# PREFACE

This maintenance manual provides procedures and techniques for the troubleshooting, maintenance, and repair of C9500/C9300.

This manual is written for maintenance personnel, but it should always be accompanied with the C9500/C9300 User's Manual for procedures for handling and operating C9500/C9300. For repairing each component of C9500/C9300, see the Troubleshooting manual.

#### [Notices]

The contents of this manual are subject to change without prior notice.

Although reasonable efforts have been taken in the preparation of this manual to assure its accuracy, this manual may still contain some errors and omissions. OKI will not be liable for any damage caused or alleged to be caused, by the customer or any other person using this maintenance manual to repair, modify, or alter C9500/C9300 in any manner.

#### [Warning]

Many parts of C9500/C9300 are very sensitive and can be easily damaged by improper servicing. We strongly suggest that C9500/C9300 be serviced by OKI's authorized technical service engineers.

## 1. SPECIFICATIONS

### 1.1 Basic System Configuration

The basic system configuration of C9500/C9300 is illustrated in Figure 1.1.

# 1.2 Printer Engine Specifications

The inside of the printer is composed of the followings:

- Electrophotographic Processor
- Paper Paths
- Controller Block (CU and PU)
- Operator Panel
- Power Units (High-Voltage Unit and Low-Voltage Unit)

Figure 1-2 shows the printer configuration.

#### 1.3 **Option Configuration**

The followings are available as options on C9500/C9300.

(1) 2nd Tray/ 3rd Tray

(7) Finisher Unit

(8) Simplified Color Copy Unit \* Equipped with exclusive auto feeder

(9) Dual-Purpose Finisher and Copy Unit Table, and Copy Unit Extension Rack

(10) 2nd/3rd Tray Unit on Casters

Note: Don't use one for C9200/C9400

# 1.4 Specifications

(1) External Dimensions	Height: 460mm	n Width: 66	6mm Length: 62	26mm
(2) Weight	72 kg			
(3) Paper	Type: Ordina OHP0 Size: Postal A3 A3 (Only to postal Weight: 1st tra Multi F	ary paper and 1) card, Legal -Nobi, B4 the 1st tray a card sizes.) y Purpose feed	I transparencies (F 13" or 14", Executi nd the front feeder 17 lb to 54 lb (64 er 17 lb to 54	Recommended: ML ve, A4, A5, B5, A6, r support A6 and to 203g/m <sup>2</sup> ) lb (64 to 203g/ m <sup>2</sup> )
(4) Print Speed (A4 LEF)	Color: Monochrome: Postal Card, La	30 pages pe (Transparer 37 pages pe (Transparer abel, Thick Pa	er minute ncy: Pages per mi er minute ncy: Pages per mi aper: 12Pages pe	nute) nute) er minute

## (12) Temperatures and Relative Humidities

#### Temperature

	Temperature (°F)	Temperature (°C)	Remark
Operating	50 to 89.6	10 to 32	17 to 27°C (Temperatures to assure full color print quality)
Non-Operating	32 to 109.4	0 to 43	Power-off
Storage (Max. One Year)	-14 to 109.4	-10 to 43	With drum and toner
Transport (Max. One Month)	-20 to 122	-29 to 50	With drum and without toner
Transport (Max. One Month)	-20 to 122	-29 to 50	With drum and toner

#### Humidity

	Relative Humidity (%)	Max. Wet-Bulb Temperature (°C)	Remark
Operating	20 to 80	25	50 to 70% (Humidities to assure full color print quality)
Non-Operating	10 to 90	26.8	Power-off
Storage	10 to 90	35	
Transport	10 to 90	40	

(13) Printer Life 1,000,000 pages (on a A4 basis) or five years

### 2. PARTS REPLACEMENT

This section describes the procedure for replacing the parts, assemblies and units in the field. The replacing procedure is given for detachment. To attach, use the reverse procedure.

#### 2.1 Precautions in Replacing Parts

- (1) Before replacing the parts, be sure to remove the CA cable and the interface cable.
  - (a) To remove the AC cable, always use the following procedure.
    - ① Flip the power switch of the printer off (to "O").
    - 2 Pull the AC inlet plug of the AC cable out of the AC receptable.
    - ③ Remove the AC cable and the interface cable from the printer.
  - (b) To connect the printer again, always use the following procedure.
    - ① Connect the AC cable and the interface cable to the printer.
    - ② Insert the AC inlet plug into the AC receptacle.
    - ③ Flip the power switch of the printer on (to "l").

- (2) Do not disassemble the printer so long as it operates properly.
- (3) Minimize the disassembly. Do not detach parts other than those shown in the replacing procedure.
- (4) For maintenance applications, use designated tools.
- (5) Follow the order instructed to disassemble the printer. Incorrect order may damage the parts.
- (6) Small parts such as screws and collars tend to get lost, so temporarily place and fix them in their original positions.
- (7) When handling ICs and circuit boards such as microprocessors, ROMs and RAMs, do not use gloves that likely to have static.
- (8) Do not place the printed circuit boards directly on the printer or the floor.

### [Maintenance Tools]

Table 2-1 lists tools necessary to replace the units.

No.	Service Tools		Q' ty	Place of use	Remarks
1		No. 1-100 Philips screwdriver	1	2~2.5 mm screws	
2		No. 2-200 Philips screwdriver, Magnetized	1	3~5 mm screws	
3		No. 3-100 screwdriver	1		
4		No. 5-200 screwdriver	1		
5		Digital multimeter	1		
6		Pliers	1		
7		Handy cleaner	1		
8		LED Head cleaner P/N 4PB4083-2248P001	1	Cleans LED head

Eject Guide Assy (2.3.6)

#### 2.3.1 Top cover

- (1) Open the top cover Assy.
- (2) Unscrew 9 screws (1) to detach the top cover (2).

Figure 2-3-1 Top Cover

- 2.3.2 LED Head / LED Spring / Post-Guide
  - (1) Open the Top Cover (1).
  - (2) Unplug 3 cables, release 2 hooks and remove the LED Head 2.
    (At this time, the 2 springs 3, Post-Guide 4 become detached together with the LED Head 2.)

*Note!* The contact is used only for 1200 dpi K, Y and M.

Figure 2-3-2 LED Head / LED Spring / Post-Guide

- 2.3.3 Top Cover Unit
  - (1) Remove the Top Cover. (See Sec. 2.3.1.)
  - (2) Remove the Rear Cover. (See Sec. 2.3.12.)
  - (3) Remove the Front Cover (See Sec. 2.3.11.)
  - (4) Remove the Electrical Chassis. (See Sec. 2. 3. 22.)
  - (5) Unscrew the screws (1) and (2), and remove the Limiters (F) (3) and (R) (4).
  - (6) Remove the Inner Shaft (5) and then the Top Cover Unit (8). At this time, the Inner Springs (6).

and  $\ensuremath{\overline{7}}$  also come off.

Figure 2-3-3 Top Cover Unit

- 2.3.4 Control Panel Assy / Control Panel Bezel / LED Control PWB / Toner Sensor / Stack Full Sensor / Control Panel / Control Panel Tape Harness / Eject Roller
  - (1) Remove the Control Panel Bezel ①.
  - (2) Unscrew the screws (2) and remove the Control Panel (3).
  - (3) Remove the Control Panel Tape Harness ④.
  - (4) Unscrew the screws (5), unplug the connectors (6) and then remove LED Control PWB (7).
  - (5) Unscrew the screws (8) and remove the plate (9).
  - (6) Release the claw and remove the Toner Sensor (10).
  - (7) Remove the Stack Full Sensor (1).
  - (8) Unscrew the screw (2) and remove the Eject Sensor Bracket (3).

Figure 2-3-4 Control Panel Assy / Control Panel Bezel / LED Control PWB / Toner Sensor / Stack Full Sensor / Control Panel / Control Panel Tape Harness / Eject Roller

- 2.3.5 Top Cover Handle / Top Cover Latch / Top Cover Latch Spring
  - (1) Unscrew 2 screws ① and remove the Top Cover Handle ② and Top Cover Latch ③.
    (At this time, 2 Top Cover Latch Springs ④ also come off.)

Figure 2-3-5 Top Cover Handle / Top Cover Latch / Top Cover Latch Spring

## 2.3.6 Eject Guide Assy

(1) Unscrew 7 screws (1) and remove the Eject Guide Assy (2).

Figure 2-3-6 Eject Guide Assy

- 2.3.7 Cassette Assy / Cover-Blind / Side Cover Assy
  - (1) Take out the Cassette Assy  $\bigcirc$ .
  - (2) Release 2 joints and remove the Cover-Blind (2).
  - (3) Unscrew 2 screws (3) and remove the stopper (4).
  - (4) Unscrew 5 screws (5), release the claw at the left support of the Side Cover (R) and remove the Side Cover (R) (6).

Figure 2-3-7 Cassette Assy / Cover-Blind / Side Cover Assy

#### 2.3.8 Feed Roller

- (1) Take out the Cassette. (See Sec. 2.3.7.)
- (2) Release the latch and remove the Feed Rollers (1).

Figure 2-3-8 Feed Roller

#### 2.3.9 Left Side Cover

(1) Unscrew 4 screws (1) and remove the Left Side Cover (2).

Figure 2-3-9 Left Side Cover

### 2.3.10 Face Up Tray

(1) Open the Face Up Tray ① to the arrow direction, release the joints of the Links ② (2 joints each) and then remove the Face Up Tray ①.

Figure 2-3-10 Face Up Tray

#### 2.3.11 Front Cover

- (1) Open the Top Cover (1).
- (2) Release 2 claws at the Side Cover (R) and remove the Blind Cover 2.
- (3) Unscrew 6 screws (3) and remove the Front Cover (4).

Figure 2-3-11 Front Cover

#### 2.3.12 Rear Cover

- (1) Open the Top Cover (1).
- (2) Unscrew 6 screws (2) and a screw (3), and remove the Rear Cover (4).

Figure 2-3-12 Rear Cover

- 2.3.13 Multipurpose Tray Assy / Multipurpose Tray Cover Assy / Link / Multipurpose Tray Top Cover / Multipurpose Tray Drive Gear / OHP Sensor
  - (1) Remove the Rear Cover (See Sec. 2.3.12.)
  - (2) Remove the Front Cover (See Sec. 2.3.11.)
  - (3) Unscrew 3 screws (1) and remove Multipurpose Tray Top Cover (2).
  - (4) Remove the Cover Seal Sensor and the sensor connector.
  - (5) Release the joints between ④ and ⑤, and remove Multipurpose Tray Cover Assy ⑤.
    (At this time, the Links ⑥ also comes off.)
  - (6) Release a hook and remove the Multipurpose Tray Drive Gear  $\bigcirc$ .

Figure 2-3-13 Multipurpose Tray Assy / Multipurpose Tray Cover Assy / Link / Multipurpose Tray Top Cover / Multipurpose Tray Drive Gear / OHP Sensor

#### [OHP Sensor Replacement]

- (7) Figure 2-3-13-1 shows the bottom of the multipurpose tray ④. First remove the cover ⑨ (figure 2-3-13-1). The cover ⑨ with five protrusions can be disengaged by removing them with a screwdriver etc.
- (8) Remove the OHP sensor (10) (figure 2-3-13-1). Only the sensor, which has the shape shown in figure 2-3-13-2, can be detached by pushing those claws on its both sides which are shaded in the figure, using a flatblade screwdriver etc. Be careful not to allow the cable attached to the sensor to be broken.

Figure 2-3-13-1 Bottom of Multipurpose Tray

Figure 2-3-13-2 OHP Sensor Composition

**Note!** When cleaning the OHP sensor, wipe dirt such as paper powder off its sensing surface that is as shown in figure 2-3-13-3, with a soft cloth or the tip of a brush. The shaded areas, which are lenses, should be wiped especially carefully, taking care not to allow it to be scratched.

Figure 2-3-13-3 Top of OHP Sensor
## 2.3.14 Drum Contact Assy

(1) Insert a screwdriver between the Printer Chassis and Drum Contact Assy ①, and remove the Drum Contact Assy ①.

Figure 2-3-14 Drum Contact Assy

- 2.3.15 Media Thickness Sensor Assy
  - (1) Detach the Cover Seal Sensor ① and the Thickness Sensor Connector ②.
  - (2) Remove the two screws (3) to demount the Media Thickness Assy.
  - (3) Insert a microdriver(-) between the Thickness Plate Assy 4 and Thickness Sensor Assy 5 to demount the Thickness Sensor Assy (5).
  - *Note!* When attaching the Media Thickness Assy, adjust [Spin lever adjust by microdriver(-)] the position of lever (White).

The upper surface of the lever be in agreement with a datum level. (Adjustment range 0/-0.5mm)

Figure 2-3-15 Media Thickness Sensor Assy

2.3.16 Registration Roller Assy (A) / Registration Drive Gear (A)

- (1) Remove the Front Cover. (See Sec. 2.3.11.)
- (2) Remove the Rear Cover. (See Sec. 2.3.12.)
- (3) Remove the Multipurpose Tray. (See Sec. 2.3.13.)
- (4) Remove the Media Thickness Sensor Assy. (See Sec. 2.3.15.)
- (5) Remove the screw 1 of the Pickup Stage 2.
- (6) Remove the four screws (3) to demount the registration roller Assy (A) (4) and the Pickup Stage

   (2).
- (7) Remove the E ring  $\bigcirc$  to detach the registration gear (A)  $\bigcirc$ .
  - **Note!** When attaching the pickup stage ①, place the stage height adjustment jig between the pressure roller and the registration roller and, until the top surface of the pickup stage reaches the jig, move the pickup stage toward the jig. (See Table 2-1 Maintenance Tools)

Figure 2-3-16 Registration Roller Assy (A) / Registration Drive Gear (A)

- 2.3.17 Registration Roller Assy (B)
  - (1) Take out the Cassette Assy.
  - (2) Remove the Front Cover. (See Sec. 2.3.11.)
  - (3) Remove the Rear Cover. (See Sec. 2.3.12.)
  - (4) Remove the Electrical Chassis. (See Sec. 2. 3. 22.)
  - (5) Remove the Registration Clutch. (See Sec. 2.3.18.)
  - (6) Remove the Printer Unit Chassis. (See Sec. 2.3.24.)
  - (7) Unscrew 4 screws ① and pull out the Registration Roller Assy (B) ② to the arrow direction.

- 2.3.18 Registration Clutch / Registration Motor Assy
  - (1) Remove the Left Side Cover. (See Sec. 2.3.9.)
  - (2) Remove the Electrical Chassis. (See Sec. 2. 3. 22.)
  - (3) Unplug the connector, take out the E Ring ① and dismount the Registration Clutch ②. Unscrew the screws ③ and ④, and remove the Earth Plate ⑤.
  - (4) Unplug the connector, unscrew 2 screws (6) and remove the Registration Motor Assy (7).

Figure 2-3-18 Registration Clutch / Registration Motor Assy

# 2.3.19 ID Cooling Fan

(1) Unplug the connector (1), unscrew the screws (2) and remove the ID Cooling Fan (3).

*Note!* When mounting the fan, pay attention to the mounting direction.

Figure 2-3-19 ID Cooling Fan

## 2.3.20 Color Registration Sensor Assy

- (1) Unscrew 2 screws (1), unplug 3 connectors and remove the Color Registration Sensor Assy (2).
- (2) Remove the Earth Plate (B)  $\Im$ .

Figure 2-3-20 Color Registration Sensor Assy

# 2.3.21 Duplex Guide Assy

- (1) Release the latch and remove the Duplex Guide Assy .
- (2) Remove the springs ②.

Figure 2-3-21 Duplex Guide Assy

2.3.22 Electrical Chassis / Electrical Chassis Cooling Fan

- (1) Unscrew 5 screws (1) and 2 screws (2), and remove the Plate (A) (3).
- (2) Unscrew 31 screws (4) and remove the Shield Plate (B) (5).
- (3) Remove the Printer Engine Controller PWB. (See Sec. 2.3.23.)
- (4) Unscrew 11 screws 6 and remove the Electrical Chassis 7.
- (5) Unscrew 2 screws (8) and remove the Electrical Chassis Cooling Fan (9).

Figure 2-3-22 Electrical Chassis / Electrical Chassis Cooling Fan

- 2.3.23 Print Engine Controller PWB
  - (1) Remove the Rear Cover. (See Sec. 2.3.12.)
  - (2) Remove the Electrical Chassis and Electrical Chassis Cooling Fan. (See Sec. 2.3.22.)
  - (3) Unscrew 5 screws (1), unplug all the connectors and remove the Print Engine Controller PWB (2).

Figure 2-3-23 Print Engine Controller PWB

### 2.3.24 Printer Unit Chassis

- (1) Open the top cover.
- (2) Remove the fuser unit (see section 2.3.38).
- (3) Remove the belt unit (see section 2.3.39).
- (4) Remove the top cover unit (see section 2.3.3).
- (5) Remove the eject guide Assy (see section 2.3.6).
- (6) Remove the side cover (R) (see section 2.3.7).
- (7) Remove the face-up tray Assy (see section 2.3.10).
- (8) Remove the side cover (L) (see section 2.3.9).
- (9) Remove the registration clutch and the registration motor Assy (see section 2.3.18).
- (10) Remove the duplex guide Assy (see section 2.3.21).
- (11) Unscrew the screw 1 and remove the AC switch assy 2.
- (12) Unscrew the 4 black screws (3) and other 8 screws (4), then detach the printer unit chassis (5).

Figure 2-3-24 Print Unit Chassis

- 2.3.25 Entrance Cassette Sensor Actuator
  - (1) Remove the Printer Unit Chassis. (See Sec. 2.3.24.)
  - (2) Turn over the Main Chassis.
  - (3) Release 2 clamps with tweezers and remove the Entrance Cassette Sensor Actuator ①.

Figure 2-3-25 Entrance Cassette Sensor Actuator

## 2.3.26 Entrance Sensor PWB (R71)

- (1) Remove the Registration Roller Assy B. (See Sec. 2.3.17.)
- (2) Unscrew 2 screws (1) and remove the Entrance Sensor PWB (2).

Figure 2-3-26 Entrance Sensor PWB

- 2.3.27 Entrance MT Sensor Actuator / Entrance Belt Sensor Actuator / Entrance Waste Toner Sensor Actuator
  - (1) Remove the Entrance Sensor PWB (R71). (See Sec. 2.3.26.)
  - (2) Release the latch and remove the Entrance MT Sensor Actuator (1).
  - (3) Release the latch and remove the Entrance Belt Sensor Actuator 2.
  - (4) Release the latch and remove the Entrance Waste Toner Sensor Actuator ③.

Figure 2-3-27 Entrance MT Sensor Actuator / Entrance Belt Sensor Actuator / Entrance Waste Toner Sensor Actuator

2.3.28 Main Cooling Fan (PULL) Assy / Main Cooling Fan (PUSH) / Fuser Eject Roller

- (1) Unscrew 2 screws ① and remove the Main Cooling Fan (PULL) Assy ②.
- (2) Unscrew the screw 3 and remove the Fuser Eject Roller Contact 4.
- (3) Remove the Fuser Drive Gear (5).
- (4) Unscrew the screw (6) and remove the Fuser Drive Gear Assy (7).
- (5) Unscrew the screws (8), take out the washers (9) and remove the Main Cooling Fan (PUSH) (10).
- (6) Release the latch and remove the Fuser Eject Roller Bearing (L) (1) and Fuser Eject Roller (2).

Figure 2-3-28 Main Cooling Fan (PULL) Assy / Main Cooling Fan (PUSH) / Fuser Eject Roller

## 2.3.29 Eject Sensor Assy

- (1) Remove the Fuser Eject Roller. (See Sec. 2.3.28.)
- (2) Unscrew the screw ①, unplug the connector and remove the (red/blue) Eject Sensor Assy ②.

Figure 2-3-29 Eject Sensor Assy

## 2.3.30 Fuser Latch Handle (L)

- (1) Remove the Latch Handle Spring ①.
- (2) Unscrew the screw (2) and remove the Fuser Latch Handle (L) (3).

Figure 2-3-30 Fuser Latch Handle (L)

## 2.3.31 Belt Motor Assy

- (1) Remove the Fuser Latch Handle (R). (See Sec. 2.3.32.)
- (2) Unscrew 2 screws (1) and unplug 2 connectors (2).
- (3) Remove the Belt Motor Assy (3).

Figure 2-3-31 Belt Motor Assy

## 2.3.32 Fuser Latch Handle (R)

- (1) Remove Printer Unit Chassis. (See Sec. 2.3.24.)
- (2) Take out the E Ring (1).
- (3) Release the Fuser Latch Handle Spring (2) and remove the Fuser Latch Handle (R) (3).

Figure 2-3-32 Fuser Latch Handle (R)

# 2.3.33 Main Motor Assy

- (1) Remove the Belt Motor Assy. (See Sec. 2.3.31.)
- (2) Unplug all the connectors.
- (3) Unscrew 2 screws (1) and remove the Main Motor Assy (2).

Figure 2-3-33 Main Motor Assy

- 2.3.34 Contact Assy / Side Plate Assy
  - (1) Remove the Printer Unit Chassis. (See Sec. 2.3.24.)
  - (2) Unscrew 4 screws (1) and remove the Side Plate Assy (2).
  - (3) Unscrew the screws 3 and remove the Contact Assy 4.

Figure 2-3-34 Contact Assy / Side Plate Assy

### 2.3.35 Low-voltage Power Unit

- (1) Remove the Printer Unit Chassis. (See Sec. 2.3.24.)
- (2) Unplug the connector (1).
- (3) Unscrew 6 screws (2) and remove Low-voltage Power Unit (5).
- (4) Unplug the connector  $\Im$ .
- (5) Unscrew the screw (6), release the claw at the AC Switch (7) and remove the plate (8).
- (6) Unscrew the screws (9) and (10), and remove the AC Inlet (11) from the plate (12).

Figure 2-3-35 Low-voltage Power Unit

## 2.3.36 High-voltage Power Unit

- (1) Remove the Contact Assy. (See Sec. 2.3.34.)
- (2) Remove the connector of the High-voltage Power Unit (1).
- (3) Unscrew 2 screws (2) and remove the High-voltage Power Unit (1) and HV Tape Harness (3).

Figure 2-3-36 High-voltage Power Unit

### 2.3.37 Main Feeder Assy

- (1) Remove the Printer Unit Chassis. (See Sec. 2.3.24.)
- (2) Remove the Low-voltage Power Unit and High-voltage Power Unit. (See Secs. 2.3.35 and 2.3.36.)
- (3) Unscrew 5 screws (1) and remove the Lower Plate (2).
- (4) Unscrew 6 screws 3 and remove the Main Feeder Assy 4.
- (5) Unscrew the screws (5), disconnect the cable and remove the Paper Size Sensor PWB (6).
- (6) Unscrew the screw  $(\bar{\ensuremath{7}})$  and remove the Duplex Connector (8).
- (7) Unscrew the screws (9) and remove the Second Tray Connector (10).

Figure 2-3-37 Main Feeder Assy

# 2.3.38 Fuser Unit

- (1) Open the Top Cover (1).
- (2) Push the left/right Fuser Levers (blue) (2) to the arrow direction and remove the Fuser Unit (3).

Figure 2-3-38 Fuser Unit

# 2.3.39 Belt Unit

- (1) Open the Top Cover (1).
- (2) Remove the I/D Unit.
- (3) Push the lever (blue) ② to the arrow direction and pull the handle (blue) upward to remove the Belt Unit ③.

Figure 2-3-39 Belt Unit

### 2.3.40 Duplex Unit

- (1) Pull the lever ② of the duplex unit ① to slide out the unit ① toward the front, and detach the unit
  ① by pulling its front upward.
- (2) Turn the lever (3) of the duplex unit (1) toward the front, then pull the lever (4) toward the front to check to see that the pin (5) moves up.
- (3) The duplex unit ① can be separated from the cassette Assy by moving the unit up.

Figure 2-3-40 Duplex Unit

#### 2.3.41 CU Assy

CU Assy confirmation subject.

[CU main board]

There are two kinds of CU main boards of C9500/C9300.

$OIDVarcian \cdot TIC_2(C0500)$					
TIG-3(C9300)	Combination	OK/NG	Main Board	Program DIMM	EEPROM
NEW Version: HMF(C9500) HMF(C9300)	OLD Version	OK	TIG-2/TIG-3	Ver.x1.xx or x2.xx	93C86
ROM DIMM and EEPROM of	NEW Version	OK	HME/HMF	Ver.x3.xx	24C32
each board cannot be used		NG	TIG-2/TIG-3	Ver.x1.xx or x2.xx	24C32(NG)
with the board of another side.	NG	Blank	TIG-2/TIG-3	Ver.x3.xx(NG)	93C86
	Combination		HME/HMF	Ver.x1.xx or x2.xx(NG)	24C32
		LOD	HME/HMF	Ver.x3.xx	93C86(NG)

How to recognize

1:Serial No.

OLD Version XXXA XXXXXXX		
NEW Version xxxB xxxxxxx or	<u>→</u> 212A	1004702
	N31033C -D	Made in Thailand
2:Main Map printting(CU F/W Ver.)		
OLD Version : x1.xx or x2.xx		
NEW Version : x3.xx		
3:Board appearance		
OLD Version :		

NEW Version : Ther

There is printting of "NBC-2" on the board. The position of HDD and Centoro.(See page 147)

[Program ROM DIMM]

There are two kinds of program ROM DIMM.

CRF : Flash ROM DIMM

TNY: P2ROM DIMM.

Flash ROM is rewritable.

P2ROM is not rewritable.(Parts number are also changed whenever the versions change.)

### [NIC Card]

There are three kinds of NIC Cards.

Oki LAN 6200e+ ODA Oki LAN 7300e ODA/C

Oki LAN 7300e ODA/OEL/APS

Oki LAN 8100e ODA/OEL/APS

*Note:* To use Oki LAN 8100e, software for the NIC must be downloaded to a CU main board. Software for the NIC is downloaded to a CU main board (HMF/HME) before shipment of a printer or a service board.

As software is deleted when forced initialization is performed to a Flash ROM, redownloading of the software is required. Software is not downloaded to a TIG-2/TIG-3 also a program ROM DIMM doesn't support the software. Accordingly, the Soft NIC (Oki LAN 8100e) is not usable even if software for the NIC is downloaded to a TIG-2/TIG-3 board.

## CU Assy disassembly pracedures

- (1) Pulling out Controller Board
  - 1. Undo the two screws ①.
  - 2. Pull the controller board 2 out.
  - 3. Place the controller board 2 on a flat table.
- (2) Detaching Fan
  - 1. Remove the connector  $\Im$ .
  - 2. Unscrew 2 screws (4).
  - 3. Remove the CPU Cooling Fan (5).

Figure 2-3-41 CU Assy (1/2)

- (3) Demounting CU Board
  - 1. Remove 3 screws (6) and screw (7) ,and remove the fan bracket (8).
  - 2. Remove the screw (9) and 4 screws (10) ,and remove the plate support (1) and the guide rail A(12).
  - 3. Remove 2 screws (13) ,and remove the guide rail B(14).
  - 4. Remove 2 screws (5) and 2 screws (6) and the plate-FG(Centro)(7), then demount the CU board (8).

Figure 2-3-41 CU Assy (2/2)

# 3. ADJUSTMENT

This device is adjusted by key input from the operator panel.

Other than the general menu, this device supports a maintenance menu. Select the menu that matches your objective.

## 3.0 System Maintenance MENU

The printer enters this mode when you turn on the power supply switch while holding down the [Menu]+[Item]+[Value]+[Cancel] (0+1+6+7)switches.

This menu is not disclosed to end-users because changes can be made to brand/destination, etc.

Category	Item(1st Line)	Value(2nd Line)	DF	Functions	
OKIUSER	OKIUSER	ODA OEL APS JP1 JPOEM1 OEMA OEML	*	Sets Brand JPOEM1: Japan OEM OEMA: Overseas OEM for A4 default OEML: Overseas OEM for Letter default Boots up automatically when the Menu is existed.	
CONFIGURATION MENU			*		
	HIGH RESOLUTION	ENABLE DISABLE	*	Not used. note: Don't change the setting value.	
ENG STATUS PRINT	ENG STATUS PRINT	EXECUTE		Selecting by the Select switch, then pressing the On-line switch will prompt initialization and printing Engine information.	
TEST PRINT MENU	TEST PRINT MENU	ENABLE DISABLE	*	Switches ENABLE and DISABLE to display the TEST PRINT MENU category in the User Menu. ( See "ID Check Pattern" section. )	
PAGE CNT PRINT	PAGE CNT PRINT	ENABLE DISABLE	*	Sets printing or not printing the total page count in PRINT MENU MAP.	
PERSONALITY	PCL	ENABLE DISABLE	*	Change the default PDL for each brand.	
	IBM PPR III XL	ENABLE DISABLE	*	PDLs that are disabled in this Menu will not be displayed on User Menu or Adomin Menu's PERSONALITY.	
	EPSON FX	ENABLE DISABLE	*	When print data in the PDL language set to DISABLE is received, the printer will display INVALID DATA and discard received data. (HP-	
	Adobe Postscript	ENABLE DISABLE	*	to implement as yet in the product.) The PDF function requires Adobe Postscript;	
	HP-GL/2	ENABLE DISABLE	*	(Setting Adobe Postscript on DISABLE will set	
	PCL XL	ENABLE DISABLE	*	On the PX711/713, neither Adobe Postscript nor PDF can be set to DISABLE. (They are to be always set to FNABLE for use, Even if they are	
	PDF	ENABLE DISABLE	*	set to DISABLE, the printer processes the data receives. This item is incorporated only in the menu ahead of time for future extension. )	

Table 3-0 (1/2) Maintenance Menu display Table

Category	Item(1st Line)	Value(2nd Line)	DF	Functions
NETWORK				The details depend on Network. ( Not used )
DIAGNOSTIC MODE XX.XX.XX				Enters engine self-diagnostic mode. The display in place of xx.xx varies among the PU version. (The disply within this category depends on the Engine Maintenance specs.)

### Table 3-0 (2/2) Maintenance Menu display Table

Switch operations and LCD displays in Engine Self-diagnostic Mode depend on the instructions from the Engine F/W; hence, they are different from the operation spec in the Controller F/W. Engine Self-diagnostic Mode is excutable even if the Controller board is removed.

For details, see the Engine Unit spec as needed.

#### 3.0.1 ID Check Pattern Printing ( " TEST PRINT MENU " item )

This pattern can be used for the cause investigation (specifying of color(C,M,Y,K) of the problem item, the confirmation of the periodicity) of the following problem that it originated in ID, the LED head. It is composed of CMYK color 20% duty each of the patterns (print 2 pages).

# Operation: (Press switch)

Without HDD: "0" - "0" - "3" - "3" With HDD : "0" - "0" - "0" - "3" - "3"

- Vertical Black/White Lines
- Vertical Black/White Bands
- Horizontal Black/White Lines
- Horizontal Black/White Bands

Print pattern:

Page.1

Page.2

## 3.1 Maintenance Mode and Functions

#### 3.1.1 Maintenance menu

A maintenance menu category is located in the general menu category. The following items are those that can be set with this menu.

#### Maintenance Menu

Category	Item(1st Line)	Value(2nd Line)	DF	Functions
MAINTENANCE MENU	EEPROM reset	EXECUTE	*	Resets EEPROM for CU.
	SAVE MENU Save menu setting	EXECUTE	*	Saves current menu setting. A message asking Are you sure? and a choice of YES/NO will appear.
	RESTORE MENU Return to saved menu setting	EXECUTE	*	Changes setting to the stored menu setting. (Displayed only when a menu setting is stored.) <i>NOTE</i> : Stored in CU Flash (directly attached). In HDD if HDD exists.
	POWER SAVE Power save function	Enabled Disabled	*	Enables or disables the power save mode. The time to switch to Power Save Enable can be changed with the Power Save Delay Time Item in the System Configuration Menu.
	Normal paper black setting	0 +1 +2 -2 -1	*	Normal Paper/Black Print Used for fine adjustment when scratches or dots are notable on print results. Decrement if the highly-dense print portion seems dispersed or scattered with white dust. Increment if the print result seems faint.
	Normal paper color setting	0 +1 +2 -2 -1	*	Normal Paper/Color Print Used for fine adjustment when scratches or dots are notable on print results. Decrement if the highly-dense print portion seems dispersed or scattered with white dust. Increment if the print result seems faint.
	OHP paper black setting	0 +1 +2 -2 -1	*	OHP/Black Print Used for fine adjustment when scratches or dots are notable on print results. Decrement if the highly-dense print portion seems dispersed or scattered with white dust. Increment if the print result seems faint.
	OHP paper color setting	0 +1 +2 -2 -1	*	OHP/Color Print Used for fine adjustment when scratches or dots are notable on print results. Decrement if the highly-dense print portion seems dispersed or scattered with white dust. Increment if the print result seems faint.

#### 3.1.2 Engine maintenance mode

Three modes from Level 1 to Level 3 are in the engine maintenance mode. Level 1 is a mode that checks the media transport and basic movement of the print system. Level 2 checks the counter for consumables and tests the correcting function of color displacement, and is a mode that does not require special knowledge. Level 3, on the other hand, requires special knowledge for handling the process parameter setting and is contained in the independent experimental element of PU. Basically, levels other than Level 1 should not be used.

### 3.1.2.1 Operator panel

The description for operations related to self-diagnosis is made presuming the arrangement of the operator panel shown below.

3.1.2.2 General self-diagnostic mode (Level 1)

Items in the normal self-diagnostic mode menu are listed below.

- Switch scan test
- Motor & clutch test
- Executing test pattern
- NVM initialization
- Consumables counter display
- · Consumables continuation counter display

- 3.1.2.2.1 Entering self-diagnostic mode (Level 1)
  - 1. The system maintenance menu mode is entered by turning the power ON while pressing the (0), (1), (6), and (7) keys simultaneously.
  - 2. Press the (1) key several times until [DIAGNOSTIC MODE] is displayed.

- 3. The [XX.XX.XX] in [DISGNOSTIC MODE XX.XX.XX] that is displayed in the LCD display is the ROM version. The set value for FACTORY WORKING MODE is displayed in the right side of the bottom line. [SHIPPING] is normally set.
- 4. Proceed to each self-diagnosis step by pressing the ① or ⑤ key. (The menu item rotates by pressing the ①,⑤ key.)
- 3.1.2.2.2 Exiting self-diagnostic mode
  - 1. Turn the power OFF, then turn it on after ten seconds.
- 3.1.2.3 Switch scan test

This self-diagnosis is used for checking the input sensor and switch.

1. Press the ① and ⑤ keys until the normal diagnostic mode is entered and [SWITCH SCAN] is displayed on the top line.

(Key (1) increments the test item and Key (5) decrements the test item.)

SWITCH	SCAN

2. Press the 2 and 6 keys until the SCAN number that corresponds to the unit subject to the following test listed in Table 3-1. (Key 2) increments the item and Key 6 decrements the item.)

SWITCH SCAN	00
1=H 2=L 3=H	4=L

- 3. The test starts by pressing the ③ key. The SWITCH SCAN number begins to blink and the number of the corresponding unit (1-4) is displayed along with the current status. Manipulate each unit (Fig 3-1). The items are displayed in the LCD that corresponds to each item. (The display differs for each sensor. See Table 3-1 for details.)
- 4. The SWITCH SCAN number reappears in the display status (blinking ceased) by pressing the ⑦ key.
- 5. Repeat Steps 2 to 4 as required.
- 6. Press the (4) key to end the test. (Status returns to that described in 1.)

## Table 3-2 Paper Size Detection - Paper /Bit Correspondence Table

#### 3.1.2.4 Motor clutch test

This self-diagnostic routine is used to test the motor and clutch.

- 1. Press the ① and ⑤ keys until the self-diagnostic (Level 1) mode is entered and [MOTOR & CLUTCH TEST] is displayed in the top line.(Key ① increments the test item and Key ⑤ decrements the test item.)
- 2. Press the 2 and 6 keys until the section that corresponds to the unit subject to the next test in Table 3-2 is displayed in the top line of the display. (Key 2 increments the item and Key 6 decrements the item.)

MOTOR &	CLUTCH TEST
BLACK -	ID MOTOR

- 3. The test starts by pressing the ③ key. The name of the unit begins to blink and the corresponding unit drives for 10 seconds. (See Fig 3-3.)
- *Note:* The status returns to that described in 2 after driving 10 seconds, and the unit will start driving again be pressing the corresponding switch.
  - The drive control conditions listed in Table 3-2 must be fulfilled in order to drive the corresponding unit. A unit cannot be driven without fulfilling the conditions, and if attempted, instructions will appear in the bottom display line.
  - For clutch solenoid, ON and OFF is repeated for normal print drive. (For those that cannot be driven independently due to their mechanism, drive with the motor.)
- 4. A driving unit is stopped by pressing the ⑦ key. (The display of the corresponding unit is maintained.)
- 5. Repeat Steps 2 to 4 as required.
- 6. Press the ④ key to end the test. (Status returns to that described in 1.)

### 3.1.2.5 Test print

This self-diagnostic routine is used to print the test patterns in the PU. The other test patterns are stored in the controller.

- 1. Press the ① and ⑤ keys until the self-diagnostic (Level 1) mode is entered and [TEST PRINT] is displayed in the top line. (Key ① increments the test item and Key ⑤ decrements the test item.)
- 2. The bottom line displays the setup items applied only for test print. Press the (2) and (6) keys until the corresponding item is displayed. (Key (2) increments the item and Key (6) decrements the item.)
- 3. When the ③ and ⑦ keys are pressed, the setup items appear in the top line and set values appear in the bottom line. The set value increments by pressing the ③ key and decrements by pressing the ⑦ key. (The value that is set at the end will be applied.) Repeat Stop 3 as required.

TEST PATTERN	
1	

Display	Set Value	Function
PRINT EXECUTE	—	Press Key ③ to start print. / Press Key ⑦ to end print.
		(In page unit.)
TEST PATTERN	0	0: empty page
		1-7: Refer to the following page (pattern print).
		8-15: empty page
CASSET	TRAY1	Set paper feed source.
	TRAY2	
	TRAY3	
	FF	
PAGE	0000	Set number of pages to test print.
COLOR	ON	Select color or monochrome.
	OFF	
DUPLEX	2 PAGES STACK	Perform duplex print with 2-page stack.
	OFF	Set duplex print to OFF.
	1PAGES STACK	Perform duplex print with 1-page stack.

• Let is the default. The set items are valid only in this test mode. (They will not be written in EEPROM.)

*Note:* Page setting: Key (1) or (5) shifts the digits.

Color setting: The following indications appear in the panel when Key (1) or (5) is pressed when set to [ON].

Print setting for each color:

Shifts by pressing Key (1) or (5).

Switch between [ON] and [OFF] is set by pressing Key (3) or (7). Panel indication returns by pressing Key (2) or (6). COLOR

Y:ON M:ON C:ON K:ON

4. Test print will be executed under the values set in Steps 2 and 3 by pressing the ③ key when [PRINT EXECUTE] is displayed in the bottom row of the display.

Press the ⑦ key to stop the test print.

When an alarm indicated under Details in the table is detected at the start of test print or during test print, a message will appear in the panel display and the print operation will be interrupted. (Refer to "3.1.2.9 Panel display details" for details on errors.)

#### Print pattern

Pattern 1

Pattern 3

Pattern 2

Pattern 4

Pattern 5

Pattern 6

• The following messages appear during print operation.

P=\*\*\* T=\*\*\* U=\*\*\*[###] H=\*\*\*% L=\*\*\*[###]

P: No. of test print pages (unit: page)

- U: Temperature of top heater [Set value] (unit: Celsius)
- L: Temperature of bottom heater [Set value] (unit: Celsius)
- T: Environment temperature (unit: Celsius)
- H: Environment humidity (unit: percent)
- The display changes by pressing the ③ key.

```
KTR=*.**KV YTR=*.**KV
MTR=*.**KV CTR=*.**KV
```

YTR, MTR, CTR, KTR are values of the set transfer voltage. (unit: KV)

• The display changes by pressing the ③ key.

```
KR=*.**KV YR=*.**KV
MR=*.**KV CR=*.**KV
```

YR, MR, CR, KR are transfer rollers of each color values of the set transfer voltage. (unit: KV)

- 5. Repeat Steps 2 to 4 as required.
- 6. Press the ④ key to end the test. (Status returns to that described in 1.)

#### 3.1.2.6 NVM initialization

This self-diagnosis is used for initializing non-volatile memory.

- 1. Press the ① and ⑤ keys until the self-diagnostic (Level 1) mode is entered and [NV-RAM INITIAL] is displayed in the top line. (Key ① increments the item and Key ⑤ decrements the item.)
- 2. The bottom line displays the table number subject to initialization. There are three tables to initialize. Press the (2) and (6) keys until the corresponding table number is displayed. (Key (2) increments the table number and Key (6) decrements the table number.)

NV-RAM INITIAL	
TABLE 1	

*Note:* Do not use Table 2.

- 3. The [NV-RAM INITIAL] display blinks when the ③ key is pressed and all items in Table 3-3 will be initialized by pressing the key for 10 seconds continuously.
- 4. Press the ④ key to end the test. (Status returns to that described in 1.)

Item to Initi	alize	Details	Initial Value	Unit
Drum counter	Black	Initialize internal counter since	0	-
	Yellow	exchanging the drum.		
	Magenta			
	Cyan			
Belt unit counter		Initialize internal counter since	0	-
		exchanging the belt unit.		
Fuser unit		Initialize internal counter since	0	-
counter		exchanging the fuser unit.		
Toner counter	Black	Initialize internal counter since	0	-
	Yellow	recovering the toner error.		
	Magenta			
	Cyan			

Table 3-3 (1/2)	Items to Initialize in Table 2
-----------------	--------------------------------

Table 3-3 (2/2)	Items to Initialize in Table 2
-----------------	--------------------------------

Item to Initialize		Details	Initial Value	Unit
Color irregularity	Yellow	Initialize X axis correction value for	0	1/1200 inch
adjust point X	Magenta	the LED head (yellow, magenta,		
axis	Cyan	cyan).		
Color irregularity	Yellow	Initialize Y axis (L) correction value	0	1/1200 inch
adjust point Y	Magenta	for the LED head (yellow, magenta,		
axis (L)	Cyan	cyan).		
Color irregularity	Yellow	Initialize Y axis (R) correction value	0	1/1200 inch
adjust point Y	Magenta	for the LED head (yellow, magenta,		
axis (R)	Cyan	cyan).		
Engine		Initialize all items set in Level 2 and 3		
parameter		in the engine maintenance mode.		

#### 3.1.2.7 Consumable counter display

This self-diagnosis is used for displaying the consumed status of consumables.

- 1. Press the ① and ⑤ keys until the normal self-diagnostic mode is entered and [CONSUMABLE STATUS] is displayed in the top line. (Key ① increments the item and Key ⑤ decrements the item.)
- 2. The consumed status of consumables is displayed by pressing the 2 and 6 keys. (Keys 3 and 7) are invalid.)
- 3. Press the ④ key to end the test. (Status returns to that described in 1.)

Item	Top Display	Bottom Display	Format	Unit	Details
Fuser unit	FUSER UNIT	******* PRINTS	Decimal system	Printed sheets	Displays number of pages
					since installing a new fuser.
Belt unit	TR BELT UNIT	******* PRINTS	Decimal system	Printed sheets	Displays number of pages
					since installing a new drum
					unit.
ID unit - black	BLACK ID UNIT	******* IMAGES	Decimal system	Printed sheets	Displays number of
ID unit - yellow	YELLOW ID UNIT	******* IMAGES	Decimal system	Printed sheets	rotations by converting to
ID unit - magenta	MAGENTA ID UNIT	******* IMAGES	Decimal system	Printed sheets	A4 3Page/Job since
ID unit - cyan	CYAN ID UNIT	******* IMAGES	Decimal system	Printed sheets	installing a new ID unit.
Toner - black	BLACK TONER	***%	Decimal system	%	Displays amount of color
Toner - yellow	YELLOW TONER	***%	Decimal system	%	toner used.
Toner - magenta	MAGENTA TONER	***%	Decimal system	%	
Toner - cyan	CYAN TONER	***%	Decimal system	%	

#### 3.1.2.8 Consumable counter display - continuous

This self-diagnosis is used for displaying the continuous status of a consumable. Continuous status of a consumable is the total count of a consumable that is not initialized even upon being replaced. The consumed amount is counted continuously.

- 1. Press the ① and ⑤ keys until the normal self-diagnostic mode is entered and the continuous status of a consumable is displayed in the top line. (Key ① increments the item and Key ⑤ decrements the item.)
- 2. The total consumed amount of a consumable is displayed by pressing the (2) and (6) keys. (Keys (3) and (7) are invalid.)
- 3. Press the ④ key to end the test. (Status returns to that described in 1.)

Item	Top Display	Bottom Display	Format	Unit	Details
Total sheets feed	TOTAL SHEETS FEED	******* PRINTS	Decimal system	Printed sheets	Total number of fed sheets
					including passed paper.
Print - black	BLACK IMPRESSIONS	******* IMAGES	Decimal system	Printed sheets	Displays number of
Print - yellow	YELLOW IMPRESSIONS	******* IMAGES	Decimal system	Printed sheets	printed sheets for each
Print - magenta	MAGENTA IMPRESSIONS	******* IMAGES	Decimal system	Printed sheets	color ID.
Print - cyan	CYAN IMPRESSIONS	******* IMAGES	Decimal system	Printed sheets

## 3.1.3 Various print jobs with single printer unit attached with a controller

Menu map print Prints program version, configuration of the control unit, and other printer configuration and setting. Operation: (Press switch) Without HDD : "0" $\rightarrow$ "3" $\rightarrow$ "3" With HDD : "0" $\rightarrow$ "0" $\rightarrow$ "3" $\rightarrow$ "3"
File list printPrints a file list stored in the HDD or Flash ROM.Operation: (Press switch)Without HDD : " $0$ " $\rightarrow$ " $3$ " $\rightarrow$ " $1$ " $\rightarrow$ " $3$ "With HDD : " $0$ " $\rightarrow$ " $0$ " $\rightarrow$ " $3$ " $\rightarrow$ " $1$ " $\rightarrow$ " $3$ "
Font list print (PCL) Prints a font list for PCL. Operation: (Press switch) Without HDD : "0" $\rightarrow$ "3" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "3" With HDD : "0" $\rightarrow$ "0" $\rightarrow$ "3" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "3"
Font list print (PS) Prints a font list for PS. Operation: (Press switch) Without HDD : " $0^{n} \rightarrow "3^{n} \rightarrow "1^{n} \rightarrow "1^{n} \rightarrow "3^{n}$ With HDD : " $0^{n} \rightarrow "0^{n} \rightarrow "3^{n} \rightarrow "1^{n} \rightarrow "1^{n} \rightarrow "1^{n} \rightarrow "3^{n}$
Demo print Prints a demo pattern for each subject installed in the ROM. Operation: (Press switch) Without HDD : "0" $\rightarrow$ "3" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "3" With HDD : "0" $\rightarrow$ "0" $\rightarrow$ "3" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "1" $\rightarrow$ "3"
Ethernet self-diagnostic print

If an Ethernet board is installed, perform self-diagnosis by pressing the Ethernet board SW for two seconds or longer and print the result.

## 3.2 Adjustments after Parts Replacement

The following describes the adjustments that are required after replacing parts. Adjustment and correction for color registration are always required for each part replacement.

Replaced Part	Adjustment		
LED Head	Not required		
Drum Cartridge (Y, M, C, K)	Not required.		
Fuser Unit	Not required.		
Belt Cassette Assy	Not required.		
PU (K7N Board)	Re-mounting the EEPROM used on the board before the replacement. *Note°1		
CU (TIG board)	Re-mounting the EEPROM used on the board before the replacement. *Note 2		
CU (HMF/HME board)	Re-mounting the EEPROM used on the board before the replacement. *Note 2 Network information initialization described in section 3.2.6, in replacing CUs containing Oki LAN8100e.		
Oki LAN8100e (HMN Board)	Network information initialization described in section 3.2.6.		
Shutter	Setting the correction value of the calibration chip for detecting density.		
Media Thickness Sensor Assy	Adjusting paper thickness detection sensitivity and checking media thickness detection value setting.		

\* Note:1. When the EEPROM of the PU (K7N board) is replaced to a new one, color balance must be adjusted.

\* Note: 2. When the EEPROM of the CU board is replaced to a new one, the Destination Setting must be adjusted.

#### 3.2.1 Precautions in replacing engine control board

When replacing the engine control board (K7N PWB), remove the EEPROM from the old board and set it on a new board (for errors other than those of engine EEPROM). When SERVICE CALL xxx (an engine EEPROM error) is displayed on the operator panel, the EEPROM must be replaced with new EEPROM. In this case, perform the operation described in section 3.2.2.

#### 3.2.2 Precautions in replacing EEPROM

When the EEPROM is not removed from the board and placed on the new board at the time of engine controll board (K7N PWB) replacement, the Version Read function (fuse cut) is disabled. The printer must be switched from the factory mode to the shipping mode by the PJL command.

[Description]

- 1. Sending of an appropriate PJL file to the printer to place it in Shipping mode
- 2. Sending of a repower-on or reboot command (PJL file) to complete the setting

#### [Procedure]

- At the MS-DOS prompt, perform the following steps:
- 1. Enter Copy /b Pjl\_ship.bin prn and hit <Enter>.
- 2. Enter Copy /b Pjl\_reboot.bin prn and hit <Enter>, or power the printer off and on.

[Pjl Files Required]

- 1. Pjl-ship.bin
- 2. Pjl-reboot.bin
- **Note:** Life data for consumables such as belt, toner, and ID is cleared when replacing EEPROM, therefore, be cautious as there will be a tolerance in life management upon replacing the unit in the future. The following count will be cleared when replacing EEPROM. Other than Total Sheets Feed is cleared when each unit is replaced, therefore, the tolerance will be cleared at that point.

Item	Contents	Count	
Fuser	Life count of the fuser	Value in which the number of printed pages is converted to the number of Letter paper after installing a new fuser unit.	
Transfer Belt	Life count of the transfer belt	Value in which the number of printed pages is converted to the number of Letter paper after installing a new fuser unit.	
Black Imaging Drum Cyan Imaging Drum Magenta Imaging Drum Yellow Imaging Drum	Life count of the imaging drums for each color	Value in which the number of rotations is converted to the number of Letter paper after installing a new ID unit.	
Black Toner Cyan Toner Magenta Toner Yellow Toner	Count of the used toner amount for each color	Count of the number of printed dots.	
Total Sheets Feed Life count of the printer		Total number of printed pages.	
Black Impressions Cyan Impressions Magenta Impressions Yellow Impressions		Number of printed pages after installing a new ID unit.	

#### 3.2.3 EEPROM replacement after CU board replacement

When replacing the CU board, remove EEPROM from the board used by the user and set it to the replaced board. (This is to pass on the user set contents and font install data to the new board.) Furthermore, if the user's EEPROM cannot be used due to damages, use the EEPROM on the new board. In this case, the new board and EEPROM should be set with destinations.

#### 3.2.4 Destination Setting (Checking Method: Printing Demo Page)

The destination setting of each main control board, which takes on ODA by default, must be set, at the time of printer shipment, to correspond to the destination of the printer equipped with the board.

Japan indirect sales, ODA, OEL and APS maintenance boards are to be shipped with the destination setting left at its default.

#### Setting on Operation Panel:

Powering up each printer in maintenance mode and then setting its destination are made.

While holding SWs (0, 1), (6), and (7) down, turn on printer.

After MAINTENANCE MENU is displayed on LCD, the display changes to OKIUSER.

Press SW (1) to select OKIUSER for destination setting.

ODA \* appears on the lower display. Press SW (2) to select a destination.

Confirm the setting by pressing SW (3).

Printer restarts, and comes up with the destination changed.

Description:

Each of Japan domestic and over seas C9500/C9300 uses a common ROM.

Destination setting must be made for the common ROM to be used in the printers to various destinations (the setting in the ROM default to ODA).

Setiings are stored in CU board's EEPROM.

Maintenance boards are to be shipped with the destination setting at its default and, when Settings are stored in CU board's EEPROM.

3.2.5 Recovery Flash ROM data on CU board

A 4MB Flash ROM that enables a user to register an arbitrary file is installed on the CU board.

- When a CU board has to be replaced, print a file list of the information menu and check Note: the registered files before replacing the board. Re-register necessary files when the CU board is replaced.
- 3.2.6 Notes on replacing Oki LAN8100e or CU boards equipped with Oki LAN8100e

With the replacement of Oki LAN8100e (software NIC HMN board) or a CU (HMF board or HME board) containing Oki LAN8100e, or the concurrent replacement of a CU (HMF board or HME board) and Oki LAN8199e, network information stored in their Flash ROM must be initialized.

• Network information initialization is required at:

replacement of an HMF or HME board, HMF/HME Board Oki LAN8100e

Oki LAN8100e (an HMN board)

Network information initialization is not required at:

or

HMF/HME Board

[Network Information Initialization Procedure]

- (1) Turn the printer off.
- (2) When a network cable is connected to the printer, plug off the cable from the connector on the printer side.

replacement of an HMF or HME board not containing Oki LAN8100e

- (3) While holding the black push switch ([Test] button) of Oki LAN8100e down, turn the printer on. The black push switch should be held down until "NETWORK INITIALIZING" (the network is being initialized) appears on the upper display and "WAIT A MOMENT" (to wait a moment) appears on the lower display. Release the black push switch when they are displayed.
- (4) When "ONLINE" is displayed on the operator panel, initialization is complete.

[Network Information Initialization Checking Procedure]

(1) Execute "PRINT MENU MAP" in "INFORMATION MENU".

(2) Check the following two points in the Network Information of the first sheet from the result of Oki LAN8100e menu printing.

**General Information** MAC Address TCP/IP Configuration Auto Discovery Printer Name

ΔΔ<u>000000</u>

The Mac Address and Printer Name values at the portions indicated by  $\underline{\bigcirc}$  (three bytes) are the same, network information has been initialized successfully.

#### 3.3 Adjusting the Density

The auto density adjust mode is set to [Auto] when the printer is delivered, however, problems may occur upon using the printer if the mode is set to [Manual]. Perform the procedure when the density is improper.

Note: Perform the task when the printer is not in operation. Do not perform during warm-up.

(1) Press (1) several times and display [Color Menu].

(2) Press (1) or (5) and display [Density Adjust/Start].

(3) Press(3).

The auto density adjustment will begin.

# 3.4 Paper Thickness Detection Sensitivity Adjustment and Media Thickness Detection Value Check

Outline:

The sensitivity of a micro displacement sensor used for detecting media thickness varies from one to another. Therefore, to ascertain the sensitivity in advance, check the output value of the sensor by passing media of known thickness through the printer equipped with the sensor. The sensitivity is fixed based on the output value.

Adjustments must be made when the paper thickness sensor, the registration roller and the PU board are replaced.

By passing, from the multipurpose tray, four sheets of paper whose thickness has been measured with a micrometer (MDQ-30M, MDQ-30), the correction value for media thickness sensitivity is automatically set with the first three sheets. Check the media thickness detection value with the fourth sheet.

Media: Transparency (42404301)

Paper thickness difference: Within  $\pm 10 \mu m$ 

#### 3.4.1 Applicable Operating Systems and Interfaces, and File Required

Software: AdjustmentMM.exe (Ver. 1.12) File Required: Opusbase.dll

OS	l/F	File Type	File Name	Remarks
Win9x Series (95/98/Me)	Centronics	No file required	No file required	The interface port must be checked for its bidirectional setting.
	USB	USB driver	Oki USB Driver for Win98.exe	With the insertion of a USB, installation screen display is provided.
Win2000/XP	Centronics			Inapplicable
	USB	No file required	No file required	

*Note:* For use of a Centronics interface, the interface port must be checked for its bidirectional setting.

Checking: Check the parallel port is set to bidirectional in the BIOS setup (Parallel Mode parameter: Bi directional. No ECP/EEP).

*Note:* BIOS setup and program words vary with personal computers. Be sure to refer to the user documentation for the PC used.

(Example for NEC PCs)

- (1) Power on the PC.
- (2) POST (Power On Self-Test) details are displayed on the PC screen and then, at the lower left of the screen, Press <F2> to enter SETUP is shown.
- (3) At the press of <F2>, SETUP is activated and the Main menu appears.
- (4) Select Peripheral Configuration from the Advanced menu.
- (5) Select Parallel Mode and check the parallel port is set to Bi directional.
- (6) Press Esc to end the checking.

#### 3.4.2 Setting

### 3.4.2.1 Menu Setting

- (1) Power on the PC.
- (2) Create an arbitrary folder, and copy the two files AdjustMM.exe and Opusbacc.dll into it (refer to the screen that is an example when the folder C:\MediaThickness has been created).

🔯 Exploring - Media Thickness			
<u></u>	ools <u>H</u> elp		
Back Forward Up	Cut Copy	Paste Undo Delete Properties	Views
🛛 Address 🗀 C:\Media Thickness			<b>•</b>
Folders × N	ame	Size Type	Modified
📝 Desktop 📃 👔	AdjustMM.exe	84KB Application	11/12/02 10:42 AM
📄 🛄 My Computer 🔤 💽	Opusbacc.dll	68KB Application Extension	1/22/02 3:45 AM
😟 🚽 3½ Floppy (A:)			
2 object(s)	152KB (Disk free	space: 5.39GB)	🛄 My Computer //

(3) On the PC, activate the adjustment software AdjustMM (press OK on the screen that is provided only when the software is activated first time).

ADJUST	MM 🔀
⚠	Failed to Load setting-data !
	0K

Perform steps (2) to (4) only in first-time menu setting.

- (4) Connect the printer AC cable and Centronics interface cable.
- When a Centronics is used, operation is not performed unless the Centronics is set to bidirectional. Refer to 3.4.1 Applicable Operating Systems and Interfaces, and File Required.
  - When a USB is used with a Win9x series (Win95/98/Me), the USB driver "Oki USB Driver for Win98.exe" must be installed.
  - (5) Power on the printer. Wait until the printer is placed on-line.
  - (6) Mark the Config(C) checkbox and then press Setup Data.

#### 3.4.2.2 Media Setting

 The media thickness input screen is displayed. Prepare four sensitivity adjustment transparency sheets (42404301) and enter the thicknesses with which the transparency sheets are labeled.

- *Note:* Make thickness entries in μm (simply type in the value that is indicated on each transparency sheet). Enter the value of the long edge.
  - Load the sheets in the multipurpose tray, in the order of their thickness entry (the media of the first entered thickness is to be lowermost in the multipurpose tray).

Thickness Entry Order	Screen Display	Tray L	oading Order	Feed Order	Remarks
4	sample 1=	4	MP try top	1	Sensitivity adjustment 1st sheet
3	sample 2=	3	*	2	Sensitivity adjustment 2nd sheet
2	sample 3=	2	*	3	Sensitivity adjustment 3rd sheet
1	Check data=	1	MP try bottom	4	Check sheet

(2) After the completion of the thickness entry of the fourth sheet, the ADJUSTMM screen is shown.

Paper Orientation: Landscape

\* Load four sheets of media so as that their measurement points are located at the front feeder - plate hopper.

×

#### 3.4.2.3 Sensitivity Adjustment

(1) With the press of OK on the ADJUSTMM screen, sensitivity adjustment is performed. The printer boots up, and four sheets of media are passed through it.

(2) When the sensitivity adjustment is completed properly, the ADJUSTMM screen and the Adjust Munsell & Media screen are displayed.

	🔅 Adjust Munsell & Media
ADJUSTMM 🔀 Adjustment GOOD	Adjust Munsell & Media OKI Adjustment Munsell-et & Media-thickness-calibration Printer Number Exit Execution [Enter] Version Adjustment GOOD 1033C 05 208A 1000011 Media Thickness Adjustment Error Code = 0 Thickness Check (fumut) = 100 Munsell

Action procedure for NG sensitivity adjustment on media thickness detection part

3.4.3 Inputting the density of the calibration chip for density detection

Write the calibration target adjustment value (last 2 digits in the barcode, refer to the figure below) indicated on the shutter label.

The adjustment value of the shutter must be reset when Sheet Color, density sensor, or PU sensor is replaced.

3.4.3.1 Density Adjustment Menu Setting

For the steps (1) to (8) of menu setting, see Media Thickness Detection Adjustment Calibration 3.4.2.1, steps (1) to (8).

(9) The screen returns to the Adjust Munsell & Media screen. Press Munsell.

## 4. **REGULAR MAINTENANCE**

## 4.1 Parts Replaced Regularly

It is recommended that the following parts be periodically replaced, as specified, by users (When they are not replaced, print quality is not assumed and printer problems may result).

Part Name	Time of Replacement	Condition for Replacement	Adjustment after Replacement
Large-capacity	When the message Toner	15,000 pages are printed.	
	Low is displayed.	7,500 pages are printed.	
Ioner Cartridge			
ID Cartridge	When the message Drum Life is displayed.	26,000 pages are printed. (at 3P/J)	
Fuser Unit	When the message Fuser Life is displayed.	80,000 pages are printed.	
Belt Unit	When the message Belt Life is displayed.	80,000 pages are printed. (at 3P/J)	
Feed Roller	When non-feeding of paper is frequent (a proper paper amount is loaded).	120,000 pages are printed (this is given as a guide).	

The above regular part replacement is performed by a user.

## 4.2 Cleaning

The inside and outside of this printer should be cleaned with waste and a hand cleaner, if necessary.

*Note:* Do not touch the Image drum terminals, LED lens array and LED head connector.

## 4.3 Cleaning of LED Lens Array

When longitudinal white bands or stripes (void or light areas) appear on a printed paper surface, the LED lens array should be cleaned.

*Note:* The LED head cleaner must be used to clean the LED lens array. (The LED head cleaner is included in the Toner cartridge package.)

White band, white stripes (Void or light area)

## 4.4 Cleaning Pick-up Roller

When paper is not fed normally, the Pick-up roller should be cleaned.

*Note:* Use a soft cloth, alcohol, etc. So as not to damage the roller surface.

## 5. TROUBLESHOOTING PROCEDURES

## 5.1 Precautions before troubleshooting

- (1) Confirm the basic inspection items described in the user manual.
- (2) Obtain as much information regarding the problem from the user as possible.
- (3) Check the printer in a condition close to that upon generating the problem.

## 5.2 Precautions before handling an abnormal image

- (1) Confirm that the environment for using this printer is appropriate.
- (2) Confirm that consumables (toner, drum cartridge) are replaced appropriately.
- (3) Confirm that paper is accurate. Refer to paper specifications.
- (4) Confirm that the drum cartridge is set appropriately.

## 5.3 Precautions upon handling an abnormal image

- (1) Do not touch or allow foreign objects to contact the OPC drum surface.
- (2) Do not expose the OPC drum to direct sunlight.
- (3) Do not touch the fuser unit as it is heated significantly.
- (4) Do not expose the image drum to light for longer than five minutes in room temperature.

## 5.4 Preparing for Troubleshooting

(1) Operator panel display

Problems that occur with the printer are indicated in the LCD. Apply proper remedies according to the message indicated in the LCD.

## 5.5 Troubleshooting Procedure

Confirm the problem in the following method when the printer generates a problem.

#### 5.5.1 LCD message list

When the printer detects a non-recoverable error, the following service call error is displayed in the LCD.

Service call nnn: error

*Note:* nnn is an error code.

When [Service call] is displayed, error information that corresponds to the error code appears in the bottom line in the LCD. Error codes, their definitions and remedies are described in Table 5-1-1.

Message	Cause	Error Description		Solutions
Service Call 001: Error ~ 011: Error	CPU Exception	Does error display reappear? Does error display reappear?	Yes Yes	Turn power OFF and ON. Replace CU board. (Replace EEPROM)
Service Call 020: Error	CU ROM Hash Check Error 1	Is program ROM DIMM set properly? Is error recovered by replacing program ROM DIMM?	No Yes No	Reset program ROM DIMM. Replace program ROM DIMM. Replace CU board. (Replace EEPROM)
Service Call 030: Error	CU Slot1 DIMM RAM Check Error	Is subject RAM DIMM set properly? Is error recovered by replacing subject ROM DIMM?	No Yes No	Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 031: Error	CU Slot2 DIMM RAM Check Error	Is subject RAM DIMM set properly? Is error recovered by replacing subject ROM DIMM?	No Yes No	Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 032: Error	CU Slot3 DIMM RAM Check Error	Is subject RAM DIMM set properly? Is error recovered by replacing subject ROM DIMM?	No Yes No	Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 035: Error	Slot1 RAM Spec Error. The CU RAM Slot1 DIMM specification is not supported.	Is RAM DIMM genuine? Is subject RAM DIMM gap setting proper? Is error recovered by replacing subject ROM DIMM?	No No Yes No	Use genuine RAM DIMM. Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 036: Error	Slot2 RAM Spec Error. The CU RAM Slot2 DIMM specification is not supported.	Is RAM DIMM genuine? Is subject RAM DIMM gap setting proper? Is error recovered by replacing subject ROM DIMM?	No No Yes No	Use genuine RAM DIMM. Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 037: Error	Slot3 RAM Spec Error. The CU RAM Slot3 DIMM specification is notsupported.	Is RAM DIMM genuine? Is subject RAM DIMM gap setting proper? Is error recovered by replacing subject ROM DIMM?	No No Yes No	Use genuine RAM DIMM. Reset subject RAM DIMM. Replace RAM DIMM. Replace CU board. (Replace EEPROM)
Service Call 040: Error	CU EEPROM Error	Is error recovered by replacing EEPROM on CU board?	Yes No	Replace EEPROM. (Recover user environment.) Replace CU board. (Replace EEPROM)
Service Call 041: Error	CU Flash Error Flash ROM error on CU board.	Does error display reappear?	Yes	Replace CU board. (Replace EEPROM.)

Message	Cause	Error Description		Solutions
Service Call 042: Error	Flash File SYSTEM Error	Failed access to Flash set directly on CU board.		Press (0), (3), (5), (6) to turn power ON, release buttons when [FLASH FORMAT] appears, wait until
044: Error				[ON-LINE] (2sec) and replace CU board if symptom does not change.
Service Call 048: Error	CU ROM for PS+PCL was set in Non-PS device.	Is proper program ROM set?	Yes No	Replace program ROM DIMM. Replace with proper program ROM DIMM.
Service Call 049: Error	CU type mismatch CU ROM does not match with the device.	Is proper program ROM set?	Yes No	Replace program ROM DIMM. Replace with proper program ROM DIMM.
Service Call 050: Error	Operater Panel Error	Does error display reappear?	Yes	Refer to no LCD display flow chart.
Service Call 051: Error	CU Fan Error Abnormal CPU cooling fan on CU board.	Is connector set properly on CU board? Is error recovered by replacing fan?	No Yes No	Connect properly. Replace fan. Replace CU board. (Replace EEPROM.)
Service Call	Network comm. Error	Is network board set properly?	No	Set properly.
063: Error	between CU-NIC.	Is error recovered by replacing network board?	Yes No	Replace Network. Replace CU board. (Replace EEPROM.)
Service Call 065: Error	NIC Combination Error	Is proper Network board for the model set?	Yes No	Replace NIC card. Replace with proper Network board.
Service Call 070: Error	CANT_HAPPEN PS firmware fault detected.	Confirm that error is recovered by turning power OFF/ON.	No	Replace CU board. (Replace EEPROM.)
Service Call 072: Error	Engine communication error I/F error between PU-CU.	Is CU assembly set properly?	No Yes	Set properly. Replace CU board. (Replace EEPROM.)
		Is error recovered by replacing CU board?	No	Replace PU board.
Service Call 073: Error	Video overrun detect	Is CU assembly set properly? Is error recovered by replacing CU board?	No Yes	Set properly. Replace CU board. (Replace EEPROM.)
075: Error				
Service Call 090: Error	Finisher Stapler Motor Error	Is the error message displayed again?	Yes	See Finisher Maintenance Manual.
Service Call 091: Error	Finisher Tray Elevator Error	Is the error message displayed again?	Yes	See Finisher Maintenance Manual.
Service Call 092: Error	Finisher Bin2 Exit Belt Motor Error	Is the error message displayed again?	Yes	See Finisher Maintenance Manual.
Service Call 093: Error	Finisher Jogging Motor Error	Is the error message displayed again?	Yes	See Finisher Maintenance Manual.
Service Call 094: Error	Finisher Main Feed Motor Error	Is the error message displayed again?	Yes	See Finisher Maintenance Manual.
Service Call 102: Error	Error in engine RAM read/write detected at power ON.	Does error reoccur?	Yes	Replace engine control board (K7N).
Service Call 103: Error	Error in engine SRAM read/write detected at power ON.	Does error reoccur?	Yes	Replace engine control board (K7N).
Service Call 104: Error	Error in engine EEPROM check total detected at power ON.	Does error reoccur?	Yes	Replace engine control board (K7N).

Table 5-1-1	Operator	Alarms	(2/6)
-------------	----------	--------	-------

Message	Cause	Error Description		Solutions
Service Call	EEPROM not detected	Does EEPROM exist?	Yes	Check for EEPROM and set if not
105: Error	at power ON.	Does error reoccur?	Yes	found. Replace engine control board (K7N).
Service Call 106: Error	Error in engine control logic detected at power ON.	Does error reoccur?	Yes	Replace engine control board (K7N).
Service Call 107: Error	Engine ROM check sum error.	Does error reoccur? Is error recovered by reloading PU F/W?	Yes No	Reload PU I/F. Replace engine control board (K7N).
Service Call 110: Error 116: Error	Option unit for different model detected. 110: EnvelopeFeeder 111: Duplex unit 112: 2nd Tray 113: 3rd Tray 114: 4th Tray 115: 5th Tray 116: Finisher	Is a proper option unit for the printer set?	Yes No	Set proper option unit. Check connections and turn power ON. If error is not recovered, replace the unit.
Service Call 120: Error	PU unit fan motor error.	1) Is fan in PU unit operating?	No Yes	Replace fan motor. Replace engine control board (K7N).
Service Call 121: Error	High-voltage power supply I/F error.	Is cable between PU board andhigh- voltage power LSI connected properly?	No Yes	Connect properly. Replace high-voltage power supply. Check improper connections for high-voltage
Service Call 122: Error	Low-voltage power supply fan error. Low-voltage power supply temperature error.	<ol> <li>Is fan in low-voltage power supply unit operating?</li> <li>Error reoccurs after replacing fan motor.</li> </ol>	No Yes Yes	Replace fan motor. Replace low-voltage power supply. Replace low-voltage power supply.
Service Call 123: Error	Improper environment humidity detected by sensor.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace humidity sensor.
Service Call 124: Error	Improper environment temperature detected by sensor.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace humidity sensor.
Service Call 125: Error	Error detected at MT home position.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace MT.
Turn power OFF and wait 126: Dew error	Sensor dew error.	Sensor dew error detected.		Turn ON power after a while.
Service Call 127: Error	Error detected at the fuser unit cooling fan.	<ol> <li>Does the fuser unit cooling fan operate?</li> <li>Does the error repeat after fuser unit cooling fan replacement?</li> </ol>	No Yes Yes	Replace the fuser unit cooling fan. Replace the engine control PWB (K7N). Replace the engine control PWB (K7N).
Service Call 130: Error	Temperature rise detected at LED head.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes Yes	Leave alone for 30 min. Turn power OFF. Leave for 30 min., then turn power ON. Replace LED head.
Service Call 131: Y Head 132: M Head 133: C Head 134: K Head	Same unit not detected upon power ON or opening cover.	<ol> <li>Is error message displayed?</li> <li>Is LED head properly set?</li> <li>Does error reoccur?</li> </ol>	Yes No Yes	Confirm that LED head is set properly. Turn power ON again. Replace LED head assembly.
Service Call 140: Y ID 141: M ID 142: C ID 143: K ID	Error detected at proper ID position.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn power ON again. Replace drum contacct assembly.

## Table 5-1-1 Operator Alarms (3/6)

Message	Cause	Error Description		Solutions
Service Call 150: Y 151: M 152: C 153: K	When a fuse could not be disconnected in the ID unit.	Is ID unit set properly?	Yes	Check cable connections and replace engine board.
Service Call 154: Error	When belt unit fuse cannot be disconnected.	Is belt unit set properly?	Yes	Check cable connections and replace engine board.
Service Call 155: Error	When fuser unit fuse cannot be disconnected.	Is fuser unit set properly?	Yes	Check cable connections and replace engine board.
Service Call 160: Y Toner 161: M Toner 162: C Toner 163: K Toner	Error detected by toner sensor.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Replace toner sensor or assembly (Y71-PWB). Same as above.
Service Call 170: Error 171: Error 174: Error 175: Error	Short circuit in fuser thermistor or open detected (high temp. or low temp.)	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace thermistor and turn power OFF. Leave aside for 30 min.
Service Call 172: Error 176: Error	Thermistor indicates high-temperature error.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace thermistor and turn power OFF. Leave aside for 30 min.
Service Call 173: Error 177: Error	Thermistor indicates low-temperature error.	<ol> <li>Is error message displayed?</li> <li>Does error reoccur?</li> </ol>	Yes Yes	Turn ON power again. Replace thermistor and turn power OFF. Leave aside for 30 min.
Service Call 179: Error	Wrong fuser standard.	<ol> <li>Does fuser match with model and power voltage?</li> <li>Error reoccurs after setting fuser properly.</li> </ol>	No Yes Yes	Set proper fuser. Check if fuser is set properly. Replace fuser.
Service Call 180: Error ~ 186: Error	Communication disability with option unit detected by engine. 180: Envelope Feeder (Not used) 181: Duplex unit 182: Tray2 unit 183: Tray3 unit 184: Tray4 unit 185: Tray5 unit 186: Finisher unit	Is the error message displayed sgin?	Yes	Check the connector between the printer and the unit, and reinstall the unit.
Service Call 187: Error	Communication with control panel disabled	Is cable properly connected to control panel?	No Yes	Connect properly. Replace control panel and cable.
Service Call 200: Error ~ 202: Error	Error occurered while writing over the PU firmware. ( This does not occur at user level. )	Turn the printer OFF/ON, and retry to download the PU firmware, again.	-	Usually, the procedure ( PU firmware download ) which isn't done.
POWER OFF/ON 209: DOWNLOAD ERROR	Downloading Media Table to PU has failure. ( Related to Custum Media Type )	Turn the printer OFF/ON, and retry to download the PU firmware, again.	-	Usually, the procedure ( PU firmware download ) which isn't done.
Service Call 203: Error 208: Error 210: Error 214: Error 0xFFE: Error 0xFFF: Error	An error was detected of the CU program.	Reinstall the CU board. Is the error message displayed again?	Yes	Please report the address (24 charactoers) in the indicated LCD (if possible). Turn the printer OFF/ON.

## Table 5-1-1 Operator Alarms (4/6)
Message	Cause	Error Description		Solutions
Close cover 310: Top cover open	Printer engine cover open.	<ol> <li>Check if top cover is open.</li> <li>Check if cover switch is proper.</li> </ol>	Yes Yes No	Close top cover. Close side cover. Replace cover switch.
Reset fuser 320: Fuser error	Same unit not detected upon power ON or opening cover.	<ol> <li>Is error message displayed?</li> <li>Is fuser unit set properly?</li> <li>Does error reoccur?</li> </ol>	Yes No Yes	Check if fuser is set properly. Reset fuser and turn ON power again. Replace fuser unit assembly.
Turn power OFF and wait 321: MOTOR OVERHEAT	Printer cannot be used temporarily due to motor overheat.			Turn ON power after a while.
Open/close cover 323: Paper thickness error	Sensor output out of range with no media. (Only for Factory Mode)	<ol> <li>Are foreign objects mixed in sensor?</li> <li>Does printer recover when detecting paper thickness by opening/closing tray?</li> <li>Does printer recover by power OFF/ON.</li> </ol>	Yes No	Remove foreign objects. Normal.
Open/close cover 324: Paper thickness error	Sensor output gap out of range with no media. (Only for Factory Mode)	<ol> <li>Are foreign objects mixed in sensor?</li> <li>Does printer recover when detecting paper thickness by opening/closing tray?</li> <li>Does printer recover by power OFF/ON.</li> </ol>	Yes No	Remove foreign objects. Normal.
Open/close cover 325: Paper thickness error	Media detect value out of range.	<ol> <li>1) Is different media type mixed in?</li> <li>2) Is media being double fed?</li> </ol>	Yes	Remove foreign objects.
Open/close cover 326: Paper thickness error	U-Heavy mode media detect value out of range.	Is different media type mixed in?	Yes	Remove foreign objects.
Reset belt 330: Belt error	Same unit not detected upon power ON or closing cover.	<ol> <li>Is error message displayed?</li> <li>Is belt unit set properly?</li> <li>Does error reoccur?</li> </ol>	Yes No Yes	Check set condition of belt unit. Reset belt unit and turn power ON again. Replace belt unit assembly.
Reset drum 340~343: Drum error	Same as above.	<ol> <li>Is error message displayed?</li> <li>Is image drum set properly?</li> <li>Does error reoccur?</li> </ol>	Yes No Yes	Check set condition of ID. Turn power ON again. Replace ID unit assembly.
Set new drum 350: Yellow drum life 351: Magenta drum life 352: Cyan drum life 353: Black drum life	ID unit life.	Right after replacing ID unit?	Yes No	Check ID unit life. Replace ID unit.
Set new fuser 354: Fuser life	Fuser life (occurs when fuser life continuation is OFF).	Right after replacing fuser?	Yes No	Check fuser life. Replace fuser.
Set new belt 355: Belt life	Belt life notified (alarm). Print N-count by opening and closing cover.	Right after replacing belt?	Yes No	Check belt life. Replace belt.
Set new belt 356: Belt life	Waste toner belt life notified (alarm). Print N-count by opening and closing cover. N=20	Right after replacing belt?	Yes No	Check belt life. Replace belt.
Set duplex unit 360: Duplex unit is open.	When duplex unit is removed from printer.	Does error recover by resetting duplex unit?	Yes No	Normal. Replace duplex unit or engine board.

Table 5-1-1	<b>Operator Alarms</b>	(5/6)
-------------	------------------------	-------

Message	Cause	Error Description		Solutions
Check DUPLEX 370: Paper jam	Paper jam detected after paper rotated in duplex unit.	Check paper jam in duplex unit.	Yes No	Remove jammed paper. Check/replace duplex unit.
Check DUPLEX 371: Paper jam	Paper jam during paper feed from duplex unit.	Check paper jam in duplex unit.	Yes No	Remove jammed paper. Check/replace duplex unit.
Check DUPLEX 372: Paper jam		Check miss-feed in duplex unit.	Yes No	Remove miss-fed paper and close cover. Check/replace duplex unit.
Open front cover 380: Paper jam	Paper jam during paper feed from cassette 1, 2, 3, 4 or 5.	Check miss-feed in duplex unit.	Yes No	Remove miss-fed paper and set cassette. Check/replace cassette 1, 2, 3, 4, or 5.
Open top cover 381: Paper jam	Paper jam detected between black ID and fuser	<ol> <li>Check paper jam between yellow ID and fuser.</li> <li>Check fuser unit load.</li> </ol>	Yes No	Remove jammed paper. Replace fuser unit.
Open top cover 382: Paper jam	Paper jam detected in fuser or during paper ejection from fuser.	<ol> <li>Check paper jam in fuser and between yellow ID and fuser.</li> <li>Check if paper ejection switch is proper.</li> </ol>	Yes No	Remove jammed paper. Replace paper ejection switch.
Open top cover 383: Paper jam	Paper jam detected when paper started to enter duplex print unit.	Check paper jam in duplex unit or at entrance.	Yes No	Remove jammed paper. Check/replace duplex unit.
Open top cover 389: Paper jam	Jam generated in paper path.	Open front cover and check jammed paper.	Yes	Remove jammed paper.
Check MP tray 390: Paper jam	Paper jam during paper feed from MT.	Check for miss-fed paper around MT cassette.	Yes No	Remove miss-fed paper and close cover. Check/replace MT.
Check tray * 391~395: Paper jam	Paper jam detected between cassette and black ID	<ol> <li>Check jammed paper between cassette and yellow ID.</li> <li>Check if paper entry switch is normal</li> </ol>	Yes	Remove jammed paper.
Open top cover 400: Paper size error	Non-set paper (45mm or above) detected by printer engine.	<ul><li>1) Is paper custom size?</li><li>2) Is paper standard size?</li></ul>	Yes Yes No	No treatment required. Adjust paper size guide in cassette. Replace paper size board (PXC PWB).
Refill toner 410: Yellow 411: Magenta 412: Cyan 413: Black	Certain toner is almost empty.	<ol> <li>Selected toner cartridge is almost empty.</li> <li>Check if selected toner cartridge is normal.</li> </ol>	Yes No	Replace with new toner kit. Replace selected toner sensor.
Remove paper 480: Stacker full	Paper ejection stacker is full.	<ol> <li>Check if stacker is full.</li> <li>Check if stacker full sensor is operating properly.</li> </ol>	Yes No	Remove paper from stacker. Replace stacker full sensor.
Set *** 490: No paper in MP tray (* stands for A4 B4, etc.)	No paper in selected cassette. cassette is not set, or paper ran out in cassette being used.	<ol> <li>Check if paper is empty in MT.</li> <li>Check if paper-end sensor is operating properly.</li> </ol>	Yes No	Set paper in MT. Replace paper-end sensor.
Set *** 491~495: No paper in * tray (* stands for A4 B4, etc.)	Paper empty in cassette 1, 2, 3, 4, or 5.	<ol> <li>Check if paper is empty in selected cassette.</li> <li>Check if paper-end sensor is operating properly.</li> </ol>	Yes No	Set paper in selected cassette. Replace the corresponding paper-end sensor.
Replace fuser	Fuser counter exceeded life.	<ol> <li>Is error message displayed?</li> <li>Was fuser unit just replaced?</li> </ol>	Yes No	Check fuser unit life. Replace fuser immediately or at next maintenance.
Paper in * tray nearly empty	Paper near end detected.	Are only few papers remaining in tray? (approx. 30 sheets or less)	Yes No	Refill paper. Check paper near end sensor.
Disk operation error	Cannot write in HDD.	Is faulty operation being applied?	No Yes	Check manual operation. HDD abnormality. Replace HDD.

Table 5-1-1	Operator	Alarms	(6/6)
-------------	----------	--------	-------

### 5.5.2 Preparing for troubleshooting

### (1) Operator panel display

Problems that are generated in this device are indicated in the LCD. Apply proper measures according to the message displayed in the LCD.

No.	Problem	Flow Chart No.
1	The printer does not function properly after power ON.	(1)
2	Jam error Feed jam (1st tray) Feed jam (multipurpose tray) Path jam Exit jam Duplex jam	<ul> <li>2-1</li> <li>2-2</li> <li>2-3</li> <li>2-4</li> <li>2-5</li> </ul>
3	Paper size error	3
4	I/D up/down error	4
5	Fuser unit error	(5)
6	Fan motor error	6

# *Note:* When changing the engine board (K7N PWB), remove the EEPROM chip from the old board and install it on the newly replaced board

(2) CU assembly troubleshooting

No operation

Is an error message displayed?

YES Perform according to the error message. No Is black displayed in the top and bottom lines of the operator panel LCD? 3.3V, 5V •No Check the power voltage 3.3V is open space 2 pin for JTAGW 5V is 2, 3 pins for open space HD5V. Replace the power supply. No YES Check the PU board and operator panel board. YES Is ROM DIMM A set properly? No Set a program DIMM to ROM DIMM A properly. If the error is not recovered, replace the CU board. YES Replace the CU board. Remove EEPROM from the old board and install it on the new board.

(1) The printer does not function property after power O	(1)
--	-----

ls	displayed? (Approx. 1 sec.)
• No	Is the AC cable connected properly?
	No Connect the AC cable properly.
Yes	Is +5V output to the panel connector (OPTN connector) on the engine board (K7N PWB)? Pin 10, 11, 18: +5V Pin 5, 7, 15,20: 0V
	Yes Is +5V output to the panel connector on the relay board (Y73 PWB)? Pin 5: +5V Pin 2: 0V
	No Replace the relay board.
	Yes Is the operator panel cable connected properly?
	No Connect the cable properly.
	Yes Replace the operator panel cable. Is operation recovered?
	No Replace the cover assembly of the operator panel.
	Yes End.
No	Is +5V output to the power connector on the engine board (K7N PWB)? Pin 5, 6, 7, 8: +5V Pin 1, 2, 3, 4, 9, 10, 11: 0V
	No Check the power connection connector, then replace the low-voltage power supply unit.
Yes	Replace the engine board.
Yes	Are the following voltages output to the PU IF connector on the main board?Pin 137-147, 187-197: +5VPin 125-136, 175-186: +3.3VPin 148, 198: +12VPin 101-124, 149-174, 199, 200: 0V
Yes	Replace the main board.
No	Is the following voltage output to the power connector on the engine board? Pin 5, 6, 7, 8 :+5V Pin 15 :+12V
	Pin 12, 13, 14 : +34V Pin 1, 2, 3, 4, 9, 10, 11 : 0V
Yes	Replace the engine board.
No	Replace the low-voltage power supply unit.

### 2-1 Feed jam (1st tray)

ţ	Do feed	jams occur right after power ON?
	• Yes	Is the jam at the entrance cassette sensor or entrance MT sensor?
		Yes Remove the jammed paper.
	(A)	
	No	Does the sensor lever (entrance cassette sensor or entrance MT sensor) function properly?
		No Replace the faulty sensor lever.
	Yes	Does the sensor (input cassette sensor, entrance MT sensor) function properly? Operate each sensor lever and check the signal on the FSENS connector pin on the engine board (K7N PWB). Pin 4: Entrance sensor / Pin 2: Entrance MT sensor
		No Check the connection of the NO signal cable, then replace the engine.
	Yes	Check the signal cable connection, then replace the sensor board (R71 PWB).
*	No	Do feed jams occur right after papers are absorbed?
	• Yes	Did the paper reach the entrance cassette sensor or entrance MT sensor?
		Yes Proceed to (A).
	Y No	Replace the feed roller or paper separation frame assembly of the paper cassette.
*	No	Is the main feed motor rotating?
	Yes	Replace the feed roller or paper separation frame assembly of the paper cassette.
*	No	Is the main feed motor resistance within the regulated value (approx. $4\Omega$ )?
	No	Replace the main feed motor.
¥	Yes	Is 34V output to fuse F2 and F4 on the engine board?
	No	Replace the low-voltage power unit.
¥	Yes	Check the gear mesh status and cable connections, then replace the engine board.

### 2-2 Feed jam (multipurpose tray)

ſ	Do fe	ed	jams occur right after power ON?
	• Ye	es	Is the jam at the entrance cassette sensor or entrance MT sensor?
			Yes Remove the jammed paper.
	(/	A)	
	▼ No	C	Does the sensor lever (entrance MT sensor) function properly?
			No Replace the faulty sensor lever.
	Ye	es	Does the sensor (entrance MT sensor) function properly? (Operate each sensor lever and confirm that the sensors function properly in the switch scan test in the system maintenance mode. Also check the FSENS connector pin signal on the engine board (K7N PWB).) PIN 2: Entrance MT sensor
			No Check the signal cable connection, then replace the sensor board (R71 PWB).
	Y Ye	es	Check the signal cable connection, then replace the engine board.
¥	No		Do feed jams occur right after papers are absorbed?
	• Ye	es	Did the paper reach the entrance MT sensor?
			Yes Proceed to (A).
	¥ No	C	Replace the multipurpose tray assembly.
¥	No		Is the resist motor rotating?
	• No	C	Is 34V output to fuse F4 on the engine board?
			No Replace the low-voltage power unit.
	Y Ye	es	Check the cable connections, then replace the engine board.
¥	Yes		Check the cable connections, then replace the engine board.

### 2-3 Path jam

ſ	Do	path	jams	occur right after power ON?	
	ţ	Yes	Is the	e jam at the entrance belt sensor?	
			Yes	Remove the jammed paper.	
		(A)			
	¥	No	Does	s the light sensor lever function properly?	
			No	Replace the light sensor lever.	
	•	Yes	Does (Ope (K7N Pin 6	s the belt sensor lever function properly? The the sensor lever and check the FSENS connector pin signal on the engine board I PWB).) S: Entrance belt sensor	
			No	Check the cable connections, then replace the sensor board (R71 PWB).	
	•	Yes	Cheo Is it o	ck the signal cable. connected properly?	
			No	Connect the cable properly.	
	Y	Yes	Repl	ace the engine board.	
¥	No		Do path jams occur right after papers are absorbed?		
	ţ	Yes	Did t	he paper reach the light sensor?	
			Yes	Proceed to (A).	
	•	No	Is the	e resist motor rotating?	
		Ţ	No	Is the main feed motor resistance within the regulated value (approx. $7.9\Omega$ )?	
				No Replace the resist motor.	
		¥	Yes	Check the gear mesh status, then replace the engine board.	
	7	Yes	Repl	ace resist motor A or B.	
Y	No	)	Do p	ath jams occur upon loading paper?	
	Ţ	Yes	Is the	e belt motor rotating?	
		Ť	No	Is the belt motor resistance within the regulated value (approx. 7.9 $\Omega$ )?	
				No Replace the belt motor.	
		¥	Yes	Check the gear mesh status, then replace the engine board.	
	•	Yes	Cheo	ck the gear mesh status, then replace the belt cassette assembly.	
Y	No	)	End.		

### 2-4 Exit jam

•	Do	o exit j	ams occur right after power ON?		
	•	Yes	Is the jam at the paper exit sensor?		
		•	Yes Remove the jammed paper.		
	¥	No	Does the paper exit sensor lever function properly?		
		•	No Replace the paper exit sensor lever.		
	•	Yes	Does the paper exit sensor function properly? (Operate each sensor lever and confirm that the sensors function properly in the switch scan test in the system maintenance mode. Also check the signal of connecter PARTTEMP Pin 8 on the engine board (K7N PWB).)		
			No Check the signal cable connections, then replace the paper exit sensor.		
	*	Yes	Replace the engine board.		
¥	No	C	Is the cover of the face-up stacker fully opened or closed?		
		No	Open or close the cover completely.		
¥	Ye	es	Is the heat motor rotating?		
	Ţ	No	Is the heat motor resistance within the regulated value (approx. $7.9\Omega$ )?		
			No Replace the heat motor.		
	¥	Yes	Is 34V output to power connector 12-14 pins on the engine board?		
			No Replace the low-voltage power unit.		
	¥	Yes	Check the cable connections, then replace the engine board.		
*	Ye	es	Is the paper ejection guide functioning properly?		
			No Replace the paper ejection guide.		
¥	Ye	es Rep	lace the engine board.		

### 2-5 Duplex jam

Ţ	Do	o path	jams occur right after power ON?
	ţ	Yes	Is there paper in the duplex print unit?
			Yes Remove the jammed paper.
		(A)	
	•	No	Do the duplex unit entrance sensor, rear sensor, and sensor lever of the front sensor function properly?
			No Replace the faulty sensor lever.
	<b>Y</b>	Yes	Do the duplex unit entrance sensor, rear sensor, and front sensor function properly? (Check if the level of each sensor is "no paper" with the switch scan test in the system maintenance mode.)
			No Check the cable connections, then replace the faulty sensor.
	•	Yes	Check the signal cable connection. Is it connected properly?
			No Connect the cable properly.
	¥	Yes	Replace the duplex print control board (V73 PWB)
*	No	D	Do path jams occur right after papers are absorbed?
	ţ	Yes	Did the paper reach the duplex print rear sensor?
		•	Yes Proceed to (A).
	*	No	Is the duplex print motor rotating?
		Ţ	No Is the duplex print motor resistance within the regulated value (approx. $6.7\Omega$ )?
			No Replace the duplex print motor.
		¥	Yes Check the gear mesh status, then replace the duplex print board (V73 PWB).
	¥	Yes	Replace resist motor A or B.
¥	No	)	Replace the duplex print unit.

3	Paper size error			
Ţ	Is paper	Is paper of regulated size being used?		
	No	Use paper of regulated size.		
¥	Yes	Is a jam detected by the entrance FF sensor or paper width sensor?		
	Yes	Remove the jammed paper.		
¥	No	Is the entrance FF sensor lever functioning properly?		
	No	Place the faulty sensor lever.		
*	Yes	Is the entrance FF sensor functioning properly? (Check the FSENS connector pin signal on the engine board (K7N PWB).) Pin 4: Entrance FF sensor		
	No	Check the cable connections, then replace the sensor board (R71 PWB).		
¥	Yes	Is the entrance belt sensor functioning properly?		
	No	Place the faulty sensor lever.		
•	Yes	Is the entrance belt sensor functioning properly? (Operate the sensor lever and confirm that the sensor functions properly in the switch scan test in the system maintenance mode. Also check the FSENS connector pin signal on the engine board (K7N PWB).) Pin 6: Entrance belt sensor		
	No	Check the cable connections, then replace the sensor board (R71 PWB).		
¥	Yes	Are all paper size detection switch on the size detection board (PXC-PWB) functioning properly? (Press the paper size detection switch and check the PSIZE connector pin signal on the engine board.) Pin 3: Paper size detector 1 Pin 4: Paper size detector 2 Pin 5: Paper size detector 3 Pin 6: Paper size detector 4		
	No	Check the cable connections, then replace the paper size detection board (PXC-PWB).		
7	Yes	Check the cable connections, then replace the engine board.		

(4)	Up/Down movement error of the image drum unit (ID)
$\smile$	

• Turn the printer OFF, then turn it ON after a few seconds.

1	•	Are all ID drums	rotating	properly	during	print	operation	?

	• No	Is the ID motor resistance within the regulated value (approx. $2.4\Omega$ )?		
		No Replace the faulty IDU motor.		
	Yes	Is 34V output to F3 and F5 on the engine board?		
		No Replace the low-voltage power unit.		
	Yes	Check the cable connections, then replace the engine board.		
¥	Yes	Is the IDU sensor terminal functioning properly?		
	No	Check the gear mesh status and sensor terminal function, the replace the gear or sensor terminal.		
•	Yes	Is the ID sensor terminal functioning properly? (Check the JODEN connector pin signal on the driver board (K7N PXB).) Pin 12 : IDU sensor - yellow Pin 2 : IDU sensor - magenta Pin 4 : IDU sensor - cyan Pin 14 : IDU sensor - black Are all at 5V level or 0V level?		
	No	Replace the connection board (N71 PWB).		
¥	Yes	Check the cable connection between the connection board (N71 PWB) and engine board (K7N PWB), then replace the engine board.		

- 5 Fuser unit error
- Do fuser errors occur right after power ON?

(A)

- Yes Is the heat roller thermister disconnected or generating a short circuit? (See Fig. 5-1) (Approx. 190k-980k $\Omega$  in room temperature of 0-43 degrees Celsius.)
  - Yes Replace the fuser unit.
- No Is the back-up roller thermister disconnected or generating a short circuit? (See Fig. 5-1) (Approx. 190k-980k $\Omega$  in room temperature of 0-43 degrees Celsius.)
  - Yes Replace the fuser unit.
- Y No
- No Does a fuser unit error occur approx. three minutes after power ON?
- No Proceed to (A).
- Is the heater in the fuser unit turned ON? (Is it hot?)
- Yes Replace the engine board.
- No Replace the fuser unit.
- No Is AC voltage output between CN1 connector pin 1 and pin 3 in the low-voltage power unit?
- No Replace the low-voltage power unit.
- Yes Replace the fuser unit.

Figure 5.1

(5) Motor fan error

Ţ	Does the	the low-voltage power fan rotate at power ON?		
	<ul> <li>No Is 34V output to fuse F7 on the engine board (K7N PWB)?</li> </ul>			
	ſ	No Is 34V output to the power connector on the engine board (K7N PWB)? 34V: Pin 12, 13, 14		
		No Check the cable connections, then replace the low-voltage power unit.		
	Y	Yes Replace the engine board.		
	Y Yes	Was the low-voltage power board replaced?		
	•	Yes End.		
	Y No	Replace the low-voltage power board.		
¥	Yes	Does the engine board fan rotate at power ON?		
	• No	Is 34V output to fuse F7 on the engine board (K7N PWB)?		
		No Is 34V output to the power connector on the engine board (K7N PWB)? 34V: Pin 12, 13, 14		
		No Check the cable connections, then replace the low-voltage power unit.		
	Y	Yes Replace the engine board.		
	Y Yes	Replace the engine board fan.		
¥	Yes	End.		

5.5.3 Troubleshooting for abnormal images

Apply remedies according to the following table when printed images are abnormal as shown below.

Abnormal Image	Flowchart No.
The entire image is faint or the color is irregular. (Figure 5.2-A)	1
The white portion is dirty. (Figure 5.2-B)	2
A white page is output. (Figure 5.2- <sup>©</sup> )	3
Streaks or solid lines appear in the vertical direction.	(4)
(Black line, color line / black streak, color streak) (Figure 5.2- $\mathbb{O}$ )	
White solid lines / streaks or blurred color lines / streaks appear in the vertical	5
direction. (Figure 5.2-①)	
Faulty fusing (image blurs or scatters when touched)	6
Consistent abnormality (Figure 5.2-(E))	7
Color detachment	8
Color irregularity	9
Different color compared with the original.	(10)

Figure 5.2

1	An image is generally faint or th	e color is irregular. (Fig 5-2 $\textcircled{A}$ )
$\sim$		

Is the amount of toner low? (Is [Toner Low] indicated?)

1

	Yes	Refill toner.
¥	No	Is regulated paper used?
	No	Use regulated paper.
¥	Yes	Is the LED head lens dirty?
	Yes	Clean the LED head lens.
Y	No	Are all items of the LED head assembly connected properly to the connection board (Y73 PWB) and engine board (K7N PWB)?
	No	Check the cable connection (between each LED head and engine board), then connect the cables between the LED head and engine board properly.
¥	Yes	Is +5V output to the following power connector pins on the connection board (Y73 PWB)? +5V: Pin 1, 2, 3, 4, 5, 6
	• Yes	Is +5V output to the each LED head assemblies on the connection board (Y73 PWB)? 3 pin for YPOW connector : LED head assembly - yellow 3 pin for MPOW connector : LED head assembly - magenta 3 pin for CPOW connector : LED head assembly - cyan 3 pin for KPOW connector : LED head assembly - black
		No Replace the connection board (Y73 PWB).
	Yes	Check the cable connections, then replace the LED head assembly.
Y	No	Check the cable connections, then replace the low-voltage power unit. Did the printer recover?
	Yes	End.
Y	No	Is 34V output to the power connector on the engine board (K7N PWB)? +34V: Pin 12, 13, 14
	No	Check the cable connections, then replace the low-voltage power unit.
Y	Yes	Is 34V output to the HVOLT connector pin 2 on the engine board (K7N PWB)?
	No	Replace the engine board.
Y	Yes	Check the cable connections, then replace the high-voltage power unit or belt cassette assembly.
	Yes	End.
Y	No	Is the I/D unit terminal connected properly to the contact assembly. (See Fig. 5-2)
	No	Connect the I/D unit terminal properly to the contact assembly.
*	Yes	Replace the image drum.
	Note	: 1. Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).

2. If EEPROM is not replaced, refer to section 3.2.2.

2	Dirty Background. (Fig. 5-2 B)		
Ţ	Was the	e image drum exposed to external light for a long time?	
	Yes	Replace the I/D unit.	
¥	No	Is the roller in the fuser unit dirty?	
	Yes	Replace the fuser unit.	
¥	No	Correct the PAPER THICKNESS setting. Light: 64 g/m <sup>2</sup> Medium Light: 64 to 74 g/m <sup>2</sup> Medium: 75 to 90 g/m <sup>2</sup> Medium Heavy: 91 to 104 g/m <sup>2</sup> Heavy: 105 to 120 g/m <sup>2</sup> Ultra Heavy 121 to 203 g/m <sup>2</sup> Transparency	
	No	Set [Paper Thickness] properly.	
¥	No	Is the LED head assembly connected properly to the connection board (Y73 PWB)?	
	No	Connect the LED head assembly properly to the connection board (Y73 PWB).	
¥	Yes	Is +5V output to the following power pins on the connection board (Y73 PWB)? +5V: Pin 1, 2, 3, 4, 5, 6	
	• Yes	Is +5V output to the following cable connector pins between the connection board (Y73 PWB) and LED head assembly? 3 pin for YPOW connector : LED head assembly - yellow 3 pin for MPOW connector : LED head assembly - magenta 3 pin for CPOW connector : LED head assembly - cyan 3 pin for KPOW connector : LED head assembly - black	
		No Replace the connection board (Y73 PWB).	
	Yes	Check the cable connections, then replace the LED head assembly.	
¥	No	Check the cable connections, then replace the low-voltage power unit. Did the printer recover?	
	Yes	End.	
¥	No	Is 34V output to the power connector on the engine board (K7N PWB)? +34V: Pin 12, 13, 14	
	No	Check the cable connections, then replace the low-voltage power unit.	
¥	Yes	Is 34V output to the power connector pin 2 on the engine board (K7N PWB)? +34V: Pin 12, 13, 14	
	No	Replace the engine board.	
¥	Yes	Check the cable connections, then replace the high-voltage power unit or belt cassette assembly.	
	Yes	End.	
¥	No	Is the I/D unit terminal connected properly to the contact assembly. (See Fig. 5-2)	
	No	Connect the I/D unit terminal properly to the contact assembly.	
¥	Yes	Replace the image drum unit.	
	Note	: 1. Remove EEPROM from the old board and set it on the new board upon replacing the	

- engine board (K7N PWB).
- 2. If EEPROM is not replaced, refer to section 3.2.2.

(3)	White	page	(Fig	5-2	$(\mathbb{C})$	)
9			· · · · · · · · · · · · · · · · · · ·		/	

Is the LED head assembly connected properly to the connection board (Y73 PWB) or engine board
(K7N PWB)?

- NO Connect the cables, connect the LED assembly to the connection board (Y73 PWB), and engine board properly.
- YES Is +5V output to the following power connector pins on the connection board (Y73 PWB)? +5V: Pin 1, 2, 3, 4, 5, 6
  - YES Is +5V output to the following cable connector pins between the connection board (Y73 PWB) and LED head assembly?
    3 pin for YPOW connector : LED head assembly yellow
    3 pin for MPOW connector : LED head assembly magenta
    3 pin for CPOW connector : LED head assembly cyan
    - 3 pin for KPOW connector : LED head assembly black
    - NO Replace the connection board (Y73 PWB).
- YES Check the cable connections, then replace the LED head assembly.
- NO Is 34V output to the power connector on the engine board (K7N PWB)? +34V: Pin 12, 13, 14
  - NO Check the cable connections, then replace the low-voltage power unit.
- YES Is 34V output to HVOLT connector pin 2 on the engine board (K7N PWB)?
  - NO Replace the engine board.
- NO Check the cable connections, then replace the high-voltage power unit or belt cassette assembly. Did the printer recover?
  - YES End.
- NO Is the I/D unit terminal connected properly to the contact assembly. (See Fig. 5-2)
  - NO Connect the I/D unit terminal properly to the contact assembly.
- YES Replace the image drum unit.
  - *Note:* 1. Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).
    - 2. If EEPROM is not replaced, refer to section 3.2.2.

- (4) Solid lines or streaks appear in the vertical direction. (Black lines, color lines / black streaks, color streaks) (Fig. 5-2 (D))
  - Is the LED head assembly connected properly to the connection board (Y73 PWB)?
    - NO Connect the LED head assembly to the connection board properly.
    - YES Check the cable connections, then replace the LED head assembly. Did the printer recover?
      - YES End.
    - YES Check the cable connections, then replace the connection board (Y73 PWB). Did the printer recover?
      - YES End
    - NO Is the engine board (K7N PWB) connected properly to the connection board (Y73 PWB)?
      - NO Connected the engine board properly to the connection board.
    - YES Check the cable connections, then replace the engine board (K7N PWB). Did the printer recover?
      - YES End

Y

- NO Is the I/D terminal connected properly to the contact assembly? (See Fig. 5-3)
  - NO Connect the I/D terminal properly to the contact assembly.
- YES Replace the image drum.
  - *Note:* 1. Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).
    - 2. If EEPROM is not replaced, refer to section 3.2.2.

(5) Thick white lines / streaks or blurred color lines / streaks appear in the vertical direction (Fig. 5-2  $\bigcirc$ )

Ī	Is the LE	ne LED head dirty?		
	YES	Clean the LED head.		
¥	NO	Is the LED head assembly connected to the connection board (Y73 PWB) properly?		
	NO	Connect the LED head assembly to the connection board (Y73 PWB) properly.		
*	YES	Check the cable connections, then replace the LED head assembly. Did the printer recover?		
	YES	End.		
*	NO	Check the cable connections, then replace the connection board (Y73 PWB). Did the printer recover?		
	YES	End		
¥	NO	Is the engine board (K7N PWB) connected properly to the connection board (Y73 PWB)?		
	NO	Connected the engine board properly to the connection board.		
*	YES	Check the cable connections, then replace the engine board (K7N PWB). Did the printer recover?		
	YES	End		
¥	NO	Is the I/D terminal connected properly to the contact assembly? (See Fig. 5-3)		
	NO	Connect the I/D terminal properly to the contact assembly.		
¥	YES	Replace the image drum.		

- *Note:* 1. Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).
  - 2. If EEPROM is not replaced, refer to section 3.2.2.

- 6 Poor Fusing (Ink spreads or peels when touched with fingers)
- Is regulated paper being used?
  - NO Use regulated paper.
  - YES Is the contact of the fuser unit connected properly?
    - NO Connect the contact of the fuser unit properly.
  - YES Is the roller in the fuser unit dirty?
    - YES Replace the fuser unit assembly.
  - NO Is the PAPER THICKNESS (menu 1) selected correctly? Light: 64 g/m<sup>2</sup> Medium Light: 64 to 74 g/m<sup>2</sup> Medium: 75 to 90 g/m<sup>2</sup> Medium Heavy: 91 to 104 g/m<sup>2</sup> Heavy: 105 to 120 g/m<sup>2</sup> Ultra Heavy 121 to 203 g/m<sup>2</sup> OHP
    - NO Set [Paper Thickness] properly.
    - YES Is AC voltage output between CN connector pins 1 and 3 in the low-voltage power unit?
      - NO Replace the low-voltage power unit.
    - YES Is the heat roller thermister resistance within the regulated value? (See Fig. 5-1) (Approx. 190k-980k $\Omega$  in room temperature of 0-43 degrees Celsius.)
      - NO Replace the fuser unit.
    - YES Is the back-up roller thermister resistance within the regulated value? (See Fig. 5-1) (Approx.  $190k-980k\Omega$  in room temperature of 0-43 degrees Celsius.)
      - NO Replace the fuser unit.
    - YES Does the fuser temperature match the set temperature? Check the fuser temperature in the LCD display of the engine maintenance mode. Heat roller (upper) : 145-155 degrees (5FH-6BH) Back-up (lower) : 125-135 degrees (48H-53H)
      - NO Replace the fuser unit assembly.
    - YES Replace the fuser unit assembly.
      - *Note:* 1. Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).
        - 2. If EEPROM is not replaced, refer to section 3.2.2.

- Remedy Consistency Problem 94.2 mm Image Drum Replace the ID unit. 63.6 mm **Developing Roller** Replace the ID unit. 57.8 mm Toner Supply Roller Replace the ID unit. 44.0 mm Charge Roller Replace the ID unit. 113.1 mm Fuser Roller (Upper) Replace the fuser unit. Fuser Roller (Lower) Replace the fuser unit. Transfer Roller 57.8 mm Replace the belt cassette assembly.
- ⑦ Consistent abnormality (Figure 5.2-)

*Note:* The life counter for the I/D unit, fuser unit, and belt cassette unit is reset automatically when the unit is replaced.

8	Color detaches.			
Ţ	Is the LED head dirty?			
	YES	Clean the LED head.		
¥	NO	Is the LED head assembly connected to the connection board (Y73 PWB) properly?		
	NO	Check the connection cable between the LED head and connection board, then connect properly.		
*	YES	Is +5V output to the following HEADPOW connector pins on the connection board (Y73 PWB)? +5V: Pin 1, 2, 3, 4, 5, 6		
	• YES	Is +5V output to the each LED head assemblies on the connection board (Y73 PWB)? 3 pin for YPOW connector : LED head assembly - yellow 3 pin for MPOW connector : LED head assembly - magenta 3 pin for CPOW connector : LED head assembly - cyan 3 pin for KPOW connector : LED head assembly - black		
		NO Replace the connection board (Y73 PWB).		
	YES	Check the cable connections, then replace the LED head assembly.		
Ť	NO	Check the cable connections, then replace the low-voltage power unit. Did the printer recover?		
	YES	End.		
¥	NO	Is 34V output to the power connector on the engine board (K7N PWB)? +34V: Pin 12, 13, 14		
	NO	Check the cable connections, then replace the low-voltage power unit.		
¥	YES	Is 34V output to the HVOLT connector pin 2 on the engine board (K7N PWB)?		
	NO	Replace the engine board.		
¥	YES	Check the cable connections, then replace the high-voltage power unit or belt cassette assembly.		
	YES	End.		
¥	NO	Is the I/D unit terminal connected properly to the contact assembly. (See Fig. 5-3)		
	NO	Connect the I/D unit terminal to the contact assemblyproperly .		
¥	YES	Replace the image drum.		
	Note	<ol> <li>Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).</li> </ol>		

2. If EEPROM is not replaced, refer to section 3.2.2.

9	Color irregularity				
Ţ	[Toner Low] is displayed.				
	YES Refill toner. Did the printer recover?				
	YES End.				
*	NO Perform the color irregularity test in the engine maintenance mode. Method: Enter the self-diagnostic mode (Level 1) in the engine maintenance mode.				
	DIAGNOSTIC MODE				
	XX.XX.XX				
	Press the $\textcircled{0}$ and $\textcircled{4}$ keys and enter the self-diagnostic mode (Level 2).				
	ENGINE DIAG LEVEL2				
	Press the $\textcircled{1}$ key three times and display [REG ADJUST TEST].				
	REG ADJUST TEST				
	Press the ② key once and display [REG ADJUST EXECUTE].				
	REG ADJUST EXECUTE				
	Press the $(3)$ key and execute auto adjustment for color irregularity. (The motor will start to rotate and adjustment for color irregularity will begin.)				
¥	[OK] is displayed immediately with executing color irregularity adjustment. (Motor does not rotate.)				
	YES Error other than color irregularity has generated. Did color irregularity recover after the error was released?				
	YES End.				

(A)					
¥	NO		[NG CALIBRATION LEFT /RIGHT] display.		
	Ţ	YES	Is the	color irregularity sensor cover dirty?	
			YES: I	Faulty cleaning operation of the rear sensor cover due to the cleaning blade on the rear side of the shutter. Replace the shutter and sensor cover, and recover cleaning capability.	
	*	NO	Check K7N b conne	the connection of the Z71 board (color irregularity board) connector, RSNS on the oard (engine board), and power connector. Did the printer recover after checking the ctions?	
			YES I	End.	
	¥	NO	Repla	ce the Z71 board. Did the printer recover?	
			YES I	End.	
	*	NO	Repla	ce the engine board. Did the printer recover?	
			YES I	End.	
	¥	NO	Repla	ce the cables for the Z71 board and engine board. Did the printer recover?	
			YES I	End.	
¥	NC	)	[DYNA	AMICRANGE LEFT /RIGHT] display.	
	ţ	YES	Is the	color irregularity sensor cover dirty?	
			YES I	Faulty cleaning operation of the rear sensor cover due to the cleaning blade on the rear side of the shutter. Replace the shutter and sensor cover, and recover cleaning capability.	
	¥	NO	Is the	open/close operation of the shutter abnormal?	
		Ţ	YES I	Replace the shutter. Did the printer recover?	
			`	YES End.	
		¥	NO I	Replace the shutter open/close solenoid. Did the printer recover?	
			•	YES End.	
	*	NO	Repla	ce the belt unit. Did the printer recover?	
			YES I	End.	
	¥	NO	Repla	ce the ID unit. Did the printer recover?	
			YES I	End.	
। (В)					

(B)					
•	[Y	[Yellow/Magenta/Cyan Left/Right/Horizontal] display			
	YES Replace the belt unit. Did the printer recover?				
			YES End.		
	¥	NO	Replace the ID unit. Did the printer recover?		
			YES End.		
	*	NO	Is the gear abnormal? (Gear assembly such as I/D, multipurpose tray, belt unit, belt motor.)		
			YES Replace the damaged gear assembly.		
	*	NO	Is the LED head unit connected to the connection board (Y73 PWB) properly?		
			NO Connect the LED head unit to the connection board properly.		
	¥	YES	Check the cable connections, then replace the LED head assembly. Did the printer recover?		
			YES End.		
	<b>Y</b>	NO	Check the cable connections, then replace the connection board (Y73 PWB). Did the printer recover?		
			YES End.		
	¥	NO	Is the engine board (K7N PWB) connected to the connection board (Y73 PWB) properly?		
			NO Connect the engine to the connection board properly.		
	¥	NO	Replace the engine board. Did the printer recover?		
			YES End.		
	¥	NO	Is the I/D terminal connected to the contact assembly properly? (See Fig. 5-3)		
			NO Connect the I/D terminal to the contact assembly properly.		
	¥	YES	Replace the image drum.		
		Note:	1. Remove EEPROM from the old board and set it on the new board upon replacing the		

- engine board (K7N PWB). 2. If EEPROM is not replaced, refer to section 3.2.2.

(10)	Color irregularity compared with the original			
<ul> <li>Is the LED head lens dirty?</li> </ul>				
	YES	Clean the LED head lens.		
¥	NO	Is the LED head assembly connected to the connection board (Y73 PWB) properly?		
	NO	Check the cable between the LED assembly and connection board and connect properly.		
¥	YES	Is +5V output to the following HEADPOW connector pins on the connection board (Y73 PWB)? +5V: Pin 1, 2, 3, 4, 5, 6		
	• YES	Is +5V output to the each LED head assemblies on the connection board (Y73 PWB)? 3 pin for YPOW connector : LED head assembly - yellow 3 pin for MPOW connector : LED head assembly - magenta 3 pin for CPOW connector : LED head assembly - cyan 3 pin for KPOW connector : LED head assembly - black		
		NO Replace the connection board (Y73 PWB).		
	YES	Check the cable connections, then replace the LED head assembly.		
¥	NO	Check the cable connections, then replace the low-voltage power unit. Did the printer recover?		
	YES	End.		
¥	NO	Is 34V output to the power connector on the engine board (K7N PWB)? +34V: Pin 12, 13, 14		
	NO	Check the cable connections, then replace the low-voltage power unit.		
Y	YES	Is 34V output to HVOLT connector pin 2 on the engine board (K7N PWB)?		
	NO	Replace the engine board.		
¥	YES	Check the cable connections, then replace the high-voltage power unit or belt cassette assembly. Did the printer recover?		
	YES	End.		
¥	NO	Is the I/D unit terminal connected properly to the contact assembly. (See Fig. 5-3)		
	NO	Connect the I/D unit terminal properly to the contact assembly.		
¥	YES	Replace the image drum unit.		
	Note	<ol> <li>Remove EEPROM from the old board and set it on the new board upon replacing the engine board (K7N PWB).</li> </ol>		

2. If EEPROM is not replaced, refer to section 3.2.2.

- (1) Paper thickness error (Err Code 323, 324)
  - Is the sensor connector connected?
    - NO Connect the connecter.
    - YES Is the sensor cable disconnected?
      - NO Replace the cable.
    - YES Is +5V output to the PU board REG 13pin?
      - NO Replace the PU board.
    - YES IS GND connection made to the PU board REG 15pin?
      - NO Replace the PU board.
    - YES Is pulse signal 5ms ON 10% Duty output to the PU board REG 16pin? (Disabled on field due to sync usage.)
      - NO Replace the PU board.
    - YES Turn ON the power and check the media thickness. Is the error released?
      - NO Replace the sensor.
    - YES: End.

# APPENDIX A INTERFACE SPECIFICATIONS

# 1. Parallel Interface Specifications

#### 1.1 Parallel Interface

Item	Description			
Mode	Compatibility mode, Nibble mode, ECP mode			
Data bit length	8 bits: Compatibility mode, 4bits: Nibble mode,9 bits: ECP mode			

#### 1.2 Parallel Interface Connector and Cable

## 1) Connector

Printer side:

Cable side:

Type 57LE-40360-12 (D56) (made by Daiichi Denshi) or equivalent 36-pin plug Type 57FE-30360-20N (D8) (made by Daiichi Denshi) or equivalent

Connector Pin Arrangement Viewed from Cable Side

36-pin receptacle

#### 2) Cable

Cable length: 1.8 m max. (A shielded cable composed of twisted pair wires is recommended for noise prevention.)

### 1.3 Parallel Interface Level

LOW: 0 V to +0.8 V HIGH: +2.4 V to 5.0 V

#### 1.4 Timing Charts

#### Compatible mode

### a) Data receiving timing

b) On-line (off-line switching timing by ON-LINE SW)

c) Off-line (on-line switching timing by ON-LINE SW)

d) nlnit timing (invalid by default)

#### 1.5 Parallel I/F Signals

## Table 8-1 shows interface signal names and pin numbers. Table 8-1 Signals

Pin No.	Signal Name	Signal Direction	Functions
1	Nstrobe (HostClk)	→PR	Pulse for reading data in at trailing edge.
2	DATA 1		
3	DATA 2		
4	DATA 3		8-bit parallel data.
5	DATA 4	→PR	Each signal is HIGH when data is logical 1 and
6	DATA 5		LOW when it is logical 0.
7	DATA 6		
8	DATA 7		
9	DATA 8		
10	nAck (PtrClk)	←PR	Indicates the completion of data reception.
11	Busy (PtrBusy)	←PR	Indicates whether the printer is ready for receiving
			data. Data cannot be received while the signal is
			HIGH.
12	PError (AckDataRe	q)←PR	Indicates paper error when held HIGH.
13	Select (Xflag)	←PR	HIGH without exception when the parallel
			interface is enabled.
14	NAutoFd (HostBus	y) →PR	Used in bidirectional communication.
15	-		Unassigned.
16	GND		Signal ground.
17	FG		Chassis ground.
18	+5V	←PR	Used for supplying +5V. Power cannot be
			supplied to the outside of the printer.
19			
~	GND		Signal ground.
30			
31	NInit (nInit)	→PR	Initializes the printer when held LOW.
32	NFault (nDataAvail	) ←PR	LOW during alarm.
33	GND		Signal ground.
34	-		Unassigned.
35	HILEVEL	←PR	Pulled up to +5V at $3.3K\Omega$ inside the printer.
36	Nselectin	→PR	Used in bidirectional communication. Low without
	(IEEE 1284 active)		exception in compatible mode.
No	te: Parenthesized s Only functions in The C9300/C95	ignal names are use n compatible mode a 600 series of printer	ed in nibble mode. are listed. s supports the IEEE std 1284-1994 nibble mode.

Note that, when used with personal computers or cables that do not comply with the standards, the printers may exhibit unpredictable behavior.

- 2. Universal Serial Bus (USB) Interface Specifications
- 2.1 USB Interface
  - Basic specifications Conforms to USB specification, revision 1.1.
  - (2) Transmission mode Full speed (max. 12 Mbps + 0.25%)
    (3) Power Control
    - Self-power device
- 2.2 USB Interface Connector and Cable
  - (1) Connector
     Printer side: Type B receptacle
     Upstrem port
     UBB-4R-D14T-1 (made by JST) or equivalent

Connector pin layout

Cable side: Type B plug

- (2) Cable
  - Cable length:

5 m max. (cable compliant with USB specification, revision 1.1) (A shielded cable must be used.)

2.3 USB Interface Signals

	R1	Function
1	Vbus	Power Supply (+5V) (red)
2	D -	Data transmission (white)
3	D +	Data transmission (green)
4	GND	Signal ground (black)
Shell	Shield	

# APPENDIX B 2ND/3RD TRAY, HIGHT CAPACITY TRAY UNIT

# 2nd Tray

- 1. Control PWB, Paper Size Sensor PWB.
  - (1) Unscrew the five screws ① to remove the cover-rear-opt ②.
  - (2) Unscrew the four screws 3 to remove the cover-side (L)-opt 4.
  - (3) Unscrew the two screws (5) to remove the cover-side (R) sub-opt (6).
  - (4) Unscrew the screw ⑦ to remove the stopper ⑧, and disengage the front claw, to remove the cover Assy.-R ⑨.
  - (5) Remove the ten screws 0 and the connector to remove the plate top 1.
  - (6) Remove the all connectors and the four screws (2) to demount the control PWB (3).
  - (7) Unscrew the four screws (4) to demount the paper size sensor PWB (5).

- 2. Motor-Geared
  - (1) Unscrew the five screws (1) to remove the great grip R (2).
  - (2) Remove the six screws 3 to remove the feed unit 4.
  - (3) Remove the three screws 5 to demount the motor-geared 6.

- 3. Transport Clutch
  - (1) Remove the motor-geared (see section 2).
  - (2) Unscrew the four screws (1) to remove the motor Assy (2).
  - (3) Remove the E ring 3 to detach the transport clutch 4.

# 4. Pickup Clutch

- (1) Remove the geared motor (see section 2).
- (2) Unscrew the four screws (1) to remove the motor Assy (2).
- (3) Detach the pickup clutch (3).

# 5. Roller-Feed

- (1) Remove the geared motor (see section 2).
- (2) Unscrew the two screws to remove the feed Assy .
- (3) Unscrew the screw (3), remove the pillar sub (4), then detach the roller-feed (5).

#### 6. Sensor PWB

- (1) Remove the geared motor (see section 2).
- (2) Unscrew the two screws (1) to remove the feed Assy (2).
- (3) Remove the parts in the portion A and then in B and pull out the shaft (3) to remove the portion C.
- (4) Remove the sensor lever ④ to demount the sensor PWB ⑤.

Portion B
0 5

08

0 4

#### 7. High Capacity Tray Unit

- (1) Remove all the cassettes  $\bigcirc$ .
- (2) Unscrew the five screws 2 to remove the cover-rear- pt 3.
- (3) Unscrew the four screws (4) to remove the cover-side (L)-opt (5).
- (4) Unscrew the two screws (6) to remove the cover-side (R) sub-opt (7).
- (5) Unscrew the four screws (8) to separate the first and second unit.
- (6) Unscrew the four screws 9 to separate the second and third unit.
- (7) Lift the tray unit upward to demount it.

## 3. C7100/7300/9300/9500 Series (Warning messages : Related to usage, media)

Err Code	LCD Messages	LED Ready	LED Atten	Description	Comments
	 ttttt NEAR END	Varies	Varies	The paper in the selected tray is near end.	
	YELLOW TONER LOW	Varies	Light	Toner amount is low. Displayed in a combination of other message in the	
	_ MAGENTA TONER LOW	Varies	Light	TONER=STOP, h ATTENTION LED blinks and the printer shifts to OFF	
	_ CYAN TONER LOW	Varies	Light	printing can continue until TONER EMPTY.	
	_ BLACK TONER LOW	Varies	Light		
	_ YELLOW DRUM NEAR LIFE	Varies	Light	The life of the drum (warning). Displayed in a combination of other message in the first line. The printer	
	_ MAGENTA DRUM NEAR LIFE	Varies	Light	stops at the point when it reaches the drum life (Shifts to error, OFF-LINE.)	
	_ CYAN DRUM NEAR LIFE	Varies	Light		
	_ BLACK DRUM NEAR LIFE	Varies	Light		
	FUSER UNIT NEAR LIFE	Varies	Light	Notifies the fuser unit is near its life.	
	_ BELT UNIT NEAR LIFE	Varies	Light	Notifies the belt unit is near its life. This is a warning; thus, printing will not stop.	
	_ CHANGE FUSER UNIT	Varies	Light	Notifies the life of the fuser unit (warning). Displayed in a combination of other message in the first line. Warning only (No Life error)	
	- ttttt EMPTY	Varies	Varies	ttttt: The tray is empty. Treated as Warning until printing to the empty tray is designated.	ttttt:TRAY1~ 5,MPTRAY
	ttttt LIFT UP ERROR	Varies	Varies	Lift Up Error has occurred to tttttt Tray. That tray is treated "Paper Empty" as a result, and printing from that tray becomes disabled. (This sometimes occurs only to PX713.)	ttttt:TRAY1~5
	- ttttt OVERFILLED	Varies	Varies	Displays that there is too much paper in Tray ttttt. This is a warning; thus, printing will not stop.(This sometimes occurs only to PX713.)	ttttt:TRAY1~5

## 4. C7100/7300/9300/9500 Series (Warning messages : Job Account)

Err Code	LCD Messages	LED Ready	LED Atten	Description	Comments
	FILE ACCESSING	Varies	Varies	Accessing the File System (HDD/FLASH) on the CU board.	
	CANCELLING(USER DENIED)	Blink	Varies	Job cancellation due to no print permit. (Related to JobAccount)1. A job received from a user who is denied printing.2. A color job received from a user who is denied color printing.	
	CANCELLING(BUFFER FULL)	Blink	Light	Indiates that a job has been cancelled because the printer area where the logs are stored has been used up and also "Cancel job" is specified as an operation at the time of Log Full. (Related to JobAccount)	
	– INVALD ID.JOB REJECTED	Varies	Light	Notifies users that jobs have been cancelled because they are not permitted for printing. (Related to JobAccount). Stays displayed until the ON LINE key is pressed.	
	_ LOG BUFFER FULL.JOB REJECTED	Varies	Light	Notifies users that jobs have been cancelled because the buffer is full. (Related to JobAccount.)Stays displayed until the ON LINE key is pressed.	

### 5. C7100/7300/9300/9500 Series (Other Warning)

(Caution) \*: Raise in the factory mode only.

Err Code	LCD Messages	LED Ready	LED Atten	Description	Comments
	DISK FILE SYSTEM IS FULL	Varies	Light	Disk-full is occurring. Because this is a temporary warning, it remains until the end of the job and disappears	
	DISK IS WRITE PROTECTED	Varies	Light	An attempt to write in a read-only file was done. Because this is a temporary warning, it remains until the end of the job and disappears.	
	DISK FILE OPERATION FAILED nnn	Varies	Light	Operation that does not involve a disk is available. nnn: An identifier to Error type (For details, see the Error table provided in the subsequent chapter.)	See right table
	_ JOB OFFSET HOME ERROR	Varies	Light	Job Offset Home Position Sensor ErrorThe Job Offset function becomes disabled, however, printing can continue.	
*	PU FLASH ERROR	Varies	Light	Error occurred while writing over the PU firmware(This does not occur at user level.)	
	COLLATE FAIL:TOO MANY PAGES	Varies	OFF	The data of MOPY is memory-full.	

In case of occourrence of Disk Operation Error, error numbers will be displayed according to individual errors as follows:

Errors	LCD Display	PJL Status Code
GENERAL ERROR	DISK FILE OPERATION FAILED 0	32000
VOLUME NOT AVAILABLE	DISK FILE OPERATION FAILED 1	32001
DISK FULL	DISK FILESYSTEM IS FULL	32002
