CAUTION

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

It may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for proper disposal.

ATTENTION

IL Y A UN RISQUE D'EXPLOSION SI LA BATTERIE EST REMPLACEE PAR UN MODELE DE TYPE INCORRECT. METTRE AU REBUT LES BATTERIES UTILISEES SELON LES INSTRUCTIONS DONNEES.

Il peut être illégal de jeter les batteries dans des eaux d'égout municipales. Vérifiez avec les fonctionnaires municipaux de votre région pour les détails concernant des déchets solides et une mise au rebut appropriée.

Safety precautions

This booklet provides safety warnings and precautions for our service personnel to ensure the safety of their customers, their machines as well as themselves during maintenance activities. Service personnel are advised to read this booklet carefully to familiarize themselves with the warnings and precautions described here before engaging in maintenance activities.

Safety warnings and precautions

Various symbols are used to protect our service personnel and customers from physical danger and to prevent damage to their property. These symbols are described below:

- **DANGER:** High risk of serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.
- **WARNING:** Serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.
- **CAUTION:** Bodily injury or damage to property may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

Symbols

The triangle (\triangle) symbol indicates a warning including danger and caution. The specific point of attention is shown inside the symbol.

Warning of risk of electric shock.

Warning of high temperature.

⊘ indicates a prohibited action. The specific prohibition is shown inside the symbol.

General prohibited action.

Disassembly prohibited.

indicates that action is required. The specific action required is shown inside the symbol.

General action required.

Remove the power plug from the wall outlet.

Always ground the copier.

1.Installation Precautions

WARNING

- Do not use a power supply with a voltage other than that specified. Avoid multiple connections to
 one outlet: they may cause fire or electric shock. When using an extension cable, always check
 that it is adequate for the rated current.
- Connect the ground wire to a suitable grounding point. Not grounding the copier may cause fire or electric shock. Connecting the earth wire to an object not approved for the purpose may cause explosion or electric shock. Never connect the ground cable to any of the following: gas pipes, lightning rods, ground cables for telephone lines and water pipes or faucets not approved by the proper authorities.

ACAUTION:

- Do not place the copier on an infirm or angled surface: the copier may tip over, causing injury.
- Do not install the copier in a humid or dusty place. This may cause fire or electric shock.
- Do not install the copier near a radiator, heater, other heat source or near flammable material.

This may cause fire.

- Allow sufficient space around the copier to allow the ventilation grills to keep the machine as cool as possible. Insufficient ventilation may cause heat buildup and poor copying performance.
- Always handle the machine by the correct locations when moving it.
- Always use anti-toppling and locking devices on copiers so equipped. Failure to do this may cause the copier to move unexpectedly or topple, leading to injury.
- Avoid inhaling toner or developer excessively. Protect the eyes. If toner or developer is accidentally ingested, drink a lot of water to dilute it in the stomach and obtain medical attention immediately. If it gets into the eyes, rinse immediately with copious amounts of water and obtain medical attention.
- Advice customers that they must always follow the safety warnings and precautions in the copier's instruction handbook.

2. Precautions for Maintenance

WARNING

- Always remove the power plug from the wall outlet before starting machine disassembly. Always follow the procedures for maintenance described in the service manual and other related brochures. Under no circumstances attempt to bypass or disable safety features including safety mechanisms and protective circuits. Always use parts having the correct specifications. Always use the thermostat or thermal fuse specified in the service manual or other related brochure when replacing them. Using a piece of wire, for example, could lead to fire or other serious accident. · When the service manual or other serious brochure specifies a distance or gap for installation of a part, always use the correct scale and measure carefully. Always check that the copier is correctly connected to an outlet with a ground connection. Check that the power cable covering is free of damage. Check that the power plug is dust-free. If it is dirty, clean it to remove the risk of fire or electric shock. Never attempt to disassemble the optical unit in machines using lasers. Leaking laser light may damage eyesight. Handle the charger sections with care. They are charged to high potentials and may cause electric shock if handled improperly. Wear safe clothing. If wearing loose clothing or accessories such as ties, make sure they are safely secured so they will not be caught in rotating sections. Use utmost caution when working on a powered machine. Keep away from chains and belts.
- Handle the fixing section with care to avoid burns as it can be extremely hot.
 Check that the fixing unit thermistor, heat and press rollers are clean. Dirt on them can cause abnormally high temperatures.

| | | $\langle \rangle$ |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| • | Do not remove the ozone filter, if any, from the copier except for routine replacement. | S |
| • | Do not pull on the AC power cord or connector wires on high-voltage components when removing them; always hold the plug itself. | \bigcirc |
| • | Do not route the power cable where it may be stood on or trapped. If necessary, protect it with a cable cover or other appropriate item. | \bigcirc |
| • | Treat the ends of the wire carefully when installing a new charger wire to avoid electric leaks | |
| • | Remove toner completely from electronic components. | |
| • | Run wire harnesses carefully so that wires will not be trapped or damaged After maintenance, always check that all the parts, screws, connectors and wires that were removed, have been refitted correctly. Special attention should be paid to any forgotten connector, trapped wire and missing screws. | |
| • | Check that all the caution labels that should be present on the machine according to the instruction handbook are clean and not peeling. Replace with new ones if necessary. | 0 |
| • | Handle greases and solvents with care by following the instructions below: | V |
| • | Never dispose of toner or toner bottles in fire. Toner may cause sparks when exposed directly to fire in a furnace, etc. | \bigcirc |
| • | Should smoke be seen coming from the copier, remove the power plug from the wall outlet imme- diately. | |
| 3 | Miscellaneous | |

• Never attempt to heat the drum or expose it to any organic solvents such as alcohol, other than the specified refiner; it may generate toxic gas.

1-2-1 Installation environment

- 1. Temperature: 10 to 32.5°C/50 to 90.5°F
- 2. Humidity: 15 to 80%RH
- 3. Power supply: 120 V AC, 7.7 A
 - 220 240 V AC, 4.2 A

4. Power source frequency: 50 Hz $\pm 0.3\%$ /60 Hz $\pm 0.3\%$

5. Installation location

Avoid direct sunlight or bright lighting. Ensure that the photoconductor will not be exposed to direct sunlight or other strong light when removing paper jams.

Avoid locations subject to high temperature and high humidity or low temperature and low humidity; an abrupt change in the environmental temperature; and cool or hot, direct air.

Avoid places subject to dust and vibrations.

Choose a surface capable of supporting the weight of the machine.

Place the machine on a level surface (maximum allowance inclination: 1°).

Avoid air-borne substances that may adversely affect the machine or degrade the photoconductor, such as mercury, acidic of alkaline vapors, inorganic gasses, NOx, SOx gases and chlorine-based organic solvents. Select a well-ventilated location.

6. Allow sufficient access for proper operation and maintenance of the machine.

Machine front: 600 mm/23 5/8" Machine rear: 200 mm/7 7/8" Machine right: 300 mm/11 13/16"

Machine left: 300 mm/11 13/16"

Machine top: 300 mm/11 13/16"

1-2-3 Installing the expanded memory (option)

<Procedure>

- 1. Power off the printer and unplug the printer power cord.
- 2. Open the right side cover.
- 3. Remove the screw and open the inner cover.

Figure 1-2-3

- 4. Aligning the cutouts of the memory module with the matching keys of the socket, carefully plug the memory module into the memory socket until it clicks in place. Then, push down the memory module to secure.
- 5. Close and secure the inner cover by one screw.
- 6. Refit the right side cover.

Verifying the expanded memory

1. To verify that the memory module is working properly, test it by printing a status page.

Figure 1-2-4

1-2-4 Installing the memory card (option)

<Procedure>

- 1. Turn off the printer and disconnect the power cord and printer cable.
- 2. Remove two screws and then open the option interface slot cover.
- 3. Install the memory card into the memory card slot.
- 4. Refit the option interface slot cover by two screws.

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Counter reset for the maintenance kit |
| Description The "Install MK" message means that maintenance kit should be replaced at 300,000 pages of printing. The interval counter must be manually reset using this service item. |
| Maintenance kit MK-340 (for 35/37 ppm printer [EUR/USA model]) Maintenance kit MK-350 (for 40/42 ppm printer [EUR/USA model]) Maintenance kit MK-360 (for 45/47 ppm printer [EUR/USA model]) |
| Maintenance kit includes the following units: Drum unit Developing unit Fuser unit Transfer roller Separation charger brush unit Paper feed system rollers |
| PurposeTo reset the life counter for the developing unit and drum unit included in maintenance kit.Procedure for replacing the maintenance kitDrum unit (See page 1-5-12)Developing unit (See page 1-5-11)Fuser unit (See page 1-5-16)Transfer roller (See page 1-5-14)Separation charger brush unit (See page 1-5-14)Paper feed system rollers:Paper feed assembly [paper feed roller and pickup roller] (See page 1-5-6)Retard roller (See page 1-5-7)MP tray paper feed roller (See page 1-5-10) |
| Procedure Enter the maintenance mode [>>Maintenance]. Press the OK key. [>>Maintenance?] will be displayed. Press the OK key twice. The counter for each component is reset immediately. Completion Note: Occurrences of resetting the maintenance kits are recorded on the service status page or event log in number of pages at which the maintenance kit was replaced (See page 1-3-2, 1-3-10). This may be used to determine the possibility that the counter was errorneously or unintentionally reset. |
| Initializing the developing unit (toner install mode) |
| The new developing unit is shipped from the factory with no toner contained. The developing unit can be automatically replete with toner when a toner container is installed onto it and the printer is turned on. However, because the toner reservoir in the developing unit has a large capacity, it requires a lengthy period of time until a substantial amount of toner has been fed to get the printer ready. (A new developing unit needs approximately 200 g for triggering the sensor inside.) Purpose To execute when the developing unit has been replaced. Method Enter the maintenance mode [>>Developer]. Press the OK key. [>>Developer?] will be displayed. Turn off and on the printer. [Self test] [Please wait (Adding toner)] will displayed. The printer continually engages in this mode for a period of approximately 10 minutes, after which the printer reverts to the [Ready] state. [Ready] will displayed. Develop-ing unit initialization is finished. |
| |

| Maintenance items | Description | | | | |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| >>DRUM-CTRL | Automatic drum surface refreshing Description The drum surface refreshing operation is normally performed when the power is turned on to the printer or during warm-up when the printer is recovering from the Sleep mode, but even then only at those times that the temperature/humidity sensor detects the drum surface to be in a state of dew condensation. By using this mode, it is possible to force the drum surface refreshing operation to be performed automatically at a predetermined period of time, regardless of the status detected by the temperature/humidity sensor. Purpose To prevent bleeding of the output image when the printer's operating environment is one of high humidity. Method 1. Enter the maintenance mode [>>DRUM-CTRL]. 2. Press the OK key. [>>DRUM-CTRL?] will be displayed. 3. Press the OK key. 4. Press the V key or ▲ key and select the desire mode (from 00 to 02). | | | | |
| | 00 Mode turned OFF (default) | | | | |
| | 01 Refreshing operation time (short) | | | | |
| | 02 Refreshing operation time (long) | | | | |
| | Press the OK key. The new value is set. Completion | | | | |
| >>Drum | Drum surface refreshing Description Rotates the drum approximately 3 minutes with toner lightly on the overall drum using the high-voltage output control of the engine PWB. The cleaning blade in the drum unit scrapes toner off the drum surface to clean it. Purpose To clean the drum surface when image failure occurs due to the drum. This mode is effective when dew condensation on the drum occurs. Method 1. Enter the maintenance mode [>>Drum]. 2. Press the OK key. [>>Drum?] will be displayed. 3. Press the OK key. Drum surface refreshing will start and finish after approximately 3 minutes, after which the printer reverts to the [Ready] state. [Ready] will displayed. Drum surface refreshing is finished. Completion | | | | |

| No. Item | Description | | |
| Toont. | E0: Paper misfeed occurs due to forced stop when an error occurs during prin ing. (such as opening of a cover) [00] E1: The length of paper is shorter than designated for the paper cassette is set to A4 width wise (see reference 1 below). [00] E3: Paper cassette 1 was opened in the middle of duplex printing (see reference 2 below). [49] F0: Paper does not arrive at the face down tray paper full sensor. [47] F1 to FE: Paper misfeed by another cause. [00] Note: Values (hexadecimal) within [] indicate paper misfeed locations. Reference 1: Widthwise A4 size and lengthwise A5 are identical in length, however, the fuse temperature differs. Detecting the fuser temperature depending on this temper ature difference allows detection of paper misfeed due to a wrong paper size. Reference 2: The DU cover of the duplex paper conveying section is designed to operate at being held against the main unit as the paper cassette is installed. (Paper feet ing fails when the paper cassette is in operly installed because of the resul tant space between the DU cover and the main unit.) Therefore, paper jam occurs if the paper cassette is opened in the middle of duplex printing. | | |

| 1 Unknown Toner Log | # Remembers 1 to 5 of occurrence of unknown toner detection. If the occurrence of the previous unknown toner detection is less than 5, all of the unknown toner detection are logged. | <u>Count.</u> The total page count at the time of the "Toner Empty" error with using an unknown toner container. | <u>Item</u> Unknown toner log code (1 byte, 2 categories) First byte 01: Fixed (Toner container) Second byte 00: (Fixed) |
| (1) Counter Log Comprised of three log counters includ- ing paper jams, self diagnostics errors, and replacement of the toner con- tainer. | (g) Jam Indicates the log counter of paper jams depending on location. Refer to Paper Jam Log. All instances including those are not occurred are displayed. | (h) Self diagnostic error Indicates the log counter of self diagnostics errors depending on cause. (See page 1-4-2) Example C6000: 4 Self diagnostics error 6000 has happened four times. | (1) Maintenance item replacing Indicates the log counter depending on the maintenance item for maintenance. T: Toner container 00: Black M: Maintenance kit 00: (Fixed) Example T00: 1 The (black) toner container has been replaced once. This is virtually logged as the occurrence of the" Toner Empty" or "Install MK" condition. |

1-4-1 Paper misfeed detection

(1) Paper misfeed indication

When a paper misfeed occurs, the printer immediately stops printing and displays the paper misfeed message on the operation panel. To remove paper misfed in the printer, pull out the paper cassette, pull out the rear unit, remove the developing unit or open the duplex cover.

Paper misfeed location

(2) Paper misfeed detection

Figure 1-4-2

1-4-2 Self-diagnostic function

(1) Self-diagnostic function

This printer is equipped with self-diagnostic function. When a problem is detected, the printer stops printing and display an error message on the operation panel. An error message consists of a message prompting a contact to service personnel, total print count, and a four-digit error code indicating the type of the error. (The display varies depending on the type of the error.)

(2) Self diagnostic codes

| Code | Contents | Remarks | | |
|------|----------------------------------------------------------------------------------|--------------------------------------------------|--------------------------------------------------------|--|
| | | Causes | Check procedures/corrective measures | |

| | | Defective drum PWB EEPROM. | Replace the drum unit (See page 1-5-12). | |
| | | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| Code | Contents | Remarks | | |
|------------|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| | | Causes | Check procedures/corrective measures | |
| F0 F000 | Communication problem between the main PWB and operation panel PWB Communication is failed between the | Defective main PWB. | Turn the power switch off/on to restart the printer.If the error is not resolved, replace main PWB (See page 1-5-30). | |
| | PWB. | Defective opera- tion panel PWB. | Replace the operation panel PWB. | |
| F010 | Main PWB checksum error | Defective main PWB. | Turn the power switch off/on to restart the printer. | |
| | | | In recovery mode, download the controller firmware using a CompactFlash card. In recovery mode, only a CompactFlash card is usable, not a USB memory. | |
| | | | Replace main PWB (See page 1-5-30). | |
| F020 | Main or expanded memory error Checksum failed with main memory (RAM) on the main PWB or expanded memory (DIMM). | Defective system main memory (RAM) on the main PWB. | Turn the power switch off/on to restart the printer.If the error is not resolved, replace main PWB (See page 1-5-30). | |
| | | Defective expanded memory (DIMM). | Replace the expanded memory (DIMM) (See page 1-2-3). | |
| F030 | General failure Miscellaneous failure with the main PWB. | Defective main- PWB. | Turn the power switch off/on to restart the printer.If the error is not resolved, replace main PWB (See page 1-5-30). | |
| F040 | Main PWB - engine PWB communica- tion error Communication between main PWB and engine PWB is failed. | Defective harness between engine PWB (YC12) and main PWB (YC12), or improper con- nector insertion. | Reinsert the connector. Also check for conti- nuity within the connector harness. If none, remedy or replace the harness. | |
| | | Defective main PWB. | Turn the power switch off/on to restart the printer.If the error is not resolved, replace main PWB (See page 1-5-30). | |
| | | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| F050 | Engine PWB ROM checksum error A checksum error occurred with ROM on the engine PWB. | Some error may have occurred when downloading the firmware of the engine PWB. | Download the firmware of the engine PWB again using the memory card (See page 1-6-3). | |
| | | Defective engine PWB. | Turn the power switch off/on to restart the printer. If the error is not resolved, replace the EEPROM on the engine PWB or engine PWB (See page 1-5-25). | |
| F186 | Main PWB video data control error | Defective main- PWB. | Turn the power switch off/on to restart the printer.If the error is not resolved, replace main PWB (See page 1-5-30). | |

1-4-3 Image formation problems

(1) Completely blank printout.

| Print example | | Causes | Check procedures/corrective measures |
|---------------|---------------------------------------|---------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | No develop- ing bias output. | Poor contact of engine PWB's developing bias out- put terminal and printer's contact (spring). | Check the installation position of the engine PWB. Refer to figure1-4-3 above. |
| | | Poor contact of engine PWB's developing bias out- put terminal and developing unit's contact. | Check the installation of the developing unit. Refer to figure 1-4-4 below. |
| | | Developing bias output terminal | Printer inside Developing unit Developing unit |
| | | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |
| | No laser | Defective laser scanner unit. | Replace the laser scanner unit (See page 1-5-38). |
| | output. | Defective main PWB. | Replace the main PWB (See page 1-5-30). |

(2) All-black printout.

| Print example | | Causes | Check procedures/corrective measures |
|---------------|-------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| | No main | Defective main charger unit. | Replace the main charger unit (See page 1-5-13). |
| | Poor contact of engine PWB's main charger of terminal and main char unit's contact (spring). | | Check the installation of the drum (main charger) unit. Refer to figure 1-4-5 below. |
| | | Drum PWB connector (YC1) Main charger unit Contact (spring) Contact (spring) Drum unit | Figure 1-4-5 |
| | | Poor contact of engine PWB's main charger out- put terminal and printer's contact (spring). | Check the installation position of the engine PWB. (See page 1-5-25 and 1-4-9, refer to figure 1-4-3) |
| | | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |

(3) Dropouts.

| Print example | Causes | Check procedures/corrective measures |
|---------------|------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Defective developing roller (develop- ing unit). | If the defects occur at regular intervals of 39 mm/1 9/16" (See page 2-4-1), the problem may be the damaged developing roller (in the developing unit). Replace developing unit. If a developing unit which is known to work normally is avail- able for check, replace the current developing unit in the printer with the normal one. If the symptom disappears, replace the developing unit with a new one (See page 1-5-11). |
| | Defective drum (drum unit). | If the defects occur at regular intervals of 94 mm/3 11/16" (See page 2-4-1), the problem may be the damaged drum (in the drum unit). Replace drum unit. If a drum unit which is known to work normally is available for check, replace the current drum unit in the printer with the normal one. If the symptom disappears, replace the drum unit with a new one (See page 1-5-12). |
| | Fuser unit (heat roller or press roller). | If the defects occur at regular intervals of 72 mm/2 13/16", 82 mm/3 1/4" or 93 mm/3 11/16" (See page 2-4-1), the problem may be the damaged heat roller or press roller (in the fuser unit). Replace fuser unit (heat roller or press roller). If a fuser unit which is known to work normally is available for check, replace the current fuser unit in the printer with the normal one. If the symptom disappears, replace the fuser unit (heat roller or press roller) with a new one (See page 1-5-16). |
| | Defective paper specifications. | Paper with rugged surface or dump tends to cause dropouts. Replace paper with the one that satisfies the paper specifica- tions. |
| | Defective transfer roller installation. | The transfer roller must be supported by the bushes at the both ends. Clean the bush to remove oil and debris. Replace the transfer roller if necessary (See page 1-5-14). |
| | Defective engine PWB (transfer bias output circuit). | Replace the engine PWB (See page 1-5-25). |

(4) Black dots.

| Print example | Causes | Check procedures/corrective measures |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Defective drum unit. | If the defects occur at regular intervals of 94 mm/3 11/16" (See page 2-4-1), the problem may be the damaged drum (in the drum unit). Replace drum unit. If the defects occur at random intervals, the toner may be leaking from the developing unit or drum unit. Replace developing unit or drum unit (See page 1-5-11 or 1-5-12). |
| | An additive which was applied to the cleaning roller in the drum unit during manufacturing was transferred to the main charger roller surface of main charger unit. (Immediately after the | If the defects occur at a regular interval of 39 mm or 1 9/16" (See page 2-4-1), the problem may be due to the damaged main charger roller (in the main charger unit). Perform the steps 1 to 3 below. |
| | printer is installed.) | Perform the drum surface refreshing for three times (See page 1-3-9). Clean the drum surface (See next page). |
| | | 3. Clean the main charger roller surface (See next page). |
| | | If the problem persists, repeat them more times. If the problem still persists, replace the main charger unit (roller). |

Cleaning the drum surface

- 1. Remove the drum unit (See page 1-5-12).
- 2. Remove the main charger unit (See page 1-5-13).
- 3. Hold the drum unit at an angle shown right figure.

Use care not to drop foreign objects into the drum.

- Rotate the drum by rotating the drum gear. (in the direction of arrow (A), approximately 90 degrees)
 CAUTION: Do not turn the drum in the opposite direction.
- Lightly wipe the drum surface with a cleaning cloth in the direction of arrow (B). NOTE: Use a cleaning cloth with fine seams.
- Repeat the steps 4 and 5 until the entire surface of the drum surface is cleaned. NOTE: Do not leave waste textiles of the cleaning cloth on the drum surface.

Cleaning the main charger roller surface

- Lightly wipe the main charger roller surface in the direction of arrow (A). NOTE: Use the cleaning cloth with fine seams. CAUTION: Do not accidentally apply grease onto the main charger roller surface.
- Slightly rotate the main charger roller to a new position.
- Repeat the steps 1 and 2 to clean the entire surface of the main charger roller. NOTE: Do not leave waste textiles of the cleaning cloth on the main charger roller surface.
- Lightly wipe the edges of the urethane sheet.
 CAUTION: Use care not to deform or dam-

CAUTION: Use care not to deform or damage the urethane sheet.

Figure 1-4-8

(5) Black horizontal streaks.

| Print example | Causes | Check procedures/corrective measures |
|---------------|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Defective drum unit's ground. | Defective drum unit's ground. The contact (spring) in the drum unit and its counter part, the drum grounding terminal in the printer, must be in a good contact. (See page 1-4-10, refer to figure 1-4-5) |
| | Defective drum unit. | If a drum unit which is known to work normally is available for check, replace the current drum unit in the printer with the normal one. If the symptom disappears, replace the drum unit with a new one (See page 1-5-12). |

(6) Black vertical streaks.

| Print example | Causes | Check procedures/corrective measures |
|---------------|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Flawed main charger roller. | Replace the main charger unit (See page 1-5-13). |
| | Dirty or flawed drum. | Clean the drum or, if it is flawed, replace the drum unit (See page 1-5-12). |
| | Defective drum unit. | A streak of toner remaining on drum after printing means that the cleaning blade (in the drum unit) is not working properly. Replace the drum unit (See page 1-5-12). If a drum unit which is known to work normally is available for check, replace the current drum unit in the printer with the nor- mal one. If the symptom disappears, replace the drum unit with a new one (See page 1-5-12). |
| | Defective developing roller (develop- ing unit). | If a developing unit which is known to work normally is avail- able for check, replace the current developing unit in the printer with the normal one. If the symptom disappears, replace the developing unit with a new one (See page 1-5-11). |

(7) Unsharpness.

| Print example | Causes | Check procedures/corrective measures |
|---------------|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC | Defective paper specifications. | Paper with rugged surface or dump tends to cause unsharp printing. Replace paper with the one that satisfies the paper specifications. |
| | EcoPrint mode setting. The E becau For no operating guide. | The EcoPrint mode can provides faint, unsharp printing because it acts to conserve toner for draft printing purpose. For normal printing, turn the EcoPrint mode off by using the operation panel. For details refer to the printer's operation guide. |
| | Defective transfer roller. | If the transfer roller is contaminated with toner, clean the trans- fer roller using a vacuum cleaner or by continuously printing a low density page until the symptom has faded away. |
| | Poor contact of engine PWB's trans- fer bias output terminal and printer's contact (spring). | Check the installation position of the engine PWB. (See page 1-5-25 and 1-4-9, refer to figure 1-4-3) |

2J0/2J1/2J2

(8) Gray background.

| Print example | Causes | Check procedures/corrective measures |
|---------------|-----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Print density setting. | The print density may be set too high. Try adjusting the print density. For details refer to the printer's operation guide. |
| | Defective drum surface potential. | If a drum unit which is known to work normally is available for check, replace the current drum unit in the printer with the normal one. If the symptom disappears, replace the drum unit with a new one (See page 1-5-12). |
| | Defective main charger unit. | Replace the main charger unit (See page 1-5-13). |
| | Defective developing roller (develop- ing unit). | If a developing unit which is known to work normally is avail- able for check, replace the current developing unit in the printer with the normal one. If the symptom disappears, replace the developing unit with a new one (See page 1-5-11). |

(9) Dirt on the top edge or back of the paper.

| Print example | Causes | Check procedures/corrective measures |
|---------------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ABC 123 | Toner contamination in various parts. | Dirty edges and back of the paper can be caused by toner accumulated on such parts as the paper chute, paper trans- portation paths, the bottom of the drum and developing unit, and the fuser unit inlet. Clean these areas and parts to remove toner. |
| | Defective transfer roller. | If the transfer roller is contaminated with toner, clean the trans- fer roller using a vacuum cleaner or by continuously printing a low density page until the symptom has faded away. |

(10) Undulated printing at the left edge (scanning start position).

| Print example | Causes | Check procedures/corrective measures |
|----------------------------------------------|----------------------------------------------------|---------------------------------------------------|
| | Defective polygon motor (laser scan- ner unit). | Replace the laser scanner unit (See page 1-5-38). |
| This vertical line should be straight. | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |

1-4-4 Electric problems

| Problem | Causes | Check procedures/corrective measures | |
|------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|--|
| (1) Defective waste toner box detecting. | Defective waste toner sen- sor. | Replace the drum unit (See page 1-5-12). | |
| | Defective connection between drum PWB (YC1) and connect-L PWB (YC3). | Check the connection of connectors between drum PWB (YC1) and connect-L PWB (YC3). (See page 1-4-10, refer to figure 1-4-5) | |
| | Defective harness between connect-L PWB (YC6) and engine PWB (YC504), or improper connector inser- tion. | Reinsert the connector. Also check for continuity within the con- nector harness. If none, remedy or replace the harness. | |
| | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| (2) Defective paper jam | Defective registration sen- sor or duplex jam sensor. | Replace the engine PWB (See page 1-5-25). | |
| Paper jam frequently occurs. False paper jam | Defective paper exit sensor, duplex sensor or face down tray paper full sensor. | Replace the paper exit sensor, duplex sensor or face down tray paper full sensor. | |
| message display. | Actuators of registration sensor, duplex jam sensor, duplex sensor or face down tray paper full sensor does not operate smoothly. | Repair or replace. | |
| | A piece of paper torn from a sheet is caught around actuator of registration sen- sor, paper exit sensor, duplex sensor, duplex jam sensor or face down tray paper full sensor. | Check visually and remove it, if any. | |
| | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| (3)Defective paper gauge sensing. | Defective paper gauge sensor 1 or 2. | Replace the engine PWB (See page 1-5-25). | |
| indication. | Actuator of paper gauge sensor 1 and 2 does not operate smoothly. | Repair or replace. | |
| | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| (4)Defective paper size detecting. | Defective cassette size switch. | Replace the cassette size switch. | |
| message display. | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). | |
| (5) Defective message displaying (LCD) [1]. No message appears on the message dis- | Defective harness between operation panel PWB (YC1) and main PWB (YC7), or improper connector inser- tion. | Reinsert the connector. Also check for continuity within the con- nector harness. If none, remedy or replace the harness. | |

| ation panel PWB.) | Defective operation panel PWB. | Replace the operation panel PWB. | |

| Problem | Causes | Check procedures/corrective measures |
|--------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (6) Defective message displaying (LCD) [2]. No message appears | Broken power cord. | Replace the power cord. |
| | The power cord is not plugged in properly. | Check the contact between the printer's AC inlet and the AC power outlet. |
| on the message dis- play (LCD), even | No electricity at the AC power outlet. | Measure the AC input voltage. |
| sage background does not illuminate | Defective power source unit. | Replace the power source unit (See page 1-5-32). |
| faintly. (The power is not supplied to the operation panel PWB.) | Defective harness between operation panel PWB (YC1) and main PWB (YC7), or improper connector inser- tion. | Reinsert the connector. Also check for continuity within the con- nector harness. If none, remedy or replace the harness. |
| | Defective operation panel PWB. | Replace the operation panel PWB. |
| | Defective main PWB. | Replace the main PWB (See page 1-5-30). |
| (7) "Close rear unit" dis- play is not cancelled to closing the rear | Defective fuser unit's drawer connector. | If a fuser unit which is known to work normally is available for check, replace the current fuser unit in the printer with the normal one. If the symptom disappears, replace the fuser unit with a new one. |
| unit. | Defective harness between engine PWB (YC506) and fuser drawer connector, or improper connector inser- tion. | Reinsert the connector. Also check for continuity within the con- nector harness. If none, remedy or replace the harness. |
| | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |
| (8) "Close top cover" dis- | Deformed interlock switch's actuator lever. | Check the bending of the actuator lever of the interlock switch, if there is trouble, remedy or replace. |
| to closing the top cover. | Defective power source unit. | Replace the power source unit (See page 1-5-32). |
| | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |
| (9) "Close left side cover" display is not cancelled to closing the left side cover. | Defective engine PWB. | Replace the engine PWB (See page 1-5-25). |

Mechanical problems

| Problem | Causes/check procedures | Corrective measures |
|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (1) Check if the surfaces of the following r are dirty with paper powder: pickup rol paper feed roller and MP tray feed roller | | Clean with isopropyl alcohol. |
| | Check if the pickup roller, paper feed roller and MP tray feed roller are deformed. | Check visually and replace any deformed rollers. |
| | Defective installation position of paper feed drive unit (paper feed clutch, MP tray paper feed clutch and middle feed clutch) or MP tray paper feed solenoid. | Check the installation position of paper feed drive unit (paper feed clutch, MP tray paper feed clutch and middle feed clutch) or MP tray paper feed solenoid. |
| | Defective installation position of paper feed motor. | Check the installation position of paper feed motor. |
| (2) No secondary paper feed. | Check if the surfaces of the upper and lower registration rollers are dirty with paper pow- der. | Clean with isopropyl alcohol. |
| | Defective installation position of paper feed drive unit (paper feed clutch, MP tray paper feed clutch and middle feed clutch) or MP tray paper feed solenoid. | Check the installation position of paper feed drive unit (paper feed clutch, MP tray paper feed clutch and middle feed clutch) or MP tray paper feed solenoid. |
| | Defective installation position of paper feed motor. | Check the installation position of paper feed motor. |
| (3) Skewed paper feed. | Check if the paper is curled. | Change the paper. |
| (4) | Check if the paper is excessively curled. | Change the paper. |
| are fed at one time. | Deformed guides along the paper conveying path. | Check visually and replace any deformed guides. |
| (5) Paper jams. | Check if the contact between the upper and lower registration rollers is correct. | Check visually and remedy if necessary. Replace the pressure spring if it is deformed. |
| | Check if the press roller is extremely dirty or deformed. | Clean or replace the press roller (See page 1-5-21). |
| | Check if the contact between the heat roller and its separation claws is correct. | Repair if any springs are off the separation claws. |
| (6) Toner drops on the paper conveying path. | Check if the developing unit or drum unit is extremely dirty. | Clean the developing unit or drum unit (See page 1-5-11 or 1-5-12). |
| (7) Abnormal noise is heard. | Check if the pulleys, rollers and gears operate smoothly. | Grease the bearings and gears. |
| | Check if the following drive unit are installed correctly: Paper feed drive unit Main drive unit | Correct. |
| | | |

This page is intentionally left blank.

1-5-1 Precautions for assembly and disassembly

(1) Precautions

Be sure to turn the power switch off and disconnect the power plug before starting disassembly.

When handling PWBs, do not touch connectors with bare hands or damage the PWB.

Do not touch any PWB containing ICs with bare hands or any object prone to static charge.

Use only the specified parts to replace the thermal cutout. Never substitute electric wires, as the printer may be seriously damaged.

When removing the hook of the connector, be sure to release the hook.

Take care not to get the wire caught.

(2) Drum

Note the following when handling or storing the drum.

When removing the drum unit, never expose the drum surface to strong direct light.

Keep the drum at an ambient temperature between 0 °C/32 °F and 40 °C/104 °F and at a relative humidity not higher than 90% RH. Avoid abrupt changes in temperature and humidity.

Avoid exposure to any substance which is harmful to or may affect the quality of the drum.

Do not touch the drum surface with any object. Should it be touched by hands or stained with oil, clean it.

(3) Toner container

Store the toner container in a cool, dark place. Avoid direct light and high humidity.

(4) How to tell a genuine Kyocera Mita toner container

As a means of brand protection, the Kyocera Mita toner container utilizes an optical security technology to enable visual validation. A validation viewer is required to accomplish this.

Hold the validation viewer over the left side part of the brand protection seal on the toner container. Through each window of the validation viewer, the left side part of the seal should be seen as follows:

A black-colored band when seen through the left side window (

A shiny or gold-colored band when seen through the right side window (~~)

The above will reveal that the toner container is a genuine Kyocera Mita branded toner container, otherwise, it is a counterfeit.

The brand protection seal has an incision as shown below to prohibit reuse.

Figure 1-5-2

1-5-2 Outer covers

(1) Detaching and refitting the top cover

- Open the top cover.
 Remove two screws.
- 3. Remove the one connector and then remove the top cover.

Figure 1-5-3

(2) Detaching and refitting the right cover and left cover

- 1. Remove the paper cassette.
- Open the MP tray.
 Remove the top cover (See page 1-5-3).
- 4. Release five latches and then remove the right cover.

Figure 1-5-4

- 5. Open the left side cover and then remove the waste toner box.
- 6. Remove the one screw.
- 7. Draw the rear unit.
- 8. Open the rear upper cover.
- 9. Release six latches and then remove the left cover.

Figure 1-5-5

1-5-3 Paper feed section

(1) Detaching and refitting the paper feed assembly (paper feed roller and pickup roller)

Procedure

- 1. Remove the paper cassette.
- 2. While pushing the lock and then slide the paper feed roller pin.
- 3. While pressing the lever and then remove the paper feed assembly.
- 4. Check or replace the paper feed assembly and refit all the removed parts.

*: 40/42 and 45/47 ppm printers (EUR/USA model) only.

Figure 1-5-6

(2) Detaching and refitting the retard roller

Procedure

- 1. Remove the paper cassette.
- 2. Push the bottom plate down until it locks (35/37 ppm printer [EUR/USA model] only).
- 3. Release the two latches and then remove the retard guide.

Figure 1-5-7

- 4. Remove the retard holder (roller) from the retard guide.
- 5. Check or replace the retard roller and refit all the removed parts.

Figure 1-5-8

(3) Detaching and refitting the registration upper and lower roller

- 1. Remove the developing unit (See page 1-5-
 - 11).
- 2. Remove the spring.
- 3. Pull the registration upper roller.

- 4. Remove the registration upper roller from the bush.
- 5. Remove the gear and bush from the registration upper roller.

- Remove the registration lower roller.
 Remove the stopper, gear and three bushes from the registration lower roller.
- Check or replace the registration upper and lower roller and refit all the removed parts.

Figure 1-5-11

(4) Detaching and refitting the MP tray paper feed roller

- 1. Open the MP tray.
- 2. Grasp and pull the MP tray upwards until it is removed from the printer.

Figure 1-5-12

- Pull the MP tray paper feed roller holder. (1)
 Slide the MP tray paper feed roller holder.
- (2)
- Remove the MP tray paper feed roller.
 Check or replace the MP tray paper feed roller and refit all the removed parts.

Figure 1-5-13

1-5-4 **Developing section**

(1) Detaching and refitting the developing unit

- Open the top cover.
 Open the MP tray.
 Remove the developing unit.
- 4. Check or replace the developing unit and refit all the removed parts.

Figure 1-5-14

1-5-5 Drum section

(1) Detaching and refitting the drum unit

- 1. Remove the developing unit (See page 1-5-11).
- 2. Open the left side cover and then remove the waste toner box.
- 3. Unlock the drum unit lock and then remove the drum unit.
- 4. Check or replace the drum unit and refit all the removed parts.

Figure 1-5-15

(2) Detaching and refitting the main charger unit

- 1. Remove the drum unit (See page 1-5-12).
- Unlock the lock lever and then remove the main charger unit.
 Check or replace the main charger unit and
- 3. Check or replace the main charger unit and refit all the removed parts.

Figure 1-5-16

1-5-6 Transfer/separation section

(1) Detaching and refitting the transfer roller and separation charger brush unit

Procedure

- 1. Remove the developing unit (See page 1-5-11).
- 2. Remove the drum unit (See page 1-5-12).
- 3. Slide the paper chute guide and unhook the hooks.
- 4. Remove the paper chute guide.

5. Remove the shaft (transfer roller) from the both bushes.

Figure 1-5-18
- 6. Release four latches and then remove the separation charger brush unit.
- 7. Check or replace the transfer roller and separation charger brush unit and refit all the removed parts.

CAUTION: Note the following, when refitting the separation charger brush unit. A. The separation charger brush unit is inserted into the two projections of the frame and does not run on to the projections. B. The separation charger brush unit is firmly in contact with the separation charger plate of the frame.

Figure 1-5-19

1-5-7 Fuser section

(1) Detaching and refitting the fuser unit

Procedure

- 1. Draw the rear unit.
- 2. Insert a flat-blade screwdriver to push the fuser lock (gray colored) on the rear unit and the fuser unit is separated from the rear unit (rails).

Do it both ends of the rear unit.

 Check or replace the fuser unit and refit all the removed parts.
 Place the fuser unit on the rear unit (rails) and push the fuser lock so that the fuser lock catches the fuser unit.
 Do it for the both ends of the fuser unit.

Figure 1-5-20

(2) Detaching and refitting the fuser heater lamp

- Remove the fuser unit (See page 1-5-16).
 Open the exit upper guide.
 Remove four screws.

Figure 1-5-21

4. Detach the fuser upper frame.

Figure 1-5-22

5. Remove the one screw from the fuser heater lamp.

- 6. Remove the one screw and one terminal from the fuser heater lamp.
- 7. Remove the fuser heater lamp.
- Check or replace the fuser heater lamp and refit all the removed parts. Seat the fuser heater lamp aligning its wattage mark and welding mark faced with the correct direction and side.

Figure 1-5-24

(3) Detaching and refitting the heat roller

- 1. Remove the fuser heater lamp (See page 1-5-17).
- 2. Unhook two bearing retainer's hooks and then remove the heat roller (assembly) from the fuser upper frame.
- 3. Remove the heat gear Z46, two bearings, two bushes and two stoppers from the heat roller.
- 4. Check or replace the heat roller and refit all the removed parts.

Figure 1-5-25

(4) Detaching and refitting the press roller

- 1. Remove the fuser unit (See page 1-5-16).
- 2. Open the fuser upper frame (See page 1-5-17).
- 3. Remove the press roller from the fuser lower frame.
- 4. Check or replace the press roller and refit all the removed parts.

(5) Detaching and refitting the fuser thermistor 1/2 and thermal cutout

- 1. Remove the fuser unit (See page 1-5-16).
- 2. Turn the fuser unit bottom side up.
- 3. Release three lock levers and then remove the wire cover.

- 4. Unlatch two latches and then remove the fuser drawer connector.
- Remove the following connector(s). One connector (gray): 35/37 ppm printer (EUR/USA model) Two connectors (gray and blue): 40/42 and 45/47 ppm printers (EUR/USA model)

Figure 1-5-28

- 6. Remove the wires from the ten clamps.
- 7. Remove one connector.

Figure 1-5-29

- 8. Remove the heat roller (See page 1-5-20).
- 9. Remove the one screw and then remove the fuser thermistor 1.

Figure 1-5-30

10. Remove the one screw (nut) and then remove the fuser thermistor 2 (40/42 and 45/47 ppm printers [EUR/USA model] only).

Figure 1-5-32

- 11. Remove the two screws (nuts) and then remove the terminal and cord plate.
- 12. Remove the thermal cutout.
- 13. Check or replace the fuser thermistor 1/2 and thermal cutout and refit all the removed parts.

1-5-8 PWBs

(1) Detaching and refitting the engine PWB

Procedure

- 1. Remove the developing unit (See page 1-5-11).
- 2. Remove the drum unit (See page 1-5-12).
- 3. Remove the top cover (See page 1-5-3).
- 4. Remove the left cover (See page 1-5-4).
- 5. Remove the PSU fan motor (See page 1-5-32).
- 6. Stand the printer front side up.
- 7. Remove five screws and then remove the bottom plate1.
- 8. Remove two screws and then remove the bottom plate 2.

Figure 1-5-33

- 9. Remove two wires from the hooks and notches.
- 10. Open the DU guide (duplex cover).

Figure 1-5-34

- Remove the cord cover (40/42 and 45/47 ppm printers [EUR/USA model] only).
 Remove the connector (40/42 and 45/47
- ppm printers [EUR/USA model] only). 13. Detach the joint.
- 14. Remove the six screws and then remove the DU base.

Figure 1-5-35

- 15. Release four snaps. 16. Remove one tab.
- 17. Remove five connectors.

Figure 1-5-36

18. Remove four screws.

Figure 1-5-37

- Detach the engine PWB assembly.
 Remove four connectors.
 Remove the engine PWB assembly.

- 23. Remove two screws-A and then remove the HV plate.
- 24. Remove two screws-B and then remove the engine R grounding plate, engine L ground-ing plate and shield plate.
- 25. Check or replace the engine PWB and refit all the removed parts. To replace the engine PWB, remove the EEPROM from the old engine PWB and mount it to the new engine PWB.

Figure 1-5-39

(2) Detaching and refitting the main PWB

Procedure

- 1. Remove the top cover (See page 1-5-3).
- 2. Remove the right cover (See page 1-5-4).
- Remove the following connectors from the main PWB. Six connectors: 35/37 and 40/42 ppm printers (EUR/USA model) Seven connectors: 45/47 ppm printer (EUR/USA model)
 Remove the following connectors from the
- Remove the following connectors from the connect-R PWB.
 Eleven connectors: 35/37 ppm printer (EUR/ USA model)
 Thirteen connectors: 40/42 and 45/47 ppm printers (EUR/USA model)
- 5. Remove the wires from the clamp.
- 6. Remove the one screw and then remove the connect-R PWB.

Connectors Connect-R PWB Main PWB YC3 YC16 YC9 Ο YC6 YCS YC7 YC7 YC11 YC14 YC12 YC13 YC10 YC11 YC12 ХC4 YC4 YC8 YC9: 45/47 ppm printer YC9 YC2 YC1 (EUR/USA model) only YC8, YC9; 40/42 and 45/47 ppm printers (EUR/USA model) only Main PWB

Figure 1-5-40

- 7. Draw the rear unit.
- 8. Remove six screws and then remove the controller box (main PWB).

- 9. Remove five screws and then remove the main PWB from the controller box.
- 10. Check or replace the main PWB and refit all the removed parts.

Figure 1-5-42

(3) Detaching and refitting the power source unit (PWB)

- 1. Remove the top cover (See page 1-5-3).
- 2. Remove the right cover (See page 1-5-4).
- 3. Remove the drum unit (See page 1-5-12).
- 4. Remove one connector (YC11) from the connect-L PWB.
- 5. Remove the wires from the drum grounding plate and clamp.
- 6. Release two hooks and then remove the PSU fan motor.

Figure 1-5-43

- 7. Remove seven screws-A and drum grounding plate and two grounding terminals.
- 8. Remove one screw-B and grounding terminal.
- 9. Remove the AC inlet.

Figure 1-5-44

- 10. Remove one connector.
- 11. Remove the PWB connector between connect-L PWB and power source unit.
- 12. Remove the power source unit.

Figure 1-5-45

- 13. Remove one connector.
- 14. Remove six screws and then remove the power source PWB.15. Check or replace the power source PWB
- and refit all the removed parts.

Figure 1-5-46

1-5-9 Others

(1) Detaching and refitting the paper feed drive unit

- 1. Remove the paper cassette.
- 2. Remove the developing unit (See page 1-5-11).
- 3. Remove the top cover (See page 1-5-3).
- 4. Remove the right cover (See page 1-5-4).
- 5. Remove five connectors from the connect-R PWB.
- 6. Remove wires from the clamp.
- 7. While opening four hooks and then remove the wires.
- 8. Remove the right fan motor.

Figure 1-5-47

- 9. Remove three screws and then remove the
- Remove three screws and then remove the paper feed drive unit.
 Check or replace the paper feed drive unit and refit all the removed parts. To refit the paper feed drive unit, make sure mesh of gears.

Figure 1-5-48

(2) Detaching and refitting the main drive unit

- 1. Remove the top cover (See page 1-5-3).
- 2. Remove the right cover (See page 1-5-4).
- 3. Remove the controller box (See page 1-5-30).
- 4. Remove two connectors.
- 5. Remove five screws and then remove the main drive unit.
- 6. Check or replace the main drive unit and refit all the removed parts.

Figure 1-5-49

(3) Detaching and refitting the laser scanner unit

Procedure

- 1. Remove the top cover (See page 1-5-3).
- 2. Remove the right cover (See page 1-5-4).
- 3. Remove the following connectors from the main PWB.

Two connectors: 35/37 and 40/42 ppm printers (EUR/USA model)

Three connectors: 45/47 ppm printer (EUR/ USA model)

Figure 1-5-50

- 4. Remove four screws and then remove the laser scanner unit.
- 5. Check or replace the laser scanner unit and refit all the removed parts.

Figure 1-5-51

(4) Direction of installing the principal fan motors

When detaching or refitting the left fan motor or right fan motor, be careful of the airflow direction (intake or exhaust).

Figure 1-5-52

1-6-1 Downloading firmware

The system firmware can be update by downloading new firmware. Downloading can be made either by directly sending the new firmware using a USB memory or memory card that contains the new firmware.

Firmware file name example

Figure 1-6-1

(1) Downloading the firmware from the USB memory

To download data written in a USB memory to the printer, proceed as explained in this section.

CAUTION

Downloading firmware takes several minutes. Do not turn power off during downloading. If downloading is interrupted by an accidental power failure, etc., the main PWB may have to be replaced.

- 1. Turn printer power off.
- 2. Connect the USB memory to the PC.
- 3. Copy the firmware files to the root directory of the USB memory.
- 4. Remove the USB memory from the PC and then insert the USB memory into the printer's USB memory slot.

Figure 1-6-2

- 5. Turn printer power on.
- 6. When message display (1) is displayed to detect firmware in the USB memory.
- 7. Message display (2) is displayed during downloading.
- 8. When message display (3) is displayed to indicate downloading is finished.
- 9. Turn printer power off.
- 10. Remove the USB memory from USB memory slot.
- 11. Turn printer power on.
- 12. Confirm that message display (4) is displayed after warm-up.
- Print the status page to check that the firmware version has been updated (See page 1-3-2).

(2) Downloading the firmware from the memory card

To download data written in a memory card (CompactFlash) to the printer, proceed as explained in this section.

CAUTION

Downloading firmware takes several minutes. Do not turn power off during downloading. If downloading is interrupted by an accidental power failure, etc., the main PWB may have to be replaced.

- 1. Turn printer power off.
- 2. Remove two screws and then remove the optional interface slot cover.
- 3. Insert the memory card into the printer's memory card slot.

Figure 1-6-4

- 4. Turn printer power on.
- Press MENU key on the printer's operation panel and carry out the memory card formatting procedure (1).
- 6. When formatting is complete, turn printer power off.

Figure 1-6-5

- 7. Remove the formatted memory card from the memory card slot.
- 8. Insert the memory card to the PC's slot or to the adaptor.
- 9. Copy the firmware files to download to the root directory of the memory card.
- 10. Remove the memory card from the PC's slot or the adaptor.

- 11. Confirm that the printer's power switch is set to off.
- 12. Insert the memory card into the printer's memory card slot.

- 13. Turn printer power on.
- 14. When message display (1) is displayed to detect firmware in the memory card.
- 15. Message display (2) is displayed during downloading.
- 16. When message display (3) is displayed to indicate downloading is finished.
- 17. Turn printer power off.
- 18. Remove the memory card from memory card slot.
- 19. Refit the optional interface slot cover by two screws.
- 20. Turn printer power on.
- 21. Confirm that message display (4) is displayed after warm-up.
- Print the status page to check that the firmware version has been updated (See page 1-3-2).

2-1-1 Paper feed section

Paper feed section consists of the paper feed unit that feeds paper from the paper cassette and the MP tray paper feed unit that feeds paper from the MP tray, and the paper feed conveying section that conveys the fed paper to the transfer/ separation section.

(1) Paper cassette paper feed section

Paper cassette is the universal type that is applicable to various paper sizes by adjusting the side guides and paper stopper and approximate 500 pages can be put in. Mechanism in the paper cassette consists of the bottom plate that lifts the paper in order to let it touch the pickup roller and the retard roller that prevents papers from multiple feeding. Paper that is drawn out by the rotation of pickup roller of the paper cassette paper feed section is then sent in between the feed roller and the retard roller. Function of the built-in torque limiter in the retard roller gives weak resistance force against the rotation. Normally, when only a page is drawn out by the rotation of pickup roller, the paper is conveyed to the printer by the rotation of feed roller on its own. If the pickup roller drew out two lapped pages someway, the upper paper is conveyed by the feed roller and the lower paper stays due to the rotation resistant force of the retard roller because the friction force between papers is smaller than the rotation resistance force of the retard roller and then the multiple paper feed can be prevented.

Figure 2-1-1 Paper cassette paper feed section

- (3) Feed holder
- (4) Retard roller
- (5) Retard holder
- (6) Bottom plate
- (7) Retard guide
- (8) Cassette base

Figure 2-1-2 Paper cassette paper feed section block diagram

(2) MP tray paper feed section

The MP tray can contain about 100 pages. Feeding is performed by the rotation of the MP tray feed roller from the MP tray. Function of the MP tray friction pad prevents papers from multiple feeding.

Figure 2-1-3 MP tray paper feed section

- (1) MP tray paper feed roller
- (2) Bottom plate
- (3) MP tray frame
- (4) MPF base
- (5) MP tray cover

Figure 2-1-4MP tray paper feed section block diagram

(3) Paper feed conveying section

The conveying section consists of the parts shown in the following illustration and conveys papers from the paper cassette or the MP tray to the transfer/separation section when papers are fed. Paper by feeding or refeeding is conveyed by the middle feed roller to the position where the registration sensor is turned on, and then sent to the transfer/separation section by the upper registration roller and lower registration roller.

Figure 2-1-5Paper feed conveying section

- (3) Feed frame
- (4) Registration upper guide
- (5) Registration sensor (actuator)
- (6) Registration lower roller
- (7) Registration upper roller

Figure 2-1-6Paper feed conveying section block diagram

.

2-1-2 Drum section

(1) Drum section

The drum unit includes a photoconductive drum, eraser lamp, cleaning blade and, a main charger unit. The drum unit is removable with the main charger unit.

Figure 2-1-8Drum section block diagram

2-1-3 Expose section

(1) Laser scanner unit

The charged surface of the drum is then scanned by the laser beam from the laser scanner unit. The laser beam is dispersed as the polygon motor revolves to reflect the laser beam over the drum. Various lenses and mirror are housed in the laser scanner unit, adjust the diameter of the laser beam, and focalize it at the drum surface.

Figure 2-1-9Laser scanner unit

- (1) Polygon motor (polygon mirror)
- (2) $f-\theta$ sub lens
- (3) f-θ main lens
- (4) Direction change mirror
- (5) Protective glass

Figure 2-1-10Laser scanner unit block diagram
2-1-4 Developing section

(1) Developing section

The developing section consists of the developing unit and the toner container. The developing unit consists of the developing roller where a magnetic brush is formed, the doctor blade and the agitator A and B that agitate the toner. Also, the toner sensor checks whether or not toner remains in the developing unit.

Figure 2-1-12Developing section block diagram

2-1-5 Transfer/separation section

(1) Transfer/separation section

The image developed by toner on the drum is transferred onto the paper because of the electrical attraction between the toner itself and the transfer roller. The transfer roller is negatively biased so that the positively charged toner is attracted onto the paper while it is pinched by the drum and the transfer roller.

- (1) Transfer roller
- (2) Paper chute guide
- (3) Separation brush

Figure 2-1-14Transfer /separation section block diagram

2-1-6 Cleaning section

After the transferring process, the drum needs to be physically cleaned of toner which is residual after the development process. The cleaning blade is constantly pressed against the drum and scrapes the residual toner off to the cleaning roller. The waste toner is collected at the output end of the drum screw and sent to the waste toner box.

After the drum is physically cleaned, it then must be cleaned to the electrically neutral state. This is necessary to erase any residual positive charge, ready to accept the uniform charge for the next print process. The residual charge is canceled by exposing the drum to the light emitted from the eraser lamp (PWB). This lowers the electrical conductivity of the drum surface making the residual charge on the drum surface escape to the ground.

Figure 2-1-15Cleaning section

- (2) Cleaning roller
- (3) Drum screw
- (4) Drum frame
- (5) Eraser lamp (PWB)

Figure 2-1-16Cleaning section block diagram

2-1-7 Fuser section

(1) Fuser unit

The fuser section consists of the following parts and fixes the toner that is transferred to the paper at the transfer/separation section. The paper sent from the transfer/separation section is interleaved between the heat roller and the press roller. The heat roller is heated by the fuser heater lamp installed inside, and the toner is fused by heat and pressure and fixed onto the paper because the press roller is pressed by the fuser press spring. The fuser thermistor detects the temperature of the surface on the heat roller heated by the fuser heater lamp and this temperature is controlled by the engine PWB. If the fuse section shows extremely high temperature, the power line will be shut off and the fuser heater lamp is forced to turn off. When fusing of toner is complete, the paper is separated from he heat roller by the separator and ejected to the paper eject section/rear unit.
