Safety Notice

⚠ Important Safety Notices

Prevention of Physical Injury

1. Be sure that the power cord is unplugged before disassembling or assembling parts of the copier or peripherals.
2. The wall outlet should be near the copier and easily accessible.
3. Note that electrical voltage is supplied to some components of the copier and the paper tray unit even while the main power switch is off.
4. If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.
5. If you start a job before the copier completes the warm-up or initializing period, keep hands away from the mechanical and electrical components until job execution has started. The copier will start making copies as soon as warm-up or initialization is finished.
6. The inside and the metal parts of the fusing unit become extremely hot while the copier is operating. Be careful to avoid touching those components with your bare hands.

Health Safety Conditions

Toner and developer are nontoxic, but getting either of these into your eyes may cause temporary eye discomfort. Try to remove with eye drops or flush with water. If material remains in eye or if discomfort continues, get medical attention.

Observance of Electrical Safety Standards

The copier and its peripherals must be installed and maintained by a customer service representative who has completed the training course on those relevant models.

⚠ **WARNING**

- ⃠ Keep the machine away from flammable liquids, gases, and aerosols. A fire or an explosion might occur if this precaution is not observed.

-

Lithium Batteries

Incorrect replacement of lithium battery(s) on the FCU may pose risk of explosion. Replace

only with the same type or with an equivalent type recommended by the manufacturer. Discard used batteries in accordance with the manufacturer's instructions.

Safe and Ecological Disposal
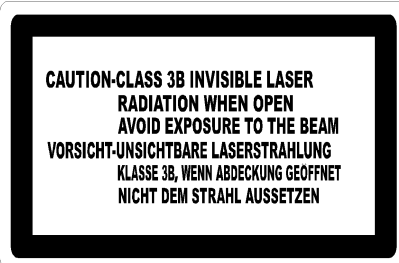

1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly if exposed to an open flame.
2. Dispose of used toner, developer, and organic photoconductors in accordance with local regulations. (These are nontoxic supplies.)
3. Dispose of replaced parts in accordance with local regulations.

Laser Safety

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

⚠ WARNING

- Use of controls not specified in this manual, or performance of adjustments or procedures not specified in this manual, may result in hazardous radiation exposure.

⚠ WARNING FOR LASER UNIT
⚠ **WARNING** - Turn off the main switch before attempting any of the procedures in the Laser Unit section. Laser beams can seriously damage your eyes. **CAUTION MARKING:**   CAUTION VORSICHT CAUTION-CLASS 3B INVISIBLE LASER RADIATION WHEN OPEN AVOID EXPOSURE TO THE BEAM VORSICHT-UNSICHTBARE LASERSTRAHLUNG KLASSE 3B, WENN ABDECKUNG GEOFFNET NICHT DEM STRAHL AUSSETZEN >PS< b262r934

Symbols and Abbreviations

This manual uses several symbols and abbreviations. The meaning of those symbols and abbreviations is as follows:

☞	See or Refer to
⟬	Clip ring
ℭ	E-ring
𝔓	Screw
⟐	Connector
⟑	Clamp
SEF	Short Edge Feed
LEF	Long Edge Feed
𝐂𝐓	Core Technology manual
Short Edge Feed (SEF)   **Long Edge Feed (LEF)**
Cautions, Notes, etc.

The following headings provide special information:

⚠WARNING

- FAILURE TO OBEY WARNING INFORMATION COULD RESULT IN SERIOUS INJURY OR DEATH.

⚠CAUTION

- Obey these guidelines to ensure safe operation and prevent minor injuries.

↓ Note

- This information provides tips and advice about how to best service the machine.

INSTALLATION

1. INSTALLATION

1.1 INSTALLATION CAUTIONS

⚠ **CAUTION**

- **Before installing an optional unit, do the following:**
    - Print out all messages stored in the memory, all user-programmed items, and a system parameter list.
    - If there is a printer option on the machine, print out all data in the printer buffer.
    - Turn off the main switch and disconnect the power cord, the telephone line, and the network cable.

1.2 INSTALLATION REQUIREMENTS

1.2.1 ENVIRONMENT

–Temperature and Humidity Chart–

b046i512
- Temperature Range: 10°C to 32°C (50°F to 89.6°F)
- Humidity Range: 15% to 80% RH
- Ambient Illumination: Less than 1,500 lux (Do not expose to direct sunlight.)
- Ventilation: Room air should turn over at least 3 times/hr/person
- Ambient Dust: Less than 0.1 mg/m^3
- Do not install the machine where it will be exposed to direct sunlight or to direct airflow (from a fan, air conditioner, air cleaner, etc.).
- Do not install the machine where it will be exposed to corrosive gas.
- Place the machine on a firm and level base.
- Do not install the machine where it may be subjected to strong vibration.

1.2.2 MACHINE LEVEL

Front to back:	Within 5 mm (0.2") of level
Right to left:	Within 5 mm (0.2") of level

1.2.3 MINIMUM OPERATIONAL SPACE REQUIREMENTS

Place the machine near the power source, providing clearance as shown.

b262i130
A: Front – 750 mm (29.6")

B: Left – 100 mm (3.9")

C: Rear – 105 mm (4.1")

D: Right – 230 mm (9.0")

E: Depth – 450 mm (17.7")

F: Width – 485 mm (19.1")

↓ Note

- The 750-mm front space indicated above is sufficient to allow the paper tray to be pulled out. Additional space is required to allow an operator to stand at the front of the machine.
- Actual minimum space requirement for left, rear, and right sides is 10mm (0.4") each, but note that this will not allow room for opening of the bypass tray, right door, platen cover, or ARDF unit.

1.2.4 POWER REQUIREMENTS

⚠CAUTION

Installation Requirements

- Make sure that the wall outlet is near the machine and easily accessible. After completing installation, make sure the plug fits firmly into the outlet.
- Avoid multiple connections to the same power outlet.
- Be sure to ground the machine.

Input voltage:

North America:	110 – 120 V, 60 Hz, 8 A
Europe:	220 – 240 V, 50/60 Hz, 4 A

Image quality guaranteed at rated voltage ± 10%.

Operation guaranteed at rated voltage ± 15%.

1.3.2 INSTALLATION PROCEDURE

⚠️**CAUTION**

- Make sure that the copier remains unplugged during installation.

b262i901a
1. Remove the all strips of tape.

2. Remove the bag [A], SMC and A3 sheet of paper on the exposure glass.

b262i902a
3. Remove the spacing wedge [B].

b262i106
4. Remove the three scanner lock pins. (A tag is hanging from each pin.) To remove: Grasp the base of the pin [C], turn the pin 90 degrees, and pull it down and out.

5. Remove the tags from the pins.

6. Break each pin off the base [C].

7. Discard the pin part [D].

8. Set each base [C] back into its original hole, turning it 90° to lock it into place. (Be sure to do this for all three pins.)

b262i112
9. Open the front door [E].

10. Lift lever [F], press in on latch [G] and pull the bottle holder [H] out. (You do not need to pull it completely out of the machine.)

11. Take a new bottle of toner, and shake it several times.
b262i301

12. Remove the outer cap [I].

   ↓ Note

   ▪ Do not remove the inner cap [J].

13. Load the bottle on the holder.

   ↓ Note

   ▪ Do not forcefully turn the toner bottle on the holder. After you turn on the main power switch, the copier sets the bottle in place.

14. Push the bottle holder back into the machine.

15. Press the latch [K] down to lock the holder.
b262i903

16. Remove the padding [L].

17. Pull each tabbed strip [M] out of the PCU with one hand, supporting the PCU with the other.

   ↓ Note

   ▪ Do not pull both strips at the same time, as this could damage the PCU.

18. Close the front door.
b262i119

19. Pull out the paper tray, and remove the tape securing the end fence in the compartment.

20. Push the bottom plate down, and then load the paper.

21. Adjust the side fences. If you load paper shorter than A4, set the end fence in the correct position.

22. Push the tray back into the copier.
b262i515

23. Attach the appropriate Brand Decal to the center [N] of the front door if necessary.

24. Attach the appropriate tray number decal and paper-size decal to the paper tray [O].

25. Install optional units (if any).

b262i909   b893i508
26. **B284/B288 Only:** Attach the ferrite core [P] to the network cable when connecting the cable.

27. **B284/B288 Only:** Attach the ferrite core to the telephone line as same manner step 26.

28. **B284/B288 Only:** Connect the telephone line to the "LINE" jack.

    ↓ Note

    ▪ The end of the ferrite core must be about 10 cm (4") from the end [Q] of the cable.

29. Plug in the machine and turn on the main power switch.

30. Select the language used in the operation panel as necessary (⬦⃞ > Language).

31. Make a full size copy, and check if the side to side and leading edge registrations are correct. If they are not, adjust the registrations.

Interface settings

For B284 (Fax Model)

1. Start the SP mode.

2. Select SP5-985-001 (NIC setting) and change the setting value to "0" (OFF).

3. Select SP5-985-002 (USB setting) and change the setting value to "0" (OFF).

4. Turn the main switch off and on.

For B288 (Printer/Scanner & Fax Model)

1. Start the SP mode.

2. Select SP5-985-001 (NIC setting) and change the setting value to "1" (ON).

3. Select SP5-985-002 (USB setting) and change the setting value to "1" (ON).

4. Turn the main switch off and on.

Copier

Copier settings

1. Start the SP mode.

2. Select SP5-801-001 and execute the initialization.

3. Exit the SP mode, and then start the UP mode.

4. Select the "@Remote Service" ("User Tool" > "System Settings > Administrator Tools"
    > "Extended Security" > @Remote Service") and select "Prohibit".

5. Exit the UP mode, and then start the SP mode.

6. Select SP5-870-003 and execute initialization for @Remote.

7. Select SP5-907-001 and specify the "Plug & Play".

8. Select SP5-870-001 and execute writing certification for @Remote S.

9. Select SP5-302-002 and specify the time zone.

10. Select SP5-307-001, 003, and 004 and specify the daylight-saving-time settings.

11. Exit the SP mode and turn the main switch off and on.

12. Start the UP mode.

13. Specify the date and time with "Set Date" or "Set Time" (User Tool" > "System
    Settings" > "Set Date" or "Set Time").

14. Turn the main switch off and on.

15. Check the operations.

16. Make a full size copy, and check if the side-to-side and leading edge registrations are
    correct. If they are not, adjust the registrations.

Fax Settings

Initializing the Fax unit

When you press the Fax key for the first time after installation, the error "SRAM problem
occurred / SRAM was formatted" will show on the LCD for initializing the program of the fax
unit. Turn the main power switch off/on to clear the error display.

Note

- ▪ If another error occurs after initialization, this can be a functional problem.

1. Select fax SP1-101-016 and specify the country code.

2. Select fax SP3-101-001 and specify the service station.

1.3.3 OPTIONAL HAND SET

Accessory Check

Check that you have the components and accessories.

No.	Description	Q'ty
1	Handset	1
2	Handset cradle	1
3	Screws	2
4	Handset manual	1

↓ Note

- The handset bracket is not included in the optional handset kit. The bracket is provided as an accessory of the copier.
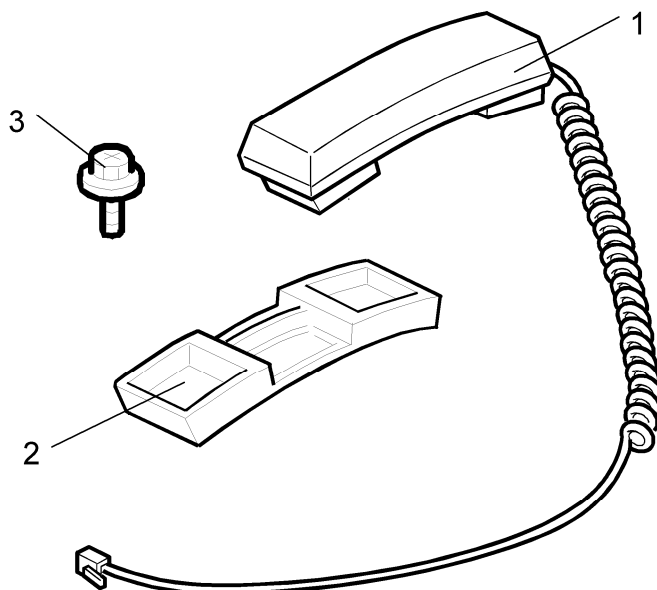

b130i908

Copier

Installation Procedure
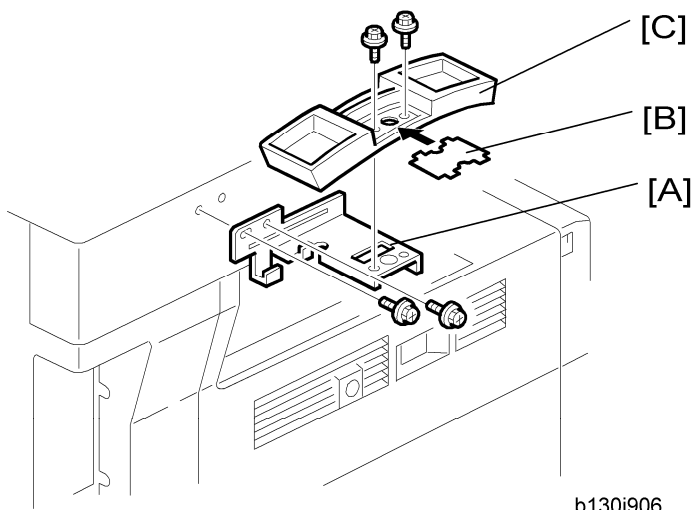

b130i906

1. Attach the handset bracket [A] ($\mathscr{F}$ x 2).

   ↓ Note

   - The bracket is an accessory of the copier.

2. Remove the label [B] from the handset cradle [C].

3. Attach the cradle to the bracket ($\mathscr{F}$ x 2).

4. Reattach the label.
b130i907

5. Set the handset [D] on the cradle.

6. Connect the cable [E] to the TEL jack at the left side of the copier.

1.4 PAPER TRAY UNIT

1.4.1 ACCESSORY CHECK

Confirm that you have these accessories.

Description	Q'ty
1. Paper-size decals	1 sheet
2. Installation Procedure (for service person)	1
3. Installation Procedure (for user)	1

1.4.2 INSTALLATION PROCEDURE

⚠CAUTION

- Unplug the main machine's power cord before starting the following procedure.

b046i516
1. Remove the tape at [A], and the tape and cardboard at [B].
2. Pull the paper tray part way out of the unit, remove the tape and cardboard at [C], and push the tray back in.

Paper Tray Unit

b046i527
3. Set the machine on the paper tray unit.

4. Remove the paper tray from the paper tray unit.

5. Load paper into the paper tray. Adjust the side and end fences as necessary. If loading $8^1/_2$"x 14" paper, remove the end fence and set it into the special compartment.

6. Set the paper tray back into the paper tray unit.

b046i517
7. Stick on the appropriate tray-number decal and paper-size decal, at the locations indicated in the illustration.

1.5 PAPER TRAY UNIT HEATER

1.5.1 ACCESSORY CHECK

Confirm that you have the accessories listed below.

Description	Q'ty
1. Grounding wire	1
2. Relay harness	1
3. Clamps	2
4. Ferrite core	1
5. Heater fastening screws	2
6. PTU fastening screws	3
7. Grounding screw	1
8. Decal for copier	1
9. Decal for paper unit	1
10. Tie wrap	1
b046i518

1.5.2 INSTALLATION PROCEDURE

⚠️CAUTION

- Unplug the main machine's power cord before starting the following procedure.

1. Remove the paper tray unit from the copier if it is already installed.

2. Remove the paper trays from the copier and from the paper tray unit.

b046i519
3. Remove the ground screw [1] at the rear of the paper tray unit.

4. Fasten the heater [2] and the supplied ground wire [3] to the paper tray unit (📎 x 3).
   Note that [1] is the ground screw you removed in the previous step and [4] and [5] are the two supplied heater fastening screws.

   ⬇️ Note

   - Be sure to position the ground wire [3] and heater harness [6] so that they are out of the way of the copier when you set it onto the paper tray unit.

b046i500
5. Set the copier onto the paper tray unit.

6. Screw the paper tray unit into place using three supplied PTU fastening screws.

b046i501
7. Open the front door and remove the copy tray [7] ($\mathscr{J}$×1).

8. Close the front door.

[9]

[8]   b130r901a
9. Remove the memory card cover [8] ($\mathscr{J}$ x 1).

10. Remove the rear cover [9] ($\mathscr{J}$ x 5).

[11]   [10]

b130r921a
11. Remove the upper left cover [10].

Paper Tray Unit Heater

12. Remove the controller box [11] (🔌 x 1, 🔩 x 5).

b130i905
13. Remove the support bracket [12] (🔩 x 3).

[15]

[18]

[16]

[17]

b046i520
14. Pass the heater harness through the hole [15] at the rear of the copier.

15. Pass relay harness [16] through the opening [17] (at the rear of the PSU) and through the other opening [15].

16. Connect the relay harness to the heater's harness [18].

b046i521
17. Pull the relay harness back into the copier.

18. Attach the ferrite core [19] over the relay harness.

19. Push the ferrite core back so that it is over the heater's harness.

20. Wrap the heater's harness once around the ferrite core [20].

21. Locate the ferrite core at the rear [24] of the copier behind the rear clamps.

22. Secure the ferrite core with the supplied tie wrap [21].

23. Clip off the excess length of the tie wrap.

24. Connect the relay harness connector [22] to the large connector at the front center of the PSU.

25. Screw the ground wire [23] to the PSU bracket with the included grounding screw.

26. Attach the clamps [24] to the PSU bracket.

27. Attach the heater harness though the clamps.

28. Position the harness so that the front clamp is between the two bindings [25] on the harness.

29. Fasten the clamps.

Paper Tray Unit Heater

b046i522
30. Pull the excess length of the heater's harness out the opening at the rear.

   ↓ Note

   - Be sure that the harness passes on the side of the grounding plate at the bottom of the opening. (The front of the grounding plate must remain clear.)

31. Arrange the excess harness length so that it sits beneath the FCU cover plate.

32. Attach the caution decals to the locations shown in the illustration.

b046i523
33. Reassemble the copier.

34. Plug in the power cord, and check the operation.

1.6 CONTROLLER OPTIONS

1.6.1 OVERVIEW

This machine has I/F card slots and SD card slots for optional I/F connections and applications.
b892i503

I/F Card Slot

▪ Slot [A] is used for one of the optional I/F connections: (IEEE1284, IEEE802.11 (Wireless LAN) or Bluetooth).

SD Card Slot

▪ Slot [1] is used for the printer/scanner application only.

▪ Slot [2] is used for PostScript3.

▪ Slot [3] is used for the service use.

1.6.2 POSTSCRIPT3 INSTALLATION

⚠️**CAUTION**

▪ Unplug the machine power cord before starting the following procedure.

Installation Procedure

b892i504
1. Install the PostScript3 SD card into the slot 2 [A].

2. Turn on the main power switch.

3. Print out the configuration page (User Tools/ Counter > Printer Features > List/ Test Print), and then check that this device is detected.

4. Attach the "Adobe PostScript3" decal to the front cover of the machine.

1.6.3 WIRELESS LAN (IEEE 802.11B) INSTALLATION

⚠CAUTION

- Unplug the machine power cord before starting the following procedure.

Component Check

No.	Description	Q'ty
1	Wireless Adapter	1
2	Wireless LAN Card	1
3	LAN Card Cover	4
4	Caution Sheet	1
5	Label	1

Installation Procedure
b892i505

1. Remove the interface cover [A] ($\mathscr{F}$ x 2).
2. Install the Wireless adaptor into the slot A [B] ($\mathscr{F}$ x 2).

Controller Options

3. Install the Wireless LAN card in the wireless adaptor.

4. Attach the antenna cap to the wireless LAN card.

5. Turn on the main power switch.

6. Print out the configuration page (User Tools/Counter > Printer Features > List/Test Print), and then check that this device is detected.

If reception is poor, you may need to move the machine:

▪ Make sure that the machine is not located near an appliance or any type of equipment that could generate a strong magnetic field.

▪ Position the machine as close as possible to the access point.

SP Mode Settings for IEEE 802.11b Wireless LAN

The following SP commands can be set for IEEE 802.11b

SP No.	Name	Function
5840 004	SSID	Used to confirm the current SSID setting.
5840 006	Channel MAX	Sets the maximum range of the channel settings for the country.
5840 007	Channel MIN	Sets the minimum range of the channel settings allowed for your country.
5840 011	WEP Key Select	Used to select the WEP key (Default: 00).
5840 018	SSID Check	Used to check the SSID.
5840 020	WEP Mode	Used to display the maximum length of the string that can be used for the WEP Key entry.

1.6.4 IEEE 1284 INSTALLATION

⚠️CAUTION

- Unplug the machine power cord before starting the following procedure.

Component Check

No.	Description	Q'ty
1	IEEE1284 Interface Ass'y	1
2	UL Sheet	1
3	Caution Sheet	1

Installation Procedure
b892i505

1. Remove the interface cover [A] (🖋 x 2).

2. Install the IEEE 1284 board into interface slot A [B] (🖋 x 2).

3. Turn on the main power switch.

4. Print out the configuration page (User Tools/Counter > Printer Features > List/Test Print), and then check that this device is detected.

1.6.5 BLUETOOTH INSTALLATION

⚠️**CAUTION**

- ▪ Unplug the machine power cord before starting the following procedure.

Component Check

No.	Description	Q'ty
1	Wireless Adapter	1
2	Bluetooth Card	1
3	Bluetooth Card Adapter	1
4	Bluetooth Card Cover	1
5	UL/FCC Sheet	1
6	Caution Sheet	1

Installation Procedure
b892i505

1. Remove the interface cover [A] (🔩 x 2).

2. Install the Wireless adaptor into interface slot A [B] (🔩 x 2).

3. Install the Bluetooth card in the wireless adaptor.

4. Attach the antenna cap to the Bluetooth card.

5. Turn on the main power switch.

6. Print out the configuration page (User Tools/ Counter > Printer Features > List/ Test Print), and then check that this device is detected.

1.7 ARDF (B872)

1.7.1 ACCESSORY CHECK

Description	Q'ty
1. Stud Screw	1
2. Screw	1
3. Clamp	1
4. DF Exposure Glass with Mylar	1
5. Left Scale Guide	1
Platen Sheet	1
Installation Procedure	1

b872i101a
1.7.2 INSTALLATION PROCEDURE

⚠️**CAUTION**

- ▪ Unplug the main machine's power cord before starting the following procedure.

b872i501
7.   Unpack the ARDF and remove the packing tape from the bottom of the ARDF body.

[A]

[C]

[B]
b872i102

8.   Open the right door [A].

9.   Remove the connector cover [B] (𝄞 x 1) and rear cover [C] (𝄞 x 5).

ARDF (B872)
b872i103

10. Remove the left guide [D] (🗝 x 2) and scanner left cover [E] (hook x 2).
b872i105

11. Place the DF exposure glass [F] on the glass holder.

⬇ Note

- When installing the DF exposure glass, make sure that the side of the DF exposure glass with two black points faces down.
- Do not hold the Mylar strip when installing the DF exposure glass.
- Make sure that there is no gap between the two Mylar strips and the scanner frame. If there is any gap between them, dust may fall into the scanner unit.
b872i106a

12. Peel off the backing [G] of the double-sided tape attached to the rear side of the left scale guide [H], then install it (🖉 x 2 removed in step 4).
b872i107

13. Remove the two platen stays [I] and bracket (🖉 x 1 each).
14. The bracket is attached to the platen stay of the rear left side. Make sure to remove the bracket at this time.

ARDF (B872)

b872i108
15. Mount the DF [J] on the copier as shown.

b872i502
16. Secure the screw [K].

17. Attach the clamp [L].

18. Connect two I/F cables [M] to the CN109 and CN110 on the BICU, and secure the ground cable [N] (🔩 x 1, 📎 x 2).

🔽 Note

- Make sure that the I/F cable of ARDF is clamped between the two binds [O].
- Reinstall the scanner left side cover removed in step 4.

b872i110
19. Cut the cutout [P] with nippers.

20. Reinstall the rear cover and connector cover (🔩 x 6).

21. Close the right door.

b872i111
22. Open the ARDF.

23. Place platen sheet [Q] on the exposure glass.

24. Line up the rear left corner of the platen sheet flush against corner [R] on the exposure glass.

25. Close the ARDF.

b872i503
26. Check that the groove [S] of the ARDF is aligned with the groove [T] of the left scale on the scanner.

    ↓ Note

    ▪ The shift value between [S] and [T] must be within ± 0.5 mm.

27. Reinstall the platen sheet if both grooves are not aligned correctly.

28. Plug in and turn on the main power switch.

29. Check the ARDF operation.

30. Make a full size copy. Then check to make sure the side-to-side and leading edge registrations are correct. If they are not, adjust the side-to-side and leading edge registration (refer to the "DF Image Adjustment" in the section "Replacement Adjustment").

1.8 DDST UNIT (B880/893)

1.8.1 ACCESSORY CHECK

No.	Description	Q'ty

DDST Unit (B880/893)

b880i501
1.8.2 INSTALLATION PROCEDURE

⚠ **CAUTION**

- Unplug the main machine's power cord before starting the following procedure.

b880i102a

b880i102a
31. Open the right door [A].

32. Remove the memory card cover [B] (🔩 x 1)

33. Remove the rear cover [C] (🔩 x 5).

34. Remove the bracket [D] (🔩 x 2)

35. Cut the opening [E] and [F] on the rear cover. This opening is for the USB slot and the LAN cable.

36. Remove the upper left cover [G].

b880i504
37. Install the ground plate [H] (🔩 x 2).

    ↓ Note

    ▪ Insert the upper and lower hooks in the openings [I], and fasten the upper
      screw first.

38. Install the controller box [J] (🔩 x 5).

    ↓ Note

    ▪ Insert the bracket [K] into the frame. The connector on the controller box
      engages with the connector on the BICU.

b880i109
39. Remove the panel cover [L].

40. Install the printer panel [M].

DDST Unit (B880/893)

b880i904a
41. **For the North America model only:** Attach the FCC decal [N] close to the LAN cable slot of the controller box.

42. Reassemble the whole copier.

b880i507

b880i508
43. **For B880 only:** Attach the ferrite core [O] to the network cable and attach the cable to the copier if a network cable is used.

   ↓ Note

   ▪ The end of the ferrite core must be about 10 cm (4") [P] from the end of the cable.

44. Plug in the power cord, and turn on the main switch.

Check the operations.

⟹1.9   KEY COUNTER (CARD) INTERFACE TYPE A

Installation Procedure for the Key Counter (Card) Interface Type A (20 pins)

1.9.1 ACCESSORY CHECK

No.	Description
1.	MKB (bridge board)
2.	BRACKET:MKB B2621310
3.	SCREW:M3X6 03530060 F
4.	CLAMP:LWS-0711Z 11050508

1.9.2 INSTALLATION PROCEDURE

1. Remove the rear cover.
2. Remove the cut-out in the rear cover (circled in red in the photo).

$\Longrightarrow$

3. Attach the MKB bracket and harness clamp to the MKB (3 x 🔩).

MKB Bracket

Harness clamp

MKB

3 screws
4. Attach the MKB + bracket to the copier (2 x 🔩).
5. Connect one end of the MKB harness to CN3 (13 pins) on the MKB.
6. Connect the other end of the MKB harness to CN149 (13 pins) on the BICU.

Screw for grounding line of vendor's harness (if needed).

CN4 (20 pins) for connection of vendor's harness.

$\Rightarrow$
7. Connect the vendor's harness for the external key counter device to CN4 (20 pins) on the MKB.

8. Reattach the rear cover.

    IMPORTANT: Pass the vendor's harness through the cut-out hole from Step 2.
⟹1.10 INSTALLATION OF PCL-OPTION

1.10.1 INSTALLATION PROCEDURE

1. Turn OFF the main power switch of the machine.

2. Remove the rear cover of the machine.

3. Remove the DDST box cover.

4. Install the PCL dongle [A] in the DDST board socket as shown below.
5. Turn on the DipSW2 [B] switch (upper position).
⟹6. Remove the cover of the IC card slot on the DDST controller board.

7. Install the PCL IC card in the IC card slot.
    NOTE1: 1) Download the firmware to your IC card from your firmware
                 download site.
               2) Part number of firmware is B8955500.

8. Turn ON the main power switch.
    NOTE2: 1) LED 6 (orange) blinks during this installation.
               2) LED 5 (red) lights after completion of this installation.
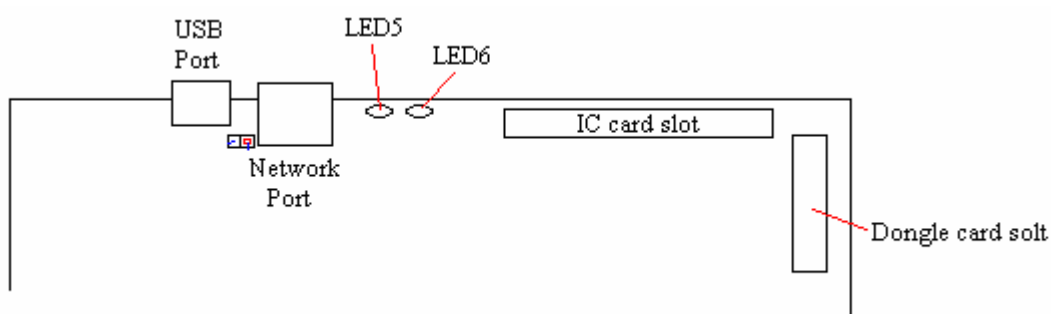

9. Turn OFF the main power switch after completing the installation.

10. Turn OFF the Dip SW2 (lower position).

11. Remove the IC card.

12. Turn ON the main power switch.

13. Output the "Config. Page" (UserTool > Printer Features > List/Test Print >
    Config. Page) and confirm if PCL option is correctly installed.

14. Re-install all covers.

PREVENTIVE MAINTENANCE

2.2 HOW TO CLEAR THE PM COUNTER

Reset the PM counter after your maintenance work.

b262p901
1. Activate the SP mode.
2. Select SP7-804-001.
3. Press the EXECUTE key [A]. The message "Completed" is displayed when the program ends normally. An error message is displayed if the program ends abnormally.
4. Press the ⏻ (Escape) key [B] to end the program.

REPLACEMENT AND ADJUSTMENT

SECTION 3 REPLACEMENT AND ADJUSTMENT REVISION HISTORY		
Page	**Date**	**Added/Updated/New**
		None

3. REPLACEMENT AND ADJUSTMENT

3.1 PRECAUTIONS

3.1.1 GENERAL

⚠ **CAUTION**

- Turn off the main power switch and unplug the machine before starting replacement.

Before turning off the main power switch, check that no mechanical component is operating. Mechanical components may stop out of their home positions if you turn off the main power switch while they are operating. The component may be damaged if you try to remove it when it is not in the home position.

3.1.2 LITHIUM BATTERIES

⚠ **CAUTION**

- Incorrect replacement of lithium battery(s) on the controller or on the fax unit poses risk of explosion. Replace only with the same type or with an equivalent type recommended by the manufacturer. Discard used batteries in accordance with the manufacturer's instructions.

3.1.3 HALOGEN-FREE CABLE

⚠ **CAUTION**

- Use extreme caution while handling cables.

To comply with local regulations, halogen-free cables are used in this machine.

Halogen-free cables are environment-friendly, but no stronger than conventional cables.

These cables may be damaged in any of the following cases:

- The cable is caught between hard objects such as brackets, screws, PCBs, and exterior covers.

- The cable is rubbed on a hard object such as brackets, screws, PCBs, and exterior covers.

- The cable is scratched with a hard object such as brackets, screws, PCBs, exterior covers, screwdrivers, and fingernails.

3.2 SPECIAL TOOLS AND LUBRICANTS

Part Number	Description	Q'ty
A1849501	Optics Adjustment Tools (2 pcs/set)	1 set
A2929500	Test Chart – S5S (10 pcs/set)	1 set
VSSM9000	Digital Multimeter – Fluke 87	1
N8036701	Flash Memory Card (4MB)	1
N8031000	Case for Flash Memory Card	1
A2579300	Grease Barrierta – S552R	1
52039502	Silicon Grease 501	1
B6455010	SD Card Kit (SD Card, Plastic Case, & Label)	1

B6456810	USB Reader/Writer	1

3.3 EXTERIOR COVERS AND OPERATION PANEL

3.3.1 REAR COVER
b284i102a

1. Open the right door [A].
2. Rear cover [B] (𝄢 x 5)

3.3.2 COPY TRAY

⚠ **CAUTION**

▪ Make sure that the cables under the copy tray are in place before reassembling the copier. If these cables are caught between the copy tray and the inner cover, they may be severely damaged.
b130r902

1. Open the front door [A].
2. Copy tray [B] (𝄢 x 1)

Exterior Covers and Operation Panel

Reassembling

There are several cables under the front end of the copy tray. To set these cables in place, gently pull these cables to the left-hand side (toward the PSU) and hold them there as you attach the copy tray.

3.3.3 OPERATION PANEL AND UPPER COVERS

b130r944

b262r501
1. **Basic Model B262/B292 only:** Remove scale plate [A] (🖉 x 2).
2. Remove the ARDF.
3. Rear cover (☛ "Rear Cover")
4. Slide the upper left cover [B] to the rear.
5. Rear scale [C] (🖉 x 3)
6. Slide the upper right cover [D] to the rear.
7. Front left cover [E] (🖉 x 2)
8. Operation panel [F] (🖉 x 4, ⬚ x 1)
9. Front right cover [G]

3.3.4 RIGHT DOOR

b130r904
1. Open the right door [A].

2. Release the strap [B].

3. Right door (⊞ × 1).

3.3.5 BYPASS TRAY

b130r945
1. Press the stopper rails [A] inward.

3.3.6 PLATEN COVER SENSOR
b262r505

1. Rear cover (☛ "Rear Cover").

2. Rear scale (☛ "Operation Panel and Upper Covers").

3. Platen cover sensor [A] (⬚× 1, hook).

3.4 SCANNER UNIT

To clean the mirrors and lenses, use a blower brush or wet cotton.

3.4.1 EXPOSURE GLASS

To clean the exposure glass, use alcohol or glass cleaner.

b130r906
Non-ARDF machines

4. Rear cover (☛ "Rear Cover")

5. Scale plate (☛ "Operation Panel and Upper Covers")

6. Exposure glass [A]

ARDF-equipped machines

7. Rear cover (☛ "Rear Cover")

8. Rear scale, upper right cover (☛ "Operation Panel and Upper Covers")

9. Exposure glass [A]

Reassembling

Make sure that the marking on the glass is at the rear left corner, and that the left edge of the glass is aligned flush against the support ridge [B] on the frame.

Adjustment

When replacing the white plate, perform the "Scan Auto Adjustment" (☛SP4-428-001).

Replacement and Adjustment

3.4.2 LENS BLOCK

⚠ CAUTION

- Do not disassemble the lens block. The lens block is precision adjusted before shipment.
- Do not touch the screws on the CCD. The CCD is precision adjusted before shipment.
b130r946

1. Exposure glass (☛ "Exposure Glass")
2. Front left cover, operation panel (☛ "Operation Panel and Upper Covers")
3. Release the cable from the four clamps [A].
4. Lens block [B] (🔩 × 4, 1 flat cable)

⬇ Note

- Do not loosen the paint-locked screws holding the lens unit in place.
- After installing a new lens block, carry out copy adjustments (☛ "Adjusting Copy Image Area").

3.4.3 EXPOSURE LAMP, LAMP STABILIZER BOARD

Do not fold the exposure cable on the exposure lamp.
b130r947

1. Exposure glass (☛ "Exposure Glass")

2. Front left cover, operation panel (☛ "Operation Panel and Upper Covers")

3. Slide the first scanner to a position where the lamp and scanner are clear of the metal lids.

4. Disconnect the lamp connector [A].

5. Remove either or both of the following:

    ▪ Exposure lamp [B] (🔩 x 1)

    ▪ Lamp stabilizer board [C] (🔩 x 2, 1 flat cable)

3.4.4 SCANNER MOTOR

1. Rear cover (☛ "Rear Cover")

2. Rear scale, upper right cover (☛ "Operation Panel and Upper Covers")

b262r507
3. Remove the right platen stay holder [A] (🔩 x 3).
b130r907

4. Scanner motor [B] (✐ × 3, 1 spring, 3 screw holders, ⬚ × 1)

Reinstalling

When reinstalling, fasten the screws loosely, set the spring in place, and tighten up the screws.

3.4.5 SCANNER HP SENSOR
b262r506

1. Rear cover (☛ "Rear Cover")

2. Front left cover (☛ "Operation Panel and Upper Covers")

3. Scale plate (☛ "Scale Plate")

4. Scanner HP sensor [A] (⬚ × 1, hook)

    ⬇ Note

    ▪ Move the first scanner from the home position if you have difficulty removing the sensor.

3.4.6 SCANNER ALIGNMENT ADJUSTMENT

1. Rear cover (☞ "Rear Cover")

2. Rear scale, upper right cover, front left cover, operation panel (☞ "Operation Panel and Upper Covers")

3. Exposure glass (☞ "Exposure Glass").

4. Loosen the 2 screws holding the 1st and 2nd scanner belts in place.

b130r948
5. Slide the 1st and 2nd scanners so that all four of the following are roughly aligned on both the front and back sides:

   - The hole on the copier's lid
   - The hole on the 1st scanner
   - The corner right hole on the 2nd scanner
   - The hole at the base of the scanner
6. Insert the two optics adjustment tools [A], and adjust the scanners as necessary so that the tools go through all four holes.

b130r949

7. Tighten the two screws that you loosened at step 2 above, so that the belts are firmly clamped into place.

8. Remove the adjustment tools.

3.5 FUSING

3.5.1 FUSING UNIT

⚠**CAUTION**

- Before handling the fusing unit, make sure that the unit is cool enough. The fusing unit can be very hot.

b130r950
1. Copy tray (☛ "Copy Tray")
2. Open the right door.
3. Connector cover [A] (🔩 x 1)

   ↓ Note

   - When reinstalling, attach the ground wire.

4. Fusing unit [B] (🔩 x 2, 🔌 x 4)

3.5.2 EXIT SENSOR

b130r951   [A]
1. Fusing unit (☛ "Fusing Unit")
2. Exit sensor [A] (🔌 × 1)

3.5.3 HOT ROLLER STRIPPER PAWLS

⭐ Important

▪ Take care not to damage the hot roller stripper pawls and the tension springs.

b130r909a
1. Fusing unit (☛ "Fusing Unit").
2. Separate the fusing unit into two sections: the hot roller section [A] and the pressure roller section [B] (🔩 x 2).
   After removing the screws, lower the pressure roller section about halfway and then slide it toward the front side to detach it.
3. Support rollers [C].
4. Hot roller stripper pawls [D].

   ⬇ Note

   ▪ Remove the spacer [E] (🔩 x 1) if you are removing the hot roller assembly (☛ "Hot Roller & Fusing Lamp").

3.5.4 HOT ROLLER AND FUSING LAMP

⚠ CAUTION

- Do not touch the fusing lamp and rollers with your bare hands.

b130r911
1. Hot roller stripper pawls and spacers (☛ " Hot Roller Stripper Pawls")

2. Hot roller assembly [A] (🔩 x 2)

3. Fusing lamp [B]

    ↓ Note

    - When reassembling, check that the direction of the fusing lamp is correct.
b130r912

4. Hot roller [C] (2 C-rings, 1 spacer, 1 gear, 2 bushings, 1 cover [D])

Reassembling

Be sure that:

- The fusing lamp is positioned correctly.

- The fusing lamp does not touch the internal part of the hot roller.

3.5.5 THERMOSWITCHES AND THERMISTOR
b130r913

1. Hot roller assembly (☛ "Hot Roller & Fusing Lamp").

2. Thermoswitches (𝄢 x 2 for each).

3. Thermistor (𝄢 x 1).

Reassembling

Make sure of the following:

▪ That the thermistor is in contact with the hot roller.

▪ That the hot roller turns smoothly.

⬇ Note

▪ Do not recycle a thermoswitch that is already opened. Safety is not guaranteed if you do this.

3.5.6 PRESSURE ROLLER

1. Separate the fusing unit into two sections (☛ "Hot Roller Stripper Pawls").

2. Fusing entrance guide [A]
b130r914
Fusing

3. Two springs [B] & [C].

4. Two pressure arms [D] & [E].

5. Bushing [F].

6. Pressure roller [G].

b130r915
3.5.7 CHECKING THE NIP BAND

You can check the nip band to see if the fusing unit is in a good condition–especially, if the hot roller and pressure roller are correctly installed.

1. Activate the SP mode.

2. Select SP1-109-001.

3. Specify "1."

4. Press the OK key.

5. Press the ⊚ key. The copy mode is activated.

6. Place an OHP sheet on the by-pass tray.

7. Press the ⊚ key. The copier feeds the OHP sheet, and stops it between the hot roller and the pressure roller for about 20 seconds.

8. Wait until the OHP sheet is output.

9. Press the ▭ key.

10. Make sure SP1-109-001 is selected.

11. Specify "0".

12. Press the OK key.

13. Quit the SP mode.

You see an opaque stripe on the OHP sheet. This is the trace of the nip band. The normal nip band is symmetrical on the OHP sheet. Both ends are slightly thicker than the center.

↓ Note

▪ There are no specifications or standards for the nip band of this copier.

3.6 PCU AND QUENCHING LAMP

When handling the photo conductor unit (PCU), use caution:

▪ Do not touch the OPC drum with your bare hands. When the OPC drum is unclean, clean it with dry cloth, or clean it with wet cotton and wipe it with dry cloth.

▪ Do not use alcohol any other chemicals to clean the OPC drum. These substances damage the OPC-drum surface.

▪ Keep PCUs in a cool, dry place.

▪ Do not expose the OPC to any corrosive gas such as ammonia.

▪ Do not shake a used PCU. Remaining toner and developer may spill out.

▪ Dispose of used PCUs in accordance with local regulations.

3.6.1 PCU

b130r952
1. Open the right door.

   ↓ Note

      ▪ The PCU may become stuck if you try to remove it while the front door is closed.

2. Open the front door.

3. Remove the toner bottle holder.

   ↓ Note

      ▪ Clean all spilled toner off the toner bottle area and the inside of the front door.

4. Pull out the PCU [A] (🗐 x 1).

5. When having installed a new PCU, remove the Styrofoam and tags (☛ "Installation Procedure" in the chapter "Installation").

Replacement and Adjustment

Initialization

After you turn on the main power switch, the copier automatically initializes the new PCU.

When the copier is executing initialization, it is important that you:

▪ Do not turn off the main power switch.

▪ Do not open or remove exterior covers.

3.6.2 QUENCHING LAMP

b130r953
1. PCU (☛ "PCU").
2. Quenching lamp [A] (🔌 x 1).

3.7 EXHAUST FAN AND MAIN MOTOR

3.7.1 EXHAUST FAN

b130r926
1.   Rear cover (☛ "Rear Cover")

2.   Exhaust fan [A] (🖉 x 2, 🖃 x 1)

Reassembling

Make sure that the arrow [B] on the frame points to the rear side. The arrow indicates the direction of airflow.

3.7.2 MAIN MOTOR
b130r917

1. Rear cover (☛ "Rear Cover")

2. High-voltage power supply board (☛ "High-Voltage Power Supply Board")

3. Ground plate [A] (🔩 x 1)

4. Main motor with the gear cover [B] (📎 x 1, 🔩 x 7, © x 2, 2 bushings)

b130r927
5. All gears [C]

6. Main motor [D] (🔩 x 4)

Reassembling

Attach the main motor before attaching the gears.

3.8 PAPER FEED

3.8.1 PAPER FEED ROLLER AND FRICTION PAD

When handling the paper tray or the paper feed roller, use caution:

▪ Do not touch the surface of paper feed rollers.

▪ To avoid paper jams, correctly set the side and end fences in the paper tray.

b130r955
1. Paper tray

2. Shaft [A] (🗝 x 1)

3. Remove either or both of the following:

   ▪ Paper feed roller [B]

   ▪ Friction pad [C]

3.8.2 PAPER END SENSOR

1. Paper tray

2. Open the right door.

3. PCU (☛ "PCU")

4. Paper end sensor [A] (🗝 x 1)

b130r956

[A]
3.8.3 REGISTRATION SENSOR

b130r916-957
1. Paper tray
2. Open the right door.
3. Open the paper guide [A].

    ↓ Note

    ▪ Remove the paper guide (Clip x 1) if you have difficulty removing the
      registration sensor.

4. Registration sensor feeler [B]
5. Registration sensor [C] (⧉ x 1)

    ↓ Note

    ▪ Disconnect the connector (CN127 [D]) if you have difficulty removing the
      registration sensor.

3.8.4 BYPASS PAPER END SENSOR

b130r958
1. Right door (☛ "Right Door")

2. Sensor compartment [A]

3. Bypass paper end sensor [B] (▭ x 1)

3.8.5 BYPASS FEED ROLLER

b130r959
1. Right door (☛ "Right Door")

2. Turn the feed roller housing upside down [A] (⌀ x 2).

b130r960

3.10 BICU AND CONTROLLER BOARD B284/B288

⚠CAUTION

- Turn off the main power switch and unplug the machine before starting replacement.
- Before turning off the main power switch, check that no mechanical component is operating. Mechanical components may stop out of their home positions if you turn off the main power switch while they are operating. The component may be damaged if you try to remove it when it is not in the home position.

3.10.1 BICU

🔴 Preparation

- Before replacing the NVRAM, be sure to save the NVRAM data.
- Saving from the BICU NVRAM to an SD card (☞ "NVRAM Data Upload/Download (SP5-824/825)" in the chapter "Service Tables")

b130r921b
1. Rear cover (☞ "Rear Cover")
2. Controller box [A] (🔩 x 5)

b130r920
3. Ground plate [B] (🔩 x 2)

4. BICU [C] (all 🖇, 2 flat cables, 🔩 x 6)

    ↓ Note

    ▪ When replacing the BICU, remove the NVRAM [D] from the board. Install the NVRAM to the new board.

5. After replacing the NVRAM, copy the saved data to the NVRAM.

    ▪ From an SD card to the NVRAM (☛ "NVRAM Data Upload/Download (SP5-824/825)" in the chapter "Service Tables")

3.10.2 CONTROLLER BOARD

   🔆 Preparation

    ▪ Before replacing the controller board, be sure to print out SMC or save the NVRAM data.

    ▪ Saving from the Controller NVRAM to an SD card (☛ "NVRAM Data Upload/Download [SP5-824/825]" in the chapter "Service Tables" of the this manual)

1. Rear cover (☛ "Rear Cover")

2. FCU (☛ "FCU")

b284r503
3. Remove the printer/scanner SD card [A].

4. Remove the two I/F covers [B] (or I/F options if they have been installed) (🔩 x 2 each).
b284r504

5. Remove the relay connector [C].

6. Remove the DIMM [D] if it has been installed.

7. Remove the controller board with the rails [E] (✏ x 5).
b284r505

8. Release the hooks [F], and then pull out the rails [G].

9. Controller board

   ↓ Note

   ▪ When replacing the controller board, remove the NVRAMs from the board. Install the NVRAMs to the new board.

When replacing the NVRAM on the controller board

b284r506

1. When you replace the NVRAMs [A], make sure that the NVRAMs are correctly installed.

2. The mark [B] on the NVRAM should be directed to the right side (seem from the back side of the machine).

3. Reassemble the machine.

4. Copy the old NVRAM data to the new NVRAM with SP5-825 or input the SMC data in the machine. (For details, refer to the "NVRAM Data Upload/Download [SP5-824/825]" in the chapter "Service Tables" of the this manual)

3.11 OTHER REPLACEMENTS

3.11.1 DUPLEX MOTOR

1. Rear cover (☛ "Rear Cover")
2. Duplex motor [A] (⬚ x 1, ⌀ x 2)

b130r928
3.11.2 HIGH-VOLTAGE POWER SUPPLY BOARD

1. Rear cover (☛ "Rear Cover")
2. High-voltage power supply board [A]
   (all ⬚, ⌀ x 4)

b130r924
↓ Note

- Remove the insulating sheet [B] if you are going to remove the contact-release solenoid (☛ "Contact-Release Solenoid") or the gear cover (☛ "Paper Feed and Registration Clutches").

3.11.3 PSU ASSEMBLY

b130r923
1.   Open the front door.

2.   Copy tray (☛ "Copy Tray")

3.   PSU assembly [A] (⬚ x 4, ✄ x 8)

3.11.4 PSU

1.   Open the front door.

2.   Copy tray (☛ "Copy Tray")
b130r925

3.   PSU [B] (⬚ x 4, ✄ x 6)

3.11.5 CONTACT-RELEASE SOLENOID
b130r929

1.   Rear cover (☛ "Rear Cover")

2.   High-voltage power supply board (☛ "High-Voltage Power Supply Board")

3.   Contact-release solenoid [A] (1 spring, 🔩 x 1)

3.11.6 TONER SUPPLY CLUTCH
1. Toner bottle holder
2. Copy tray (☞ "Copy Tray")
3. Rear cover (☞ "Rear Cover")
4. Disconnect the connector on C19 on the BICU.
5. Push the clutch coupler [A] to the rear side, and remove the clip ring [B] from the back of the copier.
6. Coupler and spring [C]
7. Lift the toner supply clutch [D] and remove it.

   ↓ Note

   - When removing, note how the wire goes through a clamp, and also note where it passes through the rear of the machine.

3.11.7 FCU (B284/B288)

Lithium Batteries
⚠ CAUTION

- Incorrect replacement of lithium battery(s) on the controller or on the fax unit poses risk of explosion. Replace only with the same type or with an equivalent type recommended by the manufacturer. Discard used batteries in accordance with the manufacturer's instructions.

Procedure

1. Open the right door [A].
2. Remove the rear cover [B] (🖉 x 5).

b284r102
3. Controller box cover [C] (🖉 x 12)
4. FCU [D] (🖉 x 3, 🔌 x 1)
5. When you replace the FCU board, remove the MBU board from the old FCU board and install it on the new FCU board.
6. Set the correct date and time with the User Tools: User Tools> System Settings> Timer Setting> Set Date/Time
⬇ Note

- Do not turn off the battery switch (SW1).
- Do SP6-101 in the "Fax SP" to print the system parameters, and check the settings.

3.12 LASER UNIT

⚠ WARNING

- Turn off the main power switch and unplug the copier before starting replacement. The laser beam can damage your eyes severely.

⚠ CAUTION

- Do not touch the screws on the LD board on the LD unit. Do not try to adjust any part of the LD unit. The LD unit is precision adjusted before shipment.
- Do not touch the polygon mirror, shield glass, or lenses with your bare hands.

3.12.1 LOCATION OF THE CAUTION DECAL

b130r963-934

CAUTION
VORSICHT

CAUTION-CLASS 3B INVISIBLE LASER
RADIATION WHEN OPEN
AVOID EXPOSURE TO THE BEAM
VORSICHT-UNSICHTBARE LASERSTRAHLUNG
KLASSE 3B, WENN ABDECKUNG GEÖFFNET
NICHT DEM STRAHL AUSSETZEN

>PS<

3.12.2 LASER UNIT

[A]

b130r964

[B]

b130r965
1. PSU assembly (☛ "PSU")
2. Toner bottle holder
3. Laser unit [A] (✎ x 3, 🔌 x 2)

Reassembling

Make sure that the cable [B] passes under the unit.

3.12.3 LD UNIT AND POLYGON MIRROR MOTOR

b130r966
1. Laser unit (☛ "Laser Unit")

2. Laser unit cover [A] (𝒻 x 2, 1 grounding plate)

3. LD unit [B] (𝒻 x 2)

4. Polygon mirror motor [C] (𝒻 x 4)

Reassembling

Check that the polygon mirror and toroidal lens are clean. Dust or other foreign substances may interfere with the operation of the LD unit.

3.13 ARDF

3.13.1 ARDF

1. Rear cover (☞ "Rear Cover")

b872i502a

b872i108a
2. Remove the DF interface cables [A] (🗲 x 2, hook x 2).

3. Remove the ground cable [B] (🔩 x 1).

4. Remove the stud screw [C].

5. Remove the ARDF [D].

3.13.2 DF REAR COVER

b872r103

1. Open the ARDF [A].

2. Release the three hooks

Replacement and Adjustment
b872r104

3. Open the DF left cover [B].

4. Open the original tray [C].

5. DF rear cover [D] ($\mathscr{F}$ x 1, hook x 4)

3.13.3 ORIGINAL FEED UNIT

1. Open the DF left cover.
b872r101

2. Original feed unit [A] (⊗ x 1)

3.13.4 SEPARATION ROLLER

1. Open the DF left cover.
2. Original feed unit (☞ "Original Feed Unit")

b872r102

3. Separation roller cover [A] (hook x 2)

4. Separation roller stopper [B] (hook)

5. Separation roller [C]

3.13.5 DF DRIVE BOARD

1. DF rear cover (☛ "DF Rear Cover")
b872r105

2. DF drive board [A] (🔩 x 2, 🔌 x 4, ground cable x 1)

3.13.6 ORIGINAL SET AND DF INVERTER SENSOR

1. Open the DF left cover.

2. Original feed unit (☛ "Original Feed Unit")

3. DF feed clutch (☛ "DF Feed Clutch")

b872r109
4. Original feed-in guide plate [A] (📎 x 2).

5. Original set sensor [B] (🔌 x 1, hook)

6. DF inverter sensor [C] (🔌 x 1, hook)

3.13.7 DF REGISTRATION AND DF EXIT SENSOR

1. Open the DF left cover.

2. Original feed unit (☛ "Original Feed Unit")

3. DF feed clutch (☛ "DF Feed Clutch")

4. Original feed-in guide plate (☛ "Original Set and Inverter Sensor")

5. DF feed motor (☛ "DF Feed Motor")

6. DF transport motor (☛ "DF Transport Motor")

b872r110
7. DF transport roller [A] (🔘 x 2, gear x 2, bushing x 2)

8. DF separation roller unit [B] (🔘 x 2, gear x 1, bushing x 2)

9. Inverter upper guide plate [C] (὘️ x 4, ⬚ x 3, ⬚ x 4)

b872r111
10. Inverter lower guide plate [D] (hook x 2)

11. DF registration sensor [E] (⬚ x 1, hook)

12. DF exit sensor [F] (⬚ x 1, hook)

DF Registration Sensor Reflector

b262r508
Clean the SD registration sensor reflector [A] as necessary.

Replacement and Adjustment

3.13.8 DF FEED MOTOR

1. DF rear cover (☞ "DF Rear Cover")
b872r106

2. Inner cover [A] ($\mathscr{J}$ x 1)

3. DF feed motor with bracket [B] ($\mathscr{J}$ x 2, 🔩 x 4, ⬛ x 3, timing belt)

4. DF feed motor [C] ($\mathscr{J}$ x 2)

3.13.9 DF TRANSPORT MOTOR

1. DF rear cover (☞ "DF Rear Cover")

2. DF feed motor (☞ "DF Feed Motor")
b872r107

3. DF transport motor with bracket [A] ($\mathscr{J}$ x 2, spring x 1, timing belt)

4. DF transport motor [B] ($\mathscr{J}$ x 2)

3.13.10 DF FEED CLUTCH
b872r108a

1. Open the DF left cover.

2. DF front cover [A] (🔩 x 1)

3. Bracket [B] (🔩 x 1, 🔌 x 1)

4. DF feed clutch [C] (🔌 x 1)

3.14 ADJUSTING COPY IMAGE AREA

Adjust the copy image area under any of the following conditions:

1. After clearing engine data (SP5-801-002 or SP5-998-001).

2. After replacing any of the following components:

    ▪   First scanner or second scanner

    ▪   Lens block

    ▪   Scanner motor

    ▪   Polygon mirror motor

    ▪   Paper tray

3.14.1 PRINTING

Make sure that the paper is correctly loaded in each paper tray before starting the adjustment procedures in this section.

Adjusting Registration

Use the Trimming Area Pattern (SP5-902-001 > 10) for this adjustment.

1. Print out the test pattern with the paper fed from the regular paper tray.

2. Print out the test pattern with the paper fed from the by-pass tray.

3. Print out the test pattern by selecting duplex printing.
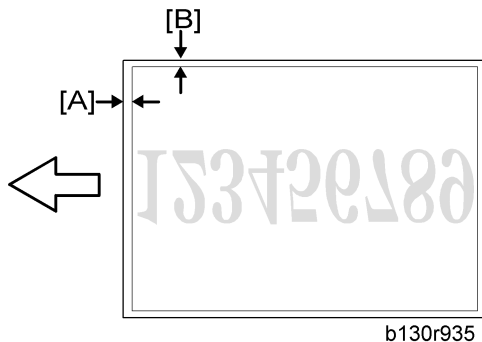

b130r935

4. Measure the distance between the leading edge of the image area and the leading edge of the paper [A].

✔ Note

- The diagram shows the paper on the copy tray. Note that the paper is output with the face down.

SP	Specification
SP1-001-001 (All Trays)	0 ± 2 mm
SP1-001-002 (By-pass)	0 ± 2 mm
SP1-001-003 (Duplex)	0 ± 4 mm

5. Adjust the leading edge registration (SP1-001).

6. Measure the distance between the side edge of the image area and the side edge of the paper [B].

SP	Specification
SP1-002-001 (1st tray)	0 ± 2 mm
SP1-002-002 (2nd tray)	0 ± 2 mm
SP1-002-005 (By-pass)	0 ± 4 mm
SP1-002-006 (Duplex)	0 ± 4 mm

7. Adjust the side-to-side registration (SP1-002).

8. Specify "0" (zero) in SP5-902-001 after finishing the adjustment procedure.

Adjusting Blank Margin

Use the Trimming Area Pattern (SP5-902-001 > 10) for this adjustment.

1. Print out the test pattern.

b130r936
2. Measure the distance between the four edges of the image area and the four edges of the paper [A][B][C][D].

Adjusting Copy Image Area

↓ Note

- The diagram shows the paper on the copy tray. Note that the paper is output with the face down.

3. Adjust the blank margin (SP2-101).

SP	Specification
SP2-101-001 (Leading Edge) [A]	2 ± 1.5 mm
SP2-101-002 (Trailing Edge) [B]	2 +2.5/-1.5 mm
SP2-101-003 (Left Side) [C]	2 ± 1.5 mm
SP2-101-004 (Right Side) [D]	2 +2.5/-1.5 mm

↓ Note

- The "Left Side" and "Right Side" comes to your left-hand side and right-hand side respectively when you view the copied image with the leading edge upwards.

4. Specify "0" (zero) in SP5-902-001 after finishing the adjustment procedure.

Adjusting Main-Scan Magnification

Use the Grid Pattern (Single Dot) (SP5-902-001 > 5) for this adjustment.

SP	Specification
SP2-998-001 (Main Mag-print)	100 ± 1%

1. Print out the test pattern.
2. Measure the sides of squares. Each side should be 2.7-mm long.)
3. Adjust the main-scan magnification (SP2-998-001: Main Mag-print).
4. Specify "0" (zero) in SP5-902-001 after finishing the adjustment procedure.

3.14.2 SCANNING

⚲ Preparation

- Before adjusting scanning, adjust printing (☛ "Printing" in this section).
- To adjust scanning, use the A4 test chart.

Adjusting Registration

1. Place the test chart on the exposure glass. Make sure that the test chart is aligned with the rear and left scales on the exposure glass.

2. Make a copy.

b130r935
3. Measure the distance between the leading edge of the image area and the leading edge of the paper [A].

    ↓ Note

    ▪ The diagram shows the paper on the copy tray. Note that the paper is output with the face down.

4. Adjust the leading-edge scan registration. (SP4-010-001).

SP	Specification
SP4-010-001 (LE Scan Regist)	0 ± 2 mm

5. Measure the distance between the side edge of the image area and the side edge of the paper [B].

6. Adjust the side-to-side registration (SP4-011-001).

SP	Specification
SP4-011-001 (S-to-S Scan Regist)	0 ± 2 mm

Adjusting Magnification

[A]

b130r938

[B]

b130r939

[C]

b130r940
1. Place the test chart on the exposure glass. Make sure the test chart is aligned with the rear and left scales on the exposure glass.

2. Make a copy.

3. Compare the copy with the original.

4. Adjust the main-scan and sub-scan magnifications. The original image [A] is magnified in the main-scan direction [B] or in the sub-scan direction [C] when you specify a larger value.

↓ Note

- The diagrams show the paper on the copy tray. Note that the paper is output with the face down.

SP	Specification
SP4-009-001 (Main Scan Mag)	± 1.0%
SP4-008-001 (Sub Scan Mag)	± 1.0%

Scan Auto Adjustment

This procedure adjusts the standard white density level. Adjust the standard white density after any of the following maintenance work:

- Replacing the standard white plate
- Replacing the BICU

- Replacing the lens block
- Executing the memory clear (SP5-801-002 [basic model], SP5-998-001 [other models]).

1. Place 10 sheets of new A4 paper on the exposure glass.
2. Close the platen cover.
3. Activate the SP mode.
4. Select Copy SP4-428.
5. Specify "1" and press the OK key. The copier automatically adjusts the standard white density.

3.14.3 DF IMAGE ADJUSTMENT

⬇ Note

- Perform the adjustment procedure in this section only when the ARDF is installed on the copier.
b130r967

1. Make a temporary test chart as shown in the above diagram. Use the A4/8.5 x 11" paper to make it.
2. Place the temporary test chart on the ARDF.
3. Make a copy.
b130r941

4. Measure the distance between the side edge of the image area and the side edge of the paper [A].

Adjusting Copy Image Area

(The diagram shows the paper on the copy tray. Note that the paper is output with the face down.)

5. Adjust the side-to-side registration (S to S/Front Regist: SP6-006-001, S to S/Rear Regist: SP6-006-004). The image area moves to the rear side of the copier when you specify a larger value.

6. Measure the distance between the leading of the image area and the leading edge of the paper [B].

7. Adjust the leading edge registration (Leading Regist: SP6-006-002). The image area moves to the right side of the copier when you specify a larger value.

8. Measure the distance between the trailing edge of the image area and the trailing edge of the paper [C].

9. Adjust the erased area on the trailing edge (Trailing Erase: SP6-006-003).

10. Compare the copy with the original.

11. Adjust the sub-scan magnification (SP6-006-005). The specification is $\pm1.0\%$.

TROUBLESHOOTING

SECTION 4 TROUBLESHOOTING (SC CODES) REVISION HISTORY		
Page	**Date**	**Added/Updated/New**
1	01/17/2008	Summary
9 ~ 28	01/17/2008	Service Call Conditions
29 ~ 31	01/17/2008	New page numbers only
32 ~ 34	01/17/2008	Removed Information

4. TROUBLESHOOTING

4.1 SERVICE CALL CONDITIONS

4.1.1 SUMMARY

There are four levels of service call conditions.

Level	Definition	Reset Procedure
A	To prevent possible damage, the machine does not operate until the service representative resets the SC code.	Activate the SP mode, and turn the main power switch off and on.
B	Turning the main power stitch off and on resets the SC code if the error is caused by incorrect sensor detection.	Turn the main power switch off and on.
C	The machine operates as usual excluding the unit related to the service call.	Turn the main power switch off and on.
D	The SC history is updated. The machine operates as usual.	No SC code is displayed. Only the SC history is updated.

⟹ ↓ Note

- If the problem concerns electrical circuit boards, first disconnect then reconnect the connectors before replacing the PCBs.
- If the problem concerns a motor lock, first check the mechanical load before replacing motors or sensors.

★ Important

- Do not try to use the operation panel during an automatic reboot.
- If the Remote Service System is used, the SC code is sent immediately to the Service Center

⚠ CAUTION

- Never turn off the main power switch when the power LED is lit or flashing. To avoid damaging the hard disk or memory, press the operation switch to switch the power off, wait for the power LED to go off, and then switch the main power switch off.

Trouble-
shooting

4.1.2 ENGINE SC CODE DESCRIPTIONS

No. Definition		Symptom	Possible Cause
		Exposure Lamp Error	
101	B	The scanner has scanned the white plate, but cannot detect the white level.	▪ Defective exposure lamp ▪ Defective exposure lamp stabilizer ▪ Defective exposure lamp connector ▪ Unclean scanner mirror ▪ Scanner mirror out of position ▪ Defective SBU board ▪ Defective SBU connector ▪ Lens block out of position ▪ Incorrect position or width of white plate scanning (☛ SP4-015)
		Scanner home position error 1	
120	B	The scanner home position sensor does not detect the scanner leaving the home position.	▪ Defective scanner home position sensor ▪ Defective scanner drive motor ▪ Defective scanner home position sensor connector ▪ Defective scanner drive motor connector ▪ Defective BICU board

No. Definition		Symptom	Possible Cause
121	B	Scanner home position error 2	
		The scanner home position sensor does not detect the scanner coming back to the home position.	- Defective scanner home position sensor - Defective scanner drive motor - Defective scanner home position sensor connector - Defective scanner drive motor connector - Defective BICU board
141	B	SBU black level correction error	
		- The automatic SBU adjustment has failed to correct the black level three times at the pre-offset adjustment. - The automatic SBU adjustment has failed to correct the black level ten times at the PGA adjustment. - The automatic SBU adjustment has failed to correct the black level ten times at the offset adjustment.	Defective SBU board

Trouble- shooting

No. Definition		Symptom	Possible Cause
142	B	SBU white/black level correction error	
		The automatic SBU adjustment has failed to correct the white level ten times at the PGA adjustment.	▪ Defective exposure lamp ▪ Unclean white plate ▪ Incorrect position or width of white plate scanning (☛ SP4-015) ▪ Defective SBU board
144	B	Communication Error between BICU and SBU	
		The BICU cannot correctly establish communication with the SBU.	▪ Loose connection of the flat cable between the BICU and the SBU ▪ Defective flat cable between the BICU and the SBU ▪ Defective BICU ▪ Defective SBU
145	D	Automatic SBU adjustment error	
		The white levels of the white plate and the white paper are extraordinarily different during the Scan Auto Adjustment (☛ SP4-428-001).	▪ Defective exposure lamp ▪ Unclean white plate ▪ Incorrect position or width of white plate scanning (☛ SP4-015) ▪ Defective BICU board ▪ Defective SBU board
193	B	Image transfer error	
		Scanned images are not transferred to the controller memory within one minute.	▪ Defective BICU board ▪ Defective controller board

No. Definition		Symptom	Possible Cause
198	B	Memory address error	
		The BICU does not receive the memory address report from the controller within one minute.	▪ Inconsistency between the BICU firmware and the controller firmware ▪ Defective BICU ▪ Defective controller
302	B	Charge roller current leak	
		The polling module detects a current leak of the charge roller.	▪ Defective charge roller ▪ Defective high voltage supply board ▪ Loose connection of the PCU
320	B	Polygonal mirror motor error	
		The polygon mirror motor does not reach the operating speed within 10 seconds. Or, the polygon mirror motor remains out of the operating speed for 0.2 second after reaching the operating speed.	▪ Defective polygon mirror motor ▪ Loose connection between the polygonal mirror motor and the BICU ▪ Defective cable between the BICU and the polygon mirror motor ▪ Defective BICU
321	B	No laser writing signal (F-GATE) error	
		The poling module does not detect the laser writing signal (F-GATE) asserting after the laser crosses 5 mm from the start point on the drum surface.	▪ Defective BICU ▪ Loose connection on the fax controller or the printer controller ▪ Defective fax controller or printer controller

Trouble-shooting

No. Definition		Symptom	Possible Cause
322	B	Laser synchronization error	
		The main scan synchronization detector does not detect the laser signal for 0.5 second.	- Toner bottle not installed - Loose connection between the LD unit and the BICU - Defective cable between the BICU and LD unit - LD unit out of position - Defective LD unit - Defective BICU
390	B	TD sensor error	
		The BICU detects the TD sensor outputting extraordinary voltage (less than 0.2 V or more than 4.0 V) 10 times consecutively.	- Defective TD sensor - Loose connection of the PCU
391	B	Development bias leak	
		The polling module detects a current leak of the development bias.	- Loose connection of the PCU - Defective high voltage supply board
392	B	Developer initialization error	
		The ID sensor does not detect a correct pattern during developer initialization (☛ 2-214-001).	- Defective ID sensor - Insufficient developer - Defective drum operation - Defective development roller operation - Loose connection of the PCU - Insufficient voltage for the charge roller

No. Definition		Symptom	Possible Cause
401	B	Transfer roller leak error (positive electrode)	
		The feedback voltage of the transfer roller is insufficient.	• Defective high voltage supply board • Loose connection of the PCU • Incorrect installation of the transfer unit or the separation unit • Defective transfer roller
402	B	Transfer roller leak error (negative electrode)	
		The feedback voltage of the transfer roller is insufficient.	• Defective high voltage supply board • Loose connection of the PCU • Incorrect installation of the transfer unit or the separation unit • Defective transfer roller
500	B	Main motor error	
		The main motor does not reach its operation speed within 0.7 second. Or, the main motor remains out of its operation speed for 0.7 second after reaching the operation speed.	• Overload • Defective main motor
541	A	Fusing thermistor open error	
		The fusing temperature remains lower than the specified temperature by 20 degrees Celsius.	• Defective thermistor • Incorrect installation of the thermistor • Defective power supply unit • Loose connectors

Trouble-shooting

Service Call Conditions

No. Definition		Symptom	Possible Cause
542	A	Fusing temperature warm-up error The fusing temperature rises 7 degrees or less in two seconds; and this continues 5 times consecutively. Or, the fusing temperature is not detected within 25 or 35 seconds.	▪ Defective thermistor ▪ Incorrect installation of the thermistor ▪ Defective fusing lamp ▪ Defective power supply unit
543	A	Fusing overheat error 1 The fusing temperature detected by the thermistor is 230°C or higher for one second.	▪ Defective thermistor ▪ Defective power supply unit
544	A	Fusing overheat error 2 The fusing temperature detected by the monitor circuit is 250°C or higher for one second.	▪ Defective thermistor ▪ Defective power supply unit
545	A	Fusing lamp overheat error After the fusing temperature reaches the target, the fusing lamp remains on for 12 seconds.	▪ Defective thermistor ▪ Incorrect installation of the thermistor ▪ Defective power supply unit
546	A	Unstable fusing temperature While the fusing lamp is on, the fusing temperature varies 50°C or more within one second; and this occurs two consecutive times.	▪ Defective thermistor ▪ Incorrect installation of the thermistor ▪ Defective power supply unit

No. Definition		Symptom	Possible Cause
547	B	Zero cross signal malfunction	
		The zero cross signal is not detected within five seconds after the main power switch is turned on. Or, the zero cross signal is not detected within one second after operation begins.	▪ Defective power supply unit ▪ Defective BICU
559	A	Consecutive fusing jam	
		The paper jam counter for the fusing unit reaches 3 times. The paper jam counter is cleared if the paper is fed correctly. This SC is activated only when SP1159-001 is set to "1" (default "0").	▪ Paper jam in the fusing unit.
590	B	Exhaust fan motor error	
		The exhaust fan motor is locked for five seconds.	▪ Loose connection of the exhaust fan motor ▪ Overload
630	D	CSS communication error **(B284/B288)**	
		The machine tries to communicate with one of the terminals of a relevant service center. → An error signal returns.	▪ Communication error on the public telephone network (logged only; the machine can still operate)

Trouble-shooting

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
632	C	**Accounting error 1 (B262/B292)**	
		An error occurs during communication with the MF accounting device.	▪ Defective accounting device ▪ Loose connection
633	C	**Accounting error 2 (B284/B288)**	
		An error occurs during communication with the MF accounting device.	▪ Defective accounting device ▪ Loose connection
634	C	**Accounting RAM error (B262/B292)**	
		An error occurs in the backup RAM for the MF accounting device.	▪ Defective accounting device
635	C	**Accounting battery error (B262/B292)**	
		An error occurs in the battery of the MF accounting device.	▪ Defective accounting device
636		SD Card Error **(B284/B288)**	
-001	B	Expanded authentication module error	
		There is no expanded authentication module in the machine. The SD card or the file of the expanded authentication module is broken. ▪ There is no DESS module in the machine.	1. Install the correct SD card or the file of the expanded authentication module. 2. Install the DESS module.

No. Definition		Symptom	Possible Cause
-002	B	Version error	
		The version of the expanded authentication module is not correct.	3. Install the correct file of the expanded authentication module.
650		Communication error of the remote service modem (RC Gate) **(B284/B288)**	
-001	C	Authentication error	
		▪ The authentication for the RC Gate fails at a dial up connection.	1. Check and set the correct user name (SP5816-156) and password (SP5816-157).
-004	C	Incorrect modem setting	
		Dial up fails due to the incorrect modem setting.	1. Check and set the correct AT command (SP5819-160).
-005	C	Communication line error	
		The supplied voltage is not sufficient due to the defective communication line or defective connection.	1. Consult with the user's local telephone company.
-011	C	Incorrect network setting	
		Both the NIC and RC Gate are activated at the same time.	1. Disable the NIC with SP5985-1.
-012	C	Modem board error	
		The modem board does not work properly even though the setting of the modem board is installed with a dial up connection.	1. Install the modem board. 2. Check and reset the modem board setting with SP5816. 3. Replace the modem board.

Trouble-shooting

No. Definition			Symptom	Possible Cause
651			Incorrect dial up connection **(B284/B288)**	
-001	D		Program parameter error	
			The unexpected error occurs when the modem (RC Gate) tries to call the center with a dial up connection.	▪ Software bug.
-002	D		Program execution error	
			Same as SC651-001.	▪ Software bug.
670	B		Engine startup error **(B284/B288)**	
			Just after the main power is turned on or the machine is recovering from auto off mode, the engine ready signal assertion fails. Just after the main power is turned on, the engine does not respond.	▪ Poor connection between the BICU and controller board ▪ Defective BICU ▪ Defective controller board
672	B		Controller-to-operation panel communication error at startup **(B284/B288)**	
			After powering on the machine, communication between the controller and operation panel does not begin, or the communication is interrupted after a normal startup.	▪ Controller stalled ▪ Controller board installed incorrectly ▪ Defective controller board ▪ Operation panel connector loose or defective ▪ Poor connection of DIMM and optional boards on the controller board ▪ Check the setting of SP5875-001. If the setting is set to "1 (OFF)", change it to "0 (ON)".

⟹

No. Definition		Symptom	Possible Cause
761	B	ADF gate abnormal 2	
		The ADF does not send the FGATE signal within 30 seconds after the ADF starts scanning.	▪ Defective ADF connector ▪ Defective SBU board
762	B	ADF gate abnormal 3	
		The ADF continues to send the FGATE signal for more than 60 seconds after the ADF starts scanning.	▪ Defective ADF connector ▪ Defective SBU board
819		Kernel stop	
[0696e]	B	Process error	
		System co mpletely down	▪ Defective RAM DIMM ▪ Defective SD card in slot 1 (lowest slot) ▪ Defective controller ▪ Software error 1. Check and/or replace the RAM DIMM. 2. Check and/or replace the SD card in slot 1 (lowest slot). 3. Replace the controller. See **NOTE** on Page 4-1 of the SC Table.

Trouble-shooting

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
[0766d]	B	VM full error	
		Unexpected system memory size	▪ Defective RAM DIMM ▪ Defective SD card in slot 1 (lowest slot) ▪ Defective controller ▪ Software error 1. Check and/or replace the RAM DIMM. 2. Check and/or replace the SD card in slot 1 (lowest slot). 3. Replace the controller. See **NOTE** on Page 4-1 of the SC Table.
[4361]	B	Cache error	
		Cache error in the CPU	▪ Defective CPU 1. Replace the controller board.
[----]	B	The others	
		Error in OS	▪ Defective memory ▪ Defective flash memory ▪ Defective CPU 1. Replace the controller board.

⟹

No. Definition		Symptom	Possible Cause
820		Self-Diagnostic Error: CPU	
	B	[0001-0015] [000A-000D]: Detailed error code	
		During the boot monitor program and self-diagnostic, any exception or cut-in are not supposed to happen. If these happen, it is defined as SC.	▪ Defective CPU device ▪ Defective boot monitor program or self-diagnostic program 1. Replace the controller board. ▪ Reinstall the system firmware.
	B	[00FF]: Detailed error code	
		Cache access error in the CPU	▪ Defective CPU ▪ Defective local bus 1. Turn the main power switch off and on. 2. Reinstall the system program. ▪ Replace the controller board.
	B	[0601, 0602, 0605, 0606, 0607, 0609]: Detailed error code	
		Exceptional command does not operate even though it is executed on purpose.	▪ Defective CPU devices 1. Replace the controller board.
	B	[060A-060E]: Detailed error code	
		Cut-in command does not operate when it is executed.	▪ Defective CPU devices ▪ Defective ASIC devices 1. Replace the controller board.
	B	[0610]: Detailed error code	
		Timer cut-in does not operate even though it is set.	▪ Defective CPU devices 1. Replace the controller board.

Trouble-shooting

⟹

No. Definition		Symptom	Possible Cause
820 Con'd		[0612]: Detailed error code	
	B	Cut-in in ASIC occurs.	▪ Defective ASIC ▪ Defective devices in which ASIC detects cut-in. 1. Replace the controller board.
		[06FF]: Detailed error code	
	B	The pipeline clock frequency rate is different from the prescribed value.	▪ Defective CPU devices ▪ Mode bit data error, which is used for initializing CPU. 1. Replace the controller board.
		[0702]: Detailed error code	
	B	The result when the program is executed in the command cache is different from desirable value.	▪ Insufficient CPU cache ▪ Insufficient memory process speed 1. Replace the controller board. 2. Replace the RAM DIMM.
		[0709, 070A]: Detailed error code	
	B	Even you write the data in the only cache of memory, the data is actually written in another area (not cache) of memory.	▪ Defective CPU devices ▪ Incorrect SPD ▪ Boot mode setting error 1. Replace the controller board. 2. Replace the RAM DIMM.
		[0801, 0804, 0807, 0808, 0809, 80A]: Detailed error code	
	B	An error occurs when checking the TLB.	▪ Defective CPU devices 1. Replace the controller board.

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
820 Con'd	B	[4002-4005]: Detailed error code	
		The calculation error in the CPU occurs.	▪ Defective CPU 1. Replace the CPU.
821		Self-Diagnostic Error: ASIC **(B284/B288)**	
[0B00]	B	ASIC error	
		The write-&-verify check error has occurred in the ASIC.	▪ Defective controller board 1. Replace the controller.
[0B06]	B	ASIC not detected	
		The ASIC of the I/O is not detected.	▪ ASIC (controller board defective) ▪ Poor connection between North Bridge and PCI I/F. 1. Replace controller board.
[0B10]	C	SHM register check error	
		Failed to initialize or could not read connection bus. Data in SHM register incorrect.	▪ Defective bus connection ▪ Defective SHM 1. Replace controller board.
[0D05]	B	Timer error between ASIC and CPU	
		The CPU checks if the ASIC timer works properly compared with the CPU timer. If the ASIC timer does not function in the specified range, this SC code is displayed.	▪ System firmware problem ▪ Defective RAM-DIMM ▪ Defective controller ▪ Reinstall the controller system firmware. 1. Replace the RAM-DIMM. 2. Replace the controller board.

Trouble-
shooting

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
823		Self-diagnostic Error: NIB **(B284/B288)**	
[6101]	C	MAC address check sum error	
		The result of the MAC address check sum does not match the check sum stored in ROM.	▪ Defective controller 1. Replace the controller.
[6104]	C	PHY IC error	
		The PHY IC on the controller cannot be correctly recognized.	Same as SC823-[6101]
[6105]	C	PHY IC loop-back error	
		An error occurred during the loop-back test for the PHY IC on the controller.	Same as SC823-[6101]
824	B	Self-diagnostic Error: NVRAM **(B284/B288)**	
		The controller cannot recognize the standard NVRAM installed or detects that the NVRAM is defective.	▪ NVRAM damaged or abnormal ▪ Backup battery has discharged ▪ NVRAM socket damaged 1. Replace the NVRAM.

$\Rightarrow$

No. Definition		Symptom	Possible Cause/Countermeasure
826	B	Self-diagnostic Error: RTC/Optional NVRAM [1501]: Clock error ▪ An RTC device is recognized, and the difference between the RTC device and the CPU exceeds the defined limit. ▪ No RTC device is recognized.	▪ RTC defective ▪ NVRAM without RTC installed ▪ Backup battery discharged 1. Replace the NVRAM with another NVRAM with a RTC device.
	B	[15FF]: RTC not detected The RTC device is not detected.	▪ NVRAM without RTC installed ▪ Backup battery discharged 1. Replace the NVRAM with another NVRAM with a RTC.
827		Self-diagnostic Error: RAM **(B284/B288)**	
[0201]	B	Verification error Error is detected during a write/verify check for the standard RAM (SDRAM DIMM).	▪ Loose connection ▪ Defective SDRAM DIMM ▪ Defective controller 1. Replace the SDRAM DIMM. 2. Replace the controller.
[0202]	B	Resident memory error The SPD values in all RAM DIMM are incorrect or unreadable.	▪ Defective RAM DIMM ▪ Defective SPD ROM on RAM DIMM ▪ Defective 12C bus 1. Replace the RAM DIMM.

Trouble-shooting

No. Definition		Symptom	Possible Cause/Countermeasure
828		Self-diagnostic Error: ROM **(B284/B288)**	
[0101]	B	Boost lap code error	
		The boot monitor and OS program stored in the ROM DIMM is checked. If the check sum of the program is incorrect, this SC code is displayed.	▪ Defective ROM DIMM ▪ Defective controller 1. Replace the ROM DIMM. 2. Replace the controller.
[0104]	B	ROMFS error	
		All areas of the ROM DIMM are checked. If the check sum of all programs stored in the ROM DIMM is incorrect, this SC code is displayed.	▪ Defective ROM DIMM 1. Replace the ROM DIMM.
829		Self-diagnostic Error: Optional RAM **(B284/B288)**	
[0401]	C	Verification error (Slot 1)	
		The data stored in the RAM in Slot 1 does not match the data when reading.	▪ Not specified RAM DIMM installed ▪ Defective RAM DIMM 1. Replace the RAM DIMM. 2. Replace the controller board.
[0402]	C	Composition error (Slot 1)	
		The result of checking the composition data of the RAM in Slot 1 on the controller is incorrect.	▪ Not specified RAM DIMM installed ▪ Defective RAM DIMM 1. Replace the RAM DIMM. 2. Replace the controller board.

$\Longrightarrow$

No. Definition		Symptom	Possible Cause/Countermeasure
838	B	Self-diagnostic Error: Clock Generator **(B284/B288)**	
		A verify error occurred when setting data was read from the clock generator via the I2C bus.	- Defective clock generator - Defective I2C bus - Defective I2C port on the CPU 1. Replace the controller board.
853	C	Wireless card startup error	
		The machine starts up. → The IEEE802 11b card connection board is recognized. → The wireless LAN card or bluetooth card is not recognized.	Loose connection between the wireless card and the connection board
854	C	Wireless card access error **(B284/B288)**	
		The machine has been reading the data from the card. → The machine loses access to the card; the wireless LAN card or bluetooth card connection board is still recognized.	Loose connection between the wireless card and the connection board
855	C	Wireless card error **(B284/B288)**	
		Some illegal data is found in the card.	Defective wireless card
856	C	Wireless card connection board error **(B284/B288)**	
		An error is detected in the wireless LAN card or bluetooth card connection board.	Defective wireless card connection board

Trouble-shooting

$\Longrightarrow$

No. Definition		Symptom	Possible Cause/Countermeasure
857	C	USB I/F Error **(B284/B288)**	
		USB interface error is detected.	▪ Defective controller 1. Check the USB connections, and make sure that they are securely connected. 2. Replace the controller board.
866	C	SD card authentication error **(B284/B288)**	
		A digital license error of an SD card application is detected.	▪ SD card data has corrupted. 1. Store correct data in the SD card.
867	B	SD card error **(B284/B288)**	
		An application SD card is removed from the boot slot while an application is activated.	▪ An application SD card is ejected.
868	B	SD card access error (-13 to -3: File system error, other number: Device error)	
		An error report is sent from the SD card reader.	▪ SD card not inserted correctly ▪ SD card defective ▪ Controller board defective 1. For a file system error, format the SD card on PC. 2. For a device error, turn the main switch off and on. 3. Remove and re-install the SD card. 4. Replace the SD card. 5. Replace the controller.

⟹

No. Definition		Symptom	Possible Cause/Countermeasure
870	C	Address book data error **(B284/B288)**	

		The address book in the hard disk is accessed. → An error is detected in the address book data; address book data is not read; or data is not written into the address book.
		
		↓ Note
		  ▪ To recover from the error, do any of the following countermeasures:
		  ▪ Format the address book by using SP5-846-050 (all data in the address book–including the user codes and counters–is initialized).
			▪ Data corruption
			▪ Defective controller software

880	B	File Format Converter (MLB) error	
		Not Available for this Model	
900	B	Electronic total counter error **(B284/B288)**	
		The value of the total counter is out of the normal range.	▪ Defective NVRAM
920	C	Printer error **(B284/B288)**	
		An application error that stops the machine operation is detected.	▪ Defective software 1. Unexpected hardware resource (e.g., memory shortage)

Trouble-shooting

$\Longrightarrow$

No. Definition		Symptom	Possible Cause/Countermeasure
921	C	Printer font error **(B284/B288)**	
		A necessary font is not found in the SD card when the printer application starts.	▪ A necessary font is not found in the SD card. ▪ The SD card data is corrupted. 1. Check that the SD card stores correct data.
929	B	IMAC hardware error **(B262/B292)**	
		A memory control job is not completed within a certain period.	▪ Defective IMAC ▪ Defective BICU ▪ Loose connection
954	B	Printer application program error	
		The printer application program does not become ready when the printer application program is necessary.	▪ Defective application program
955	B	Image transfer error	
		The BICU requests the controller to transfer image data; but the controller does not become ready.	▪ Defective application program
964	B	Status error (laser optics housing unit)	
		The optics-housing unit does not become ready within 17 seconds after a request.	▪ Defective software

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
980	B	Controller-engine inconsistency The controller is incompatible with the engine.	One of the following controllers is installed to the basic model: - The controller of the MFP model - The controller of the copier/facsimile model - The controller of the printer/scanner/copier model The controller of the optional printer/scanner is installed to one of the following models: - The MFP model - The copier/facsimile model - The printer/scanner/copier model
981	B	NVRAM error An error occurs during engine NVRAM check.	- Defective NVRAM - Loose connection between the BICU and the NVRAM - Incorrect installation of the NVRAM - Defective BICU

Trouble-shooting

$\Rightarrow$

No. Definition		Symptom	Possible Cause
982	B	Localization error	
		The localization information in the nonvolatile ROM and in the NVRAM is different (☞ SP5-807-001).	- Localization setting not specified (The main power switch is turned on for the first time after the NVRAM is replaced.) - Incorrect localization setting - Defective NVRAM
984	B	Print image transfer error	
		Print images are not transferred.	- Defective controller - Defective BICU - Loose connection between the controller and the BICU
990	B	Software performance error **(B284/B288)**	
		The software attempted to perform an unexpected operation. **NOTE:** When this error occurs, the file name, address, and data will be stored in NVRAM. This information can be checked by using SP7-403. See the data and the situation in which this SC occurs. Then report the data and conditions to your technical control center.	- Software defective - Internal parameter incorrect - Insufficient working memory

$\Longrightarrow$

No. Definition		Symptom	Possible Cause
991	D	Software continuity error **(B284/B288)**	
		The software attempted to perform an unexpected operation. However, unlike SC990, the process can keep on running.	▪ Logged only; the machine can continue to operate
992	B	Undefined error **(B284/B288)**	
		An error not controlled by the system occurred (the error does not come under any other SC code).	▪ Defective software program
997	C	Application function selection error **(B284/B288)**	
		The application selected by a key press on the operation panel does not start or ends abnormally.	▪ Software for that application is defective ▪ An option required by the application (RAM, DIMM, board) is not installed. ▪ Too complicated nest of the fax group address 1. As for the fax operation problem, simplify the nest of the fax group address.

Trouble-shooting

⟹

No. Definition		Symptom	Possible Cause
998	B	Application start error **(B284/B288)**	
		After switching the machine on, the application does not start within 60 s. (No applications start or end normally.)	▪ Software for that application is defective ▪ An option required by the application (RAM, DIMM, board) is not installed. 1. Check the setting of SP5875-001. If the setting is set to "1 (OFF)", change it to "0 (OFF)".

SERVICE TABLES

SECTION 5	SERVICE TABLES (SP MODES) REVISION HISTORY	
Page	**Date**	**Added/Updated/New**
32 ~ 33	01/18/2007	SP5307
126 ~ 131	04/24/2007	Firmware Update Procedure

5. SERVICE TABLES

5.1 SERVICE PROGRAM

⭐ Important

- Do not let the user access the SP mode or the SSP mode. Only service representatives are allowed to access these modes. The machine operation is NOT guaranteed after any person other than service representatives accesses the SP mode.

5.1.1 USING SP AND SSP MODES

The following two modes are available:

- SP Mode (Service Program Mode): The SP Mode includes the programs that are necessary for standard maintenance work.
- SSP Mode (Special SP Mode): The SSP Mode includes SP-Mode programs and some special programs. You need some extra knowledge to use these special programs. For details, consult your supervisor.
Starting SP Mode

1. Type the keys as follows: 🖨→①→⓪→⑦
2. Press the ⊙ key and hold it down until the SP-mode menu is displayed (about 3 seconds).

Service Program

Selecting Programs

- When a blinking underscore (or several blinking underscores) is displayed, you can type a number from the numeric keypad [D].

- When the sign "◀▶/OK" [A] is displayed upper right corner, you can scroll through the menu by pressing the left-arrow key [B] or the right-arrow key [C]. To select program, press the OK key [F].

Specifying Values

1. After locating a program, press the OK key. A blinking underscore (or several blinking underscores) indicates which value you can change. The value in parentheses is the default value of the menu.

2. Type a necessary value from the numeric keypad. To switch between positive (plus) and negative (minus) values, press the ⊙ key.

3. To validate the value, press the OK key. To cancel the value, press the escape key [E].

Activating Copy Mode

You can activate the copy mode while the SP mode is running. When you do so, the copier outputs images or patterns that help you adjust the SP setting.

1. Press the ⊚ key. The copy mode is activated.

2. Specify copy settings and press the ⊚ key.

3. To return to the SP mode, press the ⊛▭ key.

⬇ Note

- You cannot end the SP mode while the copy mode is activated.

Quitting Programs/Ending (S) SP Mode

Press the ⊛▭ key or the escape key to quit the program. You can end the SP mode by pressing one of these keys several times.

5.1.2 COPIER SERVICE PROGRAM MODE TABLES

Conventions used in the tables:

▪ Asterisk (*): The settings are saved in the NVRAM. Most of them return to the default values when you execute SP5-801-002. CTL indicates that the data is contained in NVRAM on the controller board.

▪ DFU: The program is for design/factory use only. Do not change the settings.

▪ Brackets ([ ]): The brackets enclose the setting rage, default value, and minimum step with unit ([Minimum to Maximum / **Default** / Step]).

SP1-XXX (Feed)

1001*	Leading Edge Registration	[–9.0 to 9.0 / **0.0** / 0.1 mm/step]
1001 1	All Trays	Adjusts the leading-edge registration (☞ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").
1001 2	By-pass	
1001 3	Duplex	

1002*	side-to-side Registration	[–9.0 to 9.0 / **0.0** / 0.1 mm/step]
1002 1	1st Tray	Adjusts the side-to-side registration (☞ "Adjusting Copy Image Area" in the section "Replacement and Adjustment"). SP1-002-001 is applied to all trays. SP1-002-002 and 005 adjusts the difference from SP1-002-001.
1002 2	2nd Tray	
1002 5	By-pass	
1002 6	Duplex	Adjusts the side-to-side registration of the 2nd side in duplex copying. The 1st side is adjusted by SP1-002-001 through 005.

Service Tables

1003*	Paper Feed Timing	Adjusts the amount of paper buckle on the registration roller.
1003 1	1st tray	[0 to 10 / **5** / 1 mm/step]
1003 3	Bank Trays	[0 to 10 / **5** / 1 mm/step]
1003 4	By-pass	[0 to 10 / **5** / 1 mm/step]
1003 5	Duplex	[0 to 20 / **5** / 1 mm/step]

1103*	Fusing Idling	[**0** = No / 1 = Yes]	
1103 1	Enables or disables the contact-release control. The following table lists the results.		
	Setting	**0 = No**	**1 = Yes**
	C-R control	Works	Does not work
	Idling time	Shorter	Longer
	Fusing quality	Lower	Higher

1105*	Fusing Temperature Adjustment	
	Adjusts the target fusing temperature. Note that the thermistor is at the center of the hot roller.	
1105 1	Warm Up-Center	[140 to 180 / **160** / 1°C/step]
1105 3	Standby-Center	[140 to 160 / **150** / 1°C/step]
1105 5	Copying-Center	[140 to 180 / **160** / 1°C/step]
1105 7	Low Level 2-Center	[0 to 80 / **60** / 1°C/step]
1105 9	Thick-Center	[140 to 185 / **165** / 1°C/step]

1106	Display Fusing
1106 1	Displays the fusing temperature.

1107*	Fusing Soft Start **DFU**
	Adjusts the number of zero-cross cycles of the fusing lamp AC supply needed to bring the fusing lamp power to 100% while bringing the lamp up to the standby temperature or while copying. Increase this value if the machine is experiencing sudden power dropouts.

1107 1	Warm Up Soft Start	[0 = 10 times / 1 = 20 times / **2** = 50 times]
1107 2	Other Soft Start	[0 = 10 times / 1 = 20 times / **2** = 50 times / 3 = 1 time]
1107 3	Soft Stop Setting	[0: No / **1**: Yes]

1108*	Set-Fusing Start	[**0** = 1s / 1 = 1.5s / 2 = 2s]
1108 1	Specifies the interval for fusing-temperature control.	

1109	Nip Band Check
1109 1	Conducts the nip band check (☛ "Adjusting Nip Band" in the section "Replacement and Adjustment").

1110*	Fan Control Timer	[30 to 60 / **30** / 1 s/step]
1110 1	Specifies the fan control time. The fan motor keeps its operating speed for the specified time before changing the speed or stopping. The fan control timer prevents the exhaust fan from suddenly stopping. This function protects the copier from overheating.	

Service Tables

SM   **5-5**   **B262/B284/B288/B292**

1159*	Fusing Jam SC	[**0 =** No / 1 = Yes]
1159 1	Enables or disables consecutive jam detection at the fusing unit. If this SP is set to "1" (default: 0), consecutive fusing jam alarm occurs (SC559) when the machine detects three consecutive paper jams at the fusing unit.	

1902	Display-AC Frequency	
1902 1	Displays the fusing lamp power control frequency (as detected by the zero cross signal generator). The displayed value is 1/5 the actual frequency: 10 and lower = 50 Hz, 11 and higher = 60 Hz.	

1911*	By-pass Envelope	[**0** = No / 1= Yes]
1911 1	The program dedicated to envelope printing runs when you enable this program (SP1-911-001) and you select "Thick Paper" as the paper type of the by-pass tray (⊗/123 > System Settings > Tray Paper Settings > Paper Type: Bypass Tray).	

SP2-XXX (Drum)

2001*	Charge Roller Bias Adjustment	
2001 1	Printing	[–2100 to –1500 / **–1650** / 1 V/step]
	Adjusts the voltage applied to the charge roller for printing. The voltage changes automatically as charge-roller voltage control works. The value here is the base value for the charge-roller voltage control.	
2001 2	ID sensor pattern	[0 to 400 / **300** / 1 V/step]
	Adjusts the voltage applied to the charge roller for the ID sensor pattern (as part of charge-roller voltage correction). The charge-roller voltage is obtained by adding SP2-001-002 to the value of SP2-001-001.	

2101*	Erase Margin Adjustment	Adjusts the width of the erased area (☞ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").
2101 1	Leading edge	[0.0 to 9.0 / **3.0** / 0.1 mm/step] Specification: 2 ± 1.5 mm
2101 2	Trailing	[0.0 to 9.0 / 4.**0** / 0.1 mm/step] Specification: 2 +2.5/–1.5 mm
	The rear trailing edge is this value plus 1.2 mm.	
2101 3	Left side	[0.0 to 9.0 / **2.0** / 0.1 mm/step] Specification: 2 ± 1.5 mm
	The rear left edge is this value plus 0.3 mm.	
2101 4	Right side	[0.0 to 9.0 / **2.0** / 0.1 mm/step] Specification: 2 +2.5/–1.5 mm
	The rear right edge is this value plus 0.3 mm.	

2201*	Development Bias Adjustment	
2201 1	Printing	[–1500 to –200 / **–650** / 1 V/step]
	Adjusts the voltage applied to the development roller for printing. Image density becomes higher when you specify a smaller value (a greater absolute value). Image density becomes lower when you specify a greater value (a smaller absolute value).	
2201 2	ID sensor pattern	[–2 = LL (220 V) / -1 = L (260 V) / **0** = N (300 V) / 1 = H (340 V) / 2 = HH (380 V)]
	Adjusts the voltage applied to the development roller for the ID sensor pattern. The voltage applied is obtained by adding SP2-201-002 to SP2-201-1. The setting affects ID sensor pattern density, which in turn affects the toner supply.	

2213*	Outputs after Near End
2213 1	[**0** = 50 pages / 1 = 20 sheets] Sets the number of copy/print/fax pages that can be made after toner near-end has been detected. Reduce the number of pages if the user normally makes copies with a high image ratio.

2214	Developer Initialization
2214 1	Initializes the TD sensor toner supply target voltage and the TD sensor gain value. Execute this SP replacing the developer or the TD sensor.

2221		ID Sensor Error Analysis (☛ "ID Sensor Error Analysis (SP2-221)")
2221 1	Vsg	Displays the Vsg value.
2221 2	Vsp	Displays the Vsp value.
2221 3	PWM	Displays the PWM value.
2221 4	Vsdp	Displays the Vsdp value.
2221 5	Vt	Displays the Vt value.
2221 6	Vts	Displays the Vts value.

2301*		Transfer Current Adjustment (☛"Image Transfer Current").
2301 1	Normal paper	[–2 = –4 µA / –1 = –2 µA / **0 = 0** µ**A** / 1 = 2 µA / 2 = +4 µA]
	Adjusts the current applied to the transfer roller when feeding from a paper tray. Use a high setting if the user normally feeds relatively thick paper (within spec) from a paper tray	
2301 2	Thick/Special paper	[–2 = –4 µA / –1 = –2 µA / **0 = 0** µ**A** / 1 = 2 µA / 2 = +4 µA]
	Adjusts the current applied to the transfer roller when feeding from the by-pass tray. Use a high setting (a) if the user normally feeds relatively thick paper from the by-pass tray, or (b) if waste toner is re-attracted from the drum (which can occur when using transparencies).	
2301 3	Duplex	[–2 = –4 µA / –1 = –2 µ/ **0 = 0** µ**A** / 1 = 2 µA / 2 = +4 µA]
	Adjusts the current applied to the transfer roller when carrying out a duplex job. Use this SP if there is poor image transfer on the rear side of duplex copies.	

Service Tables

	Cleaning	[–10 to 1 / **–1** / 1 µA/step]
2301 4	Adjusts the current applied to the transfer roller for roller cleaning. Increase the current if toner remains on the roller after cleaning. (Remaining toner may cause dirty background on the rear side.)	

2802	Forced Developer Churning
2802 1	Initializes the developer and checks the TD sensor output (Vt). The machine mixes the developer for 2 minutes while reading and displaying the Vt value. The machine does not initialize the TD sensor output. If the machine has not been used for a long period, prints may have a dirty background. In a case like this, use this SP to mix the developer. The message "Completed" is displayed when the program ends normally.

2906*	Tailing Correction	
	Shift value	[0.0 to 1.0 / **0.0** / 0.1 mm/step]
2906 1	Shifts the image position at the intervals specified by SP2-906-002. When the copier is continuously printing vertical lines (such as in tables), the paper may not separate correctly. This SP can prevent this.	
	Interval	[1 to 10 / **1** / 1 page/step]
2906 2	Changes the interval of the image position shift specified by SP2-906-001.	

2908	Forced Toner Supply
2908 1	Supplies the toner to the development unit. The processing stops under either of the following conditions: ▪ The toner density in the development unit reaches the standard level. ▪ The processing has continued for two 2 minutes.

2915*	Polygon Mirror Motor Idling Time	[0 = None / **1** = 15 s / 2 = 25 s]
2915 1	Specifies the polygon mirror motor idling time. The polygon mirror motor starts its operation when an original is set, a key is pressed, or the platen cover or DF is opened. The motor stops if no manual operation is performed for the specified time. When you set "0", the motor does not stop while the copier is in the standby status.	

2921*	Toner Supply Mode	
2921 1	[**0** = Sensor 1 / 1 = Sensor 2 (**DFU**)] Selects the toner supply mode. Keep the default setting as long as the TD sensor is working.	

2922*	Toner Supply Time	[0.1 to 5.0 / **0.6** / 0.1 s/step]
2922 1	Adjusts the toner supply time. The toner supply motor remains on for the specified time. To validate this setting, select "0" in SP2-921-001. Specify a greater value if the user tends to make many copies having high proportions of solid black image areas.	

2926*	Standard Vt	[0.00 to 5.00 / **2.50** / 0.01 V/step] **DFU**
2926 1	Adjusts Vts (the Vt value for new developer). The TD sensor output is adjusted to this value during the TD sensor initial setting process. This SP is effective only when SP2-921001 is "0", "1", or "2".	

2927*	ID Sensor Control	[0 = No / **1** = Yes]
2927 1	Determines whether the ID sensor signal is referenced or not for the toner density control. Keep the default value in usual operations.	

Service Tables

2928	Toner End Clear
2928 1	Clears the following messages and counters without supplying the toner: ▪ Toner near end message ▪ Toner end message ▪ Toner near end counter ▪ Toner end counter Do not use this SP in usual operations. When the toner in the development unit is abnormally insufficient, the drum may attract the toner carrier to its surface. The toner carrier damages the drum surface..

2929*	Vref Limits	Adjust the upper or lower Vref limit.
2929 1	Upper	[0.50 to 3.50 / **3.20** / 0.01V/step] **DFU**
2929 2	Lower	[0.50 to 3.50 / **0.70** / 0.01V/step] **DFU**

2994*	ID Sensor Detection Temperature	[30 to 90 / **30** / 1 °C/step]
2994 1	Adjusts the temperature threshold. The ID sensor signal is not referenced when the fusing temperature is at the specified level or higher while the copier is recovering or starting up.	

2996*	Transfer Roller Cleaning	[**0** = No / 1 = Yes]
2996 1	Cleans or does not clean the transfer roller before each job. Select "1" if the backside of the paper becomes unclean when output. Note that the copier takes a longer time to output the first copy when you select "1". If you select "0", the transfer roller is never cleaned.	

2998*	Main Scan Magnification	[–0.5 to +0.5 / **0.0** / 0.1%/step]
2998 1	Adjusts the magnification (☞ "Adjusting Copy Image Area" in the section "Replacement and Adjustment"). The specification is 100 ± 1.0%.	

SP4-XXX (Scanner)

4008*	Sub-Scan Magnification (Scanner)	[-0.9 to +0.9 / **0.0** / 0.1%/step]
4008 1	Adjusts the sub-scan magnification (☛ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").	

4009*	Main Scan Magnification (Scanner)	[–0.9 to +0.9 / **0.0** / 0.1%/step]
4009 1	Adjusts the main-scan magnification (☛ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").	

4010*	Leading Edge Scan Registration	[–5.0 to +5.0 / **0.0** / 0.1 mm/step]
4010 1	Adjusts the leading edge registration (☛ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").	

4011*	Side-to-side Scanner Registration	[–2.0 to +2.0 / **0.0** / 0.1 mm/step]
4011 1	Adjusts the side-to-side registration for scanning in platen mode (☛ "Adjusting Copy Image Area" in the section "Replacement and Adjustment").	

4012*	Scan Erase Margin	[0 to 9.0 / **1.0** / 0.1 mm/step]
4012 1	Leading edge	
4012 2	Trailing edge	Adjusts the scanning margin. Generally, the scanning margin should be as little as possible. To adjust the image area, use SP2-101.
4012 3	Left Side	
4012 4	Right Side	

Service Program

4013	Scanner Free Run
4013 1	Conducts the scanner free run with the exposure lamp on.

4015*	White Plate Scanning	
4015 1	Start position	[–3.0 to +6.0 / **0.0** / 0.1 mm/step]
	Adjusts the scanning start position on the white plate. The base value is 17.8 mm from the scanner home position. This SP specifies the offset from this base value.	
4015 2	Scanning length	[–3.0 to +6.0 / **0.0** / 0.1 mm/step]
	Adjusts the distance of the white plate scan. The scan begins from the start position (SP4-015-001) and ends at the specified distance. The base value is 2.0 mm. This SP decides the offset from this base value. Specify 0 (zero) or a larger value.	

4428	Scan Auto Adjustment
4428 1	Conducts the automatic scanner adjustment. Use this SP after replacing the white plate (☛ "Scanning" in the section "Replacement and Adjustment").

4606	SBU Offset-Target	
4607 1	EVEN	[0 to 63 / **10** / 1 /step] Adjusts the target black level for each signal. These are used for offset adjustment in the SBU.
4607 2	ODD	
4607 3	RED	
4607 4	GREEN	
4607 5	BLUE	

4607	SBU Gain-Target	
4607 1	EVEN	[0 to 255 / **180** / 1 /step] Adjusts the target white level for each signal. These are used for gain adjustment in the SBU.
4607 2	ODD	
4607 3	RED	
4607 4	GREEN	
4607 5	BLUE	

4623	SBU Offset-Result	
4623 1	EVEN	[0 to 255 / **0** / 1 /step] Displays the result value of the offset adjustment in the SBU.
4623 2	ODD	
4623 3	RED	
4623 4	GREEN	
4623 5	BLUE	

Service
Tables

4628	SBU Gain-Result	
4628 1	EVEN	[0 to 255 / **0** / 1 /step] Displays the result value of the gain adjustment in the SBU.
4628 2	ODD	
4628 3	RED	
4628 4	GREEN	
4628 5	BLUE	

4640	SBU Offset-Loop	
4640 1	EVEN	[0 to 10 / **0** / 1 /step] Displays the number of the offset adjustment in the SBU.
4640 2	ODD	
4640 3	RED	
4640 4	GREEN	
4640 5	BLUE	

4641	SBU Gain-Loop	
4641 1	EVEN	[0 to 10 / **0** / 1 /step] Displays the number of the gain adjustment in the SBU.
4641 2	ODD	
4641 3	RED	
4641 4	GREEN	
4641 5	BLUE	

4642	SBU Offsetpre-Loop	
4642 1	EVEN	[0 to 3 / **0** / 1 /step] Displays the number of the pre-offset adjustment in the SBU.
4642 2	ODD	
4642 3	RED	
4642 4	GREEN	
4642 5	BLUE	

4646	SBU Adj Error	
4646 1	Offsetpre-Mono	[**0** = Success / 1 = Failure] Displays the result of SBU adjustment.
4646 2	Offsetpre-Color	
4646 3	Offset-Mono	
4646 4	Offset-Color	
4646 5	Gain-Mono	
4646 6	Gain-Color	

4654*	SBU Offset-Adjust	
4654 1	EVEN	[0 to 255 / **-** / 1 /step] Displays the offset value of the offset adjustment in the SBU.
4654 2	ODD	
4654 3	RED	
4654 4	GREEN	
4654 5	BLUE	

Service Program

4658*	SBU Gain-Adjust	
4658 1	EVEN	[0 to 511 / **-** / 1 /step] Displays the gain value of the gain adjustment in the SBU.
4658 2	ODD	
4658 3	RED	
4658 4	GREEN	
4658 5	BLUE	

4685*	Gray Balance-Book	
4685 1	RED	[128 to 383 / **256** / 1 /step] Adjusts the coefficient of the gray balance adjustment for the book scanning.
4685 2	GREEN	
4685 3	BLUE	

4686*	Gray Balance-DF	
4686 1	RED	[128 to 383 / **256** / 1 /step] Adjusts the coefficient of the gray balance adjustment for the DF scanning.
4686 2	GREEN	
4686 3	BLUE	

4687*	White Balance	
4687 1	Adjust	[222 to 281 / **256** / 1 /step] Adjust the correction value for the white plate adjustment.
4687 2	Result	Displays the current value of the white plate adjustment. If SP4-428 has not been done, this value is "0".

4690	White Peek Init	
4658 1	EVEN	[0 to 255 / **-** / 1 /step] Displays the white offset value of the pre-offset adjustment in the SBU.
4658 2	ODD	
4658 3	RED	
4658 4	GREEN	
4658 5	BLUE	

4693	Black Ave Init	
4658 1	EVEN	[0 to 255 / **-** / 1 /step] Displays the black offset value of the pre-offset adjustment in the SBU.
4658 2	ODD	
4658 3	RED	
4658 4	GREEN	
4658 5	BLUE	

4902*	Exposure Lamp ON	[**0**: OFF / 1: ON]
4902 1	Turns the exposure lamp on or off. To turn on the exposure lamp, specify "1"; to turn it off specify "0".	

4903*	ADS Level	[0 to 255 / **252** / 1/step]
4903 1	Adjusts the ADS level.	

4904*	ADS Lower Limit	[0 to 255 / **80** / 1/step]
4904 1	Adjusts the ADS lower limit.	

Service Tables

4905*	ADS Level	[**0** = All / 1 = One]
4905 1	Checks the whole area (0 = All) or the specific areas (1 = One) to adjust the ADS level. The specific areas are as follows: • ARDF: ±37.5 mm from the center • Platen Cover: 15 to 90 mm from the left edge	

4921*	Image Adj Selection	
001	Copy	[0 to 10 / 0 / 1]
001	Selects which mode the settings from SP4-922 to SP4-932 are used for. 0 = None, 1 = Text 1, 2 =Text 2, 3= Photo 1, 4 = Photo 2, 5 = Photo 3, 6 = Special 1, 7 = Special 2, 8 = Special 3, 9 = Special 4, 10 = Special 5	
002	Fax	[0 to 5 / **0** / 1]
002	Selects which mode the settings from SP4-922 to SP4-932 are used for. 0 = None, 1 = Text 1, 2 = Text 2, 3 = Photo 1, 4 = Photo 2, 5 = Special 1	
003	Scanner (Mono)	[0 to 4 / **0** / 1]
003	Selects which mode the settings from SP4-922 to SP4-932 are used for. 0 = None, 1 = Text 1, 2 = Text 2, 3= Photo 1, 4 = Photo 2	
004	Scanner (Color)	[0 to 2 / **0** / 1]
004	Selects which mode the setting of SP4-935 is used for. 0 = None, 1 = Color Text, 2 = Color Photo	
005	Scanner (Gray Scale)	[0 or 1 / **0** / -]
005	Selects which mode the setting of SP4-936 is used for. 0 = None, 1 = Gray Scale	

4922*	Scanner Gamma	
	Selects "text" or "photo" as the priority output mode. This setting is applied to all image processing modes of SP4-921.	
001 Copy		
002 Fax		[**0**=System default/ 1=Text/ 2=Photo]
003 Scanner		

4923*	Notch Selection	
	Selects the value of the center ID adjustment notch for the ID adjustment LEDs.	
	▪ Normally the center notch is 3 (range 1-5). If –1 is selected, each notch shifts down (becomes lighter). If +1 is selected, each notch shifts up (becomes darker).	
	▪ This setting is applied to all image processing modes of SP4-921.	
001 Copy		
002 Fax		[–1 = Light / **0** = Normal / +1 = Dark]
003 Scanner		

Service Tables

4926*	Texture Removal	
	Adjusts the texture removal level that is used with error diffusion. 0: The default value for each mode is used. Text 1, Photo 2, Special 2, and Special 5 have a default of 3 and Photo 1-3 have a default of 1. 1: No removal applied. 2 to 5: Removal applied at the level specified here. The higher the setting (level), the less clear the image will become (more texture removal). This setting is only applied to the originals in SP4-921.	
001	Copy	[0 to 6 / **0** / 1/step]
002	Fax	
003	Scanner	

4927*	Line Width Correction	
	Adjusts the line width correction algorithm. Positive settings produce thicker lines; negative settings produce thinner lines. This setting is only applied to the originals in SP4-921.	
001	Copy	[–2 to 2 / **0** / 1/step]
002	Fax	
003	Scanner	

4928*	Independent Dot Erase	
	Selects the dot erase level. Higher settings provide greater erasure. This setting is only applied to the originals in SP4-921.	
001	Copy	[–2 to 2 / **0** / 1/step]
002	Fax	
003	Scanner	

4929*	Positive/Negative	[**0 = No**, 1 = Yes]
	Inverts white and black. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	

4930*	Sharpness-Edge	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

4931*	Sharpness-Solid	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

4932*	Sharpness-Low ID	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

Service Tables

4935*	Color Image Adjust	
001	Main Scan MTF Level	[0 to 3 / **0** / 1/step]
	Adjust the MTF level for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Weak, 2: Middle, 3: Strong	
002	Main Scan MTF Strength	[0 to 5 / **0** / 1/step]
	Adjust the MTF strength for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
003	Sub Scan MTF Level	[0 or 1 / **0** / 1/step]
	Turns on or off the MTF for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: No, 1: Yes	
004	Sub Scan MTF Strength	[0 to 5 / **0** / 1/step]
	Adjust the MTF strength for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
005	Smooth Level	[0 to 2 / **0** / 1/step]
	Adjust the smooth level. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Weak, 2: Strong	
006	Brightness	[0 to 255 / **128** / 1/step]
	Adjust the brightness level. This setting is only activated for the specified mode with SP4-921-004.	
007	Contrast	[0 to 255 / **128** / 1/step]
	Adjust the contrast level. This setting is only activated for the specified mode with SP4-921-004.	

4936*	Gray Scale Image Adjust	
001	Main Scan MTF Level	[0 to 15 / **0** / 1/step]
	Adjust the MTF level for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Level 1 to 15: Level 15	
002	Main Scan MTF Strength	[0 to 5 / **0** / 1/step]
	Adjust the MTF strength for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
003	Sub Scan MTF Level	[0 to 13 / **0** / 1/step]
	Adjust the MTF level for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: No, 1: Level 1 to 13: Level 13	
004	Sub Scan MTF Strength	[0 to 5 / **0** / 1/step]
	Adjust the MTF strength for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
005	Smooth Level	[0 to 7 / **0** / 1/step]
	Adjust the smooth level. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Level 1 to 7: Level 7	
006	Brightness	[0 to 255 / **128** / 1/step]
	Adjust the brightness level. This setting is only activated for the specified mode with SP4-921-004.	
007	Contrast	[0 to 255 / **128** / 1/step]
	Adjust the contrast level. This setting is only activated for the specified mode with SP4-921-004.	

Service Tables

4941*	White Line Erase	[0 to 2 / **1** / 1/step]
4941 1	Selects the white line erase level. 0: None 1: Weak 2: Strong ▪ This setting is effective for all modes. ▪ 0: White line erase is not used, and white level correction is used instead· ▪ This setting is applied regardless of what mode has been selected in SP4-921.	

4942*	Black Line Erase	[0 to 3 / **2** / 1/step]
4942 1	Selects the black line erase level. This setting is effective only when originals are scanned by the DF. [0 = No / 1 = Very weak / 2 = Weak / 3 = Strong] This setting is applied regardless of what mode has been selected in SP4-921.	

SP5-XXX (Mode)

5001	All Indicators On
5001 1	Turns on all LEDs. The LCDs turn on and off every 3 seconds. Press the reset key to end this program.

5024*	mm/inch Selection
001	Selects whether mm or inches are used in the display. ⬇ Note ▪ After selecting the number, you must turn the main power switch off and on. Europe/Asia model: [**0**: **mm** / 1: inch] American model: [0: mm / **1**: **inch**]

5044*	Panel Bit Switch	Note: B288 model only.

5045*	Counter Model	[0 to 2 / **0** / 1 /step] 0: 1 counter (Total) 1: 2 counters (Total and Prints) 2: 2 counters GPC
5045 1	Displays the number of the installed counter.	

5051	Refill Toner Displ (Refill Toner Detection Display)		
	Enables or disables the toner refill detection display.		
001	Toner Refill Detection Display	CTL	[0 or 1 / **0** /-] 0: ON, 1: OFF

Service Tables

5055	Display IP address		
001	Display IP address	CTL	Displays or does not display the IP address on the LCD. [0 or 1 / **0** / -] 0: No (Not display), 1: Yes (Display)

5056	Coverage Counter		
001	Coverage Counter	CTL	Displays or does not display the coverage counter on the LCD. [0 or 1 / **0** / -] 0: Not display, 1: Display

5112	Non-Std. Paper Set (Non-Standard Paper Set)	
001	Determines whether a non-standard paper size can be input for the universal cassette trays (Tray 2, Tray 3) [0 or 1 / **0** / -] 0: No 1: Yes. If "1" is selected, the customer will be able to input a non-standard paper size using the UP mode.	

5113	Optional Counter Type		
001	Optional Counter Type 1	CTL	This program specifies the counter type. **0: None** 1: Key card (RK 3, 4) 2: Key card (down) 3 to 10: (Japan only) 11: Exp. Key card (Add) 12: Exp. Key card (Deduct)
002	Optional Counter Type 2	CTL	This program specifies the external counter type. **0: None** 1: Expansion Device type 1 2: Expansion Device type 2 3: Expansion Device type 3

5114	Optional Counter I/F	CTL	[**0**: Not installed/ 1: Installed (scanning accounting)]
001	MF Key Card Ext. Japan use		

5118	Disable Copying	CTL	[**0**: Not disabled/ 1: Disabled]
001	This program disables copying.		

Service Tables

5120*	Clear For Count Remove	[**0**=Yes / 1=Standby only / 2=No]
5120 1	Specifies the condition to reset the copy job settings when the key counter is removed. • 0 = Yes: The settings are cleared when the counter is removed. • 1 = Standby only: The settings are cleared when the counter is removed at the end of a job. • 2 = No: The settings are not cleared under either condition. As for duplex copying, the job settings are always preserved regardless of these setting.	

5121*	Counter Up Timing	[**0** = Feed In / 1 = Exit]
5121 1	Selects the count-up timing. • 0 = Feed: At each paper feed • 1= Exit: At each paper exit	

5127	APS	

5150	By-pass Long Paper	CTL	[**0** = OFF / 1 = ON]
001	Determines whether the transfer sheet from the by-pass tray is used or not. Normally the paper length for sub scanning paper from the by-pass tray is limited to 600 mm, but this can be extended with this SP to 1260 mm.		

5167	Fax PrintingCnt Off		
	Enables or disables the automatic print out without an accounting device. This SP is used when the receiving fax is accounted by an external accounting device.		
001	Fax Printing Counter Off	CTL	[0 or 1 / **0** / –] 0: Automatic printing 1: No automatic printing

5169	CE Login		
	If you change the printer bit switches, you must 'log in' to service mode with this SP before you go into the printer SP mode.		
001	CE Login	CTL	[0 or 1 / **0** / -] 0: Disabled 1: Enabled

5188	Copy NV Version		
001	Copy NV Version	CTL	Displays the NVRAM version in the controller board.

5228	Scan Binary Bound (B288 model only)	0: 8 bit 1: 32 bit

5302	Set Time		
	Adjusts the RTC (real time clock) time setting for the local time zone. Examples: For Japan (+9 GMT), enter 540 (9 hours x 60 min.) DOM: +540 (Tokyo) NA :-300 (New York) EU :+ 60 (Paris) CH :+480 (Peking) TW :+480 (Taipei) AS :+480 (Hong Kong)		
002	Time Difference	CTL #	[-1440 to 1440 / **Area** / 1 min./step]

5307	Summer Time		
001	ON/OFF	-	[0 or 1 / **NA, EU, ASIA** / 1 /step] 0: Disabled 1: Enabled NA and EUR: 1, ASIA: 0
	Enables or disables the summer time mode. ↓ Note ▪ Make sure that both SP5-307-3 and -4 are correctly set. Otherwise, this SP is not activated even if this SP is set to "1".		
003	Start	-	**03200210**
	Specifies the start setting for the summer time mode. There are 8 digits in this SP. For months 1 to 9, the "0" cannot be input in the first digit, so the eight-digit setting for -2 or -3 becomes a seven-digit setting. 1st and 2nd digits: The month. [1 to 12] 3rd digit: The week of the month. [1 to 5] 4th digit: The day of the week. [0 to 6 = Sunday to Saturday] 5th and 6th digits: The hour. [00 to 23] 7th digit: The length of the advanced time. [0 to 9 / 1 hour /step] 8th digit: The length of the advanced time. [0 to 5 / 10 minutes /step] For example: 3500010 (EU default) The timer is advanced by 1 hour at am 0:00 on the 5th Sunday in March ▪ The digits are counted from the left. ▪ Make sure that SP5-307-1 is set to "1".		

		End	-	**11100200**
⟹	004	Specifies the end setting for the summer time mode. There are 8 digits in this SP. 1st and 2nd digits: The month. [1 to 12] 3rd digit: The week of the month. [0 to 5] 4th digit: The day of the week. [0 to 6 = Sunday to Saturday] 5th and 6th digits: The hour. [00 to 23] The 7th and 8th digits must be set to "00". ▪ The digits are counted from the left. ▪ Make sure that SP5-307-1 is set to "1".		

5401	Access Control		
	When installing the SDK application, SAS (VAS) adjusts the following settings. **DFU**		
006	C	CTL	
016	DS	CTL	
026	F	CTL	
036	S	CTL	**SSP:** These SPs are not disclosed due to the security protection.
046	P	CTL	
076	SDK 1	CTL	
086	SDK 2	CTL	
096	SDK 3	CTL	
200	SDK1 Unique ID	CTL	This ID is overwritten by SAS (VAS) when you install or uninstall the SDK application.
201	SDK1 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**

Service
Tables

210	SDK2 Unique ID	CTL	**DFU**
211	SDK2 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**
220	SDK3 Unique ID	CTL	**DFU**
221	SDK3 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**

5404	User Code Clear
001	Clears the counts for the user codes assigned by the key operator to restrict the use of the machine. Press [Execute] to clear.

5501	PM Alarm Interval	CTL	-
001	Printout		[0 to 9999 / **0** / 1 /step] 0: Alarm off 1 to 9999: Alarm goes off when the PM counter reaches the specified value (1 to 9999) x 1000.
002	ADF		[0 or 1 / **1** / –] 0: No alarm sounds 1: Alarm sounds after the number of originals passing through the A(R)DF $\geq$ 10,000

5504	Jam Alarm	CTL	-
001	Sets the alarm to sound for the specified jam level (document misfeeds are not included). [0 to 3 / **3** / 1 /step] 0: Zero (Off), 1: Low (2.5K jams), 2: Medium (3K jams), 3: High (6K jams)		

5505*	Error Alarm
001	Sets the error alarm level. The error alarm counter counts "1" when any SC is detected. However, the error alarm counter decreases by "1" when any SC is not detected during specified sheets of copies (for example, default 1500 sheets). The error alarm occurs when the SC error alarm counter reaches "5". [0 to 255 / **10** / 100 copies per step]

5507	Supply Alarm	CTL	-
001	Paper Size	**0**: Off, 1: On,	
003	Toner	**0**: Off, 1: On,	
005	Drum	**0**: Off, 1: On,	
128	Interval :Others		
132	Interval :A3	[250 to 10000 / **1000** / 1 /step]	
133	Interval :A4		
134	Interval :A5		

Service
Tables

141	Interval :B4	[250 to 10000 / **1000** / 1 /step]
142	Interval :B5	
160	Interval :DLT	
164	Interval :LG	
166	Interval :LT	
172	Interval :HLT	

5508*	Auto Call Setting	CTL	-

001*	Jam Remains	0: Disable, **1**: Enable
	Enables/disables initiating a call for an unattended paper jam.	

002*	Frequent Jams	0: Disable, **1**: Enable
	Enables/disables initiating a call for consecutive paper jams.	

003*	Door Open	0: Disable, **1**: Enable
	Enables/disables initiating a call when the front door remains open.	

011*	Jam Remains: Time	[03 to 30 / **10** / 1 minute /step]
	Sets the time a jam must remain before it becomes an "unattended paper jam". This setting is enabled only when SP5508 004 is set to 1.	

012*	Freq Jam: # of Time	[02 to 10 / **5** / 1 /step]
	Sets the number of consecutive paper jams required to initiate a call. This setting is enabled only when SP5508 004 is set to 1.	

013*	Door Open: Time	[03 to 30 / **10** / 1 minute/step]
	Sets the length of time the door remains open before the machine initiates a call. This setting is enabled only when SP5508 004 is set to 1.	

5515	SC/Alarm Setting	CTL	-
	With @Remote in use, these SP codes can be set to issue an SC call when an SC error occurs. If this SP is switched off, the SC call is not issued when an SC error occurs.		
001	SC Call	[0 or 1 / **1** / -] 0: Off, 1: On	
002	Service Parts Near End		
003	Service Parts End		
004	User Call		
006	Communication Test		
007	Machine Information		
008	Alarm Notice		
010	Supply Automatic Order	[0 or 1 / **0** / -] 0: Off,1: On	
011	Supply Management Report		
012	Jam/Door Open Call	[0 or 1 / **1** / -] 0: Off,1: On	

5791	DCS Debug Setting	Note: B288 model only.

5792	MCS Debug Switch	Note: B288 model only.

5793	ECS Debug Switch	Note: B288 model only.

Service Tables

5801	[Memory Clear] Before executing any of these SP codes, print an SMC Report.		
001	All Clear		
	Initializes items SP5801-002 to -014 below. Turn the main power switch off and on after executing this SP.		
003	SCS	-	-
	Clears the system settings.		
004	IMH	-	-
	Clears IMH data. **DFU**		
005	MCS	-	-
	Clears MCS data. **DFU**		
006	Copier	-	-
	Clears the copy application settings.		
007	Fax	-	-
	Clears the fax application settings.		
008	Printer	-	-
	Clears the printer application settings.		
009	Scanner	-	-
	Clears the scanner application settings.		
010	GWWS/NFA	-	-
	Delete the netfile application management files and thumbnails, and initializes the job login ID.		

011	NCS	-	-
	Initializes the system default and interface settings (IP address also), SmartNetMonitor for Admin, WebImageMonitor settings, and the TELNET settings. The name of Apple talk is not cleared only if this SP is executed. Turns off and on after executing this SP.		
012	R-FAX	-	-
	Initializes the job login ID, SmartNetMonitor for Admin, job history, and local storage file numbers.		
014	Clear DCS Setting	-	-
	Initializes the DCS (Delivery Control Service) settings.		
015	Clear UCS Setting	-	-
	Initializes the UCS (User Information Control Service) settings.		
016	MIRS Setting	-	-
	Initializes the MIRS (Machine Information Report Service) settings.		
017	CCS	-	-
	Initializes the CCS (Certification and Charge-control Service) settings.		
018	SRM Memory Clr	-	-
	Initializes the SRM (System Resource Manager) settings.		
019	LCS	-	-
	Initializes the LCS (Log Count Service) settings.		

5802	Machine Free Run	[0 or 1 / **0** / -] 0: No, 1: Yes
5802 1	Conducts machine free run (including the scanner unit). Set "1" and then press "⌽" key. Press "⌽" key again to start "Free Run". When this SP is set to "0", the machine operates normally even "⌽" key is pressed.	

5803	Input Check
	☞ "Input Check" in this chapter.

5804	Output Check
	☞ "Output Check" in this chapter.

5807*	Area Selection
5807 1	Selects the display language. 2 North America, 3 Europe, 5 Asia, 6 China SP5-807-001 is not cleared by SP5-801-002. **NOTE:** SC982 is displayed if you specify a language that is inconsistent with your local model.

5811*	Machine No. Setting
5811 1	☞ "Machine No. Setting " in this section.

5812	Service TEL		
001	Telephone	CTL	-
	Sets the telephone number for a service representative. This number is printed on the Counter List, which can be printed with the user's "Counter" menu. This can be up to 20 characters (both numbers and alphabetic characters can be input).		
002	Facsimile	CTL	-
	Sets the fax or telephone number for a service representative. This number is printed on the Counter List. This can be up to 20 characters (both numbers and alphabetic characters can be input).		
003	Supply	CTL	-
	Use this to input the telephone number of your supplier for consumables. Enter the number and press"StringIn" key. Press the "Clear modes" key to delete the telephone number.		
004	Sales	CTL	-
	Use this to input the telephone number of your sales agency. Enter the number and press #. Press the "Clear modes" key to delete the telephone number.		

Service
Tables

5816	[NRS Function]	CTL	-
001	I/F Setting		Selects the remote service setting. [0 to 2 / **2** / 1 /step] 0: Remote service off 1: CSS remote service on 2: @Remote service on
002	CE Call		Performs the CE Call at the start or end of the service. [0 or 1 / **0** / 1 /step] 0: Start of the service, 1: End of the service ⬇ Note ▪ This SP is activated only when SP 5816-001 is set to "2".
003	Function Flag		Enables or disables the remote service function. [0 or 1 / **0** / 1 /step] 0: Disabled, 1: Enabled
007	SSL Disable		Uses or does not use the RCG certification by SSL when calling the RCG. [0 or 1 / **0** / 1 /step] 0: Uses the RCG certification 1: Does no use the RCG certification
008	RCG Connect Timeout		Specifies the connect timeout interval when calling the RCG. [1 to 90 / **10** / 1 second/step]
009	RCG Write Timeout		Specifies the write timeout interval when calling the RCG. [1 to 100 / **60** / 1 second/step]
010	RCG Read Timeout		Specifies the read timeout interval when calling the RCG. [1 to 100 / **60** / 1 second/step]

011	Port 80	Enables/disables access via port 80 to the SOAP method. [0 or 1 / **0** / –] 0: Disabled, 1: Enabled
021	Function Flag	
	This SP displays the embedded RCG installation end flag. 1: Installation completed 2: Installation not completed	
022	Install Status	
	This SP displays the RCG device installation status. 0: RCG device not registered 1: RCG device registered 2: Device registered	
023	Connect Mode (N/M)	
	This SP displays and selects the embedded RCG connection method. **0**: Internet connection 1: Dial-up connection	
061	NotiTime ExpTime **DFU**	
	Proximity of the expiration of the certification.	
062	HTTP Proxy Use	
	This SP setting determines if the proxy server is used when the machine communicates with the service center.	

Service
Tables

063	HTTP Proxy Host
	This SP sets the address of the proxy server used for communication between embedded RCG-N and the gateway. Use this SP to set up or display the customer proxy server address. The address is necessary to set up embedded RCG-N. **↓ Note** ▪ The address display is limited to 127 characters. Characters beyond the 127th character are ignored. ▪ This address is customer information and is not printed in the SMC report.
064	HTTP Proxy Port Number
	This SP sets the port number of the proxy server used for communication between embedded RCG N and the gateway. This setting is necessary to set up embedded RCG-N. **↓ Note** ▪ This port number is customer information and is not printed in the SMC report.
065	HTTP Proxy Aut Usr
	This SP sets the HTTP proxy authentication user name. **↓ Note** ▪ The length of the name is limited to 31 characters. Any character beyond the 31st character is ignored. ▪ This name is customer information and is not printed in the SMC report.
066	HTTP Proxy Aut Pass
	This SP sets the HTTP proxy authentication password. **↓ Note** ▪ The length of the password is limited to 31 characters. Any character beyond the 31st character is ignored. ▪ This name is customer information and is not printed in the SMC report.

067	Cer Updt Cond	
	Displays the status of the certification update.	
	0	The certification used by embedded RCG is set correctly.
	1	The certification request (setAuthKey) for update has been received from the GW URL and certification is presently being updated.
	2	The certification update is completed and the GW URL is being notified of the successful update.
	3	The certification update failed, and the GW URL is being notified of the failed update.
	4	The period of the certification has expired and a new request for an update is being sent to the GW URL.
	11	A rescue update for certification has been issued and a rescue certification setting is in progress for the rescue GW connection.
	12	The rescue certification setting is completed and the GW URL is being notified of the certification update request.
	13	The notification of the request for certification update has been completed successfully, and the system is waiting for the certification update request from the rescue GW URL
	14	The notification of the certification request has been received from the rescue GW controller, and the certification is being stored.
	15	The certification has been stored, and the GW URL is being notified of the successful completion of this event.
	16	The storing of the certification has failed, and the GW URL is being notified of the failure of this event.

Service
Tables

Service Program

	67	17	The certification update request has been received from the GW URL, the GW URL was notified of the results of the update after it was completed, but a certification error has been received, and the rescue certification is being recorded.
		18	The rescue certification of No. 17 has been recorded, and the GW URL is being notified of the failure of the certification update.
	068		Cer Abnml Cause
			Displays a number code that describes the reason for the request for update of the certification.
		0	Normal. There is no request for certification update in progress.
		1	Request for certification update in progress. The current certification has expired.
		2	An SSL error notification has been issued (after the certification has expired).
		3	Notification of shift from a common authentication to an individual certification.
		4	Notification of a common certification without ID2.
		5	Notification that no certification was issued.
		6	Notification that GW URL does not exist.
	069		Cert: Updtt ReqID
			The ID of the request for certification.
	083		Firm Updating
			Displays the status of the firmware update.

084	Firm UpFlg No HDD
	This setting determines if the firmware can be updated, even without the HDD installed.

085	Firm Up Usr Conf
	This SP setting determines if the operator can confirm the previous version of the firmware before the firmware update execution. If the option to confirm the previous version is selected, a notification is sent to the system manager and the firmware update is done with the firmware files from the URL.

086	Firmware Size
	Allows the service technician to confirm the size of the firmware data files during the firmware update execution.

087	CERT: Macro Version
	Displays the macro version of the @Remote certification.

088	CERT: PAC Version
	Displays the PAC version of the @Remote certification.

089	CERT: ID2 Code
	Displays ID2 for the @Remote certification. Spaces are displayed as underscores (_). Asterisks (*) indicate that no @Remote certification exists.

090	CERT: Subject
	Displays the common name of the @Remote certification subject. CN = the following 17 bytes. Spaces are displayed as underscores (_). Asterisks (*) indicate that no DESS exists.

091	CERT: Serial Number
	Displays serial number for the @Remote certification. Asterisks (*) indicate that no DESS exists.

Service
Tables

092	CERT: Issuer
	Displays the common name of the issuer of the @Remote certification. CN = the following 30 bytes. Asterisks (*) indicate that no DESS exists.
093	CERT: St ExpTime
	Displays the start time of the period for which the current @Remote certification is enabled.
094	CERT: End ExpTime
	Displays the end time of the period for which the current @Remote certification is enabled.
150	Ins Country
	Select from the list the name of the country where embedded RCG-M is installed in the machine. After selecting the country, you must also set the following SP codes for embedded RCG-M: ▪ SP5816-153 ▪ SP5816-154 ▪ SP5816-161 0: Japan, 1: USA, 2: Canada, 3: UK, 4: Germany, 5: France 6: Italy, 7: Netherlands, 8: Belgium, 9: Luxembourg, 10: Spain
151	Aut Line Detect
	Press [Execute]. Setting this SP classifies the telephone line where embedded RCG-M is connected as either dial-up or push type, so embedded RCG-M can automatically distinguish the number that connects to the outside line. ▪ The current progress, success, or failure of this execution can be displayed with SP5816 152. ▪ If the execution succeeded, SP5816 153 will display the result for confirmation and SP5816 154 will display the telephone number for the connection to the outside line.

152	Line Detect Rst	
	Displays a number to show the result of the execution of SP5816 151. Here is a list of what the numbers mean.	
	0: Success 1: In progress (no result yet). Please wait. 2: Line abnormal 3: Cannot detect dial tone automatically 4: Line is disconnected 5: Insufficient electrical power supply 6: Line classification not supported 7: Error because fax transmission in progress – ioctl() occurred. 8: Other error occurred 9: Line classification still in progress. Please wait.	
153	Dial/Push Select	
	This SP displays the classification (tone or pulse) of the telephone line to the access point for embedded RCG-M. The number displayed (0 or 1) is the result of the execution of SP5816 151. However, this setting can also be changed manually. [0 to 1 / **0** / 1 /step] 0: Tone Dialing Phone 1: Pulse Dialing Phone Inside Japan "2" may also be displayed: 0: Tone Dialing Phone 1: Pulse Dialing Phone 10PPS 2: Pulse Dialing Phone 20PPS	

Service
Tables

154	Outline Phone #
	The SP sets the number that switches to PSTN for the outside connection for embedded RCG-M in a system that employs a PBX (internal line). ▪ If the execution of SP5816-151 has succeeded and embedded RCG-M has connected to the **external** line, this SP display is completely blank. ▪ If embedded RCG-M has connected to an **internal** line, then the number of the connection to the external line is displayed. ▪ If embedded RCG-M has connected to an external line, a comma is displayed with the number. The comma is inserted for a 2 sec. pause. ▪ The number setting for the external line can be entered manually (including commas).
155	Remove Service: PPP Recognition Timeout
	SSP: Sets the length of the timeout for the embedded RCG-M connection to its access point. The timeout is the time from when the modem sends the ATD to when it receives the result code. [1 to 65536 / **60** / 1 /step]
156	Dial Up User
	Use this SP to set a user name for access to remote dial up. Follow these rules when setting a user name: ▪ Name length: Up to 32 characters ▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").
157	Dial Up Password
	Use this SP to set a password for access to remote dial up. Follow these rules when setting a user name: ▪ Name length: Up to 32 characters ▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").

161	**Phone Number**
	Use this SP to set the telephone number of the line where embedded RCG-M is connected. This number is transmitted to and used by the Call Center to return calls. Limit: 24 numbers (numbers only)
162	**Ans Timing Adj**
	When the Call Center calls out to a embedded RCG-M modem, it sends a repeating ID tone (*#1#). This SP sets the time the line remains open to send these ID tones after the number of the embedded RCG-M modem is dialed up and connected. [0 to 24/ **1** /1 /step] The actual amount of time is this setting + 2 sec. For example, if you set "2" the line will remain open for 4 sec.
163	**Access Point**
	This is the number of the dial-up access point for embedded RCG-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used. Default: 0 Allowed: Up to 16 alphanumeric characters
164	**Comm Line**
	This SP sets the connection conditions for the customer. This setting dedicates the line to embedded RCG-M only, or sets the line for sharing between embedded RCG-M and a fax unit. [0 or 1 / **0** / -] 0: Line shared by embedded RCG-M/Fax 1: Line dedicated to embedded RCG-M only ↓ Note ▪ If this setting is changed, the copier must be cycled off and on. ▪ SP5816 187 determines whether the off-hook button can be used to interrupt an embedded RCG-M transmission in progress to open the line for fax transaction.

Service
Tables

173	Modem Serial Number
	This SP displays the serial number registered for the embedded RCG-M.
174	Lmt Resend Cncl
	Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, embedded RCG-M generates charges based on transmission time for the customer, so a limit is placed upon the time allowed for these transactions. If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.
187	FAX TX Priority
	This SP determines whether pushing the off-hook button will interrupt an embedded RCG-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816-164 is set to "0". [0 or 1/ **0** / -] 0: Disable. Setting the fax unit off-hook does not interrupt a fax transaction in progress. If the off-hook button is pushed during a embedded RCG-M transmission, the button must be pushed again to set the fax unit on-hook after the embedded RCG-M transmission has completed. 1: Enable. When embedded RCG-M shares a line with a fax unit, setting the fax unit off-hook will interrupt a embedded RCG-M transmission in progress and open the line for a fax transaction.
200	Polling Man Exc
	Executes the polling test.

201	Instl: Condition	
	Displays a number that indicates the status of the @Remote service device.	
	0: Neither the registered device by the external RCG nor embedded RCG device is set.	
	1: The embedded RCG device is being set. Only Box registration is completed. In this status the this unit cannot answer a polling request from the external RCG.	
	2: The embedded RCG device is set. In this status the external RCG unit cannot answer a polling request.	
	3: The registered device by the external RCG is being set. In this status the embedded RCG device cannot be set.	
	4: The registered module by the external RCG has not started.	
202	Instl: ID#	
	Allows entry of the number of the request needed for the embedded RCG.	
203	Instl: Reference	
	Executes the inquiry request to the @Remote GateWay URL.	
204	Instl: Ref Rslt	
	Displays a number that indicates the result of the inquiry executed with SP5816-203.	
	0: Succeeded	
	1: Inquiry number error	
	2: Registration in progress	
	3: Proxy error (proxy enabled)	
	4: Proxy error (proxy disabled)	
	5: Proxy error (Illegal user name or password)	
	6: Communication error	
	7: Certification update error	
	8: Other error	
	9: Inquiry executing	

Service
Tables

205	**Instl: Ref Section**
	Displays the result of the notification sent to the device from the GW URL in answer to the inquiry request. Displayed only when the result is registered at the GW URL.
206	**Instl: Rgstltn**
	Executes Embedded RCG Registration.
207	**Instl: Rgstltn Rst**
	Displays a number that indicates the registration result. 0: Succeeded 2: Registration in progress 3: Proxy error (proxy enabled) 4: Proxy error (proxy disabled) 5: Proxy error (Illegal user name or password) 6: Communication error 7: Certification update error 8: Other error 9: Registration executing
208	**Instl Error Code**
	Displays a number that describes the error code that was issued when either SP5816 204 or SP5816 207 was executed.

	Cause	Code	Meaning
208	Illegal Modem Parameter	-11001	Chat parameter error
		-11002	Chat execution error
		-11003	Unexpected error
	Operation Error, Incorrect Setting	-12002	Inquiry, registration attempted without acquiring device status.
		-12003	Attempted registration without execution of an inquiry and no previous registration.

208	Error Caused by Response from GW URL	-12004	Attempted setting with illegal entries for certification and ID2.
		-2385	Attempted dial up overseas without the correct international prefix for the telephone number.
		-2387	Not supported at the Service Center
		-2389	Database out of service
		-2390	Program out of service
		-2391	Two registrations for same device
		-2392	Parameter error
		-2393	External RCG not managed
		-2394	Device not managed
		-2395	Box ID for external RCG is illegal
		-2396	Device ID for external RCG is illegal
		-2397	Incorrect ID2 format
		-2398	Incorrect request number format
209	Instl Clear		
	Releases a machine from its embedded RCG setup.		
250	Print Com Log		
	Prints the communication log.		

Service Tables

5821	NRS Address	
001	CSS-PI Device	Sets the PI device code. After you change this setting, you must turn the machine off and on.
002	RCG IP Address	Sets the IP address of the RCG (Remote Communication Gate) destination for call processing at the remote service center. [00000000h to FFFFFFFFh / 1 /step]

5824	NVRAM Upload
5824 1	☛ "NVRAM Upload/Download" in this section.

5825	NVRAM Download
5825 1	☛ "NVRAM Upload/Download" in this section.

5828	Network Setting	CTL	
050	1284 Compatibility (Centro)	Enables or disables 1284 Compatibility. [0 or 1 / **1** / 1 / step] 0: Disabled, 1: Enabled	
052	ECP (Centro)	Enables or disables ECP Compatibility. [0 or 1 / **1** / 1 / step] 0: Disabled, 1: Enabled **NOTE:** This SP is activated only when SP5-828-50 is set to "1".	
065	Job Spooling	Enables/disables Job Spooling. [0 or 1 / **0** / 1 / step] 0: Disabled, 1: Enabled	

066	Job Spooling Clear: Start Time	Treatment of the job when a spooled job exists at power on. 0: ON (Data is cleared) **1**: OFF (Automatically printed)
069	Job Spooling (Protocol)	Validates or invalidates the job spooling function for each protocol. **0**: Validates 1: Invalidates bit0: LPR bit1: FTP bit2: IPP bit3: SMB bit4: BMLinkS bit5: DIPRINT bit6: (Reserved) bit7: (Reserved)
090	TELNET (0: OFF 1: ON)	Enables or disables the Telnet protocol. [0 or 1 / **1** / –] 0: Disable, 1: Enable
091	Web (0: OFF 1: ON)	Enables or disables the Web operation. [0 or 1 / **1** / –] 0: Disable, 1: Enable
145	Active IPv6 Link This is the IPv6 local address link referenced on the Ethernet or wireless LAN (802.11b) in the format: "Link Local Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.	

Service
Tables

147	Active IPv6 Status Address 1	These SPs are the IPv6 status addresses (1 to 5) referenced on the Ethernet or wireless LAN (802.11b) in the format: "Status Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.
149	Active IPv6 Status Address 2	
151	Active IPv6 Status Address 3	
153	Active IPv6 Status Address 4	
155	Active IPv6 Status Address 5	
156	IPv6 Manual Setting Address	
	This SP is the IPv6 manually set address referenced on Ethernet or wireless LAN (802.11b) in the format: "Manual Set Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.	
158	IPv6 Gateway Address	
	This SP is the IPv6 gateway address referenced on Ethernet or wireless LAN (802.11b). The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.	

5840	IEEE 802.11b		
006	Channel MAX	CTL	[1 to 11 or 13 / **11** or **13** / 1 /step] Europe: 1 to 13, default: 13 NA/ Asia: 1 to 11, default: 11
	Sets the maximum number of channels available for data transmission via wireless LAN. The number of channels available varies according to location. The default settings are set for the maximum end of the range for each area. Adjust the upper 4 bits to set the maximum number of channels. **DFU** ⬇ Note ▪ Do not change the setting.		
007	Channel MIN	CTL	[1 to 11 or 13 / **1** / 1 /step] Europe: 1 to 13 NA/ Asia: 1 to 11
	Sets the minimum number of channels available for data transmission via the wireless LAN. The number of channels available varies according to location. The default settings are set for the minimum end of the range for each area. Adjust the lower 4 bits to set the minimum number of channels. **DFU** ⬇ Note ▪ Do not change the setting.		
011	WEP Key Select	CTL	[00 to 11 / 00 / 1 binary] 00: Key #1 01: Key #2 (Reserved) 10: Key #3 (Reserved) 11: Key #4 (Reserved)
	Selects the WEP key.		

5842	GWWS Analysis **DFU**			
001	Setting 1	CTL		
	This is a debugging tool. It sets the debugging output mode of each Net File process. Default: Bit SW 1000 0000	Bit	Groups	
		0	System & other groups (LSB)	
		1	Capture related	
		2	Certification related	
		3	Address book related	
		4	Machine management related	
		5	Output related (printing, delivery)	
		6	Repository related	
		7	Debug log output	
002	Setting 2	CTL		
	Default: Bit SW 0000 0000	Bit	Groups	
		0-6	Not used	
		7	Log time stamp setting 0: Date/Hour/Minute/Second 1: Minute/Second/Msecond	

5844	USB		
001	Transfer Rate	CTL	
	Sets the speed for USB data transmission. [Full Speed] **[Auto Change]**		

	Vendor ID	CTL	
002	Sets the vendor ID: Initial Setting: 0x05A Ricoh Company [0x0000 to 0xFFFF/1] **DFU**		
	Product ID	CTL	
003	Sets the product ID. [0x0000 to 0xFFFF/1] **DFU**		
	Device Release No.	CTL	
004	Sets the device release number of the BCD (binary coded decimal) display. [0000 to 9999/1] **DFU** Enter as a decimal number. NCS converts the number to hexadecimal number recognized as the BCD.		

	Delivery Server Setting	CTL	-
5845	Provides items for delivery server settings.		
001	FTP Port Num	[0 to 65535 / **3670** / 1 /step]	
	Sets the FTP port number used when image files to the Scan Router Server.		
002	Srv IP (Primary)	Range: **000.000.000.000** to 255.255.255.255	
	Use this SP to set the Scan Router Server address. The IP address under the transfer tab can be referenced by the initial system setting.		
003	Retry Interval	[60 to 999 / **300** / 1 second /step]	
	Specifies the interval time for sending the scanned image data to the deliver server or SMTP/FTP/NCP/SMB server after sending error.		
004	Number of Retries	[0 to 99 / **3** / 1 time/step]	
	Specifies the retry times for sending the scanned image data to the deliver server or SMTP/FTP/NCP/SMB server after sending error.		

Service
Tables

006	Delivery Error Display Time	[0 to 999 / **300** / 1 second /step]	
	Use this setting to determine the length of time the prompt message is displayed when a test error occurs during document transfer with the NetFile application and an external device.		
008	Srv IP (Secondary)	Range: **000.000.000.000** to 255.255.255.255	
	Specifies the IP address assigned to the computer designated to function as the secondary delivery server of Scan Router. This SP allows only the setting of the IP address without reference to the DNS setting.		
009	Delivery Server Model	[0 to 4 / **0** / 1 /step]	
	Allows changing the model of the delivery server registered by the I/O device. 0: Unknown, 1: SG1 Provided, 2: SG1 Package, 3: SG2 Provided, 4: SG2 Package		
010	Delivery Svr Capability	[0 to 255 / **0** / 1 /step]	
	Bit7 = 1 Comment information exits		
	Bit6 = 1 Direct specification of mail address possible		
	Bit5 = 1 Mail RX confirmation setting possible		
	Bit4 = 1 Address book automatic update function exists	Changes the capability of the server that is registered as an I/O device.	
	Bit3 = 1 Fax RX delivery function exists		
	Bit2 = 1 Sender password function exists		
	Bit1 = 1 Function to link MK-1 user and Sender exists		
	Bit0 = 1 Sender specification required (if set to 1, Bit6 is set to "0")		

011	Delivery Svr Capability (Ext)	[0 to 255 / **0** / 1 /step]
	Changes the capability of the server that is registered as an I/O device.	
	Bit7 = 1 Address book usage limitation (Limitation for each authorized user) Bit6 = 1 RDH authorization link Bit5 to 0: Not used	
013	Svr Schm (Primary)	-
	Specifies the scheme of the primary delivery server.	
014	Svr Port Num (Pri)	-
	Specifies the port number of the primary delivery server.	
015	Srv URL Path (Pri)	-
	Specifies the URL path of the primary delivery server.	
016	Svr Schm (Sec)	-
	Specifies the scheme of the secondary delivery server.	
017	Svr Port Num (Sec)	-
	Specifies the port number of the secondary delivery server.	
018	Srv URL Path (Sec)	-
	Specifies the URL path of the secondary delivery server.	
019	CapSvr Schm	-
	Specifies the scheme of the capture server.	
020	CapSvr Port Num	-
	Specifies the port number of the capture server.	
021	CapSrv URL Path	-
	Specifies the URL path of the s capture server.	

Service
Tables

022	Rapid-fire Send	[0 or 1 / **1** / -] 0: Disable, 1: Enable
	Enables or disables the prevention function for the continuous data sending.	

5846	UCS Settings	CTL
	Provides items for delivery server settings.	
001	Machine ID (Delivery Server)	Displays ID
	Displays the unique device ID in use by the delivery server directory. The value is only displayed and cannot be changed. This ID is created from the NIC MAC or IEEE 1394 EUI. The ID is displayed as either 6-byte or 8-byte binary.	
002	Machine ID Clear (Delivery Server)	Clears ID
	Clears the unique ID of the device used as the name in the file transfer directory. Execute this SP if the connection of the device to the delivery server is unstable. After clearing the ID, the ID will be established again automatically by cycling the machine off and on.	
003	Maximum Entries	[150 to 999 / **150** / 1 /step]
	Changes the maximum number of entries that UCS can handle. If a value smaller than the present value is set, the UCS managed data is cleared, and the data (excluding user code information) is displayed.	
006	Delivery Server Retry Timer	[0 to 255 / **0** / 1 /step]
	Sets the interval for retry attempts when the delivery server fails to acquire the delivery server address book.	

007	Delivery Server Retry Times	[0 to 255 / **0** / 1 /step]
	Sets the number of retry attempts when the delivery server fails to acquire the delivery server address book.	
008	Delivery Server Maximum Entries	[200 to 999 / **200** / 1/step]
	Sets the maximum number account entries of the delivery server user information managed by UCS.	
010	LDAP Search Timeout	[1 to 255 / **60** / 1 /step]
	Sets the length of the timeout for the search of the LDAP server.	
041	[AddrB Acl Info] Address Book Access Control List Information	
	This SP must be executed immediately after installation of an HDD unit in a basic machine that previously had no HDD. The first time the machine is powered on with the new HDD installed, the system automatically takes the address book from the NVRAM and writes it onto the new HDD. However, the new address book on the HDD can be accessed only by the system administrator at this stage. Executing this SP by the service technician immediately after power on grants full address book access to all users.	
042	Addr B Mig (SD → SD)	[0 to 10 / **0** / 1 /step] 0: Not decided yet 1: Slot 1 to 10: Slot 10
	This SP copies an address book data in a SD card to another SD card. Select the destination slot where you want to move an address book data, and then press "Execute" key. You can check where an address book data is in with SP5-846-043.	
043	Addr B Media	
	Displays the slot number where an address book data is in.	

Service Tables

047	Initialize Local Addr Book	Clears the local address book information, including the user code.
048	Initialize Delivery Addr Book	Clears the distribution address book information, except the user code.
049	Initialize LDAP Addr Book	Clears the LDAP address book information, except the user code.
050	Initialize All Addr Book	Clears all directory information managed by UCS, including all user codes. Turn the main power switch off and on after executing this SP.
051	Backup All Addr Book	Uploads all directory information to the SD card.
052	Restore All Addr Book	Downloads all directory information from the SD card.
053	Clear Backup Info	Deletes the address book data from the SD card in the service slot. Deletes only the files that were uploaded from this machine. This feature does not work if the card is write-protected. **Note:** After you do this SP, go out of the SP mode, and then turn the power off. Do not remove the SD card until the Power LED stops flashing.
060	Search Option	This SP uses bit switches to set up the fuzzy search options for the UCS local address book. Bit0: Checks both upper/lower case characters Bit1: Japan only Bit2 to 7: Not used

062	Compl Opt1[(1)]	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to upper case and sets the length of the password. [0 to 32 / 0 / 1 /step]
063	Compl Opt2[(1)]	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to lower case and defines the length of the password. [0 to 32 / 0 / 1 /step]
064	Compl Opt3[(1)]	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to numbers and defines the length of the password. [0 to 32 / 0 / 1 /step]
065	Compl Opt4[(1)]	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to symbols and defines the length of the password. [0 to 32 / 0 / 1 /step]
091	FTP Auth Port Setting	Specifies the FTP port for getting a distribution server address book that is used in the identification mode. [0 to 65535 / 3671 / 1 /step]
094	Encryption Stat	Shows the status of the encryption function for the address book data.

Note [(1)]:

SP5846-062 to SP5846-065 do not normally require adjustment.

These SP modes are enabled only after the system administrator has set up a group password policy to control access to the address book.

		Web Service	CTL	-
5848		SP5848-1 sets the 4-bit switch assignment for the access control setting. Setting of 0001 has no effect on access and delivery from Scan Router. ac: Access Control		
	001	ac: Netfile (only Lower 4 bits)	Switches access control on and off. **0000**: No access control 0001: Denies access to DeskTop Binder.	
	004	ac: UD (only Lower 4 bits)		
	005	ac: For Cherry (only Lower 4 bits)		
	007	ac: Log Fax (Lower 4 bits)		
	009	ac: Job Ctrl (Lower 4 bits)		
	011	ac: Device Management (Lower 4 bits)		
	022	ac: Uadmin (Lower 4bits)		
	210	Log Type: Job1	Displays the log server settings. These can be adjusted with the Web Image Monitor.	
	211	Log Type: Job2		
	212	Log Type: Access		
	213	Primary Srv		
	214	Secondary Srv		
	215	Start Time		
	216	Interval Time	Specifies the transmit interval. [1 to 1000 / **1** / 1 hour/step] This SP is activated only when SP5848-217 is set to "2 (Transmit periodically)".	

217	Timing	Selects the transmit timing. [0 to 2 / **0** / 1/step] 0: No Transmit, 1: Transmit one by one 2: Transmit periodically

5849	Installation Date		CTL	
	Displays or prints the installation date of the machine.			
001	Display	The "Counter Clear Day" has been changed to "Installation Date" or "Inst. Date".		
002	Print	Determines whether the installation date is printed on the printout for the total counter. [0 or 1/ **1** / 1/step] 0: Off (No Print), 1: On (Print)		
003	Total Counter	Displays the total counter when the installation date is registered to the machine.		

5851	Bluetooth		
001	Mode	CTL	Sets the operation mode for the Bluetooth Unit. Press either key. **0** :Public, 1: Private

5856	Remote ROM Update		
	Allows the technician to upgrade the firmware using a parallel cable when updating the remote ROM.		
002	Local Port	CTL	[0 or 1 / **0** / 1/step] **0**: Disallow 1: Allow

Service
Tables

5857	Debug Log Save	CTL	-
001	ON/OFF	0: OFF, 1: ON	
	Switches the debug log feature on and off. The debug log cannot be captured until this feature is switched on.		
006	Save to SD Card		
	Specifies the debug log number for saving to an SD card.		
012	Erase SD Debug		
	Erases SD debug logs in the SD card. Turn off and on after executing this SP.		
013	Dsply-SD Space		
	Displays the remaining space in the SD card.		
014	SD to SD Latest (Latest 4 MB)		
	Saves the debug log (latest 4 MB) in memory to the SD card. A unique file name is generated to avoid overwriting existing file names on the SD card. Up to 4MB can be copied to the SD card. 4 MB segments can be copied one by one to the SD card.		
015	SD to SD Any (Latest 4 MB Any Key)		
	Saves the specified debug log (with SP5-857-006) in memory to the SD card. A unique file name is generated to avoid overwriting existing file names on the SD card. Up to 4MB can be copied to the SD card. 4 MB segments can be copied one by one to the SD card.		
017	Make SD Debug		
	Executes the making of a file (4MB) for saving debug logs.		

5858	Debug Log Save: SC	CTL	-
	These SPs select the content of the debugging information to be saved to the destination selected by SP5857-2. SP5858-3 stores one SC specified by number. Refer to the chapter "Trouble Shooting" for a list of SC error codes.		
001	Engine SC	Turns the save function on/off for SC codes generated by copier engine errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	
002	Controller SC	Turns the save function on/off for SC codes generated by GW controller errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	
003	Any SC	[0 to 65535 / **0** / 1 /step]	
004	Jam	Turns the save function on/off for jam errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	

5859	Debug Log Save Key	CTL	-
001	Key 1	These SPs allow you to set up to 10 keys for log files for functions that use common memory on the controller board. [–9999999 to 9999999 / **0** / –]	
002	Key 2		
003	Key 3		
004	Key 4		
005	Key 5		
006	Key 6		

Service Tables

007	Key 7		
008	Key 8		
009	Key 9		
010	Key 10		

5860	SMTP/POP3/IMAP4	CTL	-

020	Partial Mail Receive Timeout	[1 to 168 / **72** / 1 hour/step]
	Sets the amount of time to wait before saving mail that breaks up during reception. The received mail is discarded if the remaining portion of the mail is not received during this prescribed time.	

021	MDN Response RFC2298 Compliance	[0 to 1 / **1** / –]
	Determines whether RFC2298 compliance is switched on for MDN reply mail. 0: No, 1: Yes	

022	SMTP Auth. From Field Replacement	[0 to 1 / **0** / –]
	Determines whether the FROM item of the mail header is switched to the validated account after the SMTP server is validated. 0: No. "From" item not switched. 1: Yes. "From" item switched.	

025	SMTP Auth. Direct Setting	[0 or 1 / **0** / –]
	Selects the authentication method for SMPT. **Bit switch:** ▪ Bit 0: LOGIN ▪ Bit 1: PLAIN ▪ Bit 2: CRAM MD5 ▪ Bit 3: DIGEST MD5 ▪ Bit 4 to 7: Not used ⬇ Note ▪ This SP is activated only when SMTP authorization is enabled by UP mode.	

5866	E-mail Report		
001	Report Validity	-	[0 or 1 / **0** / –] 0: Enabled, 1: Disabled
	Enables or disables the E-mail alert function.		
005	Add Date Field	CTL	[0 or 1 / **0** / –] 0: Not add, 1: Add
	Adds or does not add the date field to the header of the alert mail.		

5869	RAM Disk Setting		
001	Mail Function	GWINIT	[0 or 1 / **0** / -] 0: ON, 1: OFF
	Turns on or off the e-mail function.		
002	PDL Storage	GWINIT	[0 to 255 / **4** / 1 /step]
	Specifies the RAM disk storage size for PDL.		

5870	Common Key Info Writing		
001	Writing	CTL	Writes to flash ROM the common proof for validating the device for @Remote specifications.
003	Initialize	CTL	Formats the common proof area of the flash ROM. **FA**

Service
Tables

$\Longrightarrow$

5875	SC Auto Reboot		
001	Reboot Mode	CTL	Enables or disables the automatic reboot function when an SC error occurs. [0 or 1 / **0** / –] 0: The machine reboots automatically when the machine issues an SC error and logs the SC error code. If the same SC occurs again, the machine does not reboot. 1: The machine does not reboot when an SC error occurs. The reboot is not executed for Type A, B or C SC codes.
002	Reboot Method	CTL	Selects the reboot method for SC. [0 or 1 / **0** / -] 0: Manual reboot, 1: Automatic reboot

5878	Option Setup		
001	Option Setup	-	Enables the Data Overwrite Security unit. Press "EXECUTE" on the operation panel. Then turn the machine off and on.

5881	Delete Fixed Sent		
001	Delete Fixed Sent	-	Deletes the fixed form sentence.

5886	Permit ROM Update **DFU**	
001	This SP determines whether the ROM can be updated. [0 or 1 / **0** / 1/step] 0: Yes, 1: No

5887	SD GetCounter **SSP**	
001	This SP saves the counter list of the machine to an SD card in the slot 3. The folder of "SD_COUNTER" must be made in an SD card for this SP.

5902	Test Pattern Print	
5902 1	☛ "Test Pattern Print" in this section.

5907*	Plug & Play Setting
5907 1	Selects the brand name and production name for the Plug and Play function. These names are stored in the NVRAM. When the NVRAM data is corrupted, select these names once again. Use the right-arrow or left-arrow key to scroll through the list of brand names. To select a brand name, press the OK key. An asterisk (*) indicates which manufacture is currently selected.

5912*	PCU Alarm Counter (Printout)	[0 to 255 / 45 / 1/step]
5912 1	Specifies the PCU alarm level. The PCU alarm is issued when the following condition is met: PAc x 1000 >= PCUc where PAc is the value specified in this SP and PCUc is the PCU counter. When you specify 0 (zero), the PCU alarm is deactivated.	

5913	Switch Permission
002	Print Application Timer
	Sets the length of time to elapse before allowing another application to take control of the display when the application currently controlling the display is not operating because a key has not been pressed. [3 to 30 / **3** / 1 second/step]

5970	Debug Output	Note: B288 model only.

5974	Cherry Server
001	Selects which version of the Scan Router application program, "Light" or "Full (Professional)", is installed. [0 to 1 / **0** / 1 /step] 0: Light version (supplied with this machine) 1: Full version (optional)

5985	Device Setting	
	The NIC and USB support features are built into the GW controller. Use this SP to enable and disable these features. In order to use the NIC and USB functions built into the controller board, these SP codes must be set to "1".	
001	On Board NIC	[0 to 2 / **0** / 1 /step] 0: OFF, 1: ON, 2: ON: Limited When the "Function limitation" is set, "On board NIC" is limited only for the @Remote or LDAP/NT authentication. ↓ Note ▪ Other network applications than @Remote or LDAP/NT authentication are not available when this SP is set to "2". Even if you can change the initial settings of those network applications, settings may not actually work.
002	On Board USB	[0 or 1 / **0** / 1/step] 0: OFF, 1: ON

Service
Tables

5990	SP Print Mode	SMC Print
	In the SP mode, press Copy Window to move to the copy screen, select the paper size, then press Start. Select A4/LT (Sideways) or larger to ensure that all the information prints. Press SP Window to return to the SP mode, select the desired print, and press "EXECUTE".	
001	All (Data List)	
002	SP (Mode Data List)	
003	User Program Data	
004	Logging Data	
005	Diagnostic Report	
006	Non-Default (Prints only SPs set to values other than defaults.)	
007	NIB Summary

022	Scanner SP	
023	Scanner User Program	

5998	Memory Clear
001	See the section "Memory Clear" in this chapter.

SP6-XXX (Peripherals)

6006*	ADF Adjustment (☛ "DF Image Adjustment" in the "Adjusting Copy Image Area") **NOTE:** Available menus depend on the machine model and its configuration.	
6006 1	StoS/Front Regist	[–5.0 to +5.0 / **0.0** / 0.1 mm/step]
	Adjusts the side-to-side registration for the front side of the original, for ARDF mode. Use the ⊗ key to select "+" or "–" before entering the value	
6006 2	Leading Regist	[–5.0 to +5.0 / **0.0** / 0.1 mm/step]
	Adjusts the leading edge registration for ARDF mode. Use the ⊗ key to select "+" or "–" before entering the value.	
6006 3	Trailing Erase	[–3.0 to +3.0 / **–1.5** / 0.1 mm/step]
	Adjusts the trailing edge erase margin for ARDF mode. Use the ⊗ key to select "+" or "–" before entering the value.	
6006 4	S to S/ Rear Regist	[–5.0 to +5.0 / **0.0** / 0.1 mm/step]
	Adjusts the side-to-side registration for the 2nd side of the original, for ARDF mode. Use the ⊗ key to select "+" or "–" before entering the value	
6006 5	Sub-scan Magnif	[–0.9 to +0.9 / **0.0** / 0.1 %/step]
	Adjusts the sub-scan magnification for the ARDF.	
6006 6	Origin Curl Adj	[0 = No / **1** = Yes]
	Turns on or off the skew correction at 2nd side scanning. This SP is activated only when the duplex mode is selected.	
6006 7	Skew Correction	[–20 to +20 / **0.0** / 1 mm/step]
	Adjusts the original buckle for the skew correction at 2ns side scanning. This SP is activated only when SP6-006-006 is set to "1 (Yes)".	

Service
Tables

6009	ADF Free Run	
6009 1	Duplex Mode	
	Performs an ARDF free run in duplex scanning mode. Press "ON" to start; press "OFF" to stop.	
6009 3	Simplex Mode	
	Performs an ARDF free run at simplex scanning mode. Press "ON" to start; press "OFF" to stop.	

6910*	ADF Shading Time	[0 to 60 / **30** / 1 s/step]
6910 1	Adjusts the interval used for the shading processing in the ARDF mode. Light and heat in the room may affect the scanner response. Reduce this setting if copy quality indicates that the white level is drifting during ARDF copy jobs.	

6930*	ADF Hole Setting	[0 or 1 / **0** / -] **0**: No, 1: Yes
6930 1	Enables or disables the ADF hole setting. When "1: Yes" is selected, the machine prevents feed jams of the punched originals in the ARDF.	

SP7-XXX (Data Log)

7001*	Total Operation	
7001 1	Displays the total operation time (total drum rotation time).	

7401*	Counter–SC Total	[0 to 9999 / **0** / 1/step]
7401 1	Displays how many times SC codes are generated.	

7403*	SC History	
7403 1	Displays the histories of the latest 10 SC codes.	

7502*	Counter–Paper Jam	[0 to 9999 / **0** / 1/step]
7502 1	Displays the total number of copy paper jams.	

7503*	Counter–Orgn Jam	[0 to 9999 / **0** / 1/step]
7503 1	Displays the total number of original jams,	

7504*	Paper Jam/Loc	[0 to 9999 / **0** / 1/step]
	Displays the total number of the paper jams classified by timing and location.	
7504 1	At power on	
	Paper jam occurs at power on.	
7504 10	Regist NoFeed: OFF	
	Paper does not reach the registration sensor (from a paper tray).	
7504 11	1 Vertical SN: OFF	
	Paper does not reach the relay sensor.	

Service Tables

7504 12	1 Vertical SN: ON
	Paper is caught at the relay sensor.
7504 50	Regist Bypass: OFF
	Paper does not reach the registration sensor (from the by-pass tray).
7504 60	Regist Duplex: OFF
	Paper does not reach the registration sensor during reverse-side printing (for duplex printing).
7504 70	Regist SN: ON
	Paper is caught at the registration sensor.
7504 120	1 Exit SN: ON
	Paper is caught at the exit sensor (previous page).
7504 121	Exit SN: OFF
	Paper does not reach the exit sensor.
7504 122	2 Exit SN: ON
	Paper is caught at the exit sensor.
7504 123	Dup Inverter: OFF
	Paper does not reach the duplex inverter sensor (from the registration roller).
7504 125	Dup Inverter: ON
	Paper is caught at the duplex inverter sensor.

7505*	Original Jam/Loc	[0 to 9999 / **0** / 1/step]
	Displays the total number of the original jams on the ARDF that have occurred at a certain timing or at a certain location.	
7505 1	At power on	
	Paper jam occurs at power on.	
7505 210	Regist SN: OFF	
	The original does not reach the registration sensor.	
7505 211	Regist SN: ON	
	The original is caught at the registration sensor.	
7505 212	Paper Exit SN: OFF	
	The original does not reach the exit sensor.	
7505 213	Paper Exit SN: ON	
	The original is caught at the exit sensor.	
7505 214	Inverter SN: OFF	
	The original does not reach the inverter sensor.	
7505 215	Inverter SN: ON	
	Not used in this machine.	

Service Tables

7506	[Paper Jam/ Size] Jam Counter: Paper Size		
7506 6	A5 LEF	CTL	Displays the number of jams according to the paper size. [0 to 9999 / **0** / 1 sheet/step]
7506 44	HLT LEF		
7506 133	A4 SEF		
7506 134	A5 SEF		
7506 142	B5 SEF		
7506 164	LG SEF		
7506 166	LT SEF		
7506 172	HLT SEF		
7506 255	Others		

7507*	Display-P Jam History
7507 1	Displays the latest 10 paper-jam history. The list below shows the possible 12 codes: 1, 10, 11, 12, 50, 60, 70, 120, 121, 122, 123, 125 The codes correspond to the menus of SP7-504. For example, the code 1 corresponds to SP7-504-001, and the code 10 corresponds to SP7-504-10.

7508*	Display-O Jam History
7508 1	Displays the total number of the original-jams history. The possible codes are 210, 211, and 216. The codes correspond to the menus of SP7-505. For example, the code 210 corresponds to SP7-505-210, and the code 211 corresponds to SP7-505-211.

7801	Memory/Version/PN
7801 255	Memory/Version
	Displays the he part number and version of all ROMs in the machine

7803*	PM Counter
7803 1	Displays the PM counter.

7804	PM Counter Reset
7804 1	Resets the PM counter (SP7-803-001). When the program ends normally, the message "Completed" is displayed.

7807	Reset–SC/Jam Counters
7807 1	Resets the SC, paper, original, and total jam counters. When the program ends normally, the message "Completed" is displayed. SP7-807-1 does not reset the following logs: SP7-507 (Display-Paper Jam History) and SP7-508 (Display-Original Jam History).

7826	MF Error Counter **Japan Only**	
	Displays the number of counts requested of the card/key counter.	
001	Error Total	A request for the count total failed at power on. This error will occur if the device is installed but disconnected.
002	Error Staple	The request for a staple count failed at power on. This error will occur if the device is installed but disconnected.

<div style="writing-mode: vertical">Service Tables</div>

7827	MF Error Counter Clear
	Press Execute to reset to 0 the values of SP7826. **Japan Only**

7832*	Display-Self-Diag
7832 1	Displays the SC codes and the number of their occurrences. Each number is in the range of 0 to 9999.

7836	**[Resident Memory]**
	Displays the contents of the memory on the controller board.

7901	Assert Info		
	Records the location where a problem is detected in the program. The data stored in this SP is used for problem analysis. **DFU**		
7901 1	File Name	-	-
7901 2	Number of Lines	-	-
7901 3	Location	-	-

7991*	Dsply–Info Count
	Displays the total operating time or the total number of operations. The time is displayed in the following format: day: hour: minute: second.
7991 3	Dsply-ID S Work
	The total of the time when the ID sensor is working.
7991 4	Dsply-Dev Counter
	The total number of paper outputs.
7991 5	Dsply-ID Er Count
	The total number of ID-sensor errors.

7992*	Reset-Info Count
7992 4	Reset-Dev Count
	Clears the development counter (SP7-991-004).
7992 5	Reset-ID Er Count
	Clears the ID sensor error counter (SP7-991-005).

Service Tables

SP8-XXX (History)

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an "application"). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

Prefixes		What it means
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.)..
C:	Copy application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the document server.
F:	Fax application.	
P:	Print application.	
S:	Scan application.	
O:	Other applications (external network applications, for example)	Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future.

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

Key for Abbreviations

Abbreviation	What it means
/	"By", e.g. "T:Jobs/Apl" = Total Jobs "by" Application
>	More (2> "2 or more", 4> "4 or more"
AddBook	Address Book
Apl	Application

Abbreviation	What it means
B/W	Black & White
Bk	Black
C	Cyan
ColCr	Color Create
ColMode	Color Mode
Comb	Combine
Comp	Compression
Deliv	Delivery
DesApl	Designated Application. The application (Copy, Fax, Scan, Print) used to store the job on the document server, for example.
Dev Counter	Development Count, no. of pages developed.
Dup, Duplex	Duplex, printing on both sides
Emul	Emulation
FC	Full Color
FIN	Post-print processing, i.e. finishing (punching, stapling, etc.)
Full Bleed	No Margins
GenCopy	Generation Copy Mode
GPC	Get Print Counter. For jobs 10 pages or less, this counter does not count up. For jobs larger than 10 pages, this counter counts up by the number that is in excess of 10 (e.g., for an 11-page job, the counter counts up 11-10 =1)

Service Tables

Abbreviation	What it means
IFax	Internet Fax
ImgEdt	Image Edit performed on the original with the copier GUI, e.g. border removal, adding stamps, page numbers, etc.
K	Black (YMCK)
LS	Local Storage. Refers to the document server.
LSize	Large (paper) Size
Mag	Magnification
MC	One color (monochrome)
NRS	NRS (@Remote), which allows a service center to monitor machines remotely. "@Remote" is used overseas; "CSS" is used in Japan.
Org	Original for scanning
OrgJam	Original Jam
Palm 2	Print Job Manager/Desk Top Editor: A pair of utilities that allows print jobs to be distributed evenly among the printers on the network, and allows files to moved around, combined, and converted to different formats.
PC	Personal Computer
PGS	Pages. A page is the total scanned surface of the original. Duplex pages count as two pages, and A3 simplex count as two pages if the A3/DLT counter SP is switched ON.
PJob	Print Jobs
Ppr	Paper

Abbreviation	What it means
PrtJam	Printer (plotter) Jam
PrtPGS	Print Pages
R	Red (Toner Remaining). Applies to the wide format model A2 only. This machine is under development and currently not available.
RCG	Remote Communication Gate
Rez	Resolution
SC	Service Code (Error SC code displayed)
Scn	Scan
Sim, Simplex	Simplex, printing on 1 side.
S-to-Email	Scan-to-E-mail
SMC	SMC report printed with SP5990. All of the Group 8 counters are recorded in the SMC report.
Svr	Server
TonEnd	Toner End
TonSave	Toner Save
TXJob	Send, Transmission
YMC	Yellow, Magenta, Cyan
YMCK	Yellow, Magenta, Cyan, Black

Service
Tables

> **↓ Note**
>
> ▪ All of the Group 8 SPs are reset with SP5 801 1 Memory All Clear.

8 191	T:Total Scan PGS	CTL	These SPs count the pages scanned by each application that uses the scanner to scan images. [0 to 99999999 / **0** / 1]
8 192	C:Total Scan PGS	CTL	
8 193	F:Total Scan PGS	CTL	
8 195	S:Total Scan PGS	CTL	

- SP 8 191 to 8 196 count the number of scanned sides of pages, not the number of physical pages.
- These counters do not count reading user stamp data, or reading color charts to adjust color.
- Previews done with a scanner driver are not counted.
- A count is done only after all images of a job have been scanned.
- Scans made in SP mode are not counted.

Examples

- If 3 B5 pages and 1 A3 page are scanned with the scanner application but not stored, the S: count is 4.
- If both sides of 3 A4 sheets are copied and stored to the document server using the Store File button in the Copy mode window, the C: count is 6 and the L: count is 6.
- If both sides of 3 A4 sheets are copied but not stored, the C: count is 6.
- If you enter document server mode then scan 6 pages, the L: count is 6.

8 201	T:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the total number of large pages input with the scanner for scan and copy jobs. Large size paper (A3/DLT) scanned for fax transmission is not counted. **↓ Note** ▪ These counters are displayed in the SMC Report, and in the User Tools display.		

8 203	F:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of large pages scanned by original type for Fax jobs.		
8 205	S:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the total number of large pages input with the scanner for scan jobs only. Large size paper (A3/DLT) scanned for fax transmission are not counted. ↓ Note ▪ These counters are displayed in the SMC Report, and in the User Tools display.		
8 221	ADF Org Feeds	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages fed through the ADF for front and back side scanning.		
001	Front	Number of front sides fed for scanning: With an ADF/ARDF that can scan both sides simultaneously, the Front side count is the same as the number of pages fed for either simplex or duplex scanning. With an ADF/ARDF that cannot scan both sides simultaneously, the Front side count is the same as the number of pages fed for duplex front side scanning. (The front side is determined by which side the user loads face up.)	
002	Back	Number of rear sides fed for scanning: With an ADF/ARDF that can scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex scanning. With an ADF/ARDF that cannot scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex rear-side scanning.	

Service
Tables

- When 1 sheet is fed for duplex scanning the Front count is 1 and the Back count is 1.
- If a jam occurs during the job, recovery processing is not counted to avoid double counting. Also, the pages are not counted if the jam occurs before the first sheet is output.

8 281	T:Scan PGS/TWAIN	CTL	These SPs count the number of pages scanned using a TWAIN driver. These counters reveal how the TWAIN driver is used for delivery functions. [0 to 99999999 / **0** / 1] ⬇ Note - At the present time, these counters perform identical counts.
8 285	S:Scan PGS/TWAIN	CTL	

8 291	T:Scan PGS/Stamp	CTL	These SPs count the number of pages stamped with the stamp in the ADF unit. [0 to 99999999 / **0** / 1]
8 293	F:Scan PGS/Stamp	CTL	
8 295	S:Scan PGS/Stamp	CTL	

8 301	T:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by all applications. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-441].		
8 302	C:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Copy application. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-442].		
8 303	F:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Fax application. Use these totals to compare original page size (scanning) and output page size [SP 8-443].		

8 305	S:Scan PGS/Size		CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Scan application. Use these totals to compare original page size (scanning) and output page size [SP 8-445].			
-001	A3			
002	A4			
003	A5			
004	B4			
005	B5			
006	DLT		-	
007	LG			
008	LT			
009	HLT			
010	Full Bleed			
-254	Other (Standard)			
-255	Other (Custom)			

8 381	T:Total PrtPGS	CTL	
8 382	C:Total PrtPGS	CTL	These SPs count the number of pages printed by the customer. The counter for the application used for storing the pages increments. [0 to 99999999 / **0** / 1]
8 383	F:Total PrtPGS	CTL	
8 384	P:Total PrtPGS	CTL	
8 385	S:Total PrtPGS	CTL	
8 387	O:Total PrtPGS	CTL	

Service Tables

- When the A3/DLT double count function is switched on with SP5104, 1 A3/DLT page is counted as 2.

- When several documents are merged for a print job, the number of pages stored is counted for the application that stored them.

- These counters are used primarily to calculate charges on use of the machine, so the following pages are not counted as printed pages:

  - Blank pages in a duplex printing job.

  - Blank pages inserted as document covers, chapter title sheets, and slip sheets.

  - Reports printed to confirm counts.

  - All reports done in the service mode (service summaries, engine maintenance reports, etc.)

  - Test prints for machine image adjustment.

  - Error notification reports.

  - Partially printed pages as the result of a copier jam.

8 391	LSize PrtPGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count pages printed on paper sizes A3/DLT and larger. ↓ Note 　　■　In addition to being displayed in the SMC Report, these counters are also displayed in the User Tools display on the copy machine.		

8 411	Prints/Duplex	CTL	This SP counts the amount of paper (front/back counted as 1 page) used for duplex printing. Last pages printed only on one side are not counted. [0 to 99999999 / **0** / 1]

8 421	T:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing. This is the total for all applications.		

8 422	C:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the copier application.		
8 423	F:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the fax application.		
8 424	P:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the printer application.		
8 425	S:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the scanner application.		
8 427	O:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by Other applications		
001	Simplex> Duplex	-	
002	Duplex> Duplex	-	
003	Book> Duplex	-	
004	Simplex Combine	-	
005	Duplex Combine	-	
006	2>	2 pages on 1 side (2-Up)	
007	4>	4 pages on 1 side (4-Up)	
008	6>	6 pages on 1 side (6-Up)	
009	8>	8 pages on 1 side (8-Up)	

Service
Tables

010	9>	9 pages on 1 side (9-Up)
011	16>	16 pages on 1 side (16-Up)
012	Booklet	-
013	Magazine	-

- These counts (SP8-421 to SP8-427) are especially useful for customers who need to improve their compliance with ISO standards for the reduction of paper consumption.
- Pages that are only partially printed with the n-Up functions are counted as 1 page.
- Here is a summary of how the counters work for Booklet and Magazine modes:

Booklet		Magazine	
Original Pages	Count	Original Pages	Count
1	1	1	1
2	2	2	2
3	2	3	2
4	2	4	2
5	3	5	4
6	4	6	4
7	4	7	4
8	4	8	4

8 441	T:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by all applications.		
8 442	C:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the copy application.		
8 443	F:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the fax application.		
8 444	P:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the printer application.		
8 445	S:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the scanner application.		
8 447	O:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by Other applications.		
001	A3	-	
002	A4		
003	A5		
004	B4		
005	B5		
006	DLT		
007	LG		

Service Tables

▪ These counters do not distinguish between LEF and SEF.

8 451	PrtPGS/Ppr Tray		CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of sheets fed from each paper feed station.			
001	Bypass	Bypass Tray		
002	Tray 1	Copier		
003	Tray 2	Copier		
004	Tray 3	Currently not used.		
005	Tray 4	Currently not used.		
006	Tray 5	Currently not used.		
007	Tray 6	Currently not used.		
008	Tray 7	Currently not used.		
009	Tray 8	Currently not used.		
010	Tray 9	Currently not used.		

8 461	T:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by all applications. ▪ These counters are not the same as the PM counter. The PM counter is based on feed timing to accurately measure the service life of the feed rollers. However, these counts are based on output timing. ▪ Blank sheets (covers, chapter covers, slip sheets) are also counted. ▪ During duplex printing, pages printed on both sides count as 1, and a page printed on one side counts as 1.		
8 462	C:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the copy application.		
8 463	F:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the fax application.		
8 464	P:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the printer application.

Service
Tables

8 521	T:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by all applications.		
8 522	C:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Copy application.		
8 523	F:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Fax application. ↓ Note ▪ Print finishing options for received faxes are currently not available.		
8 524	P:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Print application.		
8 525	S:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Scanner application.		
001	Sort		
002	Stack		
003	Staple		
004	Booklet		
005	Z-Fold		
006	Punch		
007	Other		

↓ Note

- If stapling is selected for finishing and the stack is too large for stapling, the unstapled pages are still counted.
- The counts for staple finishing are based on output to the staple tray, so jam recoveries are counted.

8 581	T:Counter		CTL	[0 to 99999999 / **0** / 1]
	This SP counts the total output broken down by color output, regardless of the application used. In addition to being displayed in the SMC Report, these counters are also displayed in the User Tools display on the copy machine.			
001	Total			

8 591	O:Counter		CTL	[0 to 99999999 / **0** / 1]
8 591 1	A3/DLT	These SPs count the totals for A3/DLT paper use, number of duplex pages printed, and the number of staples used. These totals are for Other (O:) applications only.		
8 591 2	Duplex			

8 601	Cvg Counter	CTL	[0 to 99999999 / **0** / 1]
8 601 1	Cvg: BW %	Displays the total coverage of each mode.	
8 601 11	Cvg: BW Pages	Displays the number of the printouts in each mode.	

8 631	T:FAX TX PGS		CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by fax to a telephone number.			

Service Tables

8 633	F:FAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by fax to a telephone number.		
001	B/W		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8631 and SP8633 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each destination.

8 641	T:IFAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by fax to as fax images using I-Fax.		
8 643	F:IFAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by Fax as fax images using I-Fax.		
001	B/W		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8641 and SP8643 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.

- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each destination.

8 651	T:S-to-Email PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the total number of pages attached to an e-mail for both the Scan and document server applications.		
8 655	S:S-to-Email PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the total number of pages attached to an e-mail for the Scan application only.		
001	B/W		
002	Color		

⬇ Note

- The count for B/W and Color pages is done after the document is stored. If the job is cancelled before it is stored, the pages are not counted.
- If Scan-to-Email is used to send a 10-page document to 5 addresses, the count is 10 (the pages are sent to the same SMTP server together).
- If Scan-to-PC is used to send a 10-page document to 5 folders, the count is 50 (the document is sent to each destination of the SMB/FTP server).
- Due to restrictions on some devices, if Scan-to-Email is used to send a 10-page document to a large number of destinations, the count may be divided and counted separately. For example, if a 10-page document is sent to 200 addresses, the count is 10 for the first 100 destinations and the count is also 10 for the second 100 destinations, for a total of 20.).

Service
Tables

8 661	T:Deliv PGS/Svr	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by both Scan and LS applications.		
8 665	S:Deliv PGS/Svr	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by the Scan application.		
001	B/W		
002	Color		

↓ Note

- The B/W and Color counts are done after the document is stored on the HDD of the Scan Router server.
- If the job is canceled before storage on the Scan Router server finishes, the count is not done.
- The count is executed even if there is confirmation of the arrival at the Scan Router server.

8 671	T:Deliv PGS/PC	CTL	[0 to 99999999/ **0** / 1]
	These SPs count by color mode the total number of pages sent to a folder on a PC (Scan-to-PC) with the Scan and LS applications.		
8 675	S:Deliv PGS/PC	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent with Scan-to-PC with the Scan application.		
001	B/W		
002	Color		

⬇ Note

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the count.
- If several documents are merged for sending, the number of pages stored are counted for the application that stored them.
- When several documents are sent by a Fax broadcast, the F: count is done for the number of pages sent to each destination.

8 681	T:PCFAX TXPGS	CTL	These SPs count the number of pages sent by PC Fax. These SPs are provided for the Fax application only, so the counts for SP8-681 and SP8-683 are the same. [0 to 99999999 / **0** / 1]
8 683	F:PCFAX TXPGS	CTL	

- This counts pages sent from a PC using a PC fax application, from the PC through the copier to the destination.
- When sending the same message to more than one place using broadcasting, the pages are only counted once. (For example, a 10-page fax is sent to location A and location B. The counter goes up by 10, not 20.)

8 701	TX PGS/Port	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages sent by the physical port used to send them. For example, if a 3-page original is sent to 4 destinations via ISDN G4, the count for ISDN (G3, G4) is 12.		
8 701 1	PSTN-1	-	
8 701 2	PSTN-2	-	
8 701 3	PSTN-3	-	
8 701 4	ISDN (G3,G4)	-	
8 701 5	Network	-	

8 711	T:Scan PGS/Comp	CTL	[0 to 99999999 / **0** / 1]
8 715	S:Scan PGS/Comp	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages sent by each compression mode.		
-001	JPEG/JPEG2000	-	
-002	TIFF M/S (Multi/Single)	-	
-003	PDF	-	
-004	Other	-	

8 771	Dev Counter	CTL	[0 to 99999999/ **0** / 1]
	This SP counts the total number of developed images.		
8 771 1	Total		

8 781	Toner Botol Info.	*BICU	[0 to 99999999/ **0** / 1]
	This SP counts the total number of developed images.		
8 781 1	Total		

8 801	Toner Remain	CTL	[0 to 100 / 0 / 1]
	This SP displays the percent of toner remaining for each color. This SP allows the user to check the toner supply at any time. • This precise method of measuring remaining toner supply (1% steps) is better than other machines on the market that can only measure in increments of 10 (10% steps).		
8 801 1	K		

8 851	Cvr Cnt:0-10%	*BICU	[0 to 99999999/ **0** / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 0% to 10%.		
8 851 11	0-2%:Bk		
8 851 21	3-4%: Bk		
8 851 31	5-7%: Bk		
8 851 41	8-10%: Bk		

8 861	Cvr Cnt: 11-20%	*BICU	[0 to 99999999/ **0** / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 11% to 20%.		
8 861 1	Bk		

8 871	Cvr Cnt: 21-30%	*BICU	[0 to 99999999/ **0** / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 21% to 30%.		
8 871 1	Bk		

8 881	Cvr Cnt: 31%-	*BICU	[0 to 99999999/ **0** / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is 31% or higher.		
8 881 1	Bk		

Service Tables

8 891	Page/Toner Bottle	*BICU	[0 to 99999999/ **0** / 1]
	This SP displays the number of sheets output by the scan application.		
8 891 1	Bk		

8 901	Page/Toner k Prev1	*BICU	[0 to 99999999/ **0** / 1]
	This SP displays the number of sheets output by the scan application with the previously replaced units.		
8 901 1	Bk		

8 911	Page/Toner k Prev2	*BICU	[0 to 99999999/ **0** / 1]
	This SP displays the number of sheets output by the scan application with the unit replaced before the previously replaced unit (two steps back from the current unit).		
8 911 1	Bk		

8 921	Cvr Cnt/Total	*BICU	
8 921 1	Coverage(%): BK	[0 to 2147483647 / **0** / 1] These SPs display the total coverage percentage of sheets output by the machine.	
8 921 11	Covwerage/P: Bk	[0 to 99999999 / **0** / 1] These SPs display the total coverage pages output by the machine.	

	Cvr Cnt/Total	CTL	[0 to 99999999 / **0** / 1]
8 941	These SPs count the amount of time the machine spends in each operation mode. These SPs are useful for customers who need to investigate machine operation for improvement of their compliance with ISO Standards.		
8 941 1	Operation Time	Engine operation time. Does not include time while controller is saving data to HDD (while engine is not operating).	
8 941 2	Standby Time	Engine not operating. Includes time while controller saves data to HDD. Does not include time spent in Energy Save, Low Power, or Off modes.	
8 941 3	Energy Save Time	Includes time while the machine is performing background printing.	
8 941 4	Low Power Time	Includes time in Energy Save mode with Engine on. Includes time while machine is performing background printing.	
8 941 5	Off Mode Time	Includes time while machine is performing background printing. Does not include time machine remains powered off with the power switches.	
8 941 6	SC	Total down time due to SC errors.	
8 941 7	PrtJam	Total down time due to paper jams during printing.	
8 941 8	OrgJam	Total down time due to original jams during scanning.	
8 941 9	Spl PM Unit End	Total down time due to toner end.

5.1.3 ID SENSOR ERROR ANALYSIS (SP2-221)

The image quality may become very poor when the ID sensor does not operate properly. However, there is no SC code that indicates ID-sensor malfunction. Instead, SP2-221 shows you some information on the ID sensor. Check this information when the image quality is poor.

The table lists the information shown with SP2-221 (ID Sensor Error Analysis).

SP	Error condition	Possible cause	Remarks
SP2-221-1 Vsg (VG in the display)	Vsg < 2.5V or (Vsg – Vsp) < 1.00V	• ID sensor defective • ID sensor dirty • Drum not charged	-
SP2-221-2 Vsp (VP in the display)	Vsp > 2.5V or (Vsg – Vsp) < 1.00V	• Toner density very low • ID sensor pattern not created	-
SP2-221-3 Power (PW in the display)	Vsg < 3.5V when maximum power (979) is applied	• ID sensor defective • ID sensor dirty • Drum not get charged	Power source for the ID-sensor light
SP2-221-4 Vsdp	No Error Conditions		-
SP2-221-5 Vt	Vt > 4.5V or Vt < 0.2V	• TD sensor defective	-
SP2-221-6 Vts	-	-	-

Service Tables

5.1.4 MEMORY CLEAR

GW Machine (B284/B288)

The GW machine (the machine with the optional controller box) stores the engine data in the NVRAM on the BICU, and stores the other data in the NVRAM on the optional controller. To distinguish between the engine data and the other data, see SP5-801-003 through 015. This service program (SP5-801) handles the controller data. Any data that is not handled by SP5-801 is the engine data. The data in the BICU NVRAM (engine data) is cleared by SP5-998-001 while the data in the controller NVRAM (controller data) is cleared by SP5-801-xxx (for exceptions, see "Exceptions" as described below).

Machine	Data	NVRAM	Cleared by	Remarks
GW	Engine data	BICU	SP5-998-001	Any data other than controller data
	Controller data	Controller	SP5-801-xxx	SCS, IMH, MCS, Copier application, Fax application, Printer application, Scanner application, Web service/network application, NCS, R-Fax, DCS, UCS

Exceptions

SP5-998-001 clears most of the settings and counters stored in the NVRAM on the BICU (the values return to their default values). However, the following settings are not cleared:

- SP5-807 (Area Selection)
- SP5-811-001 (Serial Num Input [Code Set])
- SP5-811-003 (Serial Num Input [ID2 Code Display])
- SP5-812-001 (Service TEL [Telephone])
- SP5-812-002 (Service TEL [Facsimile])
- SP5-907 (Plug & Play)
- SP7 (Data Log)
- SP8 (History)

Use SP5-998-001 after you have replaced the BICU NVRAM or when the BICU NVRAM data is corrupted. When the program ends normally, the message "Completed" is displayed.

When you have replaced the controller NVRAM or when the controller NVRAM data is corrupted, use SP5-801-001. The message is the same as the basic machine.

Memory Clear Procedure

1. Print out all SMC data lists (☛ "SMC Print").
2. Do SP5-998-001.
3. Press the OK key.
4. Select "Execute." The messages "Execute?" followed by "Cancel" and "Execute" are displayed.
5. Select "Execute."
6. When the program has ended normally, the message "Completed" is displayed. If the program has ended abnormally, an error message is displayed.
7. Turn the main switch off and on.
8. Adjust the printer and scanner registration and magnification (* "Copy Adjustment" in the chapter "Replacement and Adjustment").
9. Refer to the SMC lists, and enter any values that differ from the factory settings. Double-check the values for SP4-901.
10. Adjust the standard white level (SP4-428).
11. Initialize the TD sensor (SP 2-214).
12. Check the copy quality and the paper path.

5.1.5 MEMORY CLEAR

Basic Model (B262/B292)

This model (the machine without the controller box) stores all the data in the NVRAM on the BICU. The data is cleared by SP5-801-002 (for exceptions, see "").

Exceptions

SP5-801-002 clears most of the settings and counters stored in the NVRAM on the BICU (the values return to their default values). However, the following settings are not cleared:

- SP5-807 (Area Selection)
- SP5-811-001 (Serial Num Input > Code Set)
- SP5-812-001 (Service TEL > Telephone)
- SP5-812-002 (Service TEL > Facsimile)
- SP5-907-001 (Plug & Play)
- SP7 (Data Log)
- SP8 (History)

Service Program

Initializing Memory Data

Use SP5-801-002 after you have replaced the BICU NVRAM or when the BICU NVRAM data is corrupted. When the program ends normally, the message "Completed" is displayed. When you have replaced the controller NVRAM or when the controller NVRAM data is corrupted, use SP5-801-001.

Executing Memory Clear

13. Upload the NVRAM data to a flash memory card (☛ "NVRAM Data Upload/Download").

14. Print out all SMC data lists (☛ "SMC Print").

   ↓ Note

   ▪ Be sure to print out all the lists. You have to manually change the SP settings if the NVRAM data upload ends abnormally.

15. Select SP5-801-002.

16. Press the OK key.

17. Select "Execute." The messages "Execute?" followed by "Escape" and "Execute" are displayed.

18. Select "Execute."

19. When the program has ended normally, the message "Completed" is displayed. If the program has ended abnormally, an error message is displayed.

20. Press the escape key.

21. Turn the main switch off and on.

22. Download the NVRAM data from a flash memory card (☛ "NVRAM Data Upload/Download").

5.1.6 INPUT CHECK (SP5-803)

Conducting Input Check

1. Select SP5-803.

2. Select the number (see the table below) corresponding to the component.

3. Select "Execute." The copy mode is activated.

4. The sign "01H" or "00H" is displayed (see the table below).

Input Check Table

Num.	Sensor/Switch	1h	0h
001	Safety SW	Open	Closed
003	Right Cover SW	Open	Closed
005	Tray Cover SW	Open	Closed
006	Upper Relay S	Paper detected	Not detected
009	Registration Sensor	Paper detected	Not detected

* Available Paper Feed Unit

00	None
30	1-tray paper feed unit

5.1.7 OUTPUT CHECK (SP5-804)

Conducting Output Check

⚠️ **CAUTION**

- To prevent mechanical or electrical damage, do not keep an electrical component on for a long time.

1. Select SP5-804.

2. Select the number (see the table below) corresponding to the component.

3. Select "ON."

4. To stop the operation, select "OFF."

Output Check Table

Num.	Component
001	Main Motor Forward
002	Main Motor Reverse
003	Quenching Lamp
004	Toner Supply Clutch Forward
005	Fan Motor High
006	Fan Motor Low
007	Registration Clutch
008	By-pass Feed Clutch
009	Upper Feed Clutch
010	Lower Feed Clutch
017	BK-Lift Motor
020	Duplex Inv Motor Reverse
021	Duplex Inv Motor Forward

Service Tables

Num.	Component
024	Duplex Inv Motor Hold
026	Polygon Motor
027	Polygon M/LD
028	LD
029	DF-Feed M
030	DF-Transport M
031	DF-Feed Clutch
034	DF-Gate SOL (Junction Gate Solenoid)
038	Fusing Solenoid
039	Fast Dup Inv M-Rev
042	Scan Fgate-Mono
043	Scan Fgate-Color

When checking Fan Motor High (005) or Fan Motor Low (006) note the following:

- These motors may not respond when the fusing temperature is high.
- Selecting "ON" checks that one of these motors normally operates. Selecting "OFF" turns off the motor that you have started by selecting "ON." However, this does not guarantee that the motor normally stops during normal operation.

5.1.8 MACHINE SERIAL NUMBER SETTING (SP5-811-001)

Specifying Characters

SP5-811-001 specifies the serial number. For the machine with the optional controller, you use the numeric keypad and the optional operation panel.

GW Machine (B284/B288)

You can use the numeric keypad to type numbers. In addition, you can use the operation panel to type other characters. When you press the "ABC" key, the letter changes as follows: A → B → C. To input the same letter two times, for example "AA," you press the "ABC" key, the "Space" key, and the "ABC" key. To switch between uppercase letters and lowercase letters, press the "Shift" key.

Serial Number and NVRAM

Serial numbers are stored in the NVRAM before shipment and are not cleared. You must specify a serial number after you replace the NVRAM.

5.1.9 NVRAM DATA UPLOAD/DOWNLOAD (B284/B288)

⚠ **CAUTION**

- Make sure that you turn off the main power switch before inserting or removing a flash memory card. Data in the memory may be corrupted if you insert or remove the memory card with the main power switch on.

Uploading Content of NVRAM to an SD card

Follow this procedure to upload SP code settings from NVRAM to an SD card.

⬇ Note

- This data should always be uploaded to an SD card before the NVRAM is replaced.

1. Before switching the machine off, execute SP 5990-1 (SMC Print). You will need a record of the NVRAM settings if the upload fails.
2. Turn off the main power of the copier.
3. Remove the slot cover 3 (uppermost one) (✎ x 1).
4. Insert the SD card into the service slot 3 (uppermost one), then turn on the main power of the copier.
5. Execute SP 5824-1 (NVRAM Data Upload) then press the "Execute" key.
   - When uploading is finished, a file is coped to an NVRAM folder on the SD card.

Service Program

The file is saved to the path and filename:

NVRAM¥<serial number>.NV

Here is an example with Serial Number "B0700017":

NVRAM¥B0700017.NV

6. In order to prevent an error during the download, be sure to mark the SD card that holds the uploaded (saved) data with the number of the machine from which the data was uploaded (saved).

⭐ Important

- NVRAM data from more than one machine can be uploaded (saved) to the same SD card.

7. Turn off the main power, and then remove the SD card from the slot 3 (the uppermost one).

8. Reassemble the machine.

Downloading an SD Card to NVRAM

Follow this procedure to download (save) SP data from an SD card to the NVRAM in the machine.

- If the SD card with the NVRAM data is damaged, or if the connection between the controller and BICU is defective, the NVRAM data download may fail.
- If the download fails, repeat the download procedure.
- If the second attempt fails, enter the NVRAM data manually using the SMC print you created before uploading the NVRAM data. (☛ above procedure)

1. Turn off the main power of the copier.

2. Remove the slot cover 3 (the uppermost one) (🖋 x 1).

3. Insert the SD card with the NVRAM data into the service slot 3 (the uppermost one).

4. Turn on the main power of the copier.

5. Execute SP 5825-1 (NVRAM Data Download) and press the "Execute" key.

6. Turn off the main power of the copier, and then remove the SD card from the slot 3 (the uppermost one).

7. Reassemble the machine.

↓ Note

- In order for the NVRAM data to download successfully, the serial number of the file on the SD card must match the serial number of the machine. If the serial numbers do not match, the download will fail.

This procedure downloads (saves) the following data to the NVRAM:

- Total Count
- C/O, P/O Count

5.1.10 NVRAM DATA UPLOAD/DOWNLOAD (B262/B292)

⚠ CAUTION

- ▪ Make sure that you turn off the main power switch before inserting or removing a flash memory card. Data in the memory may be corrupted if you insert or remove the memory card with the main power switch on.

This section illustrates how to copy the data from the BICU NVRAM to a memory card (☛ "NVRAM Data Upload/Download" writing onto open space on card) or from a memory card to the BICU NVRAM (☛ "NVRAM Data Upload/Download"). For the workflow to copy the data in the controller NVRAM, see **xxx**.

Overview

You can copy the data from the NVRAM to a flash memory card (NVRAM Upload) or from a flash memory card to the NVRAM (NVRAM download).

SP5-824-1 (NVRAM Upload)	From the BICU to a flash memory card
SP5-825-1 (NVRAM Download)	From a flash memory card to the BICU

You should execute NVRAM Upload before replacing the NVRAM or before executing SP5-801-002 (Memory Clear > Engine). You can copy back the data from the flash memory card to the NVRAM as necessary.

Service Tables

NVRAM Upload (SP5-824-001)

8. Turn off the main switch.
9. Remove the memory card cover [B] (🖉 x 1).
10. Turn the face of the flash memory card [A] ("A" is printed on it) to the rear of the copier, and insert it into the card slot [C].
11. Turn on the main power switch.
12. Activate the SP mode and select SP5-824-001.
13. The copier overwrites the data in the memory card with the data in the NVRAM. This takes about 20 seconds. If uploading fails, an error message appears. If an error message appears, retry the upload procedure.
14. Turn off the main power switch.
15. Remove the memory card.

b130s901
NVRAM Download (SP5-825-001)

SP5-825-001 copies the data from a flash memory card to the NVRAM. Most of the data in the NVRAM is overwritten. The following data in the NVRAM remains unchanged (these are not overwritten):

▪ SP8-221-001 (ADF Original Feed > Front)
▪ SP8-381-001 (Total: Total Printer Pages)
▪ SP8-382-001 (Copy Application: Total Print Pages)
▪ SP8-411-001 (Prints/Duplex)

16. Turn off the main power switch.

17. Remove the memory card cover [B] (🖋 x 1).

18. Turn the face of the flash memory card [A] ("A" is printed on it) to the rear of the copier, and insert it into the card slot [C].

19. Turn on the main switch.

20. Activate the SP mode and select SP5-825-001.

21. The copier overwrites the data in the NVRAM with the data in the memory card. This takes about one second. If downloading fails, an error message appears. If an error message appears, retry the download procedure.

22. Turn off the main power switch.

23. Remove the memory card.

b130s901

Service Tables
5.1.11 FIRMWARE UPDATE PROCEDURE

Procedure for the B284, B288, B892, and D323

This section illustrates how to update the firmware of the GW machine (the machine with the (optional) controller box). See **Procedure for the B262 and B292** for those units.
To update the firmware for the GW machine, you must have the new version of the firmware downloaded onto an SD (Secure Digital) Card. The SD Card is inserted into the uppermost slot on the right side of the controller box, viewed from the back of the machine.

Before You Begin…

An SD card is a precision device, so always observe the following precautions when handling SD cards:

▪   Always switch the machine off before inserting an SD card. Never insert the SD card into the slot with the power on.

▪   When the power is switched on, never remove the SD card from the service slot.

▪   Never switch the machine off while the firmware is downloading from the SD card.

▪   Store SD cards in a safe location where they are not exposed high temperature, high humidity, or exposure to direct sunlight.

▪   Always handle SD cards with care to avoid bending or scratching them. Never drop an SD card or expose it to other shock or vibration.

Keep the following points in mind while you are using the firmware update software:

▪   "Upload" means to send data from the machine to the SD card, and "download" means to send data from the SD card to the machine.

▪   To select an item on the LCD screen, press the appropriate key on the operation panel, or press the appropriate number key on the 10-key pad of the operation panel.

▪   Before starting the firmware update procedure, always make sure that the machine is disconnected from the network to prevent a print job for arriving while the firmware update is in progress.

Firmware Update Procedure

▪   Before beginning the following, first confirm which firmware version(s) are currently installed in the machine with SP7-801-255.

SD Card Preparation

1.   Format an SD card with, for example, SD Formatter v1.1.

2.   Create a "romdata" folder on the card.

3.   Create the following folders within the "romdata" folder: B284, B288, B892, D323.

4. Download the firmware from the server and store the files in the folder with the corresponding model code on the SD card.

    Example:
    File B2845521C should be stored in the "B284" folder, whereas files B2625540C should be stored in the "B262" folder.

Firmware Update

↓ Note

- It is strongly recommended to store only B284, B288, B892 and D323 files on SD cards used for downloading to B284, B288, and B292. With the controller used on this model, a firmware update may sometimes be interrupted if there is software for multiple models stored on the same SD card.

5. Turn OFF the main power switch.

6. If the machine is connected to a network, disconnect the network cable from the copier.

7. Remove the slot cover [A] (🖉 x 1).

8. With the label on the SD card facing the rear side of the machine, insert the SD card into the uppermost slot [B] on the controller box. Slowly push the SD card into the slot so it locks in place.

9. Make sure the SD card is locked in place. (To remove the SD card, push it in to unlock the spring lock and then release it so it pops out of the slot.)

10. Switch the main power switch ON. After about 5 seconds, the LCD will display "Please wait…" Then, about 60 seconds later, the LCD will display "Program UpDate Menu P.01" on the first line and the name of the firmware on the second line (e.g. System/Copy).

11. Press the "OK" key to select a
    module.

    ▪ To scroll through the menus,
      press the △ or ▽ keys [A].

```
Program UpDate Menu P.01
  ROM: B1234567A
  NEW: B1234567B
                        Exit
```

▪ To view the firmware version, press the right key. "ROM" is the information on
  the current firmware. "NEW" is the information on the firmware in the SD card.

▪ To return to the menu, press the ◁ key.

▪ To select the module, press the OK key.

▪ To scroll through the module name, the serial number, and the version, press the
  ◁ key or ▷ key.

▪ If you wish to install the following firmware simultaneously, press the START key.
  The scroll keys can be used to confirm that this firmware has been selected
  (highlighted with a dark background).
  [Engine, FCU, Scanner, Printer, Printer Font, Security Module]

★ Important

- Please note that the following firmware
  cannot be updated simultaneously. The
  update procedure must be repeated for
  each individually.
- System/Copy, ServiceCardNetFile,
  ServiceCardNIB, ServiceCardFAX,
  ServiceCardWebSystem.

```
Program UpDate Menu P.01
  ROM: B2764567A
  NEW: B2764567B
 Verify   Update   Exit
```

▪ When you have selected a module, the text lines are highlighted, and the "Verify"
  key and the "Update" key are displayed.

12. Select a module and press the "Update" key.

    ★ Important

    ▪ Do **NOT** press the "Verify" key.

13. The firmware update program starts and the message "Loading" is displayed.

    ▪ The update will begin, and then will take a few minutes to complete. The LCD will
      initially display, "Updating…   ***---------".

    ▪ When the update is completed, the LCD display will change to "Update done" or
      "Updated / Power OFF ON".

14. Check that the message
    "Update Done" is displayed.
Confirmation

1. Turn the main power switch OFF and ON.
   ▪ The LCD will display "Please wait…" for about 60 seconds, after which it will return to the "Program UpDate Menu" screen.
2. Repeat Steps 1-8 above until all firmware updates are complete.
3. Turn the main power switch OFF.
4. Remove the SD card from the lower slot on the controller by pushing on the card to release the spring lock.

If an error occurs, the error code is displayed. For a list of information on error codes, see the following table.

Code	Cause	Necessary Action
E20	Physical address mapping error	• Insert the SD card correctly. • Use another SD card
E22	Decompression error	• Store correct data in the SD card.
E23	Update program error	• Update controller program. • Replace the controller.
E24	SD card access error	• Insert the SD card correctly. • Use another SD card.
E31	Download data inconsistency*	• Insert the SD card that was used when the previous update procedure is interrupted.
E32	Download data inconsistency*	• Insert the SD card that stores the correct data.
E33	Version data error	• Store the correct data in the SD card.

Code	Cause	Necessary Action
E34	Locale data error	• Store the correct data in the SD card.
E35	Machine model data error	• Store the correct data in the SD card.
E36	Module data error	• Store the correct data in the SD card.
E40	Engine program error**	• Store the correct data in the SD card. • Replace BICU.
E42	Operation panel program error*	• Store the correct data in the SD card. • Replace the operation panel board.
E44	Controller program error*	• Store the correct data in the SD card. • Replace the controller board.
E50	Authentication error	• Store the correct data in the SD card.

*You need to reinstall the program.

If the firmware update program is interrupted (for example, by a power failure), keep the SD card inserted and turn the mains switch off and on. The firmware update program restarts. If you do not do so, the message "Reboot after Card insert" is displayed when you turn the main switch ON.

⇒ Procedure for the B262 and B292

This section describes how to update the firmware for the B262 and B292.

1. Turn the main power switch OFF.
2. Remove the memory card cover [B] (✏ x 1)
3. Turn the face of the flash memory card [A] ("A" is printed on it.) to the rear of the copier, and insert it into the card slot [C].
4. Press down the power switch on the operation panel and hold it, and turn on the main power switch.

```
COPY
5.827.001 Program Download

                                    Execute
```
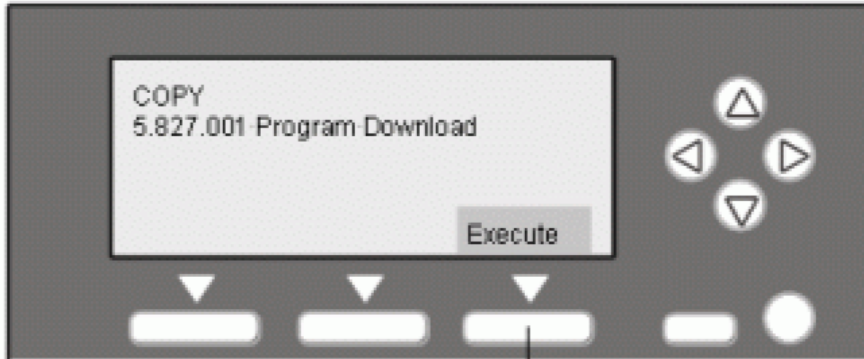

5. Press the "Execute" key [D]. The program starts running.

```
COPY
5.827.001 Program Download
Load Status:★─★★★★★★★

                                    Execute
```
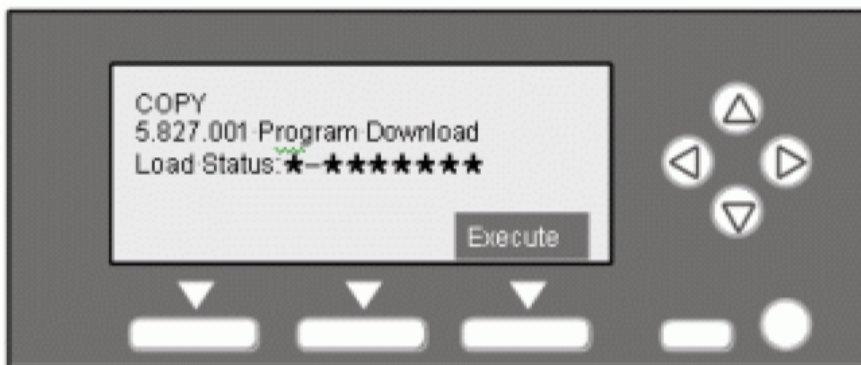

6. Do not touch any key while the message "Load Status..." is displayed. This message indicates that the program is running.

```
COPY(Class3)
5.827.001 Program Download
End Sum:★★★★H 0.20 EXP
```
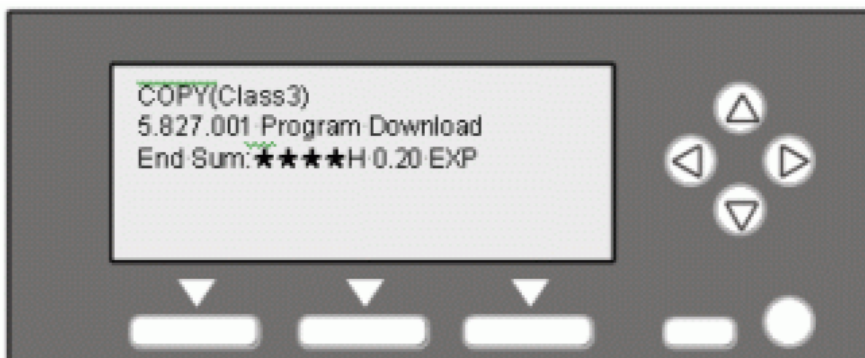

7. Check that the message "End Sum..." is displayed. This message indicates that the program has ended normally.

8. Turn OFF the main power switch.

9. Remove the flash memory card.

10. Attach the memory card cover.

11. Turn the main power switch ON, and check the operation.

5.1.12 TEST PATTERN PRINT (SP5-902-001)

Executing Test Pattern Printing

1. Specify the pattern number and press the OK key.
2. Press the copy start key. The copy mode is activated (☛ "Using SP and SSP Modes" in this section).
3. Specify copy settings and press the ⊘ key.
4. To return to the SP mode, press the ⬚ key.

[1]: The PCI is available to the models with the controller box.
[2]: The original image on the exposure glass is printed behind the test pattern.

5.1.13 SMC PRINT (SP5-990)

SP5-990 outputs machine status lists.

1.   Select SP5-990.

2.   Select a menu:

   ▪   GW machine: 001 All (Data List), 002 SP (Mode Data List), 003 User Program, 004 Logging Data, 005 Diagnostic Report, 006 Non-Default, 007 NIB Summary, 008 Net File Log, 021 Copier User Program, 022 Scanner SP, 023 Scanner User Program, 040 Parts Alarm Counter Print, 064 Normal Count Print, 065 User Code Counter, 066 Key Operator Counter, 067 Contact List Print, 069 Heading1 print, 071 Heading3 print, 072 Group List Print, 128 ACC Pattern, 129 User Color Pattern, or 160:ACC Pattern Scan

   ▼ Note

   ▪   The output given by the menu "Big Font" is suitable for faxing.

3.   Press the "Execute" key.

   ▪   GW machine: The machine status list is output.

4.   To return to the SP mode, press the ⌧ key.

5.1.14 POWER-ON SELF TEST

The controller tests the following devices at power-on. If an error is detected, an error code is stored in the controller board.

- CPU, ASIC and clock
- Flash ROM
- Resident and optional SDRAM
- NVRAM

PS fonts (if installed)

5.1.15 PRINTER SERVICE MODE

Service Mode Table

SP No.	Description	Function and Setting
1001	BitSw#1 Set	Adjusts bit switch settings. **Note:** Currently the bit switches are not being used.
1003	Clear Setting	Not used
1004	Print Summary	Prints the service summary sheet (An error log is printed in addition to the configuration page).
1005	Display Version	Displays the version of the controller firmware.

SP Modes Related to Printer Controller

The following SP modes are located in the copier SP mode. Refer to section 5.1 of the main unit service manual.

SP No.	Description	Function and Setting
5801	Memory All Clear	Resets data for process control and all software counters, and returns all modes and adjustments to their defaults values. ☛ section "Memory Clear" in this chapter for details.
5907	Plug & Play	Selects the brand name and the production name for Windows Plug & Play. This information is stored in NVRAM.
7832	Detailed Display of Self-Diagnostics	Displays the controller self-diagnostic result.

5.1.16 SCANNER PROGRAM MODE TABLE

Service Table Key

Notation	What it means
[range / **default** / step]	Example: [-9 to +9 / **+3.0** / 0.1 mm step]. The setting can be adjusted in the range ±9, value reset to +3.0 after an NVRAM reset, and the value can be changed in 0.1 mm steps with each key press.
italics	Comments added for your reference.
*	This value is stored in NVRAM. After a RAM reset, the default value (factory setting) is restored.
DFU	Denotes "Design or Factory Use". Do not change this value.

Service Tables

Service Program

SP1		Mode Number		Function and [Setting]
1001*	5	Scan NV Version		Displays the scanner NV version. This shows as following: Function name _ Model name _ Version
1004*	1	Compression Type		Selects the compression type for binary picture processing. [**1: MH**, 2: MR, 3: MMR]
1005*	1	Erase Margin		Creates an erase margin for all edges of the scanned image. If the machine has scanned the edge of the original, create a margin. [0 to 5 / **0mm** / 1mm step]
1009*	1	Remote Scan disable		Enables or disables the network TWAIN scanner function. **0**: enable, 1: disable

SP	Number/Name	Function and [Setting]	
2021	Compression level (grayscale)		
	These SP codes set the compression ratio for the grayscale processing mode that can be selected with the notch settings on the operation panel. Range: 5 (lowest ratio) ⟵⟶ 95 (highest ratio)		
1	Level 3 (Middle I-Qual)	[5 to 95 / **40** /1/step]	
2	Level 2 (High I-Qual)	[5 to 95 / **50** /1/step]	
3	Level 4 (Low I-Qual)	[5 to 95 / **30** /1/step]	
4	Level 1 (Highest I-Qual)	[5 to 95 / **60** /1/step]	
5	Level 5 (Lowest I-Qual)	[5 to 95 / **20** /1/step]	

For the settings of the image quality, see the copier SP-mode table.

This table lists available units and components for each model.

Model	Document Feeder	Printer/ Scanner	Fax*	Controller
Fax Model (B284)	Standard	Optional	Standard	GW controller
SPF Model (B288)	Standard	Standard	Standard	GW controller
Basic Model (B292) for North America	Standard	Optional	Not available	Distributed with the optional printer/scanner
Basic Model (B262) for Europe/China	Optional	Not available	Not available	Not available

This table lists available interfaces for the Fax/SPF models.

	B284/B288
Ethernet	Standard
USB 2.0	Standard

Detailed Descriptions

6.5 MAIN PCBS

6.5.1 SBU (SENSOR BOARD UNIT)
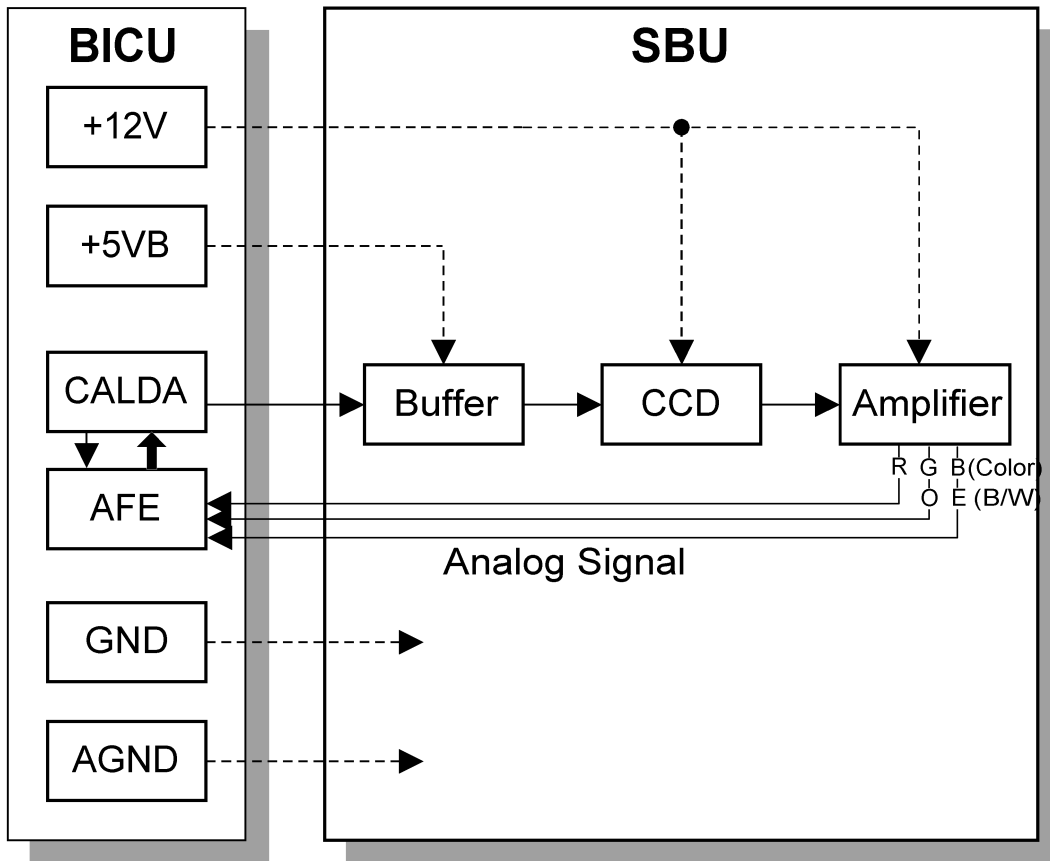

b262d554

The SBU receives analog signals from the CCD and converts these into digital signals used for image processing.

Buffer

Used for driving the CCD. Includes a 3V/5V converter (converts the CALDA 3V drive signal to 5V).

CCD

Converts light reflected from the original into an electrical signal. This machine uses a color CCD. Scan density is 600 dpi. Pixel size is 7 x 7 microns. Maximum pixel rate is 10 Mhz.

Amplifier

Inverts and amplifies the electrical signal from the CCD.

6.6 COPY PROCESS

6.6.1 OVERVIEW

b262d563
The following is a brief overview. For more detailed information about each process, refer to the Core Technology manual.

1. **Exposure**

   A xenon lamp [A] exposes the original → the CCD [B] converts reflected light to analog data signal → the BICU converts analog signal into digital data, processes it, stores it in memory the → BICU retrieves the data from memory and uses it to drive the laser. (Each original is scanned once only.)

2. **Drum Charge**

   In the dark, the drum charge roller [C] imparts a negative charge to the OPC drum. (The roller is kept clean by cleaning roller [D].)

Copy Process

3. **Laser Exposure**

The laser unit, controlled by the BICU, fires a beam [E] at the drum, drawing the latent electrostatic image on the drum surface. (Exposure by laser dissipates the local negative charge.)

4. **ID (Image Density) Sensor**

The ID sensor [F] periodically measures (a) drum surface reflectivity, and (b) reflectivity of a test pattern image drawn on the drum. The BICU uses ID sensor data to adjust charge-roller voltage, and uses both ID sensor data and TD sensor [J] data to adjust the toner density.

5. **Development**

Augers at [G] carry developer (carrier/toner mix) to the magnetic development roller [H]. The roller creates a developer "brush" that rubs against the drum, causing toner to adhere to the electrostatic image. (The doctor blade [I] restricts the height of the "brush." The TD (toner density) sensor [J] measures the ratio of toner in the developer.)

6. **Image Transfer**

Paper moves between the drum and the transfer roller [K]. A positive charge applied to the transfer roller pulls toner off the drum and onto the paper, while also attracting the paper itself.

7. **Paper Separation**

Paper is separated from the drum as a result of (a) electrostatic attraction of paper toward transfer roller, and (b) a high AC voltage applied to the discharge plate [L].

8. **Cleaning**

The cleaning blade [M] scrapes remaining toner from the drum, and the toner collection coil [N] retrieves this toner.

9. **Quenching**

Light from the quenching lamp [O] neutralizes the charge on the drum surface.

6.7 SCANNING

6.7.1 OVERVIEW

b262d564
1. Scanner HP Sensor	7. 2nd Mirror
2. 1st Mirror	8. Scanner Motor
3. Exposure Lamp	9. 3rd Mirror
4. 1st Scanner	10. Lens Block
5. Exposure Glass	11. Lens
6. 2nd Scanner	12. CCD

The HP sensor [1] senses when the scanner is at home position, ready to begin a scan.
To copy: the original is illuminated by the xenon exposure lamp [2]. The 1st, 2nd, and 3rd
mirrors direct the reflected light to the lens block, where the lens directs it to the CCD.
The 1st scanner includes a reflector (not shown) that helps reduce shadows on pasted
originals.

Detailed Descriptions

6.7.2 SCANNER DRIVE

b262d001
The scanner motor [A] (a stepper motor) drives a gear that turns a small drive belt [B], driving the scanner drive shaft [C]. Pulleys [D, E] on the ends of the shaft drive timing belts [F] and [G], driving the 1st scanner [H]. The first scanner is secured to timing belts [I] and [J], which drive the 2nd scanner [K] through the 2nd scanner's pulleys.

During scanning in book mode, the 2nd scanner moves at half the speed of the 1st scanner. Scanner speed increases for reduction printing, and drops for enlargement printing—generating reduction or enlargement in the sub-scan dimension. (The BICU uses image processing to generate the corresponding reduction or enlargement in the main-scan dimension.)

You can adjust magnification in the sub-scan direction using SP4-101 (which will adjust the motor speed). You can adjust in the main scan direction using SP4008.

For information about scanning in DF mode, refer to the "ARDF" section in this manual.

6.8 IMAGE PROCESSING

6.8.1 OVERVIEW

b284d100
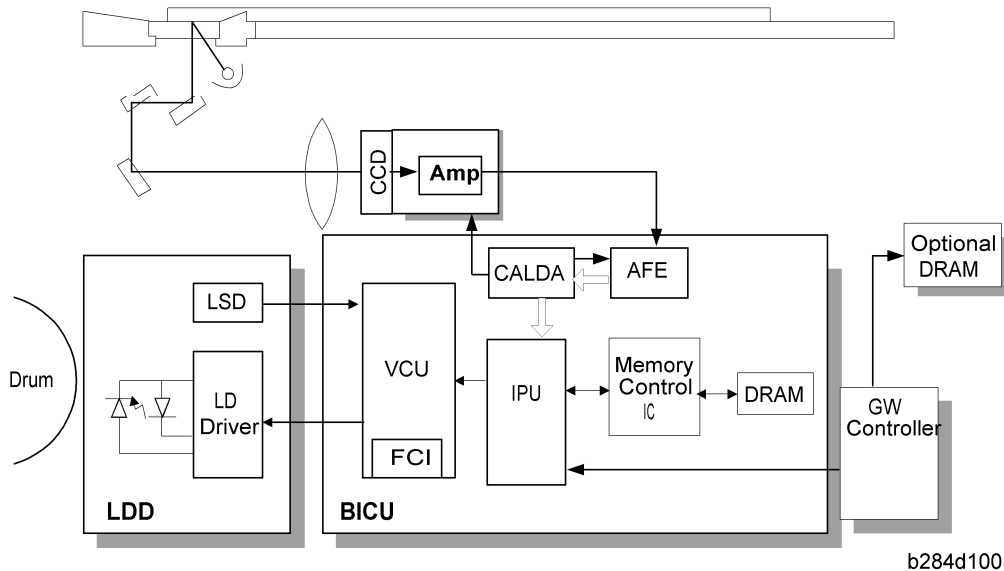

The scanned image is processed by the following modules.

In the SBU

- CCD: Converts the reflected light from the image into an analog signal. Driven by the CALDA.
- Amp: Amplifies the analog signal and sends it to the AFE on the BICU.

In the BICU

- IPU: Auto shading, filtering, magnification, scanner gamma correction, ID gamma correction
- VCU: Printer gamma correction, LD print timing control and laser power PWM control
- FCI (inside the VCU): Smoothing
- The data then moves to the LD drive board in accordance with timing controlled by the BICU.
- CALDA: CCD drive, AFE drive, Data conversion, Offset correction
- AFE: Analog digital converter, Gain adjustment, Offset adjustment (Analog Front End)

Detailed Descriptions

6.8.2 IMAGE PROCESSING PATH

b284d998
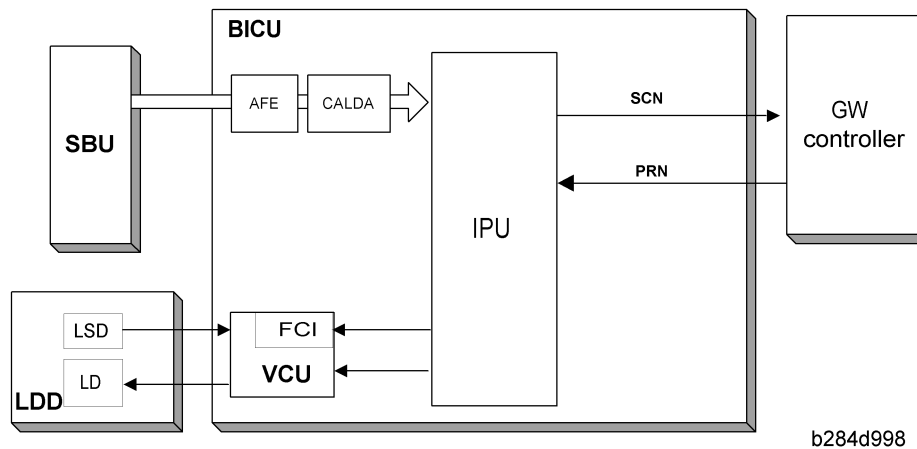

The image data from the SBU goes to the IPU (Image Processing Unit) on the BICU board, which carries out the following processes on the image data:

- Auto shading
- White/black line correction
- ADS
- Scanner gamma correction
- Magnification (main scan)
- Filtering (MTF and smoothing)
- D gamma correction
- Binary picture processing
- Error diffusion
- Dithering
- Video path control
- Test pattern generation

The image data then goes to the GW controller.

 Note

- The IPU and VCU are contained in the same IC (called SCRATCH) on the BICU.

6.8.3 ORIGINAL MODES

The machine has 10 original modes. There are two text modes, three photo modes, and five "special" modes.

The original mode key on the operation panel has two settings, text and photo. With the default settings, the machine uses "Normal Text (Text 1)" when the Text indicator is lit, and uses "Photo Priority (Photo 1)" when the Photo indicator is lit.

Selection of Original Modes, for Copying

The customer can allocate different modes to the Text and Photo indicators with User Tools – Copier Features – Image Adjustment. Note that the Text indicator does not have to be allocated to a Text mode and the Photo key does not have to be allocated to a Photo mode. For example, the Text indicator can be allocated to Photo 3, and the Photo indicator can be allocated to Special 4.

If the user wishes to customize one of the original modes, the technician can change the settings using SP 4922 to SP 4942. Refer to "SP Modes for Each Image Processing Step". However, only one of the original modes can be customized at any one time.

Selection of Original Modes, for Fax

Before scanning, the user selects Text or Photo at the operation panel.

▪ If Text: The machine uses Text Sharp mode, unless a serviceperson has changed the mode to Dropout mode.

▪ If Photo: The machine uses the photo mode selected by User Parameter switch 10 bit 7 (where "0" selects Photo Normal and "1" selects Photo Smooth).

If the user is having a problem with text-mode quality, please try to resolve the problem by adjusting the settings for Text Sharp. Do not try to solve the problem by changing the mode to Dropout. Dropout mode is designed for very specific uses only (for machines that are almost exclusively used to send preprinted forms with unneeded background color), and is rarely appropriate outside of Japan. The text mode used by the machine is determined by the value of SRAM address 410D48h. To change the text mode, you must use Fax SP (SP2-101-001) to manually change the value at this address. To change to Dropout mode, write 0Ah into this address. To change back to Text Sharp mode, write 07h into this address.

Original Modes: Copying

Original Type	Mode	Targeted Original Type
Text	Normal	Normal text originals
	Sharp	Newspapers, originals through which the rear side is moderately visible as faint text.
Photo	Photo priority	Text/photo images which contain mainly photo areas

Detailed Descriptions

Image Processing

	Text priority	Text/photo images which contain mainly text areas
	Photographs	Actual photographs
Special	Unneeded background	Originals through which the rear side is extremely visible (or have a colored background) with faint text. Also for originals with very grainy backgrounds (some newspapers) and faint text.
	Colored text	Originals with colored text and lines.
	Normal Pixel Photo	Photo images created by dither patterns (dots visible), such as newspaper photos – normal resolution.
	Coarse Pixel Photo	Photo images created by dither patterns (dots visible), such as newspaper photos – coarse resolution.
	Preserved Background (Normal Text)	Use instead of Normal Text if, e.g. an embedded white area causes Auto Image Density to initially remove the surrounding (darker) background but leave the rest. Use if the customer wishes to keep this background.

Original Modes: Fax

Original Type	Mode	Targeted Original Type
Text	Text shrap	For newspapers or other originals through which text on the rear side is moderately visible.
	Dropout	Stronger removal of dropout colors.
Photo	Photo Smooth	Photos with visible pixels (newspaper photos, etc.)
	Photo Normal	Normal photos

6.8.4 IMAGE PROCESSING STEPS FOR EACH MODE

NOTE: The gray area means the setting cannot be changed using SP mode.

Block	Function	Text: Normal	Text: Sharp	Text: Photo Priority	Photo: Text Priority	Photo: Photographs	Special: Unneeded Background	Special: Colored Text	Special: Normal Pixel Photo	Special: Coarse Pixel Photo	Special: Preserved Background	Note

b130d924

6.8.5 MODE ADJUSTMENTS

As a service person, you can use SPs 4-922 to 4-932 to further customize each of these original modes to meet specific user requirements. If the user is experiencing a problem with copy, however, SP-based adjustment should be the last step. Always proceed as follows:

1. First, try changing the density notch setting.

   If that doesn't resolve the problem, then...

2. Try selecting a different original mode.

   If that also doesn't resolve the problem, then...

3. Try customizing the relevant original mode with SPs.

To customize...

First use SP4-921 to select the original mode that you wish to customize. Then enter the relevant customizations using SP4-922 to SP4-932. Refer to Section 5 for general information about the adjustments you can make .

Note the following points:

- All SP settings are relative to the selected original mode. If you set the SP value to "0", the machine will use the default processing for that mode.

- If you enter an SP customization setting for an original mode that does not support that customization, the entry will have no meaning.

6.9 LASER EXPOSURE

6.9.1 OVERVIEW
b262d101

[A]: LD Unit	[E]: Toroidal Lens
[B]: Synchronization Detector Lens	[F]: Polygon Mirror Motor
[C]: OPC Drum	[G]: Cylindrical Lens
[D]: Shield Glass	[H]: LD Shutter

- The LD unit controls both the laser output and the laser synchronization mechanism.
- The machine cuts the power to the LD drive board when the front door or right door is opened.
- The LD shutter blocks the laser-beam path if the toner bottle holder or THM (toner hopper magazine) is unlatched.

Detailed Descriptions

6.9.2 LD SAFETY SWITCHES
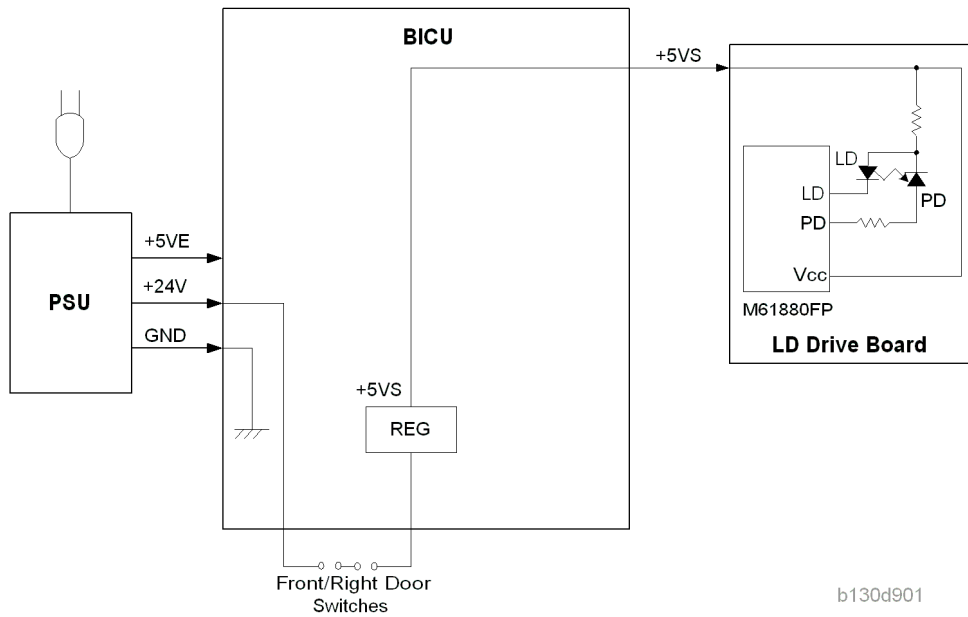

b130d901

Safety switches are installed at the front and right doors to ensure technician and user safety and to prevent the laser beam from accidentally switching on during servicing. Opening of the front or right door opens the corresponding switch, cutting the power supply (+5VS) to the laser diode.

The safety switches are installed on the +24V line coming from the power supply unit (PSU). The +24V supply must pass through these switches before converting into the +5VS power that drives the laser.

6.10 PHOTOCONDUCTOR UNIT (PCU)

6.10.1 OVERVIEW
b262d510

1. Cleaning Blade	6. TD (toner density) Sensor
2. Toner Collection Coil	7. Mixing Auger 1
3. OPC Drum	8. Doctor Blade
4. Development roller	9. Charge Roller
5. Mixing Auger 2	10. Cleaning Roller

Detailed Descriptions
6.10.2 DRUM DRIVE

b262d303

The main motor [A] drives the drum [B] through a series of gears and the drum drive shaft [C].

6.11 DRUM CHARGE

6.11.1 OVERVIEW
b262d305

The drum charge roller [A] remains in contact with the drum, producing a charge of –900 V on the drum surface.

The high voltage supply board [B] supplies a negative charge to the charge roller via wire [C] and spring [D]. The default base (uncorrected) charge is –1650V. You can adjust this base charge using SP20011. The actual charge is corrected in accordance with the ambient environment, as described in the next section.

Detailed
Descriptions

6.11.2 CHARGE ROLLER VOLTAGE CORRECTION

Correction for Ambient Environment
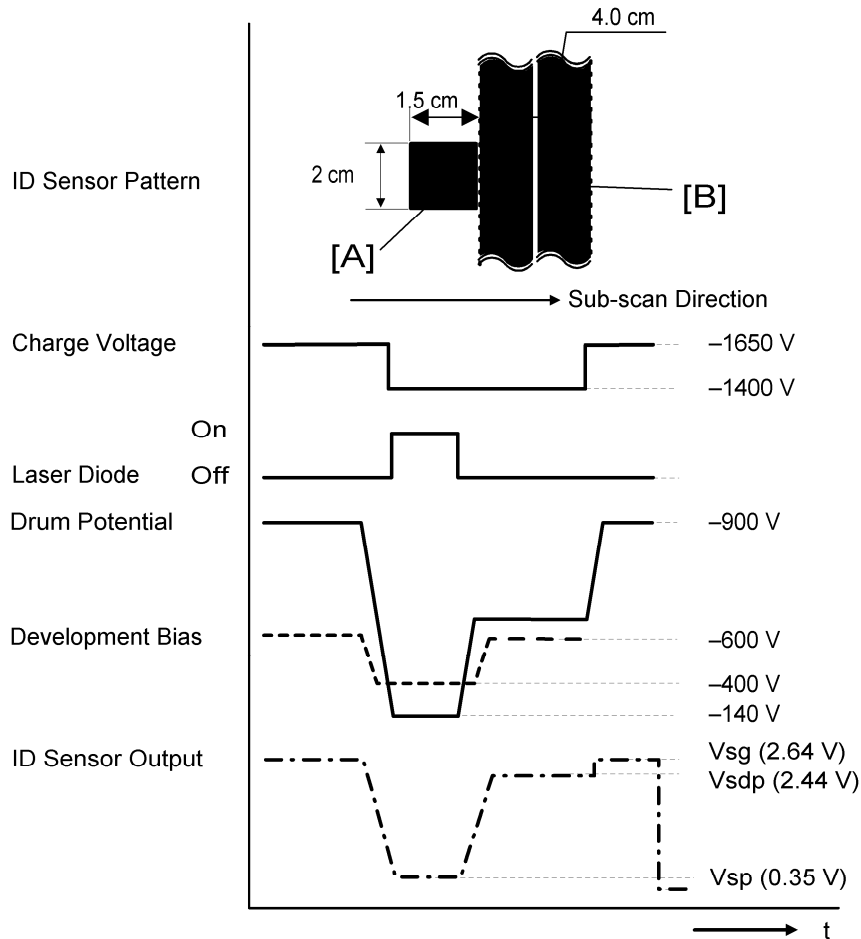

b262d552

Efficiency of voltage transfer from the charge roller to the drum decreases as ambient temperature and humidity rise. Accordingly, the charge roller voltage must be made more negative at higher temperature and humidity.

When Correction is Made

▪ At initial warm-up (following power-on by main switch)

▪ During warm-up on exit from low-power or auto-off mode, if that mode has been in effect for at least 4 hours

⬇ Note

▪ Correction can be disabled with SP2-927.

How Correction is Made

Immediately after creating the ID sensor pattern [A] used for toner density control (☛ "Toner Density Control"), the machine generates another pattern [B] for charge voltage correction by intensifying the development bias (☛ "Development Bias") to –600 V. The laser remains off, but a small amount of toner moves to the drum because of the slight charge difference between the drum and development roller. The ID measures the pattern's density (Vsdp) and the bare drum voltage (Vsg); the FCU compares the difference and adjusts the roller voltage accordingly.

- If Vsdp/Vsg > 0.95:   Change charge roller voltage by +50 V (less negative).
- If Vsdp/Vsg < 0.90 = Change charge roller voltage by –50 V (more negative).

↓ Note

- The current ID sensor readings can be viewed using SP2-221.

6.11.3 CHARGE ROLLER CLEANING

b262d304
A cleaning roller [A] removes toner and debris that the roller picks up from the drum.

6.11.4 DETECTION OF NEW PCU

Before starting to use a new PCU, the machine must (a) agitate the toner/developer mix, (b) initialize the TD sensor, and (c) initialize the PCU counter. This machine automatically detects the presence of a new PCU and carries out these operations.

At time of copier installation

The first time the machine is turned on following installation, a factory-set flag informs the machine that the PCU has not yet been initialized. The machine carries out the necessary initialization automatically.

Detailed Descriptions

Drum Charge

When a replacement PCU is installed

Replacement PCUs have a special mechanism that trips when they first start, informing the machine that a new PCU has been installed. (Preinstalled PCUs do not include this mechanism, and have two empty pins in their connector.)

b262d301
Replacement PCU ships in state [A]. Slight rotation of PCU gear [B] at power-on releases plate [C], breaking the circuit and informing the FCU that the new PCU is a replacement unit.

6.12 DEVELOPMENT

6.12.1 OVERVIEW

b262d563a
The development section consists of the following parts.

1. Development Roller	4. TD Sensor
2. ID Sensor	5. Mixing Auger 1
3. Mixing Auger 2	6. Doctor Blade

The two mixing augers mix the developer (carrier/toner mix). The TD (toner density) sensor and the ID (image density) sensor are used to control the copy image density.

Detailed Descriptions

6.12.2 DEVELOPMENT BIAS
b262d309

Black areas of the latent image on the drum are at low negative charge (about −140 ± 50 V), with white areas at high negative charge (about −900 V).

To attract negatively charged toner to black areas, the high voltage supply board [A] applies a (default) bias of −600 V to the development roller [B]. The bias voltage can be adjusted with SP2-201-1.

6.12.3 TONER SUPPLY

b262d306

b262d307
When toner bottle [A] is pushed in, shutter [B] is pushed open by the PCU body. Pressing in lever [C] pulls off toner bottle cap [D], which is held by chuck [E]. When clutch [F] turns the bottle, the spiral grooves push toner out at [G], and the turning Mylar blades [H] push this toner through slit [I] into the developing unit. Toner collection coil [J] simultaneously recycles toner retrieved from the OPC drum. The recycled toner slides down chute [K] and enters the developing unit through slit [L].

6.12.4 TONER DENSITY CONTROL

Overview

Toner concentration in the developer is controlled using the following values:

Vts:	TD sensor initial setting (1.25V). (Used as reference voltage when Vref is not available.)
Vref:	Toner supply reference voltage (calculated value; periodically updated)
Vt:	Actual output from TD sensor
Vsg/Vsp:	Values from ID sensor, where Vsp is the voltage of a test pattern (the "ID sensor pattern"), and Vsg is the voltage of the bare drum

Detailed
Descriptions

Development

Toner is added to the development unit if Vt is higher than the reference voltage.

Reference Voltage

Vts is used as the reference if the PCU has just been installed (since Vref has not yet been calculated) or if ID sensor correction has been disabled with SP2-927. In all other cases, Vref is used as the reference.

Toner Density Sensor Initial Setting

The Vts for this machine is 1.25 V. During TD sensor initialization (after installation of new PCU), the machine adjusts the sensor so that it reads out 1.25V.

Toner Concentration Measurement

The machines checks concentration every copy cycle, by comparing Vt against the reference voltage.

Vsp/Vsg Detection

An ID sensor pattern is made on the drum by the charge roller and laser diode. The ID sensor detects the pattern density (Vsp) and the density of the bare drum (Vsg). Detection is carried out at the same time as (and immediately before) charge-roller voltage detection (☛ "Charge Roller Voltage Correction").

↓ Note

- Use of ID sensor control can be disabled with SP2-927.

Calculation of Vref

Vref is calculated based on:

- ID sensor output (Vsp/Vsg)
- Existing reference voltage (Vref or Vts) – Vt
  Toner Supply Determination

The machine supplies toner if Vt exceeds the reference voltage.

↓ Note

- Current Vt and reference voltage values can be viewed using SP2-220. Other ID sensor values can be viewed using SP2-221.

Toner Clutch ON Time

Calculation is based on:

- Vt
- Reference voltage RV (= Vref or Vts)
- S (TD sensor's sensitivity coefficient)

Level	Decision	Motor On Time (seconds)
1	RV < Vt ≤ RV + S/16	t
2	RV + S/16 < Vt ≤ RV + S/8	1.5t
3	RV + S/8 < Vt ≤ RV + S/4	2t
4	RV + S/4 < Vt ≤ RV + S/2	3t
5	RV + S/2 < Vt ≤ RV + 4S/5	4t
6	RV + S > Vt ≥ RV + 4S/5	5t
7	Vt ≥ RV + S	6t

↓ Note

- The default value for t is 0.6. The value can be changed using SP2-922.

Detailed Descriptions

6.12.5 TONER SUPPLY IF SENSOR READING IS ABNORMAL

ID Sensor

Any of the following is considered abnormal:

- Vsg $\leq$ 1.65 (when Vsg is read)
- Vsg < 2.31 (at maximum power)
- Vsp $\geq$ 1.65
- Vt $\geq$ 2.64 or Vt < 0.20

Current readings can be viewed using SP2-221.

TD Sensor

The reading is considered abnormal if TD < 0.20 V or TD > 2.64 V. Abnormal readings 10 times in succession will generate SC 390.

6.12.6 DETECTION OF TONER NEAR END AND TONER END

Toner Near End detected when either of the following occurs...

- Vt is at level 6 (see above table) five times in succession
- Vt > 1.85 five times in succession

Toner End detected when any of the following occurs....

- (Vt is $\geq$ level 6 and Vt > 1.85) "n" time in succession, where "n" is 50 by default but can be changed to 20 using SP2-213. (Note that "n" corresponds to the number of sheets that can be printed before Toner Near End changes to Toner End.)
- Vt is at level 7 three times in succession.
- Vt > 2.00 three times in succession

6.13 DRUM CLEANING AND TONER RECYCLING

b262d510

b262d307
- Cleaning blade [A] scrapes remaining toner from the drum after image transfer. Toner piles up on the blade.

- Toner collect coil [B] transports toner from pile and drops it onto chute [C], where it slides down into the development unit through a slit located at [D].

- At the end of each copy job, the drum turns about 3 mm in reverse to help clear toner and other debris from the edge of the cleaner blade.

Detailed
Descriptions

6.14 ARDF OPERATION

6.14.1 PICK-UP AND SEPARATION

The ARDF uses an FRR (feed & reverse roller) system.

Setting paper moves the feeler, causing the original set sensor to inform the CPU that the ARDF is ready to feed.

Press Ⓞ → short time lag → DF feed clutch engages → DF motor starts.

The motor drives the DF pickup roller, DF feed roller, DF separation roller, and transport roller. The pickup roller drives the top sheet(s) between the feed and separation roller, where the top sheet is separated and fed to the transport rollers.

6.14.2 CLUTCH OPERATION

The DF feed clutch is provided to stop feeding when the original is fed to the inverter tray in double-sided mode. If the DF feed clutch does not stop the pick-up, feed and separation rollers in double-sided mode, the next original is fed while the first original is at the inverter tray and an original jam occurs.

6.14.3 ORIGINAL TRANSPORT AND EXIT
Single-Sided Originals

b872d106

The feed motor feeds the separated original to the registration roller [A]. A short time after an original reaches the registration sensor [B], the DF feed motor stops briefly, the scanner moves to DF scan position, and the white peak is read. The DF feed motor and DF transport motor then start and the sheet is scanned.

After scanning, the original is fed out by the exit roller [C].

Double-Sided Originals

b872d107

b872d108
After an original has been fed to the registration sensor [B] by the transport roller [A], the DF feed motor stops briefly. After the scanner has moved to DF scan position, and the white peak has been read, the front side of the original is then scanned.

When the exit sensor [C] detects the leading edge of the original, the junction gate solenoid is activated and the junction gate [E] opens. The original is then transported towards the inverter table.

Soon after the trailing edge of the original passes the exit sensor, the junction gate solenoid switches off and the junction gate [E] is closed. When the original has been fed onto the inverter table, the feed and transport motors stop. After that, the feed motor rotates in reverse and the original is fed to the exit roller [D] by the inverter roller [F]. At this time, the feed motor stops briefly to adjust the original skew.

After adjusting the original skew, the original is fed again by the exit roller [D] and registration roller [B] to the scanning area (where the reverse side will be scanned).

Detailed Descriptions

b872d109

The original is then sent to the inverter table again to be turned over. This is done so that the duplex copies will be properly stacked front side down in the exit tray [G] in the correct order.

Original Set Sensor

During one-to-one copying, copy paper is fed to the registration roller in advance (while the original is still being scanned), to increase the copy speed. The original set sensor monitors the stack of originals in the original tray, and detects when the trailing edge of the last page has been fed in. The main CPU then stops the copier from feeding an unwanted extra sheet of copy paper.

6.15 PAPER FEED

6.15.1 OVERVIEW

b262d557a
1. Exit Roller	6. Bypass Friction Pad
2. Exit Sensor	7. (Main) Friction Pad
3. Registration Sensor	8. (Main) Paper End Sensor
4. Bypass Feed Roller	9. Paper Feed Roller
5. Bypass Paper End Sensor	10. Registration Roller

Detailed Descriptions

6.15.2 PAPER FEED DRIVE MECHANISM

From Paper Tray
b262d708

Main motor [A] drives gears on the registration clutch [B] and the paper feed clutch [C]. These clutches transfer drive to the registration roller [D] and paper feed roller [E]. The BICU controls clutch timing based on input from the registration sensor.

From 100-Sheet Bypass Tray
b262d709

Main motor [A] drives gear on registration clutch [B] and bypass feed clutch [F]. The bypass feed clutch drives the bypass feed roller [G]. Again, the BICU controls clutch timing based on input from the registration sensor.

From 1-Sheet Bypass Tray

The user inserts the sheet directly up to the registration roller [D]. Main motor [A] drives the gear on registration clutch [B], causing the registration roller to turn and feed the sheet.

6.15.3 PAPER FEED AND SEPARATION

b262d569
The machine uses a friction-pad feed system.

Friction pad [A] (in paper tray)

6.15.4 PAPER LIFT MECHANISM
b262d570

When tray is pushed in: Projection [B] on frame pushes rounded slider [C] in against spring [D], retracting the latch [E]. Spring [F] pushes the plate up.

6.15.5 PAPER END DETECTION

Main Tray
b262d571

When paper runs out, feeler [A] drops into cutout, activating paper end sensor [B].

100-Sheet Bypass Tray
b262d710

When paper runs out, feeler [C] drops into cutout, activating the bypass paper end sensor [D].

Paper Registration
b262d708a

The BICU uses input from registration sensor [A] to control clutch timing and detect misfeeds. Registration clutch timing is controlled to eliminate skew (by stopping the paper briefly as it reaches the roller, so that it buckles). The amount of buckle can be adjusted with SP1-003.

Detailed
Descriptions

6.16 IMAGE TRANSFER AND PAPER SEPARATION

6.16.1 OVERVIEW

b262d401

b262d572

b262d302
The transfer roller [A] is pressed against the OPC drum [B]. The high-voltage power supply board [C] supplies a positive current to the transfer roller, attracting the toner from the drum onto the paper. The current is set in accordance with the paper's type, size, and feed tray. Separation of the paper from the drum is aided by the drum's own curvature and by a high AC voltage applied to the discharge plate [D].
The drum drives the transfer roller directly by gears [E], [F].

6.16.2 IMAGE TRANSFER CURRENT TIMING

There are two transfer current levels: low and high.

1. Low level: Before image transfer starts, the high voltage supply board supplies $+10\mu A$ to the transfer roller. This prevents the transfer roller from attracting any positively charged toner on the drum surface.

2. High level: During image transfer, the high voltage supply board supplies a high level current (see the table) to the transfer roller. This enables the transfer roller to attract toner onto the paper.

When the trailing edge of the paper has passed the transfer roller, the high voltage supply board stops supplying the transfer current. If the copier is printing more pages, the high voltage supply board supplies the low level current.

You can adjust these levels (☛ SP2-301). When increasing a transfer current level, use caution:

▪ Increasing a transfer current level may produce ghost images–some part of image near the leading edge reappears in other part of the page.

▪ Increasing a transfer current level might damage the OPC drum.

The table lists the default settings and SPs.

Job type	Amp	SP
Normal paper	$0 \mu A$	SP2-301-001
Thick paper	$0 \mu A$	SP2-301-002
Duplex copying	$0 \mu A$	SP2-301-003

Detailed Descriptions

6.16.3 TRANSFER ROLLER CLEANING

Toner may transfer to the roller surface following a paper jam or if the paper is smaller than the image. Periodic cleaning of the roller is required to prevent this toner from migrating back to the rear of new printouts.

The machine cleans the roller at the following times:

- After initial power on.
- After clearing of a copy jam
- At the end of a job, if at least 10 sheet have been printed since the last cleaning

The high voltage supply unit first supplies a negative cleaning current (about –4 μA) to the transfer roller, causing negatively charged toner on the roller to move back to the drum. It then applies a positive cleaning current (+5 μA) to the roller, causing any positively charged toner to migrate back to the drum.

The cleaning current can be adjusted using SP2-301-4.

6.17 IMAGE FUSING AND PAPER EXIT

6.17.1 OVERVIEW

2. Paper Path Sensor
3. Hot Roller Strippers
4. Pressure Spring
5. Pressure Roller
6. Fusing Lamp
7. Hot Roller
8. Thermoswitch
9. Thermistor
10. Exit Sensor

**Detailed
Descriptions**

6.17.2 HOT ROLLER DRIVE
b130d902

Left: Contact-release solenoid off

Right: Contact-release solenoid on

Mechanism

The main motor [A] drives the hot roller [D] through a gear train. One of the gears in the gear train is the contact-release gear [B]. This gear is linked to the contact-release solenoid [C]. When the contact-release solenoid is on, it separates the contact-release gear from another gear [E] in the gear train. As a result, the drive power of the main motor is not transmitted to the hot roller.

The drive power of the main motor is not transmitted to the paper exit roller [F]. This roller is driven by the duplex motor.

Contact/Release Control

The contact-release solenoid turns on when the following conditions are all met:

- The copier is warming up the hot roller.
- The hot roller temperature is 16°C or higher.
- The fusing idling (SP1-103-001) is "No."

This control is based on the following facts:

- The copier takes a shorter time to heat the hot roller when the roller is not turning.
- The temperature of the hot roller surface may become uneven when the hot roller temperature is low and the roller is not turning.

6.17.3 PRESSURE ROLLER
b130d929

The pressure springs [A] constantly press the pressure roller against the hot roller. As the default, the springs are positioned at the lower notch [B]. If necessary, pressure can be decreased by changing the springs to the upper notch [C].

6.17.4 PRESSURE RELEASE
b130d930

When the right door is opened, part [A] (on each side) pulls open catch [B] (on each side), releasing pressure on the pressure roller, so that it can turn freely to allow removal of jams. When the right door is closed, part [C] pushes catch [B] closed, restoring normal pressure.

Detailed Descriptions

6.17.5 SEPARATION
b130d906

The hot roller stripper pawls [A] prevent paper from sticking to the hot roller.

6.17.6 FUSING TEMPERATURE CONTROL

Control Process

The BICU references the signal from the thermistor every second. The BICU turns the fusing lamp on and off based on the current temperature and the "target temperature".

Target Temperature

The table lists the target temperatures. You can change these targets by the listed programs.

For the fusing temperature transition during copying, see   (below).

Status/Condition	Temperature	SP
Warming up	160°C	SP1-105-001
Ready	150°C	SP1-105-003
Copying	160°C	SP1-105-005
Low level	60°C	SP1-105-007
Thick paper	165°C	SP1-105-009

Temperature Transition

When the fusing unit is cool, the fusing temperature should be higher to ameliorate the fusing quality. During copying, the fusing temperature is controlled in four phases as listed in the table. "Default" is the target fusing temperature of SP1-105-005 (160°C). "Example" is the target fusing temperature of the case where you specify "165°C" in SP1-105-005.

	Start key pushed (①)	For one second (②)	30 seconds later (③)	60 seconds later (④)
Default	175°C	170°C	165°C	160°C
Example	180°C	175°C	170°C	165°C
Difference from SP1-105-005	+15°C	+10°C	+5°C	—

Copy SP1-105-005 adjusts the fusing temperature of the fourth phase (④). You cannot directly adjust the fusing temperature in the first three phases (① through ③). They are always higher than the fourth phase (④) by 15°C, 10°C, and 5°C respectively.

Detailed Descriptions

Overheat Protection
b130d907

The BICU references the fusing temperature through the thermistor [A]. The copier prevents overheating as listed below. Normally, Feature 1 is effective in preventing overheating. Features 2 through 3 are fail-safe features.

Feature 1:

The BICU turns off the fusing lamp when the fusing temperature is too high.

Feature 2:

The BICU disables the machine operation when the thermistor detects an abnormal temperature transition. In a case like this, the copier displays one of these codes: SC543, SC544, SC545, or SC546.

If the fusing temperature is too low, SC542 is displayed.

Feature 3:

The BICU disables the machine operation when the thermistor does not normally work. In a case like this, the copier displays SC541.

Feature 4:

The thermoswitch near the center [B] cuts power to the fusing lamp at 160°C; the thermoswitch near the end [C] cuts power to the fusing lamp at 170°C. These thermoswitches and the fusing lamp are on the same circuit.

↓ Note

- Thermoswitch temperature is somewhat lower than the fusing temperature.
- The thermoswitch near the center does not necessarily work earlier than the other thermoswitch. The ends of the hot roller can be much hotter than the center when, for example, paper of a small size is continuously going through the fusing unit.

Feature 5:

The BICU disables machine operation when the exhaust fan is not functioning normally. In a case like this, the copier displays SC590. Note that defective exhaust fans may cause overheating.

Detailed Descriptions

6.18 DUPLEX UNIT

6.18.1 IMPORTANT COMPONENTS

b130d908
The following components play important roles in duplex printing:

▪ The duplex motor drives the exit roller [A] and duplex roller [D].

▪ One of the paper guides on the fusing unit [C] is linked to the paper path sensor [B].

The bypass tray cannot be used for duplex printing.

6.18.2 DUPLEX PRINTING PROCESS

b130d910
The main steps of the duplex printing process are as follows:

1. The controller starts to operate the main motor and duplex motor.

2. The hot roller [A] and pressure roller [B] transport the paper to the paper guide [C].

3. The leading edge of the paper pushes the paper guide; the paper guide turns the paper path sensor [D] on.

4. When the leading edge of the paper reaches the exit roller [E], the exit roller transports the paper.

Detailed Descriptions

b130d911
5. When the trailing edge of the paper exits from the paper guide, the paper guide drops to the original position [F] and turns the paper path sensor [G] off.

6. The controller starts to operate the duplex motor in reverse; the exit roller [H] turns in reverse, transporting the paper to the duplex roller.

7. The paper goes over the paper guide and reaches the duplex roller [I].

8. The duplex roller transports the paper into the duplex unit. The paper goes through the unit.

b130d912
9. When the leading edge of the paper reaches the registration sensor [J], the controller stops the duplex motor. The duplex roller holds the paper in the duplex unit.

10. When the OPC drum [K] gets ready for printing, the controller restarts the duplex motor. The duplex roller transports the paper.

11. The duplex roller keeps transporting the paper until the paper reaches the fusing unit.

12. The hot and pressure rollers transport the paper to the paper guide.

Detailed Descriptions

Duplex Unit

b130d909
13. The leading edge of the paper pushes the paper guide [L]; the paper guide turns the paper path sensor [M] on.

14. The controller changes the direction of the duplex motor. The exit roller [N] changes the direction of its rotation, transporting the paper to the copy tray.

6.19 ENERGY SAVER MODES

This section explains the energy saver modes.

6.19.1 OVERVIEW

The machine has three energy-saver modes: the Low Power Mode, the Transit Mode, and the Night/Off Mode. The Transit Mode continues for about two seconds (probably, the user does not recognize this mode when it occurs). The table lists the status of several components.

	Operation panel	Engine	Exhaust fan
Operating Mode*	On	On	On
Low Power Mode	Off	On	Off
Transit Mode	Off	On	Off
Night/Off Mode	Off	Off**	Off

* The "Operating Mode" here refers to all the modes (and status) other than the Low Power

Energy Saver Modes

Mode and Night/Off Mode. Actual power consumption (during the Operating Mode) depends on job status and environmental conditions.

** The SRAM is alive and backs up the engine controller.

6.19.2 AOF

When AOF is off, the engine controller is unable to start the Night/Off Mode. The user should keep AOF on (⬦🔢 → System Settings → Key Operator Tools → AOF).

6.19.3 TIMERS

The engine controller references the Energy Saver Timer to start the Low Power Mode, and references the Auto Off Timer to start the Night/Off Mode. The user can set these timers (⬦🔢 → System Settings → Timer Settings).

The Energy Saver Timer and the Auto Off Timer start at the same time (t0) when the machine ends all jobs or when the user ends all manual operations. Note that the Auto Off Timer does not wait for the Energy Saver Timer. If the user specifies a larger value in the Energy Saver Timer, the Auto Off Timer expires earlier than the Energy Saver Timer. In a case like this, the Low Power Mode is not activated. Instead, the engine controller starts the Night/Off Mode when the Auto Off Timer expires.

Specified value	Low Power Mode	Night/Off Mode
Energy Saver Timer > Auto Off Timer	Cannot start	Can start
Energy Saver Timer = Auto Off Timer	Cannot start	Can start
Energy Saver Timer < Auto Off Timer	Can start	Can start

6.19.4 RECOVERY

Any of the following operations brings the machine back to the Operating Mode:

- The power switch is pressed.
- Originals are set on the document feeder.
- The platen cover is opened.
- The controller receives a job over the network or the telephone line.
- An SC code is generated.

6.20 GW CONTROLLER (B284/B288)

6.20.1 OVERVIEW
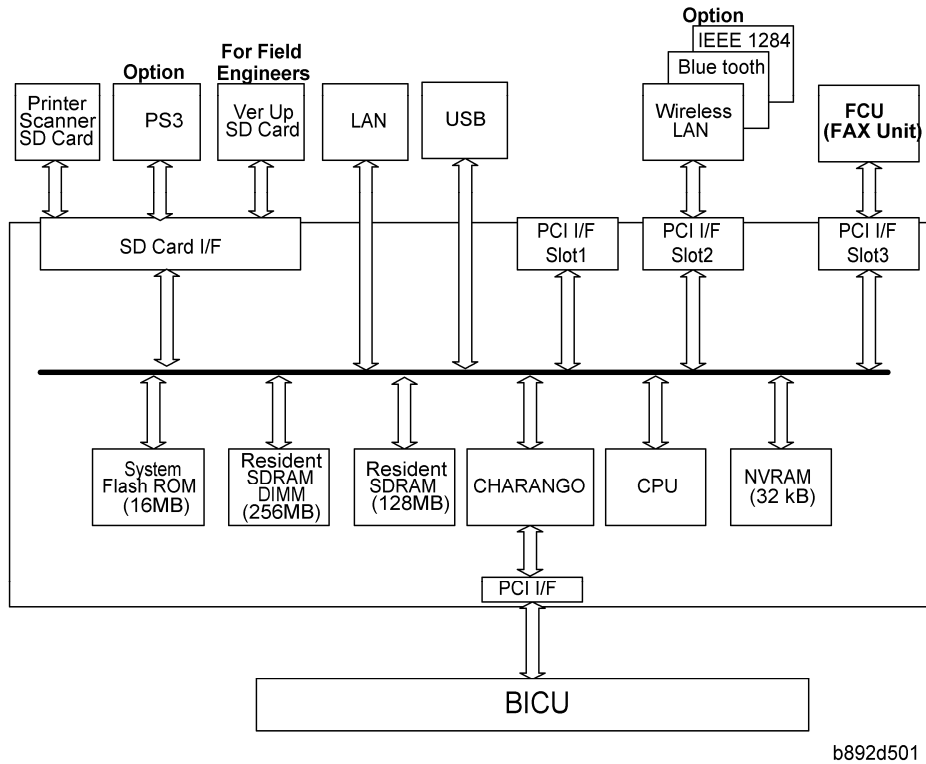

b892d501

This machine uses the GW architecture. To enable printer features, install the printer option SD Card in the controller.

Main components:

- CPU: TOSHIBA TMPR4955BFG-300
- CHARANGO: GW architecture ASIC. It controls all the functions of the controller board.
- Flash ROM: 16 MB Flash ROM for the system program
- SDRAM: On board 128 MB, DIMM 256 MB (resident)
- NVRAM: Stores the controller settings
- LAN interface
- USB 2.0 interface
- SD Card: Printer/Scanner program

Optional components:

- PostScript3
- Bluetooth interface
- Wireless LAN interface
- IEEE1284 interface

6.20.2 CONTROLLER FUNCTIONS

Paper Source Selection

Tray Priority (Auto Tray Select)

b284d502

The Tray Priority setting determines the start of the tray search when the user selects "Auto Tray Select" with the driver.

The machine searches for a paper tray with the specified paper size and type.

When no tray contains paper that matches the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

The Tray Priority setting can be specified using the Paper Size Setting in the user tools.

(User Tools/ System Settings/ Paper Size Settings)

↓ Note

▪ The by-pass tray is not part of the tray search.

Tray Lock

If Tray Lock is enabled for a tray, the controller skips the "locked" tray in the tray search process.

The Tray Lock setting can be specified by selecting "No" for the "Apply Auto Paper Select" setting in the Paper Size Setting screen in the user tools.

(User Tools/ System Settings/ Paper Size Settings)

↓ Note

▪ The by-pass feeder cannot be locked.

Manual Tray Select

If the selected tray does not have the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

Auto Continue

If no paper tray matches the paper size and paper type specified by the driver:

```
┌──────────────┐          ┌──────────────┐
│ Auto Continue│─────────▶│     OFF      │────────▶ Job stays in the printer
└──────────────┘     │    └──────────────┘
                     │    ┌──────────────┐
                     ├───▶│  Immediately │────────▶ Job is immediately canceled
                     │    └──────────────┘
                     │    ┌──────────────┐
                     ├───▶│   1 minute   │────────▶ Job is canceled after 1 minute
                     │    └──────────────┘
                     │    ┌──────────────┐
                     ├───▶│   5 minute   │────────▶
                     │    └──────────────┘
                     │    ┌──────────────┐
                     ├───▶│  10 minute   │────────▶    and so on
                     │    └──────────────┘
                     │    ┌──────────────┐
                     └───▶│  15 minute   │────────▶
                          └──────────────┘
```

b867d503

When this function is enabled, the machine stops printing and cancels the print job if there is no paper tray which matches the paper size and paper type specified by the driver.

If Auto Continue is enabled, the machine waits for a specified period (0, 1, 5, 10, 15 minutes) for the correct size paper to be set in the tray, then cancels the print job if the interval expires.

▪ The interval can be set via Printer Settings in the user tools.

(User Tools/ Printer Settings/ System/ Auto Continue)

If Auto Continue is disabled, the machine will not print the job, but will not cancel it, so the job stays in the print queue.

⬇ Note

▪ The default setting for Auto Continue is "Off."

Duplex Printing

Duplex printing is available with all output bin options but not all paper sizes. If a job specifies duplex printing but the paper size to be used cannot be used by the duplex unit, the job will be printed single-sided.

▪ When the by-pass feeder is selected as the paper source, duplex printing is automatically disabled.

Detailed Descriptions

6.20.3 SCANNER FUNCTIONS

Image processing for scanner mode

The image processing for scanner mode is done in the IPU chip on the BICU board. The IPU chip chooses the most suitable image processing methods (gamma tables, dither patterns, etc) depending on the settings made in the driver.

The image compression method can be selected with SP mode (MR/MH/MMR for binary, gray scale or full color picture processing).

Image Data Path:

1. **Image Store/Image Delivery Mode**

    The user can select the following modes from the LCD.

    ▪ Delivery only

    b262d905

    After image processing and image compression, all image data for the job are stored in the printer controller RAM using TIFF, PDF or JPEG file format (binary, gray scale or full color picture processing). The type of file format used depends on the user's scanner settings.

    When the delivery mode is selected, the controller creates a file which contains the destination and page information, and then the controller sends the file to a server.

2. **Twain Mode**

    After image processing and image compression, the data (binary, gray scale or full color picture of TIFF, PDF or JPEG) is sent to the scanner Twain driver directory on the computer.

    b262d906

6.20.4 NETWORK INTERFACE

LED Indicators

The LED is on the optional controller box.

LED1 (Green) ⟶

LED2 (Yellow) ⟶

b262d907
Description	On	Off
LED1 (Green): Link status	Link success	Link failure
LED2 (Yellow): Data rate	100 Mbps	10 Mbps

6.20.5 USB

Specifications

USB connectivity is provided as an option for this machine.

Interface:	USB 1.1, USB 2.0
Data rates:	480 Mbps (high speed), 12 Mbps (full speed)
	High speed mode is only supported by USB 2.0.

USB 1.1/2.0

USB (Universal Serial Bus) offers simple connectivity for computers, printers, keyboards, and other peripherals. In a USB environment, terminators, device IDs (like SCSI), and DIP switch settings are not necessary.

USB 1.1 provides the following features:

- Plug & Play. As soon as a new device is connected via USB, the operating system recognizes it, and the appropriate driver is installed for it automatically if the driver is available. If the driver is not available, a message prompts the user for the driver disk for immediate installation.

- Hot swapping (cables can be connected and disconnected while the computer and other devices are switched on)

- No terminator or device ID required

- Data rates of 12 Mbps (full speed)

- Common connectors for different devices

- Bi-directional data communication between device and host computer via a 4-byte header and DEVICE ID.

USB 2.0 is an evolution of the USB 1.1 specification. It uses the same cables, connectors, and software interfaces so the user will see no change. It provides an easy-to-use connection to a wide range of products with a maximum data rate of 480 Mbps (high speed).

Up to 127 devices can be connected and 6 cascade connections are allowed. Power is supplied from the computer and the maximum cable length is 5 m.

USB connectors

USB is a serial protocol and a physical link, which transmits all data on a single pair of wires. Another pair provides power to downstream peripherals. The USB standard specifies two types of connectors, type "A" connectors for upstream connection to the host system, and type "B" connectors for downstream connection to the USB device.
b262d908

[A]: Type "A" connector, [B]: Type "B" connector

Pin Assignment

The controller has a type "B" receptacle.
b262d909

Pin No.	Signal Description	Wiring Assignment
1	Power	Red
2	Data –	White
3	Data +	Green
4	Power GND	White

Remarks about USB

The machine does not print reports specifically for USB.

Only one host computer is allowed for the USB connection.

After starting a job using USB, do not switch the printer off until the job has been completed.

When a user cancels a print job, if data transmitted to the printer has not been printed at the time of cancellation, the job will continue to print up to the page where the print job was cancelled

When the controller board is replaced, the host computer will recognize the machine as a different device.

Related SP Mode

"USB Settings" in the printer engine service mode. Data rates can be adjusted to full speed fixed (12 Mbps). This switch may be used for troubleshooting if there is a data transfer error using the high speed mode (480 Mbps).

Data rates can also be adjusted using the UP mode "USB Setting" in the Host Interface in the System menu. This mode can be accessed only when the "Enter", "Escape", then "Menu" keys are pressed to enter the UP mode.

Important Safety Notices

⚠ WARNING

- Never install telephone wiring during a lightning storm.
- Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
- Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
- Use caution when installing or modifying telephone lines.
- Avoid using a telephone (other than a cordless type) during an electrical storm. There may be remote risk of electric shock from lightning.
- Do not use a telephone or cellular phone to report a gas leak in the vicinity of the leak.

⚠ CAUTION

- Before installing the fax unit, switch off the main switch, and disconnect the power cord.
- The fax unit contains a lithium battery. The danger of explosion exists if a battery of this type is incorrectly replaced. Replace only with the same or an equivalent type recommended by the manufacturer. Discard batteries in accordance with the manufacturer's instructions and local regulations.

⬇ Note

- **Note for Australia**:
- Unit must be connected to Telecommunication Network through a line cord which meets the requirements of ACA Technical Standard TS008.

Symbols and Abbreviations

Conventions Used in this Manual

This manual uses several symbols.

Symbol	What it means
☛	Refer to section number
🗇	Screw

🔌	Connector
ℂ	E-ring
🔗	Clip ring
🗜	Clamp

Lengthwise, SEF
(Short Edge Feed)

Sideways, LEF
(Long Edge Feed)
Cautions, Notes, etc.

The following headings provide special information:

⚠ WARNING

- Failure to obey warning information could result in serious injury or death.

⚠ CAUTION

- Obey these guidelines to ensure safe operation and prevent minor injuries.

⭐ **Important**

- Obey these guidelines to avoid problems such as misfeeds, damage to originals, loss of valuable data and to prevent damage to the machine.
- Always obey these guidelines to avoid serious problems such as misfeeds, damage to originals, loss of valuable data and to prevent damage to the machine. **bold** is added for emphasis.

⬇ **Note**

- This information provides tips and advice about how to best service the machine.

1. INSTALLATION

1.1 FAX UNIT

For Fax unit settings, refer to the chapter "Installation" in the Service Manual for B284/B288.

2. REPLACEMENT AND ADJUSTMENT

2.1 FCU

For the replacement procesure for the FCU, refer to the "Replacement and Adjustment" in the Service Manual for the B284/B288.

3. TROUBLESHOOTING

3.1 ERROR CODES

If an error code occurs, retry the communication. If the same problem occurs, try to fix the problem as suggested below. Note that some error codes appear only in the error code display and on the service report.

Code	Meaning	Suggested Cause/Action
0-00	DIS/NSF not detected within 40 s of Start being pressed	- Check the line connection. - The machine at the other end may be incompatible. - Replace the NCU or FCU. - Check for DIS/NSF with an oscilloscope. - If the rx signal is weak, there may be a bad line.
0-01	DCN received unexpectedly	- The other party is out of paper or has a jammed printer. - The other party pressed Stop during communication.
0-03	Incompatible modem at the other end	The other terminal is incompatible.
0-04	CFR or FTT not received after modem training	- Check the line connection. - Try changing the tx level and/or cable equalizer settings. - Replace the FCU. - The other terminal may be faulty; try sending to another machine. - If the rx signal is weak or defective, there may be a bad line. **Cross reference** Tx level - NCU Parameter 01 (PSTN)

Error Codes

Code	Meaning	Suggested Cause/Action
		Cable equalizer - G3 Switch 07 (PSTN) Dedicated Tx parameters in Service Program Mode
0-05	Modem training fails even G3 shifts down to 2400 bps.	▪ Check the line connection. ▪ Try adjusting the tx level and/or cable equalizer. ▪ Replace the FCU. ▪ Check for line problems. **Cross reference** See error code 0-04.
0-06	The other terminal did not reply to DCS	▪ Check the line connection. ▪ Try adjusting the tx level and/or cable equalizer settings. ▪ Replace the NCU or FCU. ▪ The other end may be defective or incompatible; try sending to another machine. ▪ Check for line problems. **Cross reference** See error code 0-04.
0-07	No post-message response from the other end after a page was sent	▪ Check the line connection. ▪ Replace the NCU or FCU. ▪ The other end may have jammed or run out of paper. ▪ The other end user may have disconnected the call. ▪ Check for a bad line. ▪ The other end may be defective; try sending to another machine.
0-08	The other end sent RTN or PIN after receiving a page, because there were too many errors	▪ Check the line connection. ▪ Replace the NCU or FCU. ▪ The other end may have jammed, or run out of paper or memory space.

Code	Meaning	Suggested Cause/Action
		▪ Try adjusting the tx level and/or cable equalizer settings. ▪ The other end may have a defective modem/NCU/FCU; try sending to another machine. ▪ Check for line problems and noise. **Cross reference** ▪ Tx level - NCU Parameter 01 (PSTN) ▪ Cable equalizer - G3 Switch 07 (PSTN) ▪ Dedicated Tx parameters in Service Program Mode
0-14	Non-standard post message response code received	▪ Incompatible or defective remote terminal; try sending to another machine. ▪ Noisy line: resend. ▪ Try adjusting the tx level and/or cable equalizer settings. ▪ Replace the NCU or FCU. **Cross reference** See error code 0-08.
0-15	The other terminal is not capable of specific functions.	The other terminal is not capable of accepting the following functions, or the other terminal's memory is full. ▪ Confidential rx ▪ Transfer function ▪ SEP/SUB/PWD/SID
0-16	CFR or FTT not detected after modem training in confidential or transfer mode	▪ Check the line connection. ▪ Replace the NCU or FCU. ▪ Try adjusting the tx level and/or cable equalizer settings. ▪ The other end may have disconnected, or it may be defective; try calling another machine. ▪ If the rx signal level is too low, there may be a

Error Codes

Code	Meaning	Suggested Cause/Action
		line problem. **Cross reference** See error code 0-08.
0-20	Facsimile data not received within 6 s of retraining	▪ Check the line connection. ▪ Replace the NCU or FCU. ▪ Check for line problems. ▪ Try calling another fax machine. ▪ Try adjusting the reconstruction time for the first line and/or rx cable equalizer setting. **Cross reference** Reconstruction time - G3 Switch 0A, bit 6 Rx cable equalizer - G3 Switch 07 (PSTN)
0-21	EOL signal (end-of-line) from the other end not received within 5 s of the previous EOL signal	▪ Check the connections between the FCU, NCU, & line. ▪ Check for line noise or other line problems. ▪ Replace the NCU or FCU. ▪ The remote machine may be defective or may have disconnected. **Cross reference** Maximum interval between EOLs and between ECM frames - G3 Bit Switch 0A, bit 4
0-22	The signal from the other end was interrupted for more than the acceptable modem carrier drop time (default: 200 ms)	▪ Check the line connection. ▪ Replace the NCU or FCU. ▪ Defective remote terminal. ▪ Check for line noise or other line problems. ▪ Try adjusting the acceptable modem carrier drop time. **Cross reference** Acceptable modem carrier drop time - G3 Switch 0A, bits 0 and 1
0-23	Too many errors during reception	▪ Check the line connection. ▪ Replace the NCU or FCU.

Code	Meaning	Suggested Cause/Action
		▪ Defective remote terminal. ▪ Check for line noise or other line problems. ▪ Try asking the other end to adjust their tx level. ▪ Try adjusting the rx cable equalizer setting and/or rx error criteria. **Cross reference** Rx cable equalizer - G3 Switch 07 (PSTN) Rx error criteria - Communication Switch 02, bits 0 and 1
0-30	The other terminal did not reply to NSS(A) in AI short protocol mode	▪ Check the line connection. ▪ Try adjusting the tx level and/or cable equalizer settings. ▪ The other terminal may not be compatible. **Cross reference** Dedicated tx parameters - Section 4
0-32	The other terminal sent a DCS, which contained functions that the receiving machine cannot handle.	▪ Check the protocol dump list. ▪ Ask the other party to contact the manufacturer.
0-33	The data reception (not ECM) is not completed within 10 minutes.	▪ Check the line connection. ▪ The other terminal may have a defective modem/NCU/FCU.
0-52	Polarity changed during communication	▪ Check the line connection. Retry communication.
0-55	FCU does not detect the SG3.	▪ FCU firmware or board defective. ▪ SG3 firmware or board defective.
0-56	The stored message data exceeds the capacity of the mailbox in the SG3.	▪ SG3 firmware or board defective.
0-70	The communication mode	▪ The other terminal did not have a compatible

Error Codes

Code	Meaning	Suggested Cause/Action
	specified in CM/JM was not available (V.8 calling and called terminal)	communication mode (e.g., the other terminal was a V.34 data modem and not a fax modem.) ■ A polling tx file was not ready at the other terminal when polling rx was initiated from the calling terminal.
0-74	The calling terminal fell back to T.30 mode, because it could not detect ANSam after sending CI.	■ The calling terminal could not detect ANSam due to noise, etc. ■ ANSam was too short to detect. ■ Check the line connection and condition. ■ Try making a call to another V.8/V.34 fax.
0-75	The called terminal fell back to T.30 mode, because it could not detect a CM in response to ANSam (ANSam timeout).	■ The terminal could not detect ANSam. ■ Check the line connection and condition. ■ Try receiving a call from another V.8/V.34 fax.
0-76	The calling terminal fell back to T.30 mode, because it could not detect a JM in response to CM (CM timeout).	■ The called terminal could not detect a CM due to noise, etc. ■ Check the line connection and condition. ■ Try making a call to another V.8/V.34 fax.
0-77	The called terminal fell back to T.30 mode, because it could not detect a CJ in response to JM (JM timeout).	■ The calling terminal could not detect a JM due to noise, etc. ■ A network that has narrow bandwidth cannot pass JM to the other end. ■ Check the line connection and condition. ■ Try receiving a call from another V.8/V.34 fax.
0-79	The called terminal detected CI while waiting for a V.21 signal.	■ Check for line noise or other line problems. ■ If this error occurs, the called terminal falls back to T.30 mode.
0-80	The line was disconnected	■ The guard timer expired while starting

Code	Meaning	Suggested Cause/Action
	due to a timeout in V.34 phase 2 – line probing.	these phases. Serious noise, narrow bandwidth, or low signal level can cause these errors. If these errors happen at the transmitting terminal: ▪ Try making a call at a later time. ▪ Try using V.17 or a slower modem using dedicated tx parameters. ▪ Try increasing the tx level. ▪ Try adjusting the tx cable equalizer setting. If these errors happen at the receiving terminal: ▪ Try adjusting the rx cable equalizer setting. ▪ Try increasing the tx level. ▪ Try using V.17 or a slower modem if the same error is frequent when receiving from multiple senders.
0-81	The line was disconnected due to a timeout in V.34 phase 3 – equalizer training.	
0-82	The line was disconnected due to a timeout in the V.34 phase 4 – control channel start-up.	
0-83	The line was disconnected due to a timeout in the V.34 control channel restart sequence.	
0-84	The line was disconnected due to abnormal signaling in V.34 phase 4 – control channel start-up.	▪ The signal did not stop within 10 s. ▪ Turn off the machine, then turn it back on. ▪ If the same error is frequent, replace the FCU.
0-85	The line was disconnected due to abnormal signaling in V.34 control channel restart.	▪ The signal did not stop within 10 s. ▪ Turn off the machine, then turn it back on. ▪ If the same error is frequent, replace the FCU.
0-86	The line was disconnected because the other terminal requested a data rate using MPh that was not available in the currently selected symbol rate.	▪ The other terminal was incompatible. ▪ Ask the other party to contact the manufacturer.
0-87	The control channel started	▪ The receiving terminal restarted the control

Error Codes

Code	Meaning	Suggested Cause/Action
	after an unsuccessful primary channel.	channel because data reception in the primary channel was not successful. ▪ This does not result in an error communication.
0-88	The line was disconnected because PPR was transmitted/received 9 (default) times within the same ECM frame.	▪ Try using a lower data rate at the start. ▪ Try adjusting the cable equalizer setting.
2-11	Only one V.21 connection flag was received	▪ Replace the FCU.
2-12	Modem clock irregularity	▪ Replace the FCU.
2-13	Modem initialization error	▪ Turn off the machine, then turn it back on. ▪ Update the modem ROM. ▪ Replace the FCU.
2-23	JBIG compression or reconstruction error	▪ Turn off the machine, then turn it back on.
2-24	JBIG ASIC error	▪ Turn off the machine, then turn it back on.
2-25	JBIG data reconstruction error (BIH error)	
2-26	JBIG data reconstruction error (Float marker error)	▪ JBIG data error ▪ Check the sender's JBIG function. ▪ Update the MBU ROM.
2-27	JBIG data reconstruction error (End marker error)	
2-28	JBIG data reconstruction error (Timeout)	
2-29	JBIG trailing edge maker error	▪ FCU defective ▪ Check the destination device.

Code	Meaning	Suggested Cause/Action
2-50	The machine resets itself for a fatal FCU system error	▪ If this is frequent, update the ROM, or replace the FCU.
2-51	The machine resets itself because of a fatal communication error	▪ If this is frequent, update the ROM, or replace the FCU.
2-53	Snd msg() in the manual task is an error because the mailbox for the operation task is full.	▪ The user did the same operation many times, and this gave too much load to the machine.
4-01	Line current was cut	▪ Check the line connector. ▪ Check for line problems. ▪ Replace the FCU or the NCU.
4-10	Communication failed because of an ID Code mismatch (Closed Network) or Tel. No./CSI mismatch (Protection against Wrong Connections)	▪ Get the ID Codes the same and/or the CSIs programmed correctly, then resend. ▪ The machine at the other end may be defective.
5-10	DCR timer expired	▪ Replace the FCU.
5-20	Storage impossible because of a lack of memory	▪ Temporary memory shortage. ▪ Test the SAF memory.
5-21	Memory overflow	
5-23	Print data error when printing a substitute rx or confidential rx message	▪ Test the SAF memory. ▪ Ask the other end to resend the message.
5-25	SAF file access error	▪ Replace an SD card or HDD.

Error Codes

Code	Meaning	Suggested Cause/Action
		▪ Replace the FCU.
6-00	G3 ECM - T1 time out during reception of facsimile data	▪ Try adjusting the rx cable equalizer. ▪ Replace the FCU.
6-01	G3 ECM - no V.21 signal was received	
6-02	G3 ECM - EOR was received	
6-04	G3 ECM - RTC not detected	▪ Check the line connection. ▪ Check for a bad line or defective remote terminal. ▪ Replace the FCU.
6-05	G3 ECM - facsimile data frame not received within 18 s of CFR, but there was no line fail	▪ Check the line connection. ▪ Check for a bad line or defective remote terminal. ▪ Replace the FCU. ▪ Try adjusting the rx cable equalizer **Cross reference** ▪ Rx cable equalizer - G3 Switch 07 (PSTN)
6-06	G3 ECM - coding/decoding error	▪ Defective FCU. ▪ The other terminal may be defective.
6-08	G3 ECM - PIP/PIN received in reply to PPS.NULL	▪ The other end pressed Stop during communication. ▪ The other terminal may be defective.
6-09	G3 ECM - ERR received	▪ Check for a noisy line. ▪ Adjust the tx levels of the communicating machines. ▪ See code 6-05.
6-10	G3 ECM - error frames still	▪ Check for line noise.

Fax for B284/B288

Code	Meaning	Suggested Cause/Action
	received at the other end after all communication attempts at 2400 bps	▪ Adjust the tx level (use NCU parameter 01 or the dedicated tx parameter for that address). ▪ Check the line connection. ▪ Defective remote terminal.
6-21	V.21 flag detected during high speed modem communication	▪ The other terminal may be defective or incompatible.
6-22	The machine resets the sequence because of an abnormal handshake in the V.34 control channel	▪ Check for line noise. ▪ If the same error occurs frequently, replace the FCU. ▪ Defective remote terminal.
6-99	V.21 signal not stopped within 6 s	▪ Replace the FCU.
13-17	SIP user name registration error	▪ Not used
13-18	SIP server access error	▪ Not Used
13-24	SIP authentication password error	▪ Not used
14-00	SMTP Send Error	▪ Error occurred during sending to the SMTP server. Occurs for any error other than 14-01 to 16. For example, the mail address of the system administrator is not registered.
14-01	SMTP Connection Failed	▪ Failed to connect to the SMTP server (timeout) because the server could not be found. ▪ The PC is not ready to transfer files. ▪ SMTP server not functioning correctly. ▪ The DNS IP address is not registered.

Error Codes

Code	Meaning	Suggested Cause/Action
		▪ Network not operating correctly. ▪ Destination folder selection not correct.
14-02	No Service by SMTP Service (421)	▪ SMTP server operating incorrectly, or the destination for direct SMTP sending is not correct. ▪ Contact the system administrator and check that the SMTP server has the correct settings and operates correctly. ▪ Contact the system administrator for direct SMTP sending and check the sending destination.
14-03	Access to SMTP Server Denied (450)	▪ Failed to access the SMTP server because the access is denied. ▪ SMTP server operating incorrectly. Contact the system administrator to determine if there is a problem with the SMTP server and to check that the SMTP server settings are correct. ▪ Folder send destination is incorrect. Contact the system administrator to determine that the SMTP server settings and path to the server are correct. ▪ Device settings incorrect. Confirm that the user name and password settings are correct. ▪ Direct SMTP destination incorrect. Contact the system administrator to determine if there is a problem at the destination at that the settings at the destination are correct.
14-04	Access to SMTP Server Denied (550)	▪ SMTP server operating incorrectly ▪ Direct SMTP sending not operating correctly
14-05	SMTP Server HDD Full (452)	▪ Failed to access the SMTP server because the HDD on the server is full.

Error Codes

Code	Meaning	Suggested Cause/Action
		• Insufficient free space on the HDD of the SMTP server. Contact the system administrator and check the amount of space remaining on the SMTP server HDD. • Insufficient free space on the HDD where the destination folder is located. Contact the system administrator and check the amount of space remaining on the HDD where the target folder is located. • Insufficient free space on the HDD at the target destination for SMTP direct sending. Contact the system administrator and check the amount of space remaining on the target HDD.
14-06	User Not Found on SMTP Server (551)	• The designated user does not exist. • The designated user does not exist on the SMTP server. • The designated address is not for use with direct SMTP sending.
14-07	Data Send to SMTP Server Failed (4XX)	• Failed to access the SMTP server because the transmission failed. • PC not operating correctly. • SMTP server operating incorrectly • Network not operating correctly. • Destination folder setting incorrect. • Direct SMTP sending not operating correctly.
14-08	Data Send to SMTP Server Failed (5XX)	• Failed to access the SMTP server because the transmission failed. • SMTP server operating incorrectly • Destination folder setting incorrect. • Direct SMTP sending not operating correctly. • Software application error.

Error Codes

Code	Meaning	Suggested Cause/Action
14-09	Authorization Failed for Sending to SMTP Server	▪ POP-Before-SMTP or SMTP authorization failed. ▪ Incorrect setting for file transfer
14-10	Addresses Exceeded	▪ Number of broadcast addresses exceeded the limit for the SMTP server.
14-11	Buffer Full	▪ The send buffer is full so the transmission could not be completed. Buffer is full due to using Scan-to-Email while the buffer is being used send mail at the same time.
14-12	Data Size Too Large	▪ Transmission was cancelled because the detected size of the file was too large.
14-13	Send Cancelled	▪ Processing is interrupted because the user pressed Stop.
14-14	Security Locked File Error	▪ Update the software because of the defective software.
14-15	Mail Data Error	▪ The transmitting a mail is interrupted via DCS due to the incorrect data. ▪ Update the software because of the defective software.
14-16	Maximum Division Number Error	▪ When a mail is divided for the mail transmission and the division number of a mail are more than the specified number, the mail transmission is interrupted. ▪ Update the software because of the defective software.
14-17	Incorrect Ticket	▪ Update the software because of the defective software.
14-18	Access to MCS File Error	▪ The access to MCS file is denied due to the no permission of access.

Code	Meaning	Suggested Cause/Action
		▪ Update the software because of the defective software.
14-30	MCS File Creation Failed	Failed to create the MCS file because: ▪ The number of files created with other applications on the Document Server has exceeded the limit. ▪ HDD is full or not operating correctly. ▪ Software error.
14-31	UFS File Creation Failed	UFS file could not be created: ▪ Not enough space in UFS area to handle both Scan-to-Email and IFAX transmission. ▪ HDD full or not operating correctly. ▪ Software error.
14-32	Cancelled the Mail Due to Error Detected by NFAX	▪ Error detected with NFAX and send was cancelled due to a software error.
14-33	No Mail Address For the Machine	▪ Neither the mail address of the machine nor the mail address of the network administrator is registered.
14-34	Address designated in the domain for SMTP sending does not exist	▪ Operational error in normal mail sending or direct SMTP sending. ▪ Check the address selected in the address book for SMTP sending. ▪ Check the domain selection.
14-50	Mail Job Task Error	Due to an FCU mail job task error, the send was cancelled: ▪ Address book was being edited during creation of the notification mail. ▪ Software error.
14-51	UCS Destination Download Error	Not even one return notification can be downloaded:

Error Codes

Code	Meaning	Suggested Cause/Action
		▪ The address book was being edited. ▪ The number for the specified destination does not exist (it was deleted or edited after the job was created).
14-60	Send Cancel Failed	▪ The cancel operation by the user failed to cancel the send operation.
14-61	Notification Mail Send Failed for All Destinations	▪ All addresses for return notification mail failed.
14-62	Transmission Error due to the existence of zero line page	▪ When the 0 line page exists in received pages with G3 communication, the transmission is interrupted.
15-01	POP3/IMAP4 Server Not Registered	▪ At startup, the system detected that the IP address of the POP3/IMAP4 server has not been registered in the machine.
15-02	POP3/IMAP4 Mail Account Information Not Registered	▪ The POP3/IMAP4 mail account has not been registered.
15-03	Mail Address Not Registered	▪ The mail address has not been registered.
15-10	DCS Mail Receive Error	▪ Error other than 15-11 to 15-18.
15-11	Connection Error	The DNS or POP3/IMAP4 server could not be found: ▪ The IP address for DNS or POP3/IMAP4 server is not stored in the machine. ▪ The DNS IP address is not registered. ▪ Network not operating correctly.
15-12	Authorization Error	POP3/IMAP4 send authorization failed: ▪ Incorrect IFAX user name or password. ▪ Access was attempted by another device, such as the PC.

Code	Meaning	Suggested Cause/Action
		▪ POP3/IMAP4 settings incorrect.
15-13	Receive Buffer Full	▪ Occurs only during manual reception. Transmission cannot be received due to insufficient buffer space. The buffer is being used for mail send or Scan-to-Email.
15-14	Mail Header Format Error	▪ The mail header is not standard format. For example, the Date line description is incorrect.
15-15	Mail Divide Error	▪ The e-mail is not in standard format. There is no boundary between parts of the e-mail, including the header.
15-16	Mail Size Receive Error	▪ The mail cannot be received because it is too large.
15-17	Receive Timeout	▪ May occur during manual receiving only because the network is not operating correctly.
15-18	Incomplete Mail Received	▪ Only one portion of the mail was received.
15-31	Final Destination for Transfer Request Reception Format Error	▪ The format of the final destination for the transfer request was incorrect.
15-39	Send/Delivery Destination Error	The transmission cannot be delivered to the final destination: ▪ Destination file format is incorrect. ▪ Could not create the destination for the file transmission.
15-41	SMTP Receive Error	▪ Reception rejected because the transaction exceeded the limit for the "Auth. E-mail RX" setting.
15-42	Off Ramp Gateway Error	▪ The delivery destination address was specified with Off Ramp Gateway OFF.

Error Codes

Code	Meaning	Suggested Cause/Action
15-43	Address Format Error	▪ Format error in the address of the Off Ramp Gateway.
15-44	Addresses Over	▪ The number of addresses for the Off Ramp Gateway exceeded the limit of 30.
15-61	Attachment File Format Error	▪ The attached file is not TIFF format.
15-62	TIFF File Compatibility Error	Could not receive transmission due to: ▪ Resolution error ▪ Image of resolution greater than 200 dpi without extended memory. ▪ Resolution is not supported. ▪ Page size error ▪ The page size was larger than A3. ▪ Compression error ▪ File was compressed with other than MH, MR, or MMR.
15-63	TIFF Parameter Error	The TIFF file sent as the attachment could not be received because the TIFF header is incorrect: ▪ The TIFF file attachment is a type not supported. ▪ The TIFF file attachment is corrupted. ▪ Software error.
15-64	TIFF Decompression Error	The file received as an attachment caused the TIFF decompression error: ▪ The TIFF format of the attachment is corrupted. ▪ Software error.
15-71	Not Binary Image Data	▪ The file could not be received because the attachment was not binary image data.
15-73	MDN Status Error	▪ Could not find the Disposition line in the

Code	Meaning	Suggested Cause/Action
		header of the Return Receipt, or there is a problem with the firmware.
15-74	MDN Message ID Error	▪ Could not find the Original Message ID line in the header of the Return Receipt, or there is a problem with the firmware.
15-80	Mail Job Task Read Error	▪ Could not receive the transmission because the destination buffer is full and the destination could not be created (this error may occur when receiving a transfer request or a request for notification of reception).
15-81	Repeated Destination Registration Error	▪ Could not repeat receive the transmission because the destination buffer is full and the destination could not be created (this error may occur when receiving a transfer request or a request for notification of reception).
15-91	Send Registration Error	Could not receive the file for transfer to the final destination: ▪ The format of the final destination or the transfer destination is incorrect. ▪ Destinations are full so the final and transfer destinations could not be created.
15-92	Memory Overflow	▪ Transmission could not be received because memory overflowed during the transaction.
15-93	Memory Access Error	▪ Transaction could not complete due to a malfunction of SAF memory.
15-94	Incorrect ID Code	▪ The machine rejected an incoming e-mail for transfer request, because the ID code in the incoming e-mail did not match the ID code registered in the machine.
15-95	Transfer Station Function	▪ The machine rejected an incoming e-mail for

Code	Meaning	Suggested Cause/Action
		transfer because the transfer function was unavailable.
22-00	Original length exceeded the maximum scan length	- Divide the original into more than one page. - Check the resolution used for scanning. Lower the scan resolution if possible. - Add optional page memory.
22-01	Memory overflow while receiving	- Wait for the files in the queue to be sent. - Delete unnecessary files from memory. - Transfer the substitute reception files to an another fax machine, if the machine's printer is busy or out of order. - Add an optional SAF memory card or hard disk.
22-02	Tx or rx job stalled due to line disconnection at the other end	- The job started normally but did not finish normally; data may or may not have been received fully. - Restart the machine.
22-04	The machine cannot store received data in the SAF	- Update the ROM - Replace the FCU.
22-05	No G3 parameter confirmation answer	Defective FCU board or firmware.
23-00	Data read timeout during construction	- Restart the machine. - Replace the FCU.
25-00	The machine software resets itself after a fatal transmission error occurred	- Update the ROM - Replace the FCU.

Code	Meaning	Suggested Cause/Action
31-21	LAN Fax Error	• It was cancelled received LAN Fax images during store the image to SAF of FCU. • The LAN Fax transmission of a message was cancelled by the LAN Fax driver.
F0-xx	V.34 modem error	▪ Replace the FCU.
F6-xx	SG3 modem error	▪ Update the SG3 modem ROM. ▪ Replace the SG3 board. ▪ Check for line noise or other line problems. ▪ Try communicating another V.8/V.34 fax.

3.2 IFAX TROUBLESHOOTING

Use the following procedures to determine whether the machine or another part of the network is causing the problem.

Communication Route	Item	Action [Remarks]
General LAN	1. Connection with the LAN	▪ Check that the LAN cable is connected to the machine. Check that the LEDs on the hub are lit.
	2. LAN activity	Check that other devices connected to the LAN can communicate through the LAN.
Between IFAX and PC	1. Network settings on the PC	▪ Check the network settings on the PC. [Is the IP address registered in the TCP/IP properties in the network setup correct? Check the IP address with the administrator of the network.]
	2. Check that PC can connect with the machine	▪ Use the "ping" command on the PC to contact the machine. [At the MS-DOS prompt, type ping then the IP address of the machine, then press Enter.]
	3. LAN settings in the machine	▪ Check the LAN parameters ▪ Check if there is an IP address conflict with other PCs. [Use the "Network" function in the User Tools. If there is an IP address conflict, inform the administrator.]
Between machine and e-mail server	LAN settings in the machine	▪ Check the LAN parameters ▪ Check if there is an IP address conflict with other PCs. [Use the "Network" function in the User Tools. If there is an IP address conflict, inform the

Communication Route	Item	Action [Remarks]
		administrator.]
Between machine and e-mail server	1. E-mail account on the server	▪ Make sure that the machine can log into the e-mail server. ▪ Check that the account and password stored in the server are the same as in the machine. [Ask the administrator to check.]
	2. E-mail server	▪ Make sure that the client devices which have an account in the server can send/receive e-mail. [Ask the administrator to check. Send a test e-mail with the machine's own number as the destination. The machine receives the returned e-mail if the communication is performed successfully.]
Between e-mail server and internet	1. E-mail account on the Server	▪ Make sure that the PC can log into the e-mail server. ▪ Check that the account and password stored in the server are the same as in the machine. [Ask the administrator to check.]
	2. E-mail server	▪ Make sure that the client devices which have an account in the server can send/receive e-mail. [Ask the administrator to check. Send a test e-mail with the machine's own number as the destination. The machine receives the returned e-mail if the communication is performed successfully.]
	3. Destination	▪ Make sure that the e-mail address is

IFAX Troubleshooting

Communication Route	Item	Action [Remarks]
	e-mail address	actually used. ▪ Check that the e-mail address contains no incorrect characters such as spaces.
Between e-mail server and internet	Router settings	▪ Use the "ping" command to contact the router. ▪ Check that other devices connected to the router can sent data over the router. [Ask the administrator of the server to check.]
Between e-mail server and internet	Error message by e-mail from the network of the destination.	▪ Check whether e-mail can be sent to another address on the same network, using the application e-mail software. ▪ Check the error e-mail message. [Inform the administrator of the LAN.]

3.3 IP-FAX TROUBLESHOOTING

3.3.1 IP-FAX TRANSMISSION

Cannot send by IP Address/Host Name

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	Specified IP address/host name correct?	Check the IP address/host name.
3	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
4	Transmission sent manually?	Manual sending not supported.
5	IP address of local machine registered?	Register the IP address.
6	Remote terminal port number setting other than 1720?	Send by specifying the port number.
7	Specified port number correct?	Confirm the port number of the remote fax.
8	DNS server registered when host name specified?	Contact the network administrator.
9	Remote fax a T.38 terminal?	Check whether the remote fax is a T38 terminal.
10	Remote fax switched off or busy?	Check that the remote fax is switched on.
11	Network bandwidth too narrow?	Request the network administrator to increase the bandwidth.
		Raise the delay level. IPFAX SW 01 Bit 0 to 3

IP-Fax Troubleshooting

		IP-Fax bandwidth is the same as the DCS speed. Set IP-Fax SW00 Bit 6 to 1.
12	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

Cannot send via VoIP Gateway

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	VoIP Gateway T.38 standard?	Contact the network administrator.
3	VoIP Gateway installed correctly?	Contact the network administrator.
4	VoIP Gateway power switched on?	Contact the network administrator.
5	Is the IP address/host name of the specified Gateway correct?	Check the IP address/host name.
6	Number of the specified fax correct?	Check the remote fax number.
7	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
8	Transmission sent manually?	Manual sending not supported.
9	IP address of local fax registered?	Register the IP address.
10	DNS registered when host name specified?	Contact the network administrator.
11	Remote fax a G3 fax?	Check that the remote fax is a G3 fax.
12	G3 fax is connected to VoIP gateway?	Check that G3 fax is connected.
13	Remote G3 fax turned on?	Check that G3 fax is switched on.

		Request the network administrator to increase the bandwidth.
14	Network bandwidth too narrow?	Raise the network delay level. IPFAX SW 01 Bit 0 to 3
		IP-Fax bandwidth is the same as the DCS speed. Set IP-Fax SW00 Bit 6 to 1.

Cannot send by Alias Fax number.

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	Number of specified Alias fax correct?	Confirm the Alias of the remote fax. Error Code: 13-14
3	Firewall/NAT installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
4	Transmission sent manually?	Manual sending not supported.
5	Gatekeeper installed correctly?	Contact the network administrator.
6	Gatekeeper power switched on?	Contact the network administrator.
7	IP address/host name of Gatekeeper correct?	Check the IP address/host name.
8	DNS server registered when Gatekeeper host name specified?	Contact the network administrator.
9	Enable H.323 SW is set to on?	Check the settings. See User Parameter SW 34 Bit 0
10	IP address of local fax registered?	Register the IP address of the local fax.
11	Alias number of local fax registered?	Register the Alias number of the local

		fax.
12	Remote fax registered in Gatekeeper?	Contact the network administrator.
13	Remote fax a T.38 terminal?	Check whether the remote fax is a T38 terminal.
14	Remote fax switched off or busy?	Contact the network administrator.
15	Network bandwidth too narrow?	Request the system administrator to increase the bandwidth.
		Raise the delay level. IPFAX SW 01 Bit 0 to 3
		Lower the modem transmission baud rate. IPFAX SW 05
16	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

3.3.2 IP-FAX RECEPTION

Cannot receive by IP Address/Host name.

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
3	IP address of local fax registered?	Register the IP address.
4	Port number specified at remote sender fax (if required)?	Request the sender to specify the port number.
5	Specified port number correct (if required)?	Request the sender to check the port number.

6	DNS server registered when host name specified on sender side?	Contact the network administrator. ⬇ Note ▪ The sender machine displays this error code if the sender fax is a Ricoh model.
7	Network bandwidth too narrow?	Request the system administrator to increase the bandwidth.
		Lower the start modem reception baud rate on the receiving side. IPFAX SW06
8	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

Cannot receive by VoIP Gateway.

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot breach the firewall. Request the remote fax to send by using another method (Fax, Internet Fax)
3	VoIP Gateway installed correctly?	Contact the network administrator.
4	VoIP Gateway power switched on?	Contact the network administrator.
5	IP address/host name of specified VoIP Gateway correct on sender's side?	Request the remote fax to check the IP address/host name.
6	DNS server registered when host name specified on sender side?	Contact the network administrator.
7	Network bandwidth too narrow?	Request the network administrator to increase the bandwidth.
8	G3 fax connected?	Check that G3 fax is connected.

9	G3 fax power switched on?	Check that G3 fax is switched on.

Cannot receive by Alias Fax number.

	Check Point	Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot the breach firewall. Request the remote fax to send by using another method (Fax, Internet Fax)
3	Gatekeeper installed correctly?	Contact the network administrator. ↓ Note ▪ The sender machine displays this error code when the sender fax is a Ricoh model.
4	Power to Gatekeeper switched on?	Contact the network administrator. ↓ Note ▪ The sender machine displays this error code when the sender fax is a Ricoh model.
5	IP address/host name of Gatekeeper correct on the sender's side?	Request the sender to check the IP address/host name. ↓ Note ▪ The sender machine displays this error code when the sender fax is a Ricoh model.
6	DNS server registered when Gatekeeper host name specified on sender's side?	Contact the network administrator. ↓ Note ▪ The sender machine displays this error code when the sender fax is a Ricoh model.
7	Enable H.323 SW is set to on?	Request the sender to check the settings.

		User Parameter SW 34 Bit 0 ⬇ Note ▪ Only if the remote sender fax is a Ricoh fax.
8	Local fax IP address registered?	Register the IP address.
9	Local fax Alias number registered?	Register the Alias number.
10	Network bandwidth too narrow?	Request the system administrator to increase the bandwidth.
		Lower the start modem reception baud rate on the receiving side. IPFAX SW06
11	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.
12	Local fax registered in Gatekeeper?	Contact the network administrator. ⬇ Note ▪ The sender machine displays this error code when the sender fax is a Ricoh model.
4. SERVICE TABLES

4.1 BEFOREHAND

⚠️**CAUTION**

- Never turn off the main power switch when the power LED is lit or flashing. To avoid damaging the hard disk or memory, press the operation power switch to switch the power off, wait for the power LED to go off, and then switch the main power switch off.

🔽 Note

- The main power LED (⁂◎) lights or flashes while the platen cover or ARDF is open, while the main machine is communicating with a facsimile or the network server, or while the machine is accessing the hard disk or memory for reading or writing data.

4.2 SERVICE TABLES

4.2.1 SP1-XXX (BIT SWITCHES)

☛ "Bit Switches"

1	Mode No.		Function
101	System Switch		
	001 – 032	00 – 1F	Change the bit switches for system settings for the fax option (☛ "Bit Switches")
102	Ifax Switch		
	001 – 016	00 – 0F	Change the bit switches for internet fax settings for the fax option (☛ "Bit Switches")
103	Printer Switch		
	001 – 016	00 – 0F	Change the bit switches for printer settings for the fax option (☛ "Bit Switches")
104	Communication Switch		
	001 – 032	00 – 1F	Change the bit switches for communication settings for the fax option (☛ "Bit Switches")
105	G3-1 Switch		
	001 – 016	00 – 0F	Change the bit switches for the protocol settings of the standard G3 board (☛ "Bit Switches")
111	IP fax Switch		
	001 – 016	00 – 0F	Change the bit switches for optional IP fax parameters

			(☛ "Bit Switches")

4.2.2 SP2-XXX (RAM DATA)

2	Mode No.		Function
101	RAM Read/Write		
	001		Change RAM data for the fax board directly. (☛ "Service RAM Addresses")
102	Memory Dump		
	001	G3-1 Memory Dump	Print out RAM data for the fax board. (☛ "Service RAM Addresses")
103	G3-1 NCU Parameters		
	001 – 023	CC, 01 – 22	NCU parameter settings for the standard G3 board. (☛ "NCU Parameters")

4.2.3 SP3-XXX (TEL LINE SETTINGS)

3	Mode No.		Function
101	Service Station		
	001	Fax Number	Enter the fax number of the service station.
102	Serial Number		
	000		Enter the fax unit's serial number.
103	PSTN-1 Port Settings		
	001	Select Line	Select the line type setting for the G3-1 line. If the machine is installed on a PABX line, select "PABX", "PABX(GND)" or "PABX(FLASH)".

	002	PSTN Access Number	Enter the PSTN access number for the G3-1 line.
	003	Memory Lock Disabled	If the customer does not want to receive transmissions using Memory Lock on this line, turn this SP on.
107	IPFAX Port Settings		
	001	H323 Port	-
	002	SIP Port	Not used
	003	RAS Port	-
	004	Gatekeeper port	-
	005	T.38 Port	-
	006	SIP Server Port	Not used
	007	IPFAX Protocol Priority	Select "H.323" (SIP not used)
201	FAX SW		
	001 – 032	00 – 1F	-

4.2.4 SP4-XXX (ROM VERSIONS)

4	Mode No.		Function
101	002 – 007	FCU ROM Version	Displays the FCU ROM version.
102	002 – 065	Error Codes	Displays the latest 64 fax error codes.
103	002 – 004	G3-1 ROM Version	Displays the G3-1 modem version.

4.2.5 SP5-XXX (INITIALIZING)

5	Mode No.	Function
101	Initialize SRAM	
	001	Initializes the bit switches and user parameters, user data in the SRAM, files in the SAF memory, and clock.
102	Erase All Files	
	001	Erases all files stored in the SAF memory.
103	Reset Bit Switches	
	001	Resets the bit switches and user parameters.
104	Factory setting	
	001	Resets the bit switches and user parameters, user data in the SRAM and files in the SAF memory.
105	Reset All Bit Switches	
	001	Initializes all the current bit switch settings.
106	Reset Security Bit Switches	
	001	Initializes only the security bit switches. If you select automatic output/display for the user parameter switches, the security settings are initialized.

4.2.6 SP6-XXX (REPORTS)

6	Mode No.		Function
101	System Parameter List		
	001	-	Touch the "ON" button to print the system parameter list.
102	Service Monitor		
	001	-	Touch the "ON" button to print the service

			monitor report.
103	G3 Protocol Dump List		
	001	G3-1 (All Communications)	Prints the protocol dump list of all communications for the G3-1 line.
	002	G3-1 (1 Communication)	Prints the protocol dump list of the last communication for the G3-1 line.
105	All Files print out		
	001	-	Prints out all the user files in the SAF memory, including confidential messages. ↓ Note ▪ Do not use this function, unless the customer is having trouble printing confidential messages or recovering files stored using the memory lock feature.
106	Journal Print out		
	001	All Journals	The machine prints all the communication records on the report.
	002	Specified Date	The machine prints all communication records after the specified date.
107	Log List Print out		
	001	All log files	These log print out functions are for designer use only.
	002	Printer	
	003	SC/TRAP Stored	
	004	Decompression	
	005	Scanner	
	006	JOB/SAF	

Service Tables

	007	Reconstruction	
	008	JBIG	
	009	G3CCU	
	010	Fax Job	
	011	CCU	
	012	Scanner Condition	
108	IP Protocol Dump List		
	001	All Communications	Prints the protocol dump list of all communications for the IP fax line.
	002	1 Communication	Prints the protocol dump list of the last communication for the IP fax line.

4.2.7 SP7-XXX (TEST MODES)

These are the test modes for PTT approval.

7	Function
101	G3-1 Modem Tests
102	G3-1 DTMF Tests
103	Ringer Test
104	G3-1 V34 (S2400baud)
105	G3-1 V34 (S2800baud)
106	G3-1 V34 (S3000baud)
107	G3-1 V34 (S3200baud)
108	G3-1 V34 (S3429baud)
109	Message Test

4.3 BIT SWITCHES

⚠ **WARNING**

- Do not adjust a bit switch or use a setting that is described as "Not used", as this may cause the machine to malfunction or to operate in a manner that is not accepted by local regulations. Such bits are for use only in other areas, such as Japan.

↓ Note

- Default settings for bit switches are not listed in this manual. Refer to the System Parameter List printed by the machine.

4.3.1 SYSTEM SWITCHES

System Switch 00 [SP No. 1-101-001]		
No	**FUNCTION**	**COMMENTS**
0	Dedicated transmission parameter programming 0: Disabled, 1: Enabled	Set this bit to 1 before changing any dedicated transmission parameters. Reset this bit to 0 after programming dedicated transmission parameters.
1	**Not used**	Do not change
2	Technical data printout on the Journal 0: Disabled 1: Enabled	1: Instead of the personal name, the following data are listed on the Journal for each G3 communication.
	e.g. 0000 (1) // 32 (2) V34 (3) // 288 (4) // 264 (5) // L0100 (6) 03 (7) 04 (8) (1): EQM value (Line quality data). A larger number means more errors. (2): Symbol rate (V.34 only) (3): Final modem type used (4): Starting data rate (for example, 288 means 28.8 kbps) (5): Final data rate (6): Rx revel (refer to the note after this table for how to read the rx level) (7): Total number of error lines that occurred during non-ECM reception. (8): Total number of burst error lines that occurred during non-ECM reception.		

Bit Switches

	↓ Note	
	▪ EQM and rx level are fixed at "FFFF" in tx mode. ▪ The seventh and eighth numbers are fixed at "00" for transmission records and ECM reception records.	
	Rx level calculation Example: 0000 // 32 V34 // 288/264 // L 01 00 03 04 The four-digit hexadecimal value (N) after "L" indicates the rx level. The high byte is given first, followed by the low byte. Divide the decimal value of N by -16 to get the rx level. In the above example, the decimal value of N (= 0100 [H]) is 256. So, the actual rx level is 256/-16 = -16 dB	
3	**Not used**	Do not change this setting.
4	Line error mark print 0: OFF, 1: ON (print)	When "1" is selected, a line error mark is printed on the printout if a line error occurs during reception.
5	G3/G4 communication parameter display 0: Disabled 1: Enabled	This is a fault-finding aid. The LCD shows the key parameters (see below). This is normally disabled because it cancels the CSI display for the user. Be sure to reset this bit to 0 after testing.
6	Protocol dump list output after each communication 0: Off 1: On	This is only used for communication troubleshooting. It shows the content of the transmitted facsimile protocol signals. Always reset this bit to 0 after finishing testing. If system switch 09 bit 6 is at "1", the list is only printed if there was an error during the communication.
7	Not used	Do not change the setting.

System Switch 01 - Not used (Do not change the factory settings.)

System Switch 02 [SP No. 1-101-003]		
No	**FUNCTION**	**COMMENTS**
0-1	**Not used**	Do not change these settings.
2	Force after transmission stall 0: Off 1: On	With this setting on, the machine resets itself automatically if a transmission stalls and fails to complete the job.
3-5	**Not used**	Do not change these settings.
6-7	Memory read/write by RDS Bit 7: 0, Bit 6: 0 Always disabled Bit 7: 0, Bit 6: 1 User selectable Bit 7: 1, Bit 6: 0 User selectable Bit 7: 1, Bit 6: 1 Always enabled	(0,0): All RDS systems are always locked out. (0,1), (1,0): Normally, RDS systems are locked out, but the user can temporarily switch RDS on to allow RDS operations to take place. RDS will automatically be locked out again after a certain time, which is stored in System Switch 03. Note that if an RDS operation takes place, RDS will not switch off until this time limit has expired. (1,1): At any time, an RDS system can access the machine.

System Switch 03 [SP No. 1-101-004]		
No	**FUNCTION**	**COMMENTS**
0-7	Length of time that RDS is temporarily switched on when bits 6 and 7 of System Switch 02 are set to "User selectable"	00 - 99 hours (BCD). This setting is only valid if bits 6 and 7 of System Switch 02 are set to "User selectable". The default setting is 24 hours.

System Switch 04 [SP No. 1-101-005]		
No	**FUNCTION**	**COMMENTS**
0-2	**Not used**	Do not change these settings.

Bit Switches

3	Printing dedicated tx parameters on Quick/Speed Dial Lists 0: Disabled 1: Enabled	1: Each Quick/Speed dial number on the list is printed with the dedicated tx parameters (10 bytes each). The first 10 bytes of data are the programmed dedicated tx parameters; 34 bytes of data are printed (the other 24 bytes have no use for service technicians).
4-7	**Not used**	Do not change these settings.

System Switch 05 - Not used (Do not change the factory settings.)
System Switch 06 - Not used (Do not change the factory settings.)
System Switch 07 - Not used (Do not change the factory settings.)
System Switch 08 - Not used (Do not change the factory settings.)

System Switch 09 [SP No. 1-101-010]		
No	**FUNCTION**	**COMMENTS**
0	**Not used**	Do not change these settings.
1	Inclusion of communications on the Journal when no image data was exchanged. 0: Disabled 1: Enabled	0: Communications that reached phase C (message tx/rx) of the T.30 protocol are listed on the Journal. 1: Communications that reached phase A (call setup) of T.30 protocol are listed on the Journal. This will include telephone calls.
2	Automatic error report printout 0: Disabled 1: Enabled	0: Error reports will not be printed. 1: Error reports will be printed automatically after failed communications.
3	Printing of the error code on the error report 0: No 1: Yes	1: Error codes are printed on the error reports.

4	**Not used**	Do not change this setting.
5	Power failure report 0: Disabled 1: Enabled	1: A power failure report will be automatically printed after the power is switched on if a fax message disappeared from the memory when the power was turned off last.
6	Conditions for printing the protocol dump list 0: Print for all communications 1: Print only when there is a communication error	This switch becomes effective only when system switch 00 bit 6 is set to 1. 1: Set this bit to 1 when you wish to print a protocol dump list only for communications with errors.
7	Priority given to various types of remote terminal ID when printing reports 0: RTI > CSI > Dial label > Tel. Number 1: Dial label > Tel. number > RTI > CSI	This bit determines which set of priorities the machine uses when listing remote terminal names on reports. Dial Label: The name stored, by the user, for the Quick/Speed Dial number.

Bit Switches

	Original Line Resolution of TX Attachment File	These settings set the maximum resolution of the original that the destination can receive.
0	200x100 Standard	0: Not selected 1: Selected If more than one of these three bits is set to "1", the higher resolution has priority. For example, if both Bit 0 and Bit 2 are set to "1" then the resolution is set for "Bit 2 200 x 400.
1	200x200 Detail	
2	200x400 Fine	
3	300 x 300 Reserve	
4	400 x 400 Super Fine	
5	600 x 600 Reserve	
6	Reserve	
	mm/inch	
7	This setting selects mm/inch conversion for mail transmission. 0: Off (No conversion), 1: On (Conversion) When on (set to "1"), the machine converts millimeters to inches for sending mail. There is no switch for converting inches to millimeters. Unlike G3 fax transmissions which can negotiate between sender and receiver to determine the setting, mail cannot negotiate between terminals; the mm/inch selection is determined by the sender fax. When this switch is Off (0): Images scanned in inches are sent in inches. Images scanned in mm are sent in mm. Images received in inches are transmitted in inches. Images received in mm are transmitted in mm. When this switch is On (1): Images scanned in inches are sent in inches. Images scanned in mm are converted to inches. Images received in inches are transmitted in inches. Images received in mm are converted to inches.	

I-fax Switch 02 [SP No. 1-102-003]	
No	FUNCTION	COMMENTS

0	RX Text Mail Header Processing
	This setting determines whether the header information is printed with text e-mails when they are received. 0: Prints only text mail. 1: Prints mail header information attached to text mail. When a text mail is received with this switch On (1), the "From" address and "Subject" address are printed as header information. When a mail with only binary data is received (a TIFF-F file, for example), this setting is ignored and no header is printed.
1	Output from Attached Document at E-mail TX Error
	This setting determines whether only the first page or all pages of an e-mail attachment are printed at the sending station when a transmission error occurs. This allows the customer to see which documents have not reached their intended destinations if sent to the wrong e-mail addresses, for example. 0: Prints 1st page only. 1: Prints all pages.
2-3	Text String for Return Receipt
	This setting determines the text string output for the Return Receipt that confirms the transmission was received normally at the destination.
	00: "Dispatched" Sends from PC mail a request for a Return Receipt. Receives the Return Receipt with "dispatched" in the 2nd part: Disposition: Automatic-action/MDN-send automatically; dispatched The "dispatched" string is included in the Subject string. 01: "Displayed" Sends from PC mail a request for a Return Receipt. Receives the Return Receipt with "displayed" in the 2nd part: Disposition: Automatic-action/MDN-send automatically; displayed The "displayed" string is included in the Subject string. 10: Reserved 11: Reserved A mail requesting a Return Receipt sent from an IFAX with this switch set to "00"

	(for "dispatched") received by Microsoft Outlook 2000 may cause an error. If any setting other than "displayed" (01) causes a problem, change the setting to "01" to enable normal sending of the Return Receipt.
4	Media accept feature
	This setting adds or does not add the media accept feature to the answer mail to confirm a reception. 0: Does not add the media accept feature to the answer mail 1: Adds the media accept feature to the answer mail. Use this bit switch if a problem occurs when the machine receives an answer mail, which contains the media accept feature field.
5-6	**Not Used**
7	Image Resolution of RX Text Mail
	This setting determines the image resolution of the received mail. 0: 200 x 200 1: 400 x 400 The "1" setting requires installation of the Function Upgrade Card in order to have enough SAF (Store and Forward) memory to receive images at 400 x 400 resolution.

0-1	T1 timer adjustment Adjusts the T1 timer. The default is "00" (35 seconds). Bit 1: 0, Bit 0: 0 = 35 sec Bit 1: 0, Bit 0: 1 = 40 sec Bit 1: 1, Bit 0: 0 = 50 sec Bit 1: 1, Bit 0: 1 = 60 sec	-
2-3	T4 timer adjustment Adjust the T4 timer. The default is "00" (3 seconds). Bit 3: 0, Bit 2: 0 = 3 sec Bit 3: 0, Bit 2: 1 = 3.5 sec Bit 3: 1, Bit 2: 0 = 4 sec Bit 3: 1, Bit 2: 1 = 5 sec	-

Bit Switches

4-5	T0 timer adjustment Bit 5: 0, Bit 4: 0 = 75 sec Bit 5: 0, Bit 4: 1 = 120 sec Bit 5: 1, Bit 4: 0 = 180 sec Bit 5: 1, Bit 4: 1 = 240 sec	Adjusts the fail safe timer. This timer sets the interval between "setup" data transmission and T.38 phase decision. If your destination return is late on the network or G3 fax return is late, adjust the longer interval timer. The default is "00" (75 seconds).
6-7	**Not used**	Do not change these settings.

4.4 NCU PARAMETERS

The following tables give the RAM addresses and the parameter calculation units that the machine uses for ringing signal detection and automatic dialing. The factory settings for each country are also given. Most of these must be changed by RAM read/write (SP2-102), but some can be changed using NCU Parameter programming (SP2-103); if SP2-103 can be used, this will be indicated in the Remarks column. The RAM is programmed in hex code unless (BCD) is included in the Unit column.

Address	Function					
680500	Country/Area code for NCU parameters

6805DA	T.30 T1 timer			1 s	
6805E0 bit 3	Maximum wait time for post message			0: 12 s 1: 30 s	1: Maximum wait time for post message (EOP/EOM/MPS) can be changed to 30 s. Change this bit to "1" if communication errors occur frequently during V.17 reception.
6805E4	Bit 2 sets the level of the call signal, Bit 3 sets the call signal impedance	Bit 2	0	RT=0 (Low)	-
			1	RT=1 (High)	
		Bit 3	0	RZ=0 (High)	

NCU Parameters

Address	Function			Unit	Remarks
			1	RZ=1 (Composite)	
6805E5	Bit 0 sets the ring detection method, Bit 1 sets the ring detection method when fixed.	Bit 0	0	Auto	If any setting is changed, select a setting that is higher than the default setting.
			1	Fixed	
		Bit 1	0	Use RDTP	
			1	Use RDTN	
	Bits 2 to 7: Not used				

NOTES

1. If a setting is not required, store FF in the address.

2. Italy and Belgium only

   RAM address 68055E: the lower four bits have the following meaning.

   Bit 2 - 1: International dial tone cadence detection enabled (Belgium)

   Bit 1 - Not used

   Bit 0 - 1: PSTN dial tone cadence detection enabled (Italy)

   If bit 0 or bit 2 is set to 1, the functions of the following RAM addresses are changed.

   680508 (if bit 0 = 1) or 680538 (if bit 2 = 1): tolerance for on or off state duration (%), and number of cycles required for detection, coded as in address 680533.

   68050B (if bit 0 = 1) or 68053B (if bit 2 = 1): on time, hex code (unit = 20 ms)

   68050C (if bit 0 = 1) or 68053C (if bit 2 = 1): off time, hex code (unit = 20 ms)

3. Pulse dial parameters (addresses 68054A to 68054F) are the values for 10 pps. If 20 pps is used, the machine automatically compensates.

4. The first ring may not be detected until 1 to 2.5 wavelengths after the time specified by this parameter.

5. The calculated level must be between 0 and 10.

   The attenuation levels calculated from RAM data are:

   High frequency tone:

   - $- 0.5 \times N_{680552/680554} - 3.5$ dBm
   - $- 0.5 \times N_{680555}$ dBm

Low frequency tone:

- $-0.5 \times (N_{680552}/_{680554} + N_{680553}) -3.5$ dBm

- $-0.5 \times (N_{680555} + N_{680553})$ dBm

  ↓ Note

    - N_{680552}, for example, means the value stored in address 680552(H)

6. 68054A: Europe - Between Ds opening and Di opening, France - Between Ds closing and Di opening

    68054D: Europe - Between Ds closing and Di closing, France - Between Ds opening and Di closing

7. Tone signals which frequency is lower than 1500Hz (e.g., 800Hz tone for AI short protocol) refer to the setting at 6805B5h. Tones which frequency is higher than 1500Hz refer to the setting at 6805B6h.

8. 68054A, 68054D, 68054E: The actual inter-digit pause (pulse dial mode) is the sum of the period specified by the RAM addresses 68054A, 68054D, and   68054E.

4.5 DEDICATED TRANSMISSION PARAMETERS

There are two sets of transmission parameters: Fax and E-mail

Each Quick Dial Key and Speed Dial Code has eight bytes of programmable parameters allocated to it. If transmissions to a particular machine often experience problems, store that terminal's fax number as a Quick Dial or Speed Dial, and adjust the parameters allocated to that number.

The programming procedure will be explained first. Then, the eight bytes will be described.

4.5.1 PROGRAMMING PROCEDURE

1. Set the bit 0 of System Bit Switch 00 to 1.
2. Enter Address Book Management mode ([User Tools]> System Settings> Administrator Tools > Address Book Management).
3. Select the address book that you want to program.
4. Press the "Dest." Key to enter the fax and e-mail parameter settings.
5. For the fax parameter, select "Fax Settings", for the E-mail parameter, select "E-mail Settings".
6. Press the "OK" key, and then press "Start" key. Make sure that the LED of the Start button lights green.
7. The settings for the switch 00 are now displayed. Press the bit number that you wish to change.
8. To scroll through the parameter switches, either:
9. Select the next switch: press "Next" or Select the previous switch: "Prev." until the correct switch is displayed. Then go back to step 6.
10. After the setting is changed, press "OK" key.
11. After finishing, reset bit 0 of System Bit Switch 00 to 0.

4.5.2 PARAMETERS

Fax Parameters

The initial settings of the following fax parameters are all FF(H) - all the parameters are disabled.

Switch 00
FUNCTION AND COMMENTS

ITU-T T1 time (for PSTN G3 mode)

If the connection time to a particular terminal is longer than the NCU parameter setting, adjust this byte. The T1 time is the value stored in this byte (in hex code), multiplied by 1 second.

Range:

0 to 120 s (00h to 78h)

FFh - The local NCU parameter factory setting is used.

Do not program a value between 79h and FEh.

Switch 01

No	FUNCTION						COMMENTS
0-4	Tx level						If communication with a particular remote terminal often contains errors, the signal level may be inappropriate. Adjust the Tx level for communications with that terminal until the results are better. If the setting is "Disabled", the NCU parameter 01 setting is used.
	Bit4	Bit3	Bit2	Bit1	Bit0		
	0	0	0	0	0	0	
	0	0	0	0	1	−1	
	0	0	0	1	0	−2	
	0	0	0	1	1	−3	
	0	0	1	0	0	−4	
	↓	↓	↓	↓	↓	↓	↓ Note
	0	1	1	1	1	−15	▪ Do not use settings other than listed on the left.
	1	1	1	1	1	Disabled	
5-7	Cable equalizer Bit 7: 0, Bit 6: 0, Bit 5: 0 = None Bit 7: 0, Bit 6: 0, Bit 5: 1 = Low Bit 7: 0, Bit 6: 1, Bit 5: 0 = Medium Bit 7: 0, Bit 6: 1, Bit 5: 1 = High Bit 7: 1, Bit 6: 1, Bit 5: 1 = Disabled						Use a higher setting if there is signal loss at higher frequencies because of the length of wire between the modem and the telephone exchange when calling the number stored in this Quick/Speed Dial. Also, try using the cable equalizer if one or more of the following

Dedicated Transmission Parameters

		symptoms occurs. Communication error with error codes such as 0-20, 0-23, etc. Modem rate fallback occurs frequently. ↓ Note ▪ Do not use settings other than listed on the left. If the setting is "Disabled", the bit switch setting is used.

Switch 02					
No			**FUNCTION**		**COMMENTS**
0-3	Initial Tx modem rate				If training with a particular remote terminal always takes too long, the initial modem rate may be too high. Reduce the initial Tx modem rate using these bits.
	Bit3	Bit2	Bit1	Bit0	bps
	0	0	0	0	Not used
	0	0	0	1	2400
	0	0	1	0	4800
	0	0	1	1	7200
	0	1	0	0	9600
	0	1	0	1	12000
	0	1	1	0	14400
	0	1	1	1	16800
	1	0	0	0	19200
	1	0	0	1	21600
	1	0	1	0	24000
	1	0	1	1	26400

For the settings 14.4 or kbps slower, Switch 04 bit 4 must be changed to 0.

↓ Note

▪ Do not use settings other than listed on the left. If the setting is "Disabled", the bit switch setting is used.

1	1	0	0	28800	
1	1	0	1	31200	
1	1	1	0	33600	
1	1	1	1	Disabled	
Other settings: **Not used**					
4-7	**Not used**				Do not change the settings.

Switch 03		
No	**FUNCTION**	**COMMENTS**
0-1	Inch-mm conversion before tx Bit 1: 0, Bit 0: 0 = Inch-mm conversion available Bit 1: 0, Bit 0: 1 = Inch only Bit 1: 1, Bit 0: 0 = Not used Bit 1: 1, Bit 0: 1 = Disabled	The machine uses inch-based resolutions for scanning. If "inch only" is selected, the printed copy may be slightly distorted at the other end if that machine uses mm-based resolutions. If the setting is "Disabled", the bit switch setting is used.
2-3	DIS/NSF detection method Bit 3: 0, Bit 2: 0 = First DIS or NSF Bit 3: 0, Bit 2: 1 = Second DIS or NSF Bit 3: 1, Bit 2: 0 = Not used Bit 3: 1, Bit 2: 1 = Disabled	(0, 1): Use this setting if echoes on the line are interfering with the set-up protocol at the start of transmission. The machine will then wait for the second DIS or NSF before sending DCS or NSS. If the setting is "Disabled", the bit switch setting is used.
4	V.8 protocol 0: Off 1: Disabled	If transmissions to a specific destination always end at a lower modem rate (14,400 bps or lower), disable V.8 protocol so as not to use V.34 protocol. 0: V.34 communication will not be possible. If the setting is "Disabled", the bit switch setting is used.
5	Compression modes available in transmit mode	This bit determines the capabilities that are informed to the other terminal during transmission.

Dedicated Transmission Parameters

	0: MH only 1: Disabled	If the setting is "Disabled", the bit switch setting is used.
6-7	ECM during transmission Bit 7: 0, Bit 6: 0 = Off Bit 7: 0, Bit 6: 1 = On Bit 7: 1, Bit 6: 0 = Not used Bit 7: 1, Bit 6: 1 = Disabled	For example, if ECM is switched on but is not wanted when sending to a particular terminal, use the (0, 0) setting. ↓ Note ▪ V.8/V.34 protocol and JBIG compression are automatically disabled if ECM is disabled. ▪ If the setting is "Disabled", the bit switch setting is used.

Switch 04 - Not used (do not change the settings)
Switch 05 - Not used (do not change the settings)
Switch 06 - Not used (do not change the settings)
Switch 07 - Not used (do not change the settings)
Switch 08 - Not used (do not change the settings)
Switch 09 - Not used (do not change the settings)

E-mail Parameters

The initial settings of the following e-mail parameters are all "0" (all parameters disabled).

Switch 00		
No	**FUNCTION**	**COMMENTS**
0	MH Compression mode for e-mail attachments **0**: Off 1: On	Switches MH compression on and off for files attached to e-mails for sending.
1	MR Compression mode	Switches MR compression on and off for files

	for e-mail attachments **0**: Off 1: On	attached to e-mails for sending.
2	MMR Compression mode for e-mail attachments **0**: Off 1: On	Switches MMR compression on and off for files attached to e-mails for sending.
3-6	**Not used**	Do not change these settings.
7	Designates the bits to reference for compression method of e-mail attachments **0**: Registered (Bit 0 to 6) 1: No registration.	The "0" selection (default) references the settings for Bits 00, 01, 02 above. The "1" selection ignores the selections of Bits 00, 01, 02.

Switch 01		
No	**FUNCTION**	**COMMENTS**
0	Original width of e-mail attachment: A4 **0**: Off 1: On	Sets the original width of the e-mail attachment as A4.
1	Original width of e-mail attachment: B4 **0**: Off 1: On	Sets the original width of the e-mail attachment as B4.
2	Original width of e-mail attachment: A3 **0**: Off 1: On	Sets the original width of the e-mail attachment as A3.
3-6	**Not used**	Do not change these settings.

Dedicated Transmission Parameters

7	Designates the bits to reference for original size of e-mail attachments **0**: Registered (Bit 0 to 6) 1: No registration.	The "0" selection (default) references the settings for Bits 00, 01, 02 above. The "1" selection ignores the selections of Bits 00, 01, 02.

Switch 02		
No	**FUNCTION**	**COMMENTS**
0	Line resolution of e-mail attachment: 200 x 100 **0**: Off 1: On	Sets the line resolution of the e-mail attachment as 200 x100.
1	Line resolution of e-mail attachment: 200 x 200 **0**: Off 1: On	Sets the line resolution of the e-mail attachment as 200 x 200.
2	Line resolution of e-mail attachment: 200 x 400 **0**: Off 1: On	Sets the line resolution of the e-mail attachment as 200 x 400.
3	Not used	Do not change these settings.
4	Line resolution of e-mail attachment: 400 x 400 **0**: Off 1: On	Sets the line resolution of the e-mail attachment as 400 x 400.
5-6	**Not used**	Do not change these settings.
7	Designates the bits to reference for original size of e-mail attachments **0**: Registered (Bit 0 to 6) 1: No registration.	The "0" selection (default) references the settings for Bits 00, 01, 02, 04 above. The "1" selection ignores the selections of Bits 00, 01, 02, 04.

Switch 03 - Not used (do not change the settings)

Switch 04		
No	**FUNCTION**	**COMMENTS**
0	Full mode address selection 0: Full mode address 1: No full mode (simple mode)	If the other ends have the addresses, which have the full mode function flag ("0"), this machine determines them as full mode standard machines. ▪ This machine attaches the "demand of reception confirmation" to a message when transmitting. ▪ This machine updates the reception capability to the address book when receiving.
1-7	**Not used**	Do not change these settings.

Switch 05		
No	**FUNCTION**	**COMMENTS**
0	Directr transmission selection to SMTP server 0: ON 1: OFF	Allows or does not allow the direct transmission to SMTP server.
1-7	Not used	Do not change these settings.

4.6 SERVICE RAM ADDRESSES

⚠️**CAUTION**

- Do not change the settings which are marked as "Not used" or "Read only."

680000(H) - Machine code

680001 to 680004(H) - ROM version (Read only)

680001(H) - Revision number (BCD)

680002(H) - Year (BCD)

680003(H) - Month (BCD)

680004(H) - Day (BCD)

680005(H) - Machine code 2 (check ram2)

680006 to 680015(H) - Machine's serial number (16 digits - ASCII)

680016(H) - Language code

Bit0: Japanese, Bit1: English (UK), Bit2: English (USA), Bit3: French,

Bit4: German, Bit5: Spanish, Bit6: Italian, Bit7: Dutch, Bit8: Swedish,

Bit9: Norwegian, Bit10: Danish, Bit11: Finnish, Bit12: Czech,

Bit13: Hungarian, Bit14: Polish, Bit15: Portuguese, Bit16: Russian,

Bit17: Traditional Chinese, Bit18: Simplified Chinese, Bit19: Hangul

680018(H) - Total program checksum (low)

680019(H) - Total program checksum (high)

680020 to 68003F(H) - System bit switches

680050 to 68005F(H) - Printer bit switches

680060 to 68007F(H) - Communication bit switches

680080 to 68008F(H) - G3 bit switches

680090 to 68009F(H) - G3-2 bit switches: Not used

6800A0 to 6800AF(H) - G3-3 bit switches: Not used

6800D0(H) - User parameter switch 00 (SWUER_00) : Not used

6800D1(H) - User parameter switch 01 (SWUSR_01) : Not used

6800D2(H) - User parameter switch 02 (SWUSR_02)

Bit 0: Forwarding mark printing on forwarded messages

0: OFF, 1: ON (Print)

Bit 1: Center mark printing on received copies

(This switch is not printed on the user parameter list.)

0: OFF, 1: ON (Print)

Bit 2: Reception time printing

(This switch is not printed on the user parameter list.)

0: OFF, 1: ON (Print)

Bit 3: TSI print on received messages 0: OFF, 1: ON (Print)

Bit 4: Checkered mark printing

(This switch is not printed on the user parameter list.)

0: OFF, 1: ON (Print)

Bit 5: Not used

Bit 6: Not used

Bit 7: Not used

6800D3(H) - User parameter switch 03 (SWUSR_03: Automatic report printout)

Bit 0: Transmission result report (memory transmissions) 0: Off, 1: On

Bit 1: Not used

Bit 2: Memory storage report 0: Off, 1: On

Bit 3: Polling reserve report (polling reception) 0: Off, 1: On

Bit 4: Polling result report (polling reception) 0: Off, 1: On

Bit 5: Transmission result report (immediate transmissions) 0: Off, 1: On

Bit 6: Not used

Bit 7: Journal 0: Off, 1: On

6800D4(H) - User parameter switch 04 (SWUSR_04: Automatic report printout)

Bit 0: Not used

Bit 1: Automatic communication failure report and transfer result report output 0: Off, 1: On

Bits 2 to 3: Not used

Bit 4: Indicates the parties 0: Not indicated, 1: Indicated

Bit 5: Include sender's name on reports 0: Off, 1: On

Bit 6: Not used

Bit 7: Inclusion of a sample image on reports   0: Off, 1: On

6800D5(H) - User parameter switch 05 (SWUSR_05)

Bit 0: Substitute reception when the base copier is in an SC condition

0: Enabled, 1: Disabled

Bits 1 and 2: Condition for substitute rx when the machine cannot print messages (Paper end, toner end, jam, and during night mode)

Bit 2: 0, Bit 1: 0 = The machine receives all the fax messages.

Bit 2: 0, Bit 1: 1 = The machine receives the fax messages with RTI or CSI.

Bit 2: 1, Bit 1: 0 = The machine receives the fax messages with the same ID code.

Bit 2: 1, Bit 1: 1 =   The machine does not receive anything.

Bits 3 and 4: Not used

Bit 5: Just size printing 0: Off, 1: On

Service RAM Addresses

Bit 6: Not used

Bit 7: Add paper display when a cassette is empty   0: Off, 1: On

6800D6(H) - User parameter switch 06 (SWUSR_06): Not used

6800D7(H) - User parameter switch 07 (SWUSR_07)

Bits 0 and 1: Not used

Bit 2: Parallel memory transmission 0: Off, 1: On

Bits 3 to 7: Not used

6800D8(H) - User parameter switch 08 (SWUSR_08)

Bits 0 and 1: Not used.

Bit 2: Authorized reception

0: Only faxes from senders whose RTIs/CSIs are specified for this feature are accepted.

1: Only faxes from senders whose RTIs/CSIs are not specified for this feature are accepted.

Bits 3 to 7: Not used.

6800D9(H) - User parameter switch 09 (SWUSR_09): Not used

6800DA(H) - User parameter switch 10 (SWUSR_0A)

Bits 0 to 2: Not used

Bit 3: Page reduction 0: Off, 1: On

Bits 4 and 5: Not used

Bit 6: Use both e-mail notification and printed reports to confirm the transmission results 0: Off, 1: On

Bit 7: Not used

6800DB(H) - User parameter switch 11 (SWUSR_0B)

Bits 0 and 1: Not used

Bit 2: White original detection 0: Off, 1: On (alarm and alert message on the LCD)

Bits 3 and 4: Not used

Bit 6: Printout of messages received while acting as a forwarding station 0: Off, 1: On

Bit 7: Not used

6800DC(H) - User parameter switch 12 (SWUSR_0C): Not used

6800DD(H) - User parameter switch 13 (SWUSR_0D): Not used

6800DE(H) - User parameter switch 14 (SWUSR_0E)

Bit 0: Message printout while the machine is in Night Printing mode 0: On, 1: Off

Bit 1: Maximum document length detection 0: Double letter, 1: Longer than double-letter (well log) – up to 1,200 mm

Bit 2: Not used

Bit 3: Fax mode settings, such as resolution, before a mode key

(Copy/Fax/Printer/Scanner) is pressed 0: Not cleared, 1: Cleared

Bits 4 to 7: Not used

6800DF(H) - User parameter switch 15 (SWUSR_0F)

(This switch is not printed on the user parameter list.)

Bits 0, 1 and 2: Cassette for fax printout

Bit 2: 0, Bit 1: 0, Bit 0: 1 = 1st paper feed station

Bit 2: 0, Bit 1: 1, Bit 0: 0 = 2nd paper feed station

Bit 2: 0, Bit 1: 1, Bit 0: 1 = 3rd paper feed station

Bit 2: 1, Bit 1: 0, Bit 0: 0 = 4th paper feed station

Bit 2: 1, Bit 1: 0, Bit 0: 1 = LCT

Other settings Not used

Bits 3 and 4: Not used

Bit 5: Using the cassette specified by bits 0, 1 and 2 above only 0: On, 1: Off

Bits 6 and 7: Not used

6800E0(H) – User parameter switch 16 (SWUSR_10)

(This switch is not printed on the user parameter list.)

Bits 0 and 1: Not used

Bit 2: Paper size selection priority for an A4 size fax message when A4/LT size paper is not available. 0: A3 has priority, 1: B4 has priority

Bits 3 to 7: Not used

6800E1(H) – User parameter switch 17 (SWUSR_11)

Bits 0 and 1: Not used

Bit 2: Inclusion of the "Add" button when a sequence of Quick/Speed dials is selected for broadcasting 0: Not needed, 1: Needed

Bits 3 to 6: Not used

Bit 7: Press "Start" key without an original when using the on hook dial or the external telephone,
0: displays "Cannot detect original size". 1: Receives fax messages.

6800E2(H) - User parameter switch 18 (SWUSR_12)

Bit 0: TTI date 0: Off, 1: On

Bit 1: TTI sender 0: Off, 1: On

Bit 2: TTI file number 0: Off, 1: On

Bit 3: TTI page number 0: Off, 1: On

Bits 4 to 7: Not used

6800E3(H) - User parameter switch 19 (SWUSR_13)

Bit 0: Not used

Service RAM Addresses

Bit 1: Journal format

0: The Journal is separated into transmissions and receptions

1: The Journal is separated into G3-1, G3-2, and G3-3 communications

Bit 2: Not used

Bit 3: 90° image rotation during B5 portrait Tx (This switch is not printed on the user parameter list.) 0: Off, 1: On

Bit 4: Reduction of sample images on reports to 50% in the main scan and sub-scan directions. (This switch is not printed on the user parameter list.) 0: Technician adjustment (printer switch 0E bits 3 and 4), 1: 50% reduction

Bit 5: Use of A5 size paper for reports (This switch is not printed on the user parameter list.) 0: Off, 1: On

Bits 6 and 7: Not used

6800E4(H) - User parameter switch 20 (SWUSR_14)

Bit 0: Automatic printing of the LAN fax result report 0: Off, 1: On

Bit 1: Not used.

Bits 2 to 5: Store documents in memory which could not be printed from PC fax (LAN fax) driver

Bit 5	Bit 4	Bit 3	Bit 2	Setting
0	0	0	0	0 min.
0	0	0	1	1 min.
↓	↓	↓	↓	↓
1	1	1	0	14 min.
1	1	1	1	15 min.

Bits 6 and 7: Not used.

6800E5(H) - User parameter switch 21 (SWUSR_15)

Bit 0: Print results of sending reception notice request message 0: Disabled (print only when error occurs), 1: Enabled

Bit 1: Respond to e-mail reception acknowledgment request 0: Disabled, 1: Enabled

Bit 2: Not used

Bit 3: File format for forwarded folders 0: TIFF, 1:PDF

Bit 4: Transmit Journal by E-mail 0: Disabled, 1: Enabled

Bit 5: Not used

Bit 6: Network error display 0: Displayed, 1: Not displayed

Bit 7: Transmit error mail notification 0: Enabled, 1: Disabled

6800E6(H) - User parameter switch 22 (SWUSR_16)

(This switch is not printed on the user parameter list.)

Bit 0: Dial tone detection (PSTN 1) 0: Disabled, 1: Enabled

Bits 1 to 7: Not used

6800E7(H) - User parameter switch 23 (SWUSR_17): Not used

6800E8(H) - User parameter switch 24 (SWUSR_18): Not used

6800E9(H) - User parameter switch 25 (SWUSR_19)

Bits 0 to 3: Not used

Bit 4: RDS operation 0: Not acceptable, 1: Acceptable for the limit specified by system switch 03

↓ Note

- This bit is only effective when RDS operation can be selected by the user (see system switch 02).

Bits 5 to 7: Not used

6800EA(H) and 6800EB(H) - User parameter switches 26 and 27 (SWUSR_1A and 1B): Not used

6800EC(H) - User parameter switch 28 (SWUSR_1C)

- Ringing times setting in the TEL line priority mode: 00 to 99 (BCD)

6800ED(H) - User parameter switch 29 (SWUSR_1D): Not used

6800EE(H) and 6800EF(H) - User parameter switches 30 and 31 (SWUSR_1E and 1F): Not used

6800F0(H) - User parameter switch 32 (SWUSR_20)

Bit 0: Quotation priority for a destination when there is no destination of the specified type

0: Paper output priority = Priority order: 1. IP-fax destination, 2. Fax Number, 3. E-mail address, 4. Folder

1: Electric putout order = Priority order: 1. E-mail address, 2. Folder, 3. IP-fax destination, 4. Fax number

Bits 1 to 7: Not used

6800F1(H) - User parameter switch 33 (SWUSR_21): Not used

6800F2(H) - User parameter switch 34 (SWUSR_22)

Bit 0: Gatekeeper server used with IP-Fax 0: Disabled, 1: Enabled

Bit 1: SIP server used with IP-Fax 0: Disabled, 1: Enabled – Not used

Bits 2 to 7: Not used

Service RAM Addresses

680100 to 68010F(H) - G4 Parameter Switches – Not used

680110 to 68012F(H) - G4 Internal Switches – Not used

680130 to 68016F(H) - Service Switches (SCU) – Not used

680170 to 68017F(H) - IFAX Switches

680180 to 68018F(H) - IP-FAX Switches

680190 to 6801AF(H) - Service station's fax number (SP3-101)

6801B0 to 6801B9(H) - Own fax PABX extension number

6801BA to 6801C3(H) - Own fax number (PSTN) – Not used

6801C4 to 6801D7(H) - Own fax number (ISDN G4) – Not used

6801D8 to 6801E3(H) - The first subscriber number (ISDN G3) – Not used

6801E4 to 6801EF(H) - The second subscriber number (ISDN G3) – Not used

6801F0 to 6801FB(H) - The first subscriber number (ISDN G4) – Not used

6801FC to 680207(H) - The second subscriber number (ISDN G4) – Not used

680208 to 68021B(H) - PSTN-1 RTI (Max. 20 characters - ASCII) - See the following note.

68021C to 68022F(H) - PSTN-2 RTI (Max. 20 characters - ASCII) - Not used

680230 to 680246(H) - PSTN-3 RTI (Max. 20 characters - ASCII) - Not used

680247 to 680286(H) - TTI 1 (Max. 64 characters - ASCII) - See the following note.

680287 to 6802C6(H) - TTI 2 (Max. 64 characters - ASCII) - Not used

6802C7 to 680306(H) - TTI 3 (Max. 64 characters - ASCII) - Not used

680307 to 68031A(H) - PSTN-1 CSI (Max. 20 characters - ASCII)

68031B to 68032E(H) - PSTN-2 CSI (Max.20 characters - ASCII) - Not used

68032F to 680342(H) - PSTN-3 CSI (Max.20 characters - ASCII) - Not used

680343(H) - Number of PSTN-1 CSI characters (Hex)

680344(H) - Number of PSTN-2 CSI characters (Hex) - Not used

680345(H) Number of PSTN-3 CSI characters (Hex) - Not used

⬇ Note

- If the number of characters is less than the maximum (20 for RTI, 64 for TTI), add a stop code (00[H]) after the last character.

680370(H) ID for transmission and reception (Read only – Do not change the settings)

680374 to 680375(H) - Envelopment ID for the envelopment reception (BCD)

680380 to 680387(H) - Last power off time (Read only)

680380(H) - 01(H) - 24-hour clock, 00(H) - 12-hour clock (AM), 02(H) - 12-hour clock (PM)

680381(H) - Year (BCD)

680382(H) - Month (BCD)

680383(H) - Day (BCD)

680384(H) – Hour

680385(H) – Minute

680386(H) – Second

680387(H) - 00: Monday, 01: Tuesday, 02: Wednesday, /// , 06: Sunday

680394(H) - Optional equipment – Not used

680395(H) - Optional equipment (Read only – Do not change the settings)

Bits 0 to 3: Not used

Bit 4: G3-2 0: Not installed, 1: Installed

Bit 5: G3-3 0: Not installed, 1: Installed

Bit 6 and 7: Not used

680401 to 68040D – Not used

680410(H) - G3-1 Modem ROM version (Read only)

680412(H) - G3-2 Modem ROM version – Not used

680414(H) - G3-3 Modem ROM version – Not used

680420(H) - Number of multiple sets print (Read only)

680476(H) - Time for economy transmission – Not used

68048C(H) - Dial in (BCD)

680492(H) - Transmission monitor volume 00 - 07(H)

680493(H) - Reception monitor volume   00 - 07(H)

680494(H) - On-hook monitor volume   00 - 07(H)

680495(H) - Dialing monitor volume   00 - 07(H)

680496(H) - Buzzer volume   00 - 07(H)

680497(H) - Beeper volume   00 - 07(H)

6804A8(H) - Machine code (Check ram 4)

6804D2(H) - Serial number (Max. 8 characters ASCII)

685E6C to 685E6F(H) - Transmission counter (HEX)

685E70 to 685E73(H) - Reception counter (HEX)

685EDC to 685EDF(H) - E-mail transmission counter (HEX)

685EE0 to 685EE3(H) - E-mail reception counter (HEX)

⟹**688E8E to 68918D(H)** - SIP server address (Read only) - Not Used

⟹688E8E(H) - Proxy server - Main (Max. 128 characters - ASCII) - Not Used

⟹688F0E(H) - Proxy server - Sub (Max. 128 characters - ASCII) - Not Used

⟹688F8E(H) - Redirect server - Main (Max. 128 characters - ASCII) - Not Used

⟹68900E(H) - Redirect server - Sub (Max. 128 characters - ASCII) - Not Used

⟹68908E(H) - Registrar server - Main (Max. 128 characters - ASCII) - Not Used

⟹68910E(H) - Registrar server - Sub (Max. 128 characters - ASCII) - Not Used

68918E(H) - Gatekeeper server address - Main (Max. 128 characters - ASCII)

68920E(H) - Gatekeeper server address - Sub (Max. 128 characters - ASCII)

68928E(H) - Arias Number (Max. 128 characters - ASCII)

⟹**68930E(H)** - SIP user name (Max. 128 characters - ASCII) - Not Used

⟹**68938E(H)** - SIP authentication password (Max. 128 characters - ASCII) - Not Used

⟹**68938E3(H) - SIP digest authentication password**Max.128 characters ASCII) - Not Used

68940E(H) - Gateway address information (Max. 7100 characters - ASCII)

68AFCA(H) - Stand-by port number for H.232 connection

⟹**68AFCC(H)** - Stand-by port number for SIP connection - Not Used

68AFCE(H) - RAS port number

68AFD0(H) - Gatekeeper port number

68AFD2(H) - Port number of data waiting for T.38

⟹**68AFD4(H)** - Port number of SIP server - Not Used

⟹**68AFD6(H)** - Priority for SIP and H.323   0: H.323, 1: SIP - Not Used

⟹**68AFD7(H)** - SIP function   0: Disabled, 1: Enabled - Not Used

68AFD8(H) - H.323 function   0: Disabled, 1: Enabled

⟹**68AFD9(H) - SIP digest authentication function** 0: Disabled, 1: Enabled - Not Used

68AFDA(H) - IP-Fax backup data 00 - 600 (H)

69ECBE(H) - 69ECDE(H) - Dial tone detection parameter (Max. 11 x 3 lines)

This initializes following order. [0x04, 0x40, 0x03, 0x60, 0x64, 0xf4, 0x01,0x64, 0x04, 0xc8, 0x00]

5. DETAILED SECTION DESCRIPTIONS

5.1 OVERVIEW
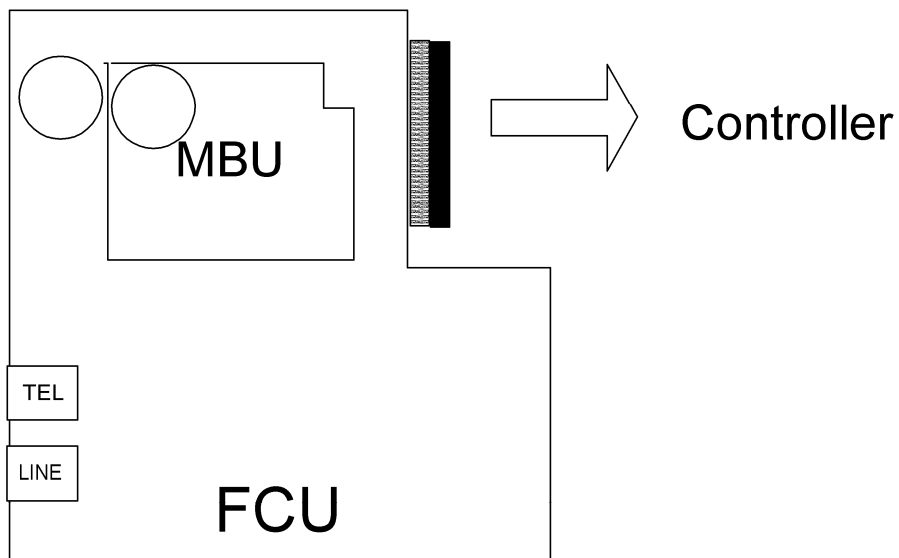

b868d501

The basic fax unit consists of two PCBs: an FCU and an MBU.

The FCU controls all the fax communications and fax features, in cooperation with the controller board. The MBU contains the ROM and SRAM. Also, the FCU has an NCU circuit.

5.2 BOARDS

5.2.1 FCU
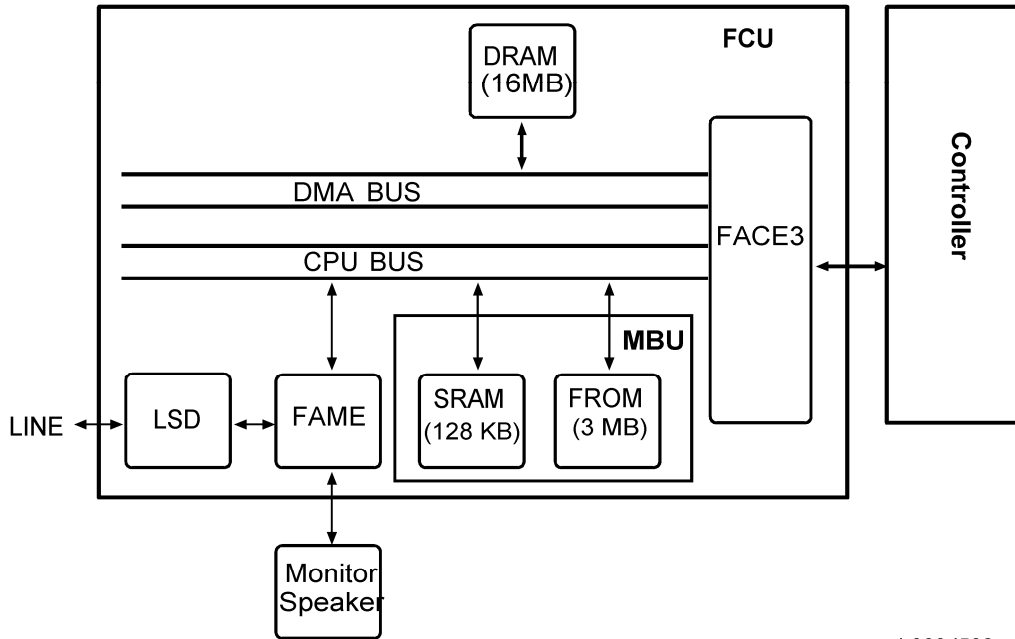

b868d502

The FCU (Facsimile Control Unit) controls fax communications, the video interface to the base copier's engine, and all the fax options.

FACE3 (Fax Application Control Engine)

- CPU
- Data compression and reconstruction (DCR)
- DMA control
- Clock generation
- DRAM backup control

Modem (FAME)

- V.34, V33, V17, V.29, V.27ter, V.21, and V.8

DRAM

- The 16 MB of DRAM is shared as follows.

  SAF memory: 4MB

  Working memory: 8MB

  Page memory: 4MB

- The SAF memory is backed up by a rechargeable battery.

Memory Back-up

- A Rechargeable battery backs up the SAF memory (DRAM) for 12 hour.

5.2.2 MBU

On this board, the flash ROM contains the FCU firmware, and the SRAM contains the system data and user parameters. Even if the FCU is changed, the system data and user parameters are kept on the MBU board.

ROM

- 3MB flash ROMs for system software storage
  2MB (16bit x 1MB) + 1MB (16bit x 512K)

SRAM

- The 128 KB SRAM for system and user parameter storage is backed up by a lithium battery.

Memory Back-up

- A lithium battery backs up the system parameters and programmed items in the SRAM, in case the base copier's main switch is turned off.

Switches

Item	Description
SW1	Switches the SRAM backup battery on/off.

5.3 FAX COMMUNICATION FEATURES

5.3.1 INTERNET MAIL COMMUNICATION

Mail Transmission

This machine supports T.37 full mode. (ITU-, RFC232). The difference between T.37 simple mode and full mode is as follows.

Function	T.37 Simple Mode	T.37 Full Mode
Resolution	200 x 100 200 x 200	200 x100 200 x 200 200 x 400 400 x 400 (if available)
RX Paper Width	A4	A4, B4, A3
RX Data Compression Method	MH	MH (default), MR, MMR,
Signals	Image data transmission only	Image data transmission, exchange of capability information between the two terminals, and acknowledgement of receipt of fax messages

Data Formats

The scanned data is converted into a TIFF-F formatted file.

The fields of the e-mail and their contents are as follows:

Field	Content
From	Mail address of the sender
Reply To	Destination requested for reply
To	Mail address of the destination

Bcc	Backup mail address
Subject	From CSI or RTI (Fax Message No. xxxx)
Content Type	Multipart/mixed Attached files: image/tiff
Content Transfer Encoding	Base 64, 7-bit, 8-bit, Quoted Printable
Message Body	MIME-converted TIFF-F (MIME standards specify how files are attached to e-mail messages)

Direct SMTP Transmission

Internet Fax documents can be sent directly to their destinations without going through the SMTP server. (Internet Faxes normally transmit via the SMTP server.)

For example:

e-mail address:	gts@ricoh.co.jp
SMTP server address:	gts.abcd.com

In this case this feature destination e-mail address (gts@ricoh.co.jp) is read as the SMTP server address "gts.abcd.com" and the transmissions bypass the SMTP server.

Selectable Options

These options are available for selection:

- With the default settings, the scan resolution can be either standard or detail. Inch-mm conversion before TX depends on IFAX SW01 Bit 7. Detail resolution will be used if Super Fine resolution is selected, unless Fine resolution is enabled with IFAX SW01.
- The requirements for originals (document size, scan width, and memory capacity) are the same as for G3 fax memory TX.
- The default compression is TIFF-F format.
- IFAX SW00: Acceptable paper widths for sending
- IFAX SW09: Maximum number of attempts to the same destination

Secure Internet Transmission

- SMTP Authentication: User Tools> System Settings> File Transfer> SMTP Authentication

Fax Communication Features

▪ POP Before SMTP: User Tools> System Settings> File Transfer> POP Before SMTP

Mail Reception

This machine supports three types of e-mail reception:

▪ POP3 (Post Office Protocol Ver. 3.)

▪ IMAP4 (Internet Messaging Access Protocol)

▪ SMTP (Simple Mail Transfer Protocol)

For details: Core Technology Manual – Facsimile Processes – Faxing from a PC – Internet/LAN Fax Boards – Mail Reception

POP3/IMAP4 Mail Reception Procedure

The machine automatically picks up e-mail from the server at an interval which is adjustable in the range 2 to 1440 min. in 1-minute steps: User Tools> System Settings> File Transfer> E-mail Reception Interval

SMTP Reception

▪ The IFAX must be registered as an SMTP server in the MX record of the DNS server, and the address of the received mail must specify the IFAX.

▪ Enable SMTP reception: User Tools> System Settings> File Transfer> Reception Protocol
Even if the MX record on the DNS server includes the IFAX, mail cannot be received with SMTP until SMTP reception is enabled:
However, if SMTP reception is selected and the machine is not registered in the MX record of the DNS server, then either IMAP4 or POP3 is used, depending on the setting: User Tools> System Settings> File Transfer> Reception Protocol

Mail Delivery Conditions: Transferring Mail Received With SMTP

1. The machine must be set up for SMTP mail delivery: User Tools> Facsimile Features> E-mail Settings> SMTP RX File Delivery Settings

2. If the user wishes to limit this feature so that the machine will only deliver mail from designated senders, the machine's "Auth. E-mail RX" feature must be set (User Tools> Facsimile Features> E-mail Settings> SMTP RX File Delivery Settings).

3. If the "SMTP RX File Delivery Setting" is set to 0 to prohibit SMTP receiving, and if there is mail designated for delivery, then the machine responds with an error. (User Tools> Facsimile Features> E-mail Settings> SMTP RX File Delivery Settings)

4. If the quick dial, speed dial, or group dial entry is incorrect, the mail transmission is lost, and the IFAX issues an error to the SMTP server and outputs an error report.

Auth. E-mail RX

In order to limit access to mail delivery with IFAX, the addresses of senders must be limited using the Access Limit Entry. Only one entry can be registered.

1. Access Limit Entry

   For example, to limit access to @IFAX.ricoh.co.jp:

gts@IFAX.ricoh.co.jp	Matches and is delivered.
gts@IFAX.abcde.co.jp	Does not match and is not delivered.
IFAX@ricoh.co.jp	Does not match and is not delivered.

2. Conditions

   - The length of the Access Limit Entry is limited to 127 characters.
   - If the Access Limit Entry address and the mail address of the incoming mail do not match, the incoming mail is discarded and not delivered, and the SMTP server responds with an error. However, in this case an error report is not output.
   - If the Access Limit Entry address is not registered, and if the incoming mail specifies a delivery destination, then the mail is delivered unconditionally.

Handling Mail Reception Errors

Abnormal files

When an error of this type occurs, the machine stops receiving and commands the server to erase the message. Then the machine prints an error report and sends information about the error by e-mail to the sender address (specified in the "From" or "Reply-to" field of the message). If there is an incomplete received message in the machine memory, it will be erased.

The machine prints an error message when it fails to send the receive error notification after a certain number of attempts.

The following types of files are judged to be abnormal if one or more of the following are detected:

1. Unsupported MIME headers.

   Supported types of MIME header

Header	Supported Types
Content-Type	Multipart/mixed, text/plain, message/rfc822 Image/tiff

Charset	US-ASCII, ISO 8859 X. Other types cannot be handled, and some garbage may appear in the data.
Content-Transfer-Encoding	Base 64, 7-bit, 8-bit, Quoted Printable

2. MIME decoding errors
3. File format not recognized as TIFF-F format
4. Resolution, document size, or compression type cannot be accepted

Remaining SAF capacity error

The machine calls the server but does not receive e-mail if the remaining SAF capacity is less than a certain value (the value depends on IFAX Switch 08. The e-mail will be received when the SAF capacity increases (for example, after substitute reception files have been printed). The error handling method for this type of error is the same as for "Abnormal files". If the capacity of the SAF memory drops to zero during reception, the machine operates in the same way as when receiving an abnormal file (refer to "Abnormal files" above).

Secure Internet Reception

To enable password encryption and higher level security: User Tools> System Settings> File Transfer> POP3/IMAP4 Settings> Encryption (set to "On")

Transfer Request: Request By Mail

For details: Core Technology Manual – Facsimile Processes – Faxing from a PC – Internet/LAN Fax Boards – Transfer Request
The fields of the e-mail and their contents are as follows:

Field	Content
From	E-mail address of the requesting terminal
To	Destination address (Transfer Station address)
Bcc	Blind carbon copy
Subject	From TSI (Fax Message No. xxxx)
Content-Type	Multipart/mixed Text/Plain (for a text part), image/tiff (for attached files)
Content-Transfer-Encoding	Base 64, 7-Bit, 8-bit, Quoted Printable

Mail body (text part)	RELAY-ID-: xxxx (xxxx: 4 digits for an ID code) RELAY: #01#*X#**01….
Message body	MIME-converted TIFF-F.

E-Mail Options (Sub TX Mode)

The following features are available as options for mail sending: entering a subject, designating the level of importance, confirming reception of the mail.

Subject and Level of Importance

You can enter a subject message with: Sub TX Mode> E-mail Options
The Subject entry for the mail being sent is limited to 64 characters. The subject can also be prefixed with an "Urgent" or "High" notation.

How the Subject Differs According to Mail Type

Mail Type	①	②		③
Subject Entry	---	Entry Condition		Fax Message No. + File No.
No Subject Entry	-	1. "CSI" ("RTI")		Fax Message No. + File No.
		2. "RTI"	CSI not registered	
		3. "CSI"	RTI not registered	
		4. None	CSI, RTI not registered	
Confirmation of Reception	From	1. "CSI" ("RTI")		Normal: Return Receipt (dispatched). You can select "displayed" with IFAX SW02 Bits 2 and 3.
		2. "RTI"	CSI not registered	
		3. "CSI"	RTI not registered	Error: Return Receipt
		4. None	CSI, RTI not registered	

Fax Communication Features

				(processed/error)
Mail delivery, memory transfer, SMTP receiving and delivery	From	RTI or CSI of the station designated for delivery	Mail delivery	Fax Message No. + File Number
		RTI or CSI of sender	Mail sending from G3 memory	
		Mail address of sender	Memory sending	
		Mail address of sender	SMTP receiving and delivery (Off Ramp Gateway)	
Mail error notification	---	Error Message No. xxxx From CSI (RTI)		

Items ① ② ③ of the table above are in the Subject.

Subjects Displayed on the PC

Sender	Date	Size	Subject
Substation 2	04/25/2002	1,513	Parts List
Substation 2	04/26/2002	1,147	Specifications
Main Station	05/09/2002	33,551	[Urgent] Memo 2041
		21,624,288	

b868d505

E-mail Messages

After entering the subject, you can enter a message with:

Sub TX Mode> E-mail Options

An e-mail message (up to 5 lines) can be pre-registered with: User Tools> System

Settings> File Transfer> Program/Change/Delete E-mail Message

Limitations on Entries

Item	Maximum
Number of Lines	5 lines

Line Length	80 characters
Name Length	20 characters

Message Disposition Notification (MDN)

For details: Core Technology Manual – Facsimile Processes – Faxing from a PC –
Internet/LAN Fax Boards – E-mail Options

The network system administrator can confirm whether a sent mail has been received
correctly or not. This function is enabled only when "I-FAX switch 02 Bit 4" is set to "1"This
confirmation is done in four steps.

1. Send request for confirmation of mail reception. To enable or disable this request
   (known as MDN):
2. Sub TX Mode> E-mail Options
3. Mail reception (receive confirmation request)
4. Send confirmation of mail reception
5. Receive confirmation of mail reception

The other party's machine will not respond to the request unless the two conditions below
are met:

▪ The other party's machine must be set up to respond to the confirmation request.
▪ The other party's machine must support MDN (Message Disposition Notification).

- Setting up the Receiving Party -

The receiving party will respond to the confirmation request if:

1. The "Disposition Notification To" field is in the received mail header (automatically
   inserted in the 4th line in the upper table on the previous page, if MDN is enabled), and
2. Sending the disposition notification must be enabled (User Parameter Setting SW21
   (15 [H]) Bit 1 for this model). The content of the response is as follows:

Normal reception:	"Return Receipt (dispatched)" in the Subject line
IFAX SW02 (Bit 2, 3)	"Return Receipt (displayed)" in the Subject line
Error:	"Return Receipt (processed/error)" in the Subject line

Handling Reports

1. Sending a Request for a Return Receipt by Mail

After the mail sender transmits a request for a return receipt, the mail sender's journal is annotated with two hyphens (--) in the Result column and a "Q" in the Mode column.

2. Mail Receipt (Request for Receipt Confirmation) and Sending Mail Receipt Response

   After the mail receiver sends a response to the request for a return receipt, the mail receiver's journal is annotated with two hyphens (--) in the Result column and an "A" in the Mode column.

3. Receiving the Return Receipt Mail

   ▪ After the mail sender receives a return receipt, the information in the mail sender's journal about the receipt request is replaced, i.e. the journal is annotated with "OK" in the Result column.

   ▪ When the return receipt reports an error, the journal is annotated with an "E" in the Result column.

   ▪ The arrival of the return receipt is not recorded in the journal as a separate communication. Its arrival is only reported by the presence of "OK" or "E" in the Result column.

   ▪ If the mail address used by the sender specifies a mailing list (i.e., a Group destination; the machine sends the mail to more than one location. See "How to set up Mail Delivery"), the Result column of the Journal is updated every time a return receipt is received. For example, if the mailing list was to 5 destinations, the Result column indicates the result of the communication with the 5th destination only. The results of the communications to the first 4 destinations are not shown. Exceptions: If one of the communications had an error, the Result column will indicate E, even if subsequent communications were OK.

   If two of the communications had an error, the Journal will indicate the destination for the first error only.

Report Sample

```
 DATE     TIME   ADDRESS                    MODE     TIME      PAGE
                                  RESULT
--------------------------------------------------------------------------
 MAY. 5  10:15   fuser_01@dom1g. ricoh. co.  Mail SM  0'09"       2

         10:16   fuser_01@dom1g. ricoh. co.  Mail SMQ 0'05"       1

5.4 IP-FAX

5.4.1 WHAT IS IP-FAX?

For details: Core Technology Manual – Facsimile Processes – Faxing from a PC –
Internet/LAN Fax Boards – IP-FAX

T.38 Packet Format

TCP is selected by default for this machine, but you can change this to UDP with IPFAX
SW 00 Bit 1.

UDP Related Switches

IP-Fax Switch 01					
No.	**FUNCTION**				**COMMENTS**
0-3	Select IP FAX Delay Level				Raise the level by selecting a higher setting if too many transmission errors are occurring on the network.
	Bit3	Bit2	Bit1	Bit0	Setting	
	0	0	0	0	Level 0	
	0	0	0	1	Level 1	If TCP/UDP is enabled on the network, raise this setting on the T.30 machine. Increasing the delay time allows the recovery of more lost packets.
	0	0	1	0	Level 2	
	0	0	1	1	Level 3	If only UDP is enabled, increase the number of redundant packets.
						Level 1~2: 3 Redundant packets
						Level 3: 4 Redundant packets

Settings

User parameter switch 34 (22[H]), bit 0

IP-Fax Gate Keeper usage 0: No, 1: Yes

IP Fax Switches: Various IP-FAX settings (see the bit switch table)

6. SPECIFICATIONS

6.1 GENERAL SPECIFICATIONS

Type:	Desktop type transceiver
Circuit:	PSTN PABX
Connection:	Direct couple
Original Size:	Book (Face down): Maximum Length: 297 mm [11.7 inch] Maximum Width: 216 mm [8.5 inch] ARDF (Face up): (Single-sided document) Length: 139 - 1200 mm [5.5 - 47.2 inch] Width: 139 - 216 mm [5.5 - 8.5 inch] (Double-sided document) Length: 160 - 356 mm [6.3 - 14.0 inch] Width: 139 - 216 mm [5.5 - 8.5 inch]
Scanning Method:	Flat bed, with CCD
Resolution:	G3 8 x 3.85 lines/mm (Standard) 8 x 7.7 lines/mm (Detail) 8 x 15.4 line/mm (Fine) 200 x 100 dpi (Standard) 200 x 200 dpi (Detail)
Transmission Time:	G3: 3 s at 28800 bps; Measured with G3 ECM using memory for an ITU-T #1 test document (Slerexe letter) at standard resolution
Data Compression:	MH, MR, MMR, JBIG

Protocol:	Group 3 with ECM
Modulation:	V.34, V.33, V.17 (TCM), V.29 (QAM), V.27ter (PHM), V.8, V.21 (FM)
Data Rate:	G3: 33600/31200/28800/26400/24000/21600/ 19200/16800/14400/12000/9600/7200/4800/2400 bps Automatic fallback
I/O Rate:	With ECM: 0 ms/line Without ECM: 2.5, 5, 10, 20, or 40 ms/line
Memory Capacity:	ECM: 128 KB SAF Standard: 4 MB Page Memory: Standard: 4 MB (Print: 2 MB + Scanner: 2 MB)

6.2 IFAX SPECIFICATIONS

Connectivity:	Local area network Ethernet 100base-Tx/10base-T IEEE1394 (IP over 1394) IEEE802.11b (wireless LAN)
Resolution:	Main scan: 400 dpi, 200 dpi Sub scan: 400 dpi, 200 dpi, 100 dpi To use 400 dpi, IFAX SW01 Bit 4 must be set to "1".
Transmission Time:	1 s (through a LAN to the server) Condition: ITU-T #1 test document (Selerexe Letter) MTF correction: OFF TTI: None Resolution: 200 x 100 dpi Communication speed: 10 Mbps Correspondent device: E-mail server Line conditions: No terminal access
Document Size:	Maximum message width is A4/LT. ↓ Note To use B4 and A3 width, IFAX SW00 Bit 1 (B4) and/or Bit 2 (A3) must be set to "1".
E-mail File Format:	Single/multi-part MIME conversion Image: TIFF-F (MH, MR, MMR)
Protocol:	**Transmission:** SMTP, TCP/IP **Reception:** POP3, SMTP, IMAP4, TCP/IP
Data Rate:	100 Mbps(100base-Tx) 10 Mbps (10base-T)

**Fax for
B284/B288**

Authentication Method:	SMTP-AUTH POP before SMTP A-POP
Remark:	The machine must be set up as an e-mail client before installation. Any client PCs connected to the machine through a LAN must also be e-mail clients, or some features will not work (e.g. Autorouting).

6.3 IP-FAX SPECIFICATIONS

Network:	Local Area Network Ethernet/10base-T, 100base-TX IEEE1394 (IP over 1394) IEEE802.11b (wireless LAN)
Scan line density:	8 x 3.85 lines/mm, 200 x 100dpi (standard characters) 8 x 7.7lines/mm, 200 x 200dpi (detailed characters)
Original size:	Maximum A3 or 11"x 17" (DLT)
Maximum scanning size:	Standard: A3, 297mm x 432mm Irregular: 297mm x 1200mm
Transmission protocol:	Recommended: T.38 Annex protocol, TCP, UDP/IP communication
Compatible machines:	IP-Fax compatible machines
IP-Fax transmission function:	Specify IP address and send fax to an IP-Fax compatible fax through a network. Also capable of sending fax from a G3 fax connected to the public telephone lines via a VoIP gateway.
IP-Fax reception function:	Receive a fax sent from an IP-Fax compatible fax through a network. Also capable of receiving fax from a G3 fax connected the public telephone lines via a VoIP gateway.

3. Feed Roller
4. Friction Pad

1.4 OVERALL ELECTRICAL CIRCUIT
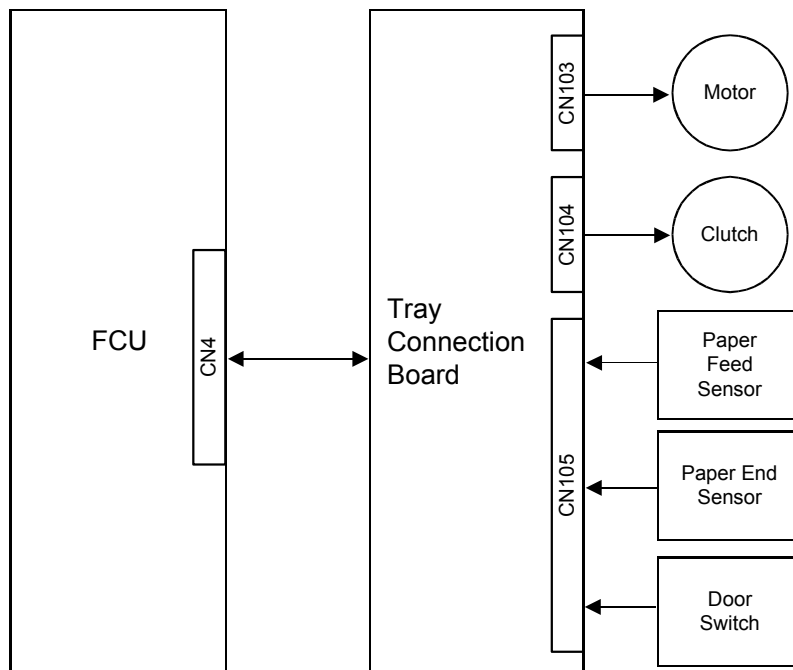

1.5 DETAILED DESCRIPTIONS

1.5.1 PAPER FEED AND SEPARATION
The paper tray holds 500 sheets. A friction-pad feed system is used.

[A]: Paper feed roller
[B]: Friction pad

1.6 PAPER LIFT MECHANISM
With tray partially or fully out of unit: Pushing down bottom plate [A] engages latch [B], locking the plate down. Latch [B] is held in place by spring [C].

When user pushes tray in: Runner [D] on frame pushes in rounded slider [E], retracting the latch. Springs [F] push the plate up. The latch remains retracted while the drawer is in the unit, so that the plate cannot be locked down.

1.7 PAPER END DETECTION
[A]: Paper End Feeler
[B]: Paper End Sensor
[C]: Cutout in Paper Tray

- If paper is present: feeler [A] pushed up, deactivating sensor [B].
- If no paper is present: feeler [A] drops into cutout [C], activating sensor [B].
- The feeler is rounded so that it lifts out of the way when the tray is inserted or pulled out.

1.8 SIDE AND END FENCES
[A]: Side Fence
[B]: End Fence

- Side Fence: Set width to A4, 81/4", or 81/2".
- End fence: Set from 11" to 13", with standard settings at 11", A4, and 13". To
feed 14" paper, the end fence can be removed and placed in
internal compartment.
- Both fences can be secured with screws at standard positions.

2. REPLACEMENT AND ADJUSTMENT

2.1 FEED ROLLER AND FRICTION PAD

1. Take the tray out of the paper tray unit.

2. Clip ring [A]

3. Shaft assembly [B]

4. Feed roller [C] ($\overline{\overline{\mathbb{U}}}$ x 1)

5. Friction pad [D]

[D]
2.2 REMOVING THE PAPER TRAY UNIT FROM THE COPIER

If Optional Tray Heater Is Not Installed

1. Lift the copier off of the paper tray unit.

If Optional Tray Heater Is Installed

1. Refer to Section 1.4.2 of the B044/B045/B046 Service Manual, and carry out the following steps of that procedure in this order:
   - Step 2 (remove both paper trays)
   - Step 7 (remove copy tray)
   - Step 8 (remove rear cover)
   - Step 9 (remove FCU cover plate)

2. Refer to Section 1.4.2 of the B044/B045/B046 Service Manual, and do the following:
   - Unscrew the ground line.
   - Unclamp the heater harness clamps.
   - Disconnect the heater harness from the relay harness.
   - Unwrap and remove the core.

3. Pull the relay harness down and out through the hole in the PSU bracket, and then pull it all the way in through the hole at the rear of the (main) paper tray unit.

4. Remove the 3 screws fastening the paper tray unit to the copier (☛ 1.4.2 of the B044/B045/B046 Service Manual, Step 6).

5. Lift the copier off the paper tray unit.
   To reinstall, refer to the procedure in Section 1.4.2 of the B044/B045/B046 Service Manual. Carry out most of that procedure, starting from Step 5 and omitting unnecessary steps.

2.3 SENSORS

1. Remove the copier from the paper tray unit (☛ 2.2).

2. Open the PTU's right door [A].

[B]: Paper end sensor (🗄 × 1)
[C]: Paper feed sensor
   (1 feeler [D], 🗄 × 1)
2.4 DRIVE SECTION

2.4.1 DRIVE BLOCK

1. Remove copier from paper tray unit (☛ 2.2).

2. Open the paper tray unit's right door [A].

3. Drive block [B] (🔩 × 4)
2.4.2 PAPER FEED MOTOR

Electrical Component Descriptions

Symbol	Name	Function	Index No.
Motors			
-	DF Feed	Drives the feed, separation, pick-up rollers, transport roller and inverter roller.	6
-	DF Transport	Drives the registration and exit rollers	5
Sensors			
-	Registration	Detects the original exposure timing, and checks for original misfeeds.	2
-	Exit	Detects the leading edge of the original to turn on the junction gate solenoid and DF feed	3

Component Layout

		clutch in single-sided mode. Detects the trailing edge of the original to turn off the transport and feed motor and junction gate solenoid in single-sided mode. Detects the trailing edge of the original to turn on the DF feed clutch. In single-sided mode, used to detect original misfeeds.	
-	Left Cover	Detects whether the feed-in cover is opened or not.	4
-	Original Set	Detects if an original is on the original tray.	10
-	Inverter	Detects the leading edge of the original to turn off the DF feed motor and checks for original misfeeds.	7
Solenoids			
-	Junction Gate	Opens and closes the junction gate.	9
Magnetic Clutches			
-	DF Feed	Drives the feed and pick-up rollers.	1
PCBs			
-	Main	Interfaces the sensor signals with the copier, and transfers the magnetic clutch, solenoid and motor drive signals from the copier.	8

2.1.3 DRIVE LAYOUT

b872d103

b872d104
1. DF Feed Motor

2. Feed Roller

3. Pick-up Roller

4. Inverter Roller

5. DF Feed Clutch

6. Separation Roller

7. Transport Roller

8. DF Transport Motor

9. Exit Roller

10. Registration Roller

- DF Feed Motor: Drives the feed, separation, pick-up, and transport and inverter rollers.

- DF Transport Motor: Drives the registration and exit rollers.

2.2 BASIC OPERATION

2.2.1 PICK-UP AND SEPARATION

The ARDF uses an FRR (feed & reverse roller) system.

Setting paper moves the feeler, causing the original set sensor to inform the CPU that the ARDF is ready to feed.

Press ⊘ → short time lag → DF feed clutch engages → DF motor starts.

The motor drives the DF pickup roller, DF feed roller, DF separation roller, and transport roller. The pickup roller drives the top sheet(s) between the feed and separation roller, where the top sheet is separated and fed to the transport rollers.

2.2.2 CLUTCH OPERATION

The DF feed clutch is provided to stop feeding when the original is fed to the inverter tray in double-sided mode. If the DF feed clutch does not stop the pick-up, feed and separation rollers in double-sided mode, the next original is fed while the first original is at the inverter tray and an original jam occurs.

2.2.3 ORIGINAL TRANSPORT AND EXIT
Single-Sided Originals

b872d106

The feed motor feeds the separated original to the registration roller [A]. A short time after an original reaches the registration sensor [B], the DF feed motor stops briefly, the scanner moves to DF scan position, and the white peak is read. The DF feed motor and DF transport motor then start and the sheet is scanned.

After scanning, the original is fed out by the exit roller [C].

Double-Sided Originals

b872d107

[A] [B] [C] [D] [E] [F]

[E] [F] b872d108
After an original has been fed to the registration sensor [B] by the transport roller, the DF feed motor stops briefly. After the scanner has moved to DF scan position, and the white peak has been read, the front side of the original is then scanned.

When the exit sensor [C] detects the leading edge of the original, the junction gate solenoid is activated and the junction gate [E] opens. The original is then transported towards the inverter table.

Soon after the trailing edge of the original passes the exit sensor, the junction gate solenoid switches off and the junction gate [E] is closed. When the original has been fed onto the inverter table, the feed and transport motors stop. After that, the feed motor rotates in reverse and the original is fed to the exit roller [D] by the inverter roller [F]. At this time, the feed motor stops briefly to adjust the original skew.

After adjusting the original skew, the original is fed again by the exit roller [D] and registration roller [B] to the scanning area (where the reverse side will be scanned).

Basic Operation
b872d109

The original is then sent to the inverter table again to be turned over. This is done so that the duplex copies will be properly stacked front side down in the exit tray [G] in the correct order.

Original Set Sensor

During one-to-one copying, copy paper is fed to the registration roller in advance (while the original is still being scanned), to increase the copy speed. The original set sensor monitors the stack of originals in the original tray, and detects when the trailing edge of the last page has been fed in. The main CPU then stops the copier from feeding an unwanted extra sheet of copy paper.

Important Safety Notices

Prevention of Physical Injury

1. Before disassembling or assembling parts of the copier and peripherals, make sure that the power cord is unplugged.
2. The wall outlet should be near the copier and easily accessible.
3. Note that some components of the copier and the paper tray unit are supplied with electrical voltage even if the main power switch is turned off.
4. If a job has started before the copier completes the warm-up or initializing period, keep hands away from the mechanical and electrical components because the starts making copies as soon as the warm-up period is completed.
5. The inside and the metal parts of the fusing unit become extremely hot while the copier is operating. Be careful to avoid touching those components with your bare hands.

Health Safety Conditions

Toner and developer are non-toxic, but if you get either of them in your eyes by accident, it may cause temporary eye discomfort. Try to remove with eye drops or flush with water as first aid. If unsuccessful, get medical attention.

Observance of Electrical Safety Standards

The copier and its peripherals must be installed and maintained by a customer service representative who has completed the training course on those models.

Safety and Ecological Notes for Disposal

1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly when exposed to an open flame.
2. Dispose of used toner, developer, and organic photoconductors in accordance with local regulations. (These are non-toxic supplies.)
3. Dispose of replaced parts in accordance with local regulations.

Laser Safety

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

⚠ WARNING

▪ **Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.**

⚠WARNING FOR LASER UNIT
WARNING: Turn off the main switch before attempting any of the procedures in the Laser Unit section. Laser beams can seriously damage your eyes. CAUTION MARKING: **CAUTION** **VORSICHT** INVISIBLE LASER RADIATION WHEN OPEN. AVOID EXPOSURE TO BEAM. UNSICHTBARE LASERSTRAHLUNG WENN ABDECKUNG GEÖFFNET. NICHT DEM STRAHL AUSSETZEN. >PS<

Cautions, Notes, etc.

The following headings provide special information:

- ▪ Failure to obey warning information could result in serious injury or death.

- ▪ Obey these guidelines to ensure safe operation and prevent minor injuries.

- ▪ Obey these guidelines to avoid problems such as misfeeds, damage to originals, loss of valuable data and to prevent damage to the machine.

- ▪ Always obey these guidelines to avoid serious problems such as misfeeds, damage to originals, loss of valuable data and to prevent damage to the machine. **bold** is added for emphasis.

- ▪ This information provides tips and advice about how to best service the machine.

1.1.2 INSTALLATION PROCEDURE

⚠ **CAUTION**

- Unplug the machine power cord before starting the following procedure.
b892i102a

1. Open the right door [A].

2. Remove the memory card cover [B] (🔩 x 1)

3. Remove the rear cover [C] (🔩 x 5).

4. Remove the bracket [D] at the rear left frame of the mainframe (🔩 x 2).
b892i927

5. Cut the opening [E] on the rear cover. This opening is for the network interfaces.

6. Cut another opening [F] on the rear cover. This opening is for the SD card slot and the LAN cable.

    ↓ Note

    ▪ Do not cut the topmost opening [G] when the machine is the basic model (B262/B292).

7. Remove the upper left cover [H].
b892i902

8. Install the ground plate [I] (🔩 x 2).

    ↓ Note

    ▪ Insert the upper and lower hooks in the openings [J], and fasten the upper screw first.

9. Install the controller box [K] (🔩 x 5).

Printer/
Scanner
Option
B892

Controller Box

- Insert the bracket [L] into the frame. The connector on the controller box engages with the connector on the BICU.
b892i501

10. Remove the screw [M].

11. Install the ground cable [N] (🔩 x 2 [including the screw [M]]).

12. Install PostScript 3 as necessary.
b892i510   b892i903

13. Remove the front left cover [O] (🔩 x 2).

14. Retain the screws and use them in the next step.

15. Install the multi-function panel [P] (🔌 x 1, 🔩 x 2).

b892i109
16. Remove the panel cover [Q].

17. Install the printer panel [R].

b892i904a
18. **For the North America model only:**

    Attach the FCC decal [S] at the right-hand side of the USB connector on the controller

    box

19. Reassemble the whole copier.

Printer/
Scanner
Option
B892

Controller Box

[T]

b892i108
20. Attach the ferrite core [T] to the network cable and attach the cable to the copier if a network cable is used.

[U]

b893i508
↓ Note

- The ferrite core must be attached next to the network cable connector [U].

21. Plug in the power cord, and turn on the main switch.

22. **For the North America model only:** Perform the interface settings.

1) Start the SP mode.

2) Select SP5-985-001 (NIC setting) and change the setting value to "1" (ON).

3) Select SP5-985-002 (USB setting) and change the setting value to "1" (ON).

4) Turn the main switch off and on.

23. Perform the Printer/Scanner settings.

1) Start the SP mode.

2) Select SP5-801-001 and execute the initialization.

3) Exit the SP mode, and then start the UP mode.

4) Select the "@Remote Service" ("User Tool" > "System Settings > Administrator Tools" > "Extended Security" > @Remote Service") and select "Prohibit".

5) Exit the UP mode, and then start the SP mode.

6) Select SP5-870-003 and execute initialization for @Remote.

7) Select SP5-907-001 and specify the "Plug & Play".

8) Select SP5-870-001 and execute writing certification for `Remote.

9) Select SP5-302-002 and specify the time zone.

10) Select SP5-307-001, 003, and 004 and specify the daylight-saving-time settings.

11) Exit the SP mode and turn the main switch off and on.

12) Start the UP mode.

13) Specify the date and time with "Set Date" or "Set Time" (User Tool" > "System Settings" > "Set Date" or "Set Time").

24. Turn the main switch off and on.

25. Check the operations.

1.2 CONTROLLER OPTIONS

1.2.1 OVERVIEW

This machine has I/F card slots and SD card slots for optional I/F connections and applications.
b892i503

I/F Card Slot

▪ Slot [A] is used for one of the optional I/F connections: (IEEE1284, IEEE802.11 (Wireless LAN) or Bluetooth).

SD Card Slot

▪ Slot [1] is used for the printer/scanner application only.

▪ Slot [2] is used for PostScript3.

▪ Slot [3] is used for the service use.

1.2.2 POSTSCRIPT3 INSTALLATION

⚠ **CAUTION**

▪ Unplug the machine power cord before starting the following procedure.

Installation Procedure
b892i504

1. Install the PostScript3 SD card into the slot 2 [A].

2. Turn on the main power switch.

3. Print out the configuration page (User Tools/ Counter > Printer Features > List/ Test Print), and then check that this device is detected.

4. Attach the "Adobe PostScript3" decal to the front cover of the machine.

1.2.3 WIRELESS LAN (IEEE 802.11B) INSTALLATION

⚠ **CAUTION**

- ▪ Unplug the machine power cord before starting the following procedure.

Component Check

No.	Description	Q'ty
1	Wireless Adapter	1
2	Wireless LAN Card	1
3	LAN Card Cover	4

5	Label		1

Installation Procedure
b892i505

1. Remove the interface cover [A] (🖉 x 2).

2. Install the Wireless adaptor into the slot A [B] (🖉 x 2).

3. Install the Wireless LAN card in the wireless adaptor.

4. Attach the antenna cap to the wireless LAN card.

5. Turn on the main power switch.

6. Print out the configuration page (User Tools/Counter > Printer Features > List/Test Print), and then check that this device is detected.

If reception is poor, you may need to move the machine:

- Make sure that the machine is not located near an appliance or any type of equipment that could generate a strong magnetic field.

- Position the machine as close as possible to the access point.

SP Mode Settings for IEEE 802.11b Wireless LAN

The following SP commands can be set for IEEE 802.11b

SP No.	Name	Function

5840 004	SSID	Used to confirm the current SSID setting.
5840 006	Channel MAX	Sets the maximum range of the channel settings for the country.
5840 007	Channel MIN	Sets the minimum range of the channel settings allowed for your country.
5840 011	WEP Key Select	Used to select the WEP key (Default: 00).
5840 018	SSID Check	Used to check the SSID.
5840 020	WEP Mode	Used to display the maximum length of the string that can be used for the WEP Key entry.

1.2.4 IEEE 1284 INSTALLATION

⚠ **CAUTION**

- Unplug the machine power cord before starting the following procedure.

Main Board
b284r505a

8. Release the hooks [H], and then pull out the rails [I].

9. Controller board

    ↓ Note

    ▪   When replacing the controller board, remove the NVRAMs from the board.
        Install the NVRAMs to the new board.

When replacing the NVRAM on the controller board
b284r506

1. When you replace the NVRAMs [A], make sure that the NVRAMs are correctly installed.

2. The mark [B] on the NVRAM should be directed to the right side (seem from the back side of the machine).

3. Reassemble the machine.

Copy the old NVRAM data to the new NVRAM with SP5-825 or input the SMC data in the machine. (For details, refer to the "NVRAM Data Upload/Download [SP5-824/825]" in the chapter "Service Tables" of the this manual)

3. TROUBLESHOOTING

3.1 SERVICE CALL CONDITIONS

⟹ The Service Call Codes used by the B892 are the same codes used by the main engine (B262/B284/B288/B292). Refer to the Troubleshooting section of the main engine for the B892 Service Call Codes.

Printer/ Scanner Option B892

4. SERVICE TABLES

4.1 SERVICE PROGRAM MODE

⚠CAUTION

- Before accessing the service menu, do the following:
- Confirm that there is no print data in the printer buffer (the 'Data In' LED must not be lit or blinking).
- If there is some data in the buffer, wait until all data has been printed.

⚠CAUTION
- Never turn off the main power switch when the power LED is lit or flashing. To avoid damaging the hard disk or memory, press the operation power switch to switch the power off, wait for the power LED to go off, and then switch the main power switch off.

↓ Note

- The main power LED (☀◎) lights or flashes while the platen cover or ARDF is open; while the main unit is communicating with a facsimile or the network server; or while the machine is accessing the memory for reading or writing data.

4.1.1 ENABLING AND DISABLING SERVICE PROGRAM MODE

Entering the SP Mode

◇▭	1.	Press the Clear Mode key.
①⓪⑦	2.	Use the keypad to enter "107".
©/◎	3.	Hold down Clear/Stop for at least 3 seconds.
	4.	Enter the Service Mode.
Printer SP **Scanner SP**		Select "Printer SP" to enter printer SP mode. Select "Scanner SP" to enter scanner SP mode.

Exiting the Service Mode

Press the cancel key to exit from the service mode.

4.2 GW SP MODE TABLES

The tables in this section list the service programs (SPs).

The following codes are used:

- Asterisk (*): The settings are saved in the NVRAM. Most of them return to the default values when you execute SP 5801 2.

  CTL indicates that the data is contained in the NVRAM on the controller board.

- The DFU menu is for design or factory use only. You must not change the settings.
- Brackets ([ ]): The brackets enclose the setting rage, default value, and minimum step (with unit) as follows: [Minimum to Maximum / **Default** / Step].
- SSP: Consult your supervisor before you use this program.

4.2.1 SP4-XXX (MODE)

<table>
<tr><td colspan="3">4921*</td><td colspan="2">[Image Adj Selection]</td></tr>
<tr><td rowspan="2">001</td><td colspan="2">Copy</td><td colspan="2">[0 to 10 / 0 / 1]</td></tr>

</table>

005	Scanner (Gray Scale)	[0 or 1 / **0** / -]
	Selects which mode the settings from SP4-936 are used for. 0 = None, 1 = Gray Scale	

4922*	**[Scanner Gamma]**	
	Selects "text" or "photo" as the priority output mode. This setting is applied to all image processing modes of SP4-921.	
001	Copy	
002	Fax	[**0**=System default/ 1=Text/ 2=Photo]
003	Scanner	

4923*	**[Notch Selection]**	
	Selects the value of the center ID adjustment notch for the ID adjustment LEDs. ▪ Normally the center notch is 3 (range 1-5). If –1 is selected, each notch shifts down (becomes lighter). If +1 is selected, each notch shifts up (becomes darker). ▪ This setting is applied to all image processing modes of SP4-921.	
001	Copy	
002	Fax	[–1 = Light / **0** = Normal / +1 = Dark]
003	Scanner	

4926*	**[Texture Removal]**
	Adjusts the texture removal level that is used with error diffusion. 0: The default value for each mode is used. Text 1, Photo 2, Special 2, and Special 5 have a default of 3 and Photo 1-3 have a default of 1. 1: No removal applied. 2 to 5: Removal applied at the level specified here. The higher the setting

		(level), the less clear the image will become (more texture removal). This setting is only applied to the originals in SP4-921.	
	001	Copy	[0 to 6 / **0** / 1/step]
	002	Fax	
	003	Scanner	

		[Line Width Correction]	
4927*		Adjusts the line width correction algorithm. Positive settings produce thicker lines; negative settings produce thinner lines. This setting is only applied to the originals in SP4-921.	
	001	Copy	[–2 to 2 / **0** / 1/step]
	002	Fax	
	003	Scanner	

		[Independent Dot Erase]	
4928*		Selects the dot erase level. Higher settings provide greater erasure. This setting is only applied to the originals in SP4-921.	
	001	Copy	[–2 to 2 / **0** / 1/step]
	002	Fax	
	003	Scanner	

		[Positive/Negative]	[**0 = No**, 1 = Yes]
4929*		Inverts white and black. This setting is only applied to the originals in SP4-921.	
	001	Copy	
	002	Fax	

4930*	**[Sharpness-Edge]**	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

4931*	**[Sharpness-Solid]**	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

4932*	**[Sharpness-Low ID]**	[–2 to 2 / **0** / 1/step]
	Adjust the clarity. This setting is only applied to the originals in SP4-921.	
001	Copy	
002	Fax	
003	Scanner	

4935*	Color Image Adjust	
	Main Scan MTF Level	[0 to 3 / **0** / 1/step]
001	Adjust the MTF level for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Weak, 2: Middle, 3: Strong	
002	Main Scan MTF Strength	[0 to 5 / **0** / 1/step]

	Adjust the MTF strength for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2		
003	Sub Scan MTF Level	[0 or 1 / **0** / 1/step]	
	Turns on or off the MTF for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: No, 1: Yes		
004	Sub Scan MTF Strength	[0 to 5 / **0** / 1/step]	
	Adjust the MTF strength for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2		
005	Smooth Level	[0 to 2 / **0** / 1/step]	
	Adjust the smooth level. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Weak, 2: Strong		
006	Brightness	[0 to 255 / **128** / 1/step]	
	Adjust the brightness level. This setting is only activated for the specified mode with SP4-921-004.		
007	Contrast	[0 to 255 / **128** / 1/step]	
	Adjust the contrast level. This setting is only activated for the specified mode with SP4-921-004.		

4936*	Gray Scale Image Adjust	
001	Main Scan MTF Level	[0 to 15 / **0** / 1/step]
	Adjust the MTF level for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Level 1 to 15: Level 15	
002	Main Scan MTF Strength	[0 to 5 / **0** / 1/step]

Printer/
Scanner
Option
B892

	Adjust the MTF strength for the main scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
003	Sub Scan MTF Level	[0 to 13 / **0** / 1/step]
	Adjust the MTF level for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: No, 1: Level 1 to 13: Level 13	
004	Sub Scan MTF Strength	[0 to 5 / **0** / 1/step]
	Adjust the MTF strength for the sub scan. This setting is only activated for the specified mode with SP4-921-004. 0: 1, 1: 1/32, 2: 1/16, 3: 1/8, 4: 1/4, 5: 1/2	
005	Smooth Level	[0 to 7 / **0** / 1/step]
	Adjust the smooth level. This setting is only activated for the specified mode with SP4-921-004. 0: None, 1: Level 1 to 7: Level 7	
006	Brightness	[0 to 255 / **128** / 1/step]
	Adjust the brightness level. This setting is only activated for the specified mode with SP4-921-004.	
007	Contrast	[0 to 255 / **128** / 1/step]
	Adjust the contrast level. This setting is only activated for the specified mode with SP4-921-004.	

4.2.2 SP5-XXX (MODE)

5001	[All Indicators On]
001	All LEDs turn on. The LCDs turn on or off with "ON" or "OFF" key.

5024*	[mm/inch Selection]

001	Selects whether mm or inches are used in the display. ⬇ Note ▪ After selecting the number, you must turn the main power switch off and on. Europe/Asia model: [**0**: **mm** / 1: inch] American model: [0: mm / **1**: **inch**]

5045	[Display-Counter]
001	Slects the counting display if the meter charge mode is enabled with SP5-930-001. ⬇ Note ▪ You can change the setting only one time. [0 to 2/ **0** / 1 /step] 0: 1 counter (Total) 1: 2 counters (Total and Prints) 2: 2 counters GPC

5051	[Refill Toner Displ] Refill Toner Detection Display		
	Enables or disables the toner refill detection display.		
001	Refill Toner	CTL	[0 or 1 / **0** /-] 0: ON, 1: OFF

5055	[Display IP address]		
001	Display IP address	CTL	Displays or does not display the IP address on the LCD. [0 or 1 / **0** / -] 0: No, 1: Yess

5056	[Coverage Counter]		
001	Coverage Counter	CTL	Displays or does not display the coverage

Printer/
Scanner
Option
B892

			counter on the LCD. [0 or 1 / **0** / -] 0: Not display, 1: Display

5112	**[Non-Std. Paper Set]** Non-Standard Paper Set		
001	Determines whether a non-standard paper size can be input for the universal cassette trays (Tray 2, Tray 3) [0 or 1 / **0** / -] 0: No 1: Yes. If "1" is selected, the customer will be able to input a non-standard paper size using the UP mode.		

5113	**[Optional Counter Type]**		
001	Optional Counter Type 1	CTL	This program specifies the counter type. **0: None** 1: Key card (RK 3, 4) 2: Key card (down) 3 to 10: Japan only 11: Exp. key card (Add) 12: Exp. key card (Deduct)
002	Optional Counter Type 2	CTL	This program specifies the external counter type. **0: None** 1: Expansion device 1 2: Expansion device 2 3: Expansion device 3

5114	**[MF Key Card Ext.]**	CTL	[**0**: Not installed/ 1: Installed (scanning accounting)]
001	Japan use		

5118	[Disable Copying]	CTL	[**0**: Not disabled/ 1: Disabled]
001	This program disables copying.		

5120*	[Clr For Cnt Remove]	CTL	[**0=Yes** / 1=Standby only / 2=No]
001	Determines under which conditions the copy job settings are reset when the key counter is removed. With 0, the settings are cleared if the counter is removed at the end of a job or midway through a job. With 1, they are only cleared if the counter is removed at the end of a job. With 2, they are not cleared at all, under either condition. With duplex copies, the job settings are always preserved, regardless of the setting of this SP mode.		

5121*	[Counter Up Timing]	CTL	[**0 = Feed In** / 1 = Exit]
001	Selects whether the key counter increments at time of paper feed-in or at time of paper exit.		

5127	[APS Mode]	CTL	[**0**: Not disabled/ 1: Disabled]
001	This program disables the APS.		

5150	[By-pass Long Paper]	CTL	[**0 = OFF** / 1 = ON]
001	Determines whether the transfer sheet from the by-pass tray is used or not. Normally the paper length for sub scanning paper from the by-pass tray is limited to 600 mm, but this can be extended with this SP to 1260 mm.		

5167	[Fax Printing Cnt Off]		
	Enables or disables the automatic print out without an accounting device. This SP is used when the receiving fax is accounted by an external accounting device.		
001	Fax Printing Counter Off	CTL	[0 or 1 / **0** / –] 0: Automatic printing

Printer/
Scanner
Option
B892

			1: No automatic printing

5169	**[CE Login]**		
	If you change the printer bit switches, you must 'log in' to service mode with this SP before you go into the printer SP mode.		
	001	CE Login	CTL	[0 or 1 / **0** / -] 0: Disabled 1: Enabled

5188	**[Copy NV Version]**		
	001	Copy NV Version	CTL	Displays the NVRAM version in the controller board.

5302	**[Set Time]**		
	Adjusts the RTC (real time clock) time setting for the local time zone. Examples: For Japan (+9 GMT), enter 540 (9 hours x 60 min.) DOM: +540 (Tokyo) NA :-300 (New York) EU :+ 60 (Paris) CH :+480 (Peking) TW :+480 (Taipei) AS :+480 (Hong Kong)		
	002	Time Difference	CTL #	[-1440 to 1440 / **Area** / 1 min./step]

5307	**[Summer Time]**		
	001	ON/OFF	-	[0 or 1 / **NA, EU, ASIA** / 1 /step] 0: Disabled 1: Enabled NA and EUR: 1, ASIA: 0

	Enables or disables the summer time mode. ↓ Note ▪ Make sure that both SP5-307-3 and -4 are correctly set. Otherwise, this SP is not activated even if this SP is set to "1".		
003	Start	-	-

	Specifies the start setting for the summer time mode.
	
	There are 8 digits in this SP. For months 1 to 9, the "0" cannot be input in the first digit, so the eight-digit setting for -2 or -3 becomes a seven-digit setting.
	
	1st and 2nd digits: The month. [1 to 12]
	
	3rd digit: The week of the month. [1 to 5]
	
	4th digit: The day of the week. [0 to 6 = Sunday to Saturday]
	
	5th and 6th digits: The hour. [00 to 23]
	
	7th digit: The length of the advanced time. [0 to 9 / 1 hour /step]
	
	8th digit: The length of the advanced time. [0 to 5 / 10 minutes /step]
	
	For example: 3500010 (EU default)
	
	The timer is advanced by 1 hour at am 0:00 on the 5th Sunday in March
	
	    ▪ The digits are counted from the left.
	
	    ▪ Make sure that SP5-307-1 is set to "1".		

004	End	-	-

	Specifies the end setting for the summer time mode.
	
	There are 8 digits in this SP.
	
	1st and 2nd digits: The month. [1 to 12]
	
	3rd digit: The week of the month. [0 to 5]
	
	4th digit: The day of the week. [0 to 6 = Sunday to Saturday]
	
	5th and 6th digits: The hour. [00 to 23]
	
	The 7th and 8th digits must be set to "00".
	
	    ▪ The digits are counted from the left.
	
	    ▪ Make sure that SP5-307-1 is set to "1".		

5401	**[Access Control]**
	When installing the SDK application, SAS (VAS) adjusts the following settings. **DFU**

Printer/
Scanner
Option
B892

006	C	CTL	
016	DS	CTL	**SSP:** These SPs are not disclosed due to the security protection.
026	F	CTL	
036	S	CTL	
046	P	CTL	
076	SDK 1	CTL	
086	SDK 2	CTL	
096	SDK 3	CTL	
200	SDK1 Unique ID	CTL	This ID is overwritten by SAS (VAS) when you install or uninstall the SDK application.
201	SDK1 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**
210	SDK2 Unique ID	CTL	**DFU**
211	SDK2 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**
220	SDK3 Unique ID	CTL	**DFU**
221	SDK3 Certification Method	CTL	[0 to 255 / **0** / 1 /step] **DFU**

5404	[User Code Clear]
001	Clears the counts for the user codes assigned by the key operator to restrict the use of the machine. Press [Execute] to clear.

5501		[PM Alarm Interval]	CTL	-
001	Printout	[0 to 9999 / **0** / 1 /step] 0: Alarm off 1 to 9999: Alarm goes off when the PM counter reaches the specified value (1 to 9999) x 1000.		
002	ADF	[0 or 1 / **1** / –] 0: No alarm sounds 1: Alarm sounds after the number of originals passing through the A(R)DF ≥ 10,000		

5504		[Jam Alarm]	CTL	-
001		Sets the alarm to sound for the specified jam level (document misfeeds are not included). [0 to 3 / **3** / 1 /step] 0: Zero (Off), 1: Low (2.5K jams), 2: Medium (3K jams), 3: High (6K jams)		

5505*		[Error Alarm]
001		Sets the error alarm level. The error alarm counter counts "1" when any SC is detected. However, the error alarm counter decreases by "1" when any SC is not detected during specified sheets of copies (for example, default 1500 sheets). The error alarm occurs when the SC error alarm counter reaches "5". [0 to 255 / **20** / 100 copies per step]

5507		[Supply Alarm]	CTL	-
001	Paper Size	**0**: Off, 1: On,

166	Interval :LT	
172	Interval :HLT	

5508*	[Auto Call Setting]	CTL	-
001*	Jam Remains		0: Disable, **1**: Enable
	Enables/disables initiating a call for an unattended paper jam.		
002*	Frequent Jams		0: Disable, **1**: Enable
	Enables/disables initiating a call for consecutive paper jams.		
003*	Door Open		0: Disable, **1**: Enable
	Enables/disables initiating a call when the front door remains open.		
011*	Jam Remains: Time		[03 to 30 / **10** / 1 minute /step]
	Sets the time a jam must remain before it becomes an "unattended paper jam". This setting is enabled only when SP5508 004 is set to 1.		
012*	Freq Jam: # of Time		[02 to 10 / **5** / 1 /step]
	Sets the number of consecutive paper jams required to initiate a call. This setting is enabled only when SP5508 004 is set to 1.		
013*	Door Open: Time		[03 to 30 / **10** / 1 minute/step]
	Sets the length of time the door remains open before the machine initiates a call.		

	This setting is enabled only when SP5508 004 is set to 1.		
021*	Jam Remains: Mode	0: Automatic Call **1**: Audible Warning at Machine	
	Determines what happens when a paper jam is left unattended.		
022*	Freq Jam: Mode	0: Automatic Call **1**: Audible Warning at Machine	
	Determines what happens when a paper jam happens continually.		
023*	Door Open: Mode	0: OFF, **1**: ON	
	Determines what happens if the door remains open (15 min.). Displays a warning if set to ON. Pressing the call button will contact the service center.		

5515	**[SC/Alarm Setting]**	CTL	-
	With @Remote in use, these SP codes can be set to issue an SC call when an SC error occurs. If this SP is switched off, the SC call is not issued when an SC error occurs.		
001	SC Call	[0 or 1 / **1** / -] 0: Off, 1: On	
002	Service Parts Near End		
003	Service Parts End		
004	User Call		
006	Communication Test		
007	Machine Information		
008	Alarm Notice		
010	Supply Automatic Order	[0 or 1 / **0** / -] 0: Off,1: On	
011	Supply Management Report		

	012	Jam/Door Open Call	[0 or 1 / **1** / -] 0: Off,1: On	

5801	**[Memory Clear]** Before executing any of these SP codes, print an SMC Report.			
001	All Clear			
	Initializes items SP5801-002 to -014 below. Turn the main power switch off and on after executing this SP.			
003	SCS	-	-	
	Clears the system settings.			
004	IMH	-	-	
	Clears IMH data. **DFU**			
005	MCS	-	-	
	Clears MCS data. **DFU**			
006	Copier	-	-	
	Clears the copy application settings.			
007	Fax	-	-	
	Clears the fax application settings.			
008	Printer	-	-	
	Clears the printer application settings.			
009	Scanner	-	-	
	Clears the scanner application settings.			
010	GWWS	-	-	
	Delete the netfile application management files and thumbnails, and initializes the job login ID.			
011	NCS	-	-	

	Initializes the system default and interface settings (IP address also), SmartNetMonitor for Admin, WebImageMonitor settings, and the TELNET settings. The name of Apple talk is not cleared only if this SP is executed. Turns off and on after executing this SP.		
012	R-FAX	-	-
	Initializes the job login ID, SmartNetMonitor for Admin, job history, and local storage file numbers.		
014	Clear DCS Setting	-	-
	Initializes the DCS (Delivery Control Service) settings.		
015	Clear UCS Setting	-	-
	Initializes the UCS (User Information Control Service) settings.		
016	MIRS Setting	-	-
	Initializes the MIRS (Machine Information Report Service) settings.		
017	CCS	-	-
	Initializes the CCS (Certification and Charge-control Service) settings.		
018	SRM Memory Clr	-	-
	Initializes the SRM (System Resource Manager) settings.		
019	LCS	-	-
	Initializes the LCS (Log Count Service) settings.		

5811*	[Machine Serial] Machine Serial Number		
001	Set	-	(☛ "Serial Number Input")

5812	[Service TEL]		
001	Telephone	CTL	-

Printer/ Scanner Option B892

	Sets the telephone number for a service representative. This number is printed on the Counter List, which can be printed with the user's "Counter" menu. This can be up to 20 characters (both numbers and alphabetic characters can be input).		
002	Facsimile	CTL	-
	Sets the fax or telephone number for a service representative. This number is printed on the Counter List. This can be up to 20 characters (both numbers and alphabetic characters can be input).		
003	Supply	CTL	-
	Use this to input the telephone number of your supplier for consumables. Enter the number and press"StringIn" key. Press the "Clear modes" key to delete the telephone number.		
004	Sales	CTL	-
	Use this to input the telephone number of your sales agency. Enter the number and press #. Press the "Clear modes" key to delete the telephone number.		

5816	**[NRS Function]**	CTL	-
001	I/F Setting		Selects the remote service setting. [0 to 2 / **2** / 1 /step] 0: Remote service off 1: CSS remote service on 2: @Remote service on
002	CE Call		Performs the CE Call at the start or end of the service. [0 or 1 / **0** / 1 /step] 0: Start of the service, 1: End of the service ⬇ Note ▪ This SP is activated only when SP

		5816-001 is set to "2".
003	Function Flag	Enables or disables the remote service function. [0 or 1 / **0** / 1 /step] 0: Disabled, 1: Enabled
007	SSL Disable	Uses or does not use the RCG certification by SSL when calling the RCG. [0 or 1 / **0** / 1 /step] 0: Uses the RCG certification 1: Does no use the RCG certification
008	RCG Connect Timeout	Specifies the connect timeout interval when calling the RCG. [1 to 90 / **10** / 1 second/step]
009	RCG Write Timeout	Specifies the write timeout interval when calling the RCG. [1 to 100 / **60** / 1 second/step]
010	RCG Read Timeout	Specifies the read timeout interval when calling the RCG. [1 to 100 / **60** / 1 second/step]
011	Port 80	Enables/disables access via port 80 to the SOAP method. [0 or 1 / **0** / –] 0: Disabled, 1: Enabled
021	Function Flag	
	This SP displays the embedded RCG installation end flag. 1: Installation completed 2: Installation not completed	
022	Install Status	
	This SP displays the RCG device installation status. 0: RCG device not registered 1: RCG device registered	

Printer/
Scanner
Option
B892

	2: Device registered
023	Connect Mode (N/M)
	This SP displays and selects the embedded RCG connection method. **0**: Internet connection 1: Dial-up connection
061	NotiTime ExpTime **DFU**
	Proximity of the expiration of the certification.
062	HTTP Proxy Use
	This SP setting determines if the proxy server is used when the machine communicates with the service center.
063	HTTP Proxy Host
	This SP sets the address of the proxy server used for communication between embedded RCG-N and the gateway. Use this SP to set up or display the customer proxy server address. The address is necessary to set up embedded RCG-N. ↓ Note - The address display is limited to 127 characters. Characters beyond the 127th character are ignored. - This address is customer information and is not printed in the SMC report.
064	HTTP Proxy Port Number
	This SP sets the port number of the proxy server used for communication between embedded RCG N and the gateway. This setting is necessary to set up embedded RCG-N. ↓ Note This port number is customer information and is not printed in the SMC report.
065	HTTP Proxy Aut Usr
	This SP sets the HTTP proxy authentication user name.

	⬇ Note		
		▪ The length of the name is limited to 31 characters. Any character beyond the 31st character is ignored.	
		▪ This name is customer information and is not printed in the SMC report.	
066	HTTP Proxy Aut Pass		
	This SP sets the HTTP proxy authentication password. ⬇ Note ▪ The length of the password is limited to 31 characters. Any character beyond the 31st character is ignored. ▪ This name is customer information and is not printed in the SMC report.		
067	Cer Updt Cond		
	Displays the status of the certification update.		
	0	The certification used by embedded RCG is set correctly.	
	1	The certification request (setAuthKey) for update has been received from the GW URL and certification is presently being updated.	
	2	The certification update is completed and the GW URL is being notified of the successful update.	
	3	The certification update failed, and the GW URL is being notified of the failed update.	
	4	The period of the certification has expired and a new request for an update is being sent to the GW URL.	
	11	A rescue update for certification has been issued and a rescue certification setting is in progress for the rescue GW connection.	
	12	The rescue certification setting is completed and the GW URL is being notified of the certification update request.	

Printer/ Scanner Option B892

	13	The notification of the request for certification update has been completed successfully, and the system is waiting for the certification update request from the rescue GW URL
	14	The notification of the certification request has been received from the rescue GW controller, and the certification is being stored.
	15	The certification has been stored, and the GW URL is being notified of the successful completion of this event.
	16	The storing of the certification has failed, and the GW URL is being notified of the failure of this event.
	17	The certification update request has been received from the GW URL, the GW URL was notified of the results of the update after it was completed, but a certification error has been received, and the rescue certification is being recorded.
	18	The rescue certification of No. 17 has been recorded, and the GW URL is being notified of the failure of the certification update.
068		Cer Abnml Cause
		Displays a number code that describes the reason for the request for update of the certification.
	0	Normal. There is no request for certification update in progress.
	1	Request for certification update in progress. The current certification has expired.
	2	An SSL error notification has been issued (after the certification has expired).
	3	Notification of shift from a common authentication to an individual certification.
	4	Notification of a common certification without ID2.
	5	Notification that no certification was issued.

	6	Notification that GW URL does not exist.
069	Cert: Updtt ReqID	
	The ID of the request for certification.	
083	Firm Updating	
	Displays the status of the firmware update.	
084	Firm UpFlg No HDD	
	This setting determines if the firmware can be updated, even without the HDD installed.	
085	Firm Up Usr Conf	
	This SP setting determines if the operator can confirm the previous version of the firmware before the firmware update execution. If the option to confirm the previous version is selected, a notification is sent to the system manager and the firmware update is done with the firmware files from the URL.	
086	Firmware Size	
	Allows the service technician to confirm the size of the firmware data files during the firmware update execution.	
087	CERT: Macro Version	
	Displays the macro version of the @Remote certification.	
088	CERT: PAC Version	
	Displays the PAC version of the @Remote certification.	
089	CERT: ID2 Code	
	Displays ID2 for the @Remote certification. Spaces are displayed as underscores (_). Asterisks (*) indicate that no @Remote certification exists.	
090	CERT: Subject	
	Displays the common name of the @Remote certification subject. CN = the following 17 bytes. Spaces are displayed as underscores (_). Asterisks (*)	

Printer/ Scanner Option B892

	indicate that no DESS exists.
091	CERT: Serial Number
	Displays serial number for the @Remote certification. Asterisks (*) indicate that no DESS exists.
092	CERT: Issuer
	Displays the common name of the issuer of the @Remote certification. CN = the following 30 bytes. Asterisks (*) indicate that no DESS exists.
093	CERT: St ExpTime
	Displays the start time of the period for which the current @Remote certification is enabled.
094	CERT: End ExpTime
	Displays the end time of the period for which the current @Remote certification is enabled.
150	Ins Country
	Select from the list the name of the country where embedded RCG-M is installed in the machine. After selecting the country, you must also set the following SP codes for embedded RCG-M: ▪ SP5816-153 ▪ SP5816-154 ▪ SP5816-161 0: Japan, 1: USA, 2: Canada, 3: UK, 4: Germany, 5: France 6: Italy, 7: Netherlands, 8: Belgium, 9: Luxembourg, 10: Spain
151	Aut Line Detect
	Press [Execute]. Setting this SP classifies the telephone line where embedded RCG-M is connected as either dial-up or push type, so embedded RCG-M can automatically distinguish the number that connects to the outside line. ▪ The current progress, success, or failure of this execution can be displayed with SP5816 152.

	▪ If the execution succeeded, SP5816 153 will display the result for confirmation and SP5816 154 will display the telephone number for the connection to the outside line.
152	Line Detect Rst
	Displays a number to show the result of the execution of SP5816 151. Here is a list of what the numbers mean.
	0: Success 1: In progress (no result yet). Please wait. 2: Line abnormal 3: Cannot detect dial tone automatically 4: Line is disconnected 5: Insufficient electrical power supply 6: Line classification not supported 7: Error because fax transmission in progress – ioctl() occurred. 8: Other error occurred 9: Line classification still in progress. Please wait.
153	Dial/Push Select
	This SP displays the classification (tone or pulse) of the telephone line to the access point for embedded RCG-M. The number displayed (0 or 1) is the result of the execution of SP5816 151. However, this setting can also be changed manually. [0 to 1 / **0** / 1 /step] 0: Tone Dialing Phone 1: Pulse Dialing Phone Inside Japan "2" may also be displayed: 0: Tone Dialing Phone 1: Pulse Dialing Phone 10PPS 2: Pulse Dialing Phone 20PPS
154	Outline Phone #
	The SP sets the number that switches to PSTN for the outside connection for embedded RCG-M in a system that employs a PBX (internal line). ▪ If the execution of SP5816-151 has succeeded and embedded RCG-M

Printer/
Scanner
Option
B892

	has connected to the **external** line, this SP display is completely blank.
	▪ If embedded RCG-M has connected to an **internal** line, then the number of the connection to the external line is displayed.
	▪ If embedded RCG-M has connected to an external line, a comma is displayed with the number. The comma is inserted for a 2 sec. pause.
	▪ The number setting for the external line can be entered manually (including commas).
155	Remove Service: PPP Recognition Timeout
	SSP: Sets the length of the timeout for the embedded RCG-M connection to its access point. The timeout is the time from when the modem sends the ATD to when it receives the result code. [1 to 65536 / **60** / 1 /step]
156	Dial Up User
	Use this SP to set a user name for access to remote dial up. Follow these rules when setting a user name: ▪ Name length: Up to 32 characters ▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").
157	Dial Up Password
	Use this SP to set a password for access to remote dial up. Follow these rules when setting a user name: ▪ Name length: Up to 32 characters ▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").
161	Phone Number
	Use this SP to set the telephone number of the line where embedded RCG-M is connected. This number is transmitted to and used by the Call Center to return calls. Limit: 24 numbers (numbers only)
162	Ans Timing Adj

		When the Call Center calls out to a embedded RCG-M modem, it sends a repeating ID tone (*#1#). This SP sets the time the line remains open to send these ID tones after the number of the embedded RCG-M modem is dialed up and connected. [0 to 24/ **1** /1 /step] The actual amount of time is this setting + 2 sec. For example, if you set "2" the line will remain open for 4 sec.
163	Access Point	
		This is the number of the dial-up access point for embedded RCG-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used. Default: 0 Allowed: Up to 16 alphanumeric characters
164	Comm Line	
		This SP sets the connection conditions for the customer. This setting dedicates the line to embedded RCG-M only, or sets the line for sharing between embedded RCG-M and a fax unit. [0 or 1 / **0** / -] 0: Line shared by embedded RCG-M/Fax 1: Line dedicated to embedded RCG-M only ↓ Note - If this setting is changed, the copier must be cycled off and on. - SP5816 187 determines whether the off-hook button can be used to interrupt an embedded RCG-M transmission in progress to open the line for fax transaction.
173	Modem Serial Number	
		This SP displays the serial number registered for the embedded RCG-M.
174	Lmt Resend Cncl	
		Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, embedded RCG-M generates charges based on transmission time

Printer/
Scanner
Option
B892

		for the customer, so a limit is placed upon the time allowed for these transactions. If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.
	187	FAX TX Priority
		This SP determines whether pushing the off-hook button will interrupt an embedded RCG-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816-164 is set to "0". [0 or 1/ **0** / -] 0: Disable. Setting the fax unit off-hook does not interrupt a fax transaction in progress. If the off-hook button is pushed during a embedded RCG-M transmission, the button must be pushed again to set the fax unit on-hook after the embedded RCG-M transmission has completed. 1: Enable. When embedded RCG-M shares a line with a fax unit, setting the fax unit off-hook will interrupt a embedded RCG-M transmission in progress and open the line for a fax transaction.
	200	Polling Man Exc
		Executes the polling test.
	201	Instl: Condition
		Displays a number that indicates the status of the @Remote service device. 0: Neither the registered device by the external RCG nor embedded RCG device is set. 1: The embedded RCG device is being set. Only Box registration is completed. In this status the this unit cannot answer a polling request from the external RCG. 2: The embedded RCG device is set. In this status the external RCG unit cannot answer a polling request. 3: The registered device by the external RCG is being set. In this status the embedded RCG device cannot be set. 4: The registered module by the external RCG has not started.
	202	Instl: ID#

		Allows entry of the number of the request needed for the embedded RCG.
203		Instl: Reference
		Executes the inquiry request to the @Remote GateWay URL.
204		Instl: Ref Rslt
		Displays a number that indicates the result of the inquiry executed with SP5816-203.
		0: Succeeded 1: Inquiry number error 2: Registration in progress 3: Proxy error (proxy enabled) 4: Proxy error (proxy disabled) 5: Proxy error (Illegal user name or password) 6: Communication error 7: Certification update error 8: Other error 9: Inquiry executing
205		Instl: Ref Section
		Displays the result of the notification sent to the device from the GW URL in answer to the inquiry request. Displayed only when the result is registered at the GW URL.
206		Instl: Rgstltn
		Executes Embedded RCG Registration.
207		Instl: Rgstltn Rst
		Displays a number that indicates the registration result. 0: Succeeded 2: Registration in progress 3: Proxy error (proxy enabled) 4: Proxy error (proxy disabled) 5: Proxy error (Illegal user name or password) 6: Communication error

Printer/
Scanner
Option
B892

		7: Certification update error
		8: Other error
		9: Registration executing

208	Instl Error Code		

Displays a number that describes the error code that was issued when either SP5816 204 or SP5816 207 was executed.

Cause	Code	Meaning
Illegal Modem Parameter	-11001	Chat parameter error
	-11002	Chat execution error
	-11003	Unexpected error
Operation Error, Incorrect Setting	-12002	Inquiry, registration attempted without acquiring device status.
	-12003	Attempted registration without execution of an inquiry and no previous registration.
	-12004	Attempted setting with illegal entries for certification and ID2.
Error Caused by Response from GW URL	-2385	Attempted dial up overseas without the correct international prefix for the telephone number.
	-2387	Not supported at the Service Center
	-2389	Database out of service
	-2390	Program out of service
	-2391	Two registrations for same device
	-2392	Parameter error
	-2393	External RCG not managed
	-2394	Device not managed
	-2395	Box ID for external RCG is illegal

		-2396	Device ID for external RCG is illegal
		-2397	Incorrect ID2 format
		-2398	Incorrect request number format
209	Instl Clear		
	Releases a machine from its embedded RCG setup.		
250	Print Com Log		
	Prints the communication log.		

5821	[NRS Address]	
001	CSS-PI Device	Sets the PI device code. After you change this setting, you must turn the machine off and on.
002	RCG IP Address	Sets the IP address of the RCG (Remote Communication Gate) destination for call processing at the remote service center. [00000000h to FFFFFFFFh/1]

5824	NVRAM Upload
001	(☛ "NVRAM Upload")

5825	NVRAM Download
001	(☛ "NVRAM Download")

5828	[Network Setting]	CTL	
050	1284 Compatibility (Centro)	Enables or disables 1284 Compatibility. [0 or 1 / **1** / 1 / step] 0: Disabled, 1: Enabled	
052	ECP (Centro)	Enables or disables ECP Compatibility.	

Printer/ Scanner Option B892

		[0 or 1 / **1** / 1 / step] 0: Disabled, 1: Enabled **NOTE:** This SP is activated only when SP5-828-50 is set to "1".
065	Job Spooling	Enables/disables Job Spooling. [0 or 1 / **0** / 1 / step] 0: Disabled, 1: Enabled
066	Job Spooling Clear: Start Time	Treatment of the job when a spooled job exists at power on. 0: ON (Data is cleared) **1**: OFF (Automatically printed)

069	Job Spooling (Protocol)	Validates or invalidates the job spooling function for each protocol.
		0: Validates
		1: Invalidates
		  bit0: LPR
		  bit1: FTP
		  bit2: IPP
		  bit3: SMB
		  bit4: BMLinkS
		  bit5: DIPRINT
		  bit6: (Reserved)
		  bit7: (Reserved)

090	TELNET (0: OFF 1: ON)	Enables or disables the Telnet protocol. [0 or 1 / **1** / –] 0: Disable, 1: Enable
091	Web (0: OFF 1: ON)	Enables or disables the Web operation. [0 or 1 / **1** / –] 0: Disable, 1: Enable
145	Active IPv6 Link	
		This is the IPv6 local address link referenced on the Ethernet or wireless LAN (802.11b) in the format:

		"Link Local Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.	
147	Active IPv6 Status Address 1		
149	Active IPv6 Status Address 2	These SPs are the IPv6 status addresses (1 to 5) referenced on the Ethernet or wireless LAN (802.11b) in the format: "Status Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.	
151	Active IPv6 Status Address 3		
153	Active IPv6 Status Address 4		
155	Active IPv6 Status Address 5		
156	IPv6 Manual Setting Address This SP is the IPv6 manually set address referenced on Ethernet or wireless LAN (802.11b) in the format: "Manual Set Address" + "Prefix Length" The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.		
158	IPv6 Gateway Address This SP is the IPv6 gateway address referenced on Ethernet or wireless LAN (802.11b). The IPv6 address consists of a total of 128 bits configured in 8 blocks of 16 bits each.		

5840	[IEEE 802.11b]		
006	Channel MAX	CTL	[1 to 11 or 13 / **11** or **13** / 1 /step] Europe: 1 to 13, default: 13 NA/ Asia: 1 to 11, default: 11
	Sets the maximum number of channels available for data transmission via

	wireless LAN. The number of channels available varies according to location. The default settings are set for the maximum end of the range for each area. Adjust the upper 4 bits to set the maximum number of channels. **DFU** ⬇ Note ▪ Do not change the setting.		
007	Channel MIN	CTL	[1 to 11 or 13 / **1** / 1 /step] Europe: 1 to 13 NA/ Asia: 1 to 11
	Sets the minimum number of channels available for data transmission via the wireless LAN. The number of channels available varies according to location. The default settings are set for the minimum end of the range for each area. Adjust the lower 4 bits to set the minimum number of channels. **DFU** ⬇ Note ▪ Do not change the setting.		
011	WEP Key Select	CTL	[00 to 11 / 00 / 1 binary] 00: Key #1 01: Key #2 (Reserved) 10: Key #3 (Reserved) 11: Key #4 (Reserved)
	Selects the WEP key.		

5842	[GWWS Analysis] DFU		
001	Setting 1	CTL	
	This is a debugging tool. It sets the debugging output mode of each Net File process. Default: Bit SW 1000 0000	Bit	Groups
		0	System & other groups (LSB)
		1	Capture related
		2	Certification related
		3	Address book related
		4	Machine management related

		5	Output related (printing, delivery)
		6	Repository related
		7	Debug log output
002	Setting 2	CTL	
	Default: Bit SW 0000 0000	Bit	Groups
		0-6	Not used
		7	Log time stamp setting 0: Date/Hour/Minute/Second 1: Minute/Second/Msecond

5844	[USB]		
001	Transfer Rate	CTL	
	Sets the speed for USB data transmission. [Full Speed] [Auto Change]		
002	Vendor ID	CTL	
	Sets the vendor ID: Initial Setting: 0x05A Ricoh Company [0x0000 to 0xFFFF/1] **DFU**		
003	Product ID	CTL	
	Sets the product ID. [0x0000 to 0xFFFF/1] **DFU**		
004	Device Release No.	CTL	
	Sets the device release number of the BCD (binary coded decimal) display. [0000 to 9999/1] **DFU** Enter as a decimal number. NCS converts the number to hexadecimal number recognized as the BCD.		

GW SP Mode Tables

5845	[Delivery Server Setting]	CTL	-
	Provides items for delivery server settings.		
001	FTP Port Num	[0 to 65535 / **3670** / 1 /step]	
	Sets the FTP port number used when image files to the Scan Router Server.		
002	Srv IP (Primary)	Range: **000.000.000.000** to 255.255.255.255	
	Use this SP to set the Scan Router Server address. The IP address under the transfer tab can be referenced by the initial system setting.		
003	Retry Interval	[60 to 999 / **300** / 1 second /step]	
	Specifies the interval time for sending the scanned image data to the deliver server or SMTP/FTP/NCP/SMB server after sending error.		
004	Number of Retries	[0 to 99 / **3** / 1 time/step]	
	Specifies the retry times for sending the scanned image data to the deliver server or SMTP/FTP/NCP/SMB server after sending error.		
006	Delivery Error Display Time	[0 to 999 / **300** / 1 second /step]	
	Use this setting to determine the length of time the prompt message is displayed when a test error occurs during document transfer with the NetFile application and an external device.		
008	Srv IP (Secondary)	Range: **000.000.000.000** to 255.255.255.255	
	Specifies the IP address assigned to the computer designated to function as the secondary delivery server of Scan Router. This SP allows only the setting of the IP address without reference to the DNS setting.		
009	Delivery Server Model	[0 to 4 / **0** / 1 /step]	
	Allows changing the model of the delivery server registered by the I/O device. 0: Unknown, 1: SG1 Provided, 2: SG1 Package, 3: SG2 Provided, 4: SG2 Package		
010	Delivery Svr Capability	[0 to 255 / **0** / 1 /step]	

	Bit7 = 1 Comment information exits	Changes the capability of the server that is registered as an I/O device.
	Bit6 = 1 Direct specification of mail address possible	
	Bit5 = 1 Mail RX confirmation setting possible	
	Bit4 = 1 Address book automatic update function exists	
	Bit3 = 1 Fax RX delivery function exists	
	Bit2 = 1 Sender password function exists	
	Bit1 = 1 Function to link MK-1 user and Sender exists	
	Bit0 = 1 Sender specification required (if set to 1, Bit6 is set to "0")	
011	Delivery Svr Capability (Ext)	[0 to 255 / **0** / 1 /step]
	Changes the capability of the server that is registered as an I/O device.	
	Bit7 = 1 Address book usage limitation (Limitation for each authorized user) Bit6 = 1 RDH authorization link Bit5 to 0: Not used	
013	Svr Schm (Primary)	-
	Specifies the scheme of the primary delivery server.	
014	Svr Port Num (Pri)	-
	Specifies the port number of the primary delivery server.	
015	Srv URL Path (Pri)	-
	Specifies the URL path of the primary delivery server.	
016	Svr Schm (Sec)	-
	Specifies the scheme of the secondary delivery server.	

Printer/ Scanner Option B892

017	Svr Port Num (Sec)	-
	Specifies the port number of the secondary delivery server.	
018	Srv URL Path (Sec)	-
	Specifies the URL path of the secondary delivery server.	
019	CapSvr Schm	-
	Specifies the scheme of the capture server.	
020	CapSvr Port Num	-
	Specifies the port number of the capture server.	
021	CapSrv URL Path	-
	Specifies the URL path of the s capture server.	
022	Rapid-fire Send	[0 or 1 / **1** / -] 0: Disable, 1: Enable
	Enables or disables the prevention function for the continuous data sending.	

5846	[UCS Settings]	CTL	-
001	Machine ID (Delivery Server)		Displays ID
	Displays the unique device ID in use by the delivery server directory. The value is only displayed and cannot be changed. This ID is created from the NIC MAC or IEEE 1394 EUI. The ID is displayed as either 6-byte or 8-byte binary.		
002	Machine ID Clear (Delivery Server)		Clears ID
	Clears the unique ID of the device used as the name in the file transfer directory. Execute this SP if the connection of the device to the delivery server is unstable. After clearing the ID, the ID will be established again automatically by cycling the machine off and on.		
003	Maximum Entries	[150 to 999 / **150** / 1 /step]	

	Changes the maximum number of entries that UCS can handle. If a value smaller than the present value is set, the UCS managed data is cleared, and the data (excluding user code information) is displayed.		
006	Delivery Server Retry Timer		[0 to 255 / **0** / 1 /step]
	Sets the interval for retry attempts when the delivery server fails to acquire the delivery server address book.		
007	Delivery Server Retry Times		[0 to 255 / **0** / 1 /step]
	Sets the number of retry attempts when the delivery server fails to acquire the delivery server address book.		
008	Delivery Server Maximum Entries		[200 to 999 / **200** / 1/step]
	Sets the maximum number account entries of the delivery server user information managed by UCS.		
010	LDAP Search Timeout		[1 to 255 / **60** / 1 /step]
	Sets the length of the timeout for the search of the LDAP server.		
041	[AddrB Acl Info] Address Book Access Control List Information		
	This SP must be executed immediately after installation of an HDD unit in a basic machine that previously had no HDD. The first time the machine is powered on with the new HDD installed, the system automatically takes the address book from the NVRAM and writes it onto the new HDD. However, the new address book on the HDD can be accessed only by the system administrator at this stage. Executing this SP by the service technician immediately after power on grants full address book access to all users.		
042	Addr B Mig (SD → SD)		[0 to 10 / **0** / 1 /step] 0: Not decided yet 1: Slot 1 to 10: Slot 10
	This SP copies an address book data in a SD card to another SD card. Select the destination slot where you want to move an address book data, and then press "Execute" key.		

Printer/
Scanner
Option
B892

	You can check where an address book data is in with SP5-846-043.	
043	Addr B Media	-
	Displays the slot number where an address book data is in.	
047	Initialize Local Addr Book	Clears the local address book information, including the user code.
048	Initialize Delivery Addr Book	Clears the distribution address book information, except the user code.
049	Initialize LDAP Addr Book	Clears the LDAP address book information, except the user code.
050	Initialize All Addr Book	Clears all directory information managed by UCS, including all user codes. Turn the main power switch off and on after executing this SP.
051	Backup All Addr Book	Uploads all directory information to the SD card.
052	Restore All Addr Book	Downloads all directory information from the SD card.
053	Clear Backup Info	
	Deletes the address book data from the SD card in the service slot. Deletes only the files that were uploaded from this machine. This feature does not work if the card is write-protected. ⬇ Note ▪ After you do this SP, go out of the SP mode, and then turn the power off. Do not remove the SD card until the Power LED stops flashing.	
060	Search Option	
	This SP uses bit switches to set up the fuzzy search options for the UCS local address book. Bit0: Checks both upper/lower case characters Bit1: Japan only	

	Bit2 to 7: Not used
062	Compl Opt1

	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to **upper case** and sets the length of the password.
	[0 to 32 / **0** / 1 /step]
	↓ Note
	  ▪ This SP does not normally require adjustment.
	  ▪ This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.

063	Compl Opt2

	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to **lower case** and defines the length of the password.
	[0 to 32 / **0** / 1 /step]
	↓ Note
	  ▪ This SP does not normally require adjustment.
	  ▪ This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.

064	Compl Opt3

	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to **numbers** and defines the length of the password.
	[0 to 32 / **0** / 1 /step]
	↓ Note
	  ▪ This SP does not normally require adjustment.
	  ▪ This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.

065	Compl Opt4
	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to **symbols** and

Printer/ Scanner Option B892

		defines the length of the password. [0 to 32 / **0** / 1 /step] ⬇ Note ▪ This SP does not normally require adjustment. ▪ This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.
091	FTP Auth Port Setting	Specifies the FTP port for getting a distribution server address book that is used in the identification mode. [0 to 65535 / **3671** / 1 /step]
094	Encryption Stat	Shows the status of the encryption function for the address book data.

		[Web Service]	CTL	-
5848		SP5848-1 sets the 4-bit switch assignment for the access control setting. Setting of 0001 has no effect on access and delivery from Scan Router. ac: Access Control		
	004	ac: UD (only Lower 4 bits)	Switches access control on and off. **0000**: No access control 0001: Denies access to DeskTop Binder.	
	007	ac: Log Fax (Lower 4 bits)		
	009	ac: Job Ctrl (Lower 4 bits)		
	011	ac: Device Management (Lower 4 bits)		
	022	ac: Uadmin (Lower 4bits)		
	210	Log Type: Job1	Displays the log server settings. These can be adjusted with the Web Image Monitor.	
	211	Log Type: Job2		
	212	Log Type: Access		
	213	Primary Srv		
	214	Secondary Srv		

215	Start Time	
216	Interval Time	Specifies the transmit interval. [1 to 1000 / **1** / 1 hour/step] This SP is activated only when SP5848-217 is set to "2 (Transmit periodically)".
217	Timing	Selects the transmit timing. [0 to 2 / **0** / 1/step] 0: No Transmit, 1: Transmit one by one 2: Transmit periodically

5849	[Installation Date]		CTL	
	Displays or prints the installation date of the machine.			
001	Display	The "Counter Clear Day" has been changed to "Installation Date" or "Inst. Date".		
002	Print	Determines whether the installation date is printed on the printout for the total counter. [0 or 1/ **1** / 1/step] 0: No Print, 1: Print		
003	Total Counter	Displays the total counter when the installation date is registered to the machine.		

5851	[Bluetooth]	CTL	
001	Mode	Sets the operation mode for the Bluetooth Unit. Press either key. **0** :Public, 1: Private	

5856	[Remote ROM Update]
	Allows the technician to upgrade the firmware using a parallel cable when updating the remote ROM.

Printer/
Scanner
Option
B892

002	Local Port	CTL	[0 or 1 / **0** / 1/step] **0**: Disallow 1: Allow

5857	**[Debug Log Save]**	CTL	-
001	On/Off	**0**: OFF, 1: ON	
001	Switches the debug log feature on and off. The debug log cannot be captured until this feature is switched on.		
006	Save to SD Card		
006	Specifies the debug log number for saving to an SD card.		
012	Erase SD Debug		
012	Erases SD debug logs in the SD card. Turn off and on after executing this SP.		
013	Dsply-SD Space		
013	Displays the remaining space in the SD card.		
014	SD to SD Latest (Latest 4 MB)		
014	Saves the debug log (latest 4 MB) in memory to the SD card. A unique file name is generated to avoid overwriting existing file names on the SD card. Up to 4MB can be copied to the SD card. 4 MB segments can be copied one by one to the SD card.		
015	SD to SD Any (Latest 4 MB Any Key)		
015	Saves the specified debug log (with SP5-857-006) in memory to the SD card. A unique file name is generated to avoid overwriting existing file names on the SD card. Up to 4MB can be copied to the SD card. 4 MB segments can be copied one by one to the SD card.		
017	Make SD Debug		
017	Executes the making of a file (4MB) for saving debug logs.		

5858	**[Debug Log Save: SC]**	CTL	-
	These SPs select the content of the debugging information to be saved to the destination selected by SP5857-2. SP5858-3 stores one SC specified by number. Refer to the chapter "Trouble Shooting" for a list of SC error codes.		
001	Engine SC	Turns the save function on/off for SC codes generated by copier engine errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	
002	Controller SC	Turns the save function on/off for SC codes generated by GW controller errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	
003	Any SC	[0 to 65535 / **0** / 1 /step]	
004	Jam	Turns the save function on/off for jam errors. [0 or 1 / **0** / 1/ step] 0: OFF, 1: ON	

5859	**[Debug Log Save Key]**	CTL	-
001	Key 1	These SPs allow you to set up to 10 keys for log files for functions that use common memory on the controller board. [−9999999 to 9999999 / **0** / −]	
002	Key 2		
003	Key 3		
004	Key 4		
005	Key 5		
006	Key 6		
007	Key 7		
008	Key 8		

Printer/ Scanner Option B892

009	Key 9	
010	Key 10	

5860	**[SMTP/POP3/IMAP4]**	CTL	-

020	Partial Mail Receive Timeout	[1 to 168 / **72** / 1 hour/step]
	Sets the amount of time to wait before saving mail that breaks up during reception. The received mail is discarded if the remaining portion of the mail is not received during this prescribed time.	

021	MDN Response RFC2298 Compliance	[0 to 1 / **1** / –]
	Determines whether RFC2298 compliance is switched on for MDN reply mail. 0: No, 1: Yes	

022	SMTP Auth. From Field Replacement	[0 to 1 / **0** / –]
	Determines whether the FROM item of the mail header is switched to the validated account after the SMTP server is validated. 0: No. "From" item not switched. 1: Yes. "From" item switched.	

025	SMTP Auth. Direct Setting	[0 or 1 / **0** / –]
	Selects the authentication method for SMPT. **Bit switch:** ▪ Bit 0: LOGIN ▪ Bit 1: PLAIN ▪ Bit 2: CRAM MD5 ▪ Bit 3: DIGEST MD5 ▪ Bit 4 to 7: Not used ⬇ Note ▪ This SP is activated only when SMTP authorization is enabled by UP mode.	

5866	**[E-mail Report]**		
001	Report Validity	-	[0 or 1 / **0** / –]

			0: Enabled, 1: Disabled
	Enables or disables the E-mail alert function.		
005	Add Date Field	CTL	[0 or 1 / **0** / –] 0: Not add, 1: Add
	Adds or does not add the date field to the header of the alert mail.		

5869	[RAM Disk Setting]		
001	Mail Function	GWINIT	[0 or 1 / **0** / -] 0: ON, 1: OFF
	Turns on or off the e-mail function.		
002	PDL Storage	GWINIT	[0 to 255 / **4** / 1 /step]
	Specifies the RAM disk storage size for PDL.		

5870	[Common Key Info Writing]		
001	Writing	CTL	Writes to flash ROM the common proof for validating the device for @Remote specifications.
003	Initialize	CTL	Formats the common proof area of the flash ROM. **FA**

5873	[SD Card Appli Move]	
001	Move Exec	This SP copies the application programs from the original SD card in SD card slot 3 to an SD card in SD card slot 2.
002	Undo Exec	This SP copies back the application programs from an SD card in the SD Card Slot 3 to the original SD card in the SD card slot 2. Use this menu when you have mistakenly copied some programs by using "Move Exec" (SP5873-1).

Printer/
Scanner
Option
B892

5875	**[SC Auto Reboot]**		
001	Reboot Mode	CTL	Enables or disables the automatic reboot function when an SC error occurs. [0 or 1 / **0** / –] 0: The machine reboots automatically when the machine issues an SC error and logs the SC error code. If the same SC occurs again, the machine does not reboot. 1: The machine does not reboot when an SC error occurs. The reboot is not executed for Type A, B or C SC codes.
002	Reboot Method	CTL	Selects the reboot method for SC. [0 or 1 / **0** / -] 0: Manual reboot, 1: Automatic reboot

5878	**[Option Setup]**		
001	Option Setup	-	Enables the Data Overwrite Security unit. Press "EXECUTE" on the operation panel. Then turn the machine off and on.

5881	**[Delete Fixed Sent]**		
001	Delete Fixed Sent	-	Deletes the fixed form sentence.

5886	**[Permit ROM Update] DFU**	
001	This SP determines whether the ROM can be updated. [0 or 1 / **0** / 1/step] 0: Yes, 1: No	

5887	**[SD GetCounter] SSP**
001	This SP saves the counter list of the machine to an SD card in the slot 3. The folder of "SD_COUNTER" must be made in an SD card for this SP.

5913	**[Switch Permission]**
	Print Application Timer
002	Sets the length of time to elapse before allowing another application to take control of the display when the application currently controlling the display is not operating because a key has not been pressed. [3 to 30 / **3** / 1 second/step]

5974	**[Cherry Server]**
001	Selects which version of the Scan Router application program, "Light" or "Full (Professional)", is installed. [0 to 1 / **0** / 1 /step] 0: Light version (supplied with this machine) 1: Full version (optional)

5985	**[Device Setting]**	
→	The NIC and USB support features are built into the GW controller. Use this SP to enable and disable these features. In order to use the NIC and USB functions built into the controller board, these SP codes must be set to "1".	
001	On Board NIC	[0 to 2 / **0** / 1 /step] 0: Disable, 1: Enable, 2: Function limitation When the "Function limitation" is set, "On board NIC" is limited only for the @Remote or LDAP/NT authentication. ⬇ Note ▪ Other network applications such as @Remote, WebImageMonitor, or LDAP/NT authentication are not available when this SP is set to "2". Even

Printer/ Scanner Option B892

		if you can change the initial settings of those network applications, settings may not actually work.	
	002	On Board USB	[0 or 1 / **0** / 1/step] 0: Disable, 1: Enable

5990	**[SP Print Mode]**		SMC Print
	In the SP mode, press Copy Window to move to the copy screen, select the paper size, then press Start. Select A4/LT (Sideways) or larger to ensure that all the information prints. Press SP Window to return to the SP mode, select the desired print, and press "EXECUTE".		
	001	All (Data List)	
	002	SP (Mode Data List)	
	003	User Program Data	
	004	Logging Data	
	005	Diagnostic Report	
	006	Non-Default (Prints only SPs set to values other than defaults.)	
	007	NIB Summary	
	021	Copier User Program	
	022	Scanner SP	
	023	Scanner User Program	
5998		Memory Clear

7801	**[Memory/ Version/ PN]**
	Displays the part number and version of all ROMs in the machine.
7801 255	Memory/ Version/ PN

7803	**[PM Counter]**		
	Displays the PM counter for each PM part.		
7803 1	Paper	CTL	[0 to 99999999 / **0** / 1/step]

7804	**[PM Count. Reset]**		
	Clears the PM counter for each PM part.		
7804 1	Paper	CTL	This clears the counter of SP7803-1.

7807	**[Reset–SC/Jam Counters]**
7807 1	Resets the SC, paper, original, and total jam counters. When the program ends normally, the message "Completed" is displayed. SP 7807 1 does not reset the following logs: SP 7507 (Display-Paper Jam History) and SP 7508 (Display-Original Jam History).

7826	[MF Error Counter] Japan Only	
	Displays the number of counts requested of the card/key counter.	
001	Error Total	A request for the count total failed at power on. This error will occur if the device is installed but disconnected.
002	Error Staple	The request for a staple count failed at power on. This error will occur if the device is installed but disconnected.

7827	[MF Error Counter Clear]
	Press Execute to reset to 0 the values of SP7826. **Japan Only**

7832*	[Display-Self-Diag]
7832 1	Displays the SC codes and the number of their occurrences. Each number is in the range of 0 to 9999.

7836	[Resident Memory]
	Displays the contents of the memory on the controller board.

7901	[Assert Info]		
	Records the location where a problem is detected in the program. The data stored in this SP is used for problem analysis. **DFU**		
7901 1	File Name	-	-
7901 2	Number of Lines	-	-
7901 3	Location	-	-

7992*	Reset-Info Count

Printer/
Scanner
Option
B892

7992 5	Reset-ID Er Count
	Clears the ID sensor error counter (SP7-991-005).

4.2.4 SP8-XXX (HISTORY)

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an "application"). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

Prefixes		What it means
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.)..
C:	Copy application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the document server.
F:	Fax application.	
P:	Print application.	
S:	Scan application.	
O:	Other applications (external network applications, for example)	Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future.

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

Key for Abbreviations

Abbreviation	What it means
/	"By", e.g. "T:Jobs/Apl" = Total Jobs "by" Application
>	More (2> "2 or more", 4> "4 or more"

Abbreviation	What it means
AddBook	Address Book
Apl	Application
B/W	Black & White
Bk	Black
C	Cyan
ColCr	Color Create
ColMode	Color Mode
Comb	Combine
Comp	Compression
Deliv	Delivery
DesApl	Designated Application. The application (Copy, Fax, Scan, Print) used to store the job on the document server, for example.
Dev Counter	Development Count, no. of pages developed.
Dup, Duplex	Duplex, printing on both sides
Emul	Emulation
FC	Full Color
FIN	Post-print processing, i.e. finishing (punching, stapling, etc.)
Full Bleed	No Margins
GenCopy	Generation Copy Mode
GPC	Get Print Counter. For jobs 10 pages or less, this counter does not count up. For jobs larger than 10 pages, this counter counts up by the number that is in excess of 10 (e.g., for an 11-page job, the counter counts up 11-10 =1)
IFax	Internet Fax

Printer/ Scanner Option B892

Abbreviation	What it means
ImgEdt	Image Edit performed on the original with the copier GUI, e.g. border removal, adding stamps, page numbers, etc.
K	Black (YMCK)
LS	Local Storage. Refers to the document server.
LSize	Large (paper) Size
Mag	Magnification
MC	One color (monochrome)
NRS	NRS (@Remote), which allows a service center to monitor machines remotely. "@Remote" is used overseas; "CSS" is used in Japan.
Org	Original for scanning
OrgJam	Original Jam
Palm 2	Print Job Manager/Desk Top Editor: A pair of utilities that allows print jobs to be distributed evenly among the printers on the network, and allows files to moved around, combined, and converted to different formats.
PC	Personal Computer
PGS	Pages. A page is the total scanned surface of the original. Duplex pages count as two pages, and A3 simplex count as two pages if the A3/DLT counter SP is switched ON.
PJob	Print Jobs
Ppr	Paper
PrtJam	Printer (plotter) Jam
PrtPGS	Print Pages
R	Red (Toner Remaining). Applies to the wide format model A2

Abbreviation	What it means
	only. This machine is under development and currently not available.
RCG	Remote Communication Gate
Rez	Resolution
SC	Service Code (Error SC code displayed)
Scn	Scan
Sim, Simplex	Simplex, printing on 1 side.
S-to-Email	Scan-to-E-mail
SMC	SMC report printed with SP5990. All of the Group 8 counters are recorded in the SMC report.
Svr	Server
TonEnd	Toner End
TonSave	Toner Save
TXJob	Send, Transmission
YMC	Yellow, Magenta, Cyan
YMCK	Yellow, Magenta, Cyan, Black

Printer/
Scanner
Option
B892

⬇ Note

- All of the Group 8 SPs are reset with SP5 801 1 Memory All Clear.

8 191	T:Total Scan PGS	CTL	These SPs count the pages scanned by each application that uses the scanner to scan images. [0 to 99999999 / **0** / 1]
8 192	C:Total Scan PGS	CTL	
8 193	F:Total Scan PGS	CTL	
8 195	S:Total Scan PGS	CTL	

GW SP Mode Tables

- SP 8 191 to 8 196 count the number of scanned sides of pages, not the number of physical pages.
- These counters do not count reading user stamp data, or reading color charts to adjust color.
- Previews done with a scanner driver are not counted.
- A count is done only after all images of a job have been scanned.
- Scans made in SP mode are not counted.

Examples

- If 3 B5 pages and 1 A3 page are scanned with the scanner application but not stored, the S: count is 4.
- If both sides of 3 A4 sheets are copied and stored to the document server using the Store File button in the Copy mode window, the C: count is 6 and the L: count is 6.
- If both sides of 3 A4 sheets are copied but not stored, the C: count is 6.
- If you enter document server mode then scan 6 pages, the L: count is 6.

8 201	T:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the total number of large pages input with the scanner for scan and copy jobs. Large size paper (A3/DLT) scanned for fax transmission is not counted. ↓ Note ■ These counters are displayed in the SMC Report, and in the User Tools display.		
8 203	F:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of large pages scanned by original type for Fax jobs.		
8 205	S:LSize Scan PGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the total number of large pages input with the scanner for scan jobs only. Large size paper (A3/DLT) scanned for fax transmission are not counted. ↓ Note ■ These counters are displayed in the SMC Report, and in the User Tools display.		

8 221	ADF Org Feeds		CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages fed through the ADF for front and back side scanning.			
	001	Front	Number of front sides fed for scanning: With an ADF/ARDF that can scan both sides simultaneously, the Front side count is the same as the number of pages fed for either simplex or duplex scanning. With an ADF/ARDF that cannot scan both sides simultaneously, the Front side count is the same as the number of pages fed for duplex front side scanning. (The front side is determined by which side the user loads face up.)	
	002	Back	Number of rear sides fed for scanning: With an ADF/ARDF that can scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex scanning. With an ADF/ARDF that cannot scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex rear-side scanning.	

- When 1 sheet is fed for duplex scanning the Front count is 1 and the Back count is 1.
- If a jam occurs during the job, recovery processing is not counted to avoid double counting. Also, the pages are not counted if the jam occurs before the first sheet is output.

8 281	T:Scan PGS/TWAIN	CTL	These SPs count the number of pages scanned using a TWAIN driver. These counters reveal how the TWAIN driver is used for delivery functions. [0 to 99999999 / **0** / 1] ⬇ Note - At the present time, these counters perform identical counts.
8 285	S:Scan PGS/TWAIN	CTL	

Printer/
Scanner
Option
B892

8 291	T:Scan PGS/Stamp	CTL	These SPs count the number of pages stamped with the stamp in the ADF unit. [0 to 99999999 / **0** / 1]
8 293	F:Scan PGS/Stamp	CTL	
8 295	S:Scan PGS/Stamp	CTL	

8 301	T:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by all applications. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-441].		
8 302	C:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Copy application. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-442].		
8 303	F:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Fax application. Use these totals to compare original page size (scanning) and output page size [SP 8-443].		
8 305	S:Scan PGS/Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by size the total number of pages scanned by the Scan application. Use these totals to compare original page size (scanning) and output page size [SP 8-445].

8 381	T:Total PrtPGS	CTL	These SPs count the number of pages printed by the customer. The counter for the application used for storing the pages increments. [0 to 99999999 / **0** / 1]
8 382	C:Total PrtPGS	CTL	
8 383	F:Total PrtPGS	CTL	
8 384	P:Total PrtPGS	CTL	
8 385	S:Total PrtPGS	CTL	
8 387	O:Total PrtPGS	CTL	

▪ When the A3/DLT double count function is switched on with SP5104, 1 A3/DLT page is counted as 2.

▪ When several documents are merged for a print job, the number of pages stored is counted for the application that stored them.

▪ These counters are used primarily to calculate charges on use of the machine, so the following pages are not counted as printed pages:

   ▪ Blank pages in a duplex printing job.

   ▪ Blank pages inserted as document covers, chapter title sheets, and slip sheets.

   ▪ Reports printed to confirm counts.

   ▪ All reports done in the service mode (service summaries, engine maintenance reports, etc.)

   ▪ Test prints for machine image adjustment.

   ▪ Error notification reports.

   ▪ Partially printed pages as the result of a copier jam.

Printer/ Scanner Option B892

8 391	LSize PrtPGS	CTL	[0 to 99999999 / **0** / 1]
	These SPs count pages printed on paper sizes A3/DLT and larger. ⬇ Note 　　▪ In addition to being displayed in the SMC Report, these counters are also displayed in the User Tools display on the copy machine.		

8 411	Prints/Duplex	CTL	This SP counts the amount of paper (front/back counted as 1 page) used for duplex printing. Last pages printed only on one side are not counted. [0 to 99999999 / **0** / 1]

8 421	T:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing. This is the total for all applications.		
8 422	C:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the copier application.		
8 423	F:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the fax application.		
8 424	P:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the printer application.		
8 425	S:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by the scanner application.		
8 427	O:PrtPGS/Dup Comb	CTL	[0 to 99999999 / **0** / 1]

		These SPs count by binding and combining, and n-Up settings the number of pages processed for printing by Other applications

012	Booklet	-
013	Magazine	-

Printer/ Scanner Option B892

- These counts (SP8-421 to SP8-427) are especially useful for customers who need to improve their compliance with ISO standards for the reduction of paper consumption.
- Pages that are only partially printed with the n-Up functions are counted as 1 page.
- Here is a summary of how the counters work for Booklet and Magazine modes:

Booklet		Magazine	
Original Pages	**Count**	**Original Pages**	**Count**
1	1	1	1
2	2	2	2

3	2	3	2
4	2	4	2
5	3	5	4
6	4	6	4
7	4	7	4
8	4	8	4

8 441	T:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by all applications.		
8 442	C:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the copy application.		
8 443	F:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the fax application.		
8 444	P:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the printer application.		
8 445	S:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by the scanner application.		
8 447	O:PrtPGS/Ppr Size	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by print paper size the number of pages printed by Other applications.

▪ These counters do not distinguish between LEF and SEF.

8 451	PrtPGS/Ppr Tray		CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of sheets fed from each paper feed station.			
001	Bypass	Bypass Tray		
002	Tray 1	Copier		
003	Tray 2	Copier		
004	Tray 3	Currently not used.		
005	Tray 4	Currently not used.		
006	Tray 5	Currently not used.		
007	Tray 6	Currently not used.		
008	Tray 7	Currently not used.		

009	Tray 8	Currently not used.	
010	Tray 9	Currently not used.	

8 461	T:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by all applications. ▪ These counters are not the same as the PM counter. The PM counter is based on feed timing to accurately measure the service life of the feed rollers. However, these counts are based on output timing. ▪ Blank sheets (covers, chapter covers, slip sheets) are also counted. ▪ During duplex printing, pages printed on both sides count as 1, and a page printed on one side counts as 1.		
8 462	C:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the copy application.		
8 463	F:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the fax application.		
8 464	P:PrtPGS/Ppr Type	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by paper type the number pages printed by the printer application.		
001	Normal		
002	Recycled		
003	Special		
004	Thick		
005	Normal (Back)		
006	Thick (Back)		

	007	OHP
	008	Other

8 521	T:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by all applications.		

8 522	C:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Copy application.		

8 523	F:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Fax application. ↓ Note ▪ Print finishing options for received faxes are currently not available.		

8 524	P:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Print application.		

8 525	S:PrtPGS/FIN	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by finishing mode the total number of pages printed by the Scanner application.		
001	Sort		
002	Stack		
003	Staple		
004	Booklet		
005	Z-Fold		

Printer/ Scanner Option B892

006	Punch		
007	Other		

Note

- If stapling is selected for finishing and the stack is too large for stapling, the unstapled pages are still counted.
- The counts for staple finishing are based on output to the staple tray, so jam recoveries are counted.

8 581	T:Counter	CTL	[0 to 99999999 / **0** / 1]
	This SP counts the total output broken down by color output, regardless of the application used. In addition to being displayed in the SMC Report, these counters are also displayed in the User Tools display on the copy machine.		
001	Total		

8 591	O:Counter	CTL	[0 to 99999999 / **0** / 1]
8 591 1	A3/DLT	These SPs count the totals for A3/DLT paper use, number of duplex pages printed, and the number of staples used. These totals are for Other (O:) applications only.	
8 591 2	Duplex		

8 601	Cvg Counter	CTL	[0 to 99999999 / **0** / 1]
8 601 1	Cvg: BW %	Displays the total coverage of each mode.	
8 601 11	Cvg: BW Pages	Displays the number of the printouts in each mode.	

8 631	T:FAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by fax to a telephone number.		
8 633	F:FAX TX PGS	CTL	[0 to 99999999 / **0** / 1]

	This SP counts by color mode the number of pages sent by fax to a telephone number.		
001	B/W		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8631 and SP8633 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each destination.

8 641	T:IFAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by fax to as fax images using I-Fax.		
8 643	F:IFAX TX PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the number of pages sent by Fax as fax images using I-Fax.		
001	B/W		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8641 and SP8643 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each

destination.

8 651	T:S-to-Email PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the total number of pages attached to an e-mail for both the Scan and document server applications.		
8 655	S:S-to-Email PGS	CTL	[0 to 99999999 / **0** / 1]
	This SP counts by color mode the total number of pages attached to an e-mail for the Scan application only.		
001	B/W		
002	Color		

↓ Note

- The count for B/W and Color pages is done after the document is stored on the HDD. If the job is cancelled before it is stored, the pages are not counted.
- If Scan-to-Email is used to send a 10-page document to 5 addresses, the count is 10 (the pages are sent to the same SMTP server together).
- If Scan-to-PC is used to send a 10-page document to 5 folders, the count is 50 (the document is sent to each destination of the SMB/FTP server).
- Due to restrictions on some devices, if Scan-to-Email is used to send a 10-page document to a large number of destinations, the count may be divided and counted separately. For example, if a 10-page document is sent to 200 addresses, the count is 10 for the first 100 destinations and the count is also 10 for the second 100 destinations, for a total of 20.).

8 661	T:Deliv PGS/Svr	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by both Scan and LS applications.		
8 665	S:Deliv PGS/Svr	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by the Scan application.		

001	B/W	
002	Color	

↓ Note

- The B/W and Color counts are done after the document is stored on the HDD of the Scan Router server.
- If the job is canceled before storage on the Scan Router server finishes, the count is not done.
- The count is executed even if there is confirmation of the arrival at the Scan Router server.

8 671	T:Deliv PGS/PC	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent to a folder on a PC (Scan-to-PC) with the Scan and LS applications.		
8 675	S:Deliv PGS/PC	CTL	[0 to 99999999 / **0** / 1]
	These SPs count by color mode the total number of pages sent with Scan-to-PC with the Scan application.		
001	B/W		
002	Color		

Printer/
Scanner
Option
B892

↓ Note

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the count.
- If several documents are merged for sending, the number of pages stored are counted for the application that stored them.
- When several documents are sent by a Fax broadcast, the F: count is done for the number of pages sent to each destination.

8 681	T:PCFAX TXPGS	CTL	These SPs count the number of pages sent by PC Fax. These SPs are provided for the Fax application only, so the counts for SP8-681 and
8 683	F:PCFAX TXPGS	CTL	

			SP8-683 are the same.
			[0 to 99999999 / **0** / 1]

- This counts pages sent from a PC using a PC fax application, from the PC through the copier to the destination.
- When sending the same message to more than one place using broadcasting, the pages are only counted once. (For example, a 10-page fax is sent to location A and location B. The counter goes up by 10, not 20.)

8 701	TX PGS/Port	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages sent by the physical port used to send them. For example, if a 3-page original is sent to 4 destinations via ISDN G4, the count for ISDN (G3, G4) is 12.		
8 701 1	PSTN-1	-	
8 701 2	PSTN-2	-	
8 701 3	PSTN-3	-	
8 701 4	ISDN (G3,G4)	-	
8 701 5	Network	-	

8 711	T:Scan PGS/Comp	CTL	[0 to 99999999 / **0** / 1]
8 715	S:Scan PGS/Comp	CTL	[0 to 99999999 / **0** / 1]
	These SPs count the number of pages sent by each compression mode.		
-001	JPEG/JPEG2000	-	
-002	TIFF M/S (Multi/Single)	-	
003	PDF	-	
-004	Other	-	

8 771	Dev Counter	CTL	[0 to 99999999 / **0** / 1]
	This SP counts the total number of developed images.		
8 771 1	Total	-	

8 781	Toner Botol Info.	*BICU	[0 to 99999999 / **0** / 1]
	This SP displays the number of already replaced toner cartridges.		
8 781 1	BK	The number of black toner cartridges	

8 801	Toner Remain	CTL	[0 to 100 / **0** / 1]
	This SP displays the percent of toner remaining for each color. This SP allows the user to check the toner supply at any time. ↓ Note • This precise method of measuring remaining toner supply (1% steps) is better than other machines on the market that can only measure in increments of 10 (10% steps).		
8 801 1	K		

8 851	Cvr Cnt:0-10%	*BICU	[0 to 99999999 / **0** / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 0% to 10%.		
8 851 11	0-2%:Bk		
8 851 21	3-4%: Bk		
8 851 31	5-7%: Bk		
8 851 41	8-10%: Bk

B892

	each color is from 11% to 20%.
8 851 1	BK

	Cvr Cnt: 21-30%	*BICU	[0 to 99999999 / **0** / 1]
8 871	This SP displays the number of scanned sheets on which the coverage of each color is from 21% to 30%.		
8 871 1	BK		

	Cvr Cnt: 31%-	*BICU	[0 to 99999999 / **0** / 1]
8 881	This SP displays the number of scanned sheets on which the coverage of each color is 31% or higher.		
8 881 1	BK		

	Page/Toner Bottle	*BICU	[0 to 99999999 / **0** / 1]
8 891	This SP displays the number of sheets output by the scan application.		
8 891 1	BK		

	Page/Toner k Prev1	*BICU	[0 to 99999999 / **0** / 1]
8 901	This SP displays the number of sheets output by the scan application with the previously replaced units.		
8 901 1	BK		

	Page/Toner Prev2	*BICU	[0 to 99999999 / **0** / 1]
8 911	This SP displays the number of sheets output by the scan application with the unit replaced before the previously replaced unit (two steps back from the current unit).		
8 911 1	BK		

8 921	Cvr Cnt/Total	*BICU	
8 921 1	Coverage(%): BK		[0 to 2147483647 / **0** / 1] These SPs display the total coverage percentage of sheets output by the machine.
8 921 11	Covwerage/P: Bk		[0 to 99999999 / **0** / 1] These SPs display the total coverage pages output by the machine.

	Machine Status	CTL	[0 to 99999999 / **0** / 1]
8 941	These SPs count the amount of time the machine spends in each operation mode. These SPs are useful for customers who need to investigate machine operation for improvement of their compliance with ISO Standards.		
8 941 1	Operation Time		Engine operation time. Does not include time while controller is saving data to HDD (while engine is not operating).
8 941 2	Standby Time		Engine not operating. Includes time while controller saves data to HDD. Does not include time spent in Energy Save, Low Power, or Off modes.
8 941 3	Energy Save Time		Includes time while the machine is performing background printing.
8 941 4	Low Power Time		Includes time in Energy Save mode with Engine on. Includes time while machine is performing background printing.
8 941 5	Off Mode Time		Includes time while machine is performing background printing. Does not include time machine remains powered off with the power switches.
8 941 6	SC		Total down time due to SC errors.
8 941 7	PrtJam		Total down time due to paper jams during printing.

Printer/
Scanner
Option
B892

8 941 8	OrgJam	Total down time due to original jams during scanning.
8 941 9	Spl PM Unit End	Total down time due to toner end.

8 999	AdominCounter	CTL	[0 to 99999999 / **0** / 1]

8 999 105	FaxSend: BW	-	

4.3 PRINTER SERVICE MODE

4.3.1 SERVICE MODE TABLE

SP No.	Description	Function and Setting
1001	BitSw#1 Set	Adjusts bit switch settings. **Note:** Currently the bit switches are not being used.
1003	Clear Setting	Not used
1004	Print Summary	Prints the service summary sheet (An error log is printed in addition to the configuration page).
1005	Display Version	Displays the version of the controller firmware.

4.3.2 SP MODES RELATED TO PRINTER CONTROLLER

The following SP modes are located in the copier SP mode. Refer to section 5.1 of the main unit service manual.

SP No.	Description	Function and Setting
5801	Memory All Clear	Resets data for process control and all software counters, and returns all modes and adjustments to their defaults values. ☛ section "Memory Clear" in this chapter for details.
5907	Plug & Play	Selects the brand name and the production name for Windows Plug & Play. This information is stored in NVRAM.
7832	Detailed Display of Self-Diagnostics	Displays the controller self-diagnostic result.

Printer/ Scanner Option B892

4.4 SCANNER PROGRAM MODE TABLE

4.4.1 SERVICE TABLE KEY

Notation	What it means
[range / **default** / step]	Example: [-9 to +9 / **+3.0** / 0.1 mm step]. The setting can be adjusted in the range ±9, value reset to +3.0 after an NVRAM reset, and the value can be changed in 0.1 mm steps with each key press.
italics	Comments added for your reference.
*	This value is stored in NVRAM. After a RAM reset, the default value (factory setting) is restored.
DFU	Denotes "Design or Factory Use". Do not change this value.

4.4.2 SCANNER SERVICE MODE

SP1		Mode Number	Function and [Setting]
1001*	5	Scan NV Version	Displays the scanner NV version. This shows as following: Function name _ Model name _ Version
1004*	1	Compression Type	Selects the compression type for binary picture processing. [**1: MH**, 2: MR, 3: MMR]
1005*	1	Erase Margin	Creates an erase margin for all edges of the scanned image. If the machine has scanned the edge of the original, create a margin. [0 to 5 / **0mm** / 1mm step]
1009*	1	Remote Scan disable	Enables or disables the network TWAIN scanner function.

			0: enable, 1: disable	

SP	Number/Name	Function and [Setting]	
2021	Compression level (grayscale) These SP codes set the compression ratio for the grayscale processing mode that can be selected with the notch settings on the operation panel. Range: 5 (lowest ratio)←→ 95 (highest ratio)		
1	Level 3 (Middle I-Qual)	[5 to 95 / **40** /1/step]	
2	Level 2 (High I-Qual)	[5 to 95 / **50** /1/step]	
3	Level 4 (Low I-Qual)	[5 to 95 / **30** /1/step]	
4	Level 1 (Highest I-Qual)	[5 to 95 / **60** /1/step]	
5	Level 5 (Lowest I-Qual)	[5 to 95 / **20** /1/step]	

For the settings of the image quality, see the copier SP-mode table.

Printer/Scanner Option B892

4.5 USING SP MODE

4.5.1 MEMORY CLEAR

GW Machine

The GW machine (the machine with the optional controller box) stores the engine data in the NVRAM on the BICU, and stores the other data in the NVRAM on the optional controller. To distinguish between the engine data and the other data, see SP5-801-003 through 015. This service program (SP5-801) handles the controller data. Any data that is not handled by SP5-801 is the engine data. The data in the BICU NVRAM (engine data) is cleared by SP5-998-001 while the data in the controller NVRAM (controller data) is cleared by SP5-801-xxx (for exceptions, see "Exceptions" as described below).

Machine	Data	NVRAM	Cleared by	Remarks
GW	Engine data	BICU	SP5-998-001	Any data other than controller data
	Controller data	Controller	SP5-801-xxx	SCS, IMH, MCS, Copier application, Fax application, Printer application, Scanner application, Web service/network application, NCS, R-Fax, DCS, UCS

Exceptions

SP5-998-001 clears most of the settings and counters stored in the NVRAM on the BICU (the values return to their default values). However, the following settings are not cleared:

- SP5-807 (Area Selection)
- SP5-811-001 (Serial Num Input [Code Set])
- SP5-811-003 (Serial Num Input [ID2 Code Display])
- SP5-812-001 (Service TEL [Telephone])
- SP5-812-002 (Service TEL [Facsimile])
- SP5-907 (Plug & Play)
- SP7 (Data Log)
- SP8 (History)

Use SP5-998-001 after you have replaced the BICU NVRAM or when the BICU NVRAM data is corrupted. When the program ends normally, the message "Completed" is displayed. When you have replaced the controller NVRAM or when the controller NVRAM data is corrupted, use SP5-801-001. The message is the same as the basic machine.

Memory Clear Procedure

1. Print out all SMC data lists (☞ "SMC Print").
2. Do SP5-998-001.
3. Press the OK key.
4. Select "Execute." The messages "Execute?" followed by "Cancel" and "Execute" are displayed.
5. Select "Execute."
6. When the program has ended normally, the message "Completed" is displayed. If the program has ended abnormally, an error message is displayed.
7. Turn the main switch off and on.
8. Adjust the printer and scanner registration and magnification (☞ "Copy Adjustment" in the chapter "Replacement and Adjustment").
9. Refer to the SMC lists, and enter any values that differ from the factory settings. Double-check the values for SP4-901.
10. Adjust the standard white level (SP4-428).
11. Initialize the TD sensor (SP 2-214).
12. Check the copy quality and the paper path.

4.5.2 MACHINE NO. SETTING (SP5-811-001)

Specifying Characters

SP5-811-001 specifies the serial number. For the machine with the optional controller, you use the numeric keypad and the optional operation panel.

GW Machine

You can use the numeric keypad to type numbers. In addition, you can use the operation panel to type other characters. When you press the "ABC" key, the letter changes as follows: A → B → C. To input the same letter two times, for example "AA," you press the "ABC" key, the "Space" key, and the "ABC" key. To switch between uppercase letters and lowercase letters, press the "Shift" key.

Serial Number and NVRAM

Serial numbers are stored in the NVRAM before shipment and are not cleared. You must specify a serial number after you replace the NVRAM.

4.5.3 NVRAM DATA UPLOAD/DOWNLOAD

Uploading Content of NVRAM to an SD card

Follow this procedure to upload SP code settings from NVRAM to an SD card.

⬇ Note

- This data should always be uploaded to an SD card before the NVRAM is replaced.

1. Before switching the machine off, execute SP 5990-1 (SMC Print). You will need a record of the NVRAM settings if the upload fails.

2. Turn off the main power of the copier.

3. Remove the slot cover 3 (uppermost one) (🖉 x 1).

4. Insert the SD card into the service slot 3 (uppermost one), then turn on the main power of the copier.

5. Execute SP 5824-1 (NVRAM Data Upload) then press the "Execute" key.

    - When uploading is finished, a file is coped to an NVRAM folder on the SD card. The file is saved to the path and filename:

      NVRAM¥<serial number>.NV

      Here is an example with Serial Number "B0700017":

      NVRAM¥B0700017.NV

6. In order to prevent an error during the download, be sure to mark the SD card that holds the uploaded (saved) data with the number of the machine from which the data was uploaded (saved).

    ⭐ Important

    - NVRAM data from more than one machine can be uploaded (saved) to the same SD card.

7. Turn off the main power, and then remove the SD card from the slot 3 (the uppermost one).

8. Reassemble the machine.

Downloading an SD Card to NVRAM

Follow this procedure to download (save) SP data from an SD card to the NVRAM in the machine.

- If the SD card with the NVRAM data is damaged, or if the connection between the controller and BICU is defective, the NVRAM data download may fail.

- If the download fails, repeat the download procedure.

- If the second attempt fails, enter the NVRAM data manually using the SMC print you created before uploading the NVRAM data. (☛ above procedure)

1. Turn off the main power of the copier.

2. Remove the slot cover 3 (the uppermost one) (🔧 x 1).

3. Insert the SD card with the NVRAM data into the service slot 3 (the uppermost one).

4. Turn on the main power of the copier.

5. Execute SP 5825-1 (NVRAM Data Download) and press the "Execute" key.

6. Turn off the main power of the copier, and then remove the SD card from the slot 3 (the uppermost one).

7. Reassemble the machine.

> **↓ Note**
>
>   ▪ In order for the NVRAM data to download successfully, the serial number of the file on the SD card must match the serial number of the machine. If the serial numbers do not match, the download will fail.

This procedure downloads (saves) the following data to the NVRAM:

▪ Total Count

▪ C/O, P/O Count

4.5.4 FIRMWARE UPDATE PROCEDURE

This section illustrates how to update the firmware of the GW machine (the machine with the optional controller box).

To update the firmware for the GW machine, you must have the new version of the firmware downloaded onto an SD (Secure Digital) Card. The SD Card is inserted into the uppermost slot on the right side of the controller box, viewed from the back of the machine.

Before You Begin…

An SD card is a precision device, so always observe the following precautions when handling SD cards:

▪ Always switch the machine off before inserting an SD card. Never insert the SD card into the slot with the power on.

▪ When the power is switched on, never remove the SD card from the service slot.

▪ Never switch the machine off while the firmware is downloading from the SD card.

▪ Store SD cards in a safe location where they are not exposed high temperature, high humidity, or exposure to direct sunlight.

▪ Always handle SD cards with care to avoid bending or scratching them. Never drop an SD card or expose it to other shock or vibration.

Keep the following points in mind while you are using the firmware update software:

▪ "Upload" means to send data from the machine to the SD card, and "download" means to send data from the SD card to the machine.

▪ To select an item on the LCD screen, press the appropriate key on the operation panel,

<div style="text-align: right;">**Printer/ Scanner Option B892**</div>

Using SP Mode

or press the appropriate number key on the 10-key pad of the operation panel.

- Before starting the firmware update procedure, always make sure that the machine is disconnected from the network to prevent a print job for arriving while the firmware update is in progress.

Firmware Update Procedure

- Before beginning the following, first confirm which firmware version(s) are currently installed in the machine with SP7-801-255.

SD Card Preparation

1. Format an SD card with, for example, SD Formatter v1.1.
2. Create a "romdata" folder on the card.
3. Create the following folders within the "romdata" folder: B121, B620, B622, B658, B681, B685
4. Download the firmware from the server and store the files in the folder with the corresponding model code on the SD card.

   Example:

   File B1215540B should be stored in the "B121" folder, whereas files B6585902B, B6585903B, and B6585905B should be stored in the "B658" folder.

Firmware Update

- It is strongly recommended to store only B245/B276/B277 files on SD cards used for downloading to B245/B276/B277. With the controller used on this model, a firmware update may sometimes be interrupted if there is software for multiple models stored on the same SD card.
b284s501

1. Turn off the main power switch.

2. If the machine is connected to a network, disconnect the network cable from the copier.

3. Remove the slot cover [A] (🔩 x 1)

4. With the label on the SD card facing the rear side of the machine, insert the SD card into the uppermost slot [B] on the controller box. Slowly push the SD card into the slot so it locks in place.

5. Make sure the SD card is locked in place.
   (To remove the SD card, push it in to unlock the spring lock and then release it so it pops out of the slot.)

6. Switch the main power switch on. After about 5 seconds, the LCD will display "Please wait…" Then, about 60 seconds later, the LCD will display "Program UpDate Menu P.01" on the first line and the name of the firmware on the second line (e.g. System/Copy).

b867s502

7. Press the "OK" key to select a module.

Using SP Mode

- To scroll through the menus, press the △ or ▽ keys [A].

Program UpDate Menu P.01
ROM: B1234567A
NEW: B1234567B
Exit

b867s503

- To view the firmware version, press the right key. "ROM" is the information on the current firmware. "NEW" is the information on the firmware in the SD card.
- To return to the menu, press the ◁ key.
- To select the module, press the OK key.
- To scroll through the module name, the serial number, and the version, press the ◁ key or ▷ key.
- If you wish to install the following firmware simultaneously, press the START key. The scroll keys can be used to confirm that this firmware has been selected (highlighted with a dark background).
  [Engine, FCU, Scanner, Printer, Printer Font, Security Module]

  ★ Important

  - Please note that the following firmware **cannot** be updated simultaneously. The update procedure must be repeated for each individually.
  - System/Copy, ServiceCardNetFile, ServiceCardNIB, ServiceCardFAX, ServiceCardWebSystem.

Program UpDate Menu P.01
ROM: B2764567A
NEW: B2764567B
Verify   Update   Exit

b867s504

- When you have selected a module, the text lines are highlighted, and the "Verify" key and the "Update" key are displayed.

8. Select a module and press the "Update" key.

   ★ Important

   - Do **NOT** press the "Verify" key.

9. The firmware update program starts and the message "Loading" is displayed.

- The update will begin, and then will take a few minutes to complete. The LCD will initially display, "Updating…   ***---------".
- When the update is completed, the LCD display will change to "Update done" or "Updated / Power Off On".

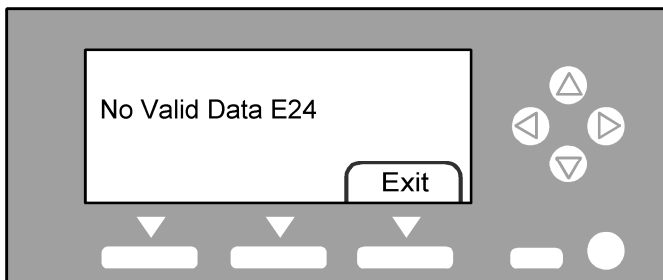

b867s505

10. Check that the message "Update Done" is displayed.

Confirmation

1. Turn the main power switch off and on.
    - The LCD will display "Please wait…" for about 60 seconds, after which it will return to the "Program UpDate Menu" screen.
2. Repeat Steps 1-8 above until all firmware updates are complete.
3. Turn the main power switch off.
4. Remove the SD card from the lower slot on the controller by pushing on the card to release the spring lock.

b867s506

If an error occurs, the error code is displayed. For a list of information on error codes, see the following table.

Code	Cause	Necessary Action
E20	Physical address mapping error	• Insert the SD card correctly. • Use another SD card
E22	Decompression error	• Store correct data in the SD card.

Printer/
Scanner
Option
B892

Using SP Mode

Code	Cause	Necessary Action
E23	Update program error	• Update controller program. • Replace the controller.
E24	SD card access error	• Insert the SD card correctly. • Use another SD card.
E31	Download data inconsistency*	• Insert the SD card that was used when the previous update procedure is interrupted.
E32	Download data inconsistency*	• Insert the SD card that stores the correct data.
E33	Version data error	• Store the correct data in the SD card.
E34	Locale data error	• Store the correct data in the SD card.
E35	Machine model data error	• Store the correct data in the SD card.
E36	Module data error	• Store the correct data in the SD card.
E40	Engine program error**	• Store the correct data in the SD card. • Replace BICU.
E42	Operation panel program error*	• Store the correct data in the SD card. • Replace the operation panel board.
E44	Controller program error*	• Store the correct data in the SD card. • Replace the controller board.
E50	Authentication error	• Store the correct data in the SD card.

*You need to reinstall the program.

If the firmware update program is interrupted (for example, by a power failure), keep the SD card inserted and turn the mains switch off and on. The firmware update program restarts. If you do not do so, the message "Reboot after Card insert" is displayed when you turn the main switch on.

4.5.5 SMC PRINT (SP5-990)

SP5-990 outputs machine status lists.

1. Select SP5-990.

2. Select a menu:

   - GW machine: 001 All (Data List), 002 SP (Mode Data List), 003 User Program, 004 Logging Data, 005 Diagnostic Report, 006 Non-Default, 007 NIB Summary, 008 Net File Log, 021 Copier User Program, 022 Scanner SP, 023 Scanner User Program, 040 Parts Alarm Counter Print, 064 Normal Count Print, 065 User Code Counter, 066 Key Operator Counter, 067 Contact List Print, 069 Heading1 print, 071 Heading3 print, 072 Group List Print, 128 ACC Pattern, 129 User Color Pattern, or 160:ACC Pattern Scan

   ↓ Note

   - The output given by the menu "Big Font" is suitable for faxing.

3. Press the "Execute" key.

   - GW machine: The machine status list is output.

4. To return to the SP mode, press the ⌾▭ key.

4.5.6 POWER-ON SELF TEST

The controller tests the following devices at power-on. If an error is detected, an error code is stored in the controller board.

- CPU, ASIC and clock
- Flash ROM
- Resident and optional SDRAM
- NVRAM

PS fonts (if installed)

Printer/
Scanner
Option
B892

5. DETAILED SECTION DESCRIPTIONS

5.1 GW CONTROLLER

5.1.1 OVERVIEW

b892d501

This machine uses the GW architecture. To enable printer features, install the printer option SD Card in the controller.

Main components:

- CPU: TOSHIBA TMPR4955BFG-300
- CHARANGO: GW architecture ASIC. It controls all the functions of the controller board.
- Flash ROM: 16 MB Flash ROM for the system program
- SDRAM: On board 128 MB, DIMM 256 MB (resident)
- NVRAM: Stores the controller settings
- LAN interface
- USB 2.0 interface
- SD Card: Printer/Scanner program

Optional components:

- PostScript3
- Bluetooth interface
- Wireless LAN interface
- IEEE1284 interface

5.1.2 CONTROLLER FUNCTIONS

Paper Source Selection

Tray Priority (Auto Tray Select)

```
┌─────────────────────┐
│    Priority Tray     │ ◄ - - -   Start of Tray Search
└─────────────────────┘
           │
           ▼
┌─────────────────────┐
│       Tray 1         │
└─────────────────────┘
           │
           ▼
┌─────────────────────┐
│   Tray 2  (Optional) │
└─────────────────────┘
```

b284d502

The Tray Priority setting determines the start of the tray search when the user selects "Auto Tray Select" with the driver.

The machine searches for a paper tray with the specified paper size and type.

When no tray contains paper that matches the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

The Tray Priority setting can be specified using the Paper Size Setting in the user tools.

(User Tools/ System Settings/ Paper Size Settings)

⬇ Note

- The by-pass tray is not part of the tray search.

Tray Lock

If Tray Lock is enabled for a tray, the controller skips the "locked" tray in the tray search process.

The Tray Lock setting can be specified by selecting "No" for the "Apply Auto Paper Select" setting in the Paper Size Setting screen in the user tools.
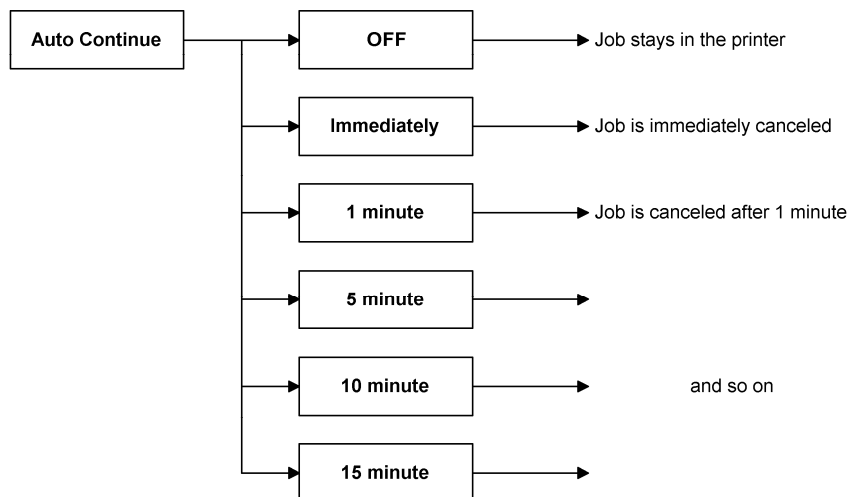

(User Tools/ System Settings/ Paper Size Settings)

⬇ Note

- The by-pass feeder cannot be locked.

Manual Tray Select

If the selected tray does not have the paper size and type specified by the driver, the controller stops printing until the user loads the correct paper.

Auto Continue

If no paper tray matches the paper size and paper type specified by the driver:

b867d503

When this function is enabled, the machine stops printing and cancels the print job if there is no paper tray which matches the paper size and paper type specified by the driver.

If Auto Continue is enabled, the machine waits for a specified period (0, 1, 5, 10, 15 minutes) for the correct size paper to be set in the tray, then cancels the print job if the interval expires.

▪ The interval can be set via Printer Settings in the user tools.

(User Tools/ Printer Settings/ System/ Auto Continue)

If Auto Continue is disabled, the machine will not print the job, but will not cancel it, so the job stays in the print queue.

↓ Note

▪ The default setting for Auto Continue is "Off."

Duplex Printing

Duplex printing is available with all output bin options but not all paper sizes. If a job specifies duplex printing but the paper size to be used cannot be used by the duplex unit, the job will be printed single-sided.

▪ When the by-pass feeder is selected as the paper source, duplex printing is automatically disabled.

5.1.3 ENERGY SAVER MODES

This section explains the energy saver modes.

Overview

b130d932

The machine has three energy-saver modes: the Low Power Mode, the Transit Mode, and the Night/Off Mode. The Transit Mode continues for about two seconds (probably, the user does not recognize this mode when it occurs). The table lists the status of several components.

	Operation panel	**Engine**	**Exhaust fan**
Operating Mode*	On	On	On
Low Power Mode	Off	On	Off
Transit Mode	Off	On	Off
Night/Off Mode	Off	Off**	Off

* The "Operating Mode" here refers to all the modes (and status) other than the Low Power Mode and Night/Off Mode. Actual power consumption (during the Operating Mode) depends on job status and environmental conditions.

** The SRAM is alive and backs up the engine controller.

GW Controller

AOF

When AOF is off, the engine controller is unable to start the Night/Off Mode. The user should keep AOF on (⊗⁄123 → System Settings → Key Operator Tools → AOF).

Timers

The engine controller references the Energy Saver Timer to start the Low Power Mode, and references the Auto Off Timer to start the Night/Off Mode. The user can set these timers (⊗⁄123→ System Settings → Timer Settings).

The Energy Saver Timer and the Auto Off Timer start at the same time (t0) when the machine ends all jobs or when the user ends all manual operations. Note that the Auto Off Timer does not wait for the Energy Saver Timer. If the user specifies a larger value in the Energy Saver Timer, the Auto Off Timer expires earlier than the Energy Saver Timer. In a case like this, the Low Power Mode is not activated. Instead, the engine controller starts the Night/Off Mode when the Auto Off Timer expires.

Specified value	Low Power Mode	Night/Off Mode
Energy Saver Timer > Auto Off Timer	Cannot start	Can start
Energy Saver Timer = Auto Off Timer	Cannot start	Can start
Energy Saver Timer < Auto Off Timer	Can start	Can start

Recovery

Any of the following operations brings the machine back to the Operating Mode:

- The power switch is pressed.
- Originals are set on the document feeder.
- The platen cover is opened.
- The controller receives a job over the network or the telephone line.
- An SC code is generated.

5.1.4 SCANNER FUNCTIONS

Image processing for scanner mode

The image processing for scanner mode is done in the IPU chip on the BICU board. The IPU chip chooses the most suitable image processing methods (gamma tables, dither patterns, etc) depending on the settings made in the driver.

The image compression method can be selected with SP mode (MR/MH/MMR for binary,
gray scale or full color picture processing).

Image Data Path:

1. **Image Store/Image Delivery Mode**

    The user can select the following modes from the LCD.

   ▪   Delivery only

    b262d905

    After image processing and image compression, all image data for the job are stored in the printer controller RAM using TIFF, PDF or JPEG file format (binary, gray scale or full color picture processing). The type of file format used depends on the user's scanner settings.

    When the delivery mode is selected, the controller creates a file which contains the destination and page information, and then the controller sends the file to a server.

2. **Twain Mode**

    After image processing and image compression, the data (binary, gray scale or full color picture of TIFF, PDF or JPEG) is sent to the scanner Twain driver directory on the computer.

    b262d906

6. SPECIFICATIONS

6.1 GENERAL SPECIFICATIONS

6.1.1 PRINTER

Resolution:	600 dpi (PCL 6/PCL5e/PS3/RPCS) 300 dpi (PCL5e/PS3) 200 dpi (RPCS)	
Printing speed:	16 ppm (A4L, 8½" × 11"L plain paper)	
Interface:	USB 2.0 interface, Ethernet interface (100BASE-TX/10BASE-T) Bi-directional IEEE1284 parallel x 1 (option) IEEE802.11b (Wireless LAN) (option) Bluetooth (option)	
Network protocol:	TCP/IP, IPP
