HOW TO USE THIS MANUAL

ILLUSTRATION

The illustration gives an exploded view of an assembly, and separate parts and how they fit together. Each part has a number corresponding to that in "INDEX NO. column" on the parts list.

PARTS LIST

(1) INDEX NO

The index number corresponds with a part number in the illustration.

- When the mark 'S' precedes the index number, the part is a Recommended Spare Part or a Consumable.
- When the mark 'P' precede the index number, the part is a Spare Parts for Repair.
- Do not confuse two parts with the same index number, because a Recommended Spare Part and a Spare Parts for Repair may have the same index number.
- When blank, although the QUANTITY and SPECIFICATION are given, a whole of that part is not shown in the illustration or that part is illustrated for detail breakdown in the other page.
- When a '-' is given in this column, the part is not shown in the illustration.

(2) COMPOSITION & QUANTITY

This column shows the relationship among units, assemblies, subassemblies, and parts. A unit indicated in a column is assembled by the parts or units indicated in the next right column. The figure is the value of the parts needed to assemble into the higher assembly.

(3) SPECIFICATIONS

This column shows part number of the units, or parts.

(4) DESCRIPTION

The part name, applicable device number, and other information are given in this column.

NOTE:

Newly added/changed parts may not be revised in this parts catalogue, RSPL and SPLR at the same time because it takes a few weeks for pricing.
