SERVICE MANUAL

Canon

November 12, 2021 Rev. 6

Important Notices

Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products.

This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

Following "Trademarks" and "Copyright" are not applicable if they are not supported by laws and regulations in the country or region that this document and products are used in.

Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

Trademarks

- The Bluetooth word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Canon is under license.
- Mopria®, the Mopria® Logo and the Mopria® Alliance logo are registered trademarks and service marks of Mopria Alliance,
 Inc. in the United States and other countries. Unauthorized use is strictly prohibited.
- · Apple, AppleTalk, Bonjour, iPad, iPhone, iPod touch, Mac, OS X and Safari are trademarks of Apple Inc.
- Microsoft, Windows, Windows Vista, Windows Server, Internet Explorer, Microsoft Edge, Excel and PowerPoint are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- · Google Cloud Print, Google Chrome and Android are either registered trademarks or trademarks of Google Inc.
- iHQC™ compression technology by I.R.I.S., copyright 2007-2015, All Rights Reserved.
- PDF-iHQC™, XPS-iHQC™ technology by I.R.I.S., copyright 2007-2015, All rights Reserved.
- · Java is a registered trademark of Oracle and/or its affiliates.
- Adobe is a registered trademark of Adobe Systems Incorporated.
- Command WorkStation, EFI, Fiery, FreeForm, Spot-On, and WebTools are trademarks of Electronics For Imaging, Inc. and/ or its wholly owned subsidiaries in the U.S. and/or certain other countries.
- TORX® is a registered trademark of Acument Intellectual Properties, LLC in the United States.
- Matrox is a registered trademark of Matrox Corporation in the Canada.
- Other product names and other names in this document are generally registered trademarks or trademarks of the companies.

Caution

Use of this manual should be strictly supervised to avoid disclosure of confidential information.

Explanation of Symbols

The following symbols are used throughout this Service Manual.

| Symbols | Explanation | Symbols | Explanation |
|---------|------------------------------------------------------------|---------|-----------------------------|
| | Check. | lt 1x | Remove the claw. |
| (C) | Check visually. | 1x | Insert the claw. |
| 200 | Check a sound. | | Push the part. |
| 1x | Disconnect the connector. | | Connect the power cable. |
| 1x | Connect the connector. | | Disconnect the power cable. |
| 1x | Remove the cable/wire from the cable guide or wire saddle. | ON | Turn on the power. |
| 1x | Install the cable/wire to the cable guide or wire saddle. | OFF | Turn off the power. |
| 1x | Remove the screw. | 1x | Loosen the screw. |
| 1x | Install the screw. | 1x | Tighten the screw. |
| | Cleaning is needed. | | Measurement is needed. |

The following rules apply throughout this Service Manual:

- 1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.
 - In the diagrams, represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow indicates the direction of the electric signal.

The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.

- 2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*" indicates that the DRMD signal goes on when '0'.
 - In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine.

| Toner Safety | 4 |
| Notes on works | 4 |

Laser

Laser Safety

Since radiation emitted inside this machine is completely confined with protective housings, external covers and interlock switches, the laser beam cannot escape from the machine during any phase of normal use by users.

Therefore, this machine is classified as a Class 1 laser product under the international standard IEC60825-1 that is regarded as safe during normal use.

Handling of Laser System

This machine is classified as a Class 1 laser product.

However, inside the machine, Class 3B laser beam is emitted and exposure to the beam may cause eye injuries. Therefore, when servicing on and around the Laser Assembly, be sure to turn OFF the power of the machine before starting the work.

If you must service while the power is turned ON, be sure to keep the following in mind.

- Do not use a screwdriver or any tools that reflect laser light.
- Remove watches, rings and any other objects that act as reflectors before starting the work to prevent eye injuries.

If you must open the cover and disable the interlock switches for servicing, be sure to prevent the eye from exposure.

The following warnings are given to comply with Safety Principles (EN60950-1).

Dieses Gerät ist der Klasse 1 der Laserprodukte zugeordnet.

Innerhalb des Geräts wird jedoch ein Laserstrahl der Klasse 3B ausgestrahlt, der Augenschäden verursachen kann, wenn man in diesen Strahl blickt.

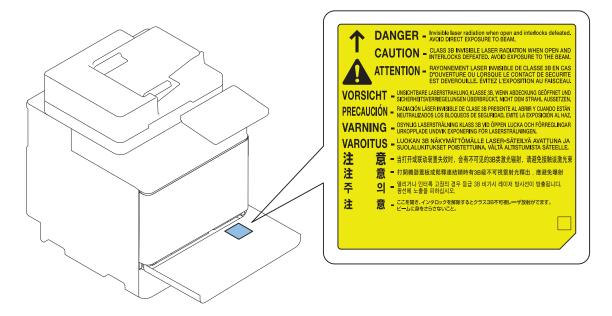

Deshalb sollte bei Servicearbeiten an oder in der Nähe der Laserbaugruppe zuerst die Stromversorgung des Geräts ausgeschaltet werden.

Bei Servicearbeiten, die unbedingt bei eingeschaltetem Gerät durchgeführt werden müssen, auf jeden Fall die folgenden Vorsichtsmaßnahmen beachten.

- · Keine Schraubendreher oder ähnliche Werkzeuge verwenden, die Laserlicht reflektieren können.
- Vor Beginn der Arbeit Uhren, Ringe und ähnliche Gegenstände abnehmen, die als Reflektoren fungieren können, um Augenschäden zu verhindern.

An den Abdeckungen des Geräts, die das Austreten des Laserstrahls verhindern, ist das Kennzeichen bzw. der Warnaufkleber angebracht (siehe Abbildung).

Müssen für Servicezwecke die Abdeckung geöffnet und die Verriegelungsschalter deaktiviert werden, besondere Vorsicht walten lassen, damit der Laserstrahl nicht in die Augen gerät.

Power Supply / Lithium Battery

Turn power switch ON

The machine is equipped with 2 power switches: main power switch and control energy saver key. The machine goes on when the main power switch is turned on (i.e., other than in low power mode, sleep mode).

CAUTION:

Do not turn off the main power switch while the progress bar is indicated, during which access is made to the HDD. If deprived of power, the HDD can suffer a fault (E602).

Power Supply Guidelines

As a general rule, do not use extension cords.
 If an extension cord must be used, one that meets the rated voltage and current of the product must be used.
 When using, untie the bundle and plug the power cord into the root to ensure the connection between the power cord and extension cord.

A CAUTION:

Do not plug multiple cords together to an extension cord. It may cause a fire or electrical shock.

· Use the power plug in an easily accessible location near the host machine.

Notes When Handling a Lithium Battery

Dispose of used batteries according to the instructions.

Risk of explosion if battery is replaced by an incorrect type.

The following warnings are given to comply with Safety Principles (EN60950-1).

A CAUTION:

Wenn mit dem falschen Typ ausgewechselt, besteht Explosionsgefahr. Gebrauchte Batterien gemäß der Anleitung beseitigen.

警告

如果更換不正確之電池型式會有爆炸的風險 請依製造商說明書處理用過之電池

Toner Safety

About Toner

Toner is a nontoxic matter composed of plastic, iron and a trace of pigments.

A CAUTION:

Never throw toner in flames to avoid explosion.

Handling Adhered Toner

- Use dry tissue paper to wipe off toner adhered to skin or clothes and wash in water.
- · Never use warm water for cleaning up toner to prevent toner particles from being gelated to soak into fibers permanently.
- Toner particles are reactive with vinyl polymers. Avoid contacting these materials.

Notes on works

Points to Note Before Servicing

- At servicing, be sure to turn OFF the power source according to the specified steps and disconnect the power plug.
- · Be sure to disconnect the power plug on a regular basis and remove dust and dirt accumulated around the outlet with dry cloth.

A CAUTION:

Leaving the power plug connected for a long time in an environment having a lot of dust, moisture, or oily smoke will cause a fire. (Because dust accumulated in the surrounding area will absorb moisture and cause an insulation failure)

· Be careful not to be injured by burrs of edges, sharp corners or protrusions.

A CAUTION:

Hazardous area such as corners, edges, springs and other sharp sections may be remaining on products. Always be aware of the presence of hazardous area to avoid injury caused by contacting and/or striking those area, by not overconcentrating on service work.

Points to Note at Cleaning

When performing cleaning using organic solvent such as alcohol, be sure to check that the component of solvent is vaporized completely before assembling.

Notes on Assembly/Disassembly

Follow the items below to assemble/disassemble the device.

- 1. Disconnect the power plug to avoid any potential dangers during assembling/disassembling works.
- 2. If not specially instructed, reverse the order of disassembly to reinstall.
- 3. Ensure to use the right screw type (length, diameter, etc.) at the right position when assembling.
- 4. To keep electric conduction, binding screws with washers are used to attach the grounding wire and the varistor. Ensure to use the right screw type when assembling.
- 5. Unless it is specially needed, do not operate the device with some parts removed.
- 6. Never remove the paint-locked screws when disassembling.

A CAUTION:

English

CAUTION

The fuse may be in the neutral, and that the mains shall be disconnected to de-energize the phase conductors.

German

VORSICHT

Die Sicherung kann sich im Nullleiter befinden und das Hauptnetz muss abgetrennt werden, um die Phasenleiter stromlos zu machen.

■ Points to Note when Tightening a Screw

When a thin plates is used in some parts for the light weighting purpose, warn the following.

In the case of a screw hole with a triangle mark near it as shown in the figure below, strongly tightening the screw may damage or deform the screw hole.

In the case of a screw hole with a triangle mark, take care not to apply too much force when tightening the screw.

The recommended torque value is shown below as a reference value.

| | | | Type of Screws | | | | | | |
|-------------------------|----|----------------|-----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| | | RS | RS tight W Sems | | | Binding | | TP | |
| Fastened member | | Metal | Resin | Metal | Resin | Metal | Resin | Metal | Resin |
| Tightening torque (N*m) | M4 | Approx. 1.6 | Approx. 1.6 | Approx. 1.6 | Approx. 0.8 | Approx. 1.6 | Approx. 0.8 | Approx. 1.6 | Approx. 0.8 |
| | M3 | Approx. 0.8 | Approx. 0.8 | Approx. 0.6 | Approx. 0.6 | Approx. 0.6 | Approx. 0.6 | Approx. 0.6 | Approx. 0.6 |

^{*} For PCB, refer to the tightening torque value of resin (fastened member).

| 8 | IP FAX Expansion Kit-B1 | |
| 9 | Remote Fax Kit-A1 | |

Product Features

New ADF

- High Productivity (1-sided / 2-sided), Fastest (Send 300 x 300 dpi) , 100 ipm / 200 ipm , (LTR)95 ipm / 190 ipm (A4)
- Small Size Paper-Enabled , Support originals of W 48mm x L 85mm
- Prevention of black streaks of Stream Reading , Oil Repellent Coated Glass
- Improved Operability , Change of Handle Position
- · Supports digital registration function to increase skew accuracy

New Panel

- · Compact control panel due to full touch panel
- · Improve visibility of output
- · Visibility-obsessed LED notification light

Functional Configuration

Functional Configuration

This machine consists of 6 major blocks: Original Exposure and Feed System, Controller System, Laser Exposure System, Image Formation System, Fixing System, and Pickup Feed System.

Original Exposure System

Features

■ Reader Assembly

• Color reproducibility has been improved by adopting a scanner unit with 3-line CIS installed, as compared with the conventional models.

ADF

High Productivity (1-sided /2-sided)

Fastest (Send 300 x 300 dpi) / Auto Color Select = OFF 100 ipm / 200 ipm (LTR) 95 ipm / 190 ipm (A4)

Small Size Paper-Enabled

Support originals of W 48mm x L 85mm

Expanded Stacking Capacity

150 sheets (75 gsm) / 100 sheets (80 gsm)

Prevention of black streaks of Stream Reading

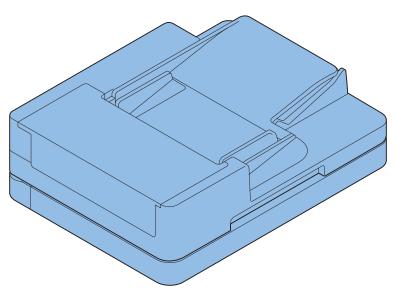

Oil Repellent Coated Glass

Improved Operability

Change of Handle Position

Digital registration

Supports digital registration function

Dust Detection Control

When reading an original, the original reading position is changed according to the presence/absence of dust on the Stream Reading Glass or the Guide Plate of the ADF, or image correction is performed to prevent the dust from being printed on the image.

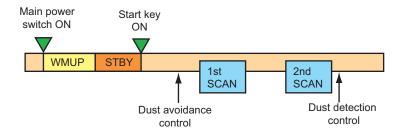

Control timing

Dust detection

· At job completion

Dust evasion

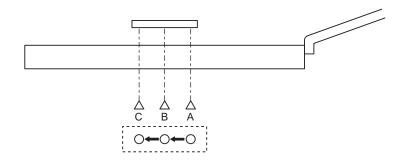

· When a job starts

Control description

At job completion (dust detection)

The Reading Sensor performs dust detection at a reading position. When it detects any dust, the sensor is moved to the position B if the sensor position is A, or to the position C if the position is B. This position will be the reading position for the next job.

At the start of a job and paper interval (dust evasion)

The Scanner Unit does not move.

Reading is performed at the position determined by the control performed at job completion or at the start of a job, and image correction is performed if dust is detected at that position.

Guide Plate dust detection/correction control

Overview

The Guide Plate facing the Stream Reading Glass is static for the ADF on this machine. Because of this, a false detection may occur with the conventional detection method for stream reading as it is not possible with that method to discriminate the dust adherent to the Guide Plate from the dust adherent to the glass when the Stream Reading Glass is read without paper. As measures against this issue, the ADF on this machine performs dust detection both before and during the feed and determines whether the dust is adherent to the Guide Plate or not based on the following criteria.

- The dust detected both before and during the feed: dust adherent to the glass (the dust that should be evaded)
- The dust detected before the feed but not during the feed: dust adherent to the Guide Plate (the dust that do not need to be evaded)

Timing of control

Guide Plate dust detection control is performed starting when an original passes through the specified location at the following timing.

- · At the start-up of a stream reading job
- · At paper interval

Control Description

Guide Plate dust detection/correction is performed with the following steps.

- 1. A dust detection is performed with a scan before the feed.
- 2. A dust detection is performed with a scan during the feed.
- 3. Dust detection correction is performed for the dust that are determined to be adherent to the glass

Non-continuous Dust Detection/Correction Control

Overview

This detects and corrects non-continuous streaks when stream reading is performed.

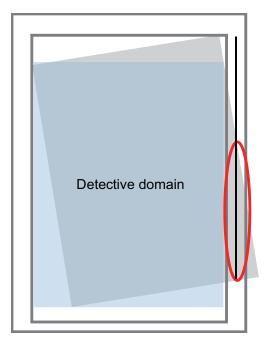

This function can be set to enable/disable by turning ON/OFF of "Streak Prevention".

Settings/Registration > Function Settings > Common > Scan Settings > Streak Prevention

Control Description

The horizontal scanning range for the original is detected for the skew detection/correction.

When soiling outside of the original range is detected, image failure may be caused by correction outside the original range entering inside the image after correcting skew. To prevent this, the correction processing application range is set from the image leading edge based on the skew detection result and the process is only executed within the range.

■ Dust evasion at stream reading

Overview

When dust is detected with the aforementioned Guide Plate dust detection, the scanning position is shifted to prevent the dust from being scanned next time and thereafter.

Timing of control

The shit in scanning position for dust evasion is performed at the end of a stream reading job.

Control Description

When dust is detected during a stream reading job, the scanning position is shifted or shifted back for approximately 0.5 mm. If dust is detected consecutively for a specified number of times, an alarm is generated to prompt the user to clean the glass. When the cover is opened, the count of the consecutive detections is reset.

Image processing

The functions of the PCBs used for image processing are shown below.

Main Controller PCB
 Shading correction (executed per job)
 Color displacement correction in vertical scanning direction

· Scanner Unit PCB

Driving the Scanner Unit, analog image processing, A/D conversion

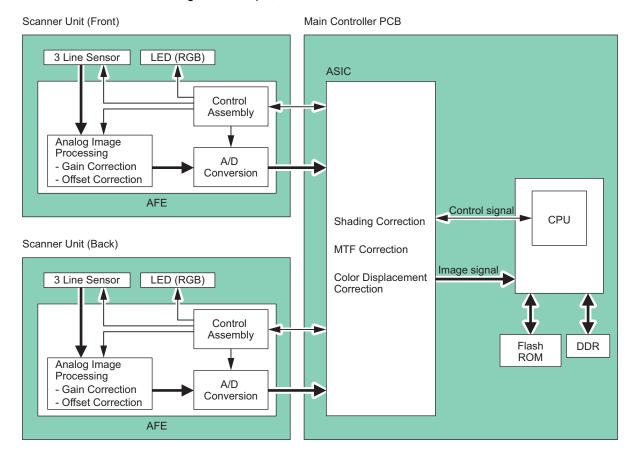

Image processing is performed line by line for each image with the Main Controller PCB. The main functions are shown below.

Main Controller PCB

- · Shading correction
- · Color displacement correction in vertical scanning direction
- · Skew detection/correction

Scanner Unit PCB (in the Scanner Unit)

- · Driving the Scanner Unit
- · Gain correction of the Reading Sensor output, Offset correction

■ Detecting and Correcting Skew Using Scanned Image

Overview

Images are rotated (skew correction) on the output based on the amount of skew measured during stream reading. This enables to increase productivity and reduce noise at the same time by eliminating the need for configuration to have a registration mechanism that presses the original document against the roller to make the skew of the leading edge of the original document and the horizontal scanning direction line closer.

Skew Detection

Detects skew by determining it from a scanned image instead of using sensors.

It binarizes the scanned image to detect the following three items.

Edge

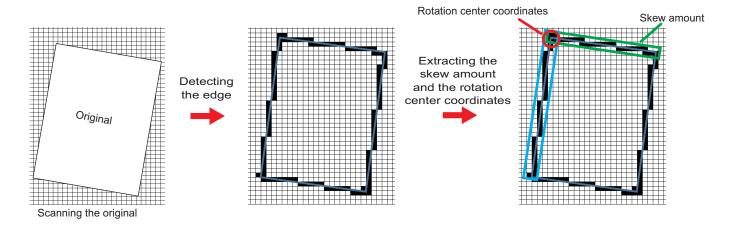

The shadow of the original on the opposed plate is detected as the edge of the original.

Skew amount

Skew amount is detected from the degree of the edge detected.

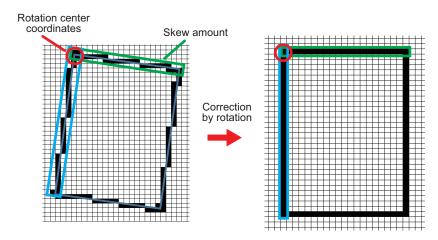

Rotation center coordinates

Rotation center coordinates is detected from the edge and the skew amount.

Skew Correction

Corrects the skew by rotating the image data according to the detected skew amount.

NOTE:

- When the edge of original is damaged or bent, the accurate skew amount may not be detected and the correction function may fail to function.
- The upper limit value of the cross-feed correction angle varies depending on the document size as shown below. When the
 cross-feed exceeding the upper limit value of the correction angle is detected, the read image is printed as it is without having
 the cross-feed correction.
 - Length in vertical scanning direction 250mm or more: 1.5°
 - Length in vertical scanning direction 200mm 249mm: 2°
 - Length in vertical scanning direction 199mm or less: 3°

In the mixed mode of the different width original, the cross-feed detection control by the sensor is canceled, and the cross-feed correction is performed up to a maximum of 3.5°.

Correction of the leading edge

Corrects the leading edge of the scanned image after skew correction if the leading edge position of the image is not appropriate.

Correction of the left edge

Corrects the left edge of the scanned image after skew correction if the left edge position of the image is not appropriate.

Angle correction

Corrects rotation angle on the scanned image after skew correction.

Parallelogram correction

Corrects the angle of the image to be 90 degrees by outputting the image while shifting it towards the horizontal scanning direction.

Shading Correction

Overview

Even if the original density is even, output of the CIS Reading Sensor in the Scanner Unit may not become even. A control that corrects variations in the output is shading correction.

Main causes of uneven output of the Reading Sensor are shown below.

- · Variation in sensitivity of pixel of the Reading Sensor
- Uneven light intensity of the lens
- · Uneven light intensity of the LED and light guide plate
- · Deterioration of the LED
- · Variations in luminance between at the position of the Standard White Plate and at the reading position

To correct unevenness of the Reading Sensor output, shading correction is performed.

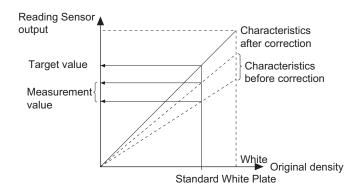

In shading correction, there is a type of shading correction that is executed per job.

Shading Correction (Common to Reader and ADF)

Shading correction is performed for each scanning of original.

With this operation, light of LED Lamp is emitted to the Standard White Plate, and the reflected light is converted into digital data at the analog image processing part of the Scanner Unit PCB. The amount of digitized reflected light is input to the shading correction circuit in the Main Controller PCB as the shading coefficient. In the shading correction circuit, the stored target value and the shading coefficient are compared, and the difference is determined as the shading correction value.

With this shading correction value, variation of pixel of the Reading Sensor of each scan is corrected to make the image density level even.

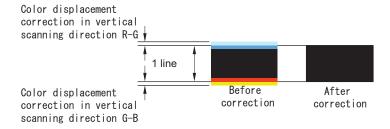

Shading correction (ADF side)

Positional relationship between the CIS Reading Sensor and the Standard White Plate differs between at the Reader side and at the ADF side. Therefore, when performing shading correction to the Reading Sensor at ADF side, the correction value stored in advance needs to be taken into consideration. This corrects difference in image density caused by positional relationship.

Color Displacement Correction Processing in Vertical Scanning Direction

Color displacement correction control in the vertical scanning direction is used to correct displacement of R, G, and B by shifting the pixels in the vertical scanning direction (by less than 1 pixel) to align the red (R) and blue (B) images with green (G) when the scanned R, G, and B images are not accurately overlapped at color scanning.

Example: A scanned image of a black line where red (R) is displaced upward and blue (B) is displaced downward with respect to green (G)

As for the color displacement correction value in the vertical scanning direction, there are two types of reader scans as shown below. These correction values have been adjusted at the time of shipment, and stored as service mode values. (In COPIER > ADJUST > CCD)

100-RG, 100-BG, 100DF-RG, 100DF-GB, 100DF2GB, 100DF2RG

When a job is started, color displacement correction processing is performed based on the saved color displacement correction values.

Service Mode

 COPIER > ADJUST > CCD > 100DF2RG

■ Gain Correction of the Reading Sensor Output, Offset Correction

The analog video signal output from the Reading Sensor has its amplification ratio aligned with a fixed value (gain correction) and has its output voltage when there is no incident light aligned with a fixed value (offset correction).

ADF scan operation sequence (common to both 2-sided/1-sided)

The operation sequence for original scan with the ADF is shown below.

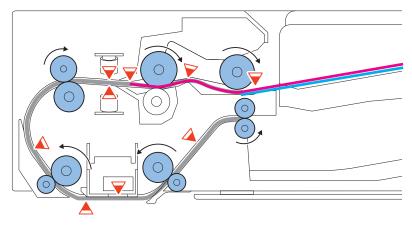

Loading original (2 sheets of original)

As an example, 2 sheets of original are loaded.

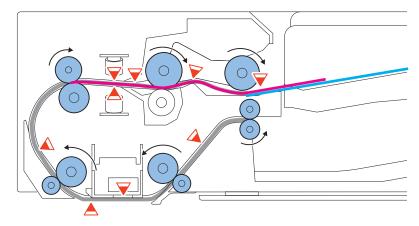

| No. | Code | Name | |
|-----|---------|------------------------------------------|--|
| [1] | SR4204 | Original Sensor | |
| [2] | SR4205 | Pre-separation Sensor | |
| [3] | REG | Post-separation Sensor | |
| [4] | JUSO(R) | Double Feed Detection PCB (Reception) | |
| [5] | JUSO(T) | Double Feed Detection PCB (Transmission) | |
| [6] | SR4206 | Document End Sensor | |
| [7] | - | Reading position for the front side | |
| [8] | - | Reading position for the back side | |
| [9] | SR2 | Delivery Sensor | |

Separation sequence (first sheet)

1For the first sheet, from the start of separation to the Post-separation Sensor

A sheet of original is picked up from the top of the stack by driving the Pickup Roller and the Separation Roller.

For the first sheet, from the Post-separation Sensor to the Pullout Roller

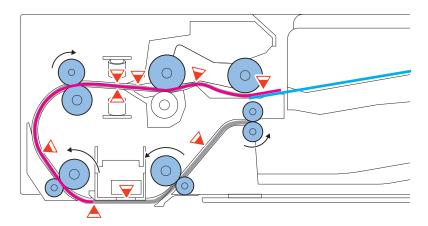

The picked-up original is fed from the Separation Roller to the Pullout Roller.

The Double Feed Sensor located between the Separation Roller and the Pullout Roller detects double feed of original.

When conditions are met, the feed is suspended before the original reaches the Pullout Roller.

Note that the ADF on this machine does not perform registration processing as corrections are made on originals with rotation using the skew detection/correction functions.

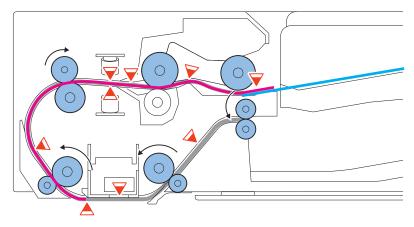

Reading sequence

For the first sheet, from the Pullout Roller to the reading point

The original that enters the Lead Roller is fed to the Document End Sensor at the reading speed, and the image is read.

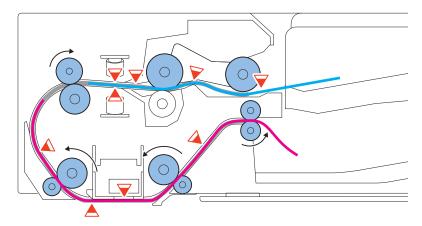

Separation sequence (next sheet)

For the second sheet, from the start of separation (when the Pre-separation or the Post-separation Sensor is turned off after the first sheet passes through)

Once the trailing edge of the first sheet is detected, separation control for the second sheet is started. The trailing edge of the first sheet is detected with the Pre- and Post-Separation Sensors.

Delivery sequence

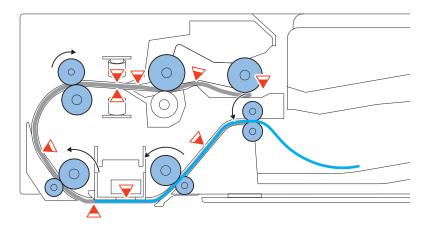

The second sheet reaches to the temporary stop position and the first sheet is delivered

If the paper interval detected with the Post-separation Sensor is less than the specified distance, the second paper is temporarily stopped at the temporary stop position until the paper interval reaches the specified distance.

The first sheet that passed through both the front side and back side reading position is delivered to the Delivery Tray at the process speed.

The delivery is determined to be completed when it is detected that the trailing edge of the original passed through the Delivery Roller after the completion of reading.

The delivery of the second sheet

The delivery of the second sheet is controlled in the same manner as that for the first sheet after the reading of the second sheet is completed.

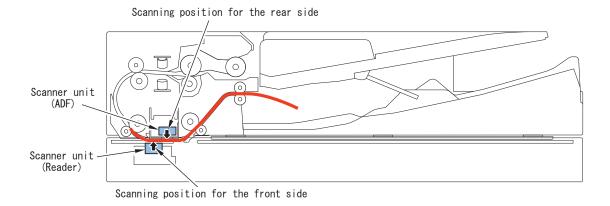

The Feed Motor stops when the trailing edge of the second sheet passes through the Delivery Sensor.

After the job is completed, the Delivery LED blinks and prompts the user to remove the original.

Scanner Unit Configurations

The Contact Image Sensor (CIS) is used to expose and read the original, and image reading is performed line by line.

■ Duplex Reading Control

2-sided originals are read using simultaneous duplex reading.

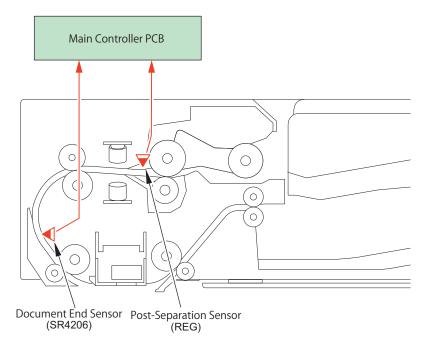

With one feed, the Scanner Unit of the Reader Unit reads the front side and the Scanner Unit of the ADF reads the back side so that both sides can be read without reversing the paper.

■ Original size detection

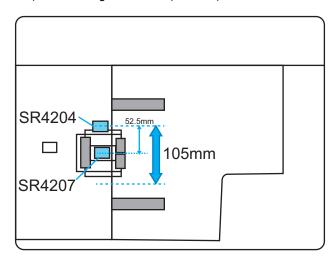

As this machine does not have a function to detect the length of original, the size of original is calculated based on the time difference between the timings of detection of original by the Post-separation Sensor (REG) and by the Document End Sensor (SR4206).

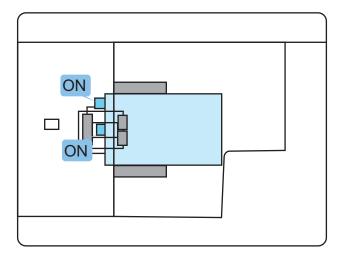

Original Detection

Overview

- The ADF on this machine has the 2 Original Sensors located near the Pickup Roller to detect the presence/absence of originals. (See the figures shown below)
 - Originals with a width of 105 mm or larger and with a width of less than 105 mm are both detected by using both the Original Sensor (small size paper) (SR4207) and the Original Sensor (SR4204).

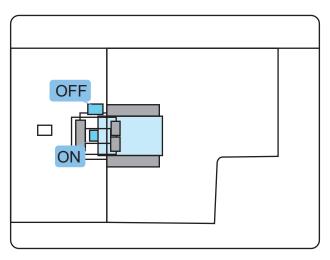

• When an original with a width of 105 mm or larger is placed

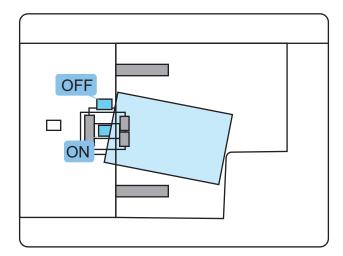

Both the Original Sensor (small size paper) (SR4207) and the Original Sensor (SR4204) detect the original (ON).

• When an original with a width of less than 105 mm is placed

The Original Sensor (small size paper) (SR4207) detects the original (ON) while the Original Sensor (SR4204) does not detect it (OFF).

· When an original is not placed properly

If the Original Sensor (small size paper) (SR4207) detects the original (ON) and the Original Sensor (SR4204) detects it (ON) after a short time lag, it is determined that the original was not placed properly. Then, the feed is stopped, and a message that prompts the user to replace the original is displayed.

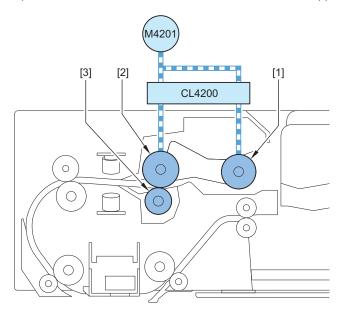

■ Pickup Operation

The pickup operation is performed by the Pickup Roller, Separation Roller, and the Feed Roller.

The Pickup Roller and the Feed Roller are driven by the ADF Motor (M4201).

The ADF Separation Clutch is connected when starting pickup, thereby transmitting the drive of the ADF Motor to each roller to perform pickup.

After pickup is finished, the ADF Separation Clutch is disconnected or the Feed Motor is stopped.

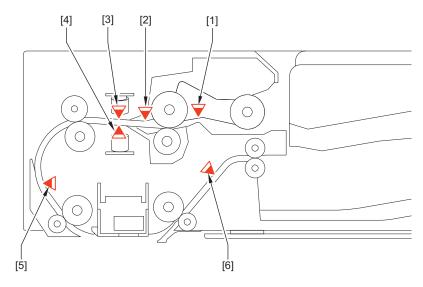

| No. | Name |
|--------|-----------------------|
| [1] | Pickup Roller |
| [2] | Feed Roller |
| [3] | Separation Roller |
| M4201 | ADF Motor |
| CL4200 | ADF Separation Clutch |

■ Jam detection

This machine detects original jams using the sensors shown in the figure below.

When a jam occurs, the machine records the information as a code.

This machine's jam code can be checked in service mode of the host machine or by outputting a jam/error log report from service mode.

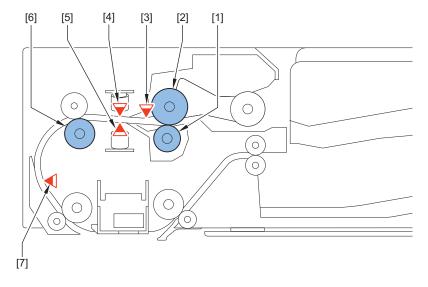

| No. | Code | Name | |
|-----|---------|------------------------------------------|--|
| [1] | SR4205 | Pre-separation Sensor | |
| [2] | REG | ost-separation Sensor | |
| [3] | JUSO(R) | Double Feed Detection PCB (Reception) | |
| [4] | JUSO(T) | Double Feed Detection PCB (Transmission) | |
| [5] | SR4206 | Document End Sensor | |
| [6] | SR2 | Delivery Sensor | |

■ Double feed detection control

This machine has the Double Feed Detection PCBs to detect double feed of paper.

The Double Feed Detection PCBs located between the Feed Roller and the After Separation Feed Roller detect double feed.

- 1. The Double Feed Detection PCBs calculate the threshold value for double feed detection by checking the sensor level at job start-up with no original.
- 2. During a job, the PCBs cooperate with the Post-separation Sensor (REG) to detect originals.
- 3. The detected data is compared with the threshold calculated at job start-up to determine if a double feed has occurred.
- 4. Once It is determined that a double feed has occurred, the machine stops the feed operation recognizing it as a jam.

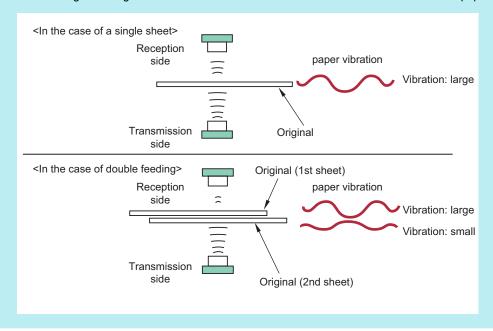

| No. | Code | Name |
|-----|----------|------------------------------------------|
| [1] | - | Separation Roller |
| [2] | - | Feed Roller |
| [3] | REG | Post-Separation Sensor |
| [4] | JUSO (R) | Double Feed Detection PCB (Reception) |
| [5] | JUSO (T) | Double Feed Detection PCB (Transmission) |
| [6] | - | After Separation Feed Roller |
| [7] | SR4206 | Document End Sensor |

NOTE:

The Double Feed Detection PCBs use an ultrasonic sensor.

With the ultrasonic method, the oscillation portion emits ultrasonic wave and applies it to paper surface. New ultrasonic wave is generated as the paper surface vibrates, and the reception side reads the ultrasonic wave.

Double feed is detected taking advantage of the fact that oscillation becomes smaller when a 2nd sheet of paper is present.

■ Types of jam

| | 0096 | Limited functions jam*2 | - | - |

^{*1:}It occurs when a software sequence error has occurred for some reasons. The machine is recovered by opening and then closing the cover to remove jammed paper.

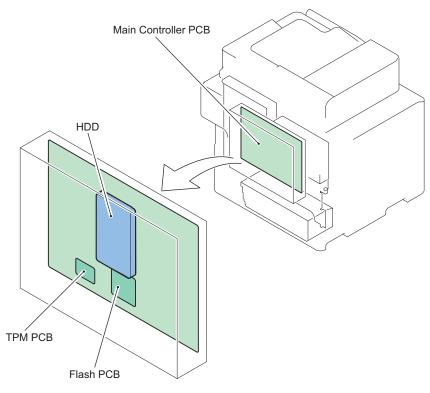

If this jam occurs, refer to the error log, and perform the remedy for the error code which has occurred at the same time.

^{*2:} Limited functions jam is a jam for preventing an original to be left inside the machine when a problem which requires the machine moves to limited functions mode occurs. If an error occurs for some reasons, a jam message is displayed to prompt the user to perform jam removal. After that, an error is displayed, and the device enters limited functions mode. The machine recovers when the cause of the error is solved.

Controller System

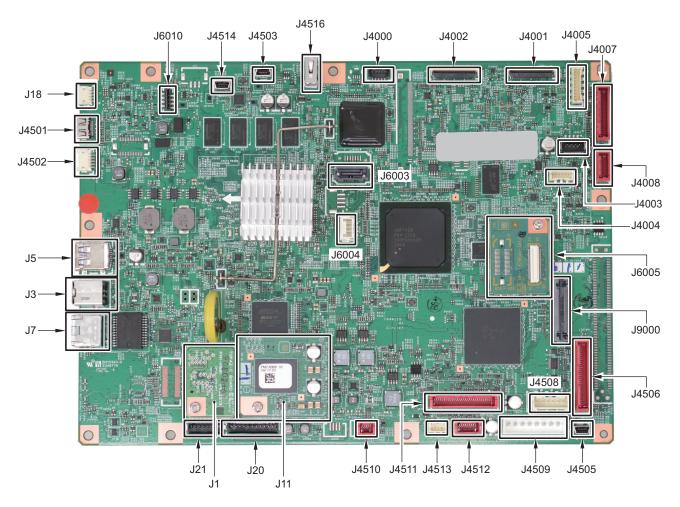

Overview

■ Configuration/Function

| Item | Function |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Main Controller PCB | System Control/Memory Control/Printer Output Image Processing Control, Reader Image Input Processing, Card Reader Connection I/F, Fax Image Processing, USB Extension HUB Connection I/F |

■ Startup Sequence

Screen sequence and internal processing sequence

NOTE:

To achieve faster startup, the progress bar and the active PCB are not synchronized.

For this reason, the progress bar cannot be utilized for troubleshooting.

For information about troubleshooting, refer to "Related error codes (major error codes)" shown below.

NOTE:

When system verification* at startup is ON, startup of system software takes more time than when OFF.

*: Settings/Registration (login as an administrator) > [Management Settings] > [Security Settings] > [System verification at startup] Note that when the machine is recovering from sleep mode or at Quick Startup, system verification is not performed even it is set to ON.

Related error codes (major error codes):

- E602-0001: HDD detection error
- E614-0001: Flash PCB detection error
- E614-0002: Error in file system on the Flash PCB
- E614-4001: Error in file system on the Flash PCB
- E614-4002: Error in file system on the Flash PCB
- E748-2010: Flash PCB error / HDD error

NOTE:

When the following errors occur, the system of the host machine has not been started normally. Therefore the error code is not recorded in the log.

E602-XX01, E614-XX01, E748-2010

■ Shutdown Sequence

Before shutting down the power supply, it is necessary to perform the HDD completion process (Purpose: to prevent damage on the HDD) and execute the fixing disengagement operation. This sequential process is called "shutdown sequence". The shutdown sequence has been manually executed with the legacy (existing) models (by holding down the power supply switch on the Control Panel for a specific duration).

With this machine, the Main Controller PCB detects turning OFF the Main Power Supply Switch, and the shutdown sequence is started and executed automatically.

Note that the maximum shutdown time with this equipment is 110 seconds.

NOTE:

When the power supply is stopped without advance shutdown of the equipment, or the complete deletion process of the HDD (deletion of the primary file) failed to be completed within the shutdown time (max. 110 sec.), data matching is checked at startup. The progress bar is displayed during the data checking.

Motion Sensor

Function

Features of the Motion Sensor functions are shown below.

- When the machine detects a person staying in front of it (in the area where the sensor works) for more than a certain period
 of time, it automatically recovers from sleep mode.
- It judges whether the person is a user or a passerby and controls not to perform recovery triggered by passersby in order to reduce unnecessary power consumption.
- Criteria for judging whether a person is a user or passerby are shown below.
 - If a person approaches the machine from the front, the sensor judges the person as a user and starts recovery from sleep mode quickly.
 - If a person approaches the machine from the side, the sensor judges the person walking fast as a passerby and the person walking slowly as a user.
- The machine may recover from sleep mode in response to the detection of the passerby walking slowly, but the machine shifts to sleep mode again if it is not operated within a specified period of time.

CAUTION:

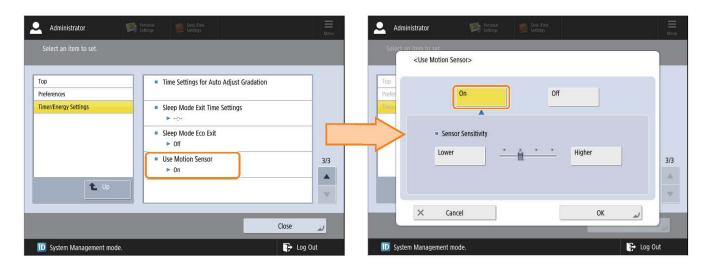

Do not block the opening because the sensor generates ultrasonic waves and detects reflected waves.

Settings/Registration

This function can be set from the following menu.

[Settings/Registration] > [Preferences] > [Timer/Energy Settings] > [Use Motion Sensor] ON/OFF of this function and the sensor sensitivity can be configured.

2. Technical Explanation (Device)

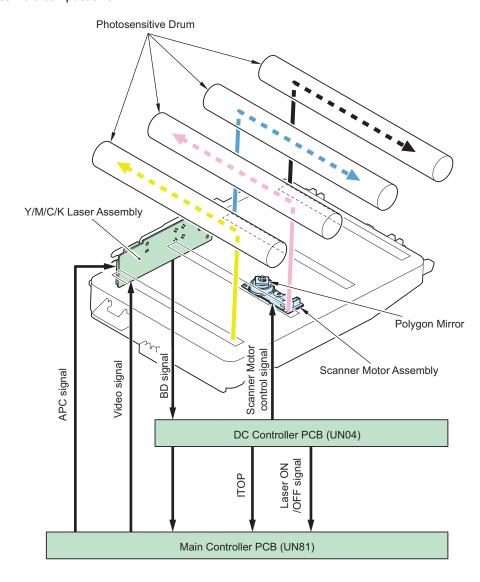

Laser Exposure System

Overview

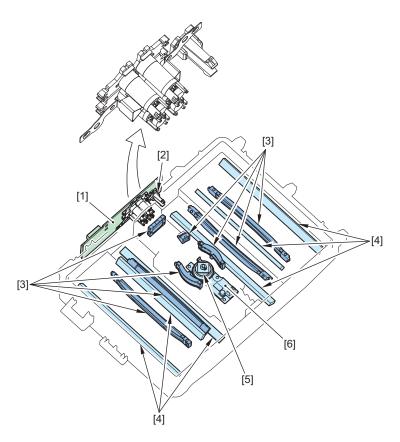

The laser exposure system forms a static latent image on the Photosensitive Drum by laser exposure.

The Laser Scanner Unit consists of the Laser Assembly and the Scanner Motor, and is controlled by the signal input from the DC Controller PCB.

The machine uses the 2-beam method that enables exposure of 2 beams per scanning direction, and adopts the 1-polygon, 4-laser method to realize a compact size.

2. Technical Explanation (Device)

| No. | Name |
|-----|---------------------------|
| 1 | Y/M/C/Bk Laser Driver PCB |
| 2 | BD Circuit |
| 3 | Imaging Lens |
| 4 | Reflection Mirror |
| 5 | Polygon Mirror |
| 6 | Scanner Motor |

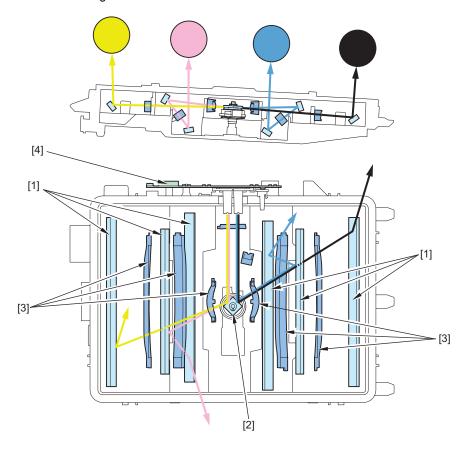

Specifications

| Item | Description |
|-----------------------------------|-------------|
| Number of Laser Scanner Units | 1 |
| Number of laser beams | 2 beams |
| Resolution | 600 dpi |
| Number of Polygon Mirror surfaces | 4 surfaces |

■ 1-Polygon, 4-Laser Method

This method uses one Scanner Motor and four laser diodes to perform laser scanning. Four lasers can be scanned on the multifaceted mirror on one Scanner Motor, thereby realizing space-saving.

The following shows an outline drawing of the Laser Scanner Unit.

| No. | Name |
|-----|---------------------------|
| 1 | Reflection Mirror |
| 2 | Polygon Mirror |
| 3 | Imaging Lens |
| 4 | Y/M/C/Bk Laser Driver PCB |

Laser ON/OFF Control

Purpose

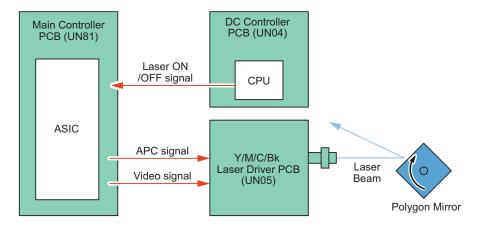

Turns the laser beam ON and OFF according to the combination of laser control signals.

Execution timing

After turning ON the power

Control description

The DC Controller PCB switches between four modes (Forced OFF mode, APC mode, Print mode, and Standby mode) based on the laser control signals.

| Mode | Laser status | Remarks |
|-----------------|--------------|-----------------------------------------------------------|
| Forced OFF mode | OFF | Clears the light intensity setting determined by the APC. |
| APC mode | ON | Adjusts laser light intensity. |
| Print mode | On/Off | Emits the laser according to the video signal. |
| Standby mode | OFF | The laser is OFF in an area without images. |

Horizontal Scanning Synchronization Control

Purpose

Aligns the write start position in the horizontal scanning direction.

Execution timing

When printing is started (for each line)

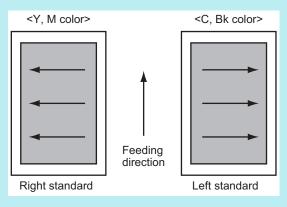

Control description

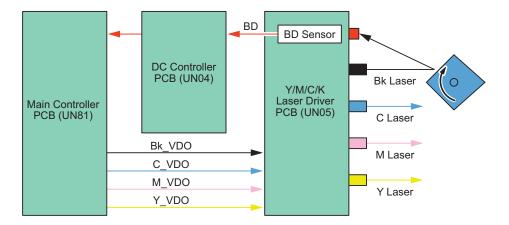

- 1. The Main Controller PCB forcibly activates the laser diode of the Y/M/C/Bk Laser Driver PCB by executing the Bk laser control signal in APC mode.
- 2. The laser beam of the Bk laser has a BD circuit in the scanning light path, and is incident on the BD Circuit.
- 3. The BD Circuit detects the laser beam and then generates a BD signal, and sends it to the DC Controller PCB.
- 4. The DC Controller PCB performs synchronization based on this signal, and then sends a reference BD signal to the Main Controller PCB as the horizontal scanning synchronous signal (BD) for every line.

5. The Main Controller PCB outputs video signals (Y_VDO, M_VDO, C_VOD, Bk_VDO) to the Y/M/C/Bk Laser Driver PCB when it receives these signals. This enables the Y/M/C/Bk Laser Driver PCB to emit a laser beam from a fixed position for each line.

NOTE:

As the BD signal is the horizontal scanning synchronous signal of the Bk color, the Bk color serves as each color's reference for horizontal scanning.

Vertical Scanning Synchronization Control

Purpose

Aligns the write start position in the vertical scanning direction.

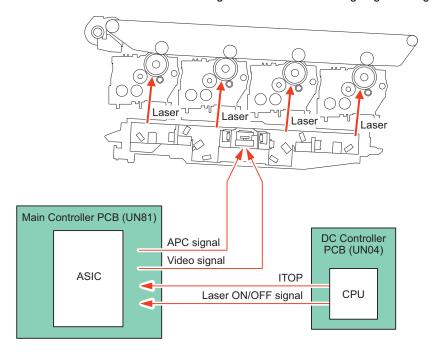

Execution timing

At printing

Control description

- 1. When the DC Controller PCB receives a print order, it detects an internal reference signal. Based on this signal, a vertical scanning synchronous signal (ITOP) is generated and sent to the Main Controller PCB.
- 2. The Main Controller PCB generates a video signal in accordance with reception of the ITOP signal.

3. The Laser Scanner Unit emits laser beams based on video signals to match the leading edge of image with that of paper.

Purpose

Rotates the Scanner Motor at a specific speed.

Execution timing

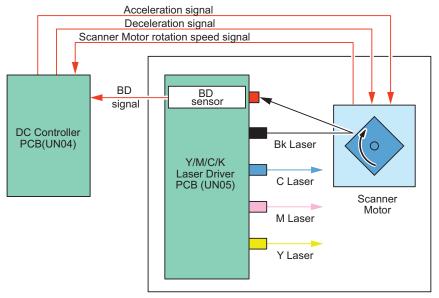

At power-on, and at printing

Control description

The Scanner Motor rotation speed is controlled by the DC Controller PCB.

- 1. The DC Controller PCB outputs Scanner Motor control signals (acceleration signals and deceleration signals) to the Scanner Motor to rotate the Polygon Mirror.
- 2. The DC Controller PCB controls the Scanner Motor rotation speed to be constant by reference to the Scanner Motor rotation speed signal.
 - (From when the Scanner Motor starts rotation until it reaches the target revolutions and the machine starts image formation process)
- 3. When the laser beams are emitted at image formation, the DC Controller PCB detects the BD signal.

4. The DC Controller PCB controls the Scanner Motor control signals (acceleration signals and deceleration signals) based on the input timing of the BD signal to control the Scanner Motor rotation speed.

Laser Scanner Unit

APC (Auto Power Control)

Purpose

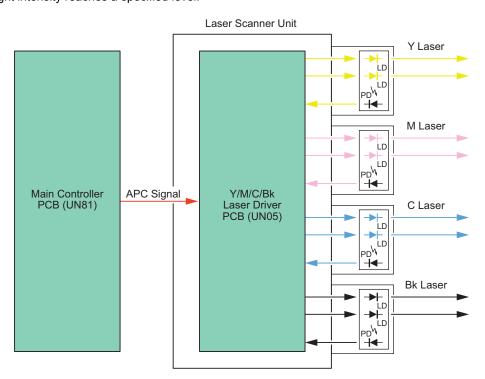

Ensures constant laser beam light intensity for each line.

Execution timing

For each line (before writing the image)

Control description

- 1. The Main Controller PCB outputs the APC signal to the Laser Driver IC in the Y/M/C/Bk Laser Driver PCB.
- 2. The APC mode is set for the Laser Driver ICs of each Y/M/C/Bk Laser Driver PCB and the laser diode of each color is forcibly activated. The photo diode (PD) monitors the laser diode (LD), and each Laser Driver IC adjusts the output of laser diode until the laser light intensity reaches a specified level.

Related error code

- E110-0001: Scanner Motor error (FG lock)
- E110-0002: Scanner Motor error (BD speed lock)
- E110-0003: Scanner Motor error (BD phase lock)
- E110-0005: Scanner Motor error (GBD signal not detected))

BD Detection Correction Control

Purpose

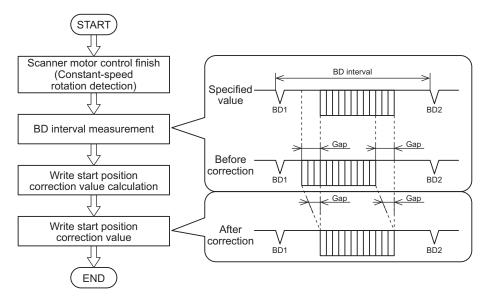

Corrects the displacement of each color's laser write start position due to Polygon Mirror accuracy and Polygon Motor rotation accuracy.

Execution timing

At power-on, and at printing

Control description

- The DC Controller PCB measures the BD interval after the completion of constant speed rotation control of the Scanner Motor.
- 2. The DC Controller PCB calculates the correction value from the displacement of the BD interval.
- 3. The write start position is corrected by adjusting the write start timing based on the above correction value.

Dustproof Shutter

Purpose

Prevents dropped toner getting attached on the Dustproof Glass when installing/removing the cartridge.

Execution timing

At image formation and when the Waste Toner Container is removed and then installed

Control description

The Waste Toner Container is interlocked with the Shutter Lever of the Laser Scanner Assembly to open/close the Dustproof Shutter.

When the Waste Toner Container is inserted, the Dustproof Shutter opens. When the Waste Toner Container is pulled out, the Dustproof Shutter closes.

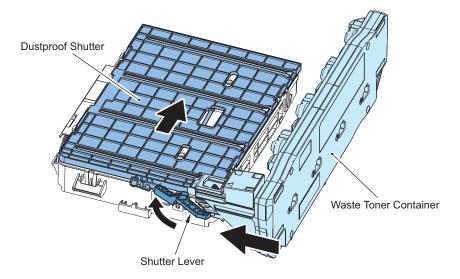

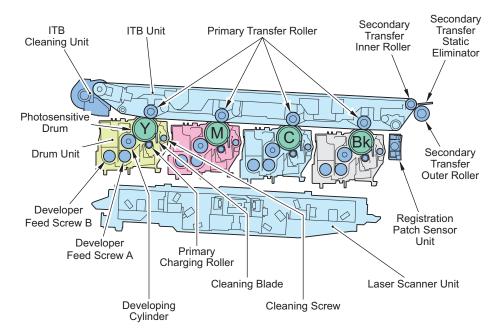

Image Formation System

Overview

The image formation system of this machine uses the dry, 2-component AC developing method for developing and the intermediate transfer method for transferring to form toner images.

To increase life of the Image Formation Unit, this machine uses the primary transfer disengagement method.

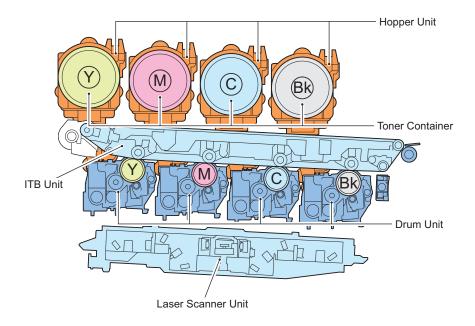

■ Specifications

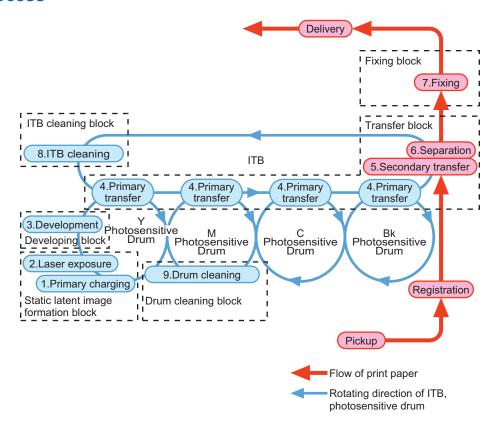

| Item | Function/Method | |
|-------------------------|------------------------------------------------------------------------------|--|
| Photosensitive Drum | Material: OPC | |
| | Drum diameter: 30 mm | |

■ Parts Configuration

Major Parts

■ Print Process

| No. | Block name | Process name | Description |
|-----|-------------------------------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Static latent image formation block | Primary charging | The surface of the Photosensitive Drum is charged to make a uniform negative potential. |
| 2 | | Laser exposure | Emission of the laser light forms a static latent image on the surface of the Photosensitive Drum. (Image exposure: laser exposed area becomes image area) |
| 3 | Developing block | Development | With the dry, 2-component AC developing method, toner that has been negatively charged by the Developing Cylinder is attached to the Photosensitive Drum. |

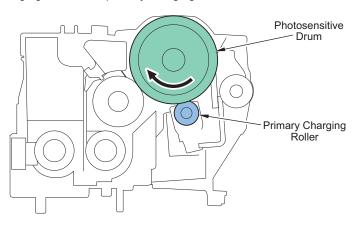

| No. | Block name | Process name | Description | | | |
|-----|---------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| 4 | Transfer block Primary transfer | | Toner on the surface of the Photosensitive Drum is transferred to the ITE by applying positive charge from the back side of the ITE. | | | |
| 5 | | Secondary transfer | Toner on the ITB is transferred to the paper by applying positive potent to the Secondary Transfer Outer Roller. | | | |
| 6 | 6 Separation | | With the curvature separation method, the paper is separated from the ITE In the case of thin paper which has low elastic force, the Static Eliminator reduces potential on the back side of paper to make the thin paper to be separated easily. | | | |
| 7 | Fixing block | Fixing | The toner on the paper is fixed on the paper by heat and pressure. | | | |
| 8 | ITB Cleaning Block | ITB cleaning | The Cleaning Blade removes the residual toner attached on the ITB. | | | |
| 9 | Drum cleaning block | Drum cleaning | The Cleaning Blade removes the residual toner attached to the Photosensitive Drum. | | | |

Primary Charging

Overview

This machine uses the roller charging method for primary charging.

■ Primary Charging Bias Control

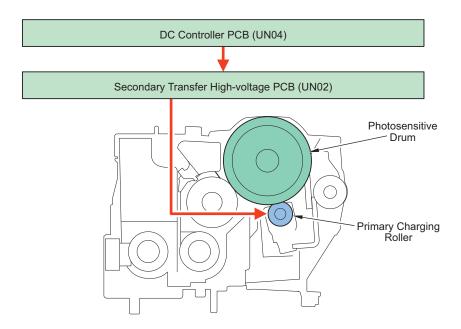

DC charging is a distinguishing feature of the primary charging of this machine.

The surface of the Photosensitive Drum is charged to make a uniform negative potential.

The primary charging bias (DC negative), which has been generated by the Secondary Transfer High-voltage PCB (UN02), is applied to the Primary Charging Roller.

The primary charging bias value is determined by the DC Controller PCB based on the following conditions:

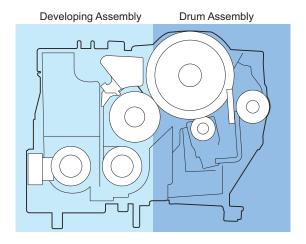

- Environment (humidity detected by the Environment Sensor (UN33))
- · Life of the Photosensitive Drum

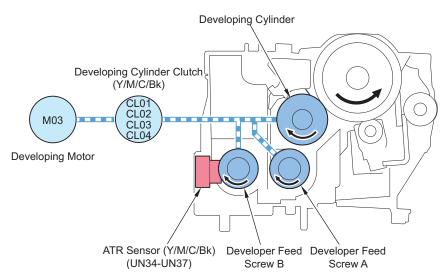

Drum Unit (Developing/Drum)

■ Drum Unit Overview

The Drum Unit consists of the Developing Assembly and Drum.

■ Developing Overview/ Drive Configuration

| Parts name | Role |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Developing Assembly | The toner fed from the Hopper Unit is developed on the Photosensitive Drum. |
| Developing Cylinder | The toner and carrier inside the Developer Container are coated on the surface, and the toner is developed on the Photosensitive Drum. |
| Developer Feed Screw A | Toner and carrier in the Developer Container are supplied to the Developing Cylinder. |
| Developer Feed Screw B | Toner and carrier in the Developer Container are stirred and supplied to the Developer Feed Screw A. |

| Code | Parts name | Role | | |
|------------------------------------|------------|--------------------------------------------------------------------------------|--|--|
| M03 Developing Motor | | To rotate the Y/M/C/Bk Developing Cylinder and the Developer Feed Screw | | |
| UN34 to UN37 ATR Sensor (Y/M/C/Bk) | | To detect the ratio of developer (toner + carrier) in the Developing Assembly. | | |

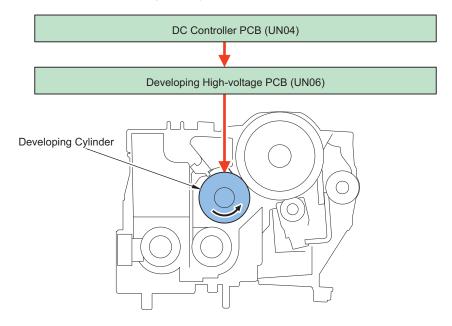

■ Developing Bias Control

A toner image is formed on the Photosensitive Drum by attaching toner to the Developing Cylinder.

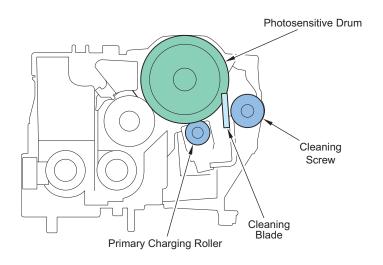

Control description

The developing bias (AC, DC negative), which has been generated on the Developing High-voltage PCB (UN06), is applied to the Developing Cylinder.

- Developing DC bias: The bias to generate potential difference with the Photosensitive Drum. The bias value is determined based on the Environment Sensor (UN33).
- Developing AC bias: The bias to improve image quality.

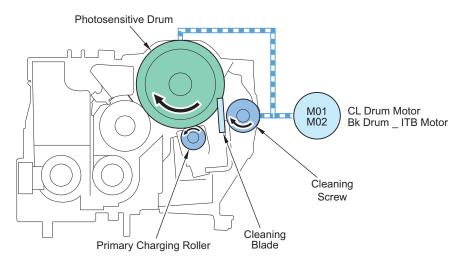

■ Drum Overview

| Parts name | Role |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Drum Assembly | After a static latent image has been formed on the Photosensitive Drum, a toner image is formed with the toner from the Developing Cylinder. |
| Photosensitive Drum | A toner image is formed on the Photosensitive Drum. |
| Primary Charging Roller | The surface of the Photosensitive Drum is charged to make a uniform potential. |
| Cleaning Blade | Residual toner on the Photosensitive Drum is removed. |
| Cleaning Screw | Residual toner is fed. |

■ Drive Configuration

| Code | Parts name | Role | | | |
|------|---------------------|---------------------------------------------|--|--|--|
| M01 | CL Drum Motor | Rotation of the Photosensitive Drum (Y/M/C) | | | |
| M02 | Bk Drum _ ITB Motor | Rotation of the Photosensitive Drum (Bk) | | | |

Related error code

Drum Unit detection

Whether the Drum Unit is installed or not is detected.

Execution condition/timing

At power-on, at recovery from sleep mode (of 4 or more hours), when the Front Door/Right Door is opened/closed.

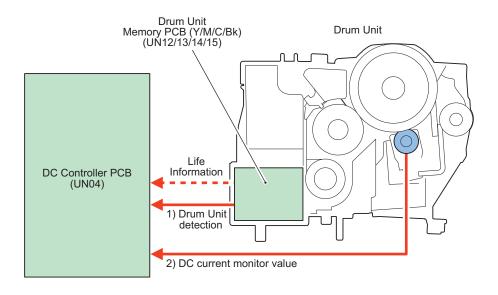

Detection description

This machine detects the presence/absence of a Drum Unit in the following order.

- 1. The Drum Unit Memory PCB of the Drum Unit is detected.
 - If the Drum Unit Memory PCB can be detected, it is judged that the Drum Unit is attached.
 - If the Drum Unit Memory PCB cannot be detected, step 2 is executed.
- 2. It is determined by the DC current monitor value at warm-up rotation.
 - When the current monitor value is less than the specified value: Drum Unit absent
 - When the current monitor value is the specified value or higher: Drum Unit present

Operation of the host machine

If the Drum Unit is detected as absent, the machine is stopped and the corresponding error code is displayed on the Control Panel.

NOTE:

Drum Unit detection may not be executed at times such as at recovery from sleep mode (of 4 or more hours). "No drum jam" is detected when a print job is executed with no Drum Unit installed in the machine.

Related jam code

00-0B0D: No drum jam

■ Drum Unit Life Detection

Purpose

To display the life/remaining days to notify the Toner Container replacement timing.

The LIFE and the Remaining Days can be checked in the service modes below.

COPIER > COUNTER > LIFE > PT-DR-Y

COPIER > COUNTER > LIFE > PT-DR-M

COPIER > COUNTER > LIFE > PT-DR-C

COPIER > COUNTER > LIFE > PT-DRM

Control description

Since this machine does not have a function for detecting the film thickness of the Photosensitive Drum, change in the film thickness is calculated based on the rotation time of the Photosensitive Drum and the application time of the primary charging DC bias.

■ Primary Transfer Roller Engagement/Disengagement Control

The Primary Transfer Rollers are usually disengaged.

All the Primary Transfer Rollers are engaged in color mode, and only the Bk roller is engaged in B&W mode.

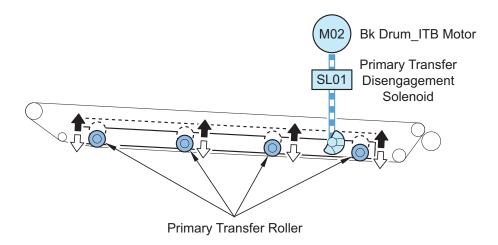

Shift from the color mode to the B&W mode is not performed immediately from the perspective of productivity. Shift to the state where only the Bk roller is engaged is performed when B&W printing continues for the specified number of sheets or more.

Engagement timing

· When image formation is executed

Disengagement timing

- · At power-on
- · At recovery from sleep mode
- · When the Front Door/Right Door is opened/closed (if the rollers have not been disengaged)
- · When image formation is completed

CAUTION:

When a jam has occurred, the ITB must not be pulled out as it is because the Primary Transfer Rollers are not disengaged by opening the door. Be sure to execute ITB full disengagement mode (see the related service mode shown below) before pulling out the ITB.

Related service mode

- Executing ITB full disengagement mode COPIER > FUNCTION > MISC-P > T1-UP
- Enabling/disabling display of initialization after replacement of the ITB in the Settings/Registration menu COPIER > OPTION > DSPLY-SW > ITB-DSP

ATVC Control

Primary Transfer ATVC

The transfer voltage required to obtain the target transfer current value is set in order to prevent transfer failure due to environmental changes.

Control timing

- At power-on (when the fixing temperature is 80 deg C or less)
- At power-on (when the Right Door is opened/closed at times other than at jam removal)
- · When the internal temperature has changed by more than the specified value since the last ATVC control
- At paper interval (equivalent to 130 images) during continuous printing
- · At last rotation after 100 accumulated images

Control description

- 1. The monitor current value of the primary transfer DC bias is detected.
- 2. Optimal target current value is determined based on the temperature/humidity data of the Environment Sensor.
- 3. The primary transfer DC bias to be applied to the Primary Transfer Roller is determined.

Related service mode

• Adjustment of the primary transfer ATVC target current for each color (plain/recycled 1, 2)

· Adjustment of the primary transfer ATVC target current for Bk-color in color mode

COPIER > Adjust > HV-TR > 1TR-TK42 : Other paper types COPIER > Adjust > HV-TR > 1TR-TK43 : Plain/Recycled 3

Secondary Transfer ATVC

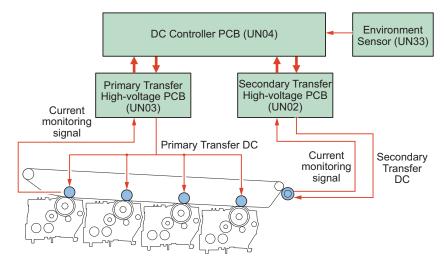

To set the transfer voltage required to obtain the target transfer current value in order to prevent transfer failure due to environmental changes and paper type.

Control timing

- At the same timing as the paper interval (equivalent to 130 images) during continuous printing of the Primary Transfer ATVC
- · At initial rotation
- At paper interval on a specified print basis (100 sheets)

Control description

- 1. Monitor current value of the secondary transfer DC bias is detected.
- 2. Optimal target current value is determined based on temperature/humidity data of the Environment Sensor and paper type.
- 3. The secondary transfer DC bias is determined that is to be applied to the Secondary Transfer Roller.

■ Primary Transfer Bias Control

The primary transfer bias is divided into each color (Y, M, C, Bk) to be generated on the primary transfer bias generation circuit. The primary transfer bias that has been generated is applied to the Primary Transfer Roller.

The primary transfer bias value is determined by the ATVC control with the DC Controller PCB, which makes a constant current value run though the Primary Transfer Roller.

ON and OFF of the primary transfer bias can be switched by color, and it is possible to turn OFF the bias of the color which will not be used.

NOTE:

The ATVC control secures transfer performance that is not affected by change in resistance caused by the environment as well as deterioration of the Primary Transfer Roller and is executed respectively to the primary transfer bias of each color.

■ Secondary Transfer Bias Control

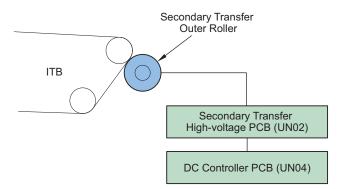

Toner on the ITB is transferred to a paper.

The secondary transfer bias, which has been generated on the Secondary Transfer High-voltage PCB (UN02), is applied to the Secondary Transfer Outer Roller.

There are 2 types of the secondary transfer bias (the DC positive and the DC negative) to apply bias with the following purpose.

- DC positive: Toner on the ITB is transferred to a paper when printing.
- DC negative: Toner on the Secondary Transfer Outer Roller is attracted onto the ITB when cleaning.

The secondary transfer bias value is determined by the ATVC control with the DC Controller PCB, which makes a constant current value run though the Secondary Transfer Outer Roller.

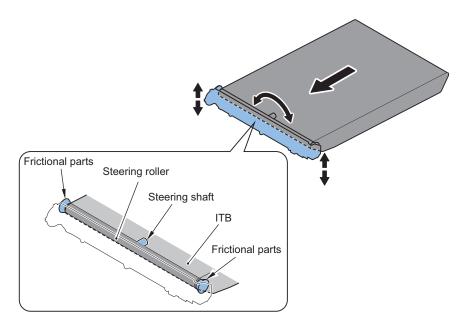

■ ITB Displacement Correction

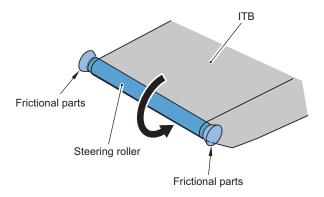

The newly developed ITB displacement control mechanism mechanically prevents full displacement of the belt.

Parts Configuration

The following shows the configuration of the edge of the ITB Unit. The portion including the Steering Roller can be tilted around the steering shaft.

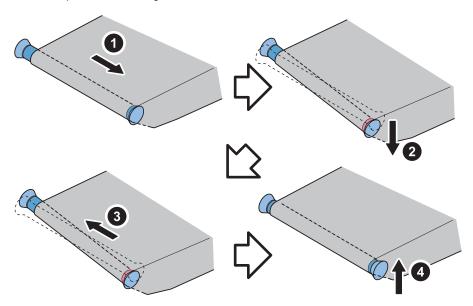

The Steering Roller has a configuration to rotate together with the rotation of the ITB, but the sliding members at both ends do not rotate.

Control description

The mechanism for preventing displacement is shown below.

- 1. The ITB is displaced toward one side.
- 2. The belt is displaced and driven onto the sliding member at the end. This sliding member does not rotate, and friction is generated between the belt and the sliding member. This force makes the roller tilt and the steering shaft tilt.
- 3. When the shaft is tilted, the belt moves toward the higher side, eliminating the displacement of the belt.
- 4. When the displacement is eliminated and the friction between the belt and the sliding member is eliminated, the steering shaft goes back into the equilibrium state again.

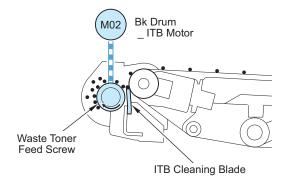

■ ITB Cleaning Control

Remove residual toner on the ITB.

Control description

- 1. The ITB Cleaning Blade scrapes toner on the ITB.
- 2. The scraped toner is fed to the Waste Toner Container with the Waste Toner Feed Screw.

Related service mode

- Setting of toner band formation at specific number of sheets COPIER > OPTION > CLEANING > ITB-CL-T
- Setting of the length of toner band COPIER > OPTION > CLEANING > ITB-CL-L

Secondary Transfer Outer Roller Cleaning Control

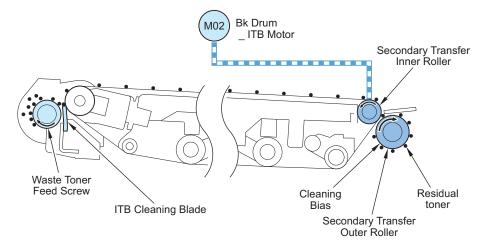

This control prevents soiled back of paper caused by soiling on the Secondary Transfer Outer Roller.

Control timing

- · When image stabilization control (generation of patch image on the ITB) is executed during warm-up rotation
- At last rotation
- · After executing the image stabilization control (generation of patch image on the ITB)

Control description

- 1. The secondary transfer cleaning bias (DC minus + DC plus), which has been generated on the Secondary Transfer High-voltage PCB (UN02), is applied to the Secondary Transfer Outer Roller.
- 2. Residual toner on the Secondary Transfer Outer Roller is attached to the ITB, and then collected by the ITB Cleaning Unit.

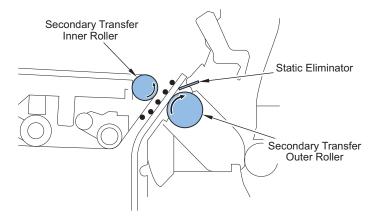

Related service mode

 Cleaning of the Secondary Transfer Outer Roller COPIER > Function > Cleaning > 2TR-CLN

Separation

This control separates paper from the ITB by elastic force of the paper (curvature separation method).

In the case of thin paper which has low elastic force, the Static Eliminator removes positive potential at the back of the paper. This reduces electrostatic absorption force of the paper so that paper can be easily separated.

Drum cleaning control

To clean residual toner on the photosensitive drum Residual toner on the drum is scraped by the drum cleaning blade.

Then, rotation of the waste toner screw feeds the residual toner to the waste toner case.

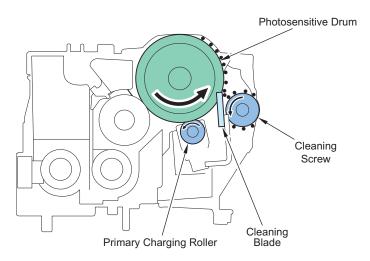

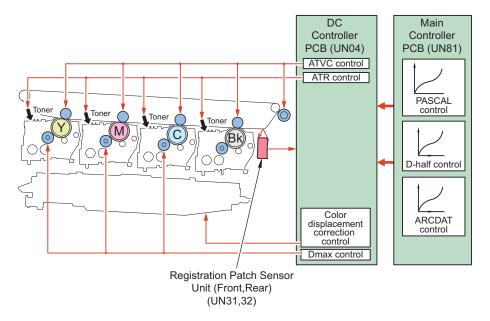

Image Stabilization Control

Overview

Image failure due to changes in environment or deterioration of the Photosensitive Drum is prevented to achieve stability in printed image.

Related alarm code

10-0006: Patch Sensor error 110-0007: Patch Sensor error 2

| | At the end of the toner recovery sequence | | | Yes | | | |

^{*} When a job is executed at 1200 dpi, the timing of control changes.

■ D-max Control

This control determines the optimal laser output.

Control timing

- · At replacement of the Drum Unit
- · At paper interval when printing 360 sheets or more / at last rotation when printing 240 sheets or more
- At the last rotation after printing when the difference in temperature/humidity from the last execution exceeds the specified value
- · At initial rotation for PASCAL control or D-half control

Control description

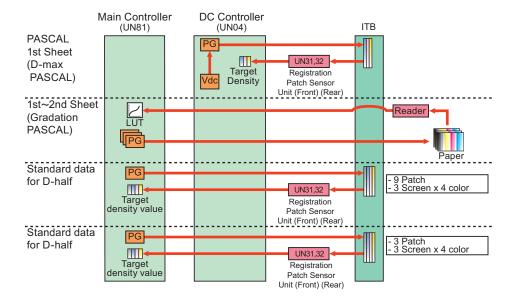

- 1. The Main Controller PCB forms the patch pattern of the target color on the ITB.
- 2. The Registration Patch Sensor Unit (Front) (UN31) and Registration Patch Sensor Unit (Rear) (UN32) measure the density of the patch pattern.
- 3. On the basis of the measured density, the developing bias, primary charging bias, and laser output for each color are corrected to achieve the target density.

■ PASCAL control

To stabilize the gradation density characteristics of the image.

This control is executed when auto gradation adjustment (full adjustment) is executed. Gradation density of the patch pattern on the test print is scanned by the Reader to create an image density correction table.

Based on the table, image gradation density characteristics that vary due to environmental change or deterioration of the Photosensitive Drum are corrected.

Control timing

When auto gradation adjustment (full adjustment) is executed ([Settings/Registration] > [Auto Adjust Gradation] > [Full Adjust])

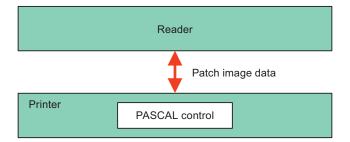

Control description

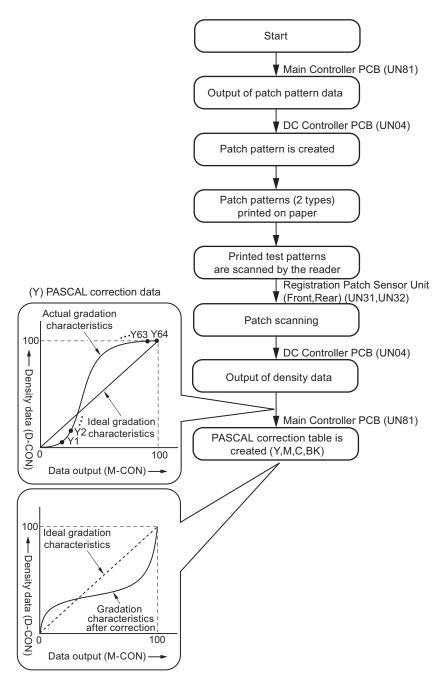

- 1. When the specified conditions are satisfied, the Main Controller PCB prints 3 types of memorized test prints (patch patterns).
- 2. Place the test prints on the Reader.
- 3. The Reader scans the gradation density of the patch patterns on the test prints.
- 4. The Main Controller PCB creates an image gradation density correction table from the gradation density data of the patch patterns scanned by the Reader.

NOTE:

The following 3 types of patch patterns are formed with this control.

- A pattern for copy (39 patches for each color)
- A pattern for text (39 patches for each color)
- · A pattern for photo (39 patches for each color)

Related service mode

Setting the auto gradation adjustment target selection screen:
 COPIER > OPTION > DSPLY-SW > HPFL-DSP

D-half control

To determine the optimal image gradation.

Control timing

- · At installation or when replacing the Drum Unit
- At last rotation after every specified number of prints (1000 sheets or more)
- · At last rotation when the PASCAL control is executed

Control description

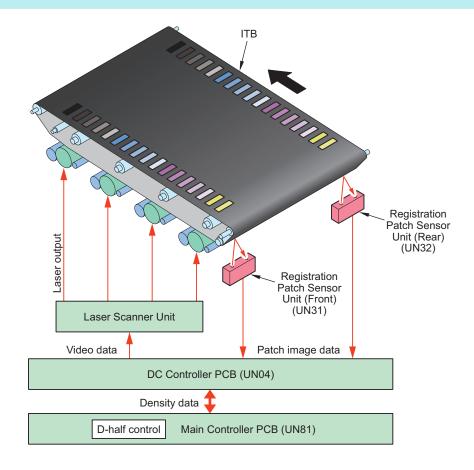

- 1. The Main Controller PCB outputs the patch data for each color (Y, M, C, and Bk) to the DC Controller PCB.
- 2. The DC Controller PCB forms the patch pattern for each color (Y, M, C, and Bk) on the ITB based on these data.
- 3. The DC Controller PCB measures the patch patterns using the Registration Patch Sensor Unit (Front) (UN31) and the Registration Patch Sensor Unit (Rear) (UN32), and returns the results to the Main Controller PCB.

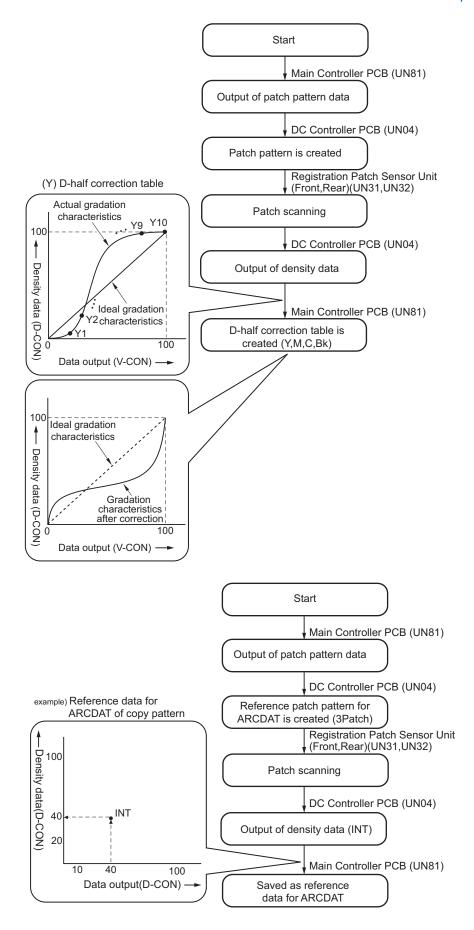

4. The Main Controller PCB performs gradation correction based on these data to obtain the ideal halftone image.

NOTE:

The following 3 types of patch patterns are formed with this control.

- A pattern for copy (9 patches for each color)
- A pattern for text priority (8 patches for each color)
- A pattern for photo priority (9 patches for each color)

■ ARCDAT Control (Automatic and Reciprocal Color Density Adjustment Technology)

While reducing downtime, the ideal gradation characteristics are realized.

Control timing

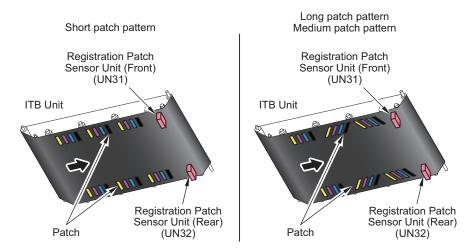

- · At replacement of the Drum Unit
- At paper interval on a specified print basis (180 sheets or more)
- At last rotation on a specified print basis (120 sheets or more)
- · At last rotation of PASCAL control or D-half control

Control description

- 1. The Main Controller PCB outputs patch data in each color (Y, M, C, and Bk) to the DC Controller PCB.
- 2. The DC Controller PCB forms patch patterns of each color (Y, M, C, and Bk) on the ITB. (Total of 12 patterns: 3 patch patterns for each color)
- 3. The DC Controller PCB measures the patch pattern using the Registration Patch Sensor Unit (Front) (UN31) and Registration Patch Sensor Unit (Rear) (UN32) and the result is returned to the Main Controller PCB.
- 4. The Main Controller PCB compares this measured data with the reference data for ARCDAT control that has been backed up. The difference by comparison is reflected to the D-half result as the offset value.

■ Color Displacement Correction Control

It is a control to correct color displacement caused by uneven radiation with the Laser Scanner Unit or uneven rotation of the drum or the ITB.

Startup timing

- · Whether to execute this control is determined by the status of the host machine at power-on or recovery from sleep mode.
- When it is determined necessary based on the predicted value for temperature inside the machine (according to the usage environment and continuous print state).

Control description

Color displacement correction control based on patch pattern

- 1. The Main Controller PCB forms the patch pattern of each color on the ITB.
- 2. The DC Controller PCB scans this patch pattern using the Registration Patch Sensor Unit (Front) (UN31) and Registration Patch Sensor Unit (Rear) (UN32) to detect the amount of color displacement compared to the reference color (Y).
- 3. Based on the above-mentioned detection result, the DC Controller PCB executes correction according to the degree of color displacement.

Color displacement correction control based on temperature prediction

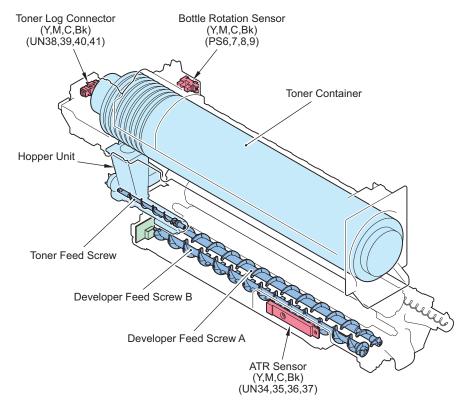

- 1. The degree of color displacement is measured based on the operating condition (mainly temperature).
- 2. The exposure timing for M/C/Bk is adjusted based on Y.
- 3. Color displacement correction is performed based on the above patch patterns.

| Type of control | | Correction description | |
|------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------|--|
| Correction in horizon- | Write start correction | Write-start timing in horizontal scanning direction is changed. | |
| tal scanning direction | Entire-area magnification ratio correction | Pixels in horizontal scanning direction is increased/reduced (at the both edges of the image) | |
| Correction in vertical | Write start correction | Write-start timing in vertical scanning direction is changed. | |
| scanning direction | Image skew correction | Image data is corrected. | |

Overview

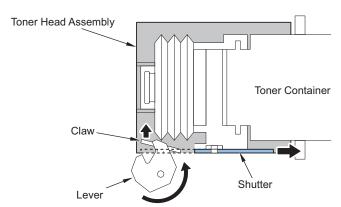

Toner is supplied from the Toner Container to the Developing Assembly. The toner level in the Toner Container is detected at the same time.

| Parts name | Role | |
|-----------------------------------|------------------------------------------------------------------------|--|
| Hopper Unit | Toner is supplied from the Toner Container to the Developing Assembly. | |
| Toner Feed Screw | Toner is supplied from the Hopper Unit to the Developing Assembly. | |
| Toner Log Connector (Y/M/C/Bk) | The state of the Toner Container is detected. | |
| Bottle Rotation Sensor (Y/M/C/Bk) | Presence/absence of the Toner Container is detected. | |

Opening the Toner Head

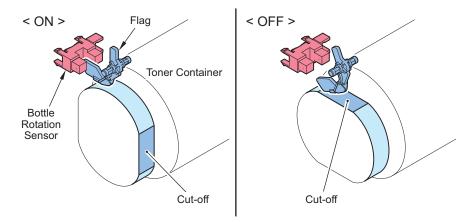

The head of the Toner Container is automatically opened/closed when the Toner Container is replaced.

■ Toner Container Detection

The presence/absence of the Toner Container is detected.

The Bottle Rotation Sensors (Y/M/C/Bk) (PS06/PS07/PS08/PS09) are located as shown in the figure below, which turn ON when a Toner Container is inserted to detect the presence of the Toner Container.

■ Bottle State Detection

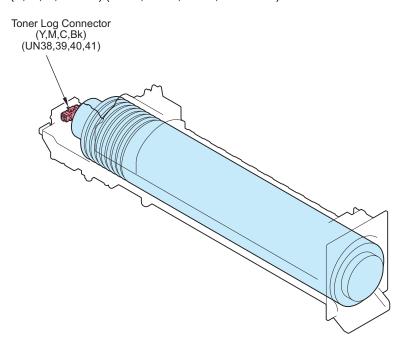

The state of the Toner Container is detected.

Detection timing

When the Toner Container is replaced

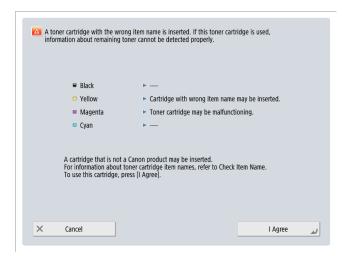

Detection description

The Toner Log Connectors (Y, M, C, and Bk) (UN38, UN39, UN40, and UN41) detect the state of the Toner Containers.

Screen display

A message shown below is displayed according to the condition detected from the memory.

| Message | Status | |
|------------------------------------------------|-----------------------------------------------------------|--|
| Cartridge with wrong item no. may be inserted. | A Toner Container with a wrong item number is inserted. | |
| Toner cartridge may be malfunctioning. | A Toner Container that may be malfunctioning is inserted. | |
| Wrong cartridge color may be inserted. | A Toner Container of a wrong color is set. | |
| | The correct Toner Container is set. | |

■ ATR (Auto Toner Replenishment) Control

Toner is supplied to the Developing Assembly to make the ratio between toner and carrier in the assembly ideal.

Control timing

For each print job (every page)

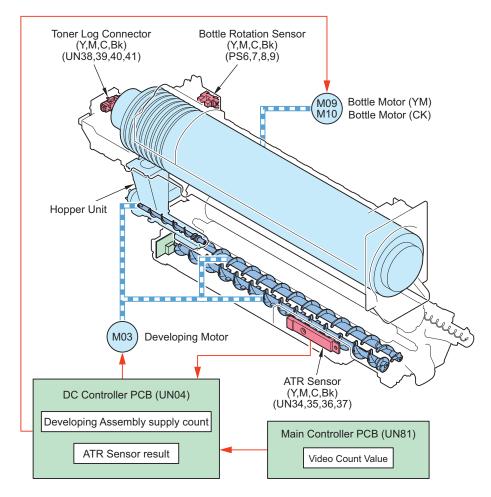

Control description

Supply amount of the toner for each color is calculated by the abovementioned startup timing, and toner is supplied to the Drum Unit. The DC Controller PCB determines toner supply amount by the following 2 data:

- ATR Sensor output value (DC Controller PCB)
- Video count value (Main Controller PCB)

The DC Controller PCB turns ON the Bottle Motor (YM) (M09) and Bottle Motor (CK) (M10) when it determines that toner supply is necessary.

This makes the Toner Feed Screw and the Developer Feed Screw A/B rotate so that the specified amount of toner is supplied to the Developing Assembly.

■ Driving the Toner Bottles

This machine has only 2 Bottle Motors, and toner is supplied by driving Toner Bottles of two colors alternately by one motor. The following shows the image of the Bottle Drive Unit viewed from the back side.

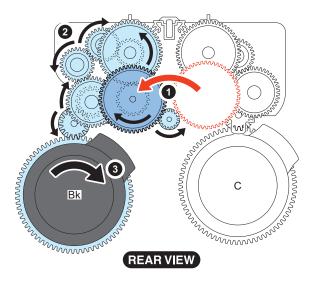

The operation is going to be explained taking Bk and C as an example.

- 1. The motor rotates. At the same time, the gear in the center moves.
- 2. The driving force is transmitted only to the gears on the side toward which the gear moved, and the Toner Bottle rotates.

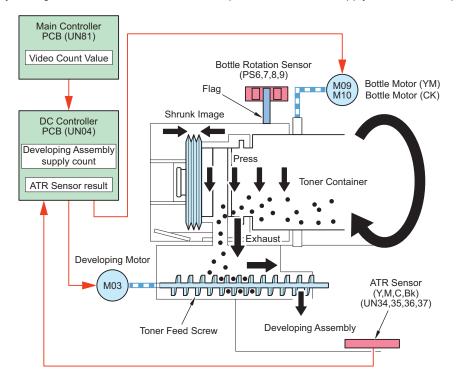

- 3. When the motor rotates in the reverse direction, the gear in the center moves to the opposite direction.
- 4. The driving force is transmitted only to the gears on the side toward which the gear moved, and the Toner Bottle rotates.

■ Toner Supply Control

Toner is supplied from the Toner Container to the Developing Assembly.

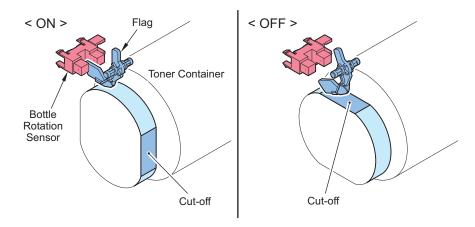

This machine uses a Toner Container that has a bellows mechanism at the edge. The Toner Bottle is rotated and the bellows section is operated by driving the Bottle Motor. At that time, air pressure is used to supply toner to the Hopper Unit.

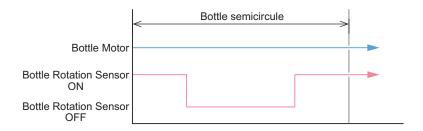

| Title | Supply to the Hopper | Supply to the Developing Assembly |
|-------------------------------|---------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| Description | Toner is supplied from the Toner Container to the Hopper Unit. | Toner is supplied from the Hopper Unit to the Developing Assembly. |
| Supply timing | Toner is supplied when supply is determined necessary from the result of ATR control. | Toner supply from the Hopper Unit to the Developing Assembly is synced with the Toner Feed Screw. |
| Operation of the host machine | The Bottle Motor (YM) (M09) and the Bottle Motor (CK) (M10) are driven*. | The Toner Feed Screw is turned to supply toner to the Developing Assembly. |

*) The supply amount is determined based on the output value at the time of ATR Sensor output and the time of video count. The Bottle Rotation Sensor (Y/M/C/Bk) (PS06/PS07/PS08/PS09) starts while it is turned ON at the time of feeding. Driving the Bottle Motor (YM) (M09) or the Bottle Motor (CK) (M10) rotates the Toner Bottle, causing the flag of the Bottle Rotation Sensor to drop to the cut-off part of the Toner Bottle as shown in the figure below, which in turn switches OFF the sensor. When the flag then moves away from the cut-off part of the Bottle Rotation Sensor, the sensor is switched ON.

While the Bottle Rotation Sensor is in turned OFF, 1 block's worth of toner is supplied to the Hopper Unit.

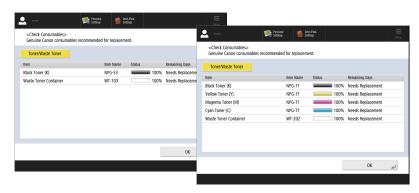

■ Toner Level Detection

Purpose

To display the life/remaining days to notify the Toner Container replacement timing. The LIFE and the Remaining Days can be checked in the service modes below.

Special Controls

This machine has the following sequences as the special sequence.

Black Band Sequence

Execution condition/timing

hen the travel distance of the drum or the ITB has exceeded the designated value

Control description

In order to prevent the Cleaning Blades flip, toner is supplied to the Drum Cleaning Blade and the ITB Cleaning Blade.

Developing Discharge Sequence

Execution condition/timing

When the average image ratio per sheet reaches the default value or less

Control description

Supply a toner in ITB, then maintain ability for developing.

■ Warm-up Rotation Control

Operation overview

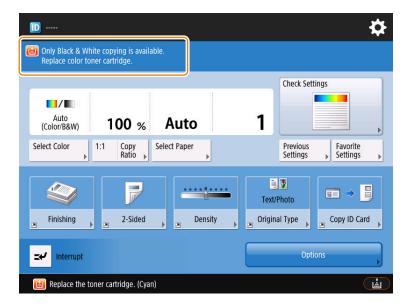

This operation is performed to check the status of sensor/motor at power-on or recovery from sleep mode. According to the conditions, one of the following 3 patterns of warm-up rotation is performed: none, short, or long.

| Status | Fixing temperature | | |
|----------------------------------------------------------------------------|---------------------------|--------------------------|--|
| | Specified value or higher | Specified value or lower | |
| Power-on | None | Long | |
| When recovering from sleep mode of 24 hours or more | - | Long | |
| When recovering from sleep mode of at least 4 hours and less than 24 hours | - | Short | |
| When recovering from sleep mode of less than 4 hours | None | None | |

| Warm-up rotation con- trol | Long | Short | None | Reference |
|-----------------------------------------------|----------|--------------|--------------|---------------------------------------------------------------------------|

Fixing System

Ov

Overview

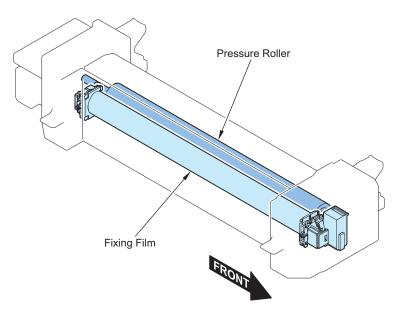

This machine uses the on-demand fixing method.

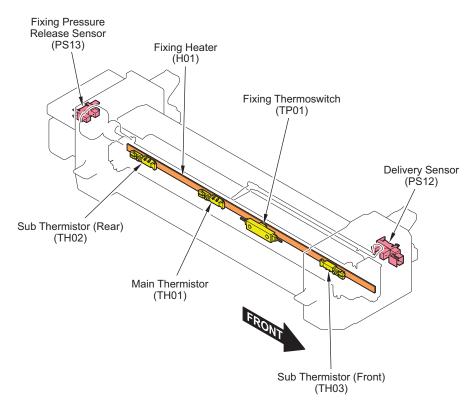

Specifications

| Item | Function/Method |
|---------------------|---------------------------------|
| Fixing method | On-demand fixing |
| Fixing Heater | Ceramic Heater |
| Protection function | Main Thermistor, Sub Thermistor |

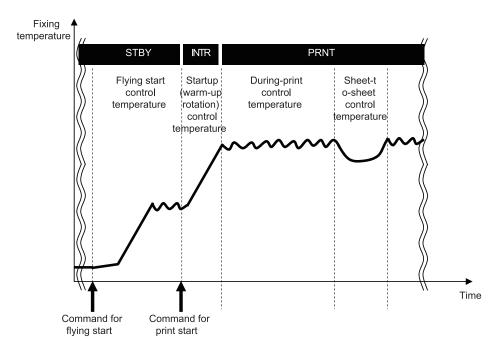

Component Parts

| Code | Parts name | Function/Method |
|------|--------------------------------|----------------------------------------------------------------------------------------------|
| | Fixing Film | A toner image on paper is fixed by applying heat/pressure. |
| | Pressure Roller | |
| H01 | Fixing Heater | Ceramic Heater |
| TH01 | Main Thermistor | This is engaged with the heater. Temperature control and abnormal temperature rise detection |
| TH02 | Sub Thermistor (Rear) | This is engaged with the heater. |
| TH03 | Sub Thermistor (Front) | Abnormal temperature rise detection and edge temperature rise control |
| TP01 | Fixing Thermoswitch | This is not engaged with the heater. AC power supply is shut down at detection of a failure. |
| PS13 | Fixing Pressure Release Sensor | Detecting engagement/disengagement of the Film Unit |
| PS12 | Delivery Sensor | Jam Detection |

Fixing temperature control

■ Standby Temperature Control

This is a control to pre-heat the Fixing Assembly to reduce time to start printing.

· Flying Start

■ Print Temperature Control

This is a control to increase fixing temperature to the target level and keep it during printing.

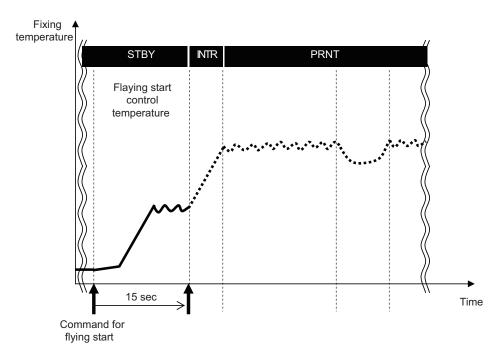

- · Startup (initial rotation) temperature control
- · Print temperature control
- · Paper interval temperature control

■ Down Sequence Control

This is a control to prevent fixing failure due to temperature increase at the edge or temperature decrease. Productivity (throughput) decreases.

- Down sequence when feeding small-size paper
- Down sequence when switching paper size

Standby Temperature Control

■ Flying Start

Purpose

To reduce time to print the first sheet (FCOT).

Execution condition/timing

- When using the Numeric Keypad on the Control Panel/Touch Panel while the copy screen is displayed
- · At power-on of the main power*1
- At completion of jam removal*1
- When opening and closing the Right Door*1*2
- *1: This control is performed regardless of the following service mode setting.
 - ON/OFF of flying start temperature control (Lv.2):
 COPIER > OPTION > IMG-FIX> FLYING
- *2: It is not executed while in sleep mode.

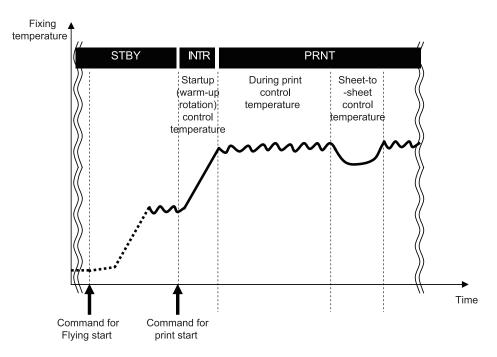

Control description

The temperature control target is set, and the Fixing Motor is controlled at half-speed to start operation. The control continues for 15 seconds at most until the machine receives a command to start printing.

Related service mode

ON/OFF of flying start temperature control (Lv.2):
 COPIER > OPTION > IMG-FIX> FLYING

Print Temperature Control

■ Startup (initial rotation) Temperature Control

A fixing temperature is increased to a printable temperature after receiving a command to start printing.

■ Print Temperature Control

This is a control to set an optimal target temperature to prevent fixing error or high temperature offset. Temperature is controlled to keep the specified target temperature during printing.

Setting the target temperature

A target temperature is determined according to the paper type/size, time which elapsed from when fixing temperature control (including standby control) finished the last time, and fixing temperature when startup control started.

Temperature control during printing

When the paper passes through the Fixing Assembly, temperature is controlled to keep the target temperature according to the detected temperature of the Main Thermistor.

Paper interval temperature control

The paper interval temperature is decreased to prevent temperature increase when the paper interval becomes wider than normal conditions at down sequence*1.

Paper Interval Temperature = Target temperature during printing - (0 to 20 deg C)*2

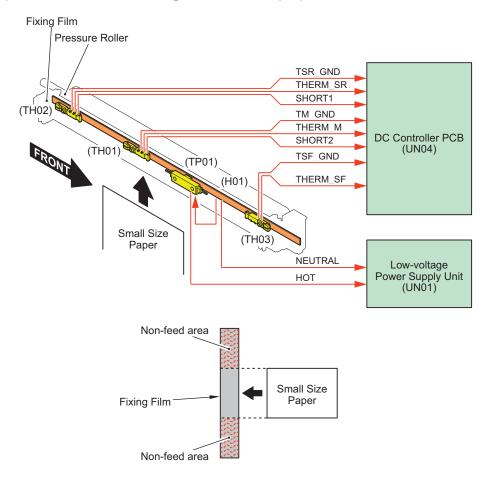

*1: At down sequence

- · An interval between the first side and the second side at 2-sided printing
- At execution of controls (ATR control, registration control, ATVC control)
- · At continuous printing of small-size paper (paper shorter than A4R/LTR in width-direction length)
- · When power for maintaining the target temperature is not supplied
- When the Sub Thermistor detects abnormally high temperature even for A4R size or larger

^{*2} The fixing temperature is determined depending on the elapsed time since the time paper has passed through the fixing nip.

■ Down sequence when feeding small-size paper

Purpose

To prevent fixing offset and deterioration of the Fixing Film by controlling temperature increase at non paper feed area at continuous printing of small-size paper (paper shorter than A4R/LTR in width-direction length).

Execution condition/timing

When the detected temperature of the Sub Thermistor (Rear) (TH02) or Sub Thermistor (Front) (TH03) is the designated temperature or higher for 1 sec or longer, down sequence is entered.

Down sequence is performed in a stepwise manner. If the Sub Thermistor detection temperature reaches the designated temperature or higher during printing, the down sequence increases by one level and the print speed (ppm) decreases each time this condition continues for a period of 1 second.

Control ends at job completion.

Control description

Increasing paper interval (to make longer temperature control at a temperature lower than that of normal print) to reduce fixing temperature in up to 6 stages.

| Paper size / Length in vertical scanning direction | Paper type | Print speed (ppm: pages per minute) |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|

Related service mode

Setting of the temperature to start down sequence for small-size paper:
 COPIER > OPTION > IMG-SPD > FX-D-TMP

Down Sequence when Switching Paper Size

Purpose

When feeding a sheet with a wider width than a preceding sheet during continuous printing, temperature at the non paper-feed area of the preceding sheet increases, and it can cause fixing offset and wrinkles when feeding the succeeding sheet. This down sequence controls temperature increase at the non paper feed area.

Execution condition/timing

When switching to paper that is wider than the preceding sheet while printing and the detected temperature of the Main Thermistor (front/rear edge of the Fixing Film) at that time exceeds the designated temperature

Control description

This is a control to stop pickup of the succeeding sheet and power distribution to the Fixing Heater to reduce fixing temperature. This down sequence is terminated at the point when any of the following conditions is satisfied.

- When the detected temperature of the Main Thermistor (front/rear edge of the Fixing Heater) and Sub Thermistor (front/rear edge of the Fixing Film) is at or below the designated temperature
- · When specified time has elapsed after the preceding sheet passed the fixing nip

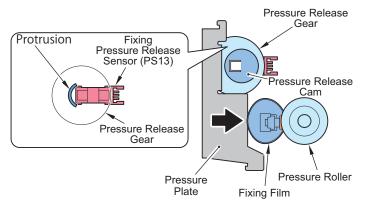

Fixing Film Unit Engagement/Disengagement Control

The Fixing Film Unit is disengaged from the Pressure Roller under a specific condition in order to prevent deformation of the Fixing Film/Pressure Roller due to heat and pressure that arise when the drive of the Pressure Roller stops, and to improve jam removability.

Execution condition/timing

Engagement operation

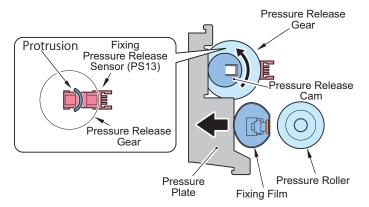

- · When the unit is disengaged during printing
- · When shifting to standby mode

Pre-fixing arch level control

Purpose

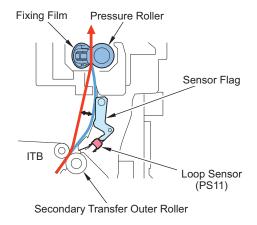

To prevent image failure/feed failure

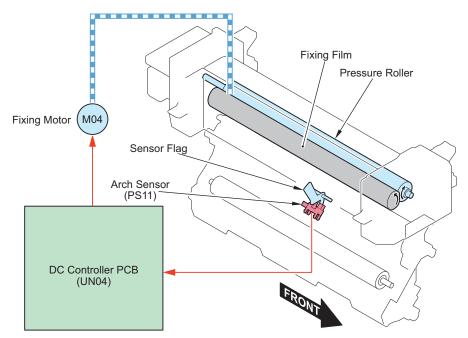

Execution condition/timing

This control is performed every time the paper is fed.

NOTE:

The control is not performed for some paper types, such as envelope.

Control description

Since the feeding speed of the Pressure Roller and that of the Secondary Transfer Outer Roller are not the same when paper is fed to the Fixing Assembly, image failure, paper wrinkle, image stretching, etc. occur. To prevent these symptoms, the Arch Sensor located at downstream of the Secondary Transfer Unit detects the slack of paper, and the rotation speed of the Fixing Motor is adjusted. This keeps an appropriate level of paper slack.

Arch Sensor Control

Control description

This control uses the Arch Sensor (PS11) to detect the paper arch between the transfer nip and fixing nip, and changes the drive speed of the Fixing Motor as follows to ensure formation of proper arches.

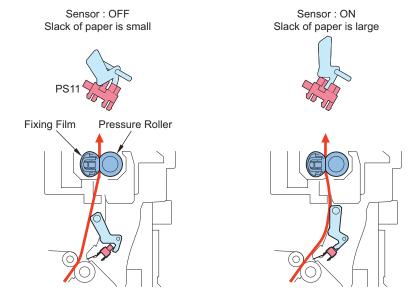

- 1. When the leading edge of the paper passes through the secondary transfer nip area, the Fixing Motor drive speed is decelerated, and the decelerated speed is maintained until the leading edge passes through a specified amount.
- 2. When the Arch Sensor (PS11) detects arches continuously for more than a specified duration, the Fixing Motor drive speed is accelerated.
 - When the Arch Sensor (PS11) does not detect arches for more than a specified duration, the Fixing Motor drive speed is decelerated.
- 3. The Fixing Motor drive speed is switched based on detection/non-detection of the Arch Sensor (PS11) (the Arch Sensor (PS11) repeatedly turns ON and OFF).

4. When the trailing edge of the paper passes through the secondary transfer nip area a designated distance, the Fixing Motor drive speed is accelerated.

NOTE:

The value of the designated distance varies depending on the process speed (paper type).

5. For continuous printing, repeat steps 1 to 4. For single-sheet printing, the Fixing Motor is stopped after the trailing edge of the paper passes through the Delivery Sensor. For small-size paper, the machine goes to the last rotation operation.

Protection Function

This machine is equipped with protection functions that result in error occurrences when activated. Descriptions of errors are shown below.

The following errors do not need to be cleared.

| | Code | Description | |
|------------------------------------------------------------------|-----------------------------------------------------|-------------------------------------------------------------------------|--|
| E001 | Error in overheating | of Fixing Assembly | |
| | A001 | Fixing Main Thermistor high temperature detection error | |

■ Countermeasure When the Fixing Assembly Error (E001/E002/E003) Occurs

When a Fixing Assembly-related error (E001, E002, or E003) occurred to previous models, a service visit was necessary to clear the error in service mode (COPIER > FUNCTION > CLEAR > ERR).

This machine handles E001, E002 and E003 errors in the following manner to avoid service visits just to clear these errors:

| Error | First error detection | Second and subsequent error detection |
|-------|--------------------------------------------------------------------------------------------------|------------------------------------------------------|
| E001 | Error E001 is displayed. (The detail code is Axxx.*) | |
| E002 | Error avoidance jam (00-0CF1) is displayed. Error E002 is displayed. (The detail code is Axxx.*) | |
| E003 | | Error E003 is displayed. (The detail code is Axxx.*) |

If the above errors occur, turn OFF and then ON the power of the host machine.

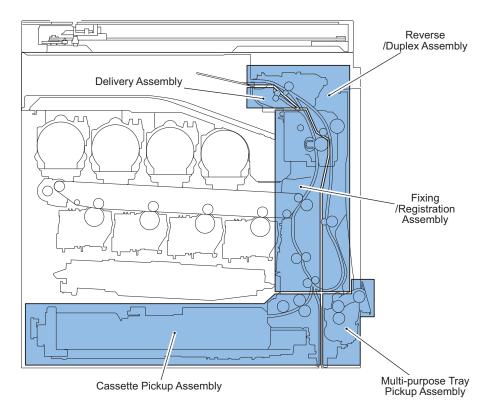

When approx. 3000 sheets or more are printed after the first and subsequent error detections, the cause is determined as incidental. In such cases, second and subsequent error detections are handled as a first error detections.

If the problem is not solved by turning OFF and then ON the power, a problem can be determined to have occurred on the Fixing Assembly.

^{*} For detail codes that start with "A", clearing the error in service mode (COPIER > FUNCTION > CLEAR > ERR) is not necessary.

Pickup Feed System

Overview

■ Specifications

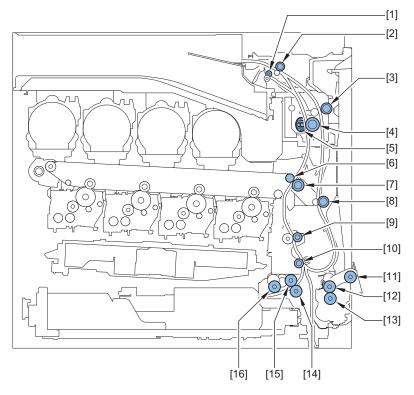

| Item | Description | |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------|--|
| Pickup method | Cassette: Retard separation Multi-purpose Tray: Retard separation | |
| Stacking capacity | Cassette: 550 sheets (80 g/m²), 640 sheets (64 g/m²) Multi-purpose Tray: 100 sheets (80g/m²), 120 sheets (64 g/m²) | |
| Paper size | Cassette: | |
| Paper weight | Cassette: 60 to 163 g/m ² Multi-purpose Tray: 60 to 220 g/m ² | |
| Paper size switching | Cassette: Auto switching Multi-purpose Tray: Manual switching | |
| Paper level display | Yes | |
| Leading edge margin | 1-sided: 4.0 mm +1.5/-1.0 mm 2-sided: 4.0 mm +1.5/-1.0 mm | |
| Left edge margin | 1-sided: A4: 2.5 mm +/- 1.5 mm LTR: 4.2 mm +/- 1.5 mm 2-sided: A4: 2.5 mm +/- 2.0 mm LTR: 4.2 mm +/- 2.0 mm | |

CAUTION:

2-sided print not supported for A5 and A6R regardless of paper type.

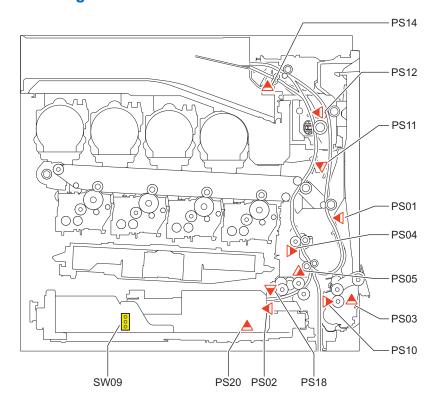

■ Parts Configuration

| M06 | Pre-registration Motor | SL02 | Duplex Solenoid |

Paper Path

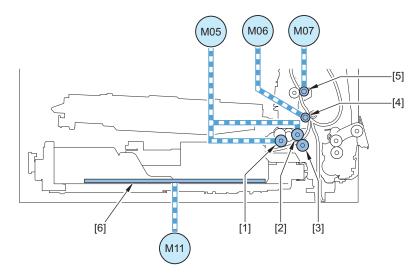

Cassette Pickup Assembly

Overview

Paper inside a cassette is lifted up by the Lifter Plate.

- 1. The Lifter Plate is lifted up by rotation of the Cassette 1 Lifter Motor (M11).
- 2. When the Cassette Pickup Roller [1] comes into contact with the paper surface, the Cassette 1 _ Multi-purpose Tray Pickup Motor (M05) rotates to pick up the surface layer paper, and the Cassette Feed Roller [2] and Cassette Separation Roller [3] feed only 1 sheet of paper to the feed path.
- 3. It is then moved from the Pre-registration Roller [4] to the Registration Roller [5] by rotation of the Pre-registration Motor (M06).
 - If the Cassette 1 Pickup Sensor (PS05) has detected paper at the start of pickup due to, for example, the succeeding paper being also picked up when a paper is picked up and fed, the feed speed is decreased.

The Cassette 1 Pickup Roller, Cassette 1 Feed Roller, and Cassette 1 Separation Roller are driven by the Cassette 1 _ Multi-purpose Tray Pickup Motor (M05) while the Pre-registration Roller is operated by the rotation of the Pre-registration Motor (M06).

| Code | Parts name | Code | Parts name |
|------|------------------------------|------|-------------------------|
| [1] | Cassette 1 Pickup Roller | [4] | Pre-registration Roller |
| [2] | Cassette 1 Feed Roller | [5] | Registration Roller |
| [3] | Cassette 1 Separation Roller | [6] | Lifter Plate |

■ Pickup Retry Control

If the Cassette 1 Pickup Sensor (PS05) does not detect pickup within a specified period of time after the start of pickup of the top paper, the Cassette 1 _ Multi-purpose Tray Pickup Motor (M05) is stopped, and the pickup operation is executed again.

NOTE:

This control is only executed for the top paper of B&W jobs.

Related alarm codes

- 04-0011: Cassette 1 Pickup Retry Error
- 04-0012: Cassette 2 Pickup Retry Error
- 04-0013: Cassette 3 Pickup Retry Error
- 04-0014: Cassette 4 Pickup Retry Error

■ Paper Size Detection Control

The paper size in the cassette is automatically detected by the "Cassette 1 Size Switch (SW09)" after the position of the Guide Plate is adjusted and the cassette is installed in the host machine.

By shifting the Guide Plate, concavo-convex area of the Cassette Size Dial is switched and the Cassette Size Switch at the printer side is switched. The switch consists of 3 microswitches, and the length is detected in accordance with the combination of ON/OFF (ON when the switch is pressed). Any standard size paper of AB, inch, or AK configuration can be used.

However, distinction between A5, A5R and STMTR, A6R should be made manually on the check screen. Distinction between EXECR and 16KR and between LTR-R and 16K-R is automatically made according to the country setting.

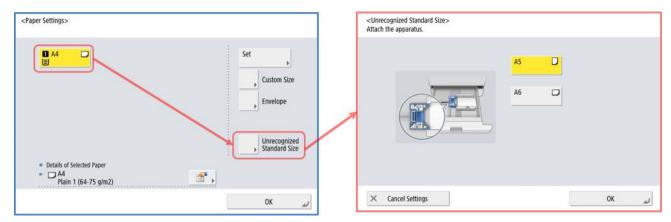

A5R and STMTR paper distinction can be registered in the following menu.

• [Settings/Registration] > [Preferences] > [Paper Settings] > [A5R/STMTP Paper Selection] Specify A5R or STMTR for each cassette.

A5 and A6R paper distinction can be registered in the following menu.

• [Settings/Registration] > [Preferences] > [Paper Settings] > [Paper Settings] > [Paper drawer 1] > [Unrecognized Standard Size]

Specify A5 or A6R for each cassette.

■ Paper Level Detection Control

Paper level inside the cassette is detected by the following three sensors.

The paper level in the cassette is detected by the Cassette 1 Paper Sensor (PS02), Cassette 1 Paper Surface Sensor (PS18), and Cassette 1 Paper Level Sensor (PS20).

Paper Sensor

It detects presence/absence of paper. "Detected" indicates absence of paper, and "Not detected" indicates presence of paper.

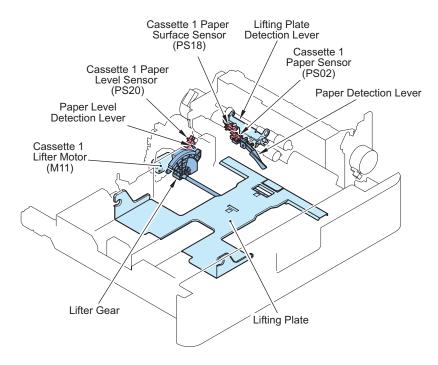

Paper Surface Sensor

It detects the surface of paper. "Detected" indicates presence of the paper surface, and "Not detected" indicates absence of the paper surface.

Paper Level Sensor

It detects the paper level. "Detected" indicates that the paper level is low (approx. 50 sheets or less), and "Not detected" indicates that there is sufficient paper (approx. 50 sheets or more).

| Cassette 1 Paper Sensor (PS02) | Cassette 1 Paper Surface Sensor (PS18) | Cassette 1 Paper Level Sensor (PS20) | Paper level | Display on the Control Panel |
|-----------------------------------|----------------------------------------|--------------------------------------------|----------------------------------|---------------------------------|
| Not detected | Detected | Not detected | 100% to 50% of the capacity | |
| Not detected | Detected | Not detected | Approx. 50% to approx. 50 sheets | E |
| Not detected | Detected | Detected | Approx. 50 sheets or less | |

Related service mode

COPIER > ADJUST > CST-ADJ > CST-VLM2: Cassette 2

COPIER > ADJUST > CST-ADJ > CST-VLM3: Cassette 3

COPIER > ADJUST > CST-ADJ > CST-VLM4: Cassette 4

■ Paper Detection Control

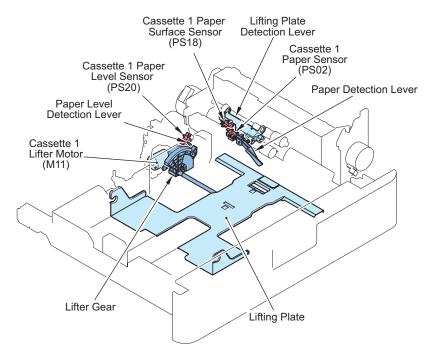

The presence/absence of paper is detected by the following sensors and switch.

- · Cassette 1 size switch (SW09)
- · Cassette 1 Paper Surface Sensor (PS18)
- Cassette 1 Paper Sensor (PS02)

Control description

This control sends a notification of absence of paper when all of the following conditions are satisfied.

- The Cassette 1 Size Switch (SW09) has detected that the cassette is in the host machine.
- The Cassette 1 Paper Surface Sensor (PS18) has detected that the Lifter Plate has ascended to the pickup position.
- The Cassette 1 Paper Sensor (PS02) has detected absence of paper.

■ Lifter Control When the Cassette is Set

When the cassette is set, the Cassette 1 Lifter Motor (M11) rotates to raise the Lifter Plate so that the paper is raised to the position to be picked up.

Multi-purpose Tray Pickup Assembly

Overview

Paper on the Multi-purpose Tray of the Multi-purpose Tray Pickup Unit is picked up by the rotation of the Cassette 1_Multi-purpose Tray Pickup Motor (M05).

The Multi-purpose Tray Pickup Roller is lowered by the rotation of the Cassette 1_Multi-purpose Tray Pickup Motor. When the Multi-purpose Tray Pickup Roller comes into contact with the paper surface, the Cassette 1_ Multi-purpose Tray Pickup Motor (M05) rotates to pick up the surface layer paper, and the Multi-purpose Tray Feed Roller and Multi-purpose Tray Separation Roller feed only 1 sheet of paper to the feed path. Then, it is moved from the Pre-registration Roller to the Registration Roller by the rotation of the Pre-registration Motor (M06).

The Multi-purpose Tray Pickup Roller and the Multi-purpose Tray Feed Roller are driven by the Cassette 1_Multi-purpose Tray Pickup Motor (M05) while the Pre-registration Roller is moved by the rotation of the Pre-registration Motor (M06).

Related alarm code

04-0007: Multi-purpose Tray Pickup Lifter error

■ Pickup Retry Control

If the Pre-Registration Sensor (PS03) does not detect pickup within a specified period of time after the start of pickup operation, the Cassette 1 _ Multi-purpose Tray Pickup Motor (M05) is stopped, and the pickup operation is executed again.

NOTE:

This control is executed in the following cases.

- · Top paper of B&W jobs
- Envelope of 190.1 mm or more in length, Heavy 4/5, Label, or Transparency

■ Paper Detection

Presence/absence of paper is detected by the Multi-purpose Tray Paper Sensor (PS03).

When the sensor detects that paper has run out, the cassette is automatically changed to a cassette containing paper of the same size and type at a different paper source.

■ Paper Size Detection

This machine does not have a function for detecting paper size. The user has to specify the paper size in the Multi-purpose Tray using the Control Panel. Or, the user has to register the fixed size in the Settings/Registration menu.

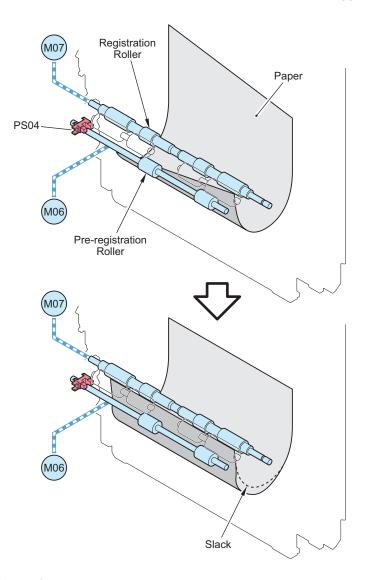

Registration Area

■ Registration Control

This control corrects paper skew and aligns the leading edge of the paper with that of the image.

Skew Correction Control

The paper leading edge runs into the stopped Registration Roller, thereby forming a slack (arch) in order to correct the skew.

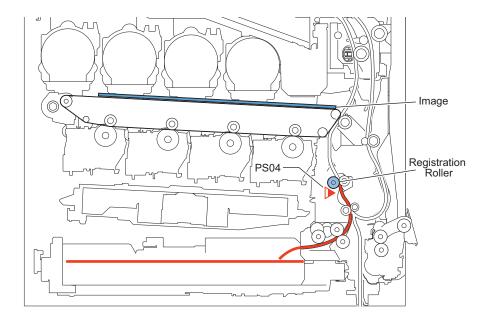

Non-stop Registration Control

This control is executed to increase or decrease the feed speed and align the paper with the image without stopping the paper at the registration position in order to shorten the paper interval and improve the throughput.

Stop Registration Control

This control stops the paper at the registration position, aligns the image on the ITB with the paper at a specified timing, and then resumes paper feed.

Stop registration control stops the Pre-registration Roller. Paper fed by the Pre-registration Roller after being picked up from the cassette or Multi-purpose Tray forms an arch due to being pushed against the Registration Roller which has been stopped. In order to align the image on the ITB with the paper at a specified timing, this control stops paper feed with the paper arched, aligns the image on the ITB with the paper at the specified timing, and then resumes paper feed.

NOTE:

Normally, the Pickup Motor drives when the Registration Roller starts driving but the Pickup Motor does not drive when A5 and A6R paper is fed.

■ Size Mismatch Detection Control

If the actual paper differs from the specified paper in length, this machine judges that a jam has occurred, and the operation is stopped without delivering the paper. (Jam code: 0D91)

Paper size mismatches are judged on the basis of the following criteria.

- The difference between the paper length detected by the Cassette 1 Size Switch and the paper length calculated on the basis of the time it took the paper to get past the Pre-Registration Sensor (PS04) is 20 mm or more.
- The difference between the paper length specified by the user for the Multi-purpose Tray and the paper length calculated on the basis of the time it took the paper to get past the Pre-Registration Sensor (PS04) is 20 mm or more.

Delivery Assembly

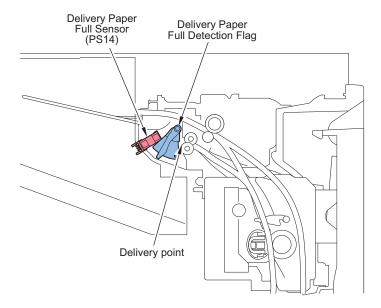

Delivery Control

This machine executes face-down delivery (delivers paper to the Delivery Tray of the host machine with the print side down).

■ Delivery Full Detection

If the Delivery Paper Full Sensor (PS14) detects paper for a specified period of time, a delivery paper full notification is sent to the Main Controller PCB.

When the notification is received, printing stops.

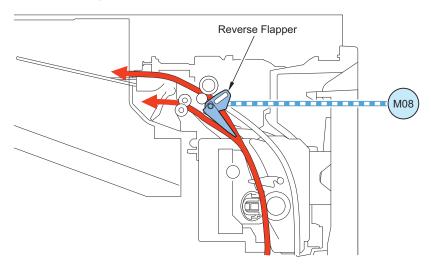

Reverse/Duplex Assembly

■ Reverse Flapper Operation

The Reverse Flapper operates in accordance with the Reverse Motor (M08).

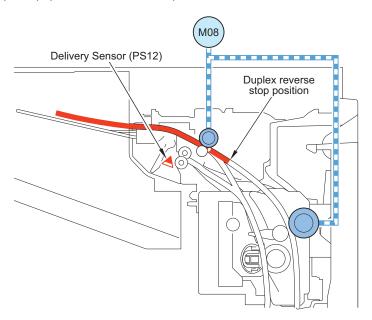

- · When the Reverse Motor is stopped: Feed to the Delivery Outlet
- When the Reverse Motor is operating: Feed to the Reverse Mouth

■ Duplex Reverse Control

Paper is reversed outside the machine using the Reverse Mouth.

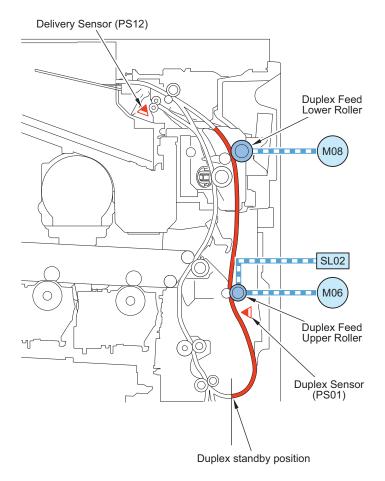

Paper stops at the duplex reverse stop position after a specified time has elapsed since passing the Delivery Sensor (PS12). After a specified time has elapsed, paper is reversed, and duplex feed starts.

■ Duplex Standby Control

When paper is detected, the Duplex Sensor (PS01) estimates the paper interval with the preceding paper. If the necessary paper interval can be secured, the paper is fed to the pre-registration.

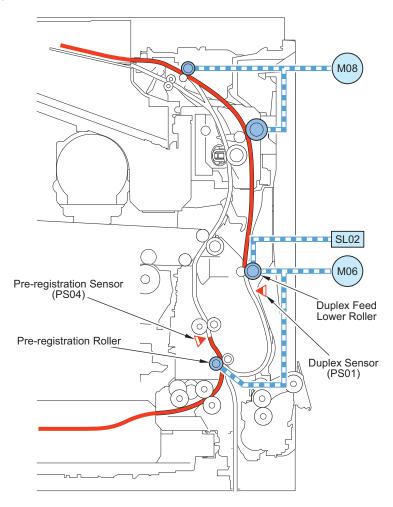

If the necessary paper interval cannot be secured, the paper stays at the duplex standby position. After recalculated standby time has passed, re-pickup is executed.

■ Duplex Pre-registration Standby Control

If registration control (non-stop registration control and stop registration control) of the succeeding paper has not been finished, the paper stops before the nip of the Duplex Feed Lower Roller.

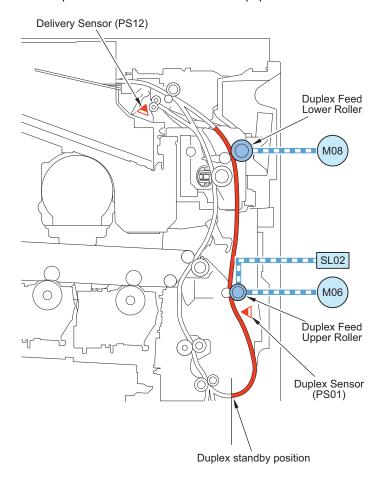

When the process speed reaches the specified speed after registration control of the succeeding paper, the Reverse Motor (M08) is rotated to start paper feed.

The drive of the Duplex Feed Lower Roller is controlled by ON/OFF of the Duplex Solenoid (SL02).

Duplex Solenoid (SL02) is turned ON to stop the duplex leading edge at the duplex standby position. Consequently, the drive of the Pre-registration Motor (M06) is no longer transmitted.

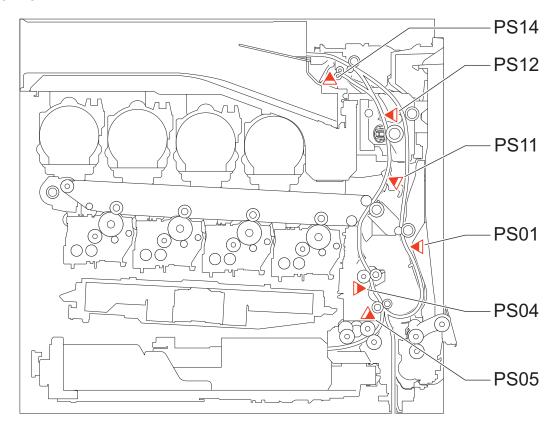

After the designated time has elapsed and the Duplex Solenoid (SL02) is turned OFF, transmission of the Pre-registration Motor (M06) drive starts, which drives the Duplex Feed Lower Roller to resume paper feed.

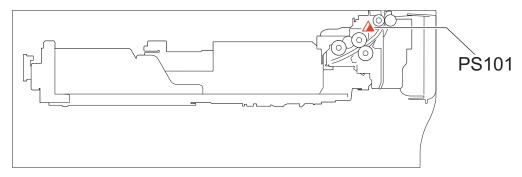

This equipment detects original jam using the sensors shown in the figure below.

■ Count-up timing

Count-up timing differs according to the following:

- Print mode (1-sided print/2nd side of 2-sided print, 1st side of 2-sided print)
- Delivery position (Delivery Tray of the host machine/Staple Finisher*

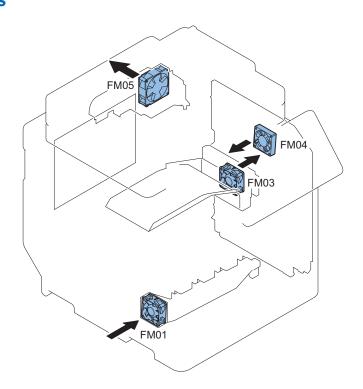

Count-up timing list

| Delivery position | | Print mode | | |
|-----------------------------------|---------------------------------------------|---------------------------|--|--|
| | 1-sided print/2nd side of 2-sided print | 1st side of 2-sided print | | |
| Delivery Tray of the host machine | Delivery Sensor (PS12) Duplex Sensor (PS01) | | | |
| Staple Finisher* | Feed Path Sensor (S2) | | | |

^{*} When the Staple Finisher is connected.

■ Location of Fans

| No. | Name | Role | Error Codes |
|------|-------------------------------|-----------------------------------------------------------|----------------------|
| FM01 | Drum Unit Suction Cooling Fan | To cool the Developing Assembly and laser. | E806-0100, E806-0101 |
| FM03 | Delivery Cooling Fan | To cool the Delivery Assembly. | E806-0300, E806-0301 |
| FM04 | Duplex Cooling Fan | To cool the Duplex Feed Assembly and the Fixing Assembly. | E806-0400, E806-0401 |
| FM05 | Power Supply Cooling Fan | To cool power supply. | E804-0000 |

■ Fan Drive Sequence

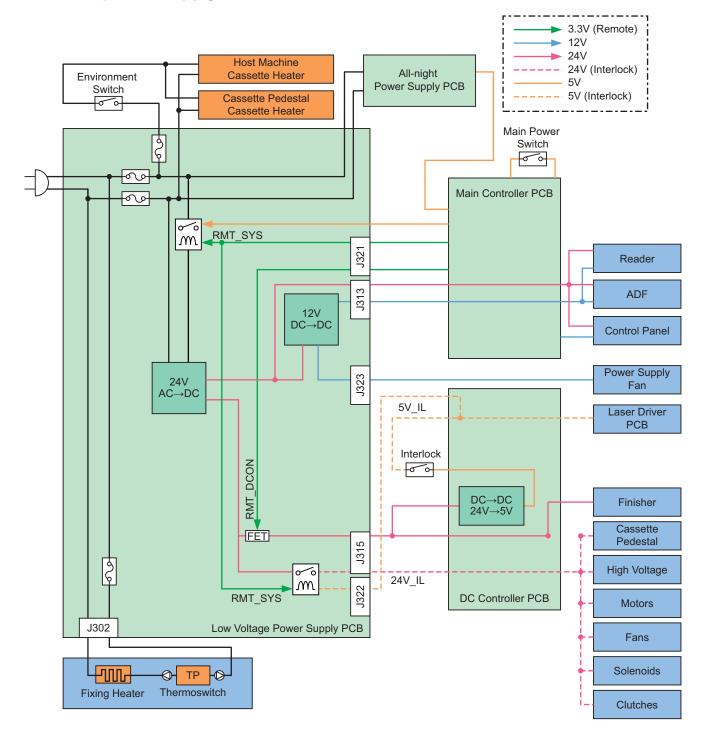

| Sym- | Service | Initial | Warm- | Stand- | Сору/ | Print | Last ro- | Jam | Error | Reader | Sleep1 | Deep- |
|------|----------------------------------------|-------------------------|-------------------------|--------|--------------------------------|-----------------------------------|---------------|---------------|---------------|----------------|--------|-------|

| FM05 | Power Supply Cooling Fan | Full speed | Full speed | OFF | Full speed | Full speed | Full speed | Half speed | Half speed | Half speed | OFF | OFF |

^{*1} When the Finisher is not connected

Fan drive sequence under an environment in which the temperature is 27 deg C or lower.

Power supply

■ Internal power supply

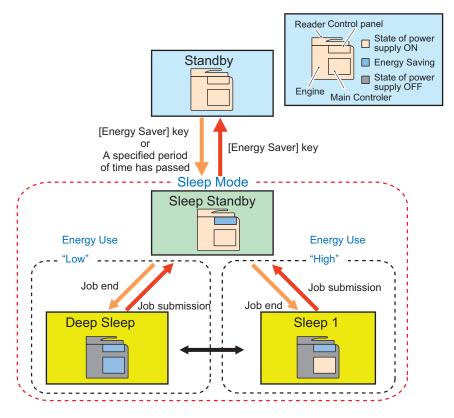

Power-saving Function

Overview

This machine has the following power supply mode: "Standby" and "Sleep".

"Sleep" is further divided into the following 5 modes: "Sleep Standby", "Sleep 1", "Sleep 1 (when [Consider Network Connection] is enabled)", "Sleep Exit", and "Deep Sleep".

^{*}The time specified in Settings/Registration> Preferences> Timer/Energy Settings> Auto Sleep Time

Standby

The state where the machine is operating or can start operation immediately and all the power is supplied.

The machine enters Sleep mode when the [Energy Saver] key on the Control Panel is pressed or the specified period of time has passed.

The machine enters this mode when the Touch Panel Display on the Control Panel is tapped during Sleep Standby.

Sleep Standby

The state where only the Control Panel is turned OFF and power is supplied to all the other parts.

The machine enters Deep Sleep/Sleep 1 if there is no job after checking whether there is a job.

The machine enters this mode when a job is submitted during Sleep (Deep Sleep/Sleep 1).

Sleep 1

The state where the Control Panel is turned OFF and power is supplied only to the processing circuitry for the printer and scanner. The All-night/Non-all-night Power Supply is supplied to the controller.

The machine enters this mode from Sleep Standby during Sleep if Sleep Mode Energy Use is set "High" in Settings/Registration > Preferences > Timer/Energy Settings > Sleep Mode Energy Use.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

Sleep 1 (when [Consider Network Connection] is enabled)

The state where the Control Panel is turned OFF and only the All-night Power (5 V) is supplied to the printer/scanner/controller. This mode should be selected in advance in order to allow the machine to respond to requests for exiting Sleep from external sources such as faxes or the network.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

CAUTION:

The machine can enter this mode if Settings/Registration > Preferences > Timer/Energy Settings > Sleep Mode Energy Use > Low > Consider Network Connection has been turned ON.

The machine does not enter this mode if a 2-, 3-, or 4-line Fax or a coin vendor is connected.

The machine does not enter Deep Sleep when this mode is activated.

Sleep Exit

The machine first enters this mode when returning to Standby from Sleep. The state where power supply is maintained to return from Sleep.

Deep Sleep

The state where the Control Panel is turned OFF and only the All-night Power (5 V) is supplied.

The machine enters this mode from Sleep Standby during Sleep.

The machine enters Sleep Standby when a job is submitted during this mode.

The machine enters Sleep Exit first, and then Standby when the Touch Panel Display on the Control Panel is tapped during this mode.

The machine does not enter this mode when any of the following "Conditions for Not Entering Deep Sleep" applies.

■ Conditions for Not Entering Deep Sleep Mode (Check Items)

Settings of Settings/Registration

When the following settings are enabled in the [Settings/Registration] menu, the machine does not enter Deep Sleep mode. The corresponding items are shown below.

Preferences > Timer/Energy Settings

- · Sleep Mode Energy Use > High
- Sleep Mode Energy Use > Low > Compensate for Network Comm.
- · Within the time specified in Auto Sleep Time

Preferences > Network

- NetWare Settings > Use NetWare > ON
- AppleTalk Settings > Use AppleTalk > ON
- TCP/IP Settings > BMLinkS Settings > Use BMLinkS > ON (*1)
- IEEE 802.1X Settings > Use IEEE 802.1X > ON
- TCP/IP Settings > IPv4 Settings > IP Address Settings > Auto IP > ON
- TCP/IP Settings > DNS Settings > mDNS Settings > Use mDNS > ON
- Google Cloud Print Settings > Use Google Cloud Print > ON (*2)
- TCP/IP Settings > SIP Settings > NGN Settings > Use NGN > ON (*1)
- Direct Connection Settings > Use Direct Connection > ON

Function Settings > Receive/Forward

- Fax Settings >Select RX Mode > Fax/Tel (Auto Switch) (*1)
- Fax Settings > Remote RX > ON (*1)
- Fax Settings > Set Number Display > ON (*1)

Function Settings > Send

• Fax Settings > Modem Dial-in Settings > ON (*1)

Other Settings

- Volume Settings key > Fax Volume Settings > Incoming Fax Ring > ON (*1)
- *1: This may not be displayed depending on the country/region, model, and configuration of the options.
- *2: This must be already registered on Google Cloud Print in advance.

Hardware status

· It is connected to the coin vendor.

System Performance Status

· The system is running/communicating.

CAUTION:

The system is in a running/communicating state for approx. 10 minutes after startup in many cases.

Quick Startup

To realize faster startup, power configuration has been changed to always supply power to the Main Controller PCB at quick startup. Consequently, the main menu can be displayed faster than the normal startup.

Even when the Main Power Supply Switch is OFF, power is supplied to the following PCBs:

| | Quick startup setting ON | Quick startup setting OFF |
|------------------------------|--------------------------|---------------------------|
| Low-voltage Power Supply PCB | Power is supplied | Power is supplied |
| All-night Power Supply PCB | Power is supplied | Power is supplied |
| Main Controller PCB | Power is supplied | OFF |

NOTE:

The guick startup function can be set from "Settings/Registration".

• Settings/Registration > Preferences > Timer/Energy Settings > Quick Startup Settings for Main Power

[On]: Quick startup is executed (default)

[Off]: Quick startup is not executed

Disconnect the power plug when performing work with the possibility to come in contact with the PCBs above. If a conductive material comes in contact with the PCB, short circuit may occur in the PCB, and may cause damage on it. The following label is used at the place where attention is required.

Conditions for not executing quick startup

This machine does not execute quick startup if the following conditions are met at first startup after the power plug is connected to the outlet.

Connection status of the hardware

· A coin vendor is connected.

Either of the following network settings is set to "ON":

Settings/Registration > Preferences > Network

- AppleTalk Settings > Use AppleTalk > ON
- Slect Wired/Wireless LAN > Wireless LAN
- Bluetooth Settings > ON

When turning ON the main power of the machine after turning OFF the main power in any of the conditions below

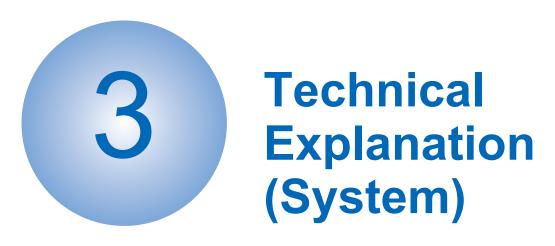

· The system is running/communicating.

Others

- · More than 110 hours have elapsed after quick startup
- When turning ON the main power of the machine in 20 seconds after turning OFF the main power
- · Startup after 8 hours or more have passed since the power of this product was turned OFF
- When turning ON the main power of the machine after turning OFF the main power from the Remote UI
- · The next time the power is turned ON after occurrence of the error code
- The next time the power is turned ON after shifting to the service mode screen

Operating Conditions of the Heater Control

The Environment Heater of this machine becomes ON state when the Environment Heater Switch is turned ON regardless of the state of the main power/operation of the host machine.

| 5 | ADF Pickup Unit | FM1-W677 | 1 | 50,000 sheets | Replace- ment | DF-PU-RL | 43-0091 |
| 6 | ADF Separation Roller Unit | FM1-W655 | 1 | 50,000 sheets | Replace- ment | DF-SP-RL | 43-0092 |

^{*1:} The parts numbers may change according to engineering change.

Option

No consumable parts exist for the options of this machine.

^{*2:} All the values described in this column are estimated replacement timing in A4 size. The estimated life is a reference value in the case of usage in a typical office. The actual value varies depending on the customer environment, field operation status, etc.

Preface

Outline

This chapter describes disassembly and reassembly procedures of the printer.

The service technician is to identify the cause of printer failures according to the "Chapter 6 TROUBLESHOOTING" and to follow the disassembly procedures of each part to replace the defective parts or the consumable parts.

Note the following precautions when working on the printer.

- 1. CAUTION: Before disassembling or reassembling the printer, be sure to disconnect its power cord from the electrical outlet
- During disassembly, reassembly or transportation of the printer, remove the cartridge if required.
 When the cartridge is out of the printer, put it in a protective bag even in a short period of time to prevent the adverse effect of light.
- 3. Reassembling procedures are followed by the reverse of disassembly unless otherwise specified.
- 4. Note the length, diameters, and locations of screws as you remove them. When reassembling the printer, be sure to use them in their original locations.
- 5. Do not run the printer with any parts removed as a general rule.
- 6. Ground yourself by touching the metal part of the printer before handling the PCB to reduce the possibility of damage caused by static electricity.
- 7. When you replace the part that the rating plate or the product code label is attached, be sure to remove the rating plate or the product code label and put it to the new part.

Points to Note when Tightening a Screw

For reduction in weight, thin plates are used in some parts of this machine.

In the case of a screw hole with a triangle mark near it as shown in the figure below, strongly tightening the screw may damage or deform the screw hole.

In the case of a screw hole with a triangle mark, take care not to apply too much force when tightening the screw.

The recommended torque value is shown below as a reference value.

| | | | Type of Screws | | | | | | |
|-----------------|--------|-------------|----------------|-------------|-------------|-------------|-------------|-------------|-------------|
| | | RS t | tight | W Sams Bin | | ding | TP | | |
| Fastened | member | Metal | Resin | Metal | Resin | Metal | Resin | Metal | Resin |
| Tightening | M4 | Approx. 1.6 | Approx. 1.6 | Approx. 1.6 | Approx. 0.8 | Approx. 1.6 | Approx. 0.8 | Approx. 1.6 | Approx. 0.8 |
| torque (N*m) | M3 | Approx. 0.8 | Approx. 0.8 | Approx. 0.6 |

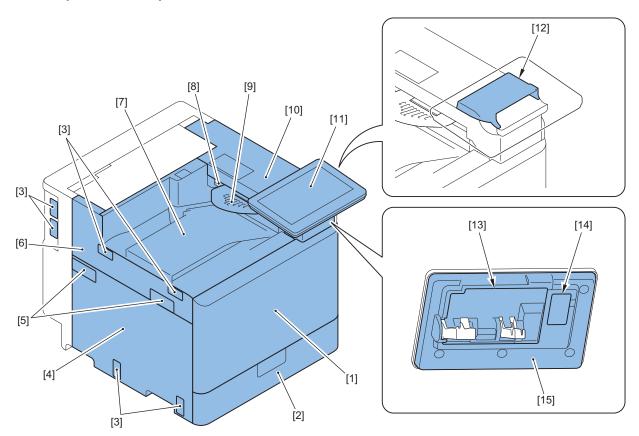

^{*} For PCB, refer to the tightening torque value of resin (fastened member).

| Type of Screws | | | | | |
|----------------|--------|---------|----|--|--|
| RS tight | W Sams | Binding | TP | | |
| | | | | | |

External Cover/Interior System

F

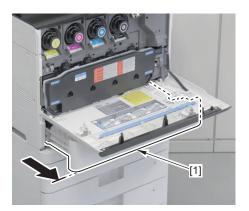

Removing the Front Cover

■ Procedure

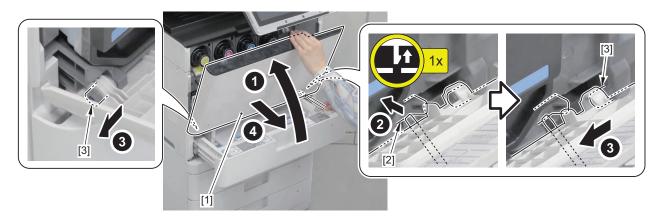

- 1. Open the Front Cover [1], and remove the Front Cover Retainer Band [2].
 - 1 Boss [3]

2. Pull out the Cassette 1.

- 3. Remove the Front Cover [1] while it is half open.
 - 1 Claw [2]
 - 2 Shafts [3]

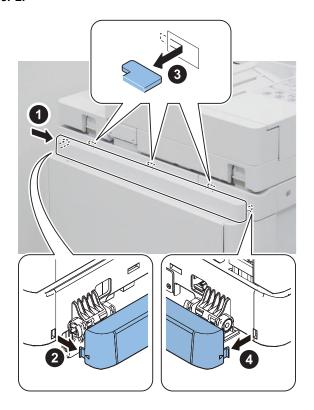

Removing the Rear Cover 1

■ Procedure

NOTE: If the optional Copy Card Reader is installed, remove it before work.

1. Remove the Reader Rear Cover 2.

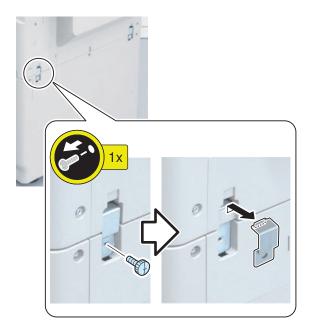

2. <For models without the Cassette Heater Unit>

<For models with the Cassette Heater Unit>

3. <For models without the Cassette Heater Unit>

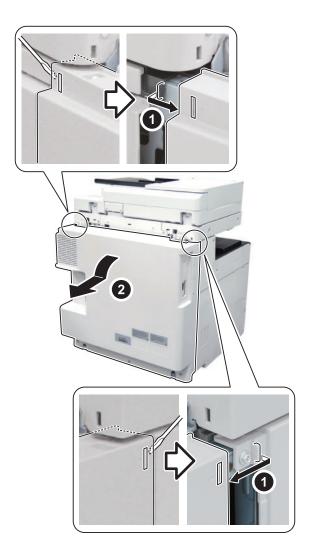

<For models with the Cassette Heater Unit>

4. Remove the screws.

5. Remove the Rear Cover 1.

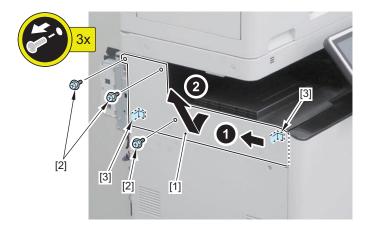

Removing the Left Upper Cover

■ Preparation

1. "Removing the Rear Cover 1" on page 164

■ Procedure

- 1. Remove the Upper Left Cover [1].
 - 3 Screws [2]
 - 2 Hooks [3]

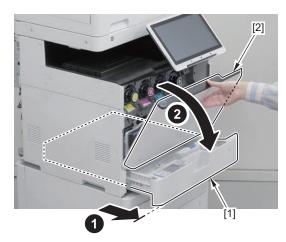

Removing the Left Lower Cover

■ Preparation

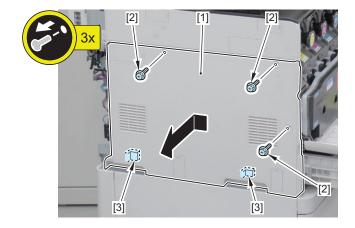

1. "Removing the Rear Cover 1" on page 164

■ Procedure

1. Pull out the Cassette [1], and open the Front Cover [2].

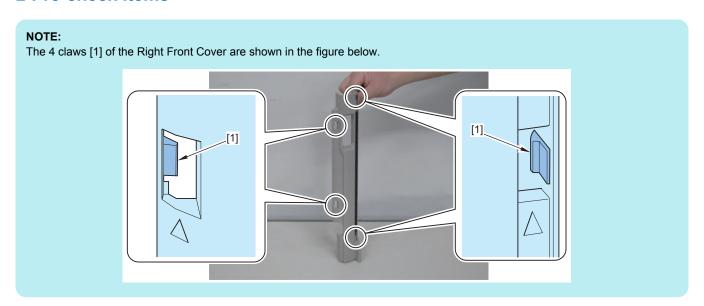

- 2. Remove the Left Lower Cover [1].
 - 3 Screws [2]
 - 2 Hooks [3]

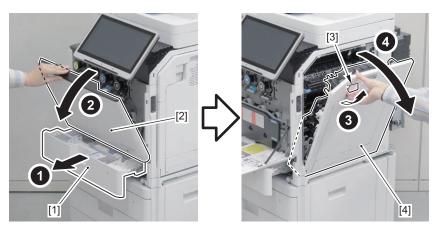

Removing the Right Front Cover

■ Pre-check items

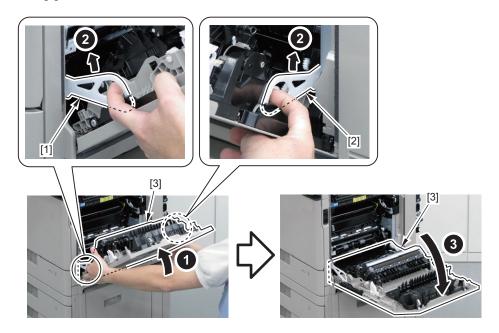

■ Procedure

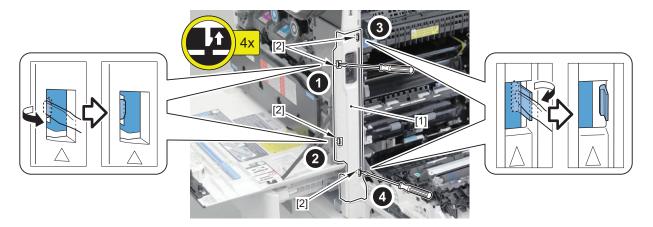

- 1. Pull out the Cassette [1], and open the Front Cover [2].
- 2. Pull the Right Cover Open/Close Lever [3], then open the Right Cover Unit [4].

3. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

- 4. Remove the Right Front Cover [1].
 - 4 Claws [2]

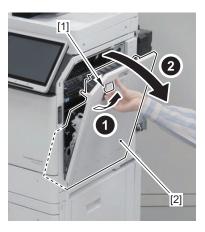

Removing the Right Rear Cover/Right Rear Lower Cover

■ Preparation

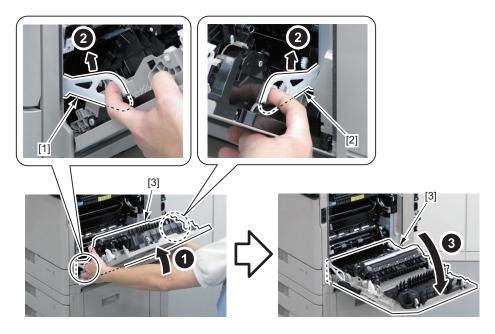

1. "Removing the Rear Cover 1" on page 164

■ Procedure

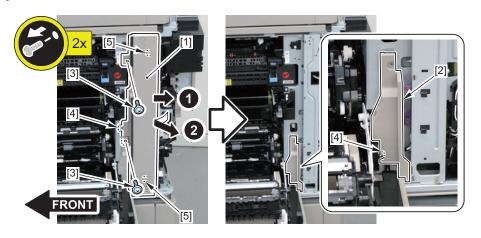

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

- 3. Remove the Right Rear Cover [1] and Right Rear Lower Cover [2].
 - 2 Screws [3]
 - 2 Hooks [4]
 - 2 Bosses [5]

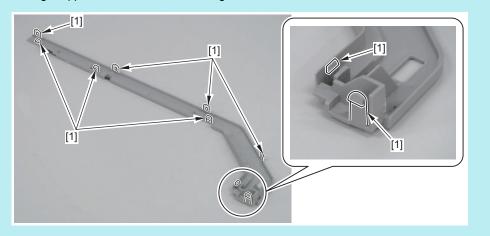

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170

■ Pre-check items

NOTE:

The 9 claws [1] of the Right Upper Cover are shown in the figure below.

■ Procedure

1. Open the ADF Unit + Reader Unit [1].

2. Remove the Right Upper Cover [1].

- 9 Claws [2]
- 2 Bosses [3]

Removing the Right Cover Unit

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170

■ Procedure

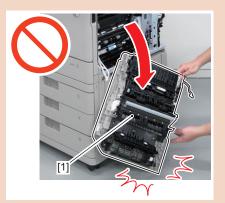

• Be sure not to touch the roller surface [A] of the Secondary Transfer Outer Roller Unit when disassembling/assembling.

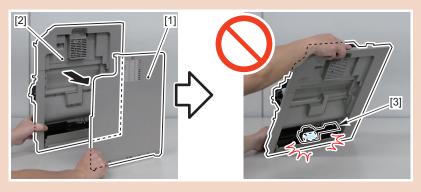

A CAUTION:

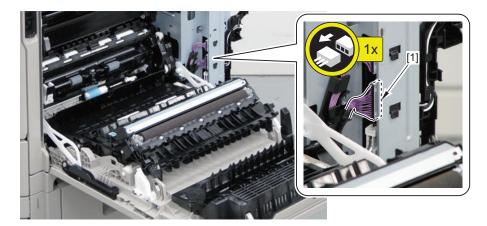

• Be careful not to drop the Right Cover Unit [1] when disassembling/assembling.

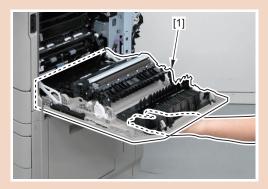

• Do not place the Right Cover Unit [2] directly on the floor after removing the Multi-purpose tray [1]. This is because the Multi-purpose Tray Pickup Roller/Multi-purpose Tray Feed Roller Unit [3] may be damaged.

1. Disconnect the Connector [1].

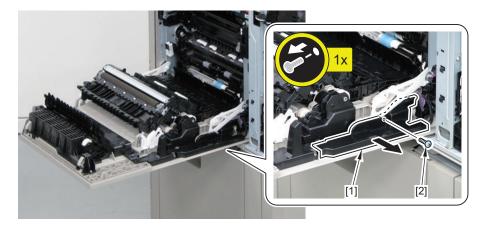

CAUTION:Be sure to disassemble/assemble by holding the Right Cover Unit [1] after step 2.

2. Remove the Right Cover Stopper Rear Holder [1].

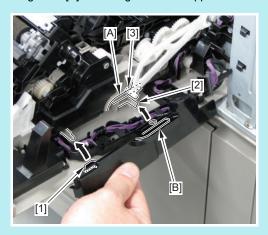

• 1 Screw [2]

NOTE:

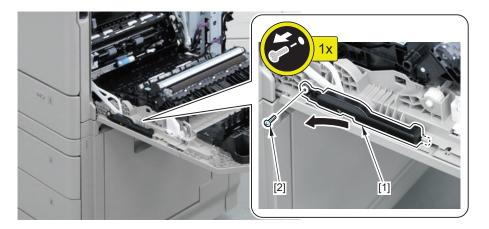

How to assemble the Right Cover Stopper Rear Holder

When assembling, be sure to align the hook [1] and the boss [2], and align the shaft [3] of the Right Cover Stopper Rear with the groove [A] of the Right Cover Unit and the groove [B] of the Right Cover Stopper Rear Holder to install the holder.

3. Remove the Right Cover Stopper Front Holder [1].

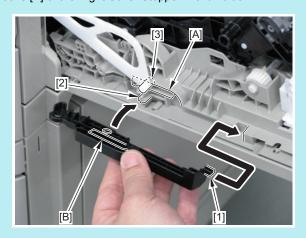

• 1 Screw [2]

NOTE:

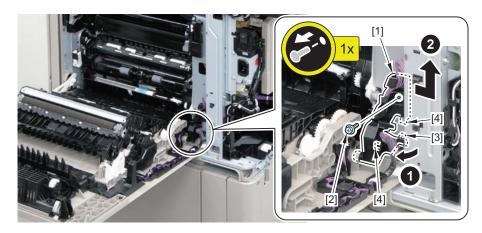

How to assemble the Right Cover Stopper Front Holder

When assembling, align the hook [1] and the boss [2], and align the shaft [3] of the Right Cover Stopper Front with the groove [A] of the Right Cover Unit and the groove [B] of the Right Cover Stopper Front Holder.

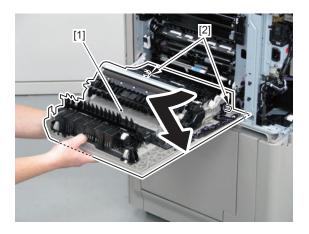

4. Remove the Right Cover Rear Support Holder [1].

- 1 Screw [2]
- 1 Boss [3]
- 2 Hooks [4]

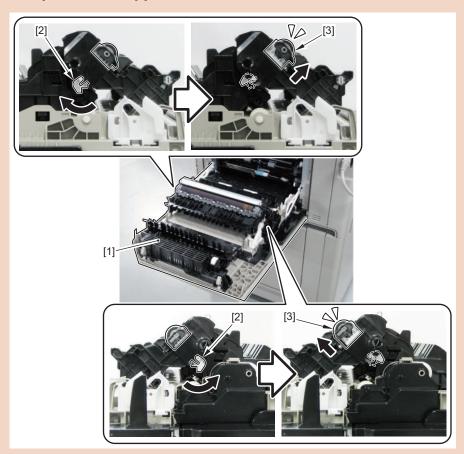

5. Remove the Right Cover Unit [1].

• 2 Shafts [2]

CAUTION:

After installing a new Right Cover Unit [1], be sure to push the Lock Release Lever [2] in the direction of the arrow to disengage the Secondary Transfer Roller [3].

If the foregoing work is omitted, a power-on jam may occur due to the Secondary Transfer Roller being disengaged when the power is turned ON.

This occurs because the Sensor Flag moves when the roller is disengaged and it is wrongly detected as a jam. The machine recovers by opening and then closing the door.

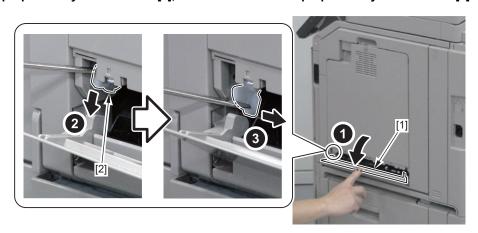

■ Procedure

CAUTION:

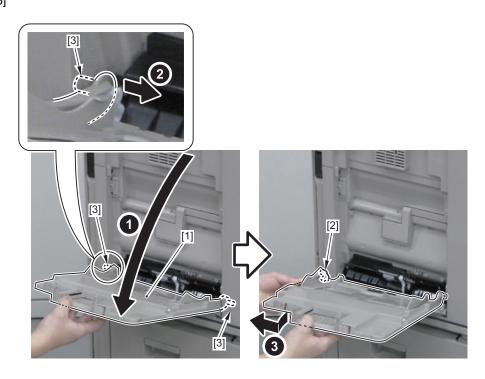

Be careful not to drop the Multi-purpose Tray Shaft Holder [2] in the host machine when disassembling/assembling.

1. Open the Multi-purpose Tray Lower Cover [1], and release the Multi-purpose Tray Shaft Holder [2].

- 2. Remove the Multi-purpose Tray [1] and the Multi-purpose Tray Shaft Holder [2].
 - 2 Shafts [3]

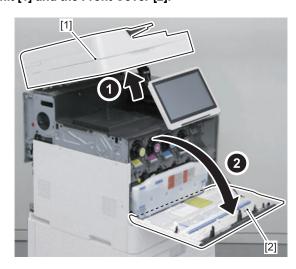

Removing the Delivery Tray

■ Preparation

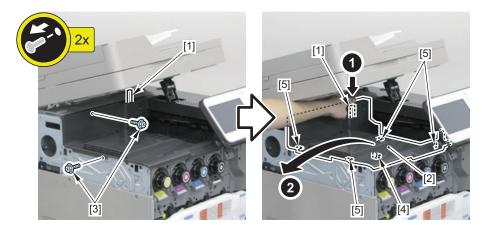

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168

■ Procedure

1. Open the ADF Unit + Reader Unit [1] and the Front Cover [2].

- 2. Remove the Delivery Tray [2] while pressing the damper [1].
 - 2 Screws [3]
 - 1 Hook [4]
 - 4 Bosses [5]

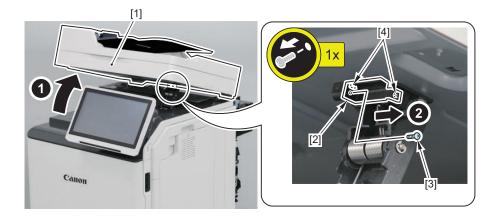

Removing the Rear Upper Cover

■ Preparation

1. "Removing the Rear Cover 1" on page 164

■ Procedure

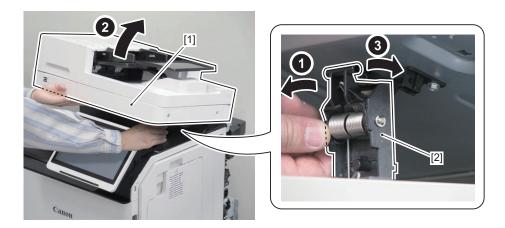

- 1. Open the ADF Unit + Reader Unit [1], and remove the ADF Arm Cover [2].
 - 1 Screw [3]
 - 2 Hooks [4]

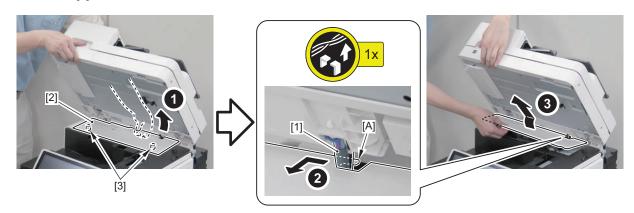

2. Remove the ADF Arm [2] while pressing the ADF Unit + Reader Unit [1].

▲ CAUTION:Be careful not to drop the ADF Unit + Reader Unit [1] when disassembling/assembling.

- 3. Free the harness [1] from the [A] part of the Rear Upper Cover, and remove the Rear Upper Cover [2].
 - 2 Bosses [2]

Removing the Upper Cover

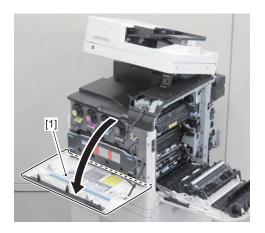

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170
- 3. "Removing the Left Upper Cover" on page 172
- 4. "Removing the Control Panel Unit" on page 185

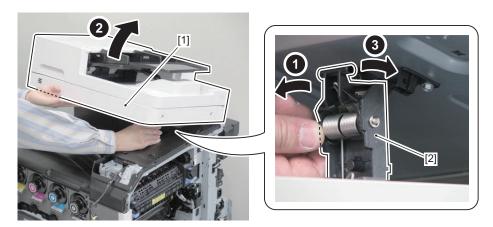

5. "Removing the Rear Upper Cover" on page 181

■ Procedure

1. Open the Front Cover [1].

2. Remove the ADF Arm [2] while pressing the ADF Unit + Reader Unit [1].

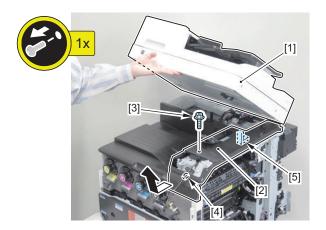

- 3. Remove the Upper Cover [2] while pressing the ADF Unit + Reader Unit [1].
 - 1 Screw [3]
 - 1 Boss [4]
 - 1 Hook [5]

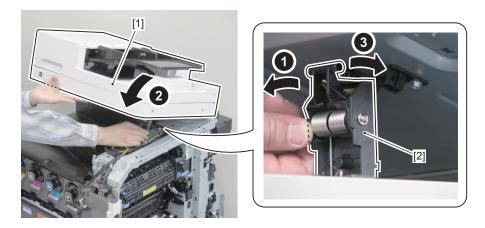

A CAUTION:

Be careful not to drop the ADF Unit + Reader Unit [1] when disassembling/assembling.

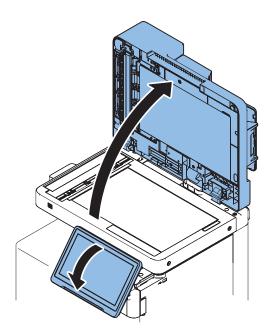

4. Place the ADF Unit + Reader Unit [1] on the ADF Arm [2] temporarily.

Removing the Control Panel Unit

■ Procedure

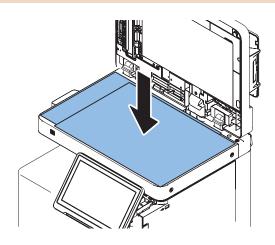

1.

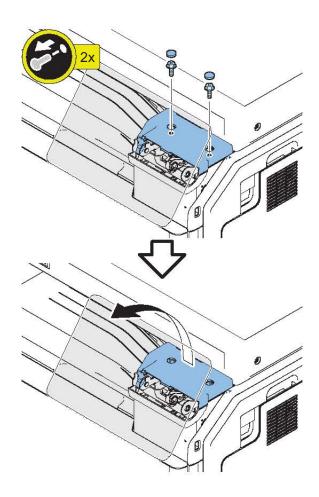

2.

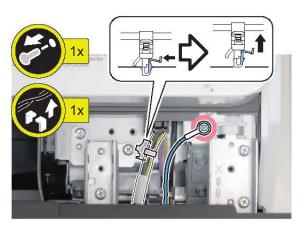

CAUTION:

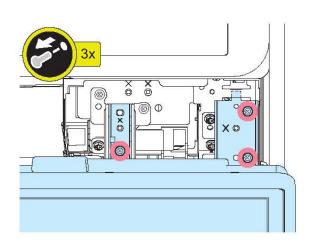

Be sure to place 5 or more sheets of paper to prevent damage.

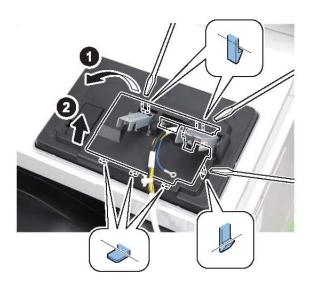

4.

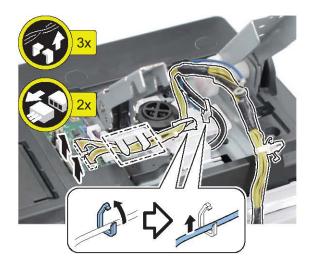

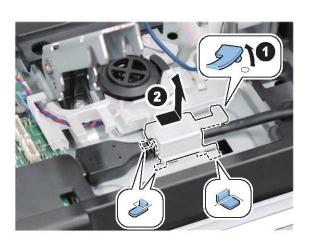

9.

Original Exposure/Feed System

Removing the ADF Unit

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

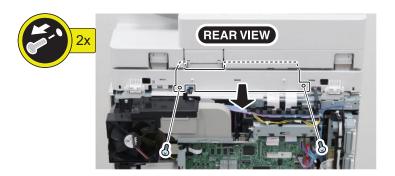

■ Procedure

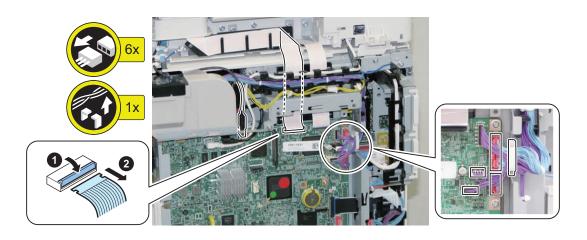

CAUTION:

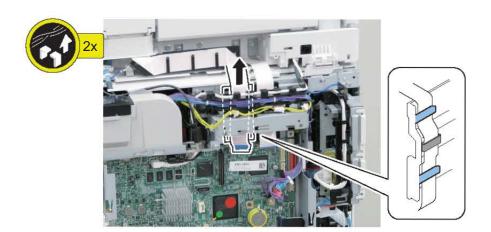

Be careful not to damage the white sheets and the White Plate of the ADF Unit when disassembling/assembling.

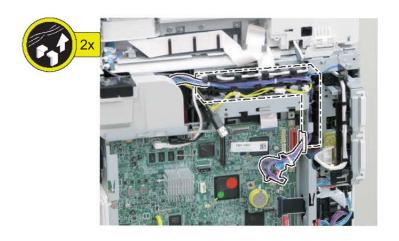

1.

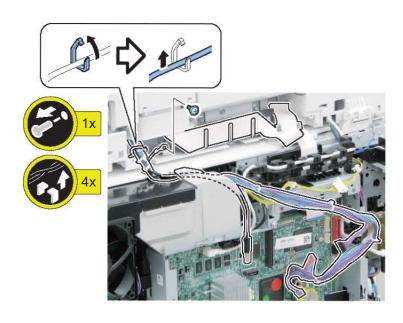

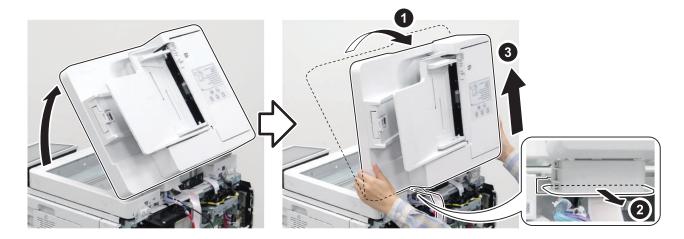

4.

CAUTION:

When installing the ADF Unit, be sure to insert the rib of the Harness Cover into the guide of the Reader Unit.

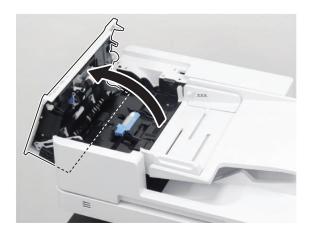

Removing the ADF Pickup Unit

■ Procedure

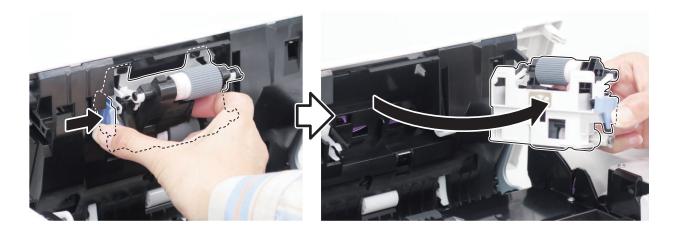

CAUTION:

Do not touch the surface of the roller when disassembling/assembling.

2.

NOTE:

When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode.

• COPIER > COUNTER > DRBL-2 > DF-PU-RL

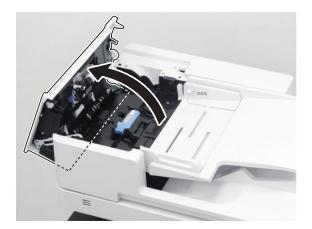

Removing the ADF Separation Unit

■ Procedure

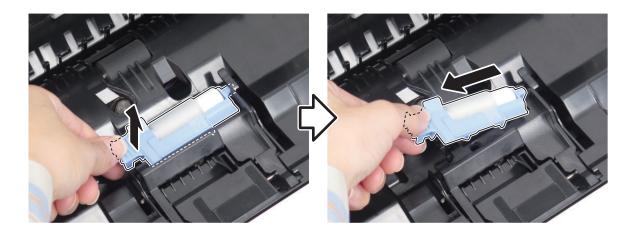

CAUTION:

Do not touch the surface of the roller when disassembling/assembling.

2.

NOTE:

When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode.

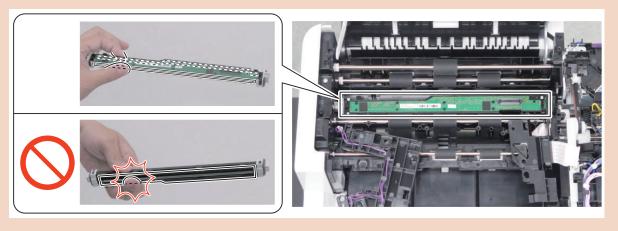

• COPIER > COUNTER > DRBL-2 > DF-SP-RL

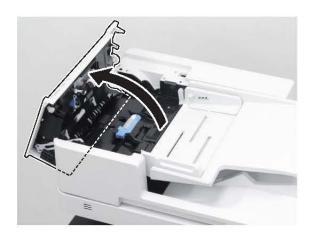

Removing the Scanner Unit (Back)

■ Procedure

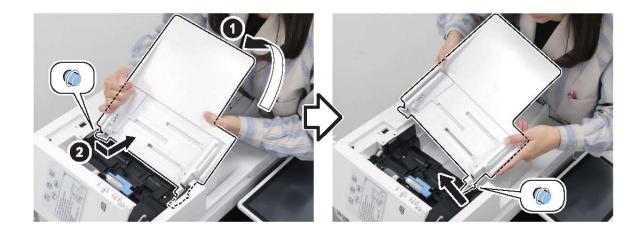

CAUTION:

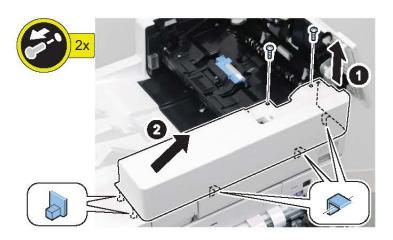

Be careful not to touch the sensor part of the Scanner Unit (Back) when disassembling/assembling. Be sure to hold the side surfaces.

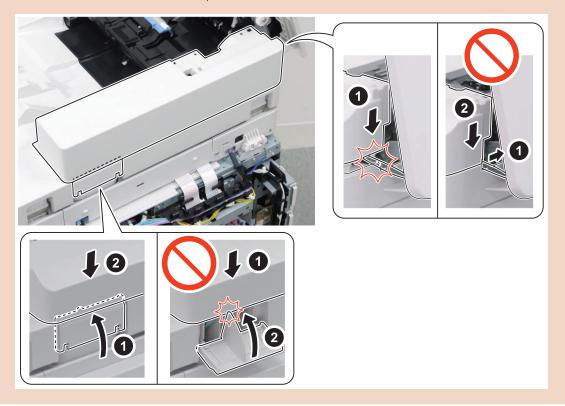

2.

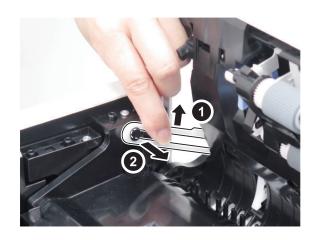

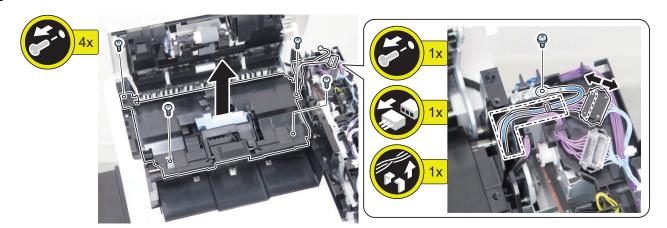

CAUTION:

- Be careful not to trap the harness with the ADF Rear Cover.
- Close the Harness Connection Cover first, and then install the ADF Rear Cover.

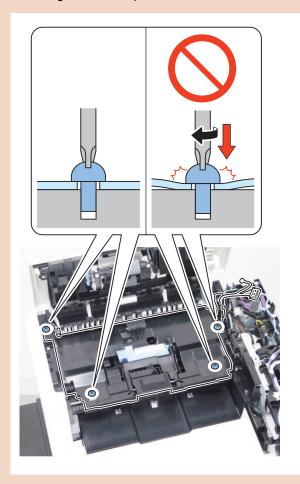

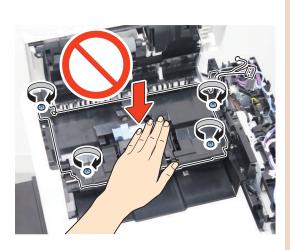

CAUTION:

Points to note when tightening screws to install the Separation Guide

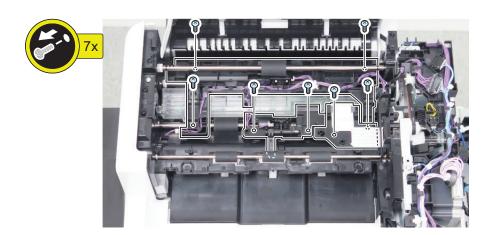

Tightening the screws in the following manner deforms the Separation Guide and may cause feed failure when feeding heavy paper.

- Pressing the screwdriver hard while tightening the screws
- · Pressing down the Separation Guide with a hand while tightening the screws

In the case that feed failure occurs, loosen the screws and tighten them again carefully so as not to apply too much force. Take the same caution also when installing the Separation Guide at the time of replacement of the Delivery Sensor, Double Feeding Detection PCB (Transmission) or Document End Sensor.

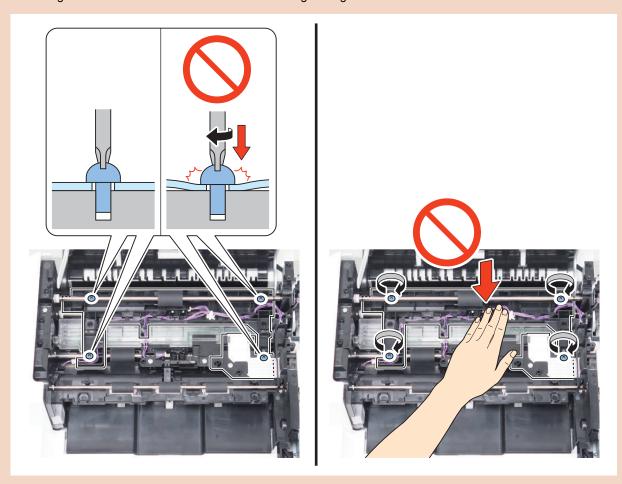

CAUTION:

Points to note when tightening screws to install the Sensor Holder

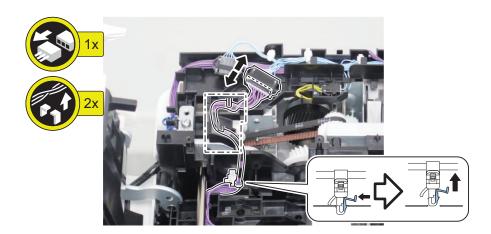

Tightening the screws in the following manner deforms the Sensor Holder and may cause image failure (right angle accuracy, parallelism and/or skew) when feeding paper.

- · Pressing the screwdriver hard while tightening the screws
- · Pressing down the Sensor Holder with a hand while tightening the screws

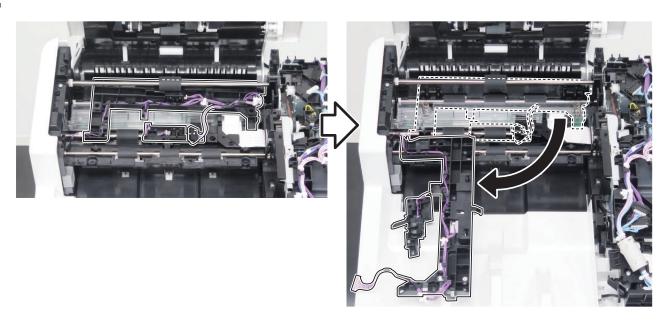

In the case that image failure (right angle accuracy, parallelism, skew) occurs, loosen the screws and tighten them again carefully so as not to apply too much force.

Take the same caution also when installing the Sensor Holder at the time of replacement of the Document End Sensor.

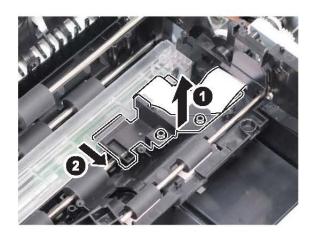

8.

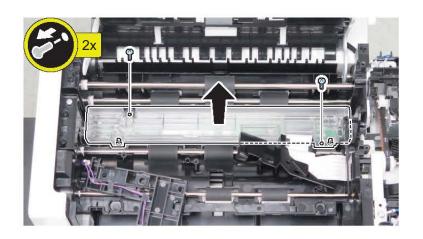

9. CAUTION:

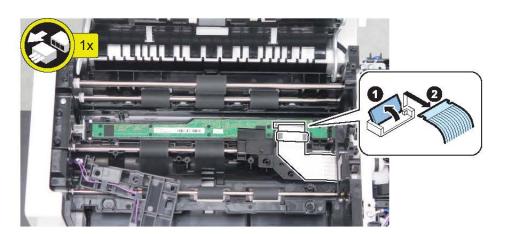

Make sure that the springs in the following figure are not deformed when installing the CIS Cover.

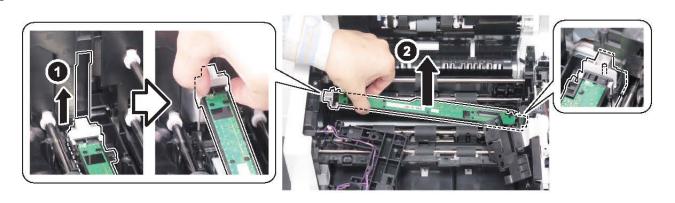

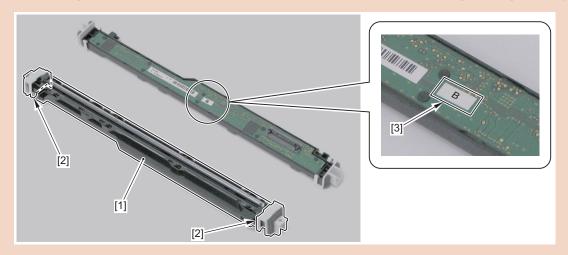

11.

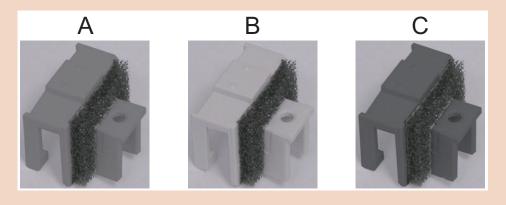

CAUTION:

When replacing the Scanner Unit (Back) [1], be sure to replace the Scanner Unit (Back) [1] and the Spacers [2], which are included in the package of the service part, at the same time. If different spacers are used, image reading error may occur.

- If the Spacers are mixed or lost, be sure to check the Scanner Unit Rank Label [3] being used and use the Spacers appropriate for the rank of the Scanner Unit (Back).
- There are three ranks available for the Scanner Unit (Back), and there are spacers suitable for each rank.

| Rank | Color of the Spacer |
|------|---------------------|
| A | Gray |
| В | Titanium white |
| С | Standard black |

13. Adjustment after Replacement

"After Replacing the Scanner Unit (Back)" on page 362

Removing the Copyboard Glass Unit

■ Procedure

CAUTION:

- When removing the Copyboard Glass, be careful not to touch the 2 glass surfaces.
- If the surfaces become dirty, clean it with the Glass Cleaning Sheet.

1.

2.

3. Actions after Parts Replacement

"After Replacing the Copyboard Glass" on page 361

Removing the Scanner Unit (Front)

■ Preparation

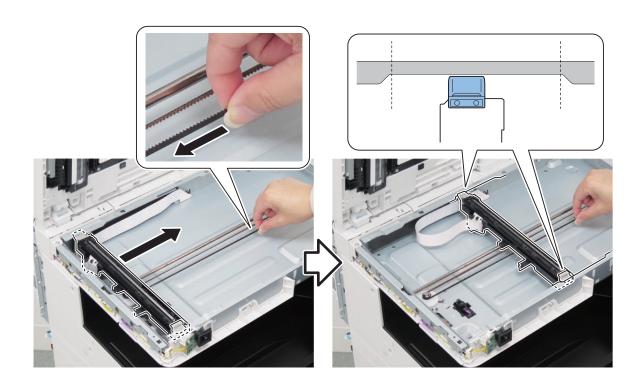

1. "Removing the Copyboard Glass Unit" on page 202

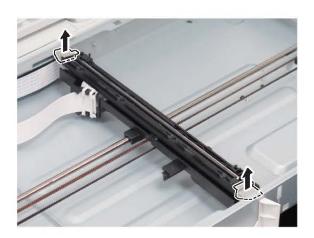

■ Procedure

CAUTION:

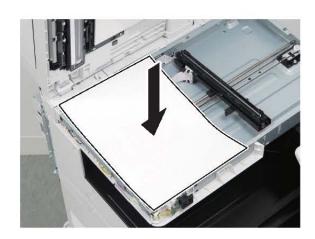

Be careful not to touch the sensor part of the Scanner Unit (Front) when disassembling/assembling.

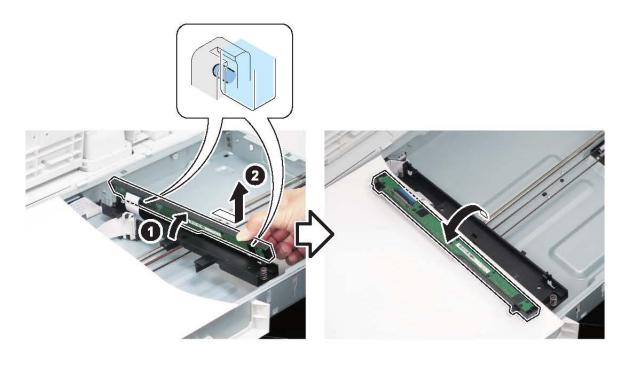

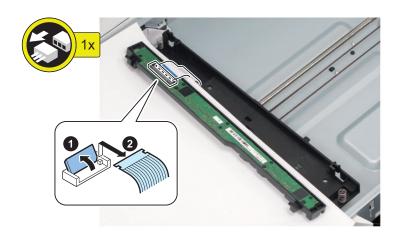

3.

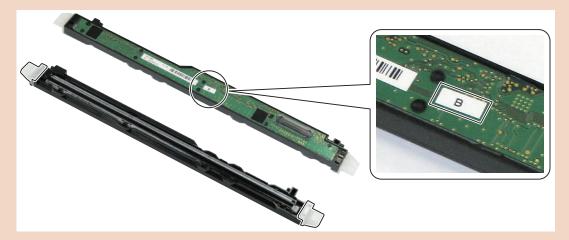

CAUTION: Be careful not to drop the spring(s) when replacing the part.

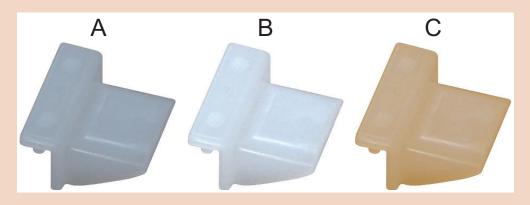

CAUTION:

When replacing the Scanner Unit (Front), be sure to replace the Scanner Unit (Front) and the Spacers, which are included in the package of the service part, at the same time. If different spacers are used, image reading error may occur.

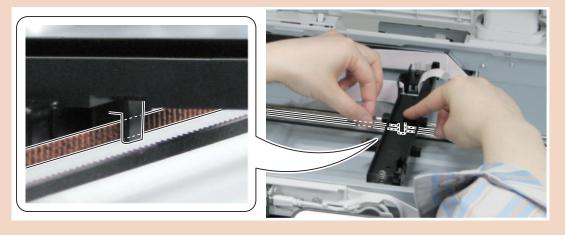

- If the Spacers are mixed or lost, be sure to check the Scanner Unit Rank Label being used and use the Spacers appropriate for the rank of the Scanner Unit (Front).
- There are three ranks available for the Scanner Unit (Front), and there are spacers suitable for each rank.

| Rank | Color of the Spacer |
|------|---------------------|
| A | Gray |
| В | White |
| С | Brown |

CALITION

Be sure that the groove of the Scanner Unit Holder is hooked on the belt when assembling.

6 ■ Adjustment after Replacement

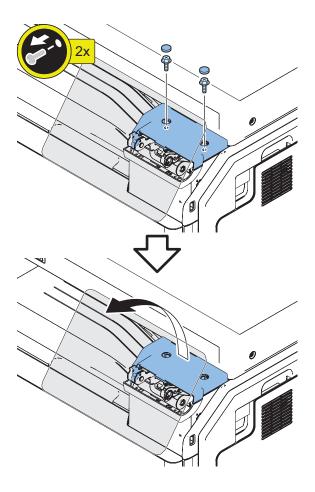

"After Replacing the Scanner Unit (Front)" on page 362

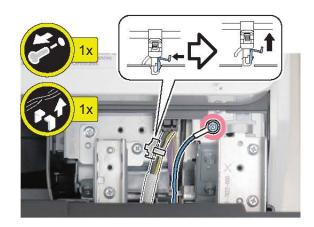

Removing the Reader Motor

■ Procedure

1.

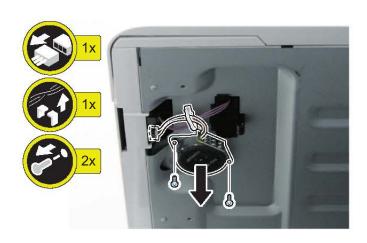

4.

5.

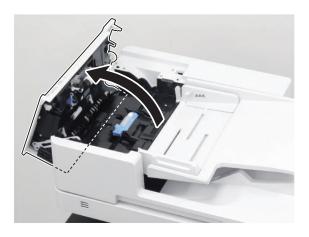

Removing the ADF Feed Frame

■ Preparation

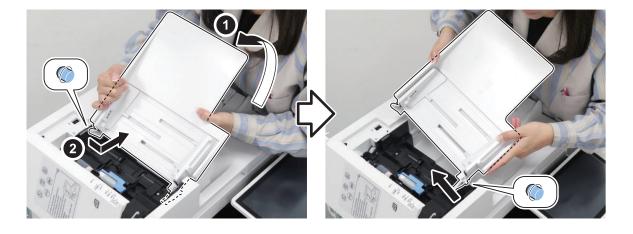

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

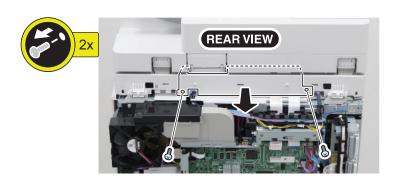

■ Procedure

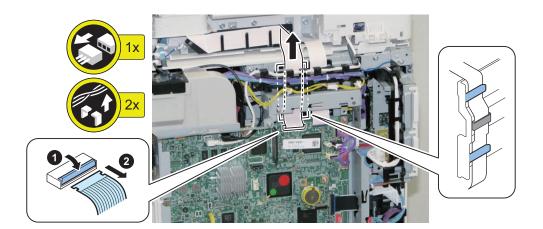

1.

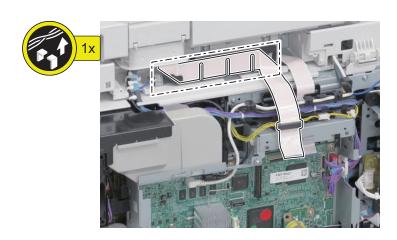

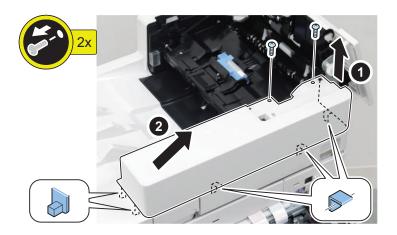

2.

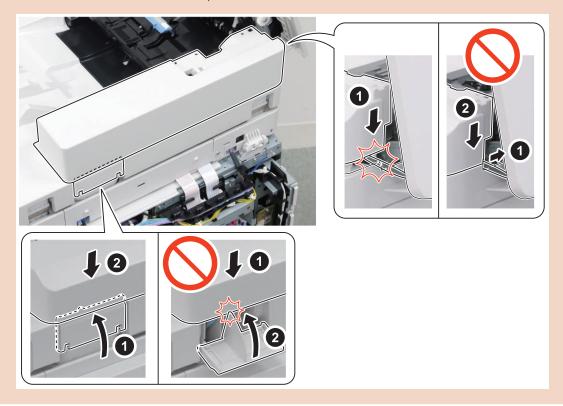

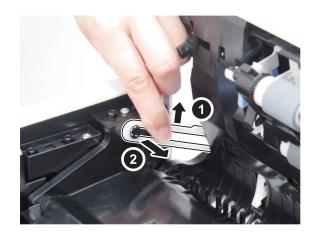

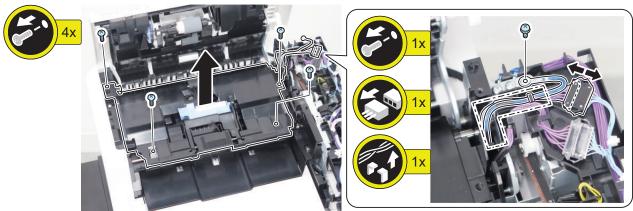

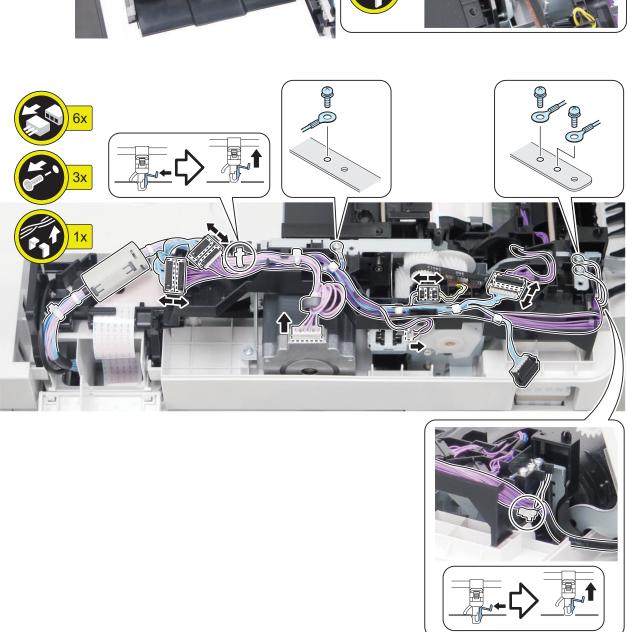

CAUTION:

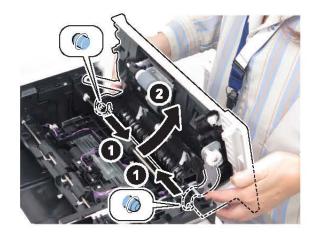

- Be careful not to trap the harness with the ADF Rear Cover.
- Close the Harness Connection Cover first, and then install the ADF Rear Cover.

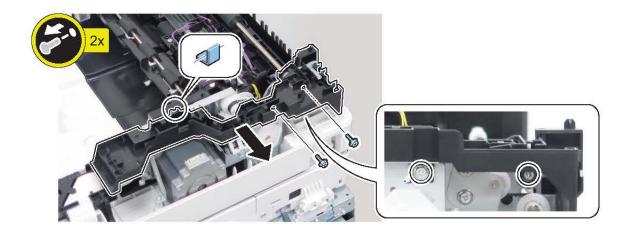

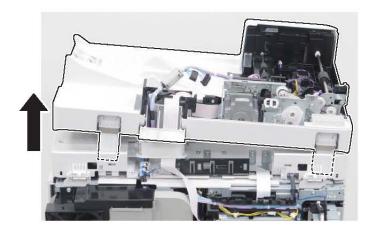

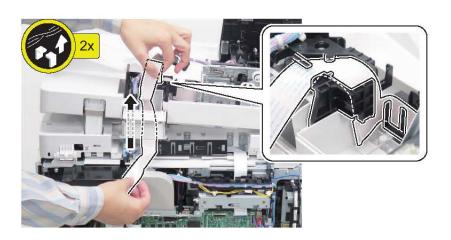

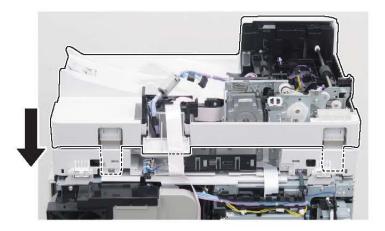

11.

12.

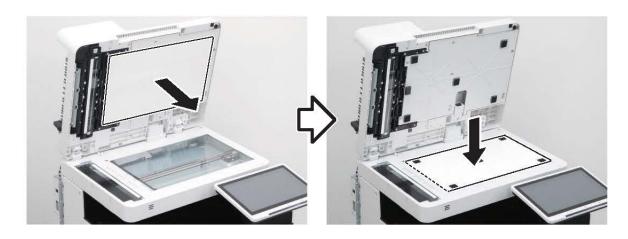

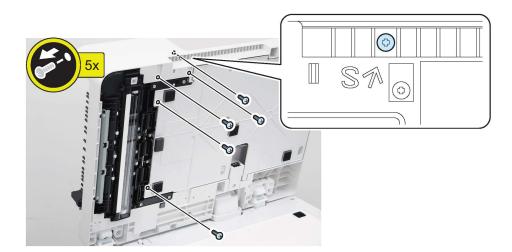

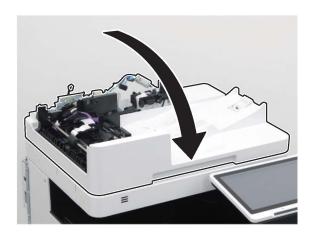

15.

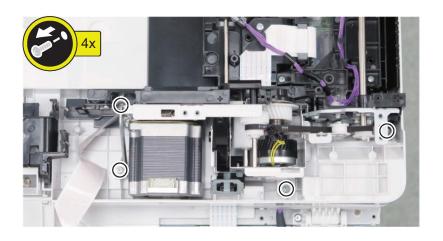

18.

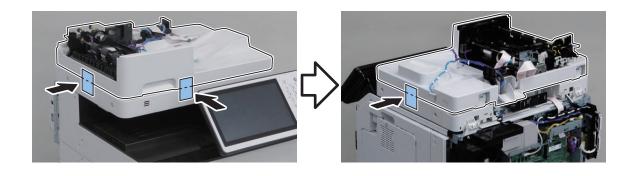

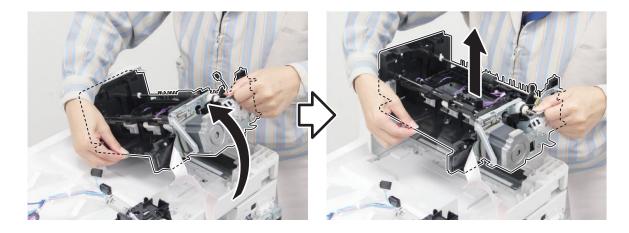

21.

CAUTION:

Be careful of the ADF as it opens abruptly when the Feed Frame Unit is removed.

22.

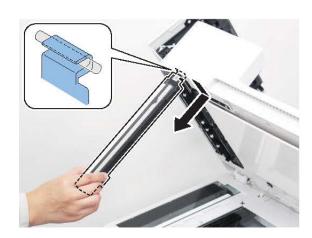

Removing the CIS Holder

■ Preparation

1. "Removing the Scanner Unit (Back)" on page 194

■ Procedure

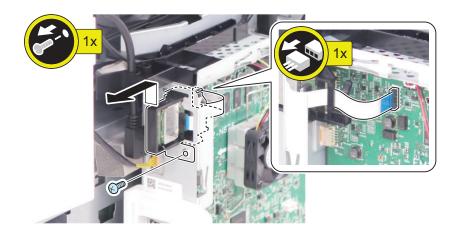

Controller System

Removing the Wi-Fi PCB

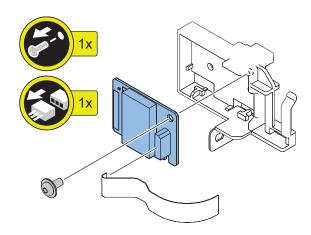

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

■ Procedure

2.

Removing the Main Controller Sub Cover /Main Controller Cover

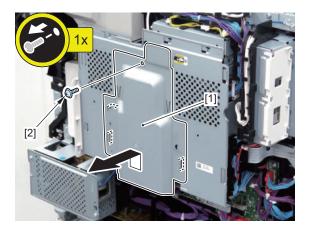

■ Preparation

1. "Removing the Rear Cover 1" on page 164

■ Procedure

1. Remove the Main Controller Sub Cover [1].

• 1 Screw [2]

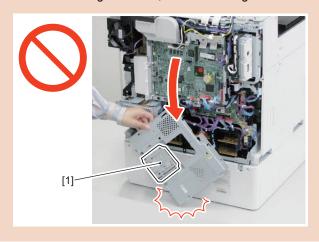

2. Remove the Main Controller Cover [1].

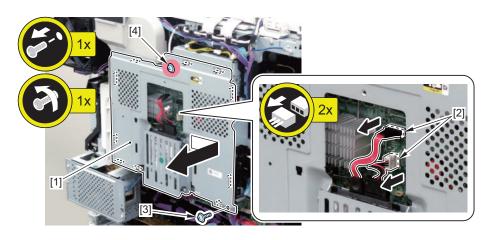

- 2 Connectors [2]
- 1 Screw [3]
- 1 Screw [4] (loosen)

CAUTION:

The Main Controller Cover has an HDD [1] on the back side.

The HDD [1] is sensitive to shock. When handling this cover, be sure not to give a shock to it.

■ Preparation

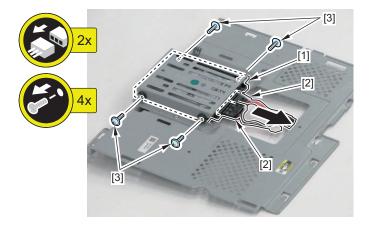

CAUTION:

"Actions before Parts Replacement" on page 360

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

■ Procedure

- 1. Remove the HDD [1].
 - 4 Screws [3]
 - 2 Connectors [2]

2. Actions after Parts

"Actions after Parts Replacement" on page 360

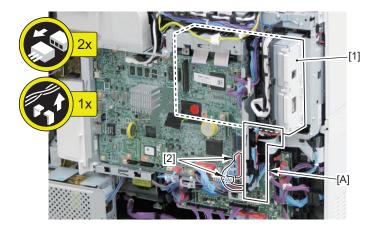

Removing the Main Controller Unit

■ Preparation

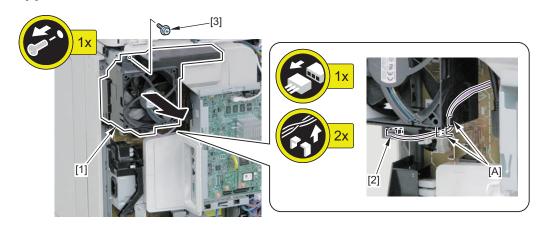

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

■ Procedure

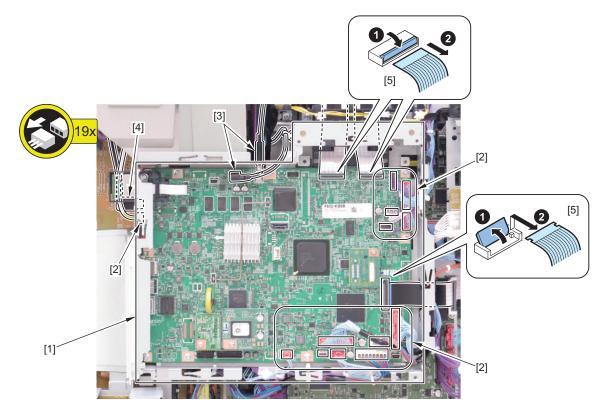

- 1. Disconnect the 2 connectors [2] of the FAX Unit.
 - · Harness Guide [A]

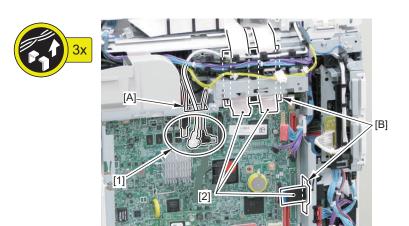

- 2. Remove the Power Supply Cooling Fan Unit [1].
 - 1 Connector [2]
 - · Harness Guide [A]
 - 1 Screw [3]

- 3. Disconnect the harness connected to the Main Controller Unit [1].
 - 9 Connectors [2]
 - 4 USB Connectors [3]
 - 1 HDMI Connector [4]
 - 3 Flat Cables [5]

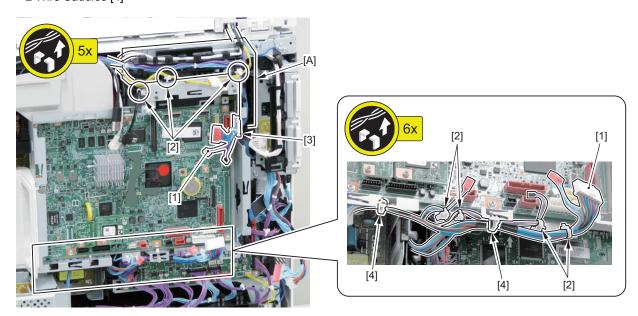

- 4. Pull out the disconnected harness from the hole [A] of the Main Controller Unit and the Flat Cable Guide [B].
 - 3 USB Cables [1]
 - 3 Flat Cables [2]

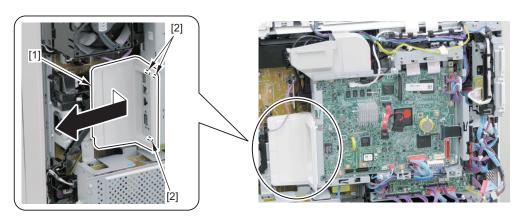

5. Remove the harness [1].

- 1 Harness Guide [A]
- 7 Reuse Bands [2]
- 1 Edge Saddle [3]
- 2 Wire Saddles [4]

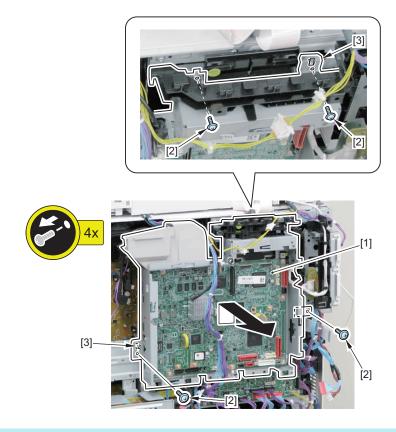

6. Remove the Rear Cover 2 [1].

• 3 Hooks [2]

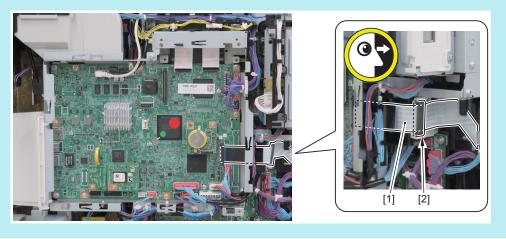

7. Remove the Main Controller Unit [1].

- 4 Screws [2]
- 2 Hooks [3]

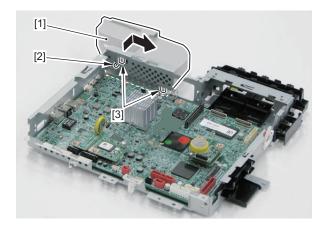

NOTE:

- The completed assembly of the Main Controller Unit is shown below.
 Check that the Flexible Cable [1] runs through the Ferrite Core [2].

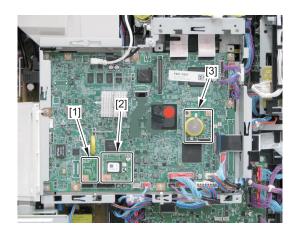

8. Remove the Fan Duct [1].

- 1 Boss [2]
- 2 Hooks [3]

- 9. Be sure to remove the parts from the old PCB to the new PCB.
 - [1] TPM PCB
 - [2] Flash PCB
 - [3] Memory PCB

10. Actions after Parts Replacement

"Actions after Parts Replacement" on page 355

Removing the Low-voltage Power Supply Unit

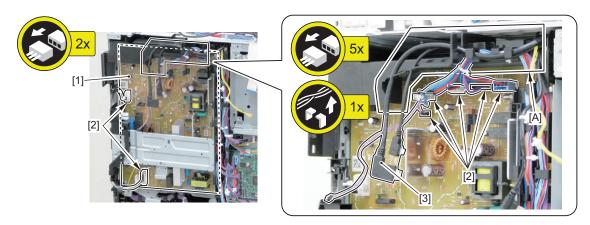

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 3. "Removing the Main Controller Unit" on page 220
- 4. "Removing the All-night Power Supply PCB Unit" on page 246

■ Procedure

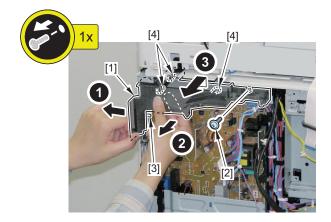

1. Disconnect the 7 connectors [2] connected to the Low-voltage Power Supply PCB [1].

2. Free the harness [3] from the Harness Guide [A] of the Fan Guide [1].

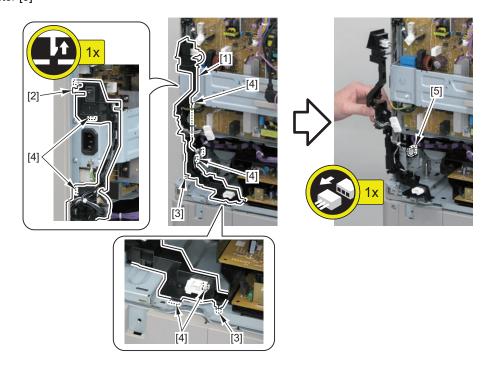

3. Remove the Fan Guide [1].

- 1 Screw [2]
- 1 Boss [3]
- 3 Hooks [4]

4. Remove the Power Switch Harness Guide [1].

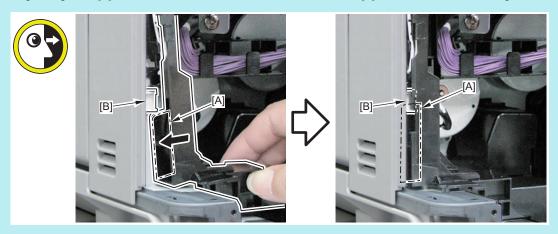

- 1 Claw [2]
- 2 Bosses [3]
- 6 Hooks [4]
- 1 Connector [5]

NOTE:

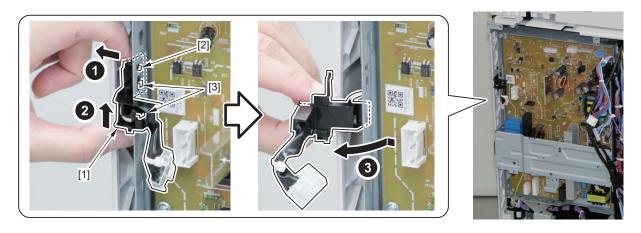

How to install the Power Switch Harness Guide

Be sure to align the groove [A] of the Power Switch Harness Guide with the end [B] of the cover to install the guide.

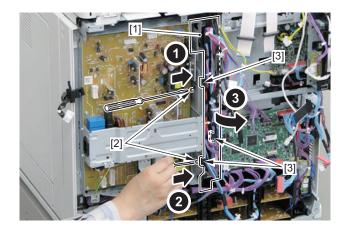

5. Remove the Fixing Harness Guide [1].

- 1 Boss [2]
- 2 Hooks [3]

6. Remove the Power Supply Harness Guide [1].

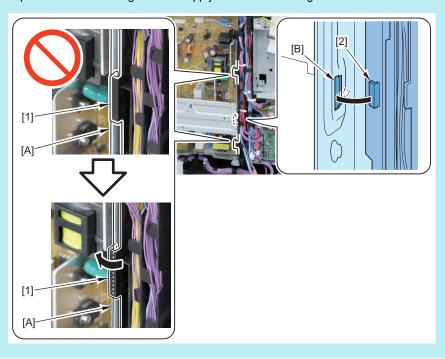

- 2 Bosses [2]
- 3 Hooks [3]

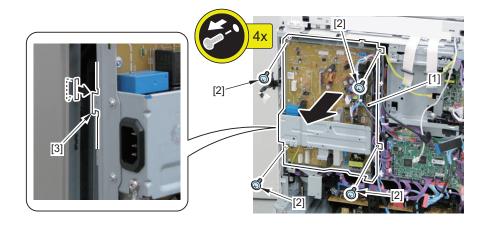

NOTE:

How to install the Power Supply Harness Guide

Be sure to align the 2 hooks [1] of the Power Supply Harness Guide with the edge [A] of the side plate, and hook the hook [2] in the hole [B] on the side plate of the Low-voltage Power Supply PCB to install the guide.

- 7. Remove the Low-voltage Power Supply Unit [1].
 - 4 Screws [2]
 - 1 Hook [3]

Removing the DC Controller PCB

■ Preparation

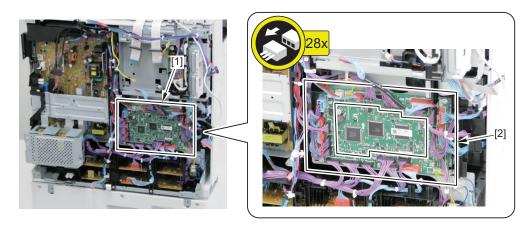

CAUTION:

"Before Parts Replacement" on page 357

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 3. "Removing the Main Controller Unit" on page 220

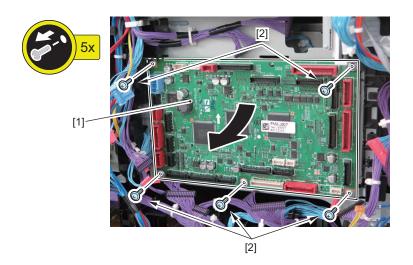

■ Procedure

- 1. Disconnect the connectors connected to the DC Controller PCB [1].
 - 28 Connectors [2]

2. Remove the DC Controller PCB [1].

• 5 Screws [2]

NOTE:

The completed assembly of the DC Controller PCB is shown below.

3. Actions after Parts

"During Parts Replacement" on page 357

Removing the Primary Transfer High-voltage PCB Unit

■ Preparation

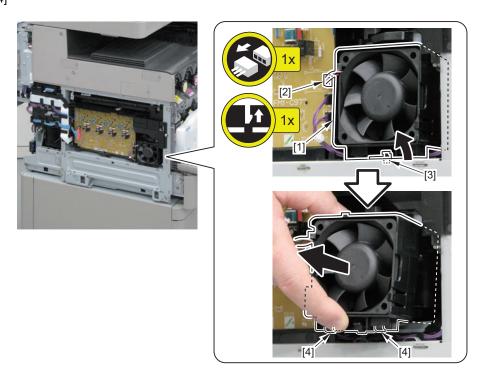

1. Pull out the ITB Unit for about 10 cm.

If your hand or the PCB comes in contact with the ITB Cleaning Unit when removing the Primary Transfer High-voltage PCB Unit in step 6, the ITB may be damaged.

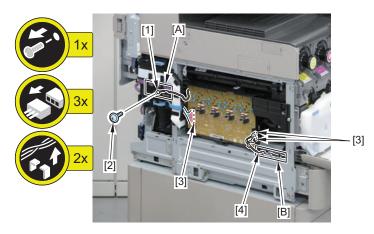

- 2. "Removing the Waste Toner Container" on page 253
- 3. "Removing the Drum Unit (Y/M/C/Bk)" on page 254
- 4. "Removing the Rear Cover 1" on page 164
- 5. "Removing the Left Lower Cover" on page 168

■ Procedure

- 1. Remove the Drum Unit Suction Cooling Fan [1].
 - 1 Connector [2]
 - 1 Claw [3]
 - 2 Hooks [4]

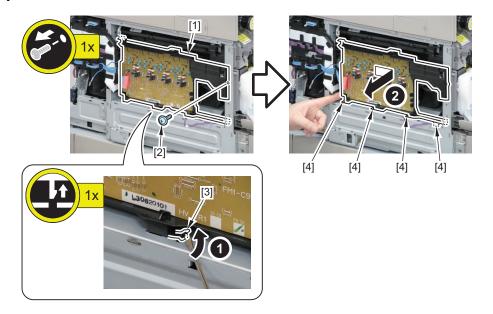

- 2. Remove the round shape terminal [1].
 - 1 Screw [2]
 - · Harness Guide [A]
- 3. Disconnect the 3 connectors [3], and free the harness [4] from the Harness Guide [B].

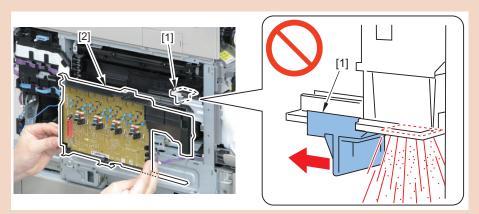

4. Remove the Primary Transfer High-voltage PCB Unit [1].

- 1 Screw [2]
- 1 Claw [3]
- 4 Hooks [4]

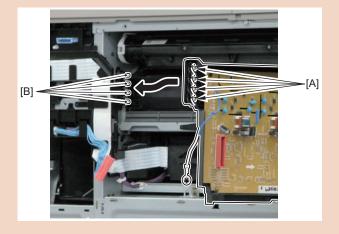

CAUTION:

• When disassembling/assembling, be sure to handle carefully so as to not scatter toner since the Collection Mouth [1] of the Waste Toner Container is located behind the Primary Transfer High-voltage PCB Unit [2].

• When assembling, the contact point [A] of the Primary Transfer High-voltage PCB Unit must be contacted with the 4 Contact Springs [B] of the High-voltage Main Guide.

Actions after assembly

Execute Auto Adjust Gradation.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust

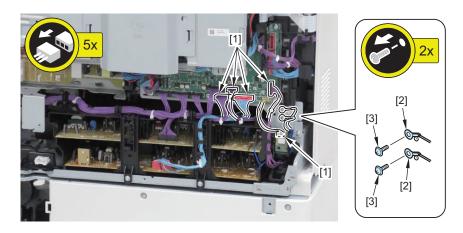

Removing the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit

■ Preparation

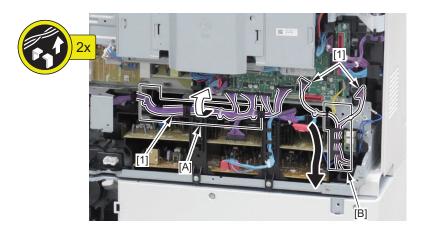

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the All-night Power Supply PCB Unit" on page 246

■ Procedure

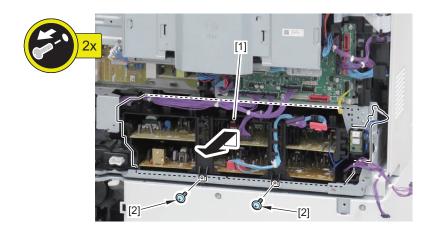

- 1. Remove the 5 connectors [1] and the 2 round shape terminals [2].
 - 2 Screws [3]

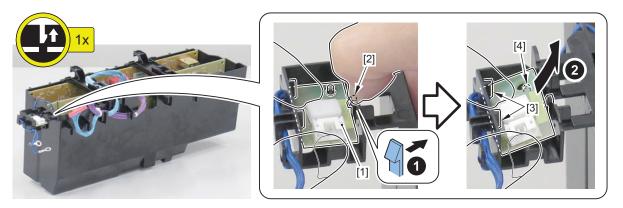

2. Free the harness [1] from the Harness Guide [A] and [B].

- 3. Remove the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit [1].
 - 2 Screws [2]

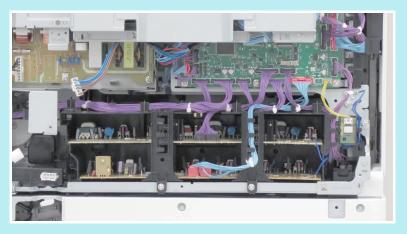

- 4. Be sure to remove the Environment Sensor [1] when replacing the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit.
 - 1 Claw [2]
 - 2 Hooks [3]
 - 1 Boss [4]

NOTE:

- Be sure to install the removed Environment Sensor after replacing the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit.
- The completed assembly of the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit is shown below.

Actions after assembly

Execute Auto Adjust Gradation.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust

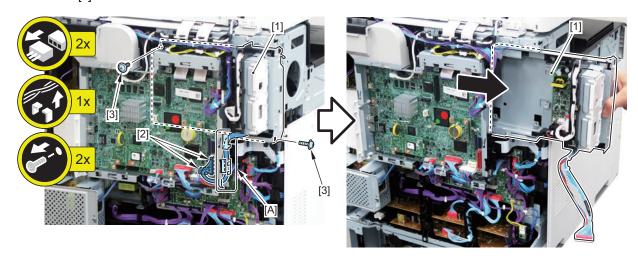

Removing the Fax Unit

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

■ Procedure

- 1. Remove the Fax Unit [1].
 - 2 Connectors [2]
 - Harness Guide [A]
 - 2 Screws [3]

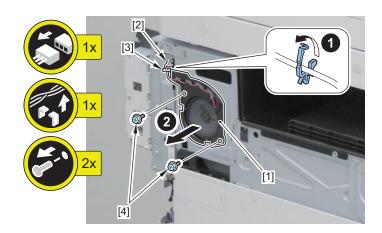

Removing the Fax Speaker Unit

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168

■ Procedure

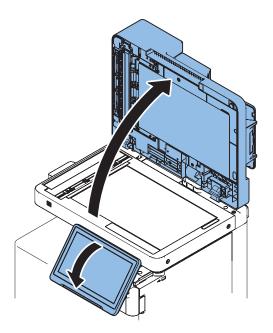

- 1. Remove the FAX Speaker Unit [1].
 - 1 Connector [2]
 - 1 Wire Saddle [3]
 - 2 Screws [4]

Removing the Control Panel Unit

■ Procedure

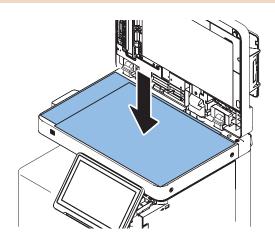

1.

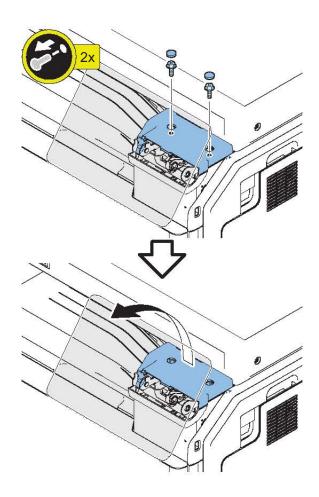

2.

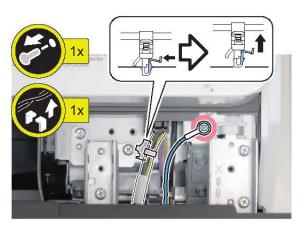

CAUTION:

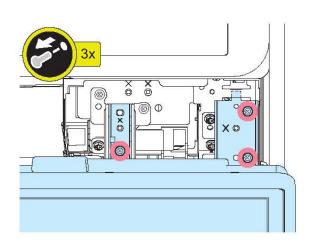

Be sure to place 5 or more sheets of paper to prevent damage.

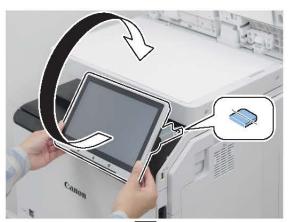

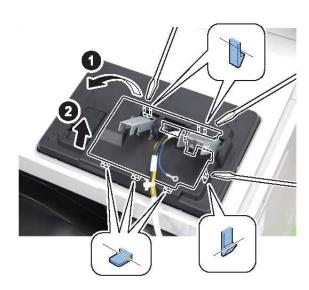

4.

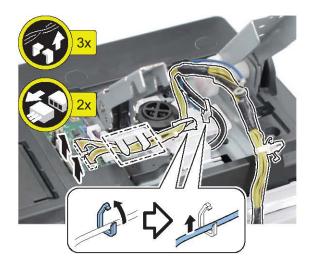

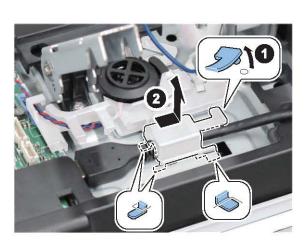

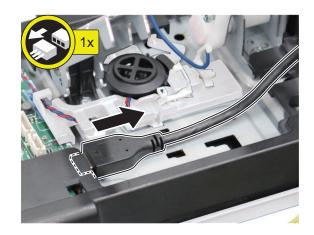

9.

11.

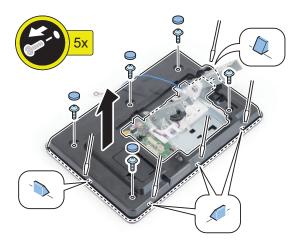

Removing the Control Panel CPU PCB/LCD Unit/LED PCB

■ Preparation

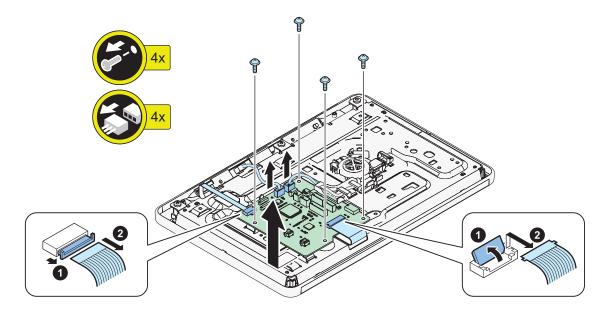

1. "Removing the Control Panel Unit" on page 185

■ Procedure

1.

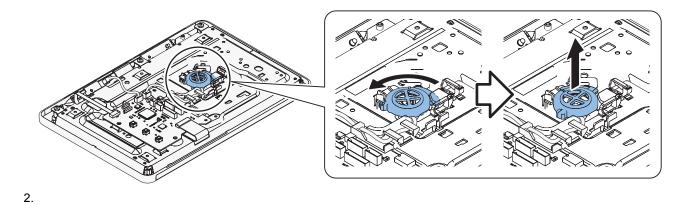

2. Removing the Control Panel CPU PCB

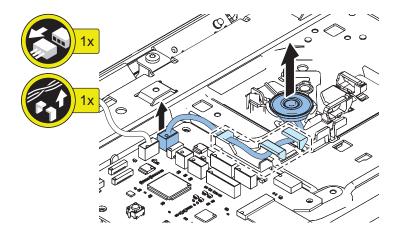

3. Removing the Speaker

1.

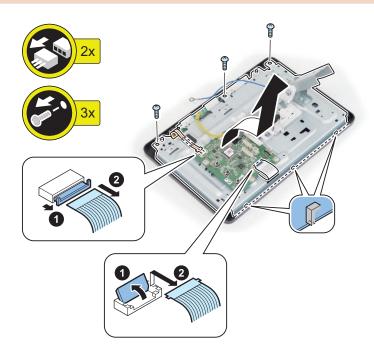

CAUTION:

- Do not directly touch the speaker.Do not damage the speaker.

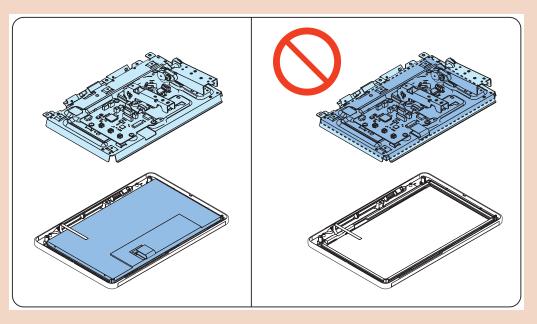

4. Removing the LCD Unit

CAUTION: Do not touch the surface of the Touch Panel [A] and LCD Unit [B] when assembling/disassembling.

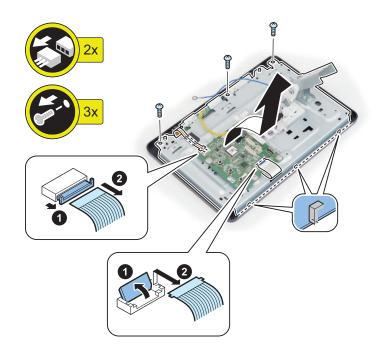

Remove the Touch Panel and the LCD Unit in one set.

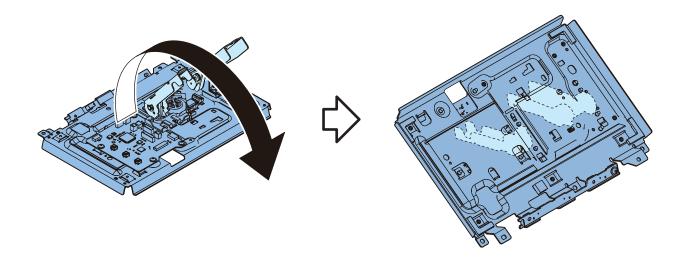

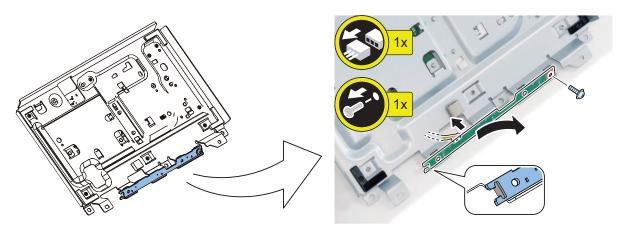

5. Removing the LED PCB

1.

2.

6 ■ Actions after Replacement: "Control Panel Unit" on page 364

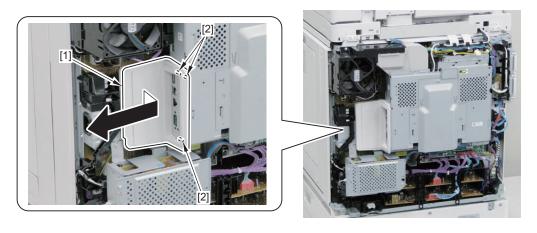

Removing the All-night Power Supply PCB Unit

■ Preparation

1. "Removing the Rear Cover 1" on page 164

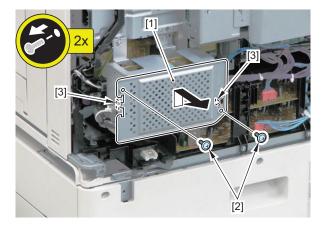

■ Procedure

- 1. Remove the Rear Cover 2 [1].
 - 3 Hooks [2]

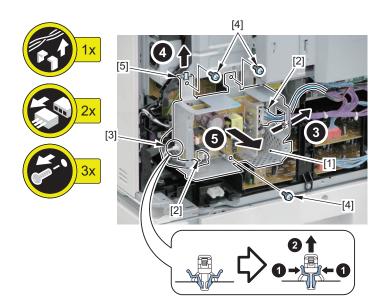

2. Remove the All-night Power Supply Cover [1].

- 2 Screws [2]
- 2 Hooks [3]

3. Remove the All-night Power Supply Unit [1].

- 2 Connectors [2]
- 1 Reuse Band [3]
- 3 Screws [4]
- 1 Hook [5]

Laser Exposure System

Removing the Laser Scanner Unit

■ Preparation

1. Pull out the ITB Unit for about 10 cm.

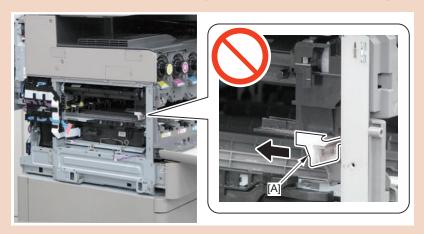

If your hand or the PCB comes in contact with the ITB Cleaning Unit when removing the Primary Transfer High-voltage PCB Unit in step 6, the ITB may be damaged.

- 2. "Removing the Waste Toner Container" on page 253
- 3. "Removing the Drum Unit (Y/M/C/Bk)" on page 254
- 4. "Removing the Rear Cover 1" on page 164
- 5. "Removing the Left Lower Cover" on page 168
- 6. "Removing the Primary Transfer High-voltage PCB Unit" on page 231

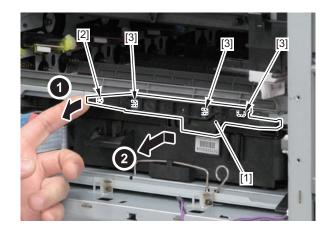

■ Procedure

CAUTION:

- · Be sure not to disassemble the Laser Scanner Unit because adjustment is required.
- · Disassembling the unit may cause functional problems.
- · Do not touch the toner outlet [A] because the toner may be scattered when disassembling/assembling.

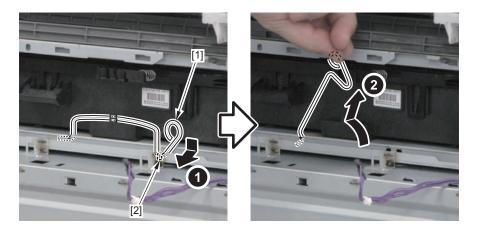

- 1. Remove the Shutter Link Unit [1].
 - 1 Boss [2]
 - 3 Hooks [3]

2. Remove the Laser Scanner Fixation Spring [1].

• 1 Hook [2]

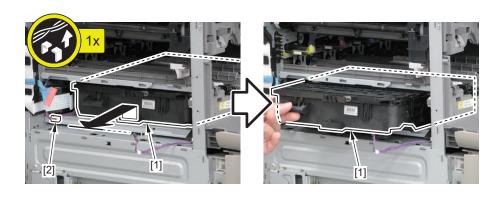

3. Pull out the Laser Scanner [1].

• 1 Edge Saddle [2]

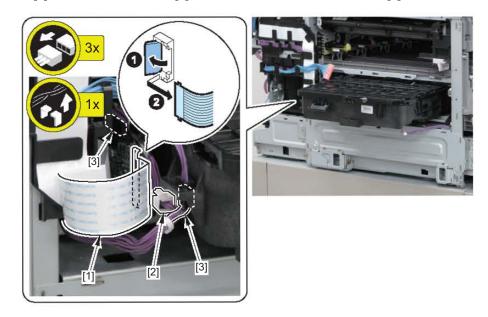

CAUTION:

Do not touch the PCB installed on the Laser Scanner Unit when disassembling/assembling.

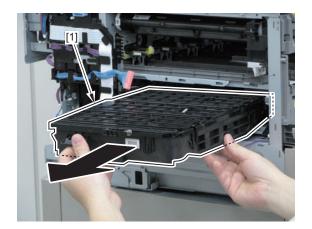

4. Free the Flat Cable [1] from the Wire Saddle [2], and disconnect the 2 connectors [3].

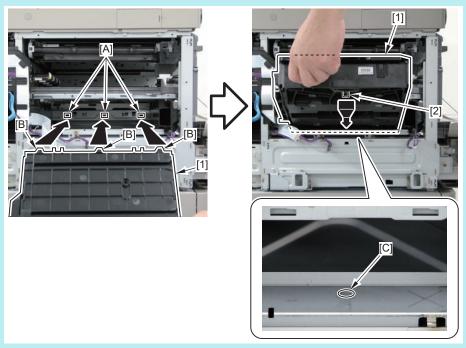

5. Remove the Laser Scanner Unit [1].

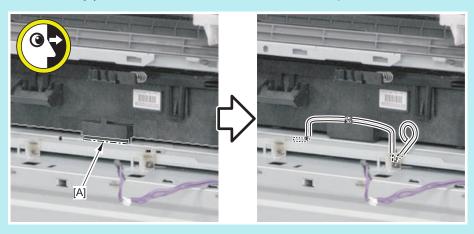

NOTE:

How to install the Laser Scanner Unit

- 1. Insert the Laser Scanner Unit [1] until it stops, and fit the 3 protrusions [B] of the Laser Scanner Unit into the 3 holes [A] of the plate.
- 2. Slightly pull the Laser Scanner Unit [1] toward the front, and fit the boss [2] into the hole [C] of the plate to install the unit.

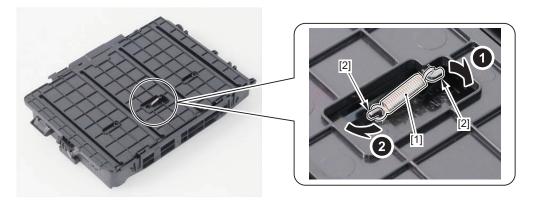

3. Check that the contact area [A] of the Laser Scanner Unit is in contact with the plate.

6. Remove the spring [1].

• 2 Hooks [2]

7. Remove the Dustproof Shutter [1].

• 4 Hooks [2]

Actions after assembly

Execute Auto Adjust Gradation and Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Image Formation System

Removing the Waste Toner Container

■ Procedure

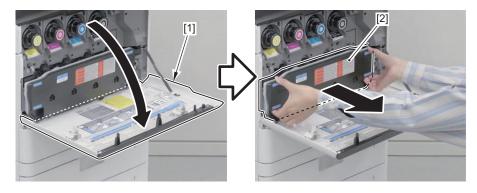

CAUTION:

If the Waste Toner Container is tilted while holding the shutter [1], toner [3] may spill out of the collection mouth [2] onto the floor.

Hold the Waste Toner Container horizontally when removing it from the host machine.

1. Open the Front Cover [1], and remove the Waste Toner Container [2].

Actions after Parts

1. When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode.
COPIER > COUNTER > DRBL-1 > WST-TNR

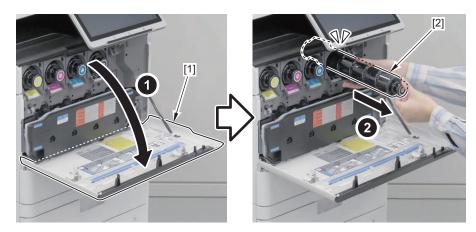

Removing the Toner Container (Y/M/C/Bk)

■ Subsequent Work

NOTE:

In this procedure, the procedure for the (Bk) color Toner Container Unit is described. Be sure to perform the same procedure for (Y/M/C) color.

1. Open the Front Cover [1], and then Remove the Toner Container (Bk) [2].

Removing the Drum Unit (Y/M/C/Bk)

■ Preparation

1. "Removing the Waste Toner Container" on page 253

■ Procedure

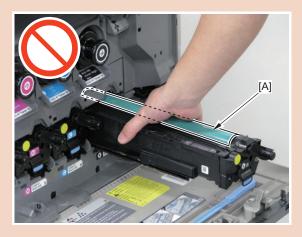

NOTE:

This procedure describes the steps for the Drum Unit (Bk). Perform the same procedure for (Y/M/C) color.

CAUTION:

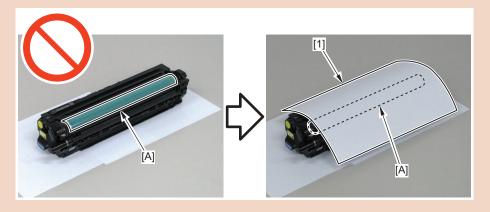

Touching the Drum Unit with hand may smear the Drum part [A] with fat.

This may cause soiled image due to the toner sticking to the fat smeared on the Drum. To prevent this, be sure not to touch the Drum part [A] with hand.

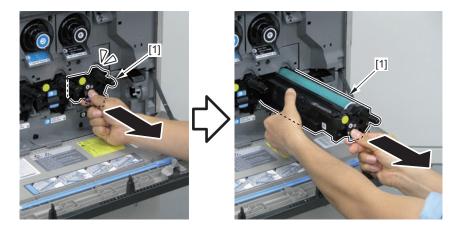

Exposing the Drum Unit to light for a long time may cause deterioration in sensitivity.

To prevent this, be sure to cover the Drum part [A] with paper to block light when the Drum Unit is removed.

1. Remove the Drum Cartridge[1].

CAUTION:

Handling of the Drum Unit at replacement

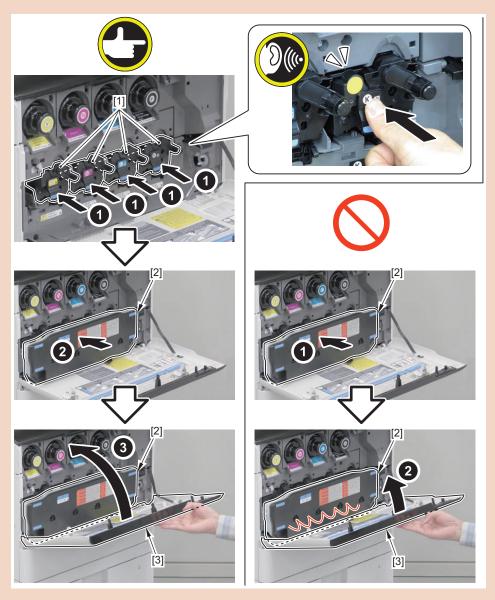

If a Drum Unit is vertically or horizontally kept for a long time, starter in the Developing Assembly in the unit is fixed. As a result, starter in the Developing Assembly does not circulate, and image failure may occur.

To prevent this, when replacing the Drum Unit with a new one, shake it well for 10 to 12 times as shown in the following figure to loosen the starter before inserting it to the host machine.

If the Waste Toner Container [2] sticks out if the Drum Unit [1], it is not installed properly to the Host Machine when installed. As a result, when closing the Front Cover [3], the Front Cover [3] interferes with the Waste Toner Container and cannot be closed in some cases.

To prevent this, be sure to install the Drum Unit [1] properly by inserting it until it stops when installing the Drum Unit [1] to the host machine.

■ Actions after assembly

Execute Auto Adjust Gradation.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust

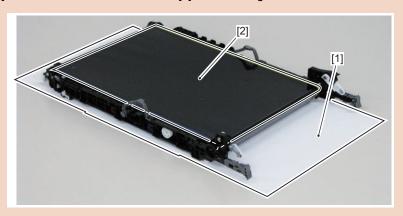

Removing the ITB Unit

■ Procedure

NOTE:

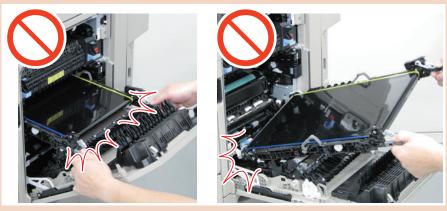

If durability levels differ between the ITB Unit and Secondary Transfer Outer Roller, color displacement may occur on the output image.

• Place the paper [1] on a flat surface so that the ITB [2] is not damaged.

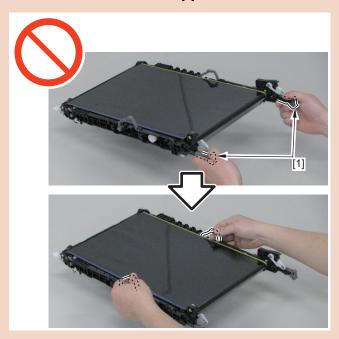

CAUTION:

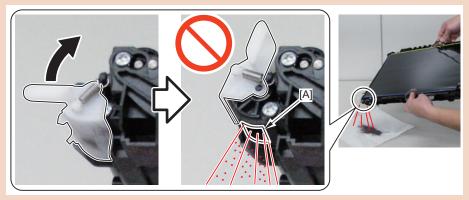

• Do not damage the ITB [1] when disassembling/assembling.

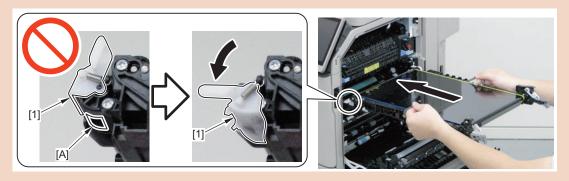

• When removing the ITB Unit, do not hold the 2 Push Levers [1] to hold the unit.

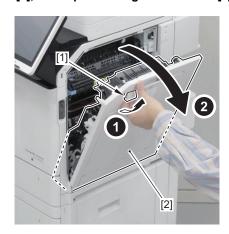

• Do not open the outlet [A] of the Transfer Cleaning Shutter when disassembling/assembling. Otherwise, toner may scatter.

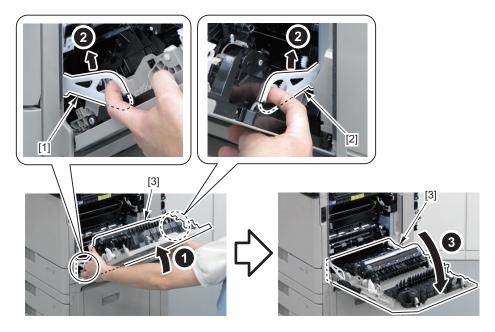

• Be sure to check that the outlet [A] is closed before storing the ITB Unit in the machine when assembling. There is a risk of damaging the ITB Unit if it is installed with the Transfer Cleaning Shutter [1] open.

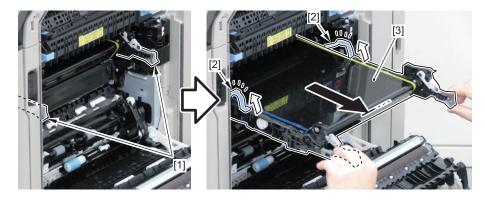

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

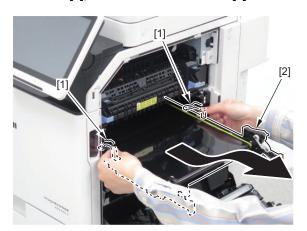

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

3. Hold the 2 Push Levers [1], and pull out the ITB Unit [3] to the position where the 2 handles [2] are lifted.

4. Change the place to hold to the 2 handles [1], and remove the ITB Unit [2].

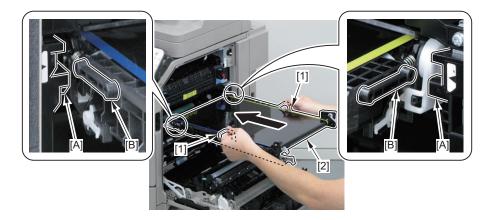

- 5. "Cleaning when installing/removing the ITB Unit" on page 327
- 6. "Cleaning the Registration Patch Sensor Unit" on page 328

■ Installing the ITB Unit

Procedure

1. Hold the 2 handles [1], align the 2 protrusions [B] of the ITB Unit [2] with the 2 grooves [A] of the rails of the ITB Unit, and then put the unit inside the machine.

2. Push the 2 Push Levers [2] of the ITB Unit [1] to install the ITB Unit.

CAUTION:

• When installing the ITB Unit, do not push it in the machine by pushing the ITB [1].

3. Close the Right Cover.

Actions after Parts

1. When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode.

COPIER > COUNTER > DRBL-1 > TR-BLT

CAUTION:

Be sure to clear the counter to avoid causing the transfer cleaning error.

Actions after assembly

Execute Auto Adjust Gradation and Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Registration Patch Sensor Unit

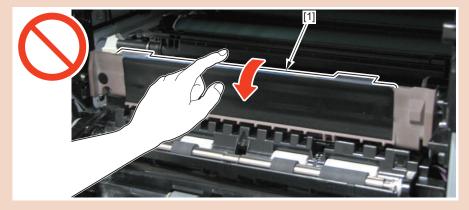

■ Preparation

- 1. "Removing the Waste Toner Container" on page 253
- 2. Remove the Drum Unit (Bk) "Removing the Drum Unit (Y/M/C/Bk)" on page 254.
- 3. "Removing the ITB Unit" on page 257

■ Procedure

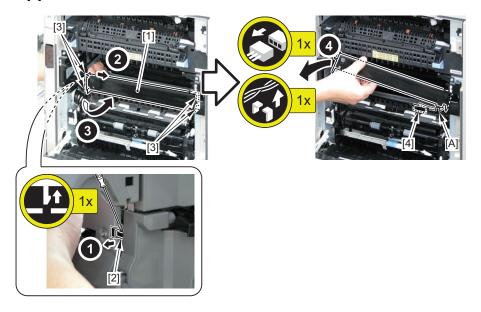

CAUTION:

- Do not disassemble the Registration Patch Sensor Unit because it requires adjustment.
- Do not bend the Plastic Film Sheet [1] when disassembling/assembling.

1. Remove the Registration Patch Sensor Unit [1].

- 1 Claw [2]
- 4 Shafts [3]
- 1 Connector [4]
- · Harness Guide [A]

2. Actions after Parts Replacement

"Actions after Parts Replacement" on page 361

Removing the Secondary Transfer Outer Roller Unit

■ Procedure

NOTE:

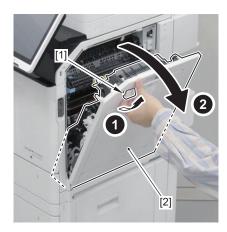

If durability levels differ between the ITB Unit and Secondary Transfer Outer Roller, color displacement may occur on the output image.

CAUTION:

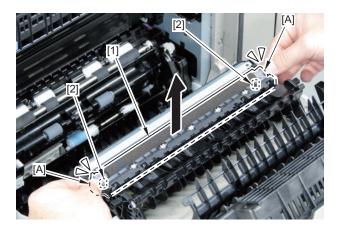

Be sure not to touch the surface [A] of the roller when disassembling/assembling.

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

- 2. Hold the 2 edges [A], and remove the Secondary Transfer Outer Roller Unit [1].
 - 2 Bosses [2]

■ Actions after Parts

1. When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode. COPIER > COUNTER > DRBL-1 > 2TR-ROLL

■ Actions after assembly

Execute Auto Adjust Gradation.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust

Removing the Secondary Transfer Outer Roller Guide Unit

■ Subsequent Work

CAUTION:

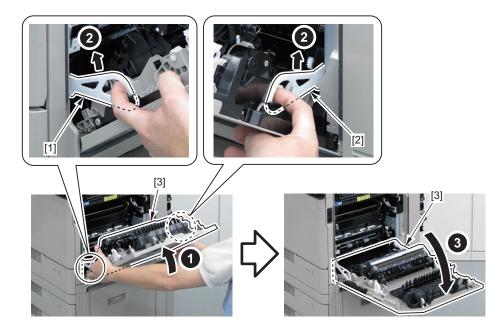

Be sure not to touch the surface [A] of the roller when disassembling/assembling.

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

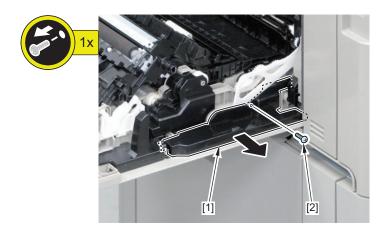

2. Release locks of the Right Cover Stopper (Front) [1] and Right Cover Stopper (Rear) [2], and then open the Right Cover Unit [3].

3. Remove the Right Cover Stopper Rear Holder [1].

• 1 Screw [2]

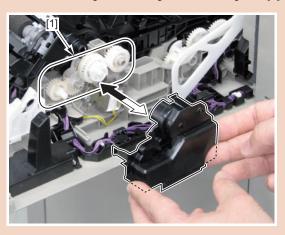

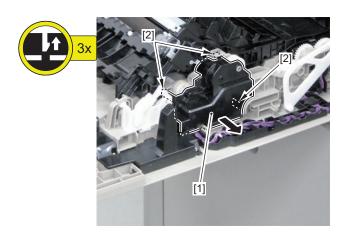

4. Remove the Duplex Gear Holder [1].

• 3 Claws [2]

CAUTION:

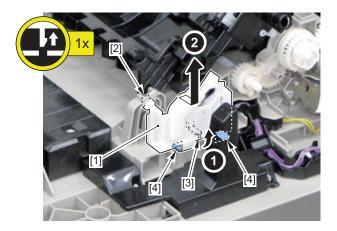

Be sure to perform work carefully so as not to change the arrangement of the gears [1] when disassembling/assembling.

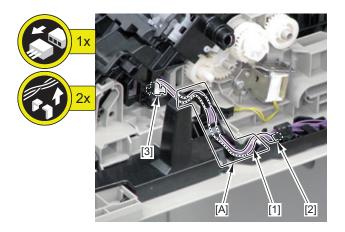

5. Remove the Lock Guide Rear [1].

- 1 Claw [2]
- 1 Boss [3]
- 2 Hooks [4]

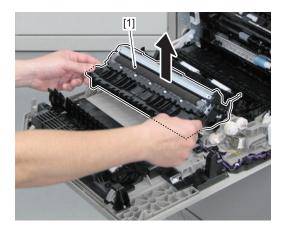

6. Remove the Arch Sensor Harness [1].

- 1 Connector [2]
- Harness Guide [A]
- 1 Reuse Band [3]

7. Remove the Secondary Transfer Outer Roller Guide Unit [1].

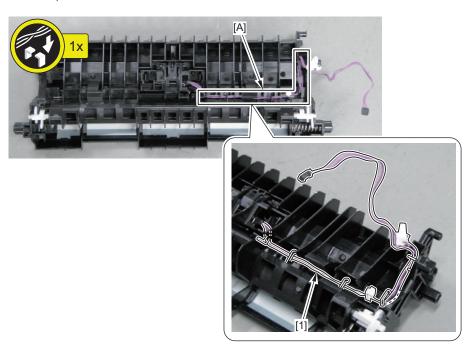

■ Installation

1. Check that the harness [1] is stored in the guide [A] of the Secondary Transfer Outer Roller Guide Unit.

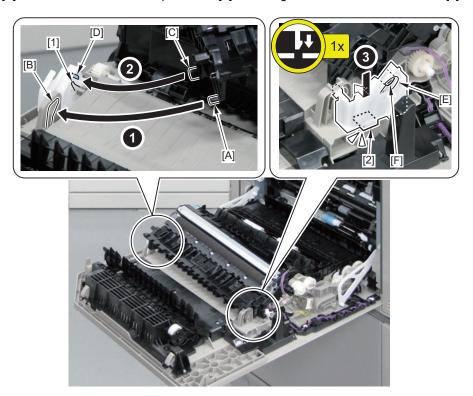

When it is not stored, paper skew may occur.

Related jam code: 00-0105, 00-0107

2. When assembling, insert the protrusion [A] of the Secondary Transfer Outer Roller Guid Unit into the groove [B] of the Right Cover Unit, and insert the protrusion [C] between the groove [D] of the Lock Guide and the spring [1] to install the unit.

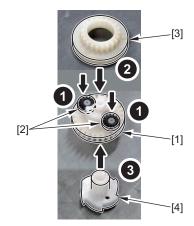

Align the groove [E] of the Lock Guide with the protrusion [F] of the Right Cover Unit to lock the claw [2].

■ Installing the Duplexing Drive Gear Unit

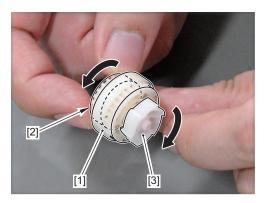

- 1. Attach the 2 small gears [2] to the gear [1].
- 2. Place the gear [3] on the top.

3. Attach the Planetary Gear [4] to the bottom.

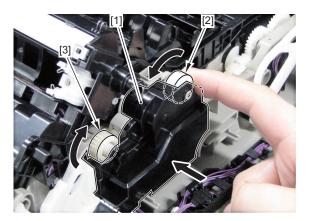

4. Check the assembled Gear Unit.

Hold the middle gear [1], and check that the gears [2] and [3] on both sides rotate together.

5. After attaching the Gear Cover [1] to the Right Cover Unit, check that the gear [3] rotates in the direction of the arrow when the gear [2] is rotated in the direction of the arrow.

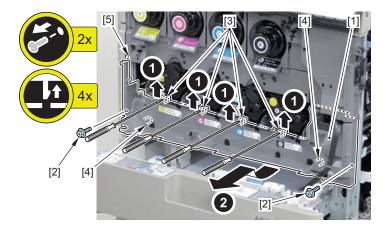

Removing the Registration Drive Unit

■ Preparation

- 1. "Removing the Front Cover" on page 163
- 2. "Removing the Right Front Cover" on page 169
- 3. "Removing the Waste Toner Container" on page 253

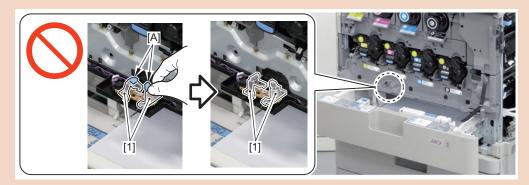

■ Procedure

- 1. Remove the Front Inner Lower Cover [1].
 - 2 Screws [2]
 - 4 Claws [3]
 - 2 Bosses [4]
 - 1 Hook [5]

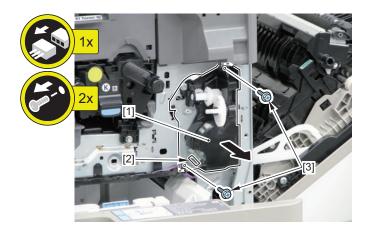

CAUTION:

- Be sure that the lens [1] of the Waste Toner Sensor PCB is not removed when installing the Front Inner Lower Cover.
- Do not touch the surface [A] of the lens.

2. Remove the Registration Drive Unit [1].

- 1 Connector [2]
- 2 Screws [3]

■ Actions after assembly

Execute Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

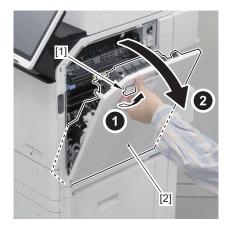

Removing the Main Drive Unit

■ Preparation

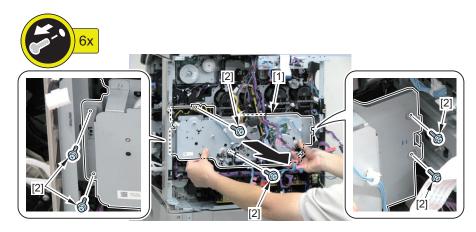

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230

■ Procedure

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

- 2. Remove the Main Drive Unit [1].
 - 6 Screws [2]

■ Actions after assembly

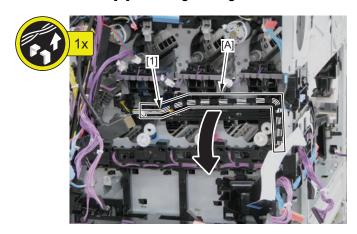

Execute Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Hopper Unit (Y/M/C/Bk)

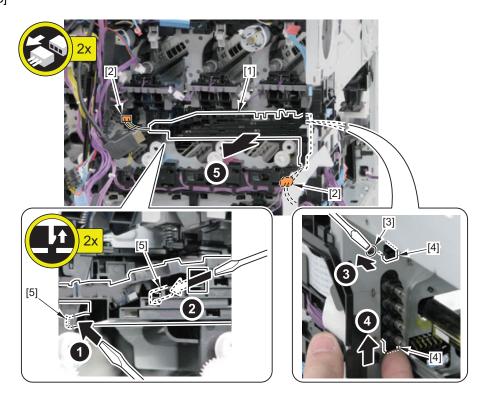

■ Preparation (for the Hopper Unit (Y/M/C))

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Main Drive Unit" on page 271
- 10. "Removing the Waste Toner Container" on page 253
- 11. Remove the toner container (The color to be removed) "Removing the Toner Container (Y/M/C/Bk)" on page 253.
- 12. Remove the Drum Unit (The color to be removed) "Removing the Drum Unit (Y/M/C/Bk)" on page 254.
- 13. "Removing the ITB Unit" on page 257
- 14. "Removing the Left Lower Cover" on page 168
- 15. "Removing the Primary Transfer High-voltage PCB Unit" on page 231
- 16. Free the harness [1] from the Harness Guide [A] of the High-voltage Contact Unit.

17. Remove the High-voltage Contact Unit [1].

- 2 Connector [2]
- 1 Boss [3]
- 2 Hooks [4]
- 2 Claws [5]

■ Procedure

NOTE:

In this procedure, the procedures for the Hopper Unit (Bk) are described. Perform the same procedure for removing the Hopper Unit (Y/M/C).

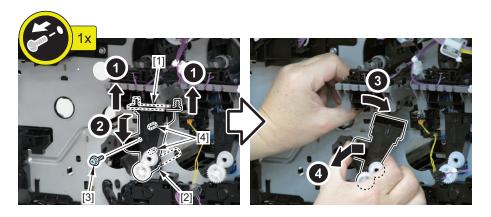

CAUTION:

Perform work carefully so as not to scatter the toner when disassembling/assembling.

- 1. Remove the Hopper Unit (Bk) [2] while holding the Open/Close Shutter [1].
 - 1 Screw [3]
 - 2 Bosses [4]

■ Actions after assembly

Execute Auto Adjust Gradation and Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

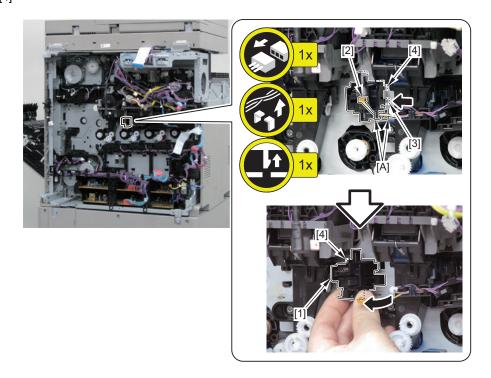

Removing the ITB Pressure Release Switch

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Main Drive Unit" on page 271

■ Procedure

- 1. Remove the ITB Pressure Release Switch [1].
 - 1 Connector [2]
 - · Harness Guide [A]
 - 1 Claw [3]
 - 2 Hooks [4]

Actions after assembly

Execute Auto Adjust Gradation and Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Bottle Drive Unit (Y/M/C/Bk)

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Delivery Tray" on page 180
- 10. Remove the toner container (color to be removed)"Removing the Toner Container (Y/M/C/Bk)" on page 253

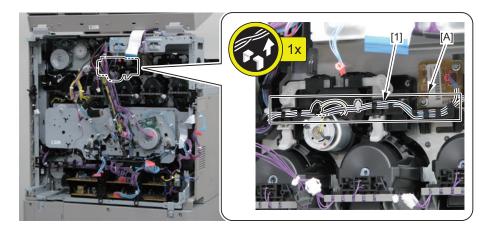

■ Procedure

NOTE:

In this procedure, the procedures for the Bottle Drive Unit (C Bk) are described. Perform the same procedure for removing the Bottle Drive Unit (Y M).

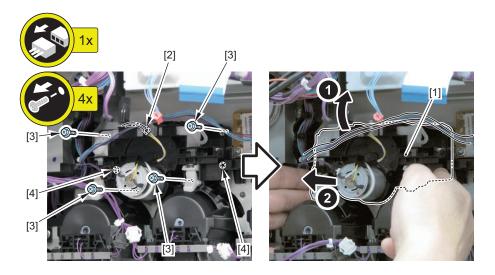

1. Free the Harness [1].

· Harness Guide [A]

2. Remove the Bottle Drive Unit (C Bk) [1].

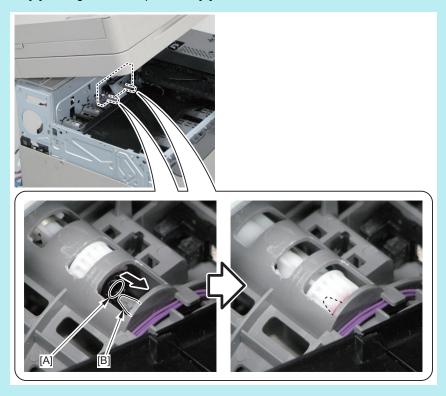

- 1 Connector [2]
- 4 Screws [3]
- 2 Bosses [4]

NOTE:

How to install the Bottle Drive Unit (C Bk)

Be sure to align the hole [A] of the gear with the protrusion [B] of the shaft to install the unit.

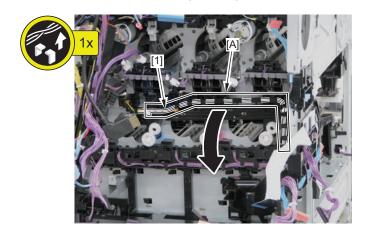

Removing the Toner Bottle Mount (Y/M/C/Bk)

■ Preparation (for the Toner Bottle Mount (Y/M/C))

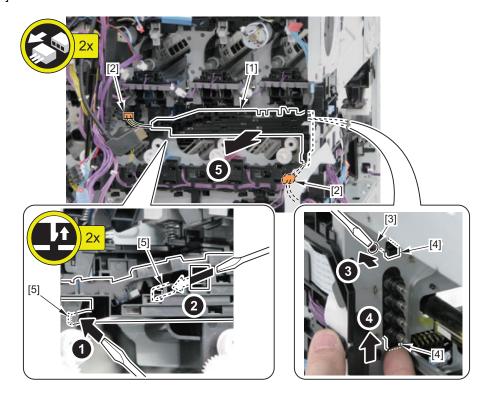

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218

- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Main Drive Unit" on page 271
- 10. "Removing the Waste Toner Container" on page 253
- 11. "Removing the Toner Container (Y/M/C/Bk)" on page 253
- 12. "Removing the Drum Unit (Y/M/C/Bk)" on page 254
- 13. "Removing the ITB Unit" on page 257
- 14. "Removing the Left Lower Cover" on page 168
- 15. "Removing the Primary Transfer High-voltage PCB Unit" on page 231
- 16. Free the harness [1] from the Harness Guide [A] of the High-voltage Contact Unit.

17. Remove the High-voltage Contact Unit [1].

- 2 Connector [2]
- 1 Boss [3]
- 2 Hooks [4]
- 2 Claws [5]

18. Remove the Hopper Unit (The color to be removed).

"Removing the Hopper Unit (Y/M/C/Bk)" on page 272

19. Remove the Bottle Drive Unit (The color to be removed).

"Removing the Bottle Drive Unit (Y/M/C/Bk)" on page 275

20. "Removing the Delivery Tray" on page 180

■ Preparation (for Toner Bottle Mount(Bk))

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Main Drive Unit" on page 271
- 10. "Removing the Waste Toner Container" on page 253
- 11. "Removing the Toner Container (Y/M/C/Bk)" on page 253
- 12. "Removing the Drum Unit (Y/M/C/Bk)" on page 254
- 13. "Removing the ITB Unit" on page 257
- 14. "Removing the Left Lower Cover" on page 168
- 15. "Removing the Primary Transfer High-voltage PCB Unit" on page 231
- 16. Removing the Hopper Unit (Bk)

"Removing the Hopper Unit (Y/M/C/Bk)" on page 272.

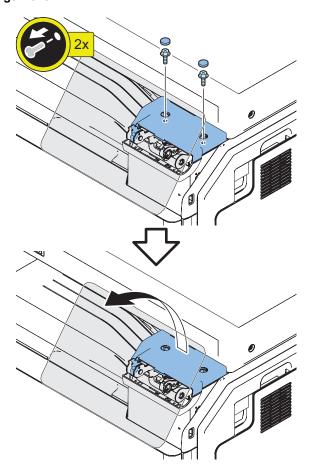

17. Removing the Bottle Drive Unit (CBk)

"Removing the Bottle Drive Unit (Y/M/C/Bk)" on page 275.

- 18. "Removing the Delivery Tray" on page 180
- 19. "Removing the Delivery/Reverse Unit" on page 291
- 20. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170
- 21. "Removing the Left Upper Cover" on page 172
- 22. Open the Control Panel Unit.

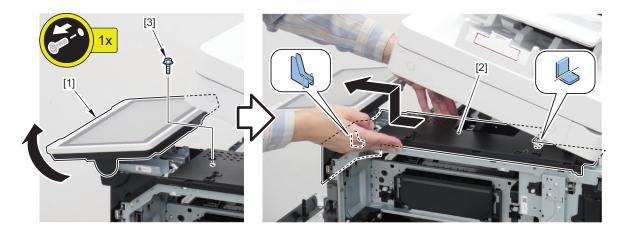

23. Remove the Control Panel Hinge Cover.

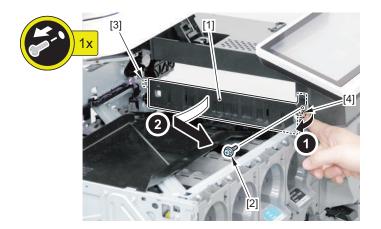

24. Lift the Control Panel Unit [1] upwards, and then move the Upper Cover [2].

• 1 Screw [3]

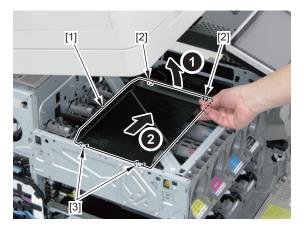

25. Remove the Delivery Guide.

- 1 Screw [2]
- 1 Hook [3]
- 1 Boss [4]

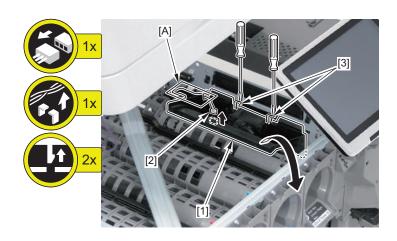

26. Remove the Delivery Tray Air Duct [1].

- 2 Bosses [2]
- 2 Hooks [3]

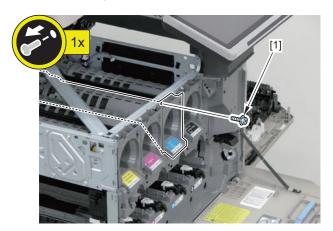

27. Remove the Delivery Cooling Fan Holder [1].

- 1 Connector [2]
- Harness Guide [A]
- 2 Claws [3]

28. Remove the screw [1] of the Toner Bottle Mount (C).

(This is because it may be hooked when removing the Toner Bottle Mount (Bk).)

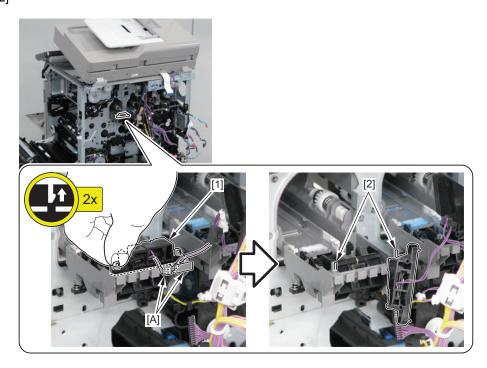

■ Procedure

NOTE:

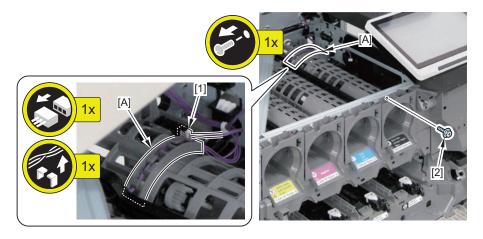

In this procedure describes the steps for the Toner Bottle Mount (Bk). Perform the same procedure for removing the Toner Bottle Mount (Y/M/C).

1. Remove the tag [1].

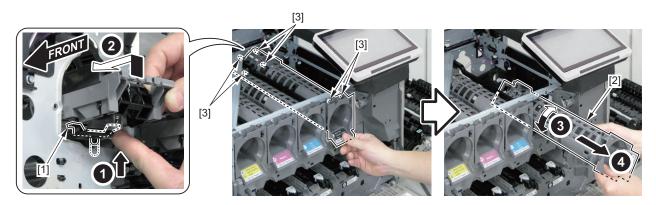

- · Harness Guide [A]
- 2 Claws [2]

2. Disconnect the connector [1], free the harness from the Harness Guide [A], and remove the screw [2].

- 3. Remove the Toner Bottle Mount (Bk) while pressing the shutter [1].
 - 6 Bosses [3]

■ Actions after assembly

Execute Auto Adjust Gradation and Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

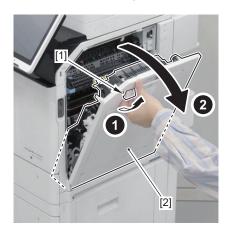

Fixing System

Removing the Fixing Assembly

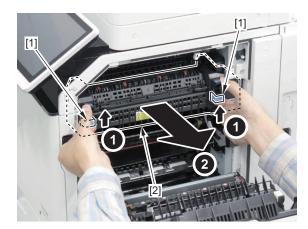

■ Procedure

A CAUTION:

- · Be sure to start removing the Fixing Assembly after it is cooled down enough. The Fixing Assembly right after printing may cause burn injury.
- 1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

2. Hold the 2 Release Levers [1] of the Fixing Assembly, and remove the Fixing Assembly [2].

NOTE:

How to install the Fixing Assembly

To install the Fixing Assembly, press the Release Lever parts [A] of the Fixing Assembly with fingers until they lock.

■ Actions after Parts

1. When the consumable parts have been replaced, be sure to clear the parts counter shown below in service mode. COPIER > COUNTER > DRBL-1 > FX-UNIT

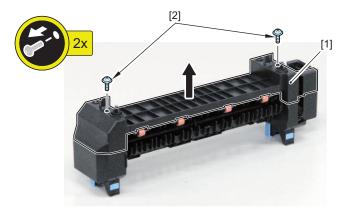

Removing the Fixing Pressure Roller Unit

■ Preparation

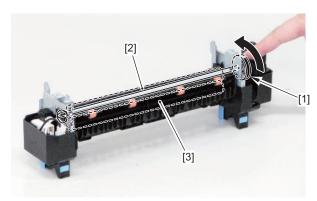

1. "Removing the Fixing Assembly" on page 284

■ Procedure

- 1. Remove the Fixing Assembly Cover [1].
 - 2 Screws [2]

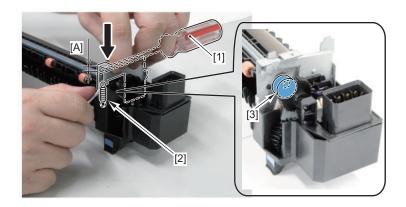

2. Turn the gear [1] to engage the Fixing Film Unit [2] and the Pressure Roller Unit [3].

3. Remove the 2 Fixing Pressure Plates (Front and Rear) [1].

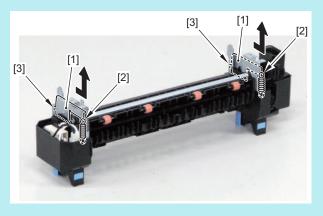

- 2 Pressure Springs [2]
- 2 Hooks [3]

NOTE:

Procedure when installing the Pressure Springs [2].

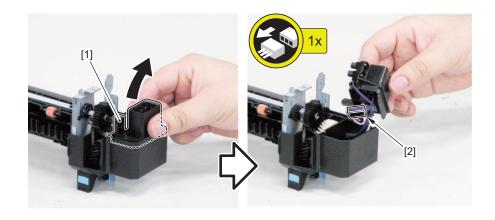

In order to facilitate installation of the Pressure Spring, rotate the gear to have the cam facing down, put a screwdriver [1] between the Fixing Pressure Plate (Front/Rear) and the Side Plate and hold down the Fixing Plate while installing the Pressure Spring.

4. Move the Drawer Connector Unit [1], and disconnect the connector [2].

CAUTION:

Rotate the gear and disconnect the connector while paying attention not to have the flag of the gear come in contact with the sensor.

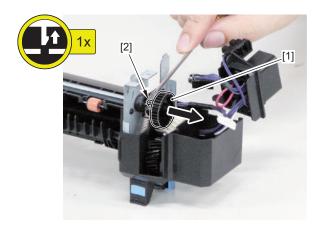

5. Remove the gear [1].

• 1 Claw [2]

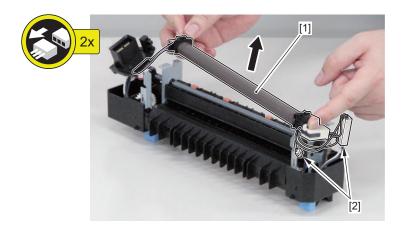

CAUTION:

Do not damage the claw [2] when removing the gear [1].

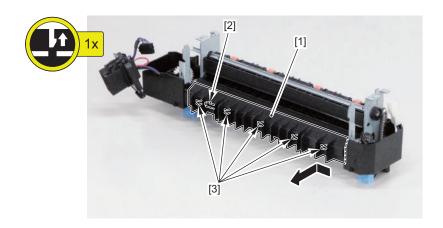

6. Remove the Fixing Film Unit [1].

• 2 Connectors [2]

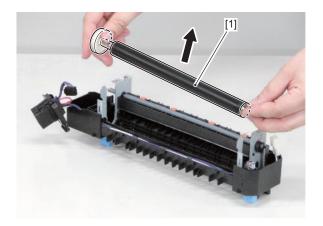

7. Remove the Fixing Inlet Guide [1].

- 1 Claw [2]
- 5 Hooks [3]

8. Remove the Pressure Roller Unit [1].

NOTE:

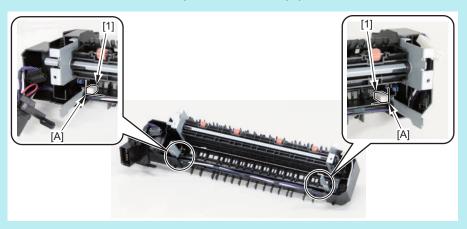

Actions at installation

• Apply grease (MOLYKOTE HP-300 GREASE: QY9-0035) to the 2 locations [1] where the bearings of a new Pressure Roller is installed.

• Be sure to affix felt [1] to the 2 [A] parts of the Fixing Assembly.

(If felt is already affixed, remove the old felt, clean the portion with lint-free paper moistened with alcohol, and affix new felt.)

Removing the Fixing Drive Unit

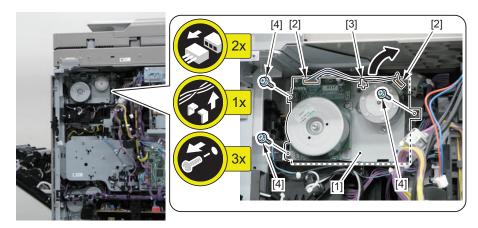

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 3. "Removing the Main Controller Unit" on page 220
- 4. "Removing the Low-voltage Power Supply Unit" on page 225

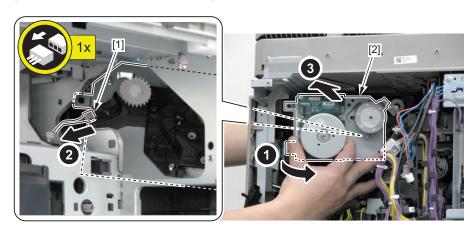

- 5. "Removing the Fixing Assembly" on page 284
- 6. "Removing the Delivery/Reverse Unit" on page 291

■ Procedure

1. Disconnect the 2 connectors [2], free the cable from the Reuse Band [3] and remove the 3 screws [4], all of which are of the Fixing Drive Unit [1].

2. Remove the Fixing Drive Unit [2] while disconnecting the inner connector [1].

Pickup/Feed System

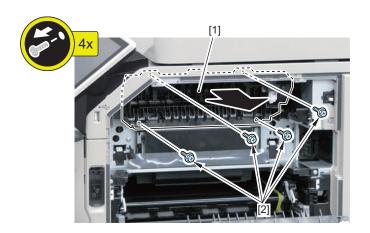

Removing the Delivery/Reverse Unit

■ Preparation

1. "Removing the Fixing Assembly" on page 284

■ Subsequent Work

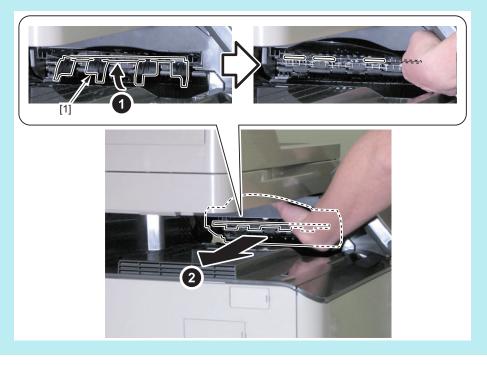

- 1. Remove the Delivery/Reverse Unit [1].
 - 4 Screws [2]

NOTE:

How to assemble the Delivery/Reverse Unit:

Lift the Paper Full Detection Flag [1] upwards to prevent it from being damaged when assembling the unit.

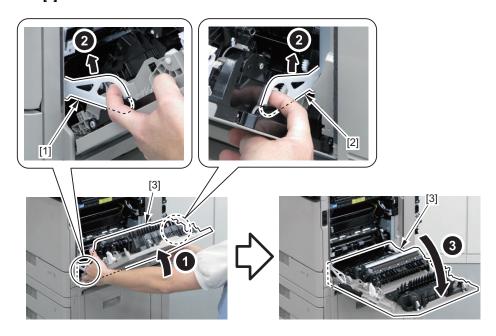

■ Procedure

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

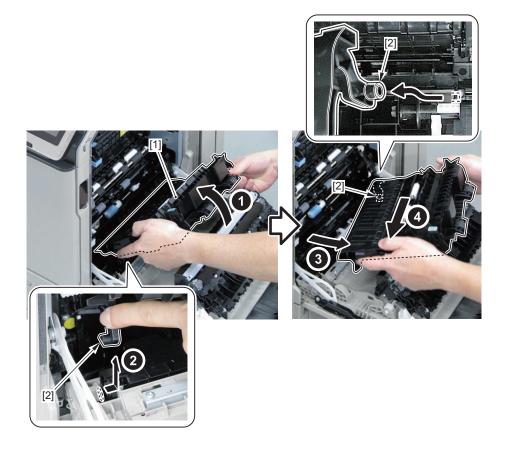

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

3. Remove the Right Inner Cover Unit [1].

• 2 Shafts [2]

■ Actions after assembly

Execute Auto Correct Color Mismatch.

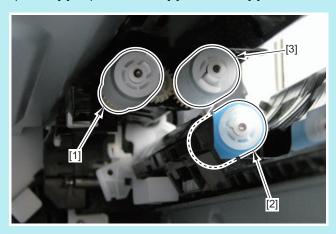

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Cassette Pickup Roller/Cassette Separation Roller/Cassette Feed Roller

■ Procedure

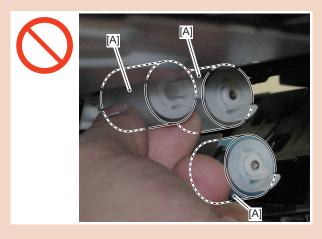

NOTE:

The layout for the Cassette Pickup Roller [1] /Separation Roller [2] /Feed Roller [3] is shown below.

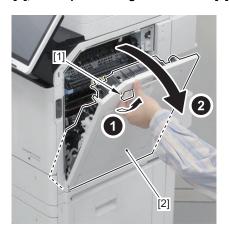

CAUTION:

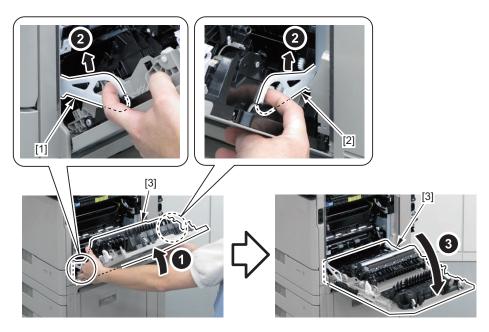

Be sure not to touch the surface [A] of the roller when disassembling/assembling.

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

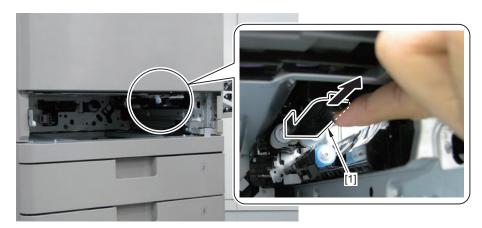

3. Remove the cassette [1].

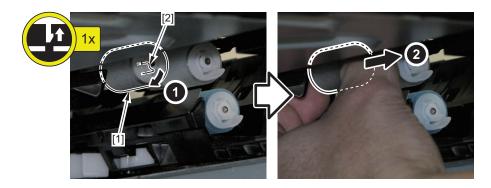

• When removing the Cassette Pickup Roller

1. Move the Pickup Guide Holder [1].

2. Remove the Cassette Pickup Roller [1].

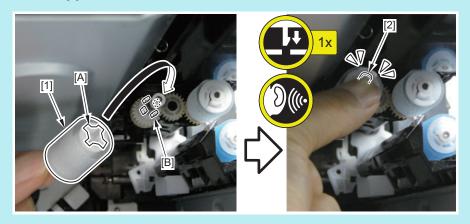

• 1 Claw [2]

NOTE:

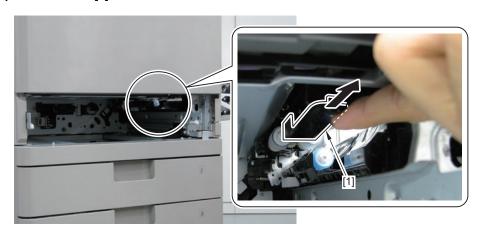

How to install the Cassette Pickup Roller

- Be sure to align the groove [A] of the Cassette Pickup Roller [1] with the protrusion [B] of the gear to install the roller.
- Be sure to hook the claw [2].

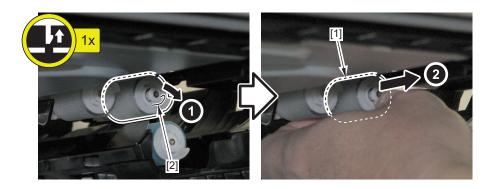

• When removing the Cassette Feed Roller

1. Move the Pickup Guide Holder [1].

2. Remove the Cassette Feed Roller [1].

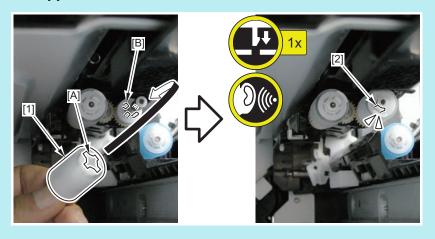

• 1 Claw [2]

NOTE:

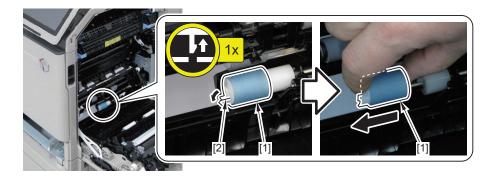

How to install the Cassette Feed Roller

- Be sure to align the groove [A] of the Cassette Feed Roller [1] with the protrusion [B] of the coupling to install the roller.
- Be sure to hook the claw [2].

When Removing the Cassette Separation Roller

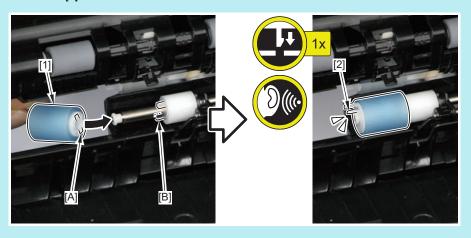

- 1. Remove the Cassette Separation Roller [1].
 - 1 Claw [2]

NOTE:

How to install the Cassette Separation Roller

- Be sure to align the groove [A] of the Cassette Separation Roller [1] with the protrusion [B] of the coupling to install the roller.
- · Be sure to hook the claw [2].

Actions after assembly

Execute Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Multi-purpose Tray Pickup Roller /Multi-purpose Tray Separation Roller /Multi-purpose Tray Feed Roller

■ Preparation

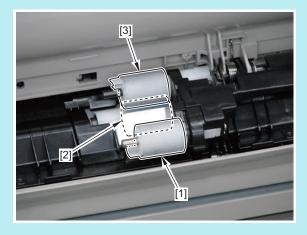

1. "Removing the Multi-purpose Tray" on page 179

(When the Multi-purpose Tray is removed, it broadens the working space and makes it easier to work.)

■ Procedure

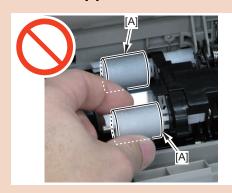

NOTE:

The layout for the Cassette Pickup Roller [1] /Separation Roller [2] /Feed Roller [3] is shown below.

CAUTION:

Be sure not to touch the surface [A] of the roller when disassembling/assembling.

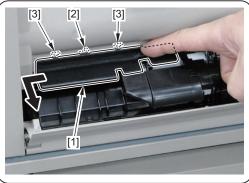

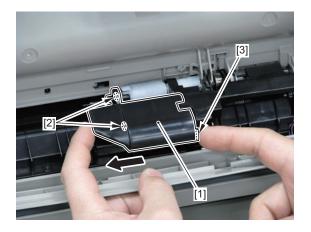

• Disassembling Procedure

- 1. Remove the Multi-purpose Tray Roller Holder 1 [1].
 - 1 Boss [2]
 - 2 Hooks [3]

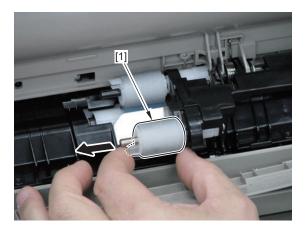

- 2. Remove the Multi-purpose Tray Roller Holder 2 [1].
 - 2 Shafts [2]
 - 1 Hook [3]

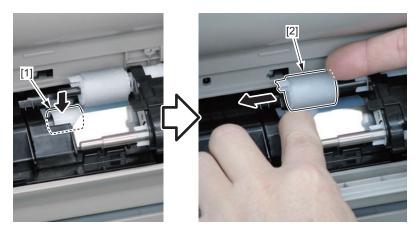

When removing the Multi-purpose Tray Pickup Roller

3. Remove the Multi-purpose Tray Pickup Roller [1].

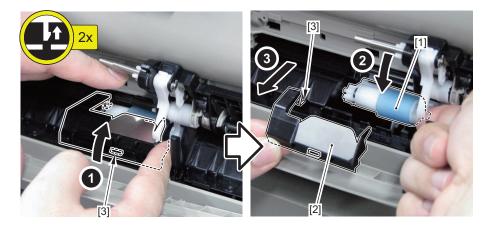

When removing the Multi-purpose Tray Feed Roller

4. Remove the Multi-purpose Tray Feed Roller [2] while pressing the Torque Limiter [1].

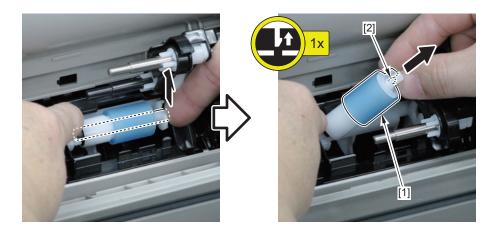

When removing the Multi-purpose Tray Separation Roller

- 5. Remove the Multi-purpose Feed Roller Guide [2] while pressing the Multi-tray Separation Roller[1].
 - 2 Claws [3]

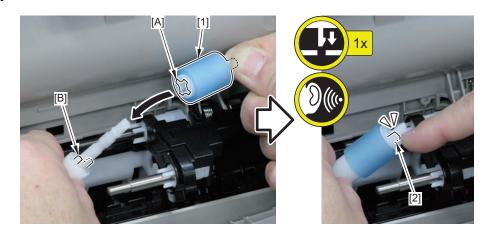

- 6. Remove the Multi-purpose Tray Separation Roller [1].
 - 1 Claw [2]

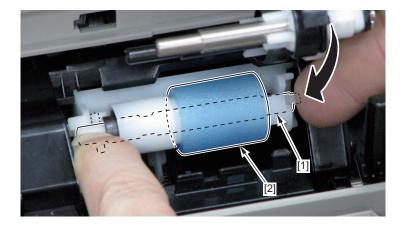

• Assembling Procedure

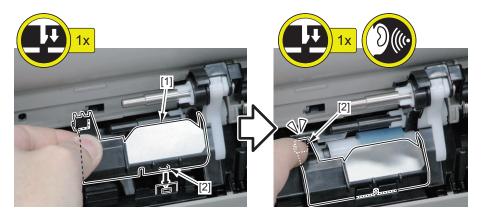

- 1. Align the groove [A] of the Multi-purpose Tray Separation Roller [1] with the protrusion [B] of the Torque Limiter to install.
 - 1 Claw [2]

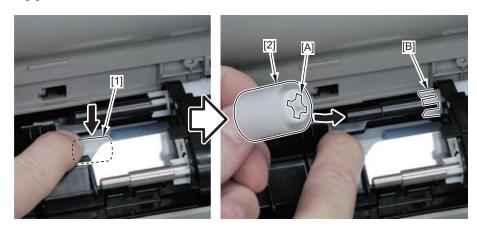

2. Store the Multi-purpose Tray Separation Roller [2] while paying attention not to remove its shaft [1].

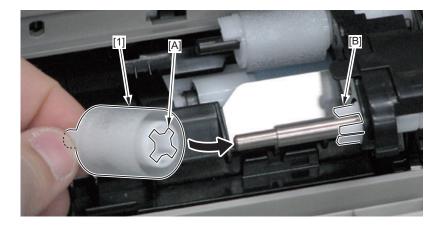

- 3. Install the Multi-purpose Tray Feed Guide [1].
 - 2 Claws [2]

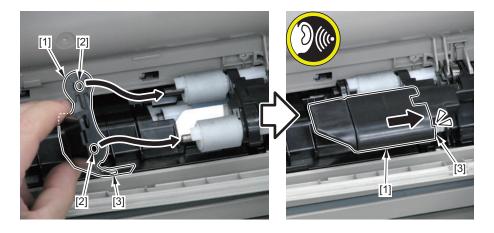

4. Align the groove [A] of the Multi-purpose Tray Feed Roller [2] with the protrusion [B] of the coupling while pressing the Torque Limiter [1] to install.

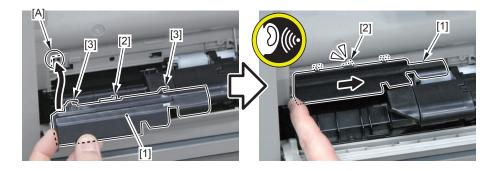

5. Align the groove [A] of the Multi-purpose Tray Pickup Roller [1] with the protrusion [B] of the coupling to install.

- 6. Install the Multi-purpose Tray Roller Holder 2 [1].
 - 2 Shaft Holes [2]
 - 1 Hook [3]

- 7. Align the Multi-purpose Tray Roller Holder 1 [1] to the corner [A] for installation.
 - 1 Boss [2]
 - 2 Hooks [3]

■ Reassembling when the Multi-purpose Tray Separation Roller Shaft is detached

NOTE:

The following describes the state in which the Multi-purpose Tray Separation Roller Shaft is detached.

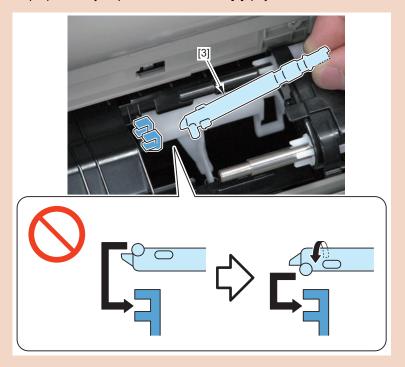

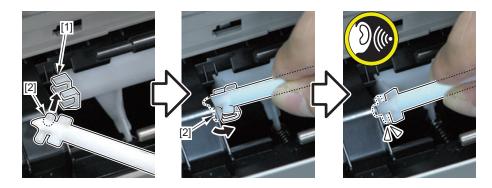

Procedure

1. Hook the 2 shafts [2] on the 2 hooks [1].

CAUTION:

When assembling the Multi-purpose Tray Separation Roller Shaft [3], pay attention to the direction of installing it.

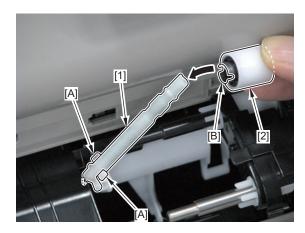

2. Assemble the Torque Limiter [2] on the Multi-purpose Tray Separation Roller Shaft [1].

CAUTION:

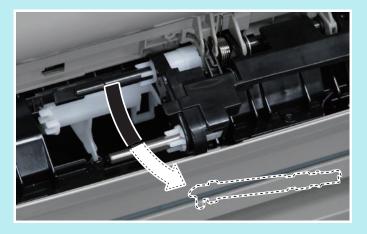

Be sure to align the groove [B] of the Torque Limiter [2] with the protrusion [A] of the Multi-purpose Tray Separation Roller Shaft [1] to assemble them.

■ Reassembling when the Multi-purpose Tray Separation Roller Shaft is detached and dropped inside the host machine

NOTE:

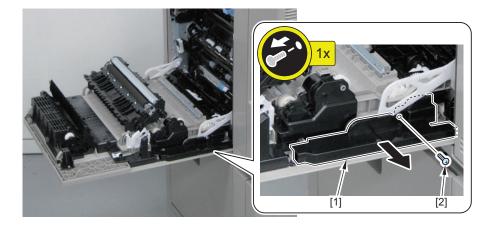

The following describes the state in which the Multi-purpose Tray Separation Roller Shaft is detached and dropped inside the host machine.

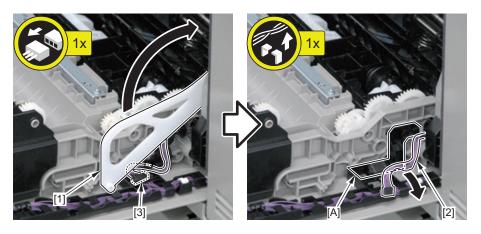

- Preparation
- 1. "Removing the Right Inner Cover Unit" on page 292

Procedure

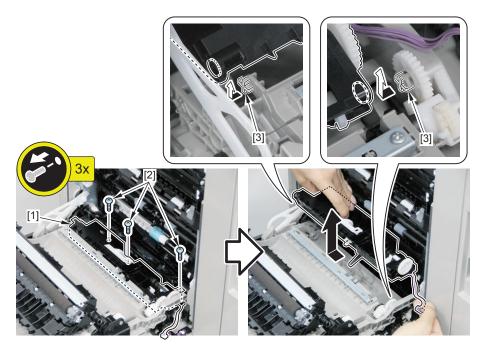

- 1. Remove the Right Cover Stopper Rear Holder [1].
 - 1 Screw [2]

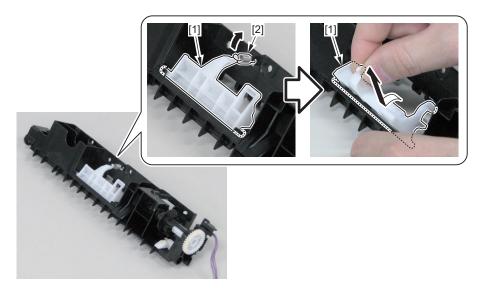

- 2. Lift the Right Cover Stopper Rear [1], and remove the Sensor Harness [2].
 - 1 Connector [3]
 - · Harness Guide [A]

- 3. Remove the Multi-purpose Tray Separation Unit [1].
 - 3 Screws [2]
 - 2 Bosses [3]

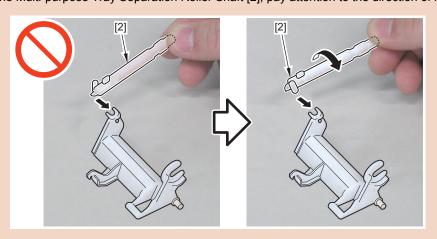

- 4. Remove the Multi-purpose Tray Separation Roller Holder [1].
 - 1 Spring [2]

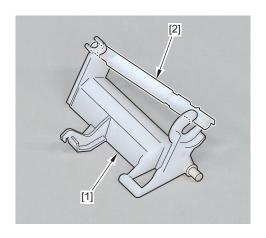

5. Assemble the Multi-purpose Tray Separation Roller Shaft [2] on the Multi-purpose Tray Separation Roller Holder [1].

CAUTION:

When assembling the Multi-purpose Tray Separation Roller Shaft [2], pay attention to the direction of installing it.

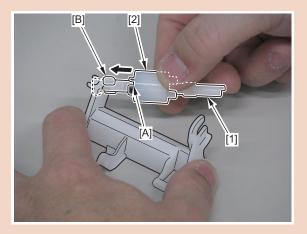

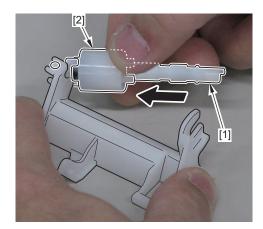

6. Assemble the Torque Limiter [2] on the Multi-purpose Tray Separation Roller Shaft [1].

CAUTION:

Be sure to align the groove [A] of the Torque Limiter [2] with the protrusion [B] of the Multi-purpose Tray Separation Roller Shaft [1] to assemble.

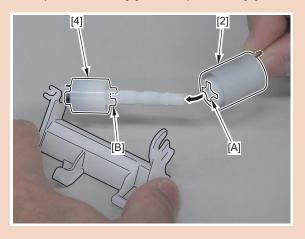

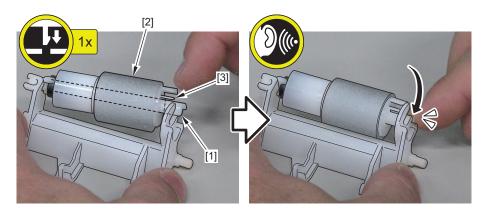

7. Assemble the Separation Roller [2] on the Multi-purpose Tray Separation Roller Shaft [1].

• 1 Claw [3]

CAUTION:

Be sure to align the groove [A] of the Separation Roller [2] with the protrusion [B] of the Torque Limiter [4] to assemble.

Actions after assembly

Execute Auto Correct Color Mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Removing the Registration/Pickup Unit

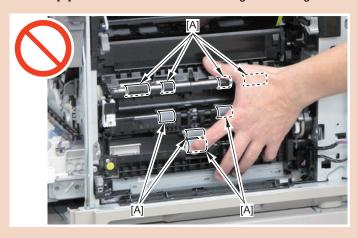

Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170
- 3. "Removing the Right Cover Unit" on page 173
- 4. "Removing the Front Cover" on page 163
- 5. "Removing the Right Front Cover" on page 169
- 6. "Removing the Waste Toner Container" on page 253
- 7. "Removing the Registration Drive Unit" on page 269

■ Procedure

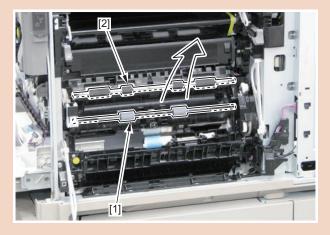

CAUTION:

• Be sure not to touch the surface [A] of the roller when disassembling/assembling.

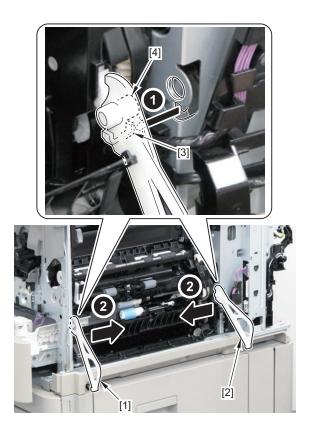

CAUTION:

• If the Registration Roller [2] and the Pre-registration Roller [1] are replaced separately, not simultaneously, it may generate a difference in feeding speed and cause feeding problems such as geometrical characteristics and jams.

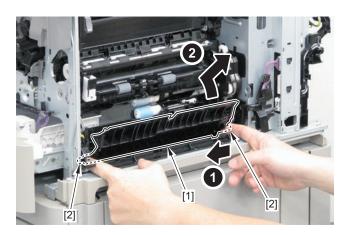

- 1. Remove the Right Cover Stopper Front [1] and the Right Cover Stopper Rear [2].
 - 2 Hooks [3]
 - 2 Shafts [4]

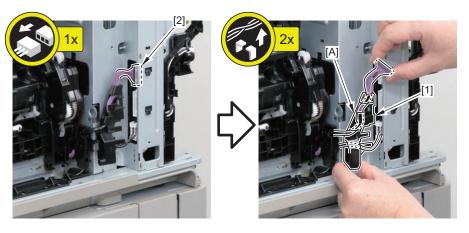

2. Remove the Swing Guide [1].

• 2 Shafts [2]

3. Remove the Right Cover Harness Guide [1].

- 1 Connector [2]
- · Harness Guide [A]

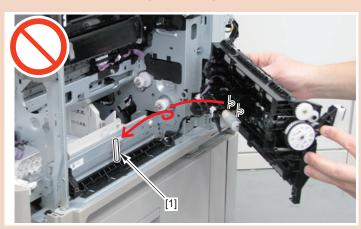

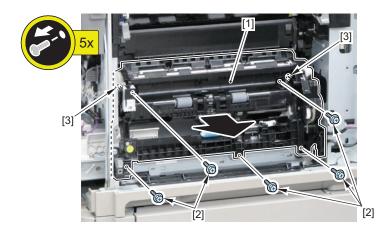

4. Remove the Registration/Pickup Unit [1].

- 5 Screws [2]
- 2 Bosses [3]

CAUTION:

Be careful not to drop the shaft [1] when disassembling/assembling.

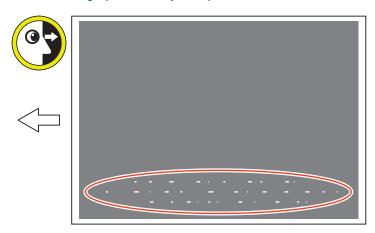

■ Actions after assembly

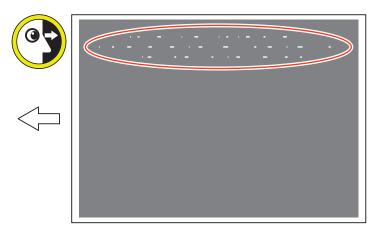

Execute Auto Correct Color Mismatch.
Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Procedure after replacement When images with uneven density (white spots) are generated after replacing the Registration Unit

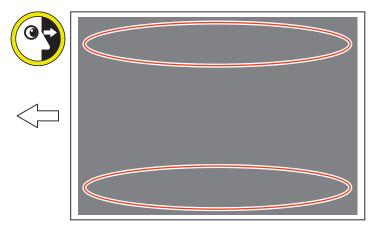

■ Image with uneven density (white spots) on the front side

■ Image with uneven density (white spots) on the rear side

- Test Print (output of halftone).
 Service mode: Select 5 for COPIER > TEST > PG > TYPE.
- 2. Check if there is no image with uneven density (white spots).

3. Perform the following remedy when images with uneven density (white spots) are generated when executing the service mode.

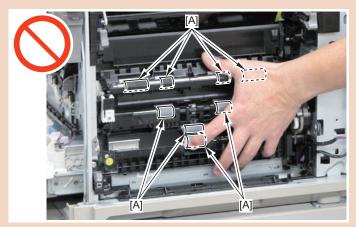

■ Adjusting the Registration/Pickup Unit

Preparation

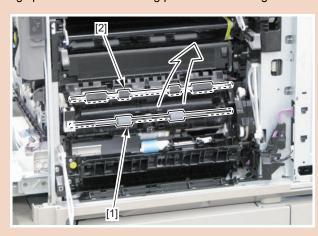

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Right Rear Cover/Right Rear Lower Cover" on page 170
- 3. "Removing the Right Cover Unit" on page 173
- 4. "Removing the Front Cover" on page 163
- 5. "Removing the Right Front Cover" on page 169
- 6. "Removing the Waste Toner Container" on page 253
- 7. "Removing the Registration Drive Unit" on page 269

CAUTION:

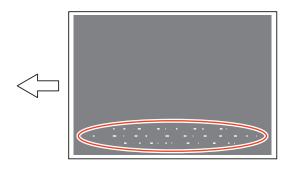

• Be sure not to touch the surface [A] of the roller when disassembling/assembling.

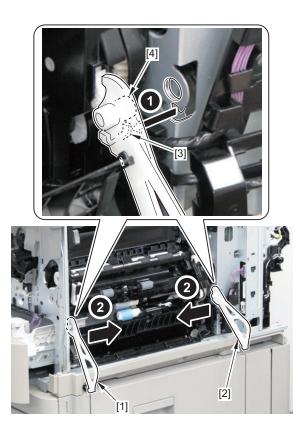

• If the Registration Roller [2] and the Pre-registration Roller [1] are replaced separately, not simultaneously, it may generate a difference in feeding speed and cause feeding problems such as geometrical characteristics and jams.

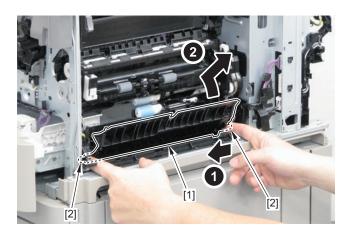

• Procedure when images with uneven density (white spots) are generated on the front side

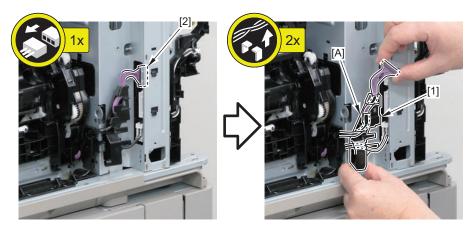

- 1. Remove the Right Cover Stopper Front [1] and the Right Cover Stopper Rear [2].
 - 2 Hooks [3]
 - 2 Shafts [4]

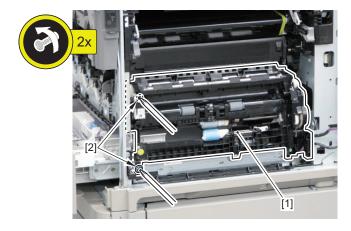

- 2. Remove the Swing Guide [1].
 - 2 Shafts [2]

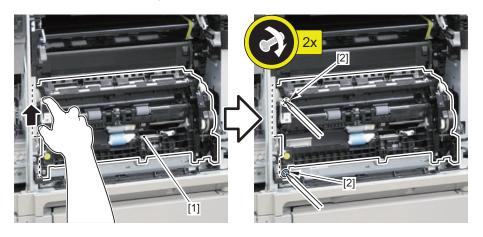

- 3. Remove the Right Cover Harness Guide [1].
 - 1 Connector [2]
 - Harness Guide [A]

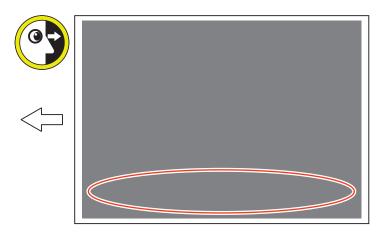

4. Loosen the 2 screws [2] of the Registration/Pickup Unit [1].

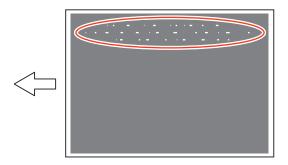

5. Lift the Registration/Pickup Unit [1], and tighten the 2 screws [2].

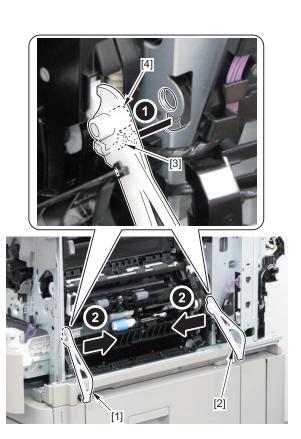

6. Assemble the Registration/Pickup Unit, output a test print, and confirm that images with uneven density (white spots) are not generated.

- 7. End if images with uneven density (white spots) are not generated.
 Adjust again the Registration/Pickup Unit if images with uneven density (white spots) are generated.
- Procedure when images with uneven density (white spots) are generated on the rear side

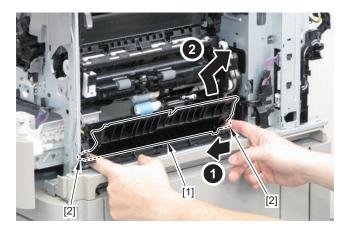

- 1. Remove the Right Cover Stopper Front [1] and the Right Cover Stopper Rear [2].
 - 2 Hooks [3]
 - 2 Shafts [4]

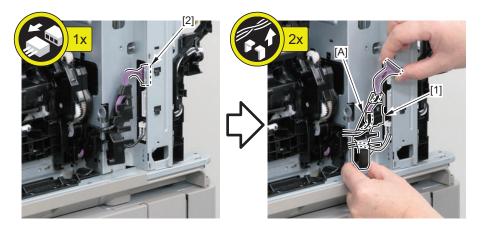

2. Remove the Swing Guide [1].

• 2 Shafts [2]

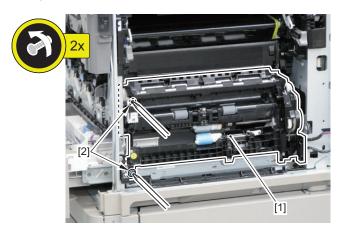

3. Remove the Right Cover Harness Guide [1].

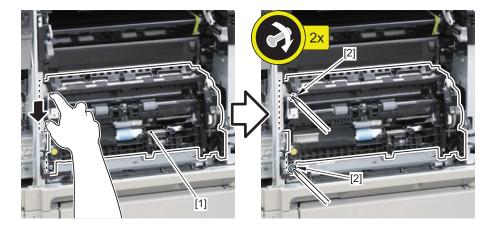

- 1 Connector [2]
- Harness Guide [A]

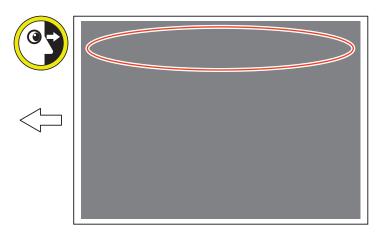

4. Loosen the 2 screws [2] of the Registration/Pickup Unit [1].

5. Lower the Registration/Pickup Unit [1], and tighten the 2 screws [2].

6. Assemble the Registration/Pickup Unit, output a test print, and confirm that images with uneven density (white spots) are not generated.

7. End if images with uneven density (white spots) are not generated.
Adjust again the Registration/Pickup Unit if images with uneven density (white spots) are generated.

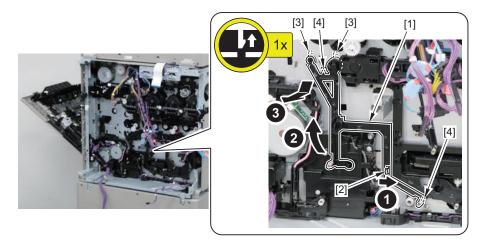

Removing the Cassette 1 Lifter Drive Unit

■ Preparation

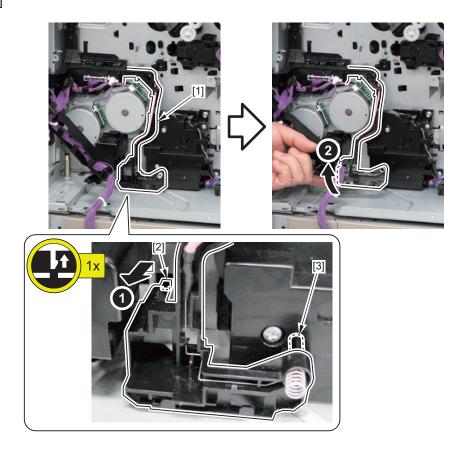

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Left Upper Cover" on page 168
- 3. "Removing the Fax Speaker Unit" on page 236
- 4. "Removing the Main Controller Sub Cover /Main Controller Cover" on page 218
- 5. "Removing the Fax Unit" on page 235
- 6. "Removing the Main Controller Unit" on page 220
- 7. "Removing the Low-voltage Power Supply Unit" on page 225
- 8. "Removing the DC Controller PCB" on page 230
- 9. "Removing the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit" on page 234
- 10. "Removing the Waste Toner Container" on page 253
- 11. Remove the Drum Unit (Bk)"Removing the Drum Unit (Y/M/C/Bk)" on page 254.

■ Procedure

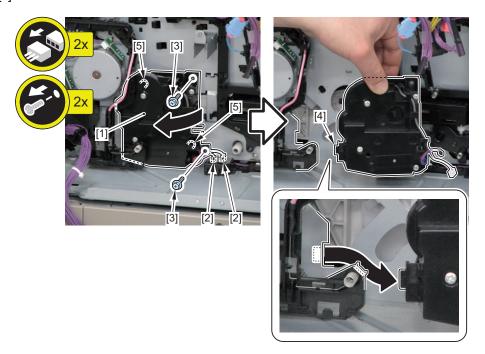

- 1. Remove the High-voltage Contact Guide 1 [1].
 - 1 Claw [2]
 - 2 Hooks [3]
 - 2 Bosses [4]

- 2. Move the High-voltage Contact Guide 2 [1].
 - 1 Claw [2]
 - 2 Bosses [3]

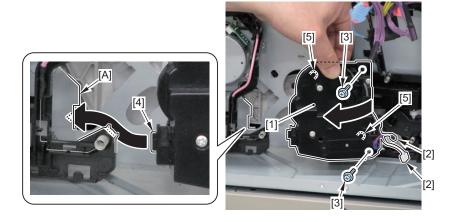

- 3. Remove the Cassette 1 Lifter Drive Unit [1].
 - 2 Connectors [2]
 - 2 Screws [3]
 - 1 Hook [4]
 - 2 Bosses [5]

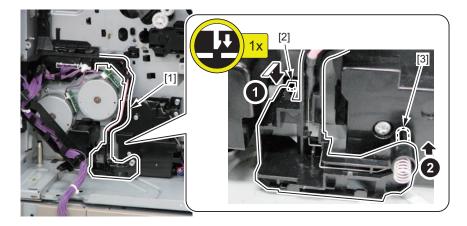

■ Installation

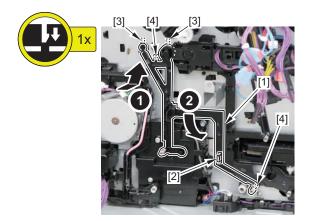

- 1. Insert the hook [4] of the Cassette 1 Lifter Drive Unit [1] inside the hole [A] of the Rear Plate, and secure the unit in place with the 2 screws [3].
 - 2 Bosses [5]
 - 2 Connectors [2]

- 2. Install the High-voltage Contact Guide 2 [1].
 - 1 Claw [2]
 - 2 Bosses [3]

- 3. Install the High-voltage Contact Guide 1 [1].
 - 1 Claw [2]
 - 2 Hooks [3]
 - 2 Bosses [4]

Removing the Cassette 1 Pickup Drive Unit

■ Preparation

- 1. "Removing the Rear Cover 1" on page 164
- 2. "Removing the Secondary Transfer High-voltage PCB/Developing High-voltage PCB Unit" on page 234
- 3. "Removing the Cassette 1 Lifter Drive Unit" on page 320

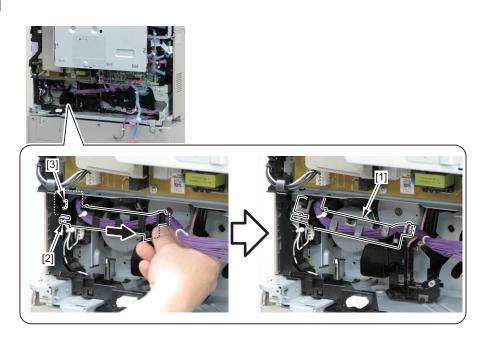

■ Procedure

1. Pull out the Cassette 1.

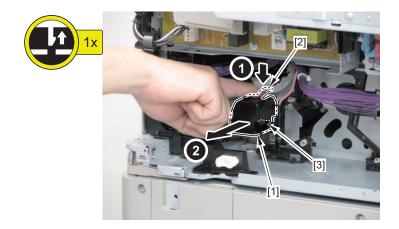

2. Move the Harness Guide [1].

- 1 Boss [2]
- 1 Hook [3]

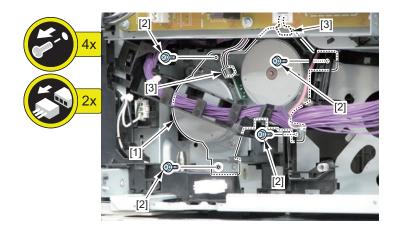

3. Remove the Rail Cover [1].

- 1 Claw [2]
- 1 Hook [3]

4. Remove the Cassette 1 Pickup Drive Unit [1].

- 4 Screws [2]
- 2 Connectors [3]

■ Actions after assembly

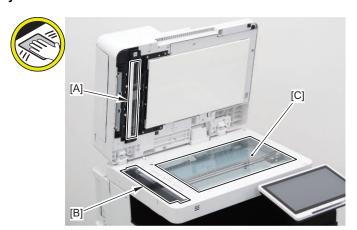

Execute Auto Correct Color Mismatch.
Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

Cleaning Procedure

Cleaning the Copyboard Glass/Reading Glass

■ Procedure

1. Clean the Platen Guide (Front) [A], Stream Reading Glass for back side [B], and Stream Reading Glass for front side [C] with a glass cleaning sheet. If soiling is still remarkable, clean them with wet and tightly-wrung lint-free paper and then wipe them with dry soft cloth.

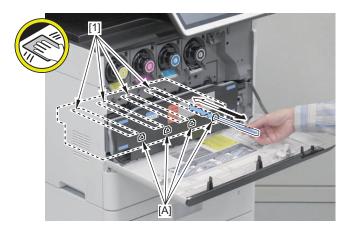

Cleaning the Dustproof Glass

■ Subsequent Work

- 1. Open the Front Cover [1].
- 2. Remove the Dustproof Glass Cleaning Tool [2].

3. Clean the Dustproof Glass [1] from the hole [A] of the Waste Toner Container.

Cleaning when installing/removing the ITB Unit

Be sure to check for any soiling before cleaning since toner may be spilled over Drum Unit (Y) when installing/removing the ITB Unit

■ Preparation

- 1. "Removing the Waste Toner Container" on page 253
- 2. Remove the Drum Unit (Y)"Removing the Drum Unit (Y/M/C/Bk)" on page 254.

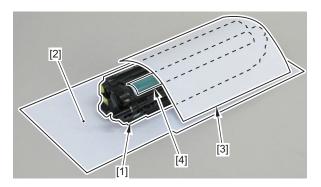

■ Procedure

CAUTION:

Do not clean the drum surface [A] with a blower [1] or lint-free paper [2].

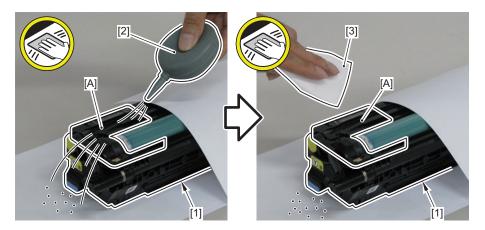

- 1. Put the removed Drum Unit (Y) [1] on a sheet of paper [2].
- 2. Cover the removed Drum Unit (Y) [1] with a paper [3] to block the light for Drum (4).

3. Clean the [A] part of the Drum Unit (Y) [1] with a blower [2].

4. Clean the [A] part of the Drum Unit (Y) [1] with lint-free paper [3].

Cleaning the Registration Patch Sensor Unit

Be sure to clean the Registration Patch Sensor Unit when replacing the ITB Unit. Preparation

Preparation

- 1. "Removing the Waste Toner Container" on page 253
- 2. Remove the Drum Unit (Bk)"Removing the Drum Unit (Y/M/C/Bk)" on page 254.
- 3. "Removing the ITB Unit" on page 257

■ Procedure

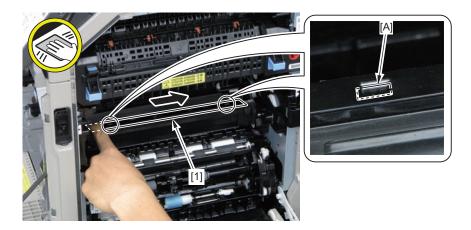

1. While opening the RD Sensor Shutter [1], clean the surface [A] of the Patch Sensor with a blower. After cleaning, check that there is no soiling caused by toner on the surface [A] of the sensor.

If the soiling cannot be removed, perform step 2.

2. While opening the RD Sensor Shutter [1], clean the surface [A] of the Patch Sensor with tightly-wrung cotton swab moistened with water in a single direction.

CAUTION:

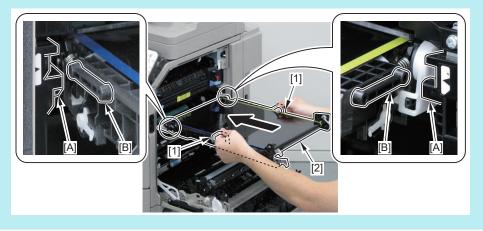

- Do not use alcohol because it causes melting and clouding of the sensor window.
- Do not dry wipe the sensor window because it is charged to attract toner.

NOTE:

How to install the ITB Unit

1. Hold the 2 handles [1], align the 2 protrusions [B] of the ITB Unit [2] with the 2 grooves [A] of the rails of the ITB Unit, and then put the unit inside the machine.

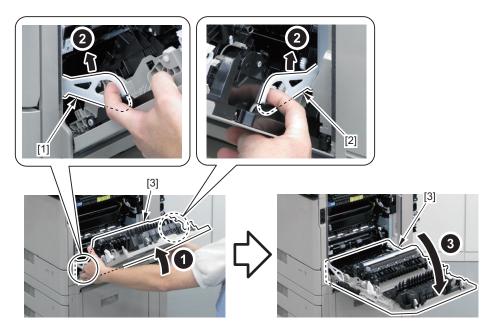

■ Procedure

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

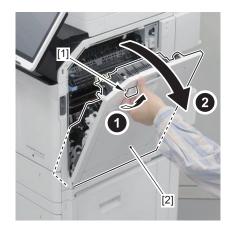

3. Clean the [A] part of the Pre-Registration Guide [2] with lint-free paper moistened with alcohol [1].

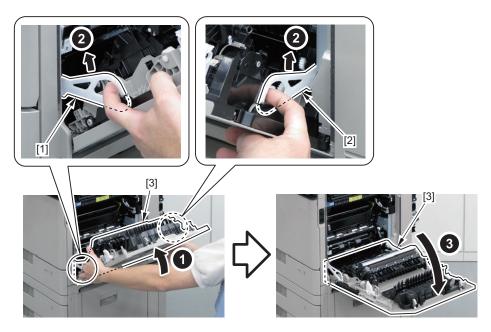

■ Subsequent Work

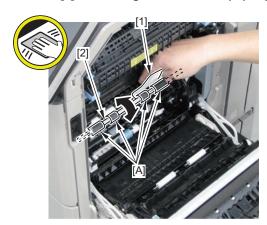

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

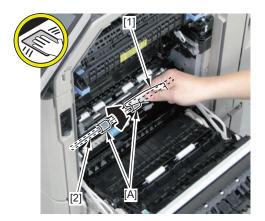

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

3. Clean the surface [A] of Registration Roller [2] as rotating it with lint-free paper [1].

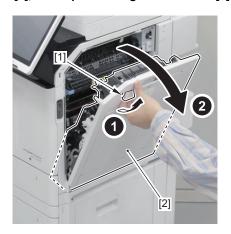

4. Clean the surface [A] of Pre-registration Roller [2] as rotating it with lint-free paper [1].

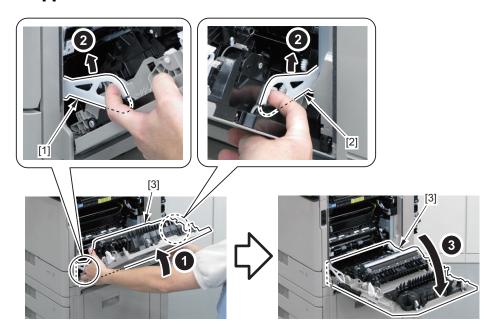

Cleaning the Secondary Transfer Guide

■ Procedure

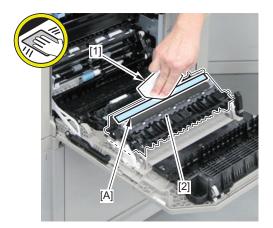

1. Pull the Right Cover Open/Close Lever [1], then open the Right Cover Unit [2].

2. Release the lock of the Right Cover Stopper (Front) [1] and the Right Cover Stopper (Rear) [2], and then further open the Right Cover Unit [3].

3. Clean the [A] part of the Pre-Registration Guide [2] with lint-free paper moistened with alcohol [1].

Cleaning the Fixing Inlet Guide

- **■** Preparation
- 1. "Removing the Fixing Assembly" on page 284
- **Procedure**

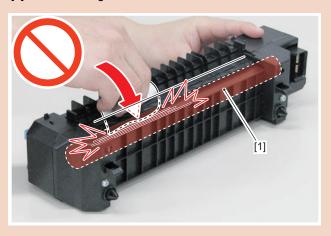

A CAUTION:

Be sure to start removing the Fixing Assembly after it is cooled down enough. The Fixing Assembly right after printing may cause burn injury.

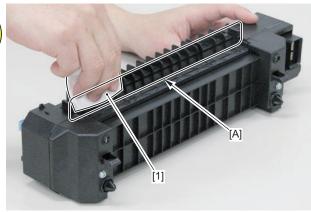

1. Clean the Fixing Inlet Guide [A] with lint-free paper [1] moistened with alcohol.

CAUTION:

Do not damage the Fixing Film [1] when cleaning.

Adjustment

| Pickup Feed System | 336 |
|------------------------------|------|
| Original Feed System | .338 |
| Original Exposure System | .352 |
| Actions at Parts Replacement | .355 |

Pickup Feed System

Image Position Adjustment

NOTE:

By making an adjustment on the 1st side, the margin on the 2nd side is also changed. If the difference between the 1st and the 2nd sides is +/- 0.5 mm or less, do not adjust the 2nd side.

Reference: Standard value (front side, back side)

Leading edge: 4.0 mm + 1.5/-1.0 mm

Left edge: [A4] 2.5 mm +/- 1.5 mm, [LTR] 4.2 +/- 1.5 mm

1. Set the following values for the service modes.

COPIER > TEST > PG > TYPE = 5 COPIER > TEST > PG > COLOR-K = 1 COPIER > TEST > PG > COLOR-Y/M/C = 0 COPIER > TEST > PG > 2-SIDE = 1 COPIER > TEST > PG > PG-PICK = each paper source

2. Press the Start key.

A test print (2-sided print) is output from each paper source.

3. Check the output test print.

NOTE:

At 2-sided printing, paper is output with the 1st side up and 2nd side down. When checking the leading edge margin on the 1st side, check the up side of paper, and check the trailing margin with respect to the feed direction.

4. If outside of standard, perform software adjustment.

Software Adjustment

Software adjustment is an adjustment method to adjust the image position by changing the service mode setting value. Follow the procedure shown below to adjust the positions of the leading edge and left edge of paper.

1. Execute the following service modes to adjust the image position on the leading edge.

COPIER > ADJUST > FEED-ADJ > REGIST : Adjustment of the registration start timing COPIER > ADJUST > FEED-ADJ > REG-DUP1 : Adjustment of the margin on the leading edge of paper (2nd side of plain paper)

As the input value is changed by 1, the margin on the leading edge of paper is changed by 0.1 mm.

To perform adjustment for one paper type at a time, use the following service mode.

COPIER > ADJUST > FEED-ADJ > REG-DUP1 : Adjustment of the margin on the leading edge of paper (2nd side of plain paper)

COPIER > ADJUST > FEED-ADJ > REG-MF : Adjustment of the margin on the leading edge of paper (plain/recycled/thin paper, Multi-purpose Tray)

2. Execute the following service modes to adjust the image position on the left edge.

Front side: Adjustment of the image write start position in the horizontal scanning direction at pickup from the Cassette 1 to 4 and the Multi-purpose Tray

COPIER > ADJUST > FEED-ADJ > ADJ-C1 COPIER > ADJUST > FEED-ADJ > ADJ-C2 COPIER > ADJUST > FEED-ADJ > ADJ-C3 COPIER > ADJUST > FEED-ADJ > ADJ-C4 COPIER > ADJUST > FEED-ADJ > ADJ-MF

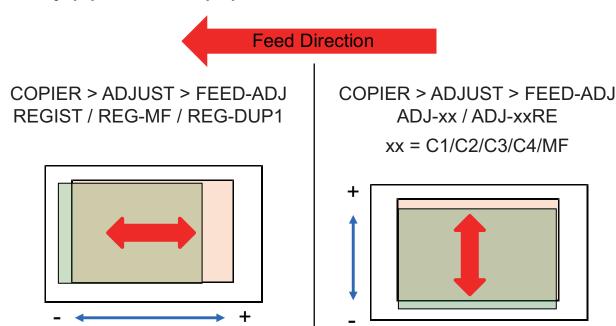

Back side: Adjustment of the image write start position in the horizontal scanning direction for the 2nd side of paper picked up from the Cassette 1 to 4 and the Multi-purpose Tray

COPIER > ADJUST > FEED-ADJ > ADJ-C1RE COPIER > ADJUST > FEED-ADJ > ADJ-C2RE COPIER > ADJUST > FEED-ADJ > ADJ-C3RE COPIER > ADJUST > FEED-ADJ > ADJ-C4RE COPIER > ADJUST > FEED-ADJ > ADJ-MFRE

As the input value is changed by 1, the margin on the left edge of paper is changed by 0.1 mm.

Reference: Standard value (front side, back side)

Leading edge: 4.0 mm +1.5/-1.0 mm Left edge: [A4] 2.5 mm +/- 1.5 mm, [LTR] 4.2 +/- 1.5 mm

3. If the service mode setting value has been changed, write down the new adjustment value on the service label.

Original Feed System

Skew Adjustment (at Stream Scanning of Originals)

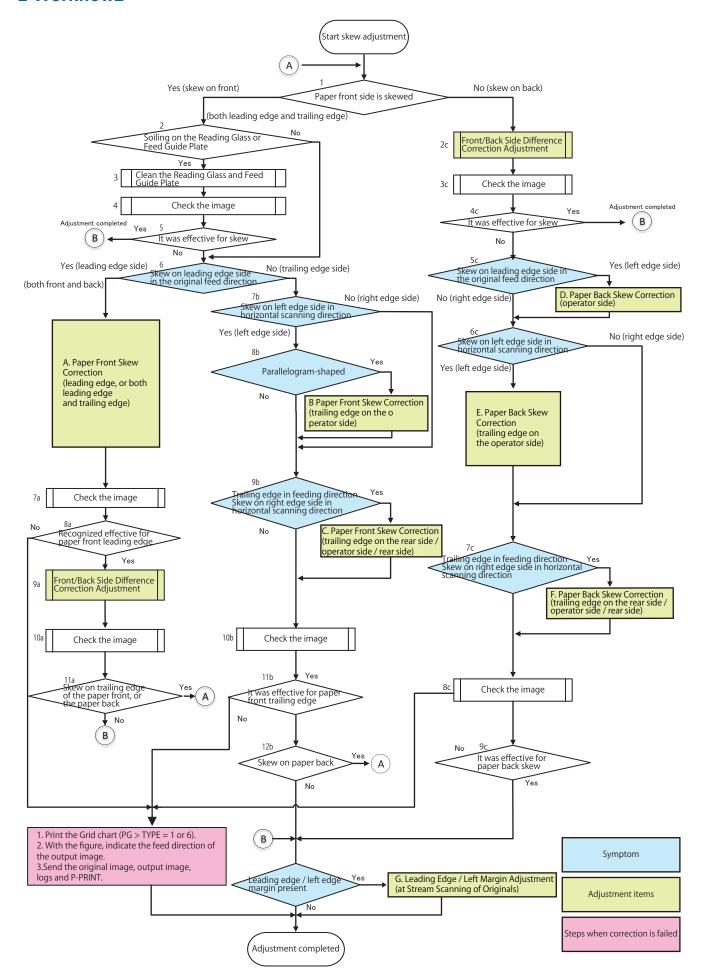

If the images from stream scanned originals are skewed after the adjustments of the printer side is complete, perform skew adjustment according to the workflow.

CAUTION:

The correction may not be performed under the following usage conditions because the skew cannot be detected.

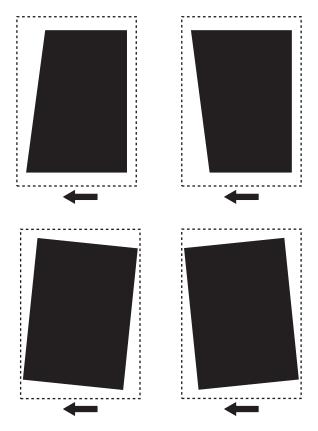

- The Reading Glass or Feed Guide is soiled.
- The edge of original is bent / torn / missing.
- · Translucent or thin originals are used.
- E202-0010 or E202-0002 is in the error log and not remedied, which occurs system degraded.

■ Workflow2

■ A. Paper Front Skew Correction (Leading Edge, or Both Leading Edge and Trailing Edge)

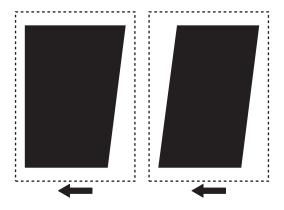

Correct skew with the following procedure if a skew occurs on leading edge, or both leading edge and trailing edge (on the front side of paper).

- 1. "Right Angle Adjustment (Slant Adjustment)" on page 343
- 2. "Light intensity adjustment" on page 344
- 3. "Automatic Adjustment of the Stream Reading Position (Automatic Adjustment of the Reading Position at ADF Reading)" on page 345
- 4. "White Level Adjustment" on page 345
- 5. Check the image again. If the leading edge on the front side of the paper is corrected, perform "Difference correction adjustment of front and back sides". If a skew is occurring on the trailing edge of the front side of the paper, or back side of the paper, perform the appropriate skew correction item. If the skew on the front side is not corrected, contact the support department of the sales company.
 - "Front/Back Side Difference Correction Adjustment" on page 345

■ B. Paper Front Skew Correction (Trailing Edge on the Operator Side)

Correct skew with the following procedure if a skew occurs on trailing edge on the operator side (on the front side of paper).

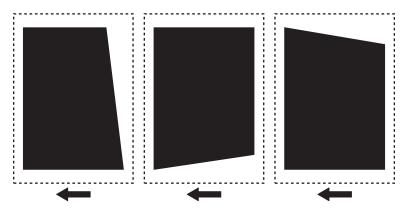

1. "Parallelogram Correction" on page 345

2. Check the image again. If a skew is occurring on the back side of the paper, perform the appropriate skew correction item. If the skew on the front side is not corrected, contact the support department of the sales company.

■ C. Paper Front Skew Correction (Trailing Edge on the Rear Side / Operator Side / Rear Side)

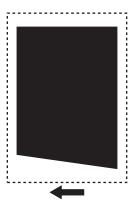

Correct skew with the following procedure if a skew occurs on trailing edge on the rear side / operator side / rear side (on the front side of paper).

- 1. "Angle Correction (Front / Back)" on page 346
- 2. Check the image again. If a skew is occurring on the back side of the paper, perform the appropriate skew correction item. Check the image again. If a skew has not been corrected on the front side of the paper, contact the support department of the sales company.

■ D. Paper Pack Skew Correction (Operator Side)

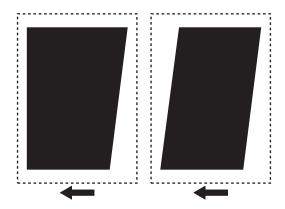

Correct skew with the following procedure if a skew occurs on the operator side (on the back side of paper).

- 1. "Front/Back Side Difference Correction Adjustment" on page 345
- 2. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

■ E. Paper Back Skew Correction (Trailing Edge on the Operator Side)

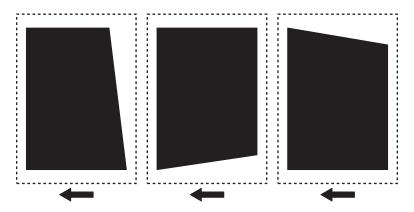

Correct skew with the following procedure if a skew occurs on trailing edge on the operator side (on the back side of paper).

- 1. "Right Angle Adjustment (Slant Adjustment)" on page 343
- 2. "Light intensity adjustment" on page 344
- 3. "White Level Adjustment" on page 345
- 4. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

■ F. Paper Back Skew Correction (Trailing Edge on the Rear Side / Operator Side / Rear Side)

Correct skew with the following procedure if a skew occurs on trailing edge on the rear side / operator side / rear side (on the back side of paper).

- 1. "Angle Correction (Front / Back)" on page 346
- 2. Check the image again. If a skew is occurring on the back side of the paper, contact the support department of the sales company.

■ G. Edge Margin Adjustment after the Skew Adjustment (at Stream Scanning of the Originals)

When the leading edge / left edge margin of the image is out of the standard range after skew correction, adjust the leading edge / left edge margin using a test chart.

Reference: Standard value

- Leading edge: 4.0+1.5/-1.0 mm (front side, back side)
- Left edge: 2.5+/-1.5 mm (front side) / 2.5 + / -2.0 mm (back side)
- 1. "Creating the Test Charts for Image Position Adjustment" on page 346
- 2. Adjust the leading edge margin of the image after skew correction in the following service modes.
 - FEEDER > ADJUST > ADJ-T1 (Front)
 - FEEDER > ADJUST > ADJ-T2 (Back)

NOTE:

- Amount of change per 1 setting value 0.1 mm
- Adjustment range -15 to 15

- 3. Adjust the left edge margin of the image after skew correction in the following service modes.
 - FEEDER > ADJUST > ADJ-L1 (Front)
 - FEEDER > ADJUST > ADJ-L2 (Back)

NOTE:

- · Amount of change per 1 setting value 0.1 mm
- Adjustment range -30 to 30

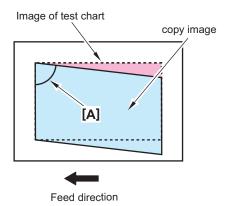

Right Angle Adjustment (Slant Adjustment)

NOTE:

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

Adjustment of the Paper Front Reading

- Prepare the test chart according to the link.
 "Creating the Test Charts for Image Position Adjustment" on page 346
- Set the following service mode to "1". FEEDER > OPTION > SKW-SW
- 3. Place the test chart on the ADF and make a 1-sided copy.
- 4. Check whether the angle [A] of the copied paper is a right angle. If it is not right-angled, adjust it as follows.

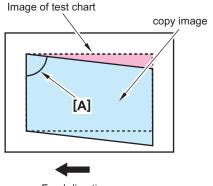

5. Loosen the 4 Right Hinge Fixation Screws, make adjustment by moving the hinge installation position back and forth, and then temporarily fix the screws.

- 6. Place the test chart on the ADF to make a 1-sided copy again.
- 7. Repeat steps 4 and 5 until the skew amount falls within the specified range.
- 8. When the skew amount is within the range, tighten the Fixation Screws you loosened.

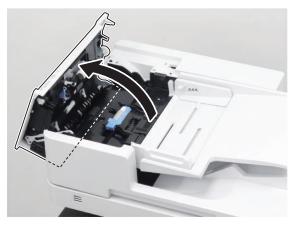

Adjustment of the Paper Back Reading

- 1. Place the test chart facing down on the ADF and make a 2-sided copy.
- 2. Check whether the angle [A] of the copied paper is a right angle. If it is not right-angled, adjust it as follows.

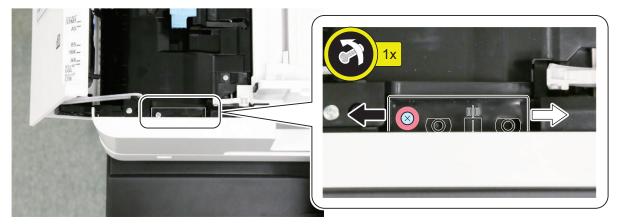

Feed direction

3. Open the Feeder Cover.

- 4. Loosen the screw and adjust the position of the guide for the CIS Adjustment Holder.
 - [A] = Less than 90 degrees: Move the guide to the right (direction of the white arrow).
 - [A] = 90 degrees or more: Move the Guide to the left (direction of the black arrow).

- 5. Tighten the screw after adjustment.
- 6. Make a 2-sided copy of the test chart again, and check that the [A] is a right angle.
- 7. Close the Feeder Cover.
- 8. Set the following service mode to "0". FEEDER > OPTION > SKW-SW

Light intensity adjustment

NOTE:

- This mode automatically performs adjustment.
- If "NG" is displayed after executing this mode, check that PCB and each connector are properly connected.

1. Execute the following service mode with the ADF closed.

COPIER > FUNCTION > CCD > CL-AGC

Automatic Adjustment of the Stream Reading Position (Automatic Adjustment of the Reading Position at ADF Reading)

NOTE:

- · If the DADF is opened during adjustment, restart the adjustment.
- Enter the value after adjustment on the Service Label (on the back of the Reader Front Cover or Printer Front Cover). The adjustment result is reflected to COPIER > ADJUST > ADJ-XY > STRD-POS.

1. Execute the following service mode.

COPIER > FUNCTION > INSTALL > STRD-POS

NOTE:

If "NG" is displayed after executing this mode, execute "Right Angle Adjustment (Slant Adjustment)" on the service manual.

White Level Adjustment

Place a sheet of blank A4 or LTR size paper on the Copyboard Glass and close the ADF.

CAUTION:

When executing the white level adjustment using paper with smaller width, adjustment may not be executed properly.

- Execute the service mode item.COPIER > FUNCTION > CCD > DF-WLVL1
- 3. Remove the blank paper from the Copyboard Glass, and place it on the Document Pickup Tray of ADF.
- Execute the service mode item.
 COPIER > FUNCTION > CCD > DF-WLVL2

Front/Back Side Difference Correction Adjustment

NOTE:

This mode automatically feed the original and performs adjustment.

- 1. Place the white color chart (included in the package) or plain paper on the ADF, and then execute the following service mode.
 - FEEDER > FUNCTION > ADJ-SKW

Parallelogram Correction

Perform parallelogram correction if a scanned image is parallelogram-shaped.

- 1. Correct the parallelogram in the following service modes.
 - FEEDER > ADJUST > ADJ-PAR1 (Front)
 - FEEDER > ADJUST > ADJ-PAR2 (Back)

NOTE:

- As the value is increased by 1, the image is corrected clockwise by 0.01 degree.
- As the value is decreased by 1, the image is corrected counterclockwise by 0.01 degree.

Angle Correction (Front / Back)

If the trailing edge of the scanned image is missing, perform angle correction.

- 1. Correct the amount of rotation in the following service modes.
 - FEEDER > ADJUST > ADJ-ROT1 (Front)
 - FEEDER > ADJUST > ADJ-ROT2 (Back)

NOTE:

- As the value is increased by 1, the image is corrected clockwise by 0.01 degree.
- As the value is decreased by 1, the image is corrected counterclockwise by 0.01 degree.

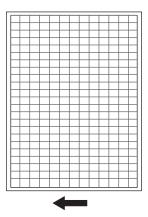

Image Position Adjustment (at Stream Scanning of Originals)

Adjust the image position of the side / leading edge using a test chart.

■ Creating the Test Charts for Image Position Adjustment

CAUTION:

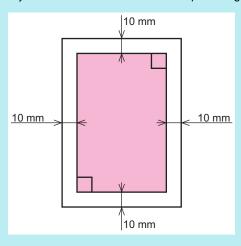

Create the test charts for image position adjustment after completing adjustments on the printer side.

- 1. After setting the service modes as follows, press the Start key to output the test chart.
 - COPIER > TEST > PG > TYPE = 6
 - COPIER > TEST > PG > PG-PICK = To set the Pickup Cassette for test print output.

NOTE:

- If the specified test chart cannot be output, draw a test chart on A3 or LDR paper with a rectangle whose four corners are 10 mm smaller than the paper.
- To draw characters and marks so that you can see the direction of the copied image.

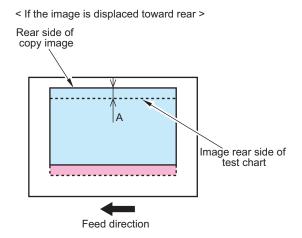

■ Side Registration Adjustment

NOTE:

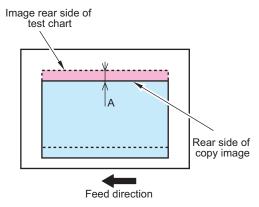

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

Adjustment of the Paper Front / Back Reading

- Set the following service mode to "1". FEEDER > OPTION > SKW-SW
- 2. Place the test chart on the ADF and make a 1-sided copy.
- 3. Overlay the copied paper onto the test chart.
- 4. Check whether the rear side of the copied image is within the standard.
 - Standard: A =< 1 mm

< If the image is displaced toward front >

5. If it is not within the standard range, make an adjustment with the following service modes.

COPIER > ADJUST > ADJ-XY > ADJ-Y-DF COPIER > ADJUST > ADJ-XY > ADJ-Y-DF2

- If the copied image is displaced toward the front side: Increase the value (the image moves toward the rear side)
- If the copied image is displaced toward the rear side: Decrease the value (the image moves toward the front side) Amount of change per 1 setting value 0.1 mm

Adjustment range -15 to 15

- 6. Copy the test chart again, and check that the image is within the ranges of the standard.
- 7. Write down the adjusted value in the service label (on the back of the Reader Front Cover).
- 8. Set the following service mode to "0". FEEDER > OPTION > SKW-SW

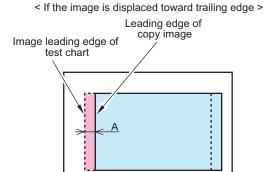

■ Leading Edge Margin Adjustment

NOTE:

There are two adjustment methods: One for reading the front side (Scanner Unit on the Reader side) and another for reading the back side (Scanner Unit on the ADF side).

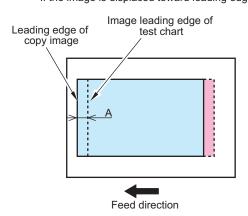

Adjustment of the Paper Front / Back Reading

- Set the following service mode to "1".
 FEEDER > OPTION > SKW-SW
- 2. Place the test chart on the ADF and make a 1-sided copy.
- 3. Overlay the copied paper onto the test chart.
- 4. Check that the leading edge of the copied image is within the standard range.
 - Standard: A =< 1 mm

Feed direction

< If the image is displaced toward leading edge >

5. If it is not within the standard range, make an adjustment with the following service modes.

FEEDER > ADJUST > DOCST

FEEDER > ADJUST > DOCST2

- If the copied image is displaced toward the trailing edge: Increase the value (move the image toward the leading edge)
- · If the copied image is displaced toward the leading edge: Decrease the value (move the image toward the trailing edge)

Amount of change per 1 setting value 0.1 mm

Adjustment range -30 to 30

- 6. Copy the test chart again, and check that the image is within the ranges of the standard.
- 7. Write down the adjusted value in the service label (on the back of the Reader Front Cover).
- 8. Set the following service mode to "0".

FEEDER > OPTION > SKW-SW

■ Magnification Ratio Adjustment

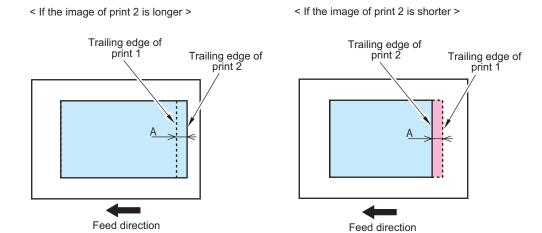

NOTE:

- There are two adjustment methods: One for Paper Front Reading (Scanner Unit on the Reader side), and the other for Paper Back Reading (Scanner Unit on the DADF side).
- This adjustment is performed by comparing the images printed with the stream reading and the copyboard reading.

Adjustment of the Paper Front Reading

- 1. Prepare the test chart according to the link.
 - "Creating the Test Charts for Image Position Adjustment" on page 346
- 2. Place a test chart on the Copyboard Glass of the connected device, and make a print. This is called Print 1.
- 3. Place a test chart on the Document Pickup Tray, and make a 1-sided print. This is called Print 2.
- 4. Overlay the Print 2 onto the Print 1.
- 5. Check if the trailing edge of the image on the Print 2 is within the standard range.

Standard: A ≦1 mm

6. If it is not within the standard range, make adjustments with the following service modes.

FEEDER > ADJUST > LA-SPEED

- · If the image on the Print 2 is longer: Increase the numeric value (i.e., make the stream reading speed "faster")
- If the image on the Print 2 is shorter: Decrease the numeric value (i.e., make the stream reading speed "slower")
- · Amount of change per unit: 0.01%
- · Adjustment range: -200 to +200
- 7. Make a print with the test chart again, and check that the image is within the standard range.

Adjustment of the Paper Back Reading

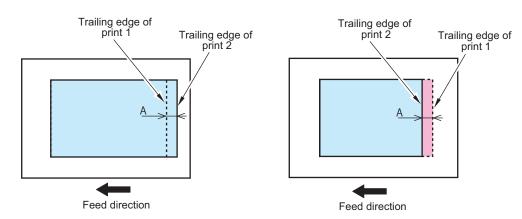

- Prepare the test chart according to the link.
 "Creating the Test Charts for Image Position Adjustment" on page 346
- 2. Place a test chart on the Copyboard Glass of the connected device, and make a print. This is called Print 1.
- 3. Place a test chart facing down on the Document Pickup Tray, and make a 2-sided print. This is called Print 2.
- 4. Overlay the Print 2 onto the Print 1.

5. Check if the trailing edge of the image on the Print 2 is within the standard range.

Standard: A≦1 mm

< If the image of print 2 is longer >

< If the image of print 2 is shorter >

- 6. If it is not within the standard range, make adjustments with the following service modes.
 - If the image on the Print 2 is longer: Increase the numeric value (i.e., make the length of the image in the vertical scanning direction shorter).
 - If the image on the Print 2 is shorter: Decrease the numeric value (i.e., make the length of the image in the vertical scanning direction longer).
 - Amount of change per unit: 0.01%
 - Adjustment range: -200 to +200

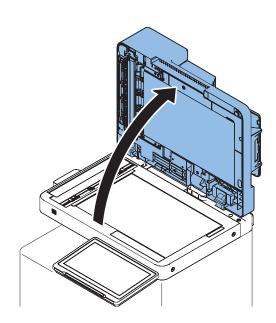

FEEDER > ADJUST > LA-SPD2

7. Make a print with the test chart again, and check that the image is within the standard range.

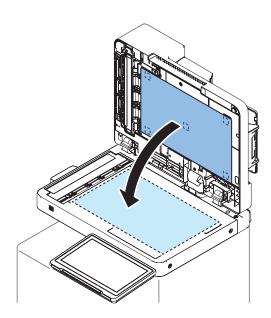

Original Exposure System

Adjustment of the White Plate

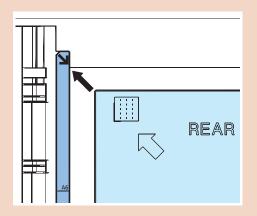

2.

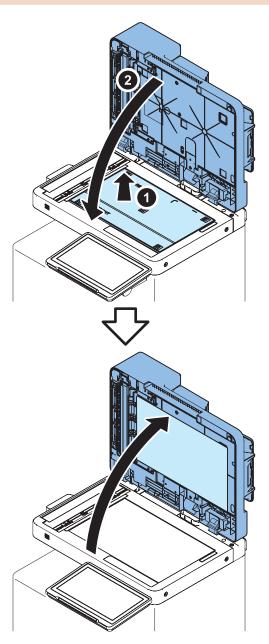

3.

CAUTION:

Align the White Plate with the Index.

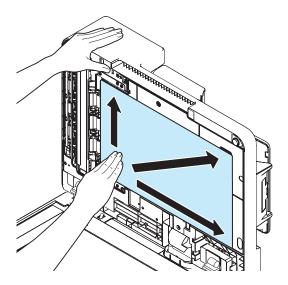

4.

CAUTION:

If the White Plate is pressed from top to bottom, it is placed on the Index Sheet, so be sure to press it from bottom to top.

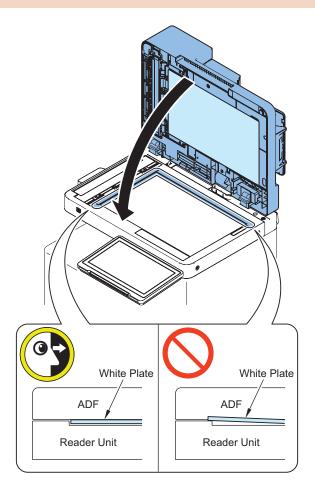

5.

CAUTION:

Check that the White Plate is not placed on the Index Sheet with this equipment closed.

- Be sure that there is no gap between the White Plate and the Index Sheet.
- The gap between the White Plate and the Index Sheet must be 0.3 mm or less as a reference.

Actions at Parts Replacement

Main Controller PCB

■ Actions before Parts Replacement

- 1. Output the latest service mode setting values.
 - COPIER > FUNCTION > MISC-P > P-PRINT
- 2. Perform backup in the following service mode (Lv.2).

COPIER > FUNCTION > SYSTEM > DSRAMBUP

■ Actions after Parts Replacement

1. Upgrade the firmware for correcting its combination to ensure that the machine operates properly.

NOTE:

It is recommended to use the automatic update function.

2. Perform either of the followings according to the backup status.

When backup completed successfully

Execute the following service mode (Lv.2) to restore the backup data.

• COPIER > FUNCTION > SYSTEM > DSRAMRES

When backup does not complete successfully

Enter the values written on the service label (on the Front Door of the host machine) in the following service modes.

- COPIER > ADJUST > ADJ-XY >
- COPIER > ADJUST > CCD >
- COPIER > ADJUST > PASCAL >
- FEEDER > ADJUST >

List of Service Mode Items to Enter Values

| Service mode path | Service mode items to enter values |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| COPIER > ADJUST > ADJ-XY > | ADJ-X, ADJ-Y, ADJ-S, STRD-POS, ADJ-X-MG, ADJ-Y-DF, ADJY-DF2 |
| COPIER > ADJUST > CCD > | 100-GB, 100-RG, 100DF-GB, 100DF-RG, 100DF2GB, 100DF2RG, DFCH2B10, DFCH2B2, DFCH2G10, DFCH2G2, DFCH2R10, DFCH2R2, DFCH-B10, DFCH-B2, DFCH-G10, DFCH-G2, DFCH-R10, DFCH-R2, MTF2-M1, MTF2-M2, MTF2-M3, MTF2-M4, MTF2-M5, MTF2-M6, MTF2-M7, MTF2-M8, MTF2-M9, MTF2-S1, MTF2-S2, MTF2-S3, MTF2-S4, MTF2-S5, MTF2-S6, MTF2-S7, MTF2-S8, MTF2-S9, MTF3-M1, MTF3-M2, MTF3-M3, MTF3-M4, MTF3-M5, MTF3-M6, MTF3-M7, MTF3-M8, MTF3-M9, MTF3-S1, MTF3-S2, MTF3-S3, MTF3-S4, MTF3-S5, MTF3-S6, MTF3-S7, MTF3-S8, MTF3-S9, MTF-M1, MTF-M2, MTF-M3, MTF-M4, MTF-M5, MTF-M6, MTF-M7, MTF-M8, MTF-M9, MTF-S1, MTF-S2, MTF-S3, MTF-S4, MTF-S5, MTF-S6, MTF-S7, MTF-S8, MTF-S9, W-PLT-X, W-PLT-Y, W-PLT-Z |
| COPIER > ADJUST > PASCAL > | OFST-P-Y, OFST-P-M, OFST-P-C, OFST-P-K |
| FEEDER > ADJUST > | LA-SPEED, LA-SPD2, DOCST, DOCST2 , ADJ-DL, ADJ-DROT, ADJ-DT |

3. Execute the following service mode to adjust the Scanner Unit white level.

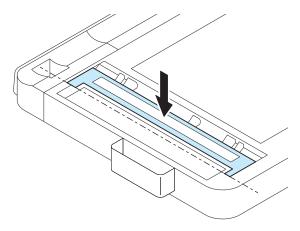

COPIER > FUNCTION > CCD > CL-AGC

- 4. Follow the steps shown below to adjust the ADF white level.
 - 1. Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode.COPIER > FUNCTION > CCD > DF-WLVL2
- 5. Follow the steps shown below to perform the paper back shading correction.
 - Cleaning the reading side 1
 Locations for cleaning: Stream Reading Glass for front side, Stream Reading Glass for back side Cleaning method: Clean with the cloth stored in the Reader Assembly.

Paper back shading correction 1
 Close the ADF, and execute the following service mode.
 COPIER > FUNCTION > CCD > BK-SHD1

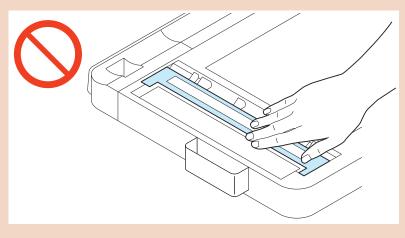

3. Paper back shading correction 2

Set the white sheet included in the package at the position shown in the figure below.

CAUTION:

Do not touch the upper surface of the white sheet.

Close the ADF, and execute the following service mode.

COPIER > FUNCTION > CCD > BK-SHD2

4. Cleaning the reading side 2

Remove the White sheet and perform the cleaning again.

- · Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side
- · Cleaning method: Clean with the cloth stored in the Reader Assembly.
- 5. Paper back shading correction 3

Close the ADF, and execute the following service mode.

COPIER > FUNCTION > CCD > BK-SHD3

6. Execute the following service mode to calculate the MTF filter coefficient.

COPIER > FUNCTION > CCD > MTF-CLC

7. Derive the ADF front and back linearity characteristics.

COPIER > FUNCTION > CCD > DF-LNR

8. In the following menu, execute the auto gradation adjustment.

Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation

■ Before Parts Replacement

CAUTION:

When replacing the DC Controller PCB, be sure to use a new one. Do not use the DC Controller PCB which was used with another machine.

1. Execute the following service mode to output setting values for just in case of restoration failure of backup data.

COPIER > FUNCTION > MISC-P > P-PRINT

2. Execute the following service mode to back up the service mode setting values.

(Lv.2) COPIER > FUNCTION > SYSTEM > DSRAMBUP
During execution, "ACTIVE" flashes in the status column of the service mode.
It takes approx. 2 minutes. Upon success, [OK!] is displayed in the status column.

3. After confirming that [OK!] is displayed in the status column of the service mode, turn OFF the power of the machine.

During Parts Replacement

CAUTION:

Once the DC Controller PCB was replaced with a brand-new one, make sure to perform a version update. Otherwise, the functionalities available with the latest version will not perform properly.

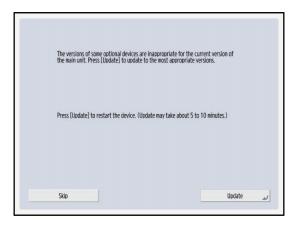

CAUTION:

Auto-update is available only when the following service mode (Lv. 2) is set to 1 or 2. COPIER > OPTION > FNC-SW > VER-CHNG

1. Update the DCON version in accordance with one of the following screen messages.

<When the update button is displayed>

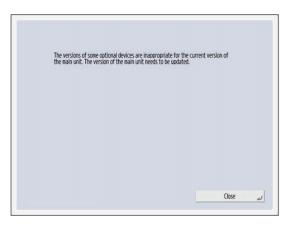

1. If the following message is displayed on the screen, press [Update] to auto-update the DCON version.

Screen sample

<When the update button is not displayed>

1. If the following message is displayed on the screen, press [Close].

Screen sample

- 2. Enter the following service mode (Lv. 2) and set the value to "2." COPIER > OPTION > FNC-SW > VER-CHNG
- 3. Turn OFF and then ON the main power.
- 4. Once the update button is displayed, press [Update] to auto-update the DCON version.
- 2. If setting value data was backed up before the parts replacement, execute the following service mode (Lv. 2) to restore the backed-up setting value data.

COPIER > FUNCTION > SYSTEM > DSRAMRES

During the execution, "ACTIVE" flashes in the status column of the service mode.

The execution takes approx. 2 minutes. Upon success, [OK!] is displayed in the status column.

3. If setting values were not backed up before the replacement due to e.g. damaged DC Controller PCB, or if the backed-up data could not be restored in the previous step, enter the value of each service mode item on the service label or P-PRINT as listed before the parts replacement.

Overview

The following describes the tasks when replacing the HDD.

Note that procedures to backup/restore the data in the HDD is required when replacing the HDD.

Backup List

| Packup towart data | Backup Method | | | | | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|---------------|----------------|-----------|--|--|
| Backup target data | | | | | | |
| | User | Service | DCM | Power OFF | | |
| | | ing DCM) | | | | |

^{*1:} Remote UI > Settings/Registration > Management Settings > Data Management > Import or Export

- *3: Remote UI > Quick Menu > Export
- *4: Remote UI > Settings/Registration > Management Settings > Data Management > Back Up or Restore
- *5: Remote UI > Service Management Service
- *6: Remote UI > Settings/Registration > Management Settings > Device Management > Save Audit Log Audit log that was exported cannot be put back to the device from which the log was exported.
- *7: Settings/Registration > Management Settings > Data Management > TPM Settings
- *8: Download mode > [5]: Backup/Restore > [3] : MEAP Backup > Meapback.bin Backup is possible using SST or USB memory

The data saved using a MEAP application can be backed up only when the MEAP application has a backup function.

*9: Backup Method using DCM When You set it in COPIER> OPTION> USER> SMD-EXPT> ON, a backup/restore is possible in Service Mode Settings from the Remote UI.

There is a backup button on the TOP page of the service mode.

- Remote UI > Settings/Registration > Management Settings > Data Management > Import/Export All
- Remote UI > Settings/Registration > Management Settings > Data Management > Import/Export
- · Service mode top screen > BACKUP
- Web Service

*10: The setting value that was set when the main power was turned OFF the last time is automatically backed up to the Flash PCB. When a HDD is replaced with a new one, the setting value is automatically inherited from the Flash PCB at the time of HDD formatting.

*11: iWEMC DAM plug-in

Actions before Parts Replacement

- 1. Backup the required data based on the "Table: Backup List" on page 359.
- 2. Execute the following service mode and printout the setting data to be ready in case of failing to restore the data.

COPIER > FUNCTION > MISC-P > USER-PRT COPIER > FUNCTION > MISC-P > P-PRINT

Actions after Parts Replacement

1. Format the hard disk.

Start the machine in safe mode, and format all partitions using SST or a USB flash drive.

- 2. Turn OFF and then ON the power of the host machine.
- 3. Restore the data backed up in [Actions before Parts Replacement].
- 4. Set/register the data again.

Set/register the data again by referring to the list that was printed before replacement.

^{*2:} Remote UI > Settings/Registration > Management Settings > User Management > Authentication Management > User Management

- 5. When an encryption key/certificate/CA certificate has been generated or added by the user, ask the user to execute regeneration.
- 6. Execute auto gradation adjustment.
 - For Reader/ ADF model
 Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust
 - For Printer model
 Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Quick Adjust

Registration Patch Sensor Unit

Actions after Parts Replacement

1. Enter the service mode values written on the label included in the package.

COPIER > ADJUST > DENS > POFST-F1
COPIER > ADJUST > DENS > POFST-R1
COPIER > ADJUST > DENS > SOFST-F1
COPIER > ADJUST > DENS > SOFST-R1
COPIER > ADJUST > DENS > POFST-F2
COPIER > ADJUST > DENS > POFST-R2
COPIER > ADJUST > DENS > SOFST-F2

2. Execute auto gradation correction (full adjustment) and auto correct color mismatch.

Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation > Full Adjust Settings/Registration > Adjustment/Maintenance > Adjust Image Quality > Auto Correct Color Mismatch

3. Write the adjustment values on the service label on the Front Cover.

After Replacing the Copyboard Glass

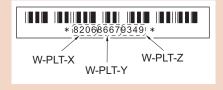

Adjustment after Replacement

1. Enter the value (XXXXYYYYZZZZ) shown on the Barcode Label affixed at the upper right of the Copyboard Glass

COPIER > ADJUST > CCD > W-PLT-X COPIER > ADJUST > CCD > W-PLT-Y COPIER > ADJUST > CCD > W-PLT-Z

CAUTION:

Be sure to execute the White Plate data adjustment before the Scanner Unit white level adjustment and ADF while level adjustment.

2. Scanner Unit white level adjustment

COPIER > FUNCTION > CCD > CL-AGC

- 3. ADF white level adjustment
 - Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode.
 COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode.COPIER > FUNCTION > CCD > DF-WLVL2

4. Write down the values on the service label for the Reader (on the Front Door of the host machine).

COPIER > ADJUST > CCD > W-PLT-X COPIER > ADJUST > CCD > W-PLT-Y COPIER > ADJUST > CCD > W-PLT-Z

After Replacing the Scanner Unit (Front)

Adjustment after Replacement

1. Execute the following service mode to perform automatic adjustment of the reader shading position.

COPIER > FUNCTION > INSTALL > RDSHDPOS

2. Execute the following service mode to perform the black and white reference level adjustment for the Scanner Unit.

COPIER > FUNCTION > CCD > CL-AGC

3. Execute the following service mode to perform automatic adjustment of the reading position during DADF reading.

COPIER > FUNCTION > INSTALL > STRD-POS

- 4. Follow the steps shown below to adjust the ADF white level.
 - Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode.COPIER > FUNCTION > CCD > DF-WLVL2
- 5. In the following service modes, enter the values shown on the label included with the Scanner Unit.

COPIER > ADJUST > CCD > MTF-xxx COPIER > ADJUST > CCD > MTF2-xxx

6. In the following service mode, calculate the MTF filter coefficient.

COPIER > FUNCTION > CCD > MTF-CLC

7. From the following menu, execute the auto gradation adjustment.

Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation

- 8. Set the white color chart on the ADF Feeder Tray.
- 9. Execute skew adjustment (front and back difference correction adjustment).

FEEDER > FUNCTION > ADJ-SKW

- 10. Write down the values on the service label for the Reader (on the Front Door of the host machine).
 - COPIER > ADJUST > CCD > MTF-xxx
 - COPIER > ADJUST > CCD > MTF2-xxx
 - FEEDER > ADJUST > ADJ-DT
 - FEEDER > ADJUST > ADJ-DL
 - FEEDER > ADJUST > ADJ-DROT

After Replacing the Scanner Unit (Back)

Adjustment after Replacement

1. Execute the following service mode to adjust the Scanner Unit white level.

COPIER > FUNCTION > CCD > CL-AGC

- 2. Follow the steps shown below to adjust the ADF white level.
 - Place an A4 or LTR size paper on the Copyboard Glass and execute the following service mode.
 COPIER > FUNCTION > CCD > DF-WLVL1
 - Place an A4 or LTR size paper on the ADF and execute the following service mode. COPIER > FUNCTION > CCD > DF-WLVL2

3. Follow the steps shown below to perform the paper back shading correction.

1. Cleaning the reading side 1

Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side Cleaning method: Clean with the cloth stored in the Reader Assembly.

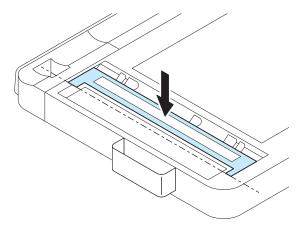

2. Paper back shading correction 1

Close the ADF, and execute the following service mode.

COPIER > FUNCTION > CCD > BK-SHD1

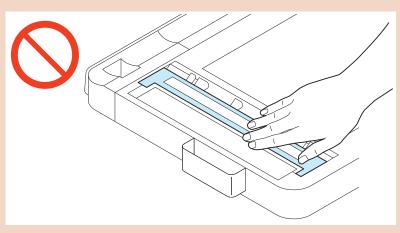

3. Paper back shading correction 2

Set the white sheet included in the package at the position shown in the figure below.

CAUTION:

Do not touch the upper surface of the white sheet.

Close the ADF, and execute the following service mode.

COPIER > FUNCTION > CCD > BK-SHD2

4. Cleaning the reading side 2

Remove the White Plate and perform the cleaning.

- · Locations for cleaning: Stream Reading Glass for front side and Stream Reading Glass for back side
- · Cleaning method: Clean with the cloth stored in the Reader Assembly.
- 5. Paper back shading correction 3

Close the ADF, and execute the following service mode.

COPIER > FUNCTION > CCD > BK-SHD3

4. In the following service modes, enter the values shown on the label included with the Scanner Unit.

COPIER > ADJUST > CCD > MTF3-xxx

5. Execute the following service mode to calculate the MTF filter coefficient.

COPIER > FUNCTION > CCD > MTF-CLC

6. In the following menu, execute the auto gradation adjustment.

Settings/Registration > Adjustment > Adjustment/Maintenance > Adjust Image Quality > Auto Adjust Gradation

7. Set the white color chart included in the package on the ADF Feeder Tray.

8. Execute skew adjustment (difference correction adjustment of front and back sides).

FEEDER > FUNCTION > ADJ-SKW

- 9. Write down the values on the service label for the Reader (on the Front Door of the host machine).
 - COPIER > ADJUST > CCD > MTF3-xxx
 - FEEDER > ADJUST > ADJ-DT
 - FEEDER > ADJUST > ADJ-DL
 - FEEDER > ADJUST > ADJ-DROT

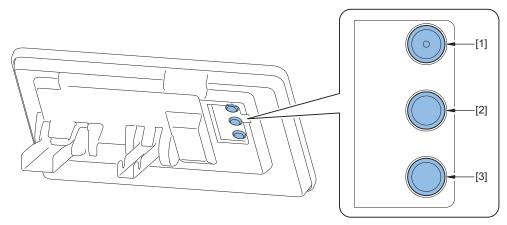

Control Panel Unit

When replacing the Touch Panel Uit, LCD Unit or the Control Panel CPU PCB, perform the following work.

■ Actions at Parts Replacement

Control Panel Adjustment

- 1. Open the Hard Key Cover in rear side of the Control Panel.
- 2. Enter the Service Mode.
- 3. Press the Hard Key [1] 3 times to enter the coordinate adjustment mode.

4. Press "+" indicated on the Control Panel in order. The coordinate adjustment mode is automatically closed when all 9 "+" is pressed.

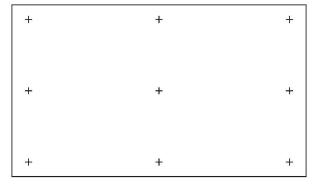

NOTE:

When the adjustment is not operated adequately, Re-adjust from procedure 3 after pressing all 9 "+" is pressed.

6. Adjustment

Troubleshooting

| List of Initial Check Items | 367 |
|----------------------------------|------|
| Test Print | .368 |
| List of Troubleshooting Items | 372 |
| Startup System Failure Diagnosis | 385 |
| Controller Self Diagnosis | .395 |
| Debug Log | .399 |

| Item | No. | Check Items | Check | | |
|--------------------------------------------------|----------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|--|--|
| Installation Envi- | 1 | The value of power voltage is +/- 10% of the specified voltage. | | | |
| ronment | 2 | The machine is installed away from heat and moisture (near a faucet, water heater, or humidifier), cold place, source of fire or in an area exposed to dust. | | | |
| | 3 | The machine is not in a place that generates ammonia gas. | | | |
| | 4 | The machine is not in a place of direct sunlight. | | | |
| | 5 | The machine is installed in a well-ventilated place where the machine stands horizontally. | | | |
| | 6 | The power plug of the machine is connected to the output. | | | |
| Checking the pa- | 7 | he Canon-recommended paper is used. | | | |
| per | 8 The paper is not moistened. Set paper by taking it out from a new package to output. | | | | |
| Checking the pa- | 9 | Paper that is within the specified volume is correctly set in the Cassette and Multi-purpose Tray. | | | |
| per setting | 10 | When using transparency film, the transparency is set in the correct direction in the Multi-purpose Tray. | | | |
| Checking the consumable parts | 11 | Check the list of estimated life of consumable parts and replace parts that have reached the estimated life. | | | |
| Checking the peri- odically replaced parts | 12 | Replace parts that have reached the estimated life in accordance with the list of periodical services and the table of periodically replaced parts. | | | |

Test Print

Overview

The following test print types are available with this machine, and you can check for failure of an image with a circle 'Yes' described in the image check items in the table below. When no failure is found in the test print in normal output mode, it can be caused in PDL input or Reader.

The image of the test print is generated by the Main Controller PCB.

| PG | Pattern | Image check item | | | | | | | | | |
|-----------|-----------------------------------------------------------------------|------------------|---------|---------------------|--------------------------------------|---------------|-----------------------------------------------------|---------------------------------------|---------------------------------|-----------|---------------------------------|
| TYPE | | Grada- tion | Fogging | Transfer failure | Black line (col- ored line) | White line | Uneven density at regu- lar inter- vals | Uneven density (rear/ front) | Right angle accura- cy | Linearity | Color dis- place- ment |
| 0 | Normal copy/print | | | | | | | | | | |
| 1 to 3 | For R&D use | | | | | | | | | | |
| 4 | 16 grada- tions | Yes | Yes | | | Yes | | Yes | | | |
| 5 | Full page halftone | | | Yes | Yes | Yes | Yes | Yes | | | |
| 6 | Grid | | | | | | | | Yes | Yes | Yes |
| 7 to 9 | For R&D use | | | | | | | | | | |
| 10 | YMCBk horizontal stripes (vertical scanning direction) | | | | Yes | Yes | | Yes | | | |
| 11 | For R&D use | | | | | | | | | | |
| 12 | YMCBk 64 grada- tions | Yes | Yes | | | Yes | | | | | |
| 13 to 100 | For R&D use | | | | | | | | | | |

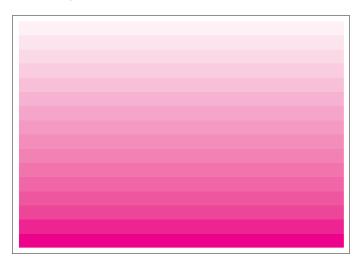

Steps to Select a Test Print Type

- 1. Set the number of sheets, paper size, etc. in the following service mode.
 - COPIER > TEST > PG > PG-PICK: Setting of the test print paper source
 - COPIER > TEST > PG > 2-SIDE: Setting of the duplex mode of PG
 - COPIER > TEST > PG > PG-QTY: Setting of the number of PG sheets
- 2. Select COPIER > TEST > PG > TYPE, enter the TYPE number of the test print to be output using the numeric keypad, and then press the OK key.
- 3. Select the color to be output from the following service mode items, enter 1 using the numeric keypad, and then press the OK key.
 - COPIER > TEST > PG > COLOR-Y: Y
 - COPIER > TEST > PG > COLOR-M: M
 - COPIER > TEST > PG > COLOR-C: C
 - COPIER > TEST > PG > COLOR-K: Bk

4. When the TYPE is set to "5" in step 2, specify the density in the following service mode.

COPIER > TEST > PG > DENS--Y: Y COPIER > TEST > PG > DENS--M: M COPIER > TEST > PG > DENS--C: C COPIER > TEST > PG > DENS--K: Bk

- 5. Press start key.
- How to use the test print
- 16 Gradations (TYPE = 4)

This test print is mainly used to check gradation performance, fogging, white lines, and uneven density between the front and rear sides.

| Check item | Checking Method | Assumed cause |
|-----------------------------|----------------------------------------------------------------|-------------------------------------------------------------------------------|
| Gradation | Check that the 16 density gradations are recognizable. | Drum Unit error or Laser Scanner Unit error |
| Fogging | Check whether fogging appears only in the blank area. | Drum Unit error or Laser Scanner Unit error |
| White line | Check the entire image for any white line. | Drum Unit error or Laser Scanner Unit error |
| Uneven density (rear/front) | Check for any uneven density between the rear and front sides. | Drum Unit error, Laser Scanner Unit error, or soiling on the laser light path |

■ Full Page Halftone (TYPE = 5)

This test print is mainly used to check for black lines, white lines, and uneven density.

NOTE:

Various settings can be configured in the following service mode.

Output of each developing color

COPIER > TEST > PG > COLOR-Y

COPIER > TEST > PG > COLOR-M

COPIER > TEST > PG > COLOR-C

COPIER > TEST > PG > COLOR-K

Print density setting

TEST>PG>DENS-Y

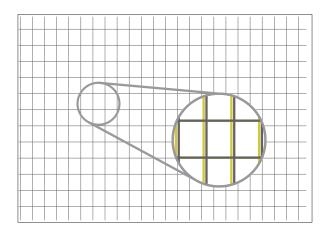

TEST>PG>DENS-M

TEST>PG>DENS-C

TEST>PG>DENS-K

| Check item | Checking method | Assumed cause |
|------------------------|-------------------------------------------------------|--------------------------------------------------------|
| Transfer failure | Check the entire image for any transfer failure. | ITB error (scratches or soiling) |
| | | Primary Transfer Roller error (scratches or soiling) |
| | | Secondary Transfer Roller error (scratches or soiling) |
| Black line (colored | Check the entire image for any black line. | Damage to the Drum Unit |
| line) | | |
| White line | Check the entire image for any white line. | ITB Unit error |
| | | Secondary Transfer Outer Roller error |
| | | Soiling on the laser light path |
| Uneven density at reg- | Check the entire image for any uneven density at reg- | Drum Unit error |
| ular intervals | ular intervals. | |
| Uneven density | Check the entire image for any uneven density. | Soiling on the Dustproof Glass |
| | | Deterioration of the ITB |

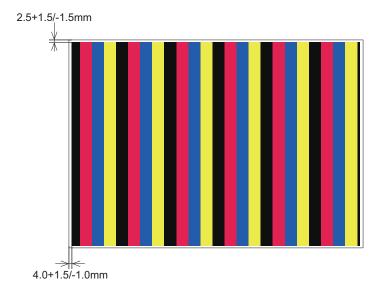

■ Grid (TYPE=6)

This test print is mainly used to check color displacement, right angle accuracy, and linearity.

| Check item | Checking Method | Assumed cause |
|--------------------------|--------------------------------------------------------------------|---------------------------------------|
| Color displacement | Check that there is no displacement between the lines | Laser Scanner Unit error |
| | of the respective colors. | ITB Unit error |
| | | Soiling on the Registration Sensor |
| | | Secondary Transfer Roller error |
| | | Main Drive Unit (drum rotation) error |
| Right angle accuracy and | Check that there is nothing wrong with the right angle | Laser Scanner Unit error |
| linearity | accuracy and linearity between the lines of the respective colors. | Separation Roller error |
| | | Secondary Transfer Outer Roller error |

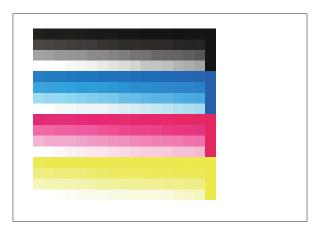

■ MCYBk Horizontal Stripes (TYPE = 10)

This test print is mainly used to check the dark area density of each color, the balance between colors, and white lines that occur during development.

| Check item | Checking Method | Assumed cause |
|---------------------------|---------------------------------------------------------------|-------------------------------------------|
| Uneven density | Check that there is no uneven density in the solid area of | Laser Scanner Unit error |
| | each color. | Error in supplying toner to the Drum Unit |
| | | Primary Transfer Roller error |
| Black line (colored line) | Check that there is no black line (colored line) in the solid | Damage to the Drum Unit |
| | area of each color. | Soiling on the Primary Charging Roller |
| White line | Check that there is no white line in the solid area of each | ITB Unit error |
| | color. | Secondary Transfer Outer Roller error |
| | | Soiling on the laser light path |

■ 64 Gradations (TYPE = 12)

This test print is mainly used to check the single color gradation performance of each of Y, M, C, and Bk at a time.

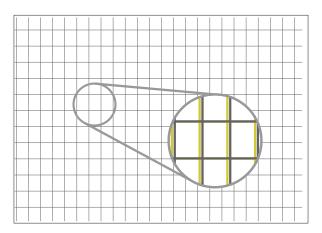

| Check item | Checking Method | Assumed cause |
|------------|--------------------------------------------------------|---------------------------------------------|
| Gradation | Check that the 64 density gradations are recognizable. | Drum Unit error or Laser Scanner Unit error |
| Fogging | Check whether fogging appears only in the blank area. | Drum Unit error or Laser Scanner Unit error |
| White line | Check the entire image for any white line. | Drum Unit error or Laser Scanner Unit error |

List of Troubleshooting Items

| Category | Item | Reference |
|--------------------|-------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Image fail- ure | Color Displacement in the Image Due to a Failure of the Registration Patch Sensor Unit (Front)/(Rear) | "Color Displacement in the Image Due to a Failure of the Registration Patch Sensor Unit (Front)/(Rear)" on page 372 |
| | Fixing Wrinkle due to Foreign Matter Attached to the Fixing Inlet Guide | "Fixing Wrinkle due to Foreign Matter Attached to the Fixing Inlet Guide" on page 373 |
| | Fixing Wrinkle in Envelopes Due to a Problem of Feedability between the Secondary Transfer Nip and the Fixing Nip | "Fixing Wrinkle in Envelopes Due to a Problem of Feedability between the Secondary Transfer Nip and the Fixing Nip" on page 374 |
| | Dark Spots on the Halftone Image | "Dark Spots on the Halftone Image" on page 375 |
| | Fogging Around the High Density Image in a Low Humidity Environment | "Fogging Around the High Density Image in a Low Humidity Environment" on page 376 |
| Operation failure | The ITB Unit Cannot Be Removed Due to a Disengagement Error of the Primary Transfer Roller | "The ITB Unit Cannot Be Removed Due to a Disengagement Error of the Primary Transfer Roller" on page 378 |
| | Troubleshooting by Forcible Stop of Paper Feed | "Troubleshooting by Forcible Stop of Paper Feed" on page 378 |

■ Color Displacement in the Image Due to a Failure of the Registration Patch Sensor Unit (Front)/(Rear)

Location

Registration Patch Sensor Unit (Front)/(Rear)

Cause/Condition

When a failure occurs to the Registration Patch Sensor Unit (Front)/(Rear), color displacement may occur to an output image.

Field Remedy

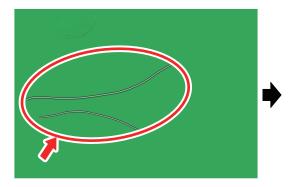

- 1. Execute the following service mode to output a test print (grid).
 - COPIER > TEST > PG > TYPE: 6
- 2. Check the output test print for any image failure (color displacement in the image).
- 3. Check that the following alarm has occurred.

Patch Sensor error 1: 10-0006

Patch Sensor error 2: 10-0007

- 4. Perform the following remedies.
 - 1. Clean the Patch Sensor window.
 - 2. Check the connector connection of the Patch Sensor.
 - 3. Check the connector connection of the Patch Sensor Shutter Solenoid.
 - 4. Replace the Registration Patch Sensor Unit.

■ Fixing Wrinkle due to Foreign Matter Attached to the Fixing Inlet Guide

Location

Fixing Inlet Guide

Cause

When duplex printing of solid image is continued, toner dust or paper lint may be adhered to the rib surface or the leading edge of Fixing Inlet Guide together with the wax inside toner and be solidified.

This causes the paper leading edge to be caught by foreign matter when it enters the Fixing Inlet Guide, disrupting the paper entry balance and causing the possibility of wrinkle in the area from the leading edge to the trailing edge of paper.

Condition

When duplex copying or duplex printing of solid image is continued

Field Remedy

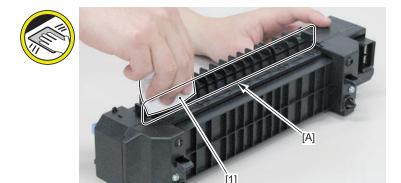

Perform the following procedure:

1. Refer to "Removing the Fixing Assembly" on page 284 and remove the Fixing Assembly.

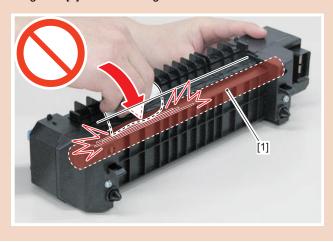

Be sure to start removing the Fixing Assembly after it is cooled down enough. The Fixing Assembly right after printing may cause burn injury.

2. Clean the Fixing Inlet Guide with lint-free paper moistened with alcohol.

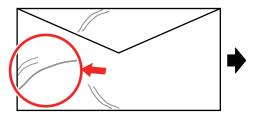

CAUTION:

Be careful not to damage the Fixing Film [1] when cleaning.

- 3. Check that the problem does not occur again
- 4. If the problem persists, replace the Fixing Assembly.

■ Fixing Wrinkle in Envelopes Due to a Problem of Feedability between the Secondary Transfer Nip and the Fixing Nip

Location

Fixing nip

Cause

When envelopes are fed in both the secondary transfer nip and fixing nip, the behavior at the time of feed may cause wrinkle in envelopes.

It may occur more frequently to envelopes which have absorbed moisture.

Condition

When envelopes have not been loaded properly, or when the alignment between the secondary transfer nip and fixing nip has been shifted from the specified position

Field Remedy

Execute the following service mode to change the setting of the fixing speed when feeding envelopes.

(Lv.2) COPIER > OPTION > FEED-SW > EVLP-FS

With this setting, the fixing speed when feeding envelopes can be specified within the range of -2.0% to +2.0%. (Setting range: -20 to 20)

There is a possibility of image displacement at the envelope's trailing edge, therefore change the setting value while checking the wrinkle and the image displacement.

■ Dark Spots on the Halftone Image

a lump and the amount of toner becomes larger.

Location

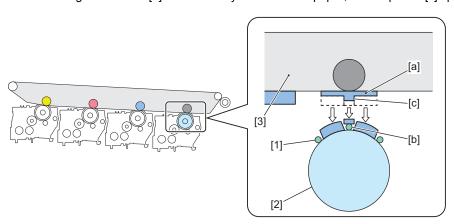

The initial ITB (the surface resistance is high) and the Drum Unit at the end of its life (the charging amount of toner is low)

Cause

When a halftone image is output, dark spots may occur locally. It does not occur in Bk color.

A slight amount of Bk developing carrier [1] is normally attached to the surface of the Bk Drum [2]. On the other hand, when the color toner image [a] on the ITB [3] that has passed through the Y Drum, M Drum, and C Drum reaches the Bk Drum [2], a part of the surface is slightly transferred on to the Bk Drum [2]. (This transfer symptom is hereafter referred to as retransferring.) The amount of toner retransferred here becomes smaller in the area [b] on the surface of the Bk Drum [2] where the developing carrier is attached. On the other hand, in the area [c] on the ITB [3] where the developing carrier had been attached, toner form

For this reason, when the toner image on the ITB [3] is secondarily transferred to paper, the lump area [c] appears as a dark spot.

Condition

This tends to occur when the initial ITB (the surface resistance is high) and the Drum Unit at the end of its life (the charging amount of toner is low) are used in a low humidity environment.

Field Remedy

1. Select "-3" for the following service mode.

COPIER (LEVEL2) > ADJUST > HV-TR > 1TR xxxx

The setting range is "-50" to "50". (Default: 0)

Changing the setting value by "1" changes the primary transfer current by 1 microampere.

Select "1TR_xxxx" according to the paper type and size in use, and the color for which the symptom occurs.

The following shows an example in the case of Plain 1 (64 to 75 g/m2)/A4.

If the problem occurs in yellow:

Change the setting value in the following service mode to "-3".

(Lv.2) COPIER > ADJUST > HV-TR > 1TR-TGM

(Lv.2) COPIER > ADJUST > HV-TR > 1TR_TGC

(Lv.2) COPIER > ADJUST > HV-TR > 1TR TGK4

If the problem occurs in magenta:

Change the setting value in the following service mode to "-3".

(Lv.2) COPIER > ADJUST > HV-TR > 1TR TGC

(Lv.2) COPIER > ADJUST > HV-TR > 1TR TGK4

If the problem occurs in cyan:

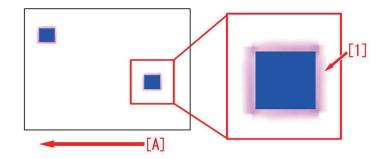

Change the setting value in the following service mode to "-3".

(Lv.2) COPIER > ADJUST > HV-TR > 1TR TGK4

| Paper type and size | | Color for which the symptom occurs | | | |
|-------------------------------------------------------------------------------------------------------|--------------------------|------------------------------------|------------------------|----------|--|
| | | Yellow | Magenta | Cyan | |
| Plain 1 (64 to 75 g/m2) Plain 2 (76 to 90 g/m2) Recycled 1 (64 to 75 g/m2) Recycled 2 (76 to 90 g/m2) | Smaller than A4 (210 mm) | 1TR_TGM3, 1TR_TGC3, 1TR_TK43 | 1TR_TGC3, 1TR_ TK43 | 1TR_TK43 | |
| | A4 (210 mm) or larger | 1TR_TGM, 1TR_TGC, 1TR_TGK4 | 1TR_TGC, 1TR_ TGK4 | 1TR_TGK4 | |
| Plain 3 (91 to 105 g/m2) Recycled 3 (91 to 105 g/m2) | ALL | 1TR_TGM3, 1TR_TGC3, 1TR_TK43 | 1TR_TGC3, 1TR_ TK43 | 1TR_TK43 | |
| Other paper types | ALL | 1TR_TGM2, 1TR_TGC2, 1TR_TK42 | 1TR_TGC2, 1TR_ TK42 | 1TR_TK42 | |

- Select the following service mode, and press the [OK] button to execute the primary transfer ATVC control. COPIER > FUNCTION > MISC-P > 1ATVC-EX
- 3. Output the image where the symptom occurred, and check that the symptom does not occur.

■ Fogging Around the High Density Image in a Low Humidity Environment

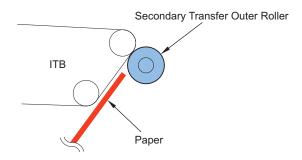

Location

Secondary transfer voltage

Cause

When paper that has been left in a low humidity environment is fed, fogging [1] may occur around the high density image. [A] indicates the paper feed direction.

When a high density image is transferred to a high surface resistance paper, a larger secondary transfer voltage is required. When the surface resistance of the paper is high, toner on the paper cannot be retained and scatters on the non-image area due to the insufficient secondary transfer voltage in the high density area, and thus this symptom occurs.

Condition

When paper is left in a low humidity environment, the surface resistance of the paper increases and this symptom tends to occur.

Field Remedy

1. Check the correspondence table on the basis of the paper type for which this symptom occurs and whether it occurs on the 1st side or 2nd side, find the corresponding setting item in service mode > COPIER > ADJUST > HV-TR, and change the setting value to "10".

| Paper type | Front side (1st side) | Back side (2nd side) | |
|--------------|-----------------------|----------------------|--|
| Thin | 2TR-TH-1 | 2TR-TH-2 | |
| Plain 1 | 2TR-N1-1 | 2TR-N1-2 | |
| Plain 2 | 2TR-N2-1 | 2TR-N2-2 | |
| Plain 3 | 2TR-N3-1 | 2TR-N3-2 | |
| Recycled 1 | 2TR-R1-1 | 2TR-R1-2 | |
| Recycled 2 | 2TR-R2-1 | 2TR-R2-2 | |
| Recycled 3 | 2TR-R3-1 | 2TR-R3-2 | |
| Heavy 1 | 2TR-H1-1 | 2TR-H1-2 | |
| Heavy 2/3 | 2TR-H2-1 | 2TR-H2-2 | |
| Heavy 4/5 | 2TR-H3-1 | 2TR-H3-2 | |
| Color | 2TR-CP-1 | 2TR-CP-2 | |
| Transparency | 2TR-O-1 | - | |
| Label | 2TR-LA-1 | - | |
| Bond | 2TR-B-1 | 2TR-B-2 | |
| Punch | 2TR-PA-1 | 2TR-PA-2 | |
| Envelope | 2TR-EN-1 | 2TR-EN-2 | |
| Postcard | 2TR-P-1 | 2TR-P-2 | |

The setting range is "-128" to "+127". Changing the setting value (default: 0) by "1" changes the secondary transfer voltage by 30 V.

NOTE:

When the secondary transfer voltage is too high or when the paper type is changed, an image failure (white dots) in the high density area may occur due to the high secondary transfer voltage.

2. Output the image where the symptom occurred, and check that the symptom does not occur. If the symptom persists, increase the setting value in Remedy 1 up to "30" in increments of "10".

NOTE:

Improving the paper storage conditions may be effective in improving the issue.

Advise the customers to wrap unused or leftover paper in the paper packaging and keep it in a place away from direct sunlight.

■ The ITB Unit Cannot Be Removed Due to a Disengagement Error of the Primary Transfer Roller

Location

ITB Unit

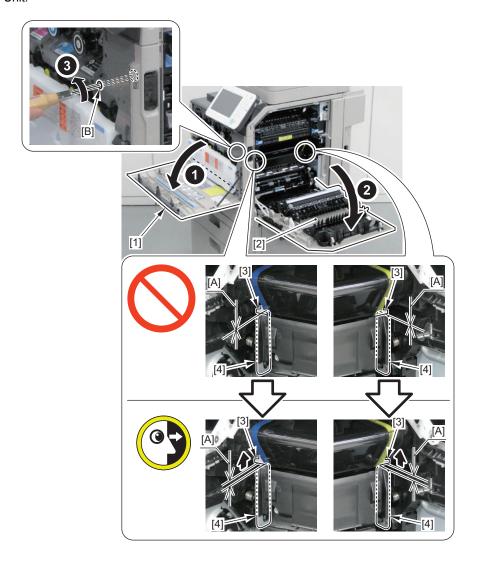

Cause/Condition

When an unexpected situation or unexpected combination of conditions occurs, a Primary Transfer Roller disengagement error may occur. This may result in the ITB Unit not being able to be removed from the host machine.

Field Remedy

Follow the procedure shown below to remove the ITB Unit from the host machine.

- 1. Open the Front Cover [1].
- 2. Open the Right Cover Unit [2].
- 3. Insert a flat-blade screwdriver into the hole [B].
- 4. Rotate the flat-blade screwdriver in a counterclockwise direction until it creates an opening [A] between the Secondary Transfer Idler Roller Shaft Support [3] and the RD Sensor Stay [4].
- 5. Remove the Drum Unit.
- 6. Remove the ITB Unit.

■ Troubleshooting by Forcible Stop of Paper Feed

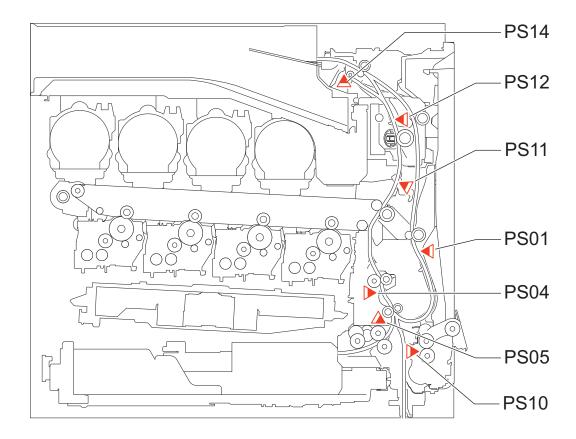

Function Overview

Forcibly stop the paper at a specified position.

Next time a job occurs, the paper is forcibly stopped at the stop position (leading edge) shown in the figure for troubleshooting. When checking the image on the ITB, set PRINTER=99. (Refer to "How to Use" shown below.)

When the paper is forcibly stopped, a jam code "AAxx" is displayed.

When the paper is forcibly stopped, when a normal jam occurs or the paper is normally delivered, the PRINTER setting is automatically cleared.

Use case

- · When bent paper, skew, or wrinkles occur
- · When jams occur frequently
- · When you want to check the image on the ITB

Caution

- Remove the stopped paper by the normal jam removal procedure. After the paper is removed, the job will be automatically recovered.
- Since the Primary Transfer Roller is not disengaged when a jam has occurred, be sure to remove the ITB Unit/Drum Unit after manually disengaging the Primary Transfer Roller (refer to the Service Manual for the procedure).
- If a normal jam cord is displayed, the paper is jammed at a position other than the specified position.
- When a job in which the paper does not pass the specified stop position is executed, the setting to forcibly stop the paper becomes disabled.
- · Unfixed toner may be attached depending on the stop position. Handle it carefully.

How to Use

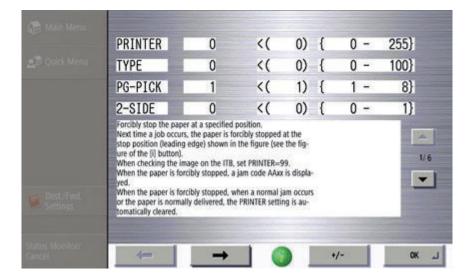

Use this function from SITUATION mode.

- Select the following service mode item.
 Service mode top screen > SITUATION > Troubleshooting > Forcible Stop of Paper Feed
- 2. Select the corresponding service mode name, enter the setting value, and then press the [OK] button.
- 3. The paper will stop at the specified position. Identify the cause of the trouble.

The following service modes can be operated from this SITUATION mode:

- COPIER > TEST > P-STOP > PRINTER
- COPIER > TEST > PG > TYPE
- · COPIER > TEST > PG > PG-PICK
- COPIER > TEST > PG > 2-SIDE
- COPIER > TEST > PG > COLOR-Y

- · COPIER > TEST > PG > COLOR-M
- COPIER > TEST > PG > COLOR-C
- COPIER > TEST > PG > COLOR-K
- · COPIER > TEST > PG > DENS-Y
- COPIER > TEST > PG > DENS-M
- COPIER > TEST > PG > DENS-C
- COPIER > TEST > PG > DENS-K
- COPIER > TEST > PG > F/M-SW

Stop positions and check items

Items that can be checked differ depending on the position where paper stops.

Check for fold/skew/crease/operation check/jam/checking of image on ITB with reference to the table below. (Setting values other than the following are not used.)

| Set- ting value | Stop position | Bend | Skew | Wrinkle | Operation check/Jam | Checking of the image on the ITB |
|-----------------------|--------------------------------------------------|------|------|---------|---------------------|----------------------------------|
| 0 | Not forcibly stopped | - | - | - | - | - |
| 1 | After pickup from the Cassette 1 | Yes | Yes | - | Yes | - |
| 2 | After pickup from the Cassette 2 | Yes | Yes | - | Yes | - |
| 3 | After pickup from the Cassette 3 | Yes | Yes | - | Yes | - |
| 4 | After pickup from the Cassette 4 | Yes | Yes | - | Yes | - |
| 20 | Pre-registration (1st side) | Yes | Yes | - | Yes | - |
| 21 | Pre-registration (2nd side) * | Yes | Yes | - | Yes | - |
| 30 | Secondary pre-transfer (1st side) | Yes | Yes | Yes | Yes | Yes |
| 31 | Secondary pre-transfer (2nd side) * | Yes | Yes | Yes | Yes | Yes |
| 32 | Pre-fixing | Yes | Yes | Yes | Yes | Yes |
| 40 | Post-fixing | Yes | - | - | Yes | - |
| 70 | Post-reverse * | Yes | Yes | - | Yes | - |
| 71 | Duplex standby position* | Yes | Yes | - | Yes | - |
| 99 | Secondary pre-transfer (when checking the image) | - | - | - | - | Yes |

^{*:} Paper is stopped when a duplex job is executed (paper is stopped after being reversed).

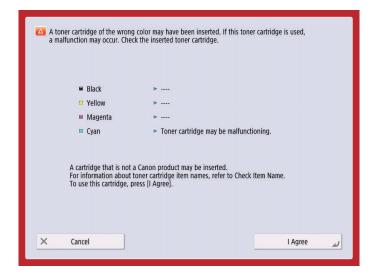

■ Display of "Non-Canon Product" Message

The following shows the remedy to be performed when a "non-Canon product" message is displayed even though Canon-made toner is used.

Remedy:

Perform a remedy according to the instruction of the alarm.

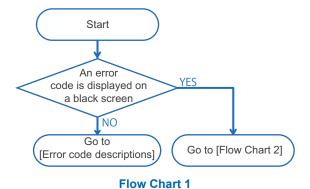

1. Toner cartridge

Alarm code: At the same time, 10-0091 - 0094 occurs.

■ Remedies to be performed when E602-xxxx or E614-xxxx error is displayed

Remedy procedure for E602 or E614 differs according to the status of the screen where error is displayed. Check the remedy procedure by referring to the following flow chart.

Turn OFF the main power.

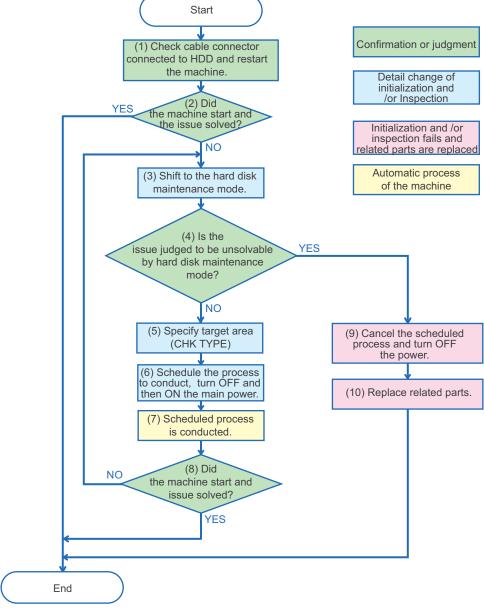

+-----+
| E602-0801 |
+-----+

Cannot access the hard disk.
If the optional removable hard disk is use, check it is connected then restart the machine.
IF this is error tou occur, content your service representative.

Display Sample: If an error code is displayed on a black screen

Execute a remedy described in service mode by referring to Error / Jam / Alarm in the Service Manual.

If an error code and a message is displayed on a black screen (as above), shift to the hard disk maintenance mode referring to the Flow Chart 2 and execute the remedy described in Error / Jam / Alarm in the Service Manual.

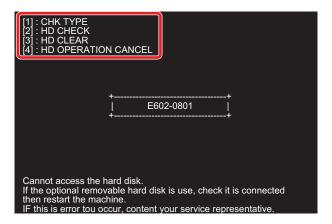

Flow Chart 2

CAUTION:

Numbers in the Flow Chart 2 are corresponding to the procedure numbers. Check the remedy procedure by referring to the flow chart.

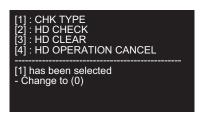

- 1. Check cable connector connected to the hard disk and restart the machine.
- 2. Check if the machine is started normally. If the machine is started normally, the analysis is complete.

3. If the machine is not started normally, execute key operation to shift to the service mode for shifting to hard disk maintenance mode.

Example of hard disk maintenance mode screen

- 4. Determine if the issue is solved in the hard disk maintenance mode.
 - Proceed to 5 for diagnosis for the first time or trying to restore with the hard disk maintenance mode.
 - If the issue cannot be solved by hard disk maintenance (HD-CHECK/HD-CLEAR is not executed or issue unsolved even executed), proceed to 9.
- 5. Press "1" of Numeric Keypad, then two digits number to specify the target area (CHK TYPE).

CAUTION:

The CHK - TYPE to be specified needs to be entered in two digits even the number to be specified is one digit. Enter "01" to specify "1" and enter "04" to specify "4".

For example, in the case of the above display (E602-0801), specify No. 8 because Partition No. 8 is in error. (Enter the number as "08")

If you made a mistake, press "1" again then enter two digits number.

- 6. Specify and schedule the process stated as a remedy for error code by referring to the Flow chart No.6, "Error / Jam / Alarm" in the Service Manual. Then turn OFF and then ON the main power of the machine.
 - To schedule disk check (COPIER > FUNCTION > SYSTEM >HD-CHECK), select [2]:HD-CHECK.
 - To schedule formatting (COPIER / FUNCTION / SYSTEM /HD-CLEAR), select [3]:HD CLEAR.

NOTE:

When the menu [2] to [4] is selected, key cannot be re-entered. If you made a wrong selection, Turn OFF and then ON the main power of the machine, shift to hard disk maintenance mode and specify again.

- 7. Scheduled process is automatically executed.
- 8. If the process is complete and the machine is restarted normally, analysis is complete.

The same black screen and the error code is displayed, shift back to the hard disk maintenance mode and conduct other maintenance.

9. Consider the HDD cannot be restored, select [4] and cancel the schedule. Switch OFF the main power of the machine.

CAUTION:

Replacing HDD without canceling the schedule causes the scheduled process is executed to replaced HDD at the next normal startup.

When replacing parts, specify [4] to cancel the schedule.

10. Refer to the Service Manual to replace the related parts.

NOTE:

Related parts for E602

- · Harness between main controller PCB and the HDD
- HDF
- Main Controller PCB

Related parts for E614

- Flash PCB
- · Main Controller PCB

Startup System Failure Diagnosis

Overview

The purpose of this diagnosis is to identify the cause when the host machine would not start up.

A combination of the following three identification methods is used to identify the cause.

- · A method for identifying the failure on the basis of the LED/LCD display status
- A method for identifying the failure on the basis of the power supply/signal route
- Identification of the location of the controller-related failure with the controller self-diagnosis function

The diagnosis is made according to the startup system failure diagnosis flow in order to perform basic identification of the cause and perform the remedy.

If it turned out that the failure was caused by the controller or the Power Supply Assembly, perform a controller self-diagnosis or check the Power Supply Assembly, and perform the remedy.

If the diagnosis result shows that replacement of parts is required, perform the works in the order shown below.

- 1. Check if the connectors (of a cable, etc.) are connected properly.
- 2. Replace the cable.
- 3. Replace the parts.

After performing the works shown above, be sure to restart the host machine and check if the symptom occurs again.

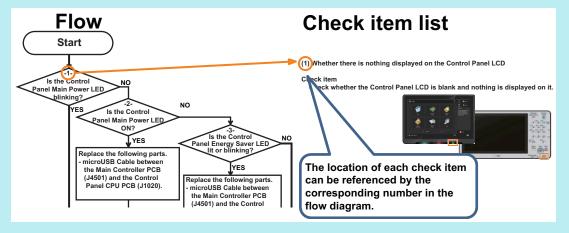

WARNING:

When a tester is used to perform a check, the AC voltage may be measured. There is a possibility of electrical shock, so caution is required during the work.

NOTE:

The numbers such as (1) and (2) shown in the flow diagram indicate that there is a check item table showing the items to be checked in the flow chart, location, and procedure.

Each number in the flow diagram is linked with the item number of the corresponding check item table to be referenced.

CAUTION:

Before using a tester to perform a check, be sure to turn OFF the Environment Heater Switch.

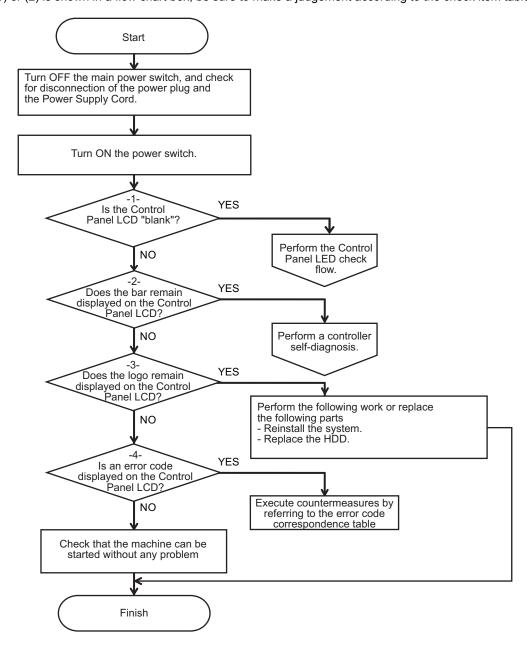

If a check is performed with the Environment Heater Switch ON, the diagnosis may not be performed correctly.

NOTE:

When replacing the cable, disconnect the cable from the connector and check the continuity.

Basic Flow

If the host machine would not start up, follow the flow shown below to identify the location of the trouble. If a number (1) or (2) is shown in a flow chart box, be sure to make a judgement according to the check item table.

(1) Whether there is nothing displayed on the Control Panel LCD

Check item

Check whether the Control Panel LCD is blank and nothing is displayed on it.

If it is blank, see "Control Panel LED Check Flow" on page 388 to perform the remedy.

(2) Whether the bar remains displayed on the Control Panel LCD

Check item

Check whether the bar remains displayed on the Control Panel LCD.

If the bar remains displayed, see "Controller Self Diagnosis" on page 395 to perform the remedy.

(3) Whether the logo remains displayed on the Control Panel LCD

Check item

Check whether the logo remains displayed on the Control Panel LCD.

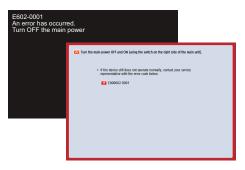

If the logo remains displayed, re-install the system software or replace the HDD.

- See the Chapter 4, "Firmware Management" of the "imageRUNNER ADVANCE System Service Manual" to re-install the system software.
- See"Removing the HDD" on page 220 to replace the HDD.

(4) Whether an E code is displayed on the Control Panel LCD

Check item

Check whether an E-code is displayed on the Control Panel LCD.

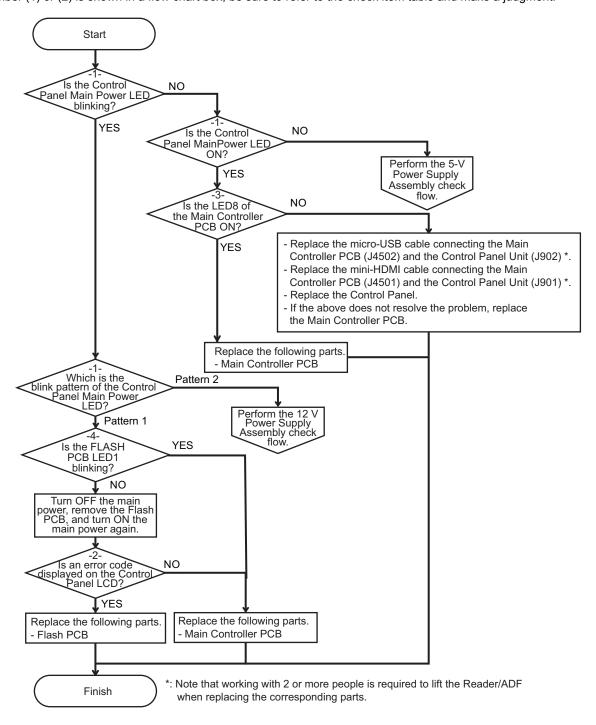

Display sample of an E-code

If an displayed error code starts with E602 or E614, see "Remedies to be performed when E602-xxxx or E614-xxxx error is displayed" on page 381 to perform the remedy.

If the error codes other than above is displayed, see "Error Code" on page 421 to perform the remedy.

Control Panel LED Check Flow

Follow the flow shown below to identify the location of failure according to the Control Panel LED status and take measurements. If a number (1) or (2) is shown in a flow chart box, be sure to refer to the check item table and make a judgment.

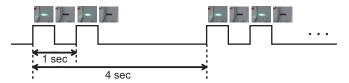

(1) Control Panel Main Power LED is blinking / ON

Check item

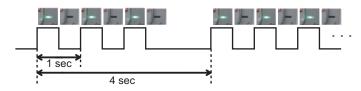

Blink pattern of the Control Panel Main Power LED

Pattern 1 (The Main Power LED blinks 2 times in 4 seconds: Controller error)

Pattern 2 (The Main Power LED blinks 3 times in 4 seconds: Power Supply error)

(2) E-code is displayed on the Control Panel LCD

Check item

Check whether E-code is displayed on the Control Panel.

E-code display example

(3) Is the LED8 of the Main Controller PCB ON?

Check item

Check whether the LED8 of the Main Controller PCB is ON.

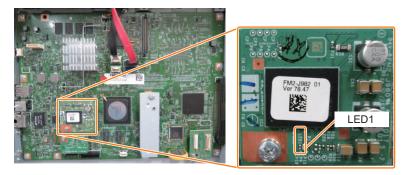

Reference example

(4) Is the LED1 of the FLASH PCB blinking?

Check item

Check whether the LED1 of the FLASH PCB is blinking.

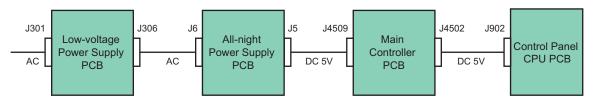

Reference example

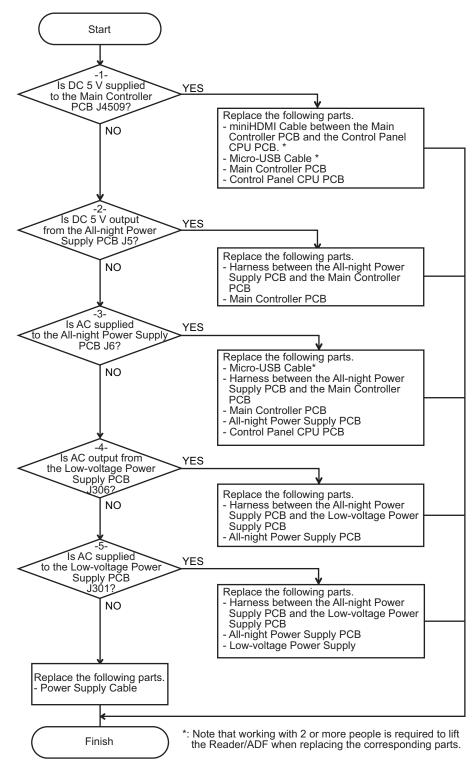

5 V Power Supply Assembly Check Flow

If 5 V power is not supplied to the PCB, the location of the problem can be identified by checking the PCB, jack, and pins supplying power to the PCB.

5 V Power Supply Assembly Block Diagram

Refer to the flow shown below, and solve the 5 V power supply system trouble.

5 V Power Supply Assembly Check Flow

Check item

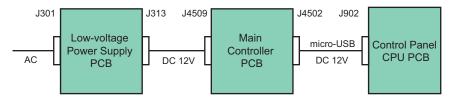

| No | Check item | Check point |
|----|-------------------------------------------------------|-------------|
| 1 | Control Panel Check whether the LED is ON or blinking | |

| No | Check item | Check point | |
|----|----------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|--|
| 0 | Main Controller PCB Connector side of J4509 Pin 1 (5 V) and pin 4 (GND) Normal value: DC 5 V | 1pin 4pin | |
| 2 | NOTE: When checking this connector, be sure to remove the HDD in advance. Note that the error code displayed in this case can be ignored. | J4509 | |
| 3 | All-night Power Supply PCB Connector side of J5 1pin(5V) and 6pin(GND) Connector side of J5 Pin 1 (5 V) and pin 6 (GND) Normal value: DC 5 V | 1pin | |

| 3 | Low-voltage Power Supply PCB Connector side of J301 Pin 1 and pin 3 Normal value: AC voltage | J301 1pin 3pin | |
| | CAUTION: Be careful when you measure the AC voltage. | | |
| | CAUTION: Before measuring the voltage, be sure to remove the All-night Power Supply PCB. | | |

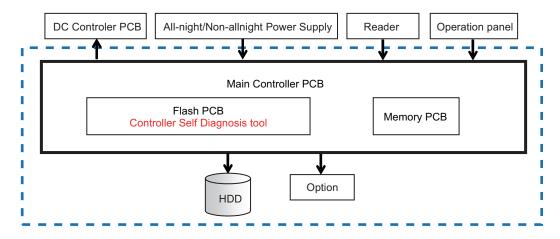

Controller Self Diagnosis

In order to reduce the time for identifying the cause of error occurred in the field and improve the accuracy of identifying the error locations, operation of the controller system error diagnosis tool added to the host machine and the remedies for errors are described.

This manual can be used when the host machine is in the following conditions.

 When a failure of the Main Controller PCB and the related PCBs (child PCBs such as TPM installed on the Main Controller PCB) is suspected

PCBs and units diagnosed by the tool are as follow:

The area framed in blue (dotted line) in the figure shows the components to be checked by the controller system error diagnosis tool.

The Main Controller PCB, child PCBs installed on the Main Controller PCB and HDD are automatically checked, and the result is displayed on the Control Panel.

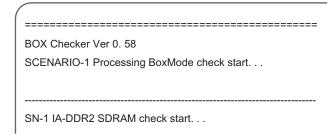

1. Turn ON the Main Power Supply Switch while pressing the service button '3'.

Reference example

2. Keep pressing the service button (for approx. 20 seconds) until the following screen appears on the Control Panel.

NOTE:

When this tool is not installed correctly, the regular Startup screen is displayed.

In this case, perform the following remedy.

Turn OFF the Main Power Switch again, and execute steps 1 and 2 shown above.

If this tool still does not boot, it means that BCT (Box Checker Test) is deleted, so install BCT.

If BCT is not installed correctly, "- - . - -" is displayed in Service Mode (BCT) in the host machine.

• COPIER > DISPLAY > VERSION > BCT

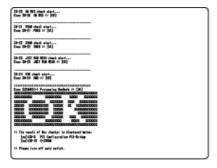

Diagnosis Result

Diagnosis Time

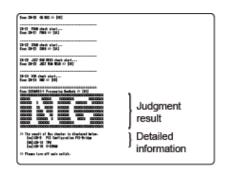

Diagnosis is completed in approx. 3 minutes. The result is displayed on the Control Panel.

When the diagnosis result is normal

When an error is detected by diagnosis

Detailed information is displayed under the judgment result. In detailed information, the name of the test where the error was detected is displayed.

How to view the error result

The following screen is an enlarged view of the detailed information indicated above. Explanation of the detailed error information is described.

> >> The result of Box checker is displayed below. [no] : SN-9 PCI Configuration PCI-Bridge [NG] : SN-13 TPM

[no]: SN-19 O-SDRAM

>> Please Turn off main switch.

[NO] means that optional PCBs are not mounted.

A fault has occurred when [NO] is displayed irrespective of whether the Option PCB is attached.

[NG] means that an error occurred to PCBs mounted as standard.

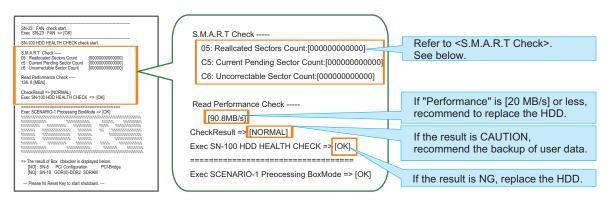

■ Controller Self Diagnosis Table

The error locations are identified according to the following table.

| Test name | | Presumed failure loca- Remedy | | Relevant Er- |
|------------------------------------|-------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|-------------------------------------------------------------------------------|--------------|
| | | tion | | ror Code |
| SN-1 MN- DDR3 SDRAM | Check the SDRAM of the Main Controller PCB | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-2 SM BUS MN DDR3 On Board | Check the circuit in the Main Controller PCB | Main Controller PCB Replacement of the Main Controller PCB | | - |
| SN-5 PCI Configuration Caiman | Check the circuit in the Main Controller PCB | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-8 CPLD | Check the circuit in the Main Controller PCB | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-9 LANC FLASH | Check the circuit in the Main Controller PCB | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-10 RTC CHECK | Check RTC setting time | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-11 TPM | Check TPM PCB device Remarks: It is always [NG] in machines for China because the TPM PCB is not installed. | Main Controller PCBTPM PCB | Replacement of the TPM PCB Replacement of the Main Controller PCB | E746 |
| SN-12 SOC DDR3 SDRAM | Check the circuit in the Main Controller PCB | Main Controller PCB | Replacement of the Main Controller PCB | - |
| SN-13 FRAM | Check the Memory PCB lead | Memory PCB | Check the Memory PCB installation Replace the Memory PCB | E355 |
| SN-16 HDD | Check the HDD lead | • HDD | Check the connection of the HDD Replace the HDD Cable Replace the HDD | E602 |
| SN-17 SRI | SRI BUS device Connection check | Main Controller PCB | Replacement of the Main Controller PCB | - |

| Test name | Detailed test name | Presumed failure loca- tion | Remedy | Relevant Er- ror Code |
|-------------------------------|-------------------------------------------------------------------------------------------------------|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| SN-25 FAN1 | Check the rotation of the Controller Fan | Main Controller PCB | Check the connection of the Controller Fan | E880 |
| SN-100 HDD HEALTH CHECK | Check the S.M.A.R.T. acquisition and lead performance (see the example displayed in the figure below) | • HDD | If the S.M.A.R.T. Check displays a numeric value apart from [0], a backup of customer data is recommended. If the CheckResult is judged as CAUTION, a backup of customer data is recommended. If the Performance is displayed as [20 MB/s] or less, replacement of the HDD is recommended. If Exec SN-100 HDD HEALTH CHECK is judged as NG, replace the HDD. | - |

SN-100 HDD HEALTH CHECK

HDD S.M.A.R.T Information

S.M.A.R.T Check

| S.M.A.R.T Check | Description | Remedy | |
|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|--|
| 05: Reallocated Sectors Count: | Number of alternative processed defec- | If a numeric value besides [000000000000] is displayed, | |
| [00000000000] | tive sectors | backup is recommended to avoid losing customer data. | |
| | Number of pending sectors (sectors that may have defective sectors) | If a numeric value apart from [000000000000] is displayed, backup is recommended to avoid losing customer data. | |
| c6: Uncorrectable Sector Count: [0000000000000] Number of defective sectors (uncorrectable sectors) which do not allow alternative processing | | If a numeric value apart from [000000000000] is displayed, | |

Limitations

- If there is a problem with the test name (SN-1, 2, 8, 12), this diagnosis tool itself will not startup.
- When no PCBs are installed on the Main Controller PCB, the following judgment results are displayed.
 Standard PCB: [NG]

Optional PCB: [OK]

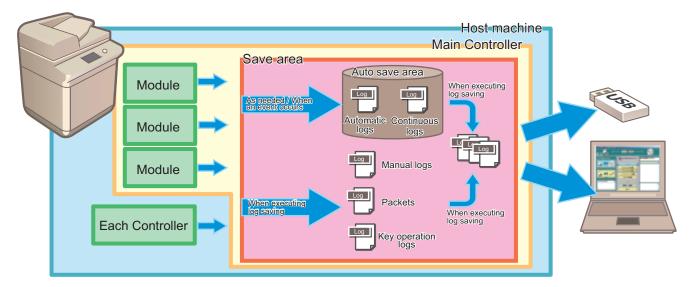

However, [NO] is displayed in detailed error information for optional PCBs.

Debug Log

Function Overview

As for debug log, following logs are available: continuous log that saves the operation log, automatic log that is saved when an event occurs, manual log which is collected and saved each time at log saving, packet log, and key operation log.

NOTE:

Debug logs are used for analysis of program operations of the machine and identification of the problem by the developer. This machine has a function for compiling operation history of each software module as debug logs and outputting them as unified logs for analyzing problems.

Since the frequency of outputting debug logs and the type of logs can be changed by the settings, the settings need to be changed according to the trouble that occurs and the situation.

Types of Debug Logs

| Types of Debug Logs | Description | | | |
|---------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Sublogs | Manual logs | | | |
| | Logs collected in each module and controller are archived and can be collected when log saving is executed. Logs of the Main Controller, RCON, and DCON are saved together with automatic logs as up to 10 logs in total. | | | |
| | Automatic logs | | | |
| | Logs that are automatically saved to the machine when an event (exceptional behavior, error code, or reboot) occurs. | | | |
| Logs of the Main Controller, RCON, and DCON are saved together with manual logs as up | | | | |
| | Continuous logs | | | |
| | Logs that are continuously saved while the machine is running. | | | |
| | Up to 100 logs of only the Main Controller can be stored. | | | |
| Key operation logs | History of key operations. | | | |
| | Log collection starts by enabling the setting and starting the function. | | | |
| | Logs that are archived and can be collected when log saving is executed. | | | |
| Network packet | Logs of network packet data sent from or received by the host machine. | | | |
| logs | Log collection starts by enabling the setting and starting the function. | | | |
| | Logs that are archived and can be collected when log saving is executed. | | | |

Storage location and types of Sublogs

The locations where Sublogs are stored and the types of logs are shown below. Logs may be stored in controllers and parts other than those shown below.

| Туре | Automatic logs | Manual logs | Continuous logs |
|-----------------|----------------------------------|----------------------------------|-----------------|
| Main Controller | Yes (more detailed than continu- | Yes (more detailed than continu- | Yes |
| | ous logs) | ous logs) | |
| DCON | Yes | Yes | No |
| RCON | Yes | Yes | No |

Cases Where Debug Logs Need to Be Collected

- When the result of identification of the cause shows that the trouble was caused by host machine (firmware, hardware-related controller)
- When the failure occurs only at the customer's site and cannot be reproduced by the department in charge of quality management or Canon Inc.

Sublogs

Sublog is the general term for the unified logs for analyzing problem in which operation histories of software modules are compiled as debug logs.

When a problem relating to the host machine occurs in the field and it is difficult to identify the cause of it at the user site, collecting Sublogs and sending them to Design Dept./R&D can improve the efficiency of analyzing the problem and reduce the time it takes to deal with the problem.

CAUTION:

- Sublogs are basically stored in volatile memory. Therefore, almost all information will be erased by turning OFF and
 ON the power before saving the log data. When obtaining the log data, make sure to implement the operation to save
 the log data (manually saving log) before turning OFF and ON the power.
- I order to prevent failure of collecting necessary information because the log is overwritten with the succeeding process, be sure to collect the Sublog while the symptom has occurred or immediately after the occurrence.
- Once the Sublog files are collected, they are deleted from the machine. In the case of collecting Sublogs consecutively, the number of continuous log files may be fewer than usual.

Key operation logs

This function collects the history of key operations in order to distinguish between a failure of the Main machine and an operation error of the user in the case of trouble of erroneous fax transmission.

If it cannot be denied the possibility that the user operation caused the error, collect the key operation logs.

The key operation log are stored/recovered in a form included in the Sublog files.

The following confidential information in the stored key operation log is masked.

- · Personal identification number, PIN code, password, etc., to be entered
- · Information that is hidden by turned letters on the UI screen

CAUTION:

To obtain permission from a user in advance for recording key operations for failure analysis.

Network packet logs

This function collects the transmitted and received network packet data as a debug log in the storage (capture). When it is expected that the trouble was caused by network, collect network packet logs.

NOTE:

To use this function, you need to register a license, so you need to ask the Support Dept. of the sales company to issue a license.

CAUTION:

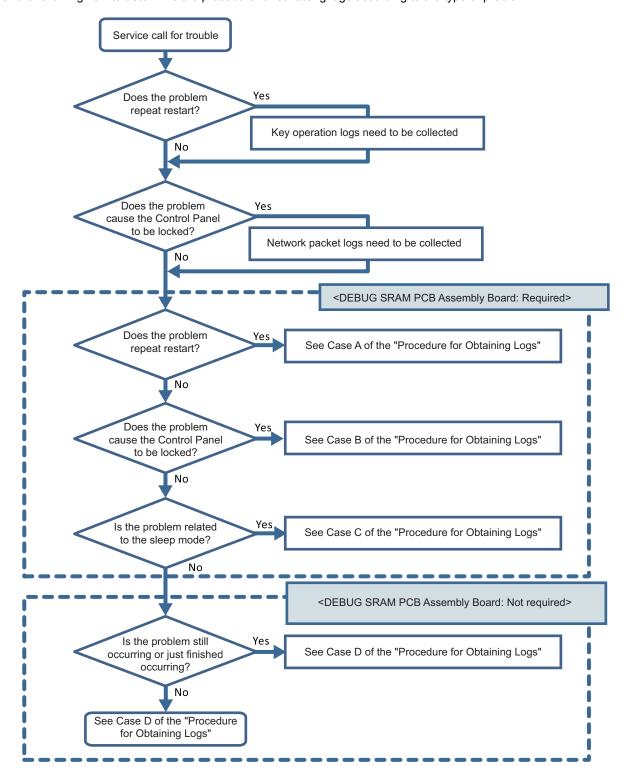

When obtaining the network packet log, explain to the user and obtain permission before proceeding.

CAUTION:

Under heavy network load environment, packets can be dropped.

■ Flow of Determining the Procedure for Collecting Logs

Check the following flow to determine the procedure for collecting logs according to the type of problem.

When the user's operation such as wrong fax transmission may be the cause of the problem, enable [Store Key Operation Log].

Procedure for Collecting Logs

Log Collection Procedure List

| Problem | Details of Problem | DEBUG SRAM | Procedure for Obtaining Logs |
|---------|-------------------------------------------------------------------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Case | | PCB ASS'Y Board | |
| Case A | Problem that repeats restart | Necessary | Refer to "Preparation" on page 404 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the settings. Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407 immediately after restart. Save and collect reports by referring to "Saving and Collecting Report Files" on page 409. Collect debug logs by referring to "Collection of Log" on page 409. |
| Case B | Problem causing the Control Panel to be locked | Necessary | Refer to "Preparation" on page 404 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the settings. Turn OFF and then ON the power immediately after the Control Panel is locked. Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407 after startup. Save and collect reports by referring to "Saving and Collecting Report Files" on page 409. Collect debug logs by referring to "Collection of Log" on page 409. |
| Case C | Problem related to the sleep mode | Necessary | Refer to "Preparation" on page 404 and make the preparations such as installing the DEBUG SRAM PCB ASS'Y Board or change the settings. After the problem occurs, turn OFF and then ON the power if necessary, and execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407. Save and collect reports by referring to "Saving and Collecting Report Files" on page 409. Collect debug logs by referring to "Collection of Log" on page 409. |
| Case D | Problem when executing a job (Example: Printing is not performed, etc.) | Not necessary | Execute log saving while the problem is occurring by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407. Saving of Manual Logs_ Network Packet Logs and Key Operation LogsExecute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407. Collect debug logs by referring to "Collection of Log" on page 409. |
| | When an E code error has occurred | Not necessary | Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407. However, if the background of the Control Panel is blank and an error code is displayed in text, logs cannot be obtained. |
| Case E | Problems other than above | Not necessary | Execute log saving by referring to "Saving of Manual Logs, Network Packet Logs and Key Operation Logs" on page 407. Check with the user on the date and time when the problem occurred and the procedure. |

Saving and Collecting Debug Logs

■ Tools Required

The following tools are necessary to save/collect debug logs of the machine.

Exporting to a USB Device

· USB device

When exporting debug logs to a USB device, use a USB device in which the system software for the machine is registered using SST.

Since the size and number of log files to collect varies according to the device status and the logs that have been saved, the size of the collected files may be several hundred MB. Therefore, it is recommended to use a USB device with 1 GB or more of free space.

The USB device must be formatted with the FAT file system.

CAUTION:

Be sure to check that the USB device has 1 GB or more of free space before collecting a log. If capacity of the USB device is insufficient, logs that failed to be saved will be deleted so that analysis of the symptom cannot be performed.

Exporting to a PC

- · PC with SST installed
- · Network connection cable

When exporting debug logs to a PC, a PC with SST installed and a network connection cable are required.

Common (When Exporting to a USB Device, or When Exporting to a PC)

· DEBUG SRAM PCB Assembly Board

In the following conditions, debug logs cannot be saved, therefore the DEBUG SRAM PCB Assembly Board is required.

- · When restart is repeated
- When all the operations of the device are frozen and manual logs cannot be collected.
- · When the machine would not recover from sleep mode

Refer to the following regarding installation on to the Controller PCB.

Reference example of installation

■ Work Flow

The flow of saving/collecting Sublogs is shown below.

1. Preparation

Refer to "Flow of Determining the Procedure for Collecting Logs" on page 401, and make the preparation as needed according to a situation where an event has occurred.

2. Reproduction of the symptom

Reproduce the symptom.

3. Saving Manual Logs

Save manual logs that require manual operation.

4. Output of reports

Output reports necessary for escalation.

5. Collecting log files

Start the machine in download mode, and save (collect) the log files to a USB device or a PC.

CAUTION:

In the case of analysis using Sublog, the following information needs to be obtained together with the Sublog.

- Symptom that has occurred (from service technician's viewpoint as far as possible)
- Date and time of the event (from an hour before the event to an hour after the event)
- Reports (P-Print, HIST-PRT, job logs, communication management report, etc.)
- Printed data and original at the time of reproduction (depends on the trouble that has occurred)

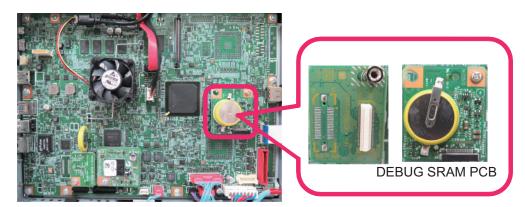

Besides Sublog, the above-mentioned information is required due to the following reasons:

- Failures such as a process being stopped due to an error or an unintended behavior are easy to find, but failures such as "the behavior is slow" are difficult to analyze based on operation logs only.
- Since the number and size of the files are huge, the information helps to find the operation log where the problem occurred.
- When R&D reproduces the failure, it is necessary to use information such as the procedure used by the customer, frequency of use, and job data at the time of occurrence of the failure.
- 6. Remove the board installed in step 1 and return the settings back to the original values.

■ Preparation

Follow the procedure shown below to make preparations for collecting debug logs.

 Refer to "Flow of Determining the Procedure for Collecting Logs" on page 401 and when it is judged that DEBUG SRAM PCB ASS'Y Board is required, install the board.

- 2. Refer to "Flow of Determining the Procedure for Collecting Logs" on page 401 and when it is judged that collection of the key operation logs is required, enable [Store Key Operation Log] by following the procedure shown below.
 - 1. Select [Settings/Registration] > [Management Settings] > [Device Management] > [Store Key Operation Log].
 - 2. Select [ON] and press [OK] to start saving key operation logs.

CAUTION:

When collecting the key operation logs, be sure to obtain user's permission in advance.

- 3. Refer to "Flow of Determining the Procedure for Collecting Logs" on page 401 and when it is judged that collection of the network packet logs is required, enable the network packet log collection function by following the procedure shown below and start the function.
 - 1. Enter a license in the following menu to enable network packet capture.

 [Settings/Registration] > [Management Settings] > [License/Other] > [Register License]

NOTE:

Use the license issued by the Support Dept. of the sales company to activate it.

- Enable the setting (ON) in the following menu.
 [Settings/Registration] > [Preferences] > [Network] > [Store Network Packet Log]
- 3. Set "1" in the following service mode (Lv.2).
- Service mode > COPIER > TEST > NET-CAP > CAPOFFON
- 4. Refer to "Initial setting of the network packet log collection function" on page 406, and configure the required option settings.
- 5. Set "0" or "1" in the following service mode (Lv.2) to start capture of network packets.

Service mode > COPIER > TEST > NET-CAP > STT-STP

- 0: Not automatically collect at startup (factory default setting)
- 1: Automatically collects at startup
- 6. Execute the following service mode (Lv.2) to check the status of the capture.

Service mode > COPIER > TEST > NET-CAP > CAPSTATE

The following types of status are displayed.

- · RUNNING: Packets are being captured.
- · STOP: Packet capturing is stopped.
- HDDFULL: The maximum amount of 1 GB of packets has been captured.
- 4. When an instruction to change the automatic log settings is given by the Support Dept. of the sales company, change the settings by referring to "Automatic Log Settings" on page 405.

Automatic Log Settings

Automatic log is collected triggered by "occurrence of an unexpected error", "occurrence of an error code" or "restart of the machine".

If you want to change the triggers, change the setting in the following service mode.

COPIER > Function > DBG-LOG > LOG-TRIG

However, there is no need to change the setting unless otherwise instructed by the Support Dept. of the sales company. The events that trigger collection of automatic logs and their setting values are shown below.

List of conditions for automatic saving of logs and setting values

| Setting value | Event condition for saving automatic log |
|-----------------------|-----------------------------------------------------------------------------------------------------|
| 101 (Default setting) | When an unexpected error occurs, an error code occurs, or the machine is restarted |
| 111 | Only when an unexpected error occurs |
| 121 | Only when an error code occurs |
| 131 | Only when the machine is restarted |
| 201 | When an unexpected error occurs, an error code occurs, the machine is restarted, or an alarm occurs |
| 211 | When an unexpected error occurs or an alarm occurs |
| 221 | When an error code occurs or an alarm occurs |
| 231 | When the machine is restarted or an alarm occurs |
| 291 | Only when an alarm occurs |
| 301 | When an unexpected error occurs, an error code occurs, the machine is restarted, or a jam occurs |
| 311 | When an unexpected error occurs or a jam occurs |
| 321 | When an error code occurs or a jam occurs |
| 331 | When the machine is restarted or a jam occurs |
| 391 | Only when a jam occurs |

The procedure for changing the log auto save conditions with LOG-TRIG is indicated below.

- Press [LOG-TRIG], enter the value for the conditions you want to set, and press [OK].
 "ACTIVE!" flashes in the display column, and the log settings in the machine are changed.
- 2. When [OK!] is displayed in the display column, the work is complete.

 If the processing fails, "NG" is displayed. It is not necessary to restart the device.

NOTE:

- A value between 0 and 99999 can be set, but make sure to set the value instructed by the Support Dept. of your sales company. Operations are not guaranteed when value other than the above is set.
- The displayed setting is not changed simply by changing the setting or pressing [DEFAULT].
 It is necessary to exit the DBG-LOG screen once by pressing the [Reset] key, etc. and then display it again, after performing these operations.

Executing Auto Saving (Reference Example)

An example of executing auto saving using LOG-TRIG is shown below so that you can experience the log collection work. It is an example of log collection in the event of jam in the Delivery Assembly during copy operation.

- 1. Connect a USB device to the machine while the machine is ready for operation.
- 2. Set "301" in the following service mode (Lv.2).
 - COPIER > Function > DBG-LOG > LOG-TRIG
- 3. Make a copy. Open the Delivery Feed Assembly before paper is delivered from the Delivery Assembly to generate a jam.
- 4. When a jam occurs, confirm "Storing System Information..." is displayed at the bottom of the Control Panel.

Initial setting of the network packet log collection function

When collecting the network packet logs, configure the initial settings as needed.

Setting the overwrite function

1. To enable this function, set "1" in the following service mode (Lv.2).

Service mode > COPIER > TEST > NET-CAP > OVERWRIT

NOTE:

When this setting is enabled, old logs will be overwritten. If the symptom cannot be reproduced, disable this setting (setting value: 0) and secure logs (save them using SST or USB).

After securing the logs, enable the setting (setting value: 1) again.

Behavior when HDD reaches the limit

When this setting is enabled (setting value: 1), the following behaviors will occur when the HDD reaches the limit.

- · When overwrite setting is ON
 - The oldest packet file is deleted. This "oldest file" is judged not by the date and time allocated to the file but by the last update time of the file.
 - If the HDD reaches the maximum size while retrieving packets, the oldest file will be deleted, and CAPSTATE of the capture, which continues the retrieval process for the file which is being saved, remains "RUNNING".
- · When overwrite setting is OFF
 - · The capture is stopped.
 - The CAPSTATE of the capture will be "HDDFULL". However, STT-STP will remain as Start (1) status. By changing STT-STP (0) to STTSTP (1), the capture resumes.
 - When the capture resumes, the capture starts if HDDFULL has been solved.
 - The CAPSTATE of the capture will be "RUNNING".
 - If HDDFULL has not been solved, an error is generated as the result of resuming the capture.
 - The CAPSTATE of the capture remains "HDDFULL".
 - If the capture is stopped while the CAPSTATE is "HDDFULL", the CAPSTATE of the capture remains "STOP".

Setting the encryption function

1. To enable this function, set "2" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > ENCDATA

- 0: Encrypted when data is extracted (factory default setting).
- 1: Not encrypted when data is extracted.
- 2: When data is extracted, a ciphertext file and a plaintext file are extracted.

The extension of extracted packet data will be "XXX.can" when encryption settings are enabled.

The extension of extracted packet data will be "XXX.cap" when encryption settings are disabled.

This setting only applies when extracting data by the USB flash drive.

NOTE:

When SST is used to collect data, both plaintext data and ciphertext data are extracted, and this setting is ignored.

Setting the payload drop function

1. To enable this setting, set "1" in the following service mode (Lv.2).

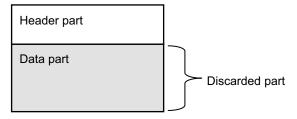

COPIER > TEST > NET-CAP > PAYLOAD

- 0: Not drop the payload (factory default settings)
- 1: Drop the payload

The obtained packet data includes a header part and data part. The header part includes data such as the TCP header and IP header. The data part includes the actual data.

Enabling this function discards the actual payload data and extracts only the data from the header part, which has the following effects.

- · Can be used when customer data is not allowed to be extracted
- · Can be used in an environment where traffic is highly overloaded

Packet data structure image

Setting the filter function

1. To enable this function, set "1" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > SIMPFILT

- 0: All data is collected without being filtered (factory default setting).
- 1: Data is filtered.

If this function is enabled, only packet data that includes the machine's MAC address in the packet header is captured.

Setting the startup collection function

1. To enable this function, set "1" in the following service mode (Lv.2).

COPIER > TEST > NET-CAP > PONSTART

- 0: Not automatically collect at startup (factory default setting)
- 1: Data is filtered.

If this function is enabled, only packet data that includes the machine's MAC address in the packet header is captured.

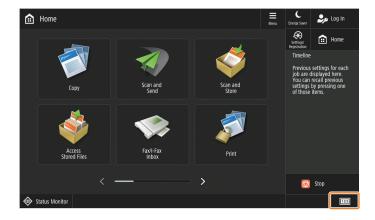

■ Saving of Manual Logs, Network Packet Logs and Key Operation Logs

Follow the procedure shown below to save debug logs (manual logs, network packet logs, and key operation logs) that require manual operation to the save area of the host machine.

1. After the symptom has reproduced, hold down the Counter key on the Control Panel for 10 seconds.

CAUTION:

If power is turned OFF during the period from when the symptom occurs to when this procedure is completed, necessary log data will be deleted so that analysis cannot be performed.

2. When the software numeric keypad is displayed, press the numeric keys 1, 2, and 3, in that order.

3. Check that "Storing System Information..." is displayed on the Control Panel.

CAUTION:

- · While logs are being saved, other operations cannot be performed.
- If the above screen or message is not displayed, press the Reset button and then try again from step 2.

NOTE:

When network packet logs have been collected and necessary network packets have been captured, stop the capture from the following menu.

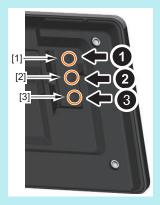

[Settings/Registration] > [Preferences] > [Network] > [Store Network Packet Log]

When this setting is disabled, all the service mode settings configured in step 3 are initialized.

Note that after completion of analysis of the network trouble, be sure to disable the network capture function. It is therefore necessary to disable and then transfer the license, but it is not necessary to transfer the LMS license after that.

NOTE:

When the Control Panel cannot be operated, store the log by the following button operation. Service Button 1 > Service Button 2 > Service Button 3 (hold down only this button)

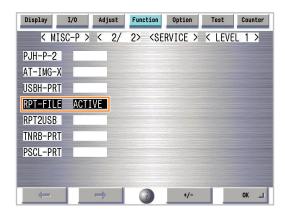

■ Saving and Collecting Report Files

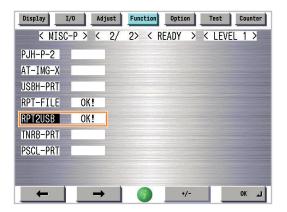

Follow the procedure shown below to save report files to the the Main Unit internal storage and collect them using a USB device.

1. Execute the following service mode to save report files.

COPIER > Function > MISC-P > RPT-FILE

- 2. Connect the USB and verify that Main machine recognizes the USB.
- 3. Execute the following service mode and retrieve the report file to USB. COPIER > Function > MISC-P > RPT2USB

■ Collection of Log

Save the Sublogs stored in the host machine to a USB device or a PC with SST installed. The procedure for storing Sublogs to a USB device differs from that for storing Sublogs to a PC

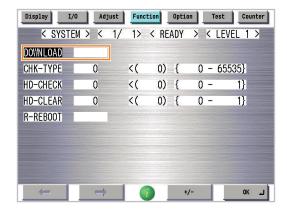

Collecting into a USB Device

To save (collect) Sublogs to a USB device, perform the procedure shown below to collect the logs. If SST is used to save (collect) Sublogs to a PC, this work is not necessary.

1. Connect the USB flash drive to the machine.

2. Execute the following service mode.

COPIER > Function > SYSTEM > DOWNLOAD

3. The host machine will enter download mode. Press [8] on the Numeric Keypad.

4. [Download File Menu] will appear. Press a numeric key for the file to download.

```
[[[[[[[ Download File Menu (USB) <v25.12> ]]]]]]]] (v25.12)

[1]: SUBLOG Download
[4]: ServicePrint Download
[5]: NetCap Download
[C]: Return to Menu
```

- Press [1] key to download Sublog.
- · Press [4] to download Service Print.
- · Press [5] to download network packet log.
- 5. The files to be downloaded and the number of files are displayed. Check the following items and press [0] on the Numeric Keypad.
 - Whether the manual log that was saved at the time of reproduction of the symptom is displayed under Event Logs
 - Whether the date and time at which the symptom was reproduced is within the period of Continuous Log
 Example: When the symptom was reproduced at 9:40 on April 14, 2017 and a manual log was saved
 Check that the manual log that was generated at 9:40 on April 14, 2017 is displayed under Event Logs.
 Check whether 9:40 on April 14, 2017 is included in the logged period(from 8:03:33 on March 22, 2017 to 9:45:14 April
 14, 2017) of the ContinuousLog.

- 6. When downloading the log files is complete, the following message will appear. Press any key.
 - --- Please press any keys ---

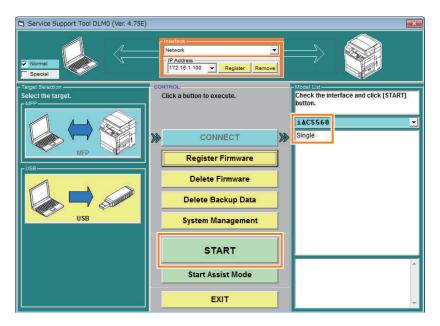

```
[68/102]20170405_0949-57-ZZZ00000-2512-clog.bin
[69/102]20170405_0908-19-ZZZ00000-2512-clog.bin
[70/102]20170404_1822-52-ZZZ00000-2512-clog.bin
[71/102]20170404_1702-57-ZZZ00000-2512-clog.bin
[98/102]20170322_1204-56-ZZZ00000-2512-clog.bin
[98/102]20170322_1102-52-ZZZ00000-2512-clog.bin
[99/102]20170322_1024-56-ZZZ00000-2512-clog.bin
[100/102]20170322_0803-33-ZZZ00000-2512-clog.bin
[101/102]20170322_0803-33-ZZZ00000-2512-clog.bin
[102/102]20170322_0803-33-ZZZ00000-2512-clog.bin
Sub log full Download OK.
---Please press any keys---

Do not turn OFF the power without......
```

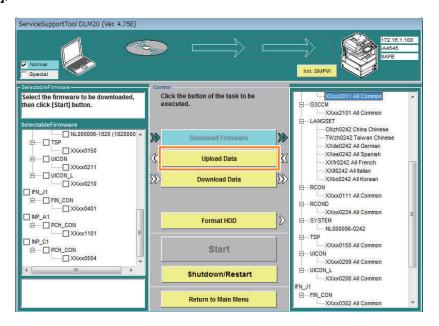

Saving to a PC with SST installed

Follow the procedure shown below to save (collect) Sublogs to a PC using SST. If a USB device is used to save (collect) Sublogs, this work is not necessary.

- 1. Connect a PC with SST installed to the network where the host machine is connected.
- 2. Start SST, and select the model name of the machine from Model List. Press the Start button.

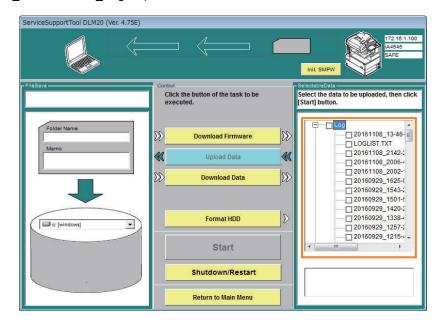

3. Click [Upload Data].

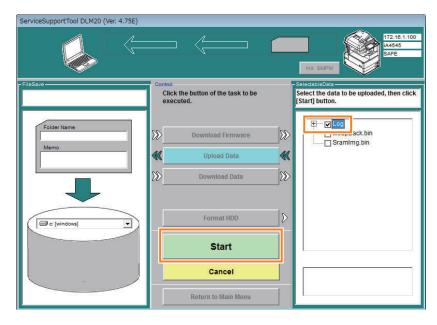

4. Check that continuous logs are stored in the device.

When connection with the device is completed, the screen shown below will appear. Select [Upload Data]. The set of data stored in the device is shown on the right. Click "+" at "Log" to expand the tree, and check that there are continuous logs (date_model number_clog.bin).

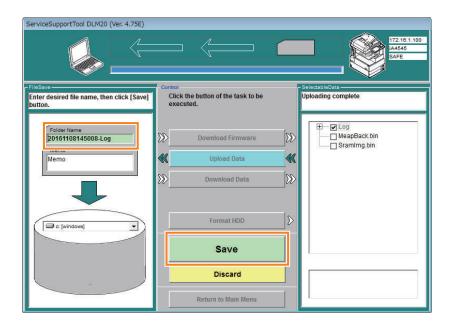

5. Select the data to upload, and click [Start].

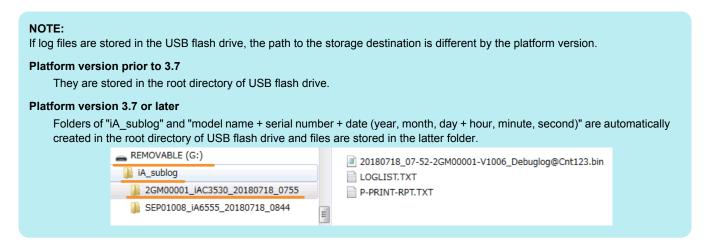

Select the check box on the left of "Log", and click the "Start" button. It is not necessary to select MeapBack.bin and SramImg.bin because they are not necessary for analysis.

6. Enter a file name (arbitrary), and click the SAVE button to save the file to the PC.

Checking the Saved Files

Sublog files

Check the saved log files whether the necessary log has been collected.

- Whether it is a log file of the target model (It contains the serial number of the target machine.)
- Whether the time and date the symptom occurred is included in the logged period. (Date and time in the log file name represent those of when the log collection is started. There are files with dates before the symptom occurs.)

Storage locations of log files

Storage locations of log files are shown below.

When using USB device: Root folder of the USB device

When using SST: PC's C:\ServData\<model name>\serial number folder

How to check the continuous log files

The continuous log files are stored in the log file storage location.

Check the names (date and time) of the files that end with "clog.bin" to see whether the date and time the symptom was reproduced is included.

In the case of the following figure, the oldest continuous log is 08:03:33 on March 22, 2017 and the latest file is 08:43:44 on April 14, 2017. The date and time the symptom was reproduced should be included within the period.

20161013_1733-36_ZZZ99999_1406_clog.bin Data and time when a file Serial Number Firmware Version

was archived (year, month, day, hour, minute, second).

Identification indicating that it is a continuous log

File name of continuous log

How to check the manual log files and automatic (event) log files

The manual log files and automatic (event) log files are stored in the log file storage location.

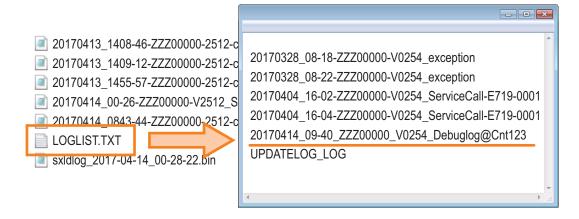

At the time of collection, these logs will be archived as a one binary file (the name of the file ends with "_SAFE.bin").

Which logs have been stored in this binary file is described in LOGLIST.TXT stored in the log file storage location. Open this file to check the manual logs and automatic (event) logs.

CAUTION:

If a manual log was saved when the symptom was reproduced, check that a log with the date and time immediately after the reproduction is included.

If there is no log file collected immediately after the symptom was reproduced, the file may have been overwritten and lost.

20161013_10-10_ZZZ99999_V 1308_Debuglog@Cnt123

Data and time when key operation was performed (year, month, day, hour, minute, second).

Serial Number Firmware Version a key operation was performed (year, month, day, hour, minute, second).

File name of manual log

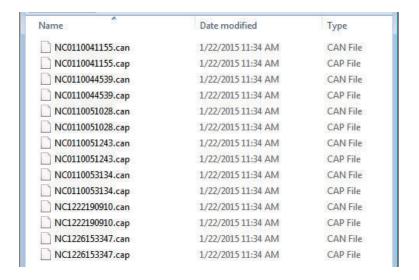

20161012_14-48_ZZZ99999_V1406_Fatal00-exception Data and time when an even occurred (year, month, day, hour, minute, second). 20161012_14-48_ZZZ99999_V1406_ServiceCall-E719-0031 Data and time when an even occurred (year, month, day, hour, minute, second). Serial Number Firmware Version Cause of occurrence an even occurred (year, month, day, hour, minute, second).

File name of automatic log

How to check the network packet log files

The network packet log file is stored in the "NC + date" folder created in the log file storage location.

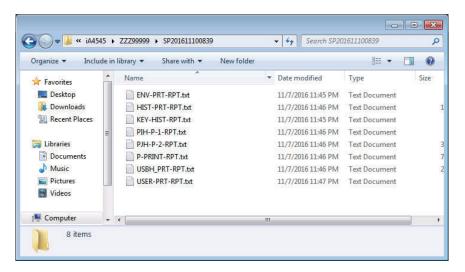

Open the folder and check that two types of files have been saved: a plaintext file which file name starts with "NC" and ends with ".cap", and a ciphertext file which file name starts with "NC" and ends with ".can".

Report files

Report files saved to the USB device are stored in the folder under the name shown below where the firmware is stored.

• [Serial No.] > SP [Date (year, month, day, hour, minute (12 digits))] L

0

Service Mode Relating to Debug Logs

Although the procedure for collecting debug logs of this equipment is as indicated above, there are other service modes related to debug logs.

Use the following service modes (Lv.2) as needed.

COPIER > Function > DBG-LOG > HIT-STS

COPIER > Function > DBG-LOG > DEFAULT

COPIER > Function > DBG-LOG > LOG-DEL

NOTE:

If log collection is continued or setting change is repeated when an abnormality is found in operation of the function related to debug logs, temporary files or log files may be remained in the machine. In that case, execute "DEFAULT" in service mode to clear the settings related to debug logs and repeat the operation again.

Confirming the Existence of Debug Logs (HIT-STS)

This service mode confirms whether debug logs exist in the auto save area.

"OK!" is displayed if logs exist in the auto save area.

NOTE:

"OK!" is displayed even after pressing the Counter key + numeric keys 1, 2, and 3.

Initializing the Debug Log Settings (DEFAULT)

This service mode changes all the settings related to debug logs back to the default (settings at the time of shipment).

- Be sure to perform when returning the device to the customer after completion of trouble investigation. (Operations required)
- Execute this service mode when resetting the settings related to debug logs during investigation of log collection and perform the operation again.

However, note that the log files automatically saved to the debug log save area in the controller are kept within the range not exceeding the upper limit.

If you want to delete the saved logs (want to use HIT-STS), use "LOG-DEL" indicated later.

Deleting the Automatically Saved Log Files (LOG-DEL)

This service mode deletes the automatically saved and stored log files. The settings of log operation such as trigger for saving log are not cleared.

Although it is not used normally (the upper limit of the number of saved logs is automatically controlled by firmware), it is necessary to delete logs with LOG-DEL once when judging whether logs are collected using HIT-STS after changing the trigger for saving log.

(It is because OK is displayed in HIT-STS as long as the saved logs exist.)

Error/Jam/Alarm

| Overview | 418 |
|------------|-----|
| Error Code | 421 |
| Jam Code | 514 |
| Alarm Code | 522 |

Overview

This section describes the error codes that are displayed when failure has occurred. The codes are divided into three categories.

| Code types | Description | Reference |
|-------------|--------------------------------------------------------------------------------|--------------------------|
| Error Codes | This code is displayed when a failure caused by the host machine has occurred. | "Error Code" on page 421 |
| Jam code | This code is displayed when a jam occurs inside the machine. | "Jam Code" on page 514 |
| Alarm code | This code is displayed when some functions are disabled. | "Alarm Code" on page 522 |

Display of error codes

The 7-digit "E000XXX"error code is displayed on the display of the Control Panel. However, since "000" of the 2nd to 4th digits is not used, the 5th to 7th digits are described as "EXXX" in the Service Manual. (Example: E012 -> E000012)

Location Code

The error codes and jam codes of this machine contain information on the location.

The location information is displayed in 2 digits and has the meaning shown below: (On the jam display screen, the location code is shown in the "L" column.)

The displayed location code differs depending on the configuration of the options installed.

In the case of alarm codes, the location information does not have any specific meaning.

| Device | Location code | | |
|------------|---------------|----------|--|
| | Error code | Jam code | |
| Controller | 00 | - | |
| Finisher | 02 | 02 | |
| ADF | 04 | 01 | |
| Reader | 04 | - | |
| Printer | 05 | 00 | |
| FAX | 07 | - | |

Pickup Position Code

When a jam occurs, the pickup location is indicated with the following pickup position code. (On the jam display screen, the pickup position code is shown in the "P" column.)

| Pickup position | Pickup position code | |
|---------------------------------------------------------------------------------------------------|----------------------|--|
| At Finisher jam/At error avoidance jam/At ADF jam without pickup operation (at SEND, Inbox, etc.) | 00 | |
| Cassette 1 | 01 | |
| Cassette 2 | 02 | |
| Cassette 3 | 03 | |
| Cassette 4 | 04 | |
| Multi-purpose Tray Pickup Assembly | 05 | |
| 2-sided | F0 | |

Pickup size

When a jam occurs, a paper size is displayed. (The row displaying "SIZE" on the jam screen refers to the paper size.) Due to the limitation of displayable number of characters, some paper size names are omitted. The following is the list of displayed row of texts and corresponding paper sizes.

* The following is based on the display specification and not all paper sizes can actually be used.

| Display | Paper Size | Display | Paper Size |

Points to Note When Clearing MN-CON

- Execution of clearing MN-COM deletes all data in Address Book, Forwarding Settings, Settings/Registration (Adjustment/ Maintenance, Function Settings, Set Destination, Management Settings, TPM Settings), etc. Before execution of this operation, ask user to back up the data and get approval for this operation.
- Clearing MN-CON will clear the service mode setting values. Be sure to enter the service mode setting values again in accordance with the configuration of the options of the host machine and requests from the user.
- When clearing MN-CON while any login application other than User Authentication is, error such as not displayed login screen occurred. In this case, access SMS once and switch login application to User Authentication to recover to the normal status.

Points to Note When Clearing HDD

As a remedy for error codes (E602-XXXX, E611-0000), HDD partition is selected and the target partition may be cleared. When clearing partition, be sure to check which data will be deleted by referring Detail of HDD partition1-26 and explain to the user before starting work.

Error Code

Error Code Details

| E001-A001-05 | Fixing Main Thermistor high temperature detection error |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | The Fixing Main Thermistor detected 265 deg C or higher for 0.1 sec or longer. |
| Remedy | [Related parts] - Harness between the Fixing Drawer (DR01/J5401) and the Low-voltage Power Supply PCB (UN01/J302) - Harness between the Low-voltage Power Supply PCB (UN01/J315 and J322) and the DC Controller PCB (UN04/J20 and J22) - Harness between the Fixing Drawer (DR01/J5401) and the DC Controller PCB (UN04/J134) - Fixing Assembly - Low-voltage Power Supply PCB (UN01) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. E009-0001-05

Fixing pressure timeout error

Detection Description

Signal of the Fixing Pressure Release Sensor could not be detected at pressure application operation of the Fixing Pressure Release Cam, and the operation was not completed within 4 sec from the start of counterclockwise rotation of the Fixing Motor.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J134) and the Fixing Drawer (DR01/J5401)
- Harness between the Fixing Drawer (DR01/J5401) and the Fixing Pressure Release Sensor (PS13/J5403)
- Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412)
- Harness between the Low-voltage Power Supply PCB (UN01/J315 and J322) and the DC Controller PCB (UN04/J20 and J22)
- Fixing Pressure Release Sensor (PS13)
- Fixing Motor (M04)
- Fixing Drive Unit
- Fixing Assembly
- Low Voltage Power Supply PCB (UN01)
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. If periodic sound has occurred, check/replace the Fixing Assembly, Low-voltage Power Supply PCB, DC Controller PCB, and related harness.
- 2. If the Delivery Roller is rotating without noise, or if noise of the gear teeth being improperly meshed has occurred, check/replace the Fixing Drive Unit.
- 3. If the Delivery Roller is not rotating, check/replace the Fixing Motor, Fixing Drive Unit, Low-voltage Power Supply PCB, DC Controller PCB, and related harness.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

- Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP
- Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

E009-0002-05

Fixing disengagement timeout error

Detection Description

Signal of the Fixing Pressure Release Sensor could not be detected at pressure release operation of the Fixing Pressure Release Cam, and the operation was not completed within 4 sec from the start of counterclockwise rotation of the Fixing Motor.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J134) and the Fixing Drawer (DR01/J5401)
- Harness between the Fixing Drawer (DR01/J5401) and the Fixing Pressure Release Sensor (PS13/J5403)
- Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412)
- Harness between the Low-voltage Power Supply PCB (UN01/J315 and J322) and the DC Controller PCB (UN04/J20 and J22)
- Fixing Pressure Release Sensor (PS13)
- Fixing Motor (M04)
- Fixing Drive Unit
- Fixing Assembly
- Low Voltage Power Supply PCB (UN01)
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. If periodic sound has occurred, check/replace the Fixing Assembly, Low-voltage Power Supply PCB, DC Controller PCB, and related harness.
- 2. If the Delivery Roller is rotating without noise, or if noise of the gear teeth being improperly meshed has occurred, check/replace the Fixing Drive Unit.
- 3. If the Delivery Roller is not rotating, check/replace the Fixing Motor, Fixing Drive Unit, Low-voltage Power Supply PCB, DC Controller PCB, and related harness.

- Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP
- Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

8. Error/Jam/Alarm E009-0003-05 Fixing pressure retry error **Detection Description** Signal of the Fixing Pressure Release Sensor could not be detected at pressure application operation of the Fixing Pressure Release Cam, and the operation was not completed within 3 times from the start of counterclockwise rotation of the Fixing Motor. [Related parts] Remedy - Harness between the DC Controller PCB (UN04/J134) and the Fixing Drawer (DR01/J5401) - Harness between the Fixing Drawer (DR01/J5401) and the Fixing Pressure Release Sensor (PS13/J5403) - Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412) - Fixing Pressure Release Sensor (PS13) - Fixing Motor (M04) - Fixing Drive Unit - Fixing Assembly - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. Be sure to preferentially check the Fixing Drive Unit. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES E009-0004-05 Fixing disengagement retry error **Detection Description** Signal of the Fixing Pressure Release Sensor could not be detected at pressure release operation

of the Fixing Pressure Release Cam, and the operation was not completed within 3 times from the start of counterclockwise rotation of the Fixing Motor.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J134) and the Fixing Drawer (DR01/J5401)
- Harness between the Fixing Drawer (DR01/J5401) and the Fixing Pressure Release Sensor (PS13/J5403)
- Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412)
- Fixing Pressure Release Sensor (PS13)
- Fixing Motor (M04)
- Fixing Drive Unit
- Fixing Assembly
- DC Controller PCB (UN04)

[Remedy] Check/replace the related harness/cable, connector and parts.

Be sure to preferentially check the Fixing Drive Unit.

- Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES

E009-0005-05

Fixing disengagement timeout error (during engagement retry)

Detection Description

At retry of engagement operation of the Fixing Pressure Release Cam, the Fixing Pressure Release Sensor did not detect disengagement state within 4 sec after the start of counterclockwise rotation of the Fixing Motor.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J134) and the Fixing Drawer (DR01/J5401)
- Harness between the Fixing Drawer (DR01/J5401) and the Fixing Pressure Release Sensor (PS13/J5403)
- Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412)
- Fixing Pressure Release Sensor (PS13)
- Fixing Motor (M04)
- Fixing Drive Unit
- Fixing Assembly
- DC Controller PCB (UN04)

[Remedy] Check/replace the related harness/cable, connector and parts.

Be sure to preferentially check the Fixing Drive Unit.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

Bk Drum ITB Motor error

Detection Description

It did not become the specified speed for 500 consecutive msec although 1000 msec have passed from the startup of the Bk Drum_ITB Motor in the Main Drive Unit. (The detection timing varies depending on the paper feed conditions.)

Remedy

[Related parts]

- Harness between the Bk Drum_ITB Motor (M02/J5702) and the DC Controller PCB (UN04/J140)
- Fuse in the Low-voltage Power Supply PCB (UN01/FU14)
- Bk Drum ITB Motor (M02)
- Main Drive Unit
- Low-voltage Power Supply PCB (UN01)
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Check whether the gears of the Main Drive Unit can be rotated by hand.
- a. If they cannot be rotated, replace the Main Drive Unit.
- b. If they can be rotated, check the harnesses from the Bk Drum_ITB Motor to the DC Controller PCB.
- 2. Measure the both ends of the fuse in the Low-voltage Power Supply PCB using a tester.
- a. If power is flowing to it (the measurement value is less than 1 ohm),
- 1. Replace the Bk Drum_ITB Motor.
- 2. Replace the DC Controller PCB.
- b. If the power is not flowing to it (the measurement value is 1 ohm or higher), replace the Low-voltage Power Supply PCB.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

Fixing Motor error

Detection Description

It did not become the specified speed for 500 consecutive msec although 1000 msec have passed from the startup of the Fixing Motor. (The detection timing varies depending on the paper feed conditions.)

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J135) and the Fixing Motor (M04/J5412)
- Fuse in the DC Controller PCB (UN04/FU1)
- Fixing Motor (M04)
- Idler Gear in the Fixing Assembly
- Pressure Roller Gear in the Fixing Assembly
- Fixing Assembly
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Check that the Fixing Assembly is pushed into the host machine so the handle is locked and there is no backlash while it is installed.
- 2. Remove the Fixing Assembly, and rotate the Idler Gear and the Pressure Roller Gear by hand to check visually that there is no bent or missing teeth or abnormal abrasion (edge of the gear is no longer tooth-shaped).
- Replace the Fixing Assembly.
- 4. Check the harness between the DC Controller PCB and the Fixing Motor.
- 5. Measure the both ends of the fuse in the DC Controller PCB using a tester.
- a. If the measurement value is less than 1 ohm (conduction state),
- 1. Replace the Fixing Motor.
- 2. Replace the DC Controller PCB.
- b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller PCB.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

Developing Motor error

Detection Description

The specified speed could not be detected for 500 consecutive msec although it became the specified speed at least once from the startup of the Developing Motor.

Remedy

[Related parts]

PCB.

- Harness between the Developing Motor (M03/J5703) and the DC Controller PCB (UN04/J142)

b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

- Fuse in the DC Controller PCB (UN04/FU4)
- Developing Motor (M03)
- Main Drive Unit
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Check whether the gears of the Main Drive Unit can be rotated by hand.
- a. If they cannot be rotated, replace the Main Drive Unit.
- b. If they can be rotated, check the harness between the Developing Motor and the DC Controller PCB.
- 2. Measure the both ends of the fuse in the DC Controller PCB using a tester.
- a. If the measurement value is less than 1 ohm (conduction state),
- 1. Replace the Developing Motor.
- 2. Replace the DC Controller PCB.
- b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller

E029-5008-05

Registration Patch Sensor (Front) light intensity error

Detection Description

The background regular reflection output of the Registration Patch Sensor at the front side did not fall within the specified range for 2 consecutive times at initialization.

[Reference] If a user inserts an empty Toner Container (Bk) repeatedly, the error may occur.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J170) and the Registration Patch Sensor Unit (Front) (UN31/J5603)
- Registration Patch Sensor Unit (Front) (UN31)
- Registration Patch Sensor Unit (Front) Shutter
- Registration Shutter Solenoid (SL03)
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared. Check the background regular reflection output value (front) in COPIER (level 2)> DISPLAY> DENS> P-B-P-C.

- a. If the value is less than 10,
- 1. Check if the sensor window of the Registration Patch Sensor Unit (Front) is soiled. If it is soiled, clean it with a blower.
- 2. Check that the Registration Patch Sensor Unit (Front) Shutter is properly installed and it is not damaged or deformed.

If it is deformed or damaged, replace the Registration Patch Sensor Unit (Front).

- 3. Check the operation of the Registration Shutter Solenoid.
- 3-1. If the Registration Shutter Solenoid moves,
- 3-1-1. Replace the Registration Patch Sensor Unit (Front).
- 3-1-2. Replace the DC Controller PCB.
- 3-2. If the solenoid does not move, replace the Registration Shutter Solenoid.
- b. If the value is above 250,
- 1. Check the harness between the Registration Patch Sensor Unit (Front) and the DC Controller PCB.
- 2. Replace the harness between the Registration Patch Sensor Unit (Front) and the DC Controller PCB.
- 3. Replace the Registration Patch Sensor Unit (Front).
- 4. Replace the DC Controller PCB.

E073-0001-05 Interlock error **Detection Description** No detection of Interlock (24 V) although all the Doors (Front Cover and Right Cover) of the host machine were closed. [Related parts] Remedy - Harness between the DC Controller PCB (UN04/J24) and the Interlock Switch 2 (SW03) - Harness between the DC Controller PCB (UN04/J20) and the Low-voltage Power Supply PCB (UN01/J315) - Front Cover/Right Cover - Low-voltage Power Supply PCB (UN01) - DC Controller PCB (UN04) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the Front Cover/Right Cover is closed. 2. Visually check that the Interlock Switch 2 are turned ON/OFF by opening/closing the Front Cover/Right Cover. 3. Check that the harness between the Interlock Switch 2 and the DC Controller PCB is not shortcircuited (the harness does not come in contact with the plate while the cable sheath is peeled). 4. Disconnect the connector (J24) of the DC Controller while the Front Cover and the Right Cover are closed, and measure the resistance value between the connectors J24/1-pin and the J24/3pin on the J24 harness side using a tester. a. If the measurement value is less than 1 ohm (conduction state), 1. Replace the DC Controller PCB. 2. Replace the Low-voltage Power Supply PCB. b. If the measurement value is 1 ohm or higher (non conduction state), replace the harness between the Interlock Switch 2 and the DC Controller PCB. 5. Check the harness between the Low-voltage Power Supply PCB and the DC Controller PCB. Replace the DC Controller PCB. 7. Replace the Low-voltage Power Supply PCB. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2

min) and restore the backup data after the replacement so the data may be able to be protected.

E074-0000-05

Primary Transfer Roller disengagement control error

Detection Description

Signal was not detected although the ITB Pressure Release Switch was turned ON/OFF for 6 times.

Remedy

[Related parts]

- Harness between the DC Controller PCB (UN04/J162) and the ITB Pressure Release Switch (SW07/J6005)
- Harness between the DC Controller PCB (UN04/J140) and the Primary Transfer Separation Solenoid (SL01/J5708)
- Fuse in the DC Controller PCB (UN04/FU07)
- ITB Guide Rail
- Main Drive Unit
- ITB Unit
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Check that the ITB Unit is installed in the machine.
- 2. Replace the ITB Unit.
- 3. Check the harness between the DC Controller PCB and the ITB Pressure Release Switch.
- 4. Check the harness between the DC Controller PCB and the Primary Transfer Separation Solenoid.
- 5. Measure the both ends of the fuse in the DC Controller PCB using a tester.
- a. If the measurement value is less than 1 ohm (conduction state),
- 1. Replace the ITB Guide Rail (Front/Rear).
- 2. Replace the Main Drive Unit.
- 3. Replace the DC Controller PCB.
- b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller PCB.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

| Detection Description | The phase was not locked by BD control within 10 sec after startup of Scanner Motor. |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J110) and the Y/M/C/Bk Laser Driver PCB (UN05/J202) - Flexible Cable between the Main Controller PCB (UN81/J7002) and the Y/M/C/Bk Laser Driver PCB (UN05/J201) - Interlock Switch 2 (SW03) - Front Cover/Right Cover - Y/M/C/Bk Laser Driver PCB (UN05) - Laser Scanner Unit - DC Controller PCB (UN04) - Main Controller PCB (UN81) - Low Voltage Power Supply PCB (UN01) [Remedy] 1. Check/replace the related harness/cable, connector and parts. 2. After replacement of the Laser Driver PCB, execute "Settings/Registration> Adjustment/ Maintenance> Adjust Image Quality> Auto Correct Color Mismatch". [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E110-0005-05 | Scanner Motor error |
| Detection Description | GBD signal was not detected although a specified period of time had passed after startup. |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - Main Controller PCB (UN81) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E193-0000-05 | Communication error |
| Detection Description | NACK was received twice at communication retry of image ASIC. |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - Main Controller PCB (UN81) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E193-0101-05 | Communication error |
| Detection Description | There was no response at communication retry of image ASIC. |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - Main Controller PCB (UN81) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |

E197-2101-05

Communication error

Detection Description

Although access to KONA3 (ASIC) in the Cassette Module Controller PCB from the DC Controller PCB (CPU) was performed, no response was received and timeout occurred.

Remedy

[Related parts]

- Harnesses connecting the DC Controller PCB (UN04/J190), the Drawer Unit (DR03/J5904) and the Cassette Module Controller PCB
- Fuse in the DC Controller PCB (UN04/FU19)
- Cassette Module Controller PCB
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Turn OFF and then ON the main power, and check whether the error is cleared.
- 2. Check the harness between the DC Controller PCB and the cassette unit drawer on the host machine side.
- 3. Visually check if the cassette unit drawer on the host machine side and the drawer on the cassette unit side are damaged or if there is any bent pin. If so, replace the drawer.
- 4. Check the harness between the drawer on the cassette unit side and the Cassette Module Controller PCB.
- 5. Measure the both ends of the fuse in the DC Controller PCB using a tester.
- a. If the measurement value is less than 1 ohm (conduction state),
- 1. Replace the Cassette Module Controller PCB.
- 2. Replace the DC Controller PCB.
- b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller PCB.

[Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

E197-2F00-05

Communication error

Detection Description

Although access to KONA3 (ASIC) in the Cassette Module Controller PCB from the DC Controller PCB (CPU) was performed, no response was received and timeout occurred.

Remedy

[Related parts]

- Harnesses connecting the DC Controller PCB (UN04/J190), the Drawer Unit (DR03/J5904) and the Cassette Module Controller PCB
- Fuse in the DC Controller PCB (UN04/FU19)
- Cassette Module Controller PCB
- DC Controller PCB (UN04)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Turn OFF and then ON the main power, and check whether the error is cleared.
- 2. Check the harness between the DC Controller PCB and the cassette unit drawer on the host machine side.
- 3. Visually check if the cassette unit drawer on the host machine side and the drawer on the cassette unit side are damaged or if there is any bent pin. If so, replace the drawer.
- 4. Check the harness between the drawer on the cassette unit side and the Cassette Module Controller PCB.
- 5. Measure the both ends of the fuse in the DC Controller PCB using a tester.
- a. If the measurement value is less than 1 ohm (conduction state),
- 1. Replace the Cassette Module Controller PCB.
- 2. Replace the DC Controller PCB.
- b. If the measurement value is 1 ohm or higher (non conduction state), replace the DC Controller PCB.

8. Error/Jam/Alarm E202-0001-04 Scanner Unit HP error **Detection Description** The HP of the Scanner Unit could not be detected when starting scanning operation. Remedy [Related parts] - Harness between the CIS HP Sensor (J4205) and the Main Controller PCB (UN81/J4005) - Harness between the Reader Motor (J4305) and the Main Controller PCB (UN81/J4005) - Harness between the Main Controller PCB (UN81/J4509) and the Low-voltage Power Supply PCB (UN01/J313) - CIS HP Sensor - Reader Motor - Low-voltage Power Supply PCB (UN01) - Reader Assembly - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. At initial operation of the Reader startup after the main power is turned ON, check if the Reader Motor operates (whether the Scanner Unit moves or operation sound is heard). If it operates, check whether load on the Timing Belt for moving CIS is appropriate. a. If it is appropriate, replace the CIS HP Sensor. b. If it is not appropriate (overloaded), check/replace the Timing Belt, Drive Gear and pulley. Check/replace the CIS Holder (soiling or damage on the surface). 3. Check/replace the related harness/cable, connector and parts. E202-0002-04 Scanner Unit HP error **Detection Description** The HP of the Scanner Unit could not be detected when completing scanning operation. Remedy [Related parts]

- Harness between the CIS HP Sensor (J4205) and the Main Controller PCB (UN81/J4005)
- Harness between the Reader Motor (J4305) and the Main Controller PCB (UN81/J4005)
- Harness between the Main Controller PCB (UN81/J4509) and the Low-voltage Power Supply PCB (UN01/J313)
- CIS HP Sensor
- Reader Motor
- Low-voltage Power Supply PCB (UN01)
- Reader Assembly
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. At initial operation of the Reader startup after the main power is turned ON, check if the Reader Motor operates (whether the Scanner Unit moves or operation sound is heard). If it operates, check whether load on the Timing Belt for moving CIS is appropriate.
- a. If it is appropriate, replace the CIS HP Sensor.
- b. If it is not appropriate (overloaded), check/replace the Timing Belt, Drive Gear and pulley.
- 2. Check/replace the CIS Holder (soiling or damage on the surface).
- 3. Check/replace the related harness/cable, connector and parts.

E202-0003-04

Reader Scanner Unit HP error

Detection Description

An error in the Reader Scanner Unit position was detected when reading of a job was started.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the Scanner Unit HP Sensor (PS A1/J5002)
- Harness between the Main Controller PCB and the Scanner Motor (STM1/J5015)
- Scanner Unit HP Sensor (PS_A1)
- Scanner Motor (STM1)
- Main Controller PCB

[Remedy] Check/replace the related harness/cable, connector and parts.

[Reference] Before replacing the Main Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected.

| E280-0102-04 | Scanner Unit communication error |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | Disconnection of FFC between the Main Controller and the Scanner Unit (back) was detected. |
| Remedy | [Related parts] - Harness between the Scanner Unit (back) and the Main Controller PCB (UN81) - Scanner Unit (back) - ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E280-0103-04 | Scanner Unit (DADF) communication error |
| Detection Description | Disconnection of FFC between the Main Controller PCB and the DADF Scanner Unit was detected. |
| Remedy | [Related parts] - Harness between the DADF Scanner Unit (J1102) and the Main Controller PCB(UN1/J105) [Remedy]Check/replace the harness between the DADF Scanner Unit and the Main Controller PCB. |
| E280-0105-04 | Scanner Unit (Paper Back) communication error |
| Detection Description | CIS Unit of a different model was installed. |
| Remedy | [Remedy] Replace the Scanner Unit (CIS) with the one for the model. (Unit of replacement: CONTACT IMAGE SENSOR ASS'Y SET) [Caution] The parts numbers of the Scanner Unit differs depending on the model. Be sure to use the correct one. |
| E302-0001-04 | Error in paper front white shading |
| Detection Description | An error in the shading value was detected at white shading. |
| Remedy | [Related parts] - Harness between the Scanner Unit (front) and the Main Controller PCB (UN81) - Scanner Unit (front) - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E302-0002-04 | Error in paper front black shading |
| Detection Description | An error in the shading value was detected at black shading. |
| Remedy | [Related parts] - Harness between the Scanner Unit (front) and the Main Controller PCB (UN81) - Scanner Unit (front) - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E302-0101-04 | Error in paper back white shading |
| Detection Description | An error in the shading value was detected at white shading. |
| Remedy | [Related parts] - Harness between the Scanner Unit (back) and the Main Controller PCB (UN81) - Scanner Unit (back) - ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |

| E302-0102-04 | Error in paper back black shading |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | An error in the shading value was detected at black shading. |
| Remedy | [Related parts] - Harness between the Scanner Unit (back) and the Main Controller PCB (UN81) - Scanner Unit (back) - ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E315-0007-00 | Image process device timeout error |
| Detection Description | Image compression process was not completed within the specified period of time at scanning. |
| Remedy | [Related parts] - Harness between the Reader Unit and Main Controller PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts. |
| E315-000D-00 | Image process device timeout error |
| Detection Description | Processing of a JBIG-compressed data was not completed within the specified period of time at printing or SEND. |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |
| E315-000F-00 | Image processing device error |
| Detection Description | A processing error occurred during the image processing of scanning |
| Remedy | [Related parts] - Main Controller PCB [Remedy]Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB memory. 2. Replace the Main Controller PCB. |
| E315-0027-00 | Image process device timeout error |
| Detection Description | Image processing (change in magnification ratio, rotating, and shifting) was not completed normally within the specified period of time. |
| Remedy | Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |
| E315-0035-00 | Image process device timeout error |
| Detection Description | Processing to clear image data in the memory was not completed normally within the specified period of time. |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |
| E315-0500-00 | Image process device timeout error |
| Detection Description | Transfer of image signal was not completed within the specified period of time at scanning. |
| Remedy | [Related parts] - Harness between the Reader Unit and Main Controller PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts. |

| E315-0510-00 | Image process device timeout error |
|-------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | Image processing was not completed within the specified period of time at scanning. |
| Remedy | [Related parts] - Harness between the Reader Unit and Main Controller PCB - Main Controller PCB (UN81) - Reader Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts. |
| E315-0530-00 | Image process device error |
| Detection Description | Compression processing of the scanned image into JPEG was terminated abnormally. |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |
| E315-0531-00 | Image process device timeout error |
| Detection Description | Compression processing of the scanned image into JPEG was not completed within the specified period of time. |
| Remedy | [Related parts] - Harness between the Reader Unit and Main Controller PCB - Main Controller PCB (UN81) - Reader Controller PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts. |
| | |
| E315-0540-00 | Image process device error |
| E315-0540-00 Detection Description | Image process device error An error occurred during decompression of JPEG. |
| | |
| Detection Description | An error occurred during decompression of JPEG. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. |
| Detection Description Remedy | An error occurred during decompression of JPEG. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |
| Detection Description Remedy | An error occurred during decompression of JPEG. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. Image process device timeout error |
| Detection Description Remedy E315-0541-00 Detection Description | An error occurred during decompression of JPEG. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. Image process device timeout error Decompression of JPEG was not completed within the specified period of time. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. |
| Detection Description Remedy E315-0541-00 Detection Description Remedy | An error occurred during decompression of JPEG. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. Image process device timeout error Decompression of JPEG was not completed within the specified period of time. [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Reinstall the latest system software using SST or a USB flash drive. 2. Check/replace the Main Controller PCB. |

| E537-0002-02 | Rear Alignment Motor error |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | The Rear Alignment Motor did not return to the HP. |
| Remedy | 1. Check that the connector (P7-5/P7/J7) of the Rear Alignment Plate HP Sensor (S5) is not disconnected. |
| | 2. Check that the connector (P5-13/P5-3/J5-3/P5/J5) of the Rear Alignment Motor (M5) is not disconnected. |
| | 3. Replace the Rear Alignment Plate HP Sensor (S5). |
| | 4. Replace the Rear Alignment Motor (M5).5. Check the conditions of the rear alignment drive parts (belt and gear). |
| | 6. Replace the Finisher Controller PCB. |
| | 7. Replace the Harness Assembly. |
| E540-0001-02 | Stack Tray Shift Motor timeout |
| Detection Description | Timeout |
| Remedy | 1. Check that the connector (P8-11/P8-1/J8-1/J8) of the Stack Tray Paper Height Sensor (S9) is not disconnected. |
| | 2. Check that the connector (J14-3/P14-3/P14/J14) of the Stack Tray Shift Motor (M8) is not disconnected. |
| | 3. Replace the Stack Tray Paper Height Sensor (S9). |
| | 4. Replace the Stack Tray Shift Motor (M8).5. Check the conditions of the stack tray shift motor drive parts (belt and gear). |
| | 6. Replace the Finisher Controller PCB. |
| | 7. Replace the Harness Assembly. |
| E575-0001-02 | Gripper Motor error |
| Detection Description | The Gripper Motor did not move from the HP. |
| Remedy | 1. Check that the connector (P7-14/P7-6/J7-6/P7/J7) of the Gripper HP Sensor (S7) is not disconnected. |
| | 2. Check that the connector (P6-3/J6-3/P6/J6) of the Gripper Motor (M7) is not disconnected. |
| | 3. Replace the Gripper HP Sensor (S7). |
| | 4. Replace the Gripper Motor (M7). |
| | 5. Check the conditions of the gripper drive parts (belt and gear).6. Replace the Finisher Controller PCB. |
| | 7. Replace the Harness Assembly. |
| E575-0002-02 | Gripper Motor error |
| Detection Description | The Gripper Motor did not return to the HP. |
| Remedy | 1. Check that the connector (P7-14/P7-6/J7-6/P7/J7) of the Gripper HP Sensor (S7) is not disconnected. |
| | 2. Check that the connector (P6-3/J6-3/P6/J6) of the Gripper Motor (M7) is not disconnected. |
| | 3. Replace the Gripper HP Sensor (S7). |
| | 4. Replace the Gripper Motor (M7).5. Check the conditions of the gripper drive parts (belt and gear). |
| | 6. Replace the Finisher Controller PCB. |
| | 7. Replace the Harness Assembly. |
| E575-0004-02 | Gripper clock error |
| Detection Description | Clock error |
| Remedy | 1. Check that the connector (P13-1/P13/J13) of the Gripper Encoder Sensor (S8) is not |
| | disconnected. |

2. Replace the Gripper Encoder Sensor (S8).

| E577-0001-02 | Paddle Motor error |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | The Paddle Motor did not move from the HP. |
| Remedy | Check that the connector (P8-4/P8/J8) of the Paddle HP Sensor (S3) is not disconnected. Check that the connector (P5-4/P5/J5) of the Paddle Motor (M3) is not disconnected. Replace the Paddle HP Sensor (S3). Replace the Paddle Motor (M3). Check the conditions of the paddle drive parts (gear). Replace the Finisher Controller PCB. Replace the Harness Assembly. |
| E577-0002-02 | Paddle Motor error |
| Detection Description | The Paddle Motor did not return to the HP. |
| Remedy | Check that the connector (P8-4/P8/J8) of the Paddle HP Sensor (S3) is not disconnected. Check that the connector (P5-4/P5/J5) of the Paddle Motor (M3) is not disconnected. Replace the Paddle HP Sensor (S3). Replace the Paddle Motor (M3). Check the conditions of the paddle drive parts (gear). Replace the Finisher Controller PCB. Replace the Harness Assembly. |
| E583-0001-02 | Tray Auxiliary Guide Motor error |
| Detection Description | The Tray Auxiliary Guide Motor did not move from the HP. |
| Remedy | Check that the connector (P8-12/P8-2/J8-2/P8/J8) of the Tray Auxiliary Guide HP Sensor (S6) is not disconnected. Check that the connector (P6-1/P6/J6) of the Tray Auxiliary Guide Motor (M6) is not disconnected. Replace the Tray Auxiliary Guide HP Sensor (S6). Replace the Tray Auxiliary Guide Motor (M6). Check the conditions of the tray auxiliary guide drive parts (gear). |
| | 6. Replace the Finisher Controller PCB.7. Replace the Harness Assembly. |
| E583-0002-02 | · |
| E583-0002-02 Detection Description | 7. Replace the Harness Assembly. |
| | 7. Replace the Harness Assembly. Tray Auxiliary Guide Motor error |
| Detection Description | Replace the Harness Assembly. Tray Auxiliary Guide Motor error The Tray Auxiliary Guide Motor did not return to the HP. Check that the connector (P8-12/P8-2/J8-2/P8/J8) of the Tray Auxiliary Guide HP Sensor (S6) is not disconnected. Check that the connector (P6-1/P6/J6) of the Tray Auxiliary Guide Motor (M6) is not disconnected. Replace the Tray Auxiliary Guide HP Sensor (S6). Replace the Tray Auxiliary Guide Motor (M6). Check the conditions of the tray auxiliary guide drive parts (gear). Replace the Finisher Controller PCB. |
| Detection Description Remedy | Replace the Harness Assembly. Tray Auxiliary Guide Motor error The Tray Auxiliary Guide Motor did not return to the HP. Check that the connector (P8-12/P8-2/J8-2/P8/J8) of the Tray Auxiliary Guide HP Sensor (S6) is not disconnected. Check that the connector (P6-1/P6/J6) of the Tray Auxiliary Guide Motor (M6) is not disconnected. Replace the Tray Auxiliary Guide HP Sensor (S6). Replace the Tray Auxiliary Guide Motor (M6). Check the conditions of the tray auxiliary guide drive parts (gear). Replace the Finisher Controller PCB. Replace the Harness Assembly. |

| E602-0020-00 | HDD error |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | Corruption of database managing user mode/service mode data was detected. |
| Remedy | [Related parts] - HDD [Remedy] While this error occurs, backup of the setting values is disabled. In addition, it may not be recorded in the error log. Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power. 2. enter safe mode, and format the HDD using a USB flash drive. 3. Replace the HDD. |
| E602-0101-00 | HDD error |
| Detection Description | An error was detected in the PDL-related file storage area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual. |
| E602-0111-00 | HDD error |
| Detection Description | An error was detected in the PDL-related file storage area. (File could not be written in the HDD after startup or I/O error after startup) |
| Remedy | [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "1", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. |

6. Check/replace the related parts.

E602-0201-00 HDD error

Detection Description

An error was detected in the storage area of image data after startup. (Initialization failed at startup or I/O error at startup)

When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0211-00

HDD error

Detection Description

An error was detected in the storage area of image data after startup. (File could not be written in the HDD after startup or I/O error after startup)

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "2", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-0301-00 **HDD** error **Detection Description** An error was detected in the MEAP-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. - 6. Check/replace the related parts.

E602-0601-00 **Detection Description**

HDD error

An error was detected in the storage area of image data after startup. (Initialization failed at startup or I/O error at startup)

When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0611-00

HDD error

Detection Description

An error was detected in the storage area of image data after startup. (File could not be written in the HDD after startup or I/O error after startup)

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "6", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-0701-00 HDD error An error was detected in general application temporary area (temporary file). (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Remedy [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to

- Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0711-00

HDD error

Detection Description

An error was detected in general application temporary area (temporary file). (File could not be written in the HDD after startup or I/O error after startup)

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "7", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-0801-00 **HDD** error **Detection Description** An error was detected in the general application-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. [Related parts] Remedy - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.

turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.

4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then,

6. Check/replace the related parts.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-0811-00 **HDD** error

Detection Description

An error was detected in the general application-related area. (File could not be written in the HDD after startup or I/O error after startup)

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-0901-00 **HDD** error **Detection Description** An error was detected in PDL spool data (temporary file). (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. [Related parts] Remedy - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.

E602-1011-00

HDD error

Detection Description

An error was detected in the SEND-related area. (File could not be written in the HDD after startup or I/O error after startup)

Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "10", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-1101-00 **HDD** error **Detection Description** An error was detected in the update-related area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. [Related parts] Remedy - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then,

E602-1111-00

HDD error

Detection Description

An error was detected in the update-related area. (File could not be written in the HDD after startup or I/O error after startup)

5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5.

Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

turn OFF and then ON the main power to delete the data in the corresponding partition.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD

Then format the HDD using SST or a USB flash drive.

- HDD
- Main Controller PCB (UN81)

6. Check/replace the related parts.

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "11", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-1201-00 **HDD** error **Detection Description** An error was detected in the license-related area. (Initialization failed at startup or I/O error at When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. [Related parts] Remedy - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1211-00

HDD error

Detection Description

An error was detected in the license-related area. (File could not be written in the HDD after startup or I/O error after startup)

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5.

- 1. Check the related harness/cable and connector.
- 2. Turn OFF and then ON the main power, and check whether the error is cleared.
- 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "12", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 5. enter safe mode, and format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-1301-00 **HDD** error **Detection Description** An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Remedy [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual. E602-1311-00 **HDD** error **Detection Description** An error was detected in the system area. (File could not be written in the HDD after startup or I/O error after startup) Remedy [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Turn OFF and then ON the main power, and check whether the error is cleared. 3. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 4. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 5. enter safe mode, and format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual. E602-1371-00 System verification error **Detection Description** At startup, a verification error occurred due to invalid data of a MEAP login application. Remedy [Remedy] 1. Set the following service mode setting value to 1: COPIIER > OPTION > USER > MEAPSAFE 2. Turn OFF and then ON the main power. 3. Reinstall the corresponding MEAP application from RUI. [Caution] After performing the remedy work, return the MEAPSAFE value to 0 and turn OFF and then ON

the main power.

E602-1372-00 Verification error by "Falsification detection at startup" function **Detection Description** At startup, a verification error occurred due to invalid data in the MEAP area. Remedy [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power, and check whether the error is cleared. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain necessary backup data referring to "Appendix > Backup Data List" in System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "13", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. Re-install MEAP application(s) via RUI and restore the backup data. [Reference] Restore the backup data if the data has been deleted.

E602-1401-00

HDD error

Detection Description

An error was detected in SWAP (temporary file/alternative memory area). (Initialization failed at startup or I/O error at startup)

When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD
- HDD
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

E602-1411-00 **HDD** error **Detection Description** An error was detected in SWAP (temporary file/alternative memory area). (File could not be written in the HDD after startup or I/O error after startup) [Related parts] Remedy - Harness between the Main Controller PCB and the HDD

- - HDD
 - Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3.

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "14", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

[Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual.

E602-1701-00 **HDD** error

Detection Description

An error was detected in the debug log area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.

Remedy

[Related parts]

- Harness between the Main Controller PCB and the HDD

Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition.
- 5. enter safe mode, and format the HDD using SST or a USB flash drive.
- 6. Check/replace the related parts.

8. Error/Jam/Alarm E602-1911-00 **HDD** error **Detection Description** An error was detected in the storage area of data for printing. (File could not be written in the HDD after startup or I/O error after startup) [Related parts] Remedy - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "19", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. If the above-mentioned service mode cannot be executed due to an error, etc., enter safe mode. Then format the HDD using SST or a USB flash drive. 6. Check/replace the related parts. [Reference] When replacing the HDD, back up the setting values by referring to "Chapter 5. Adjustment> Actions when Replacing the Parts> HDD" in the Service Manual. E602-2000-00 **HDD** error **Detection Description** I/O error was detected in the file system after startup. Remedy [Related parts] - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the HDD optional board is properly installed. 2. Turn ON the main power, and check whether the error is cleared. 3. Execute the key clear using SST (to make an unformatted disk). [CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD. 4. enter safe mode, and format the HDD using SST or a USB flash drive. E602-2001-00 **HDD** error **Detection Description** Mismatch on encryption operation Remedy [Related parts] - Main Controller PCB (UN81) - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the Main Controller PCB is installed properly. 2. Turn ON the main power, and check whether the error is cleared. 3. Execute the key clear using SST (to make an unformatted disk).

[CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk.

Therefore, be sure to format the HDD.

4. enter safe mode, and format the HDD using SST or a USB flash drive.

E602-2002-00

HDD error

Detection Description

Failure of encryption board and others

Remedy

[Related parts]

- Main Controller PCB (UN81)
- HDD

[Remedy] Perform the following in the order while checking whether the error is cleared.

- 1. Turn ON the main power, and check whether the error is cleared.
- 2. Execute the key clear using SST (to make an unformatted disk).

[CAUTION] E602-0001 will be indicated if activating the machine with the unformatted disk. Therefore, be sure to format the HDD.

- 3. enter safe mode, and format the HDD using SST or a USB flash drive.
- 4. Replace the Main Controller PCB.

E614-0101-00 Error in system on the Flash PCB **Detection Description** An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Remedy [Related parts] - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB. E614-0111-00 Error in system on the Flash PCB **Detection Description**

An error was detected in the system area. (File could not be written in the Flash PCB after startup or I/O error after startup)

Remedy

[Related parts]

- Flash PCB
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
- 5. Replace the Main Controller PCB.

E614-0201-00

Error in system on the Flash PCB

Detection Description

An error was detected in the system area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log.

Remedy

[Related parts]

- Flash PCB
- Main Controller PCB (UN81)

[Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4.

- 1. Check the related harness/cable and connector.
- 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power.
- 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual.
- 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.
- 5. Replace the Main Controller PCB.

| Detection Description | An error was detected in the license-related area. (File could not be written in the Flash PCB after startup or I/O error after startup) |
| Remedy | [Related parts] - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Replace the Main Controller PCB. |
| E614-0701-00 | Error in file system on the Flash PCB |
| Detection Description | An error was detected in system setting value (service mode, etc.) storage area. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 4. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. 5. Check/replace the related parts. |

E614-0711-00 Error in file system on the Flash PCB **Detection Description** An error was detected in system setting value (service mode, etc.) storage area. (File could not be written in the Flash PCB after startup or I/O error after startup) [Related parts] Remedy - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. When prioritizing clearing of the error, skip Remedies 2 and 3. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "8", and execute "HD-CLEAR". Then, turn OFF and then ON the main power to delete the data in the corresponding partition. Check/replace the related parts. E614-4000-00 Error in system on the Flash PCB **Detection Description** The OS could not be recognized. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Remedy [Related parts] - Main Controller PCB (UN81) - Flash PCB - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Check that the HDD and the cables are properly installed. 4. Enter safe mode, and format the HDD using SST or a USB flash drive. 5. If another error occurs, clear the error by performing the remedy for it. 6. Replace the Main Controller PCB. E614-4001-00 Error in system on the Flash PCB **Detection Description** The OS boot file was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. Remedy [Related parts] - Main Controller PCB (UN81) - Flash PCB - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive.

After replacing the Flash PCB, reinstall the system softwaCheck that the HDD and the cables are properly installed.

- 4. Enter safe mode, and format the HDD using SST or a USB flash drive.
- 5. If another error occurs, clear the error by performing the remedy for it.
- 6. Replace the Main Controller PCB.

| E614-4002-00 | Error in system on the Flash PCB |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | The OS kernel was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Main Controller PCB (UN81) - Flash PCB - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Check that the HDD and the cables are properly installed. 4. Enter safe mode, and format the HDD using SST or a USB flash drive. 5. If another error occurs, clear the error by performing the remedy for it. 6. Replace the Main Controller PCB. |
| E614-4003-00 | Error in system on the Flash PCB |
| Detection Description | The OS boot loader was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Main Controller PCB (UN81) - Flash PCB - HDD [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Check that the HDD and the cables are properly installed. 4. Enter safe mode, and format the HDD using SST or a USB flash drive. 5. If another error occurs, clear the error by performing the remedy for it. 6. Replace the Main Controller PCB. |
| E614-4010-00 | Error in system on the Flash PCB |
| Detection Description Remedy | The OS in safe mode could not be recognized. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-4011-00 | Error in system on the Flash PCB |
| Detection Description | The file for booting the OS in safe mode was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |

| E614-4012-00 | Error in system on the Flash PCB |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | The kernel in safe mode was not found. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-9000-00 | Error in system on the Flash PCB |
| Detection Description | SRAM device access-related error (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-9001-00 | Error in system on the Flash PCB |
| Detection Description | Error in memory allocation/invalid memory (at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-9002-00 | Error in system on the Flash PCB |
| Detection Description | Setting file error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-9003-00 | Error in system on the Flash PCB |
| Detection Description | Parameter error was detected at startup. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |

| E614-9004-00 | Error in system on the Flash PCB |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | Startup error was detected. When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. After turning OFF the main power, remove and then install the Flash PCB again to check that it is installed properly. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. |
| E614-FF01-00 | Error in system on the Flash PCB |
| Detection Description | An unidentified Flash error was detected at startup. (Initialization failed at startup or I/O error at startup) When this error occurs, the system has not been started normally. Therefore, it may not be recorded in the error log. |
| Remedy | [Related parts] - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB. |
| E614-FF11-00 | Error in system on the Flash PCB |
| Detection Description | An unidentified Flash error was detected at startup. (File could not be written in the Flash PCB after startup or I/O error after startup) |
| Remedy | [Related parts] - Flash PCB - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. Although the error is cleared by "HD-CHECK", it may occur again. Thus, perform Remedies 1 to 5. 1. Check the related harness/cable and connector. 2. Select COPIER> FUNCTION> SYSTEM> CHK-TYPE> "0", and execute "HD-CHECK". Then, turn OFF and then ON the main power. 3. Obtain the necessary backup data by referring to "Appendix> Backup Data List" in the System Service Manual. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 5. Replace the Main Controller PCB. |
| E615-0001-00 | Error in self-diagnosis of the encryption module |
| Detection Description Remedy | An error was detected in self-diagnosis of the encryption library. [Related parts] - Flash PCB [Remedy] Perform the following in the order while checking whether the error is cleared Reinstall the necessary application software and restore the backup data once the error is cleared. 1. After reinstalling the system software using SST or a USB flash drive, turn OFF and then ON the main power. 2. Obtain the necessary backup data by referring to the backup data list. 3. Enter safe mode, and execute [4] Clear/Format> [2] Flash Format (Flash format) using a USB flash drive. 4. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. |

"Appendix> Backup Data List" in the Service Manual.

| E674-0001-07 | Fax Board communication error |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | An error was detected for the specified number of times in communication with the Fax Board. |
| Remedy | [Related parts] - Harness between the Fax Board and the Main Controller PCB - Fax Board - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E674-0002-07 | Fax Board communication error |
| Detection Description | An error was detected for the specified number of times in communication with the Fax Board. |
| Remedy | [Related parts] - Harness between the Fax Board and the Main Controller PCB - Fax Board - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E674-0004-07 | Fax Board communication error |
| Detection Description | A communication error occurred when accessing the modem IC used for fax. |
| Remedy | [Related parts] - Harness between the Fax Board and the Main Controller PCB - Fax Board - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E674-0008-07 | Fax Board communication error |
| Detection Description | A communication error occurred when accessing the port IC used for fax. |
| Remedy | [Related parts] - Harness between the Fax Board and the Main Controller PCB - Fax Board - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E674-0010-07 | Fax Board communication error |
| Detection Description | A communication error occurred when opening the Timer Device used for fax. |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB |
| E674-0011-07 | Fax Board communication error |
| Detection Description | A communication error occurred when starting the Timer Device used for fax. |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB |
| E674-0020-07 | Fax Board communication error |
| Detection Description | An error occurred in the modem IC used for fax. |
| Remedy | [Related parts] - Harness between the Fax Board and the Main Controller PCB - Fax Board - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E674-0021-07 | Fax Board communication error |
| Detection Description | A Fax Board for non-supported modem has been connected. |
| Remedy | Replace it with a genuine Fax Board (for 1-line or 2-line). |
| E674-0030-07 | Fax Board communication error |
| Detection Description | Check sum error |
| Remedy | System software download for 2 line FAX |

| E674-0100-07 | Fax Board communication error |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | After completion of fax communication, writing of the communication information (log) failed, and the log could not be read. |
| Remedy | Turn OFF and then ON the main power. If it occurs when the power is turned OFF and then ON after executing FAX > Clear > ALL, execute FAX > Clear > ALL and turn OFF and then ON the power again. [CAUTION] The previous communication information (log) will be cleared by turning OFF and then ON the main power. |
| E674-0300-07 | Fax configuration error |
| Detection Description | It was detected that there was a Fax Board for multiple lines installed while the IP Fax license was enabled. |
| Remedy | Remove the Fax Board for multiple lines to use the machine as an IP Fax model. Uninstall the IP Fax license to use the machine as a G3 Fax model. |
| E674-0301-07 | Fax configuration error |
| Detection Description | It was detected that there was no 1-line Fax Board installed while the IP Fax license was enabled. |
| Remedy | Install the Fax Board (1-line) to use the machine as an IP Fax model.Uninstall the IP Fax license and install the G3 Fax Board to use the machine as a G3 Fax model. |
| E713-0000-05 | Communication error |
| Detection Description | The operation was not completed although retry of the communication between the host machine (Dcon) and the Finisher was performed for 3 consecutive times. |
| Remedy | [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Check that the connector of the Interface Harness is not disconnected. 2. Replace the Finisher Controller PCB. 3. Replace the Interface Harness. |
| E719-0001-00 | Error in Coin Vendor. |
| Detection Description | Error in starting of the CoinVendor - The Coin Vendor, which should have been connected before the power was turned OFF, is not connected when the power is turned ON. |
| Remedy | Check the connection between charging management equipment and machine, and check that the Cable is not open-circuit. Clear the error while the charging management equipment is connected to operate and when switching to the operation without charging management equipment. (To prevent the misuse by removing the charging management equipment, this error code is displayed.) |
| E719-0002-00 | Error in Coin Vendor. |
| Detection Description | Error in IPC when CoinVendor is running. - In the case of disconnection of IPC or an error in which IPC communication failed to be recovered. - When disconnection of the pickup delivery signal is detected. - When illegal connection is detected (short-circuit with Tx and Rx of IPC) |
| Remedy | Check the connection between charging management equipment and machine, and check that the Cable is not open-circuit. Clear the error while the charging management equipment is connected to operate and when switching to the operation without charging management equipment. (To prevent the misuse by removing the charging management equipment, this error code is displayed.) |
| E719-0003-00 | Error in Coin Vendor. |
| Detection Description Remedy | In the case of communication error with the coin vendor while obtaining the unit price at start-up. Check the connection between charging management equipment and machine, and check that the Cable is not open-circuit. Clear the error while the charging management equipment is connected to operate and when switching to the operation without charging management equipment. (To prevent the misuse by removing the charging management equipment, this error code is displayed.) |

| E719-0004-00 | Coin vendor error |
|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | |
| Detection Description Remedy | The coin vendor was connected to a model that does not support the coin vendor Cancel the connection of the coin vendor and clear the error. |
| - | |
| E719-0021-00 | Coin vendor error |
| Detection Description | Communication with the coin vendor could not be established at startup of the host machine. |
| Remedy | Check/replace the cable between the charging management equipment and the host machine. Check the power of the charging. |
| E719-0022-00 | Coin vendor error |
| Detection Description | Communication with the coin vendor could not be established at startup of the host machine. |
| Remedy | Check/replace the cable between the charging management equipment and the host machine. Check the power of the charging. |
| E719-0031-00 | Error in serial communication at the start of the New Card Reader |
| Detection Description | Failure in communication with the serial New Card Reader at start-up. |
| Remedy | Check if the cable of the serial New Card Reader is disconnected. Take out the serial New Card Reader. COPIER > Function > CLEAR > CARD COPIER > Function > CLEAR > ERR |
| E719-0032-00 | Error in serial communication at the start of the New Card Reader |
| Detection Description | Communication failed in the middle of the operation although communication with the serial New Card Reader was successful at start-up. |
| Remedy | - Check if the cable of the serial New Card Reader is disconnected. |
| E719-0041-00 | Coin vendor error |
| Detection Description | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) |
| Remedy | 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled - Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power. |
| E719-0042-00 | Coin vendor error |
| | |
| Detection Description | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) |
| Detection Description Remedy | Communication with the coin vendor could not be established at startup of the host machine. |
| | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled |
| Remedy | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled - Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power. |
| Remedy E720-0001-00 | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled - Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power. Error due to non-compatible Finisher |
| Remedy E720-0001-00 Detection Description | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled - Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power. Error due to non-compatible Finisher Non-compatible Finisher was connected. |
| Remedy E720-0001-00 Detection Description Remedy | Communication with the coin vendor could not be established at startup of the host machine. (Charge mode (COIN = 6) has been set.) 1. If it operates in charge mode (COIN = 6) - Check that it is the supported charging management equipment. - Check the cable to be connected. - Check the power of the charging management equipment. 2. If charge mode is canceled - Select COPIER> OPTION> ACC> COIN> "0", and turn OFF and then ON the main power. Error due to non-compatible Finisher Non-compatible Finisher was connected. Connect either the Staple Finisher-Z1. |

| E730-C001-00 | Error in HDD access |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | An error occurred when accessing the HDD. |
| Remedy | [Related parts] - Harness between the Main Controller PCB and the HDD - HDD - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Format the HDD and reinstall the system software using SST or a USB flash drive. 2. Check/replace the related harness/cable, connector and parts. |
| E732-0001-04 | Communication error |
| Detection Description | DDI-S communication error. |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E732-0010-00 | Communication error |
| Detection Description | A signal to start image transfer could not be detected at scanning although the specified period of time (120 sec) has passed. |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E732-0020-00 | Communication error |
| Detection Description | A communication error between the Reader Controller PCB and the Main Controller PCB was detected. |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E732-0021-00 | Communication error |
| Detection Description | A communication error between the Reader Controller PCB and the Main Controller PCB was detected. |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |

| E732-0022-00 | Communication error |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | A communication error between the Reader Controller PCB and the Main Controller PCB was detected. |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E732-0023-04 | Communication error |
| Detection Description | DDI-S communication error (SPRDY-S detection error) |
| Remedy | [Related parts] - Harness between the READER ADF UNIT (J6, J5) and the Main Controller PCB (UN81/J4001, 4002) - READER ADF UNIT - Main Controller PCB (UN81) [Remedy] Check/replace the related parts. After performing the remedy, check that the copy image is output normally. |
| E732-0F01-04 | Communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0001 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E732-0F20-00 | Communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0020 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E732-0F21-00 | Communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0021 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E732-0F22-00 | Communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0022 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E732-0F23-04 | Communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E732-0023 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E732-8888-00 | Communication error |
| Detection Description | Scanner for a different model was detected at communication with the Reader. |
| Remedy | Replace the Reader Unit with the one for this model. |
| E732-9999-00 | Reader detection error |
| Detection Description | The Reader was detected with a printer model for the first time. Only the message "Turn OFF and then ON the power" is displayed on the screen instead of displaying an error code. The error log is recorded in "COPIER> DISPLAY> ERR". |
| Remedy | [Remedy] Turn OFF and then ON the main power. |

| E733-0000-05 | Printer communication error |
|------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | A communication error between the DC Controller PCB and the Main Controller PCB was detected at startup. |
| Remedy | [Related parts] - Harnesses between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - DC Controller PCB (UN04) - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E733-0001-05 | Printer communication error |
| Detection Description | A communication error between the DC Controller PCB and the Main Controller PCB was detected. |
| Remedy | [Related parts] - Harnesses between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - DC Controller PCB (UN04) - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E733-0002-05 | Printer communication error |
| Detection Description | Signal error was detected after establishment of communication between the DC Controller PCB and the Main Controller PCB. |
| | and the Main Controller FCB. |
| Remedy | [Related parts] - Harnesses between the DC Controller PCB (UN04/J112) and the Main Controller PCB (UN81/J4511) - DC Controller PCB (UN04) - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |

| E733-0010-05 | Communication error between the Main Controller PCB and the DC Controller PCB |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | A communication error between the DC Controller PCB and the Main Controller PCB was detected. |
| Remedy | [Related parts] - Harnesses between the DC Controller PCB and the Main Controller PCB - DC Controller PCB - Main Controller PCB [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES |
| E733-0F00-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0000 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E733-0F01-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0001 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E733-0F02-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0002 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. |
| E733-0F04-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0004 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted. |
| E733-0F05-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0005 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted. |
| E733-0F06-05 | Printer communication error |
| Detection Description | Communication error that can be recovered by reboot If it is detected again immediately after reboot, E733-0006 is generated. |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted. |
| E733-9999-05 | Printer communication error |
| Detection Description | The Finisher connection information error was detected between the DC Controller PCB and the Main Controller PCB. |
| Remedy | Turn OFF and then ON the power |
| E733-F000-05 | Printer communication error |
| Detection Description | Disconnection of a cable between the Main Controller PCB and the DC Controller PCB was detected. |
| Remedy | [Remedy] Check/replace the harness between the DC Controller PCB and the Main Controller PCB. |

| E733-F001-05 | Printer communication error |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | Disconnection of a cable between the Main Controller PCB and the DC Controller PCB was |
| , , , , , , , , , , , , , , , , , , , | detected. |
| Remedy | [Remedy] Check/replace the harness between the DC Controller PCB and the Main Controller PCB. |
| E733-F002-05 | Printer communication error |
| Detection Description | A communication error between the Main Controller PCB and the Laser Driver PCB was detected. |
| Remedy | [Related parts] - Flat Cable between the Main Controller PCB (UN81/J9000) and the Y/M/C/Bk Laser Driver PCB (UN05/J201) - Laser Scanner Assembly - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. |
| E743-0000-04 | DDI communication error |
| Detection Description | Software sequence error |
| Remedy | [Remedy] Collect debug log and contact to the sales company. |
| E744-0001-00 | Language file error |
| Detection Description | The language file in HDD was not supported by the version of Bootable. |
| Remedy | Reinstall the correct language file using SST or USB flash drive reinstall the entire software. |
| E744-0003-00 | Language file error |
| Detection Description | The language file to be switched to that was described in the Config.txt in HDD was not found. |
| Remedy | Reinstall the correct language file using SST or USB flash drive reinstall the entire software. |
| E744-0004-00 | Language file error |
| Detection Description | Switching to the language file in the HDD failed. |
| Remedy | Reinstall the correct language file using SST or USB flash drive reinstall the entire software. |
| E744-2000-00 | System error |
| Detection Description | System error |
| Remedy | Contact to the sales company. |
| E744-5000-07 | Mismatch of software version for fax |
| Detection Description | After the Fax Board (option) has been installed, mismatch of version of software in the Fax Board was detected at transmission and reception. |
| Remedy | Upgrade the system software version to the latest one. |
| E746-0011-00 | Voice Board error |
| Detection Description | Both the Voice Guidance PCB and the Voice Operation PCB are inserted. |
| Remedy | Insert only 1 board of the appropriate voice board. |
| | |
| E746-0021-00 | Image Analysis Board error |
| E746-0021-00 Detection Description | Image Analysis Board error Self-check NG of Image Analysis Board |
| | |
| Detection Description | Self-check NG of Image Analysis Board Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or |
| Detection Description Remedy | Self-check NG of Image Analysis Board Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or the system software which version is supported by this model using SST or a USB flash drive. |

| E746-0023-00 | Image Analysis Board error |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detection Description | No response from Image Analysis Board (PCB used for PCAM) |
| Remedy | Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or the system software which version is supported by this model using SST or a USB flash drive. |
| E746-0024-00 | Image Analysis Board error |
| Detection Description | Failure in behavior of Image Analysis Board (PCB used for PCAM) |
| Remedy | Perform the following in the order while checking whether the error is cleared. 1. Remove and then install the Image Analysis Board. 2. If the error is not cleared, replace the Image Analysis Board. 3. After replacing the Image Analysis Board, reinstall the firmware of the Image Analysis Board or the system software which version is supported by this model using SST or a USB flash drive. |
| E746-0031-00 | TPM error |
| Detection Description | A communication error has occurred between the Main Controller PCB and the TPM PCB at startup. |
| Remedy | [Related parts] - TPM PCB [Remedy] Check/replace the TPM PCB. [Reference] After replacing the TPM PCB, if the TPM key was backed up, restore the key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. Since the old and new TPM PCB is incompatible, be sure to check the part number that matches the serial number of the product in the parts catalog. |
| E746-0032-00 | TPM error |
| Detection Description Remedy | [Related parts] - TPM PCB [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Format the HDD and reinstall the system software using SST or a USB flash drive. 2. Replace the TPM PCB. [Reference] After replacing the TPM PCB, if the TPM key was backed up, restore the key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. |

| E746-0033-00 | TPM error | | |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Detection Description | It was detected that data in TPM was inconsistent. | | |
| Remedy | [Related parts] - TPM PCB [Remedy] If the TPM key was backed up, - Restore the TPM key. 1. Connect the USB memory which stores the TPM key. 2. Execute "Settings/Registration> Log In> Management Settings> Data Management> TPM Settings> Restore TPM Key". [CAUTION] Ask the customer to enter "System Manager ID" and "System Manager PIN" when logging in. 3. Enter the password set at backup operation. 4. When the restoration completion screen is displayed, click "OK". Remove the USB memory, and turn OFF and then ON the main power. If the TPM key was not backed up, - Format the HDD and reinstall the system software using SST or a USB flash drive. | | |
| E746-0034-00 | TPM auto recovery error | | |
| Detection Description | The error occurred when clearing HDD while TPM setting was ON. | | |
| Remedy | [Related parts] - HDD [Remedy] It is recovered by turning OFF and then ON the power. If the error is not cleared, format the HDD and reinstall the system software using SST or a USB flash drive. | | |
| E746-0035-00 | TPM version error | | |
| Detection Description | TPM PCB which cannot be used in this machine was installed. | | |
| Remedy | [Related parts] - TPM PCB [Remedy] Install the TPM PCB for this model. Since the old and new TPM PCB is incompatible, be sure to check the part number that matches the serial number of the product in the parts catalog. | | |
| E748-2000-00 | Main Controller PCB access error | | |
| Detection Description | Main Controller PCB Chip access error. | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN81) | | |
| E748-2001-00 | Main Controller PCB access error | | |
| Detection Description | Main Controller PCB memory access error. | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN81) | | |

| E748-2010-00 | Flash PCB error / HDD error | | |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Detection Description | IPL (startup program) was not found, or the HDD could not be recognized. | | |
| Remedy | [Related parts] - Harness between the Main Controller PCB (UN81/J6003, J6004) and the HDD - HDD - Flash PCB (UN91) - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared Disconnect the cable between the Main Controller PCB and the HDD, and turn ON the main power. a. When the error code has not been changed: 1. Obtain the necessary backup data by referring to the backup data list. 2. After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. 3. Restore the backup data. b. When the error code has been changed to another one, see the remedy for the corresponding code. [Reference] For backup and restoration, refer to "Adjustment> Main Controller System" and "Appendix> Backup Data List" in the Service Manual. | | |
| E748-2011-00 | Flash PCB error | | |
| Detection Description | OS was not found at startup. | | |
| Remedy | [Related parts] - Flash PCB (UN91)[7000-0002] [Remedy] After replacing the Flash PCB, reinstall the system software using SST or a USB flash drive. | | |
| E748-2012-00 | Flash PCB error | | |
| Detection Description | Cannot mount the OS in safe mode startup or No OS startup script | | |
| Remedy [Related parts] - Flash PCB (UN91)[7000-0002] [Remedy] After replacing the Flash PCB, reinstall the system software using SS drive. | | | |
| E748-2021-00 | Main Controller PCB access error | | |
| Detection Description | Main controller board access errors | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN81) | | |
| E748-2022-00 | Main controller startup error | | |
| Detection Description | An fatal error was detected in the Main Controller at startup | | |
| Remedy | Replace the Main Controller PCB | | |
| E748-2023-00 | Main Controller PCB access error | | |
| Detection Description | Main controller board access errors | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN82) | | |
| E748-2024-00 | Main Controller PCB access error | | |
| Detection Description | Main controller board access errors | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN83) | | |

| E748-2025-00 | Main Controller PCB access error | | | | |
|---------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Detection Description | Main controller board access errors | | | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN84) | | | | |
| E748-2026-00 | Main Controller PCB access error | | | | |
| Detection Description | Main controller board access errors | | | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN85) | | | | |
| E748-4910-00 | Main Controller PCB access error | | | | |
| Detection Description | Main controller board access errors | | | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Check/replace the Main Controller PCB (UN86) | | | | |
| E740 7044 00 | | | | | |
| E748-7011-00 | Start system verification function error At startup, an error may occur due to invalid data of the OS boot loader on the flash PCB. | | | | |
| Detection Description | When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log. | | | | |
| Remedy | [Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive. | | | | |
| E748-7021-00 | Start system verification function error | | | | |
| Detection Description | At startup, an error may occur due to invalid data of the OS kernel on the flash PCB. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log. | | | | |
| Remedy | [Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive. | | | | |
| E748-7022-00 | Start system verification function error | | | | |
| Detection Description | At startup, an error may occur due to invalid data of the OS kernel on the flash PCB. When this error occurs, the system has not been started normally. Therefore, it is not recorded in the error log. | | | | |
| Remedy | [Related parts] - Flash PCB [Remedy] 1. Replace the Flash PCB and reinstall the system using SST or a USB flash drive. | | | | |
| E748-9000-00 | System error | | | | |
| Detection Description | System error | | | | |
| Remedy | Contact to the sales company. | | | | |
| E749-0008-00 Error due to the DC Controller not compatible with the model | | | | | |
| Detection Description | The DC Controller PCB or the Main Controller PCB which was used with another model was detected. | | | | |
| Remedy | It is not necessary to perform a remedy because the machine is automatically rebooted after log collection. | | | | |

| E750 0006 05 | Custom authoras array | | | |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| E750-0006-05 | System software error | | | |
| Detection Description | Model information of the DC Controller did not match the notification from the controller. | | | |
| Remedy | Reinstall the system software using SST or a USB memory. | | | |
| E753-0001-00 | Download Error | | | |
| Detection Description | Update of the system software failed. | | | |
| Remedy | [Related parts] | | | |
| | - Flash PCB (UN91) | | | |
| | [Remedy] Perform the following in the order while checking whether the error is cleared. 1. Turn OFF and then ON the main power. | | | |
| | Reinstall the system software using SST or a USB memory. | | | |
| | 3. Replace the FLASH PCB, and reinstall the system software. | | | |
| | 4. Collect debug log and contact the sales company. | | | |
| E760-0001-00 | Main Controller PCB internal error | | | |
| Detection Description | An error was detected in the Main Controller PCB. | | | |
| Remedy | [Related parts] | | | |
| | - Main Controller PCB (UN81) | | | |
| | [Remedy] | | | |
| | Check/replace the Main Controller PCB (UN87) | | | |
| E804-0000-00 | Power Supply Cooling Fan error | | | |
| Detection Description | It was detected that the Power Supply Cooling Fan was locked. | | | |
| Remedy | [Related parts] | | | |
| | - Harness between the Low-voltage Power Supply PCB (UN01/J323) and the Power Supply | | | |
| | The state of the s | | | |
| | Cooling Fan (FM05/J5215) | | | |
| | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) | | | |
| | Cooling Fan (FM05/J5215) | | | |
| E806-0100-05 | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) | | | |
| E806-0100-05 Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. | | | |
| | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error | | | |
| | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit Suction Cooling Fan (FM01) | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit Suction Cooling Fan (FM01) - Drum Unit Suction Cooling Fan (FM01) - Primary Transfer High-voltage PCB (UN03) - DC Controller PCB (UN04) | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit Suction Cooling Fan (FM01) - Drum Unit Suction Cooling Fan (FM01) - Primary Transfer High-voltage PCB (UN03) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit Suction Cooling Fan (FM01) - Drum Unit Suction Cooling Fan (FM01) - Primary Transfer High-voltage PCB (UN03) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. Drum Unit Suction Cooling Fan error The Drum Unit Suction Cooling Fan did not rotate for the specified period of time since the start of drive. [Related parts] - Harness between the DC Controller PCB (UN04/J180) and the Primary Transfer High-voltage PCB (UN03/J271) - Harness between the Primary Transfer High-voltage PCB (UN03/J272) and the Drum Unit Suction Cooling Fan (FM01) - Drum Unit Suction Cooling Fan (FM01) - Primary Transfer High-voltage PCB (UN03) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected. | | | |
| Detection Description | Cooling Fan (FM05/J5215) - Power Supply Cooling Fan (FM05) - Low-voltage Power Supply PCB (UN01) [Remedy] Check/replace the related harness/cable, connector and parts. | E806-0300-05 | Delivery Cooling Fan error | | | |
| Detection Description | The Delivery Cooling Fan did not rotate for the specified period of time since the start of drive. | | | |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J151) and the Delivery Cooling Fan (FM03/J5413) - Delivery Cooling Fan (FM03) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES | | | |
| E806-0301-05 | Delivery Cooling Fan error | | | |
| Detection Description | The Delivery Cooling Fan rotated for more than the specified period of time after the stop of drive. | | | |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J151) and the Delivery Cooling Fan (FM03/J5413) - Delivery Cooling Fan (FM03) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES | | | |
| E806-0400-05 | Duplex Cooling Fan error | | | |
| Detection Description | The Duplex Cooling Fan in the Right Cover did not rotate for the specified period of time since the start of drive. | | | |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J122) and the Duplex Cooling Fan (FM04/J5610) - Duplex Cooling Fan (FM04) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES | | | |

| E806-0401-05 | Duplex Cooling Fan error | | | |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Detection Description | The Duplex Cooling Fan in the Right Cover rotated for more than the specified period of time after the stop of drive. | | | |
| Remedy | [Related parts] - Harness between the DC Controller PCB (UN04/J122) and the Duplex Cooling Fan (FM04/J5610) - Duplex Cooling Fan (FM04) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES | | | |
| E808-0001-05 | Zero cross signal detection error | | | |
| Detection Description | An electrical trouble caused by zero cross signal error. Frequency between 43 Hz and 57 Hz could not be detected for 5000 msec or longer. | | | |
| Remedy | [Related parts] - Harness between the Low-voltage Power Supply PCB (UN01/J322) and the DC Controller PCB (UN04/J22) - Low-voltage Power Supply PCB (UN01) - DC Controller PCB (UN04) [Remedy] Check/replace the related harness/cable, connector and parts. [Reference] Before replacing the DC Controller PCB, back up the service mode data (approx. 2 min) and restore the backup data after the replacement so the data may be able to be protected Backup: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMBUP - Restoration: COPIER (LEVEL2)> FUNCTION> SYSTEM> DSRAMRES | | | |
| E880-0001-00 | Controller Cooling Fan error | | | |
| Detection Description | It was detected that the Controller Cooling Fan was locked. | | | |
| Remedy | [Related parts] - Controller Cooling Fan - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. | | | |
| E880-0003-00 | Controller Cooling Fan error | | | |
| Detection Description | It was detected that the Controller Cooling Fan was locked. | | | |
| Remedy | [Related parts] - Controller Cooling Fan - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. | | | |
| E880-0005-00 | Controller Cooling Fan error | | | |
| Detection Description | Fan lock of the HDD Cooling Fan was detected | | | |
| Remedy | Check if the connector is connected. It the connection is OK, replace the HDD Cooling Fan. | | | |
| E881-0001-00 | Board over heat error | | | |
| Detection Description | Abnormal temperature of the Main Controller CPU was detected. | | | |
| Remedy | [Related parts] - Main Controller PCB (UN81) [Remedy] Perform the following in the order while checking whether the error is cleared. a. If the error occurred during a service visit and then occurred again, replace the Main Controller PCB. b. If the error does not occur during a service visit but is found in the log: 1. Clean the inlet on the side where the fan is installed and remove dust. 2. Remove dust from the Controller Cooling Fan. 3. If the space on the side where the fan is installed is less than 10 cm, ask the customer to secure enough space. | | | |

| E882-0001-05 | Main Power Supply Switch error | | |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Detection Description | The main power was not turned OFF due to the solenoid in the Main Power Switch not working. | | |
| Remedy | [Related parts] - Harness between the Main Controller PCB (UN81/J4513) and the Main Power Switch (SW01/J5204, J5205) - Main Power Switch (SW01) - Main Controller PCB (UN81) [Remedy] Check/replace the related harness/cable, connector and parts. | | |
| E996-007F-04 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CA1-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CA2-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CA3-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CA4-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CA9-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CAD-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |
| E996-0CAE-05 | Error for collecting sequence jam log (Printer) | | |
| Detection Description | Error for collecting jam log (Printer) | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | |

| E996-0CAF-05 | Error for collecting sequence jam log (Finisher) | | | |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Detection Description | Error for collecting jam log (Finisher) | | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | | |
| E996-0CE0-05 | Error for collecting sequence jam log (Printer) | | | |
| Detection Description | Error for collecting jam log (Printer) | | | |
| Remedy | [Remedy] Collect debug log and contact to the sales company. [Reference] By setting "COPIER (LEVEL2)> OPTION> FNC-SW> JM-ERR-D" to "1", it is handled as an error instead of a jam from the first occurrence. | | | |

Jam Code

Jam Type

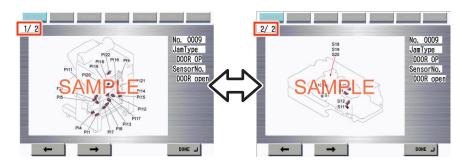

| Туре | Overview of detection | Check items (in arbitrary order) |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DELAY | A delay jam occurs when a sensor was not turned ON although a specified period of time had passed after the start of detection by the sensor. | Remaining paper at the upstream of the target sensor Soiling on the target sensor Displacement of the target sensor position Failure of the target sensor Soiling (grease)/deterioration/failure of a drive motor located upstream of the target sensor Soiling (paper dust)/deterioration/failure of a drive roller located upstream of the target sensor |
| STNRY | A stationary jam occurs when a sensor was not turned OFF although a specified period of time had passed after the sensor was turned ON. | Remaining paper near the target sensor Soiling on the target sensor Displacement of the target sensor position Failure of the target sensor Soiling (grease)/deterioration/failure of a drive motor located upstream of the target sensor Soiling (paper dust)/deterioration/failure of a drive roller located upstream of the target sensor |
| DOOR OP | A door open jam occurs when a sensor detected door open during printing operation. | Door open during printing |
| COVER OP | A door open jam occurs when a sensor detected cover open during printing operation. | Cover open during printing |
| ADF OPEN | A door open jam occurs when a sensor detected ADF open during printing operation. | ADF open during printing |
| SEQUENCE | A sequence jam occurs when there was an error in sensor detection signal at printing operation sequence. Since the jam may occur due to sporadic noise with software of each equipment or communication line (interruption of communication), failure of the part is not the cause of the jam. After the jam is removed, the machine works. | Opening/closing of the door Turning OFF and then ON the power Error near the target sensor (soiling/displacement/failure of the sensor, error in harness/open circuit of harness, soiling (grease)/deterioration/failure of a drive motor, or soiling (paper dust)/deterioration/failure of a drive roller) |
| POWER ON | A power-on jam occurs when a sensor detected ON state at power-on. | Remaining paper in the machine Soiling on the target sensor Failure of the target sensor Foreign matter on the target sensor (paper dust, paper lint) |
| ERROR | An error avoidance jam occurs when an error in the machine (excluding parts failure) was detected. Printing operation is suspended to avoid error occurrence by error code; therefore, parts failure is not the cause of the jam. After the jam is removed, the machine works. If it is due to parts failure, an error code instead of the error avoidance jam is displayed on UI and printing operation is suspended. In such case, service technician should perform remedial work for the error code. | Opening/closing of the door after jam removal Turning OFF and then ON the power after jam removal |
| SIZE ERR | A size error jam occurs when the difference between the paper length detected by the Cassette Guide Plate/specified on the Control Panel and the length measured by the Post-Separation Sensor is out of the specified range. | Difference in paper size Wrong paper size setting Error in the Document Size Sensor (soiling/displacement/ failure of the sensor) Error in the Paper Size Detection Unit (failure of mechanical structure for size detection, failure of the Guide Plate, or failure of the Cassette Size Switch) |
| P-STOP | Forcible stop of paper feed It occurs when a sheet of paper stops at the position specified in service mode. | Using at problem analysis. |

| Type | Overview of detection Check items (in arbitrary order) | |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Wrapping jam | When the first sensor after the fixing roller is turned ON is turned OFF immediately detection after the detection. Alternatively, when the second sensor after fixing roller is turned ON and immediately after detection, the first sensor is detection turned OFF. | Failure of the target sensor Fixing Assembly failure Paper Type Confirmation (Check if paper type cannot be |

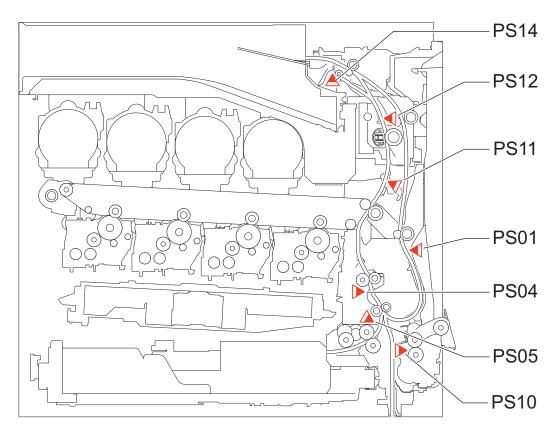

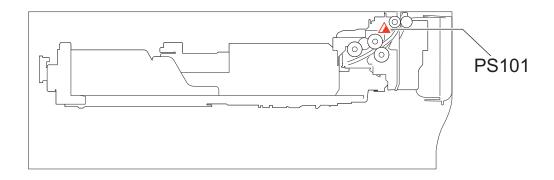

Jam screen display specification

Due to one jam code being used for multiple options, the illustration for the different option may be displayed on the jam screen. In this case, "1/2" or similar information is displayed on top left side of the screen and this area can be pushed. This operation can be used to switch information on the screen.

| 01 | 0025 | OTHER | Detected skew greater than the maximum correctable amount | [1],[2] |
| 01 | 0026 | OTHER | Unable to detect skew due to unexpected originals | [1],[2] |

■ 010025: Jam Code (UniFlow) 0025

Detection Description

Jam Type: Other Jams

Detected skew greater than the maximum correctable skew amount when performing Advanced Scan.

Remedy

- 1. Set the original again by following the displayed instruction.
 - When setting originals with mixed Free sizes, set each sheet of original to align with the center.

CAUTION:

Be aware that an image loss or a paper jam may be caused if the center of the original is off by 10 mm or more from the center of the Tray.

• When setting originals with mixed standard size paper, set by aligning the edge of originals to the rear of feeder.

NOTE:

Adjust by aligning the Side Guide Plate (Paper Guide) to the large paper.

2. Perform skew adjustment referring to chapter 6 "Adjustment".

■ 010026: Jam Code (UniFlow) 0026

Detection Description

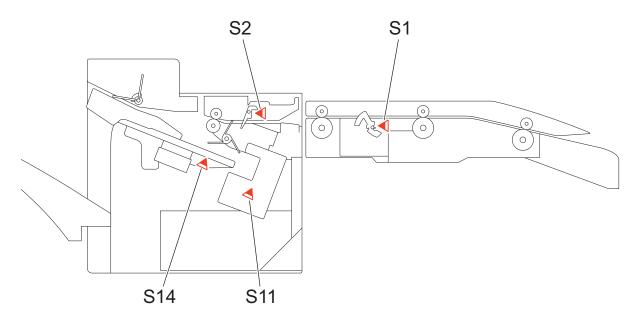

Jam Type: Other Jams

Detected skew greater than the maximum correctable skew amount when performing Advanced Scan.

Remedy

- 1. Check if the original size is out of specification.
- 2. If the original is bent, modify it.
- 3. Change the original stacking direction (with the less damaged end of the original as its leading edge).
- 4. Change the document reading method.
 - $\bullet \ \ Settings/Registration > Function \ Settings > Common > Scan \ Settings > Original \ Thickness \ Defaults \ for \ Scan \ from \ Feeder$

Staple Finisher

Alarm Code

Alarm Code Details

| 00-0085 | A notice of state |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. Operation / B. Cause / C. Remedy | - |
| 00-0246 | Error code display (4-digit) |
| A. Operation / B. Cause / C. Remedy | Soft counter PCB cannot write normally. |
| 00-0247 | Error code display (4-digit) |
| A. Operation / B. Cause / C. Remedy | Soft counter PCB cannot restore data. |
| 01-0001 | Notification of disabled to obtain counter values for a certain period of time |
| A. Operation / B. Cause / C. Remedy | Counter information is not set to UGW * Not displayed on service mode history due to the alarm being generated by UGW |
| 01-0002 | No change in device status after specified period of time has passed (RDS server creates) |
| A. Operation / B. Cause / C. Remedy | - |
| 01-0004 | Notification of IP address change |
| A. Operation / B. Cause / C. Remedy | IP address has been changed * Not displayed on service mode history due to the alarm being generated by UGW |
| 01-0005 | Restricted operation notification |
| A. Operation / B. Cause / C. Remedy | The device entered limited function mode for some reason. * Not displayed on service mode history due to the alarm being generated by UGW |
| 04-0001 | Cassette 1 Lifter error |
| A. Operation / B. Cause / C. Remedy | Cause: Error in Lift Motor or Lifter Sensor Measures: 1. While Cassette 1 is removed, turn ON the power and then insert Cassette 1. When there is operation sound of the motor 1-1. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Sensor 2-1. Check if the Cassette 1 Lifter Sensor is installed. 3-1. Extend the Sensor Flag of the Cassette 1 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc. 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear) 5-1. Replace the Cassette 1 Lifter Sensor 6-1. Replace the DC Controller PCB When there is no operation sound of the motor 1-2. Check the harness/connector between the DC Controller and the Cassette 1 Lifter Motor 2-2. Check conduction of the fuse of the DC Controller 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear) 4-2. Check the Cassette 1 Lifter Motor 5-2. Replace the DC Controller |

04-0002

Cassette 2 Lifter error

A. Operation / B. Cause / C. Remedy

Cause: Error in Lift Motor or Lifter Sensor

emedy Measures:

1. While Cassette 2 is removed, turn ON the power and then insert Cassette 2.

When there is operation sound of the motor

- 1-1. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Sensor
- 2-1. Check if the Cassette 2 Lifter Sensor is installed.
- 3-1. Extend the Sensor Flag of the Cassette 2 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc.
- 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear)
- 5-1. Replace the Cassette 2 Lifter Sensor
- 6-1. Replace the DC Controller PCB

When there is no operation sound of the motor

- 1-2. Check the harness/connector between the DC Controller and the Cassette 2 Lifter Motor
- 2-2. Check conduction of the fuse of the DC Controller
- 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear)
- 4-2. Check the Cassette 2 Lifter Motor
- 5-2. Replace the DC Controller

04-0003

Cassette 3 Lifter error

A. Operation / B. Cause /

Cause: Error in Lift Motor or Lifter Sensor

C. Remedy Measures:

1. While Cassette 3 is removed, turn ON the power and then insert Cassette 3.

When there is operation sound of the motor

- 1-1. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Sensor
- 2-1. Check if the Cassette 3 Lifter Sensor is installed.
- 3-1. Extend the Sensor Flag of the Cassette 3 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc.
- 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear)
- 5-1. Replace the Cassette 3 Lifter Sensor
- 6-1. Replace the DC Controller PCB

When there is no operation sound of the motor

- 1-2. Check the harness/connector between the DC Controller and the Cassette 3 Lifter Motor
- 2-2. Check conduction of the fuse of the DC Controller
- 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear)
- 4-2. Check the Cassette 3 Lifter Motor
- 5-2. Replace the DC Controller

04-0004

Cassette 4 Lifter error

A. Operation / B. Cause / C. Remedy

Cause: Error in Lift Motor or Lifter Sensor

Measures:

1. While Cassette 4 is removed, turn ON the power and then insert Cassette 4.

When there is operation sound of the motor

- 1-1. Check the harness/connector between the DC Controller and the Cassette 4 Lifter Sensor
- 2-1. Check if the Cassette 4 Lifter Sensor is installed.
- 3-1. Extend the Sensor Flag of the Cassette 4 Lifter Sensor by approx. 1.5 mm with Plastic Film, etc.
- 4-1. Check the condition of the gear at the host machine side (to see if there is missing or swing with the gear)
- 5-1. Replace the Cassette 4 Lifter Sensor
- 6-1. Replace the DC Controller PCB

When there is no operation sound of the motor

- 1-2. Check the harness/connector between the DC Controller and the Cassette 4 Lifter Motor
- 2-2. Check conduction of the fuse of the DC Controller
- 3-2. Check the condition of the gear at the host machine side (to see if there is something missing or swing with the gear)
- 4-2. Check the Cassette 4 Lifter Motor
- 5-2. Replace the DC Controller

| 04-0010 | Notification of iam left untouched | |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| | Notification of jam left untouched | |
| A. Operation / B. Cause / C. Remedy | Jam is left untouched * Not displayed on service mode history due to the alarm being generated by UGW | |
| 04-0011 | Cassette 1 paper feed retry error | |
| A. Operation / B. Cause / C. Remedy | Movement: Nothing in particular. Cause: The paper does not picked up even if the paper feed retry operation is carried out 4 times. Measures: Check the Cassette 1 Pickup and Feed and Separation Rollers> Check whether a scrap of paper remains around the paper feed area or not. | |
| 04-0012 | Cassette 2 paper feed retry error | |
| A. Operation / B. Cause / C. Remedy | Movement: Nothing in particular. Cause: The paper does not picked up even if the paper feed retry operation is carried out 4 times. Measures: Check the Cassette 2 Pickup and Feed and Separation Rollers> Check whether a scrap of paper remains around the paper feed area or not. | |
| 04-0013 | Cassette 3 paper feed retry error | |
| A. Operation / B. Cause / C. Remedy | Movement: Nothing in particular. Cause: The paper does not picked up even if the paper feed retry operation is carried out 4 times. Measures: Check the Cassette 3 Pickup and Feed and Separation Rollers> Check whether a scrap of paper remains around the paper feed area or not. | |
| 04-0014 | Cassette 4 paper feed retry error | |
| A. Operation / B. Cause / C. Remedy | Movement: Nothing in particular. Cause: The paper does not picked up even if the paper feed retry operation is carried out 4 times. Measures: Check the Cassette 4 Pickup and Feed and Separation Rollers> Check whether a scrap of paper remains around the paper feed area or not. | |
| 09-0010 | Drum memory detection error (Y) | |
| A. Operation / B. Cause / C. Remedy | Cause: The memory of the Drum Unit (Y) could not be detected. Measures: 1. Remove and then install the Drum Unit (Y). | |
| | Check the connection of the Drum Unit Memory PCB (Y) (UN12). Disconnect and then connect the connector of the Drum Unit Relay PCB (Y) (UN08). Disconnect and then connect the connector of the DC Controller (UN4). Replace the Drum Unit (Y). | |
| 09-0011 | Check the connection of the Drum Unit Memory PCB (Y) (UN12). Disconnect and then connect the connector of the Drum Unit Relay PCB (Y) (UN08). Disconnect and then connect the connector of the DC Controller (UN4). | |
| 09-0011 A. Operation / B. Cause / C. Remedy | Check the connection of the Drum Unit Memory PCB (Y) (UN12). Disconnect and then connect the connector of the Drum Unit Relay PCB (Y) (UN08). Disconnect and then connect the connector of the DC Controller (UN4). Replace the Drum Unit (Y). | |
| A. Operation / B. Cause / | Check the connection of the Drum Unit Memory PCB (Y) (UN12). Disconnect and then connect the connector of the Drum Unit Relay PCB (Y) (UN08). Disconnect and then connect the connector of the DC Controller (UN4). Replace the Drum Unit (Y). Drum memory detection error (M) Cause: The memory of the Drum Unit (<) could not be detected. Measures: Remove and then install the Drum Unit (M). Check the connection of the Drum Unit Memory PCB (Y) (UN13). Disconnect and then connect the connector of the Drum Unit Relay PCB (M) (UN09). Disconnect and then connect the connector of the DC Controller (UN4). | |

| 09-0013 | Drum memory detection error (Bk) |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. Operation / B. Cause / C. Remedy | Cause: The memory of the Drum Unit (Bk) could not be detected. Measures: 1. Remove and then install the Drum Unit (Bk). 2. Check the connection of the Drum Unit Memory PCB (Y) (UN15). 3. Disconnect and then connect the connector of the Drum Unit Relay PCB (Y) (UN11). 4. Disconnect and then connect the connector of the DC Controller (UN4). 5. Replace the Drum Unit (Bk). |
| 10-0001 | Toner Low (Black) alarm |
| A. Operation / B. Cause / C. Remedy | Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW |
| 10-0002 | Toner Low (Cyan) alarm |
| A. Operation / B. Cause / C. Remedy | Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW |
| 10-0003 | Toner Low (Magenta) alarm |
| A. Operation / B. Cause / C. Remedy | Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW |
| 10-0004 | Toner Low (Yellow) alarm |
| A. Operation / B. Cause / C. Remedy | Low toner was detected and UGW generated an alarm. * Not displayed on service mode history due to the alarm being generated by UGW |
| 10-0006 | Patch Sensor error 1 |
| A. Operation / B. Cause / C. Remedy | Movement: The background correction coefficient value was not updated. Cause: Each sampling value of the background reflection output of the Front Sensor did not fall within the range from 10 or higher to 250 or less for 2 consecutive times during printing. Measures: 1. Clean the Patch Sensor window. 2. Check the connector connection of the Patch Sensor. 3. Check the connector connection of the Patch Sensor Shutter Solenoid. 4. Replace the Registration Patch Sensor Unit. |
| 10-0007 | Patch Sensor error 2 |
| A. Operation / B. Cause / C. Remedy | Movement: The background correction coefficient value was not updated. Cause: Each sampling value of the background reflection output of the Front Sensor did not fall within the range from 10 or higher to 250 or less for 2 consecutive times during printing. Measures: 1. Clean the Patch Sensor window. 2. Check the connector connection of the Patch Sensor. 3. Check the connector connection of the Patch Sensor Shutter Solenoid. 4. Replace the Registration Patch Sensor Unit. |
| 10-0017 | Toner (Y) prior notification alarm |
| A. Operation / B. Cause / C. Remedy | The life value of a target part reached the number of days left as set in COPIER > OPTION > PM-DLV-D > TONER-Y. |
| 10-0018 | Toner (M) prior notification alarm |
| A. Operation / B. Cause / C. Remedy | The life value of a target part reached the number of days left as set in COPIER > OPTION > PM-DLV-D > TONER-M. |
| 10-0019 | Toner (C) prior notification alarm |
| A. Operation / B. Cause / C. Remedy | The life value of a target part reached the number of days left as set in COPIER > OPTION > PM-DLV-D > TONER-C. |
| 10-0020 | Toner (Bk) prior notification alarm |
| A. Operation / B. Cause / C. Remedy | The life value of a target part reached the number of days left as set in COPIER > OPTION > PM-DLV-D > TONER-K. |

| 10-0091 | Toner memory detection alarm (Y) |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. Operation / B. Cause / C. Remedy | Cause: Memory of toner (Y) could not be detected. 1. Remove and then install the Toner Bottle (Y). 2. Check for any scar or soiling on the memory area of the Toner Bottle (Y). 3. Check the connector between the Toner Log Connector (Y)(UN38) and the DC Controller PCB. 4. Check for any soiling or damage on the Toner Log Connector (Y)(UN38). 5. Replace the Toner Bottle (Y). |
| 10-0092 | Toner memory detection alarm (M) |
| A. Operation / B. Cause / C. Remedy | Cause: Memory of toner (M) could not be detected. 1. Remove and then install the Toner Bottle (M). 2. Check for any scar or soiling on the memory area of the Toner Bottle (M). 3. Check the connector between the Toner Log Connector (M)(UN39) and the DC Controller PCB. 4. Check for any soiling or damage on the Toner Log Connector (M)(UN39). 5. Replace the Toner Bottle (M). |
| 10-0093 | Toner memory detection alarm (C) |
| A. Operation / B. Cause / C. Remedy | Cause: Memory of toner (C) could not be detected. 1. Remove and then install the Toner Bottle (C). 2. Check for any scar or soiling on the memory area of the Toner Bottle (C). 3. Check the connector between the Toner Log Connector (C)(UN40) and the DC Controller PCB. 4. Check for any soiling or damage on the Toner Log Connector (C)(UN40). 5. Replace the Toner Bottle (C). |
| 10-0094 | Toner memory detection alarm (Bk) |
| A. Operation / B. Cause / C. Remedy | Cause: Memory of toner (Bk) could not be detected. 1. Remove and then install the Toner Bottle (Bk). 2. Check for any scar or soiling on the memory area of the Toner Bottle (Bk). 3. Check the connector between the Toner Log Connector (Bk)(UN41) and the DC Controller PCB. 4. Check for any soiling or damage on the Toner Log Connector (Bk)(UN41). 5. Replace the Toner Bottle (Bk). |
| 10-0100 | Toner Bottle replacement completion alarm |
| A. Operation / B. Cause / C. Remedy | The replacement of the Toner Bottle was detected. |
| 10-0401 | Toner Bottle empty alarm (Y) |
| A. Operation / B. Cause / C. Remedy | Toner Bottle empty was detected. |
| 10-0402 | Toner Bottle empty alarm (M) |
| A. Operation / B. Cause / C. Remedy | Toner Bottle empty was detected. |
| 10-0403 | Toner Bottle empty alarm (C) |
| A. Operation / B. Cause / C. Remedy | Toner Bottle empty was detected. |
| 10-0404 | Toner Bottle empty alarm (Bk) |
| A. Operation / B. Cause / C. Remedy | Toner Bottle empty was detected. |
| 10-F017 | Toner (Y) high consumption alarm |
| A. Operation / B. Cause / C. Remedy | It was detected that the target part was at a high level of daily consumption. |
| 10-F018 | Toner (M) high consumption alarm |
| A. Operation / B. Cause / C. Remedy | It was detected that the target part was at a high level of daily consumption. |

| 10-F019 | Toner (C) high consumption alarm |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. Operation / B. Cause / C. Remedy | It was detected that the target part was at a high level of daily consumption. |
| 10-F020 | Toner (Bk) high consumption alarm |
| A. Operation / B. Cause / C. Remedy | It was detected that the target part was at a high level of daily consumption. |
| 11-0001 | Waste Toner Container full |
| A. Operation / B. Cause / C. Remedy | Movement: The host machine stops with a message displayed on the Control Panel Cause: The Waste Toner Container is full Remedy: Replace the Waste Toner Container. |
| 11-0010 | Waste Toner Container preparation warning display |
| A. Operation / B. Cause / C. Remedy | Operation; A message is displayed on the Control Panel (printing is still possible) Cause: The following two conditions were met Waste Toner Full Level Sensor Detection - The threshold number of days left as set in COPIER > OPTION > PM-DLV-D > WST-TNR was reached. |
| 11-0100 | Waste Toner Container replacement completion alarm |
| A. Operation / B. Cause / C. Remedy | Completion of Waste Toner Container replacement was detected. |
| 11-F010 | Waste Toner Container high consumption alarm |
| A. Operation / B. Cause / C. Remedy | It was detected that the target part was at a high level of daily consumption. |
| 13-0020 | For R&D |

Cause / C. Remedy 13-0FFC For R&D A. Operation / B. Cause / C. Remedy 13-0FFD For R&D A. Operation / B. Cause / C. Remedy 13-0FFF For R&D A. Operation / B. Cause / C. Remedy 14-0000 For R&D A. Operation / B. Cause / C. Remedy 14-0001 For R&D A. Operation / B. Cause / C. Remedy 14-1000 For R&D A. Operation / B. Cause / C. Remedy 30-0025 Tried to apply abnormally great primary transfer voltage at primary transfer ATVC control for yellow. A. Operation / B. Cause / C. Remedy 30-0026 Tried to apply abnormally great primary transfer voltage at primary transfer ATVC control for magenta. A. Operation / B. Cause / C. Remedy 30-0027 Tried to apply abnormally great primary transfer voltage at primary transfer ATVC control for cyan. A. Operation / B. Cause / C. Remedy 30-0028 Tried to apply abnormally great primary transfer voltage at primary transfer ATVC control for black. A. Operation / B. Cause / C. Remedy 30-0032 Error in secondary transfer ATVC (below the lower limit) A. Operation / B. Cause / C. Remedy

Error/Jam/Alarm 30-0137 The value of data for correcting high voltage output value was not within the range. A. Operation / B. Cause / C. Remedy 31-0006 HDD failure when equipped with the mirroring function A. Operation / B. Cause / HDD failure when equipped with the mirroring function C. Remedy 31-0008 **HDD** failure prediction alarm A. Operation / B. Cause / Movement: HDD failure is expected to occur in a short time due to occurrence of physical error in C. Remedy HDD. It does not occur in the HDD of mirroring configuration. Cause: Error in the S.M.A.R.T. value of HDD Measures: 1. Back up the data stored in HDD. Replace the HDD. Restore the data. S.M.A.R.T. (Self-Monitoring Analysis and Reporting Technology): Self-diagnosis function built in the HDD. The occurrence rate of reading error, reading and writing speed, the total number of Motor start-up and stop times, the total length of power-on time, etc. are monitored. 31-0009 FLASH failure prediction alarm A. Operation / B. Cause / Cause: Error in the S.M.A.R.T. value of FLASH memory It indicates a physical error of the FLASH C. Remedy memory, which is expected to soon lead to a failure. *: S.M.A.R.T. (Self-Monitoring Analysis and Reporting Technology) = It is a self-diagnosis function built in the FLASH memory, and monitors the occurrence rate of reading errors, reading/writing speed, total number of times of motor start-up/stop, total length of power-on time, etc. Continuously using the machine without taking any measures may lead to E614. Measures: Back up the data stored in the FLASH memory, and restore the data after replacing the FLASH memory. 31-0010 The configuration of an option controlled by the Main Controller has been changed A. Operation / B. Cause / A change in configuration of an option such as a change in the configuration of the Fax Board, a C. Remedy change in the configuration of the Voice Board, or a change in the configuration of the option HDD, which requires turning OFF and then ON the power, was detected. Detection condition/timing:At the time of startup only Remedy: Turn OFF and then ON the main power. 31-0020 The configuration of an option controlled by the RCON has been changed A. Operation / B. Cause / Due to a change in the configuration related to the scanner, a change in the hardware configuration C. Remedy which requires turning OFF and then ON the power was detected. Detection condition/timing:At the time of startup only Remedy:Turn OFF and then ON the main power.

31-0030 The configuration of an option controlled by the DCON has been changed

A. Operation / B. Cause /

C. Remedy

Due to a change in the configuration related to the printer, a change in the hardware configuration which requires turning OFF and then ON the power was detected.

Detection condition/timing:At the time of startup only Remedy:Turn OFF and then ON the main power.

31-0040 Communication with RTC was not available.

A. Operation / B. Cause /

Cause: Communication with RTC could not be established.

C. Remedy Detection condition/timing:

- When a communication error occurred with RTC

Movement/symptom:

- FCOT may become longer.

Measures:

- 1. Check the connector/cable connected to the J109 Main Switch.
- 2. Check the Main Switch.
- Replace the DC Controller PCB.

31-0106 For R&D A. Operation / B. Cause / C. Remedy 31-0116 For R&D A. Operation / B. Cause / C. Remedy 31-0126 For R&D A. Operation / B. Cause / C. Remedy 31-0136 For R&D A. Operation / B. Cause / C. Remedy 31-01F1 For R&D A. Operation / B. Cause / C. Remedy 31-01F2 For R&D A. Operation / B. Cause / C. Remedy 31-01F3 For R&D A. Operation / B. Cause / C. Remedy 31-01F4 For R&D A. Operation / B. Cause / C. Remedy 31-01F5 For R&D A. Operation / B. Cause / C. Remedy 31-01F6 For R&D A. Operation / B. Cause /

C. Remedy

34-0003 Auto registration adjustment A. Operation / B. Cause / C. Remedy - Timeout occurred due to failure of reading 10 sets of auto registration patterns. - Failure of the Registration Sensor, the Registration Sensor Cleaning Member covered the Registration Sensor, or no image was formed on the belt. Detection condition/timing: - When Auto Correct Color Mismatch is executed Movement/symptom: - Color displacement may occur because the result of auto registration is not reflected. Measures: 1. Check the condition of the Drum Units (Y, M, C, Bk), and remove and then install them again. 2. Execute (Lv2) COPIER > FUNCTION > CLEAR > REG-CLR. 3. Execute (Lv2) COPIER > FUNCTION > LASER > LD-ADJ-X (X=Y,M,C,K), and end the operation if the problem is solved. 4. Check if the link of the Registration Shutter is disengaged. 5. Check if the windows of the Registration Sensor (Front) (UN47), Registration Sensor (Rear) (UN48) and the Patch Sensor (UN49) are soiled. If necessary, clean it. 6. Check for any disconnection of the connectors of the Registration Sensor (Front) (UN47), Registration Sensor (Rear) (UN48) and the Patch Sensor (UN49). 7. Check for disconnection of the connector (J125) of the DC Controller PCB (UN1). 8. Replace the Developing Units (Y, M, C, Bk). 9. Replace the Pattern Reading Shutter Drive Assembly (FM1-N636: PATT. READ SHUTTER DRIVE ASS'Y). 10. Replace the Registration Patch Sensor Unit. 11. Replace the DC Controller PCB (UN1). 38-0001 For R&D A. Operation / B. Cause / C. Remedy 38-0002 For R&D A. Operation / B. Cause / C. Remedy 38-0101 Application-generated alarm A. Operation / B. Cause / Data Backup Service Application Error (Error by the rock-out of the Device Configuration C. | 43-0359 | Secondary Transfer Outer Roller replacement completion alarm |
| A. Operation / B. Cause / C. Remedy | Secondary Transfer Outer Roller counter was cleared. |
| 50-0010 | Alarm due to original separation failure |
| A. Operation / B. Cause / C. Remedy | Movement: Nothing in particular. Cause: Condition unable to separate 1st sheet of original from the ADF occurs 3 times. Measures: Check the rotation of the Delivery Reversal Motor (M12) -> Check the operation of the Pickup Solenoid (SL5) -> Check the life of the Pickup and Feed Rollers and Separation Pad -> Check if the paper lint is at the pickup slot. |

50-0015 Failure of the ADF Double Feed Sensor A. Operation / B. Cause / C. Remedy Failure of the Double Feed Sensor installed in the ADF Detection condition/timing: - When a paper feed error of the Double Feed Sensor was detected at power-on - When an error of the output value of the Double Feed Sensor was detected during ADF job (While an ADF job is being executed, it is handled as a jam once and retry is performed.) Clearing condition: - When communication and the sensor output value are normal at power-on Movement/symptom: "Check area where multi. sheet feed was detected. (Call serv. rep.)" is displayed in the status line. Although reading from the ADF is possible, double feed cannot be detected when it occurs. Measures: Check for any foreign matter, clean paper lint, disconnect and then connect the connectors, replace the Double Feed Detection PCB, replace the Main Controller PCB, replace the harnesses 61-0001 No staple A. Operation / B. Cause / C. Remedy 70-0071 Verification error by Falsification detection at startup function A. Operation / B. Cause / C. Remedy At normal startup, verification error occurred due to invalid data of the firmware (for startup in safe mode). Measures: 1. Replace the Flash PCB, and reinstall the system software using SST or a USB flash drive. 2. Settings/Registration > Management Settings > Security Settings > System verification at startup > OFF 70-0086 For R&D A. Operation / B. Cause / C. Remedy 70-0087 Firmware combination mismatch A. Operation / B. Cause / Cause: An option with the firmware which version is newer than that of the firmware installed in C. Remedy the host machine was detected. It is an alarm when the automatic update cancellation message is displayed on the Control Panel. Detection condition: When the following two conditions are satisfied: 1. "1" is set in COPIER>Option>FNC-SW>VER-CHNG. 2. The version of the firmware installed in the option that has been installed to the host machine is newer than that of the firmware in the host machine. Timing: At startup Movement/symptom: Cancel the automatic update. Measures: Update the firmware of the host machine. 73-0004 For R&D A. Operation / B. Cause / C. Remedy 73-0007 For R&D A. Service Mode

| Overview | 565 |
|-----------------------------------|------|
| COPIER (Service mode for printer) | |
| | .582 |
| FEEDER (ADF service mode) | .895 |
| SORTER (Service mode for delivery | |
| options) | 902 |
| BOARD (Option board setting mode) |) |
| | .903 |
| FAX (FAX service mode) | 904 |

Overview

It is possible to see each item of service mode so that those who access to service mode can understand how to use them. The main types of this machine's service mode are shown below.

Basic Operations

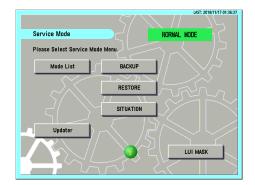

This section describes the basic operation of service mode.

■ Entering Service Mode

For information on how to enter service mode, contact the Support Dept. of the sales company.

■ Service Mode Menu

Press the button in the service mode menu to display the initial screen of each mode. The differences between these modes are described below.

Top Screen

MODELIST

In this mode, functions for referring to each item in service mode, etc. are available.

Updater

This button is used to access the CDS and UGW servers and update system software.

BACKUP

This button is used to back up the service mode setting values.

RESTORE

This button is used to restore the service mode setting values backed up by [BACKUP].

SITUATION

This function displays service mode items according to the situation.

LUI MASK

This button is used to display a mask screen to prevent operations from being performed from the Control Panel while the service mode is being accessed from a remote PC.

NOTE:

For the detailed information on how to use Updater, BACKUP, and RESTORE, refer to the imageRUNNER ADVANCE System Service Manual.

■ Description of Service Mode Items

The description of the initial screen, the main items, the intermediate items and the sub items can be displayed.

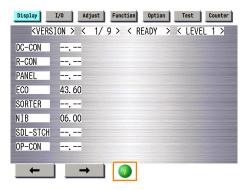

After selecting any item of the initial screen, main item, the intermediate item or the sub item, pressing "i" (Information Button) displays the description of the selected item (hereinafter referred to as the service mode contents).

CAUTION:

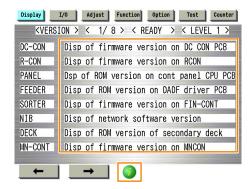

- Displayed language of the service mode contents can be selected from J/E/F/I/G/S/C/K/T.
- · The service mode contents can be upgraded using SST or a USB flash drive just like other system software.

Example: COPIER > DISPLAY > VERSION screen

1. Press the [i] button.

2. The title of each sub item is displayed.

To check the details of each item, select the relevant item and press the [i] button.

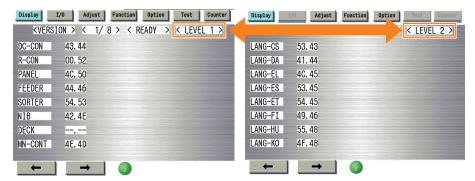

3. A detailed description of the sub item (specifications and use methods, setting screen, etc.) is displayed.

■ Switching the Screen Display (Level 1 <->2)

Switching of screens between Level 1 and Level 2 becomes easier.

By pressing <LEVEL 1> at the upper right of the screen while Level 1 screen is displayed, the screen is switched to Level 2 screen.

Examples of Screen Display

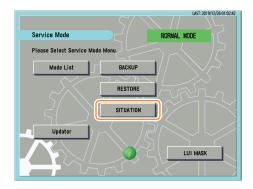

NOTE:

This key combination can be used to enter the Level 2 screen.

• Mode List screen > [Settings/Registration] > [2]

Situation mode has been implemented in this machine to improve workability and searchability at the site. This mode makes it possible to easily use the service mode appropriate for the scene at the site.

The following items are available in situation mode.

Install:

To be referred at installation of the machine.

· Troubleshooting:

To be referred at problem solving.

· Parts Replacement :

To be referred at parts replacement.

· Major Adjustment :

To be referred at installation of the machine.

· Sensor Check:

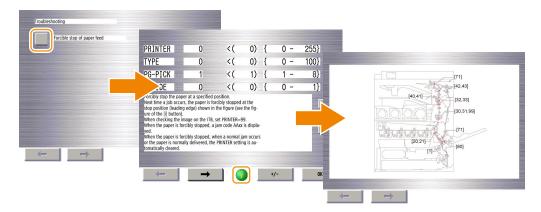

To be referred at checking of the sensor.

· Part Check :

To be referred at operation check of the part.

The following three points are made available depending on each situation:

- · Display of related service mode that requires adjustment
- · Display of causes and remedies
- · Display of related images

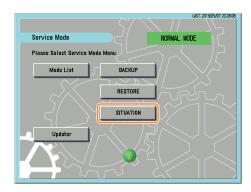

■ How to Use Sensor Check

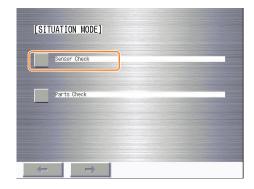

You can find a desired electrical component in Sensor Check of situation mode to review its I/O info. To do this, follow the procedure below.

1. Start service mode.

2. Select "SITUATION".

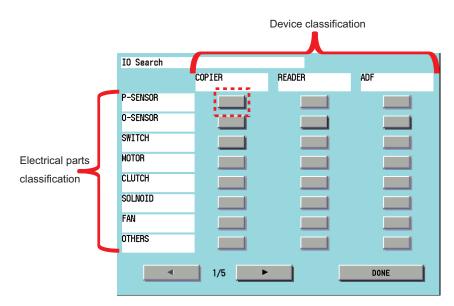

3. On the "SITUATION MODE" screen, select "Sensor Check".

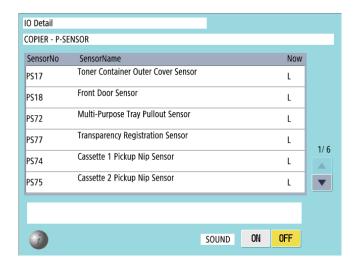

4. Press a button according to the type of electrical component and the corresponding device type.

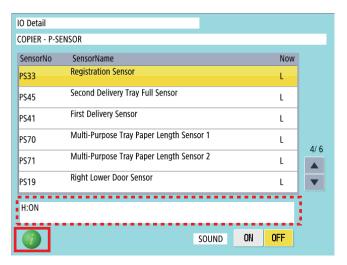

Example: In the case of the Registration Sensor of the host machine, press the button (red dotted frame) at "COPIER"/"P-SENSOR".

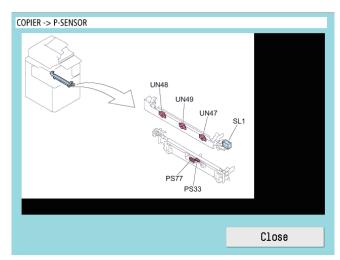

5. A list of electrical component types for the selected device is displayed.

6. Select an electrical component to display the details in the frame (red dotted frame) at the bottom of the screen.

7. Press the [i] button to display the screen showing the locations of electrical components.

■ How to Use Parts Check

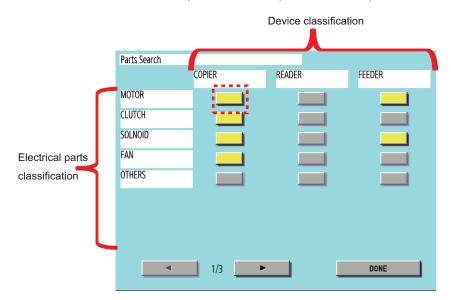

In the Parts Check of situation mode, among electrical components used (motors, fans, solenoids, and clutches), those that can operate alone can be operated from the screen and the operations can be checked. The operation procedure is shown below.

NOTE:

The service mode used below utilizes the system where electrical components used are operated by control signals sent from the DC Controller. If a control signal is sent but the electrical component does not operate, a failure of the electrical component, open circuit of the cable for transmitting control signals, or poor contact of the connector is suspected.

- 1. Select SERVICE MODE > SITUATION > Parts Check.
- 2. Press a button according to the type of electrical component and the corresponding device type.

 Example: In the case of a motor of the host machine, press the button (red dotted frame) at "COPIER"/"MOTOR".

3. A list of electrical component types for the selected device whose operation can be checked is displayed.

4. Select the electrical component you want to operate and then press the Start button to send a signal for driving the selected electrical component for a specified period of time from the DC Controller.

5. "ACTIVE" is displayed while the electrical component is driven. After the electrical component has been driven for a specified period of time, "OK!" is displayed if transmission of the drive signal succeeded, or "NG!" is displayed if failed.

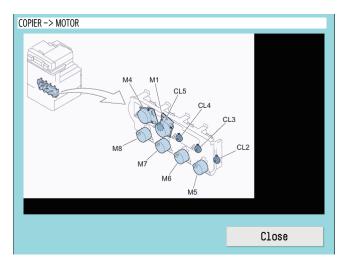

Press the [i] button to display the screen showing the locations of electrical components.

6. The screen showing the locations of electrical components is displayed.

Security Support

A password can be specified to prevent unauthorized access to the service mode.

Related Service Mode:

Setting password type when the screen is switched to the service mode

• COPIER > OPTION > FNC-SW > PSWD-SW (Level 1)

The password for service engineer when the screen is switched to the service mode

• (Level 2) COPIER > OPTION > FNC-SW > SM-PSWD

■ Procedure for Setting Password

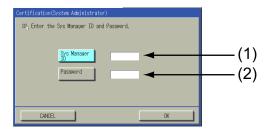

- 1. Set "1" or "2" in the following service mode.
 - COPIER > OPTION > FNC-SW > PSWD-SW
 - <Setting range>
 - 0: No password [Default]
 - 1: Service technician
 - 2: System administrator + Service technician

CAUTION:

- · This setting is enabled without restarting the host machine.
- · After setting the password, the following screen will be displayed by accessing service mode.
- Therefore, when the PSWD-SW is set to "2" (system administrator + service technician), enter the system administrator password ([System Manager ID] and [System Manager PIN] in [Settings/Registrations] > [Management Settings] > [User Management] > [System Manager Information Settings]), and then press the [OK] button.

2. Follow the following procedure to check that you can login to service mode.

1. When setting PSWD-SW to "1" (system administrator) or "2" (ServiceMode_070Backup) in step 1, the system administrator password entry screen will be displayed, so enter the system administrator ID in [Sys Manager ID] (1) and system administrator password in [Password] (2), and then press the [OK] button.

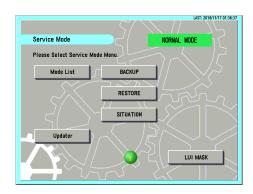

2. When setting PSWD-SW to "2" (system administrator + service technician) in step 1, the service technician password entry screen will be displayed after step 2. Enter the service technician password in [Password] (1), and then press the [OK] button.

CAUTION:

- The service technician password is the password set in COPIER > OPTION > FNC-SW > SM-PSWD.
- If you forget the password for service technician, disable the password function using the Service Support Tool (SST).

Check that you can access service mode and finish the work.

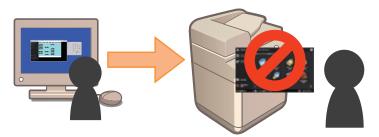

■ Function to Mask the Screen during Remote Access

This function ensures security during servicing work using remote connection.

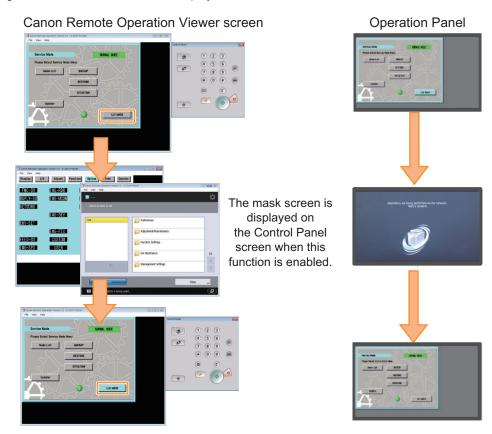

The machine has an option called Remote Operation Viewer for remote control via a network. This option enables a service technician to perform maintenance on the machine from a remote location.

However, the same screen is displayed on the Remote Operation Viewer screen and the Control Panel during the work, which carries the following risks.

- The screen being operated can be seen by the user.
- During remote operation, the user may perform an operation on the Control Panel and an unexpected processing may be executed.

To solve these security problems, a function has been added to display a message on the Control Panel screen when the machine is being operated remotely using Remote Operation Viewer in order to prevent the user from performing unexpected operations. As shown in the figure below, the mask screen is displayed when this function is enabled.

Examples of Screen Display

Functional Specification

The specifications of this function are shown below.

• When this function is enabled, a mask screen is displayed on the Control Panel. When the function is disabled, the original screen is displayed again.

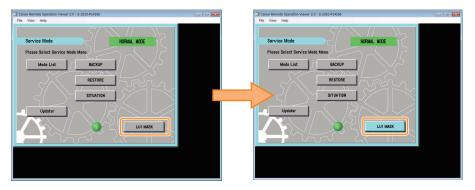

Example of the displayed mask screen

- This function is disabled when the following operations are performed.
 - Press [LUI MASK] on the service mode top screen.
 - · Exit Remote Operation Viewer.
 - The remote access is disconnected due to a network failure, etc.
 - · The machine is shut down (power down) or restarted.
- If this function is disabled while the service mode is being operated, the service mode is forcibly exited, and the previous screen is displayed. (However, the service mode is not forcibly terminated if the Updater screen has been accessed from service mode.)
- When this function is enabled, all operations (operations from the Touch Panel or hardware keys) other than screen brightness adjustment and operation on the Energy Saver key are disabled.

Procedure for Enabling This Function

The procedure for enabling this function is shown below.

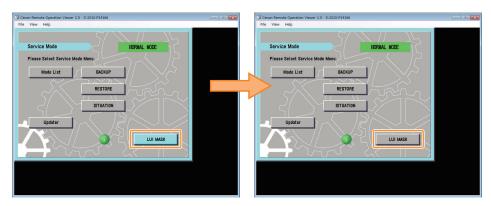

- 1. Use the Remote Operation Viewer to access the machine, and start service mode.
- 2. Press [LUI MASK], and check that the button is enabled (has turned light blue).

Procedure for Disabling This Function

The procedure for disabling this function is shown below.

- 1. Perform one of the following operations.
 - Access the service mode, press [LUI MASK], and check that the button is disabled (has turned gray).

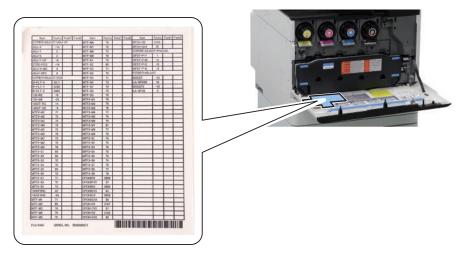

- Exit the Remote Operation Viewer.
- Disconnect the network (disconnect the network cable, disable the network function, etc.).
- · Shut down or restart the machine.

Adjustment is made to every machine at the time of shipment to write the adjustment value in the service label. When replacing the DC Controller PCB or clearing RAM, the adjusted values of ADJUST and OPTION return to the default; therefore, be sure to adjust the value in the field, and in the case of changing the service mode value, be sure to write down the changed value in the service label. When the corresponding item is not found on the service label, write the value in blank field. The service label of this machine is affixed to the position shown below.

DCON Setting Items

RCON Setting Items

Output of Service Print Data

- The service print data such as P-PRINT can be output as a file.
- By executing the following service mode, data at the time can be saved in the Storage Service Mode Level 1 > Copier > Function > MISC-P > RPT-FILE
- · The saved data will be deleted from the Storage when it is exported to SST or a USB flash drive.
- When multiple service data such as P-PRINT and HIST-PRINT is saved in the host machine, it is collectively exported to SST or a USB flash drive.

NOTE:

- · Service print data cannot be output when an error has occurred.
- When connecting a USB flash drive that runs on external power, start the machine with the power is turned ON in advance.
 A USB flash drive connected after the machine has been started cannot be recognized.

| How to obtain the report data | Location |
|------------------------------------------------------------------|-----------------|
| "Moving the file in service mode" on page 578 | USB flash drive |
| "Moving the file in download mode" on page 579 | USB flash drive |
| "How to Export Service Print File to a PC Using SST" on page 580 | PC |

■ Service Print and Data File Name Supported for File Output

| Service Mode | Content |
|---------------------------------------|-------------------------------------------------------------------------------------------------------------|
| COPIER > Function> MISC-P > P-PRINT | Output of service mode setting values |
| COPIER > Function > MISC-P > HIST-PRT | Output of jam and error history |
| COPIER > Function > MISC-P > USER-PRT | Output of Settings/Registration menu setting values list |
| COPIER > Function > MISC-P > D-PRINT | Output of service mode (DISPLAY) |
| COPIER > Function > MISC-P > ENV-PRT | Output of the temperature and humidity inside the machine/surface temperature of the Fixing Roller as a log |
| COPIER > Function > MISC-P > PJH-P-1 | Output of details on print job history (100 jobs) |
| COPIER > Function > MISC-P > PJH-P-2 | Output of details on print job history (all jobs) |
| COPIER > Function > MISC-P > USBH-PRT | Output of USB device information report |
| COPIER > Function > MISC-P > TNRB-RPT | Output of the Toner Container ID report |

NOTE:

When each service mode is individually executed, the report corresponding to the service mode as of the time of execution is output.

■ Moving the file in service mode

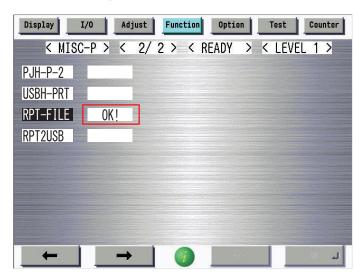

Preparation

The following item needs to be prepared to export the service print file to a USB flash drive.

• USB flash drive (FAT32 format file system that is not locked with a password. To display the USB menu, the said model's firmware must already be registered.)

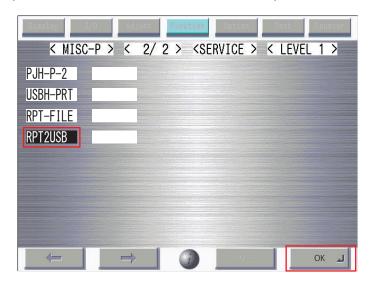

Overall flow

- Selecting RPT-FILE
 Select service mode > Copier > Function > MISC-P > RPT-FILE; and then press OK.
- 2. Generating report file
 After the "ACTIVE" blinks for 3 to 4 minutes, generation of a report file is complete as "OK!" is displayed.

3. Connect the USB flash drive storage device to the USB port.

4. Select service mode > Copier > Function > MISC-P > RPT2USB; and then press OK.

NOTE:

- If the downloaded file is opened as plain text, the paragraphs are misaligned, which makes it difficult to read the data.
- · When the file is dragged to WordPad, an image similar to the image output on paper may be displayed in some cases.

Moving the file in download mode

Preparation

The following item needs to be prepared to export the service print file to a USB flash drive.

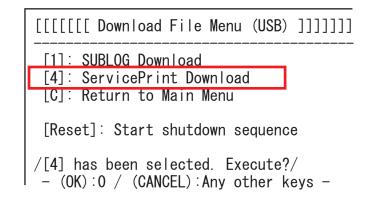

• USB flash drive (FAT32 format file system that is not locked with a password. To display the USB menu, the said model's firmware must already be registered.)

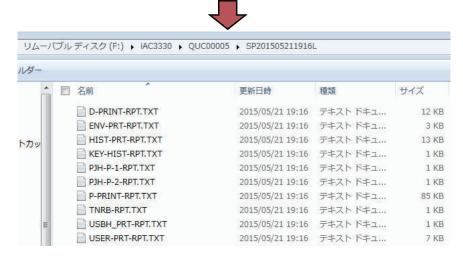

Overall flow

- Selecting RPT-FILE
 Select service mode > Copier > Function > MISC-P > RPT-FILE; and then press OK.
- 2. Generating report file
 After the "ACTIVE" blinks for 3 to 4 minutes, generation of a report file is complete as "OK!" is displayed.

3. Execute Download mode > [5]: Download File > [4]: ServicePrint Download.

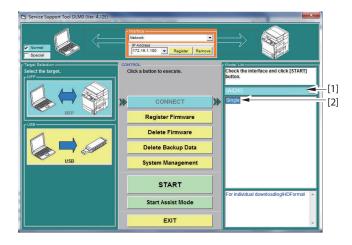

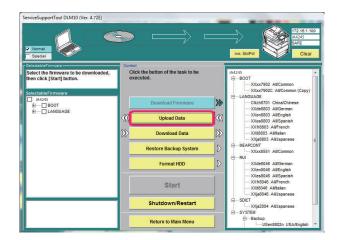

■ How to Export Service Print File to a PC Using SST

The procedure for exporting the service print file to a PC using SST will now be described. (SST described in the procedure is Ver 4.72.)

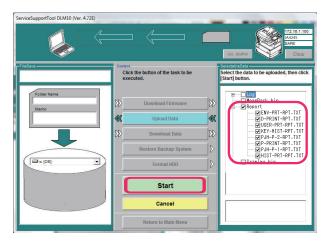

- 1. Start the SST.
- 2. Select the model [1] to be connected and the information file for separate download [2] ([Single]). Then, check the network settings and click the "Start" button.

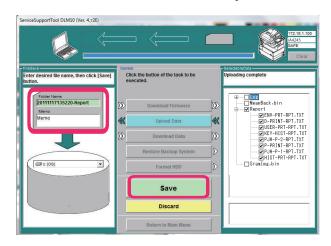

3. Click the [Upload Data] button.

4. Select [Report] and click the [Start] button.

5. Specify the folder name to be saved and enter comments if necessary. Then click the [Store] button.

6. Click the [OK] button.

ADJ-S 1 Adjustment of Reader shading position

Detail

To adjust the Scanner Unit (Front) position in feed direction when reading the White Plate on the left edge of the Copyboard Glass.

When replacing the Scanner Unit, execute RDSHDPOS and write the value of this item in the service label.

When clearing the Reader-related RAM data, enter the value of service label.

As the value is incremented by 1, the reading position moves to the trailing edge side by 0.1 mm.

Use Case - When black lines/white lines appear

- When replacing the Scanner Unit (Front)

- When clearing the Reader-related RAM data

Adj/Set/Operate Method

1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Turn OFF/ON the main power switch.

Caution

After the setting value is changed, write the changed value in the service label.

DFTAR2-R 1 Enter shading target VL (R): front, 2nd

Detail To enter the shading target value of Red on the front side at the second reading position at DADF stream reading.

When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of

the service label on the reader.

When replacing the Copyboard Glass/Scanner Unit (Front), execute DF-WLVL1 and DF-WLVL2

and write the value which is automatically set in the service label.

Use Case - When clearing the Reader-related RAM data/replacing the SATA Flash PCB

- When replacing the Copyboard Glass/Scanner Unit (Front)

Adj/Set/Operate Method 1) Enter the setting value and press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 2047

Default Value 1103

Related Service Mode COPIER> FUNCTION> CCD> DF-WLVL1/WLVL2

DFTAR2-G 1 Enter shading target VL (G): front, 2nd

Detail To enter the shading target value of Green on the front side at the second reading position at DADF stream reading.

M/l- - - - - | - - - - - - - - - - - - |

When clearing the Reader-related RAM data/replacing the SATA Flash PCB, enter the value of the service label on the reader.

When replacing the Copyboard Glass/Scanner Unit (Front), execute DF-WLVL1 and DF-WLVL2 and write the value which is automatically set in the service label.

Use Case

- When clearing the Reader-related RAM data/replacing the SATA Flash PCB

- When replacing the Copyboard Glass/Scanner Unit (Front)

Adj/Set/Operate Method 1) Enter the setting value and press OK key.

2) Turn OFF/ON the main power switch.

LSR-V-K1 2 Adj Bk wrt start pstn:vert scan, 1st sht

Detail

To adjust the write start position of Bk-color image in vertical scanning direction when color displacement occurs only with the image on the 1st sheet.

As the value is changed by 1, Bk-color image moves by 1 pixel.

- +: Move in the trailing edge direction
- -: Move in the leading edge direction

Since image formation is performed based on Y-color, adjust the position of M/C/Bk-color even if it seems that color displacement occurs only with Y-color.

Use Case

When color displacement occurs only on the 1st sheet

Adj/Set/Operate Method

Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Caution

Use this mode only when color displacement occurs on the 1st sheet.

Display/Adj/Set Range

Default Value 0

Amount of Change per

SLOP-Y Adjustment of image squareness

Detail

To adjust skew of image (squareness) in vertical scanning direction by adjusting skew of Y-color laser in vertical scanning direction digitally.

By performing auto color displacement correction after this adjustment, adjustment is made for other colors in accordance with adjustment for Y-color.

Use Case

When corners of an image are not square

Adj/Set/Operate Method

- 1) Enter the setting value, and then press OK key.
- 2) Turn OFF/ON the main power switch.
- 3) Execute auto color displacement correction.

Caution

Be sure to perform auto color displacement correction after adjustment.

If the setting value is changed dramatically, be sure to perform auto color displacement correction twice.

Display/Adj/Set Range

-126 to 126

| DMAX-C 2 | Adj D-max ctrl C-color dens target VL |
| Detail | An image failure might occur because the density target value of the D-max control becomes out of the setting table due to environment change. Adjust the offset of the cyan density target value of D-max control. |
| Use Case | When any image failure occurs due to environment change |
| Adj/Set/Operate Method | Enter the setting value (switch negative/positive by -/+ key) and press OK key. |
| Caution | Do not use this at the normal service. |
| Display/Adj/Set Range | -8 to 8 |
| Default Value | 0 |
| Additional Functions Mode | Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust, Quick Adjust |
| P-TG-Y 2 | Adj of ATR control Y-color target value |
| Detail | To adjust the offset of the ATR patch target value for Y. When the target value determined upon initialization is changed, density and the TD ratio are also changed. Density is increased when the value is increased, and fogging/scattering is alleviated when the value is decreased. |
| Use Case | When density failures, fogging, etc. occur |
| Adj/Set/Operate Method | Enter the setting value (switch negative/positive by -/+ key) and press OK key. Make 10 prints of approx. 10% image ratio (ex. COPIER> TEST> PG> TYPE: 16) 20 times. Execute Auto Adjust Gradation> Full Adjust. |
| Caution | Execute the Auto Adjust Gradation first to increase the density. If you adjust the offset of the target value, fogging might get worse. |
| Display/Adj/Set Range | -4 to 4 |
| Default Value | 0 |
| Additional Functions Mode | Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Full Adjust |

P-TG-M 2 Adj of ATR control M-color target value

Detail To adjust the offset of the ATR patch target value for M.

When the target value determined upon initialization is changed, density and the TD ratio are also changed

Density is increased when the value is increased, and fogging/scattering is alleviated when the value is decreased.

Use Case When density failures, fogging, etc. occur

Adj/Set/Operate Method 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Make 10 prints of approx. 10% image ratio (ex. COPIER> TEST> PG> TYPE: 16) 20 times.

3) Execute Auto Adjust Gradation> Full Adjust.

Caution Execute the Auto Adjust Gradation first to increase the density. If you adjust the offset of the target

value, fogging might get worse.

Display/Adj/Set Range -4 to 4

V-CONT

COPIER (Service mode for printer) > ADJUST (Adjustment mode) > V-CONT

VCONT-Y

2 Adj of Y-color contrast potential

Detail To adjust the contrast potential for Y.

As the value is incremented by 1, the contrast potential changes by 10V.

- +: Image becomes darker.
- -: Image becomes lighter.

When the value is too large, paper winds around the Fixing Roller or a transfer failure occurs. In a low humidity environment (e.g. winter in North America or Japan), the output may not be changed by increasing the value.

In principle, the adjustment of the density should be performed in Adjustment/Maintenance> Adjust Image Quality> Density Adjustment Mode.

Use Case

When adjusting the density of D-max control in the case that an image density failure occurs

Adj/Set/Operate Method

1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Execute Auto Adjust Gradation> Full Adjust.

Caution

Do not use this when the machine is operating correctly.

VBACK2-Y 2 Adj Y fog remov potntl: pln/rcycl 3, etc

Detail

To adjust the offset of the fogging removal potential Vback for Y-color when printing plain paper 1, 2/recycled paper 1, 2 (which paper width is smaller than A4), plain paper 3, or recycled paper 3

- +: Fogging is alleviated, but white/black spots are increased due to carrier adherence.
- -: White/black spots are alleviated, but fogging is increased.

Use Case

When any image failure occurs in case of printing plain paper 1, 2/recycled paper 1, 2 (which paper width is smaller than A4), plain paper 3 or recycled paper 3

Adj/Set/Operate Method

- 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.
- 2) Turn OFF/ON the main power switch.
- 3) Execute Auto Adjust Gradation> Full Adjust.

Caution

Do not use this item when the machine is operating correctly.

0 **Default Value**

Adj Y-clr brit area dens&color balance

Detail To adjust the bright area density and color balance of Y-color.

As the value is larger, the image gets darker.

Decrease the value when the background cannot be read correctly because the density of a document is dark and increase the value when the density of a document is light.

Decrease the value when removal of the background is not performed correctly and a fogging-like image appears.

This setting is linked with [Correct Density], [Correct Shading] and [Auto Correct Color Mismatch] in [Settings/Registration].

Use Case - When the background of a document cannot be read correctly

- When removal of the background cannot be performed correctly and a fogging-like image appears

Adj/Set/Operate Method 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key. 2) Turn OFF/ON the main power switch.

Display/Adj/Set Range -32 to 32

Default Value

0

LD-OFS-Y

2 Adj Y low dens area clr balance: copy

Detail

To adjust the color balance of the low density area of Y-color for copy operation.

As the value is larger, the image gets darker.

A value obtained by adding the value adjusted in [Fine Adjust Density] in the main menu to the setting value of this item is applied as the actual density value.

e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1".

Note that the density value must be within the rage from -8 to 8.

e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".

Adj/Set/Operate Method

1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

-8 to 8

Default Value

0

Additional Functions Mode

Copy> Options> Color Balance> Fine Adjust Density

Access Stored Files> Mail Box> Print> Change Print Settings> Options> Color Balance> Fine Adjust Density

Supplement/Memo

In [Fine Adjust Density] under [Copy] and [Access Stored Files] in the main menu, the density value can be set individually. Although the setting value of this item is just one value, the density may differ for copy operation and file storage.

LD-OFS-M

2 Adj M low dens area clr balance: copy

Detail

To adjust the color balance of the low density area of M-color for copy operation.

As the value is larger, the image gets darker.

2 Adj Bk-clr hi dens area clr balance: PDL

Detail

To adjust the color balance of the high density area of Bk-color at PDL print.

As the value is larger, the image gets darker.

In case of data generated by the printer driver and stored in Mail Box, a value obtained by adding the value adjusted in [Fine Adjust Density] in [Access Stored Files] to the setting value of this item is applied as the actual density value.

e.g.: When the value of this item is "-4" and the value of [Fine Adjust Density] is "5", the density value is "1".

Note that the density value must be within the rage from -8 to 8.

e.g.: When the value of this item is "7" and the value of [Fine Adjust Density] is "5", the density value is "8".

Adj/Set/Operate Method

- 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.
- 2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

-8 to 8

Default Value

0

2TR-OFF 1 Uniform adj sec trn ATVC ppr allot voltg

Detail To uniformly adjust paper allotted voltage in secondary transfer ATVC control regardless of paper

type, 1st/2nd side or environment.

When transfer failure occurs on an image, increase/decrease the value in the -30 to 30 (-900 to 900 V) range in increments of 10 (30 V).

When white dots occur on an image, increase/decrease the value in the -100 to -10 (-3000 to -300 V) range in increments of 10 (30 V). When the value is decreased too much, transfer failure occurs.

Use Case When similar image failures occur regardless of the conditions

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Caution The setting is applied to all paper types and both sides of paper. When limiting the condition, be sure to make settings individually.

Display/Adj/Set Range -128 to 127

2TRI-UP 2 Set Sec Trn Current U-Limit Offset Value

Detail To adjust the value when a transfer failure due to high secondary transfer current (mottled image,

transfer failure, etc.) occurs in multiple paper types.

Use Case When a transfer failure (mottled image) due to inappropriate secondary transfer occurs in multiple

paper types

Adj/Set/Operate Method Enter the setting value (switch positive/negative by +/- key) and press OK key.

Caution If the value is set too low, adverse effects (low density, mottled image, etc.) are likely to occur due

to the too small secondary transfer current.

Display/Adj/Set Range -30 to +30

Default Value 0

Supplement/Memo If the transfer failure occurs only in one paper type, "Adjust Secondary Transfer Voltage" to alleviate

the symptom.

2TRI-LOW 2 Set Sec Trn Current L-Limit Offset Value

Detail To adjust the value when a transfer failure due to weak secondary transfer current (mottled image,

smeared image at the trailing edge, etc.) occurs in multiple paper types.

Use Case When a transfer failure (mottled image) due to inappropriate secondary transfer occurs in multiple

paper types

Adj/Set/Operate Method Enter the setting value (switch positive/negative by +/- key) and press OK key.

Caution If the value is set too high, adverse effects (low density, abnormal electrical discharge, etc.) are

likely to occur due to the too large secondary transfer current.

Display/Adj/Set Range -30 to +30

Unit uA

Default Value 0

Supplement/Memo If the transfer failure occurs only in one paper type, "Adjust Secondary Transfer Voltage" to alleviate

the symptom.

SH-ADJ2 1 Adjustment of sharpness: DADF back side

Detail To adjust the sharpness of image on the back side in duplex stream reading mode that is set in Settings/Registration menu.

As the value is larger, the image gets sharper. If the value is too large, moire is likely to occur in an output image of COPY and SEND.

To match the image quality with that of the front side in the duplex stream reading mode, decrease the value when moire on the front side is stronger than the back side, and increase the value when it is weaker.

Use Case When moire frequently occurs on images of COPY and SEND output

Adj/Set/Operate Method 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range -3 to 3

Default Value 0

2TR-CLN 1 Clean of Secondary Transfer Outer Roller

Detail To clean paper dust adhered on the Secondary Transfer Outer Roller.

Both the Primary Transfer Roller and the Secondary Transfer Outer Roller are engaged to the ITB. The Process Unit does operation that is the same at image formation.

It forms 4 toner bands which the 4 colors are laid on top of another on the ITB. The base voltage (Vb) calculated with the Secondary Transfer ATVC control is applied to the Secondary Transfer Outer Roller until the toner bands pass through, so that toner is adhered on the Secondary Transfer

Outer Roller.

After the toner bands passed, Secondary Transfer Outer Roller cleaning control is executed (positive/reverse bias is applied every 2 rotations of the roller). Toner is adhered on the ITB. When the toner adhered on the ITB passed through the ITB Cleaning Unit, the operation is stopped.

Use Case - When the backside of the paper is soiled by the Secondary Transfer Outer Roller

- When contacting with the Secondary Transfer Outer Roller at the time of jam processing, etc.

Adj/Set/Operate Method Select the item, and then press OK key.

Display/Adj/Set Range During operation: ACTIVE, When operation finished normally: OK!

CA-KEY Deletion of CA certificate and key pair

Detail

*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To simultaneously delete the CA certificate and key pair which are additionally registered by the

Use Case

When a service person replaces/discards the device

Adj/Set/Operate Method

- 1) Select the item, and then press OK key.
- 2) Check that OK is displayed.
- 3) Turn OFF/ON the main power switch.

Caution

- Unless this item is executed at the time of replacement/discard of the device, the CA certificate and key pair which are additionally registered by the user remain in the HDD, which is a problem in terms of security.
- Do not execute this item carelessly because the CA certificate and key pair which are additionally registered are deleted when it is executed. If they are deleted mistakenly, they need to be again registered by the user. If no CA certificate and key pair are additionally registered, the machine condition becomes the same as the one at the time of factory shipment.
- When NG is displayed in 2), there is a possibility that deletion was not executed. In this case, surely execute the deletion by initializing the HDD, etc.

Display/Adj/Set Range Supplement/Memo

At normal termination: OK, At abnormal termination: NG

- The CA certificate is used in the MEAP application with E-RDS and SSL client connection, and the key pair is used in the SSL function of IPP, RUI and MEAP.
- When the main power switch is turned OFF/ON, the CA certificate and key pair which were registered at the time of factory shipment are decompressed from the archive (/BOOTDEV/ KCMNG), and become available in the E-RDS/SSL function.

ERDS-DAT

Initialization of E-RDS SRAM data

Detail

To initialize the "internal setting values" of the Embedded-RDS stored in the SRAM.

"Internal setting values" are ON/OFF of E-RDS, server's port number, server's SOAP URL, and communication schedule with the server (how often the data is acquired), etc.

The value set by COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG is cleared.

Use Case

When clear the SRAM of the "internal setting values".

Adj/Set/Operate Method

Select the item, and then press OK key.

Display/Adj/Set Range

At normal termination: OK, At abnormal termination: NG

Related Service Mode

COPIER> FUNCTION> INSTALL> E-RDS, RGW-PORT, RGW-ADR, COM-LOG

REG-CLR

Clear of image position correction value

Detail

To clear the value when the correction value that is adjusted by image position correction control becomes a faulty value due to some reasons.

When color displacement cannot be corrected by image position correction control, clear the correction value and turn OFF/ON the machine or execute "Quick Adjust" and "Auto Correct Color Mismatch" in Settings/Registration so that image position correction is executed again.

Use Case

- When color displacement cannot be corrected by image position correction control
- When a failure occurs in correction in an oblique direction

Adj/Set/Operate Method

Select the item, and then press OK key.

Additional Functions

Mode

Adjustment/Maintenance> Adjust Image Quality> Auto Adjust Gradation> Quick Adjust Adjustment/Maintenance> Adjust Image Quality> Auto Correct Color Mismatch

USBM-CLR

Initialize USB MEAP priority rgst info

Detail

To initialize the registered ID data retained in the OS field by calling the API provided by the OS.

Use Case

When a failure occurs in USB MEAP priority registration

Adj/Set/Operate Method

Select the item, and then press OK key.

| OOT ILIT (OCTVICE ITIOGE TOT) | officer) > PONCTION (Operation / inspection mode) > GLEAR |

| Adj/Set/Operate Method | Select the item, and then press OK key. |
| Caution | Be sure to use A4/LTR size plain paper/recycled paper. |
| T1-UP 1 | Execution of all ITB disengagement mode |
| Detail | To disengage the ITB from the Photosensitive Drums of all colors to prevent making small cuts on the ITB when removing and then installing the Drum Unit/ITB. When service mode is completed, the setting value is automatically returns to 0 at the time of opening and closing the door. |
| Use Case | When removing and then installing/replacing the Drum Unit/ITB |
| Adj/Set/Operate Method | Select the item, and then press OK key. |
| Display/Adj/Set Range | During operation: ACTIVE, When operation finished normally: OK! |

RPT-FILE 1 Output of report print file

Detail To save various service reports in HDD as a file.

The files can be obtained using PC to which SST has been installed or USB flash drive after starting

the machine in download mode.

Use Case When obtaining the service report as a file instead of printing the report out

Adj/Set/Operate Method Select the item, and then press OK key.

Supplement/Memo File size: Approx. 1 MB at a maximum

RPT2USB 1 Write serv rpt file to USB flash drive

Detail To store the report file of service mode saved in HDD by RPT-FILE to a USB flash drive.

Use Case When storing the report file of service mode to a USB flash drive

Adj/Set/Operate Method Select the item, and then press OK key.

Related Service Mode COPIER> FUNCTION> MISC-P> RPT-FILE

TNRB-PRT 1 Output of Toner Container ID report

Detail To output the ID of the Toner Container in the form of a report.

Text data is saved in HDD as a file (TNRB-PRT-RPT.TXT).

Use Case When checking the ID of the Toner Container

Adj/Set/Operate Method Select the item, and then press OK key.

Related Service Mode COPIER> FUNCTION> MISC-P> RPT-FILE

FX-RG-H 2 Exe of ppr side rgst displace check mode

Detail To execute the mode to check side registration displacement of paper based on the position at the Fixing Assembly.

By executing this item, a paper is picked up from the paper source specified by FX-RGPOS and it stops at the position where a specified length of it comes out from the Fixing Assembly.

Adjust the paper position at pickup side (inside a cassette) based on the side registration position at that time.

Use Case

Caution

When feeding speed of A4 size paper is decreased

Adj/Set/Operate Method

- 1) Specify a paper source by FX-RGPOS.
- 2) Select the item, and then press OK key.

A paper stops at the Fixing Assembly.

- 3) Turn OFF the main power switch.
- 4) Remove the Fixing Assembly, and check the side registration position of the paper.
- 5) Pull out the paper, and install the Fixing Assembly.
- 6) Turn ON the main power switch.
- 7) Enter 0, and then press OK key.
- 8) Execute mechanical adjustment using the Adjustment Plate in a cassette to adjust the side registration position of paper.

Be sure to set A4 paper on the paper source (Cassette 1 to 4, Multi-purpose Tray) specified by

9) Repeat the above procedure as needed.

FX-RGPOS.

Related Service Mode COPIER> FUNCTION> MISC-P> FX-RGPOS

FX-RGPOS 2 Spec ppr src at side reg displc ppr chck

Detail To specify the paper source that is used for checking side registration displacement of paper.

After setting A4R paper on the specified paper source, execute COPIER> FUNCTION> MISC-P> FX-RG-H.

FX-RG-R

Use Case When feeding speed of A4 size paper is decreased

Caution Be sure to set A4 paper on the specified paper source.

Display/Adj/Set Range 1 to 5

1: Cassette 1, 2: Cassette 2, 3: Cassette 3, 4: Cassette 4, 5: Multi-purpose Tray

OPF-DSEQ 2 Set of DADF pickup noise reduction

Detail To set whether to control drive noise that is generated when picking up paper (plain paper, thin

paper, etc.) from DADF at 1/1 speed.

When 1 is set, noise is alleviated, but productivity is decreased (A4R, 35 ppm -> 32.2 ppm).

The setting is not applied to pickup at 1/2 speed (heavy paper).

Use Case Upon user's request (to alleviate noise)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON

PSCL-PRT 1 Output grdtn/clr tone crrct log report

Detail To output the execution log of auto gradation adjustment/auto correction color tone in the form of a report.

W/SCNR **Setting of Reader Unit installation**

Detail To set installation of the Reader Unit.

When the Reader Unit is detected at startup of the machine, "1: Installed" is set automatically.

Use Case When installing/removing the Reader Unit

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0: Not installed, 1: Installed

Default Value 0 (Printer model)/1 (Copier model)

INTROT-1 Set ATR ctrl patch density dtct interval

Detail To set the offset of the interval (the number of sheets) for patch density detection executed at ATR control.

By changing the setting value, execution intervals at last rotation and at paper interval are changed. Decrease the value if E020 error occurs frequently. As the execution frequency is increased, correction accuracy for density variation is increased. Since patch density detection is linked with low duty toner ejection, lowering of density can be prevented by increasing the frequency. When the value is increased, downtime can be reduced because of decrease of execution frequency, but an image failure might occur.

Use Case - When E020 error occurs frequently

- Upon user's request (decrease downtime)

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

> Caution Increasing the number of sheets (widening the interval) causes higher frequency of image failure.

Display/Adj/Set Range -1 to 3

-1: -20 sheets, 0: +/-0 sheet, 1: +50 sheets, 2: +100 sheets, 3: +150 sheets

Unit sheet

Default Value 0

INTROT-2 Set of auto adjustment execute interval

Detail To set the paper interval to execute auto adjustment (D-max control, D-half control).

As the value is incremented by 1, the paper interval is increased by 1 sheet.

If a new Drum Unit whose number of fed sheets is 1000 or less is installed, the interval is 250 sheets at a maximum.

Use Case

When matching the use environment of the user.

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

Turn OFF/ON the main power switch.

Caution Increasing the number of sheets (widening the interval) causes higher frequency of image failure.

Display/Adj/Set Range -20 to 2000

> Unit sheet

Default Value 0

Amount of Change per Unit

DMAX-SW

Setting of D-max control timing

Detail To set the D-max control execution timing.

> When the density variation is not within the requested range at continuous output of a large volume of papers (long job length), set 2. When keeping the productivity even though there are some density variations, set 1.

Use Case

- When the density variation is not within the requested range at continuous output of a large volume of papers

- When keeping the productivity even though there are some density variations

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

2

Display/Adj/Set Range

0: Not used, 1: At last rotation, 2: At paper interval with 1/1 speed and last rotation

Default Value

BK-4CSW

2 Set simple full clr mode: hvy ppr, Bk-m

Detail

To set the conditions to switch single Bk-color mode to simple full color mode according to the type of heavy paper.

In single Bk-color mode, shock image at 75/122 mm from the leading edge is likely to occur due to impact triggered by paper entering the secondary transfer section.

By switching to simple full color mode where black is made by using small amount of Y, M and C toners, shock image is alleviated.

When 0 (normal) is set, the mode is switched to simple full color mode with heavy paper 3 after printing the specified number of sheets since the replacement of the Drum Unit (Bk).

When 1, 2, or 3 is set, simple full color mode is always applied to heavy paper 1/2/3.

When 4 is set, it is not switched to simple full color mode.

Use Case

When shock image occurs with heavy paper at single Bk-color mode

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 4

0: Normal, 1: Heavy paper 3, 2: Heavy paper 2/3, 3: Heavy paper 1/2/3, 4: OFF

Default Value (

SVMD-ENT

2 Setting of entry method to service mode

Detail To set the way to get in service mode to prevent information leak.

Use Case As needed

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 1

0: Factory default

1: [Settings/Registration] - Pressing [4] and [9] at the same time - [Settings/Registration]

Default Value

FXWRNLVL

2 Set Fix Film life display threshold VL

Detail

To set the threshold value to display the life of Fixing Film.

This item is enabled when the value at the following is set to "1" (default: 0): COPIER> OPTION> DSPLY-SW> FXMSG-SW (ON/OFF of Fixing Assembly replacement message)

The life judgment counter is stored in the DC Controller. It is not possible to change or check the counter value.

Use Case

When preventing the occurrence of fixing failure caused by the continuous use of the Fixing Film beyond its life

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 3

0: Warning is hidden.

1: Warning is displayed when the life counter reaches the specified value.

2. Warning is displayed when the print counter reaches the specified value.

3: Warning is displayed when either the life counter or the print counter reaches the specified value.

Default Value

• 0

| SDLMTWRN 1 | [For customization] |

PRE-CURL 1 ON/OFF of curl alleviation mode: Heavy

Detail To set ON/OFF of curl alleviation mode for heavy paper, etc.

When 1 is set, the initial rotation is extended and the paper intervals become wider. As a result,

paper curl can be alleviated, but productivity decreases.

Use Case When heavy paper is curled

Caution Be sure to get approval from the user by telling that productivity decreases.

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON

Default Value (

AUTO-OUT 1 ON/OFF of jammed ppr auto ejctn function

Detail To set ON/OFF of jammed paper auto ejection function.

When 1 is set, jammed paper is not delivered to the ejection position, but it stays at the current position at jam occurrence.

Use Case - When user feels unnecessity of jammed paper auto ejection

- When location of jammed paper is necessary to analyze the cause of a problem

Display/Adj/Set Range 0 to 1

0: ON, 1: OFF

Default Value 0

FAX-INT 2 Set FAX RX print interruption oprtn mode

Detail To set the mode performing interruption operation of FAX reception print automatically.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

Turn OFF/ON the main power switch.

Caution - Do not set this item while charge management (charging by Coin Manager, a device alone, etc.)

- During an ongoing job for which delivery setting (offset, stapling, etc.) is made, interruption operation is performed between sets.

Display/Adj/Set Range 0 to 1

0: Normal, 1: Interruption operation mode

Default Value 0

PDL-Z-LG 1 Setting of drawing algorithm

Detail To switch the drawing algorithm of the iR C series and the iR-ADV C series to obtain output expected by the user.

When 0 is set, image is output as displayed on the screen by the new algorithm adopted from the iR-ADV C Series. Pseudo outline (boundary for processing divided graphics separately) occurred with the iR C series does not occur. However, when PDL job with special data structure is sent, output expected by the user may not be obtained.

When 1 is set, the drawing algorithm adopted by the conventional iR C series is used. Output equivalent to that of the iR C Series can be obtained; however, drawing-related phenomenon occurred with the series occurs.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution Do not use setting value 2 and 3.

Display/Adj/Set Range 0 to 3

0: Drawing algorithm of iR-ADV C series, 1: Drawing algorithm of the conventional iR C series, 2,

3: For R&D use

Default Value

BXSHIFT 1 Setting of binding at 0mm binding margin

Detail To set whether to judge the job as a job "without binding" when storing a PDL job in Inbox while

the binding margin is set to "0".

By setting the binding margin to 0 mm while "0" is set, the job is processed as "without binding".

"Booklet" in "Options" on the Inbox screen can be also used.

When "1" is set, it is judged as "with binding" even the binding margin is 0 mm so "Booklet", which has an exclusive relationship with "binding", cannot be used.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution When storing a PDL job in Inbox while 1 is set, "Booklet" in "Options" on the Inbox screen cannot

be used.

Display/Adj/Set Range 0 to 1

0: Without binding, 1: With binding

Default Value 0

HOME-SW 1 Set screen displayed with Main Menu key

Detail To set whether to display the main menu screen or the screen registered as the startup screen

when pressing Main Menu key.

Use Case Upon user's request (to change the startup screen)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: Main Menu screen, 1: Screen registered as the startup screen

Default Value 0

NO-LGOUT 1 Display/hide of logout button

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to display or hide [Logout] button.

When 0 is set, [Logout] button is displayed on the screen, and logout with the ID key is enabled.

(Normal)

When 1 is set, [Logout] button is not displayed, and logout with the ID key is disabled.

Use Case Upon user's request (for customization, etc.)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: Display, 1: Hide

Default Value 0

JM-ERR-D 2 Set of error display of 0CAx jam (DCON)

Detail To set whether to display "0CAx" jam as the error "E996-0CAx".

In the case of a jam, log cannot be obtained depending on the timing.

By selecting 1 when the jam "0CAx" occurs, it is displayed as the error "E996-0CAx" so that the

log can be obtained.

Use Case When obtaining a log at the occurrence of 0CAx jam

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range 0 to 1

0: Display as a jam, 1: Display as an error

Default Value 0

Related Service Mode COPIER> OPTION> FNC-SW> JM-ERR-R

2 JM-ERR-R 0071 Logging Settings for Jams

> Detail 0071 Decide whether to log when a jam occurs.

> > 0071 If you want to log a jam, you can set it to 1 to get a log as an event log.

Use Case 0071 Obtaining a Log When a Jam Occurs

Adj/Set/Operate Method Enter the set value and press the OK key.

Display/Adj/Set Range

0: Do not get log data, 1: get log data

Default Value

Related Service Mode COPIER> OPTION> FNC-SW> JM-ERR-D

DFTSCNSZ Setting of default scan size

> Detail To set the default scan size when scan size is not specified.

Use Case Upon user's request

Display/Adj/Set Range 0 to 1

0: LTR, 1: LGL

Default Value

ASLPMAX Set auto sleep shift time maximum value

> Detail Set auto sleep shift time maximum value.

Use Case Upon user's request

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range

0: 240minutes, 1: 120 minutes

Default Value It differs according to the location.

SEND-SPD ON/OFF of SEND operation speed-up

> Detail To set whether to speed up the SEND operation.

> > Usually, speed of SEND/XBOX is increased by performing image conversion during SEND and

Reading speed may decrease when scanning large size color original at high resolution or when competing operation occurs with another job during scanning. Set 1 to keep the speed.

When failure with MEAP application occurs, set 1.

Use Case - When reading speed is decreased during SEND and Scan

- When failure with MEAP application occurs

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

0 to 1 Display/Adj/Set Range

0: ON, 1: OFF

Default Value

TNR-RS Set of Toner Container rotation speed

> Detail To set the rotation speed of Toner Container.

> > As the value is larger, the Toner Container rotates faster so enough amount of toner is supplied

for high duty (high image ratio) image, but noise becomes louder.

Use Case - When the rotation drive noise is loud

- When not enough amount of toner is supplied for high duty image

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range -3 to 3

Default Value

TNNEWQCK 2 Set new Tonr Cntner chck seg aftr rpice

> Detail To set whether to execute the new Toner Container check sequence after replacement.

In case of processing a large job immediately after replacement of the Toner Container when 0 is set, downtime due to the new Toner Container check sequence occurs during the processing. When 1 is set, control to print the specified number of sheets is turned OFF and the new Toner

Container check sequence is executed immediately after the replacement.

Use Case When downtime occurs due to the new Toner Container check sequence during the processing

of a large job

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution Do not use this when the machine is operating correctly.

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON

Default Value

R-DR-FAN Adj Right Door Unit Fan airflow amount

> Detail To set the rotation speed of the Right Door Unit Fan during printing.

> > When 2 is set, the heat exhaust efficiency is improved so it can alleviate papers to be stuck together at the time of delivery. However, the machine is more likely to shift to temperature rising prevention

mode.

Use Case When delivered papers stick together frequently

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution When 2 is set, the machine is more likely to shift to temperature rising prevention mode.

Display/Adj/Set Range 0 to 2

0: Automatic, 1: Half speed, 2: Full speed

Default Value

PWR-FAN Adj Power Supply Cool Fan flow amnt:stby

> Detail To adjust the airflow amount of the Power Supply Cooling Fan at standby.

> > As the value is larger, heat exhaust efficiency is improved, but noise becomes louder.

Use Case - When the machine is installed in a high temperature environment in which damage of component

parts of the Power Unit or HDD damage is likely to occur

When HDD damage occurs frequently

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution Noise becomes louder.

0 to 2 Display/Adj/Set Range

0: Automatic, 1: Half speed, 2: Full speed

Default Value

Supplement/Memo The Power Supply Cooling Fan also cools the Controller PCB.

DLVY-FAN Adj Delivery Cooling Fan airflow amount

> Detail To set the rotation speed of the Delivery Cooling Fan during printing.

> > When 2 is set, the heat exhaust efficiency is improved so it can alleviate papers to be stuck together

at the time of delivery. However stacking performance decreases.

Use Case When delivered papers stick together frequently

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution When 2 is set, stacking performance at the time of delivery decreases.

Display/Adj/Set Range 0 to 2

0: Automatic, 1: Half speed, 2: Full speed

Default Value

CRG-FANF 2 Adj Drum-U Suct Cool Fan flow amnt:print

To set the rotation speed of the Drum Unit Suction Cooling Fan during printing. Detail

When 2 is set, the heat exhaust efficiency is improved so temperature rising can be controlled.

However, noise becomes louder.

Use Case When the machine shifts to temperature rising prevention mode frequently in case of continuous

output for a long time

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Noise becomes louder. Caution

0 to 2 Display/Adj/Set Range

0: Automatic, 1: Half speed, 2: Full speed

Default Value 0

ECO-TMP For R&D

STP-TMP

For R&D 2TR-TBLS Set sec transfer bias correction table

> Detail To set the secondary transfer bias correction table according to the paper to be used.

Since physical properties of paper are different for each location, use the table according to the

paper to be used.

Use Case When using paper for a location other than the intended one

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range 0 to 2

0: For Japan, 1: For locations other than Japan and USA, 2: For USA

Default Value It differs according to the location.

Additional Functions Mode

Adjustment/Maintenance> Adjust Image Quality> Image Adjustment Mode for Solid Area

VER-CHNG Setting of firmware update operation

Detail

To set how to update firmware of PCB/option which has been installed/replaced by comparing the version of it with the version stored in the Flash PCB of the Main Controller.

If combination of firmware versions of PCB/option stored in the Main Controller and the version in PCB/option after installation/replacement is not appropriate (operation with the combination of firmware versions has not yet been checked), failure where analysis is difficult may occur.

It is possible to check the firmware versions at the start of the machine, and automatically write the firmware stored in the Main Controller in PCB/option collectively as needed.

When 0 is set, versions are not checked and firmware update is not performed. Therefore, it is necessary to manually update the versions using a USB memory/SST.

When 1 is set, firmware is updated if the version in PCB/option is old. However, it is not updated if the version is new or old and new versions are mixed.

When 2 is set, a compatible firmware (the version where operation has been checked) is written from the Main Controller regardless of whether the version in PCB/option is old or new.

Use Case When installing/replacing PCB/option having firmware

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 2

0: Keep the current firmware version.

1: Update the firmware if the version in PCB/option is older than that stored in the Main controller. If the version is new or old and new versions are mixed, firmware is not updated.

2: Update the firmware regardless of whether the version is old or new if the version in PCB/option differs from that stored in the Main Controller.

Default Value

Supplement/Memo

When updating the firmware, the main menu is displayed on the Control Panel at startup and then a message prompting to update firmware is displayed.

By pressing [Update], the machine reboots immediately and firmware is updated.

By pressing [Skip], it returns to the main menu. The message is displayed again at next startup.

DFAN-SPD Set paper protrusion prevention:delivery

Detail

When making 2-sided printing using thin paper/plain paper 1/recycled paper 1, papers may protrude from the Delivery Tray on which approx. 100 sheets are stacked. It is likely to occur with Vietnamese paper (Bayband 70g).

When 1 is set, the Delivery Cooling Fan rotates at half speed. It can alleviate protrusion of papers, but delivered papers may be stuck together.

When the finisher is installed, the fan rotates at full speed although 1 is set.

Use Case

When papers on the Delivery Tray protrude from the tray at the time of 2-sided printing using thin paper/plain paper 1/ recycled paper 1

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Caution

- When 1 is set in a high temperature and high humidity environment, papers may be stuck together.

- When the finisher is installed, the setting is disabled (remains at full speed).

Display/Adj/Set Range

0: Full speed, 1: Half speed only for 2-sided printing with thin paper/plain paper 1/recycled paper 1; Full speed for others

Default Value

T1CL-UP Set of mod shift tmg at clr/black switch

Detail

To set the timing to shift from color mode to black mode when switching between color and black. When the image is switched from color to black, an image failure may occur on the B&W image. Set 1 if the image failure occurs only on special paper (plain paper 3, heavy paper, etc.), or set 2 if it occurs on plain paper.

Use Case

When taking a temporary measure until the ITB is replaced in the case of occurrence of an image failure

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Caution

- Be sure to replace the ITB as soon as possible because this is a temporary measure in the case that there is no spare ITB on hand.
- Be sure to check that the symptom cannot be improved by PRE-CURL (heavy paper curl alleviation mode) before execution.
- Productivity may be decreased in the case of color/black mixed original or color/black linked jobs.

Display/Adj/Set Range

0 to 2

- 0: After switching, the first to fifth sheets are output in color mode, and the mode shifts to black mode from the sixth sheet.
- 1: Excluding thin paper of 210 mm or more in width (60 to 63 g/m2), plain paper 1 (64 to 75 g/m2), plain paper 2 (76 to 90 g/m2), recycled paper 1 (64 to 75 g/m2), recycled paper 2 (76 to 90 g/m2), color paper (64 to 75 g/m2), pre-punched paper (64 to 75 g/m2), and carbonless paper (60 g/m2), the mode shifts to black mode from the second sheet after switching.
- 2: At all speeds, the mode shifts to black mode from the second sheet after switching.

Default Value

COPIER> OPTION> FNC-SW> PRE-CURL

Supplement/Memo

Related Service Mode

An image failure that occurs when the image is switched from color to black is likely to occur on strongly curled paper.

CE-SW [Reserve]

PICLOGIN ON/OFF of Picture Login display

Detail To set whether to display "Picture Login" in Settings/Registration menu.

Use Case When switching the Picture Login function

1) Enter the setting value, and then press OK key. Adj/Set/Operate Method

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON

Default Value

Additional Functions Management Settings> User Management> Authentication Management> Use User Mode Authentication> Picture Login

| DCONRTRY 2 | 2 Set of retry at DCON comctn error occur |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detai | To set whether to perform retry processing when communication error occurs between the Main Controller and the DC Controller. Set 1 to 3 when E733 occurs. Communication error may be avoided by retry. (It is effective especially when E733-0001/0002/0005 occurs.) If communication error occurs during finishing job while 3 is set, duplicated pages may be output due to retry. In such case, set 0 to 2. Since retry is not performed during finishing job, duplication of pages does not occur, but E733 occurs. |
| Use Case | When E733 occurs |
| Adj/Set/Operate Method | 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. |
| Caution | When 3 is set, duplication of pages may occur during finishing job. |

CLN-SEL 1 Set of condensation prev main unit clean

Detail To set the effect of cleaning inside the main unit for condensation prevention.

When 0 is set, cleaning inside the main unit is not executed.

When 1 to 3 is set, an item for condensation prevention is displayed in Settings/Registration, and the level of effect of cleaning inside the main unit can be set.

As the value is larger, the effect is increased because ITB cleaning is executed more frequently, but toner consumption and cleaning time are increased.

In the case of installation in a low temperature and high humidity environment (in winter), ask for the user's opinion and configure the setting.

Use Case When condensation occurs in a low temperature and high humidity environment

Display/Adj/Set Range 0 to 3

0: OFF

1: ON (small effect, low toner consumption)

2: ON (moderate effect, moderate toner consumption)

3: ON (large effect, high toner consumption)

Default Value 0

SDTM-DSP 1 Display/hide of auto shutdown time

Detail To set whether to display "Auto Shutdown Time" in Settings/Registration menu.

Use Case Upon user's request

Caution When "Hide" is set, auto shutdown time is reset. (Auto shutdown is not performed.)

Display/Adj/Set Range 0 to 1

0: Hide, 1: Display

Default Value It differs according to the location.

Additional Functions Preferences> Timer/Energy Settings> Auto Shutdown Time

Mode

UI-PPA 2 ON/OFF of PPA screen display

Detail To set whether to display PPA-related information on the Control Panel or remote UI.

The setting is linked with LGCY-SCP. When LGCY-SCP is set to 0, the setting of this item becomes

1. When LGCY-SCP is set to 1, the setting of this item becomes 0.

Use Case When not displaying PPA-related information on the screen

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON

Default Value 0 (non PPA-installed machine)/1 (PPA-installed machine)

Related Service Mode COPIER> OPTION> USER> LGCY-SCP

Supplement/Memo PPA (Personal Print Application): A function to hold print job. It contains the secured print function.

NW-SPEED Setting of network data transfer speed

Detail To set the data transfer speed when the service network is connected.

When downloading the firmware through network, use 0 in the normal operation. When fixed to

100Base-TX/10Base-T for any reason, change the setting.

Use Case When fixing the communication speed

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

0 to 2 Display/Adj/Set Range

0: Auto, 1: 100Base-TX, 2: 10Base-T

Default Value

NS-CMD5 Limit CRAM-MD5 auth method at SMTP auth

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of CRAM-MD5 authentication method at the time of SMTP authentication.

Use Case Upon user's request

1) Enter the setting value, and then press OK key. Adj/Set/Operate Method

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: SMTP server-dependent, 1: Not used

Default Value

Supplement/Memo SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

NS-GSAPI Limit GSSAPI auth method at SMTP auth

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To restrict use of GSSAPI authentication method at the time of SMTP authentication.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: SMTP server-dependent, 1: Not used

Default Value

Supplement/Memo

SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

NS-NTLM Limit NTLM auth method at SMTP auth

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of NTLM authentication method at the time of SMTP authentication.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: SMTP server-dependent, 1: Not used

Default Value

Supplement/Memo

SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

NS-PLNWS 2 Limit plaintext auth at SMTP auth encry

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To restrict use of PLAIN/LOGIN authentication, which is plaintext, at the time of SMTP authentication under the environment where the communication packet is encrypted.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: SMTP server-dependent, 1: Not used

Default Value

Delault Value

Supplement/Memo SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

NS-PLN 2 Limit plaintext auth at SMTPauth noencry

*Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To restrict use of PLAIN/LOGIN authentication, which is plaintext, at the time of SMTP authentication under the environment where the communication packet is not encrypted.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: SMTP server-dependent, 1: Not used

Default Value (

Supplement/Memo

SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

NS-LGN 2 Limit LOGIN authentication at SMTP auth

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To restrict use of LOGIN authentication at the time of SMTP authentication.

Use Case Upon user's request

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 1

0: SMTP server-dependent, 1: Not used

Default Value

0

Supplement/Memo

SMTP authentication: Protocol in which user authentication function is added to SMTP, which is the protocol to be used for e-mail transmission. At the time of e-mail transmission, this protocol executes authentication of the user account and the password between the SMTP server and the user to approve e-mail transmission only when it's authenticated.

MEAP-PN 2 HTTP port No.setting of MEAP application

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set HTTP port number of MEAP application.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution Do not specify port 8080 when the Print Server is connected. Otherwise, you cannot browse the device RUI in which MEAP authentication application is running (Port 8080 is reserved for

redirection of EFI Controller to the iR side.)

Display/Adj/Set Range

Default Value

8000

0 to 65535

| RMT-LGIN | 2 For R&D |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEAP-SSL | 2 HTTPS port setting of MEAP |
| Deta | *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the port of HTTPS server in the case of using SSL with HTTP of MEAP. |
| Use Cas | When specifying the setting of HTTPS port for MEAP |
| Adj/Set/Operate Metho | 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. |
| Display/Adj/Set Rang | e 0 to 65535 |
| Default Valu | e 8443 |
| LPD-PORT | 2 Setting of LPD port number |
| Deta | *Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the LPD port number. |
| Use Cas | e Upon user's request |
| Adj/Set/Operate Method | d 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch. |
| Display/Adj/Set Rang | e 1 to 65535 |
| Default Value | |
| Supplement/Mem | LPD port: Network port for TCP/IP communication when making prints through network. |
| WUEN-LIV | 2 Recovery time setting after sleep notice |
| Deta | To set the time from the sleep start from network without job assignment until the mode is shifted to the sleep mode. |
| Use Cas | When setting the startup time after sleep notification |
| Adj/Set/Operate Metho | 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch. |
| Display/Adj/Set Rang | e 10 to 600 |
| Default Valu | e 15 |
| IFX-CHIG | 1 Set operation by IFAX recv mail content |
| Deta | To set the number of characters for the IFAX received mail content, so that the mail is not printed/ forwarded when the characters in the text is less than the number of specified characters. This machine can output blank paper because some senders send e-mail text consists of linefeed codes only. In such case, specify 2 (number of characters) so that there will be no output of blank paper. In the case of specifying any number other than 0, header/footer is printed/forwarded in 1 sheet only if the e-mail (body) text is less than the specified value while no TIFF file is attached. As the value is incremented by 1, the number of target characters in e-mail body text is increased by 1 character. |
| Use Cas | When reducing print of blank paper due to e-mail received by IFAX |
| Adj/Set/Operate Method | 1) Enter the setting value, and then press OK key.2) Turn OFF/ON the main power switch. |
| Cautio | Be sure to get approval from the user by telling that there will be no print of e-mail (body) text if the number of characters is less than the specified value. |
| Display/Adj/Set Rang | e 0 to 999 0: E-mail (body) text is not ignored. |
| Default Valu | e 0 |
| Supplement/Memo | 1 Japanese Kanji character is calculated as 2 bytes, and the control codes (such as linefeed code, etc) are included in the number of characters. |

DNSTRANS 1 Setting of DNS transfer priority

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access]

To set priority order of the protocol (IPv4/IPv6) to be used for DNS query.

In the case of using both IPv6 and IPv4 while the DNS server supports IPv4, it takes time because of timeout when executing DNS query with priority on IPv6. Giving priority on query by IPv4 can

shorten the time.

Use Case When it takes time to execute DNS query with priority on IPv6 because the DNS server supports

IPv4

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: IPv4, 1: IPv6

Default Value

PROXYRES 2 Setting of proxy response to Windows

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to provide proxy response or return the device status when an inquiry is received

via Windows while the device is in sleep mode.

Use Case When executing status response for query from Windows correctly

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: No proxy response, 1: Proxy response

Default Value

WOLTRANS 1 ON/OFF sleep recover by packet reception

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to recover from deep sleep when receiving unicast packets to the machine

(excluding proxy response).

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 1 to 2

1: ON, 2: OFF

Default Value 1

802XTOUT 1 Set of IEEE802.1X authentication timeout

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set timeout value for IEEE802.1X authentication.

If the device executes 802.1X authentication, change the wait time for response from the

authentication server.

Use Case When response from the authentication server is slow/fast

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 10 to 120

Default Value 30

| COLIETY (OCIVICE MODE IOI E | of the transfer of the transfe |

| Use Case | When changing the event notification reception port of a fax client |
| Adj/Set/Operate Method | 1) Enter the setting value, and then press OK key. 2) Turn OFF/ON the main power switch. |
| Display/Adj/Set Range | 0 to 65535 |
| Default Value | 29400 |
| Related Service Mode | COPIER> OPTION> NETWORK> AFS-JOB |

ILOGMODE

1 Setting of filter log target packet

Detail

*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the target packet to be recorded in the filter log.

Usually, only the unicast packets to the machine are recorded in the filter log by PFW (personal firewall).

When 1 is set, address filter is enabled for all protocols so all packets are recorded in the filter log. However, logs of multicast/broadcast packets sent from a harmless device or an address that are subject to rejection and have no direct relation to the machine are also recorded, and consequently the number of logs is increased.

Use Case

Upon user's request (to collect all filter logs)

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution

When 1 is set, the number of logs is increased because logs of packets which have no direct relation to the machine are recorded.

Display/Adj/Set Range

0 to 1

0: Unicast packets to the machine only, 1: All packets

Default Value

ILOGKEEP

1 Set of IP address block log hold time

Detail

*Operation on this item is restricted by the setting of [Restrict Service Representation Access]. To set the retention time from the log time of IP block.

When access is made again from a same IP address which was blocked before, if it is within the retention time of the previous log, its log is not recorded.

If access is frequently made from a same IP address, the log record of the UI might be filled with its logs. If the user considers that a single log for a same IP address is enough, set the longer retention time.

Use Case

Upon user's request

Adj/Set/Operate Method

- 1) Enter the setting value, and then press OK key.
- 2) Turn OFF/ON the main power switch.

Display/Adj/Set Range

0 to 48

0: 1 minute (special mode) 1 to 48: 1 hour to 48 hours

Default Value

IPTBROAD

1 Set to allow broad/multicast TX

Detail

*Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to permit transmission of broadcast packets and multicast packets.

Transmission of broadcast packets and multicast packets is permitted without specifying an exception address. It is permitted within the device even if it is rejected in the default setting of the IPv4/v6 transmission filter.

Set "1: Disabled" when the user does not want to send them.

Use Case

Upon user's request

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Display/Adj/Set Range

0 to 5

0: Enabled, 1: Disabled, 2 to 5: Not used

Default Value

0

PFWFTPRT Set of RST reply at IP filter FTP SEND 1

> Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

When FTP SEND is executed using an IP filter by which packets from a specific remote PC are rejected, SYN is returned to the port 113 if the PC supports authentication of the FTP port 113. However, since the IP filter blocks the packets, the block logs are increased and the performance

is lowered

When 1 is set, RST is returned to the port 113 without blocking packets.

When executing FTP SEND against the OS which supports authentication of the FTP port 113

while the IP filter is enabled

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range 0: OFF, 1: ON

> 0 **Default Value**

Use Case

DDNSINTV Set of DDNS periodical update interval

> Detail DNS registration is executed only once at start-up with the current iR, so the registered contents

> > are deleted in an environment where the DNS server settings are deleted at intervals. To set the interval of DDNS periodical update for not deleting the registered contents.

Use Case When the DNS server settings are deleted at intervals

Adj/Set/Operate Method Enter the setting value, and then press OK key.

Display/Adj/Set Range 0 to 48

0: No periodical update, 1: 1-hour interval, 2: 2-hour interval, ..., 47: 47-hour interval, 48: 48-hour

interval

Default Value

SIPAUDIO Set of SIP session establishment order

> Detail To set whether to establish audio session or T.38 session first with SIP.

> > Usually, audio session followed by T.38 session is established when using IPFAX in an intranet

environment. However, this order is not specified by the standard.

Set 1 when connecting the SIP server or terminal where the session starts with T.38 session.

When connecting the SIP server or terminal where the session starts with T.38 session **Use Case**

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution When 1 is set, IPFAX fails with the destination where the session starts with audio session.

0 to 1 Display/Adj/Set Range

0: audio, 1: T.38

Default Value

Supplement/Memo SIP: Session Initiation Protocol

CLEANING

COPIER (Service mode for printer) > OPTION (Specification setting mode) > CLEANING

OHP-PTH

2 Set of ITB clean transp threshold value

Detail

To set the number of sheets for ITB cleaning interval to be executed when feeding transparency. When a large number of transparencies is fed, surface active agent adheres to the ITB, and the blade bounds in small motions. As a result, an image failure occurs.

At last rotation of the job with more than specified number of sheets, execute ITB cleaning (not executed when 0 is set).

As the value is incremented by 1, the number of sheets for cleaning interval at last rotation is increased by 1 sheet.

When using the transparency that tends to cause the adherence of surface active agent, decrease the value so that the image failure can be alleviated.

When the value is increased, the downtime and the toner consumption can be reduced; however, image failure may occur.

Use Case

When an image failure occurs due to lowering of the transfer efficiency

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Display/Adj/Set Range

0 to 10 0: No ITB cleaning

Unit sheet

Default Value

ITBB-TMG

1 Setting of ITB cleaning sheet interval

Detail

To set the paper interval to execute the ITB cleaning.

As the value is increased, image failure due to the soiled ITB is alleviated, but downtime and toner consumption are increased.

Toner band width that is formed at ITB cleaning differs depending on the setting value (1<2<3=4=5).

Use Case

When setting the interval to execute ITB cleaning

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Display/Adj/Set Range

0 to 5

0: Not executed, 1 to 3: 50 sheets, 4: 30 sheets, 5: 10 sheets

Unit sheet

0 **Default Value**

DR-CL-L

Setting of toner band length 1

Detail

To set the length of toner band.

Increase the value if noise comes from the Photosensitive Drum or an ITB cleaning failure occurs while the ITB is worn and lacks gloss.

Decrease the value if the high consumption of toner has been pointed out.

Use Case

- When an ITB cleaning failure occurs while the ITB is worn and lacks gloss
- When noise comes from the Photosensitive Drum
- When low productivity or high toner consumption is pointed out by the user

Adj/Set/Operate Method

Enter the setting value, and then press OK key.

Caution

Default Value

The larger the value is, the higher the consumption of toner is.

Display/Adj/Set Range

0 to 100

0: OFF, 1: 1 mm, 2: 2 mm, ..., 100: 100 mm

DR-CL-T 2 Setting of toner band formation interval

Detail To set the toner band formation interval.

Decrease the value if noise comes from the Photosensitive Drum due to the flipped Cleaning Blade or an ITB cleaning failure occurs while the ITB is worn and lacks gloss.

Increase the value if the high consumption of toner has been pointed out.

Use Case - When an ITB cleaning failure occurs while the ITB is worn and lacks gloss

- When noise comes from the Photosensitive Drum

- When low productivity or high toner consumption is pointed out by the user

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Caution The larger the value is, the higher the consumption of toner is.

Display/Adj/Set Range -3 to 5

Default Value 0

ITB-CL-L 2 Setting of toner band length 2

Detail To set the length of toner band.

Increase the value if an ITB cleaning failure occurs while the ITB is worn and lacks gloss.

Enabled only when ITB-CL-T is set to 2.

Apply this if the execution of DR-CL-T and DR-CL-L shows insufficient effect.

Use Case When increasing the value by increment of 5 in the case that a cleaning error occurs with the ITB

worn enough to have lost gloss

Caution The larger the value is, the higher the consumption of toner is.

Display/Adj/Set Range 20 to 100

Unit mm

Default Value 20

■ FEED-SW

COPIER (Service mode for printer) > OPTION (Specification setting mode) > FEED-SW

Envelope feeding speed setting EVLP-SPD 1

Detail To set the envelope feeding speed.

> By feeding an envelope at 1/2 speed (default) in the case of a high humidity environment, the glue flap may adhere at the time of fixing. As a result of that, the envelope may not be opened. By setting to 2/3 speed, adhesion can be prevented, but fixing might be deteriorated in a low temperature environment. Because paper interval is widened at 2/3 speed, productivity is not changed.

This service mode is enabled only when feeding paper from the Cassette 1.

Use Case When a glue flap of envelope adheres

Adj/Set/Operate Method Enter the setting value, and then press OK key.

> Caution The fixing is deteriorated by setting 2/3 speed in a low temperature environment.

0 to 1 Display/Adj/Set Range

0: 1/2 speed, 1: 2/3 speed

Default Value

EVLP-FS Setting of fixing speed with envelop

Detail To set fixing speed when feeding envelope.

> As the value is incremented by 1, the fixing speed changes by 0.1 %. Decrease the value when fine line displacement occurs on trailing edge of envelope, and increase

the value when wrinkles occur.

Use Case When fine line displacement or wrinkles occur on trailing edge while feeding envelope

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Caution Be sure to change the value a little at a time. Otherwise, fine line displacement/wrinkles occur

when setting an extreme value.

Unit

FIX-ROT

1 Idle rotn end temp after small ppr feed

Detail

When feeding the small size paper following the large size paper on the Fixing Assembly, the temperature at both edges of Fixing Film is higher than the center. To prevent the fixing offset or paper wrinkle, it idles until the temperature becomes the specified value after the small size paper is fed.

This item is to set the temperature to finish the idle rotation.

When the value is increased, downtime is increased because of prioritizing image quality. When the value is decreased, downtime is decreased, but uneven gloss occurs.

Use Case

- When uneven gloss occurs at paper edge

- When improving productivity

Adj/Set/Operate Method

Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Display/Adj/Set Range

-2 to 2 -2: -10 deg C, -1: -5 deg C, 0: +/-0 deg C, 1: +5 deg C, 2: +10 deg C

PRN-FLG

2 Select of image area flag (PDL image)

Detail

To set the image area flag for image processing which is performed when a PDL image fails to be compressed at a specified compression rate.

If an image fails to be compressed at a specified compression rate, the following processing is performed by default:

- Processing to prioritize text reproduction
- Replacement of the processed black with single Bk-color

Set 1 when moire occurs or jaggy is significant. Set 2 when not preferring to replace the processed black with single Bk-color.

Use Case

- When moire occurs or jaggy is significant in case of printing an image containing many halftone dots or photos
- When avoiding to replace the processed black with single Bk-color

Adj/Set/Operate Method

- 1) Enter the setting value, and then press OK key.
- 2) Turn OFF/ON the main power switch.

Caution

This setting trades off with reproducibility of text.

Display/Adj/Set Range

- 0: High screen ruling, gray compensation LUT1: Error diffusion, gray compensation LUT
- 2: High screen ruling, normal LUT

Default Value (

SCN-FLG

2 Select of image area flag (copy image)

Detail

To set the image area flag for image processing which is performed when a scanned image fails to be compressed at a specified compression rate.

If an image fails to be compressed at a specified compression rate, processing to prioritize reproduction of text is performed by default.

Set 1 when an image contains many halftone photo images. Set 2 when an image contains many printed photos.

Use Case

When copying an image which contains many halftone dots and photos

Adj/Set/Operate Method

- 1) Enter the setting value, and then press OK key.
- 2) Turn OFF/ON the main power switch.

Caution

This setting trades off with reproducibility of text.

Display/Adj/Set Range

0 to 2

0: Text, 1: Halftone photo image, 2: Printed photo

Default Value

TNR-DWN

2 Setting of toner deposit amount

Detail

To set the toner deposit amount on the gradation area and text area.

By reducing the toner deposit amount when toner scatters or paper winds around the Fixing Assembly in the case of full color, the symptom can be decreased, but the hue might change.

Use Case

When a full color image is blurred due to toner scattering, etc.

When paper winds around the Fixing Assembly

Adj/Set/Operate Method

1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution

Hue might change depending on the setting.

Display/Adj/Set Range

0 to 5

0: Gradation area 200 %, Text area 180 % (Normal)

1: 180 %, 165 %

2: 140 %, 130 %

3: 160 %, 150 % (Normal 1, Recycle 1 paper, Thin paper)

4: 160 %, 150 %

5: 160 %, 150 % (Transparency only)

Default Value

ue 0

Additional Functions Mode

Adjustment/Maintenance> Adjust Image Quality> Adjust Toner Amount at Color Printing

TMIC-BK ON/OFF of TMIC Bk LUT end edge correct

To set ON/OFF of the trailing edge adjustment of Bk_LUT for PDL and for copy which are used Detail by TMIC.

When the trailing edge adjustment is set to ON, the density of the high density area becomes high, and consequently text and thin lines become clear. While an image becomes clear, hue of the

gradation area of photos, etc. is changed.

Use Case When thin lines are partly missing or characters are faded

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 3

> 0: ON for PDL, OFF for copy 1: OFF for PDL, OFF for copy 2: ON for PDL, ON for copy 3: OFF for PDL, ON for copy

Default Value

DH-MODE Set ptch data at Dhalf except full crrct

Detail To set whether to use the high-density patch data that has been scanned by D-half control of full correction at the time of D-half control other than full correction.

Use Case At image adjustment

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

REDU-CNT

0: Used. 1: Not used

Default Value Λ

2 Set toner deposit amount limt at clr adj

Detail To set whether to limit the toner deposit amount at color adjustment (color balance, fine adjustment of density).

When 0 is set, the color adjustment value is reflected to an image precisely, but toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.

Use Case - Upon user's request

- When reflecting the color adjustment value to an image precisely

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution When 0 is set, toner scattering in the Transfer Assembly and Fixing Assembly might occur, and paper might wind around the Fixing Assembly.

Display/Adj/Set Range

0 to 1

0: Toner deposit amount is not limited.

1: Toner deposit amount is limited to the specified amount.

Default Value

VP-ART Setting of line art processing

Detail To set outline processing for line art on scalable PDF.

> In the outline processing, a binary image outline is extracted in the field which is recognized as line art, and is converted into vector data.

Specify whether to convert the binary image outline into vector data or to recognize it as one line (as a thin line). For the thin line, the line width can be specified.

Change this value when you want to obtain an output of a wide-width line as one line rather than as an outline (when you want to prioritize edit operation as a line rather than image quality).

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

0 to 99 Display/Adj/Set Range

VP-TXT 2 Setting of character vectorization

Detail To set vector conversion processing for text on scalable PDF.

In the vector conversion processing, a binary image outline is extracted in the field which is recognized as text, and is converted into vector data.

In regular vector conversion, function approximation is not used for small text because the image quality is not changed.

When the value is changed, function approximation processing is executed for small text, which realizes smooth text although the image quality is changed.

Change this value when you want to prioritize smoothness in small text.

Use Case Upon user's request

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 99

Default Value

PASCL-TY 2 Set of paper type for auto gradation adj

Detail Auto gradation adjustment is normally executed with the recommended paper specified for each location. However, if you want to change the paper type, use this setting to change the paper type.

Use Case When executing the auto gradation adjustment using a paper other than the recommended paper

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution Do not change the setting in the normal operation.

Display/Adj/Set Range 1 to 3

1: CS680 68g (Except for USA and EU. Mainly for Japan)

2: Canon Multipurpose 20lb/75g (For USA)

3: Canon Red Label Professional 80g (For EU)

Default Value It differs according to the location.

AST-SEL 2 Adj of advanced smoothing effect

Detail To adjust the smoothing effect which is set in the advanced smoothing UI.

Set 3 if no smoothing effect is obtained even though High is set in the advanced smoothing UI. Set 0 if too much effect is obtained even though Low is set in the advanced smoothing UI.

Use Case When image failures (jaggy, moire) occur

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 3

Default Value 2

Supplement/Memo AST: Advanced Smoothing Technology

SCR-SW 1 Set of low screen ruling dither

Detail To set the dithering method for low screen ruling.

When changing the value, confirm the change by setting "1: Low screen ruling" in COPIER> TEST> PG> TXPH.

Use Case Upon user's request (Dot dithering is used)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Execute Auto Adjust Gradation (Full Adjust).

Display/Adj/Set Range 0 to 1

0: Line dithering, 1: Dot dithering

Default Value 0

Related Service Mode COPIER> TEST> PG> TXPH

PSCL-TBL 1 Setting of Bk-color density increase

Detail To set whether to increase the density of Bk-color.

When 1 is set, the parameters of auto gradation adjustment are adjusted so that Bk-color becomes darker. As the Bk-color toner deposit amount is increased, toner deposit amounts of Y/M/C-color which are mixed with Bk-color are decreased.

Use Case When black color density is low on plain paper with rough surface (rough paper)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

3) Execute auto gradation adjustment (full adjustment).

Caution Be sure to execute auto gradation adjustment (full adjustment) after the setting is done.

Display/Adj/Set Range 0 to 1

0: Normal, 1: Only the density of Bk-color is high

Default Value 0

BGE-OFS 2 Fine adj at bckgd adj (bckgd removal)

Detail To make a fine adjustment of the background adjustment (background removal) level which can

be set manually.

Break up the adjustment values into smaller ones when user does not satisfy with the default

adjustment values.

Use Case When color fogging occurs on the output image when copying yellowed blank paper as an original

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Caution Since the background color is set to be washed out with this mode, not only the background of

yellowed blank paper, but also other light colors (light blue, etc.) are washed out.

Display/Adj/Set Range -15 to 15

Default Value 0

Additional Functions Copy> Options> Density> Background Density

IMG-DEV

COPIER (Service mode for printer) > OPTION (Specification setting mode) > IMG-DEV

AUTO-DH 1 ON/OFF of proc auto adj at warm-up rotn

Detail To set ON/OFF of process auto adjustment (D-max/D-half control) at warm-up rotation.

Use Case When density varies at the time of making a large number of outputs

Display/Adj/Set Range 0 to 2

0: OFF, 1: ON (HH environment only), 2: ON (all environments)

Default Value

DV-RT-LG 2 ON/OFF of Drum Unit first idle rotation

Detail To set ON/OFF of idle rotation of the Drum Unit to be performed first time for the day.

Although idle rotation is not performed in the normal operation to extend the life of Drum Unit,

execute it for 60 seconds when any problem (image failure, etc.) occurs.

Use Case When an image failure occurs

Display/Adj/Set Range 0 to 1

0: OFF, 1: ON (60 seconds)

| ADJ-VPP 2 | Adj of dev AC bias Vpp: plain/rcycl 1/2 |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Detail | To adjust Vpp of the developing AC bias when printing plain paper 1, 2/recycled paper 1, 2 (which paper width is A4 or larger). As the value is incremented by 1, Vpp changes by 100 V. Decrease the value when fogging/bias leak/high density occurs. |
| Use Case | When an image failure (carrier adherence, ring marks, etc.) occurs |
| Adj/Set/Operate Method | 1) Enter the setting value, and then press OK key. 2) Execute Auto Adjust Gradation > Full Adjust. |
| Caution | If the value is too small, the contrast becomes weak. |

TMP-TBL5 1 Fixing control temperature: Thin ppr

Detail To set the offset of fixing control temperature for thin paper (60 to 63 g/m2).

> As the value is incremented by 1, the control temperature changes by 5 deg C from the specified value.

Increase the value when a fixing failure occurs. Decrease the value when fixing offset occurs.

Use Case When offset/fixing failure occurs on thin paper

Adj/Set/Operate Method 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Turn OFF/ON the main power switch.

Caution Be sure to change the value a little at a time. Otherwise, offset/image failure occurs when setting

an extreme value.

FXS-TMP2 Image leading edge control temp: heavy 1

Detail To set the offset of image leading edge control temperature for heavy paper 1 (106 to 128 g/m2).

As the value is incremented by 1, the control temperature is increased by 5 deg C from the specified value.

Increase the value when a fixing failure occurs on the leading edge of paper. Decrease the value when uneven gloss occurs on the leading edge (56.5 mm).

Use Case When uneven gloss occurs on the leading edge (56.5 mm) of heavy paper 1

Adj/Set/Operate Method 1) Enter the setting value (switch negative/positive by -/+ key) and press OK key.

2) Turn OFF/ON the main power switch.

Caution Be sure to change the value a little at a time. Otherwise, offset/image failure occurs when setting

an extreme value.

SJ-UNMSK 2 ON/OFF secured job masking cancellation

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to mask other people's secured jobs.

When 0 is set, operation of other people's secured jobs is not possible because they are masked. When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Masking is canceled and other people's secured jobs can be operated.

It is enabled at MEAP authentication.

Use Case When operating secured jobs in charge mode Type-C

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: OFF (Masking enabled), 1: ON (Masking canceled)

Default Value (

Related Service Mode COPIER> OPTION> ACC> COIN

SJ-CLMSK 2 ON/OFF secured job stop button display

Detail *Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to display the button to stop a secured job.

When 0 is set, the stop button is displayed.

When COIN is set to 6 or 7 (charge mode: Type-C), set 1. Since the stop button is not displayed,

the secured job cannot be stopped.

Use Case When prohibiting to stop the secured job in charge mode Type-C

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: OFF (Display), 1: ON (Hide)

Default Value 0

Related Service Mode COPIER> OPTION> ACC> COIN

PRTDP-SW 1 Set delivery side for 1-page job:2-sided

Detail To set whether to deliver paper face-up or face-down when printing only 1 page although 2-sided

print is set.

When 0 is set, paper is delivered face-down like 1-sided job. (Paper does not pass through the

Duplex Path.)

When 1 is set, paper is delivered face-up via the Duplex Path. Paper feed distance becomes longer

so productivity is decreased.

Use Case When changing the delivery side of 1-page print although 2-sided print is set

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Display/Adj/Set Range 0 to 1

0: Face-down delivery, 1: Face-up delivery

Default Value 0

PDFD-MSW 2 Set output paper size: direct print PDF

Detail To set output paper size at direct print PDF.

Usually, the region defined by MediaBox is output. However, in some cases, the region defined (trimmed) by CropBox is judged as output paper size depending on PDF file.

Set 1 when output result differs from what is defined at direct print PDF.

Use Case When preferring to output a PDF file with paper which size is defined by CropBox while the sizes of MediaBox and CropBox are different

Display/Adj/Set Range 0 to 1

0: MediaBox (Normal), 1: CropBox

Default Value 0

LGCY-SCP 2 Setting of PPA/secured print switch

Detail

*Operation on this item is restricted by the setting of [Restrict Service Representation Access].

To set whether to use the PPA function or the conventional secured print function.

Set 0 when using the PPA function. The conventional secured print function is disabled.

Set 1 when using the conventional secured print function (when the EFI Controller is connected, etc.). The PPA function is disabled.

When IMG-CONT is set to 3 or 4 for connecting the EFI Controller, the setting of this item becomes

When this item is set to 0, the setting of UI-PPA becomes 1. When this item is set to 1, the setting

of UI-PPA becomes 0.

Use Case When using the conventional secured print function (when the EFI Controller is connected, etc.)

Adj/Set/Operate Method 1) Enter the setting value, and then press OK key.

2) Turn OFF/ON the main power switch.

Caution The PPA function cannot be used when the EFI Controller is connected.

Display/Adj/Set Range

0: Use the PPA function, 1: Use the conventional secured print function

Default Value

Related Service Mode COPIER> OPTION> DSPLY-SW> UI-PPA

■ P-STOP

COPIER (Service mode for printer) > TEST (Print test mode) > P-STOP

PRINTER

1 Forcible stop of paper feed

Detai

To forcibly stop paper for the next job at the specified position (only once).

Leading edge of paper stops at the specified position so that the cause of a problem can be identified.

Set 99 when checking an image on the ITB.

When the operation is stopped forcibly, jam code "AAxx" is displayed.

When a normal jam occurs at a position other than the specified position or paper is delivered without being forcibly stopped, this setting is automatically cleared.

Use Case

- When bent paper/skew/wrinkles occur
- When jam occurs frequently
- When checking an image on the ITB

Adj/Set/Operate Method

- 1) Enter the setting value, and then press OK key.
- 2) Execute a job (copy/test print). Paper stops at the specified position.

Caution

- Remove the paper being stopped with the normal jam removal procedure. After jam removal, the job is automatically recovered.
- Because the Primary Transfer Roller is not disengaged when a jam occurs, manually disengage the roller (refer to the Service Manual for the procedures) and then remove the ITB Unit/Drum Unit.
- Display of standard jam code indicates that a jam occurs somewhere other than the specified position. Setting of forcible stop is enabled until paper stops at the specified position.
- The setting is disabled for job where paper does not pass through the specified position.
- Unfixed toner may be adhered on paper depending on the stop position. Thus, handle it with care.

Display/Adj/Set Range

0 to 255

- 0: Not forcibly stopped
- 1: After pickup from the Cassette 1
- 2: After pickup from the Cassette 2
- 3: After pickup from the Cassette 3
- 4: After pickup from the Cassette 4
- 20: Pre-registration (1st side)
- 21: Pre-registration (2nd side) *1
- 30: Secondary Pre-transfer (1st side)
- 31: Secondary Pre-transfer (2nd side) *1
- 32: Pre-fixing
- 40: Post-fixing
- 70: Post-reverse *1
- 71: Duplex standby position *1
- 99: Secondary Pre-transfer (when checking the image)

Any values other than those mentioned above: Not used

*1: Paper is stopped when a duplex job is executed (paper is stopped after being reversed)

Default Value

Display/Adj/Set Range

0 to 99999999

SERVICE2 1 Service-purposed total counter 2

Detail To count up when the paper is delivered outside the machine.

Large size: 2, small size: 1 A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

COPY 1 Total copy counter

Detail To count up when the paper is delivered outside the machine.

Large size: 1, small size: 1 A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

PDL-PRT 1 PDL print counter

Detail To count up when the paper is delivered outside the machine according to the charge counter at

PDL print.

Large size: 1, small size: 1
A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

FAX-PRT 1 FAX reception print counter

Detail To count up when the paper is delivered outside the machine according to the charge counter at

FAX reception.

Large size: 1, small size: 1 A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

BOX-PRT 1 Inbox print counter

Detail To count up when the paper is delivered outside the machine according to the charge counter at

Inbox print.

Large size: 1, small size: 1 A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

RPT-PRT 1 Report print counter

Detail To count up when the paper is delivered outside the machine according to the charge counter at

report print.

Large size: 1, small size: 1 A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

2-SIDE 1 2-sided copy/print counter

Detail To count up when the paper is delivered outside the machine according to the charge counter at

2-sided copy/print. Large size: 1, small size: 1

A blank sheet is not counted.

Display/Adj/Set Range 0 to 99999999

SCAN

1 Scan counter

Detail To count the number of scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operations according to the charge counter when the scan operation according to the scan ope

To count the number of scan operations according to the charge counter when the scanning operation is complete.

Large size: 1, small size: 1

Display/Adj/Set Range 0 to 99999999

| WST-TNR | 1 | Waste Toner Container parts counter |
|---------|---|-------------------------------------|
| | | |

Detail Total counter value from the previous replacement

The counter value is automatically cleared when it is replaced while the Waste Toner Container

preparation warning message or waste toner full message is displayed.

If it is replaced while neither message is displayed, it is necessary to clear the counter value

manually.

Use Case When checking the consumption level of parts

Adj/Set/Operate Method To clear the counter value: Select the item, and then press Clear key.

Caution Clear the counter value if it is replaced while neither the Waste Toner Container preparation

warning message nor waste toner full message is displayed.

FEEDER (ADF service mode)

ADJUST (Adjustment mode)

FEEDER (ADF service mode) > ADJUST (Adjustment mode)

DOCST Adj of DADF img lead edge margin: front

To adjust the leading edge margin on the front side at DADF reading.

This function is executed when an image that has been imaged in a state where skew correction is not performed/has failed is out of alignment.

(In the service mode, when skew correction is turned off or when the inclination of the document is large or the document is chipped.)

When replacing the Controller PCB/clearing RAM data, enter the value of service label.

As the value is incremented by 1, the margin is reduced by 0.1 mm. (The image moves upward.)

Use Case When clearing the Reader-related RAM data/replacing the Controller PCB

Adj/Set/Operate Method Enter the setting value (switch negative/positive by -/+ key) and press OK key.

Display/Adj/Set Range -45 to 30

Unit mm

0 **Default Value**

Amount of Change per Unit

LA-SPEED Fine adj img ratio: DADF, vert scan, front 1

Detail To make a fine adjustment of the front side image magnification ratio in vertical scanning direction

at DADF reading. As the value is incremented by 1, the image is reduced by 0.01% in vertical scanning direction. (The feeding speed increases, and the image is reduced.)

Use Case - When installing DADF

- When replacing the SATA Flash PCB

- When replacing the clearing the Reader-related RAM data

Enter the setting value (switch negative/positive by -/+ key) and press OK key. Adj/Set/Operate Method

FAX (FAX service mode)

■ Configuration of the Service Mode

Service mode is divided into the following 10 items (#1 to #10).

| Item | Name | Description |
|-------------------|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| #1 SSSW | Service software switch | This can be used to conduct the registration/settings relating to basic functions of the fax, such as error management, echo prevention and prevention of communication problems. |
| #2 MENU | Menu switch setting | This can be used to conduct the registration/settings relating to the required functions at installation, such as NL equalizer, transmission level. |
| #3 NUMERIC Param. | Setting of numeric parameters | This can be used to enter numeric parameters. |
| #4 NCU | (Adjustment by a service technician is not possible.) | The values of this item are collectively set based on the setting of #5 TYPE. |
| #5 TYPE | Country/region set- ting | If the item "STANDARD" displayed on the display is set, #4 NCU data is collectively set to comply with the communication standards in Japan. |
| #6 IPFAX | Communication set- tings of IPFAX | If the license option for IPFAX has been enabled, IPFAX is displayed. |
| #7 PRINT | Printer function set- ting | This can be used to conduct the registration/settings relating to the printer basic service functions, such as size reduction conditions for received images. |
| #8 CLEAR | Data initialization mode setting | This item is to initialize each data. |
| #9 TEST | Test Mode | To execute various tests. |
| #10 REPORT | Service Report | To execute report print. |

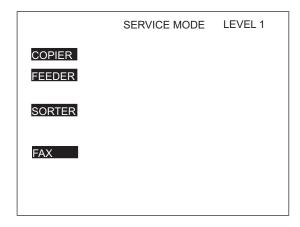

CAUTION:

If a 2nd line fax option is installed, IPFAX cannot be used.

Operation method

1. Enter service mode.

2. When the connected options (FEEDER, SORTER, FAX, BOARD) are displayed, select FAX and enter service mode of this board.

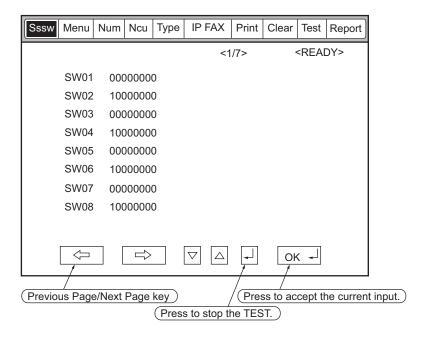

COPIER: Service mode of the connected equipment

FEEDER: Service mode of the ADF (*) SORTER: Service mode of the Finisher (*)

FAX: Service mode of the fax (*)

The following explains the operation method using the #1 SSSW screen as an example. The meaning of the keys and operations are common for all screens.

- · When changing the setting of the bit switch, directly press the bit (numeric value) you want to change.
- To enter a numeric value, use the numeric keypad.
- When confirming a change in a numeric value or when executing an item, press the [OK] key.
- · To return to the previous layer, use the [Reset] key.

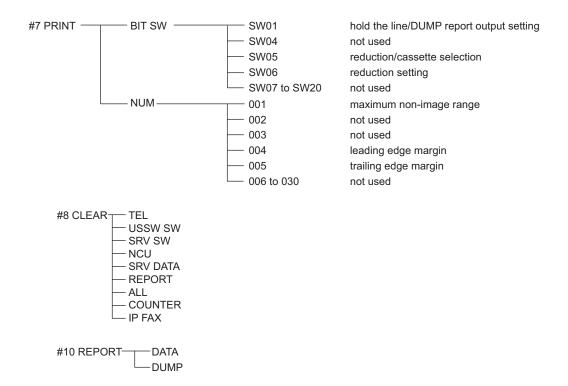

CAUTION:

When changing the service mode settings, turn OFF and then ON the power.

The details of settings in service mode are stored in the storage of the host machine. The settings for this board are enabled by loading the settings stored in the storage of the host machine to the G3 Fax Control PCB when the main power is turned ON. Therefore, be sure to turn OFF and then ON the power when the settings have been changed.

Setting of Bit Switch (SSSW)

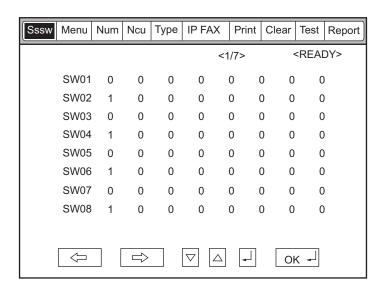

■ Bit Switch Composition

The registration/setup items of the switch are set according to the positions of its 8 bits; the bit switch shown on the display is as follows, each bit being either 0 or 1:

CAUTION:

Do not change service data identified as "not used"; they are set as initial settings.

SSSW-SW01

Functional Construction

| Bit | Function | 1 | 0 |
|-----|-------------------------------------------------|----------|-----------------|
| 0 | Error codes for service technician | Output | Do not output |
| 1 | Error dump list | Output | Do not output |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Display service error codes in the ##300 series | Display | Do not display |
| 5 | Increase the capacity of SUBLOG for USBFAX2 | Increase | Do not increase |
| 6 | Not used | - | - |
| 7 | Cancel prohibition of user setting collectively | Cancel | Do not cancel |

Details of Bit 0

Select whether to output service error codes.

When "Output" is selected, service error codes will be on the display and on the report.

Detailed Discussions of Bit 1

Select whether to output error dump list.

When "Output" is selected, the error transmission report and the reception result report at the time of occurrence of an error are output with the error dump list attached.

Detailed Discussions of Bit 4

Select whether to display service error codes in the ##300 series.

Detailed Discussions of Bit 5

Select whether to increase the log storage area when firmware automatic update function of USBFAX2 (a modem with Silicone Labs modem mounted version) is used.

Detailed Discussions of Bit 7

Select whether to collectively cancel the prohibition of user settings.

• SSSW-SW02

Functional Construction

| Bit | Function | 1 | 0 |
|-----|-------------------------------------------------|-----------|-----------------|
| 0 | Not used | - | - |
| 1 | Not used | - | - |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | To prohibit control channel retrain during V.34 | Prohibit | Do not prohibit |
| 5 | Not used | - | - |
| 6 | Not used | - | - |
| 7 | F-NET service without ring tone | Supported | Not supported |

Detailed Discussions of Bit 4

Select whether to prohibit the control channel retrain during V.34.

Detailed Discussions of Bit 7

Select whether to support F-NET (fax communication network) service without a ring tone.

If "Supported" is selected, fax document will be automatically received without a ring tone when FC signal (1300 Hz tonal signal) from F-NET is detected.

• SSSW-SW03

Functional Construction

| Bit | Function | 1 | 0 |
|-----|----------------------------------------------|------|-------------|
| 0 | Not used | - | - |
| 1 | Echo protect tone at high speed transmission | Send | Do not send |

| Bit | Function | 1 | 0 |
|-----|---------------------------------------------------|-------------------------|-------------------------|
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Transmission mode: International transmission (1) | Yes | No |
| 5 | Transmission mode: International transmission (3) | Yes | No |
| 6 | Send mode | International transmis- | International transmis- |
| | | sion (3) | sion (2) |
| 7 | Tonal signal before sending CED signal | Send | Do not send |

Use it to enable/disable sending an echo protect tone for a high-speed transmission V.29 modem signal (transmission speed at 9600 or 7200 bps).

If errors occur frequently at time of sending fax because of the condition of the line, select "Send". Selecting "send" sends non-modulated carrier for about 200 ms as the synchronous signal before sending images.

NOTE:

Error codes caused by line condition when sending fax ##100, ##104, ##281, ##282, ##283, ##750, ##755, ##760, ##765

Detailed Discussions of Bits 4, 5 and 6

Transmission mode: Selected to use whether international transmission (1), international transmission (2) or international transmission (3).

Use these switches or the dial registration to select a transmission mode if errors occur frequently at time when sending fax overseas.

NOTE:

Error codes caused by echoes at time of sending fax

#005, ##100, ##101, ##102, ##104, ##201, ##280, ##281, ##283, ##284, ##750, ##766, ##765, ##774, ##779, ##784, ##794

Settings using the Dial Registration (user level):

Select "international transmission (1)" when making an entry in the address book. If errors persist, select "international transmission (2)" and then "international transmission (3)".

Transmission mode selected using One-Touch Dial function or the Speed Dial function will be given priority over the setting made by the service soft switch.

An international transmission mode may be selected using the keypad if a mode has been selected using this switch; for settings, see the following table:

| Transmission mode | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
|-------------------------------------|------|------|------|------|------|------|------|------|
| International trans- mission (1) | * | 0 | 0 | 1 | - | - | * | - |
| International trans- mission (2) | * | 0 | 1 | 0 | - | - | * | - |
| International trans- mission (3) | * | 1 | 1 | 0 | - | - | * | - |

International transmission (1): Selected to ignore the first DIS signal from the other party.

International transmission (2): Selected to transmit a 1850-Hz total signal when transmitting the DIS signal.

International transmission (3): Selected to transmit a 1650-Hz total signal when transmitting the DIS signal.

Detailed Discussions of Bit 7

Select whether to enable/disable sending of a 1080-Hz tonal signal before sending CED signal. Select "Send" if errors occur frequently because of an echo when reception is from overseas.

NOTE:

Error codes caused by echoes at the time of reception #005, ##101, ##106, ##107, ##114, ##200, ##201, ##790

SSSW-SW04

Functional Construction

| Bit | Function | 1 | 0 |
|-----|-----------------------------------------------------------|------------|----------------------|
| 0 | LC monitoring | Monitor | Do not monitor |
| 1 | Check the CI signal frequency | Check | Do not checked |
| 2 | Final flag sequences of the procedure signal | 2 pcs | 1 piece |
| 3 | Reception mode after sending CFR signal | High speed | High speed/low speed |
| 4 | Time to ignore low-speed signals after sending CFR signal | 1500 msec | 700 msec |
| 5 | Check the CS signal frequency (when PBX is set) | Check | Do not check |
| 6 | CNG signal at the time of manual sending | Send | Do not send |
| 7 | CED signal at the time of manual reception | Send | Do not send |

Detailed Discussions of Bit 1

Select whether to check the CI signal frequency.

Detailed Discussions of Bit 2

Select the number of the final flag sequences with the procedure signal (300 bps transmission speed).

Select "2" when the other party's machine does not properly receive the procedure signal sent by this machine.

NOTE:

Error codes occurring at the time of sending fax

##100, ##280, ##281, ##750, ##753, ##754, ##755, ##758, ##759, ##760, ##763, ##764, ##765, ##768, ##769, ##770, ##773, ##775, ##778, ##780, ##783, ##788, ##788

Detailed Discussions of Bit 3

Select a reception mode after sending CFR signal.

Select "High speed" in the case of frequent errors caused by line condition at the time of reception. Simultaneously, turn "OFF" the "ECM reception" of the user data.

NOTE:

Error codes caused by line condition at the time of reception

##107, ##114, ##201

Be sure to change bit 4 before changing this bit; if errors still occur, change this bit.

When 'high speed' is selected, only high-speed signals (images) will be received after sending the CFR signal.

Detailed Discussions of Bit 4

Select the time length during which low-speed signals are ignored after sending the CFR signal.

Select "1500 msec" when reception of image signal is difficult because the line condition is not good.

Detailed Discussions of Bit 5

Select whether to check the CI signal frequency when PBX is set.

Detailed Discussions of Bit 6

Select whether to send CNG signal at the time of manual sending.

If error occurs frequently at manual sending when the destination device that has FAX/TEL switch mode does not change to the fax mode, select "Send".

Detailed Discussions of Bit 7

Select whether to send CED signal at the time of manual reception.

Select "Send" when the other party's machine does not start sending although manual reception is executed.

• SSSW-SW05

Functional Construction

| Bit | Function | 1 | 0 |
|-----|--------------------------------------------|-----|----|
| 0 | Not used | - | - |
| 1 | To execute mm/inch conversion (text mode). | Yes | No |
| 2 | Not used | - | - |

| Bit | Function | 1 | 0 |
|-----|--------------------------------------------------|------------|-----------------|
| 3 | To send bit 33 or later of DIS signal. | Prohibit | Do not prohibit |
| 4 | Record paper length to be declared by DIS signal | A4/B4 size | Any size |
| 5 | Not used | - | - |
| 6 | Not used | - | - |
| 7 | Not used | - | - |

Execute mm/inch conversion for the image scanned in text mode.

Detailed Discussions of Bit 3

Select whether to send bit 33 or later of DIS signal.

CAUTION:

If "Prohibit" is selected, the super-fine reception from other brand printers or memory box function will be disabled.

Detailed Discussions of Bit 4

Select whether the paper to be declared by DIS signal is a cut paper.

Select "A4/B4 size" if dividing the original at the sending machine side at the time of receiving a long original.

NOTE:

Depending on the model of sending machine, long originals may not be divided.

• SSSW-SW09

Functional Construction

| Bit | Function | 1 | 0 |
|-----|--------------------------------------------------|---------|----------------|
| 0 | Communication result at normal completion | Display | Do not display |
| 1 | Communication result at completion with an error | Display | Do not display |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Not used | - | - |
| 5 | Not used | - | - |
| 6 | Not used | - | - |
| 7 | Not used | - | - |

Detailed Discussions of Bit 0 and 1

Select whether to continue displaying the communication result on the Control Panel at normal completion and/or at completion with an error.

• SSSW-SW12

| 6 | Not used | - | - |
| 7 | Not used | - | - |

Select a phone number to be indicated on the report after transmission is completed.

Caller's number: To display the caller's phone number on the report

Receiver's number: To indicate the phone number (CSI signal data) sent from the other party's machine on the report

Detailed Discussions of Bit 5

Select whether to prohibit the firmware automatic update for USB Fax.

• SSSW-SW26

Functional Construction

| Bit | Function | 1 | 0 |
|-----|------------------------------------------------|---------------|--------------|
| 0 | Not used | - | - |
| 1 | Not used | - | - |
| 2 | Check the sequential broadcast. | Check | Do not check |
| 3 | Not used | - | - |
| 4 | Not used | - | - |
| 5 | Redial function when transmission error occurs | Use | Do not use |
| 6 | Not used | - | - |
| 7 | Error report when sending process is canceled | Do not output | Output |

Detailed Discussions of Bit 2

Select whether to display a confirmation message when entering destination for the sequential broadcast in order to prevent the user from broadcasting by mistake.

Detailed Discussions of Bit 5

Select whether to use the redial function when outgoing transmission error occurs.

Detailed Discussions of Bit 7

Select whether to output an error report when the [Stop] key is pressed to cancel sending.

• SSSW-SW28

Functional Configuration

| Bit | Function | 1 | 0 |
|-----|--------------------------------------|----------|-----------------|
| 0 | V.8 procedure at the caller side | No | Yes |
| 1 | V.8 procedure at the receiver side | No | Yes |
| 2 | V.8 late start at the caller side | No | Yes |
| 3 | V.8 late start at the receiver side | No | Yes |
| 4 | Fallback from the V.34 receiver side | Prohibit | Do not prohibit |
| 5 | Not used | - | - |
| 6 | Not used | - | - |
| 7 | Not used | - | - |

Detailed Discussions of Bit 0

Select whether to execute V.8 procedure when making a call.

"No": V.8 procedure is not executed even if V.8 procedure is received from the receiver side, and the procedure starts from V.21.

Select whether to execute V.8 procedure when receiving a call.

"No": V.8 procedure is not executed, and the procedure starts from V.21.

Detailed Discussions of Bit 2

Select whether to execute V.8 procedure when ANSam signal from the receiver side cannot be recognized at the time of making a call and V.8 procedure is declared by DIS signal from the receiver side.

"Yes": CI signal is sent in response to the DIS signal of the receiver side to execute the V.8 procedure.

"No": CI signal is not sent in response to the DIS signal of the receiver side, and the V.21 procedure is executed.

In the case of manual transmission, there will be no V.8 late start regardless of this setting.

Detailed Discussions of Bit 3

Select whether to declare the existence of the V.8 procedure with the DIS signal that is transmitted after the ANSam signal in case that the ANSam signal at the reception is not recognized at the caller side.

"Yes": V.8 procedure is declared by DIS signal and V.8 procedure is executed after CI signal is sent from the caller side.

"No": V.8 procedure is not declared by DIS signal, and V.21 procedure is executed.

In the case of manual transmission, there will be no V.8 late start regardless of this setting.

Detailed Discussions of Bit 4

Select whether to prohibit fallback from the V.34 receiver side.

"Prohibit": There will be no fallback from the receiver side.

Detailed Discussions of Bit 5

Switch the detection method when executing the dial tone detection at the time of calling.

- 0: New detection method (default)
- 1: Not used

Detailed Discussions of Bit 6

Select whether to execute flow control between pages.

SSSW-SW50

Functional Construction

| Bit | Function | 1 | 0 |
|-----|----------------------------------------------------------------------------------------|------------------|---------------------|
| 0 | Transmission number restriction: Function to prevent no external access code *2 | ON: Enable | OFF: Disable |
| 1 | Transmission number restriction: Extension allowance, prohibition *2 | Prohibited | Allow |
| 2 | Transmission number restriction: Add "0" to the first digit of external access code *2 | Yes | No |
| 3 | Operate as the client of a fax server *1 *a | Yes | No |
| 4 | Display the send job stop confirmation screen when pressing Stop key *2 | No | Yes |
| 5 | Send jobs that are targeted to stop when pressing Stop key *2 | Ongoing send job | Incomplete send job |
| 6 | not used | - | - |
| 7 | not used | - | - |

^{*1:} Supported by the platform version 306 or later

^{*2:} Supported by the platform version 307 or later

*a: Enabled only for USA

Details of Bit 0

To prevent incorrectly sending fax due to forgetting to use the external access number, "0", this function displays a pop-up warning window and prevents sending and returns to the status before pressing Start button by pressing [OK] after setting the fax number in [Fax] or [Scan and Send] and pressing Start button if the set telephone number does not start with "00". This function is supported even if the machine is operating in the fax server mode.

0: ON: Disable 1: OFF: Enable

CAUTION:

- If using this function, enter the telephone number from the area code.
- This function applies to the fax destination telephone number of "Address List", "One-touch" and "Numeric Keypad input".

However, the warning is not displayed with "sending from Mail Box" and "manual sending".

- A warning is displayed when sending IP fax but it is not displayed when sending PC fax.
- A warning is not displayed when forwarding transmission.
- If any registered number matches to the condition for displaying a warning, the warning is displayed with "sequential broadcast" and "group sending".
- "*" and "#" are also processed as a number.

NOTE:

Example of sending fax to 03-1234-5678

- The machine accepts sending fax with "0 (external access code) + 03 1234 5678 (telephone number)".
- The machine displays a warning and stops sending with "(no external access code) + 03 1234 5678 (telephone number)".
- If the external access code is other than "0", it can be changed from the following service mode.
 Service Mode > FAX > NUM > 080

Change the default setting of 080 from "0" to the external access code used in the installation environment.

Details of Bit 1

This is set to allow or prohibit transmission to the extension line.

This is enabled only if Bit 0 (function to prevent no external access code) is "1" (ON: Enable).

If transmission to the extension line is allowed, all telephone numbers not starting with the external access code are allowed. For example, if the external access code is "0", any number starting with "00" as starting 2 digits and number of the extension line are allowed. This means numbers starting with "01" to "09" are prohibited and other numbers are allowed.

If transmission to the extension line is prohibited, only allow the telephone number starting with the external access code + area code "0". For example, if the external access code is "0", allow only numbers starting with "00" as starting 2 digits. Prohibit all extension numbers. This means only numbers starting with "00" are allowed and other numbers are prohibited.

0: Allow

1: Prohibit

Details of Bit 2

This is the switch to add "0" to the beginning of external access code (default "0") set by the NUM switch 080.

The NUM switch can be used to set "0" and "1" but not "00" and "01" as the external access code.

This switch is used to solve this issue. In the above example, set this setting to "add" and then set the NUM switch 080 to "0" and "1" to set the external access code of "00" and "01".

0: No

1: Yes

CAUTION:

- This automatically adds the external access number to the destination telephone number for sending fax registered by Address List, One-touch and entering by the Numeric Keypad excluding Direct Send and Send from Mail Box.
- · This should be set only in the network environment that sends fax by adding the external access code.
- Do not add the external access code to the telephone number for fax send destination as the external access code is automatically added.

Details of Bit 3

This switch operates the machine as the client of fax server.

0: No

1: Yes

CAUTION:

When changing this switch, make sure to turn OFF and then ON then ON the power supply twice. This is the specification for changing the fax configuration and is the same specification as adding the Fax Board to the existing machine.

Details of Bit 4

This is the switch to set to display the send job stop confirmation screen if the Stop key is pressed during sending fax.

- 0: No
- 1: Yes

Details of Bit 5

This is the switch to set to stop the ongoing send job or incomplete send job if the Stop key is pressed during sending fax.

- 0: Incomplete send job
- 1: Ongoing send job

Setting of Menu Switch (MENU)

■ Configuration of Menu Switches

| Sssw | Menu | Num | Ncu | Туре | IPFAX | Print | Clear | Test | Report |

| No. | Function | Scope of selection |
|-----|---------------------------------------|------------------------------------------------------|
| 005 | NL equalizer | 1: ON, 0: OFF |
| 006 | Phone line monitoring | 0 to 3 |
| 007 | Transmission level (ATT) | 8 to 15 (ex: 15 = -15 dBm) |
| 008 | Upper limit for V.34 modulation speed | 0: 3429, 1: 3200, 2: 3000, 3: 2800, 4: 2743, 5: 2400 |
| 009 | Upper limit for V.34 data speed | 0 to 13 |
| 010 | Frequency of pseudo CI signal | 0: 50 Hz, 1: 25 Hz, 2: 17 Hz |

005: NL equalizer

Select ON/OFF of NL equalizer.

Select "1: ON" in the case of frequent errors caused by line status at the time of communication.

NOTE:

Error codes caused by line status at the time of transmission
##100, ##101, ##102, ##104, ##201, ##281, ##282, ##283, ##750, ##755, ##765, ##774, ##779, ##784, ##789
Error codes caused by line status at the time of reception
##103, ##107, ##114, ##201, ##790, ##793

006: Phone line monitoring

Set whether to make monitoring tone of the phone line from the speaker.

• 0 (DIAL):

To make monitoring tone of the phone line from the speaker from the start of line connection until the DIS.

1:

To make monitoring tone of the phone line from the speaker from the start of communication until the completion.

• 2:

Not used

• 3 (OFF):

There will be no monitoring tone of the phone line from the speaker.

007: ATT transmission level

Set the transmission level (ATT).

Increase the transmission level (make it closer to 8) in the case of frequent errors caused by line status at the time of communication.

NOTE:

Error codes caused by line status at the time of transmission

##100, ##101, ##102, ##104, ##201, ##280, ##281, ##282, ##283, ##284, ##750, ##752, ##754, ##755, ##757, ##759, ##760, ##762, ##764, ##765, ##767, ##769, ##770, ##772, ##774, ##775, ##777, ##779, ##780, ##784, ##785, ##785, ##787, ##789 Error codes caused by line status at the time of reception ##103, ##106, ##107, ##201, ##793

008: Upper limit for V.34 modulation speed

Select the upper limit of the modulation speed (baud rate) in the V.34 primary channel. When 4 (2743 baud) is selected, the communication is actually performed at 2400 baud.

009: Upper limit of V.34 data speed

Select an upper limit of data transmission speed in the V.34 primary channel in the range between 2.4k and 33.6kbps at 2400bps intervals (0: 2.4 kbps to 13: 33.6 kbps).

010: Pseudo CI signal frequency

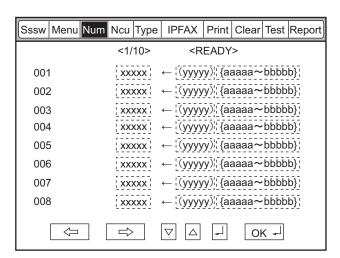

Set pseudo CI signal frequency.

Depending on the type of external phones, there is no ring tone when the FAX/TEL switching function is working. Change the pseudo CI signal frequency when there is no ring tone.

Setting of Numeric Parameter (NUMERIC Param.)

■ Configuration of Numeric Parameters

| No. | Function | Setting range | Default value |
|-----|-------------------------------------------|---------------------|---------------|
| 002 | RTN transmission condition (1) | 1 to 99% | 10 |
| 003 | RTN transmission condition (2) | 2 to 99 times | 15 |
| 004 | RTN transmission condition (3) | 1 to 99 lines | 12 |
| 005 | NCC pause time (before ID code) | 1 to 60 sec | 4 |
| 006 | NCC pause time (after ID code) | 1 to 60 sec | 4 |
| 007 | Prepose time at the time of making a call | 0 to 9999 (x 10 ms) | 0 |

| No. | Function | Setting range | Default value |
|-----|-------------------------------------------------------------------------|-----------------------|---------------|
| 009 | Comparing the number of digits between the sender's telephone number | 0 to 20 digits | 0 |
| | and the receiver's telephone number | | |
| 010 | Line connection identification time | 0 to 9999 (x 10 ms) | 5500 |
| 011 | T.30 T1 timer (for reception) | 0 to 9999 (x 10 ms) | 3500 |
| 013 | T.30 EOL timer | 500 to 3000 (x 10 ms) | 1300 |
| 015 | Hooking detection time | 0 to 999 | 120 |
| 016 | Time until a temporary response is obtained when switching FAX/TEL | 0 to 9 | 4 |
| 017 | Pseudo RBT signal pattern ON time | 0 to 999 | 100 |
| 018 | Pseudo RBT signal pattern OFF time (short) | 0 to 999 | 0 |
| 019 | Pseudo RBT signal pattern OFF time (long) | 0 to 999 | 200 |
| 020 | Pseudo CI signal pattern ON time | 0 to 999 | 100 |
| 021 | Pseudo CI signal pattern OFF time (short) | 0 to 999 | 0 |
| 022 | Pseudo CI signal pattern OFF time (long) | 0 to 999 | 200 |
| 023 | CNG detection level when switching FAX/TEL | 0 to 7 | 4 |
| 024 | Pseudo RBT transmission level when switching FAX/TEL | 10 to 20 (TYPE = | 20 |
| | | STANDARD) | |
| 025 | CNG monitoring time when the answering phone connection function is set | | |
| 026 | Silent detection level when the answering phone connection function is | | |
| 007 | Set | 00 (40) | |
| 027 | V.21 low-speed flag preamble detection time | 20 (-10 ms) | 0 |
| 028 | Off-hook PCB duty settings | 1 to 99% | 0 (50%) |
| 080 | Transmission number restriction: Outside line transmission number *1 | 0 to 9999 | 0 |

^{*1 :} Supported on the platform version 307 or later

002: RTN transmission condition (1)/003: RTN transmission condition (2)/004: RTN transmission condition (3)

Set the RTN signal transmission condition.

In the case of frequent errors caused by RTN signal transmission at the time of reception, increase the parameters to loosen the RTN signal transmission condition.

NOTE:

Error codes caused by RTN signal transmission at the time of reception ##104, ##107, ##114, ##201

RTN signal transmission condition (1) is the ratio of error lines for the total number of lines per page of the received image.

RTN signal transmission condition (2) is the reference value (*2) of burst error (*1).

RTN signal transmission condition (3) is the number of errors that fail to meet the reference value of burst error.

*1: Burst error (transmission errors with several continued lines)

*2: Reference value (When "15" is set, transmission error with 15 consecutive lines is recognized as a burst error.)

When any of the above conditions is detected during reception of image signals, RTN signal is sent after reception of the procedure signal from the sending machine. Increasing such parameter sends less RTN signal.

005: NCC pause time (before ID code)

Set the pause time to be automatically entered between the access code and ID code when dialing on NCC (New Common Carrier) line.

006: NCC pause time (after ID code)

Set the pause time to be automatically entered between the ID code and the other party's telephone number when dialing on NCC (New Common Carrier) line.

007: Prepose time at the time of making a call

When automatically making a call, set the time from closing a line to making a call.

009: Comparing the number of digits between the sender's telephone number and the receiver's telephone number

Set the TSI comparing the number of digits (last XX digits) when matching telephone numbers.

010: Line connection identification time

Set the line connection identification time.

Increase this parameter in the case of frequent errors caused by line connection status at the time of communication.

NOTE:

Error codes caused by line connection status ##005. ##018

The line connection identification time is the duration from when the dial signal is transmitted until the line is disconnected at the sending side, or from when DIS signal is transmitted until the line is disconnected at the reception side.

011: T.30 T1 timer (for reception)

Set T1 timer at the time of reception (wait time until receiving the meaningful signal after DIS transmission).

013: T.30 EOL timer

Set the receivable 1 line transmission time.

In the case of a long line data length (e.g.: computer FAX), extend the transmission time to prevent reception errors.

015: Hooking detection time

Set the hooking detection time.

016: Time until the primary response is obtained when switching FAX/TEL

Set the time from when capturing the line until transmission of pseudo RBT at FAX/TEL switching function operation.

017: Pseudo RBT signal pattern ON time/ 018: Pseudo RBT signal pattern OFF time (short)/ 019: Pseudo RBT signal pattern OFF time (long)

Set the pattern of pseudo RBT signal to be sent at Fax/Tel switching function operation.

020: Pseudo CI signal pattern ON time/ 021: Pseudo CI signal pattern OFF time (short)/ 022: Pseudo CI signal pattern OFF time (long)

Set the pattern of pseudo CI signal to be sent at Fax/Tel switching function operation.

023: CNG detection level when switching FAX/TEL

Set the CNG detection level at Fax/Tel switching function operation.

024: Pseudo RBT transmission level when switching FAX/TEL

Set the transmission level of pseudo RBT at Fax/Tel switching function operation.

025: CNG monitoring time when the answering phone connection function is set

027: V21 low-speed flag preamble detection time

Set the period of time for judge detection of V.21 low-speed command preamble.

Continuous detection for the fixed period of time leads to command analysis.

028: Off-hook PCB duty settings

Set the Off-hook PCB duty setting.

When 0 or a value that is 100 or more is entered, the duty becomes 50%.

080: Transmission number restriction: Outside line transmission number

This sets the number permitted to dial to the outside line.

Only the outside line transmission by the set number is permitted and other numbers are prohibited from transmission.

Setting of Destination (TYPE)

Overview

When the type shown on the display is set, all the service data is set to match each country/region domestic telecommunication standards

Setting of Printer Functions (PRINTER)

■ Setting of Bit Switch (SSSW)

SSSW-SW01

Functional Construction

| Bit | Function | 1 | 0 |
|-----|-----------------------------------------------|--------|---------------|
| 0 | Not used | - | - |
| 1 | Not used | - | - |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Not used | - | - |
| 5 | Not used | - | - |
| 6 | Hold the line (when error code occurs) | Hold | Do not hold |
| 7 | Output a print log when DUMP report is output | Output | Do not output |

Detailed Discussions of Bit 6

Select whether to hold the line when an error code occurs.

However, in the case of vertical scanning prioritized recording, even when 0 is set for Bit 1 and Bit 0, the priority order will be Letter -> A4 -> Legal.

Detailed Discussions of Bit 7

Select whether to output a print log at the time of the DUMP report output.

| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Not used | - | - |
| 5 | To prohibit reduced size printing (A4) | Prohibited | Not prohibited |
| 6 | To prohibit reduced size printing (A4) | Prohibited | Not prohibited |
| 7 | Vertical scanning prioritized recording | Set | Do not set |

Detailed Discussions of Bit 0 and 1

When an image which can be printed in 100% magnification and with the same number of divided pages on any of A4, letter and legal is received, set which paper is prioritized for printing.

With the settings of Bit 0 and Bit 1, the priority order of the recording paper is shown in the following table.

| Bit 1 | Bit 0 | Priority order of the recording paper |
|-------|-------|---------------------------------------|
| 0 | 0 | A4 -> Letter -> Legal |
| 0 | 1 | Letter -> A4 -> Legal |
| 1 | 0 | Legal -> Letter -> A4 |
| 1 | 1 | Letter -> Legal -> A4 |

However, in the case of vertical scanning prioritized recording, the priority order will be Letter -> A4 -> Legal even when 0 is set for Bit 1 and Bit 0.

Detailed Discussions of Bit 5 and 6

Select whether to enable reduced size printing for A4 or LTR.

Set whether to set vertical scanning prioritized recording.

Set:

If B4 recording paper and A4 recording paper are set and an A4 extra-long image (*) is received, printing will be on the B4 recording paper.

Do not set:

If B5 horizontal recording paper and A4 recording paper are set and a B4 image is received, printing will be by division and on B5 horizontal recording paper.

*: Image B4 or shorter and that cannot be printed on A4 recording paper.

SSSW-SW06

Functional Construction

| Bit | Function | 1 | 0 |
|-----|--------------------------------|--------|---------|
| 0 | Not used | - | - |
| 1 | Not used | - | - |
| 2 | Not used | - | - |
| 3 | Not used | - | - |
| 4 | Not used | - | - |
| 5 | Reduced printing from A4 to B5 | Enable | Disable |
| 6 | Not used | - | - |
| 7 | Not used | - | - |

Detailed Discussions of Bit 5

Set whether to execute the reduction print that forcibly reduces the received A4 size document into the B5 size. This function is invalid when outputting the report.

■ Setting of Numeric Parameter (NUMERIC Param.)

Numerical Parameter Composition

| No. | Function | Setting range | Initial setting | Unit |
|-----|---------------------------------------------------------------------------------------|---------------|-----------------|------|
| 01 | Missing areas of printing image when receiving image with longer length than standard | 0 to 9999 | 12 | 1 mm |
| 04 | Leading edge blank area | 0 to 9999 | 3 | 1 mm |
| 05 | Trailing edge blank area | 0 to 9999 | 3 | 1 mm |

<001: printing upon reception of extra-length image>

Use it to set the range of the image to be removed from when printing an extra-length received image.

Lower the parameter to decrease the range if the trailing edge of the received image must be retained (as when it is longer than the effective recording length).

<004: leading edge margin>

Use it to set the leading-edge margin for the effective recording length.

<005: trailing edge margin>

Use it to set the trailing-edge margin for the effective recording length.

■ IPFAX

• BASIC N

| Bit | Function | Setting range |
|-----|------------------------------------------------------|----------------|
| 2 | Session control reception timeout (sec.) | 0 to 9999 (0*) |
| 20 | Reception start delay time (sec.) | 0 to 9999 (0*) |
| 21 | BYE sending delay time at transmission (x10 msec.) | 0 to 9999 (0*) |
| 22 | BYE receiving delay time at transmission (x10 msec.) | 0 to 9999 (0*) |

• NETA NUM

| Bit | Function | Setting range |
|-----|-----------------------------------|-----------------|
| 1 | T0 timer(Timer C) for IPFAX(sec.) | 0 to 9999 (55*) |

• NETC NUM

| Bit | Function | Setting range |
|-----|-------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1 | SW for adjusting the speed at VoIPGW transmission [%] | 0 to 9999* |
| | | However, the value is fixed in the case of ECM, and is corrected by adding 5 %. |
| 2 | VoIPGW buffer size [byte] | 0 to 9999* |
| | | However, when the value is 0, it is internally |
| | | interpreted as 200. |
| 3 | Packet division size [byte] | 0 to 9999* |
| | | However, when the value is 0, it is internally interpreted as 66. |
| 4 | Number of VolPGW buffer reset frames at ECM | 0 to 9999* |
| | * At ECM transmission, when frames of the number of this NUM value have | However, when the value is 0, it is internally |
| | been transmitted, the next frames will be transmitted after the VoIPGW buffer | interpreted as 16. |
| | becomes empty. | |

• T.38 Bit Setting

SW01

| Bit | Function | Setting range | |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|------------|
| | | 1 | 0 |
| 1 | German mode is effective during T.38 communication. | Effective | Invalid * |
| 2 | T.38 significant bit of DIS (bit123) is ignored. (When this SW is effective, the other party's machine is regarded as IPFAX even if DIS bit123 is 0.) | 0 | Not ignore |
| 3 | Transmission ECM = OFF setting | Effective | Invalid * |
| 4 | Reception ECM = OFF setting | Effective | Invalid * |

• T.38 NUM Setting

| Bit | Function | Setting range |
|-----|-----------------------------------------------------------------------------------------|----------------|
| 1 | High-speed flag sending time of ECM mode for IPFAX (x10 msec.). | 0 to 9999 (0*) |
| | , , , , , , , , , , , , , , , , , , , , | 0 to 9999 (1*) |
| | (However, the setting becomes 2 seconds even if the setting is changed to 2 or more.). | |

Initialization of Set Value (CLEAR)

Overview

Selecting the following items enables the applicable data to be initialized.

When clear is executed, the setting items and numeric values for various parameters are set back to the factory setting values.

| Item | Data to be initialized |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TEL | Registered telephone number data (*1) |
| USSW SW | Contents registered in the user data and service mode #1 to #3 Memory management contents of the user data are not cleared. Image data stored in the memory is not cleared. |
| SRV SW | Contents of the user data and service mode #1 to #3, and #7 |
| NCU | Contents of service mode #4 |
| SRV DATA | Contents of the system dump list |
| REPORT | Contents of the communication management report |
| ALL | All Settings/Registration data (*1) except service mode #5 TYPE (*2) |
| COUNTER | The number of printed sheets, the number of read sheets |
| IPFAX | Contents of service mode IPFAX |

^{*1:} With models that can register information other than fax in destination, the telephone number data is not cleared even when TEL (service mode > FAX > Clear > TEL) or ALL (service mode > FAX > Clear > ALL) is executed.

To clear the data, execute the following service mode on the host machine.

COPIER > Function > CLEAR > ADRS-BK

CAUTION:

If service mode > FAX > Clear > ALL is executed with a fax job waiting to be processed and the fax job is cancelled before the power is turned OFF and then ON, E674-0100 may occur when the power is turned OFF and then ON.

If E674-0100 occurs, the machine can be recovered by executing service mode > FAX > Clear > ALL again and then turning OFF and then ON the power.

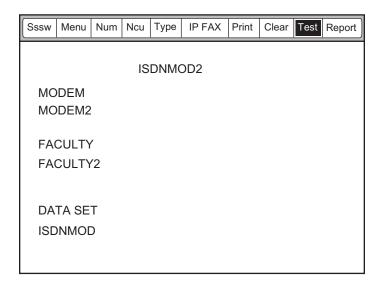

In order to prevent the foregoing error, be sure to check for any remaining fax jobs before executing service mode > FAX > Clear > ALL. If there is a remaining job, cancel the job and then execute service mode > FAX > Clear > ALL.

Test Mode (TEST)

Overview

Test Mode Construction

^{*2:} When service mode > FAX > Clear > ALL is executed, a value is registered in service mode > FAX > TYPE according to the location of the host machine (in the case of Japanese model, "STANDARD" is registered).

Using Test Mode

1. Press the desired item to highlight; then, press the OK key to bring up its screen.

The following table shows text mode items that are valid and invalid when a fax board is installed:

Yes: may be used

-: not used

| Level 1 | Level 2 | Fax Board present |
|----------|-----------|-------------------|
| | RELAY-1 | Yes |
| | RELAY-2 | - |
| | FREQ | Yes |
| MODEM | G3TX | Yes |
| | DTMFTX | Yes |
| | TONERX | - |
| | V34G3TX | Yes |
| | G3 4800TX | Yes |
| | SPEAKER | - |
| FACULTY | DETECT1 | - |
| PACOLIT | DETECT2 | - |
| | DETECT3 | - |
| | VOICETX | - |
| DATA SET | • | - |
| ISDNMOD | | - |
| ISDNMOD2 | | - |

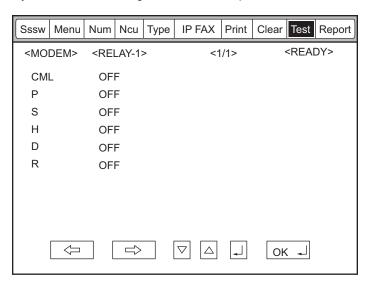

CAUTION:

Do not use items in the table identified as "-."

■ MODEM Test

• Relay Test (RELAY-1)

Use it to see if the individual relays on the NCU board go on and off as expected.

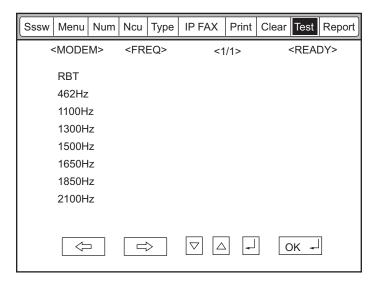

Using Text Mode

1. From the relays indicated on the screen, select the one you want to test; then, turn it off or on using the Up/Down key. (Some of the relays may not actually exist on the NCU board.)

Frequency Test (FREQ)

Of the items indicated below, press one; in response, the DC circuit will be closed and the selected frequency will be transmitted using the tone transmission function of the modem. You can also monitor the transmission signal by listening to the sound generated by the speaker. To stop the operation and end test mode, press the key.

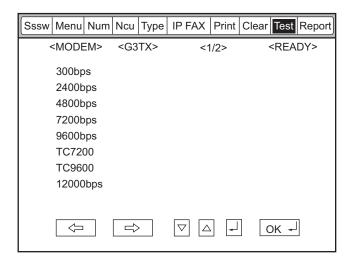

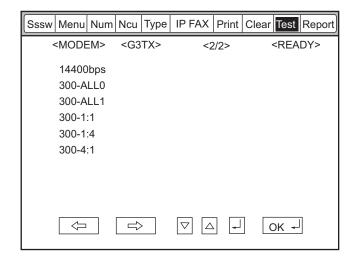

CAUTION:

'RBT' is not currently supported.

G3 Signal Transmission Test (G3 Tx)

Of the items indicated below, press one. In response, the DC circuit will be closed and the selected frequency will be transmitted using the G3 signal transmission function of the modem. You can also monitor the transmission signal by listening to the sound generated by the speaker. To stop the operation and end test mode, press the key.

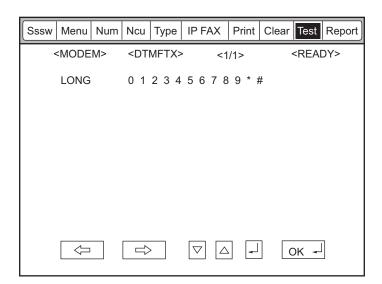

CAUTION:

'300-ALL0' through '300-4:1' are not currently supported.

DTMF Transmission Test

Of the items indicated below, press one; in response, the DC circuit will be closed and the selected DTMF signal will be transmitted using the DTMF transmission function of the modem. You can also monitor the transmission signal by listening to the speaker. To stop the operation and to end test mode, press the \blacksquare key.

Using Text Mode

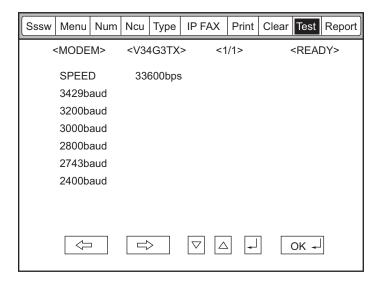

1. From the items indicated on the screen, select the item you want to test; then, press the key on keypad that corresponds to the DTMF signal to test.

CAUTION:

'SHORT' is not currently supported.

V.34 G3 Signal Transmission Test (V34G3Tx)

Select the transmission speed you want to test, and then select a modulation speed (baud rate); in response, the V.34 G3 transmission signal will be transmitted to the telephone line terminal and the speaker. To stop the operation and to end test mode, press the \square key.

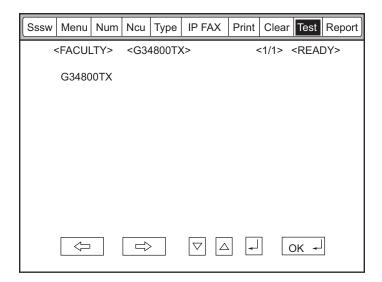

Using Text Mode

- 1. Select 'SPEED', and then select the speed you want to test using the Up/Down key.
- 2. Select the baud rate you want to test.

■ Function Test

• 4800-bps Signal Transmission Test

The DC circuit will be closed, and a 4800-bps signal will be transmitted using the 4800-bps signal transmission function of the modem. You can also monitor the transmission signal by listening to the speaker. To stop the operation and end test mode, press the 🔟 key.

Service Report (REPORT)

System Data List

Use it to check the settings associated with the service soft switch and service parameters.

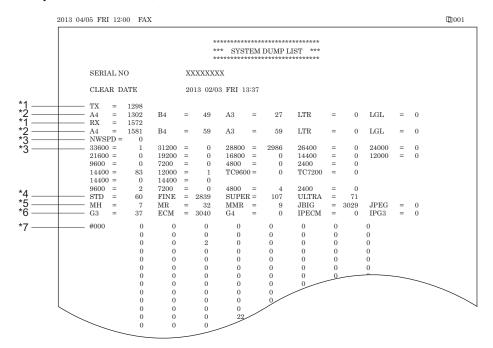

| | | SYSTEM DATA I | | |

■ System Dump List

NOTE:

A system dump list is generated when you execute the following in service mode: FAX > Report > DUMP.

Use it to check the history of communications, both successful and error.

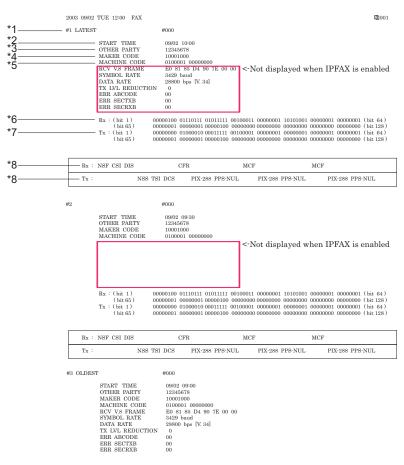

- *1: RX, total reception number of times; TX, total transmission number of times.
- *2: number of pages sent/received according to original size.
- *3: number of pages sent/received in connection with different modem speeds (NWSPD: For IPFAX communication count).
- *4: number of communication pages by resolution(Standard, Fine, Super Fine, Ultra Fine).
- *5: number of pages sent/received in connection with different coding methods.
- *6: number of transmissions/receptions according to mode.
- *7: number of occurrences according to error code.

Indication sample

It provides error information on the 3 most recent communications.

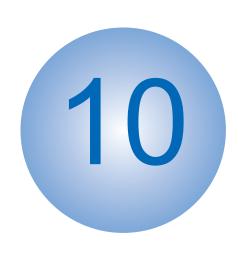

- *1: service error code.
- *2: START TIME, date and time (in 24-hr notation).
- *3: OTHER PARTY, telephone number sent by the other party.
- *4: MAKER CODE, manufacturer code.
- *5: MACHINE CODE, model code.
- *6: bit 1 through bit 128 of DIS, DCS, or DTC that has been received.
- *7: bit 1 through bit 128 of DIS, DCS, or DTC that has been transmitted.
- *8: RX, procedural signal received; TX, procedural signal transmitted.

■ Error Transmission Report

An error transmission report is an error transmission report together to which a service error code and error dump list is attached.

Installation of the host machine

Host machine can be installed by the user.

See "Getting Started" for details of the installation procedures.

Setting the Dehumidification Switch

If the installation environment is a high humidity environment, be sure to turn ON the Dehumidification Switch.

Operation when using uniFLOW Online

When using uniFLOW Online*, follow the setup procedures on the uniFLOW* Online First Steps Guide (http://www.nt-ware.com/uFO_FS).

* China version of "uniFLOW" is called "mdsFLOW".

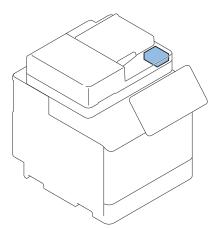

Installing the IC Card Reader

■ Points to Note at Installation

- · When installing the IC Card Reader, the IC Card Reader (sales company's option) is required.
- The IC Card Reader and the following options cannot be used together.
 - · IC Card Reader Box
 - · Copy Card Reader
- · When installing the Connection Kit for Bluetooth LE at the same time, install the Connection Kit for Bluetooth LE first.
- The pictures and illustrations used may differ from the actual product, but the procedures are the same.

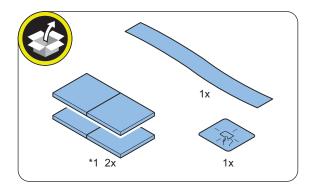

■ Installation Outline Drawing

■ Checking the Contents

NOTE:

Use the following parts included with the host machine.

*1: Use them if necessary when installing the Card Reader.

■ Essential Items to Be Performed Before Installation

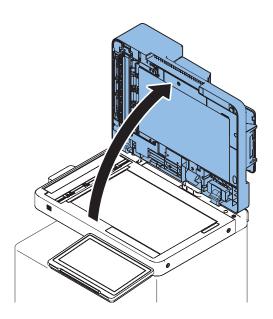

• Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

MARNING:

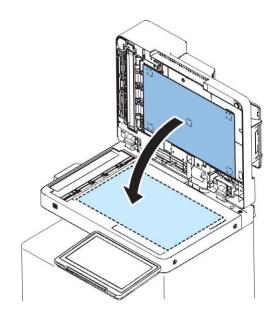

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- When turning OFF the main power, follow the below procedure.
 - 1. Turn OFF the main power switch of the host machine.
 - 2. The display in the Control Panel and the lamp of the main power are turned off.

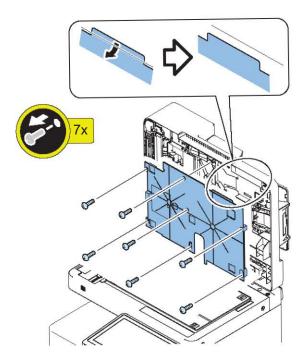

■ Installation Procedure

Removing the Covers

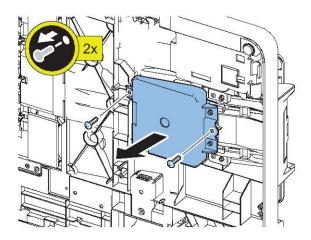

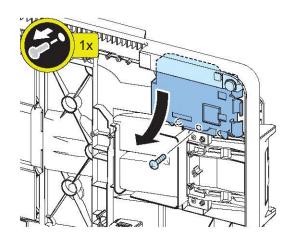

□ **2.**

4.

• Check the IC card reader

Refer to the table below and install according to the "Reference Procedure" for the IC card reader.

NOTE:

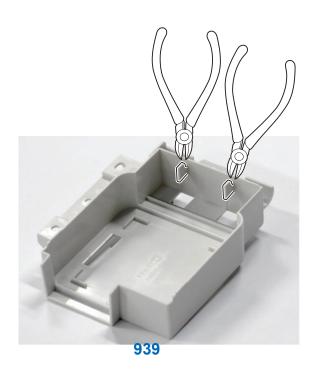

The installation procedure depends on the shape of the IC card reader.

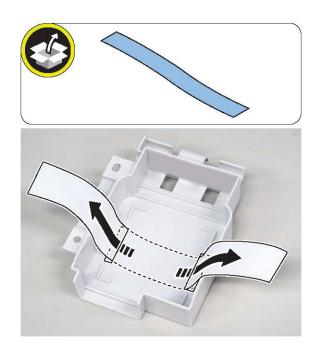

| TYPE | Shape of IC card reader | Reference Proce- dure |
|------|-------------------------|------------------------------------------|
| 1 | | " <for 1="" type="">" on page 939</for> |
| 2 | | " <for 2="" type=""> " on page 942</for> |

• Installing the IC Card Reader

<For TYPE 1>

1_

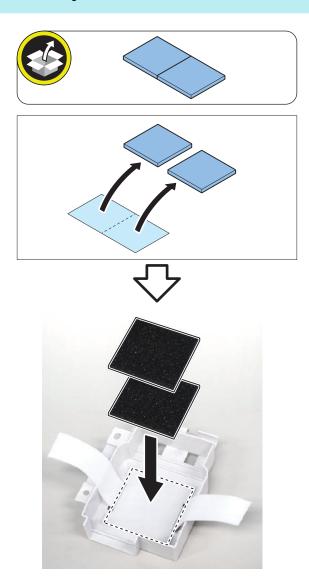

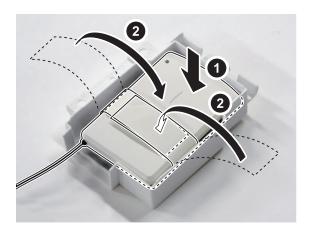

2

NOTE:

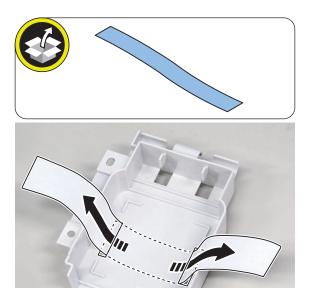

Be sure to adjust the number of cushions according to the thickness of the Card Reader.

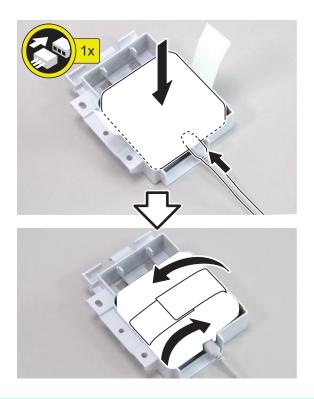

NOTE:
Go to "Subsequent Work". "Subsequent Work " on page 943

<For TYPE 2>

2.

NOTE:

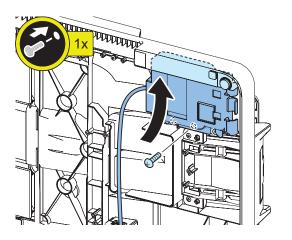

Go to "Subsequent Work". "Subsequent Work " on page 943

• Subsequent Work

1.

NOTE:

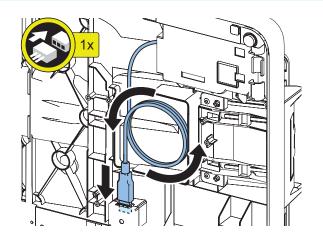

Use the screws removed in "Removing the Covers".

<u>っ</u>

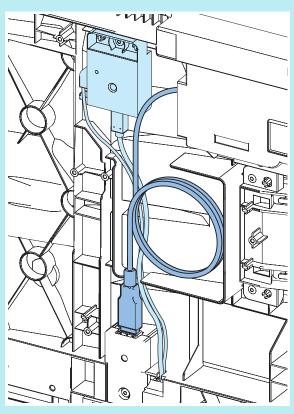

NOTE:

Wind the cable counterclockwise to store it as needed.

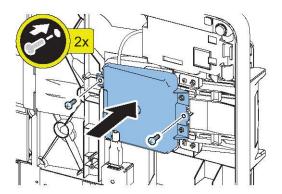

NOTE:

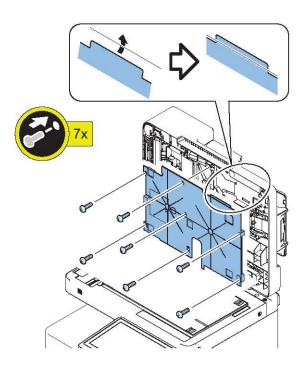

When installing with the Connection Kit for Bluetooth LE at the same time.

□ **4.**

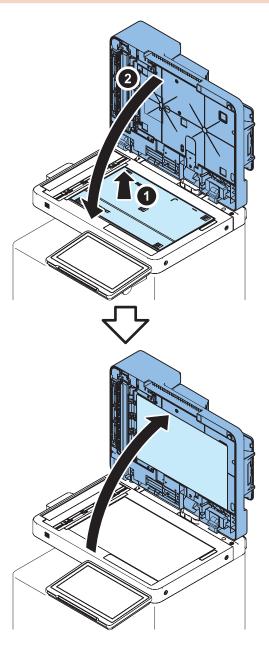

□ **5.**

CAUTION:

Align the White Plate to the Index.

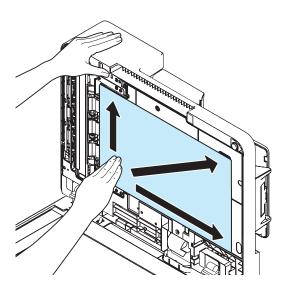

<u>_</u>

CAUTION:

If the White Plate is pressed from top to bottom, it is placed on the Index Sheet, so be sure to press it from bottom to top.

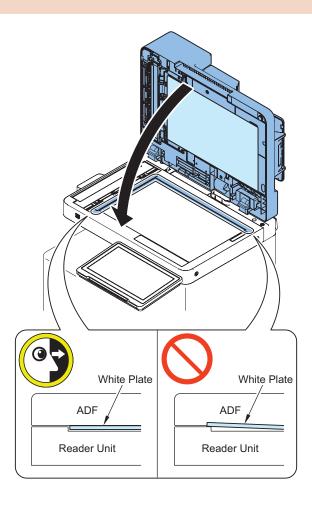

7.

CAUTION:

Check that the White Plate is not placed on the Index Sheet with this equipment closed.

- Be sure that there is no gap between the White Plate and the Index Sheet.
- The gap between the White Plate and the Index Sheet must be 0.3 mm or less as a reference.

9 Connect the power plug of the host machine to the outlet.

10. Turn ON the Main Power Supply Switch.

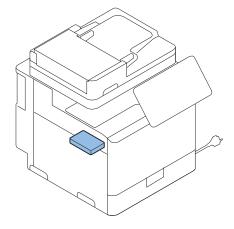

IC Card Reader BOX-D1

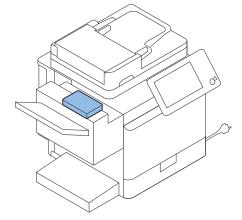

Points to Note at Installation

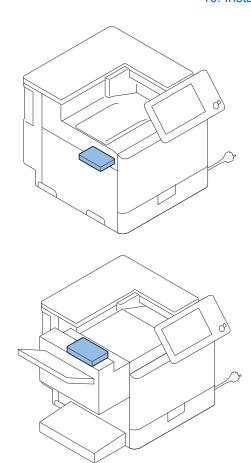

- When installing this equipment, the Card Reader (sales company's option) is required.
- This equipment cannot be used in combination with IC Card Reader and Copy Card Reader.
- When installing this equipment and the finisher at the same time, be sure to install this equipment before installing the optional Harness Cover of the finisher.
- If the finisher has already been installed, be sure to remove the optional Harness Cover. For the procedure to remove the optional Harness Cover, refer to "Removing the Equipment" in the chapter "Parts Replacement and Cleaning Procedure" in the Service Manual for Staple Finisher-S1/Z1.
- The work to be performed is the same for the printer model although the illustration of the machine is of a model with a reader.

_ 1.

CAUTION:

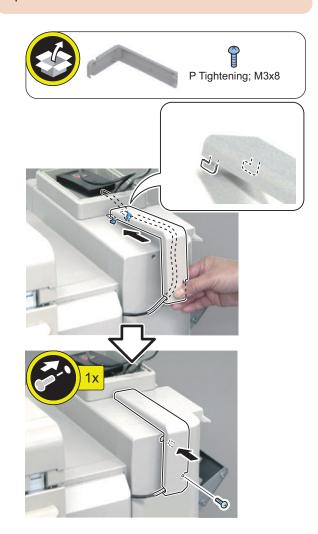

Be sure that 2 hooks of Finisher are properly hooked to holes of the Optional Harness Cover.

2.

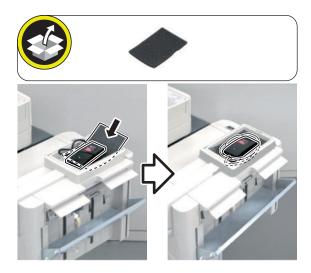

CAUTION:

Be careful not to trap cables when installing the Optional Harness Cover.

NOTE:

- Be sure to adjust the number of Sponge Sheets (1 or 2 sheets) according to how the cable of the Card Reader is stored.
- Loop the extra length of the USB cable around so that the Card Reader (sales company's option) is securely fitted.

4.

NOTE:

- Insert the DP Sheet (for Europe) to the hole of IC Card Reader Box Unit Lower Cover with the illustration side facing up and bending the bar code area.
- Be sure that the IC Card Reader Box Upper Cover is installed properly.

1.

Connect the power plug to the outlet.

2.

Turn ON the main power switch.

Copy Card Reader-F1/Copy Card Reader Attachment-B4

Points to Note at Installation

- To install the Copy Card Reader-F1, the Copy Card Reader Attachment Kit-B4 is required.
- When installing at the same time with the Image Analysis Board, be sure to install this Image Analysis Board first.
- Refer to "Table of Options Combination" when installing this equipment before operation.
- The work to be performed is the same for the printer model although the illustration of the machine is of a model with a reader.

Table of Options Combination

12.

Setting after Installation

- Connect the power plug of the host machine to the outlet.
- 2. Turn ON the main power switch.
- 3. Check the model of the Card Reader in service mode (Default: 0 "Card Reader-F1") .

COPIER > OPTION > ACC > CR-TYPE

4. In service mode (Level 2), set the number of cards (the number of departments) (1 to 1000) that can be used for the Card Reader to any value.

COPIER > OPTION > FNC-SW > CARD-RNG

5. Enter the card number which is the smallest of the card numbers to be used (1 to 2001) in service mode.
COPIER > FUNCTION > INSTALL > CARD

6. Turn OFF and then ON the main power switch to enable the setting value.

 \Box

7. Insert a card with a card number that has been registered, and check that the machine operates properly.

NOTE:

Perform the following operations to change the number of cards (the number of departments) after it has been set. In that case, counter information for each department is reset.

COPIER > FUNCTION > CLEAR > CARD

- Turn OFF and then ON the main power switch to enable the settings.
- After that, perform the setup procedure again from step 3.

Serial Interface Kit-K3, Copy **Control Interface Kit-A1**

Points to Note at Installation

- · Refer to "Table of Options Combination" when installing this equipment before operation.
- · Serial Interface Kit and Control Interface Kit cannot be used concurrently.

NFC KIT-E1/E2

Points to Note at Installation

- Do not touch the sensor and PCB components of the Control panel.
- The parts removed in "Removing the Control Panel" will be used in "Installing the Control Panel".
- The pictures and illustrations used may differ from the actual product, but the procedures are the same.

Essential Items to Be Performed Before Installation

· Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

WARNING:

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- · When turning OFF the main power, follow the below procedure.
 - 1. Turn OFF the main power switch of the host machine.
 - 2. The display in the Control Panel and the lamp of the main power are turned off.

Points to Note When Turning ON/OFF the Main Power

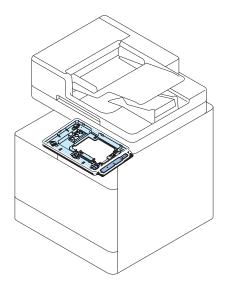

The following message is displayed.

- 1. When a message prompting to turn OFF and then ON the main power appears, turn OFF and then ON the main power switch.
- 2. If a message prompting the user to update the version appears, press [Update] to automatically update the version of this equipment.

If [Skip] is selected, a message prompting the user to update the version will appear every time the host machine is started. In the service mode (Lv. 2) shown below, it is possible to set not to display the message.

COPIER > OPTION > FNC-SW > VER-CHNG

Setting after Installation

- 1. Connect the power plug of the host machine to the outlet.
- 2. Turn ON the main power switch.
- 3. Eenter service mode and set the value to "1".

 COPIER > FUNCTION > INSTALL > NFC-USE

NOTE

When [System Manager Information Settings] is set, it is required to log in as a system manager in accordance with instructions of the user administrator.

- 4. Select [Settings/Registration] > [Management Settings] > [Device Management] > [Use NFC Card Emulation], and set the item to "ON".
- 5. Turn OFF and then ON the main power switch.
- 6. When a message prompting the version update is displayed, press [Update] and automatically update the version of this equipment.

CAUTION:

It may take time to display the update screen. (Approx. 1 to 2 min.) During this time, do not operate the screen.

7. Check the end of the following service mode.

COPIER > DISPLAY > VERSION > PANEL

If the end is an even number (e.g. 01.26): NFC is not installed.

If the end is an odd number (e.g. 01.27): NFC is installed.

Connection Kit-A2/A3 for Bluetooth LE

Points to Note at Installation

- · When installing the IC Card Reader Installation Kit at the same time, install this equipment first.
- The pictures and illustrations used may differ from the actual product, but the procedures are the same.

Essential Items to Be Performed Before Installation

Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

WARNING:

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- When turning OFF the main power, follow the below procedure.
 - 1. Turn OFF the main power switch of the host machine.
 - 2. The display in the Control Panel and the lamp of the main power are turned off.

Points to Note When Turning ON/OFF the Main Power

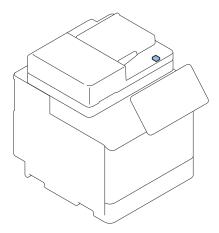

The following message is displayed.

- 1. When a message prompting to turn OFF and then ON the main power appears, turn OFF and then ON the main power switch.
- 2. If a message prompting the user to update the version appears, press [Update] to automatically update the version of this equipment.

If [Skip] is selected, a message prompting the user to update the version will appear every time the host machine is started. In the service mode (Lv. 2) shown below, it is possible to set not to display the message.

Installation Outline Drawin

Essential Items to Be Performed Before Installation

 Turn OFF the main power of the host machine, and disconnect the power plug from the outlet.

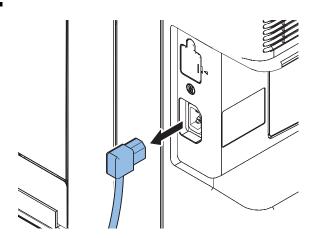

WARNING:

- If performing work without disconnecting the power plug of the host machine, it may cause electrical shock.
- If disconnecting the power plug without turning OFF the main power, it may cause damage of the machine.
- When turning OFF the main power, follow the below procedure.
 - 1. Turn OFF the main power switch of the host machine.
 - 2. The display in the Control Panel and the lamp of the main power are turned off.

Installation Procedure

■ Removing the Covers

1

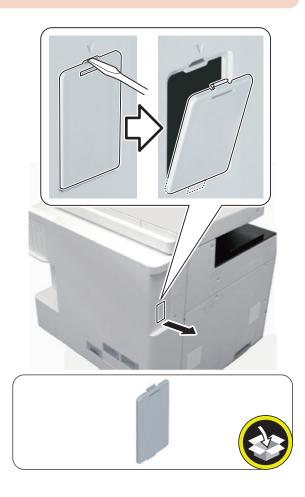

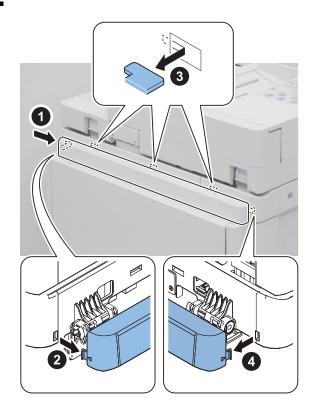

□ **2.**

CAUTION:

Do not insert a screwdriver into the hole when removing the Small Cover.

NOTE:

When the Cassette Pedestal is not installed, go to step 4.

NOTE:

When the Cassette Pedestal is installed, go to step 3. When the Cassette Pedestal is not installed, perform from step 5.

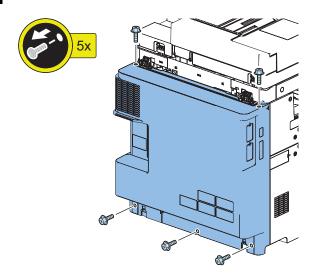

4.

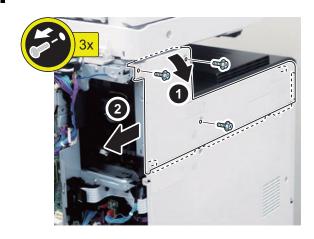

□ **5.**

□ **6.**

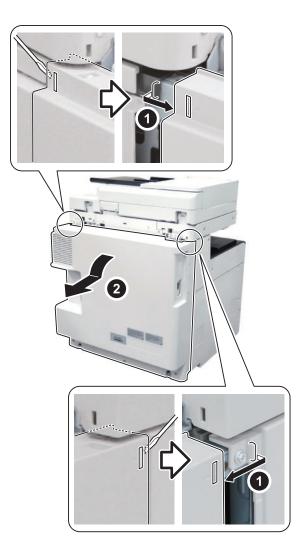

□ **8.**

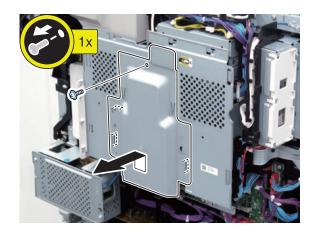

■ Installing the FAX Unit

□ **7.**

□ 1.

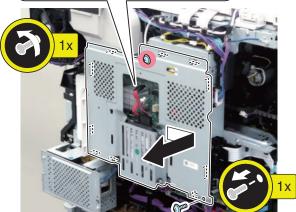

□ **2.**

CAUTION:

When handling the HDD, be careful not to vibrate or drop it.

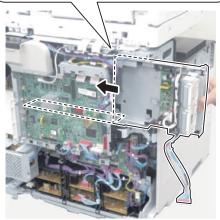

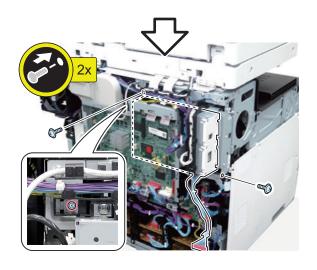

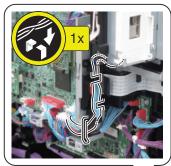

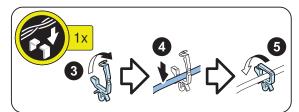

□ **4**

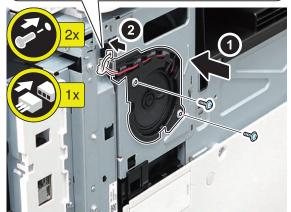

5.

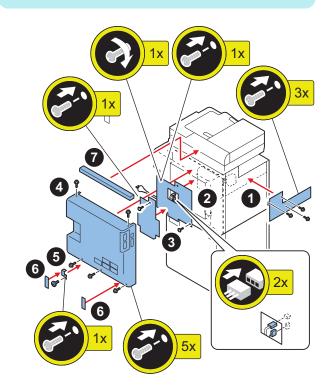

■ Subsequent Work

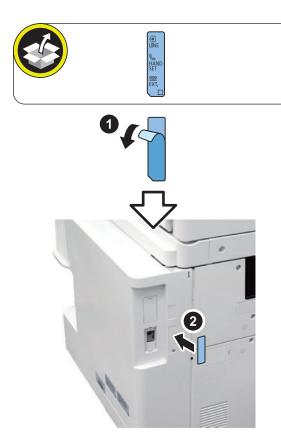

1.

NOTE:

If the Cassette Pedestal is not installed, skip the following 5 and 6.

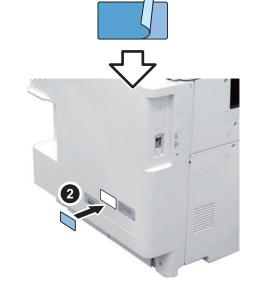

□ **2.**

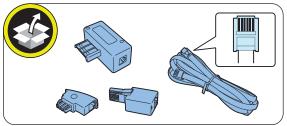

NOTE: This step is only for Taiwan.

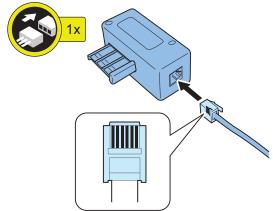

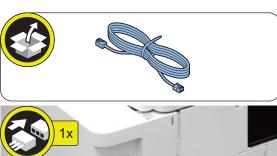

NOTE:

- This step is only for Europe.
- Do not connect the telephone cord (2 core) to PTT plugs.
- Connect the PTT cable (6 core) to the PTT Plug appropriate for the country/region.

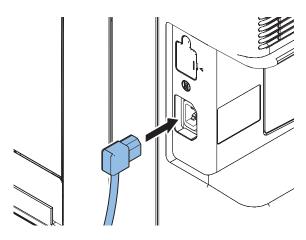

5.

6.

7. Connect the power plug to the outlet.

8 Turn ON the Main Power Supply Switch.

Checking the Operation

■ Type Setting

Select the country/region of the FAX Board in Service Mode: FAX > Type > TYPE

This setting performs the parameter settings to match the communication specification of the country/region.

 From the following service mode, set the TYPE of country/region to install this machine, and then press OK.

FAX > TYPE > TYPE

2. Confirm that service mode parameter below is "0". In the case, parameter is "1", change to "0". COPIER > OPTION > DSPLY-SW > SDTM-DSP

NOTE:

To change parameter to "0" makes no show below [Settings/Registration > Preferences > Time/Energy Settings > Auto Shutdown Time] and auto shut down is not available.

3. Turn OFF/ON the main power switch to enable this setting.

■ Basic Setting

NOTE:

- When "System Manager Information Settings" is set, be sure to follow the direction of user administrator in order to log in as an administrator.
- This setting can also be set from the Setup Guide ([Settings/Registration] > [Management Settings] > [License/Other] > [Start Setup Guide]).

In this section, make only minimum settings required for FAX communication.

1. Set the user telephone number.

[Settings/Registration] > [Function Settings] > [Send] > [Fax Settings] > [Set Line] > [Line 1] > [Register Unit Telephone Number] > Enter the fax number > [OK]

2. Set Type of telephone line.

[Settings/Registration] > [Function Settings] > [Send] > [Fax Settings] > [Set Line] > [Line 1] > [Select Line Type] > Select the line type to connect > [OK]

3. Turn OFF/ON the main power switch after setting the user telephone numbers and the type of telephone line.

■ FAX Communication Test

Perform communication test to check if FAX function works correctly.

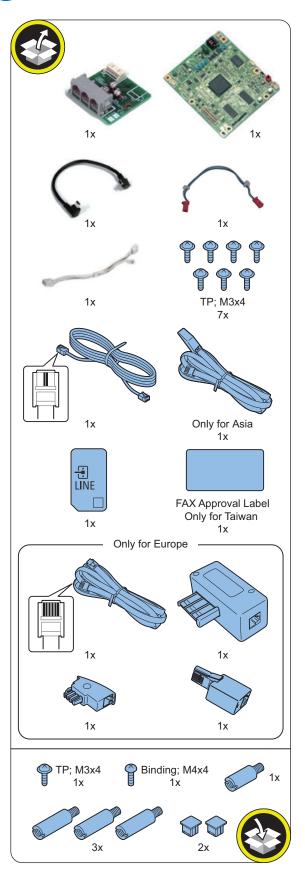

- Switch the control panel display to Send/Fax display.
- 2. Send the test document from this machine to another machine that can handle the communication test to check that this machine can send the data correctly.
- Send the test document from the target to this machine to check if the machine can receive the document properly.

Super G3 2nd Line Fax Board- AT1

Checking the Operation

■ Type Settings

Select the country/region of the FAX Board in Service Mode: FAX > Type > TYPE

This setting performs the parameter settings to match the communication specification of the country/region.

 From the following service mode, set the TYPE of country/region to install this machine, and then press OK.

FAX > TYPE > TYPE

2. Confirm that service mode parameter below is "0". In the case, parameter is "1", change to "0".

COPIER > OPTION > DSPLY-SW > SDTM-DSP

NOTE:

To change parameter to "0" makes no show below [Settings/Registration > Preferences > Time/Energy Settings > Auto Shutdown Time] and auto shut down is not available.

3. Turn OFF/ON the main power switch to enable this setting.

Basic Settings

NOTE:

When "System Manager Information Settings" is set, be sure to follow the direction of user administrator in order to log in as an administrator.

In this section, make only minimum settings required for FAX communication.

1. Set the user telephone number.

[Settings/Registration] > [Function Settings] > [Send] > [Fax Settings] > [Set Line] > [Line 2] > [Register Unit Telephone Number] > Enter FAX number > [OK]

2. Set the type of telephone line.

[Settings/Registration] > [Function Settings] > [Send] > [Fax Settings] > [Set Line] > [Line 2] > [Select Line Type] > Select the line type to connect > [OK]

3. Turn OFF/ON the main power switch after setting the user telephone numbers and the type of telephone line.

■ FAX Communication Test

Perform communication test to check if FAX function works correctly.

- 1. Switch the control panel display to Fax display.
- 2. Select the sending line.

Press [Fax] > [Options] > [Select Line], select the added line, then press [OK] button.

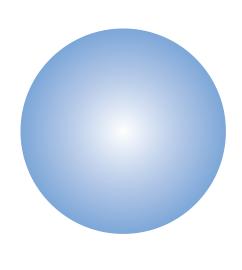

3. Send and receive a test original between the equipment and a remote unit with which a

communication test can be performed and check if it can be sent and receive correctly.

- 1. Press [Status Monitor/Cancel] > [Send] > [Job Log] and select [Fax] from pull down menu.
- Press [Fax Activity Report] > [OutPut Normally] > [Start Printing].
- The number printed following colon (:) in "COMM.MODE" field on FAX ACTIVITY REPORT TX/RX shows line type used for sending/receiving. E.g. "ECM:2" => Line 2

NOTE:

If E744-5000 error code (Fax software version mismatch error) occurred while sending or receiving fax, upgrade the firmware of 2-line Fax to the latest version.

Removal

Overview

- · User data kept by the machine contains address books and inbox documents that users can recognize.
- For security, the Settings/Registration menu for user is provided to delete data on FLASH PCB and perform overwrite deletion to render user data on Storage unrecoverable.
- Before the removal of machine, be sure to explain to the user that the above mode must be used to completely delete data.
 When performing the user operation as the substitute, make sure that the service staff executes this to prevent the information leak of user data

■ Cancelling the Device Registration

If Data Backup Service is used, it is required to perform the following steps in the order.

- 1. Stop using the Data Backup Service. (Operation on CBIO side)
- 2. Delete all the backup data. (Operation on CBIO side)
- 3. Cancel the device registration. (Operation on the device side)

NOTF:

For the above-mentioned procedure, see the User's Guide for Data Backup Service or the Service Manual for the imageRUNNER ADVANCE system.

If the User's Guide is not available, see the technical documents published by each sales company.

CAUTION:

Be sure to cancel the device registration before deleting the user, because the device registration cannot be cancelled after deleting the user data.

User data deletion

- To delete user data, execute Settings/Registration > Management Settings > System Management > Initialize All Data/ Settings. Performing Initialize All Data/Settings returns setting values of Settings/Registration menu to their factory defaults.
- Deletion Mode can be changed. Normally, "Once with 0 (Null) Data" can sufficiently delete data. Note that increasing the number of overwrite increases the time required for the deletion operation.

NOTE:

- When you perform Initialize All Data/Settings, license and data of MEAP application are initialized to the state same as when
 the HDD is replaced. If any MEAP application may be used by other users after the machine is removed, disable the MEAP
 application and uninstall it in advance.
- Performing Initialize All Data/Settings does not delete the license of the system option.

■ Deletion of Service Mode Settings

The user mode setting values may have been changed at the user's request. In that case, the service mode setting values should be changed back to the default values before removing the machine.

Work Procedure

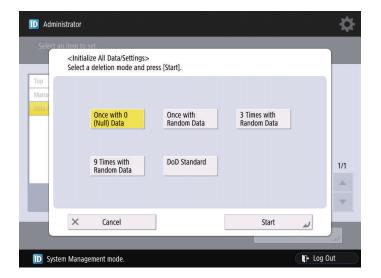

If the user uses MEAP applications, ask the user to uninstall the MEAP applications if necessary.

■ User data delete procedure

- 1. Settings/Registration > Management Settings > Data Management > Initialize All Data/Settings
- 2. Select a deletion mode.

3. Press [Start].

If the user has not given any instruction on which item in the deletion mode should be used, select the default "Once with 0 (Null) Data".

NOTE:

- When all the data are initialized, the user data on the HDD and the user data on the Flash PCB are deleted. For the items to be deleted, refer to the backup list.
- Performing "Initialize All Data" turns auto gradation adjustment values and TPM settings to OFF. Therefore, to enable normal operation the next time, the operation performed at installation is necessary.
- Performing Initialize All Data/Settings does not delete the license of the system option.

Report output upon completion of Initialize All Data/Settings

A report is output after "Initialize All Data/Settings" is completed.

Consider using this report to provide to user as a material to inform of work details when executing Initialize All Data/Settings upon user's request.

Operation after Initialize All Data/Settings

The machine is started normally at restart after Initialize All Data/Settings without displaying the message (Turn OFF the main power supply on the right side of the machine) on the screen to prompt shutdown. The report is output after startup.

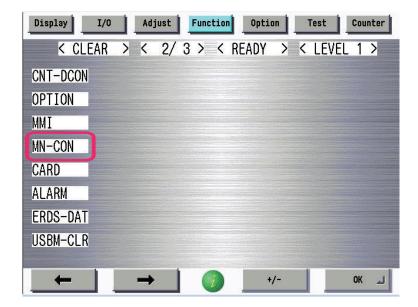

- *1 display following one.
- "Once with 0 (Null) Data"
- "Once with Random Data"
- "3 Times with Random Data"
- "9 Times with Random Data"
- "DoD Standard"

Limitations

- The language of the report is only English, and cannot be changed.
- The report is output without fail (a function to select ON/OFF of report output is not provided).
- There is no second output of report when the machine is turned ON without paper.
- Only the output of this report remains in the job log.

■ Deletion of Service Mode Setting Values

Service Mode Lev1 > Function> CLEAR > MN-CONT

NOTE:

- When MN-CON clear is executed, the address book on the HDD is not deleted. As for the user data, initialize all the data.
- · When MN-CON clear is executed, the password for the security policies will be deleted.

List of Service Modes That Can Be Restored

The following items are restored when a DCM file obtained by using [Settings/Registration] > [Back Up/Restore] or [Backup/Restoration Using Service Mode] is exported.

Purpose for Using the Function

| Case | Export/ Import | Use Case |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Α | Export from and import to the same device | Used as backup in preparation for a device failureUsed as backup before changing settings |
| | For and for an analysis and the soliton and th | |
| В | Export from and import to a different device of the same model | Collectively migrate data when replacing the host machineCopy the settings to multiple devices (during kitting) |
| С | Export from and import to a different model | Migrate the settings from the old model to the new model when replacing the host machine Migrate the settings of the base machine to a different model for a large-scale user |

NOTE:

For the details of the function, refer to "Backup/Restoration" of the System Service Manual.
