upgraded using SST or a USB flash drive just like other system software.

Example: COPIER > DISPLAY > VERSION screen

1. Press the [i] button.

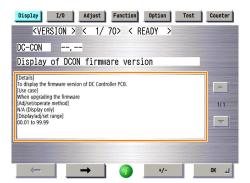

Display	I/O Adj	ust Func	tion Opti	on Tes	Counter
<vers1< td=""><td>[ON > <</td><td>1/9></td><td>< READY</td><td>> < LI</td><td>EVEL 1 ></td></vers1<>	[ON > <	1/9>	< READY	> < LI	EVEL 1 >
DC-CON

PANEL					
EC0	43.60				
SORTER					
NIB	06.00				
SDL-STCH					
OP-CON					
-					

2. The title of each sub item is displayed.

To check the details of each item, select the relevant item and press the [i] button.

3. A detailed description of the sub item (specifications and use methods, setting screen, etc.) is displayed.

Switching the Screen Display (Level 1 <->2)

Switching of screens between Level 1 and Level 2 becomes easier.

By pressing <LEVEL 1> at the upper right of the screen while Level 1 screen is displayed, the screen is switched to Level 2 screen.

والمستج المشتر المشتر المشتر الشقير	Counter Display I/O Adjust Function Option Test Counter

Examples of Screen Display

NOTE:

- This key combination can be used to enter the Level 2 screen.
 - Mode List screen > [Settings/Registration] > [2]

Situation mode has been implemented in this machine to improve workability and searchability at the site. This mode makes it possible to easily use the service mode appropriate for the scene at the site.

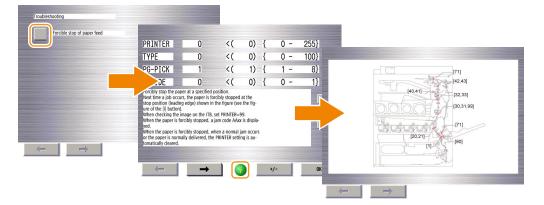

The following items are available in situation mode.

- Install :
- To be referred at installation of the machine.
- Troubleshooting :
- To be referred at problem solving.
- Parts Replacement : To be referred at parts replacement.
- Major Adjustment :
 - To be referred at installation of the machine.
- Sensor Check :
 - To be referred at checking of the sensor.
- Part Check :
- To be referred at operation check of the part.

The following three points are made available depending on each situation:

- · Display of related service mode that requires adjustment
- · Display of causes and remedies
- · Display of related images

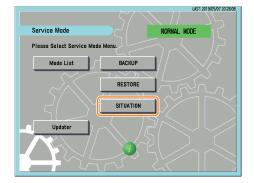

How to Use Sensor Check

You can find a desired electrical component in Sensor Check of situation mode to review its I/O info. To do this, follow the procedure below.

1. Start service mode.

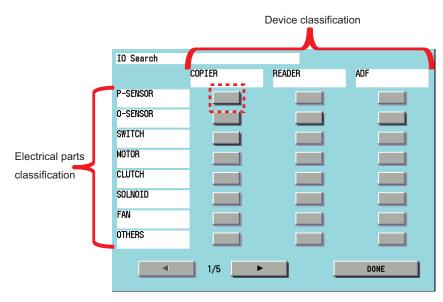

2. Select "SITUATION".

3. On the "SITUATION MODE" screen, select "Sensor Check".

[8]	TUATION MODE]		
	Sensor Check		
	Parts Check		
*	· _ =>		

4. Press a button according to the type of electrical component and the corresponding device type. Example: In the case of the Registration Sensor of the host machine, press the button (red dotted frame) at "COPIER"/"P-SENSOR".

5. A list of electrical component types for the selected device is displayed.

IO Detail					
COPIER - P-SEN	ISOR

How to Use Parts Check

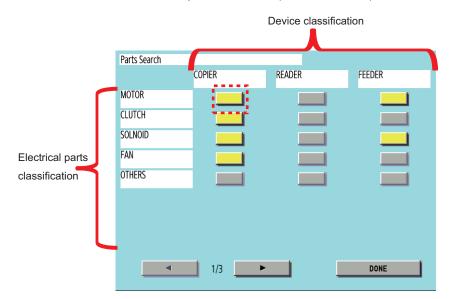

In the Parts Check of situation mode, among electrical components used (motors, fans, solenoids, and clutches), those that can operate alone can be operated from the screen and the operations can be checked. The operation procedure is shown below.

NOTE:

The service mode used below utilizes the system where electrical components used are operated by control signals sent from the DC Controller. If a control signal is sent but the electrical component does not operate, a failure of the electrical component, open circuit of the cable for transmitting control signals, or poor contact of the connector is suspected.

- 1. Select SERVICE MODE > SITUATION > Parts Check.
- 2. Press a button according to the type of electrical component and the corresponding device type.

Example: In the case of a motor of the host machine, press the button (red dotted frame) at "COPIER"/"MOTOR".

3. A list of electrical component types for the selected device whose operation can be checked is displayed.

ł	Parts Check			
(Copier - Moto)R		
	No	Name		
	М5	Developing Motor (Y) (M5)

Security Support

A password can be specified to prevent unauthorized access to the service mode.

Related Service Mode:

Setting password type when the screen is switched to the service mode

• COPIER > OPTION > FNC-SW > PSWD-SW (Level 1)

The password for service engineer when the screen is switched to the service mode

• (Level 2) COPIER > OPTION > FNC-SW > SM-PSWD

Procedure for Setting Password

1. Set "1" or "2" in the following service mode.

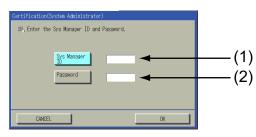

- COPIER > OPTION > FNC-SW > PSWD-SW <Setting range>
 - 0: No password [Default]
 - 1: Service technician
 - 2: System administrator + Service technician

CAUTION:

- This setting is enabled without restarting the host machine.
- · After setting the password, the following screen will be displayed by accessing service mode.
- Therefore, when the PSWD-SW is set to "2" (system administrator + service technician), enter the system administrator password ([System Manager ID] and [System Manager PIN] in [Settings/Registrations] > [Management Settings] > [User Management] > [System Manager Information Settings]), and then press the [OK] button.

2. Follow the following procedure to check that you can login to service mode.

1. When setting PSWD-SW to "1" (system administrator) or "2" (ServiceMode_070Backup) in step 1, the system administrator password entry screen will be displayed, so enter the system administrator ID in [Sys Manager ID] (1) and system administrator password in [Password] (2), and then press the [OK] button.

 When setting PSWD-SW to "2" (system administrator + service technician) in step 1, the service technician password entry screen will be displayed after step 2. Enter the service technician password in [Password] (1), and then press the [OK] button.

CAUTION:

- The service technician password is the password set in COPIER > OPTION > FNC-SW > SM-PSWD.
- If you forget the password for service technician, disable the password function using the Service Support Tool (SST).

Check that you can access service mode and finish the work.

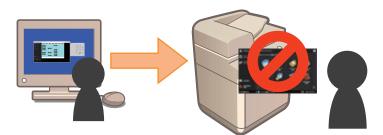

Function to Mask the Screen during Remote Access

This function ensures security during servicing work using remote connection.

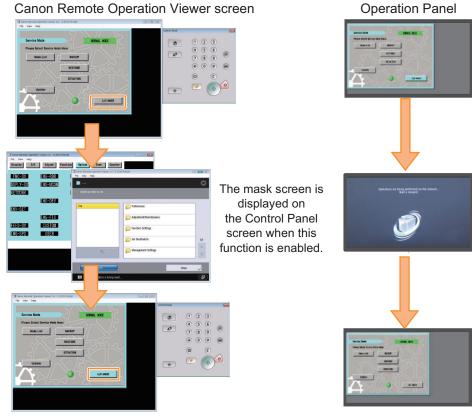

The machine has an option called Remote Operation Viewer for remote control via a network. This option enables a service technician to perform maintenance on the machine from a remote location.

However, the same screen is displayed on the Remote Operation Viewer screen and the Control Panel during the work, which carries the following risks.

- The screen being operated can be seen by the user.
- During remote operation, the user may perform an operation on the Control Panel and an unexpected processing may be executed.

To solve these security problems, a function has been added to display a message on the Control Panel screen when the machine is being operated remotely using Remote Operation Viewer in order to prevent the user from performing unexpected operations. As shown in the figure below, the mask screen is displayed when this function is enabled.

Examples of Screen Display

Functional Specification

The specifications of this function are shown below.

• When this function is enabled, a mask screen is displayed on the Control Panel. When the function is disabled, the original screen is displayed again.

Example of the displayed mask screen

- This function is disabled when the following operations are performed.
 - Press [LUI MASK] on the service mode top screen.
 - Exit Remote Operation Viewer.
 - The remote access is disconnected due to a network failure, etc.
 - The machine is shut down (power down) or restarted.
- If this function is disabled while the service mode is being operated, the service mode is forcibly exited, and the previous screen is displayed. (However, the service mode is not forcibly terminated if the Updater screen has been accessed from service mode.)
- When this function is enabled, all operations (operations from the Touch Panel or hardware keys) other than screen brightness adjustment and operation on the Energy Saver key are disabled.

• Procedure for Enabling This Function

The procedure for enabling this function is shown below.

- 1. Use the Remote Operation Viewer to access the machine, and start service mode.
- 2. Press [LUI MASK], and check that the button is enabled (has turned light blue).

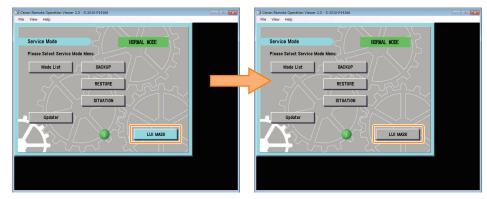

• Procedure for Disabling This Function

The procedure for disabling this function is shown below.

1. Perform one of the following operations.

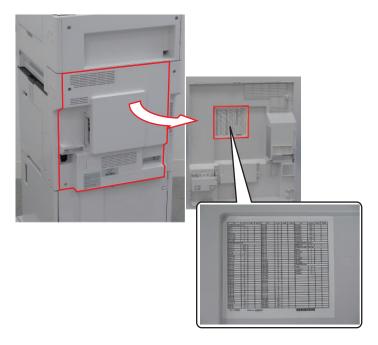

• Access the service mode, press [LUI MASK], and check that the button is disabled (has turned gray).

- Exit the Remote Operation Viewer.
- Disconnect the network (disconnect the network cable, disable the network function, etc.).
- · Shut down or restart the machine.

Service Mode Backup

Adjustment is made to every machine at the time of shipment to write the adjustment value in the service label. When replacing the DC Controller PCB or clearing RAM, the adjusted values of ADJUST and OPTION return to the default; therefore, be sure to adjust the value in the field, and in the case of changing the service mode value, be sure to write down the changed value in the service label. When the corresponding item is not found on the service label, write the value in blank field. The service label of this machine is affixed to the position shown below.

Output of Service Print Data

- The service print data such as P-PRINT can be output as a file.
- By executing the following service mode, data at the time can be saved in the Storage Service Mode Level 1 > Copier > Function > MISC-P > RPT-FILE
- The saved data will be deleted from the Storage when it is exported to SST or a USB flash drive.
- When multiple service data such as P-PRINT and HIST-PRINT is saved in the host machine, it is collectively exported to SST or a USB flash drive.

NOTE:

- · Service print data cannot be output when an error has occurred.
- When connecting a USB flash drive that runs on external power, start the machine with the power is turned ON in advance. A USB flash drive connected after the machine has been started cannot be recognized.

How to obtain the report data	Location
"Moving the file in service mode" on page 423	USB flash drive
"Moving the file in download mode" on page 424	USB flash drive
"How to Export Service Print File to a PC Using SST " on page 425	PC

Service Print and Data File Name Supported for File Output

Service Mode	Content
COPIER > Function> MISC-P > P-PRINT	Output of service mode setting values
COPIER > Function > MISC-P > HIST-PRT	Output of jam and error history
COPIER > Function > MISC-P > USER-PRT	Output of Settings/Registration menu setting values list
COPIER > Function > MISC-P > D-PRINT	Output of service mode (DISPLAY)
COPIER > Function > MISC-P > ENV-PRT	Output of the temperature and humidity inside the machine/surface temperature of the Fixing Roller as a log
COPIER > Function > MISC-P > PJH-P-1	Output of details on print job history (100 jobs)

Service Mode	Content
COPIER > Function > MISC-P > PJH-P-2	Output of details on print job history (all jobs)
COPIER > Function > MISC-P > USBH-PRT	Output of USB device information report
COPIER > Function > MISC-P > TNRB-RPT	Output of the Toner Container ID report

NOTE:

When each service mode is individually executed, the report corresponding to the service mode as of the time of execution is output.

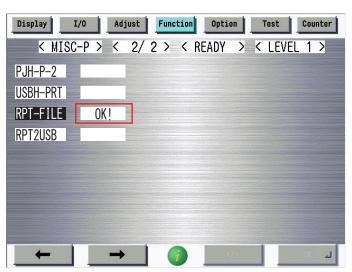

Moving the file in service mode

Preparation

- The following item needs to be prepared to export the service print file to a USB flash drive.
 - USB flash drive (FAT32 format file system that is not locked with a password. To display the USB menu, the said model's firmware must already be registered.)

Overall flow

- 1. Selecting RPT-FILE
 - Select service mode > Copier > Function > MISC-P > RPT-FILE; and then press OK.
- 2. Generating report file
 - After the "ACTIVE" blinks for 3 to 4 minutes, generation of a report file is complete as "OK!" is displayed.

- 3. Connect the USB flash drive storage device to the USB port.
- 4. Select service mode > Copier > Function > MISC-P > RPT2USB; and then press OK.

Display 1/0	Adjust		Option	Test Counter
< MISC-P >	× 2/	2 > <5E	RVIGE 2 K	
PJH-P-2				
USBH-PRT	No.			
RPT-FILE				
RPT2USB				
—	\Rightarrow		+/-	ОК 🔟

NOTE:

- If the downloaded file is opened as plain text, the paragraphs are misaligned, which makes it difficult to read the data.
- When the file is dragged to WordPad, an image similar to the image output on paper may be displayed in some cases.

Moving the file in download mode

Preparation

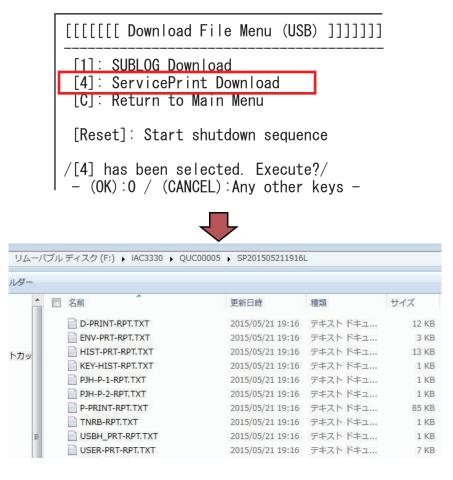

- The following item needs to be prepared to export the service print file to a USB flash drive.
 - USB flash drive (FAT32 format file system that is not locked with a password. To display the USB menu, the said model's firmware must already be registered.)

Overall flow

- 1. Selecting RPT-FILE
 - Select service mode > Copier > Function > MISC-P > RPT-FILE; and then press OK.
- 2. Generating report file
 - After the "ACTIVE" blinks for 3 to 4 minutes, generation of a report file is complete as "OK!" is displayed.

Display I/O	Ad	just	Function	Optio		est C	ounter

PJH-P-2							
USBH-PRT							
RPT-FILE	OK!						
RPT2USB							
-	-	•	0	+	/-		к ц

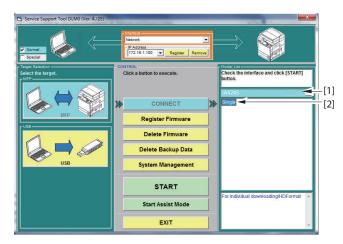

3. Execute Download mode > [5]: Download File > [4]: ServicePrint Download.

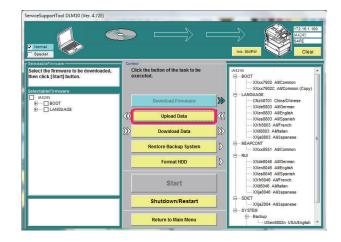

How to Export Service Print File to a PC Using SST

The procedure for exporting the service print file to a PC using SST will now be described. (SST described in the procedure is Ver 4.72.)

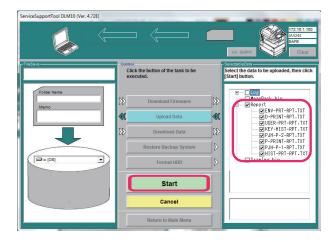

- 1. Start the SST.
- 2. Select the model [1] to be connected and the information file for separate download [2] ([Single]). Then, check the network settings and click the "Start" button.

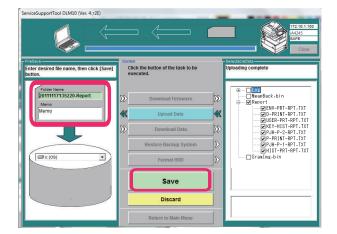

3. Click the [Upload Data] button.

4. Select [Report] and click the [Start] button.

5. Specify the folder name to be saved and enter comments if necessary. Then click the [Store] button.

6. Click the [OK] button.

ADJUST (Adjustment mode)

■ AE

AE-TBL	1 Adj of text density at image density adj
Deta	 To adjust text density according to the adjusted image density. As the greater value is set, text gets darker.
Use Cas	e When clearing the RAM data of the Reader
Adj/Set/Operate Metho	d 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch.
Cautio	n When clearing the RAM data of the Reader, enter the value of service label.
Display/Adj/Set Rang	e 1 to 9
Default Valu	e 5

ADJ-XY

JUPIER (Service mode for p	printer) > ADJUST (Adjustment mode) > ADJ-XY
ADJ-X 1	Adj read start pstn: Copyboard,vert scan
Detail	To adjust the image reading start position (image leading edge position) in the vertical scanning direction at copyboard reading. As the value is incremented by 1, the image position is moved to the trailing edge side by 0.1 mm
	Decrease the value when the non-image width is larger than the standard value. Increase the value when out of original area is copied.
	When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader.
Use Case	When clearing the Reader-related RAM data/replacing the SATA Flash PCB
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-30 to 30
Unit	mm
Default Value	0
Amount of Change per Unit	0.1
ADJ-Y 1	Adj read start pstn: Copyboard,horz scan
Detail	To adjust the image reading start position in the horizontal scanning direction at copyboard reading As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm. Decrease the value when the non-image width is larger than the standard value.
	Increase the value when out of original area is copied. When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader.
Use Case	When clearing the Reader-related RAM data/replacing the SATA Flash PCB
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Caution	After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range	-15 to 15
Unit	mm
Default Value	0
Amount of Change per Unit	0.1
ADJ-S 1	Adjustment of Reader shading position
Detail	To adjust the Scanner Unit (Front) position in feed direction when reading the White Plate on the left edge of the Copyboard Glass. When replacing the Scanner Unit, execute RDSHDPOS and write the value of this item in the
	service label. When clearing the Reader-related RAM data, enter the value of service label.
	As the value is incremented by 1, the reading position moves to the trailing edge side by 0.1 mm
Use Case	- When black lines/white lines appear - When replacing the Scanner Unit (Front) - When clearing the Reader-related RAM data
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Caution	After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range	-20 to 20
Unit	mm
Default Value	0
Related Service Mode	COPIER> FUNCTION> INSTALL> RDSHDPOS
Amount of Change per Unit	0.1

ADJ-Y-DF 1	Adj read start pstn:DADF,front,horz scan
Detail	To adjust the front side image reading start position in horizontal scanning direction at DADF reading.
	This function is executed when an image that has been imaged in a state where skew correction is not performed/has failed is out of alignment.
	(In the service mode, when skew correction is turned off or when the inclination of the document is large or the document is chipped.)
	When replacing the Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the image position is moved to the rear side by 0.1 mm.
Use Case	When clearing the Reader-related RAM data/replacing the Controller PCB
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Caution	After the setting value is changed, write the changed value in the service label.

DFTAR3-G 1	Enter shading target VL (G): front, 3rd
Detail	To enter the shading target value of Green on the front side at the third reading position at DADF stream reading. When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader. When replacing the Copyboard Glass/Scanner Unit (Front), execute DF-WLVL1 and DF-WLVL2 and write the value which is automatically set in the service label.
Use Case	- When clearing the Reader-related RAM data/replacing the SATA Flash PCB - When replacing the Copyboard Glass/Scanner Unit (Front)
Adj/Set/Operate Method	 Enter the setting value and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2047
Default Value	1111
Related Service Mode	COPIER> FUNCTION> CCD> DF-WLVL1/WLVL2
DFTAR3-B 1	Enter shading target VL (B): front, 3rd
Detail	To enter the shading target value of Blue on the front side at the third reading position at DADF stream reading. When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader. When replacing the Copyboard Glass/Scanner Unit (Front), execute DF-WLVL1 and DF-WLVL2 and write the value which is automatically set in the service label.
Use Case	- When clearing the Reader-related RAM data/replacing the SATA Flash PCB - When replacing the Copyboard Glass/Scanner Unit (Front)
Adj/Set/Operate Method	 Enter the setting value and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2047
Default Value	1164
Related Service Mode	COPIER> FUNCTION> CCD> DF-WLVL1/WLVL2

OFST-BW0 1	Adj CIS-ch0 offset:front,B&W mode,600dpi
Detail	To adjust the offset value (black level)
	of the Scanner Unit (for front side) on channel 0 in Black & White mode with 600 dpi.
	The value is updated by executing CL-AGC.
Use Case	- When clearing the Reader-related RAM data/replacing the SATA Flash PCB
	- When replacing the Scanner Unit (for front side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC

Detail	To adjust the detection level (gain level) of the Scanner Unit (for front side) in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for front side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	0
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC
GAIN-BW2 1	Adj CIS gain level:bck,B&W mode,600dpi
Detail	To adjust the detection level (gain level) of the Scanner Unit (for back side) in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	0
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC

OFST2BW0 1	Adj CIS-ch0 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 0 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC
OFST2BW1 1	Adj CIS-ch1 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 1 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC
OFST2BW2 1	Adj CIS-ch2 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 2 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC

OFST2BW3 1	Adj CIS-ch3 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 3 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC
OFST2BW4 1	Adj CIS-ch4 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 4 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC
OFST2BW5 1	Adj CIS-ch5 offset:back,B&W mode,600dpi
Detail	To adjust the offset value (black level) of the Scanner Unit (for back side) on channel 5 in Black & White mode with 600 dpi. The value is updated by executing CL-AGC.
Use Case	 When clearing the Reader-related RAM data/replacing the SATA Flash PCB When replacing the Scanner Unit (for back side)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When replacing the CIS, rewrite the value on the label by displaying this item after executing COPIER>FUNCTION>CCD>CL-AGC.
Display/Adj/Set Range	0 to 255
Default Value	216
Related Service Mode	COPIER> FUNCTION> CCD> CL-AGC

DENS

COPIER (Service mode for printer) > ADJUST (Adjustment mode) > DENS

DENS-ADJ 1	Density correction of copy image
Detail	To correct the density of copy image by changing the F-value table. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. Blurring is alleviated when the value is increased, and fogging is alleviated when the value is decreased.
Use Case	When fogging or blurring at high density area occurs with a copy image
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	Density of printer output image cannot be corrected.
Display/Adj/Set Range	1 to 9
Default Value	5
Supplement/Memo	F-value table: shows the relationship between original density and image density.

BLANK

BLANK-T 1	Adjustment of leading edge margin
Detail	To adjust the margin on the leading edge of paper. As the value is increased by 1, the margin is increased toward the center of the paper by 1 pixel (0.0212 mm).
Use Case	 When reducing the margin upon user's request When enlarging the margin for transfer separation/fixing separation
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range	0 to 1000
Unit	pixel
Default Value	118
Amount of Change per Unit	0.0212
BLANK-L 1	Adjustment of left edge margin
Detail	To adjust the margin on the left edge of paper. As the value is increased by 1, the margin is increased toward the center of the paper by 1 pixel (0.0212 mm).
Use Case	When reducing the margin upon user's request
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1000
Unit	pixel
Default Value	59
Amount of Change per Unit	0.0212

CONTERV (CONTROL MODE NOT P	
BLANK-R 1	Adjustment of right edge margin
Detail	To adjust the margin on the right edge of paper. As the value is increased by 1, the margin is increased toward the center of the paper by 1 pixel (0.0212 mm).
Use Case	When reducing the margin upon user's request
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1000
Unit	pixel
Default Value	59
Amount of Change per Unit	0.0212
BLANK-B 1	Adjustment of trailing edge margin
Detail	To adjust the margin on the trailing edge of paper. As the value is increased by 1, the margin is increased toward the center of the paper by 1 pixel (0.0212 mm).
Use Case	 When reducing the margin upon user's request When enlarging the margin for transfer separation/fixing separation
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range	0 to 1000
Unit	pixel
Default Value	94
Amount of Change per Unit	0.0212

PASCAL

OFST-P-K 1	Bk density adj at test print reading
Detail	To adjust the offset of Bk-color test print reading signal at auto gradation adjustment (full adjustment). When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader.
	As the value is larger, the image after adjustment gets darker.
Use Case	When clearing the Reader-related RAM data/replacing the SATA Flash PCB
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Caution	After the setting value is changed, write the changed value in the service label.
Display/Adj/Set Range	-128 to 128
Default Value	According to the adjustment value of the Reader at factory shipment

FEED-ADJ

REGIST 1	Adj of registration start timing: Plain
Detail	To adjust the timing to turn ON the Registration Roller in the case of plain paper. As the value is incremented by 1, the margin on the leading edge of paper is increased by 0.1 mm. +: Leading edge margin becomes larger. -: Leading edge margin becomes smaller. When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
Use Case	When changing the edge margin When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method	Enter the setting value (switch positive/negative by +/- key) and press OK key.
Caution	Be sure to enter the adjustment value on the service label after adjustment.
Display/Adj/Set Range	-50 to 50
Default Value	9
ADJ-C1 1	Cassette1 write start pstn in horz scan
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 1. As the value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When clearing RAM data, enter the value of service label.
Use Case	When clearing the Main Controller RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-25 to 50
Unit	mm
Default Value	0
ADJ-C2 1	Cassette2 write start pstn in horz scan
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 2. As the value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When clearing RAM data, enter the value of service label.
Use Case	When clearing the Main Controller RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-25 to 50
Unit	mm
Default Value	0
ADJ-C3 1	Cassette 3 write start pstn in horz scan
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 3. As the value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When clearing RAM data, enter the value of service label.
Use Case	When clearing the Main Controller RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-25 to 50
Unit	mm
Default Value	0

ADJ-C4 1	Cassette 4 write start pstn in horz scan
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper from the Cassette 4. As the value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm.
	 +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When clearing RAM data, enter the value of service label.
Use Case	When clearing the Main Controller RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-25 to 50
Unit	mm
Default Value	0
ADJ-MF 1	Write start pstn in horz scan: MP Tray
Detail	To adjust the image write start position in the horizontal scanning direction when feeding paper
	from the Multi-purpose Tray.
	As the value is incremented by 1, the margin on the left edge of paper is increased by 0.1 mm.
	+: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.)
	When clearing RAM data, enter the value of service label.
Use Case	When clearing the Main Controller RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-25 to 50
Unit	mm
Default Value	0
ADJ-C1RE 1	Write start pstn in horz scan:Cst1 2nd
Detail	To adjust the image write start position on the second side in the horizontal scanning direction
	when feeding paper from the Cassette 1.
	As the value is changed by 1, the left margin is changed by 0.1 mm.
	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.)
	As the value is changed by 1, the left margin is changed by 0.1 mm.
Use Case	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.)
Use Case Adj/Set/Operate Method	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label.
	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data
Adj/Set/Operate Method	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Adj/Set/Operate Method Display/Adj/Set Range	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50
Adj/Set/Operate Method Display/Adj/Set Range Unit	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50 mm
Adj/Set/Operate Method Display/Adj/Set Range Unit Default Value	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50 mm 0 Write start pstn in horz scan:Cst2 2nd To adjust the image write start position on the second side in the horizontal scanning direction
Adj/Set/Operate Method Display/Adj/Set Range Unit Default Value ADJ-C2RE 1	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50 mm 0 Write start pstn in horz scan:Cst2 2nd To adjust the image write start position on the second side in the horizontal scanning direction when feeding paper from the Cassette 2.
Adj/Set/Operate Method Display/Adj/Set Range Unit Default Value ADJ-C2RE 1	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50 mm 0 Write start pstn in horz scan:Cst2 2nd To adjust the image write start position on the second side in the horizontal scanning direction when feeding paper from the Cassette 2. As the value is changed by 1, the left margin is changed by 0.1 mm.
Adj/Set/Operate Method Display/Adj/Set Range Unit Default Value ADJ-C2RE 1	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. (An image moves to the right.) -: Left margin becomes smaller. (An image moves to the left.) When replacing the DC Controller PCB/clearing RAM data, enter the value of service label. When clearing the Main Controller RAM data Enter the setting value (switch negative/positive by -/+ key) and press OK key. -25 to 50 mm 0 Write start pstn in horz scan:Cst2 2nd To adjust the image write start position on the second side in the horizontal scanning direction when feeding paper from the Cassette 2.
Adj/Set/Operate Method Display/Adj/Set Range Unit Default Value ADJ-C2RE 1 Detail	As the value is changed by 1, the left margin is changed by 0.1 mm. +: Left margin becomes larger. REG-DUP1 1	Rgst start timing adj: Plain, 2nd side
Detail	To adjust the leading edge margin by changing the timing to form image when feeding the second side of plain paper. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. +: Leading edge margin becomes larger. (An image moves downward.) -: Leading edge margin becomes smaller. (An image moves upward.)
Use Case	When adjusting the leading edge margin When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method	Enter the setting value (switch positive/negative by +/- key) and press OK key.
Caution	When replacing the DC Controller PCB/clearing RAM data, restore the backup data if data is backed up or enter the value of service label if data is not backed up.
Display/Adj/Set Range	-50 to 50
Default Value	9
REG-MF 1	Rgst start timing adj: MP Tray, Plain
Detail	To adjust the leading edge margin by changing the timing to form image when feeding the, of plain paper 1/2, recycled paper, and thin paper. As the value is changed by 1, the leading edge margin is changed by 0.1 mm. +: Leading edge margin becomes larger. (An image moves downward.) -: Leading edge margin becomes smaller. (An image moves upward.)
Use Case	- When replacing the DC Controller PCB/clearing RAM data - When replacing the DC Controller PCB/clearing RAM data
Adj/Set/Operate Method	Enter the setting value (switch positive/negative by +/- key) and press OK key.
Caution	When replacing the DC Controller PCB/clearing RAM data, restore the backup data if data is backed up or enter the value of service label if data is not backed up.
Display/Adj/Set Range	-50 to 50
Default Value	5

MISC

SEG-ADJ 1	Set criteria for text/photo: front side
Detail	To set the judgment level of text/photo original in Text/Photo/Map mode. As the value is increased, the original tends to be detected as a photo document, and as the value is decreased, the original tends to be detected as a text document.
Use Case	When adjusting the classification level of text and photo in Text/Photo/Map mode
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-4 to 4
Default Value	0
K-ADJ 1	Set criteria for black text: front side
Detail	To set the judgment level of black characters at text processing. As the value is increased, the text tends to be detected as black.
Use Case	When preferring the text to be judged as black
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-3 to 3
Default Value	0

ACS-ADJ 1	Set criteria for B&W/color in ACS:front
Detail	To set the judgment level of B&W/color original in ACS mode. As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.
Use Case	When adjusting the color detection level in ACS mode
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-3 to 3
Default Value	0
ACS-EN 2	Set judgment area in ACS mode:front side
Detail	To set the judgment area in ACS mode. As the greater value is set, the judgment area is widened.
Use Case	When adjusting the judgment area in ACS mode
Adj/Set/Operate Method	 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2
Default Value	1
ACS-CNT 2	Set jdgmt pixel count area in ACS:front
Detail	To set the area which counts the pixel to judge the color presence in ACS mode. As the greater value is set, the judgment area is widened.
Use Case	When adjusting the area which counts the pixel to judge the color presence in ACS mode
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2
Default Value	0
ACS-EN2 2	Set ACS mode jdgmt area in DADF mode
Detail	To set the judgment area in ACS mode at DADF reading. As the greater value is set, the judgment area is widened.
Use Case	When adjusting the judgment area in ACS mode at DADF reading
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2
Default Value	1
ACS-CNT2 2	Set ACS jdgmt pixel count area in DADF
Detail	To set the area which counts the pixel to judge the color presence in ACS mode at DADF reading. As the greater value is set, the judgment area is widened.
Use Case	When adjusting the area which counts the pixel to judge the color presence in ACS mode at DADF reading
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2
Default Value	0

SEG-ADJ3 1	Set criteria for text/photo: back side
Detail	To set the judgment level of text/photo original in Text/Photo/Map mode (back side at duplex reading with 1 path).
	As the value is increased, the original tends to be detected as a photo document, and as the value is decreased, the original tends to be detected as a text document.
Use Case	When adjusting the classification level of text and photo in Text/Photo/Map mode (back side at duplex reading with 1 path)
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-4 to 4
Default Value	0
K-ADJ3 1	Set criteria for black text: back side
Detail	To set the judgment level of black characters at text processing (back side at duplex reading with 1 path). As the value is increased, the text tends to be detected as black.
Use Case	When preferring the text to be judged as black (back side at duplex reading with 1 path)
Adj/Set/Operate Method	 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	-3 to 3
Default Value	
ACS-ADJ3 1	Set ACS B&W/color jdgmt stdrd:back side
Detail	To set the judgment level of B&W/color original in ACS mode (back side at duplex reading with 1
Detail	path).
	As the value is increased, the original tends to be detected as a B&W document, and as the value is decreased, the original tends to be detected as a color document.
Use Case	When adjusting the color detection level in ACS mode (back side at duplex reading with 1 path)
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-3 to 3
Default Value	0
ACS-EN3 2	Set of ACS mode jdgmt area: back side
Detail	To set the judgment area in ACS mode (back side at duplex reading with 1 path). As the greater value is set, the judgment area is widened.
Use Case	When adjusting the judgment area in ACS mode (back side at duplex reading with 1 path)
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2
Default Value	1
ACS-CNT3 2	ACS mode jdgmt pixel count area: back
Detail	To set the area which counts the pixel to judge the color presence in ACS mode (back side at duplex reading with 1 path).
	As the greater value is set, the judgment area is widen.
Use Case	When adjusting the area which counts the pixel to judge the color presence in ACS mode (back side at duplex reading with 1 path)
Adj/Set/Operate Method	 Enter the setting value (switch negative/positive by -/+ key) and press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	-2 to 2

COM-TEST 1	Dspl connect result w/ Sales Co's server
Detail	To display the result of the connection test with the sales company's server.
Use Case	When using Embedded-RDS
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range	During operation: ACTIVE, When connection is completed: OK, When connection is failed: NG
Related Service Mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-LOG, RGW-ADR
Supplement/Memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
COM-LOG 1	Dspl connect error w/ Sales Co's server
Detail	To display error information when the connection with the sales company's server failed.
Use Case	When using Embedded-RDS
Adj/Set/Operate Method	N/A (Display only)
Caution	Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range	Year, date, time, error code, error detail information (maximum 128 characters)
Related Service Mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, RGW-ADR
Supplement/Memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
RGW-ADR 1	URL setting of Sales Company's server
Detail	To set the URL of the sales company's server to be used for Embedded-RDS.
Use Case	When using Embedded-RDS
Adj/Set/Operate Method	 Select the URL. Enter the URL, and then press OK key. Turn OFF/ON the main power switch.
Caution	- Do not use Shift-JIS character strings. - Be sure to use E-RDS, RGW-PORT, COM-TEST, COM-LOG and RGW-ADR as a set.
Display/Adj/Set Range	URL
Default Value	https://b01.ugwdevice.net/ugw/agentif010
Related Service Mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, COM-TEST, COM-LOG
Supplement/Memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol
CNT-DATE 1	Set counter send start date to SC server
Detail	To set the year, month, date, hour and minute to send counter information to the sales company's server. This is displayed only when the Embedded-RDS third-party extended function is available.
Use Case	When the non-Canon-made extension function of the Embedded-RDS is available
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	YYYYMMDDHHMM (12 digits) YYYY: Year, MM: Month, DD: Date, HH: Hour, MM: Minute
Default Value	0000000000
Supplement/Memo	Embedded-RDS: Function to send device information such as the device counter, failure, and consumables to the sales company's server via SOAP protocol

R-CON 1	Clearing of Reader-related setting data
Detail	To clear the Reader-related setting data.
Use Case	When clearing the Reader-related setting data
Adj/Set/Operate Method	1) Select the item, and then press OK key.
	2) Turn OFF/ON the main power switch.
Caution	- Output the service mode setting values by P-PRINT before execution. After execution, enter
	necessary setting values. - The RAM data is cleared after the main power switch is turned OFF/ON.
Related Service Mode	COPIER> FUNCTION> MISC-P> P-PRINT
JAM-HIST 1	Clear of jam history
Detail	To clear the jam history.
Use Case	When clearing the jam history
Adj/Set/Operate Method	Select the item, and then press OK key.
Related Service Mode	COPIER> DISPLAY> JAM
ERR-HIST 1	Clear of error code history
Detail	To clear the error code history.
Use Case	When clearing the error code history
Adj/Set/Operate Method	Select the item, and then press OK key.
Related Service Mode	COPIER> DISPLAY> ERR

PWD-CLR 1	Clear of system administrator password
Detail	* Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the password of the system administrator set in [Settings/Registration].
Use Case	When clearing the password of the system administrator
Adj/Set/Operate Method	Select the item, and then press OK key.
ADRS-BK 1	Clear of address book
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the address book data.
Use Case	When clearing the address book data
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Caution	The address book data is cleared after the main power switch is turned OFF/ON.
CNT-MCON 1	Clear of Main Controller service counter
Detail	To clear the service counter counted by the Main Controller PCB.
Use Case	When clearing the service counter counted by the Main Controller PCB
Adj/Set/Operate Method	Select the item, and then press OK key.
Related Service Mode	COPIER> COUNTER
Supplement/Memo	See COUNTER for the target counter.
CNT-DCON 1	For R&D
MMI 1	Clear Settings/Registration setting VL
Detail	 *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the Settings/Registration setting values. Preferences (excluding values for Paper Type Management Settings) Adjustment/Maintenance Function Settings Set Destination (excluding Address Lists) Management Settings (excluding Department ID Management)
Use Case	When clearing various setting values of [Settings/Registration]
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Caution	 The setting value is cleared after the main power switch is turned OFF/ON. If this item is executed while a login application other than User Authentication is running, it switched to User Authentication after reboot. Set the login application using SMS as needed.
Supplement/Memo	SMS (Service Management Service): An application for management which can be used on remote UI.
MN-CON 1	Deletion of setting values
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To delete the setting values of address lists, forwarding settings, Settings/Registration and service mode. For details, refer to "Backup Data List" in the Service Manual.
Use Case	When initializing the setting values
Adj/Set/Operate Method	 Select the item, and then press OK key. The machine is automatically rebooted. Turn OFF/ON the main power switch.
Caution	 Output the service mode setting values by P-PRINT before execution. After execution, enter necessary setting value. RAM data is cleared after the main power switch is turned OFF/ON.
Related Service Mode	COPIER> FUNCTION> MISC-P> P-PRINT

CARD 1	Clear of card ID-related data
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the data related to the card ID (department).
Use Case	When clearing the data related to the card ID
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Caution	The value is cleared after the main power switch is turned OFF/ON.
ALARM 1	Clear of alarm log
Detail	To clear alarm log.
Use Case	When clearing alarm log
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Caution	The alarm log is cleared after the main power switch is turned OFF/ON.
Related Service Mode	COPIER> DISPLAY> ALARM-2
CA-KEY 2	Deletion of CA certificate and key pair
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To simultaneously delete the CA certificate and key pair which are additionally registered by the user.
Use Case	When a service person replaces/discards the device
Adj/Set/Operate Method	 Select the item, and then press OK key. Check that OK is displayed. Turn OFF/ON the main power switch.
Caution	 Unless this item is executed at the time of replacement/discard of the device, the CA certificate and key pair which are additionally registered by the user remain in the HDD, which is a problem in terms of security. Do not execute this item carelessly because the CA certificate and key pair which are additionally registered are deleted when it is executed. If they are deleted mistakenly, they need to be again registered by the user. If no CA certificate and key pair are additionally registered, the machine condition becomes the same as the one at the time of factory shipment. When NG is displayed in 2), there is a possibility that deletion was not executed. In this case, surely execute the deletion by initializing the HDD, etc.
Display/Adj/Set Range	At normal termination: OK!, At abnormal termination: NG!
Supplement/Memo	 The CA certificate is used in the MEAP application with E-RDS and SSL client connection, and the key pair is used in the SSL function of IPP, RUI and MEAP. When the main power switch is turned OFF/ON, the CA certificate and key pair which were registered at the time of factory shipment are decompressed from the archive , and become available in the E-RDS/SSL function.
ERDS-DAT 1	Initialization of E-RDS SRAM data
Detail	To initialize the "internal setting values" of the Embedded-RDS stored in the SRAM. "Internal setting values" are ON/OFF of E-RDS, server's port number, server's SOAP URL, and communication schedule with the server (how often the data is acquired), etc. The value set by COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG is cleared.
Use Case	When clear the SRAM of the "internal setting values".
Adj/Set/Operate Method	Select the item, and then press OK key.
Display/Adj/Set Range	At normal termination: OK!, At abnormal termination: NG!
Related Service Mode	COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG
USBM-CLR 1	Initialize USB MEAP priority rgst info
Detail	To initialize the registered ID data retained in the OS field by calling the API provided by the OS.
Use Case	When a failure occurs in USB MEAP priority registration
Adj/Set/Operate Method	Select the item, and then press OK key.

JV-CACHE 1	Cache clear of JAVA application
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the cache information used by JAVA application.
Use Case	When initializing the JAVA application
Adj/Set/Operate Method	Select the item, and then press OK key.
LANG-CLR 2	Uninstallation of language files
Detail	To uninstall the language files other than Japanese and English files installed in HDD. When installing a new language file while the maximum number of language files (11 files) have been already installed, an existing language file needs to be uninstalled.
Use Case	When deleting/switching language files
Adj/Set/Operate Method	 Select the item, and then press OK key. Download the firmware in which the necessary language files are included using SST or a USB flash drive.
Caution	A language file is not uninstalled unless the downloaded language files are installed by SST or a USB flash drive after the execution of this item. If installation is not executed, uninstallation will be canceled. (Status of the machine remains the same as it was before execution.)
Supplement/Memo	 After the execution, language displayed on the screen becomes English. Switch the language as needed. There are 9 language files (JEFIGSCKT) installed at the time of shipment.
FIN-MCON 1	Clearing Finisher delvry destination set
Detail	To clear the setting of Delivery Tray of the Finisher specified in [Settings/Registration] (Function Settings> Common> Paper Output Settings> Output Tray Settings). Since the delivery destination settings are stored in the DC Controller PCB in the machine, malfunction occurs when replacing the Finisher with another type of it without clearing the settings. If the type of Finishers is the same, there is no need to clear the settings.
Use Case	When the Finisher is replaced with a different model in the field
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Additional Functions Mode	Function Settings> Common> Paper Output Settings> Output Tray Settings
PLPW-CLR 2	Clear security policy setting password
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To clear the password of the security administrator set in the security policy settings.
Use Case	When clearing the password of the security administrator

JV-TYPE	1	Specification of MEAP cache clear target
Deta	Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To specify the MEAP cache area to be cleared.
		The target area is divided into the 4 parts:
		 A jar file of MEAP application bundled as standard
		- Data of the application mentioned above
		 A jar file of MEAP application installed additionally
		- Data of the application mentioned above
		When JV-CACHE is executed, the area specified with this item is cleared.
		For details, refer to the Service Manual.
	Use Case	When analyzing the cause of a problem due to MEAP application
Adj/Set/Opera	te Method	Enter the setting value, and then press OK key.
Display/Adj/\$	Set Range	0 to 4
		0: Entire MEAP cache area
		1: A jar file of MEAP application bundled as standard
		2: A jar file and data of MEAP application bundled as standard
		3: Data of MEAP application which has been installed additionally
		4: A jar file and data of MEAP application which has been installed additionally
Related Server	vice Mode	COPIER> FUNCTION> CLEAR> JV-CACHE
Supplem	ent/Memo	MEAP applications bundled as standard: system application, built-in login application MEAP applications installed additionally: non-Canon-made login application, general application, etc.
CUSTOM2	2	[For customization]
CNT-RCON	1	For R&D
KEY-HCD	2	For R&D
TPM-DA	2	For R&D

MISC-R

SCANLAMP 1	Lighting check of Scanner Unit (Frt) LED
Detail	To light up the Scanning Lamp for 3 seconds under the White Plate and the Copyboard Glass respectively.
Use Case	When replacing the LED of the Scanner Unit
Adj/Set/Operate Method	Select the item, and then press OK key.
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!
SCANLMP2 1	Lighting check of Scanner Unit (Bck) LED
Detail	To light up the LED of the Scanner Unit (Back) for 3 sec. Check whether there is a missing block or no lighting in LED.
Use Case	When replacing the LED of the Scanner Unit
Adj/Set/Operate Method	Select the item, and then press OK key.
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!
RD-SHPOS 2	Moving to Reader Scanner Unit fix pstn
Detail	To move the Reader Scanner Unit to the position where it is secured in when moving. When moving the Reader after installation, the Reader Scanner Unit may move and get damage. By moving the Scanner Unit to the specified position and securing it in place with a screw before moving, damage can be prevented.
Use Case	When moving the Reader after installation
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	Be sure to move the Scanner Unit to the fixing position and secure it in place with a screw when moving the Reader after installation. Otherwise, the Scanner Unit may get damage.
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!

SCAN-ON	1	Execution of copyboard reading operation
	Detail	To execute the reading operation with the Copyboard.
Use	e Case	When checking the operation of the motor of the Reader
Adj/Set/Operate N	lethod	Select the item, and then press OK key.
Display/Adj/Set	Range	During operation: ACTIVE, When operation finished normally: OK!

MISC-P

P-PRINT 1	Output of service mode setting values
Detail	To output the service mode setting values. Text data is saved in HDD as a file (P-PRINT-RPT.TXT).
Use Case	Before executing the CLEAR service mode, etc.
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	Be sure to use A4/LTR size plain paper/recycled paper.
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE
HIST-PRT 1	Output of jam and error logs
Detail	To output the jam log and error log. Text data is saved in HDD as a file (HIST-PRT-RPT.TXT).
Use Case	When outputting the jam/error log
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	Be sure to use A4/LTR size plain paper/recycled paper.
Display/Adj/Set Range	During operation: ACTIVE, When operation finished normally: OK!
Related Service Mode	COPIER> FUNCTION> MISC-P> RPT-FILE
TRS-DATA 2	Moving memory reception data to Inbox
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To move the data received in memory to Inbox.
Use Case	When moving the data received in memory to Inbox
Use Case Adj/Set/Operate Method	When moving the data received in memory to Inbox 1) Select the item, and then press OK key. 2) Turn OFF/ON the main power switch.
	1) Select the item, and then press OK key.
Adj/Set/Operate Method Additional Functions	 Select the item, and then press OK key. Turn OFF/ON the main power switch.

DSRAMBUP 2	Backup of DC Controller PCB SRAM
Detail	To back up the setting data in SRAM of the DC Controller PCB.
Use Case	When replacing the DC Controller PCB for troubleshooting at the time of trouble occurrence
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with new setting data and the old data is deleted.
Related Service Mode	COPIER> FUNCTION> SYSTEM> DSRAMRES
DSRAMRES 2	Restore of DC Controller PCB SRAM
Detail	To restore the setting data which has been backed up in SRAM of the DC Controller PCB.
Use Case	When replacing the DC Controller PCB for troubleshooting at the time of trouble occurrence
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with new setting data and the old data is deleted.
Related Service Mode	COPIER> FUNCTION> SYSTEM> DSRAMBUP
RSRAMBUP 2	Backup of Reader-related setting data
Detail	To back up the Reader-related setting data retained in the SATA Flash PCB on the Main Controller PCB.
Use Case	When replacing the Main Controller PCB/clearing the Reader-related RAM data/replacing the SATA Flash PCB
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with new setting data and the old data is deleted.
Related Service Mode	COPIER> FUNCTION> SYSTEM> RSRAMRES

RSRAMRES 2	Restoration of Reader-related set data
Detail	To restore the Reader-related setting data which has been backed up to the SATA Flash PCB on the Main Controller PCB.
Use Case	When replacing the Main Controller PCB/clearing the Reader-related RAM data/replacing the SATA Flash PCB
Adj/Set/Operate Method	 Select the item, and then press OK key. Turn OFF/ON the main power switch.
Caution	During operation, the setting data changes by manual or automatic adjustment. When backup data which has been left for a long period of time is restored, it is overwritten with new setting data and the old data is deleted.
Related Service Mode	COPIER> FUNCTION> SYSTEM> RSRAMBUP
R-REBOOT 1	Reboot of host machine (Remote)
Detail	To reboot the host machine.
Use Case	When the reboot is carried out with the remote control by VNC
Adj/Set/Operate Method	Select the item, and then press OK key.
FIXIP 1	Start of fixed IP mode
Detail	IP address is set to "172.16.1.100". In an environment where wired LAN (main) and wireless LAN (sub) are used, the IP address of wired LAN becomes the fixed IP. During the fixed IP mode, "FIXIP" is displayed on the upper left of the screen.
Use Case	When preferring to use the network settings with the fixed IP address "172.16.1.100"
Adj/Set/Operate Method	Select the item, and then press OK key.
Caution	 It is necessary to turn OFF/ON the power to recover from the fixed IP mode. Whether to use RUI or not when the fixed IP mode is enabled follows the setting of "Management Settings> License/Other> Remote UI.

DBG-LOG

Storage of debug log to USB memory
To store a set of debug logs to the USB flash drive at the error occurrence. A type of log to be collected is set in LOG-TRIG. If there is a debug log which has been automatically saved, it is archived at this time. Required time differs according to the device conditions and volume of log data.
When analyzing the cause of a problem
 Install the USB flash drive. Select the item, and then press OK key.
 Wait until the machine recognizes the USB memory (approx. 10 sec.). During the data transfer ("ACTIVE" display), do not turn OFF the power/remove the USB memory/ use the screen for operations.
During operation: ACTIVE, At normal termination: OK, At abnormal termination: NG
COPIER> FUNCTION> DBG-LOG> LOG-TRIG
For R&D

LOG-TRIG 2	Set of debug log storage condition
Detail	To set the conditions (timing, types, etc.) to automatically store the debug logs (stored as an archive file).
	By reading the operation setting file of the setting value from the Main Controller, the conditions written in the file are set.
	When setting a new condition is necessary, read the operation setting file provided by R&D from the USB memory.
Use Case	 When changing the conditions of debug log to automatically store When setting a new condition
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 99999
Related Service Mode	COPIER> FUNCTION> DBG-LOG> LOG2USB, LOG2SRVR
HIT-STS 2	Display of debug log state
Detail	To display whether archive file of the debug log which is matched with the conditions set in LOG- TRIG exists or not.
Use Case	When checking the debug log automatically saved
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 1 0: No log is available, 1: Log is available
Related Service Mode	COPIER> FUNCTION> DBG-LOG> LOG-TRIG
SYSLOG 2	For R&D
DEFAULT 2	Reset of debug log setting
Detail	To clear all debug log settings and return to the state before debug log collection operation.
Use Case	 When returning the device in which analyzing the cause of a problem was completed When resetting the debug log settings
Adj/Set/Operate Method	Select the item, and then press OK key.
LOG-DEL 2	Clearing of debug logs
Detail	To delete the debug log file. The debug log setting is not reset.
Use Case	When clearing the debug log
Adj/Set/Operate Method	Select the item, and then press OK key.
HIT-STS2 2	For R&D

PDF-RDCT 2	PDF reduction set at forwarding
Detail	To set whether to reduce the image for transmission when converting the image received by I-Fax into PDF for e-mail/file transmission.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Following the current setting, 1: Image reduction
Default Value	0
SJB-UNW 2	Reserve upper limit of secured print job
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the upper limit for the number of reserved jobs in secured print job.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2 0: 50 jobs, 1: 90 jobs, 2: No limit
Default Value	1
CARD-RNG 2	Card number setting (department number)
Detail	To set the number of cards (departments) that can be used with the Card Reader.
Use Case	When setting the number of cards (departments)
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	1 to 1000
Default Value	1000
SJOB-CL 1	Set of scan job canceling by logout
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to cancel the scan job in operation by logout of the user.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	The job with scanning completed cannot be canceled.
Display/Adj/Set Range	0 to 2 0: Cancel only scan job in waiting state, 1: Cancel all scan jobs, 2: Not canceled
Default Value	0
Supplement/Memo	Scan job: A job after the scanning operation is completed.

MIBCOUNT 2	Scope range set of Charge Counter MIB
Detail	To set the range of counter information that can be obtained as MIB (Management Information Base).
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2 0: All charge counters are obtained, 1: Only displayed counter* is obtained, 2: All charge counters are not obtained * : Counter specified by the following: COPIER> OPTION> USER> COUNTER 1 to 6
Default Value	0
Related Service Mode	COPIER> OPTION> USER> COUNTER1 - COUNTER6
CNTR-SW 1	Init of parts counter replacement timing
Detail	To return the estimated life of parts counter to the initial value. If either "00000000" or a value before the specification change is displayed in the estimated life value of the parts counter, set 0 after upgrading of the firmware.
Use Case	 When either "00000000" or a value before the specification change is displayed in the estimated life value of the parts counter When changing the state back to the initial state after entering the estimated life value manually
Adj/Set/Operate Method	 Enter 0, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0: Returned to the initial value
Default Value	0
PSWD-SW 1	Password type set to enter service mode
Detail	To set the type of password that is required to enter when getting into service mode. 2 types are available: one for "service technician" and the other for "system administrator + service technician". When selecting the type for "system administrator + service technician", enter the password for service technician after the password entry by the user's system administrator.
Use Case	Upon request from the user who concerns security
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2 0: No password, 1: Service technician, 2: System administrator + service technician
Default Value	0
SM-PSWD 2	Password setting for service technician
Detail	To set password for service technician that is used when getting into service mode.
Use Case	When password is required to get into service mode
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	Be sure to select 1 or 2 with PSWD-SW in advance.
Display/Adj/Set Range	1 to 99999999
Default Value	1111111

CDS-MEAP 1	Set to allow MEAP installation by admin
Detail	 * Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow the user (administrator) to install MEAP applications from CDS and enable iR options. When 1 is set, Updater can be activated from [Settings/Registration].
Use Case	When allowing the administrator to install MEAP applications and enable iR options from CDS
Adj/Set/Operate Method	 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Disabled, 1: Enabled
Default Value	1
Delault Value	I
Supplement/Memo	CDS: Contents Delivery System

	sinter > or non (opecilication setting mode) > no-ow
CDS-UGW 1	Set to allow firmware update from UGW
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to permit update of the firmware from the UGW server. When "1: Enabled" is set, Updater accepts the operation from the UGW server in cooperation with CDS.
Use Case	When allowing update of the firmware from the UGW server
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Disabled, 1: Enabled
Default Value	It differs according to the location.
Supplement/Memo	CDS: Contents Delivery System
LOCLFIRM 1	Set to allow firmware update by file
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to permit the user (administrator) to update the firmware from the remote UI using a local file. This update is executed as a measure for vulnerability in emergency situations.
Use Case	This update is executed as a measure for vulnerability in emergency situations. When allowing the administrator to update the firmware using a file
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key.
	2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Disabled, 1: Enabled
Default Value	1
SDLMTWRN 1	[For customization]
FAX-INT 2	Set FAX RX print interruption oprtn mode
Detail	To set the mode performing interruption operation of FAX reception print automatically.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	 Do not set this item while charge management (charging by Coin Manager, a device alone, etc.) is used. During an ongoing job for which delivery setting (offset, stapling, etc.) is made, interruption operation is performed between sets.
Display/Adj/Set Range	0 to 1 0: Normal, 1: Interruption operation mode
Default Value	0

	miler) > OF HON (Specification setting mode) > FNC-SW
CDS-LVUP 1	Set to allow CDS periodical update
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow the user (administrator) to perform periodical update linked with CDS. When 1 is set, setting of periodical update can be made in Settings/Registration menu/via remote UI.
	When 2 is set, setting of periodical update can be made on the Updater screen in service mode.
Use Case	When allowing the user/service technician to perform periodical update
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	 0 to 2 0: Prohibited periodical update 1: Display the periodical update setting screen in Settings/Registration menu/on remote UI 2: Display the periodical update setting screen on the Updater in service mode
Default Value	It differs according to the location.

UA-OFFSW 1	ON/OFF of unified auth function
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of the Unified Authentication function. Set 0 when not preferring to use the Unified Authentication function because of security concern.
Use Case	Upon user's request (not to use the Unified Authentication function)
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: ON, 1: OFF
Default Value	0
Supplement/Memo	Unified Authentication: A function with which it is considered that login authentication under it is performed by logging in it using SSO-H.

	Sinter > Or HON (Specification setting mode) > 1 NO-SW
MIB-NVTA 1	RFC-compatible character stringMIB write
Detail	As default, MIB object which NVT-ASCII can be written exists in order to link with local UI entry value. This violates RFC order, so a problem like garbled 2-byte characters may occur in the SNMP monitoring system, such as other vendor's MPS. Whether to allow writing of non-RFC-compatible character strings in MIB can be set using this item. When 1 is set, only the character strings which are strictly compatible with RFC are written. (Writing operation is executed from the SNMP manager.) It is not linked with local UI.
Use Case	Upon user's request (operation with RFC-compatible system)
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key.
	2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 3
	0: Compatible in a conventional manner, 1: RFC-compatible, 2 to 3: Not used
Default Value	0
Supplement/Memo	RFC: Document of internet-related technical standards NVT-ASCII: Network Virtual Terminal-ASCII
MIB-EXT 1	For R&D
SVC-RUI 1	Enabling of remote UI func for servicing
Detail	To set whether to enable the remote UI function for servicing (not provided to end users). When 0 is set, the remote UI function is disabled. When setting a value other than 0, the remote UI function is enabled and its value will be used as the password to use the function.
Use Case	When preferring to use the import function of background image file of main menu/custom menu
Adj/Set/Operate Method	Enter the setting value (other than 0), and then press OK key.
Display/Adj/Set Range	0 to 65535
Default Value	0
LCDSFLG 1	Enabling of local CDS server
Detail	To set whether to use the local CDS server. When CDS-FIRM is 1, this setting is enabled.
Use Case	When using the local CDS server
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: Disabled, 1: Enabled
Default Value	0
Related Service Mode	COPIER> OPTION> FNC-SW> CDS-FIRM
Additional Functions Mode	Management Settings> License/Other> Register/Update Software> Software Management Settings> Connection Server Settings
Supplement/Memo	When local CDS is used, iW EMC/MC device firmware update plug-in is required.

COPIER (Service mode for p	printer) > OPTION (Specification setting mode) > FNC-SW
ASLPMAX 1	Set auto sleep shift time maximum value
Detail	Set auto sleep shift time maximum value.
Use Case	Upon user's request
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: 240minutes, 1: 120 minutes
Default Value	It differs according to the location.
SEND-SPD 2	ON/OFF of SEND operation speed-up
Detail	To set whether to speed up the SEND operation. Usually, speed of SEND/XBOX is increased by performing image conversion during SEND and Scan. Reading speed may decrease when scanning large size color original at high resolution or when competing operation occurs with another job during scanning. Set 1 to keep the speed. When failure with MEAP application occurs, set 1.
Use Case	 When reading speed is decreased during SEND and Scan When failure with MEAP application occurs
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: ON, 1: OFF
Default Value	0
VER-CHNG 2	Setting of firmware update operation
Detail	To set how to update firmware of PCB/option which has been installed/replaced by comparing the version of it with the version stored in the Flash PCB of the Main Controller. If combination of firmware versions of PCB/option stored in the Main Controller and the version in PCB/option after installation/replacement is not appropriate (operation with the combination of firmware versions has not yet been checked), failure where analysis is difficult may occur. It is possible to check the firmware versions at the start of the machine, and automatically write the firmware stored in the Main Controller in PCB/option collectively as needed. When 0 is set, versions are not checked and firmware update is not performed. Therefore, it is necessary to manually update the versions using a USB memory/SST. When 1 is set, firmware is updated if the version in PCB/option is old. However, it is not updated if the version is new or old and new versions are mixed. When 2 is set, a compatible firmware (the version where operation has been checked) is written from the Main Controller regardless of whether the version in PCB/option is old or new.
Use Case	When installing/replacing PCB/option having firmware
Adj/Set/Operate Method	1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	 0 to 2 0: Keep the current firmware version. 1: Update the firmware if the version in PCB/option is older than that stored in the Main controller. If the version is new or old and new versions are mixed, firmware is not updated. 2: Update the firmware regardless of whether the version is old or new if the version in PCB/option differs from that stored in the Main Controller.
Default Value	1
Supplement/Memo	When updating the firmware, the main menu is displayed on the Control Panel at startup and then a message prompting to update firmware is displayed. By pressing [Update], the machine reboots immediately and firmware is updated. By pressing [Skip], it returns to the main menu. The message is displayed again at next startup.

Detail	To set whether to display [Picture Login] in [Settings/Registration].
Use Case	When switching the Picture Login function
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	1
Additional Functions Mode	Management Settings> User Management> Authentication Management> Use User Authentication> Picture Login
DCONRTRY 2	Set of retry at DCON comctn error occur
Detail	To set whether to perform retry processing when communication error occurs between the Main Controller and the DC Controller. Set 1 to 3 when E733 occurs. Communication error may be avoided by retry. (It is effective especially when E733-0001/0002/0005 occurs.) If communication error occurs during finishing job while 3 is set, duplicated pages may be output due to retry. In such case, set 0 to 2. Since retry is not performed during finishing job, duplication of pages does not occur, but E733 occurs.
Use Case	When E733 occurs
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	When 3 is set, duplication of pages may occur during finishing job.
Display/Adj/Set Range	0 to 3 0: OFF 1: OFF during job, ON in other states 2: OFF during finishing job, ON in other states 3: ON
Default Value	1
Supplement/Memo	Finishing job: Job that 2-sided print, binding and/or collate set in "Finishing" of the printer driver.
FL-START 2	[For customization]
RCONRTRY 2	Set process at RCON communication error
Detail	To set the processing to be executed at occurrence of RCON communication error. Normally, recovery is performed without displaying an error. A log is not collected. Set 1 when recovery processing is performed frequently. An error is displayed and a log for analysis can be collected.
Use Case	When recovery processing due to RCON communication error is performed frequently
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Perform recovery without collecting a log, 1: Collect a log and display an error
Default Value	0

Use Case	When setting the startup time after sleep notification
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	10 to 600
Unit	sec
Default Value	15
IFX-CHIG 1	Set operation by IFAX recv mail content
Detail	To set the number of characters for the IFAX received mail content, so that the mail is not printed/ forwarded when the characters in the text is less than the number of specified characters. This machine can output blank paper because some senders send e-mail text consists of linefeed codes only. In such case, specify 2 (number of characters) so that there will be no output of blank paper. In the case of specifying any number other than 0, header/footer is printed/forwarded in 1 sheet only if the e-mail (body) text is less than the specified value while no TIFF file is attached. As the value is incremented by 1, the number of target characters in e-mail body text is increased by 1 character.
Use Case	When reducing print of blank paper due to e-mail received by IFAX
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	Be sure to get approval from the user by telling that there will be no print of e-mail (body) text if the number of characters is less than the specified value.
Display/Adj/Set Range	0 to 999 0: E-mail (body) text is not ignored.
Unit	char
Default Value	0
Supplement/Memo	1 Japanese Kanji character is calculated as 2 bytes, and the control codes (such as linefeed code, etc) are included in the number of characters.
DNSTRANS 1	Setting of DNS query priority protocol
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set priority of the protocol (IPv4/IPv6) for DNS query. In the case of using both IPv6 and IPv4 while the DNS server supports IPv4, it takes time because of timeout when executing DNS query with priority on IPv6. Giving priority on query by IPv4 can shorten the time.
Use Case	When it takes time to execute DNS query with priority on IPv6 because the DNS server supports IPv4
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: IPv4, 1: IPv6
Default Value	1

	printer) > OP HON (Specification setting mode) > NETWORK
PROXYRES 2	Setting of proxy response to Windows
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to provide proxy response or return the device status when an inquiry is receive via Windows while the device is in sleep mode.
Use Case	When executing status response for query from Windows correctly
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: No proxy response, 1: Proxy response
Default Value	1
WOLTRANS 1	ON/OFF sleep recover by packet reception
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to recover from deep sleep when receiving unicast packets to the machine (excluding proxy response).
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	1 to 2 1: ON, 2: OFF
Default Value	1
802XTOUT 1	Set of IEEE802.1X authentication timeout
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set timeout value for IEEE802.1X authentication. If the device executes 802.1X authentication, change the wait time for response from the authentication server.
Use Case	When response from the authentication server is slow/fast
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	10 to 120
Unit	sec
Default Value	30
SPDALDEL 2	Initialization of SPD value
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To initialize all the SPD values that are under management. SPD values can be initialized without clearing SRAM.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
Supplement/Memo	SPD: Database that manages SA (Security Association). SPD value is managed when IPSec Board is used. Normally, SRAM needs to be cleared in the case of mismatch in SPD value.

,	r printer) > OP HON (Specification setting mode) > NETWORK
NCONF-SW	1 ON/OFF of Network Configurator function
Detai	 *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set ON/OFF of Network Configurator function. If the user does not use the function, select OFF to prevent remote attack through network.
Use Case	
Adj/Set/Operate Method	
	2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	e 0 to 1 0: OFF, 1: ON
Default Value	e 1
Supplement/Memo	• Network Configurator function is a function to be used for communication with NetSpot Device Installer, etc., and the network setting can be changed from the remote.
AFS-JOB	1 Set of FAX server job reception port
Detai	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the reception port of the fax server to which a fax client sends jobs.
Use Case	When changing the job reception port of the fax server
Adj/Set/Operate Method	d 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	e 0 to 65535
Default Value	e 20317
Related Service Mode	COPIER> OPTION> NETWORK> AFC-EVNT
AFC-EVNT	1 Set of FAX client event reception port
Detai	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the event notification reception port of a fax client.
Use Case	When changing the event notification reception port of a fax client
Adj/Set/Operate Method	d 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch.
Display/Adj/Set Range	e 0 to 65535
Default Value	e 29400
Related Service Mode	COPIER> OPTION> NETWORK> AFS-JOB
ILOGMODE	1 Setting of filter log target packet
Detai	To set the target packet to be recorded in the filter log.
	Usually, only the unicast packets to the machine are recorded in the filter log by PFW (personal firewall).
	When 1 is set, address filter is enabled for all protocols so all packets are recorded in the filter log. However, logs of multicast/broadcast packets sent from a harmless device or an address that are subject to rejection and have no direct relation to the machine are also recorded, and consequently the number of logs is increased.
Use Case	Upon user's request (to collect all filter logs)
	a 1) Enter the setting value, and then press OK key.
Adj/Set/Operate Method	2) Turn OFF/ON the main power switch.
Adj/Set/Operate Methoo	2) Turn OFF/ON the main power switch.
	2) Turn OFF/ON the main power switch.When 1 is set, the number of logs is increased because logs of packets which have no direct relation to the machine are recorded.

COPIER (Service mode for p	printer) > OP IION (Specification setting mode) > NE I WORK
ILOGKEEP 1	Set of IP address block log hold time
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the retention time from the log time of IP block. When access is made again from a same IP address which was blocked before, if it is within the retention time of the previous log, its log is not recorded. If access is frequently made from a same IP address, the log record of the UI might be filled with its logs. If the user considers that a single log for a same IP address is enough, set the longer
	retention time.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 48 0: 1 minute (special mode) 1 to 48: 1 hour to 48 hours
Default Value	1
IPTBROAD 1	Set to allow broad/multicast TX
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to permit transmission of broadcast packets and multicast packets. Transmission of broadcast packets and multicast packets is permitted without specifying an exception address. It is permitted within the device even if it is rejected in the default setting of the IPv4/v6 transmission filter. Set "1: Disabled" when the user does not want to send them.
Use Case	Upon user's request
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 5 0: Enabled, 1: Disabled, 2 to 5: Not used
Default Value	0
PFWFTPRT 1	Set of RST reply at IP filter FTP SEND
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. When FTP SEND is executed using an IP filter by which packets from a specific remote PC are rejected, SYN is returned to the port 113 if the PC supports authentication of the FTP port 113. However, since the IP filter blocks the packets, the block logs are increased and the performance is lowered. When 1 is set, RST is returned to the port 113 without blocking packets.
Use Case	When executing FTP SEND against the OS which supports authentication of the FTP port 113 while the IP filter is enabled
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
DDNSINTV 1	Set of DDNS periodical update interval
Detail	DNS registration is executed only once at start-up with the current iR, so the registered contents are deleted in an environment where the DNS server settings are deleted at intervals. To set the interval of DDNS periodical update for not deleting the registered contents.
Use Case	When the DNS server settings are deleted at intervals
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 48
	0: No periodical update, 1: 1-hour interval, 2: 2-hour interval,, 47: 47-hour interval, 48: 48-hou interval
Unit	hour
Default Value	24

(I	
SIPAUDIO 2	Set of SIP session establishment order
Detail	To set whether to establish audio session or T.38 session first with SIP. Usually, audio session followed by T.38 session is established when using IPFAX in an intranet environment. However, this order is not specified by the standard. Set 1 when connecting the SIP server or terminal where the session starts with T.38 session.
Use Case	When connecting the SIP server or terminal where the session starts with T.38 session
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	When 1 is set, IPFAX fails with the destination where the session starts with audio session.
Display/Adj/Set Range	0 to 1 0: audio, 1: T.38
Default Value	0
Supplement/Memo	SIP: Session Initiation Protocol
SIPINOUT 2	Set of internal/external number to URI
Detail	To set whether to store the external number or the internal number in From URI when using NGN.
Use Case	When a call cannot be made with external number while using NGN
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: External number, 1: Internal number
Default Value	0
Supplement/Memo	NGN: Next Generation Network URI: Uniform Resource Identifier
SIPREGPR 2	Setting of registrar server use protocol
Detail	To set the protocol used for communication with registrar server. Although the protocol that is the same as the one for proxy server is usually used, another protocol can be used in accordance with user and environment.
Use Case	Upon user's request (to use a protocol different from the one for proxy server)
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 3 0: Protocol set in Settings/Registration menu, 1: UDP, 2: TCP, 3: SSL
Default Value	0
Additional Functions Mode	Preferences> Network> TCP/IP Settings> SIP Settings> Intranet Settings
VLAN-SW 2	ON/OFF VLAN participation packets send
Detail	To set whether to send packets for participating in dynamic VLAN at link-up.
Use Case	When participating in dynamic VLAN
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
Supplement/Memo	 VLAN (Virtual LAN): A method for realizing grouping of terminals depending on the hub, switch connection port, MAC address, protocol, etc. At link-up: At startup, when LAN cable is connected, when recovering from deep sleep, when pressing the button to reflect the setting (dynamic update) If IP address of the machine has not been set, an IP address is assigned after participating in VI AN.

, I	rinter) > OPTION (Specification setting mode) > NETWORK
FTPMODE 1	Set of FTP print default operation mode
Detail	To set the default operation mode of FTP print. Switch the default operation mode between ASCII mode and BIN mode in accordance with user' environment.
Use Case	At installation
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: ASCII mode, 1: BIN mode
Default Value	0
SSLMODE 2	Setting of HTTP/HTTPS port open/close
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to open or close HTTP/HTTPS port. When 1 is set while [Use HTTP] is ON and [Use TLS] is OFF in Settings/Registration menu, HTTP port is opened whereas HTTPS port is closed. When 2 is set while both [Use HTTP] and [Use TLS] are ON in Settings/Registration menu, HTTP port is closed whereas HTTPS port is opened.
Use Case	When limiting the port to open because of security concern
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2 0: Normal, 1: Open HTTP port (80/8000) only, 2: Open HTTPS port (443/8443) only
Default Value	0
Additional Functions Mode	Preferences> Network> TCP/IP Settings> Use HTTP Management Settings> License/Other> MEAP Settings> Use TLS
SSLSTRNG 2	Allow weak encryption algorithm for SSL
Detail	To set whether to allow using weak encryption algorithm for SSL. When 1 is set, weak encryption algorithm cannot be used.
Use Case	When prohibiting weak encryption algorithm because of security concern
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Normal mode, 1: Secure mode (Not used TLS_RSA_WITH_RC4_128_SHA, TLS_RSA_WITH_ RC4_128_MD5)
Default Value	1
NW-WAIT 2	Set connect wait at deep sleep recovery
Detail	To set whether to send wakeup notice after the time set in Settings/Registration menu has elapsed when recovering from deep sleep. When 0 is set, wakeup notice is sent after "Waiting Time for Connection at Startup" has elapsed When 1 is set, wakeup notice is sent when the machine becomes ready for communication.
Use Case	When a failure of the device management tool occurs
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Wait, 1: Not wait
Default Value	0
Additional Functions Mode	Preferences> Network> Waiting Time for Connection at Startup

printer) > OPTION (Specification setting mode) > NETWORK
2 Setting of wireless LAN invalidation
To set whether to disable the wireless LAN.
Bringing in and installation of the wireless LAN equipment may be prohibited depending on user
In such case, set 0 to prevent the wireless LAN to be used. When 0 is set, [Wireless Connection Settings] is not displayed in [Settings/Registration].
When bringing in and installation of the wireless LAN equipment is prohibited
 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
0 to 10: Disabled, 1: Enabled
1
Preferences> Network> Wireless Connection Settings
Set of port filter at wireless LAN side
*Operation on this item is restricted by the setting of [Restrict Service Representation Access].
To set whether to open all ports at the wireless LAN side.
When 0 is set, only the specific port is opened (filter is enabled).
Set 1 when using an application which uses a port other than the specific port. All ports are opened
(filter is disabled).
Upon user's request
 Enter the setting value, and then press OK key.
2) Turn OFF/ON the main power switch.
e 0 to 1
0: Open the specific port, 1: Open all ports
• 0
[For customization]
Set of deep sleep recovery at link-up
To set whether to recover from deep sleep when link-up (disconnection and then connection of
LAN cable) is detected.
·
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering.
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key.
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 Perform R&D Set of Bluetooth radio field strength
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy).
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 Per R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy). As the value is changed by 1, the radio field strength is changed by 1 dBm. When radio field strength of BLE is not appropriate
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy). As the value is changed by 1, the radio field strength is changed by 1 dBm.
 Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy). As the value is changed by 1, the radio field strength is changed by 1 dBm. When radio field strength of BLE is not appropriate 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy). As the value is changed by 1, the radio field strength is changed by 1 dBm. When radio field strength of BLE is not appropriate 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch. Do not change the setting in Singapore. It is prohibited by law.
Set 0 if the closest hub or switch chatters at link-up. It can prevent recovery from deep sleep triggered by chattering. When the machine recovers from deep sleep due to chattering of the closest hub or switch 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. 0 to 1 0: Not recovered, 1: Recovered 1 For R&D Set of Bluetooth radio field strength To set the radio field strength for transmission over BLE (Bluetooth Low Energy). ENV-SET

COPIER (Service mode for printer) > OPTION (Specification setting mode) > ENV-SET

· · ·	
ENVP-INT 1	Temp, humid/Fix Roll temp log get cycle
Detail	To set the cycle to obtain log of the temperature and humidity inside the machine or the surface temperature of the Fixing Roller. As the value is incremented by 1, the cycle is increased by 1 minute.
	Obtained log can be displayed by selecting the following: COPIER> DISPLAY> ENVRNT
Use Case	At trouble analysis
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	Be sure to set "High" for [Sleep Mode Energy Use] in [Settings/Registration] before collecting logs and change the value back to its original setting after log collection.
Display/Adj/Set Range	0 to 480
Unit	min
Default Value	60
Related Service Mode	COPIER> DISPLAY> ENVRNT
Additional Functions Mode	Preferences> Timer/Energy Settings> Sleep Mode Energy Use
Amount of Change per Unit	1

CLEANING

PR-CLN 2	Set Fix Pressure Roll clean dspl condtn
Detail	To set the conditions to display the message prompting to clean the Fixing Pressure Roller. When the number of continuous 1-sided prints exceeds the setting value while PRCLNSW is set to 1, the message is displayed. By executing a 2-sided job or cleaning, the Counter for this mode is reset.
Use Case	When a soiled image occurs because toner adheres to the Fixing Pressure Roller
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	If the value is too large, image soiling may occur.
Display/Adj/Set Range	1 to 50 1: 1000 sheets 2: 2000 sheets 3: 3000 sheets 50: 50000 sheets
Default Value	2
Related Service Mode	COPIER> OPTION> DSPLY-SW> PRCLNSW

■ FEED-SW

COLIEIX (Service mode for p	miler / Or How (Specification setting mode) / TED-SW
EVLP-FS 1	Set of fix speed when feeding envlp
Detail	To set the stop and the fixing speed of arch control when feeding envelope. The fixing speed can be set by 0.5% increments. Decrease the value when fine line displacement occurs on trailing edge of envelope, and increase the value when wrinkles occur.
Use Case	When fine line displacement or wrinkles occur on trailing edge while feeding envelope
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	Be sure to set the value a little at a time. Otherwise, fixing offset/fixing failure occurs when setting an extreme value.
Display/Adj/Set Range Default Value	 -4 to 3 -4: No arch control/fixing speed-2.0% -3: No arch control/fixing speed-1.5% -2: No arch control/fixing speed-1.0% -1: No arch control/fixing speed-0.5% 0: OFF (Default) 1: No arch control/fixing speed+0.0% 2: No arch control/fixing speed+0.5% 3: No arch control/fixing speed+1.0% 0
TFL-RTC 1	Set delvry dest at rcvry after tray full
Detail	To select the delivery destination for a job with multiple pages after recovering the Delivery Tray that reaches the full level. When 0 is set, a job is output from the delivery destination again from which the last job was delivered. When 1 is set, a job is output from the delivery destination which priority is set as high at "Output Tray Settings" in [Settings/Registration].
Use Case	When changing the delivery tray
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Output from the tray from which the last job was output, 1: Output from the delivery destination which priority is high among the delivery trays
Default Value	0
Additional Functions Mode	Function Settings> Common> Paper Output Settings> Output Tray Settings
SP-SW 1	Disable static elimination control
Detail	To set the value to 1 to change the static eliminator bias value to 0V.
Use Case	When white spots are generated on thin/moist paper in high humidity environment due to excessive static elimination bias
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: Static elimination bias ON, 1: static elimination bias OFF
Default Value	0

IMG-RDR

COPIER (Service mode for printer) > OPTION (Specification setting mode) > IMG-RDR

DFDST-L1 1	Adj dust detect level: ppr intvl, DADF
Detail	To adjust dust detection level with dust detection correction control that is executed at paper interval in DADF mode. Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection As the value is smaller, the dust is less detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely detected.
Use Case	- When black line occurs due to dust - Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	When increasing the value too much, the cleaning instruction screen may appear too often since even small dust that will not be appeared on the image can be detected. When decreasing the value too much, black lines may appear.
Display/Adj/Set Range	1 to 255
Default Value	200
Related Service Mode	COPIER> OPTION> IMG-RDR> DFDST-L2
Supplement/Memo	Black lines may appear on the image if there is dust. With dust detection correction control, the image is corrected to prevent black lines once dust is detected.
DF2DSTL1 1	Adj dust dtct level:strem, ppr int, back
Detail	To adjust dust detection level that is executed in the Scanner Unit (Paper Back) at paper interval at the stream reading with DADF (1-path model). Reduce the value in the case of frequent display of cleaning instruction at the time of dust detection. As the value is smaller, dust is less likely to be detected. Increase the value when black lines appear. As the value is larger, the small dust is more likely to be detected.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	If the value is too large, the cleaning instruction screen may appear too often since even small dust that will not appear on the image can be detected. If the value is too small, black lines may appear.
Diaplay/Adi/Sat Banga	1 to 255
Display/Adj/Set Range	1 to 84: Weakest, 85 to 169: Weak, 170 to 254: Moderate, 255: Strong
Display/Auj/Set Range Default Value	1 to 84: Weakest, 85 to 169: Weak, 170 to 254: Moderate, 255: Strong 200

IMG-MCON

SHARP	2	Setting of sharpness level of image
	Detail	To set the setting level (center value) of sharpness of image. As the value is increased, the image tends to be sharp, and as the value is decreased, image tends to be soft.
Use	e Case	Upon user's request
Adj/Set/Operate N	lethod	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set	Range	1 to 5
Default	t Value	3

	miler) > OP HON (Specification setting mode) > INIG-MCON
VP-ART 2	Setting of line art processing
Detail	To set outline processing for line art on scalable PDF. In the outline processing, a binary image outline is extracted in the field which is recognized as line art, and is converted into vector data. Specify whether to convert the binary image outline into vector data or to recognize it as one line (as a thin line). For the thin line, the line width can be specified. Change this value when you want to obtain an output of a wide-width line as one line rather than as an outline (when you want to prioritize edit operation as a line rather than image quality).
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 99
Default Value	1
VP-TXT 2	Setting of character vectorization
Detail	To set vector conversion processing for text on scalable PDF. In the vector conversion processing, a binary image outline is extracted in the field which is recognized as text, and is converted into vector data. In regular vector conversion, function approximation is not used for small text because the image quality is not changed. When the value is changed, function approximation processing is executed for small text, which realizes smooth text although the image quality is changed. Change this value when you want to prioritize smoothness in small text.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 99
Default Value	1
C-PDL-T 2	Setting of PDL gradation reference
Detail	To set whether gradation or density to be prioritized as the gradation reference for PDL. With priority on gradation (% of halftone dots), gradation is matched with original on the shadow area although the maximum density decreases. With priority on density, density is always matched with original.
Use Case	Upon user's request
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: Priority on gradation (% of halftone dots), 1: Priority on density
Default Value	0
Supplement/Memo	Abbreviation of CAL_PDL_Target
C-S-C-D 2	High density end edge crrct ON/OFF: copy
Detail	To set ON/OFF of high density trailing edge correction function at copy. With CAL of COPY, high density trailing edge correction function is ON in normal operation; however, set OFF as needed.
Use Case	ON: When reducing jagged line and jagged outline of text OFF: When matching density with original on high density area, or when prioritizing density and gradation
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	1
Supplement/Memo	Abbreviation of CAL_Shadow_COPY_Density. When adjusting the input signal 255 to low in the case that the density of solid area is too high, jaggy (jagged effect of halftone) may occur to text, etc. By entering the input signal 255 as solid, occurrence of jaggy can be prevented.

DOTSCT 2	Set high dens area white dot reduct mode
Detail	To set the mode to reduce white dots occur in the high density area with 600 dpi. Set 1 when white dots occur at regular intervals in the high density area. If it is not alleviated, set 2. Set 0 when degree of gradation in the high density area is decreased due to parts life or environment.
Use Case	 When white dots occur at regular intervals in the high density area When the degree of gradation is decreased because colors in the high density area become darker
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	 It is enabled only for PDL job. When 0 is set, white dots may be significant. When 2 is set, gradation in the high density area may become not noticeable.
Display/Adj/Set Range	0 to 2 0: OFF, 1: ON (Weak), 2: ON (Strong)
Default Value	0
SP-GRAD 2	ON/OFF of special gradation processing
Detail	To set whether to make the density gradation characteristics of halftone the same as that of conventional machines.
Use Case	When making the density gradation characteristic the same as that of conventional machines
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: ON, 1: OFF
Default Value	1
BIN-SEL 2	For R&D

■ IMG-FIX

COPIER (Service mode for printer) > OPTION (Specification setting mode) > IMG-FIX

RAG-CONT	1	Set fix smeared image ctrl mode level
	Detail	To set level of the mode (skipping) to control smeared image caused by fixing area.
Use	Case	When a smeared image occurs
Adj/Set/Operate M	ethod	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Ca	aution	Set RAG-SW to 1 to 3 to enable skipping.
Display/Adj/Set F	Range	0 to 3 0: No skipping, 1: Small skipping, 2: Medium skipping, 3: Large skipping
Default	Value	1
Supplement/I	Memo	When this mode is ineffective, use COPIER> ADJUST> DEVELOP> DE-OFS together.

PCL-COPY 2	Set of PCL COPIES command control method
Detail	To set the binder control method of COPIES command with PCL. Select whether to use the control method of Canon-made PCL or use the same control method of non-Canon-made PCL.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 65535 0: Control method of Canon-made PCL (following the value of COPIES command that is specified for each page to control on a page basis) 1: Control method of non-Canon-made PCL (handling the value of COPIES command, which is specified for page 1 at the time of Collate mode, as bind figure while the value of COPIES command for the next page or later is invalid. Same control applies as Canon-made PCL at the time of non- sorted mode) 2 to 65535: For future use
Default Value	0
CNT-SW 1	Set default dspl items on charge counter
Detail	To set default display items of the charge counter on the Counter Check screen. For details of each type, refer to the Service Manual.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Type1, 1: Type2
Default Value	0
BCNT-AST 1	Set of box print charge target job
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the job type that advances the count in box print with NE Controller (ASSIST).
Use Case	When switching the job type that is subject to counting of the box print with NE Controller
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: PDL job, 1: Copy job
Default Value	0
PRJOB-CP 2	Set count TX at RX/report print
Detail	To set to enable/disable a page-basis count pulse transmission to the charging management device at the time of reception print or report print.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: No transmission, 1: Transmission
Default Value	0
Supplement/Memo	Charging management device: Coin Manager, Non-Canon-made control card

COPIER (Service mode	for printer) > OPTION (Specification setting mode) > USER
DPT-ID-7	2 Password entry set at dept ID reg/auth
De	tail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to require a password entry at the time of registration/authentication of department ID.
	With the setting to require entry, entry of 7-digit password is required as well as entry of department ID.
Use Ca	ase Upon user's request
Adj/Set/Operate Meth	1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch.
Display/Adj/Set Rar	0 to 1 0: Department ID only, 1: 7-digit (password) entry
Default Va	lue 0
RUI-RJT	2 Connct set at invalid auth from remoteUI
De	tail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to disconnect HTTP port when the machine receives invalid authentication from remote UI 3 times.
Use Ca	ase Upon user's request
Adj/Set/Operate Meth	1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch.
Display/Adj/Set Rar	0 to 1 0: Continued connection, 1: Disconnected
Default Va	lue 0
SND-RATE	2 Set compress ratio at SEND high compress
De	tail To set the compression ratio when the data compression ratio for SEND (transmission) is set to "High Rati".As the value is larger, the compression ratio is higher (the file size becomes small).
Use C	
Adj/Set/Operate Meth	
·, · · · · · · · · · · · · · · · · ·	2) Turn OFF/ON the main power switch.
Caut	ion As the value is larger, image quality is decreased.
Display/Adj/Set Rar	0 to 2 0: Compression ratio 1/16, 1: Compression ratio 1/20, 2: Compression ratio 1/24
Default Va	lue 0
Additional Functio	Function Settings> Send> Common Settings> Data Compression Ratio
FREG-SW	2 For R&D
IFAX-SZL	2 Set of I-Fax transmission size limit
De	tail To set for restricting data size at the time of I-Fax transmission that does not go through the server. With the setting to restrict the data size, it is to be #830 error in the case of sending data that exceeds the upper limit value. In the case that the data goes through the server, the size of transmission data is always restricted.
Use Ca	
Adj/Set/Operate Meth	
Display/Adj/Set Rar	 0 to 1 0: Limited, 1: Not limited (Restriction applies when data goes through the server.)
Default Va	lue 1
Additional Functional Mo	Function Settings> Send> E-Mail/I-Fax Settings> Maximum Data Size for Sending
Supplement/Me	mo Set the upper limit value for transmission data size in Settings/Registration menu.

IFAX-PGD 2	Set page split TX at IFax Simple mode TX
Detail	To set whether to perform split-data transmission on a page basis in the case that the transmission size in I-Fax Simple mode exceeds the upper limit value.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	 In the case to enable split-data transmission, be sure to get approval from the user by explaining the following: No guarantee for page order on the reception side There is a possibility of interruption of other received jobs between pages.
Display/Adj/Set Range	0 to 1 0: Disabled, 1: Enabled
Default Value	0
Additional Functions Mode	Function Settings> Send> E-Mail/I-Fax Settings> Maximum Data Size for Sending
Supplement/Memo	Set the upper limit value for transmission data size in Settings/Registration menu.
MEAPSAFE 2	Setting of MEAP safe mode
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set safe mode for MEAP platform. MPSF is displayed on the Control Panel in safe mode. In safe mode, MEAP application is stopped while just the system application, which starts with initial state, is activated. Logs for cause analysis of MEAP failure can be obtained.
Use Case	Perform system recovery processing when MEAP platform fails to be activated due to resource
	confliction between MEAP applications, service registration or use order.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Normal mode, 1: Safe mode
Default Value	0
PRNT-POS 2	ON/OFF of all pauses at error job cancel
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to pause the print operation of following jobs when a job is canceled due to an error inside the machine (#037, etc.) except service calls during PDL print.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
AFN-PSWD 2	Setting of Set/Reg menu access limit
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set restriction on accessing Settings/Registration menu by entering password. With the setting to enable this mode, password entry of system administrator is required after pressing Settings/Registration key.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Password is not required, 1: Password is required
Default Value	0

PTJAM-RC 2	Auto reprint setting at PDL print jam
Detail	To set to automatically restart printing after jam recovery that occurs with PDL print.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Not automatically reprinted, 1: Automatically reprinted
Default Value	1
PDL-NCSW 2	Card mngm setting for PDL print job
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set to make PDL print job to be subject to card management by the Card Reader. With the setting to enable this mode, PDL print is available only when the card ID of the card inserted to the Card Reader matches the department ID.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: PDL print is available with no card inserted. 1: PDL print is available only when the card ID matches the department ID in the case that the card is inserted.
Default Value	0
PS-MODE 2	Setting of PS print line drawing
Detail	To set the image processing at PS print. Set 8 when line width differs depending on the drawing position although the same line width is set.
Use Case	Use case When right and left ruled lines are different in width
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 65535 0 to 7: Spare 8: Strokeadjustment is enabled. 9 to 65535: Spare
Default Value	0
CNCT-RLZ 2	Setting of connection serialize function
Detail	Connection serialize is a function to assure job grouping function of imageWARE Output Manager Select Edition V1.0. The setting to enable this mode can avoid job rearrangement because the machine does not receive job data from other connection until it completes job data reception from the current connection.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
Supplement/Memo	Connection: Connection to be established through network between multiple hosts (PC, etc). Job grouping function: A function of imageWARE Output Manager Select Edition V1.0. This is to prevent job interruption from other PC by group job (sending multiple jobs in 1 session at job transmission).

COUNTER7 1	Setting of software counter 7
Detail	To set counter type for software counter 7 on the Counter Check screen.
Use Case	Upon user/dealer's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 999 0: No registration
Default Value	0
COUNTER8 1	Setting of software counter 8
Detail	To set counter type for software counter 8 on the Counter Check screen.
Use Case	Upon user/dealer's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 999 0: No registration
Default Value	0
2C-CT-SW 2	Set of color counter at 2-color mode
Detail	To set whether to use the single color counter or full color counter for count-up in 2-color mode.
Use Case	When supporting 2-color mode
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1
	0: Single color counter, 1: Full color counter
Default Value	It differs according to the location.
JA-FUNC 2	Display of job archive function ON/OFF
Detail	To display ON/OFF of job archive function. Make the setting with the MEAP program which supports job archiving.
Use Case	When using the job archive function
Adj/Set/Operate Method	N/A (Display only)
Caution	Setting cannot be made with this item.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
JA-JOB 2	Display of job archive target job
Detail	To display the job type subject to job archive. When the job archive function is ON, archive operation is executed when executing the target job. Make the setting with the MEAP program which supports job archiving.
Use Case	When using the job archive function
Adj/Set/Operate Method	N/A (Display only)
Caution	Setting cannot be made with this item.
Display/Adj/Set Range	0: N/A, 3: Limited to FAX/IFAX, 0xFFFFFFF: All jobs
Default Value	0
Related Service Mode	COPIER> OPTION> USER> JA-FUNC

COPIER (Service mode for p	printer) > OPTION (Specification setting mode) > USER
LDAP-SW 1	Retrieval condition set for LDAP server
Detail	To set the condition to search e-mail address, etc. from LDAP server.
Use Case	When specifying condition to search e-mail address, etc. from LDAP server
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 5 0: Includes the next, 1: Not include the next, 2: Equivalent to the next, 3: Not equivalent to the next, 4: Starts with the next, 5: Finishes with the next
Default Value	4
Supplement/Memo	LDAP (Lightweight Directory Access Protocol): Registering LDAP server enables to search e-mail address, etc. from LDAP server and the result can be registered in the Address Book, etc. Registration is available by the following: Set Destination > Register LDAP Server
FROM-OF 1	Deletion of mail sender's address
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to delete the sender's address (From) at the time of e-mail transmission.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Retained, 1: Deleted
Default Value	0
FILE-OF 1	Set file transmission to entered address
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow file transmission to a newly entered address. When 1 is set, file transmission is not available by entering the address because "File" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	To restrict addresses for transmission, be sure to manually delete them because the addresses registered in the Address Book can be used.
Display/Adj/Set Range	0 to 1 0: Enabled, 1: Disabled
Default Value	0
MAIL-OF 1	Setting of e-mail TX to entered address
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow e-mail transmission to a newly entered address. When 1 is set, e-mail transmission is not available by entering the address because "E-mail" is not displayed on the transmission screen. The addresses already registered in the Address Book can be used.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.

PH-D-SL2 2	Set halftone process in text/photo mode
Detail	When copying or B&W scanning to Inbox in text/photo mode, halftone processing of the image which reproduces gradation of text and photo judgment areas can be specified with this setting. Set to 1 when jaggy occurs or request to use the same halftoning method (text area) as conventional one is raised.
	Set to 2 when moire occurs frequently or request to use the same halftoning method as conventional B&W MFP method is raised.
	Even 0 is set, TBIC is used for text judgment area and low screen ruling for photo judgment area at the time of B&W Inbox scan. The setting is disabled when the B&W Inbox scanning density is set to auto.
Use Case	 When jaggy occurs on the edge of text or thin lines at copy output. Especially when jaggy occurs in the text or thin lines (text in halftone dots) of the area where gradation in the halftone density is expressed like photo, graphics, etc. When moire occurs frequently at the time of copy or B&W Inbox scan Especially when moire
	 When more occurs inequently at the time of copy of B&W inbox scan Especially when more frequently occurs in the area where gradation in the halftone density is expressed like photo, graphics, etc. and this symptom is not alleviated with PH-D-SEL or sharpness adjustment When receiving a request to use the same halftoning method (text area) as the conventional one (model with image area separation method) at copy output When receiving a request to use the same halftoning method (both text and photo areas) as the conventional B&W MFP method at the time of copy or B&W Inbox output
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	 0 to 2 0: Low screen ruling (134 lines) is used for photo judgment area and high screen ruling (141 lines) for text judgment area. 1: Low screen ruling is used for photo judgment area and TBIC for text judgment area. 2: TBIC is used for both photo and text judgment areas.
Default Value	0

FAXSTREN 1	Set of setting delete aftr fax transmit
Detail	To set whether to delete the transmission settings except for the address after transmission from the "Fax" screen.
Use Case	Upon user's request
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 2 0: Delete 1: Retain * 2: Retain * The setting for Options > Job Done Notice > Attach TX Image is not retained.
Default Value	It differs according to the location.
SJ-UNMSK 2	ON/OFF secured job masking cancellation
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to mask other people's secured jobs. When 0 is set, operation of other people's secured jobs is not possible because they are masked. When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Masking is canceled and other people's secured jobs can be operated. It is enabled at MEAP authentication.
Use Case	When operating secured jobs in charge mode Type-C
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF (Masking enabled), 1: ON (Masking canceled)
Default Value	0
Related Service Mode	COPIER> OPTION> ACC> COIN
SJ-CLMSK 2	ON/OFF secured job stop button display
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to display the button to stop a secured job. When 0 is set, the stop button is displayed. When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Since the stop button is not displayed, the secured job cannot be stopped.
Use Case	When prohibiting to stop the secured job in charge mode Type-C
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF (Display), 1: ON (Hide)
Default Value	0
Related Service Mode	COPIER> OPTION> ACC> COIN
PDFD-MSW 2	Set output paper size: direct print PDF
Detail	To set output paper size at direct print PDF. Usually, the region defined by MediaBox is output. However, in some cases, the region defined (trimmed) by CropBox is judged as output paper size depending on PDF file. Set 1 when output result differs from what is defined at direct print PDF.
Use Case	When preferring to output a PDF file with paper which size is defined by CropBox while the sizes of MediaBox and CropBox are different
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: MediaBox (Normal), 1: CropBox
Default Value	0

SFT-OUT 2	Setting of offset priority delivery
Detail	To set whether to deliver a job where offset and collate/offset group is set to the delivery destination with offset function. When 0 is set, a job is delivered to the delivery destination set in [Settings/Registration] even though the offset function is not available. When 1 is set, a job is delivered to the delivery destination with offset function even though a delivery destination without offset function is set in [Settings/Registration].
Use Case	When preferring to deliver a job to the delivery destination with offset function
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Based on Output Tray Settings, 1: Priority on job settings (deliver to a delivery destination where offset is possible)
Default Value	1
Additional Functions Mode	Function Settings> Common> Paper Output Settings> Output Tray Settings
LGCY-SCP 2	Setting of PPA/secured print switch
Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to use the PPA function or the conventional secured print function. Set 0 when using the PPA function. The conventional secured print function is disabled. Set 1 when using the conventional secured print function (when the EFI Controller is connected, etc.). The PPA function is disabled. When this item is set to 0, the setting of UI-PPA becomes 1. When this item is set to 1, the setting of UI-PPA becomes 0.
Use Case	When using the conventional secured print function (when the EFI Controller is connected, etc.)
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	The PPA function cannot be used when the EFI Controller is connected.
Display/Adj/Set Range	0 to 1 0: Use the PPA function, 1: Use the conventional secured print function
Default Value	0
Related Service Mode	COPIER> OPTION> DSPLY-SW> UI-PPA
Supplement/Memo	PPA (Personal Print Application): A function to hold print job. It contains the function of secured print.
CNT-PRT 2	ON/OFF of parts counter report output
Detail	To set whether to print parts counter values on the counter report.
Use Case	When grasping the estimated life of parts while the monitoring service function is not used
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF (Not print), 1: ON (Print)
Default Value	It differs according to the location.
Additional Functions Mode	Check Counter> Print List

CONER (Servic	ce mode for p	orinter) > OP HON (Specification setting mode) > USER
JA-WIFI	2	Setting of SAM Wi-Fi direct print
	Detail	*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set whether to allow Wi-Fi direct print when iW SAM is enabled. Wi-Fi direct print cannot be used when iW SAM is enabled. However, when 1 is set, it can be used.
	Use Case	When the operation restriction is cleared at the time of iW SAM
Adj/Set/Opera	ate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.

NETWORK

COPIER (Service mode for printer) > TEST (Print test mode) > NETWORK

PING 1	Network connection check
Detail	To check connection between this machine and TCP/IP network.
Use Case	 When checking network connection at the time of installation At network connection failure
Adj/Set/Operate Method	 1) Turn OFF the main power switch. 2) Connect the network cable to this machine, and then turn ON the main power switch. 3) Inform the system administrator at user's site that installation of this machine is complete, and ask for network setting. 4) Ask the system administrator to check the network connection, and check the remote host address of PING transmission target. 5) Select the item and enter the remote host address, and then press OK key and Start key. OK: Connection is normal. Checking procedure is complete. NG: Connection failed. Go to step 6) if the cable connection is OK. In case of cable connection failure, connect again and then go to step 5). 6) Select the item and enter loopback address, and then press OK key and Start key. OK: TCP/IP setting of this machine is normal. Go to step 7) to check NIC. NG: TCP/IP setting of this machine has failure. Go to step 3) to check the setting again. 7) Select the item and enter the local host address, and then press OK key. OK: Network setting of this machine and NIC are normal. Inform the system administrator that the trouble is due to network environment and ask for countermeasure. NG: Connection failure/fault with NIC. Check connection of NIC/ replace NIC.
Display/Adj/Set Range	0.0.0.0 to 255.255.255.255 At normal state: OK, At failure occurrence: NG
Supplement/Memo	 Remote host address: IP address of PC terminal in network. Loopback address: 127.0.0.1. Checking TCP/IP of this machine is available because the signal is returned before NIC. NIC: Network interface Local host address: IP address of this machine
BML-DISP 2	Set System Monitor scrn: BMlinks support
Detail	To set whether to display only the device configuration in the System Monitor screen when supporting BMlinks. When the setting is switched, the job status and logs are not displayed.
Use Case	When supporting BMlinks
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: Ordinary System Monitor screen, 1: Screen in which only the device configuration is displaye
Default Value	0
IPV6-ADR 1	Setting of PING send address (IPv6)
Detail	To set the IPv6 address to send PING. When PING is sent to this address by COPIER> TEST> NETWORK> PING-IP6, the network connection condition in the IPv6 environment can be checked.
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	 Enter a consistent character string as an address of IPv6. Enter an address within 39 characters including hexadecimal numbers (0-9, a-f) and a separate
Related Service Mode	(:). COPIER> TEST> NETWORK> PING-IP6
PING-IP6 1	PING transmission to IPv6 address
Detail	To send PING to the address specified by IPV6-ADR. The network connection condition in the IPv6 environment can be checked.
Adj/Set/Operate Method	Select the item, and then press OK key.
Related Service Mode	COPIER> TEST> NETWORK> IPV6-ADR

■ NET-CAP

COPIER (Service mode for printer) > TEST (Print test mode) > NET-CAP

COPIER (Service mode for p	printer) > TEST (Print test mode) > NET-CAP
CAPOFFON 2	ON/OFF of NetCap function
Detail	To set ON/OFF of network packet capture function.
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log
STT-STP 2	Start and stop of network packet capture
Detail	To start and stop network packet capture.
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	0 to 1 0: Stop, 1: Start
Default Value	0
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log
CAPSTATE 2	State display of network packet capture
Detail	To display the state of network packet capture.
Adj/Set/Operate Method	N/A (Display only)
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log
PONSTART 2	Set network packet capture start timing
Detail	To set whether to perform network packet capture from power-on.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: OFF, 1: ON
Default Value	0
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log
OVERWRIT 2	Setting of NetCap data overwriting
Detail	To set whether to finish network capturing or overwrite when HDD becomes full.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: No overwriting (finish network packet capture), 1: Overwriting
Default Value	1
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log

COPIER (Service mode for printer) > TEST (Print test mode) > NET-CAP

PAYLOAD 2	Set network packet capture data save
Detail	To set whether to discard payload when saving the captured packet data.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Save captured packet data as is, 1: Discard payload and save the packet data
Default Value	0
Related Service Mode	COPIER> TEST> NET-CAP
Additional Functions Mode	Store Network Packet Log
FILE-CLR 2	Deletion of network packet capture data
Detail	To delete the captured packet data.
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
SIMPFILT 2	Settings of packet data filtering
Detail	To set whether to perform filtering when capturing packet data. When 0 is set, filtering is not performed (All the data are captured.) When 1 is set, packet data is captured only when the receiver's or sender's address coincides with the Mac address of this machine.
Use Case	At problem analysis (at packet data analysis)
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Display/Adj/Set Range	0 to 1 0: Not filtered, 1: Filtered
ENCDATA 2	Setting of packet data encryption
Detail	To set whether to encrypt the packet data when writing the captured packet data to the USB flash drive.
Use Case	 At problem analysis (at packet data analysis) When improving security of written packet data
Adj/Set/Operate Method	 Enter the setting value, and then press OK key. Turn OFF/ON the main power switch.
Caution	This setting is enabled only when writing data to the USB flash drive. Even when the packet data is loaded using SST, the file is specified, therefore the setting is disabled.
Display/Adj/Set Range	0 to 2 0: Encrypted (encrypted file) 1: Not encrypted (plain text file) 2: Encrypted (encrypted file + plain text file)
Default Value	0
CAPIF 2	Setting of network packet capture target
Detail	To set the network interface to capture the packet data. Make this setting before starting network packet capture.
Use Case	When changing the target of network packet capture
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Display/Adj/Set Range	1 to 6
	1: Local loopback, 2: Wired LAN, 3: Wireless LAN, 4: Wireless Soft AP mode, 5: Wi-Fi direct 6: Wired LAN (Sub-Line)
Default Value	2
Related Service Mode	COPIER> TEST> NET-CAP

TOTAL

SERVICE1 1	Service-purposed total counter 1
Detail	To count up when the printout is delivered outside the machine. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
SERVICE2 1	Service-purposed total counter 2
Detail	To count up when the printout is delivered outside the machine. Large size: 2, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
COPY 1	Total copy counter
Detail	To count up when the printout is delivered outside the machine. Large size: 1, Small size: 1 A blank sheet is not counted.
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
PDL-PRT 1	PDL print counter
Detail	To count up when the printout is delivered outside the machine according to the charge counter at PDL print. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set Range	0 to 99999999
FAX-PRT 1	FAX reception print counter
Detail	To count up when the printout is delivered outside the machine according to the charge counter at FAX reception. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set Range	0 to 99999999
RMT-PRT 1	Remote print counter
Detail	To count up when the printout is delivered outside the machine and 2-sided print is stacked according to the charge counter at remote print. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set Range	0 to 99999999
BOX-PRT 1	Inbox print counter
Detail	To count up when the printout is delivered outside the machine according to the charge counter at Inbox print. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set Range	0 to 99999999

RPT-PRT	4	Depart print counter
RPI-PRI	1	Report print counter
	Detail	To count up when the printout is delivered outside the machine according to the charge counter at report print. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set	Range	0 to 99999999
2-SIDE	1	2-sided copy/print counter
	Detail	To count up when the copy/printout is delivered outside the machine according to the charge counter at 2-sided copy/print. Large size: 1, Small size: 1 A blank sheet is not counted.
Display/Adj/Set	Range	0 to 99999999
SCAN	1	Scan counter
	Detail	To count the number of scan operations according to the charge counter when the scanning operation is complete. Large size: 1, Small size: 1
Display/Adj/Set	Range	0 to 99999999

■ JAM

TOTAL 1	Host machine total jam counter
Detail	Total number of jam occurrences in the host machine
Use Case	When checking the total jam counter of the host machine
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
FEEDER 1	DADF total jam counter
Detail	Total number of jam occurrences in the DADF
Use Case	When checking the total jam counter of feeder
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
SORTER 1	Finisher total jam counter
Detail	Total number of jam occurrences in the Finisher
Use Case	When checking the total jam counter of finisher
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1

· · · · · · · · · · · · ·	
MF 1	Multi-purpose Tray jam counter
Detail	The number of pickup jam occurrences in the Multi-purpose Tray
Use Case	When checking the jam counter of Multi-purpose Tray
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
C1 1	Cassette 1 pickup jam counter
Detail	Cassette 1 pickup jam counter
Use Case	When checking the jam counter of machine's Cassette 1
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
C2 1	Cassette 2 pickup jam counter
Detail	Cassette 2 pickup jam counter
Use Case	When checking the jam counter of machine's Cassette 2
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
C3 1	Cassette 3 pickup jam counter
Detail	Cassette 3 pickup jam counter
Use Case	When checking the jam counter of machine's Cassette 3
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1
C4 1	Cassette 4 pickup jam counter
Detail	Cassette 4 pickup jam counter
Use Case	When checking the jam counter of machine's Cassette 4
Adj/Set/Operate Method	To clear the counter value: Select the item, and then press Clear key.
Unit	time
Amount of Change per Unit	1

COPIER (Service mode for printer) > COUNTER (Counter mode) > PAPER G52-59 1 Delivered sheet counter: 52 to 59 g/m2 Detail To count up the number of delivered sheets which weight is 52 to 59 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size. **Use Case** When checking the consumption level of parts based on the number of delivered sheets Adj/Set/Operate Method N/A (Display only) **Display/Adj/Set Range** 0 to 99999999 Unit sheet Amount of Change per 1 Unit G60-63 1 Delivered sheet counter: 60 to 63 g/m2 Detail To count up the number of delivered sheets which weight is 60 to 63 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size. Use Case When checking the consumption level of parts based on the number of delivered sheets Adj/Set/Operate Method N/A (Display only) Display/Adj/Set Range 0 to 99999999 Unit sheet Amount of Change per 1 Unit G64-75 Delivered sheet counter: 64 to 75 g/m2 1 Detail To count up the number of delivered sheets which weight is 64 to 75 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size. **Use Case** When checking the consumption level of parts based on the number of delivered sheets Adj/Set/Operate Method N/A (Display only) Display/Adj/Set Range 0 to 99999999 Unit sheet Amount of Change per 1 Unit G76-90 1 Delivered sheet counter: 76 to 90 g/m2 Detail To count up the number of delivered sheets which weight is 76 to 90 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size. Use Case When checking the consumption level of parts based on the number of delivered sheets Adj/Set/Operate Method N/A (Display only) Display/Adj/Set Range 0 to 99999999 Unit sheet 1 Amount of Change per Unit

G91-105 1	Delivered sheet counter: 91 to 105 g/m2
Detail	To count up the number of delivered sheets which weight is 91 to 105 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G106-128 1	Delivered sheet counter: 106 to 128 g/m2
Detail	To count up the number of delivered sheets which weight is 106 to 128 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G129-150 1	Delivered sheet counter: 129 to 150 g/m2
Detail	To count up the number of delivered sheets which weight is 129 to 150 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G151-163 1	Delivered sheet counter: 151 to 163 g/m2
Detail	To count up the number of delivered sheets which weight is 151 to 163 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	$\overline{N/A}$ (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per	1
Unit	
G164-180 1	Delivered sheet counter: 164 to 180 g/m2
Detail	To count up the number of delivered sheets which weight is 164 to 180 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1

G181-220 1	Delivered sheet counter: 181 to 220 g/m2
Detail	To count up the number of delivered sheets which weight is 181 to 220 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G221-256 1	Delivered sheet counter: 221 to 256 g/m2
Detail	To count up the number of delivered sheets which weight is 221 to 256 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G257-300 1	Delivered sheet counter: 257 to 300 g/m2
Detail	To count up the number of delivered sheets which weight is 257 to 300 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G301-325 1	Delivered sheet counter: 301 to 325 g/m2
Detail	To count up the number of delivered sheets which weight is 301 to 325 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)
Display/Adj/Set Range	0 to 99999999
Unit	sheet
Amount of Change per Unit	1
G326-350 1	Delivered sheet counter: 326 to 350 g/m2
Detail	To count up the number of delivered sheets which weight is 326 to 350 g/m2. 1st line: The counter is advanced by 1 for both small size and large size. 2nd line: The counter is advanced by 1 for small size and by 2 for large size.
Use Case	When checking the consumption level of parts based on the number of delivered sheets
Adj/Set/Operate Method	N/A (Display only)

# LIFE

TONER-K 1	Toner (Bk): Life VL and No. of days left
Detail	To display the life value and the number of days left of Toner (Bk). The 3rd and 4th columns may be hidden depending on the country. 1st column: Operation Life Value 2nd column: Number of Days Left 3rd column: Life Value 4th column: Replacement Life Value
Use Case	When checking Life VL/No. of days left
Display/Adj/Set Range	1st column: 0 to 999 (%) 2nd column: 0 to 999 (days) 3rd column: 0 to 999 (%) 4th column: 50 to 999 (%)
Supplement/Memo	Operation Life Value: Wear level value relative to Replacement Life Value (%) Operation Life Value = Life Value/Replacement Life Valuex100Number of Days Left: Expected number of days until the part reaches its end of life Replacement Life Value: Target replacement life value
TR-ROLL 1	Transfer Roller:Life VL/No. of days left
Detail	To display the life value and the number of days left of the Transfer Roller. The 3rd and 4th columns may be hidden depending on the country. 1st column: Operation Life Value 2nd column: Number of Days Left 3rd column: Life Value 4th column: Replacement Life Value
Use Case	- When checking Life VL/No. of days left of the part - At parts replacement
Adj/Set/Operate Method	To change the Replacement Life Value: Select the item, enter the value, and then press OK key. To reset Operation Life Value/Number of Days Left/Life Value: Select the item, and then press Clear key.
Caution	<ul> <li>Be sure to reset Operation Life Value/Number of Days Left/Life Value after replacing the part.</li> <li>Operation Life Value/Number of Days Left/Life Value can also be reset by clearing the parts counter.</li> </ul>
Display/Adj/Set Range	1st column: 0 to 999 (%) 2nd column: 0 to 999 (days) 3rd column: 0 to 999 (%) 4th column: 50 to 999 (%)
Supplement/Memo	Operation Life Value: Wear level value relative to Replacement Life Value (%) Operation Life Value = Life Value/Replacement Life Valuex100Number of Days Left: Expected number of days until the part reaches its end of life Replacement Life Value: Target replacement life value

FX-UNIT 1	Fixing Ass'y: Life VL/No. of days left
Detail	To display the life value and the number of days left of the Fixing Assembly. The 3rd and 4th columns may be hidden depending on the country. 1st column: Operation Life Value 2nd column: Number of Days Left 3rd column: Life Value 4th column: Replacement Life Value
Use Case	<ul> <li>When checking Life VL/No. of days left of the part</li> <li>At parts replacement</li> </ul>
Adj/Set/Operate Method	To change the Replacement Life Value: Select the item, enter the value, and then press OK key Operation Life Value/Number of Days Left/Life Value: Display only
Caution	Be sure to reset Operation Life Value/Number of Days Left/Life Value after replacing the part.
Display/Adj/Set Range	1st column: 0 to 999 (%) 2nd column: 0 to 999 (days) 3rd column: 0 to 999 (%) 4th column: 50 to 999 (%)
Supplement/Memo	Operation Life Value: Wear level value relative to Replacement Life Value (%) Operation Life Value = Life Value/Replacement Life Value x 100Number of Days Left: Expected number of days until the part reaches its end of life Replacement Life Value: Target replacement life value
C1-FD-RL 1	Cst1 Feed Roll: Life VL/No. of days left
Detail	To display the life value and the number of days left of the Cassette 1 Feed Roller. The 3rd and 4th columns may be hidden depending on the country. 1st column: Operation Life Value 2nd column: Number of Days Left 3rd column: Life Value 4th column: Replacement Life Value
Use Case	- When checking Life VL/No. of days left of the part - At parts replacement
Adj/Set/Operate Method	To change the Replacement Life Value: Select the item, enter the value, and then press OK key. To reset Operation Life Value/Number of Days Left/Life Value: Select the item, and then press Clear key.
Caution	<ul> <li>Be sure to reset Operation Life Value/Number of Days Left/Life Value after replacing the part.</li> <li>Operation Life Value/Number of Days Left/Life Value can also be reset by clearing the parts counter.</li> </ul>

	Detail	To display the life value and the number of days left of the Separation Roller (DADF). The 3rd and 4th columns may be hidden depending on the country. 1st column: Operation Life Value 2nd column: Number of Days Left 3rd column: Life Value 4th column: Replacement Life Value
	Use Case	- When checking Life VL/No. of days left of the part - At parts replacement
Adj/Set/Opera	te Method	To change the Replacement Life Value: Select the item, enter the value, and then press OK key. To reset Operation Life Value/Number of Days Left/Life Value: Select the item, and then press Clear key.
	Caution	<ul> <li>Be sure to reset Operation Life Value/Number of Days Left/Life Value after replacing the part.</li> <li>Operation Life Value/Number of Days Left/Life Value can also be reset by clearing the parts counter.</li> </ul>
Display/Adj/∖	Set Range	1st column: 0 to 999 (%)         2nd column: 0 to 999 (days)         3rd column: 0 to 999 (%)         4th column: 50 to 999 (%)
Supplem	ent/Memo	Operation Life Value: Wear level value relative to Replacement Life Value (%)Operation Life Value = Life Value/Replacement Life Valuex115 Number of Days Left: Expected number of days until the part reaches its end of life Replacement Life Value: Target re

# FEEDER (ADF service mode)

# DISPLAY (State display mode)

FEEDER (ADF service mode) > DISPLAY (State display mode)

FEEDSIZE	1	Dspl orgnl size detected by DADF
	Detail	To display the original size detected by the DADF.
	Use Case	When checking the paper size recognized by the device after scanning
Adj/Set/Ope	erate Method	N/A (Display only)

# ADJUST (Adjustment mode)

DOCST 1	Adj of DADF img lead edge margin: front
Detail	To adjust the leading edge margin on the front side at DADF reading. This function is executed when an image that has been imaged in a state where skew correction is not performed/has failed is out of alignment. (In the service mode, when skew correction is turned off or when the inclination of the document is large or the document is chipped.) When replacing the Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)
Use Case	When clearing the Reader-related RAM data/replacing the Controller PCB
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-45 to 30
Unit	mm
Default Value	0
Amount of Change per Unit	0.1
LA-SPEED 1	Fine adj img ratio: DADF,vert scan,front
Detail	To make a fine adjustment of the front side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.01% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)
Use Case	- When installing DADF - When replacing the SATA Flash PCB - When replacing the clearing the Reader-related RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-200 to 200
Unit	%
Default Value	0
Amount of Change per Unit	0.01

DOCST2 1	Adj of DADF img lead edge margin: back
Detail	To adjust the leading edge margin on the back side at DADF reading. This function is executed when an image that has been imaged in a state where skew correction is not performed/has failed is out of alignment. (In the service mode, when skew correction is turned off or when the inclination of the document is large or the document is chipped.) When replacing the Controller PCB/clearing RAM data, enter the value of service label. As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)
Use Case	When clearing the Reader-related RAM data/replacing the Controller PCB
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-30 to 30
Unit	mm
Default Value	0
Amount of Change per Unit	0.1
LA-SPD2 1	Fine adj img ratio: DADF,vert scan,back
Detail	To make a fine adjustment of the back side image magnification ratio in vertical scanning direction at DADF reading. As the value is incremented by 1, the image is reduced by 0.01% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)
Use Case	- When installing DADF - When replacing the SATA Flash PCB - When replacing the clearing the Reader-related RAM data
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-200 to 200 (-2.00 to 2.00%)
Unit	%
Default Value	0
Amount of Change per Unit	0.01
ADJMSCN1 1	Fine adj img ratio:2-sided,horz scan,frt
Detail	To make a fine adjustment of the front side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is enlarged by 0.1% in horizontal scanning direction.
Use Case	When image magnification ratio on the front side and back side are different at 2-sided reading
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-10 to 10
Unit	%
Default Value	0
Amount of Change per Unit	0.1
ADJMSCN2 1	Fine adj img ratio:2-sided,horz scan,bck
Detail	To make a fine adjustment of the back side image magnification ratio in horizontal scanning direction at DADF 2-sided reading. As the value is incremented by 1, the image is enlarged by 0.1% in horizontal scanning direction.
Use Case	When image magnification ratio on the front side and back side are different at 2-sided reading
Adj/Set/Operate Method	Enter the setting value (switch negative/positive by -/+ key) and press OK key.
Display/Adj/Set Range	-10 to 10
Unit	%
Default Value	0
Amount of Change per Unit	0.1

ADJ-T1 1	Adj of DADF img lead edge margin: front
Detail	To adjust the leading edge margin of image after skew correction (front side).
	When the value is increased by 1, leading edge margin is increased by 0.1 mm.
	When the value is decreased by 1, leading edge margin is decreased by 0.1 mm.
Use Case	When adjusting the leading edge margin
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	Setting the value too high or too low may cause cropped image.
Display/Adj/Set Range	-15 to 15
Unit	mm
Default Value	0
Amount of Change per Unit	0.1
ADJ-T2 1	Adj of DADF img lead edge margin: back
Detail	To adjust the leading edge margin of image after skew correction (back side).
	When the value is increased by 1, leading edge margin is increased by 0.1 mm. When the value is decreased by 1, leading edge margin is decreased by 0.1 mm.
Use Case	When adjusting the leading edge margin
Adj/Set/Operate Method	Enter the setting value, and then press OK key.
Caution	Setting the value too high or too low may cause cropped image.
Display/Adj/Set Range	-15 to 15
Unit	mm
Default Value	0
Amount of Change per	0.1
Unit	
ADJ-L1 1	Adj of DADF img left edge margin: front
ADJ-L1 1 Detail	To adjust the left edge margin of image after skew correction (on front side).
	To adjust the left edge margin of image after skew correction (on front side). When the value is increased by 1, left edge margin is increased by 0.1 mm.
Detail	To adjust the left edge margin of image after skew correction (on front side). When the value is increased by 1, left edge margin is increased by 0.1 mm. When the value is decreased by 1, left edge margin is decreased by 0.1 mm.
Detail Use Case	To adjust the left edge margin of image after skew correction (on front side). When the value is increased by 1, left edge margin is increased by 0.1 mm. When the value is decreased by 1, left edge margin is decreased by 0.1 mm. When adjusting the position of scanned image's left edge
Detail Use Case Adj/Set/Operate Method	To adjust the left edge margin of image after skew correction (on front side). When the value is increased by 1, left edge margin is increased by 0.1 mm. When the value is decreased by 1, left edge margin is decreased by 0.1 mm. When adjusting the position of scanned image's left edge Enter the setting value, and then press OK key.
Detail Use Case Adj/Set/Operate Method Caution	To adjust the left edge margin of image after skew correction (on front side). When the value is increased by 1, left edge margin is increased by 0.1 mm. When the value is decreased by 1, left edge margin is decreased by 0.1 mm. When adjusting the position of scanned image's left edge Enter the setting value, and then press OK key. Setting the value too high or too low may cause cropped image.
Detail Use Case Adj/Set/Operate Method Caution Display/Adj/Set Range	To adjust the left edge margin of image after skew correction (on front side). Display/Adj/Set Range	0 to 1 0: Hide, 1: Display
Default Value	0

# FAX (Serivce Mode for FAX)

# Overview

# Configuration of the Service Mode

Service mode is divided into the following 10 items (#1 to #10).

Item	Name	Description
#1 SSSW	Service software switch	This can be used to conduct the registration/settings relating to basic functions of the fax, such as error management, echo prevention and prevention of communication problems.
#2 MENU	Menu switch setting	This can be used to conduct the registration/settings relating to the required functions at installation, such as NL equalizer, transmission level.
#3 NUMERIC Par- am.	Setting of numeric pa- rameters	This can be used to enter numeric parameters.
#4 NCU	(Adjustment by a service technician is not possible.)	The values of this item are collectively set based on the setting of #5 TYPE.
#5 TYPE	Country/region set- ting	If the item "STANDARD" displayed on the display is set, #4 NCU data is collectively set to comply with the communication standards in Japan.
#6 IPFAX	Communication set- tings of IPFAX	If the license option for IPFAX has been enabled, IPFAX is displayed.
#7 PRINT	Printer function set- ting	This can be used to conduct the registration/settings relating to the printer basic service functions, such as size reduction conditions for received images.
#8 CLEAR	Data initialization mode setting	This item is to initialize each data.
#9 TEST	Test Mode	To execute various tests.
#10 REPORT	Service Report	To execute report print.

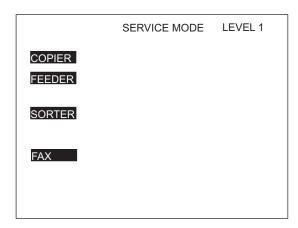

## CAUTION:

If a 2nd line fax option is installed, IPFAX cannot be used.

# Operation method

1. Enter service mode.

2. When the connected options (FEEDER, SORTER, FAX, BOARD) are displayed, select FAX and enter service mode of this board.

COPIER: Service mode of the connected equipment

FEEDER: Service mode of the ADF (*)

SORTER: Service mode of the Finisher (*)

FAX: Service mode of the fax (*)

The following explains the operation method using the #1 SSSW screen as an example. The meaning of the keys and operations are common for all screens.

Sssw	Menu	Num	Ncu	Туре	IP FAX	Print	Clear	Test	Report

				(Pres	s to stop t	he TES	ST.)		

- When changing the setting of the bit switch, directly press the bit (numeric value) you want to change.
- To enter a numeric value, use the numeric keypad.
- When confirming a change in a numeric value or when executing an item, press the [OK] key.
- To return to the previous layer, use the [Reset] key.

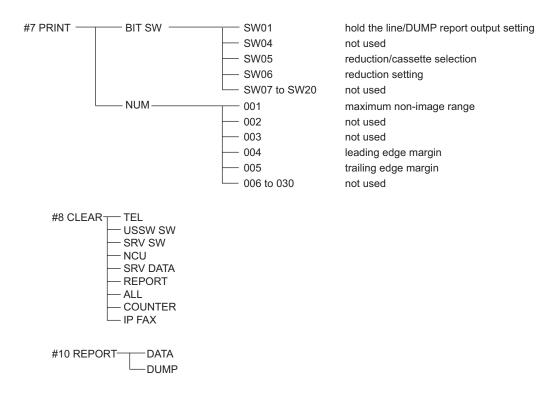

# CAUTION:

When changing the service mode settings, turn OFF and then ON the power.

The details of settings in service mode are stored in the storage of the host machine. The settings for this board are enabled by loading the settings stored in the storage of the host machine to the G3 Fax Control PCB when the main power is turned ON. Therefore, be sure to turn OFF and then ON the power when the settings have been changed.

1	Error dump list	Output	Do not output
2	Not used	-	-
3	Not used	-	-
4	Display service error codes in the ##300 series	Display	Do not display
5	Increase the capacity of SUBLOG for USBFAX2	Increase	Do not increase
6	Not used	-	-
7	Cancel prohibition of user setting collectively	Cancel	Do not cancel

### Details of Bit 0

Select whether to output service error codes.

When "Output" is selected, service error codes will be on the display and on the report.

#### **Detailed Discussions of Bit 1**

Select whether to output error dump list.

When "Output" is selected, the error transmission report and the reception result report at the time of occurrence of an error are output with the error dump list attached.

#### **Detailed Discussions of Bit 4**

Select whether to display service error codes in the ##300 series.

#### **Detailed Discussions of Bit 5**

Select whether to increase the log storage area when firmware automatic update function of USBFAX2 (a modem with Silicone Labs modem mounted version) is used.

#### **Detailed Discussions of Bit 7**

Select whether to collectively cancel the prohibition of user settings.

4	To prohibit control channel retrain during V.34	Prohibit	Do not prohibit
5	Not used	-	-
6	Not used	-	-
7	F-NET service without ring tone	Supported	Not supported

### **Detailed Discussions of Bit 4**

Select whether to prohibit the control channel retrain during V.34.

### **Detailed Discussions of Bit 7**

Select whether to support F-NET (fax communication network) service without a ring tone.

If "Supported" is selected, fax document will be automatically received without a ring tone when FC signal (1300 Hz tonal signal) from F-NET is detected.

# • SSSW-SW03

## **Functional Construction**

Bit	Function	1	0
0	Not used	-	-
1	Echo protect tone at high speed transmission	Send	Do not send

Bit	Function	1	0
2	Not used	-	-
3	Not used	-	-
4	Transmission mode: International transmission (1)	Yes	No
5	Transmission mode: International transmission (3)	Yes	No
6	Send mode	International transmis-	International transmis-
		sion (3)	sion (2)
7	Tonal signal before sending CED signal	Send	Do not send

#### Detailed Discussions of Bit 1

Use it to enable/disable sending an echo protect tone for a high-speed transmission V.29 modem signal (transmission speed at 9600 or 7200 bps).

If errors occur frequently at time of sending fax because of the condition of the line, select "Send". Selecting "send" sends non-modulated carrier for about 200 ms as the synchronous signal before sending images.

#### NOTE:

Error codes caused by line condition when sending fax ##100, ##104, ##281, ##282, ##283, ##750, ##755, ##760, ##765

## Detailed Discussions of Bits 4, 5 and 6

Transmission mode: Selected to use whether international transmission (1), international transmission (2) or international transmission (3).

Use these switches or the dial registration to select a transmission mode if errors occur frequently at time when sending fax overseas.

#### NOTE:

Error codes caused by echoes at time of sending fax

#005, ##100, ##101, ##102, ##104, ##201, ##280, ##281, ##283, ##284, ##750, ##760, ##765, ##774, ##779, ##784, ##794

Settings using the Dial Registration (user level):

Select "international transmission (1)" when making an entry in the address book. If errors persist, select "international transmission (2)" and then "international transmission (3)".

Transmission mode selected using One-Touch Dial function or the Speed Dial function will be given priority over the setting made by the service soft switch.

An international transmission mode may be selected using the keypad if a mode has been selected using this switch; for settings, see the following table:

Transmission mode	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
International trans- mission (1)	*	0	0	1	-	-	*	-
International trans- mission (2)	*	0	1	0	-	-	*	-
International trans- mission (3)	*	1	1	0	-	-	*	-

International transmission (1): Selected to ignore the first DIS signal from the other party. International transmission (2): Selected to transmit a 1850-Hz total signal when transmitting the DIS signal. International transmission (3): Selected to transmit a 1650-Hz total signal when transmitting the DIS signal.

## **Detailed Discussions of Bit 7**

Select whether to enable/disable sending of a 1080-Hz tonal signal before sending CED signal. Select "Send" if errors occur frequently because of an echo when reception is from overseas.

#### NOTE:

Error codes caused by echoes at the time of reception #005, ##101, ##106, ##107, ##114, ##200, ##201, ##790

# SSSW-SW04

# **Functional Construction**

Bit	Function	1	0
0	LC monitoring	Monitor	Do not monitor
1	Check the CI signal frequency	Check	Do not checked
2	Final flag sequences of the procedure signal	2 pcs	1 piece
3	Reception mode after sending CFR signal	High speed	High speed/low speed
4	Time to ignore low-speed signals after sending CFR signal	1500 msec	700 msec
5	Check the CS signal frequency (when PBX is set)	Check	Do not check
6	CNG signal at the time of manual sending	Send	Do not send
7	CED signal at the time of manual reception	Send	Do not send

### **Detailed Discussions of Bit 1**

Select whether to check the CI signal frequency.

#### **Detailed Discussions of Bit 2**

Select the number of the final flag sequences with the procedure signal (300 bps transmission speed). Select "2" when the other party's machine does not properly receive the procedure signal sent by this machine.

#### NOTE:

Error codes occurring at the time of sending fax ##100, ##280, ##281, ##750, ##753, ##754, ##755, ##758, ##759, ##760, ##763, ##764, ##765, ##768, ##769, ##770, ##773, ##775, ##778, ##780, ##783, ##785, ##788

#### Detailed Discussions of Bit 3

Select a reception mode after sending CFR signal.

Select "High speed" in the case of frequent errors caused by line condition at the time of reception. Simultaneously, turn "OFF" the "ECM reception" of the user data.

#### NOTE:

Error codes caused by line condition at the time of reception ##107, ##114, ##201 Be sure to change bit 4 before changing this bit; if errors still occur, change this bit. When 'high speed' is selected, only high-speed signals (images) will be received after sending the CFR signal.

#### Detailed Discussions of Bit 4

Select the time length during which low-speed signals are ignored after sending the CFR signal. Select "1500 msec" when reception of image signal is difficult because the line condition is not good.

### Detailed Discussions of Bit 5

Select whether to check the CI signal frequency when PBX is set.

#### Detailed Discussions of Bit 6

Select whether to send CNG signal at the time of manual sending.

If error occurs frequently at manual sending when the destination device that has FAX/TEL switch mode does not change to the fax mode, select "Send".

## **Detailed Discussions of Bit 7**

Select whether to send CED signal at the time of manual reception. Select "Send" when the other party's machine does not start sending although manual reception is executed.

# • SSSW-SW05

# **Functional Construction**

Bit	Function	1	0
0	Not used	-	-
1	To execute mm/inch conversion (text mode).	Yes	No

#### **Detailed Discussions of Bit 0**

Select whether to execute V.8 procedure when making a call.

"No": V.8 procedure is not executed even if V.8 procedure is received from the receiver side, and the procedure starts from V.21.

Select whether to execute V.8 procedure when receiving a call.

"No": V.8 procedure is not executed, and the procedure starts from V.21.

#### Detailed Discussions of Bit 2

Select whether to execute V.8 procedure when ANSam signal from the receiver side cannot be recognized at the time of making a call and V.8 procedure is declared by DIS signal from the receiver side.

"Yes": CI signal is sent in response to the DIS signal of the receiver side to execute the V.8 procedure.

"No": CI signal is not sent in response to the DIS signal of the receiver side, and the V.21 procedure is executed.

In the case of manual transmission, there will be no V.8 late start regardless of this setting.

#### Detailed Discussions of Bit 3

Select whether to declare the existence of the V.8 procedure with the DIS signal that is transmitted after the ANSam signal in case that the ANSam signal at the reception is not recognized at the caller side.

"Yes": V.8 procedure is declared by DIS signal and V.8 procedure is executed after CI signal is sent from the caller side. "No": V.8 procedure is not declared by DIS signal, and V.21 procedure is executed.

In the case of manual transmission, there will be no V.8 late start regardless of this setting.

#### **Detailed Discussions of Bit 4**

Select whether to prohibit fallback from the V.34 receiver side. "Prohibit": There will be no fallback from the receiver side.

# **Functional Construction**

Bit	Function	1	0
0	Transmission number restriction: Function to prevent no external access code *2	ON: Enable	OFF: Disable
1	Transmission number restriction: Extension allowance, prohibition *2	Prohibited	Allow
2	Transmission number restriction: Add "0" to the first digit of external access code *2	Yes	No
3	Operate as the client of a fax server *1 *a	Yes	No
4	Display the send job stop confirmation screen when pressing Stop key *2	No	Yes
5	Send jobs that are targeted to stop when pressing Stop key *2	Ongoing send job	Incomplete send job
6	not used	-	-
7	not used	-	-

*1: Supported by the platform version 306 or later

*2: Supported by the platform version 307 or later

*a: Enabled only for USA

## Details of Bit 0

To prevent incorrectly sending fax due to forgetting to use the external access number, "0", this function displays a pop-up warning window and prevents sending and returns to the status before pressing Start button by pressing [OK] after setting the fax number in [Fax] or [Scan and Send] and pressing Start button if the set telephone number does not start with "00". This function is supported even if the machine is operating in the fax server mode.

- 0: ON: Disable
- 1: OFF: Enable

# CAUTION:

- If using this function, enter the telephone number from the area code.
- This function applies to the fax destination telephone number of "Address List", "One-touch" and "Numeric Keypad input".

However, the warning is not displayed with "sending from Mail Box" and "manual sending".

- · A warning is displayed when sending IP fax but it is not displayed when sending PC fax.
- A warning is not displayed when forwarding transmission.
- If any registered number matches to the condition for displaying a warning, the warning is displayed with "sequential broadcast" and "group sending".
- "*" and "#" are also processed as a number.

#### NOTE:

Example of sending fax to 03-1234-5678

- The machine accepts sending fax with "0 (external access code) + 03 1234 5678 (telephone number)".
- The machine displays a warning and stops sending with "(no external access code) + 03 1234 5678 (telephone number)".
- If the external access code is other than "0", it can be changed from the following service mode.
- Service Mode > FAX > NUM > 080

Change the default setting of 080 from "0" to the external access code used in the installation environment.

#### Details of Bit 1

This is set to allow or prohibit transmission to the extension line.

This is enabled only if Bit 0 (function to prevent no external access code) is "1" (ON: Enable).

If transmission to the extension line is allowed, all telephone numbers not starting with the external access code are allowed. For example, if the external access code is "0", any number starting with "00" as starting 2 digits and number of the extension line are allowed. This means numbers starting with "01" to "09" are prohibited and other numbers are allowed.

If transmission to the extension line is prohibited, only allow the telephone number starting with the external access code + area code "0". For example, if the external access code is "0", allow only numbers starting with "00" as starting 2 digits.

Prohibit all extension numbers. This means only numbers starting with "00" are allowed and other numbers are prohibited. 0: Allow

1: Prohibit

## Details of Bit 2

This is the switch to add "0" to the beginning of external access code (default "0") set by the NUM switch 080.

The NUM switch can be used to set "0" and "1" but not "00" and "01" as the external access code.

This switch is used to solve this issue. In the above example, set this setting to "add" and then set the NUM switch 080 to "0" and "1" to set the external access code of "00" and "01".

0: No

1: Yes

## CAUTION:

- This automatically adds the external access number to the destination telephone number for sending fax registered by Address List, One-touch and entering by the Numeric Keypad excluding Direct Send and Send from Mail Box.
- This should be set only in the network environment that sends fax by adding the external access code.
- Do not add the external access code to the telephone number for fax send destination as the external access code is automatically added.

## Details of Bit 3

This switch operates the machine as the client of fax server.

- 0: No
- 1: Yes

# CAUTION:

When changing this switch, make sure to turn OFF and then ON then ON the power supply twice. This is the specification for changing the fax configuration and is the same specification as adding the Fax Board to the existing machine.

#### Details of Bit 4

This is the switch to set to display the send job stop confirmation screen if the Stop key is pressed during sending fax.

- 0: No
- 1: Yes

## **Details of Bit 5**

This is the switch to set to stop the ongoing send job or incomplete send job if the Stop key is pressed during sending fax.

- 0: Incomplete send job
- 1: Ongoing send job

# Setting of Menu Switch (MENU)

					$\bigtriangledown$ $\bigtriangleup$	◄┘	Oł	< -	

No.	Function	Scope of selection
005	NL equalizer	1: ON, 0: OFF
006	Phone line monitoring	0 to 3
007	Transmission level (ATT)	8 to 15 (ex: 15 = -15 dBm)
008	Upper limit for V.34 modulation speed	0: 3429, 1: 3200, 2: 3000, 3: 2800, 4: 2743, 5: 2400
009	Upper limit for V.34 data speed	0 to 13
010	Frequency of pseudo CI signal	0: 50 Hz, 1: 25 Hz, 2: 17 Hz

#### 005: NL equalizer

Select ON/OFF of NL equalizer.

Select "1: ON" in the case of frequent errors caused by line status at the time of communication.

## NOTE:

```
Error codes caused by line status at the time of transmission
##100, ##101, ##102, ##104, ##201, ##281, ##282, ##283, ##750, ##755, ##765, ##774, ##779, ##784, ##789
Error codes caused by line status at the time of reception
##103, ##107, ##114, ##201, ##790, ##793
```

#### 006: Phone line monitoring

Set whether to make monitoring tone of the phone line from the speaker.

• 0 (DIAL):

To make monitoring tone of the phone line from the speaker from the start of line connection until the DIS.

• 1:

To make monitoring tone of the phone line from the speaker from the start of communication until the completion.

- 2:
- Not used
- 3 (OFF):

There will be no monitoring tone of the phone line from the speaker.

# 007: ATT transmission level

Set the transmission level (ATT).

Increase the transmission level (make it closer to 8) in the case of frequent errors caused by line status at the time of communication.

#### NOTE:

Error codes caused by line status at the time of transmission ##100, ##101, ##102, ##104, ##201, ##280, ##281, ##282, ##283, ##284, ##750, ##752, ##754, ##755, ##757, ##759, ##760, ##762, ##764, ##765, ##767, ##769, ##770, ##772, ##774, ##775, ##777, ##779, ##780, ##782, ##784, ##785, ##787, ##789 Error codes caused by line status at the time of reception ##103, ##106, ##107, ##201, ##793

## 008: Upper limit for V.34 modulation speed

Select the upper limit of the modulation speed (baud rate) in the V.34 primary channel. When 4 (2743 baud) is selected, the communication is actually performed at 2400 baud.

# 009: Upper limit of V.34 data speed

Select an upper limit of data transmission speed in the V.34 primary channel in the range between 2.4k and 33.6kbps at 2400bps intervals (0: 2.4 kbps to 13: 33.6 kbps).

# 010: Pseudo CI signal frequency

Set pseudo CI signal frequency.

Depending on the type of external phones, there is no ring tone when the FAX/TEL switching function is working. Change the pseudo CI signal frequency when there is no ring tone.

# Setting of Numeric Parameter (NUMERIC Param.)

# Configuration of Numeric Parameters

027	V.21 low-speed flag preamble detection time	20 (-10 ms)	0
028	Off-hook PCB duty settings	1 to 99%	0 (50%)
080	Transmission number restriction: Outside line transmission number *1	0 to 9999	0

*1 : Supported on the platform version 307 or later

# 002: RTN transmission condition (1)/003: RTN transmission condition (2)/004: RTN transmission condition (3)

Set the RTN signal transmission condition.

In the case of frequent errors caused by RTN signal transmission at the time of reception, increase the parameters to loosen the RTN signal transmission condition.

# NOTE:

Error codes caused by RTN signal transmission at the time of reception

##104, ##107, ##114, ##201

RTN signal transmission condition (1) is the ratio of error lines for the total number of lines per page of the received image.

RTN signal transmission condition (2) is the reference value (*2) of burst error (*1).

RTN signal transmission condition (3) is the number of errors that fail to meet the reference value of burst error.

*1: Burst error (transmission errors with several continued lines)

*2: Reference value (When "15" is set, transmission error with 15 consecutive lines is recognized as a burst error.)

When any of the above conditions is detected during reception of image signals, RTN signal is sent after reception of the procedure signal from the sending machine. Increasing such parameter sends less RTN signal.

# 005: NCC pause time (before ID code)

Set the pause time to be automatically entered between the access code and ID code when dialing on NCC (New Common Carrier) line.

## 006: NCC pause time (after ID code)

Set the pause time to be automatically entered between the ID code and the other party's telephone number when dialing on NCC (New Common Carrier) line.

# 007: Prepose time at the time of making a call

When automatically making a call, set the time from closing a line to making a call.

# 009: Comparing the number of digits between the sender's telephone number and the receiver's telephone number

Set the TSI comparing the number of digits (last XX digits) when matching telephone numbers.

# 010: Line connection identification time

Set the line connection identification time.

Increase this parameter in the case of frequent errors caused by line connection status at the time of communication.

#### NOTE:

Error codes caused by line connection status ##005, ##018 The line connection identification time is the duration from when the dial signal is transmitted until the line is disconnected at the sending side, or from when DIS signal is transmitted until the line is disconnected at the reception side.

# 011: T.30 T1 timer (for reception)

Set T1 timer at the time of reception (wait time until receiving the meaningful signal after DIS transmission).

# 013: T.30 EOL timer

Set the receivable 1 line transmission time. In the case of a long line data length (e.g.: computer FAX), extend the transmission time to prevent reception errors.

# 015: Hooking detection time

Set the hooking detection time.

# 016: Time until the primary response is obtained when switching FAX/TEL

Set the time from when capturing the line until transmission of pseudo RBT at FAX/TEL switching function operation.

# 017: Pseudo RBT signal pattern ON time/ 018: Pseudo RBT signal pattern OFF time (short)/ 019: Pseudo RBT signal pattern OFF time (long)

Set the pattern of pseudo RBT signal to be sent at Fax/Tel switching function operation.

# 020: Pseudo CI signal pattern ON time/ 021: Pseudo CI signal pattern OFF time (short)/ 022: Pseudo CI signal pattern OFF time (long)

Set the pattern of pseudo CI signal to be sent at Fax/Tel switching function operation.

# 023: CNG detection level when switching FAX/TEL

Set the CNG detection level at Fax/Tel switching function operation.

## 024: Pseudo RBT transmission level when switching FAX/TEL

Set the transmission level of pseudo RBT at Fax/Tel switching function operation.

# 025: CNG monitoring time when the answering phone connection function is set

## 027: V21 low-speed flag preamble detection time

Set the period of time for judge detection of V.21 low-speed command preamble. Continuous detection for the fixed period of time leads to command analysis.

# 028: Off-hook PCB duty settings

Set the Off-hook PCB duty setting. When 0 or a value that is 100 or more is entered, the duty becomes 50%.

## 080: Transmission number restriction: Outside line transmission number

This sets the number permitted to dial to the outside line. Only the outside line transmission by the set number is permitted and other numbers are prohibited from transmission.

# Setting of Destination (TYPE)

# Overview

When the type shown on the display is set, all the service data is set to match each country/region domestic telecommunication standards.

# Setting of Printer Functions (PRINTER)

# Setting of Bit Switch (SSSW)

# SSSW-SW01

# **Functional Construction**

Bit	Function	1	0
0	Not used	-	-
1	Not used	-	-
2	Not used	-	-

4	Not used	-	-
5	Not used	-	-
6	Hold the line (when error code occurs)	Hold	Do not hold
7	Output a print log when DUMP report is output	Output	Do not output

# **Detailed Discussions of Bit 6**

Select whether to hold the line when an error code occurs.

However, in the case of vertical scanning prioritized recording, even when 0 is set for Bit 1 and Bit 0, the priority order will be Letter -> A4 -> Legal.

# Detailed Discussions of Bit 7

Select whether to output a print log at the time of the DUMP report output.

# • SSSW-SW05

# **Functional Construction**

Bit	Function	1	0
0	Letter priority	Set	Do not set
1	Legal priority	Set	Do not set
2	Not used	-	-
3	Not used	-	-
4	Not used	-	-
5	To prohibit reduced size printing (A4)	Prohibited	Not prohibited
6	To prohibit reduced size printing (A4)	Prohibited	Not prohibited
7	Vertical scanning prioritized recording	Set	Do not set

# **Detailed Discussions of Bit 0 and 1**

When an image which can be printed in 100% magnification and with the same number of divided pages on any of A4, letter and legal is received, set which paper is prioritized for printing.

With the settings of Bit 0 and Bit 1, the priority order of the recording paper is shown in the following table.

Bit 1	Bit 0	Priority order of the recording paper
0	0	A4 -> Letter -> Legal
0	1	Letter -> A4 -> Legal
1	0	Legal -> Letter -> A4
1	1	Letter -> Legal -> A4

However, in the case of vertical scanning prioritized recording, the priority order will be Letter -> A4 -> Legal even when 0 is set for Bit 1 and Bit 0.

# **Detailed Discussions of Bit 5 and 6**

Select whether to enable reduced size printing for A4 or LTR.

Set whether to set vertical scanning prioritized recording.

## Set:

If B4 recording paper and A4 recording paper are set and an A4 extra-long image (*) is received, printing will be on the B4 recording paper.

#### Do not set:

If B5 horizontal recording paper and A4 recording paper are set and a B4 image is received, printing will be by division and on B5 horizontal recording paper.

*: Image B4 or shorter and that cannot be printed on A4 recording paper.

# • SSSW-SW06

# Initialization of Set Value (CLEAR)

# Overview

Selecting the following items enables the applicable data to be initialized. When clear is executed, the setting items and numeric values for various parameters are set back to the factory setting values.

Item	Data to be initialized
TEL	Registered telephone number data (*1)
USSW SW	Contents registered in the user data and service mode #1 to #3 Memory management contents of the user data are not cleared. Image data stored in the memory is not cleared.
SRV SW	Contents of the user data and service mode #1 to #3, and #7
NCU	Contents of service mode #4
SRV DATA	Contents of the system dump list
REPORT	Contents of the communication management report
ALL	All Settings/Registration data (*1) except service mode #5 TYPE (*2)
COUNTER	The number of printed sheets, the number of read sheets
IPFAX	Contents of service mode IPFAX

*1: With models that can register information other than fax in destination, the telephone number data is not cleared even when TEL (service mode > FAX > Clear > TEL) or ALL (service mode > FAX > Clear > ALL) is executed.

To clear the data, execute the following service mode on the host machine.

COPIER > Function > CLEAR > ADRS-BK

*2: When service mode > FAX > Clear > ALL is executed, a value is registered in service mode > FAX > TYPE according to the location of the host machine (in the case of Japanese model, "STANDARD" is registered).

# CAUTION:

If service mode > FAX > Clear > ALL is executed with a fax job waiting to be processed and the fax job is cancelled before the power is turned OFF and then ON, E674-0100 may occur when the power is turned OFF and then ON. If E674-0100 occurs, the machine can be recovered by executing service mode > FAX > Clear > ALL again and then turning OFF and then ON the power.

In order to prevent the foregoing error, be sure to check for any remaining fax jobs before executing service mode > FAX > Clear > ALL. If there is a remaining job, cancel the job and then execute service mode > FAX > Clear > ALL.

# System Dump List

#### NOTE:

A system dump list is generated when you execute the following in service mode: FAX > Report > DUMP.

Use it to check the history of communications, both successful and error.

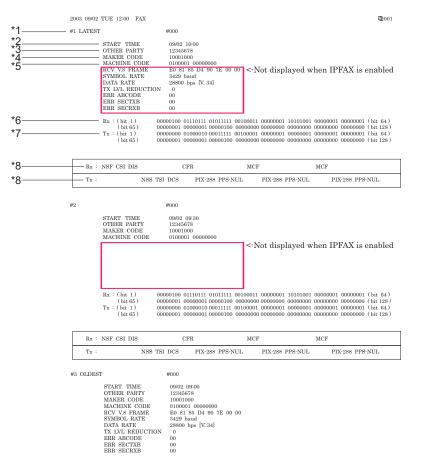

- *1: RX, total reception number of times; TX, total transmission number of times.
- *2: number of pages sent/received according to original size.
- *3: number of pages sent/received in connection with different modem speeds (NWSPD : For IPFAX communication count).
- *4: number of communication pages by resolution(Standard, Fine, Super Fine, Ultra Fine).
- *5: number of pages sent/received in connection with different coding methods.
- *6: number of transmissions/receptions according to mode.
- *7: number of occurrences according to error code.

Indication sample

It provides error information on the 3 most recent communications.

*1: service error code.

- *2: START TIME, date and time (in 24-hr notation).
- *3: OTHER PARTY, telephone number sent by the other party.
- *4: MAKER CODE, manufacturer code.
- *5: MACHINE CODE, model code.
- *6: bit 1 through bit 128 of DIS, DCS, or DTC that has been received.
- *7: bit 1 through bit 128 of DIS, DCS, or DTC that has been transmitted.
- *8: RX, procedural signal received; TX, procedural signal transmitted.

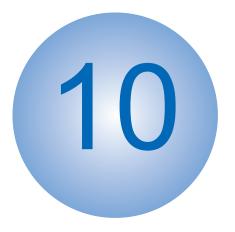

# Error Transmission Report

An error transmission report is an error transmission report together to which a service error code and error dump list is attached.

# How to Utilize This Installation Procedure

# Symbols

The frequently-performed operations are described with symbols in this procedure.

# **Installation of Host Machine**

# Setting the Dehumidification Switch

If the installation environment is a high humidity environment, be sure to turn ON the Dehumidification Switch.

# Operation when using uniFLOW Online

When using uniFLOW Online*, follow the setup procedures on the uniFLOW* Online First Steps Guide (http://www.ntware.com/uFO_FS).

* China version of "uniFLOW" is called "mdsFLOW".

# Installing the IC Card Reader

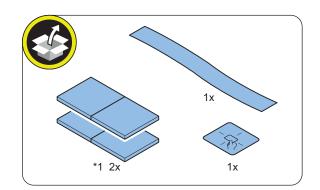

# Points to Note at Installation

- When installing the IC Card Reader, the IC Card Reader (sales company's option) is required.
- The IC Card Reader and the following options cannot be used together.
  - IC Card Reader Box
  - Copy Card Reader
- When installing the Connection Kit for Bluetooth LE at the same time, install the Connection Kit for Bluetooth LE first.
- The pictures and illustrations used may differ from the actual product, but the procedures are the same.

# Checking the Contents

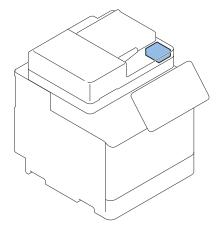

#### NOTE:

Use the following parts included with the host machine.

*1: Use them if necessary when installing the Card Reader.

# Installation Outline Drawing

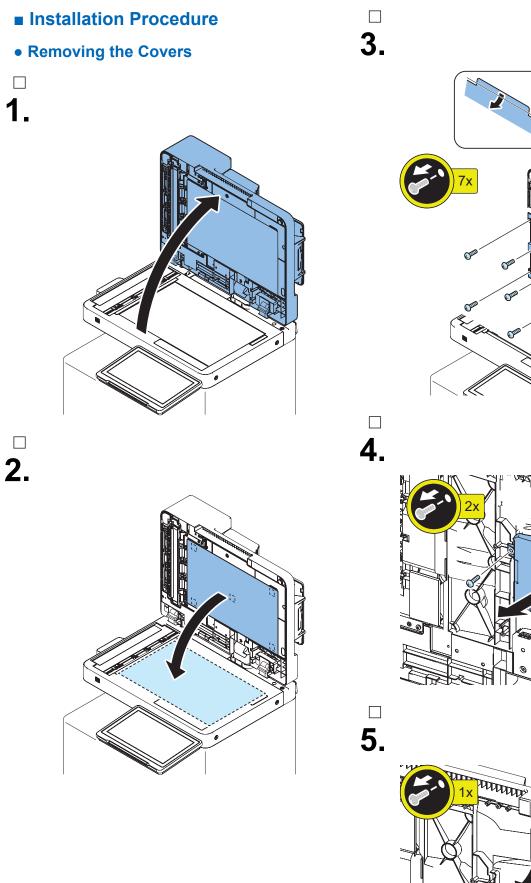

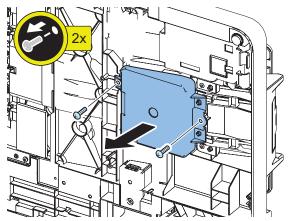

# Essential Items to Be Performed Before Installation

• Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

# WARNING:

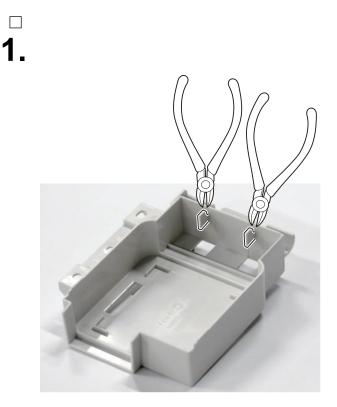

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- When turning OFF the main power, follow the below procedure.
  - 1. Turn OFF the main power switch of the host machine.
  - 2. The display in the Control Panel and the lamp of the main power are turned off.

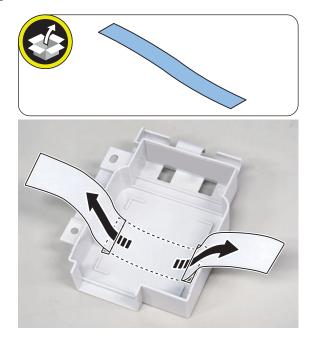

# • Installing the IC Card Reader

# <For TYPE 1>

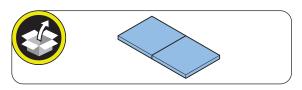

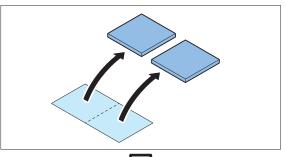

# NOTE:

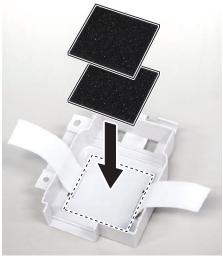

□ 3.

Be sure to adjust the number of cushions according to the thickness of the Card Reader.

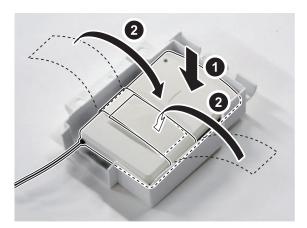

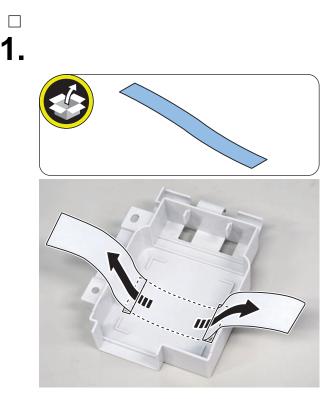

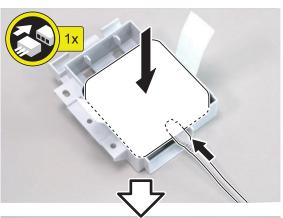

# NOTE:

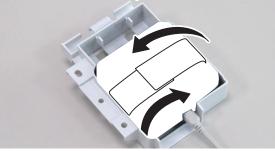

Go to "Subsequent Work"."Subsequent Work " on page 664

# <For TYPE 2>

□ 2.

# NOTE:

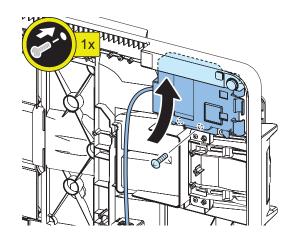

Go to "Subsequent Work"."Subsequent Work " on page 664

# Subsequent Work

# NOTE:

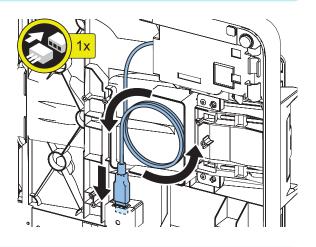

Use the screws removed in "Removing the Covers".

_____**2**.

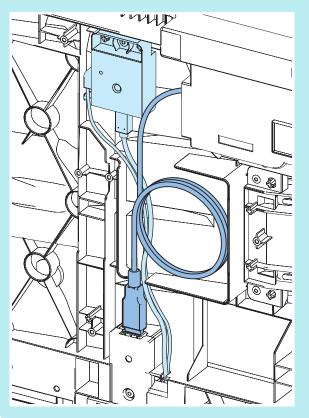

# NOTE:

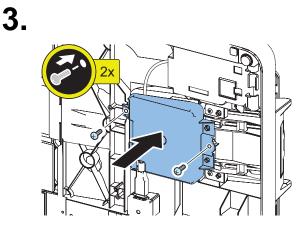

Wind the cable counterclockwise to store it as needed.

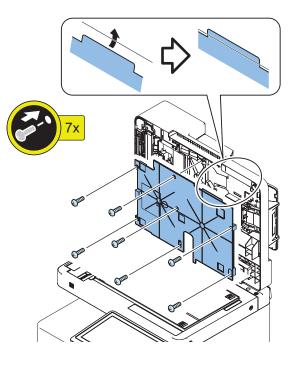

# NOTE:

When installing with the Connection Kit for Bluetooth LE at the same time.

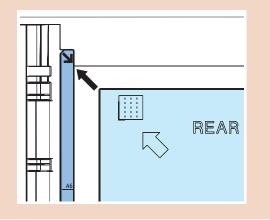

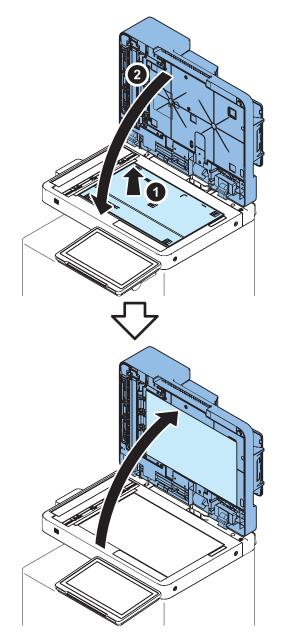

# □ 5.

# CAUTION:

Align the White Plate to the Index.

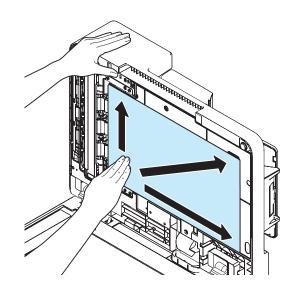

# 6.

# CAUTION:

If the White Plate is pressed from top to bottom, it is placed on the Index Sheet, so be sure to press it from bottom to top.

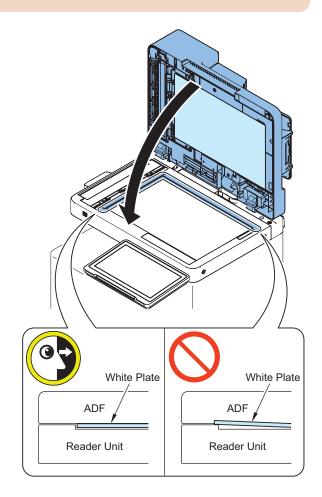

# □ 7.

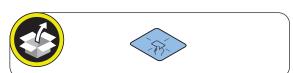

# CAUTION:

Check that the White Plate is not placed on the Index Sheet with this equipment closed.

- Be sure that there is no gap between the White Plate and the Index Sheet.
- The gap between the White Plate and the Index Sheet must be 0.3 mm or less as a reference.

□ 8.

- **9** Connect the power plug of the host machine to the outlet.
- **10.** Turn ON the Main Power Supply Switch.

# NFC KIT-E1/E2

# Points to Note at Installation

- Do not touch the sensor and PCB components of the Control panel.
- The parts removed in "Removing the Control Panel" will be used in "Installing the Control Panel".
- The pictures and illustrations used may differ from the actual product, but the procedures are the same.

# Essential Items to Be Performed Before Installation

• Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

# WARNING:

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- · When turning OFF the main power, follow the below procedure.
  - 1. Turn OFF the main power switch of the host machine.
  - 2. The display in the Control Panel and the lamp of the main power are turned off.

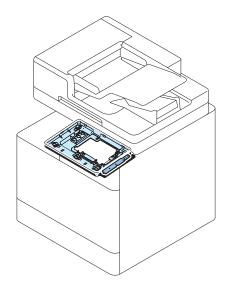

# Points to Note When Turning ON/OFF the Main Power

The following message is displayed.

- 1. When a message prompting to turn OFF and then ON the main power appears, turn OFF and then ON the main power switch.
- 2. If a message prompting the user to update the version appears, press [Update] to automatically update the version of this equipment.

If [Skip] is selected, a message prompting the user to update the version will appear every time the host machine is started. In the service mode (Lv. 2) shown below, it is possible to set not to display the message. COPIER > OPTION > FNC-SW > VER-CHNG

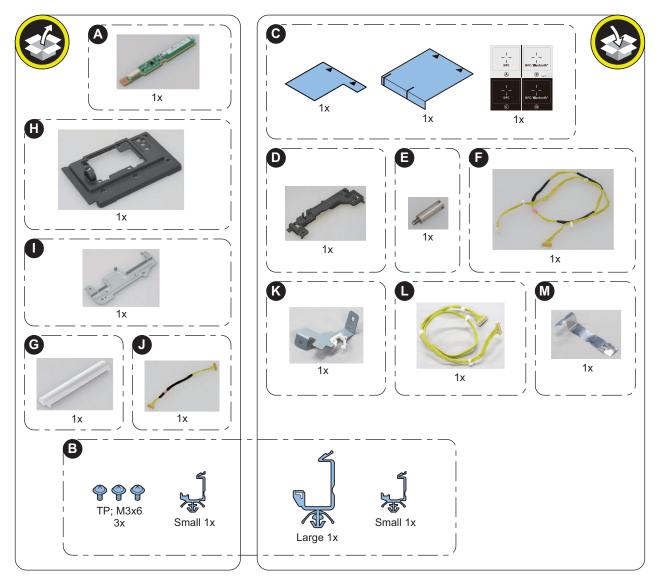

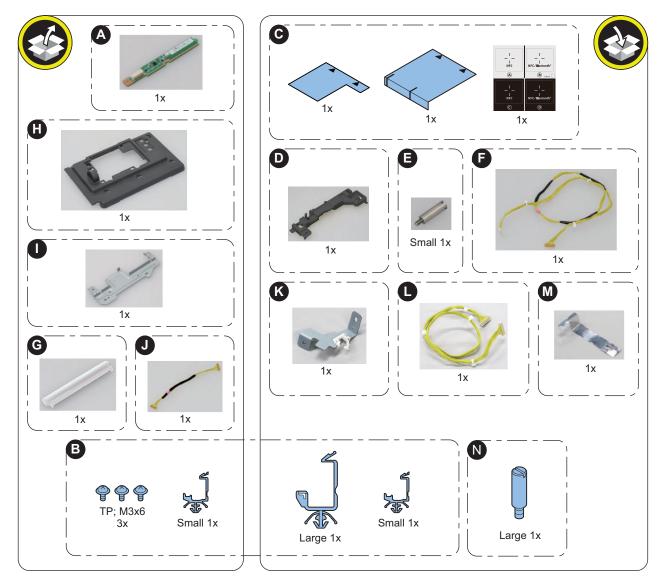

# Checking the Contents

#### NOTE:

The required parts differ depending on the host machine to which this equipment is installed. Use A, B, G, H, I and J for this product.

NOTE:

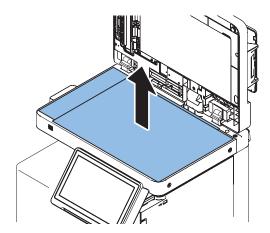

Store the excess cable under the Reader.

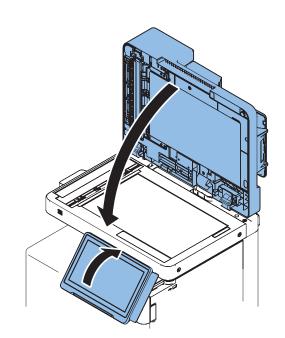

# Setting after Installation

#### 

- 1. Connect the power plug of the host machine to the outlet.
- 2. Turn ON the main power switch.
- 3. Eenter service mode and set the value to "1". COPIER > FUNCTION > INSTALL > NFC-USE

#### NOTE:

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions of the user administrator.

- 4. Select [Settings/Registration] > [Management Settings] > [Device Management] > [Use NFC Card Emulation], and set the item to "ON".
- 5. Turn OFF and then ON the main power switch.
- 6. When a message prompting the version update is displayed, press [Update] and automatically update the version of this equipment.

#### CAUTION:

It may take time to display the update screen. (Approx. 1 to 2 min.) During this time, do not operate the screen.

#### 7. Check the end of the following service mode.

COPIER > DISPLAY > VERSION > PANEL If the end is an even number (e.g. 01.26): NFC is not installed. If the end is an odd number (e.g. 01.27): NFC is installed.

# Copy Card Reader-F1/Copy Card Reader Attachment-B5

# **Points to Note at Installation**

- To install this equipment, the Copy Card Reader Attachment is required.
- When installing this equipment, be sure to install it by referring to "Table of Options Combination".
- Pictures and illustrations used in this procedure are from the model without the Finisher. Procedures that are not separately described are same for the model with the Finisher.
- After installing the Card Reader, enter the card number to be used in the following service mode. Otherwise, the card will not be recognized even if inserting it.
   COPIER > FUNCTION > INSTALL > CARD

#### NOTE:

Affixing the Approval Label is not required in countries/regions other than the following.

#### <For US>

Affix it over the number on the Wireless LAN Approval Label.

#### <For KR and TW>

Affix it over the Wireless LAN Approval Label.

#### 

- 1. Connect the power plug of the host machine to the outlet.
- 2. Turn ON the main power switch.
- 3. Enter service mode, and set the value to "1". COPIER >FUNCTION > INSTALL > BLE-USE

#### NOTE:

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions of the user administrator.

- 4. Select [Settings/Registration] > [Preferences] > [Network] > [Confirm Network Connection Setting Changes], and set the item [ON].
- 5. Select [Settings/Registration] > [Preferences] > [Network] > [Bluetooth Settings] > [Use Bluetooth] > [ON].
- 6. The message "Perform Apply Setting Changes from Settings/Registration" appears at the bottom of the Touch Panel Display.
- 7. Press [Settings/Registration] > [Apply Setting Changes] > [Yes].

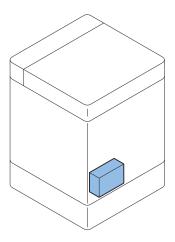

### Super G3 FAX Board-AY1

## Checking before Installation

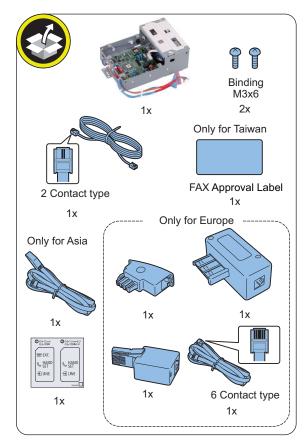

#### Points to Note when Installing

- Although the figure shows a model without the Finisher, the same procedure applies to the one with the Finisher.
- Although pictures or illustrations used for explanation may differ from the actual products, the procedure is the same.

#### Installation Outline Drawing

#### Checking the Contents

### Essential Items to Be Performed Before Installation

• Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

#### WARNING:

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- When turning OFF the main power, follow the below procedure.
  - 1. Turn OFF the main power switch of the host machine.
  - 2. The display in the Control Panel and the lamp of the main power are turned off.

#### Installation Procedure

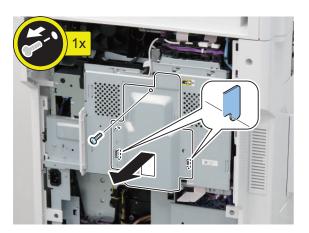

#### • Removing the Covers

 $\square$ 

<Others> Including guides

□ 2.

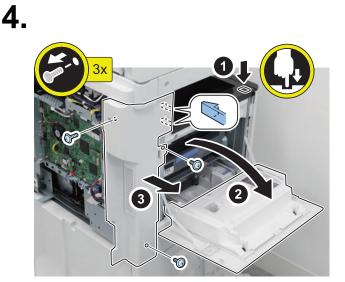

### □ 3.

#### CAUTION:

When handling the HDD, be careful not to vibrate or drop it.

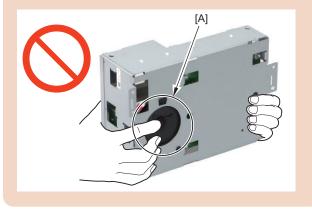

#### • Installing the Fax Unit

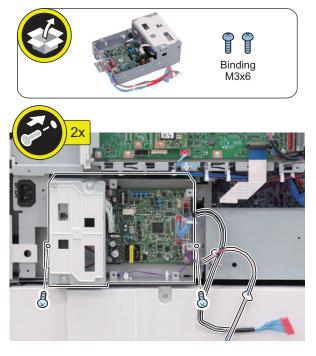

## _ 1.

**NOTE:** Remove the packing tape if any.

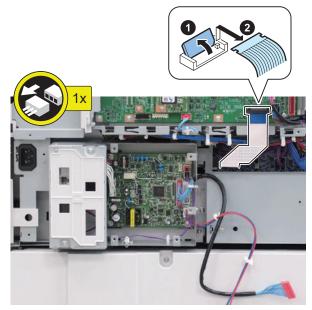

#### CAUTION:

- When installing the FAX Unit, be careful not to trap the 2 Cables of the FAX Unit.
- Do not directly touch the speaker [A] of the FAX Unit.
- Be sure not to damage the speaker [A].

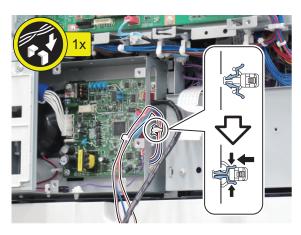

□ 2.

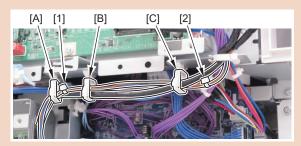

3.

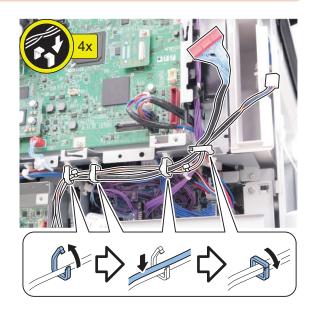

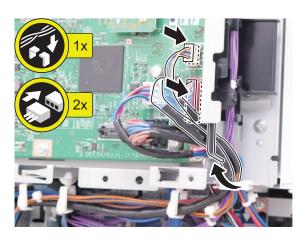

4.

#### CAUTION:

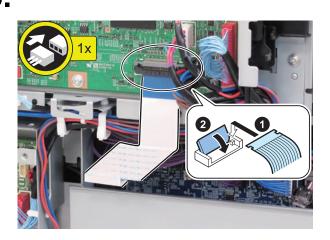

- Fix the tie-wrap between the wire saddles [A] and
- [B].Fix the tie-wrap on the right side of the wire saddle [C].

□ 6.

• Installing the Covers

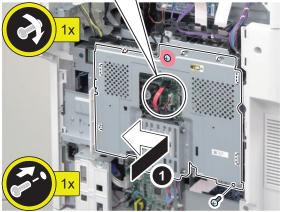

2.

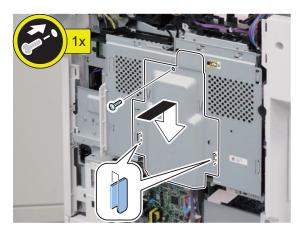

#### CAUTION:

When handling the HDD, be careful not to vibrate or drop it.

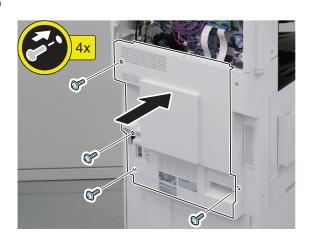

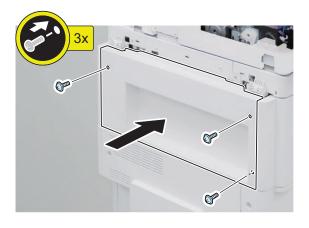

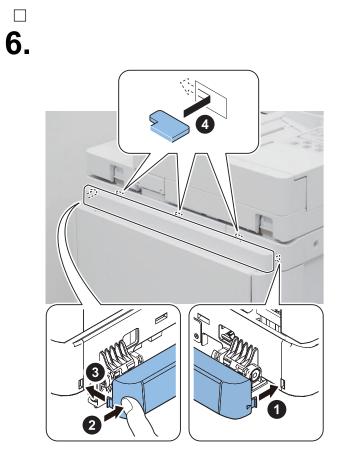

## 

## **5.** <When the Finisher is installed>

Subsequent Work

## 

NOTE: This step is only for Taiwan.

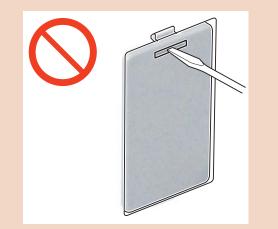

## □ 2.

#### CAUTION:

Do not insert a screwdriver into the hole when removing the Small Cover.

## □ 3.

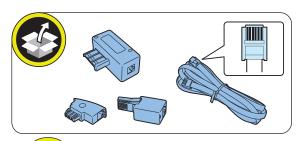

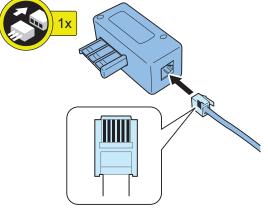

#### NOTE:

Δ

- This step is only for Europe.
- Do not connect the telephone cord (2 core) to PTT plugs.
- Connect the PTT cable (6 core) to the PTT Plug appropriate for the country/region.

## □ 5.

#### NOTE:

Connect one end of the PTT cable or the Telephone Cord (whichever appropriate for the country/region) to the modular jack on the host machine and the other end to the modular jack on the wall.

**6**. Connect the power plug to the outlet. **7**. Turn ON the Main Power Switch.

#### Operation Check

#### • Type Setting

#### 

 $\square$ 

- From the following service mode, check that the type setting of Fax board is set to the correct location (country/region) and press OK.
   FAX > TYPE > TYPE
- 2. Check that the value of the following service mode is "0". If it is "1", change it to "0". COPIER > OPTION > DSPLY-SW > SDTM-DSP

#### NOTE:

To change parameter to "0" makes no show below [Settings/Registration > Preferences > Time/Energy Settings > Auto Shutdown Time] and auto shut down is not available.

3. After setting the user telephone number, turn OFF and then ON the main power switch.

#### Basic Setting

#### NOTE:

When "System Manager Information Settings" is set, be sure to follow the direction of user administrator in order to log in as an administrator.

In this section, make only minimum settings required for FAX communication.

1. Set the user telephone number.

[Settings/Registration] > [Function Settings] > [Send] > [Fax Settings] > [Set Line] > [Line 1] > [Register Unit Telephone Number] > Enter the fax number > [OK]

2. After setting the user telephone number, turn OFF and then ON the main power switch.

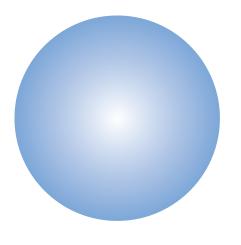

#### FAX Communication Test

Perform communication test to check if FAX function works correctly.

- 1. Switch the control panel display to Send/Fax display.
- 2. Send the test document from this machine to another machine that can handle the

communication test to check that this machine can send the data correctly.

3. Send the test document from the target to this machine to check if the machine can receive the document properly.

# **Software Counter Specifications**

## Software counter classification

Software counter is classified according to the input number as follows:

No.	Counter item	No.	Counter item
000 to 099	Toner Bottle	500 to 599	Scan
100 to 199	Total	600 to 699	Mail Box print, memory media print
200 to 299	Сору	700 to 799	Reception print, Advanced Box print, network print, mobile print
300 to 399	Print	800 to 899	Report print
400 to 499	Copy + Print	900 to 999	Transmission

## Description of codes in the table

Code	Description	Code	Description
Large	Paper larger than B4 size	Сору	Local copy
Small size	Paper equal to or smaller than B4	Сору А	Local copy + Mail Box print
The number 1 and 2 in "Counter item"	The count for large size paper	Print	PDL print + Report print + Mail Box print
The size as which "B4" should be coun- ted (service mode: B4-L-CNT)	0: Small (default) 1: Large	Print A	Local copy + Mail Box print
Total A	Total excluding local copy	Scan	Black scan + Color scan
Total B	Total excluding local copy + Mail Box print	-	-

## CAUTION:

When printing in the free size setting, it is counted in the large.

## **Related Service Mode**

## Removal

## Overview

- User data kept by the machine contains address books and inbox documents that users can recognize.
- For security, the Settings/Registration menu for user is provided to delete data on FLASH PCB and perform overwrite deletion to render user data on Storage unrecoverable.
- Before the removal of machine, be sure to explain to the user that the above mode must be used to completely delete data.
   When performing the user operation as the substitute, make sure that the service staff executes this to prevent the information leak of user data.

## Cancelling the Device Registration

If Data Backup Service is used, it is required to perform the following steps in the order.

- 1. Stop using the Data Backup Service. (Operation on CBIO side)
- 2. Delete all the backup data. (Operation on CBIO side)
- 3. Cancel the device registration. (Operation on the device side)

#### NOTE:

For the above-mentioned procedure, see the User's Guide for Data Backup Service or the Service Manual for the imageRUNNER ADVANCE system.

If the User's Guide is not available, see the technical documents published by each sales company.

#### CAUTION:

Be sure to cancel the device registration before deleting the user, because the device registration cannot be cancelled after deleting the user data.

## User data deletion

- To delete user data, execute Settings/Registration > Management Settings > System Management > Initialize All Data/ Settings. Performing Initialize All Data/Settings returns setting values of Settings/Registration menu to their factory defaults.
- Deletion Mode can be changed. Normally, "Once with 0 (Null) Data" can sufficiently delete data. Note that increasing the number of overwrite increases the time required for the deletion operation.

#### NOTE:

- When you perform Initialize All Data/Settings, license and data of MEAP application are initialized to the state same as when the HDD is replaced. If any MEAP application may be used by other users after the machine is removed, disable the MEAP application and uninstall it in advance.
- Performing Initialize All Data/Settings does not delete the license of the system option.

## Deletion of Service Mode Settings

The user mode setting values may have been changed at the user's request. In that case, the service mode setting values should be changed back to the default values before removing the machine.

## Work Procedure

If the user uses MEAP applications, ask the user to uninstall the MEAP applications if necessary.

## User data delete procedure

- 1. Settings/Registration > Management Settings > Data Management > Initialize All Data/Settings
- 2. Select a deletion mode.

## 3. Press [Start].

If the user has not given any instruction on which item in the deletion mode should be used, select the default "Once with 0 (Null) Data".

D Administra				\$
	nitialize All Data/Settings> lect a deletion mode and pre	ess [Start].		
.Walla	Once with 0 (Null) Data	Once with Random Data	3 Times with Random Data	
u	9 Times with Random Data	DoD Standard		1/1
	K Cancel	]	Start	
D System M	anagement mode.			₽ Log Out

#### NOTE:

- When all the data are initialized, the user data on the HDD and the user data on the Flash PCB are deleted. For the items to be deleted, refer to the backup list.
- Performing "Initialize All Data" turns auto gradation adjustment values and TPM settings to OFF. Therefore, to enable normal operation the next time, the operation performed at installation is necessary.
- · Performing Initialize All Data/Settings does not delete the license of the system option.

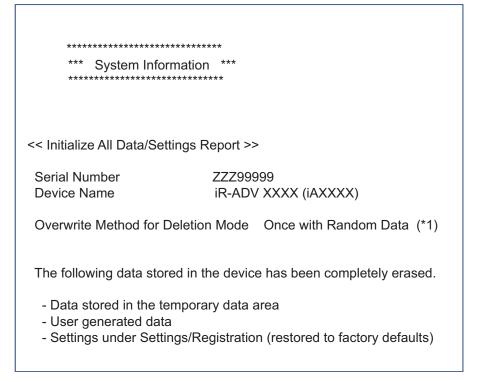

## Report output upon completion of Initialize All Data/Settings

A report is output after "Initialize All Data/Settings" is completed. Consider using this report to provide to user as a material to inform of work details when executing Initialize All Data/Settings upon user's request.

## **Operation after Initialize All Data/Settings**

The machine is started normally at restart after Initialize All Data/Settings without displaying the message (Turn OFF the main power supply on the right side of the machine) on the screen to prompt shutdown.

The report is output after startup.

*1 display following one. "Once with 0 (Null) Data" "Once with Random Data" "3 Times with Random Data" "9 Times with Random Data" "DoD Standard"

## Limitations

- The language of the report is only English, and cannot be changed.
- The report is output without fail (a function to select ON/OFF of report output is not provided).
- There is no second output of report when the machine is turned ON without paper.
- Only the output of this report remains in the job log.

## Deletion of Service Mode Setting Values

Service Mode Lev1 > Function> CLEAR > MN-CONT

Display I/O	Ad	just	Functio	Optio	TT	est .	Counter
< CLEAR	> <	2/ 3	> <	READY	> <	LEVEL	1 >
CNT-DCON							
OPTION							
MMI							
MN-CON							
CARD							
ALARM							
ERDS-DAT							
USBM-CLR							
· · ·					ſ		1
-	<b></b>			+	/-		OK L

NOTE:

- When MN-CON clear is executed, the address book on the HDD is not deleted. As for the user data, initialize all the data.
- · When MN-CON clear is executed, the password for the security policies will be deleted.

The following items are restored when a DCM file obtained by using [Settings/Registration] > [Back Up/Restore] or [Backup/ Restoration Using Service Mode] is exported.

## **Purpose for Using the Function**

Case	Export/ Import	Use Case
A	Export from and import to the same device	<ul> <li>Used as backup in preparation for a device failure</li> <li>Used as backup before changing settings</li> </ul>
В	Export from and import to a different device of the same model	<ul> <li>Collectively migrate data when replacing the host machine</li> <li>Copy the settings to multiple devices (during kitting)</li> </ul>
C	Export from and import to a different model	<ul> <li>Migrate the settings from the old model to the new model when replacing the host machine</li> <li>Migrate the settings of the base machine to a different model for a large-scale user</li> </ul>

#### NOTE:

For the details of the function, refer to "Backup/Restoration" of the System Service Manual.
