## TABLE OF CONTENTS

### PRODUCT INFORMATION

---

<b>1. PRODUCT INFORMATION</b> .....	<b>1-1</b>
1.1 SPECIFICATIONS.....	1-1
1.2 MACHINE CONFIGURATION .....	1-2
1.2.1 H-MODEL.....	1-2
1.2.2 L-MODEL.....	1-5
1.3 OVERVIEW .....	1-7

### INSTALLATION

---

<b>2. INSTALLATION</b> .....	<b>2-1</b>
2.1 INSTALLATION REQUIREMENTS .....	2-1
2.1.1 ENVIRONMENT .....	2-1
2.1.2 MACHINE LEVEL.....	2-1
2.1.3 MACHINE SPACE REQUIREMENTS .....	2-2
2.1.4 POWER REQUIREMENTS .....	2-2
2.2 OPTIONAL UNIT COMBINATIONS.....	2-3
2.2.1 MACHINE OPTIONS.....	2-3
2.2.2 CONTROLLER OPTIONS .....	2-3
2.3 COPIER INSTALLATION .....	2-5
2.3.1 POWER SOCKETS FOR PERIPHERALS .....	2-5
2.3.2 INSTALLATION FLOW CHART .....	2-6
2.3.3 ACCESSORY CHECK .....	2-6
2.3.4 INSTALLATION PROCEDURE .....	2-9
Tapes and Retainers.....	2-9
Developer and Toner Bottles .....	2-11
Paper Trays .....	2-13
Emblem and Decals.....	2-14
Fax Settings for D037-17 .....	2-14
Initialize the Developer.....	2-14

Settings Relevant to the Service Contract .....	2-15
Settings for @Remote Service.....	2-16
2.3.5 MOVING THE MACHINE .....	2-19
2.3.6 TRANSPORTING THE MACHINE .....	2-20
Main Frame.....	2-20
2.4 PAPER FEED UNIT (D331).....	2-21
2.4.1 ACCESSORY CHECK .....	2-21
2.4.2 INSTALLATION PROCEDURE .....	2-21
2.5 PAPER FEED UNIT (D425).....	2-24
2.5.1 COMPONENT CHECK.....	2-24
2.5.2 INSTALLATION PROCEDURE .....	2-24
2.6 CASTER TABLE (D488).....	2-27
2.6.1 COMPONENT CHECK.....	2-27
2.6.2 INSTALLATION PROCEDURE .....	2-27
2.7 ARDF (D366).....	2-29
2.7.1 COMPONENT CHECK.....	2-29
2.7.2 INSTALLATION PROCEDURE .....	2-29
2.8 PLATEN COVER INSTALLATION (G329) .....	2-33
2.9 SIDE TRAY (D427).....	2-34
2.9.1 COMPONENT CHECK.....	2-34
2.9.2 INSTALLATION PROCEDURE .....	2-34
2.10 1-BIN TRAY UNIT (D426).....	2-37
2.10.1 COMPONENT CHECK .....	2-37
2.10.2 INSTALLATION PROCEDURE.....	2-37
2.11 SHIFT TRAY UNIT (D428).....	2-40
2.11.1 COMPONENT CHECK .....	2-40
2.11.2 INSTALLATION PROCEDURE.....	2-40
2.12 INTERNAL FINISHER (D429).....	2-42
2.12.1 COMPONENT CHECK .....	2-42
2.12.2 INSTALLATION PROCEDURE.....	2-43
Preparing before Installing the Internal Finisher.....	2-43
Internal Finisher Installation .....	2-45
2.13 PUNCH UNIT (D390).....	2-48
2.13.1 COMPONENT CHECK .....	2-48
2.13.2 INSTALLATION PROCEDURE.....	2-48
Removing the Internal Finisher .....	2-49
Preparing the Punch Unit before Installing the Internal Finisher .....	2-51

	Installing the Punch and Inverter Unit .....	2-53
	Preparing the Internal Finisher.....	2-55
	Installing the Internal Finisher .....	2-56
2.14	USB2.0/SD SLOT TYPE A .....	2-60
2.14.1	ACCESSORY CHECK.....	2-60
2.14.2	INSTALLATION PROCEDURE.....	2-60
2.14.3	TESTING THE SD CARD/USB SLOT .....	2-63
2.15	MECHANICAL COUNTER (NA ONLY).....	2-65
2.15.1	INSTALLATION PROCEDURE.....	2-65
2.16	KEY COUNTER BRACKET .....	2-67
2.16.1	INSTALLATION PROCEDURE.....	2-67
2.17	KEY COUNTER INTERFACE UNIT .....	2-69
2.17.1	INSTALLATION PROCEDURE.....	2-69
2.18	COPY DATA SECURITY UNIT TYPE F (B829).....	2-71
2.18.1	INSTALLATION .....	2-71
	User Tool Setting .....	2-72
2.19	ANTI-CONDENSATION HEATER .....	2-73
2.19.1	INSTALLATION PROCEDURE.....	2-73
2.20	TRAY HEATER (MAINFRAME).....	2-77
2.20.1	INSTALLATION PROCEDURE.....	2-77
2.21	TRAY HEATERS (OPTIONAL UNIT).....	2-79
2.21.1	INSTALLATION PROCEDURE.....	2-79
	Tray Heater for D425 .....	2-79
	Tray Heater for D331 .....	2-83
2.22	CONTROLLER OPTIONS .....	2-87
2.22.1	OVERVIEW.....	2-87
	I/F Card Slots .....	2-87
	SD Card Slots .....	2-87
	USB Slots .....	2-88
2.22.2	SD CARD APPLI MOVE .....	2-88
	Overview .....	2-88
	Move Exec.....	2-89
	Undo Exec .....	2-90
2.22.3	POSTSCRIPT 3 (D038/D041 ONLY).....	2-90
2.22.4	FILE FORMAT CONVERTER (D038/D041 ONLY).....	2-91
2.22.5	IEEE1284 (D038/D041 ONLY).....	2-92
	Installation Procedure .....	2-92

2.22.6	IEEE 802.11 A/G, G (WIRELESS LAN: D038/D041 ONLY) .....	2-93
	Installation Procedure .....	2-93
	UP Mode Settings for Wireless LAN .....	2-95
	SP Mode and UP Mode Settings for IEEE 802.11 a/g, g Wireless LAN	2-96
2.22.7	BLUETOOTH (D038/D041 ONLY).....	2-97
2.22.8	DATAOVERWRITESECURITY UNIT TYPE I (D362: D038/D041 ONLY) 2-98	
	Before You Begin the Procedure .....	2-98
	Seal Check and Removal .....	2-99
	Installation Procedure .....	2-99
2.22.9	HDD ENCRYPTION UNIT (D038/D041 ONLY) .....	2-101
	Before You Begin the Procedure .....	2-101
	Seal Check and Removal .....	2-102
	Installation Procedure .....	2-103
	Recovery from a Device Problem .....	2-104
	Restoring the Encryption key .....	2-104
	Clearing the NVRAM.....	2-105
2.22.10	PICTBRIDGE .....	2-105
2.22.11	VM CARD TYPE I (D038/D041 ONLY) .....	2-106
	Installation Procedure .....	2-106
	Firmware Update Procedure .....	2-107
2.22.12	BROWSER UNIT TYPE E (D038/D041 ONLY).....	2-108
	Installation Procedure .....	2-108
	Update Procedure.....	2-109
2.22.13	GIGABIT ETHERNET (D038/D041 ONLY) .....	2-110
2.22.14	MEMORY UNIT TYPE I 512MB (D038/D041 ONLY) .....	2-111
2.22.15	CHECK ALL CONNECTIONS .....	2-112

## PREVENTIVE MAINTENANCE

---

<b>3.</b>	<b>PREVENTIVE MAINTENANCE.....</b>	<b>3-1</b>
3.1	MAINTENANCE TABLES .....	3-1
3.2	PM PARTS SETTINGS .....	3-2
3.2.1	BEFORE REMOVING THE OLD PM PARTS.....	3-2
3.2.2	AFTER INSTALLING THE NEW PM PARTS .....	3-3
3.2.3	PREPARATION BEFORE OPERATION CHECK.....	3-3
3.2.4	OPERATION CHECK.....	3-4

## REPLACEMENT AND ADJUSTMENT

---

<b>4. REPLACEMENT AND ADJUSTMENT .....</b>	<b>4-1</b>
4.1 BEFOREHAND.....	4-1
4.2 SPECIAL TOOLS .....	4-2
4.3 IMAGE ADJUSTMENT .....	4-3
4.3.1 SCANNING.....	4-3
Scanner sub-scan magnification .....	4-3
Scanner leading edge and side-to-side registration .....	4-3
4.3.2 ARDF.....	4-4
ARDF side-to-side, leading edge registration and trailing edge .....	4-4
ARDF sub-scan magnification.....	4-5
4.3.3 REGISTRATION.....	4-5
Image Area .....	4-5
Leading Edge.....	4-6
Side to Side.....	4-6
Adjustment Standard .....	4-6
Paper Registration Standard.....	4-6
Adjustment Procedure .....	4-6
4.3.4 ERASE MARGIN ADJUSTMENT .....	4-6
4.3.5 COLOR REGISTRATION.....	4-7
Line Position Adjustment .....	4-7
4.3.6 PRINTER GAMMA CORRECTION .....	4-8
Copy Mode .....	4-8
Printer Mode .....	4-13
4.4 EXTERIOR COVERS .....	4-15
4.4.1 PCDU TONER COLLECTION BOTTLE .....	4-15
4.4.2 FRONT DOOR .....	4-15
4.4.3 ITB CLEANING UNIT COVER.....	4-16
4.4.4 LEFT COVER .....	4-17
4.4.5 REAR COVER.....	4-17
4.4.6 REAR LOWER COVER.....	4-18
4.4.7 DUST FILTER .....	4-18
4.4.8 RIGHT REAR COVER.....	4-18
4.4.9 OPERATION PANEL.....	4-19
For D038/D041 .....	4-19

For D037/D040 .....	4-20
4.4.10 TOUCH PANEL POSITION ADJUSTMENT (D038/D041) .....	4-20
4.4.11 INNER RIGHT COVER .....	4-21
4.4.12 INNER COVER .....	4-21
4.4.13 FRONT RIGHT COVER .....	4-22
4.4.14 RIGHT UPPER COVER .....	4-22
4.4.15 LEFT FRAME AND LEFT FRAME REAR COVER .....	4-23
4.4.16 PAPER EXIT COVER .....	4-23
4.4.17 INVERTER TRAY .....	4-24
4.4.18 INNER TRAY .....	4-24
4.4.19 INNER REAR COVER .....	4-24
4.5 SCANNER UNIT .....	4-26
4.5.1 EXPOSURE GLASS .....	4-26
4.5.2 ORIGINAL LENGTH SENSORS .....	4-27
4.5.3 EXPOSURE LAMP .....	4-28
Reassembling .....	4-30
4.5.4 SCANNER MOTOR .....	4-30
4.5.5 SENSOR BOARD UNIT (SBU) .....	4-31
When reassembling .....	4-32
4.5.6 EXPOSURE LAMP STABILIZER .....	4-32
4.5.7 SCANNER HP SENSOR .....	4-32
4.5.8 PLATEN COVER SENSOR .....	4-33
4.5.9 FRONT SCANNER WIRE .....	4-34
Reinstalling the Front Scanner Wire .....	4-36
4.5.10 REAR SCANNER WIRE .....	4-38
Reinstalling the Rear Scanner Wire .....	4-38
4.6 LASER OPTICS .....	4-40
4.6.1 CAUTION DECAL LOCATION .....	4-40
4.6.2 LASER UNIT .....	4-40
Preparing a new laser unit .....	4-41
Before removing the old laser unit .....	4-41
Recovery procedure for no replacement preparation of laser unit .....	4-42
Removing the laser unit .....	4-43
After installing a new laser unit .....	4-44
4.6.3 POLYGON MIRROR MOTOR .....	4-45
4.7 IMAGE CREATION .....	4-47
4.7.1 PCDU (PHOTO CONDUCTOR AND DEVELOPMENT UNIT) .....	4-47

When installing a new PCDU .....	4-47
4.7.2 DRUM UNIT AND DEVELOPMENT UNIT .....	4-48
New unit detection for the development unit .....	4-50
4.7.3 TONER HOPPER UNIT .....	4-50
Toner hopper unit: K, C, M .....	4-50
Toner hopper unit: Y .....	4-51
When installing a new toner hopper unit .....	4-52
4.7.4 TONER SUPPLY MOTOR .....	4-52
4.7.5 TONER COLLECTION MOTOR .....	4-54
4.7.6 PCDU TONER COLLECTION BOTTLE FULL SENSOR .....	4-56
4.7.7 PCDU TONER COLLECTION BOTTLE SET SWITCH .....	4-56
4.7.8 RFID BOARD .....	4-57
4.8 IMAGE TRANSFER .....	4-58
4.8.1 ITB CLEANING UNIT .....	4-58
When installing the ITB cleaning unit .....	4-58
4.8.2 ITB TONER COLLECTION BOTTLE FULL SENSOR .....	4-58
4.8.3 ITB (IMAGE TRANSFER BELT) UNIT .....	4-59
4.8.4 ITB UNIT MOTOR .....	4-60
4.8.5 IMAGE TRANSFER BELT .....	4-60
When reinstalling a new image transfer belt .....	4-64
4.8.6 ITB CONTACT MOTOR .....	4-64
4.8.7 ITB CONTACT SENSOR .....	4-65
4.9 PAPER TRANSFER .....	4-67
4.9.1 PTR (PAPER TRANSFER ROLLER) UNIT .....	4-67
4.9.2 OPENING THE PAPER TRANSFER UNIT .....	4-68
4.9.3 ID SENSOR BOARD .....	4-68
Cleaning for ID sensors .....	4-69
After installing a new ID sensor unit/board .....	4-70
4.9.4 TEMPERATURE AND HUMIDITY SENSOR .....	4-70
4.10 DRIVE UNIT .....	4-72
4.10.1 GEAR UNIT .....	4-72
Adjustment after reinstalling the gear unit .....	4-73
4.10.2 REGISTRATION MOTOR .....	4-74
4.10.3 PAPER FEED MOTOR: T1 .....	4-74
4.10.4 PAPER FEED MOTOR: T2 .....	4-75
4.10.5 DRUM MOTOR: CMY .....	4-75
4.10.6 DEVELOPMENT MOTOR: CMY .....	4-76

4.10.7	DRUM/DEVELOPMENT MOTOR: K .....	4-76
4.10.8	DEVELOPMENT CLUTCH: K.....	4-77
4.10.9	FUSING/PAPER EXIT MOTOR .....	4-77
4.11	FUSING .....	4-80
4.11.1	PM PARTS.....	4-80
4.11.2	FUSING UNIT .....	4-80
	When installing the fusing unit .....	4-81
4.11.3	ENTRANCE GUIDE PLATE.....	4-81
	Cleaning Requirement .....	4-81
4.11.4	STRIPPER PLATE.....	4-82
	Cleaning Requirement .....	4-83
4.11.5	EXIT GUIDE PLATE CLEANING PROCEDURE .....	4-84
4.11.6	PRESSURE ROLLER FUSING LAMP.....	4-84
4.11.7	HEATING ROLLER FUSING LAMP .....	4-86
4.11.8	FUSING BELT .....	4-87
4.11.9	HEATING, FUSING AND TENSION ROLLER.....	4-90
	When reinstalling the fusing roller .....	4-91
4.11.10	PRESSURE ROLLER .....	4-91
	Cleaning Requirement .....	4-93
4.11.11	HEATING ROLLER THERMOSTATS .....	4-93
4.11.12	HEATING ROLLER THERMISTOR .....	4-93
	Cleaning Requirement .....	4-94
4.11.13	PRESSURE ROLLER THERMISTOR.....	4-94
	Pressure Roller Thermistor: Center .....	4-94
	Pressure Roller Thermistor: Center .....	4-95
	Cleaning Requirement .....	4-96
4.11.14	PRESSURE ROLLER THERMOSTAT.....	4-96
4.11.15	THERMOPILE .....	4-96
	When cleaning the lens of the thermopile .....	4-97
4.11.16	CLEANING UNIT (OPTION) INSTALLATION PROCEDURE	4-98
4.12	PAPER FEED .....	4-100
4.12.1	PAPER TRAY .....	4-100
4.12.2	FEED ROLLER.....	4-100
	Tray 1 and Tray 2.....	4-100
	When reinstalling the feed roller.....	4-100
4.12.3	FRICTION PAD.....	4-100
	When reinstalling the friction pad .....	4-101

4.12.4	PAPER SIZE SWITCH.....	4-102
4.12.5	PAPER END SENSOR .....	4-102
	Paper End Sensor: T1 .....	4-102
	Paper End Sensor: T2 .....	4-103
4.12.6	REGISTRATION SENSOR.....	4-103
	Cleaning the registration roller .....	4-104
4.12.7	VERTICAL TRANSPORT SENSOR .....	4-105
	Vertical Transport Sensor 1 .....	4-105
	Vertical Transport Sensor 2 .....	4-106
4.13	PAPER EXIT.....	4-108
4.13.1	JUNCTION GATE SOLENOID FAN .....	4-108
	When installing the junction gate solenoid fan .....	4-108
4.13.2	PAPER EXIT UNIT .....	4-108
4.13.3	FUSING EXIT .....	4-109
4.13.4	PAPER EXIT SENSOR.....	4-110
	When installing the paper exit sensor .....	4-111
4.13.5	INVERTER SENSOR.....	4-111
4.13.6	INVERTER MOTOR .....	4-112
4.13.7	FUSING FRONT FAN.....	4-113
	When installing the fusing front fan.....	4-113
4.14	DUPLEX UNIT .....	4-114
4.14.1	DUPLEX UNIT .....	4-114
4.14.2	DUPLEX ENTRANCE SENSOR.....	4-115
4.14.3	DUPLEX EXIT SENSOR.....	4-116
4.14.4	DUPLEX ENTRANCE MOTOR.....	4-117
4.14.5	DUPLEX EXIT MOTOR .....	4-118
4.14.6	BY-PASS MOTOR.....	4-119
4.14.7	BY-PASS TRAY UNIT .....	4-120
4.14.8	BY-PASS PAPER LENGTH SENSOR.....	4-120
4.14.9	BY-PASS PAPER SIZE SENSOR .....	4-121
	When reinstalling the by-pass paper size sensor.....	4-122
4.14.10	BY-PASS PAPER END SENSOR .....	4-123
	Reinstalling the By-pass Paper End Sensor .....	4-123
4.14.11	BY-PASS FEED ROLLER .....	4-123
4.14.12	BY-PASS TRAY HP SENSOR .....	4-123
4.15	ELECTRICAL COMPONENTS .....	4-125
4.15.1	BOARDS.....	4-125

4.15.2	CONTROLLER BOX COVER .....	4-126
4.15.3	CONTROLLER BOX.....	4-126
	Opening the controller box.....	4-126
4.15.4	BCU .....	4-127
	When installing the new BCU.....	4-128
4.15.5	HDD (ONLY FOR D038/D041) .....	4-128
4.15.6	CONTROLLER BOX FAN.....	4-129
	When installing the controller box fan .....	4-130
4.15.7	FUSING REAR FAN .....	4-130
	When installing the fusing rear fan.....	4-131
4.15.8	PSU .....	4-131
4.15.9	HVPS: TTS BOARD.....	4-132
4.15.10	HVPS: CB BOARD.....	4-132
4.15.11	I-CONTROLLER BOARD.....	4-133
	When installing the new controller board .....	4-135
	When installing a new HDD unit.....	4-135
	Disposal of HDD Units .....	4-136
	Reinstallation .....	4-136
4.15.12	NVRAM REPLACEMENT PROCEDURE.....	4-136
	NVRAM on the BCU .....	4-136
	NVRAM on the Controller .....	4-137
4.16	MACHINE BOOT-UP .....	4-138

## SYSTEM MAINTENANCE REFERENCE

## Important Safety Notices

### Responsibilities of the Customer Engineer

#### Customer Engineer

Maintenance shall be done only by trained customer engineers who have completed service training for the machine and all optional devices designed for use with the machine.

#### Reference Material for Maintenance

- Maintenance shall be done using the special tools and procedures prescribed for maintenance of the machine described in the reference materials (service manuals, technical bulletins, operating instructions, and safety guidelines for customer engineers).
- In regard to other safety issues not described in this document, all customer engineers shall strictly obey procedures and recommendations described the "CE Safety Guide".
- Use only consumable supplies and replacement parts designed for use of the machine.

### Before Installation, Maintenance

#### Shipping and Moving the Machine

#### CAUTION

- Work carefully when lifting or moving the machine. If the machine is heavy, two or more customer engineers may be required to prevent injuries (muscle strains, spinal injuries, etc.) or damage to the machine if it is dropped or tipped over.
- Personnel moving or working around the machine should always wear proper clothing and footwear. Never wear loose fitting clothing or accessories (neckties, loose sweaters, bracelets, etc. ) or casual footwear (slippers, sandals, etc.) when lifting or moving the machine.
- Always unplug the power cord from the power source before you move the product. Before you move the product, arrange the power cord so it will not fall under the product.

#### Power

#### WARNING

- Always disconnect the power plug before doing any maintenance procedure. After switching off the machine, power is still supplied to the main machine and other

devices. To prevent electrical shock, switch the machine off, wait for a few seconds, then unplug the machine from the power source.

- Before you do any checks or adjustments after turning the machine off, work carefully to avoid injury. After removing covers or opening the machine to do checks or adjustments, never touch electrical components or moving parts (gears, timing belts, etc.).
- After turning the machine on with any cover removed, keep your hands away from electrical components and moving parts. Never touch the cover of the fusing unit, gears, timing belts, etc.

### Installation, Disassembly, and Adjustments

#### **CAUTION**

- After installation, maintenance, or adjustment, always check the operation of the machine to make sure that it is operating normally. This ensures that all shipping materials, protective materials, wires and tags, metal brackets, etc., removed for installation, have been removed and that no tools remain inside the machine. This also ensures that all release interlock switches have been restored to normal operation.
- Never use your fingers to check moving parts causing spurious noise. Never use your fingers to lubricate moving parts while the machine is operating.

### Special Tools

#### **CAUTION**

- Use only standard tools approved for machine maintenance.
- For special adjustments, use only the special tools and lubricants described in the service manual. Using tools incorrectly, or using tools that could damage parts, could damage the machine or cause injuries.

### During Maintenance

#### General

#### **CAUTION**

- Before you begin a maintenance procedure: 1) Switch the machine off, 2) Disconnect the power plug from the power source, 3) Allow the machine to cool for at least 10 minutes.
- Avoid touching the components inside the machine that are labeled as hot surfaces.

### Safety Devices

#### **WARNING**

- Never remove any safety device unless it requires replacement. Always replace safety devices immediately.
- Never do any procedure that defeats the function of any safety device. Modification or removal of a safety device (fuse, switch, etc.) could lead to a fire and personal injury. Always test the operation of the machine to ensure that it is operating normally and safely after removal and replacement of any safety device.
- For replacements use only the correct fuses or circuit breakers rated for use with the machine. Using replacement devices not designed for use with the machine could lead to a fire and personal injuries.

### Organic Cleaners

#### **CAUTION**

- During preventive maintenance, never use any organic cleaners (alcohol, etc.) other than those described in the service manual.
- Make sure the room is well ventilated before using any organic cleaner. Use organic solvents in small amounts to avoid breathing the fumes and becoming nauseous.
- Switch the machine off, unplug it, and allow it to cool before doing preventive maintenance. To avoid fire or explosion, never use an organic cleaner near any part that generates heat.
- Wash your hands thoroughly after cleaning parts with an organic cleaner to contamination of food, drinks, etc. which could cause illness.
- Clean the floor completely after accidental spillage of silicone oil or other materials to prevent slippery surfaces that could cause accidents leading to hand or leg injuries. Use "My Ace" Silicone Oil Remover (or dry rags) to soak up spills. For more details, please refer to Technical Bulletin "Silicone Oil Removal" (A024-50).

### Lithium Batteries

#### **WARNING**

- Always replace a lithium battery on a PCB with the same type of battery prescribed for use on that board. Replacing a lithium battery with any type other than the one prescribed for use on the board could lead to an explosion or damage to the PCB.
- Never discard used batteries by mixing them with other trash. Remove them from the work site and dispose of them in accordance with local laws and regulations regarding the disposal of such items.

### Ozone Filters

#### **CAUTION**

- Always replace ozone filters as soon as their service life expires (as described in the service manual).
- An excessive amount of ozone can build up around machines that use ozone filters if they are not replaced at the prescribed time. Excessive ozone could cause personnel working around the machine to feel unwell.

### Power Plug and Power Cord

#### **WARNING**

- Before serving the machine (especially when responding to a service call), always make sure that the power plug has been inserted completely into the power source. A partially inserted plug could lead to heat generation (due to a power surge caused by high resistance) and cause a fire or other problems.
- Always check the power plug and make sure that it is free of dust and lint. Clean it if necessary. A dirty plug can generate heat which could cause a fire.
- Inspect the length of the power cord for cuts or other damage. Replace the power cord if necessary. A frayed or otherwise damaged power cord can cause a short circuit which could lead to a fire or personal injury from electrical shock.
- Check the length of the power cord between the machine and power supply. Make sure the power cord is not coiled or wrapped around any object such as a table leg. Coiling the power cord can cause excessive heat to build up and could cause a fire.
- Make sure that the area around the power source is free of obstacles so the power cord can be removed quickly in case of an emergency.
- Make sure that the power cord is grounded (earthed) at the power source with the ground wire on the plug.
- Connect the power cord directly into the power source. Never use an extension cord.
- When you disconnect the power plug from the power source, always pull on the plug, not the cable.

### After Installation, Servicing

#### Disposal of Used Items

#### **WARNING**

- Never incinerate used toner or toner cartridges.
- Toner or toner cartridges thrown into a fire can ignite or explode and cause serious

injury. At the work site always carefully wrap used toner and toner cartridges with plastic bags to avoid spillage before disposal or removal.

 **CAUTION**

- Always dispose of used items (developer, toner, toner cartridges, OPC drums, etc.) in accordance with the local laws and regulations regarding the disposal of such items.
- To protect the environment, never dispose of this product or any kind of waste from consumables at a household waste collection point. Dispose of these items at one of our dealers or at an authorized collection site.
- Return used selenium drums to the service center for handling in accordance with company policy regarding the recycling or disposal of such items.

**Points to Confirm with Operators**

At the end of installation or a service call, instruct the user about use of the machine.

Emphasize the following points.

- Show operators how to remove jammed paper and troubleshoot other minor problems by following the procedures described in the operating instructions.
- Point out the parts inside the machine that they should never touch or attempt to remove.
- Confirm that operators know how to store and dispose of consumables.
- Make sure that all operators have access to an operating instruction manual for the machine.
- Confirm that operators have read and understand all the safety instructions described in the operating instructions.
- Demonstrate how to turn off the power and disconnect the power plug (by pulling the plug, not the cord) if any of the following events occur: 1) something has spilled into the product, 2) service or repair of the product is necessary, 3) the product cover has been damaged.
- Caution operators about removing paper fasteners around the machine. They should never allow paper clips, staples, or any other small metallic objects to fall into the machine.

**Special Safety Instructions for Toner**

**Accidental Physical Exposure**

 **CAUTION**

- Work carefully when removing paper jams or replacing toner bottles or cartridges to avoid spilling toner on clothing or the hands.

- If toner is inhaled, immediately gargle with large amounts of cold water and move to a well ventilated location. If there are signs of irritation or other problems, seek medical attention.
- If toner gets on the skin, wash immediately with soap and cold running water.
- If toner gets into the eyes, flush the eyes with cold running water or eye wash. If there are signs of irritation or other problems, seek medical attention.
- If toner is swallowed, drink a large amount of cold water to dilute the ingested toner. If there are signs of any problem, seek medical attention.
- If toner spills on clothing, wash the affected area immediately with soap and cold water. Never use hot water! Hot water can cause toner to set and permanently stain fabric.

#### Handling and Storing Toner

##### **WARNING**

- Toner, used toner, and developer are extremely flammable.
- Never store toner, developer, toner cartridges, or toner bottles (including empty toner bottles or cartridges) in a location where they will be exposed to high temperature or an open flame.

##### **CAUTION**

- Always store toner and developer supplies such as toner and developer packages, cartridges, and bottles (including used toner and empty bottles and cartridges) out of the reach of children.
- Always store fresh toner supplies or empty bottles or cartridges in a cool, dry location that is not exposed to direct sunlight.

#### Toner Disposal

##### **WARNING**

- Never attempt to incinerate toner, used toner, or empty toner containers (bottles or cartridges). Burning toner can explode and scatter, causing serious burns.
- Always wrap used toner and empty toner bottles and cartridges in plastic bags to avoid spillage. Follow the local laws and regulations regarding the disposal of such items.
- Dispose of used toner and toner cartridges at one of our dealers or at an authorized collection site. Always dispose of used toner cartridges and toner bottles in accordance with the local laws and regulations regarding the disposal of such items.

## **Safety Instructions for this Machine**

### **Prevention of Physical Injury**

1. Before disassembling or assembling parts of the machine and peripherals, make sure that the machine and peripheral power cords are unplugged.
2. The plug should be near the machine and easily accessible.
3. Note that some components of the machine and the paper tray unit are supplied with electrical voltage even if the main power switch is turned off.
4. If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.
5. If the [Start] key is pressed before the machine completes the warm-up period (the [Start] key starts blinking red and green ), keep hands away from the mechanical and the electrical components as the machine starts making copies as soon as the warm-up period is completed.
6. The inside and the metal parts of the fusing unit become extremely hot while the machine is operating. Be careful to avoid touching those components with your bare hands.
7. To prevent a fire or explosion, keep the machine away from flammable liquids, gases, and aerosols.

### **Health Safety Conditions**

1. Never operate the machine without the ozone filters installed.
2. Always replace the ozone filters with the specified types at the proper intervals.
3. Toner and developer are non-toxic, but if you get either of them in your eyes by accident, it may cause temporary eye discomfort. Try to remove with eye drops or flush with water as first aid. If unsuccessful, get medical attention.

### **Observance of Electrical Safety Standards**

1. The machine and its peripherals must be installed and maintained by a customer service representative who has completed the training course on those models.
2. The NVRAM on the system control board has a lithium battery which can explode if replaced incorrectly. Replace the NVRAM only with an identical one. The manufacturer recommends replacing the entire NVRAM. Do not recharge or burn this battery. Used NVRAM must be handled in accordance with local regulations.

### **Safety and Ecological Notes for Disposal**

1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly when exposed to an open flame.

2. Dispose of used toner, developer, and organic photoconductors in accordance with local regulations. (These are non-toxic supplies.)
3. Dispose of replaced parts in accordance with local regulations.
4. When keeping used lithium batteries in order to dispose of them later, do not put more than 100 batteries per sealed box. Storing larger numbers or not sealing them apart may lead to chemical reactions and heat build-up.

### **CAUTION**

- The danger of explosion exists if a battery of this type is incorrectly replaced.
- Replace only with the same or an equivalent type recommended by the manufacturer. Discard used batteries in accordance with the manufacturer's instructions.

### **Laser Safety**

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

### **WARNING**

- **Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.**

### **WARNING**

- **WARNING:** Turn off the main switch before attempting any of the procedures in the Laser Optics Housing Unit section. Laser beams can seriously damage your eyes.
- **CAUTION MARKING:**

d037r501

## Symbols, Abbreviations and Trademarks

This manual uses several symbols and abbreviations. The meaning of those symbols and abbreviations are as follows:

	See or Refer to
	Clip ring
	Screw
	Connector
	Clamp
	E-ring
SEF	Short Edge Feed
LEF	Long Edge Feed

**Short Edge Feed (SEF)**

**Long Edge Feed (LEF)**

# 1. PRODUCT INFORMATION

## 1.1 SPECIFICATIONS

See "[Appendices](#)" for the following information:

- Mainframe Specifications
- Printer Specifications
- Scanner Specifications
- Supported Paper Sizes
- Software Accessories
- Optional Equipment

**Machine Configuration**

**1.2 MACHINE CONFIGURATION**

There are two grades for this machine.

- L-Model: This is a light model. Expansion functions and options are limited.
- H-Model: This is a high grade model. Various expansion functions and options can be used.

**1.2.1 H-MODEL**

d037v500

Item	Machine Code	Call out	Remarks
Mainframe	D038/D041	[1]	D038, D041
Platen cover	G329	[2]	One from the two; [3] is standard.
ARDF	D366	[3]	
Side tray	D427	[4]	-

## 1.3 OVERVIEW

For "Overview" information, see "[Appendices](#)".

# INSTALLATION

<b>SECTION 2 INSTALLATION REVISION HISTORY</b>		
<b>Page</b>	<b>Date</b>	<b>Added/Updated/New</b>
3 ~ 4	02/11/2009	Options
87	05/07/2009	Controller Options
96	07/01/2009	Wireless Lan
98 ~ 101	02/10/2009	Controller Options
105	05/07/2009	Controller Options
106	02/11/2009	VM Card
108 ~ 109	02/11/2009	Browser Unit

## 2. INSTALLATION

### 2.1 INSTALLATION REQUIREMENTS

#### 2.1.1 ENVIRONMENT

1. Temperature Range: 10°C to 32°C (50°F to 89.6°F)
2. Humidity Range: 15% to 80% RH
3. Ambient Illumination: Less than 1500 lux (do not expose to direct sunlight)
4. Ventilation: 3 times/hr/person or more
5. Do not let the machine get exposed to the following:
  - 1) Cool air from an air conditioner
  - 2) Heat from a heater
6. Do not install the machine in areas that are exposed to corrosive gas.
7. Install the machine at locations lower than 2,500 m (8,200 ft.) above sea level.
8. Install the machine on a strong, level base. (Inclination on any side must be no more than 5 mm.)
9. Do not install the machine in areas that get strong vibrations.

#### 2.1.2 MACHINE LEVEL

Front to back: Within 5 mm (0.2")

Right to left: Within 5 mm (0.2")

## Installation Requirements

### 2.1.3 MACHINE SPACE REQUIREMENTS

#### **⚠ CAUTION**

- This machine, which uses high voltage power sources, can generate ozone gas. High ozone density is harmful to human health. Therefore, the machine must be installed in a well-ventilated room.

d037i109

A: Over 100 mm (3.9")

B: Over 100 mm (3.9")

C: Over 100 mm (3.9")

D: Over 100 mm (3.9")

Put the machine near the power source with the clearance shown above.

### 2.1.4 POWER REQUIREMENTS

#### **⚠ CAUTION**

- Insert the plug firmly in the outlet.
  - Do not use an outlet extension plug or cord.
  - Ground the machine.
1. Input voltage level:
    - 120 V, 60 Hz: More than 12 A
    - 220 V to 240 V, 50 Hz/60 Hz: More than 8 A
  2. Permissible voltage fluctuation:  $\pm 10\%$
  3. Do not put things on the power cord.

## 2.2 OPTIONAL UNIT COMBINATIONS

### 2.2.1 MACHINE OPTIONS

No.	Options		Remarks
	D037/D040	D038/D041	
1	2-tray paper feed unit	2-tray paper feed unit	One from No.1 or No.2 (No. 2 requires No. 3)
2	1-tray paper feed unit	1-tray paper feed unit	
3	Caster table	Caster table	
4	Platen cover	Platen cover	One from No.4 or No.5
5	ARDF	ARDF (Standard)	
6	1-bin tray unit	1-bin tray unit	If No 9 is installed, then No 6 and/or No 7 cannot be installed.
7	-	Shift tray	
8	Side Tray	Side Tray	
9	-	Internal finisher	
10	-	*Punch kit (4 types)	No. 9 required; One of the types
11	Fax unit	Fax unit	-
12	-	Memory Unit (32M)*	Fax unit required

\*: Child options (Child options require a parent option.)

**2.2.2 CONTROLLER OPTIONS**

No.	Options		Remarks
	D037/D040	D038/D041	
1	-	IEEE 802.11a/g	One from six items (I/F Slot)
2	-	IEEE 1284	
3	-	Bluetooth	
4	-	File Format Converter	
5	-	Gigabit Ethernet	
6	-	PostScript 3	
7	Printer Enhanced Option	-	
8	PictBridge	PictBridge	
9	-	DataOverwriteSecurity Unit	
10	-	HDD Encryption Unit	SD card slot 2 (during installation only)
⇒ 11	-	Browser Unit	SD card slot 2 (during installation only) No. 14 is required.
⇒ 12	-	VM Card	SD card slot 2 No. 14 is required.
13	Copy Data Security Unit	Copy Data Security Unit	-
⇒ 14	-	Memory Unit (512M)	For SDK applications Required for No. 11 and 12

## 2.3 COPIER INSTALLATION

### 2.3.1 POWER SOCKETS FOR PERIPHERALS

#### ⚠ CAUTION

Rating voltage for peripherals.

Make sure to plug the cables into the correct sockets.

[1] ARDF: Rating voltage output connector for accessory Max. DC24V

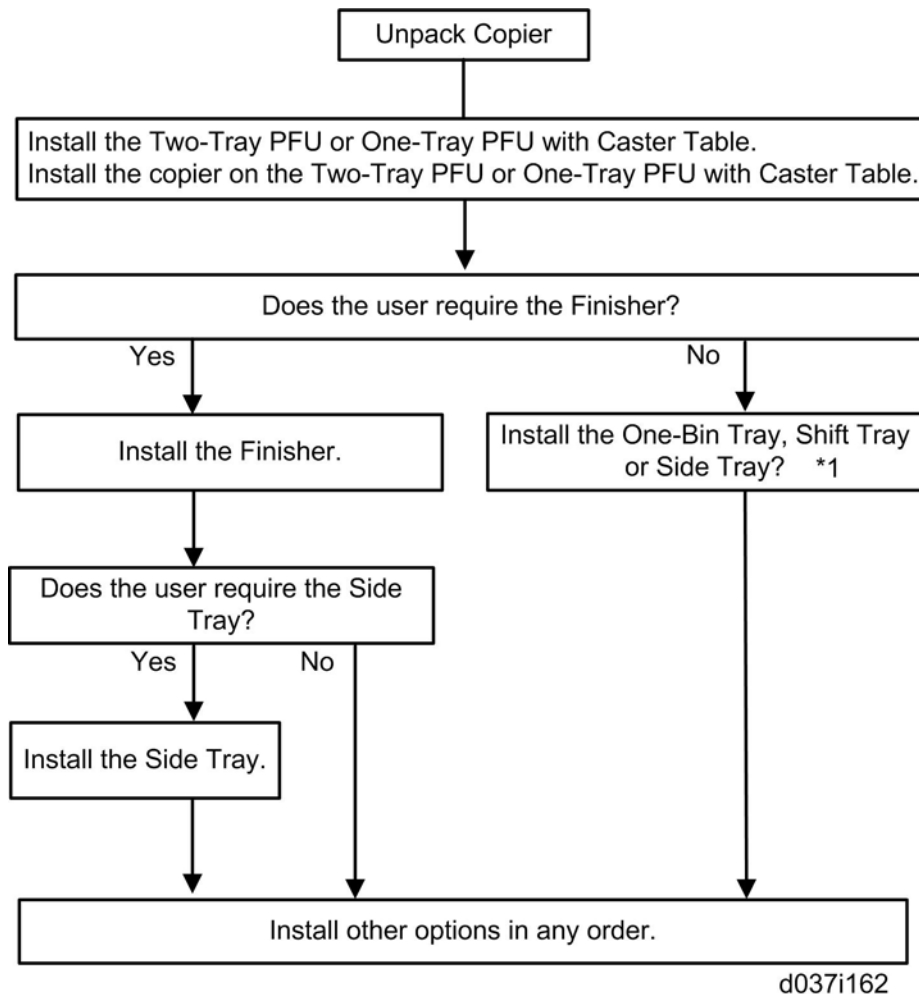

[2] Finisher: Rating voltage output connector for accessory Max. DC24V

**Copier Installation**

**2.3.2 INSTALLATION FLOW CHART**

This flow chart shows the best procedure for installation.

\*1: The shift tray should be installed first if you want to install the shift tray with the 1-bin tray at the same time.

**2.3.3 ACCESSORY CHECK**

Check the quantity and condition of these accessories.

**For D037/D040**

Installation

### 2.3.4 INSTALLATION PROCEDURE

#### **⚠ CAUTION**

- Remove the tapes from the development units before you turn the main switch on. The development units can be severely damaged if you do not remove the tapes.

Put the machine on the paper tray unit first if you install an optional paper tray unit at the same time. Then install the machine and other options.

**Note**

- Keep the shipping retainers after you install the machine. You may need them in the future if you transport the machine to another location.

#### ***Tapes and Retainers***

d037i505

d037i506

1. Remove all the tapes and retainers on the machine.
2. Remove all the tapes and retainers in trays 1 and 2.

## Copier Installation

d037i507

3. Remove the scanner unit stay [A].
4. Keep the scanner unit stay in the cutout in the inner tray.

↓ Note

- For the EU models, the scanner unit stay cannot be inserted in the cutout on the inner tray. You must bring this stay back to your depot.

d037r322a

5. Install the inverter tray [A] (hooks).

d037i509

d037i510

6. Open the duplex unit [A].
7. Remove the sheet [B] of paper with a red tag.

Copier Installation

d037i511

d037i512

8. Open the paper transfer unit [A].
9. Remove the front and rear stoppers [B] with a red tag.
10. Close the duplex unit.

d037i518

11. Attach the handle cover [A] to the front side of the duplex unit.

**Developer and Toner Bottles**

d037i513

1. Open the front door [A] and remove the PCDU toner collection bottle [B].
2. Remove all tapes except the tape [C] from the four development units and from the toner hopper units.

## Copier Installation

### ↓ Note

- Do not remove the tape [C] at this moment. You will find how to remove this tape later.
- The toner hopper cover [D] is removed with tape [E].
- Make sure that the all toner hopper covers are removed, when removing all tapes.

d037i516

d037i517

3. Check if the toner hopper shutter [A] is fully closed.

### ↓ Note

- If the toner hopper shutter is not fully closed and the inlet [B] of the toner hopper unit is visible, the toner bottle cannot be installed properly.

d037i527

4. Press the ITB lock lever [A] and turn it up as shown above.
5. Remove the black PCDU [B] (⌘ x 2).

## Copier Installation

d037i528

6. Remove the cover sheet [A] from the black PCDU.
7. Reinstall the black PCDU into the mainframe (🔩 x 2).
8. Reinstall the PCDU toner collection bottle.
9. Shake each toner bottle five or six times.
10. Slide the toner bottles in toner bottle cartridges, then turn each one to the right (clockwise).
11. Close the front door.

**Paper Trays**

d037i514

1. Pull each paper tray [A] out. Then adjust the side guides and end guide to match the paper size.

↓ Note

- To move the side guides, first pull out the tray fully. Then push down the green lock at the rear inside the tray.

## Copier Installation

### ***Emblem and Decals***

1. Attach the correct emblem [A] and the cover [B] to the front door [C] of the machine, if the emblem is not attached.

↓ Note

- If you want to change the emblem that has been already attached, remove the panel with an object (not a sharp object) as shown [D], and then install the correct emblem.

2. Attach the correct paper tray number and size decals to the paper trays [E].

↓ Note

- Paper tray number and size decals are also used for the optional paper tray or the optional LCT. Keep these decals for use with these optional units.

### ***Fax Settings for D037-17***

The D037-17 model has a fax unit as a standard function. Because of this, the fax settings are required at machine installation. Refer to steps 7 to 9 and 14 to 16 in the "Fax Option (D432) Installation Procedure" in the "Field Service Manual" of the fax option manual.

### ***Initialize the Developer***

1. Make sure that the platen or ARDF is closed and the main power is turned off.
2. Plug in the machine.
3. Turn the main power switch on. The machine automatically starts the initialization procedure. The Start button LED (Ⓢ) turns green when this procedure has finished.
4. Make copies of image samples (text, photo, and text/photo modes).
5. Do the Automatic Color Calibration process (ACC) for each mode (Copy mode, Printer 600 x 600 dpi, Printer 1800 x 600 dpi, and Printer 1200 x 1200 dpi) as follows ((Printer 1200 x 1200 dpi is for D038/D041 only):

**Copier Installation**

- 1) Print the ACC test pattern (User tools > Maintenance > ACC > Start).
  - 2) Put the printout on the exposure glass.
  - 3) Put 10 sheets of white paper on top of the test chart.
  - 4) Close the ARDF or the platen cover.
  - 5) Press "Start Scanning" on the LCD panel. The machine starts the ACC.
6. Check that the sample image has been copied normally.
7. Open the front cover.

d037i136

8. Remove the instruction guide sheet [A], and make sure the SMC report [B] is stored as shown above. Then replace the instruction guide sheet.

**Settings Relevant to the Service Contract**

Change the necessary settings for the following SP modes if the customer has made a service contract.

**Note**

- You must select one of the counter methods (developments/prints) in accordance with the contract (☛SP5045-001).

<b>Counting method</b>		
SP No.	Function	Default
SP5-045-001	Specifies if the counting method used in meter charge mode is based on developments or prints. NOTE: You can set this one time only. You cannot change the setting after you have set it for the first time.	"0": Developments
<b>A3/11" x 17" double counting</b>		
SP No.	Function	Default

**Copier Installation**

SP5-104-001	Specifies whether the counter is doubled for A3/11" x 17" paper. When you have to change this setting, contact your supervisor.	"No": Single counting
<b>Service Tel. No. Setting</b>		
SP No.	Function	Default
SP5-812-001 through 004	5812-002 programs the service station fax number. The number is printed on the counter list when the meter charge mode is selected. This lets the user fax the counter data to the service station.	

**Settings for @Remote Service**

- Prepare and check the following check points before you visit the customer site.  
For details, ask the @Remote key person.

**Check points before making @Remote settings**

1. The setting of SP5816-201 in the mainframe must be "0".
2. Device ID2 (SP5811-003) must be correctly programmed.
  - 6 spaces must be put between the 3-digit prefix and the following 8-digit number (e.g. xxx\_\_\_\_xxx).
  - ID2 (SP5811-003) and the serial number (SP5811-001) must be the same (e.g. ID2: A01\_\_\_\_23456789 = serial No. A0123456789)
3. The following settings must be correctly programmed.
  - Proxy server IP address (SP5816-063)
  - Proxy server Port number (SP5816-064)
  - Proxy User ID (SP5816-065)
  - Proxy Password (SP5816-066)
4. Get a Request Number

**Execute the @Remote Settings**

1. Enter the SP mode.
2. Input the Request number which you have obtained from @Remote Center GUI, and then enter [OK] with **SP5816-202**.
3. Confirm the Request number, and then click [EXECUTE] with **SP5816-203**.
4. Check the confirmation result with **SP5816-204**.

## Copier Installation

Value	Meaning	Solution/ Workaround
0	Succeeded	-
1	Request number error	Check the request number again.
3	Communication error (proxy enabled)	Check the network condition.
4	Communication error (proxy disabled)	Check the network condition.
5	Proxy error (Illegal user name or password)	Check Proxy user name and password.
6	Communication error	Check the network condition.
8	Other error	See "SP5816-208 Error Codes" below this.
9	Request number confirmation executing	Processing... Please wait.

5. Make sure that the screen displays the Location Information with **SP5816-205** only when it has been input at the Center GUI.
6. Click [EXECUTE] to execute the registration with **SP5816-206**.
7. Check the registration result with **SP5816-207**.

Value	Meaning	Solution/ Workaround
0	Succeeded	-
1	Request number error	Check the request number again.
2	Already registered	Check the registration status.
3	Communication error (proxy enabled)	Check the network condition.
4	Communication error (proxy	Check the network condition.

**Copier Installation**

Value	Meaning	Solution/ Workaround
	disabled)	
5	Proxy error (Illegal user name or password)	Check Proxy user name and password.
8	Other error	See "SP5816-208 Error Codes" below this.
9	Request number confirmation executing	Processing... Please wait.

8. Exit the SP mode.

**SP5816-208 Error Codes**

Cause	Code	Meaning	Solution/ Workaround
Operation Error, Incorrect Setting	-12002	Inquiry, registration attempted without acquiring Request No.	Obtain a Request Number before attempting the Inquiry or Registration.
	-12003	Attempted registration without execution of a confirmation and no previous registration.	Perform Confirmation before attempting the Registration.
	-12004	Attempted setting with illegal entries for certification and ID2.	Check ID2 of the mainframe.
	-12005	@Remote communication is prohibited. The device has an Embedded RC gate-related problem.	Make sure that "Remote Service" in User Tools is set to "Do not prohibit".
	-12006	A confirmation request was made after the confirmation had been already completed.	Execute registration.
	-12007	The request number used at registration was different from	Check Request No.

## Copier Installation

Cause	Code	Meaning	Solution/ Workaround
		the one used at confirmation.	
	-12008	Update certification failed because mainframe was in use.	Check the mainframe condition. If the mainframe is in use, try again later.
Error Caused by Response from GW URL	-2385	Other error	
	-2387	Not supported at the Service Center	
	-2389	Database out of service	
	-2390	Program out of service	
	-2391	Two registrations for the same mainframe	Check the registration condition of the mainframe

	-2393	External RCG not managed	
	-2394	Mainframe not managed	
	-2395	Box ID for external RCG is illegal.	
	-2396	Mainframe ID for external RCG is illegal.	
	-2397	Incorrect ID2 format	Check the ID2 of the mainframe.
-2398	Incorrect request number format	Check the Request No.	

### 2.3.5 MOVING THE MACHINE

This section shows you how to manually move the machine from one floor to another floor. See the section “Transporting the Machine” if you have to pack the machine and move it a

## Copier Installation

longer distance.

- Remove all trays from the optional paper feed unit.

## 2.3.6 TRANSPORTING THE MACHINE

### *Main Frame*

1. Do SP 4806-001 to move the scanner carriage from the home position. This prevents dust from falling into the machine during transportation.
2. Make sure there is no paper left in the paper trays. Then fix down the bottom plates with a sheet of paper and tape.
3. Do one of the following:
  - Attach shipping tape to the covers and doors.
  - Shrink-wrap the machine tightly.

#### Note

- After you move the machine, Make sure you do the "Auto Color Registration" as follows. This optimizes color registration.
- Do the "Forced Line Position Adj. Mode c" (SP2-111-3).
- Then do the "Forced Line Position Adj. Mode a" (SP2-111-1).  
To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.
- Make sure that the side fences in the trays are correctly positioned to prevent color registration errors.

## 2.4 PAPER FEED UNIT (D331)

### 2.4.1 ACCESSORY CHECK

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Paper Feed Unit	1
2	Screw - M4 x 10	4
3	Securing Bracket	2

### 2.4.2 INSTALLATION PROCEDURE

#### **CAUTION**

- Unplug the machine power cord before starting the following procedure.
- The handles of the main machine for lifting must be inserted inside the machine and locked, unless these handles are used for the installation or relocation of the main machine.
- You need two or more persons to lift the copier. The copier is highly unstable when lifted by one person, and may cause human injury or property damage.

↓ Note

### Paper Feed Unit (D331)

- This installation procedure uses the following symbol.
- : Screws

1. Remove the strips of tape.

2. Set the copier [A] on the paper tray unit [B].

 **Note**

- When installing the copier, be careful not to pinch the cable [C].

3. Remove the connector cover [A] (rivet screw x 1).
4. Connect the cable [B] to the copier, as shown.
5. Attach a securing bracket [C] to each side of the paper tray unit, as shown ( x 1: M3 x 8 each).
6. Re-install the connector cover.

## Paper Feed Unit (D331)

d331i104a

7. Remove the 1st and 2nd paper trays [A] and secure the paper tray unit with two screws (M4 x 10) [B].
8. Reinstall all the paper trays.
9. Attach the appropriate paper tray number decal and paper size decal to each handle of the trays.

↓ Note

- The paper tray number and size decal sheet is in the accessory box of the main machine.

d331i105

10. Rotate the adjuster [A] until the machine cannot be pushed across the floor.
11. Load paper into the paper trays and select the proper paper size.
12. Turn on the main switch.
13. Adjust the registration for each tray (☛ Section: Image Adjustment).
  - For tray 3, use SP1002-004
  - For tray 4, use SP1002-005
14. Check the machine's operation and copy quality.

## Paper Feed Unit (D425)

**2.5 PAPER FEED UNIT (D425)****2.5.1 COMPONENT CHECK**

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	Paper Feed Unit	1
2	Securing bracket	2
3	Screw (M4 x 10)	4

**2.5.2 INSTALLATION PROCEDURE****⚠ CAUTION**

- Turn off the main switch of the copier and unplug the power cord before you start the installation procedure.
- You need two or more persons to lift the copier. The copier is highly unstable when lifted by one person, and may cause human injury or property damage.
- Do not lift the copier with the paper feed unit installed. The handle and grips may be damaged.

**↓ Note**

- The one-tray paper feed unit must be installed on the caster table (D448). Prepare the caster table first before installing this unit.

## Paper Feed Unit (D425)

d358i102

d358i103

↓ Note

- This installation procedure uses the following symbols:
- : Screws

1. Remove all tape on the paper feed unit.
2. Remove the paper tray and remove all tapes and padding.
3. Put the paper tray unit on the caster table (D448).

↓ Note

- For details about the installation of the caster table, see the Section: "Caster Table (D488)" installation procedure.

d425i103

4. Grasp the handle [A] and grips [B] of the machine.
5. Lift the copier and install it on the paper feed unit [C].

↓ Note

- Hold the handle and grips of the machine when you lift and move the machine.

## Paper Feed Unit (D425)

d425i104

6. Remove the rear connector cover [A] of the main machine (rivet screw x 1).
7. Connect the harness [B] to the main machine.
8. Reinstall the rear connector cover [A] (rivet screw x 1).
9. Remove tray 1 and 2 of the machine.
10. Fasten the screws (M4 x 10) [C].
11. Reinstall all trays.
12. Attach the securing brackets [D] (M4 x 10;  $\frac{1}{2}$  x 1 each).
13. Load paper into the paper feed unit.
14. Turn on the main power switch of the machine.
15. Adjust the registration for each tray (☛ Section: Image Adjustment).
  - Use SP1002-004
16. Check the paper feed unit operation and copy quality.

## 2.6 CASTER TABLE (D488)

### 2.6.1 COMPONENT CHECK

No.	Description	Q'ty
1	Caster Table	1
2	Pin	2
3	Step Screw	2

### 2.6.2 INSTALLATION PROCEDURE

- Put the caster table on a flat place.

- Install the two pins in the screw holes.
  - Use the screw holes [A] and [C] if the mainframe is directly installed on the caster

### Caster Table (D488)

table.

- Use the screw holes [B] and [C] if the one-tray paper feed unit (D425) is installed on the caster table.

- Grasp the handle [A] and grips [B] of the machine, if the copier is to be installed on the caster table.

**Note**

- Hold the handle and grips of the machine when you lift and move the machine.

- Lift the copier or one-tray paper feed unit [C], and then install it on the caster table [D].
- Pull out tray 2 of the mainframe or the tray of the one-tray paper feed unit.

- Secure the machine or one-tray paper feed unit to the caster table (step screw x 2)
- Reinstall the tray in the mainframe or one-tray paper feed unit.
- Adjust the five leveling adjustors of the caster table.

## 2.7 ARDF (D366)

### 2.7.1 COMPONENT CHECK

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	ARDF	1
2	Stamp Cartridge	1
3	Knob Screw	2
4	Stud Screw	2
5	Attention Decal – Top Cover	1

### 2.7.2 INSTALLATION PROCEDURE

#### **⚠ CAUTION**

- Unplug the copier power cord before starting the following procedure.

1. Remove all tapes and shipping retainers.

**ARDF (D366)**

b789i102

2. Insert the two stud screws [A] on the top of the machine.

b789i103

3. Mount the ARDF [A] by aligning the screw keyholes [B] of the ARDF support plate over the stud screws.
4. Slide the ARDF toward the front of the machine.
5. Secure the ARDF with the two knob screws [C].

ARDF (D366)

b789i501

6. Install the stamp cartridge [A] in the ARDF.

[A] b789i104

7. Peel off the platen sheet [A] and place it on the exposure glass.  
 8. Align the rear left corner (of the platen sheet) with the corner [B] on the exposure glass.  
 9. Close the ARDF.  
 10. Open the ARDF and check that the platen sheet is correctly attached.

## ARDF (D366)

11. Attach the decal [A] to the top cover as shown. Choose the language that you want.
12. Plug in and turn on the main power switch of the machine, and then check the ARDF operation.
13. Make a full size copy. Check that the registrations (side-to-side and leading edge) and image skew are correct. If they are not, adjust the registrations and image skew (see  Section: "Image Adjustment" in the "Replacements and Adjustments" chapter).

## Platen Cover Installation (G329)

**2.8 PLATEN COVER INSTALLATION (G329)**

1. Install the stud screws [A] (⌀ x 2) on the top cover as shown.
2. Position the platen cover bracket [B] on the heads of the stud screws, and slide the platen cover [C] to the left.

## Side Tray (D427)

**2.9 SIDE TRAY (D427)****2.9.1 COMPONENT CHECK**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Side Tray Paper Exit Unit	1
2	Side Tray	1
3	Decal: Push	1
4	Decal: Door Push	1
5	Screw: M3x8	1
6	Tray Stopper	1

**2.9.2 INSTALLATION PROCEDURE****⚠ CAUTION**

- Unplug the copier power cord before starting the following procedure.

Side Tray (D427)

Instalaion

1. Remove all tapes on the side tray.

d427i501

2. Open the duplex unit [A].
3. Remove the right upper cover [B] (⚙ x 2).

d427i502

d427i503

4. Close the side tray paper exit unit [A], and then connect the harness [B] to the machine.
5. Install the side tray paper exit unit (⚙ x 2: removed in step 3).

d427i504

d427i505

6. Install the side tray [A].
7. Lift the side tray, and then install the tray stopper [B] (⚙ x 1: M3x8).

### Side Tray (D427)

d427i506

8. Attach the 'Push door' decal [A] to the top front edge of the duplex unit cover.

d427i507

d427i508

9. Close the duplex unit, and then attach the 'Push' decal [A] to the duplex unit cover.
10. Turn on the main power switch of the machine.
11. Check the side tray operation.

## 1-Bin Tray Unit (D426)

## 2.10 1-BIN TRAY UNIT (D426)

## 2.10.1 COMPONENT CHECK

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Tray	1
2	1-Bin Tray Unit	1
3	Screw: Blue (M3 x 6)	1
4	Screw (M3 x 8)	1
5	Tray Support Bar	1

## 2.10.2 INSTALLATION PROCEDURE

**⚠ CAUTION**

- Unplug the copier power cord before starting the following procedure.

↓ Note

### 1-Bin Tray Unit (D426)

- If both the shift tray unit and the 1-bin tray unit are installed in the mainframe at the same time, install the shift tray unit first. Installing the shift tray unit after the 1-bin tray unit may be difficult.

1. Remove all tapes.

d426i503

d426i501

2. Remove the inverter tray [A] (hook).
3. Open the right door [B] of the machine.
4. Remove the front right cover [C] (⚙ x 1).

d426i502

5. Remove the paper exit cover [A].

d426i504

d426i505

6. Remove the connector cover [A] with a small flat screwdriver.

1-Bin Tray Unit (D426)

7. Remove the left frame cover [B] (⚙️ x 1).

8. Install the 1-bin tray unit [A] (⚙️ x 1: M3x6 blue, 📐 x 1).

9. Install the tray [A] (with the tray support bar) in the machine.
10. Attach the tray support cover [B] (⚙️ x 2: M3x8 in the accessories and one screw removed in step 7).
11. Reassemble the machine.
12. Turn on the main power switch of the machine, and check the 1-bin tray unit operation.

Installaion

## Shift Tray Unit (D428)

**2.11 SHIFT TRAY UNIT (D428)****2.11.1 COMPONENT CHECK**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Shift Tray Unit	1

**2.11.2 INSTALLATION PROCEDURE****⚠ CAUTION**

- Unplug the copier power cord before starting the following procedure.

↓ Note

- If both the shift tray unit and the 1-bin tray unit are installed in the mainframe at the same time, install the shift tray unit first. Installing the shift tray unit after the 1-bin tray unit may be difficult.

1. Remove all tapes.

## Shift Tray Unit (D428)

2. Remove the inverter tray [A] (hook).
3. Remove the output tray [B] (⚙️ x 2).

4. Put the shift tray [A] in the machine, and then connect the harness to the connector [B] on the inner rear frame.

↓ Note

- If the shift tray is difficult to install in the mainframe, remove the paper exit cover [C] first (⚙️ x 1).

5. Install the shift tray [A] fully in the machine (⚙️ x 2).
6. Reinstall the inverter tray.
7. Turn on the main power switch of the machine.
8. Check the shift tray unit operation.

**Internal Finisher (D429)****2.12 INTERNAL FINISHER (D429)**

This procedure explains how to install the internal finisher, without installing the punch unit at the same time.

**2.12.1 COMPONENT CHECK**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Internal Finisher	1
2	Inverter Unit	1
3	Inner Bottom Plate	1
4	Screw: M3x10	3
5	Screw: M3x6	11
6	Guide Rail	1
7	Inverter Cover	1
8	Left Cover	1

## 2.12.2 INSTALLATION PROCEDURE

### CAUTION

- Unplug the copier power cord before starting the following procedure.

#### *Preparing before Installing the Internal Finisher*

1. Remove all tapes from the internal finisher.

d426i503b

2. Remove the inverter tray [A].
3. Open the front door [B].

d429i501

d429i517

4. Remove the lower inner cover [A].
5. Press the ITB lock lever [B] and turn it up as shown above.

### Internal Finisher (D429)

d429i502

6. Remove the inner right cover [C] (⚙️ x 2).

d429i503

7. Open the duplex unit [A], and then remove the front right cover [B] (⚙️ x 1).

d429i504

8. Remove the following:
- Inner tray [A] (⚙️ x 2)
  - Left frame rear cover [B] (⚙️ x 2)
  - Left frame cover [C] (⚙️ x 1)
  - Paper exit cover [D] (⚙️ x 1)
  - Inner rear cover [E] (⚙️ x 1)

### Internal Finisher (D429)

d429i505

d429i506

9. Install the inner bottom plate [A] (⌀ x 6).

d429i507

10. Attach the left cover [A] (⌀ x 2: M3x6, one screw removed in step 8).

### Internal Finisher Installation

d429i508

1. Insert the inverter unit [A] in the machine.

Instalaion

### Internal Finisher (D429)

d429i509

d429i510

2. Insert two joint pins [A] into the two holes in the inner rear bracket.
3. Fully attach the front side [B] of the inverter unit to the paper exit unit of the mainframe after inserting the two joint pins (⌀ x 1: M3x6).

**Note**

- Insert the two joint pins before attaching the front side of the inverter unit to the paper exit unit of the mainframe. Otherwise, paper jams may occur between the paper exit unit and inverter unit.

d429i511

d429i512

4. Install the guide rail [A] (⌀ x 2: M3x6).

d429i513

d429i514

5. Attach the inverter cover [A] (⌀ x 3: M3x10).

## Internal Finisher (D429)

d429i515

6. Install the internal finisher [A] from the left side of the machine.

d429i516

7. Insert the rear rail pins [A] into the frame of the machine (🔩 x 1: M3x6).

d429i517

8. Push the internal finisher [A] and connect the cable [B] to the power socket of the machine.
9. Reassemble the machine.
10. Turn on the main power switch of the machine.
11. Check the internal finisher operation.

## Punch Unit (D390)

**2.13 PUNCH UNIT (D390)****2.13.1 COMPONENT CHECK**

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	Punch Unit	1
2	Output Tray Lower Cover	1
3	Drawer Connector	1
4	Bracket	1
5	Left Frame Cover	1
6	Punch Cover	1

**2.13.2 INSTALLATION PROCEDURE**

If the internal finisher has **not** already been installed, skip the 'Removing the Internal Finisher' section, and go to the 'Preparing the Punch Unit before Installing the Internal

**Punch Unit (D390)**

Finisher' section. Also do 'Preparing before Installing the Internal Finisher' in the 'Internal Finisher (D429)' section.

If the internal finisher has already been installed, you must remove it first. Start from the 'Removing the Internal Finisher' section.

**⚠ CAUTION**

- Unplug the copier power cord before starting the following procedure.

**Removing the Internal Finisher**

1. Open the front door.

d390i503

2. Open the right door [A], and then remove the front right cover [B] (⚙ x 1).

d390i517

3. Disconnect the cable [A] from the power socket of the machine, and then pull out the internal finisher [B].

### Punch Unit (D390)

4. Remove the internal finisher [A] (⚙ x 1: M3x6).

5. Remove the inverter cover [A] (⚙ x 3: M3x10).

6. Remove the guide rail [A] (⚙ x 2: M3x6).

Punch Unit (D390)

7. Pull the inverter unit [A] toward the front side (⚙️ x 1: M3x6).

8. Remove the inverter unit [A] from the machine.

**Preparing the Punch Unit before Installing the Internal Finisher**

1. Remove the inverter right bracket [A] from the inverter unit (⚙️ x 4).
2. To remove screw [B], open guide plate [C].

Installaion

**Punch Unit (D390)**

d390i520

3. Remove the positioning pin bracket [A] from the inverter right bracket (⚙️ x 2).

d390i521

d390i517

4. Attach the inverter right bracket [A] to the punch unit [B] (⚙️ x 1: M3x6).

d390i522

5. Slide the inverter small guide [A] to the front side (arrow direction), and then remove it (⚙️ x 1).
6. Remove all the tapes on the punch unit.

↓ Note

- If all the tapes are not removed, SC763 may occur.

Punch Unit (D390)

Installation

- Attach the inverter unit [A] to the punch unit [B], and then secure the inverter unit with the punch unit (⚙ x 4 removed in step 1).

- Attach the drawer connector [A] of the punch unit to the rear bracket of the inverter unit (⚙ x 2 removed in step 3).
- Attach the clamp [B] to the rear bracket of the inverter unit.

**Installing the Punch and Inverter Unit**

### Punch Unit (D390)

1. Install the punch and inverter unit [A] in the mainframe.

d390i552

d390i528

2. Insert the two joint pins [A] (this picture does not show the two joint pins) into the two holes in the inner rear bracket.
3. Fully attach the front side [B] of the inverter unit to the paper exit unit of the mainframe after inserting two joint pins (⚙ x 1: M3x6).

#### ↓ Note

- Insert the two joint pins before attaching the front side of the inverter unit to the paper exit unit of the mainframe. Otherwise, paper jams may occur between the paper exit unit and inverter unit.

d390i529

d390i530

4. Remove the stopper [A] from the guide rail, and then attach with the screw holes [B] (these screw holes must be used when the internal finisher is installed with the punch unit).

Punch Unit (D390)

5. Install the guide rail [A] on the front edge of the inner bottom plate (🔩 x 2).

6. Install the punch cover [A] (🔩 x 3: M3x6).

**Preparing the Internal Finisher**

1. Remove the left rear cover [A] and the rear cover [B] of the internal finisher (🔩 x 2 each).

Installation

### Punch Unit (D390)

d390i535

2. Attach the drawer connector [A] to the rear bracket of the finisher.
3. Connect the harnesses [B] to the connectors [C] on the main board.
  - Black harness connector to CN16
  - Gray harness connector to CN17
4. Reinstall the rear cover (removed in step 1) (⚙ x 2).

### Installing the Internal Finisher

d390i536

1. Install the internal finisher [A] in the mainframe (⚙ x 1).

d390i537

d390i536a

2. Remove the bracket [A] (⚙ x 2).

Punch Unit (D390)

d390i538

d390i536a

3. Attach the bracket [A] (2 x); this bracket is for the internal finisher when used with the punch unit.

d390i539

d390i541

d390i540

4. Remove the output tray lower cover [A]; this cover is for the internal finisher without the punch unit (3 x).

Instalaion

**Punch Unit (D390)**

5. Attach the output tray lower cover [A]; this cover is for the internal finisher when used with the punch unit (⚙ x 3).

**Note**

The two projections [A] on the output tray lower cover (this plate is actually attached to the output tray lower cover) must be inserted along the two guide rails [B] inside the output tray unit.

## Punch Unit (D390)

Instalaion

6. Attach the left frame cover [A] (2).
7. Push the internal finisher in the mainframe.
8. Connect the I/F cable [B] of the finisher to the inlet of the mainframe.

## USB2.0/SD Slot Type A

**2.14 USB2.0/SD SLOT TYPE A****2.14.1 ACCESSORY CHECK**

Check the quantity and condition of the accessories against the following list.

No.	Description	Q'ty
1	USB2.0/SD Slot	1
2	Ground Plate	1
3	USB Cable	1
4	Screw: M3 x 6 blue	1
5	Screw: M3 x 8	4
6	Decal	1

**2.14.2 INSTALLATION PROCEDURE**

d027i111

1. Connect the USB cable [B] to the USB slot [A] in the USB2.0/SD Slot unit.
2. Attach the ground plate [C] to the bracket of the USB2.0/SD Slot (⌀ x 1: M3x6 blue).

USB2.0/SD Slot Type A

d037i111

3. Remove the screw [A] first, and the rear cover [B] (⌀ x 7).

d037i110

4. Remove the scanner left cover [A] (⌀ x 2).
5. Remove the left frame cover [B] (⌀ x 2).

d037i113

6. Remove the part [A] on the scanner left cover.

## USB2.0/SD Slot Type A

7. Make four holes in the scanner left cover with a screwdriver as shown [A].

↓ Note

- Smooth the four holes in the scanner left cover as shown [B].

8. Route the USB cable [A] through the gaps in the left scanner cover.
9. Secure the USB2.0/SD Slot [B] with the left scanner cover as shown above (⌀ x 4: M3x8).

↓ Note

- Use the screw holes [C] as shown above.

## USB2.0/SD Slot Type A

d037i116

10. Attach the scanner left cover [A] to the mainframe, and then connect the USB cable [B] to USB-A (this is the USB slot closest to the front side of the machine) as shown above.

↓ Note

- Make sure that the USB cable is inserted in USB-A (front side).
11. Plug in and turn on the mainframe.
  12. Enter the SP mode, and then change the setting of (scanner) SP1013-001 from “0” to “1”.

d027i118

13. Attach the decal [A] to the USB2.0/SD Slot as shown above.

### 2.14.3 TESTING THE SD CARD/USB SLOT

1. Insert an SD card or USB memory device in the slot.  
You can connect only one removable memory device at a time.
1. Close the media slot cover.

If you leave the cover open, static electricity conducted through an inserted SD card could cause the machine to malfunction.

### **USB2.0/SD Slot Type A**

1. Make sure that no previous settings remain.

If a previous setting remains, press the [Clear Modes] key.

1. Place an original on the exposure glass.

2. Press [Store File].

3. Press [Store to Memory Device].

4. Press [OK].

5. Press the [Start] key.

When writing is complete, a confirmation message appears.

1. Press [Exit].

2. Remove the memory device from the media slot.

Do not remove the memory device while writing is in process.

## Mechanical Counter (NA Only)

## 2.15 MECHANICAL COUNTER (NA ONLY)

 Note

- This counter is supplied as a spare part.

## 2.15.1 INSTALLATION PROCEDURE

1. Rear cover (☛ Section: "Rear Cover" in the "Replacement and Adjustment" section)
2. Rear lower cover (☛ Section: "Rear Lower Cover" in the "Replacement and Adjustment" section)
3. Controller box cover (☛ Section: "Controller Box Cover " in the "Replacement and Adjustment" section)

d037i152

4. Remove the cutouts [A] in the rear lower cover with nippers.

d037i153

5. Attach the mechanical counters [A] to the bracket [B] and connect the harness to each mechanical counter as shown above.

**Mechanical Counter (NA Only)**

d037i154

6. Attach the clamp [A] as shown above.
7. Attach the mechanical counter bracket [B] to the frame (⚙ x 2).
8. Connect the mechanical counter harness [C] to the mechanical counter [D] and the BCU (CN218) [E], and route the harness as shown above (🔧 x 6)
9. Reassemble the machine.
10. Plug in the machine and turn on the main power switch.
11. Enter the SP mode.
12. Set SP5987-001 to "1: ON".
13. Exit the SP mode, and then turn the machine off and on.

## 2.16 KEY COUNTER BRACKET

After the key counter bracket is installed in the mainframe, the following options cannot be used at the same time.

- Internal finisher (D429)
- Handset (B433)

### 2.16.1 INSTALLATION PROCEDURE

1. Hold the key counter plate nuts [A] on the inside of the key counter bracket [B] and insert the key counter holder [C].
2. Secure the key counter holder to the bracket (⌀ x 2).
3. Install the key counter cover [D] (⌀ x 2).
4. Rear cover (☛ "Rear Cover" in the Replacement and Adjustment section)

5. Cut off the part [A] of the rear cover.

### Key Counter Bracket

d037i161

6. Peel off double sided tape on the key counter bracket, and attach the key counter to the scanner right cover.

d037i160

7. Connect the key counter cable [A] to the connector [B].
8. Reassemble the machine.

## 2.17 KEY COUNTER INTERFACE UNIT

### 2.17.1 INSTALLATION PROCEDURE

1. Rear cover (☛ Section: "Rear Cover" in the "Replacement and Adjustment" section)
2. Rear lower cover (☛ Section: "Rear Lower Cover" in the "Replacement and Adjustment" section)
3. Cut off the part [A] of the rear cover.

4. Attach the clamp [A] to the DRB bracket.
5. Install the key counter interface board [B] on the DRB bracket (⚙ x 4).

**Key Counter Interface Unit**

d037i158

6. Connect and route the key counter cable [A] to the connector on the key counter interface board as shown above (ground screw x 1,  x 6).
7. Connect and route the harness [B] to the connector on the key counter interface board and connector CN216 [C] on the BCU ( x 5)

d037i159

8. Pull the key counter cable through from the cutout and connect it to the connector [A] of the key counter unit.
9. Reassemble the machine.

## 2.18 COPY DATA SECURITY UNIT TYPE F (B829)

### 2.18.1 INSTALLATION

#### **⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

d037r110a

- Remove the rear lower cover [A] of the machine (⚙ x 5).
- Remove the rear cover [B] of the machine (⚙ x 7)

d037r149

- Scanner cable bracket [A] (⚙ x 4)
- Loosen the eight screws, and slide up the controller box cover [B].

**Copy Data Security Unit Type F (B829)**

d037i149

5. Attach the ICIB-3 (copy data security board) [A] to CN 504 [B] on the BCU (⚙ x 2).
6. Reassemble the machine.

**User Tool Setting**

1. Plug in and turn on the main power switch.
2. Go into the User Tools mode, and select System Settings > Administrator Tools > Copy Data Security Option > “On”.
3. Exit User Tools.
4. Check the operation.

↓ Note

- The machine will issue an SC165 error if the machine is powered on with the ICIB-3 removed and the “Data Security for Copying” feature set to “ON”.
- When you remove this option from the machine, first set the setting to “OFF” with the user tool before removing this board. If you forget to do this, “Data Security for Copying” feature cannot appear in the user tool setting. And then SC165 will appear every time the machine is switched on, and the machine cannot be used.

Make sure that the machine can recognize the option (see "Check All Connections" at the end of this section).

## 2.19 ANTI-CONDENSATION HEATER

### 2.19.1 INSTALLATION PROCEDURE

**Note**

- This heater is supplied as a spare part.

1. Rear cover (☛ Section: "Rear Cover" in the "Replacement and Adjustment" section)
2. Open the ARDF or platen cover.

d037i128

3. Glass cover [A] (stepped screw x 4)

d037i130

4. Scanner right cover [A] (☛ x 2)

**Anti-Condensation Heater**

5. ARDF exposure glass [A]

↓ Note

- Position the white marker [B] at the rear-left corner when you reattach the ARDF exposure glass.

6. Rear scale [A] (stepped screw x 3)

7. Exposure glass [A] with left scale.

↓ Note

- Position the marker at the front-left corner when you reattach the exposure

Anti-Condensation Heater

glass.

d037i132

8. Move the scanner carriage fully across to the right side by rotating the scanner motor [A] at the rear of the machine.
9. Put the connector of the heater [B] through the cutout [C].

d037i133

10. Move the scanner carriage to the left side as shown above by rotating the scanner motor at the rear of the machine.
11. Install the heater in the scanner unit (1 x 1).
12. Secure the cable cover [A] and the left side of the heater (1 x 1).

d037i134

13. Attach a clamp as shown above.
14. Connect the harness [A] of the heater to the connector [B] in the frame of the machine.

### Anti-Condensation Heater

15. Reassemble the machine.

16. Attach the on/standby decal [A] to the left-hand side of the main power switch.

## 2.20 TRAY HEATER (MAINFRAME)

### 2.20.1 INSTALLATION PROCEDURE

**Note**

- This heater is supplied as a spare part.

1. Remove trays 1 and 2 from the machine.
2. Remove the connector cover [A] (⚙ x 1).
3. Connect the connector [B] of the heater to the connector of the main machine.
4. Install the heater [C] inside the machine (⚙ x 1)
5. Reassemble the machine.

Tray Heater (Mainframe)

6. Attach the on/standby decal [A] to the left-hand side of the main power switch.

## 2.21 TRAY HEATERS (OPTIONAL UNIT)

### 2.21.1 INSTALLATION PROCEDURE

#### ↓ Note

- This heater is supplied as a spare part.

#### *Tray Heater for D425*

1. Remove the rear connector cover [A] (rivet screw x 1) of the mainframe.
2. Disconnect the harness [B].

3. Remove the rear lower cover [A] of the mainframe (⚙ x 5).
4. Pull out all the tray cassettes of the paper feed unit.

Tray Heaters (Optional Unit)

- Remove the securing brackets [A] (⌀ x 1 each), and then the rear cover [B] of the paper feed unit (⌀ x 2).

- Pass the connector [A] through the opening [B].
- Install the tray heater [C] (⌀ x 1)

- Connect the heater harness [A] of the heater to the relay harness [B].

## Tray Heaters (Optional Unit)

d037i138

9. Insert the heater harness [A] into the tube [B], and push the tube against the rear frame of the paper feed unit as shown above.

↓ Note

- Make sure that the tube is in contact with the rear frame [C].

d037i139

10. Route the relay harness [A] as shown above (⚙ x 5).

↓ Note

- Make sure that the connector [A] is placed securely as shown above.
- Make sure that the edge of the tube [B] is placed as shown above.

11. Reattach the rear cover of the paper feed unit (⚙ x 2) and securing brackets (⚙ x 1 each)

### Tray Heaters (Optional Unit)

d037i524

12. Remove the connector cap [A] from the tray heater harness.
13. Connect the relay harness [B] to the tray heater harness [C] of the mainframe.

**Note**

- Do not connect the relay harness [B] to the tray heater harness of the mainframe before installing the securing bracket [D]. Otherwise, the securing bracket may pinch the relay harness.

14. Reinstall the rear lower cover of the mainframe (⚙ x 5).
15. Reinstall all the tray cassettes.

b800i501

16. Attach the on/standby decal [A] to the left-hand side of the main power switch.

## Tray Heaters (Optional Unit)

**Tray Heater for D331**

1. Remove the rear connector cover [A] (rivet screw x 1) of the mainframe.
2. Disconnect the harness [B].

3. Remove the rear lower cover [A] of the mainframe (⚙ x 5).
4. Pull out all the tray cassettes of the paper feed unit.

5. Remove the securing brackets [A] (⚙ x 1 each), and then rear cover [B] of the paper feed unit (⚙ x 2).

Tray Heaters (Optional Unit)

b121i005a

6. Pass the connector [A] through the opening [B].
7. Install the tray heater [C] (1 x 1).

d037i140

8. Connect heater harness [A] of the heater to the relay harness [B].

d037i141

9. Remove the harness guide [A] (1 x 1), and move it in the blue arrow direction as shown above.

## Tray Heaters (Optional Unit)

d037i142

10. Insert the heater harness [A] into the tube [B], and push the tube against the rear frame of the paper feed unit as shown above.

↓ Note

- Make sure that the tube is contact with the rear frame [C].

d037i143

11. Route the relay harness as shown above (🔧 x 6).

↓ Note

- Make sure that the edge of the tube [A] is placed as shown above.
- The clamp [B] is not used.

12. Reinstall the harness guide.

13. Reattach the rear cover of the paper feed unit (🔧 x 2) and securing brackets (🔧 x 1 each).

**Tray Heaters (Optional Unit)**

d037i524

14. Remove the connector cap [A] from the tray heater harness.
15. Connect the relay harness [B] to the tray heater harness [C] of the mainframe.

**Note**

- Do not connect the relay harness [B] to the tray heater harness of the mainframe before installing the securing bracket [D]. Otherwise, the securing bracket may pinch the relay harness.

16. Reinstall the rear lower cover of the mainframe (⚙ x 5).
17. Reinstall all the tray cassettes.

b800i501

18. Attach the on/standby decal [A] to the left-hand side of the main power switch.

## 2.22 CONTROLLER OPTIONS

### 2.22.1 OVERVIEW

This machine has I/F card slots for optional I/F connections and SD card slot applications. After you install an option, check that the machine can recognize it (see “Check All Connections” at the end of this section).

d037i117

#### ***I/F Card Slots***

- Fax slot [A] is used for the Fax Option
- I/F slot [B] is used for one of the optional I/F connections (only one can be installed): IEEE1284, IEEE802.11a/g, g (Wireless LAN), Bluetooth, File Format Converter, or Gigabit Ethernet.

#### **Note**

- The I/F Slot [B] is only used for D038/D041 (H Model).

#### ***SD Card Slots***

##### **D037/D040:**

- ⇒ ▪ Slot 1 is used for one of the optional applications: Printer Enhanced Option, PictBridge.
- Slot 2 is used for service only (for example, updating the firmware).

## Controller Options

### D038/D041:

- Slot 1 is used for one of the optional applications: PostScript 3, Data Overwrite Security Unit, PictBridge
- Slot 2 is used for installing the Browser Unit, HDD Encryption unit, VM card or for service only (for example, updating the firmware).

## USB Slots

- Left-side USB slot [C]: Used for connecting a digital camera (only works if PictBridge is installed).
- Right-side USB slot [D]: Used when installing the optional USB2.0/SD card slot

- D038/D041 has two slots. D037/D040 has only one slot (there is no optional USB2.0/SD card slot for these models).

## 2.22.2 SD CARD APPLI MOVE

- The PostScript3 application and fonts cannot be moved to another SD card. However, other applications can be moved onto the PostScript3 SD card.

## Overview

The service program “SD Card Appli Move” (SP5-873) lets you copy application programs from one SD card to another SD card.

Slot 1 is used to store application programs. But there are 3 possible applications (PostScript 3, DOS (DataOverwriteSecurity) unit, PictBridge). You cannot run application programs from Slot 2. However you can move application programs from Slot 2 to Slot 1 with the following procedure.

Make sure that the target SD card has enough space.

1. Enter SP5873 “SD Card Appli Move”.
2. Then move the application from the SD Card in Slot 2 to the SD Card in Slot 1.

- Do steps 1-2 again if you want to move another application program.

3. Exit the SP mode.

### Be very careful when you do the SD Card Appli Move procedure:

- The data necessary for authentication is transferred with the application program from an SD card to another SD card. Authentication fails if you try to use the SD card after you copy the application program from one card to another card.
- Do not use the SD card if it has been used before for other purposes. Normal operation

## Controller Options

is not guaranteed when such an SD card is used.

- Hold down the lever [A] and turn it in the arrow direction.
- Remove the inner cover [B] (4), and then keep the SD card in the place [C] after you copy the application program from one card to another card. This is done for the following reasons:
  - 1) The SD card can be the only proof that the user is licensed to use the application program.
  - 2) You may need to check the SD card and its data to solve a problem in the future.
- You cannot copy PostScript application to another SD card. You have to copy the other application (PictBridge, DOS Unit) to the SD card that stores the PostScript application.

### Move Exec

The menu “Move Exec” (SP5-873-001) lets you copy application programs from the original SD card to another SD card.

#### ★ Important

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
1. Turn the main switch off.
  2. Make sure that an SD card is in SD Card Slot 1. The application program is copied to this SD card.
  3. Insert the SD card with the application program in SD Card Slot 2. The application program is copied from this SD card.
  4. Turn the main switch on.
  5. Start the SP mode.
  6. Select SP5-873-001 “Move Exec.”
  7. Follow the messages shown on the operation panel.

**Controller Options**

8. Turn the main switch off.
9. Remove the SD card from SD Card Slot 2.
10. Turn the main switch on.
11. Check that the application programs run normally.

**Undo Exec**

“Undo Exec” (SP5-873-002) lets you copy back application programs from an SD card to the original SD card. You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001).

**★ Important**

- Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.

1. Turn the main switch off.
2. Insert the original SD card in SD Card Slot 2. The application program is copied back into this card.
3. Insert the SD card with the application program in SD Card Slot 1. The application program is copied back from this SD card.
4. Turn the main switch on.
5. Start the SP mode.
6. Select SP5-873-002 “Undo Exec.”
7. Follow the messages shown on the operation panel.
8. Turn the main switch off.
9. Remove the SD card from SD Card Slot 2.

**↓ Note**

- This step assumes that the application programs in the SD card are used by the machine.
10. Turn the main switch on.
  11. Check that the application programs run normally.
  12. Make sure that the machine can recognize the option (see ‘Check All Connections’ at the end of this section).

**2.22.3 POSTSCRIPT 3 (D038/D041 ONLY)**

The PostScript3 application and fonts cannot be moved to another SD card. However, other applications can be moved onto the PostScript3 SD card.

**⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

## Controller Options

d037i119

1. Remove the SD-card slot cover [A] from the SD card slots (1 x 1).
2. Turn the SD-card label face to the rear of the machine. Then push it slowly into slot 1 [B] until you hear a click.
3. Attach the slot cover [A] (1 x 1).

d027i504

4. Attach the “Adobe PostScript 3” decal [A] to the front door.
5. Make sure that the machine can recognize the option (see ‘Check All Connections’ at the end of this section).

#### 2.22.4 FILE FORMAT CONVERTER (D038/D041 ONLY)

#### **⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

## Controller Options

d037i120

1. Remove the I/F-slot cover [A] (⌀ x 2).
2. Install the file format converter [B] into the I/F-slot and then fasten it with screws.
3. Plug in and turn on the main power switch.
4. Check or set the following SP codes with the values shown below.

SP No.	Title	Setting
SP5-836-001	Capture Function (0:Off 1:On)	"1"
SP5-836-002	Panel Setting	"0"

5. Check the operation.
6. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

### 2.22.5 IEEE1284 (D038/D041 ONLY)

#### *Installation Procedure*

#### **⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

You can only install one of the following network interfaces at a time: (IEEE 802.11 a/g, g (Wireless LAN), IEEE1284, Bluetooth).

## Controller Options

d037i121

1. Remove the I/F-slot cover [A] (⚙ x 2).
2. Install the interface board [B] (Knob-screw x 2) into the I/F-slot.
3. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

### 2.22.6 IEEE 802.11 A/G, G (WIRELESS LAN: D038/D041 ONLY)

#### Installation Procedure

#### ⚠ CAUTION

- Unplug the main machine power cord before you do the following procedure.

You can only install one of the following network interfaces at one time: (IEEE 802.11 a/g, g (Wireless LAN), IEEE1284, Bluetooth).

d037i122

### Controller Options

1. Remove the I/F-slot cover [A] from the I/F-slot (🔧 x 2).
2. Install the wireless LAN board [B] (Knob-screw x 2) into the I/F-slot.
3. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

d027i509

4. Peel off the double-sided tapes on the Velcro fasteners [A], and then attach them at the front left and rear left of the machine.
5. Attach "ANT1" (having a black ferrite core) [B] to the front left of the machine.
6. Attach "ANT2" (having a white ferrite core) [C] to the rear right of the machine.

↓ Note

- "ANT1" is a transmission/reception antenna and "ANT2" is a reception antenna. Do not attach them at the wrong places.

7. Attach the clamps as shown above.
8. Wire the cables and clamp them (🔧 x 7).

↓ Note

- Make sure that the cables are not slack. Keep them wired tightly along the covers.

You may have to move the machine if the reception is not clear.

- Make sure that the machine is not located near an appliance or any type of equipment that generates strong magnetic fields.
- Put the machine as close as possible to the access point.

### Installing Various Hardware Combinations

## Controller Options

d037i135

- Refer to the above picture when installing the USB2.0/SD.

**UP Mode Settings for Wireless LAN**

Enter the UP mode. Then do the procedure below to perform the initial interface settings for IEEE 802.11 a/g, g. These settings take effect every time the machine is powered on.

↓ Note

- You cannot use the wireless LAN if you use Ethernet.
- Press the “User Tools/Counter” key.
  - On the touch panel, press “System Settings”.

↓ Note

- The Network I/F (default: Ethernet) must be set for either Ethernet or wireless LAN.
- Select “Interface Settings”.
  - Press “Wireless LAN”. Only the wireless LAN options show.
  - Communication Mode. Select either “802.11 Ad hoc”, “Ad hoc” or “Infrastructure”.
  - SSID Setting. Enter the SSID setting. (The setting is case sensitive.)
  - Channel. You need this setting when Ad Hoc Mode is selected.

Range: 1 to 14 (default: 11)

↓ Note

- The allowed range for the channel settings may vary for different countries.
- WEP (Encryption) Setting. The WEP (Wired Equivalent Privacy) setting is designed to protect wireless data transmission. The same WEP key is required on the receiving side in order to unlock encoded data. There are 64 bit and 128 bit WEP keys.

**WEP:**

Selects “Active” or “Inactive” (“Inactive” is default.).

Range of Allowed Settings:

64 bit: 10 characters

128 bit: 26 characters

- Transmission Speed. Press the Next button to show more settings. Then select the

**Controller Options**

Rev. 07/01/2009

transmission speed for the mode: Auto, 11 Mbps, 5.5 Mbps, 2 Mbps, 1 Mbps (default: Auto). This setting should match the distance between the closest machine or access point. This depends on which mode is selected.

↓ Note

- For the Ad Hoc Mode, this is the distance between the machine and the closest PC in the network. For the Infrastructure Mode, this is the distance between the machine and the closest access point.

11 Mbps: 140 m (153 yd.)

5.5 Mbps: 200 m (219 yd.)

2 Mbps: 270 m (295 yd.)

1 Mbps: 400 m (437 yd.)

⇒ 10. This step has been removed because it was unnecessary.

### ***SP Mode and UP Mode Settings for IEEE 802.11 a/g, g Wireless LAN***

The following SP commands and UP modes can be set for IEEE 802.11 a/g, g.

SP No.	Name	Function
5840-006	Channel MAX	Sets the maximum range of the channel settings for the country.
5840-007	Channel MIN	Sets the minimum range of the channels settings allowed for your country.
5840-011	WEP Key Select	Used to select the WEP key (Default: 00).
UP mode	Name	Function
	SSID	Used to confirm the current SSID setting.
WEP Key	Used to confirm the current WEP	

## Controller Options

	key setting.	
WEP Mode	Used to show the maximum length of the string that can be used for the WEP Key entry.	

## 2.22.7 BLUETOOTH (D038/D041 ONLY)

**⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

You can only install one of the following network interfaces at a time: (IEEE 802.11 a/g, g (Wireless LAN), IEEE1284, Bluetooth).

d037i150

1. Remove the slot cover [A] (⚙ x 2).

d037i151

2. Install the Bluetooth board [A] (Knob-screw x 2) into the slot.
3. Insert the Bluetooth card [B] into the Bluetooth card adaptor.
4. Install the Bluetooth card adaptor on the Bluetooth board.
5. Attach the antenna cap to the Bluetooth board.
6. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

### 2.22.8 DATAOVERWRITESECURITY UNIT TYPE I (D362-11: D038/D041 ONLY)

#### ⇒ Accessory Check

Check the accessories and their quantities against the table below.

Description	Q'ty
1. Data Overwrite Security SD Card Type I	1
2. Operating Instructions CD-ROM	1
3. Comments Sheet (17 languages)	2

#### **Before You Begin the Procedure**

1. Confirm that the DataOverwriteSecurity unit SD card is the correct type for the machine. The correct type for this machine is "**Type I**".
2. Make sure that the following settings are not at their factory default values:
  - Supervisor login password
  - Administrator login name
  - Administrator login password

If any of these settings is at a factory default value, tell the customer these settings must be changed before you do the installation procedure.

Rev. 02/2009

## Controller Options

Make sure that "Admin. Authentication" is ON.

[System Settings] – [Administrator Tools] – [Administrator Authentication Management]  
- [Admin. Authentication]

If this setting is OFF, tell the customer this setting must be ON before you do the installation procedure.

3. Make sure that "Administrator Tools" is enabled (selected).

[System Settings] – [Administrator Tools] – [Administrator Authentication Management]  
- [Available Settings]

If this setting is disabled (not selected), tell the customer this setting must be enabled (selected) before you do the installation procedure.

**Seal Check and Removal****⚠ CAUTION**

You must check the box seals to make sure that they were not removed after the items were sealed in the box at the factory before you do the install.

1. Check the box seals [A] on each corner of the box.
  - Make sure that a tape is attached to each corner.
  - The surfaces of the tapes must be blank. If you see "VOID" on the tapes, do not install the components in the box.
2. If the surfaces of the tapes do not show "VOID", remove them from the corners of the box.
3. You can see the "VOID" marks [B] when you remove each seal. In this condition, they cannot be attached to the box again.

**Installation Procedure****⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

**Note**

- You must install the DataOverwriteSecurity unit in SD Card slot 1. However, the Postscript option and others are also installed in SD Card slot 1. You must do the "SD Card Appli Move" procedure first if you want to install the Data Overwrite Security unit.

**Controller Options**

Rev. 02/2009

1. Turn off the main power switch if the machine is turned on.
2. Disconnect the network cable if it is connected.

d037i119

3. Remove the slot cover [A] of SD slots (1 x 1).
4. Turn the SD-card label face [B] to the rear of the machine. Then push it slowly into slot 1 until you hear a click.
5. Connect the network cable if it needs to be connected.
6. Turn on the main power switch.
7. Go into the SP mode and push “EXECUTE” with SP5-878-001.
8. Exit the SP mode and turn off the operation switch. Then turn off the main power switch.
9. Turn on the machine power.
- ⇒ 10. Do SP5990-005 (SP print mode -> Diagnostic Report).
- ⇒ 11. Make sure the ROM number and firmware version in area [a] of the diagnostic report are the same as those in area [b].
  - [a]: “ROM Number/Firmware Version” – “HDD Format Option”
  - [b]: “Loading Program” - “GW5a\_zoffym”

Diagnostic Report:	“ROM No. / Firmware Version” [a]	“Loading Program” [b]
DataOverwriteSecurity Unit	HDD Format Option: <b>D3775912A / 1.01m</b>	<b>GW5a_zoffym:</b> <b>D3775912A / 1.01m</b>

**NOTE:** The ROM number and firmware version number change when the firmware is upgraded.

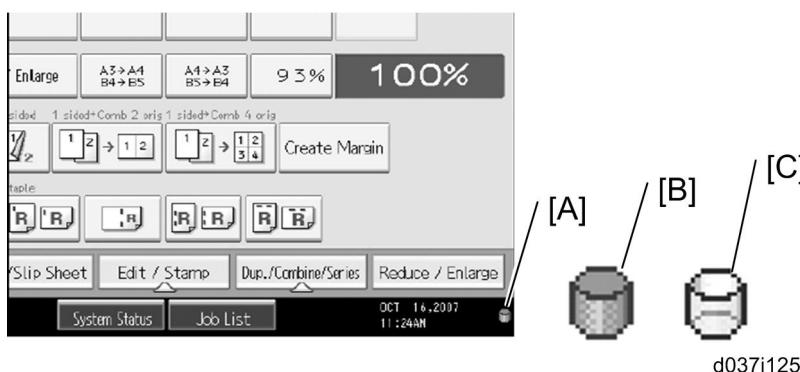

Rev. 02/2009

Controller Options

12. Go into the User Tools mode, and select System Settings> Administrator Tools> Auto Erase Memory Setting> On.

13. Exit the User Tools mode.

14. Check the display and make sure that the overwrite erase icon [A] shows.

15. Check the overwrite erase icon.

- The icon [B]: This icon is lit when there is temporary data to be overwritten, and blinks during overwriting.
- The icon [C]: This icon is lit when there is no temporary data to be overwritten.

## 2.22.9 HDD ENCRYPTION UNIT (D038/D041 ONLY)

### *Before You Begin the Procedure*

1. Make sure that the following settings are not at the factory default settings:

- Supervisor login password
- Administrator login name
- Administrator login password

#### ★ Important

- These settings must be set up by the customer before the HDD Encryption unit can be installed.

2. Confirm that "Admin. Authentication" is on:

[User Tools] > "System Settings"> "Administrator Tools"> "Administrator Authentication Management"> "Admin. Authentication"> "On"

If this setting is "Off", tell the customer that this setting must be "On" before you can do the installation procedure.

3. Confirm that "Administrator Tools" is selected and enabled:

[User Tools]> "System Settings"> "Administrator Tools"> "Administrator Authentication Management"> "Available Settings"

#### ↓ Note

- "Available Settings" is not displayed until Step 2 is done.

If this setting is not selected, tell the customer that this setting must be selected before you can do the installation procedure.

## Controller Options

### Seal Check and Removal

d037i951

### CAUTION

- You must check the box seals to make sure that they were not removed after the items were sealed in the box at the factory before you do the installation.
1. Check the box seals [A] on each corner of the box.
    - Make sure that a tape is attached to each corner.
    - The surfaces of the tapes must be blank. If you see “VOID” on the tapes, do not install the components in the box.
  2. If the surfaces of the tapes do not show “VOID”, remove them from the corners of the box.
  3. You can see the “VOID” marks [B] when you remove each seal. In this condition, they cannot be attached to the box again.

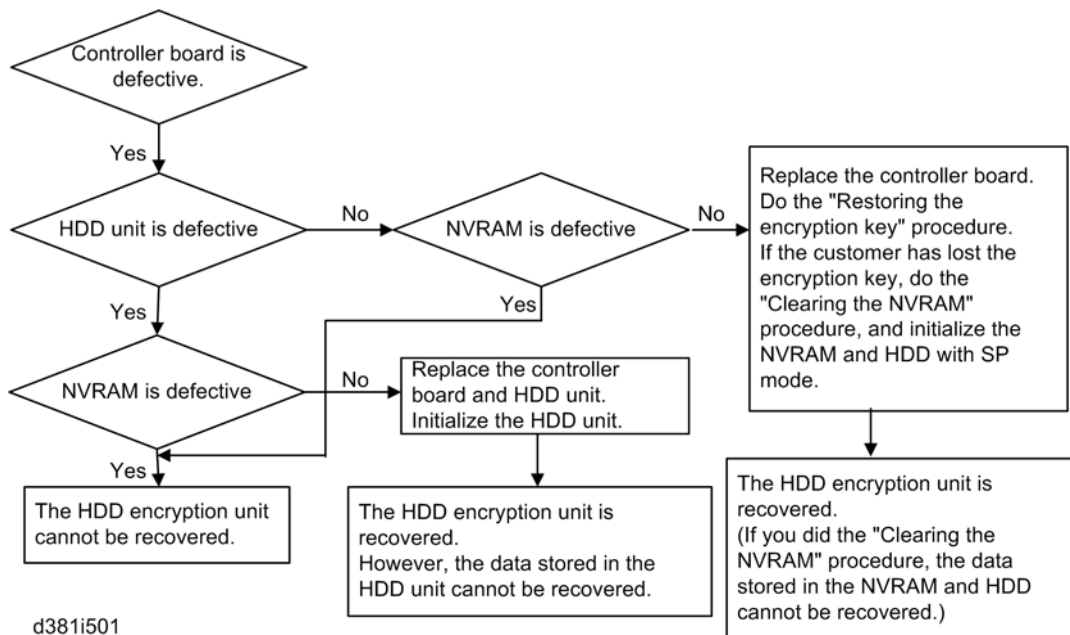

**Installation Procedure**

d037i124

1. Remove the SD card slot cover [A] (🔩 x 1).
2. Turn the SD-card label to face the rear of the machine. Then push it slowly into slot 2 [B] until you hear a click.
3. Turn on the main power switch, and then enter the SP mode.
4. Select SP5878-002, and then press "Execute" on the LCD.
5. Exit the SP mode after "Completed" is displayed on the LCD.
6. Turn off the main power switch.
7. Remove the SD card from slot 2.
8. Attach the SD card slot cover [A] (🔩 x 1).

## Controller Options

### Recovery from a Device Problem

### Restoring the Encryption key

When replacing the controller board for a model in which the HDD encryption unit has been installed, updating the encryption key is required.

1. Prepare an SD card which is initialized.
2. Make the "restore\_key" folder in the SD card.
3. Make an "nvram\_key.txt" file in the "restore\_key" folder in the SD card.
4. Ask an administrator to input the encryption key (this has been printed out earlier by the user) into the "nvram\_key.txt" file.
5. Remove only the HDD unit (☛ Section: HDD (Only for D038/D041)).
6. Turn on the main power switch.
7. Confirm that the prompt on the LCD tells you to install the SD card (storing the encryption key) in the machine.
8. Turn off the main power switch.
9. Insert the SD card that contains the encryption key into slot 2.
10. Turn on the main power switch, and the machine automatically restores the encryption key in the flash memory on the controller board.
11. Turn off the main power switch after the machine has returned to normal status.
12. Remove the SD card from slot 2.
13. Reinstall the HDD unit.

### ***Clearing the NVRAM***

When replacing the controller board for a model in which the HDD encryption unit has been installed and a customer has lost the encryption key, clearing the NVRAM is required to recover the HDD encryption unit.

1. Prepare an SD card which is initialized.
2. Make the "restore\_key" folder in the SD card.
3. Make an "nvram\_key.txt" file in the "restore\_key" folder in the SD card.
4. Input "nvclear" into the "nvram\_key.txt" file.
5. Turn on the main power switch.
6. Confirm that the prompt on the LCD tells you to install the SD card (storing the encryption key) in the machine.
7. Turn off the main power switch.
8. Insert the SD card that contains "nvclear" into slot 2.
9. Turn on the main power switch, and the machine automatically restores the encryption key in the flash memory on the controller board.
10. Turn off the main power switch after the machine has returned to normal status.
11. Remove the SD card from slot 2.
12. Turn on the main power switch.
13. Initialize the NVRAM (SP5801-001) and HDD unit (SP5832-001) with SP mode.
14. The user must enable the HDD encryption unit with a user tool.

## ⇒ 2.22.10 PICTBRIDGE

### **CAUTION**

- Unplug the main machine power cord before you do the following procedure.

#### Note

- You must install the PictBridge option in SD Card slot 1. However, the Postscript option and the data overwrite security unit option are also installed in SD Card slot 1. You must do the SD Card Appli move procedure first if you have the postscript or data overwrite security unit option installed and you want to install the PictBridge unit.

## Controller Options

Rev. 02/2009

d037i119

1. Remove the SD-card slot cover [A] for SD cards (🔩 x 1).
2. Turn the SD-card label face to the rear of the machine. Then push it slowly into slot 1 [B] until you hear a click.
3. Attach the SD-card slot cover [A] (🔩 x 1).
4. Make sure that the machine can recognize the option (see 'Check All Connections' at the end of this section).

### 2.22.11 VM CARD TYPE I (D038/D041 ONLY)

⇒ **IMPORTANT:** Whenever installing an SDK application on this model (e.g. the VM Card or Browser Unit), the **Memory Unit Type I: 512MB** must also be installed.

#### Installation Procedure

1. Switch the machine off.
2. Remove the SD card slot cover [A] (🔩 x1).
3. Insert the SD card [B] into slot 2.

d037i124

## Controller Options

4. Reattach the SD card slot cover.
5. Switch the machine on.
6. On the operation panel, remove the bottom blank keytop and replace it with the keytop provided.
7. Attach the decal to the copier.

**Firmware Update Procedure****Application halt**

1. Press the “User Tools/Counter” key, then press the “Extended Feature Settings” button and press the “Extended Feature Setting” button that appears. If required, log in as a machine administrator.
2. Press “Administrator Tools”, then press “Heap/Stack Size Settings”. Take note of the heap size and stack size. (After updating, the heap and stack size settings are cleared.)
3. Press “Startup”, then stop all applications.

**★ Important**

- The following problems can occur if the VM firmware is updated without the application halt.
  - The VM firmware update fails.
  - All settings for the application are cleared.
4. Turn the main power off, then remove the SD card slot cover, and remove the VM SD card from the SD card slot.

**Updating the VM SD card**

1. Insert the SD card into the SD card writer that is connected to a PC.
2. Make sure which drive is assigned for the SD card.
3. Decompress the downloaded update file, then there are two files (one file has an “.exe” file extension and the other has a “.bat” file extension).
4. Double click the “.bat” file, then the command prompt screen appears.
5. The first command line is shown as  
“Please input drive letter of SD card [a – x]:”  
Then enter the SD card drive name, and press the “Enter” key.
6. “Press any key to continue...” appears, then press the “Enter” key again. The update to the SD card starts.
7. “Press any key to continue...” appears again, then press “Enter” key. The command prompt screen disappears automatically if the update is successful.
8. Remove the SD card from the SD card writer after the access lamp going off on the SD card writer.

**Controller Options**

Rev. 02/2009

9. Insert the SD card in the SD card slot 2 of the machine and turn the main power on.

**Starting the application**

1. Press the “User Tools/Counter” key, then press the “Extended Feature Settings” button and press the “Extended Feature Setting” button that appears. If required, log in as a machine administrator.
2. Press “Startup”, then change the status to “Starting up” for each application.
3. Press “Administrator Tools”, then press “Heap/Stack Size Settings”. Program the heap size and stack size as the settings as before.
4. Turn the main power off and on.
5. Enter the “Extended Feature Settings” menu again, and check the version of the VM card firmware on the “Extended Feature Info” screen.

↓ Note

- The version of the VM card firmware is also shown on the Self Diagnostic Report (a part of the SMC report). But the version on the Self Diagnostic Report is not changed after updating.

**2.22.12 BROWSER UNIT TYPE E (D038/D041 ONLY)**

⇒ **IMPORTANT:** Whenever installing an SDK application on this model (e.g. the VM Card or Browser Unit), the **Memory Unit Type I: 512MB** must also be installed.

**Installation Procedure****⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

Do not leave the SD card in slot 2 after installing this application.

1. Remove the slot cover [A] for SD cards (⚙ x 1).
2. Turn the SD-card label face to the rear of the machine. Then push it slowly into slot 2 until you hear a click.

d037i124

Rev. 02/2009

Controller Options

3. Plug in and turn on the main power switch.
4. Push the "User Tools" key.
  - If an administrator setting is registered for the machine, step 5 and 6 are required. Otherwise, skip to step 7
5. Push the "Login/ Logout" key.
6. Login with the administrator user name and password.
7. Touch "Extended Feature Settings" twice on the LCD.
8. Touch "Install" on the LCD.
9. Touch "SD Card".
10. Touch the "Browser" line.
11. Under "Install to" touch "Machine HDD" and touch "Next".
12. When you see "Ready to Install", check the information on the screen to confirm your previous selection.
13. Touch "OK". You will see "Installing the extended feature... Please wait.", and then "Completed".
14. Touch "Exit" to go back to the setting screen.
15. Touch "Change Allocation".
16. Touch the "Browser" line.
17. Press the hard key that you want to use for the Browser Unit. As a default, this function is assigned to the "Other Functions" key (the bottom key of the function keys).
18. Touch "OK".
19. Touch "Exit" twice to go back to the copy screen.
20. Turn off the main power switch.
21. Install the key for "Browser Unit" to the place where you want.
22. Remove the SD card from slot 2.
23. Attach the slot cover [A] (🔑 x 1).
24. Keep the SD card in the place (👉 Section: SD Card Appli Move in Installation section) after you install the application program from the card to HDD. This is because: ↪ The SD card can be the only proof that the user is licensed to use the application program. You may need to check the SD card and its data to solve a problem in the future.

### ***Update Procedure***

1. Remove the slot cover [A] for SD cards (🔑 x 1).
2. Turn the SD-card label face to the rear of the machine. Then push it slowly into slot 2 until you hear a click.
3. Plug in and turn on the main power switch.

5. Push the "Login/ Logout" key.
6. Login with the administrator user name and password.
7. Touch "Extended Feature Settings" twice on the LCD.
8. Touch "Uninstall" on the LCD.
9. Touch the "Browser" line
10. Confirmation message appears on the LCD.
11. Touch "Yes" to proceed.
12. Reconfirmation message appears on the LCD.
13. Touch "Yes" to uninstall the browser unit.
14. You will see "Uninstalling the extended feature... Please wait.", and then "Completed".
15. Touch "Exit" to go back to the setting screen.
16. Exit "User/Tools" setting, and then turn off the main power switch.
17. Remove the SD card from SD card slot 2.
18. Overwrite the updated program in the "sdk" folder of the browser unit application with PC.
19. Do the "Installation Procedure" to install the browser unit.

**2.22.13 GIGABIT ETHERNET (D038/D041 ONLY)****⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

## Controller Options

1. Remove the I/F-slot cover [A] from the I/F-slot (⚙ x 2).
2. Install the Gigabit Ethernet board [B] (Knob-screw x 2) into the I/F-slot.
3. Attach the two caps to the Ethernet (10/100 Base-T) ports as shown above.

d037i127

4. Attach the ferrite core [A] to the LAN cable [B] as shown above, and connect the LAN cable to the machine.
5. Connect the USB cable to the USB connector.
6. Make sure that the machine can recognize this option (see 'Check All Connections' at the end of this section).

### 2.22.14 MEMORY UNIT TYPE I 512MB (D038/D041 ONLY)

#### **⚠ CAUTION**

- Unplug the main machine power cord before you do the following procedure.

1. Rear cover (☛ Section: Rear Cover)
2. Controller box cover (☛ Section: Controller Box Cover)
3. HDD bracket (☛ Section: HDD (Only for D038/D041))

d037i525

d037i526

4. Unlock the lock levers [A].
5. Remove the installed memory [B] (256 MB).
6. Push the memory unit [C] (512 MB) until both lock levers lock the memory unit.
7. Reassemble the machine.

## Controller Options

### 2.22.15 CHECK ALL CONNECTIONS

1. Plug in the power cord. Then turn on the main switch.
2. Enter the printer user mode. Then print the configuration page.

User Tools > Printer Settings > List Test Print > Config. Page

All installed options are shown in the “System Reference” column.

# PREVENTIVE MAINTENANCE

SECTION 3 PREVENTIVE MAINTENANCE REVISION HISTORY		
Page	Date	Added/Updated/New
		None

## 3. PREVENTIVE MAINTENANCE

### 3.1 MAINTENANCE TABLES

See "[Appendices](#)" for the following information:

- Preventive Maintenance Items
- Other Yield Parts

## PM Parts Settings

**3.2 PM PARTS SETTINGS****3.2.1 BEFORE REMOVING THE OLD PM PARTS**

1. Enter the SP mode.
2. Output the SMC logging data with SP5-990-004.
3. Set the following SPs to "1" before you turn the power off. Then, the machine will reset the PM counters automatically. In the case of developer, the developer initialization will also be done automatically.
4. Exit the SP mode.

Item	SP
Development Unit	Black: 3902-001 Cyan: 3902-002 Magenta: 3902-003 Yellow: 3902-004
Drum Unit	Black: 3902-009 Cyan: 3902-010 Magenta: 3902-011 Yellow: 3902-012
ITB Unit	3902-013
Fusing Unit	3902-014
Fusing Roller	3902-015
Fusing Belt	3902-016
ITB Cleaning Unit	3902-017
PTR Unit	3902-018
PCDU Toner Collection Bottle	3902-019* <sup>1</sup>
ITB Toner Collection Bottle	3902-020* <sup>1</sup>

**PM Parts Settings**

- \*1: Only if the toner collection bottle is replaced before the machine detects near-full.

For the following units, there is a new unit detection mechanism. It is not necessary to reset PM counters.

- Development unit
- PCU/ ITB Toner Collection Bottle (if full or near-full)

**3.2.2 AFTER INSTALLING THE NEW PM PARTS**

1. Turn on the main power switch.
2. Output the SMC logging data with SP5-990-004 and check the counter values.
3. Make sure that the PM counters for the replaced units are “0” with SP7-803. If the PM counter for a unit was not reset, then reset that counter with SP 7-804.
4. Make sure that the exchange counter counts up with SP7-853.
5. Make sure that the counters for the previous units (SP7-906) on the new SMC logging data list (from step 2 above) are equal to the counters (SP7-803) for these units on the previous SMC logging data list (the list that was output in the “Before removing the old parts” section).
6. Make sure that the unit replacement date is updated with SP7-950.

**3.2.3 PREPARATION BEFORE OPERATION CHECK**

1. Clean the exposure glasses (for DF and book scanning).
2. Enter the user tools mode.
3. Do the “Automatic Color Calibration “(ACC) for the copier mode & printer mode as follows:
  - Print the ACC test pattern (User Tools > Maintenance > ACC > Start).
  - Put the printout on the exposure glass.
  - Put 10 sheets of white paper on the test chart. This ensures the precise ACC adjustment.
  - Close the ARDF or the platen cover.
  - Press “Start Scanning” on the LCD. Then, the machine starts the ACC.
4. Exit the User Tools mode, and then enter the SP mode.
5. Do the “Forced line position adjustment” as follows.
  - First do SP2-111-3 (Mode c).
  - Then do SP2-111-1 (Mode a).
  - To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

### **PM Parts Settings**

6. Exit the SP mode.

### **3.2.4 OPERATION CHECK**

Check if the sample image has been copied normally.

# REPLACEMENT AND ADJUSTMENT

## 4. REPLACEMENT AND ADJUSTMENT

### 4.1 BEFOREHAND

#### CAUTION

- Installing options, please do the following:
- If there is a fax unit in the machine, print out all messages stored in the memory, the lists of user-programmed items, and the system parameter list.
- If there are printer jobs in the machine, print out all jobs in the printer buffer.
- Turn off the main switch and disconnect the power cord, the telephone line, and the network cable.

## Special Tools

**4.2 SPECIAL TOOLS**

Part Number	Description	Q'ty
B645 5010	SD Card	1
B645 6820	USB Reader/Writer	1
VSSM9000	Digital Multimeter – FLUKE87	1
C401 9503	20X Magnification Scope	1
A257 9300	Grease Barrierta – S552R	1
A092 9503	C4 Color Test Chart (3 pcs/set)	1
A184 9501	Optics Adjustment Tool (2 pcs/set)	2

## 4.3 IMAGE ADJUSTMENT

### 4.3.1 SCANNING

Check the printing registration/side-to-side adjustment and the blank margin adjustment before you do the following scanner adjustments.

**Note**

- Use S-2-1 test chart to do the following adjustments.

#### ***Scanner sub-scan magnification***

A: Sub-scan magnification

- Put the test chart on the exposure glass. Then make a copy from one of the feed stations.
- Check the magnification ratio. Adjust with SP4-008 if necessary.  
Standard:  $\pm 1.0\%$ .

#### ***Scanner leading edge and side-to-side registration***

A: Leading Edge Registration

**Image Adjustment**

1. Put the test chart on the exposure glass. Then make a copy from one of the feed stations.
2. Check the leading edge and side-to-side registration. Adjust the following SP modes if necessary.

Standard:  $0 \pm 2$  mm for the leading edge registration,  $0 \pm 2$  mm for the side-to-side registration.

	SP mode	
Leading Edge Registration	SP4-010-001	
Side-to-Side Registration	SP4-011-001	

**4.3.2 ARDF**

***ARDF side-to-side, leading edge registration and trailing edge***

A: Leading edge registration, B: Side-to-Side registration

Use A3/DLT paper to make a temporary test chart as shown above.

1. Put the temporary test chart on the ARDF. Then make a copy from one of the feed stations.
2. Check the registration. Check the leading edge and side-to-side registration. Adjust the following SP modes if necessary.

Standard:  $4.2 \pm 3.0$  mm for the leading edge registration,  $2 \pm 3.0$  mm for the side-to-side registration. Use the following SP modes to adjust if necessary.

Image Adjustment

SP Code	What It Does	Adjustment Range
SP6-006-001	Side-to-Side Registration (1st side)	± 3.0 mm
SP6-006-002	Side-to-Side Registration (2nd side)	± 3.0 mm
SP6-006-003	Leading Edge Registration	± 5.0 mm
SP6-006-005	Buckle: Duplex Front	± 5.0 mm
SP6-006-006	Buckle: Duplex Rear	± 5.0 mm
SP6-006-007	Rear Edge Erase (Trailing Edge)	± 5.0 mm

**ARDF sub-scan magnification**

1. Put the temporary test chart on the ARDF. Then make a copy from one of the feed stations.
2. Check the magnification ratio. Adjust with SP6-017-001 if necessary.
  - Standard: ±5.0%
  - Reduction mode: ±5.0%
  - Enlargement mode: ±5.0%

Replacement & Adjustment

**4.3.3 REGISTRATION**

**Image Area**

A = C = 5.2 mm (0.2"), B = 2.0 mm

Make sure that the registration is adjusted within the adjustment standard range as shown below.

## Image Adjustment

### **Leading Edge**

Adjusts the leading edge registration for each paper type and process line speed.

### **Side to Side**

Adjusts the side-to-side registration for each paper feed station. Use SP mode (SP1-002) to adjust the side-to-side registration for the optional paper feed unit, LCT, and duplex unit.

### **Adjustment Standard**

- Leading edge (sub-scan direction):  $5.2 \pm 2$  mm
- Side to side (main-scan direction):  $2 \pm 1$  mm

### **Paper Registration Standard**

The registration in both main- and sub-scan directions can change within the following tolerance.

- Sub-scan direction:  $0 \pm 9$  mm
- Main-scan direction:  $0 \pm 4$  mm

### **Adjustment Procedure**

1. Enter SP2-109-003.
2. Print out the test pattern (14: Trimming Area) with SP2-109-003.

#### ↓ Note

- Registration can change slightly as shown on the previous page. Print some pages of the "Trimming Area" for step 3 and 4. Then average the leading edge and side-to-side registration values, and adjust each SP mode.
3. Do the leading edge registration adjustment.
    - 1) Check the leading edge registration and adjust it with SP1-001.
    - 2) Select the adjustment conditions (paper type and process line speed).
    - 3) Input the value. Then press the  $\text{\#}$  key.
    - 4) Generate a trim pattern to check the leading edge adjustment.
  4. Do the side-to-side registration adjustment.
    - 1) Check the side-to-side registration and adjust it with SP1-002.
    - 2) Select the adjustment conditions (paper feed station).
    - 3) Input the value. Then press the  $\text{\#}$  key.
    - 4) Generate a trim pattern to check the leading edge adjustment.

## 4.3.4 ERASE MARGIN ADJUSTMENT

#### ↓ Note

- Adjust the erase margin C and D only if the registration (main scan and sub scan)

## Image Adjustment

cannot be adjusted within the standard values. Do the registration adjustment after adjusting the erase margin C and D, and then adjust the erase margin A and B.

1. Enter SP2-109-003.
2. Print out the test pattern (14: 1-dot trimming pattern) with SP2-109-003.
3. Check the erase margin A and B. Adjust them with SP2-103-001 to -010 if necessary.
  - Leading edge: 1.5 to 5.0 mm,
  - Side-to-side: 0.5 to 4.0 mm,
  - Trailing edge: 0.5 to 0.6 mm

### 4.3.5 COLOR REGISTRATION

#### *Line Position Adjustment*

The automatic line position adjustment usually is done for a specified condition to get the best color prints.

Do the following if color registration shifts:

- Do “Auto Color Registration” as follows to do the forced line position adjustment.
  1. First do SP2-111-3.
  2. Then do SP2-111-1.
 

To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12 (0: Completed successfully, 1: Failed).
- You should also do the line position adjustment at these times:
  1. After you transport or move the machine (you should do the forced line position

### Image Adjustment

adjustment if you install the machine at the user location.) if the machine is pre-installed at the workshop and moved to the user location,

2. When you remove the PCDU
3. When you remove or replace the motors, clutches, and/or gears related to the drum/development/transfer sections
4. When you remove or replace the image transfer belt, image transfer belt unit or laser optical housing unit

### 4.3.6 PRINTER GAMMA CORRECTION

- The ACC is usually sufficient to adjust the color balance to get the best print output. You only need the printer gamma correction to fine-tune to meet user requirements.

Use SP modes if you want to modify the printer gamma curve created with ACC. You can adjust the gamma data for the following:

- Highlight
- Middle
- Shadow areas
- IDmax.

The adjustable range is from 0 to 30 (31 steps).

### Copy Mode

- Photo Mode, Full Color -

	Item to Adjust	Level on the C-4 chart	Adjustment Standard

## Image Adjustment

	Item to Adjust	Level on the C-4 chart (K)	Adjustment Standard
	For adjusting K Highlight: SP4-914-001		

↓ Note

- Text parts of the test pattern cannot be printed clearly after you adjust “shadow” as shown above. At this time, check if the 5 line/mm pattern at each corner is printed clearly. If it is not, adjust the offset value of “shadow” again until it is.

**Printer Mode**

There are six adjustable modes (select these modes with printer SP1-102-001):

- 1200 x 1200 photo mode
- 1200 x 1200 text mode
- 2400 x 600 photo mode
- 2400 x 600 text mode
- 1800 x 600 photo mode
- 1800 x 600 text mode
- 600 x 600 photo mode
- 600 x 600 text mode

	K	C	M	Y
Highlight	SP1-104-1	SP1-104-21	SP1-104-41	SP1-104-61
Shadow	SP1-104-2	SP1-104-22	SP1-104-42	SP1-104-62
Middle	SP1-104-3	SP1-104-23	SP1-104-43	SP1-104-63
IDmax	SP1-104-4	SP1-104-24	SP1-104-44	SP1-104-64

**- Adjustment Procedure -**

- Do ACC for the printer mode.
- Turn the main power off and on.
- Enter SP mode.
- Select “Printer SP”.
- Select SP1-102-001. Then select the necessary print mode to adjust.
- Choose SP1-103-1 to print out a tone control test sheet if you want to examine the image quality for these settings.
- Adjust the color density with SP1-104. Compare the tone control test sheet with the C4

## Image Adjustment

test chart.

- Adjust the density in this order: "ID Max", "Shadow", "Middle", "Highlight".
8. Use SP1-105-001 to keep the adjusted settings.

## 4.4 EXTERIOR COVERS

### 4.4.1 PCDU TONER COLLECTION BOTTLE

If you replace this toner collection bottle after the machine detects that it is full or near-full, the machine automatically resets the PM counter for the PCDU toner collection bottle after replacement.

But, if you replace a bottle that is not full or near-full, then you must reset the PM counter for this unit. To do this, set SP 3902 019 to 1 before you start to work on the machine.

d037r101

1. Open the front door [A].

d037r102

2. PCDU toner collection bottle [A] (lock x 2)

### 4.4.2 FRONT DOOR

1. Open the front door.

3. Scanner motor [A] (⚙️ x 2, ground plate [B] x 1)

⚠️ Note

- Make sure that the ground plate [B] is attached when installing the scanner motor in the scanner motor bracket.
- Do the scanner image adjustment after replacing the scanner motor (👉 Section: Image Adjustment).

### 4.5.5 SENSOR BOARD UNIT (SBU)

1. Exposure glass (👉 Section: Exposure Glass)

Replacement & Adjustment

## Scanner Unit

d037r130

2. Original length sensor bracket [A] (🔩 x 1, 🛠️ x1, 🛠️ x 1 each)

d037r132

3. Sensor board unit [A] (🔩 x 4, ground screw x 1, 🛠️ x 2)

### ***When reassembling***

Adjust the following SP modes after you replace the sensor board unit:

- SP4-008 (Sub Scan Mag): 🖱️ Section: "Image Adjustment: Scanning".
- SP4-010 (Sub Mag Reg.): 🖱️ Section: "Image Adjustment: Scanning".
- SP4-011 (Main Scan Reg): 🖱️ Section: "Image Adjustment: Scanning".
- SP4-688 (DF: Density Adjustment): Use this to adjust the density level if the ID of outputs made in the DF and Platen mode is different.

## 4.5.6 EXPOSURE LAMP STABILIZER

1. Rear cover (🖱️ Section: Rear Cover)

Scanner Unit

2. Exposure lamp stabilizer bracket [A] (🔩 x 2, 🛠️ x 2)

### 4.5.7 SCANNER HP SENSOR

1. Rear Cover (👉 Section: Rear Cover)
2. Scanner rear cover (👉 Section: Exposure Lamp)

3. Move the 1st scanner carriage [A] to the right side by rotating the scanner motor [B] clockwise.

4. Remove the mylar [A].
5. Remove the scanner HP sensor [B] (🛠️ x 1, hooks).

Replacement & Adjustment

## Scanner Unit

**4.5.8 PLATEN COVER SENSOR**

1. Scanner rear cover (☛ Section: Exposure Lamp)

2. Holder bracket [A] (☛ x 1)
3. Platen cover sensor [B] (☛ x 1)

**4.5.9 FRONT SCANNER WIRE**

1. Rear Cover (☛ Section: Rear Cover)
2. Operation panel (☛ Section: Operation Panel)
3. Exposure glass (☛ Section: Exposure Glass)

4. Scanner left cover [A] (☛ x 2)

Scanner Unit

5. Scanner left stay [A] (🔩 x 3)
6. Scanner front frame [B] (🔩 x 5)

7. Take aside the connector bracket [A] (🔩 x 2).
8. Scanner rear frame [B] (🔩 x 8, 🛠️ x all, 🛠️ x all)
9. Scanner motor bracket (🔧 Section: Scanner Motor)

10. Rear scanner drive pulley [A] (🔩 x 1)

Replacement & Adjustment

### Scanner Unit

11. Front scanner wire clamp [A]
12. Loosen the front scanner wire bracket [B] (⚙ x 1)
13. Front scanner wire
14. Move the shaft [C] in the red arrow direction (⌚ x 1: at front), and remove the scanner drive pulley [D] (⚙ x 1).

↓ Note

- When removing the rear scanner wire, remove the e-ring at the rear side of the shaft.

### Reinstalling the Front Scanner Wire

1. Position the center ball [A] in the middle of the forked holder.
2. Pass the right end (with the ball) [B] through the square hole. Pass the left end (with

## Scanner Unit

the ring) through the notch.

3. Wind the right end counterclockwise (shown from the machine's front) five times. Wind the left end clockwise three times.

↓ Note

- The two green marks [C] come together when you have done this. Stick the wire to the pulley with tape. This lets you easily handle the assembly at the time of installation.

4. Install the drive pulley on the shaft [A].

↓ Note

- Do not attach the pulley to the shaft with the screw at this time.
5. Insert the left end into the slit [B]. The end should go via the rear track of the left pulley [C] and the rear track of the movable pulley [D].

Scanner Unit

d037r272

6. Hook the right end onto the front scanner wire bracket [A]. The end should go via the rear track of the right pulley [B] and the front track of the movable pulley [C].

↓ Note

- Do not attach the scanner wire bracket with the screw at this time.

d037r273

7. Remove the tape from the drive pulley.
8. Insert a scanner positioning pin [A] through the 2nd carriage hole [B] and the left holes [C] in the front rail. Insert another scanner positioning pin [D] through the 1st carriage hole [E] and the right holes in the front rail [F].
9. Insert two more scanner positioning pins through the holes in the rear rail.

## Scanner Unit

10. Screw the drive pulley to the shaft [G].
11. Screw the scanner wire bracket to the front rail [H].
12. Install the scanner wire clamp [I].
13. Pull out the positioning pins.

↓ Note

- Make sure the 1st and 2nd carriages move smoothly after you remove the positioning pins. Do steps 8 through 13 again if they do not.

#### 4.5.10 REAR SCANNER WIRE

1. Rear Cover (☛ Section: Rear Cover)
2. Operation panel (☛ Section: Operation Panel)
3. Exposure glass (☛ Section: Exposure Glass)
4. Scanner left cover (☛ Section: Front Scanner Wire)
5. Scanner front frame (☛ Section: Front Scanner Wire)
6. Scanner left stay (☛ Section: Front Scanner Wire)
7. Scanner rear frame (☛ Section: Front Scanner Wire)
8. Follow steps 10 through 14 in Section: Front Scanner Wire. You can remove the rear scanner wire with the same manner for replacing the front scanner wire.

#### *Reinstalling the Rear Scanner Wire*

d037r274

1. Position the center ball [A] in the middle of the forked holder.
2. Pass the left end (with the ball) [B] through the drive pulley notch. Pass the right end (with the ring) through the drive pulley hole.
3. Wind the left end [B] clockwise (shown from the machine's front) five times. Wind the right end counterclockwise three times.

↓ Note

**Scanner Unit**

- The two green marks [C] come together when you do this. Attach the wire to the pulley with tape. This lets you easily handle the assembly at the time of installation.
4. Install the drive pulley on the shaft.

↓ Note

- Do not attach the pulley on the shaft with the screw at this time.
5. Install the wire.

↓ Note

- The winding of the wire on the three pulleys at the rear of the scanner should be the same as the winding on the three pulleys at the front. This must show as a mirror image.
- Example:** At the front of the machine, the side of the drive pulley with the three windings must face the front of the machine. At the rear of the machine, it must face the rear.
6. Do steps 7 through 13 from the “Reinstalling the Front Scanner Wire” (☛ Section: Front Scanner Wire).

## 4.6 LASER OPTICS

### **WARNING**

- Turn off the main switch and unplug the machine before beginning any of the procedures in this section. Laser beams can cause serious eye injury.

### 4.6.1 CAUTION DECAL LOCATION

The caution decal is placed as shown below.

### **WARNING**

- Be sure to turn off the main switch and disconnect the power plug from the power outlet before beginning any disassembly or adjustment of the laser unit. This copier uses a class IIIb laser beam with a wavelength of 648 - 663 nm and an output of 9 mW. The laser can cause serious eye injury.

### 4.6.2 LASER UNIT

#### **CAUTION**

- Before installing a new laser unit, remove the polygon motor holder bracket and the tag from the new unit.

## Laser Optics

### Preparing a new laser unit

d037r207

1. Polygon mirror motor cover [A] of the laser unit (🔩 x 4)

d037r208

2. Polygon motor holder bracket [B] with a red tag (🔩 x 3)

d037r209

3. Install the three screws [C] (removed in step 2) in the laser unit.
4. Reinstall the polygon mirror motor cover [A] (🔩 x 4).

### **Before removing the old laser unit**

Do the following settings before removing the laser unit. These are adjustments for skew

**Laser Optics**

adjustment motors in the laser unit.

1. Plug in and turn on the main power switch of the copier.
2. Enter the SP mode.
3. Execute SP2-220-001 to clear the Mirror-No.2 positioning motor setting for Cyan.
4. Execute SP2-220-002 to clear the Mirror-No.2 positioning motor setting for Magenta.
5. Execute SP2-220-003 to clear the Mirror-No.2 positioning motor setting for Yellow.
6. Exit the SP mode.
7. Turn off the main power switch and disconnect the power cord of the copier.

***Recovery procedure for no replacement preparation of laser unit***

If you did not do the procedure in 'Before removing the laser unit' before removing the laser unit, you must do the following.

1. Turn off the main power switch and disconnect the power cord of the copier.
2. Remove the left cover (see the following "Removing the laser unit").

d037r203a

3. Disconnect the harness [A] of the skew correction motor.
4. Do steps 1 to 7 of "Before removing the laser unit".
5. Connect the harness [A] and reinstall the left cover.
6. Plug in and turn on the main power switch.

## Laser Optics

### Removing the laser unit

d037r201

1. Left cover [A] (🔧 x 10)

d037r202a

2. ITB cleaning unit [A] (🔧 x 2)

d037r203

3. Ventilation rear fan holder [A] (🔧 x 2, 🛠️ x 1)
4. Ventilation front fan holder [B] (🔧 x 2, 🛠️ x 1, 🛠️ x 1)

d037r205

5. Remove the laser unit [A] (⚙ x 2, 🔧 x 2, 📄 x 3)

**After installing a new laser unit**

Do the following adjustment after installing the new laser unit.

1. Open the front door of the machine.
2. Plug in and turn on the main power switch.
3. Check that the settings of SP2-119-001, -002 and -003 are "0". If these settings are not "0", execute "Recovery procedure for no replacement preparation of laser unit" described above.

★ Important

- If this step is not correctly done, an image problem may occur on printouts.

**Input data for SP modes**

Color Regist Adjust Bk:Main Scan:Dot	SP 2-101-001:xxx	[A]
Color Regist Adjust C:Main Scan:Dot	SP 2-101-002:xxx	

d037r513

4. Input the SP settings on the sheet provided with a new LD unit.
  - SP2-101-001 to -004: Color Registration: Main Scan for each color
  - SP2-101-013 to -016: Color Registration: Sub Scan for each color
  - SP2-102-001, -003, -004, -006, -007, -009, -010, -012: Main Magnification for each color and line speed
  - SP2-104-001 to -004: :LD Initial Power Adjustment for each color

↓ Note

Replacement & Adjustment

## Laser Optics

- The printed values [A] are different for each laser unit.
5. Print the test pattern (14: 1-dot trimming pattern in the SP2-109-003).
  6. Check that the left and right trim margin is within  $4 \pm 1$  mm. If not, change the standard value for the main scan magnification adjustment.
  7. Select "0" with SP2-109-003 after printing the "1-dot trimming pattern.
  8. Do the line position adjustment.
    - First do SP2-111-003.
    - Then do SP2-111-001.
    - To check if SP 2-111-001 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-010 to -012.
  9. Exit the SP mode.

### 4.6.3 POLYGON MIRROR MOTOR

1. Laser unit (☛ Section: Laser Unit)

d037r207

2. Polygon mirror motor cover [A] (☛ x 4)

d037r210

3. Polygon mirror motor holder [A] (☛ x 1)
4. Polygon mirror motor [B] (☛ x 4, ☛ x 1)

## Laser Optics

After installing the laser optics housing unit:

- Do the "Line Pos. Adjust Execute:Mode c" (SP2-111-003).
- Then do the "Line Pos. Adjust Execute:Mode a" (SP2-111-001).

To check if SP 2-111-001 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP2-194-010 to -012.

## Image Creation

## 4.7 IMAGE CREATION

## 4.7.1 PCDU (PHOTO CONDUCTOR AND DEVELOPMENT UNIT)

↓ Note

- Do not touch the OPC drum. Do not let metal objects touch the development sleeve.

- Open the front door.
- PCDU toner collection bottle (👉 Section: PCDU Toner Collection Bottle)

d037r177

- Turn the ITB lock lever [A] to the 'up' position.
- PCDU [B] (🔑 x 2 each)

***When installing a new PCDU***

d037r333

Remove the cover [A] on the toner inlet and pull out the tape [B] from the new development unit before installing a new PCDU in the machine.

## 4.7.2 DRUM UNIT AND DEVELOPMENT UNIT

The new drum unit has a front cover. When you attach the new drum unit to the development unit, remove the front cover first.

Use it for installing the new drum unit and development unit.

1. If you install a new drum unit only, set SP 3902-xxx to "1".
  - Black: 3902-009
  - Cyan: 3902-010
  - Magenta: 3902-011
  - Yellow: 3902-012

**Note**

- If you do this, then the machine will reset the PM counter for the drum unit automatically, after you turn the power on again.
2. If you install a new development unit only, set SP 3902-xxx to "1".
    - Black: 3902-001
    - Cyan: 3902-002
    - Magenta: 3902-003
    - Yellow: 3902-004

**Note**

- If you do this, then the machine will reset the PM counter for the development unit automatically, after you turn the power on again.
3. Turn the machine power off.
  4. PCDU (☛ Section: PCDU (Photo Conductor and Development Unit))

d037r179

5. Front cover [A] (☛ x 2)

Image Creation

d037r180

6. Rear cover [A] (🔩 x 2)

d037r181

d037r182

7. Drum unit [A] and development unit [B] (🔧 x 1)

d037r390

d037r389

↓ Note

- When the development unit is removed from the drum unit, clean the entrance mylar [A] with a vacuum cleaner.

d037r334

8. Remove the connector [A] with a small flat tool [B].

↓ Note

- Keep this connector [A] for the new drum unit.
9. If you change the development unit, do the ACC procedure.
  10. Execute the drum phase adjustment with SP1902-001 twice.

### ***New unit detection for the development unit***

When a new development unit is installed in the machine, the machine will automatically reset the PM counters for the development unit and drum unit, even if the drum unit was not changed. To avoid resetting both counters after you install a new development unit only, make sure that step 2 in the procedure above is done before installing.

## **4.7.3 TONER HOPPER UNIT**

### ***Toner hopper unit: K, C, M***

1. Open the front door.
2. PCDU toner collection bottle (☛ Section: PCDU Toner Collection Bottle)
3. Inner cover (☛ Section: Inner Cover)
4. PCDU (☛ Section: PCDU (Photo Conductor and Development Unit))

↓ Note

- Remove the corresponding color PCDU. For example, if you remove the toner hopper unit: K, remove the black PCDU.

Image Creation

d037r304

d037r305

5. Toner supply drive gear [A] (hook x 1)
6. Toner hopper unit: K, C, M [B] (🔧 x 2, 📦 x 1 for K and M; 2 for C, 📦 x 1 each)

d037r372

7. Place the toner hopper unit [A] on sheets of paper.

**Toner hopper unit: Y**

1. Open the front door.
2. PCDU toner collection bottle (🔑 Section: PCDU Toner Collection Bottle)
3. Inner cover (🔑 Section: Inner Cover)
4. PCDU (🔑 Section: PCDU (Photo Conductor and Development Unit))

d037r306

d037r304

5. Gear cover [A] (🔧 x 2, 📦 x 2)

Rev. 01/2009

Image Creation

6. Toner supply drive gear (hook x 1)
7. Toner hopper unit: Y [B] (🔧 x 2, 📄 x 1 each)

d037r372

8. Place the toner hopper unit [A] on sheets of paper.

### ***When installing a new toner hopper unit***

Developer must be added to the new toner hopper. Some developer (8 g) is provided with each new toner hopper unit. Pour this into the toner hopper unit before reattaching the inner cover.

- ⇒ 1. Slowly open the toner hopper shutter [A].

↓ Note

- Do not try to open the toner hopper shutter fully at one try. This shutter comes off easily without the inner cover. If the toner hopper shutter has come off, reattach it.

d037r307

2. Pour the developer (8 g) into the inlet [B] of the toner hopper unit.
3. Close the toner hopper shutter.
4. Reassemble the machine.

The black developer bottle is labeled as shown in the photograph to the right: The color toner hopper units use a common developer bottle without any label. So, it should be easy to distinguish color carrier bottles from the black one.

### **⚠ CAUTION**

When cleaning a toner hopper unit, be careful **not** to vacuum the developer from the bottom of the hopper.

#### 4.7.4 TONER SUPPLY MOTOR

1. Open the front door.
2. PCDU toner collection bottle (☛ Section: PCDU Toner Collection Bottle)
3. Inner cover (☛ Section: Inner Cover)

## 4.8 IMAGE TRANSFER

### 4.8.1 ITB CLEANING UNIT

If you replace the cleaning unit or toner collection bottle after the machine detects that it is full or near-full, the machine automatically resets the PM counter for the bottle after replacement.

But, if you replace a bottle that is not full or near-full, then you must reset the PM counter for this unit. To do this, set SPs 3902-017 and -020 to 1 before you turn off the power switch.

If you do this, then the machine will reset the PM counter for the units automatically, after you turn the power on again.

SP 3902-017 is for the ITB cleaning unit and SP 3902-020 is for the ITB toner collection bottle.

1. Left cover (☛ Section: Left Cover)

2. ITB cleaning unit [A] (☛ x 2)

#### ***When installing the ITB cleaning unit***

Secure the front side [B] first with a screw. This [B] is the positioning screw.

Replacement & Adjustment

## Paper Transfer

d037r261

3. ID sensor cover [A] (🔧 x 2)

d037r262

d037r263

4. ID sensor board [A] (🔧 x 6, 🖨️ x 1, 📄 x 1)

↓ Note

- If the black spacer [B] is stuck to the sensor board as shown above, remove all black spacers. These black spacers should be used when a new ID sensor board is installed.

### ***Cleaning for ID sensors***

ID sensors require cleaning maintenance every EM. Do the following steps for ID sensor cleaning.

1. PCDU: K (👉 Section: PCDU (Photo Conductor and Development Unit))
2. ITB unit (👉 Section: ITB (Image Transfer Belt) Unit)

3. Clean the ID sensors [A].
  - Use a cloth moistened with alcohol to clean the ID sensors.

↓ Note

- Do not use a dry cloth. Otherwise, the ID sensors may get more dirty due to static electricity.

### ***After installing a new ID sensor unit/board***

Do the following adjustment after installing a new ID sensor unit/board.

1. Plug in and turn on the main power switch of the copier.
2. Enter the SP mode.

3. Input all correction coefficients [A] for the ID sensor with the SP modes referring to the barcode sheet provided with the new ID sensor unit/board.

↓ Note

- For example, input "0.98" with SP3-362-013.
4. Exit the SP mode.

## **4.9.4 TEMPERATURE AND HUMIDITY SENSOR**

### 4.10.1 GEAR UNIT

1. Rear cover (☛ Section: Rear Cover)
2. Rear lower cover (☛ Section: Rear Lower Cover)

## Drive Unit

3. Open the controller box (☛ Section: Controller Box)

d037r165

4. Remove all connectors and clamps (blue arrows) on the HVPS: CB board [A].
5. Pull all the PCDUs to the front side. (☛ Section: PCDU (Photo Conductor and Development Unit))

d037r166

6. Gear unit [A] (☛ x all, ☛ x all: blue arrows, ☛ x 8)

↓ Note

- The picture below shows how to remove the screw [B] of the gear unit.

d037r167

### ***Adjustment after reinstalling the gear unit***

Do the following procedures after reinstalling the gear unit.

1. Turn on the main power switch.

## Drive Unit

2. Enter "System SP" in the SP mode.
3. Do "Drum Phase Adj." with SP1902-001.
4. Check the result of the Drum Phase Adjustment with SP1902-002.  
0: Success, 2: Failure due to no sampling data,  
3: Failure due to insufficient number of pattern detections

**When the result of this adjustment is "2" or "3":**

- Check that the all PCDUs are correctly set and that the ITB unit is correctly set.
- Do "Drum Phase Adj." again after checking the PCDUs and ITB unit.

**When the result is still "2" or "3" after checking the PCDUs and image transfer belt unit:**

- Check that the gear unit is installed correctly.
5. Exit the SP mode.

**4.10.2 REGISTRATION MOTOR**

1. Rear cover (☛ Section: Rear Cover)
2. Rear lower cover (☛ Section: Rear Lower Cover)
3. Open the controller box (☛ Section: Controller Box)

## 4.11 FUSING

### 4.11.1 PM PARTS

PM Parts	Replacement Procedure
Fusing Roller	☛ Section: Heating, Fusing and Tension Roller
Fusing Belt	☛ Section: Fusing Belt
Thermistor	☛ Section: Heating Roller Thermistor and Section: Pressure Roller Thermistor
Entrance Guide Plate	☛ Section: Entrance Guide Plate
Exit Guide Plate	☛ Section: Exit Guide Plate Cleaning Procedure
Stripper Plate	☛ Section: Stripper Plate
Thermopile	☛ Section: Thermopile

### 4.11.2 FUSING UNIT

#### CAUTION

- Turn off the main switch and wait until the fusing unit cools down before beginning any of the procedures in this section. The fusing unit can cause serious burns.
1. If you install a new fusing unit (at PM for example), then set SP 3902-014 to "1" before you start this procedure.

#### Note

- If you do this, then the machine will reset the PM counter for the fusing unit automatically, after you turn the power on again.
2. Turn off the main power switch.
  3. Open the duplex unit.

**Fusing**

d037r227

4. Open the paper transfer unit [A]
5. Release the lock levers [B].
6. Hold the fusing unit handles [C], and then pull out the fusing unit.

***When installing the fusing unit***

Make sure that the both lock levers [B] are locked before closing the duplex unit. Otherwise, these lock levers [B] can be broken.

**4.11.3 ENTRANCE GUIDE PLATE**

1. Fusing unit (☛ Section: Fusing Unit)

d037r373

2. Entrance Guide Plate [A] (☛ x 2)

***Cleaning Requirement***

The entrance guide plate requires cleaning maintenance at every 60 K interval. Clean the entrance guide plate with a cloth moistened with alcohol at the following points.

Fusing

### 4.11.4 STRIPPER PLATE

1. Fusing unit (☛ Section: Fusing Unit)

2. Fusing upper cover [A] (☛ x 4)

3. Spring [A] and bearing [B] at front and rear side

Replacement  
& Adjustment

**Fusing**

d037r239

4. Top frame [A] (🔩 x 4, 🏗️ x 1)

d037r240

5. Release the springs [A] at the front and rear side.  
6. Stripper plate [B]

***Cleaning Requirement***

The stripper plate requires cleaning maintenance at every 60 K interval. Clean the stripper plate with a cloth moistened with alcohol at the following points.

d037r377

### 4.11.5 EXIT GUIDE PLATE CLEANING PROCEDURE

The exit guide plate requires cleaning maintenance at every 60 K interval.

1. Fusing unit (☛ Section: Fusing Unit)

d037r378

2. Open the exit guide plate [A].

d037r379

3. Clean the exit guide plate [A] with a cloth moistened with alcohol.

### 4.11.6 PRESSURE ROLLER FUSING LAMP

1. Fusing unit (☛ Section: Fusing Unit)

## Fusing

d037r236

2. Fusing upper cover [A] (🔩 x 4)

d037r232

3. Remove the cable [A] from the rear stay (🔩 x 1).

d037r233

4. Remove the cable [A] from the front stay (🔩 x 1).

↓ Note

- The color of the pressure roller fusing lamp cord differs depending on the destination.
- **Red:** 220 - 240 V, **Blue:** 120 V

5. Front pressure roller lamp stay [B] (🔩 x 1)

Fusing

d037r234

6. Pressure roller fusing lamp [A]

### 4.11.7 HEATING ROLLER FUSING LAMP

1. Fusing unit (☛ Section: Fusing Unit)

d037r233a

2. Remove the cords [A] from the front stay (⚙ x 2)

d037r235

3. Remove the cords [A] from the rear stay (⚙ x 2)
4. Rear stay [B] (⚙ x 2)

Replacement  
& Adjustment

## Fusing

d037r237

5. Heating roller fusing lamp [A]

### 4.11.8 FUSING BELT

If you install a new fusing belt, set SP 3902-016 to "1" before you start this procedure.

#### ↓ Note

- If you do this, then the machine will reset the PM counter for the fusing belt automatically, after you turn the power on again.

1. Fusing unit (☛ Section: Fusing Unit)
2. Fusing upper cover (☛ Section: Pressure Roller Fusing Lamp)
3. Heating roller fusing lamp (☛ Section: Heating Roller Fusing Lamp)

d037r238

4. Idle gear [A] and fusing roller gear [B]

Fusing

d037r243

5. Remove the front cord [A] of the pressure roller fusing lamp (🔌 x 1).
6. Front stay [B] (🔧 x 2)

d037r375

d037r376

7. Spring [A] and bearing [B] at front and rear side

d037r239

8. Top frame [A] (🔧 x 4, 🛠️ x 1)

Replacement & Adjustment

Fusing

9. Release the springs [A] at the front and rear side.
10. Stripper plate [B]

11. Take the thermostat base [A] aside (2).

↓ Note

- This prevents the fusing belt from being torn or scratched when the fusing belt is removed from the fusing unit.

12. Bearings [A] of the heating roller (C-ring x 1 each)

## Fusing

13. Bearings [B] of the fusing roller (C x 1 each)

14. Fusing belt [A] with rollers

15. Fusing belt [A]

#### 4.11.9 HEATING, FUSING AND TENSION ROLLER

If you install a new fusing roller, set SP 3902-015 to "1" before you start this procedure.

↓ Note

- If you do this, then the machine will reset the PM counter for the fusing unit automatically, after you turn the power on again.

1. Fusing belt with rollers (☛ Section: Fusing Belt)

## Fusing

d037r251

2. Fusing roller [A]
3. Heating roller [B]
4. Tension roller [C]

### ***When reinstalling the fusing roller***

When replacing the fusing roller, you have to apply lubricant to the following places.

#### **Fusing Roller**

d037r250

- Apply "Barrierta S552R" to the area [A] at the front side of the fusing roller.
- Apply "Barrierta S552R" to the area [B] at the rear side of the fusing roller.

#### **Note**

- Do not apply lubricant to areas other than the areas [A] and [B] as shown above.

## 4.11.10 PRESSURE ROLLER

1. Fusing belt with rollers (☛ Section: Fusing Belt)
2. Pressure roller fusing lamp (☛ Section: Pressure Roller Fusing Lamp)

Fusing

d037r252

3. Pressure levers [A] at the rear side (snap ring x 1, spring x 1)

d037r253

4. Top right frame [A] (⚙ x 4)

d037r254

d037r255

5. Pressure roller gear [A] and bearing [B] at the rear side (C-ring x 1)  
 6. Bearing [C] (C-ring x 1)

Replacement  
& Adjustment

## Fusing

d037r256

7. Pressure roller [A]

### **Cleaning Requirement**

The pressure roller requires cleaning maintenance (if it is dirty) at every 60 K interval. Clean the pressure roller with a cloth moistened with alcohol.

## 4.11.11 HEATING ROLLER THERMOSTATS

1. Fusing upper cover (☛ Section: Pressure Roller Fusing Lamp)

d037r231

d037r228

2. Heating roller thermostats [A] (⚙ x 3)

↓ Note

- Do not re-use a thermostat that is already opened. Safety is not guaranteed if you do this.

## 4.11.12 HEATING ROLLER THERMISTOR

1. Fusing upper cover (☛ Section: Pressure Roller Fusing Lamp)

## Fusing

2. Disconnect the connector [A].
3. Heating roller thermistor assembly [B] (🔧 x 1)

4. Heating roller thermistor [A] (🔧 x 1)

***Cleaning Requirement***

The heating roller thermistor requires cleaning maintenance at every 60 K interval. Clean the heating roller thermistor with a dry cloth.

Replacement  
& Adjustment

Duplex Unit

d037r284

4. Separate the duplex exit motor [A] from the bracket (🔧 x 2)

4.14.6 BY-PASS MOTOR

1. Duplex unit (👉 Section: Duplex Unit)
2. Duplex inner cover (👉 Section: Duplex Entrance Sensor)

d037r285

3. By-pass motor with the bracket [A] (🔧 x 3, 🛠️ x 2, 📏 x 1)

⬇ Note

- Remove the clamp [B] from the bracket to disconnect the harness.

d037r286

4. By-pass motor [A] (🔧 x 2)

## Duplex Unit

## 4.14.7 BY-PASS TRAY UNIT

1. Duplex unit (☛ Section: Duplex Unit)
2. Duplex inner cover (☛ Section: Duplex Entrance Sensor)
3. Reinstall the duplex unit once, and open it.

d037r289

4. Disconnect the harness [A].
5. Close the duplex unit.

d037r288

6. Open the by-pass tray unit [A]
7. By-pass tray unit (☞ x 2, hook [B]).

↓ Note

- Use a flat-head screw driver or similar tool to push the hook [B] down.

## 4.14.8 BY-PASS PAPER LENGTH SENSOR

1. Open the by-pass tray unit.

### Duplex Unit

d037r290

2. By-pass tray right cover [A] (hook x 2)

d037r291

3. By-pass paper length sensor [A] (hook x 1)

### 4.14.9 BY-PASS PAPER SIZE SENSOR

1. By-pass tray unit (hook Section: By-Pass Tray Unit)

d037r292

2. By-pass tray cover [A] (hook x 1)

d037r293

3. By-pass paper size sensor [A] (☞ x 1)

**When reinstalling the by-pass paper size sensor**

d037r294

1. Adjust the projection [A] of the left side fence bar (it must be centered).
2. Install the by-pass paper size detection switch so that the hole [B] in this switch faces the projection [C] of the left side fence bar.
3. Reassemble the copier.
4. Plug in and turn on the main power switch.
5. Check this switch operation with SP5803-046 (By-Pass Size Detection SW < Input Check).

**- Display on the LCD -**

Paper Size	Display	Paper Size	Display

Replacement & Adjustment

### 4.15.2 CONTROLLER BOX COVER

1. Rear cover (👉 Section: Rear Cover)

d037r149

2. Scanner cable bracket [A] (🔩 x 4)
3. Loosen the eight screws.
4. Slide up the controller box cover [B], and then remove it.

### 4.15.3 CONTROLLER BOX

#### *Opening the controller box*

1. Rear cover (👉 Section: Rear Cover)

## Electrical Components

Rev. 02/2009

- Controller box cover (☛ Section: Controller Box Cover)

d037r150

- Remove the four screws and disconnect the scanner cable [A] (☛ x 1, ground screw x 1)

d037r151

- Open the controller box [A].

### 4.15.4 BCU

- Do not replace the BCU and CTL boards together. If required, See NOTE 1 after NVRAM Replacement section (☛ 4.15.12).

- Rear cover (☛ Section: Rear Cover)
- Controller box cover (☛ Section: Controller Box Cover)

## Electrical Components

d037r152

3. BCU [A] (🔧 x 7, 📄 x All)

↓ Note

- Make sure the NVRAM is correctly installed on the BCU. Insert the NVRAM in the NVRAM slot with the "half-moon" pointing [B] to the downward side.

### ***When installing the new BCU***

- Remove the NVRAM from the old BCU.
- Install the NVRAM on the new BCU after you replace the BCU.
- Reassemble the machine.
- Turn on the main power of the machine.
- "SC995-01" occurs.
- Enter the serial number with SP5811-004.
- Turn the main power of the machine off and on.

↓ Note

- Make sure you print out the SMC reports ("SP Mode Data" and "Logging Data") before you replace the NVRAM.

### **⚠ CAUTION**

- Keep NVRAM away from any objects that can cause static electricity. Static electricity can damage NVRAM data.

### **4.15.5 HDD (ONLY FOR D038/D041)**

- Rear cover (👉 Section: Rear Cover)
- Controller box cover (👉 Section: Controller Box Cover)

## Electrical Components

d037r156

3. HDD assembly [A] (⚙️ x 3, 🛠️ x 2 from the controller board).

2. i-controller board [A] (☞ x 8, ☞ x all)

Replacement  
& Adjustment

## Electrical Components

3. Remove the interface rails [A], NVRAMs [B] and RAM-DIMMs [C]

### ***When installing the new controller board***

1. Remove the NVRAM from the old controller board.
2. Install the NVRAM on the new controller board after you replace the controller board.
3. Reassemble the machine.
4. Turn on the main power of the machine

#### **Note**

- Make sure you print out the SMC reports (“SP Mode Data” and “Logging Data”) before you replace the NVRAM.

#### **CAUTION**

- Keep NVRAMs away from any objects that can cause static electricity. Static electricity can damage NVRAM data.
- Make sure the NVRAM is correctly installed on the controller board.

### ***When installing a new HDD unit***

1. Turn the main power switch on. The disk is automatically formatted.
2. Install the stamp data using "SP5853".
3. Switch the machine off and on to enable the fixed stamps for use.

## Electrical Components

**Disposal of HDD Units**

- Never remove an HDD unit from the work site without the consent of the client.
- If the customer has any concerns about the security of any information on the HDD, the HDD must remain with the customer for disposal or safe keeping.
- The HDD may contain proprietary or classified (Confidential, Secret) information. Specifically, the HDD contains document server documents and data stored in temporary files created automatically during copy job sorting and jam recovery. Such data is stored on the HDD in a special format so it cannot normally be read but can be recovered with illegal methods.

**Reinstallation**

Explain to the customer that the following information stored on the HDD is lost when the HDD is replaced:

- Document server documents
- Custom-made stamps
- Document server address book

The address book and document server documents (if needed) must be input again.

If you previously backed up the address book to an SD card with SP5846 051, you can use SP 5846 052 to copy the data from the SD card to the hard disk.

If the customer is using the Data Overwrite Security feature, the DOS function must be set up again. For more, see Section 1 (Installation).

If the customer is using the optional Browser Unit, this unit must be installed again. For more, see Section 1 (Installation).

**4.15.12 NVRAM REPLACEMENT PROCEDURE*****NVRAM on the BCU***

1. Make sure that you have the SMC report (factory settings). This report comes with the machine.
2. Output the SMC data (☛ SP5-990-001) if possible.
3. Turn the main switch off.
4. Install an SD card into SD card slot 2. Then turn the main power on.
5. Copy the NVRAM data to an SD card (☛ SP5-824-001) if possible.
6. Turn off the main switch. Then unplug the power cord.
7. Replace the NVRAM on the BCU and reassemble the machine.
8. Plug in the power cord. Then turn the main switch on.
9. SC995-01 occurs.
10. Copy the data from the SD card to the NVRAM (☛ SP5-825-001) if you have

**Electrical Components**

Rev. 02/2009

successfully copied them to the SD card.

11. Turn the main switch off. Then remove the SD card from SD card slot 2.
12. Turn the main switch on.
13. Specify the SP and UP mode settings.
14. Do the process control self-check.
15. Do ACC for the copier application program.
16. Do ACC for the printer application program.

### ⇒ ***NVRAM on BCU Board Replacement W/O Backup SP Mode Data***

1. Replace the NVRAM.
2. Turn the main power ON.
3. SC195 occurs.
4. Enter the serial number with SP5-811-001 (Factory SP Mode).
5. Enter the SP Mode settings that were set in the factory production line.

### ***NVRAM on the Controller***

1. Make sure that you have the SMC report (factory settings). This report comes with the machine.
2. Output the SMC data (☛ SP5-990-001) if possible.
3. Turn the main switch off. Then unplug the power cord.
4. Install a New NVRAM on the controller. Then reassemble the machine.
5. Turn the main switch on.
6. SC995-02 occurs.
7. Turn the machine off and on.
8. Do the process control self-check.
9. Do ACC for the copier application program.
10. Do ACC for the printer application program.

### ⇒ **NOTE 1:**

#### ***BCU Board and NVRAM, CTL Board and NVRAM Replacement W/O Backup SP Mode Data***

Do not replace the BCU and CTL boards together. If required follow the procedure listed here.

Case 1: Replace BCU board and NVRAM first if it is possible to program SP mode.

1. Replace the BCU board and NVRAM.
2. Turn the main power ON.

Rev. 02/2009

Electrical Components

- ⇒ 3. SC195 occurs.
4. Enter the serial number with SP5-811-001 (factory SP mode).
  5. Enter the serial number again with SP5-811-004.
  6. Then, replace CTL board and NVRAM
  7. Turn the main power ON.
  8. SC995 occurs.
  9. Turn the main power off and on.
  10. Enter the SP mode settings that were set in the factory line.

Case 2: Replace CTL board and NVRAM first if it is not possible to program any SP mode.

1. Replace CTL board and NVRAM
2. Turn the main power on.
3. SC995 occurs.
4. Turn the main power off and on.
5. Replace the BCU board and NVRAM.
6. Turn the main power on.
7. SC195 occurs.
8. Enter the serial number with SP5-811-001 (factory SP mode).
9. Enter the serial number again with SP5-811-004.
10. Enter the SP mode settings that were set in the factory line.

It is impossible to use the NVRAM on the CTL board to any other machine. So, you should replace the NVRAM on the CTL board to solve the SC195.

## 4.16 MACHINE BOOT-UP

This machine boots up the modules in the following order.

	Module Name
1	System application
2	Copy application
3	Printer application
4	Web System application
5	Scanner application
6	Fax application

 Note

- It takes approximately 90 seconds to boot up all modules.

# SYSTEM MAINTENANCE REFERENCE

SECTION 5 SYSTEM MAINTENANCE REFERENCE REVISION HISTORY		
Page	Date	Added/Updated/New
10 ~ 12	05/07/2009	Firmware Update
26 ~ 27	05/21/2009	NVRAM

## 5. SYSTEM MAINTENANCE REFERENCE

### 5.1 SERVICE PROGRAM MODE

#### CAUTION

- Make sure that the data-in LED (↻) is not on before you go into the SP mode. This LED indicates that some data is coming to the machine. When the LED is on, wait for the copier to process the data.

#### 5.1.1 SP TABLES

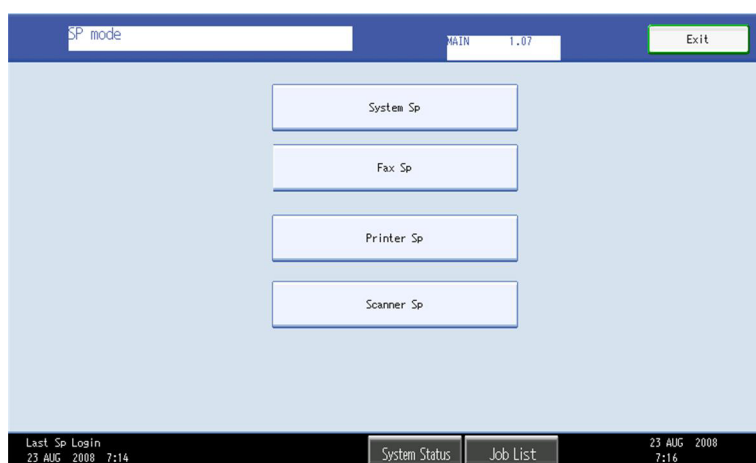

See "[Appendices](#)" for the following information:

- System SP Tables
- Printer SP Tables
- Scanner SP Tables

#### 5.1.2 TYPES OF SP MODES (D038/D041)

- System SP: SP modes related to the engine functions
- Printer SP: SP modes related to the controller functions
- Scanner SP: SP modes related to the scanner functions
- Fax SP: SP modes related to the fax functions

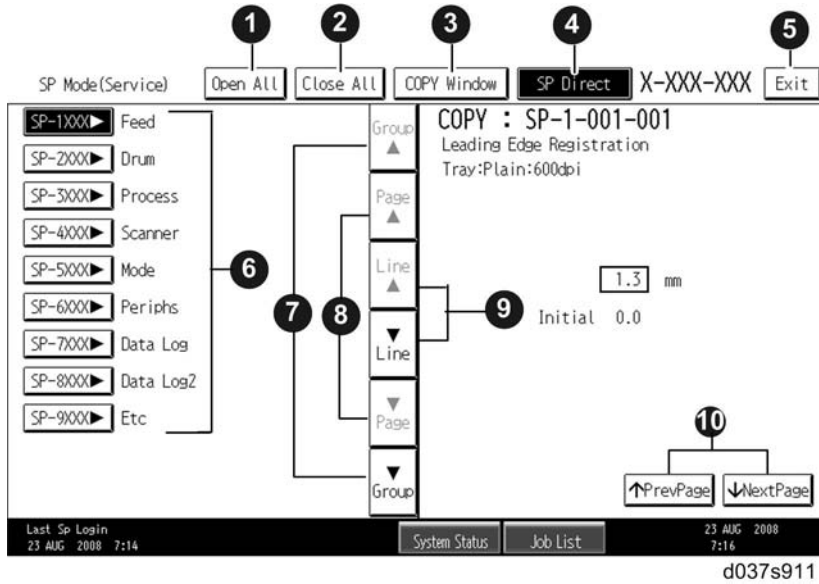

Select one of the Service Program modes (System, Printer, Scanner, or Fax) from the touch panel as shown in the diagram below after you access the SP mode. This section explains the functions of the System/Printer/Scanner SP modes. Refer to the Fax service manual for the Fax SP modes.

**Service Program Mode**

**SP Mode Button Summary**

Here is a short summary of the touch-panel buttons.

❶	Opens all SP groups and sublevels.
❷	Closes all open groups and sublevels and restores the initial SP mode display.
❸	Opens the copy window (copy mode) so you can make test copies. Press SP Mode (highlighted) in the copy window to return to the SP mode screen,
❹	Enter the SP code directly with the number keys if you know the SP number. Then press <b>#</b> . (The required SP Mode number will be highlighted when pressing <b>#</b> . If not, just press the required SP Mode number.)
❺	Press two times to leave the SP mode and return to the copy window to resume normal operation.
❻	Press any Class 1 number to open a list of Class 2 SP modes.
❼	Press to scroll the show to the previous or next group.
❽	Press to scroll to the previous or next display in segments the size of the screen display (page).
❾	Press to scroll the show the previous or next line (line by line).
❿	Press to move the highlight on the left to the previous or next selection in the list.

## Service Program Mode

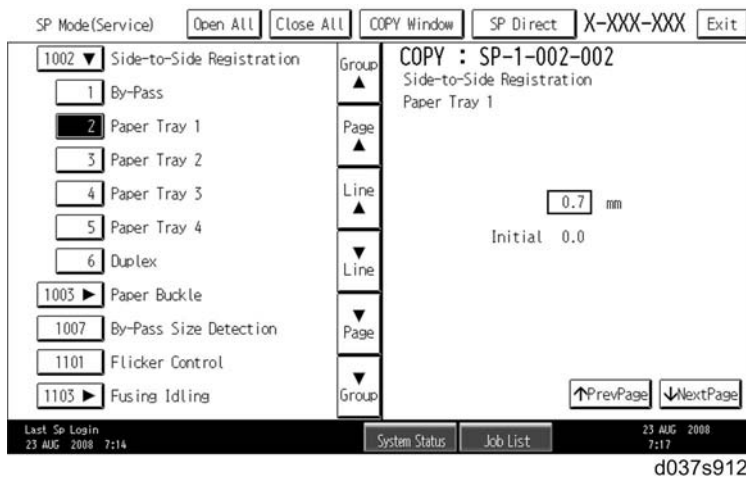

**Switching Between SP Mode and Copy Mode for Test Printing**

1. In the SP mode, select the test print. Then press "Copy Window".
2. Use the copy window (copier mode), to select the appropriate settings (paper size, etc.) for the test print.
3. Press Start (⊕) to start the test print.
4. Press SP Mode (highlighted) to return to the SP mode screen and repeat from step 1.

**Selecting the Program Number**

Program numbers have two or three levels.

1. Refer to the Service Tables to find the SP that you want to adjust before you begin.
2. Press the Group number on the left side SP Mode window that contains the SP that you want to adjust.
3. Use the scrolling buttons in the center of the SP mode window to show the SP number that you want to open. Then press that number to expand the list.
4. Use the center touch-panel buttons to scroll to the number and title of the item that you want to set and press it. The small entry box on the right activates and shows the below default or the current settings.

↓ Note

- Refer to the SP Tables for the range of allowed settings.
1. Do this procedure to enter a setting:
    - Press (⊕/⊖) to toggle between plus and minus and use the keypad to enter the appropriate number. The number you enter writes over the previous setting.
    - Press (#) to enter the setting. (The value is not registered if you enter a number that is out of range.)
    - Press "Yes" when you are prompted to complete the selection.

**Service Program Mode**

2. If you need to perform a test print, press Copy Window to open the copy window and select the settings for the test print. Press Start  and then press SP Mode (highlighted) in the copy window to return to the SP mode display.
3. Press Exit two times to return to the copy window when you are finished.

**Service Mode Lock/Unlock**

At locations where the machine contains sensitive data, the customer engineer cannot operate the machine until the Administrator turns the service mode lock off. This function makes sure that work on the machine is always done with the permission of the Administrator.

1. If you cannot go into the SP mode, ask the Administrator to log in with the User Tool and then set "Service Mode Lock" to OFF after he or she logs in:  
User Tools > System Settings > Administrator Tools > Service Mode Lock > OFF
  - This unlocks the machine and lets you get access to all the SP codes.
  - The CE can service the machine and turn the machine off and on. It is not necessary to ask the Administrator to log in again each time the machine is turned on.
2. Go into the SP mode and set SP5169 to "1" if you must use the printer bit switches.
3. After machine servicing is completed:
  - Change SP5169 from "1" to "0".
  - Turn the machine off and on. Tell the administrator that you have completed servicing the machine.
  - The Administrator will then set the "Service Mode Lock" to ON.

**5.1.3 TYPES OF SP MODES (D037/D040)**

- System SP: SP modes related to the engine functions
- Printer SP: SP modes related to the controller functions
- Scanner SP: SP modes related to the scanner functions
- Fax SP: SP modes related to the fax functions

Select one of the Service Program modes (System, Printer, Scanner, or Fax) from the operation panel as shown in the diagram below after you access the SP mode. This section explains the functions of the System/Printer/Scanner SP modes. Refer to the Fax service manual for the Fax SP modes.

### Selecting Programs

- When a blinking underscore (or several blinking underscores) is displayed, you can type a number from the numeric keypad [A].
- When the sign "◀▶/OK" [B] is displayed upper right corner, you can scroll through the menu by pressing the left-arrow key [C] or the right-arrow key [D]. To select a program, press the "OK" key [E].

### Specifying Values

1. After locating a program, press the "OK" key. A blinking underscore (or several blinking underscores) indicates which value you can change. The value in parentheses is the default value of the menu.
2. Type a necessary value from the numeric keypad. To switch between positive (plus) and negative (minus) values, press the [./\*] (period/asterisk) key.
3. To validate the value, press the "OK" key. To cancel the value, press the cancel key [F].

### Activating Copy Mode

You can activate the copy mode while the SP mode is running. When you do so, the copier outputs images or patterns that help you adjust the SP-mode program.

1. Press the  key. The copy mode is activated.
2. Specify copy settings and press the "OK" key.
3. To return to the SP mode, press the  key.

#### Note

- You cannot end the SP mode while the copy mode is activated.

### Quitting Programs/Ending SP Mode

Press the  key or the "Cancel" key to quit the program. You can end the SP mode by pressing one of these keys several times.

**Service Program Mode****5.1.4 REMARKS*****Display on the Control Panel Screen***

The maximum number of characters which can show on the control panel screen is limited to 30 (H-model)/ 17 (L-model) characters. For this reason, some of the SP modes shown on the screen need to be abbreviated. The following are abbreviations used for the SP modes for which the full description is over 30 (H-model)/ 17 (L-model) characters.

<b>Paper Weight</b> Thin paper: 52-59.9 g/m <sup>2</sup> Plain Paper1: 60-74 g/m <sup>2</sup> , 16-20lb. Plain Paper2: 74.1-90 g/m <sup>2</sup> , 20-24lb. Middle Thick: 90.1-105 g/m <sup>2</sup> , 24-28lb. Thick Paper 1: 105.1-169 g/m <sup>2</sup> , 28.5-44.9lb. Thick Paper 2: 169.1-210 g/m <sup>2</sup> , 45-56lb. Thick Paper 3: 210.1-256 g/m <sup>2</sup> , 56lb-68lb	
<b>Paper Type</b> N: Normal paper MTH: Middle thick paper TH: Thick paper	<b>Paper Feed Station</b> P: Paper tray B: By-pass table
<b>Color Mode [Color]</b> [K]: Black in B&W mode [Y], [M], or [C]: Yellow, Magenta, or Cyan in Full Color mode [YMC]: Only for Yellow, Magenta, and Cyan [FC]: Full Color mode [FC, K], [FC, Y], [FC, M], or [FC, C]: Black, Yellow, Magenta, or Cyan in full color mode	
<b>Print Mode</b> S: Simplex D: Duplex	<b>Process Speed</b> L: Low speed (60 mm/s) M: Middle speed (120 mm/s)

***Others***

The following symbols are used in the SP mode tables.

**FA:** Factory setting

(Data may be adjusted from the default setting at the factory. Refer to the factory setting

**Service Program Mode**

sheets enclosed. You can find it under the jammed paper removal decal.)

**DFU:** Design/Factory Use only

Do not touch these SP modes in the field.

A sharp (#) to the right hand side of the mode number column means that the main switch must be turned off and on to effect the setting change.

An asterisk (\*) to the right hand side of the mode number column means that this mode is stored in the NVRAM. If you do a RAM clear, this SP mode will be reset to the default value. “ENG” and “CTL” show which NVRAM contains the data.

- ENG: NVRAM on the BCU board
- CTL: NVRAM on the controller board

The settings of each SP mode are explained in the right-hand column of the SP table in the following way.

[Adjustable range / **Default setting** / Step] Alphanumeric

- If “Alphanumeric” is written to the right of the bracket as shown above, the setting of the SP mode shows on the screen using alphanumeric characters instead of only numbers. However, the settings in the bracket in the SP mode table are explained by using only the numbers.

**SSP:** This denotes a “Special Service Program” mode setting.

## Firmware Update

**5.2 FIRMWARE UPDATE**

To update the firmware for this machine, you must have the new version of the firmware downloaded onto an SD (Secure Digital) Card. The SD Card is inserted into SD Card Slot 2 on the left rear side of the controller box.

**5.2.1 TYPE OF FIRMWARE*****H-Model (D038/D041)***

Type of firmware	Function	Location of firmware	Message shown
Engine	Printer engine control	BCU Flash ROM	Engine

## 5.2.2 BEFORE YOU BEGIN

An SD card is a precision device. Always observe the following precautions when you handle SD cards:

- Always switch the machine off before you insert an SD card. Never insert the SD card into the slot with the power on.
- Do not remove the SD card from the service slot after the power has been switched on.
- Never switch the machine off while the firmware is downloading from the SD card.
- Keep SD cards in a safe location where they are not exposed to high temperature, high humidity, or exposure to direct sunlight.
- Always handle SD cards with care. Do not bend or scratch them. Do not let the SD card get exposed to shock or vibration.
- Make sure that the write protection of an SD card is unlocked when you download an application to it. If not, downloading fails and a download error (e.g. Error Code 44) occurs during a firmware upgrade.

Keep the following points in mind when you use the firmware update software:

- “Upload” means to send data from the machine to the SD card. “Download” means to send data from the SD card to the machine.
- To select an item on the LCD, touch the appropriate button on the soft touch-screen of the LCD, or, press the appropriate number key on the 10-key pad of the operation

Rev. 05/07/2009

Firmware Update

panel. For example, when “Exit (0)” shows on the screen you can touch the Exit button on the screen, or, press the  button on the operation panel of the copier.

- Make sure that the machine is disconnected from the network to prevent a print job for arriving while the firmware update is in progress before you start the firmware update procedure.

### 5.2.3 UPDATING FIRMWARE

#### *Preparation*

- If the SD card is blank, copy the entire “romdata” folder onto the SD card.
- If the card already contains the “romdata” folder, copy the “D037” folder onto the card.

If the card already contains folders up to “D037”, copy the necessary firmware files (e.g. D037xxxx.fwu) into this folder.

#### Note

- Do not put multiple machine firmware programs on the same SD card. Copy the only model firmware you want.

#### *Updating Procedure*

1. Turn the main power switch off.
2. Remove the slot cover ( x 1).
3. Insert the SD card into SD Card Slot 2. Make sure the label on the SD card faces the rear side of the machine.
4. Slowly push the SD card into the slot so it locks in place. You will hear it click. Make sure the SD card locks in place.

#### Note

- To remove the SD, push it in to unlock the spring lock. Then release it so it pops out of the slot.
5. Disconnect the network cable from the copier if the machine is connected to a network.
  6. Switch the main power switch on. After about 45 seconds, the initial version update screen appears on the LCD in English.
  7. On the screen, touch the button or press the corresponding number key on the operation panel to select the item in the menu that you want to update.

ROM/NEW	What it means
ROM:	Tells you the number of the module and name of the version currently installed. The first line is the module number, the second line the version name.
NEW:	Tells you the number of the module and name version on the SD card. The first line is the module number, the second line the version name.

↓ Note

- Controller, engine and operation panel firmware cannot be updated at the same time. It is recommended to update firmware modules one by one.

8. Touch “UpDate (#)” (or Ⓢ) to start the update.

↓ Note

- The progress bar does not show for the operation panel firmware after you touch “OpPanel”. The power on key flashes on and off at 0.5 s intervals when the LCDC firmware is updating. The power key flashes on and off at 3 s intervals when the update is finished.

9. The "Update is Done" message appears on the operation panel after completing the updating. The message differs depending on the firmware that has been updated.
10. Switch the copier main power switch off when you see the “Update is Done” message or follow the procedure that is displayed on the operation panel.
11. Press in the SD card to release it. Then remove it from the slot.
12. Switch the copier on for normal operation.

### **Error Messages**

An error message shows in the first line if an error occurs during the download.

The error code consists of the letter “E” and a number. The example above shows error “E24” displayed. For details, refer to the Error Message Table. (☛ Section: Handling Firmware Update Error)

### **Firmware Update Error**

If a firmware update error occurs, this means the update was cancelled during the update because the module selected for update was not on the SD card.

## Firmware Update

**Recovery after Power Loss**

If the ROM update is interrupted as a result of accidental loss of power while the firmware is updating, then the correct operation of the machine cannot be guaranteed after the machine is switched on again. If the ROM update does not complete successfully for any reason, then in order to ensure the correct operation of the machine, the ROM update error will continue to show until the ROM is updated successfully.

In this case, insert the card again and switch on the machine to continue the firmware download automatically from the card without the menu display.

**5.2.4 UPDATING THE LCDC FOR THE OPERATION PANEL**

Do the following procedure to update the LCDC (LCD Control Board).

1. Turn the copier main switch off.
2. Remove the SD slot cover (🔑 x 1).
3. Insert the SD card into SD Card Slot 2.
4. Switch the copier main switch on.
5. The initial screen opens in English after about 45 seconds.
6. Touch "Ope Panel.xx".
7. "xx" differs depending on the destination.
8. Touch "UpDate(#)" or (Ⓜ) to start the update.
9. Downloading starts after about 9 seconds.
10. The operation panel goes off and the main power on key flashes in red at 0.5 s intervals when the data is downloading. The same key starts flashing in green at 1 s intervals when the update is finished.
11. Switch the copier main power switch off and remove the SD card. Then switch the copier on.

**Firmware Update**

12. Press the “Exit” button. Then turn the copier off and on again.

**5.2.5 HANDLING FIRMWARE UPDATE ERRORS**

An error message shows in the first line if an error occurs during a download. The error code consists of the letter “E” and a number (“E20”, for example).

***Error Message Table***

<b>Code</b>	<b>Meaning</b>	<b>Solution</b>
20	Cannot map logical address	Make sure the SD card is inserted correctly.
21	Cannot access memory	HDD connection incorrect or replace hard disks.
22	Cannot decompress compressed data	Incorrect ROM data on the SD card, or data is corrupted.
23	Error occurred when ROM update program started	Controller program abnormal. If the second attempt fails, replace controller board.
24	SD card access error	Make sure SD card inserted correctly, or use another SD card.
30	No HDD available for stamp data download	HDD connection incorrect or replace hard disks.
31	Data incorrect for continuous download	Insert the SD card with the remaining data required for the download, then re-start the procedure.
32	Data incorrect after download interrupted	Execute the recovery procedure for the intended module download, then repeat the installation procedure.
33	Incorrect SD card version	Incorrect ROM data on the SD card, or data is corrupted.
34	Module mismatch - Correct module is not on the SD card)	SD update data is incorrect. Acquire the correct data (Japan, Overseas, OEM, etc.) then install again.

## Firmware Update

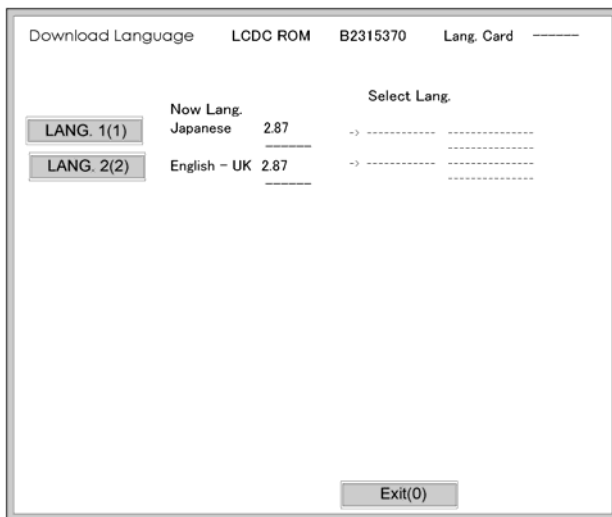

35	Module mismatch – Module on SD card is not for this machine	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
36	Cannot write module – Cause other than E34, E35	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.
40	Engine module download failed	Replace the update data for the module on the SD card and try again, or replace the BCU board.
42	Operation panel module download failed	Replace the update data for the module on the SD card and try again, or replace the LCDC.
43	Stamp data module download failed	Replace the update data for the module on the SD card and try again, or replace the hard disks.
44	Controller module download failed	Replace the update data for the module on the SD card and tray again, or replace controller board.
50	Electronic confirmation check failed	SD update data is incorrect. The data on the SD card is for another machine. Acquire correct update data then install again.

**Installing Another Language**

**5.3 INSTALLING ANOTHER LANGUAGE**

Many languages are available. But you can only switch between two languages at a time. Do the following procedure to select the two languages you want. You can select both of the languages you want from the user interface on the operation panel.

1. Switch the copier main power switch off.
2. Remove the SD slot cover (🔑 x 1).
3. Insert the SD card with the language data into SD Card Slot 2.
4. Switch the copier main power switch on. The initial screen opens after about 45 seconds.
5. Touch "Language Data (2)" on the screen (or press ②).

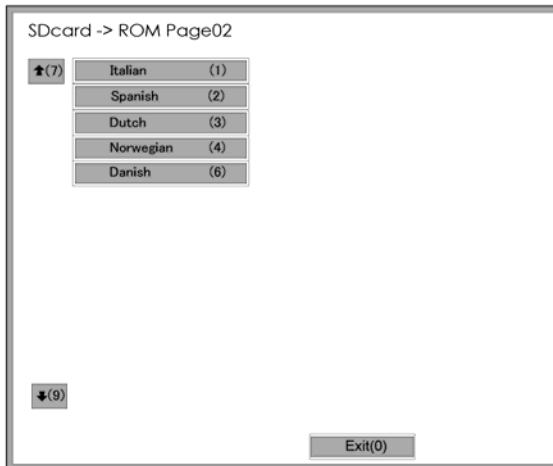

6. Touch "LANG. 1(1)" or "LANG. 2(2)"

Key	What it does
LANG. 1(1)	Touch this button on the screen (or press ① on the 10-key pad) to open the next screen so you can select the 1st language.
LANG. 1(2)	Touch this button on the screen (or press ② on the 10-key pad) to open the next screen so you can select the 2nd language.
Exit(0)	Touch this key on the screen (or press ① on the 10-key pad) to quit the update procedure and return to normal screen.

7. Touch "LANG 1(1)" to select the 1st Language. Touch "LANG (2)" to select the 2nd Language.

## Installing Another Language

8. Touch the appropriate button on the screen (or press the number on the 10-keypad) to select a language as the 1st (or 2nd) language.
  - If a language is already selected, it will show in reverse.
  - Touching "Exit (0)" returns you to the previous screen.
9. If you do not see the language that you want to select, touch "↑(7)" or "↓(9)" on the screen (or press 7 or 9) to show more choices.

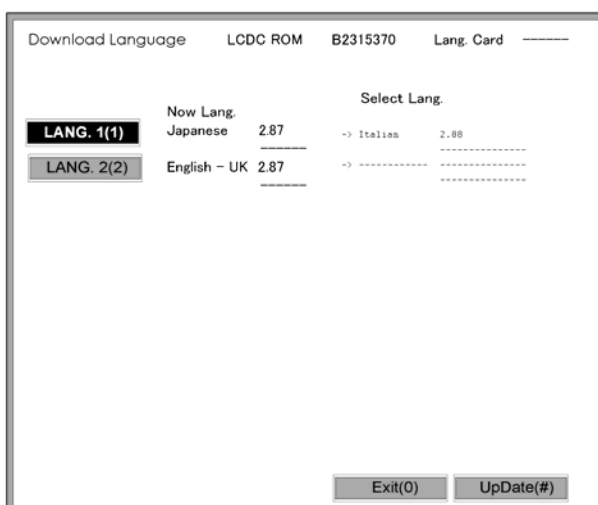

The Download Screen opens after you select a language.

The 1st or 2nd language selected for updating shows.

The following show to right of the selection:

- 1. The first column shows the language currently selected.
- 2. The 2nd column shows the language selected to replace that language.

The example below shows that the download will replace "Japanese" with "Italian" as the 1st language.

10. Touch "Update(#)" on the screen (or press #) to start the download.
 

Another screen with a progress bar does not show when the language is downloading.

### **Installing Another Language**

The following occur at the time the language is downloading:

- The operation panel switches off.
  - The LED on the power on key flashes rapidly.
11. After the message of installation completed has shown on the LCD, switch the copier main power switch off. Then remove the SD card from the slot.
  12. Switch the copier main power switch on to resume normal operation.

## 5.4 REBOOT/SYSTEM SETTING RESET

### 5.4.1 SOFTWARE RESET

You can reboot the software with one of the following two procedures:

1. Turn the main power switch off and on.
2. Press and hold down   together for over 10 seconds. When the machine beeps once, release both buttons. After “Now loading. Please wait” shows for a few seconds, the copy window will open. The machine is ready for normal operation.

### 5.4.2 SYSTEM SETTINGS AND COPY SETTING RESET

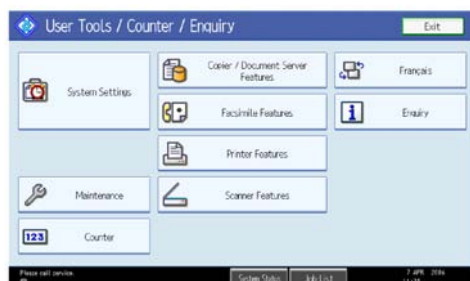

#### *System Setting Reset*

The system settings in the UP mode can be reset to their defaults. Use the following procedure.

1. Press User Tools/Counter .
2. Hold down  and then press System Settings.

 **Note**

- You must press  first.

3. Press yes when the message prompts you to confirm that you want to reset the system settings.
4. Press exit when the message tells you that the settings have been reset.

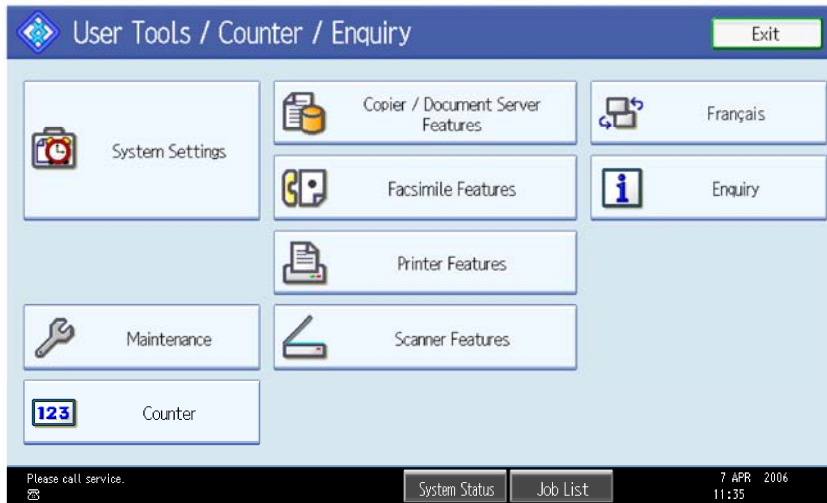

#### *Copier Setting Reset*

Use the following procedure to reset the copy settings in the UP mode to their defaults.

1. Press User Tools/Counter .
2. Hold down  and then press Copier/Document Server Settings.

 **Note**

- You must press  first.

**Reboot/System Setting Reset**

3. Press "Yes" when the message prompts you to confirm that you want to reset the Copier Document Server settings.
4. Press exit when the message tells you that the settings have been reset.

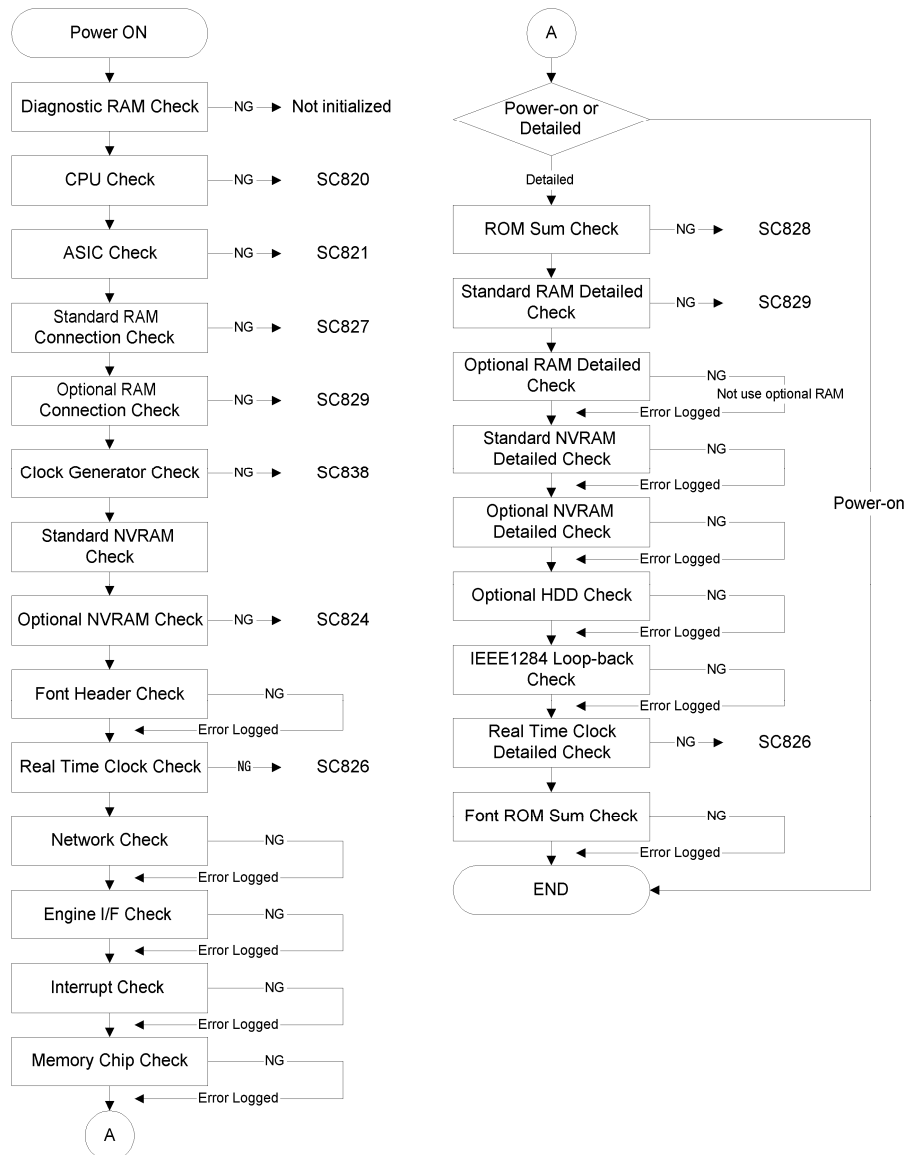

## 5.5 CONTROLLER SELF-DIAGNOSTICS

### 5.5.1 OVERVIEW

There are three types of self-diagnostics for the controller.

1. Power-on self-diagnostics: The machine automatically starts the self-diagnostics just after the power has been turned on.
2. SC detection: The machine automatically detects SC conditions at power-on or during operation.

The following shows the workflow of the power-on and detailed self-diagnostics.

## SD Card Appli Move

## 5.6 SD CARD APPLI MOVE

### 5.6.1 OVERVIEW

The service program “SD Card Appli Move” (SP5-873) lets you to copy application programs from one SD card to another SD card.

Slot 1 and Slot 2 are used to store application programs. However, more than two optional applications are supplied for this machine. In that case, you can move application programs from Slot 2 to Slot 1 with the following procedure.

Consider the following limitations when you try to merge SD cards.

- PostScript3 cannot be moved to the other SD card.
- The destination SD card should have the largest memory size of all the application SD cards. Refer to the following table for the memory size of each SD card.

#### Outline of SD Card Appli Move:

1. Choose a SD card with enough space.

↓ Note

- Do not use an SD card if it has been used on a computer. Normal operation is not guaranteed when such an SD card is used.
2. Enter SP5873 “SD Card Appli Move”. Then move the application from the SD Card in Slot 2 to the card in slot 1.
  3. Exit the SP mode

Use caution when you do the SD Card Appli Move procedure:

↓ Note

- The data necessary for authentication is transferred with the application program from an SD card to another SD card. Authentication fails if you try to use the SD card after you copy the application program from one card to another card.

d037s118

**SD Card Appli Move**

4. Remove the inner cover (☛ Section: Inner Cover in the Replacement and Adjustment).
5. Keep the SD card in the place [A] inside the inner cover after you have copied the application program from one card to another card. This is done for the following reasons:
  - 1) The SD card can be the only proof that the user is licensed to use the application program.
  - 2) You may need to check the SD card and its data to solve a problem in the future.

**5.6.2 MOVE EXEC**

The menu “Move Exec” (SP5-873-001) lets you copy application programs from the original SD card to another SD card.

**★ Important**

- Do not turn ON the write protect switch of an application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.
1. Turn the main switch off.
  2. Make sure that an SD card is in SD Card Slot 1. The application program is copied into this SD card.
  3. Insert the SD card (having stored the application program) to SD Card Slot 2. The application program is copied from this SD card.
  4. Turn the main switch on.
  5. Start the SP mode.
  6. Select SP5-873-001 “Move Exec.”
  7. Follow the messages shown on the operation panel.
  8. Turn the main switch off.
  9. Remove the SD card from SD Card Slot 2.
  10. Turn the main switch on.
  11. Check that the application programs run normally.

**5.6.3 UNDO EXEC**

The menu “Undo Exec” (SP5-873-002) lets you copy back application programs from an SD card to the original SD card. You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001).

**★ Important**

- Do not turn ON the write protect switch of an application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs

**SD Card Appli Move**

during a firmware upgrade or application merge.

1. Turn the main switch off.
2. Insert the original SD card in SD Card Slot 2. The application program is copied back into this card.
3. Insert the SD card (having stored the application program) to SD Card Slot 1. The application program is copied back from this SD card.
4. Turn the main switch on.
5. Start the SP mode.
6. Select SP5-873-002 "Undo Exec."
7. Follow the messages shown on the operation panel.
8. Turn the main switch off.
9. Remove the SD card from SD Card Slot 2.

↓ Note

- This step assumes that the application programs in the SD card are used by the machine.
10. Turn the main switch on.
  11. Check that the application programs run normally.

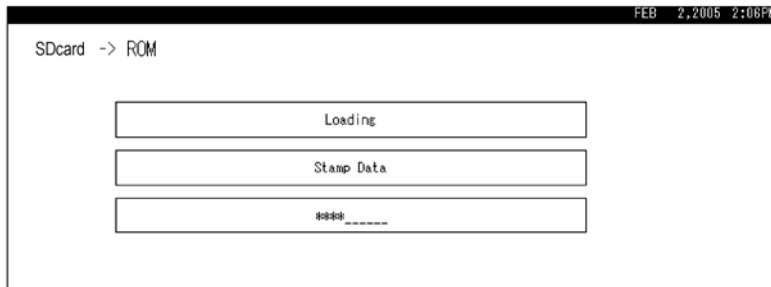

## 5.7 DOWNLOADING STAMP DATA

The stamp data should be downloaded from the controller firmware to the hard disks at the following times:

- After the hard disks have been replaced.

The print data contains the controller software. Execute SP 5853 to download the fixed stamp data required by the hard disks.

1. Enter the SP mode.
2. Select SP5853 and then press "EXECUTE". The following screen opens while the stamp data is downloading.

The download is finished when the message prompts you to close.

3. Press the "Exit" button. Then turn the copier off and on again.

## 5.8 NVRAM DATA UPLOAD/DOWNLOAD

The content of the NVRAM can be uploaded to and downloaded from an SD card.

### ⇒ IMPORTANT NOTE:

The following data stored in the NVRAM will **not** be saved to the SD Card when you perform an NVRAM data upload (SP5824).

- Total Counter value
- C/O, P/O Counter values
- Duplex, A3/DLT/Over 420 mm, Stapler, and Scanner Counter values
- Engine SP Data

Therefore, whenever you perform an NVRAM Upload/Download, make sure to print out the SP Data List **before** you perform SP5801-001 (Memory Clear: All Clear) or SP5801-002 (Memory Clear: Engine).

#### NVRAM Upload/Download Procedure:

- 1) Print out the SP Data List from SP5990-002.
- 2) Perform the NVRAM data upload (To the SD Card) according to the procedure in the Service Manual.
- 3) Perform the Memory Clear (SP5801-001 or -002)
- 4) Perform the NVRAM Data Download (from the SD Card) according to the procedure in the Service Manual.
- 5) Manually input the data listed above.

### 5.8.1 UPLOADING CONTENT OF NVRAM TO AN SD CARD

Do the following procedure to upload SP code settings from NVRAM to an SD card.

- This data should always be uploaded to an SD card before the NVRAM is replaced.
  - Make sure that the write protection of an SD card is unlocked
1. Do SP5990-001 (SMC Print) before you switch the machine off. You will need a record of the NVRAM settings if the upload fails.
  2. Switch the copier main power switch off.
  3. Remove the SD slot cover (Ⓢ x 1).
  4. Insert the SD card into SD card slot 2. Then switch the copier on.
  5. Execute SP5824-001 (NVRAM Data Upload) and then press the “Execute” key.
  6. The following files are copied to an NVRAM folder on the SD card when the upload procedure is finished. The file is saved to the path and the following filename:

**NVRAM¥<serial number>.NV**

Here is an example with Serial Number “K5000017114”:

**NVRAM¥K5000017114.NV**

7. In order to prevent an error during the download, be sure to mark the SD card that holds the uploaded data with the number of the machine from which the data was uploaded.

↓ Note

- You can upload NVRAM data from more than one machine to the same SD card.

## 5.8.2 DOWNLOADING AN SD CARD TO NVRAM

Do the following procedure to download SP data from an SD card to the NVRAM in the machine.

- The NVRAM data download may fail if the SD card with the NVRAM data is damaged, or if the connection between the controller and BCU is defective.
  - Do the download procedure again if the download fails.
  - Do the following procedure if the second attempt fails:
  - Enter the NVRAM data manually using the SMC print you created before uploading the NVRAM data.
1. Switch the copier main power switch off.
  2. Remove the SD slot cover (🔑 x 1).
  3. Insert the SD card with the NVRAM data into SD Card Slot 2.
  4. Switch the copier main power switch on.
  5. Do SP5825-001 (NVRAM Data Download) and press the “Execute” key.

↓ Note

- The serial number of the file on the SD card must match the serial number of the machine for the NVRAM data to download successfully. The download fails if the serial numbers do not match.

This procedure does not download the following data to the NVRAM:

- Total Count
- C/O, P/O Count

## Address Book Upload/Download

**5.9 ADDRESS BOOK UPLOAD/DOWNLOAD****5.9.1 INFORMATION LIST**

The following information is possible to be uploaded and downloaded.

Information	
<ul style="list-style-type: none"> <li>▪ Registration No.</li> <li>▪ User Code</li> <li>▪ E-mail</li> <li>▪ Protection Code</li> <li>▪ Fax Destination</li> <li>▪ Fax Option</li> <li>▪ Group Name</li> <li>▪ Key Display</li> </ul>	<ul style="list-style-type: none"> <li>▪ Select Title</li> <li>▪ Folder</li> <li>▪ Local Authentication</li> <li>▪ Folder Authentication</li> <li>▪ Account ACL</li> <li>▪ New Document Initial ACL</li> <li>▪ LDAP Authentication</li> </ul>

**5.9.2 DOWNLOAD**

1. Prepare a formatted SD card.
2. Make sure that the write-protection on the SD card is off.
3. Turn off the main power switch of the main machine.
4. Remove the SD slot cover at the left rear side of the machine (🔧 x 1).
5. Install the SD card into the SD card slot 2 (for service use).
6. Turn on the main power switch.
7. Enter the SP mode.
8. Do SP5-846-051 (Backup All Addr Book).
9. Exit the SP mode, and then turn off the main power switch.
10. Remove the SD card from the SD card slot 2.
11. Install the SD slot cover.

 **Note**

- If the capacity of SD card is not enough to store the local user information, an error message is displayed.
- Carefully handle the SD card, which contains user information. Do not take it back to your location.

## Address Book Upload/Download

**5.9.3 UPLOAD**

1. Turn off the main power switch of the main machine.
2. Remove the SD slot cover at the left rear side of the machine (🔧 x 1).
3. Install the SD card, which has already been uploaded, into the SD card slot 2.
4. Turn on the main power switch.
5. Enter the SP mode.
6. Do SP5-846-052 (Restore All Addr Book).
7. Exit the SP mode, and then turn off the main power switch.
8. Remove the SD card from the SD card slot 2.
9. Install the SD slot cover.

 Note

- The counter in the user code information is initialized after uploading.
- The information of an administrator and supervisor cannot be downloaded nor uploaded.
- If there is no data of address book information in the SD card, an error message is displayed.

## Using the Debug Log

# 5.10 USING THE DEBUG LOG

## 5.10.1 OVERVIEW

This machine provides a Save Debug Log feature that allows the Customer Engineer to save and retrieve error information for analysis.

Every time an error occurs, debug information is recorded in volatile memory. But this information is lost when the machine is switched off and on.

To capture this debug information, the Save Debug Log feature provides two main features:

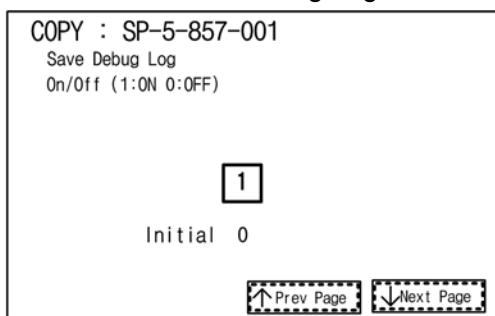

- Switching on the debug feature so error information is saved directly to the HDD for later retrieval.
- Copying the error information from the HDD to an SD card.

Do the following procedure below to set up the machine so the error information is saved automatically to the HDD when a user has problems with the machine. Then ask the user to reproduce the problem.

## 5.10.2 SWITCHING ON AND SETTING UP SAVE DEBUG LOG

The debug information cannot be saved until the “Save Debug Log” function has been switched on and a target has been selected.

1. Enter the SP mode and switch the Save Debug Log feature on.
  - Enter “System SP”.
  - On the LCD panel, open SP5857.
2. Under “5857 Save Debug Log”, touch “1 On/Off”.

b178s001

3. On the control panel keypad, press “1”. Then press  $\#$ . This switches the Save Debug Log feature on.

- The default setting is “0” (OFF). This feature must be switched on in order for the debug information to be saved.

Using the Debug Log

b178s002

4. Select the target destination where the debug information will be saved. Under “5857 Save Debug Log”, touch “2 Target”, enter “2” with the operation panel key to select the hard disk as the target destination. Then press (#).

↓ Note

- Select “3 SD Card” to save the debug information directly to the SD card if it is inserted in the service slot.
5. Now touch “5858” and specify the events that you want to record in the debug log. SP5858 (Debug Save When) provides the following items for selection.

1	Engine SC Error	Saves data when an engine-related SC code is generated.
2	Controller SC Error	Saves debug data when a controller-related SC Code is generated.
3	Any SC Error	Saves data only for the SC code that you specify by entering code number.
4	Jam	Saves data for jams.

↓ Note

- More than one event can be selected.

**Example 1: To Select Items 1, 2, 4**

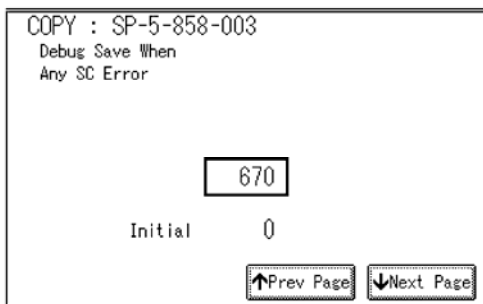

Touch the appropriate item(s). Press “ON” for each selection. This example shows “Engine SC Error” selected.

**Using the Debug Log**

**Example 2: To Specify an SC Code**

Touch “3 Any SC Error”, enter the 3-digit SC code number with the control panel number keys. Then press #. This example shows an entry for SC670.

**Note**

- For details about SC code numbers, please refer to the SC tables in Section 4. “Troubleshooting”.

- Select one or more memory modules for reading and recording debug information. Touch “5859”. Under “5859” press the necessary key item for the module that you want to record. Enter the appropriate 4-digit number. Then press #.

**Note**

- Refer to the two tables below for the 4-digit numbers to enter for each key. The example below shows “Key 1” with “2222” entered.

The following keys can be set with the corresponding numbers. (The initials in parentheses indicate the names of the modules.)

## Using the Debug Log

## 4-Digit Entries for Keys 1 to 10

Key No.	Copy	Printer	Scanner	Web
1	2222 (SCS)			
2	14000 (SRM)			
3	256 (IMH)			
4	1000 (ECS)			
5	1025 (MCS)			
6	4848 (COPY)	4400 (GPS)	5375 (Scan)	5682 (NFA)
7	2224 (BCU)	4500 (PDL)	5682 (NFA)	6600 (WebDB)
8		4600 (GPS-PM)	3000 (UCS)	3300 (PTS)
9		2000 (NCS)	2000 (NCS)	6666 (WebSys)
10		2224 (BCU)	4126 (DCS)	2000 (NCS)

 Note

- The default settings for Keys 1 to 10 are all zero ("0").

## Key to Acronyms

Acronym	Meaning	Acronym	Meaning
ECS	Engine Control Service	NFA	Net File Application
GPS	GW Print Service	PDL	Printer Design Language
GSP-PM	GW Print Service – Print Module	PTS	Print Server
IMH	Image Memory Handler	SCS	System Control Service
MCS	Memory Control Service	SRM	System Resource Management

**Using the Debug Log**

NCS	Network Control Service	WebDB	Web Document Box (Document Server)
-----	-------------------------	-------	---------------------------------------

1. The machine is now set to record the debugging information automatically on the HDD (the target selected with SP5857-002) for the events that you selected with SP5858 and the memory modules selected with SP5859.

Please keep the following important points in mind when you do this setting:

- Note that the number entries for Keys 1 to 5 are the same for the Copy, Printer, Scanner, and Web memory modules.
- The initial settings are all zero.
- These settings remain in effect until you change them. Be sure to check all the settings, especially the settings for Keys 6 to 10. To switch off a key setting, enter a zero for that key.
- You can select any number of keys from 1 to 10 (or all) by entering the corresponding 4-digit numbers from the table.
- You cannot mix settings for the groups (COPY, PRINTER, etc.) for 006 to 010. For example, if you want to create a PRINTER debug log you must select the settings from the 9 available selections for the "PRINTER" column only.
- One area of the disk is reserved to store the debug log. The size of this area is limited to 4 MB.

**5.10.3 RETRIEVING THE DEBUG LOG FROM THE HDD**

Retrieve the debug log by copying it from the hard disk to an SD card.

1. Insert the SD card into slot 2 (service slot) of the copier.
2. Enter the SP mode and execute SP5857-009 (Copy HDD to SD Card (Latest 4 MB)) to write the debugging data to the SD card.
3. Use a card reader to copy the file and send it for analysis to your local Ricoh representative by email. You can also send the SD card by regular mail if you want.

**5.10.4 RECORDING ERRORS MANUALLY**

SC errors and jams only are recorded to the debug log automatically. Please instruct the user to do the following immediately after occurrence to save the debug data for any other errors that occur while the customer engineer is not on site. Such problems also include a controller or panel freeze.

- You must previously switch on the Save Debug Feature (SP5857-001) and select

**Using the Debug Log**

the hard disk as the save destination (SP5857-002) if you want to use this feature.

1. Press  (Clear Modes).on the operation panel when the error occurs.
2. On the control panel, enter "01". Then hold down  for at least 3 seconds until the machine beeps and then release it. This saves the debug log to the hard disk for later retrieval with an SD card by the service representatives.
3. Switch the machine off and on to resume operation.

The debug information for the error is saved on the hard disk. This lets the service representative retrieve it on their next visit by copying it from the HDD to an SD card.

## Card Save Function

# 5.11 CARD SAVE FUNCTION

## 5.11.1 OVERVIEW

### **Card Save:**

- The Card Save function is used to save print jobs received by the printer on an SD card with no print output. Card Save mode is toggled using printer Bit Switch #1 bit number 4. Card Save will remain enabled until the SD card becomes full, or until all file names have been used.
- Captures are stored on the SD card in the folder /prt/cardsave. File names are assigned sequentially from PRT00000.prn to PRT99999.prn. An additional file PRT.CTL will be created. This file contains a list of all files created on the card by the card save function.
- Previously stored files on the SD card can be overwritten or left intact. Card Save SD has “Add” and “New” menu items.
  - **Card Save (Add):** Appends files to the SD Card. Does not overwrite existing files. If the card becomes full or if all file names are used, an error will be displayed on the operation panel. Subsequent jobs will not be stored.
  - **Card Save (New):** Overwrites files in the card's /prt/cardsave directory.

### **Limitation:**

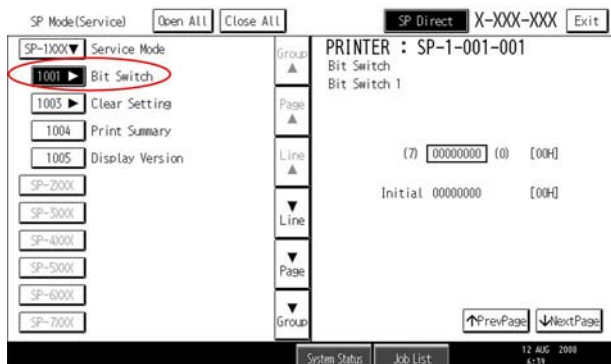

- Card Save cannot be used with PJL Status Readback commands. PJL Status Readbacks will not work. In addition they will cause the Card Save to fail.

## 5.11.2 PROCEDURE

### **For D038/D041**

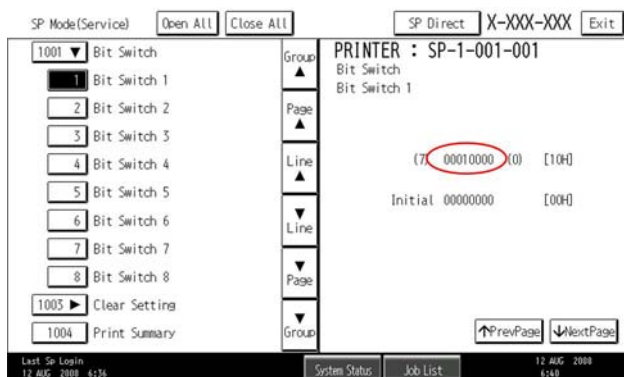

1. Turn the main power switch OFF.
2. Insert the SD card into slot 2. Then turn the power ON.
3. Enter SP mode.
4. Select the “Printer Sp”.
5. Select SP-1001 “Bit Switch”.

Card Save Function

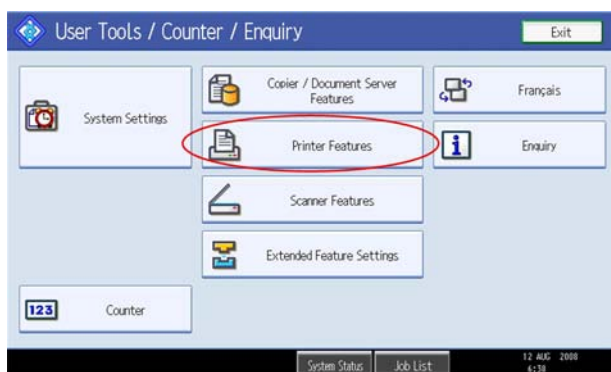

d037t100

6. Select "Bit Switch 1 Settings" and use the numeric keypad to turn bit 4 ON and then press the "#" button to register the change. The result should look like: **00010000**. By doing this, Card Save option will appear in the "List/Test Print" menu.

d037t103

7. Press "Exit" to exit SP Mode.
8. Press the "User Tools/Counter" button.
9. Select "Printer Features".

d037t101

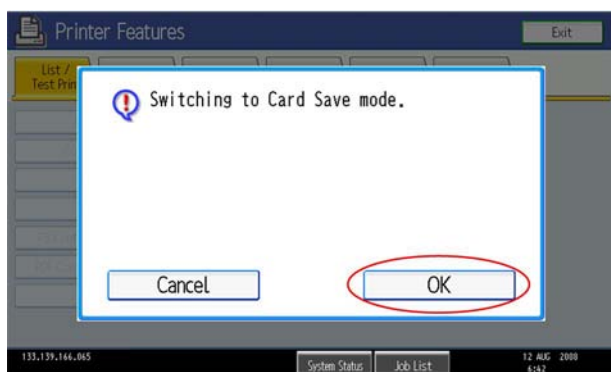

10. Card Save (Add) and Card Save (New) should be displayed on the screen. Select Card Save (Add) or Card Save (New).

## Card Save Function

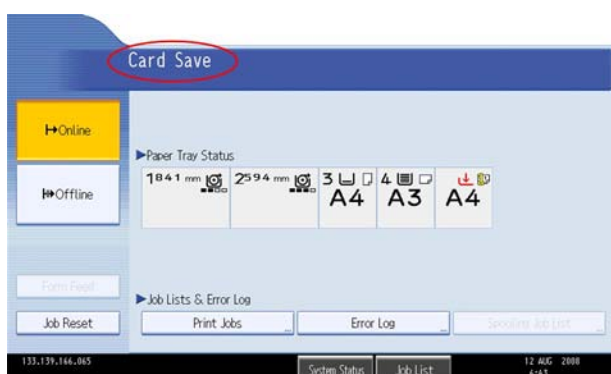

d037t104

- Press "OK" and then exit the "User Tools/Counter" menu.

d037t105

- Press the "Printer" button.
- Card Save should be displayed in the top left of the display panel.

d037t106

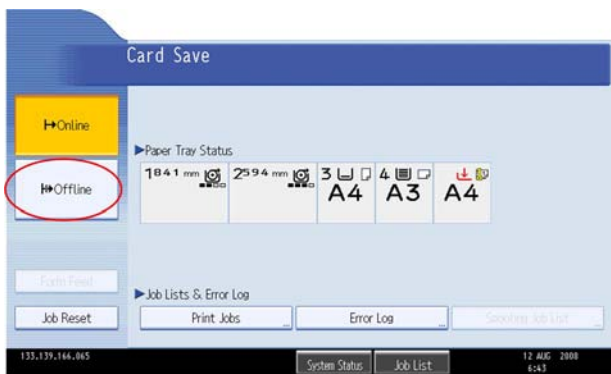

- Send a job to the printer. The Communicating light should start blinking as shown below.

Card Save Function

d037t108

15. As soon as the printer receives the data, it will be stored on the SD card automatically with no print output. Nothing is displayed on the screen, indicating that a Card Save operation was successful.
16. Press “Offline” and then the “Clear/Stop” button to exit Card Save mode.

d037t106a

17. Change the Bit Switch Settings back to the default **00000000**. Press the “#” button in the numeric keypad to register the changes.
18. Remove the SD card after the main power switch is turned off.

**For D037/D040**

1. Turn the main power switch OFF.

d045t101

System  
Maintenance  
Reference

**Card Save Function**

2. Insert the SD card into the service slot of the controller board. Then turn the power ON.

- To determine which slot is the service slot, please see the service manual.

3. Enter SP mode.
4. Select “Printer SP”.
5. Select “Service Mode” and press “OK” button.
6. Select “1.001 Bit Switch” and press “OK” button.

d045t102

7. Use the arrow key to turn “Bit Switch 4” and use the numeric key “4” to turn bit 4 ON. The result should look like: **00010000**. By doing this Card Save option will appear in “List/Test Print”.

d045t103

8. Press the “Escape” button several times to exit SP Mode.
9. Press the “User Tools/Counter” button.
10. Use the arrow key and select “Printer Features”.

d045t105

11. Use the arrow key and select “List/Test Print”.

d045t106

12. Use the arrow key and select “Cardsave (ADD) or Cardsave (New)”.

d045t107

13. To enable the newly configured settings, select “switch” button and then press the

**Card Save Function**

“Escape” button to exit the “List/Test Print” menu.

14. Send a job to the printer.
15. As soon as the printer receives the data, it will be stored on the SD card automatically with no print output. Nothing is displayed on the screen indicating that a Card Save operation was successful.
16. Press the “Online” button and then the “Escape” button to exit Card Save mode.
17. Change the Bit Switch Settings back to the default **00000000**.
18. Remove the SD card after main power switch is turned off.

**Error Messages**

Card Save error messages:

- **Init error:** A card save process (i.e. card detection, change to kernel mode) failed to initialize.
- **Card not found:** Card cannot be detected in the slot.
- **No memory:** Insufficient working memory to process the job.
- **Write error:** Failed to write to the card.
- **Other error:** An unknown error occurred.

If an error occurs, pressing “OK” will cause the device to discard the job and return to the ready state.

**5.11.3 ERROR MESSAGES**

Card Save error messages:

- **Init error:** A card save process (e.g. card detection, change to kernel mode) failed to initialize.
- **Card not found:** Card cannot be detected in the slot.
- **No memory:** Insufficient working memory to process the job.
- **Write error:** Failed to write to the card.
- **Other error:** An unknown error occurred.

If an error occurs, pressing “OK” will cause the device to discard the job and return to the ready state.

# TROUBLESHOOTING

SECTION 6 TROUBLESHOOTING REVISION HISTORY		
Page	Date	Added/Updated/New
		None

## 6. TROUBLESHOOTING

### 6.1 SERVICE CALL CONDITIONS

For "SC Table" information, see "[Appendices](#)".

**Process Control Error Conditions**

## **6.2 PROCESS CONTROL ERROR CONDITIONS**

See "[Appendices](#)" for the following information:

- Developer Initialization Result
- Process Control Self-Check Result
- Line Position Adjustment Result

## 6.3 TROUBLESHOOTING GUIDE

See "[Appendices](#)" for the following information:

- Image Quality
- Line Position Adjustment
- Image Problems at Periodical Intervals

### 6.3.1 SUB-SCAN MAGNIFICATION ERROR

If a sub-scan magnification error of an image occurs on an output, follow the procedure below to adjust the sub-scan magnification.

#### ***Sub-scan Magnification Adjustment Procedure***

1. Adjust the sub-scan magnification for each paper type and print mode with the following SPs.

**★ Important**

- Input the same value in these SP settings. Otherwise, color registration errors occur on outputs and this cannot be recovered by the line position adjustment.
  - SP1-803-001: Plain paper/ 600 dpi Input
  - SP1-803-002: Plain paper/ 1200 dpi Input
  - SP1-803-003: Thick paper Input
2. Turn the main power of the machine off and on.
  3. Check if all settings of the following SPs are "0" (success).
    - SP1-803-004: Plain paper/ 600 dpi Result
    - SP1-803-005: Plain paper/ 1200 dpi Result
    - SP1-803-006: Thick paper Result

**★ Important**

- If one of the settings of SP1-803-004 to 006 is "1" (error), return to step 1 and then input a value which is closer to "0" compared with the previously input value.
  - For example, if "+0.9" is input in the settings of SP1-803-001 to 003 and an error occurs, input "+0.8" or less with SP1-803-001 to 003.
  - For example, if "-0.9" is input in the settings of SP1-803-001 to 003 and an error occurs, input "-0.8" or more with SP1-803-001 to 003.
  - If an error still remains, refer to "Motor Speed Adjustment".
4. Execute the line position adjustment (rough) with SP2-111-003.
  5. Execute the line position adjustment (fine) with SP2-111-001.

## Troubleshooting Guide

6. Make sample copies and check if outputs are satisfactory.

### Motor Speed Adjustment

If "Sub-scan Magnification Adjustment Procedure" does not solve the sub-scan magnification error, the setting of the motor speed adjustment may be out of adjustable range. Check the following three points.

1. An error ("1") occurs in the SP1-803-004.

[Setting values of the following SPs + input value with SP1-803-001] > motor speed adjustable range

e.g.) 3.5 (SP1-801-002) + 1 (SP1-803-001 to -003) = 4.5

In this case, "4.5" is over the maximum adjustable value ("4") of the SP1-801-002. As a result, the result of the motor speed adjustment issues "1" (error).

- Adjust the settings of the SP1-830-001 to -003 so that the total value (motor speed setting value + input value) is within the adjustable range for each motor described below.

SP No.	Max.	Min.	Title
SP1-801-002	4	-4	Regist Mot:120 (0.3 default)
SP1-801-003	4	-4	Bk OpcDevMot:120 (-0.4 default)
SP1-801-007	6	-6	Fusing Mot:120 (-0.4 default)
SP1-801-009	4	-4	Transfer Mot:120 (0 default)
SP1-801-012	2	-2	Feed1:CW120 (0.3 default)
SP1-801-014	2	-2	Feed1:CCW120 (0.3 default)
SP1-801-016	2	-2	Feed2:CW120 (0.3 default)
SP1-801-018	2	-2	Feed2:CCW120 (0.3 default)
SP1-801-020	2	-2	By-pass:120 (0.3 default)
SP1-801-022	2	-2	Inverter:CW120 (0 default)
SP1-801-024	2	-2	Inverter:CCW120 (0 default)
SP1-801-026	2	-2	Duplex Entrance:120 (0.3 default)

## Troubleshooting Guide

SP No.	Max.	Min.	Title
SP1-801-028	2	-2	Duplex Exit:120 (0.3 default)

2. An error ("1") occurs in the SP1-803-**005**.

[Setting values of the following SPs + input value with SP1-803-001] > motor speed adjustable range

e.g.) 1.5 (SP1-801-025) + 1 (SP1-803-001 to -003) = 2.5

In this case, "2.5" is over the maximum adjustable value ("2") of the SP1-801-025. As a result, the result of the motor speed adjustment issues "1" (error).

- Adjust the settings of the SP1-830-001 to -003 so that the total value (motor speed setting value + input value) is within the adjustable range for each motor described below.

SP No.	Max.	Min.	Title
SP1-801-025	2	-2	Duplex Entrance:60
SP1-801-027	2	-2	Duplex Exit:60
SP1-801-033	4	-4	Regist Mot:60:1200dpi
SP1-801-034	2	-2	Feed1: CW60:1200dpi
SP1-801-035	2	-2	Feed1: CCW60:1200dpi
SP1-801-036	2	-2	Feed2: CW60:1200dpi
SP1-801-037	2	-2	Feed2: CCW60:1200dpi
SP1-801-038	2	-2	By-pass:60:1200dpi
SP1-801-039	2	-2	Inverter: CW60:1200dpi
SP1-801-040	2	-2	Inverter: CCW60:1200dpi
SP1-801-041	6	-6	FusingMot:60:1200dpi
SP1-801-042	4	-4	BkOpcDevMot:60:1200dpi
SP1-801-043	4	-4	TransferMot:60:1200dpi

### Troubleshooting Guide

3. An error ("1") occurs in the SP1-803-006.

[Setting values of the following SPs + input value with SP1-803-001] > motor speed adjustable range

e.g.) 3.5 (SP1-801-001) + 1 (SP1-803-001 to -003) = 4.5

In this case, "4.5" is over the maximum adjustable value ("4") of the SP1-801-025. As a result, the result of the motor speed adjustment issues "1" (error).

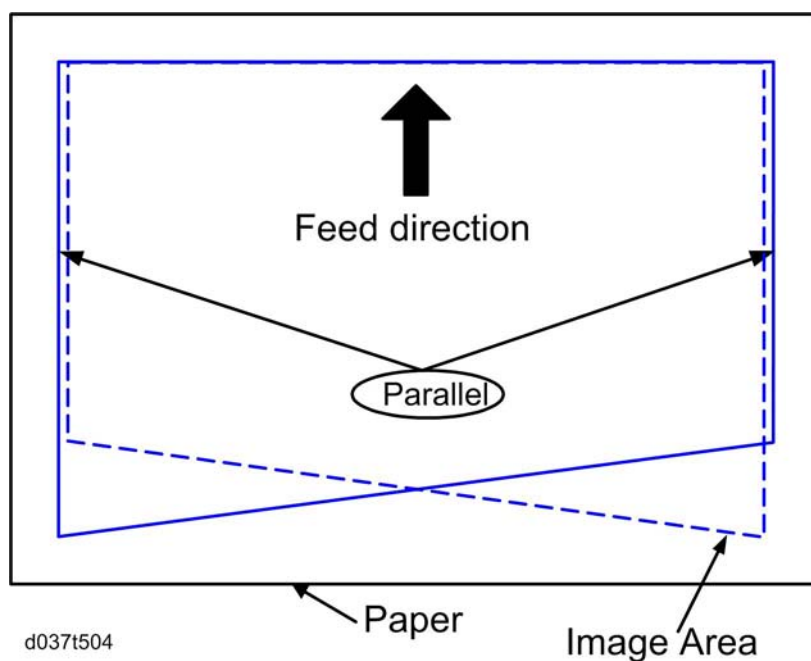

- Adjust the settings of the SP1-830-001 to -003 so that the total value (motor speed setting value + input value) is within the adjustable range for each motor described below.

SP No.	Max.	Min.	Title
SP1-801-001	4	-4	Regist Mot:60:Thick
SP1-801-004	4	-4	Bk OpcDevMot:60:Thick

### 6.3.2 TRAPEZOID IMAGE ADJUSTMENT

#### *Before Adjusting the Trapezoid Image*

1. Enter SP2-109 and print out the test pattern 14 (Trimming Area).

2. Make sure the horizontal lines are parallel.  
 “Parallel”: The gap between horizontal lines is 1.8 mm or less.
3. If the lines are not parallel, check the following and apply corrections as necessary:
  - Make sure that the side fences of the tray are set neatly against the sides of the paper.
  - Make sure that the PTR unit is connected to the bracket correctly.
  - Make sure that the shafts of the duplex unit are not bent nor damaged.

### ***Adjusting the Trapezoid Image***

1. Remove the following items:
  - Fusing unit (☛ Section: Fusing Unit)
  - Front right cover (☛ Section: Front Right Cover)
  - PCDU toner collection bottle (☛ Section: PCDU Toner Collection Bottle)
  - Inner cover (☛ Section: Inner Cover)
  - Inner right cover (☛ Section: Inner Right Cover)

Troubleshooting Guide

d037r392

2. Remove the interlock switch bracket [A] (🔩 x 3, 🛠️ x 1, 📏 x 2).

d037r393

3. Loosen the four screws [A] on the front fusing guide.
4. Remove the screw [B] on the adjustor lever.

↓ Note

- This screw is not necessary after tightening the front fusing guide.

d037r394

5. If the horizontal lines slope down to the left [A], move the front fusing guide upward. To

## Troubleshooting Guide

do this, turn the adjustor lever [B] of the fusing front guide clockwise [C].

↓ Note

- One step of the adjustor lever moves the front fusing guide by 1 mm.

6. If the horizontal lines slope down to the right [A], move the fusing front guide downward. To do this, turn the adjustor lever [B] of the front fusing guide counterclockwise [C].

↓ Note

- One step of the adjustor lever moves the front fusing guide by 1 mm.
7. Retighten the four screws for the front fusing guide.
  8. Print out the test pattern and check the image quality.
  9. If the symptom still occurs, repeat the above steps.

## Jam Detection

### 6.4 JAM DETECTION

See "[Appendices](#)" for the following information:

- Paper Jam Display
- Jam Codes and Display Codes  
(Paper Size Code)  
(Sensor Locations)

## 6.5 ELECTRICAL COMPONENT DEFECTS

See "[Appendices](#)" for the following information:

- Sensors
- Blown Fuse Conditions  
(Power Supply Unit)

**Scanner Test Mode****6.6 SCANNER TEST MODE****6.6.1 SBU TEST MODE**

Output the SBU test pattern with SP4-807-001 to make sure the scanner SBU control operates correctly. The SBU test pattern prints out after you have set the SP mode settings and pressed the start key.

- The CCD on the SBU board may be defective if the copy is abnormal and the SBU test pattern is normal.
- The followings can be the cause if the copy is normal and the SBU test pattern is abnormal:
  - The harness may not be correctly connected between the SBU and the i-controller.
  - The i-controller or SBU board may be defective.

**6.6.2 IPU TEST MODE**

You can check the BICU board with the SP mode menu, SP4-904-1.

If no error is detected, the test ends. Then the completion code shows in the operation panel display. If an error is detected, the test is interrupted. Then an error code shows. The table below lists the completion and error codes.

***SP4-904-1 Register Access***

There are 16 bits switches in this SP. Each bit indicates a different CPU. The error result is displayed on the operation panel as a decimal number.

0: Normal, 1: Error

***SP4-904-2 Image Path***

There are 16 bits switches in this SP. Each bit indicates a different CPU path. The error result is displayed on the operation panel as a decimal number.

0: Normal, 1: Error

Errors may be caused by the following problems:

1. Short circuit on the signal lines
  - When the i-controller board is installed, a pin or two on the ASIC is damaged.
  - Some conductive matter or object is trapped among the pins.
  - Condensation
2. Destruction of circuit elements
  - Over current or a defective element breaks the circuit.

**Scanner Test Mode**

3. Abnormal power supply
  - The required voltage is not supplied to the devices.
4. Overheat/overcooling
  - The environment is inappropriate for the board (the scanner unit).
5. Static electricity
  - Static electricity of a high voltage occurs during the test.
6. Others
  - The scanner and i-controller are incorrectly connected.

When you have completed a check, turn the main switch off and on before you do another check. When you have completed all necessary checks, turn the main switch off and on.**Error! No index entries found.**

\*1: Use SP4-303 to detect original sizes as A5 lengthwise/HLT when the message "Can-t detect original size" shows.

\*2: The machine can detect the paper size depending on the setting of SP6-016-1.

\*3: The machine can detect the paper size depending on the setting of SP4-305-1.

\*4: The machine can detect the paper size depending on the setting of SP5-126-1.

## Software Accessories

**1.5 SOFTWARE ACCESSORIES**

The printer drivers and utility software are provided as following two CD-ROMs

1: Printer Drivers and Utilities CD-ROM

2: Scanner/PostScript® Drivers and Utilities CD-ROM.

An auto-run installer lets you to select the components you want to install.

**1.5.1 PRINTER DRIVERS**

Printer Language	Windows 2000, XP, Server 2003, Vista, Server 20038	MacOS8.6 to 9.x, MacOSX10.1 or later
PCL5c / PCL6	Yes	No
PS3 *2)	Yes	Yes
RPCS	Yes	No

 **Note**

- The PCL5c/6 and RPCS drivers are provided on the printer drivers CD-ROM
- The PS drivers are provided on the Scanner/PostScript® Drivers and Utilities CD-ROM.
- The printer drivers for Windows NT 4.0 are only for the Intel x86 platform. There is no Windows NT 4.0 printer driver for the PowerPC, Alpha, or MIPS platforms.
- The PS3 drivers are all genuine Adobe PS drivers, except for Windows 2000/XP/2003/Vista. Windows 2000 uses Microsoft PS. A PPD file for each operating system is provided with the driver.
- The PS3 driver for Macintosh supports Mac OS X 10.1 or later versions.

**1.5.2 SCANNER AND LAN FAX DRIVERS**

Printer Language	Windows 95/98/ME	Windows NT4.0	Windows 2000, XP, Server 2003/Vista	MacOS8.6 to 9.x, MacOSX10.1 or later

## Software Accessories

Network TWAIN	Yes	Yes	Yes	No
LAN-FAX	Yes	Yes	Yes	No

 Note

- The Network TWAIN and LAN Fax drivers are provided on the scanner drivers CD-ROM.
- This software lets you fax documents directly from your PC. Address Book Editor and Cover Sheet Editor are to be installed as well. (These require the optional fax unit.)

### 1.5.3 UTILITY SOFTWARE

Software	Description
Font Manager 2000 (Win9x/ME, 2000/XP/2003, NT4)	A font management utility with screen fonts for the printer This is provided on the printer drivers CD-ROM
Smart Device Monitor for Admin (Win 95/98/Me, NT4, 2000/XP/Server 2003/Vista)	A printer management utility for network administrators. NIB setup utilities are also available. This is provided on the printer drivers CD-ROM
DeskTopBinder – SmartDeviceMonitor for Client (Win 95/98/Me, NT4, 2000/XP/Server 2003/Vista)	A printer management utility for client users. A utility for peer-to-peer printing over a NetBEUI or TCP/IP network. A peer-to-peer print utility over a TCP/IP network. This provides the parallel printing and recovery printing features. This is provided on the printer drivers CD-ROM
Printer Utility for Mac (Mac)	A utility for peer-to-peer printing over a NetBEUI or TCP This software provides several convenient functions for printing from Macintosh clients. This is provided on the scanner drivers CD-ROM
DeskTopBinder Lite	DeskTopBinder Lite itself can be used as personal

**Software Accessories**

(Win9x/ME, 2000/XP/2003, NT4)	document management software and can manage both image data converted from paper documents and application files saved in each client's PC. This is provided on the scanner drivers CD-ROM
-------------------------------	---

## 1.6 OPTIONAL EQUIPMENT

### 1.6.1 ARDF (D366: STANDARD FOR H-MODELS (D038/D041))

Paper Size/Weight:	Simplex	Size	A3 to A5, DLT to HLT
		Weight	40 to 128 g/m <sup>2</sup> (10 to 34 lb.)
	Duplex	Size	A3 to A5, DLT to HLT
		Weight	52 to 105 g/m <sup>2</sup> (14 to 28 lb.)
Table Capacity:	50 sheets (80 g/m <sup>2</sup> , 20 lb)		
Original Standard Position:	Rear left corner		
Separation:	Feed belt and separation roller		
Original Transport:	Roller transport		
Original Feed Order:	From the top original		
Supported Magnification Ratios:	Copy	-	32 to 200 %
	Fax	Color	32.6 to 200 %
		Black & white	48.9 to 200 %
Power Source:	DC 24V, 5V from the scanner unit		
Power Consumption:	50 W or less		
Dimensions (W x D x H):	550 mm x 491 mm x 120 mm (21.7" x 19.3" x 4.7")		
Weight:	10 kg (22 lb.)		

### 1.6.2 PAPER FEED UNIT (D425)

Paper Feed System:	FRR
Paper Height Detection:	4 steps (100%, 70%, 30%, Near end)

**Optional Equipment**

Capacity:	500 sheets
Paper Weight:	80 g/m <sup>2</sup> (21 lb.)
Paper Size:	A3 SEF to A5, DLT SEF to HLT
Power Source:	DC 24V, 5V (from the main frame)
Power Consumption:	58 W
Dimensions (W x D x H):	550 mm x 520 mm x 137 mm (22" x 20.8" x 5.48")
Weight:	Less than 12 kg (26.4 lbs)

**1.6.3 PAPER FEED UNIT (D331)**

Paper Size:	A5 to A3, 5 <sup>1</sup> / <sub>2</sub> " x 8 <sup>1</sup> / <sub>2</sub> " SEF to 11" x 17"
Paper Weight:	60 - 105 g/m <sup>2</sup> , 16 - 28 lb
Tray Capacity:	500 sheets (80 g/m <sup>2</sup> , 20 lb) x 2 trays
Paper Feed System:	Feed roller and friction pad
Paper Height Detection:	4 steps (100%, 70%, 30%, Near end)
Power Source:	<ul style="list-style-type: none"> <li>▪ 24 Vdc and 5Vdc (from the copier/printer)</li> <li>▪ 120 Vac (120 V version) from the copier/printer when the optional tray heater is installed</li> <li>▪ 220 – 240 Vac (230 V version) from the copier/printer when the optional tray heater is installed</li> </ul>
Power Consumption:	35 W (Copying/printing)
Weight:	25 kg (55 lb)
Size (W x D x H):	550 mm x 520 mm x 271 mm

## 1.6.4 INTERNAL FINISHER &amp; PUNCH UNIT (D429)

Print Paper Size:	<p><b>No punch mode:</b> A3/11" x 17" to B6/5.5" x 8.5" (SEF)</p> <p><b>Punch mode:</b></p> <p><b>2 holes:</b> A3, A4 or 11" x 17", 8.5" x 14" (SEF), 8.5" x 13" (SEF), 8.5" x 11"</p> <p><b>3 holes:</b> A3, A4 (LEF) or 11" x 17", 8.5" x 11" (LEF)</p> <p><b>4 holes (Europe):</b> A3, A4 (LEF) or 11" x 17", 8.5" x 11" (LEF)</p> <p><b>4 holes (Scandinavia):</b> A3, A4 or 11" x 17", 8.5" x 14" (SEF), 8.5" x 13" (SEF), 8.5" x 11", 7.25" x 10.5"</p> <p><b>Staple mode:</b> A3/11" x 17" to B5/8.5" x 11"</p>
Paper Weight:	<p>No punch mode: 52 to 256 g/m<sup>2</sup> (14 to 68 lb.)</p> <p>Punch mode: 52 to 163 g/m<sup>2</sup> (14 to 43 lb.)</p> <p>Staple mode: 52 to 128 g/m<sup>2</sup> (14 to 34 lb.)</p> <p>Label/Thick paper/OHP cannot be stapled</p>
Tray Capacity:	<p>500 sheets: A4, 8.5" x 11" or less</p> <p>250 sheets: B4, 8.5" x 14" or more</p>
Staple capacity:	<p>Single size:</p> <p>50 sheets: A4, 8.5" x 11" or smaller</p> <p>30 sheets: B4, 8.5" x 14" or larger</p>
Staple position:	<p>3 positions</p> <p>1-staple: 2 positions (Top Left, Top Right)</p> <p>2-staples: 1 positions</p>

**Optional Equipment**

Staple replenishment:	Cartridge (5000 staples)	
Power consumption:	50 W + 12 W (Punch Unit)	
Dimensions (W x D x H):	440 x 595 x 205 mm (17.3" x 23.4" x 8.1")	
Weight:	Without punch unit:	13 kg (28.6 lb.)
	With punch unit:	16.2 Kg (35.6 lb.)

**1.6.5 SHIFT TRAY (D428)**

Paper Capacity:	250 sheet (A4/ 8 $\frac{1}{2}$ " x 11 $\frac{1}{2}$ " or smaller: 80g/m <sup>2</sup> / 20 lbs)
Paper Size:	Standard sizes A6 SEF to A3, HLT to DLT Non-standard sizes Width: 90 to 305 mm Length: 148 to 600 mm
Paper Weight:	52-256 g/m <sup>2</sup> / 14 - 68 lbs
Power Consumption:	Max 13 W (Power is supplied from the mainframe.)
Dimension (W x D x H):	431 x 477.5 x 107mm (17.2" x 19.1" x 4.3")
Weight:	Approx. 2kg (4.4lbs)

**1.6.6 1-BIN TRAY UNIT (D426)**

Paper Size:	Standard Size: A3 /DLT to A5/ HLT SEF
Paper Weight:	60 to 105 g/m <sup>2</sup> , 16 to 28 lb.
Tray Capacity:	100 sheets (80 g/m <sup>2</sup> , 20 lb., A4)
Power Source:	DC 24 V, 5 V (from the copier)

## Optional Equipment

Power Consumption:	Less than 1 W
Weight:	Less than 2kg (4.4lbs)
Size (W x D x H):	455 x 530 x 226mm (18.2" x 21.2" x 9")

**1.6.7 SIDE TRAY (D427)**

Paper Size:	Standard Size: A3 /DLT to A5/ HLT SEF
Paper Weight:	60 to 105 g/m <sup>2</sup> , 16 to 28 lb.
Tray Capacity:	50 sheets (80 g/m <sup>2</sup> , 20 lb., A4)
Power Source:	DC 24 V, 5 V (from the copier)
Power Consumption:	Less than 40 W
Weight:	1.5 kg
Size (W x D x H):	480 x 480 x 170mm (19.2"x19.2"x6.8")

Items	EM	Remarks
Tray	C	Damp cloth

**3.1.2 OTHERS YIELD PARTS**

The parts mentioned in these tables have a target yield. However, the total copy/print volume made by the machine will not reach the target yield within the machine's targeted lifetime if the machine is used under the target usage conditions (ACV, color ratio, P/J, and C/O). So, these parts are categorized not as PM parts but as yield parts (EM parts).

**ARDF**

70	02/04/2009	SC995

## 4. APPENDIX: SERVICE CALL CONDITIONS

### 4.1 SC TABLES

#### 4.1.1 SERVICE CALL CONDITIONS

##### **Summary**

The 'SC Table' section shows the SC codes for controller errors and other errors. The latter (not controller errors) are put into four types. The type is determined by their reset procedures. The table shows the classification of the SC codes.

	Key	Definition	Reset Procedure
Controller errors	CTL	The error has occurred in the controller.	See "Troubleshooting Procedure" in the table.
Other errors	A	The error involves the fusing unit. The machine operation is disabled. The user cannot reset the error.	Turn the main switch off and on. Reset the SC (set SP5-810-1). Turn the main switch off and on.
	B	The error involves one or some specific units. The machine operates as usual, excluding the related units.	Turn the operation switch off and on.
	C	The error is logged. The SC-code history is updated. The machine operates as usual.	The SC will not show. Only the SC history is updated.
	D	The machine operation is disabled. You can reset the machine by turning the operation switch or main switch off and on. If the error occurs again, the same SC code is displayed.	Turn the operation switch or main power switch off and on.

## SC Tables

After you turn the main power switch off, wait for one second or more before you turn the main power switch on (➡ SC 672). All SCs are logged. The print log data (SP5-990-004) in SP mode can check the latest 10 SC codes detected and total counters when the SC code is detected.

### ↓ Note

- If the problem concerns electrical circuit boards, first disconnect then reconnect the connectors before you replace the PCBs.
- If the problem concerns a motor lock, first check the mechanical load before you replace motors or sensors.

## SC Code Classification

The table shows the classification of the SC codes:

Class 1	Section	SC Code	Detailed section
1XX	Scanning	100 -	Scanner
		190 -	Unique for a specific model
2XX	Laser exposure	200 -	Polygon motor
		220 -	Synchronization control
		230 -	FGATE signal related
		240 -	LD control
		280 -	Unique for a specific model
3XX	Image development 1	300 -	Charge
		330 -	Drum potential
		350 -	Development
		380 -	Unique for a specific model
4XX	Image development 2	400 -	Image transfer
		420 -	Paper separation
		430 -	Cleaning

## SC Tables

Class 1	Section	SC Code	Detailed section
		440 -	Around drum
		460 -	Unit
		480 -	Others
5XX	Paper feed / Fusing	500 -	Paper feed
		515 -	Duplex
		520 -	Paper transport
5XX	Paper feed / Fusing	530 -	Fan motor
		540 -	Fusing
		560 -	Others
		570 -	Unique for a specific model
6XX	Communication	600 -	Electrical counters
		620 -	Mechanical counters
		630 -	Account control
		640 -	CSS
		650 -	Network
		670 -	Internal data processing
		680 -	Unique for a specific model
7XX	Peripherals	700 -	Original handling
		720 -	Two-tray finisher
		740 -	Booklet finisher
8XX	Controller	800 -	Error after ready condition
		820 -	Diagnostics error

Appendix:  
Service Call  
Conditions

**SC Tables**

Class 1	Section	SC Code	Detailed section
		860 -	Hard disk
		880 -	Unique for a specific model
9XX	Others	900 -	Counter
		920 -	Memory
		990 -	Others

**4.1.2 SC1XX: SCANNING**

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
101	D	Exposure lamp error
		The peak white level is less than 64/255 digits (8 bits) when scanning the shading plate.
		<ul style="list-style-type: none"> <li>▪ Exposure lamp defective</li> <li>▪ Lamp stabilizer defective</li> <li>▪ Exposure lamp connector defective</li> <li>▪ Standard white plate dirty</li> <li>▪ Scanner mirror or scanner lens out of position or dirty</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check and clean the scanner mirror(s) and scanner lens.</li> <li>2. Check and clean the shading plate.</li> <li>3. Replace the exposure lamp.</li> <li>4. Replace the lamp stabilizer.</li> <li>5. Replace the scanner mirror(s) or scanner lens.</li> </ol>

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
120	D	Scanner home position error 1
		The scanner home position sensor does not detect the "OFF" condition during operation.
		<ul style="list-style-type: none"> <li>▪ Scanner motor driver defective</li> <li>▪ Scanner motor defective</li> <li>▪ Harness between BCU and scanner motor disconnected</li> <li>▪ Scanner HP sensor defective</li> <li>▪ Harness between BCU and HP sensor disconnected</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the cable connection between the BCU and scanner motor.</li> <li>2. Check the cable connection between the BCU and HP sensor.</li> <li>3. Replace the scanner motor.</li> <li>4. Replace the scanner HP sensor.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
121	D	Scanner home position error 2
		The scanner home position sensor does not detect the "ON" condition during operation.
		<ul style="list-style-type: none"> <li>▪ Scanner motor driver defective</li> <li>▪ Scanner motor defective</li> <li>▪ Harness between BCU and scanner motor disconnected</li> <li>▪ Scanner HP sensor defective</li> <li>▪ Harness between BCU and HP sensor disconnected</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the cable connection between the BCU board and scanner motor.</li> <li>2. Check the cable connection between the BCU and HP sensor.</li> <li>3. Replace the scanner motor.</li> <li>4. Replace the HP sensor.</li> </ol>

Appendix:  
Service Call  
Conditions

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
141	D	Black level detection error
		The black level cannot be adjusted within the target value during the zero clamp.
		<ul style="list-style-type: none"> <li>▪ Harness disconnected</li> <li>▪ Defective SBU</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the cable connection</li> <li>2. Replace the SBU.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
142	D	White level detection error
		The white level cannot be adjusted within the target during auto gain control.
		<ul style="list-style-type: none"> <li>▪ Dirty exposure glass or optics section</li> <li>▪ SBU board defective</li> <li>▪ Exposure lamp defective</li> <li>▪ Lamp stabilizer defective</li> <li>▪ Scanner motor defective</li> </ul>
		<ol style="list-style-type: none"> <li>1. Clean the exposure glass, white plate, mirrors, and lens.</li> <li>2. Check if the exposure lamp is lit during initialization.</li> <li>3. Check the harness connection between SBU and BCU.</li> <li>4. Replace the exposure lamp.</li> <li>5. Replace the scanner motor.</li> <li>6. Replace the SBU board.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
144	D	SBU communication error
		The SBU connection cannot be detected at power on or recovery from the energy save mode.

SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ul style="list-style-type: none"> <li>▪ Defective SBU</li> <li>▪ Defective harness</li> <li>▪ Defective detection port on the BCU</li> </ul>
		<ol style="list-style-type: none"> <li>1. Replace the harness.</li> <li>2. Replace the SBU.</li> <li>3. Replace the BCU.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
161	D	IPU error
001	D	The error result of self-diagnostic by the ASIC on the i-controller is detected.
		<ul style="list-style-type: none"> <li>▪ Defective i-controller</li> <li>▪ Defective connection between i-controller and SBU</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the connection between i-controller and SBU.</li> <li>2. Replace the i-controller.</li> </ol>
002	D	Detected an error during an access to the i-controller.
		<ul style="list-style-type: none"> <li>▪ Defective i-controller board</li> </ul>
		Replace the i-controller board.

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
165	D	Copy Data Security Unit error
		<ul style="list-style-type: none"> <li>▪ The copy data security board is not detected when the copy data security function is set "ON" with the initial setting.</li> <li>▪ A device check error occurs when the copy data security function is set "ON" with the initial setting.</li> </ul>
		<ul style="list-style-type: none"> <li>▪ Incorrect installation of the copy data security board</li> <li>▪ Defective copy data security board</li> </ul>

Appendix:  
Service Call  
Conditions

**SC Tables**

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ol style="list-style-type: none"> <li>1. Reinstall the copy data security board.</li> <li>2. Replace the copy data security board.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
195	D	Serial Number Mismatch
		<ul style="list-style-type: none"> <li>Serial number stored in the memory does not have the correct code.</li> </ul>
		<ul style="list-style-type: none"> <li>NVRAM defective</li> <li>BCU replaced without original NVRAM</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the serial number with SP5-811-002.</li> <li>2. If the stored serial number is incorrect, contact your supervisor.</li> </ol>

**4.1.3 SC 2XX: EXPOSURE**

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
202	D	Polygon motor error 1: ON timeout
		The polygon mirror motor does not reach the targeted operating speed within the specified time after turning on or changing speed
		<ul style="list-style-type: none"> <li>Defective or disconnected harness to polygon motor driver board</li> <li>Defective polygon motor driver board</li> <li>Defective polygon motor.</li> </ul>
		<ol style="list-style-type: none"> <li>1. Replace the polygon motor.</li> <li>2. Replace the laser unit.</li> <li>3. Replace the harness.</li> <li>4. Replace the BCU.</li> </ol>

SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
203	D	Polygon motor error 2: OFF timeout
		The polygon mirror motor does not leave the READY status within 3 seconds after the polygon motor switches off.
		<ul style="list-style-type: none"> <li>▪ Disconnected or defective harness to polygon motor driver board</li> <li>▪ Defective polygon motor driver board</li> <li>▪ Defective polygon motor</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check or replace the harness.</li> <li>2. Replace the polygon motor.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
204	D	Polygon motor error 3: XSCRDY signal error
		The SCRDY_N signal goes HIGH (inactive) while the laser diode is firing.
		<ul style="list-style-type: none"> <li>▪ Disconnected or defective harness to polygon motor driver board</li> <li>▪ Defective polygon motor</li> <li>▪ Defective polygon motor driver board</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check or replace the harness.</li> <li>2. Replace the polygon motor.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
220	D	Laser synchronizing detection error: start position [K]: LD0
222	D	Laser synchronizing detection error: start position [Y]: LD0
-	-	The laser synchronizing detection signal for the start position of the LDB [K], [Y], is not output for two seconds after LDB unit turns on while the polygon motor is rotating normally.

Appendix:  
Service Call  
Conditions

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ul style="list-style-type: none"> <li>▪ Disconnected cable from the laser synchronizing detection unit or defective connection</li> <li>▪ Defective laser synchronizing detector</li> <li>▪ Defective LDB</li> <li>▪ Defective BCU</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the connectors.</li> <li>2. Replace the laser unit.</li> <li>3. Replace the BCU.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
230	D	FGATE ON error: K
		The PFGATE ON signal does not assert within 5 seconds after processing the image in normal job or MUSIC for start position [K].
		<ul style="list-style-type: none"> <li>▪ Defective ASIC (Lupus)</li> <li>▪ Poor connection between i-controller and BCU.</li> <li>▪ Defective BCU</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the connection between the controller board and the BCU.</li> <li>2. Replace the BCU.</li> <li>3. Replace the controller board.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
231	D	FGATE OFF error: K
		<ul style="list-style-type: none"> <li>▪ The PFGATE ON signal still asserts within 5 seconds after processing the image in normal job or MUSIC (line position adjustment) for end position [K].</li> <li>▪ The PFGATE ON signal still asserts when the next job starts.</li> </ul>
		See SC 230 for troubleshooting details.

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
232	D	FGATE ON error: Y

## 4.1.7 SC6XX: DEVICE COMMUNICATION

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
610	D	Mechanical counter error: K
611	D	Mechanical counter error: FC
-	-	This SC is only for NA models. The machine detects the mechanical counter error when SP5987-001 is set to "1".
		<ul style="list-style-type: none"> <li>▪ Disconnected mechanical counter</li> <li>▪ Defective mechanical counter</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check or replace the mechanical counter.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
620	D	ARDF communication error
		After the ARDF is detected, the break signal occurs or communication timeout occurs.

SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ul style="list-style-type: none"> <li>▪ Incorrect installation of ARDF</li> <li>▪ ARDF defective</li> <li>▪ BCU board defective</li> <li>▪ External noise</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the cable connection of the ARDF.</li> <li>2. Shut out the external noise.</li> <li>3. Replace the ARDF.</li> <li>4. Replace the BCU board.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
621	D	Finisher communication error
		<p>While the BCU communicates with an optional unit, an SC code is displayed if one of following conditions occurs.</p> <ul style="list-style-type: none"> <li>▪ The BCU receives the break signal which is generated by the peripherals only just after the main switch is turned on.</li> <li>▪ When the BCU does not receive an OK signal from a peripheral 100ms after sending a command to it. The BCU resends the command. The BCU does not receive an OK signal after sending the command 3 times.</li> </ul>
		<ul style="list-style-type: none"> <li>▪ Cable problems</li> <li>▪ BCU problems</li> <li>▪ PSU problems in the machine</li> <li>▪ Main board problems in the peripherals</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check if the cables of peripherals are correctly connected.</li> <li>2. Replace the PSU if no power is supplied to peripherals.</li> <li>3. Replace the main board of peripherals.</li> <li>4. Replace the BCU.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
632	CTL	Counter device error 1

Appendix:  
Service Call  
Conditions

**SC Tables**

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
	B	After 3 attempts to send a data frame to the optional counter device via the serial communication line, no ACK signal was received within 100 ms.
		<ul style="list-style-type: none"> <li>▪ Serial line between the optional counter device, the relay board and copier control board is disconnected or damaged</li> <li>▪ Make sure that SP5113 is set to enable the optional counter device.</li> </ul>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
633	CTL B	Counter device error 2
		After 3 attempts to send a data frame to the optional counter device via the serial communication line, no ACK signal was received within 100 ms.
		<ul style="list-style-type: none"> <li>▪ Serial line between the optional counter device, the relay board and copier control board is disconnected or damaged</li> <li>▪ Make sure that SP5113 is set to enable the optional counter device.</li> </ul>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
634	CTL B	Counter device error 3
		A backup RAM error was returned by the counter device.
		<ul style="list-style-type: none"> <li>▪ Counter device control board defective</li> <li>▪ Backup battery of counter device defective</li> </ul>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
635	CTL B	Counter device error 4
		A backup battery error was returned by the counter device.

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ul style="list-style-type: none"> <li>▪ Counter device control board defective</li> <li>▪ Backup battery of counter device defective</li> </ul>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
636	CTL	SD Card Error
01	D	Expanded authentication module error
		There is no expanded authentication module in the machine. The SD card or the file of the expanded authentication module is broken. There is no DESS module in the machine.
		<ul style="list-style-type: none"> <li>▪ No expanded authentication module</li> <li>▪ Defective SD card</li> <li>▪ No DESS module</li> </ul>
		<ol style="list-style-type: none"> <li>1. Install the expanded authentication module.</li> <li>2. Install the SD card.</li> <li>3. Install the DESS module.</li> </ol>
02	D	Version error
		The version of the expanded authentication module is not correct.
		<ul style="list-style-type: none"> <li>▪ Incorrect module version</li> </ul>
		<ol style="list-style-type: none"> <li>1. Install the correct file of the expanded authentication module.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
641	CTL D	BCU control data transfer abnormal
		A sampling of the control data sent from the BCU reveals an abnormality.
		<ul style="list-style-type: none"> <li>▪ Controller board defective</li> </ul>

## SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
		<ul style="list-style-type: none"> <li>▪ External noise</li> <li>▪ BCU board defective</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the connection between the controller board and BCU.</li> <li>2. Replace the controller board.</li> <li>3. Replace the BCU.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
650	CTL B	Communication error of the remote service modem (RCG-M)
-001	-	Authentication error
		The authentication for the RCG-M fails at a dial up connection.
		<ul style="list-style-type: none"> <li>▪ Incorrect SP settings</li> <li>▪ Disconnected telephone line</li> <li>▪ Disconnected modem board</li> </ul>
		Check and set the correct user name (SP5816-156) and password (SP5816-157).
-004	-	Incorrect modem setting
		Dial up fails due to the incorrect modem setting.
		Same as -001
		Check and set the correct AT command (SP5819-160).
-005	-	Communication line error
		The supplied voltage is not sufficient due to the defective communication line or defective connection.
		Same as -001
		Consult with the user's local telephone company.

SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
651	CTL C	Incorrect dial up connection
		-001: Program parameter error
		-002: Program execution error
		An unexpected error occurs when the modem (RCG-M) tries to call the center with a dial up connection.
		<ul style="list-style-type: none"> <li>▪ Caused by a software bug</li> </ul>
		No action required because this SC does not interfere with operation of the machine.

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
669	D	NVRAM error
		Retry of NVRAM communication fails three times after the machine has detected the NVRAM error.
		<ul style="list-style-type: none"> <li>▪ Caused by noise</li> </ul>
		Turn the main power switch off and on.

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
670	CTL D	Engine start up error
		The ready signal from the engine board is not detected.
		<ul style="list-style-type: none"> <li>▪ Defective engine board.</li> </ul>
		Replace the engine board.

671	CTL D	Engine board mismatch error
		Engine board and controller mismatch detected.

Appendix:  
Service Call  
Conditions

**SC Tables**

		<ul style="list-style-type: none"> <li>▪ Wrong engine board installed.</li> <li>▪ Wrong controller board installed.</li> <li>▪ Check the type of engine board and controller board.</li> </ul>

Service Call  
Conditions

## SC Tables

## 4.1.10 SC9XX: MISCELLANEOUS

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
900	CTL D	Electric counter error
		Abnormal data in the counters.
		<ul style="list-style-type: none"> <li>▪ Defective NVRAM</li> <li>▪ Defective controller</li> </ul>
		<ol style="list-style-type: none"> <li>1. Check the connection between the NVRAM and controller.</li> <li>2. Replace the NVRAM.</li> <li>3. Replace the controller.</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
920	CTL D	Printer application error
		An error is detected in the printer application program.
		<ul style="list-style-type: none"> <li>▪ Defective software</li> <li>▪ Unexpected hardware resource (e.g., memory shortage)</li> </ul>
		<ol style="list-style-type: none"> <li>1. Software defective; switch off/on, or change the controller firmware if the problem is not solved</li> <li>2. Insufficient memory</li> </ol>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
921	CTL D	Printer font error
		A necessary font is not found in the SD card.
		<ul style="list-style-type: none"> <li>▪ A necessary font is not found in the SD card.</li> <li>▪ The SD card data is corrupted.</li> </ul>
		Check that the SD card has the correct data.

Rev. 01/2009

SC Tables

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
925	CTL B	<p>The NetFile file management on the HDD cannot be used, or a NetFile management file is corrupted and operation cannot continue. The HDDs are defective and they cannot be debugged or partitioned, so the Scan Router functions (delivery of received faxes, document capture, etc.), Web services, and other network functions cannot be used. HDD status codes are displayed below the SC code:</p> <ul style="list-style-type: none"> <li>▪ Refer to the four procedures below (Recovery from SC 925).</li> </ul>

List of HDD status codes:

Display	Meaning
(-1)	HDD not connected
(-2)	HDD not ready
(-3)	No label
(-4)	Partition type incorrect
(-5)	Error returned during label read or check
(-6)	Error returned during label read or check
(-7)	“filesystem” repair failed
(-8)	“filesystem” mount failed
(-9)	Drive does not answer command
(-10)	Internal kernel error
(-11)	Size of drive is too small
(-12)	Specified partition does not exist
(-13)	Device file does not exist

**Recovery from SC 925:****Procedure 1**

If the machine shows SC codes for HDD errors (SC860 to SC865) with SC 925, do the recovery procedures for SC860 to SC865.

Appendix:  
Service Call  
Conditions

**Procedure 2**

1. If the machine does not show one of the five HDD errors (SC860 to SC865), turn the machine power off and on.
2. If this is not the solution for the problem, then initialize the NetFile partition on the HDD with SP5832-11 (HDD Formatting – Ridoc I/F).  
NetFiles: These are jobs printed from the document server using a PC and DeskTopBinder. Before you initialize the NetFile partition on the HDD, tell the customer:
  - Received faxes on the delivery server will be erased
  - All captured documents will be erased
  - DeskTopBinder/Print Job Manager/Desk Top Editor job history will be erased
  - Documents on the document server, and scanned documents, will not be erased.
  - The first time that the network gets access to the machine, the management information must be configured again (this will use a lot of time).
3. Before you initialize the Netfile partition with SP5832-11, do these steps:
4. Go into the User Tools mode and do “Delivery Settings” to print all received fax documents that are scheduled for delivery. Then erase them.
5. In the User Tools mode, do Document Management> Batch Delete Transfer Documents.
6. Do SP5832-11, then turn the machine power off and on.

**Procedure 3**

1. If “Procedure 2” is not the solution for the problem, do SP5832-1 (HDD Formatting – All)
2. Cycle the machine off/on.

 **Important**

- **SP5832-001 erases all document and address book data on the hard disks. Consult with the customer before you do this SP code.**

**Procedure 4**

If “Procedure 3” does not solve the problem, replace the HDD.

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
990	CTL D	Software performance error
		The software makes an unexpected operation.
		<ul style="list-style-type: none"> <li>▪ Defective software</li> <li>▪ Defective controller</li> <li>▪ Software error</li> </ul>
		<ol style="list-style-type: none"> <li>1. Turn the main switch off and on.</li> <li>2. Reinstall the controller and/or engine main firmware.</li> </ol>
		<div style="border: 1px solid black; padding: 2px; display: inline-block;">  Note         </div> <ul style="list-style-type: none"> <li>▪ See Note 1 at the end of the SC table.</li> </ul>

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
991	CTL C	Software continuity error
		The software has attempted to perform an unexpected operation. However, unlike SC 990, the object of the error is continuity of the software.
		<ul style="list-style-type: none"> <li>▪ Software program error</li> <li>▪ Internal parameter incorrect, insufficient working memory.</li> </ul>
		This SC is not displayed on the LCD (logging only).

No.	Type	Details (Symptom, Possible Cause, Troubleshooting Procedures)
992	CTL D	Undefined error
		Defective software program
		<ul style="list-style-type: none"> <li>▪ An error undetectable by any other SC code occurred</li> </ul>

		<ol style="list-style-type: none"> <li>1. Check the setting of SP5875-001. If the setting is set to "1 (OFF)", change it to "0 (OFF)".</li> <li>2. Check if the RAM-DIMM and ROM-DIMM are correctly connected.</li> <li>3. Reinstall the controller system firmware.</li> <li>4. Replace the controller.</li> </ol>

**Note 1**

If a problem always occurs in a specific condition (for example. printer driver setting, image file), the problem may be caused by a software error. In this case, the following data and information needs to be sent back to your product specialist. Please understand that it may take some time to get a reply on how to solve the problem, because in some cases the design staff in Japan must analyze the data.

- Symptom / Possible Causes / Action taken
- Summary sheet (SP mode "Printer SP", SP1-004 [Print Summary])
- SMC - All (SP5-990-001)
- SMC - Logging (SP5-990-004)
- Printer driver settings used when the problem occurs
- All data displayed on the screen (SC code, error code, and program address where the problem is logged.)
- Image file which causes the problem, if possible

# APPENDIX: PROCESS CONTROL ERROR CONDITIONS

APPENDIX 5 PROCESS CONTROL ERROR CONDITIONS REVISION HISTORY

		None

## 5. APPENDIX: PROCESS CONTROL ERROR CONDITIONS

### 5.1 PROCESS CONTROL ERROR CONDITIONS

#### 5.1.1 DEVELOPER INITIALIZATION RESULT

##### SP-3-014-001 (Developer Initialization Result)

No.	Result	Description	Possible Causes/Action
1	Successfully completed	Developer initialization is successfully completed.	-
2	Forced termination	Developer initialization was forcibly terminated.	<ul style="list-style-type: none"> <li>▪ A cover was opened or the main switch was turned off during the initialization.</li> </ul> <ol style="list-style-type: none"> <li>1. Do the developer initialization again when done in SP mode. Reinstall the engine main firmware if the result is the same.</li> <li>2. Turn the main switch off and on when done at unit replacement.</li> </ol>
6	Vt error	Vt is more than 0.7V when Vcnt is 4.3V.	<ol style="list-style-type: none"> <li>1. Make sure that the heat seal on the development unit is not removed.</li> <li>2. Defective TD sensor</li> </ol>
7	Vcnt error 1	Vcnt is less than 4.7V when Vcnt is Vt target $\pm 0.2V$ .	<ol style="list-style-type: none"> <li>1. Defective TD sensor</li> <li>2. Vt target settings are not correct.</li> <li>3. Toner density error</li> </ol>
8	Vcnt error 2	Vt is more than 0.7V when Vcnt is 4.3V and	<ol style="list-style-type: none"> <li>1. Make sure that the heat seal on the development unit is not removed.</li> </ol>

**Process Control Error Conditions**

No.	Result	Description	Possible Causes/Action
		Vcnt is less than 4.7V when Vcnt is Vt target $\pm 0.2V$ .	2. Defective TD sensor
9	Vcnt error 3	Vcnt is less than 4.7V.	1. Make sure that the heat seal on the development unit is not removed 2. Defective TD sensor 3. Vt target settings are not correct. 4. Toner density error

**Note**

- The machine starts developer initialization after you set "1" in SP3-902-005, 006, 007, or 008. Developer initialization automatically resumes when you open and close the front door or turn the main switch off and on if an error other than Error 8 occurs.

**5.1.2 PROCESS CONTROL SELF-CHECK RESULT**

Displayed number shows results of each color sensor check.

00000000 = YYCCMMKK

**SP3-012-001 to -010 (Process Control Self-check Result)**

No.	Result	Description	Possible Causes/Action
11	Successfully completed	Process control self-check successfully completed.	Check the Vsg adjustment. See the "Vsg Adjustment Result" following this table.
41	Vt error	Vt maximum or minimum error is detected.	<ul style="list-style-type: none"> <li>▪ Defective development unit</li> </ul> Vt maximum error and an image is faint: <ol style="list-style-type: none"> <li>1. Replace the toner hopper unit.</li> </ol> Vt maximum error and an image is O.K: <ol style="list-style-type: none"> <li>1. Replace the development unit.</li> <li>2. Replace the BCU board.</li> </ol> Vt minimum error:

## Process Control Error Conditions

No.	Result	Description	Possible Causes/Action
			<ol style="list-style-type: none"> <li>1. Replace the development unit.</li> <li>2. Replace the BCU board.</li> </ol>
53	ID sensor coefficient (K5) detection error	Not enough data can be sampled.	<ul style="list-style-type: none"> <li>▪ Solid image is not sufficient density:               <ol style="list-style-type: none"> <li>1. Retry the process control.</li> <li>2. Replace the ID sensors.</li> <li>3. Replace the BCU board.</li> </ol> </li> <li>▪ Solid image is O.K.               <ol style="list-style-type: none"> <li>1. Replace the ID sensors.</li> <li>2. Replace the BCU board.</li> </ol> </li> <li>▪ ID sensor is dirty:               <ol style="list-style-type: none"> <li>1. Clean the ID sensors.</li> <li>2. Retry the process control.</li> </ol> </li> </ul>
54	ID sensor coefficient (K5) maximum/minimum error	When the K5 is more than the value of SP3-362-003 or less than the value of SP3-362-004, the error 54 is displayed.	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too high or low.</li> <li>▪ ID sensor or shutter is defective.</li> </ul> Same as 53
55	Gamma error: Maximum	Gamma is out of range. $5.0 < \text{Gamma}$	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too high.</li> <li>▪ Hardware defective.</li> </ul> Same as 53
56	Gamma error: Minimum	Gamma is out of range. $\text{Gamma} < 0.15$	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too low.</li> <li>▪ Hardware defective.</li> </ul> <ol style="list-style-type: none"> <li>1. Same as 53</li> <li>2. Replace the toner hopper unit.</li> </ol>
57	Vk error: Maximum	Vk is out of range. $150 < \text{Vk}$	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too low.</li> <li>▪ Hardware defective.</li> </ul> Same as 53
58	Vk error: Minimum	Vk is out of range. $\text{Vk} < -150$	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too high.</li> <li>▪ Background dirty</li> <li>▪ Hardware defective</li> </ul>

**Process Control Error Conditions**

No.	Result	Description	Possible Causes/Action
			Same as 53
59	Sampling data error during gamma correction	Not enough data can be sampled during the gamma correction.	<ul style="list-style-type: none"> <li>▪ ID sensor pattern density is too high or low.</li> <li>▪ Hardware defective</li> </ul> Same as 53
99	Unexpected error	Process control fails.	<ul style="list-style-type: none"> <li>▪ Power Failure</li> </ul> Check the power source.

**Vsg Adjustment Result****SP3-325-001 to -010 (Vsg Adjustment Result)**

No.	Result	Description	Possible Causes/Action
1	O.K	Vsg adjustment is correctly done.	-
2	ID sensor adjustment error	Vsg cannot be adjusted within $4.0 \pm 0.5V$ .	<ul style="list-style-type: none"> <li>▪ Dirty ID sensors (toner, dust, or foreign material)</li> <li>▪ Dirty image transfer belt</li> <li>▪ Scratched image transfer belt</li> <li>▪ Defective ID sensors</li> <li>▪ Poor connection</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Clean the ID sensors.</li> <li>2. Check the ITB cleaning unit. Clean or replace the image transfer belt.</li> <li>3. Replace the image transfer belt.</li> <li>4. Replace the ID sensors.</li> <li>5. Check the connection.</li> <li>6. Replace the BCU board.</li> </ol>
3	ID sensor output error	ID sensor output is more than	<ul style="list-style-type: none"> <li>▪ Defective ID sensors</li> <li>▪ Poor connection</li> </ul>

## Process Control Error Conditions

No.	Result	Description	Possible Causes/Action
		"Voffset Threshold" (SP3-324-004)	<ul style="list-style-type: none"> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the ID sensors.</li> <li>2. Check the connection.</li> <li>3. Replace the BCU board.</li> </ol>
9	Vsg Adjustment error	Vsg adjustment has not been completed.	<ul style="list-style-type: none"> <li>▪ Other cases</li> </ul> Retry SP3-321-010.

## 5.1.3 LINE POSITION ADJUSTMENT RESULT

SP2-194-010 to -012 (Line Position Adjustment Result: M, C, Y)

This SP shows the number as a line position adjustment result on the LCD. It shows which color has an error (M, Y or C).

No.	Result	Description	Note
0	Not done	Line position adjustment has not been done.	-
1	Completed successfully	Line position adjustment has correctly been done,	-
2	Cannot detect patterns	ID sensors have not detected the patterns for line position adjustment.	See Note
3	Fewer lines on the pattern than the target	The patterns, which ID sensors have detected, are not enough for line position adjustment.	See Note
4	More lines on the pattern than the target	Not used in this machine.	-
5-9	Not used	-	-

 Note

- For details, see the "Troubleshooting Guide - Line Position Adjustment" section.

# APPENDIX: TROUBLESHOOTING GUIDE

APPENDIX 6 TROUBLESHOOTING GUIDE REVISION HISTORY		
Page	Date	Added/Updated/New
		None

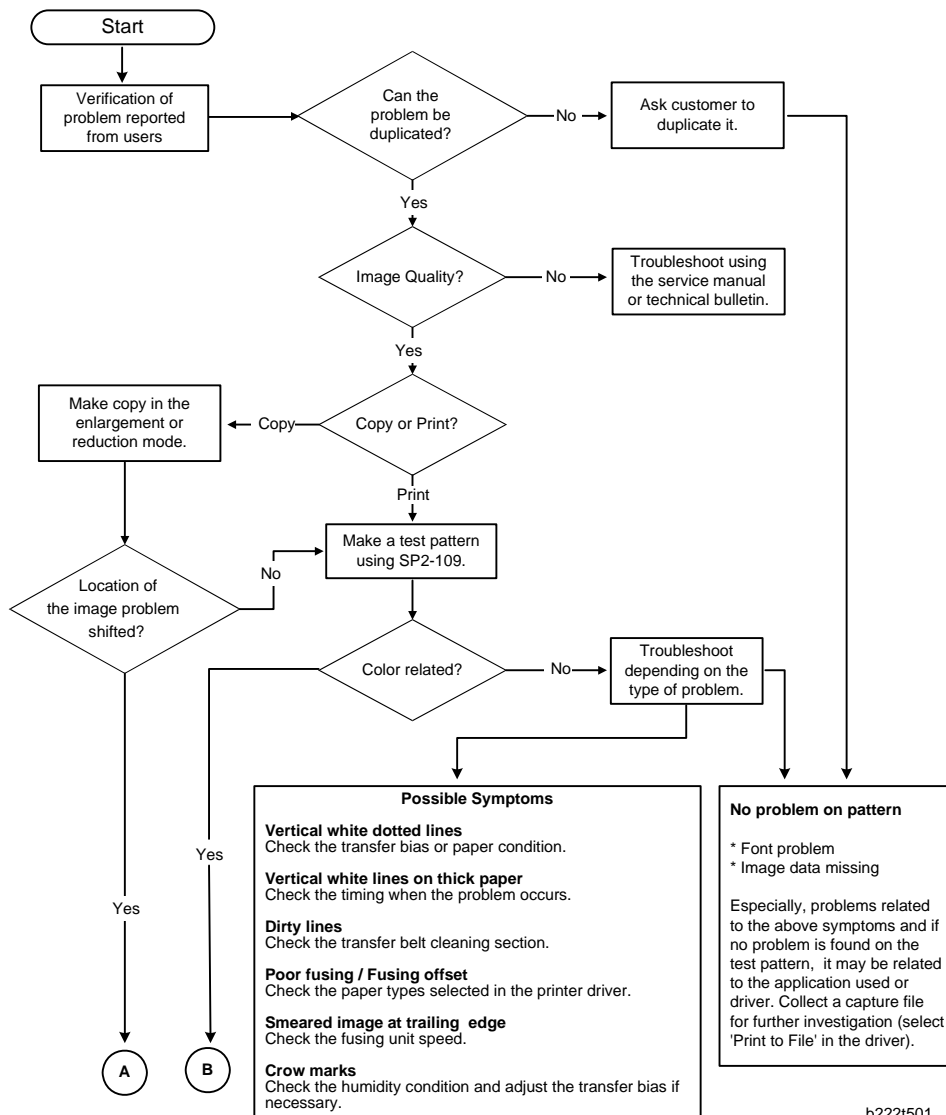

## 6. APPENDIX: TROUBLESHOOTING GUIDE

### 6.1 TROUBLESHOOTING GUIDE

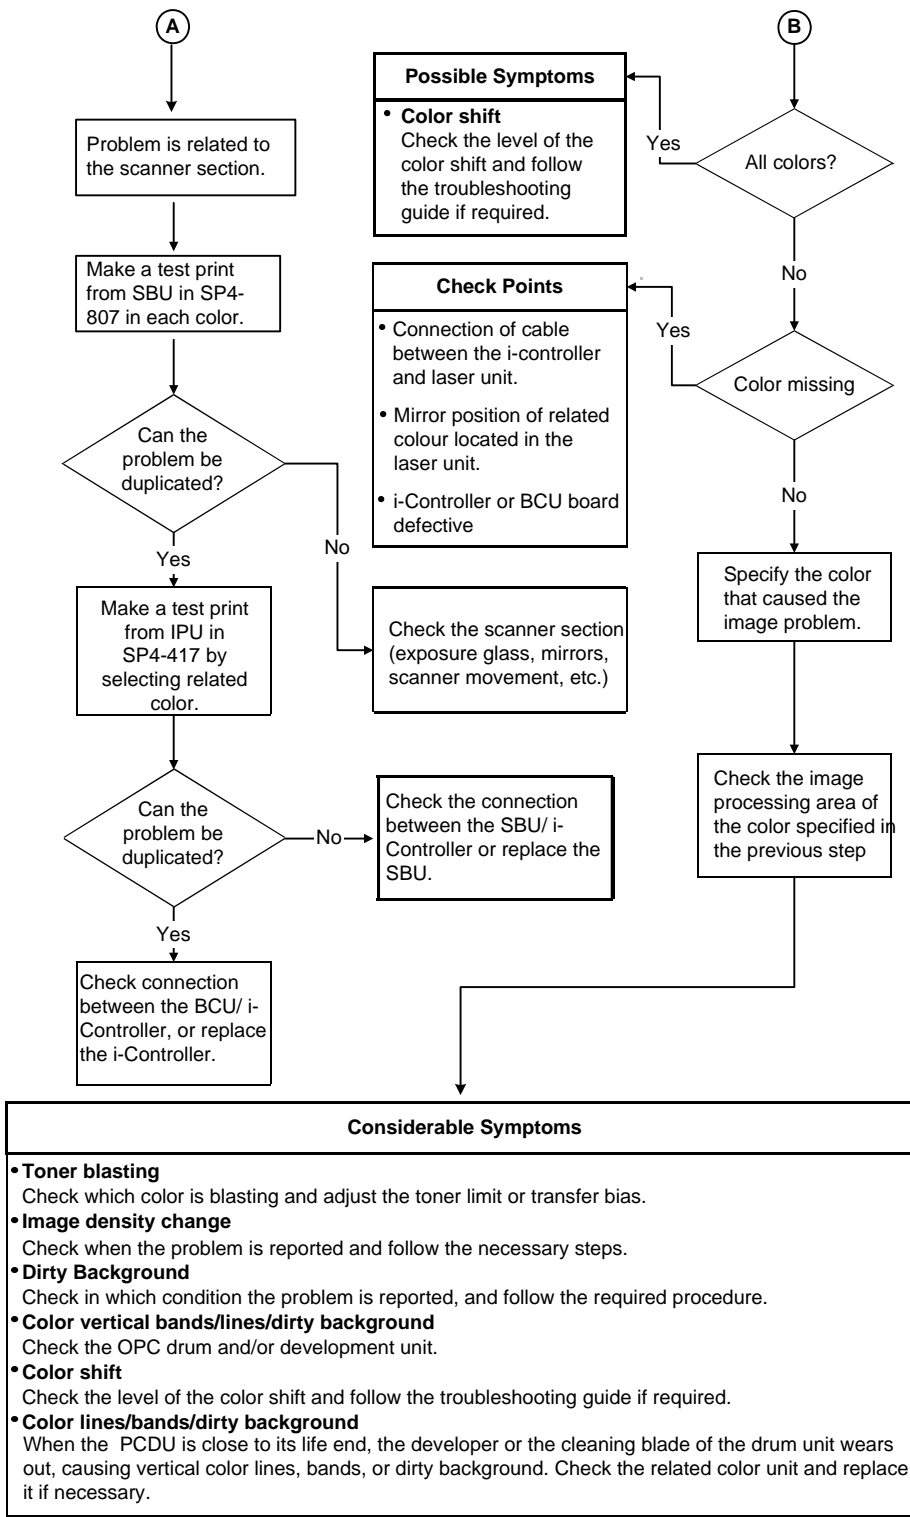

#### 6.1.1 IMAGE QUALITY

The following work-flow shows the basic troubleshooting steps for the image quality problems on this product.

Appendix:  
Trouble-  
shooting  
Guide

**Troubleshooting Guide**

Considerable Symptoms
<ul style="list-style-type: none"> <li>• <b>Toner blasting</b> Check which color is blasting and adjust the toner limit or transfer bias.</li> <li>• <b>Image density change</b> Check when the problem is reported and follow the necessary steps.</li> <li>• <b>Dirty Background</b> Check in which condition the problem is reported, and follow the required procedure.</li> <li>• <b>Color vertical bands/lines/dirty background</b> Check the OPC drum and/or development unit.</li> <li>• <b>Color shift</b> Check the level of the color shift and follow the troubleshooting guide if required.</li> <li>• <b>Color lines/bands/dirty background</b> When the PCDU is close to its life end, the developer or the cleaning blade of the drum unit wears out, causing vertical color lines, bands, or dirty background. Check the related color unit and replace it if necessary.</li> </ul>

d037t502

## 6.1.2 LINE POSITION ADJUSTMENT

When there are color registration errors on the output, do the line position adjustment as follows.

**Note**

- Use A3/DLT size paper for this adjustment.

### Test

- Do SP2-111-003 (Mode c: rough adjustment).
- Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.
- Do SP2-111-001 (Mode a: fine adjustment twice).
- Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.
- Put some A3/DLT paper on the by-pass tray.

**Note**

- When you print a test pattern, use the by-pass tray to feed the paper.
- Print out test pattern "7" with SP2-109-003.
  - Check the printed output with a loupe.
  - If there are no color registration errors on the output, the line position adjustment is correctly done. If not, refer to the countermeasure list for color registration errors.

### Countermeasure list for color registration errors

After Executing SP2-111-003

- Result: "1" in SP2-194-007
- Result: "2" or "3" (Line pattern detection failure) in SP2-194-010, -011, -012

Test pattern check	Possible cause/Countermeasure
White image, Abnormal image, Low density	<ul style="list-style-type: none"> <li>Defective image processing unit</li> <li>Low density of test pattern</li> <li>Defective i-controller</li> </ul> <ol style="list-style-type: none"> <li>Replace the high voltage power supply unit.</li> <li>Do the forced process control (SP3-011-001) or supply some toner (SP3-015-xxx).</li> </ol>

**Troubleshooting Guide**

Test pattern check	Possible cause/Countermeasure
	3. Replace the BCU.
Normal image, but with color registration errors	<ul style="list-style-type: none"> <li>▪ Defective ID sensors</li> <li>▪ Defective BCU</li> </ul> 1. Replace the ID sensor. 2. Replace the BCU.

After Executing SP2-111-003

- Result: "1" in SP2-194-007
- One of results: "5" (Out of adjustable range) in SP2-194-010, -011, -012.

Test pattern check	Possible cause/Countermeasure
The main scan registrations of M, C, Y are shifted by more than $\pm 15$ mm from the main scan registration of K.	<ul style="list-style-type: none"> <li>▪ Defective laser unit</li> <li>▪ Defective BCU</li> </ul> 1. Replace the laser unit. 2. Replace the BCU.
The sub scan registrations of M, C, Y are shifted by more than $\pm 20$ mm from the sub scan registration of K.	<ul style="list-style-type: none"> <li>▪ Defective image transfer belt</li> <li>▪ Defective drive units</li> <li>▪ Defective BCU</li> </ul> 1. Replace the image transfer belt. 2. Replace the drum motor. 3. Replace the BCU.
The main scan registration is shifted by more than $\pm 0.66$ mm, but only at the central area of the image on the output.	<ul style="list-style-type: none"> <li>▪ Defective ID sensor at center</li> <li>▪ Deformed center area on the image transfer belt</li> <li>▪ Defective BCU</li> </ul> 1. Replace the ID sensor. 2. Replace the image transfer belt. 3. Replace the BCU.
The skew for M, C, Y is more than $\pm 0.75$ mm from the main scan registration of K	<ul style="list-style-type: none"> <li>▪ Defective PCU</li> <li>▪ Defective laser unit</li> <li>▪ Defective BCU</li> </ul> 1. Reinstall or replace the BCU.

## Troubleshooting Guide

Test pattern check	Possible cause/Countermeasure
	<ol style="list-style-type: none"> <li>2. Replace the laser unit.</li> <li>3. Replace the BCU.</li> </ol>
Others	<ul style="list-style-type: none"> <li>▪ Skew correction upper limit error</li> <li>▪ Defective BCU</li> <li>▪ Defective laser unit</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the BCU.</li> <li>2. Replace the laser unit.</li> </ol>

After Executing SP2-111-003

- Result: "1" in SP2-194-007
- Result: "0" in SP2-194-010, -011, -012.

Test pattern check	Possible cause/Countermeasure
	Do SP2-111-001 or -002.

After Executing SP2-111-001

- Result: "1" in SP2-194-007
- Result: "2" or "3" (Line pattern detection failure) in SP2-194-010, -011, -012

Test pattern check	Possible cause/Countermeasure
White image, Abnormal image, Low density	<ul style="list-style-type: none"> <li>▪ Defective image processing unit</li> <li>▪ Low density of test pattern</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the high voltage power supply unit.</li> <li>2. Do the forced process control (SP3-011-001) or supply some toner (SP3-015-xxx).</li> <li>3. Replace the BCU.</li> </ol>
Normal image, but with color registration errors	<ul style="list-style-type: none"> <li>▪ Defective ID sensor</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the ID sensor.</li> <li>2. Replace the BCU.</li> </ol>

## Troubleshooting Guide

After Executing SP2-111-001

- Result: "1" in SP2-194-007
- Result: "5" (Out of adjustable range) in SP2-194-010, -011, -012

Test pattern check	Possible cause/Countermeasure
Low image density on the output	<ul style="list-style-type: none"> <li>▪ Low pattern density</li> </ul> Do the forced process control (SP3-011-001) or supply some toner (SP3-015-xxx).
The main scan registrations of M, C, Y are shifted by more than $\pm 1.4$ mm from the main scan registration of K.	<ul style="list-style-type: none"> <li>▪ No defective component</li> <li>▪ Defective laser optics housing unit</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Do SP2-111-003 again.</li> <li>2. Replace the laser unit.</li> <li>3. Replace the BCU.</li> </ol>
The sub scan registrations of M, C, Y are shifted by more than $\pm 1.4$ mm from the sub scan registration of K.	<ul style="list-style-type: none"> <li>▪ No defective component</li> <li>▪ Defective image transfer belt</li> <li>▪ Defective drive units</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Do SP2-111-003 again.</li> <li>2. Replace the image transfer belt.</li> <li>3. Replace the drum motor.</li> <li>4. Replace the BCU.</li> </ol>
The main scan registration is shifted by more than $\pm 0.66$ mm, but only at the central area of the image on the output.	<ul style="list-style-type: none"> <li>▪ Defective ID sensor at center</li> <li>▪ Deformed center area on the image transfer belt</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the ID sensor.</li> <li>2. Replace the image transfer belt.</li> <li>3. Replace the BCU.</li> </ol>
The skew for M, C, Y is more than $\pm 0.75$ mm from the main scan registration of K. – at the end of the scan line?	<ul style="list-style-type: none"> <li>▪ Defective PCDU</li> <li>▪ Defective laser unit</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Reinstall or replace the PCDU.</li> </ol>

## Troubleshooting Guide

Test pattern check	Possible cause/Countermeasure
	<ol style="list-style-type: none"> <li>2. Replace the laser unit.</li> <li>3. Replace the BCU.</li> </ol>
Others	<ul style="list-style-type: none"> <li>▪ Skew correction upper limit error</li> <li>▪ Defective BCU</li> <li>▪ Defective laser unit</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the BCU.</li> <li>2. Replace the laser unit.</li> </ol>

After Executing SP2-111-001

- Result: "0" in SP2-194-007
- Result: No color registration errors in SP2-194-010, -011, -012

Test pattern check	Possible cause/Countermeasure
The main scan registration of K is shifted.	<ul style="list-style-type: none"> <li>▪ Abnormal SP setting value of main scan: K</li> </ul> Adjust the value with SP2-101-001.
The main scan length of K is shifted.	<ul style="list-style-type: none"> <li>▪ Abnormal SP setting value of main scan length detection: K</li> </ul> Adjust the value with SP2-102-001 and -003. <b>Note:</b> The setting value of these SPs should be same.

After Executing SP2-111-001

- Result: "0" in SP2-194-007
- Result: Color registration errors in SP2-194-010, -011, -012

Test pattern check	Possible cause/Countermeasure
Low image density on the output	<ul style="list-style-type: none"> <li>▪ Low pattern density</li> </ul> Do the forced process control (SP3-011-001) or supply some toner (SP3-015-xxx).
The main scan registration is	<ul style="list-style-type: none"> <li>▪ Defective ID sensor at center</li> </ul>

**Troubleshooting Guide**

Test pattern check	Possible cause/Countermeasure
shifted, but only at the central area of the image on the output.	<ul style="list-style-type: none"> <li>▪ Deformed center area on the image transfer belt</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the ID sensor.</li> <li>2. Replace the image transfer belt.</li> <li>3. Replace the BCU.</li> </ol>
The main scan registrations of M, C, Y are shifted.	<ul style="list-style-type: none"> <li>▪ Defective laser optics housing unit</li> <li>▪ Defective ID sensor</li> <li>▪ Defective BCU</li> <li>▪ Incorrect SP value</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the laser optics housing unit.</li> <li>2. Replace the ID sensor.</li> <li>3. Replace the BCU.</li> <li>4. Adjust the value with SP2-182-004 to -021.</li> </ol>
The sub scan registrations of M, C, Y are shifted.	<ul style="list-style-type: none"> <li>▪ Defective image transfer belt</li> <li>▪ Defective drive units</li> <li>▪ Defective ID sensor</li> <li>▪ Defective BCU</li> <li>▪ Incorrect SP value</li> </ul> <ol style="list-style-type: none"> <li>1. Replace the image transfer belt.</li> <li>2. Replace the ID sensor.</li> <li>3. Replace the drum motor.</li> <li>4. Replace the BCU.</li> <li>5. Adjust the value with SP2-182-022 to -039.</li> </ol>
The skew of M, C, Y is different.	<ul style="list-style-type: none"> <li>▪ Defective PCDU</li> <li>▪ Defective laser optics housing unit</li> <li>▪ Defective BCU</li> </ul> <ol style="list-style-type: none"> <li>1. Reinstall or replace the PCDU.</li> <li>2. Replace the laser optics housing unit.</li> <li>3. Replace the BCU.</li> </ol>
The sub scan lines are shifted. Shifted lines appear cyclically.	<ul style="list-style-type: none"> <li>▪ Defective PCDU</li> <li>▪ Defective drive unit</li> <li>▪ Drum phase adjustment error</li> </ul>

## Troubleshooting Guide

Test pattern check	Possible cause/Countermeasure
	<ol style="list-style-type: none"> <li>1. Do SP1-902-001 (Drum phase adjustment); see Replacement and Adjustment – Drive Unit – Gear Unit for details.</li> <li>2. Reinstall or replace the PCDU.</li> <li>3. Check or replace the drive unit.</li> </ol>

### 6.1.3 IMAGE PROBLEMS AT REGULAR INTERVALS

If a defect occurs in the image at one of these intervals, the related component may be defective.

- Development roller: 32 mm
- PTR (Paper Transfer Roller): 75.0 mm
- Drum: 94.2 mm
- Fusing belt: 157.1 mm

## 7. APPENDIX: JAM DETECTION

### 7.1 JAM DETECTION

#### 7.1.1 PAPER JAM DISPLAY

SP7-507 shows the paper jam history.

```
CODE :011
SIZE  :05h
TOTAL:000034
DATE  :Fri Feb 15 11:44:50 2008
```

d037t503

- **CODE:** Indicates the jam code.
- **SIZE:** Indicates the paper Size Code.
- **TOTAL:** Indicates the total counter (SP7-502-001).
- **DATE:** indicates the date when the jam occurred.

#### *Paper Size Code*

Size Code	Paper Size	Size Code	Paper Size
05	A4 LEF	141	B4 SEF
06	A5 LEF	142	B5 SEF
14	B5 LEF	160	DLT SEF
38	LT LEF	164	LG SEF
44	HLT LEF	166	LT SEF
132	A3 SEF	172	HLT SEF
133	A4 SEF	255	Others
134	A5 SEF	-	-

**Jam Detection****7.1.2 JAM CODES AND DISPLAY CODES****Mainframe**

SP7-504 shows how many jams occurred at each location.

Jam Code SP	Display	Description	LCD Display
7504 1	At Power On	Paper is stack at power-on.	☛ Note
7504 3	Tray 1: ON	Paper is not fed from tray 1.	A2
7504 4	Tray 2: ON	Paper is not fed from tray 2.	A1
7504 5	Tray 3: ON	Paper is not fed from tray 3 (one-tray paper feed unit).	Y
7504 6	Tray 4: ON	Paper is not fed from tray 4.	Y
7504 8	Bypass: ON	Paper is not fed from the by-pass tray.	A2
7504 9	Duplex: ON	Paper is jammed at the duplex unit.	Z
7504 11	Vertical Transport 1: ON	Vertical transport sensor 1 does not detect paper from tray 1.	A1
7504 12	Vertical Transport 2: ON	Vertical transport sensor 2 does not detect paper from tray 2.	Y
7504 17	Registration: ON	Registration sensor does not detect paper.	A2
7504 18	Fusing Entrance: ON	Fusing entrance sensor does not detect paper.	B
7504 19	Fusing Exit: ON	Fusing exit sensor does not detect paper.	C
7504 20	Paper Exit: ON	Paper exit sensor does not detect paper.	C
7504 21	Relay Exit: ON	Tray exit sensor (bridge unit) does not detect paper.	D

## Jam Detection

Jam Code SP	Display	Description	LCD Display
7504 24	Inverter Sn: ON	Inverter sensor does not detect paper.	C
7504 25	Duplex Exit: ON	Duplex exit sensor does not detect paper.	Z
7504 27	Duplex Entrance: ON	Duplex entrance sensor does not detect paper.	Z
7504 28	1-Bin Exit Sensor	1-bin tray exit sensor does not detect paper.	C
7504 29	R-tray Paper Exit: ON	Paper exit sensor of the side tray does not detect paper.	C
7504 51	Vertical Transport Sensor1	Vertical transport sensor 1 does not turn off.	A1, A2
7504 52	Vertical Transport Sensor2	Vertical transport sensor 2 does not turn off.	Y
7504 53	Vertical Transport Sensor3	Vertical transport sensor 3 does not turn off.	Y
7504 57	Registration Sensor	Registration sensor does not turn off.	B
7504 58	Fusing Entrance Sensor	Fusing entrance sensor does not turn off.	C
7504 59	Fusing Exit Sensor	Fusing exit sensor does not turn off.	C
7504 60	Exit Sensor	Paper exit sensor does not turn off.	C
7504 64	Inverter Sensor	Inverter sensor does not turn off.	C
7504 65	Duplex Exit Sensor	Duplex exit sensor does not turn off.	Z
7504 67	Duplex Entrance Sensor	Duplex entrance sensor does not turn off.	Z
7504 68	1-Bin Exit: ON	1-bin tray exit sensor does not turn off.	R

**Jam Detection**

Jam Code SP	Display	Description	LCD Display
7504 69	R-tray Paper Exit Sensor	Paper exit sensor of the side tray does not turn off.	W
7504 230	FIN:Paper Exit Error	The machine does not get paper exit data from the internal finisher.	R1, R2
7504 231	FIN:Command Error	The machine gets a command error from the internal finisher.	R1, R2
7504 240	Fin. Entrance: ON	Entrance sensor of the internal finisher does not detect paper.	C, R1, R2
7504 241	Fin. Entrance Sensor	Entrance sensor of the internal finisher does not turn off.	R1, R2
7504 242	Feed-Out Belt Motor	The mainframe detects the lock signal from the paper transport motor of the internal finisher.	R1, R2
7504 243	Stapler Motor	The mainframe detects the lock signal from the staple motor of the internal finisher.	R1, R2
7504 244	Jogger Motor	The mainframe detects the lock signal from the front or rear jogger motor of the internal finisher.	R1, R2
7504 245	Pick-Up Roller Lift Motor	The mainframe detects the lock signal from the pick-up roller contact motor of the internal finisher.	R1, R2
7504 246	Stapler Unit Drive Motor	The mainframe detects the lock signal from the stapler unit movement motor of the punch unit.	R1, R2
7504 247	Output Tray Motor	The mainframe detects the lock signal from the feed motor of the internal finisher.	R1, R2

**Jam Detection**

Jam Code SP	Display	Description	LCD Display
7504 248	Belt Lift Solenoid	The mainframe detects the belt lift solenoid error from the internal finisher.	R1, R2
7504 249	Finisher Fan	The mainframe detects the finisher fan error from the internal finisher.	R1, R2
7504 250	Punch Motor	The mainframe detects the lock signal from the punch motor.	R1, R2
7504 251	Finisher Proof Exit	The mainframe detects the lock signal from the registration motor of the punch unit.	R1, R2
7504 252	FIN:Stapler Position Error	The stapler unit stays on the jogger end fence so that stapling is disabled.	R1, R2
7504 253	FIN:Job Data Error	Unexpected job data is sent to the internal finisher from the mainframe.	R1, R2

 Note

- The jam location display depends on where a paper jam is detected at power-on.

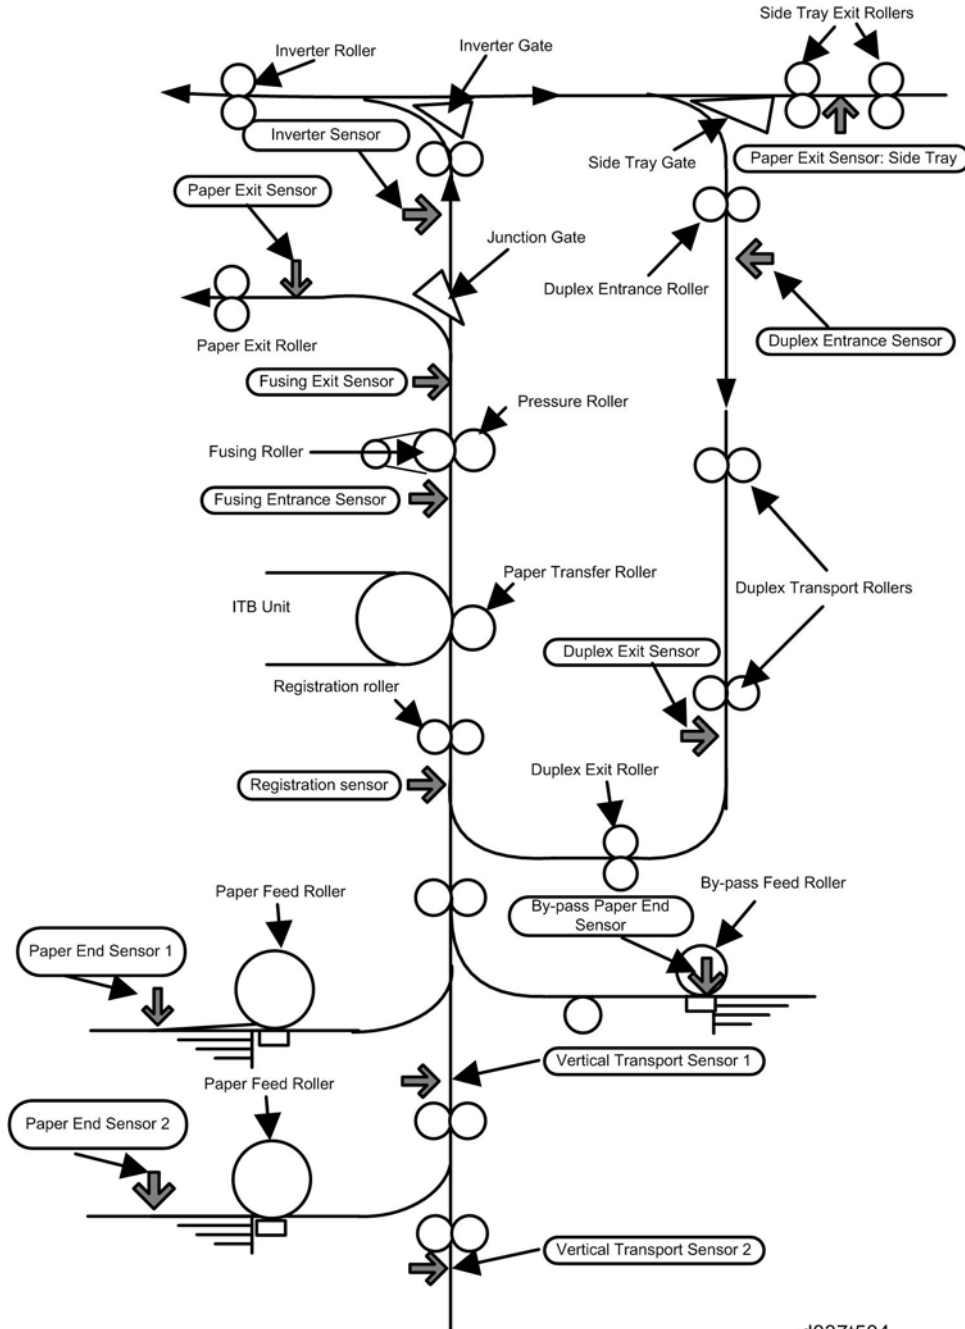

**ARDF (Original Jam)**

Jam Code SP	Display	Description	LCD Display
7505 1	At Power On	Original is stack at power-on.	P
7505 3	Skew Correction: ON	Skew correction sensor does not detect paper.	P
7505 4	Registration: ON	Registration sensor does not detect paper.	P
7505 5	Paper Exit: ON	Exit Sensor does not detect paper.	P
7505 53	Skew Correction: OFF	Skew correction sensor does not turn	P

**Jam Detection**

Jam Code SP	Display	Description	LCD Display
		off.	
7505 54	Registration: OFF	Registration sensor does not turn off.	P
7505 55	Paper Exit: OFF	Exit Sensor does not turn off.	P

## 8. APPENDIX: ELECTRICAL COMPONENT DEFECTS

### 8.1 ELECTRICAL COMPONENT DEFECTS

#### 8.1.1 SENSORS

 Note

- The CN numbers in the following table are the connector numbers on the IOB.

No.	Sensor Name/ Sensor Board Name	Active	CN	Condition	Symptom
SW4	Duplex Unit Open Switch	L	CN232/2	Open	"Open Cover" is displayed.
				Shorted	"Open cover" cannot be detected.
Sxx	ID Sensor: Front	A	CN214/8, 9	Open/ Shorted	SC258/ SC400
	ID Sensor: Center	A	CN214/6, 7	Open/ Shorted	SC258/ SC400
	ID Sensor: Rear	A	CN214/2, 3	Open/ Shorted	SC258/ SC400
Sxx	ID Sensor Shutter Sensor	H	CN232/4	Open/ Shorted	SC400
Sxx	Registration Sensor	L	CN214/11	Open	Jam A2 (Jam17)
				Shorted	Jam B (Jam57)
Sxx	Drum Phase Sensor: K	H	CN220/2	Open/ Shorted	SC380/SC396
Sxx	Drum Phase Sensor:	H	CN220/17	Open/	SC381/SC397

**Electrical Component Defects**

No.	Sensor Name/ Sensor Board Name	Active	CN	Condition	Symptom
	CMY			Shorted	
Sxx Sxx Sxx Sxx	Toner End Sensor - K Toner End Sensor - Y Toner End Sensor - C Toner End Sensor - M	L	CN234/14, 17, 20, 23	Open	Toner end cannot be detected.
				Shorted	Toner end is detected when there is enough toner.
Sxx	ITB Rotation Sensor	H/L	CN219/20	Open/ Shorted	SC443
Sxx	Vertical Transport Sensor 1	L	CN219/10	Open	Jam A1 (Jam11)
				Shorted	Jam A1, A2 (Jam51)
Sxx Sxx	Paper End Sensor 1, 2	L	CN214/17, 19	Open	Paper end is not detected when there is no paper in the paper tray.
				Shorted	Paper end is detected when there is paper in the paper tray.
Sxx	Vertical Transport Sensor 2	L	CN219/15	Open	Jam Y (Jam12)
				Shorted	Jam Y (Jam52)
SWx	Tray 1 Paper Size Switch	L	CN211/11, 12, 13, 15	Open/ Shorted	Paper size error
				Shorted	Tray 1 is detected when tray 1 is not set.
S12	By-pass Paper Size Sensor	L	CN221/9, 10, 12, 13	Open/ Shorted	Paper size error
Sxx	By-pass Paper End	L	CN221/18	Open	Paper on the by-pass

## Electrical Component Defects

No.	Sensor Name/ Sensor Board Name	Active	CN	Condition	Symptom
	Sensor				tray is not detected when paper is set.
				Shorted	Paper on the by-pass tray is detected when paper is not set.
Sxx	By-pass Paper Length Sensor	L	CN221/15	Open	Paper size error
				Shorted	
Sxx	By-pass HP Sensor	H	CN221/21	Open/ Shorted	SC508
Sx	Fusing Entrance Sensor	L	CN214/14	Open	Jam B (Jam18)
				Shorted	Jam C (Jam58)
Sx	Duplex Entrance Sensor	L	CN221/24	Open	Jam Z (Jam27)
				Shorted	Jam Z (Jam67)
Sx	Duplex Exit Sensor	L	CN221/27	Open	Jam Z (Jam25)
				Shorted	Jam Z (Jam65)
Sx	TD Sensor - K	A	CN212/B9, B11	Open/ Shorted	SC372
Sx	TD Sensor - M	A	CN212/A9, A11	Open/ Shorted	SC373

S3	Paper Exit Sensor	L	CN227/21	Open	Jam C (Jam20)
				Shorted	Jam C (Jam60)
Sxx	Original Length Sensor 1	A	CN206/2	Open/ Shorted	Original paper size cannot be detected.
Sxx	Original Length Sensor 2	A	CN206/5	Open/ Shorted	Original paper size cannot be detected.
Sxx	Scanner HP Sensor	H	CN205/2	Open	SC120
				Shorted	SC121
Sxx	Platen Cover Sensor	L	CN205/5	Open/ Shorted	Platen cover open cannot be detected.
Sxx	ITB Contact Sensor	L	CN234/5	Open/ Shorted	SC442
Sx	Inverter Sensor	L	CN227/15	Open	(Jam 24)
				Shorted	Jam C (Jam64)
SWx	Right Lower Door Open Switch	L	CN219/13	Open	"Open Cover" is displayed.

**Electrical Component Defects**

No.	Sensor Name/ Sensor Board Name	Active	CN	Condition	Symptom
				Shorted	"Open cover" cannot be detected.

**8.1.2 BLOWN FUSE CONDITIONS*****Power Supply Unit***

Fuse	Rating		Symptom when turning on the main switch
	115V	220V - 240V	
FU101	15A/125V	8A/250V	The i-controller works, but SC547 is issued. (5V power to the fusing unit is not supplied.)
FU102	10A/125V	5A/250V	No response. (5V power to the PSU is not supplied.)
FU103	2A/250V	2A/250V	5V power to the scanner heater and tray heater is not supplied.
FU4	5A/250V	5A/250V	5V power to the i-controller and BCU is not supplied.
FU5	5A/250V	5A/250V	5V power to the BCU is not supplied.
FU6	5A/250V	5A/125V	5VS power to the i-controller is not supplied.
FU7	10A/125V	10A/125V	24VS power to the BCU is not supplied.
FU8	10A/125V	10A/125V	24VS power to the BCU is not supplied.
FU9	6.3A/125V	6.3A/125V	24V power to the DRB and i-controller is not supplied.

** CAUTION**

- For continued protection against risk of fire, replace only with same type and rating of fuse.

<b>1106</b>	<b>[Fusing Temperature Display]</b> Fusing Temperature Display (Heating or Pressure)		
	Displays the current temperature of the heating and pressure rollers.		
001	Fusing Roller: Center	-	[-20 to 250 / 0 / 1 deg/step]
002	Fusing Roller: Ends	-	[-10 to 250 / 0 / 1 deg/step]
	The heating roller has two lamps. One heats the center of the heating roller and the other heats both ends of the heating roller.		
003	Pressure Roller: Center	-	[-10 to 250 / 0 / 1 deg/step]
004	Pressure Roller:Ends	-	[-10 to 250 / 0 / 1 deg/step]

## System Service Mode

	The pressure roller has one lamp.		
--	-----------------------------------	--	--

1108	<b>[Ready Temp Setting]</b>		
	Japan use only		
007	Ready Temp Time	*ENG	[22 to 60 / <b>22</b> / 0.1 sec/step]

1109	<b>[Fusing Nip Band Check]</b>		
001	Execute	-	[0 or 1 / <b>0</b> / 1] Executes the nip band measurement between fusing belt and pressure roller. If the nip band width is not 8 mm, and fusing is not good, replace the pressure roller or install a new fusing unit.
002	Pre-Idling Time	*ENG	[0 to 120 / <b>0</b> / 1 sec/step]
	Specifies the fusing rotation time before executing SP1109-001.		
003	Stop Time	* ENG	[5 to 30 / <b>20</b> / 1 sec/step]
	Specifies the time for measuring the nip.		

1112	<b>[Environmental Correct: Fusing]</b>		
001	Temp.: Threshold: Low	*ENG	[10 to 23 / <b>17</b> / 1 deg/step]
	Specifies the threshold temperature for low temperature condition.		
002	Temp.: Threshold: High	*ENG	[24 to 40 / <b>30</b> / 1 deg/step]
	Specifies the threshold temperature for high temperature condition.		
003	Low Temp. Correction	*ENG	[0 to 15 / <b>5</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller. When the low temperature condition (specified with SP1112-001) is detected, the value of this SP is added to the heating roller temperature.		

**System Service Mode**

004	High Temp. Correction	*ENG	[0 to 15 / <b>5</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller. When the high temperature condition (specified with SP1112-002) is detected, the value of this SP is subtracted from the heating roller temperature.		
005	Offset Temp:Low	*ENG	[0 to 15 / <b>6.5</b> / 0.1 deg/step]
006	Offset Temp:High	*ENG	[0 to 15 / <b>5</b> / 0.1 deg/step]

<b>1113</b>	<b>[Stand-by Mode Setting]</b>		
001	Wait Time AF Ready	*ENG	[0 to 60 / <b>20</b> / 1 sec/step]
003	Wait Time AF Recovery	*ENG	[0 to 60 / <b>10</b> / 1 sec/step]
	Specifies the time for keeping the target temperature after recovery (SP1105-083) without any jobs.		
004	Wait Time AF Job	*ENG	[0 to 60 / <b>10</b> / 1 sec/step]
005	P-Roll Thresh AF Ready	*ENG	[0 to 160 / <b>100</b> / 1 deg/step]
006	P-Roll Thresh AF Job	*ENG	
008	ON/OFF Time SW Timer	*ENG	[0 to 999 / <b>300</b> / 1 sec/step]

<b>1115</b>	<b>[Stand-by Idling]</b>		
001	Interval	*ENG	[0 to 240 / <b>60</b> / 1 min/step]
	Specifies the interval between idling during stand-by mode. This idling during the stand-by mode prevents the roller deformation.		
002	Idling Time	*ENG	[0 to 60 / <b>2</b> / 0.1 sec/step]
	Specifies the length of each idling operation during stand-by mode.		
003	Idling Speed	*ENG	[0 to 1 / <b>0</b> / 1 mm/sec/step]

<b>1116</b>	<b>[Fusing Temp Change]</b>		
-------------	-----------------------------	--	--

## System Service Mode

010	Center Temp. 1: 226–	ENG	[-10 / 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (center) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-018.		
011	Ends Temp. 1: 226–	ENG	[-10 to 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (ends) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-018.		
012	Center Temp. 2: 226–	ENG	[-10 to 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (center) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-019.		
013	Ends Temp. 2: 226–	ENG	[-10 to 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (ends) when the paper width is 226 mm or more. The start time of this SP can be adjusted with SP1116-019.		
014	Center Temp. 3: –226	ENG	[-10 to 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (center) when the paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-020.		
015	Ends Temp. 3: –226	ENG	[-10 to 10 / <b>-5</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (ends) when the paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-020.		
016	Center Temp. 4: –226	ENG	[-10 to 10 / <b>0</b> / 1 deg/step]
	Specifies the temperature correction for the heating roller (center) when the paper width is less than 226 mm. The start time of this SP can be adjusted with SP1116-021.

<b>2193</b>	<b>[MUSIC Condition]</b> Line Position Adjustment: Condition Setting		
001	Auto Execution	*ENG	[0 or 1 / <b>1</b> / 1 ] 0: OFF, 1: ON
	Enables/disables the automatic line position adjustment		
002	Page: Job End: BW+FC	*ENG	[0 to 999 / <b>500</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for BW and color printing mode after job end.		
003	Page: Job End: FC	*ENG	[0 to 999 / <b>200</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for color printing mode after job end.		
004	Page: Interrupt: BW+FC	*ENG	[0 to 999 / <b>200</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for BW and color printing mode during job.		
005	Page: Interrupt: FC	*ENG	[0 to 999 / <b>200</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for color printing mode during jobs.		
006	Page: Standby: BW + FC	*ENG	[0 to 999 / <b>100</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for BW printing mode in stand-by mode. The line position adjustment is done when the number of outputs in BW printing mode reaches the value specified with this SP and the condition of SP2-193-008 or SP2-193-009 is satisfied.		

**System Service Mode**

007	Page: Standby: FC	*ENG	[0 to 999 / <b>100</b> / 1 page/step]
	Adjusts the threshold of the line position adjustment for BW printing mode in stand-by mode. The line position adjustment is done when the number of outputs in color printing mode reaches the value specified with this SP and the condition of SP2-193-008 or SP2-193-009 is satisfied.		
008	Temp Change	*ENG	[0 to 100 / <b>5</b> / 1deg/step]
	Adjust the temperature change threshold for the line position adjustment (Mode b: adjustment once). The timing for line position adjustment depends on the combinations of several conditions. Section Descriptions" section.		
009	Elapse Time	*ENG	[1 to 1440 / <b>300</b> / 1 minute/step]
	Adjust the time threshold for the line position adjustment (Mode b: adjustment once). The timing for line position adjustment depends on the combinations of several conditions.		
011	Temp Change 2	*ENG	[0 to 100 / <b>10</b> / 1deg/step]
	Adjust the temperature change threshold for the line position adjustment (Mode a: adjustment twice). The timing for line position adjustment depends on the combinations of several conditions.		
012	Elapse Time 2	*ENG	[1 to 9999 / <b>600</b> / 1 minute/step]
	Adjust the time threshold for the line position adjustment (Mode a: adjustment twice). The timing for line position adjustment depends on the combinations of several conditions.		
016	Page: Power ON:BW+FC	*ENG	[0 to 999 / <b>200</b> / 1 page/step]

013	Lower Counter: Y	*ENG	

3021	[TD Sensor Initial Set] Developer Initialization Setting		
	Specifies the developer agitation time for each color at the developer initialization. <b>DFU</b>		
001	Agitation Time: Bk	*ENG	[0 to 200 / <b>30</b> / 1 sec/step]
002	Agitation Time: C	*ENG	
003	Agitation Time: M	*ENG	
004	Agitation Time: Y	*ENG	
005-008	Sets the execution flag of the developer initialization for each color. <b>DFU</b>		
005	Execution Flag: Bk	*ENG	[0 or 1 / <b>0</b> / 1/step]

**System Service Mode**

006	Execution Flag: C	*ENG	0: Flag OFF, 1: Flag ON
007	Execution Flag: M	*ENG	This flag is cleared after executing TD sensor initialization.
008	Execution Flag: Y	*ENG	
009	Initial Setting Off	*ENG	

<b>3022</b>	<b>[Toner Replenishment Mode] DFU</b>		
	Specifies the toner supply time for each color in the toner supply mode.		
005	Execution Flag: Bk	*ENG	[0 or 1 / <b>0</b> / 1/step] 0: Flag OFF, 1: Flag ON This flag is cleared after executing TD sensor initialization.
006	Execution Flag: C	*ENG	
007	Execution Flag: M	*ENG	
008	Execution Flag: Y	*ENG	

<b>3041</b>	<b>[Process Control Type]</b>		
001	Voltage Control	*ENG	[0 or 1 / <b>1</b> / 1/step ] Alphanumeric 0: FIXED (Use the fixed values for the charge DC bias and development DC bias set with SP2-005 and SP2-229.) 1: CONTROL
	Enables or disables potential control.		
002	LD Power Control	*ENG	[0 or 1 / <b>1</b> / 1/step] Alphanumeric 0: FIXED (at the value in SP2221-xxx) 1: CONTROL (adjusted by process control)
	Selects the LD power control mode.		
004	Pre-ACC Process	*ENG	[0 to 2 / <b>2</b> / 1/step]

**System Service Mode**

	Control		0: Not Executed 1: Process Control 2: TC Control
	Selects the process control mode that is done before ACC.		
005	P-Pattern Selection	*ENG	[0 to 2 / 2 / 1/step] 0: FIXED 1: INITIALIZED 2: CALCULATED

<b>3043</b>	<b>[TD Adjustment Mode]</b>		
	Repeat Number: Power ON	*ENG	[0 to 9 / 4 / 1 time/step]
001	Specifies the maximum number of repeats of the toner density adjustment at power on. 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled		
	Repeat Number: Initial	*ENG	[0 to 9 / 3 / 1 time/step]
002	Specifies the maximum number of repeats of the toner density adjustment at the developer initialization. 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled		
	Repeat Number: Non-use	*ENG	[0 to 9 / 0 / 1 time/step]
003	Specifies the maximum number of repeats of the toner density adjustment in stand by mode. 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode)		

Appendix:  
SP Mode  
Tables

## System Service Mode

	5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled		
004	Repeat Number: ACC	*ENG	[0 to 9 / 3 / 1 time/step]
	Specifies the maximum number of repeats of the toner density adjustment at ACC. 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled		
005	Repeat Number: Recovery	*ENG	[0 to 9 / 3 / 1 time/step]
	Not used		
006	Repeat Number: Job End	*ENG	[0 to 9 / 4 / 1 time/step]
	Specifies the maximum number of repeats of the toner density adjustment at job end. 0: Disabled, 1 to 3: Repeat number, 4: Repeat three times (No consumption mode) 5: Repeat three times (Toner is supplied only when the toner density is too low, and toner is consumed only when the toner density is too dark.) 6 to 9: Disabled		
007	Repeat: Interrupt	*ENG	[0 to 9 / 0 / 1 time/step]
	Specifies the maximum number of repeats of the toner density adjustment during printing. <b>DFU</b>		
008	Toner Supply Coeff.	*ENG	[0 to 25.5 / 10 / 0.1 sec/step]
	Adjusts the time for the toner supply mode when a toner density is detected to be low.		
009	C-pattern: Bk	*ENG	[0 to 255 / 5 / 1 time/step]
	Specifies the belt mark generating time for checking the black toner density		

## System Service Mode

	when toner density is detected to be low at the toner density adjustment.		
010	C-pattern: C	*ENG	[0 to 255 / 5 / 1 time/step]
	Specifies the belt mark generating time for checking the magenta toner density when toner density is detected to be low at the toner density adjustment.		
011	C-pattern: M	*ENG	[0 to 255 / 5 / 1 time/step]
	Specifies the belt mark generating time for checking the cyan toner density when toner density is detected to be low at the toner density adjustment.		
012	C-pattern: Y	*ENG	[0 to 255 / 5 / 1 time/step]
	Specifies the belt mark generating time for checking the yellow toner density when toner density is detected to be low at the toner density adjustment.		
013	T1 Bias: Bk	*ENG	[0 to 80 / 10 / 1 $\mu$ A/step]
	Adjusts the image transfer belt bias for Black.		
014	T2 Bias: C	*ENG	[0 to 80 / 10 / 1 $\mu$ A/step]
	Adjusts the image transfer belt bias for Cyan.		
015	T3 Bias: M	*ENG	[0 to 80 / 10 / 1 $\mu$ A/step]
	Adjusts the image transfer belt bias for Magenta.		
016	T4 Bias: Y	*ENG	[0 to 80 / 10 / 1 $\mu$ A/step]
	Adjusts the image transfer belt bias for Yellow.		
017	Developer Agitation Time	*ENG	[0 to 250 / 10 / 1 sec/step]
	Specifies the developer mixing time at the toner density adjustment.		
018	C-Pattern: LD: DUTY: Bk	*ENG	[0 to 15 / 15 / 1 /step]
	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-001) exceed the target values (SP3611-005) by more than the specified thresholds (SP3239-009).		

**System Service Mode**

019	C-Pattern: LD: DUTY: C	*ENG	[0 to 15 / <b>15</b> / 1 /step]
	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-002) exceed the target values (SP3611-006) by more than the specified thresholds (SP3239-009).		
020	C-Pattern: LD: DUTY: M	*ENG	[0 to 15 / <b>15</b> / 1 /step]
	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-003) exceed the target values (SP3611-007) by more than the specified thresholds (SP3239-009).		
021	C-Pattern: LD: DUTY: Y	*ENG	[0 to 15 / <b>15</b> / 1 /step]
	Adjusts the LD duty for the toner consumption mode at the toner density adjustment. In toner consumption mode, toner is discharged when the detected development gamma values (SP3611-004) exceed the target values (SP3611-008) by more than the specified thresholds (SP3239-009).		

<b>3044</b>	<b>[Toner Supply Type]</b> Toner Supply Type ([Color])		
	Selects the toner supply method type.		
001	Bk	*ENG	[0 to 4 / <b>4</b> / 1/step] Alphanumeric
002	C	*ENG	0: FIXED (with the supply rates stored with SP 3401)
003	M	*ENG	1: PID (Vtref_Fixed)
004	Y	*ENG	2: PID (Vtref_Control)
			3: MBD (Vtref_Fixed) 4: MBD (Vtref_Control)

<b>3045</b>	<b>[Toner End Detection: Set]</b>
-------------	-----------------------------------

**System Service Mode**

	Enables/disables the toner alert display on the LCD.		
001	ON/OFF	*ENG	[0 or 1 / <b>0</b> / 1/step] 0: Detect, 1: Not Detect
002	NE Detection	*ENG	[0 or 1 / <b>0</b> / 1/step] 0: ALL 1: TE Sensor

<b>3101</b>	<b>[Toner End/Near End]</b>		
	Displays the amount of each color toner. <b>DFU</b>		
001	Toner Replenishment: Bk	*ENG	[1 to 600 / <b>235</b> / 1 g/step]
002	Toner Replenishment: C	*ENG	
003	Toner Replenishment: M	*ENG	
004	Toner Replenishment: Y	*ENG	
005-008	Displays the consumed amount of each color toner.		
005	Toner Consumption: Bk	*ENG	[0 to 3000 / <b>0</b> / 0.001 g/step]
006	Toner Consumption: C	*ENG	
007	Toner Consumption: M	*ENG	
008	Toner Consumption: Y	*ENG	
009-012	Displays the remaining amount of each color toner. These are calculated by the operating times of the toner supply motors.		
009	Toner Remaining: Bk	*ENG	[-50000 to 600 / <b>0</b> / 0.001 g/step]
010	Toner Remaining: C	*ENG	
011	Toner Remaining: M	*ENG	
012	Toner Remaining: Y	*ENG	
013-016	Adjusts the threshold of toner near end for each color. The toner near end		

## System Service Mode

	message appears on the LCD when the remaining toner amount reaches this threshold. When one of these SPs (SP3-101-009 to 012 or -032 to -035) reaches this threshold, toner near end is detected.		
013	Near End Threshold: Bk	*ENG	[0 to 600 / <b>13</b> / 1 g/step]
014	Near End Threshold: C	*ENG	[0 to 600 / <b>3</b> / 1 g/step]
015	Near End Threshold: M	*ENG	
016	Near End Threshold: Y	*ENG	
	Delta Vt Threshold	*ENG	[0 to 5 / <b>0.5</b> / 0.01 V/step]
021	This SP is the threshold for toner end. Delta Vt: Vt-Vtref When both this SP and SP3-101-026 occur at same time, toner end is determined.		
022-025	Displays the total delta Vt (Vt-Vtref) value for each color. These are calculated by pixel counting.		
022	Delta Vt Sum: Bk	*ENG	[0 to 655 / <b>0</b> / 0.01 V/step]
023	Delta Vt Sum: C	*ENG	
024	Delta Vt Sum: M	*ENG	
025	Delta Vt Sum: Y	*ENG	
026	Delta Vt Sum Threshold	*ENG	[0 to 255 / 10 / 1 V/step]
028-031	Displays the consumed toner amount calculated with the pixel count for each color.		
028	Pixel: Consumption: Bk	*ENG	[0 to 3000 / <b>0</b> / 0.001 g/step]
029	Pixel: Consumption: C	*ENG	
030	Pixel: Consumption: M	*ENG	
031	Pixel: Consumption: Y	*ENG	
032-035	Displays the remaining toner amount for each color, using pixel count.		

**System Service Mode**

032	Pixel: Remaining : Bk	*ENG	[-50000 to 600 / <b>0</b> / 0.001 g/step]
033	Pixel: Remaining : C	*ENG	
034	Pixel: Remaining : M	*ENG	
035	Pixel: Remaining : Y	*ENG	
040-043	Displays the pixel M/A for each color.		
040	Pixel M/A: Bk	*ENG	[0 to 1 / <b>0.05</b> / 0.001 mg/cm <sup>2</sup> /step]
041	Pixel M/A: C	*ENG	
042	Pixel M/A: M	*ENG	
043	Pixel M/A: Y	*ENG	[0 to 1 / <b>0.6</b> / 0.001 mg/cm <sup>2</sup> /step]
044	Delta Vt Threshold BF NE	*ENG	Adjusts the delta Vt (Vt – Vtref) of toner end before toner near end is detected. [0 to 5 / <b>0.5</b> / 0.01 V/step]
045	Delta Vt Sum Threshold BF NE	*ENG	Adjusts the total delta Vt (Vt – Vtref) of toner end before toner near end is detected. [0 to 255 / <b>10</b> / 1 V/step]
046-049	Displays the latest mohno off time.		
046	Bottle Motor Off Time: Bk	*ENG	[0 to 0 x FFFFFFFF / <b>0</b> / 1 sec/step]
047	Bottle Motor Off Time: C	*ENG	
048	Bottle Motor Off Time: M	*ENG	
049	Bottle Motor Off Time: Y	*ENG

5401	<b>[Access Control]</b>		
	When installing the SDK application, SAS (VAS) adjusts the following settings. <b>DFU</b>		
103	Default Document ACL	*CTL	Whenever a new login user is added to the address book in external certification mode (for Windows, LDAP, RDH), the

**System Service Mode**

			default document ACL is updated according to this SP setting. [0 to 3 / 0 / 1] 0: View 1: Edit 2: Edit/Delete 3: Full control Note: This SP setting is ignored on a machine that is not using document server.
162	Extend Certification Detail		-
200	SDK1 Unique ID	*CTL	"SDK" is the "Software Development Kit". This data can be converted from SAS (VAS) when installed or uninstalled. <b>(DFU)</b>
201	SDK1 Certification Method	*CTL	
210	SDK2 Unique ID	*CTL	
211	SDK2 Certification Method	*CTL	
220	SDK3 Unique ID	*CTL	
221	SDK3 Certification Method	*CTL	
230	SDK certification device	*CTL	
240	Detail Option	*CTL	

<b>5404</b>	<b>[User Code Counter Clear]</b>		
001	UCodeCtrClr	*CTL	Clears all counters for users.

<b>5411</b>	<b>[LDAP Certification]</b>		
-------------	-----------------------------	--	--

Appendix:  
SP Mode  
Tables

**System Service Mode**

004	Easy Certification	*CTL	Determines whether easy LDAP certification is done. [0 to 1/1/1] 1: On, 0: Off
005	Password Null Not Permit	*CTL	This SP is referenced only when SP5411-4 is set to "1" (On). [0 to 1/0/1] 0: Password NULL not permitted. 1: Password NULL permitted.

<b>5413</b>	<b>[Lockout Setting]</b>		
001	Lockout On/Off	*CTL	Switches on/off the lock on the local address book account. [0 to 1 / 0 / 1] 0: Off, 1: On
002	Lockout Threshold	*CTL	Sets a limit on the frequency of lockouts for account lockouts. [1 to 10 / 5 / 1]
003	Cancellation On/Off	*CTL	Determines whether the system waits the prescribed time for input of a correct user ID and password after an account lockout has occurred. [0 to 1 / 0 / 1] 0: Off (no wait time, lockout not cancelled) 1: On (system waits, cancels lockout if correct user ID and password are entered.
004	Cancellation Time	*CTL	Determines the length of time that the system waits for correct input of the user ID and password after a lockout has occurred. This setting is used only if SP5413-3 is set to "1" (on).

## System Service Mode

			[1 to 999 / <b>60</b> / 1 min.]
005	Counter Clear Time		<b>Not Used</b>

<b>5414</b>	<b>[Access Mitigation]</b>		
001	Mitigation On/Off	*CTL	Switches on/off masking of continuously used IDs and passwords that are identical. [0 to 1 / <b>0</b> / 1] 0: Off 1: On
002	Mitigation Time	*CTL	Sets the length of time for excluding continuous access for identical user IDs and passwords. [0 to 60 / <b>15</b> / 1 min.]

<b>5415</b>	<b>[Password Attack]</b>		
001	Permissible Number	*CTL	Sets the number of attempts to attack the system with random passwords to gain illegal access to the system. [0 to 100 / <b>30</b> / 1 attempt]
002	Detect Time	*CTL	Sets the time limit to stop a password attack once such an attack has been detected. [1 to 10 / <b>5</b> / 1 sec.]

<b>5416</b>	<b>[Access Information]</b>		
001	Access User Max Number	*CTL	Limits the number of users used by the access exclusion and password attack detection functions. [50 to 200 / <b>200</b> / 1 users]

## System Service Mode

Rev. 04/16/2009

002	Access Password Max Number	*CTL	Limits the number of passwords used by the access exclusion and password attack detection functions. [50 to 200 / <b>200</b> / 1 passwords]
003	Monitor Interval	*CTL	Sets the processing time interval for referencing user ID and password information. [1 to 10 / <b>3</b> / 1 sec.]

<b>5417</b>	<b>[Access Attack]</b>		
001	Access Permissible Number	*CTL	Sets a limit on access attempts when an excessive number of attempts are detected for MFP features. [0 to 500 / <b>100</b> / 1]
002	Attack Detect Time	*CTL	Sets the length of time for monitoring the frequency of access to MFP features. [10 to 30 / <b>10</b> / 1 sec.]
003	Productivity Fall Wait	*CTL	Sets the wait time to slow down the speed of certification when an excessive number of access attempts have been detected. [0 to 9 / <b>3</b> / 1 sec.]
004	Attack Max Number	*CTL	Sets a limit on the number of requests received for certification in order to slow down the certification speed when an excessive number of access attempts have been detected. [50 to 200 / <b>200</b> / 1 attempt]

<b>5420</b>	<b>[User Authentication]</b>
	These settings should be done with the System Administrator. <b>Note:</b> These functions are enabled only after the user access feature has

## System Service Mode

	been enabled.		
001	Copy	*CTL	Determines whether certification is required before a user can use the copy applications. [0 to 1 / 0 / 1] 0: On, 1: Off
⇒ 002	Color Security Setting <b>NOTE 1:</b> Enabling the SP Mode (Value = 1) for Bit 4 disables the login dialog for that color.	*CTL	Bit 0: Black & White Mode 1: Enable, 0: Disable (0) Bit 3: Full Color Mode 1: Enable, 0: Disable (0) Bit 4: Auto Color Select Mode 1: Enable, 0: Disable(0)
011	Document Server	*CTL	Determines whether certification is required before a user can use the document server. [0 to 1 / 0 / 1] 0: On, 1: Off
021	Fax	*CTL	Determines whether certification is required before a user can use the fax application. [0 to 1 / 0 / 1] 0: On, 1: Off
031	Scanner	*CTL	Determines whether certification is required before a user can use the scan applications. [0 to 1 / 0 / 1] 0: On, 1: Off
041	Printer	*CTL	Determines whether certification is required before a user can use the printer applications. [0 to 1 / 0 / 1] 0: On, 1: Off
051	SDK1	*CTL	[0 or 1 / 0 / 1] 0: ON. 1: OFF Determines whether certification is required before a user can use the SDK application.
061	SDK2		
071	SDK3		

## System Service Mode

5481	<b>[Authentication Error Code]</b>		
	These SP codes determine how the authentication failures are displayed.		
001	System Log Disp	*CTL	Determines whether an error code appears in the system log after a user authentication failure occurs. [0 to 1 / <b>0</b> / 1] 0: Off, 1: On
002	Panel Disp	*CTL	Determines whether an error code appears on the operation panel after a user authentication failure occurs. [0 to 1 / <b>1</b> / 1] 1: On, 0: Off

5490	<b>[MF Key Card (Japan only)]</b>		
001	-	*CTL	Sets up operation of the machine with a keycard. [0 to 1 / <b>0</b> / 1] 0: Disabled. Cancels operation without a user code. 1: Enabled. Allows operation without a user code.
002	Count Mode Setting	*CTL	-

5501	<b>[PM Alarm]</b>		
001	PM Alarm Level	*CTL	Sets the PM alarm interval [0 to 9999 / <b>0</b> / 1k printouts / step] 0: No PM Alarm
002	Original Count Alarm	*CTL	-

System Service Mode

<b>5504</b>	<b>[Jam Alarm]</b>	*CTL	-
001	Sets the alarm to sound for the specified jam level (document misfeeds are not included). [0 to 3 / <b>3</b> / 1 /step] 0: Zero (Off) 1: Low (2.5K jams) 2: Medium (3K jams) 3: High (6K jams)		

	<b>[Error Alarm]</b>		
<b>5505</b>	Sets the error alarm level. The error alarm counter counts "1" when any SC is detected. However, the error alarm counter decreases by "1" when an SC is not detected during a set number of copied sheets (for example, default 1500 sheets). The error alarm occurs when the SC error alarm counter reaches "5".		
001	-	*CTL	[0 to 255 / <b>20</b> / 100 copies /step]

<b>5507</b>	<b>[Supply Alarm]</b>	*CTL	-

	<ul style="list-style-type: none"> <li>This name is customer information and is not printed in the SMC report.</li> </ul>	
066	Proxy Password	
	<p>This SP sets the HTTP proxy certification password.</p> <p> Note</p> <ul style="list-style-type: none"> <li>The length of the password is limited to 31 characters. Any character beyond the 31st character is ignored.</li> <li>This name is customer information and is not printed in the SMC report.</li> </ul>	
067	CERT: Up State	
	Displays the status of the certification update.	
	0	The certification used by Cumin is set correctly.
	1	The certification request (setAuthKey) for update has been received from the GW URL and certification is presently being updated.
	2	The certification update is completed and the GW URL is being notified of the successful update.
	3	The certification update failed, and the GW URL is being notified of the failed update.
	4	The period of the certification has expired and new request for an update is being sent to the GW URL.
	11	A rescue update for certification has been issued and a rescue certification setting is in progress for the rescue GW connection.
	12	The rescue certification setting is completed and the GW URL is being notified of the certification update request.
	13	The notification of the request for certification update has completed successfully, and the system is waiting for the certification update request from the rescue GW URL.
14	The notification of the certification request has been received from the rescue GW controller, and the certification is being stored.	

Appendix:  
SP Mode  
Tables

**System Service Mode**

	15	The certification has been stored, and the GW URL is being notified of the successful completion of this event.
	16	The storing of the certification has failed, and the GW URL is being notified of the failure of this event.
	17	The certification update request has been received from the GW URL, the GW URL was notified of the results of the update after it was completed, but a certification error has been received, and the rescue certification is being recorded.
	18	The rescue certification of No. 17 has been recorded, and the GW URL is being notified of the failure of the certification update.
068	CERT: Error	
	Displays a number code that describes the reason for the request for update of the certification.	
	0	Normal. There is no request for certification update in progress.
	1	Request for certification update in progress. The current certification has expired.
	2	An SSL error notification has been issued. Issued after the certification has expired.
	3	Notification of shift from a common authentication to an individual certification.
	4	Notification of a common certification without ID2.
	5	Notification that no certification was issued.
	6	Notification that GW URL does not exist.
069	CERT: Up ID	The ID of the request for certification.
083	Firmware Up Status	Displays the status of the firmware update.
084	Non-HDD Firm Up	This setting determines if the firmware can be updated, even without the HDD installed. 0: Not allowed update

## System Service Mode

		1: Allowed update
085	Firm Up User Check	This SP setting determines if the operator can confirm the previous version of the firmware before the firmware update execution. If the option to confirm the previous version is selected, a notification is sent to the system manager and the firmware update is done with the firmware files from the URL.
086	Firmware Size	Allows the service technician to confirm the size of the firmware data files during the firmware update execution.
087	CERT: Macro Version	Displays the macro version of the NRS certification.
088	CERT: PAC Version	Displays the PAC version of the NRS certification.
089	CERT: ID2 Code	Displays ID2 for the NRS certification. Spaces are displayed as underscores (_). Asterisks (*) indicate that no NRS certification exists.
090	CERT: Subject	Displays the common name of the NRS certification subject. CN = the following 17 bytes. Spaces are displayed as underscores (_). Asterisks (*) indicate that no DESS exists.
091	CERT: Serial Number	Displays serial number for the NRS certification. Asterisks (*) indicate that no DESS exists.
092	CERT: Issuer	Displays the common name of the issuer of the NRS certification. CN = the following 30 bytes. Asterisks (*) indicate that no DESS exists.
093	CERT: Valid Start	Displays the start time of the period for which the current NRS certification is enabled.
094	CERT: Valid End	Displays the end time of the period for which the

	Selection Country	
150	<p>Select from the list the name of the country where Cumin-M is installed in the machine. After selecting the country, you must also set the following SP codes for Cumin-M:</p> <ul style="list-style-type: none"> <li>▪ SP5816-153</li> <li>▪ SP5816-154</li> <li>▪ SP5816-161</li> </ul> <p>0: Japan, 1: USA, 2: Canada, 3: UK, 4: Germany, 5: France, 6: Italy, 7: Netherlands, 8: Belgium, 9: Luxembourg, 10: Spain</p>	
	Line Type Authentication Judgment	
151	<p>Touch [Execute].</p> <p>Setting this SP classifies the telephone line where Cumin-M is connected as either dial-up or push type, so Cumin-M can automatically distinguish the number that connects to the outside line.</p> <ul style="list-style-type: none"> <li>▪ The current progress, success, or failure of this execution can be displayed with SP5816-152.</li> <li>▪ If the execution succeeded, SP5816-153 will display the result for confirmation and SP5816-154 will display the telephone number for the connection to the outside line.</li> </ul>	
	Line Type Judgment Result	
152	<p>Displays a number to show the result of the execution of SP5816 151. Here is a list of what the numbers mean.</p> <p>0: Success</p> <p>1: In progress (no result yet). Please wait.</p> <p>2: Line abnormal</p>	

**System Service Mode**

	<p>3: Cannot detect dial tone automatically</p> <p>4: Line is disconnected</p> <p>5: Insufficient electrical power supply</p> <p>6: Line classification not supported</p> <p>7: Error because fax transmission in progress – ioctl() occurred.</p> <p>8: Other error occurred</p> <p>9: Line classification still in progress. Please wait.</p>
153	<p>Selection Dial/Push</p> <p>This SP displays the classification (tone or pulse) of the telephone line to the access point for Cumin-M. The numbered displayed (0 or 1) is the result of the execution of SP5816 151. However, this setting can also be changed manually.</p> <p>[0 to 1/ <b>0</b> / 1 /step]</p> <p>0: Tone Dialing Phone</p> <p>1: Pulse Dialing Phone</p> <p>Inside Japan "2" may also be displayed:</p> <p>0: Tone Dialing Phone</p> <p>1: Pulse Dialing Phone 10PPS</p> <p>2: Pulse Dialing Phone 20PPS</p>
154	<p>Outside Line/Outgoing Number</p> <p>The SP sets the number that switches to PSTN for the outside connection for Cumin-M in a system that employs a PBX (internal line).</p> <ul style="list-style-type: none"> <li>▪ If the execution of SP5816 151 has succeeded and Cumin-M has connected to the <b>external</b> line, this SP display is completely blank.</li> <li>▪ If Cumin-M has connected to an <b>internal</b> line, then the number of the connection to the external line is displayed.</li> <li>▪ If Cumin-M has connected to an external line, a comma is displayed with the number. The comma is inserted for a 2 sec. pause.</li> <li>▪ The number setting for the external line can be entered manually (including commas).</li> </ul>
156	<p>Dial Up User Name</p> <p>Use this SP to set a user name for access to remote dial up. Follow these</p>

Appendix:  
SP Mode  
Tables

**System Service Mode**

	<p>rules when setting a user name:</p> <ul style="list-style-type: none"> <li>▪ Name length: Up to 32 characters</li> <li>▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").</li> </ul>
157	<p>Dial Up Password</p> <p>Use this SP to set a password for access to remote dial up. Follow these rules when setting a user name:</p> <ul style="list-style-type: none"> <li>▪ Name length: Up to 32 characters</li> <li>▪ Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").</li> </ul>
161	<p>Local Phone Number</p> <p>Use this SP to set the telephone number of the line where Cumin-M is connected. This number is transmitted to and used by the Call Center to return calls.</p> <p>Limit: 24 numbers (numbers only)</p>
162	<p>Connection Timing Adjustment: Incoming</p> <p>When the Call Center calls out to a Cumin-M modem, it sends a repeating ID tone (*#1#). This SP sets the line remains open to send these ID tones after the number of the Cumin-M modem is dialed up and connected.</p> <p>[0 to 24 / 1 / 1 /step]</p> <p>The actual amount of time is this setting x 2 sec. For example, if you set "2" the line will remain open for 4 sec.</p>
163	<p>Access Point</p> <p>This is the number of the dial-up access point for Cumin-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used.</p> <p>Default: 0</p> <p>Allowed: Up to 16 alphanumeric characters</p>
164	<p>Line Connecting</p>
	<p>This SP sets the connection conditions for the customer. This setting</p>

**System Service Mode**

	dedicates the line to Cumin-M only, or sets the line for sharing between Cumin-M and a fax unit. [0 to 1 / <b>0</b> / 1 /step] 0: Sharing Fax 1: No Sharing Fax  Note <ul style="list-style-type: none"> <li>▪ If this setting is changed, the copier must be cycled off and on.</li> <li>▪ SP5816 187 determines whether the off-hook button can be used to interrupt a Cumin-M transmission in progress to open the line for fax transaction.</li> </ul>		
173	Modem Serial Number	This SP displays the serial number registered for the Cumin-M.	
174	Retransmission Limit		
	Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, Cumin-M generates charges based on transmission time for the customer, so a limit is placed upon the time allowed for these transactions. If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.		
186	RCG-CM DebugbitSW		
187	FAX TX Priority	-	
	This SP determines whether pushing the off-hook button will interrupt a Cumin-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816 164 is set to "0". [0 or 1/ <b>0</b> / - ] 0: Disable, 1: Enable		
200	Manual Polling	-	Executes the manual polling.
201	Regist: Status		
	Displays a number that indicates the status of the NRS service device. 0: Neither the NRS device nor Cumin device are set. 1: The Cumin device is being set. Only Box registration is completed. In this		

Appendix: SP Mode Tables

**System Service Mode**

	<p>status the Basil unit cannot answer a polling request.</p> <p>2: The Cumin device is set. In this status the Basil unit cannot answer a polling request.</p> <p>3: The NRS device is being set. In this status the Cumin device cannot be set.</p> <p>4: The NRS module has not started.</p>	
202	Letter Number	Allows entry of the number of the request needed for the Cumin device.
203	Confirm Execute	Executes the inquiry request to the NRS GW URL.
204	Confirm Result	
	<p>Displays a number that indicates the result of the inquiry executed with SP5816 203.</p> <p>0: Succeeded</p> <p>1: Inquiry number error</p> <p>2: Registration in progress</p> <p>3: Proxy error (proxy enabled)</p> <p>4: Proxy error (proxy disabled)</p> <p>5: Proxy error (Illegal user name or password)</p> <p>6: Communication error</p> <p>7: Certification update error</p> <p>8: Other error</p> <p>9: Inquiry executing</p>	
	Confirm Place	
205	Displays the result of the notification sent to the device from the GW URL in answer to the inquiry request. Displayed only when the result is registered at the GW URL.	
206	Register Execute	Executes Cumin Registration.
	Register Result	
207	<p>Displays a number that indicates the registration result.</p> <p>0: Succeeded</p> <p>2: Registration in progress</p> <p>3: Proxy error (proxy enabled)</p>

002	Setting 2	*CTL	Adjusts the debug program modesetting. Bit7: 5682 mmseg-log setting 0: Date/Hour/Minute/Second 1: Minute/Second/Msec. 0 to 6: Not used

<b>5844</b>	<b>[USB]</b>		
001	Transfer Rate	*CTL	0x01: Full speed <b>0x04: Auto Change</b>
	Adjusts the USB transfer rate.		
002	Vendor ID	*CTL	Displays the vendor ID. <b>DFU</b>
003	Product ID	*CTL	Displays the product ID. <b>DFU</b>
004	Device Release Number	*CTL	Displays the development release version number. <b>DFU</b>
100	Notify Unsupport	*CTL	-

<b>5845</b>	<b>[Delivery Server Setting]</b>	*CTL	-
	Provides items for delivery server settings.		
001	FTP Port No.	[0 to 65535 / <b>3670</b> / 1 /step]	

**System Service Mode**

	Sets the FTP port number used when image files to the Scan Router Server.	
002	IP Address (Primary)	Range: <b>000.000.000.000</b> to 255.255.255.255
	Use this SP to set the Scan Router Server address. The IP address under the transfer tab can be referenced by the initial system setting.	
006	Delivery Error Display Time	[0 to 999 / <b>300</b> / 1 second /step]
	Use this setting to determine the length of time the prompt message is displayed when a test error occurs during document transfer with the NetFile application and an external device.	
008	IP Address (Secondary)	Range: <b>000.000.000.000</b> to 255.255.255.255
	Specifies the IP address assigned to the computer designated to function as the secondary delivery server of Scan Router. This SP allows only the setting of the IP address without reference to the DNS setting.	
009	Delivery Server Model	[0 to 4/ <b>0</b> / 1 /step]
	<p>Allows changing the model of the delivery server registered by the I/O device.</p> <p>0: Unknown                      1: SG1 Provided                      2: SG1 Package                      3: SG2 Provided                      4: SG2 Package</p>	
010	Delivery Svr Capability	[0 to 255 / <b>0</b> / 1 /step]
	Changes the capability of the registered that the I/O device registered.	
	Bit7 = 1 Comment information exists	
	Bit6 = 1 Direct specification of mail address possible	
	Bit5 = 1 Mail RX confirmation setting possible	
	Bit4 = 1 Address book automatic update function exists	
	Bit3 = 1 Fax RX delivery function exists	

Appendix:  
SP Mode  
Tables

**System Service Mode**

	Bit2 = 1 Sender password function exists	
	Bit1 = 1 Function to link MK-1 user and Sender exists	
	Bit0 = 1 Sender specification required (if set to 1, Bit6 is set to "0")	
011	Delivery Svr Capability (Ext)	[0 to 255 / 0 / 1 /step]
	Changes the capability of the registered that the I/O device registered.	
	Bit7 = 1 Address book usage limitation (Limitation for each authorized user) Bit6 = 1 RDH authorization link Bit5 to 0: Not used	
013	Server Scheme (Primary) <b>DFU</b>	
	This is used for the scan router program.	
014	Server Port Number (Primary) <b>DFU</b>	
	This is used for the scan router program.	
015	Server URL Path (Primary) <b>DFU</b>	
	This is used for the scan router program.	
016	Server Scheme (Secondary) <b>DFU</b>	
	This is used for the scan router program.	
017	Server Port Number (Secondary) <b>DFU</b>	
	This is used for the scan router program.	
018	Server URL Path (Secondary) <b>DFU</b>	
	This is used for the scan router program.	
022	Rapid Sending Control	
	Enables or disables the prevention function for the continuous data sending error. [0 to 1 / 0 / -]	
	0: Disable, 1: Enable	

## System Service Mode

<b>5846</b>	<b>[UCS Settings]</b>	*CTL	-
001	Machine ID (For Delivery Server)	Displays ID	
	Displays the unique device ID in use by the delivery server directory. The value is only displayed and cannot be changed. This ID is created from the NIC MAC or IEEE 1394 EUI. The ID is displayed as either 6-byte or 8-byte binary.		
002	Machine ID Clear (For Delivery Server)	Clears ID	
	Clears the unique ID of the device used as the name in the file transfer directory. Execute this SP if the connection of the device to the delivery server is unstable. After clearing the ID, the ID will be established again automatically by cycling the machine off and on.		
003	Maximum Entries	[2000 to 20000/ <b>2000</b> /1 /step]	
	Changes the maximum number of entries that UCS can handle. If a value smaller than the present value is set, the UCS managed data is cleared, and the data (excluding user code information) is displayed.		
006	Delivery Server Retry Timer	[0 to 255 / <b>0</b> / 1 /step]	
	Sets the interval for retry attempts when the delivery server fails to acquire the delivery server address book.		
007	Delivery Server Retry Times	[0 to 255 / <b>0</b> / 1 /step]	
	Sets the number of retry attempts when the delivery server fails to acquire the delivery server address book.		
008	Delivery Server Maximum Entries	[2000 to 50000 / <b>2000</b> / 1/step]	
	Sets the maximum number account entries of the delivery server user information managed by UCS.		
010	LDAP Search Timeout	[1 to 255 / <b>60</b> / 1 /step]	
	Sets the length of the timeout for the search of the LDAP server.		
040	Addr Book Migration (SD => HDD)		

## System Service Mode

	Not used in this machine.	
	Fill Addr Acl Info.	
041	<p>This SP must be executed immediately after installation of an HDD unit in a basic machine that previously had no HDD. The first time the machine is powered on with the new HDD installed, the system automatically takes the address book from the NVRAM and writes it onto the new HDD. However, the new address book on the HDD can be accessed only by the system administrator at this stage. Executing this SP by the service technician immediately after power on grants full address book access to all users.</p> <p>Procedure</p> <ol style="list-style-type: none"> <li>1. Turn the machine off.</li> <li>2. Install the new HDD.</li> <li>3. Turn the machine on.</li> <li>4. The address book and its initial data are created on the HDD automatically.</li> <li>5. However, at this point the address book can be accessed by only the system administrator or key operator.</li> <li>6. Enter the SP mode and do SP5846 041. After this SP executes successfully, any user can access the address book.</li> </ol>	
043	Addr Book Media	<p>Displays the slot number where an address book data is in.</p> <p>[0 to 30 / - /1]</p> <p>0: Unconfirmed</p> <p>1: SD Slot 1</p> <p>2: SD Slot 2</p> <p>4: USB Flash ROM</p> <p>20: HDD</p> <p>30: Nothing</p>
046	Initialize All Setting & Addr	-
047	Initialize Local Addr Book	Clears the local address book information, including the user code.
048	Initialize Delivery Addr Book	Clears the distribution address book information, except the user code.

## System Service Mode

049	Initialize LDAP Addr Book	Clears the LDAP address book information, except the user code.
050	Initialize All Addr Book	Clears all directory information managed by UCS, including all user codes.
051	Backup All Addr Book	Uploads all directory information to the SD card.
052	Restore All Addr Book	Downloads all directory information from the SD card.
053	Clear Backup Info	<p>Deletes the address book data from the SD card in the service slot.</p> <p>Deletes only the files that were uploaded from this machine.</p> <p>This feature does not work if the card is write-protected.</p> <p> <b>Note</b></p> <ul style="list-style-type: none"> <li>▪ After you do this SP, go out of the SP mode, and then turn the power off.</li> <li>▪ Do not remove the SD card until the Power LED stops flashing.</li> </ul>
060	Search Option	
	<p>This SP uses bit switches to set up the fuzzy search options for the UCS local address book.</p> <p>Bit: Meaning</p> <p>0: Checks both upper/lower case characters</p> <p>1: Japan Only</p> <p>2: Japan Only</p> <p>3: Japan Only</p> <p>4 to 7: Not Used</p>	
062	Complexity Option 1	
	Use this SP to set the conditions for password entry to access the local address book. Specifically, this SP limits the password entry to <b>upper case</b>	

**System Service Mode**

	and sets the length of the password. [0 to 32 / <b>0</b> / 1 /step] ↓ Note <ul style="list-style-type: none"> <li>▪ This SP does not normally require adjustment.</li> <li>▪ This SP is enabled only after the system administrator has set up a group password policy to control access to the address book.</li> </ul>	
063	Complexity Option 2 <b>DFU</b>	
064	Complexity Option 3 <b>DFU</b>	
065	Complexity Option 4 <b>DFU</b>	
091	FTP Auth Port Setting	Specifies the FTP port for getting a distribution server address book that is used in the identification mode. [0 to 65535 / <b>3671</b> / 1 /step]
094	Encryption Stat	Shows the status of the encryption function for the address book data.

	<b>[Rep Resolution Reduction]</b>	*CTL	-
<b>5847</b>	5847 1 through 5847 8 changes the default settings of image data transferred externally by the Net File page reference function. [ 0 to 5 / <b>2</b> / 1 /step] 5847 21 sets the default for JPEG image quality of image files handled by NetFile. “Net files” are jobs to be printed from the document server using a PC and the DeskTopBinder software.		
001	Rate for Copy Color	0: 1x	
002	Rate for Copy B&W Text	1: 1/2x	
003	Rate for Copy B&W Other	<b>2: 1/3x</b>	
004	Rate for Printer Color	3: 1/4x	
005	Rate for Printer B&W	4: 1/6x	
		5: 1/8x	

**System Service Mode**

	Network Quality Default for JPEG
021	Sets the default value for the quality of JPEG images sent as NetFile pages. This function is available only with the MLB (Media Link Board) option installed. [5 to 95 / <b>50</b> / 1 /step]

	<b>[Web Service]</b>	*CTL	-		
<b>5848</b>	5848 2 sets the 4-bit switch assignment for the access control setting. Setting of 0001 has no effect on access and delivery from Scan Router. 5848 100 sets the maximum size allowed for downloaded images. The default is equal to 1 gigabyte.				
002	Access Ctrl: Repository (only Lower 4 bits)	0000: No access control 0001: Denies access to DeskTop Binder. <b>0010</b> : No writing control			
003	Access Control: Doc. Svr. Print (Lower 4 bits)	Switches access control on and off. <b>0000</b> : No access control 0001: Denies access to DeskTop Binder.			
004	Access Control: User Directory (only Lower 4 bits)				
007	Access Ctrl: Comm. Log Fax (Lower 4 bits)				
009	Access Ctrl: Job Ctrl (Lower 4 bits)				
011	Access Ctrl: Device management (Lower 4 bits)				
021	Access Ctrl: Delivery (Lower 4 bits)				
022	Access Ctrl: uAdministration (Lower 4bits)				
099	Repository: Download Image			-	

Appendix:  
SP Mode  
Tables

**System Service Mode**

	Setting	
100	Repository: Download Image Max. Size	Specifies the max size of the image data that the machine can download. [1 to 1024 / <b>1024</b> / 1 MB /step]

<b>6006</b>	<b>[ADF Adjustment]</b>
-------------	-------------------------

**System Service Mode**

	Adjusts the side-to-side and leading registration of originals with the ARDF.		
001	S-to-S Registration 1st	*ENG	[-3.0 to 3.0 / 0 / 0.1 mm/step ]
002	S-to-S Registration 2nd		
003	Leading Edge Registration		[-5.0 to 5.0 / 0 / 0.1 mm/step ]
	Adjusts the amount of paper buckle to correct original skew for the front and rear sides.		
005	Buckle: Duplex: 1st	*ENG	[-5.0 to 5.0 / 0 / 0.1 mm/step ]
006	Buckle: Duplex: 2nd		
	Adjusts the erase margin at the original trailing edge.		
007	Trailing Edge Erase	*ENG	[-5.0 to 5.0 / 0 / 0.1 mm/step ]

6007	<b>[ADF Input Check]</b>		
	Displays the signals received from the sensors and switches of the ARDF. Only Bit 0 is used for ADF input check (➡ "Input Check Table" in this section").		

6008	<b>[ADF Output Check]</b>		
	Activates the electrical components for functional check. It is not possible to activate more than one component at the same time (➡ "Output Check Table" in this section")		

6009	<b>[ADF Free Run]</b>		
	Performs a DF free run in simplex, duplex mode or stamp mode.		
002	Free Run Duplex Mode	-	

6010	<b>[Stamp Position Adj.]</b> Fax Stamp Position Adjustment		
	Adjusts the horizontal position of the stamp on the scanned originals.		

**System Service Mode**

6010 1	Stamp Position Adj.	*ENG	[-5.0 to 5.0 / 0 / 1 mm/step]
--------	---------------------	------	-------------------------------

6016	<b>[Original Size Detection Priority]</b> Original Size Detection Priority			
	Specifies the original size for a size detected by the original sensor, since original sensors cannot recognize all sizes.			
001	Original Size Detection Priority	*ENG	[0 or 1 / 0 / -] 0: Setting 1 1: Setting 2	
		NA	Setting 1	Setting 2
			DLT SEF	Folio SEF 11" x 15"
			LG SEF	Foolscap SEF
			LT SEF	US EXE 8" x 10"
			LT LEF	US EXE LEF
		EU/ ASIA	DLT SEF	8K 267 x 390 mm
			LT SEF	16K 195 x 267 mm
			LT LEF	16K 267 x 195 mm

6017	<b>[DF Magnification Adj.]</b> DF Magnification Adjustment		
	Adjusts the magnification in the sub-scan direction for the ARDF.		
001	DF Magnification Adj.	*CTL	[-5.0 to 5.0 / 0 / 0.1 %/step]

6101	<b>[Staple Position Adjustment]</b>		
	Adjusts the staple position for finisher. + Value: Moves the staple position to the rear side. - Value: Moves the staple position to the front side.		
001	-	ENG	[-2 to 2 / 0 / 0.2mm/step]

## System Service Mode

6102	<b>[Punch Position Adjustment]</b>		
	Adjusts the punching position in the sub scan direction.		
001	Leading Edge Adjustment	ENG	[-1.5 to 1.5 / <b>0</b> / 0.1mm/step]

6103	<b>[Jogger Position Adjustment]</b>		
	Adjusts the jogger position		
001	-	ENG	[-1.5 to 1.5 / <b>0</b> / 0.1mm/step]

6104	<b>[Punch Position Adjustment]</b>		
	Adjusts the punching position in the main scan direction.		
001	Side-to-Side Adjustment	ENG	[-2.0 to 2.0 / <b>0</b> / 0.2mm/step]

6120	<b>[Finisher Input Check] Finisher (D429)</b>		
	Displays the signals received from sensors and switches of the finisher. (➡ "Input Check Table" in this section)		

6121	<b>[Finisher Output Check] Finisher (D429)</b>		
	Displays the signals received from sensors and switches of the finisher. (➡ "Output Check Table" in this section)		

**SP7-XXX (Data Log)**

7401	<b>[Total SC Counter]</b>		
	Displays the number of SC codes detected.		
001	SC Counter	*CTL	[0 to 9999 / <b>0</b> / 1/step ]

**System Service Mode**

	<b>[SC History]</b>		
<b>7403</b>	Logs the SC codes detected. The 10 most recently detected SC Codes are not displayed on the screen, but can be seen on the SMC (logging) outputs.

7954	<b>[Operation Env. Log Clear]</b>		
	Clears the operation environment log.		
001	-		

**SP8-xxx: Data Log2**

Many of these counters are provided for features that are currently not available, such as sending color faxes, and so on. However, here are some Group 8 codes that when used in combination with others, can provide useful information.

SP Numbers	What They Do
SP8 211 to SP8 216	The number of pages scanned to the document server.
SP8 401 to SP8 406	The number of pages printed from the document server
SP8 691 to SP8 696	The number of pages sent from the document server

Specifically, the following questions can be answered:

- How is the document server actually being used?
- What application is using the document server most frequently?
- What data in the document server is being reused?

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an “application”). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

**System Service Mode**

<b>Prefixes</b>	<b>What it means</b>	
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.).
C:	Copy application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the document server.
F:	Fax application.	
P:	Print application.	
S:	Scan application.	
L:	Local storage (document server)	Totals (jobs, pages, etc.) for the document server. The L: counters work differently case by case. Sometimes, they count jobs/pages stored on the document server; this can be in document server mode (from the document server window), or from another mode, such as from a printer driver or by pressing the Store File button in the Copy mode window. Sometimes, they include occasions when the user uses a file that is already on the document server. Each counter will be discussed case by case.
O:	Other applications (external network applications, for example)	Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future.

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

**Key for Abbreviations**

<b>Abbreviation</b>	<b>What it means</b>
/	"By", e.g. "T:Jobs/Apl" = Total Jobs "by" Application

## System Service Mode

Abbreviation	What it means
>	More (2> "2 or more", 4> "4 or more")
AddBook	Address Book
Apl	Application
B/W	Black & White
Bk	Black
C	Cyan
ColCr	Color Create
ColMode	Color Mode
Comb	Combine
Comp	Compression
Deliv	Delivery
DesApl	Designated Application. The application (Copy, Fax, Scan, Print) used to store the job on the document server, for example.
Dev Counter	Development Count, no. of pages developed.
Dup, Duplex	Duplex, printing on both sides
Emul	Emulation
FC	Full Color
FIN	Post-print processing, i.e. finishing (punching, stapling, etc.)
Full Bleed	No Margins
GenCopy	Generation Copy Mode
GPC	Get Print Counter. For jobs 10 pages or less, this counter does not count up. For jobs larger than 10 pages, this counter counts up by the number that is in excess of 10 (e.g., for an 11-page

**System Service Mode**

Abbreviation	What it means
	job, the counter counts up 11-10 =1)
IFax	Internet Fax
ImgEdt	Image Edit performed on the original with the copier GUI, e.g. border removal, adding stamps, page numbers, etc.
K	Black (YMCK)
LS	Local Storage. Refers to the document server.
LSize	Large (paper) Size
Mag	Magnification
MC	One color (monochrome)
NRS	New Remote Service, which allows a service center to monitor machines remotely. "NRS" is used overseas, "CSS" is used in Japan.
Org	Original for scanning
OrgJam	Original Jam
Palm 2	Print Job Manager/Desk Top Editor: A pair of utilities that allows print jobs to be distributed evenly among the printers on the network, and allows files to moved around, combined, and converted to different formats.
PC	Personal Computer
PGS	Pages. A page is the total scanned surface of the original. Duplex pages count as two pages, and A3 simplex count as two pages if the A3/DLT counter SP is switched ON.
PJob	Print Jobs
Ppr	Paper
PrtJam	Printer (plotter) Jam

**System Service Mode**

Abbreviation	What it means
PrtPGS	Print Pages
R	Red (Toner Remaining). Applies to the wide format model A2 only. This machine is under development and currently not available.
Rez	Resolution
SC	Service Code (Error SC code displayed)
Scn	Scan
Sim, Simplex	Simplex, printing on 1 side.
S-to-Email	Scan-to-E-mail
SMC	SMC report printed with SP5990. All of the Group 8 counters are recorded in the SMC report.
Svr	Server
TonEnd	Toner End
TonSave	Toner Save
TXJob	Send, Transmission
YMC	Yellow, Magenta, Cyan
YMCK	Yellow, Magenta, Cyan, Black

 **Note**

- All of the Group 8 SPs are reset with SP5 801 1 Memory All Clear.

<b>8 001</b>	T:Total Jobs	*CTL	These SPs count the number of times each application is used to do a job. [0 to 9999999/ 0 / 1] <b>Note:</b> The L: counter is the total number of times the other applications are used to send a job to the
<b>8 002</b>	C:Total Jobs	*CTL	
<b>8 003</b>	F:Total Jobs	*CTL	

**System Service Mode**

<b>8 004</b>	P:Total Jobs	*CTL	document server, plus the number of times a file already on the document server is used.
<b>8 005</b>	S:Total Jobs	*CTL	
<b>8 006</b>	L:Total Jobs	*CTL	

- These SPs reveal the number of times an application is used, not the number of pages processed.
- When an application is opened for image input or output, this counts as one job.
- Interrupted jobs (paper jams, etc.) are counted, even though they do not finish.
- Only jobs executed by the customer are counted. Jobs executed by the customer engineer using the SP modes are not counted.
- When using secure printing (when a password is required to start the print job), the job is counted at the time when either “Delete Data” or “Specify Output” is specified.
- A job is counted as a fax job when the job is stored for sending.
- When a fax is received to fax memory, the F: counter increments but the L: counter does not (the document server is not used).
- A fax broadcast counts as one job for the F: counter (the fax destinations in the broadcast are not counted separately).
- A fax broadcast is counted only after all the faxes have been sent to their destinations. If one transmission generates an error, then the broadcast will not be counted until the transmission has been completed.
- A printed fax report counts as one job for the F: counter.
- The F: counter does not distinguish between fax sending or receiving.
- When a copy job on the document server is printed, SP8022 also increments, and when a print job stored on the document server is printed, SP8024 also increments.
- When an original is both copied and stored on the document server, the C: and L: counters both increment.
- When a print job is stored on the document server, only the L: counter increments.
- When the user presses the Document Server button to store the job on the document server, only the L: counter increments.
- When the user enters document server mode and prints data stored on the document server, only the L: counter increments.
- When an image received from Palm 2 is received and stored, the L: counter increments.
- When the customer prints a report (user code list, for example), the O: counter increments. However, for fax reports and reports executed from the fax application, the F: counter increments.

**System Service Mode**

8 011	T:Jobs/LS	*CTL	These SPs count the number of jobs stored to the document server by each application, to reveal how local storage is being used for input. [0 to 99999999/ 0 / 1] The L: counter counts the number of jobs stored from within the document server mode screen at the operation panel.
8 012	C:Jobs/LS	*CTL	
8 013	F:Jobs/LS	*CTL	
8 014	P:Jobs/LS	*CTL	
8 015	S:Jobs/LS	*CTL	
8 016	L:Jobs/LS	*CTL	
8 017	O:Jobs/LS	*CTL	

- When a scan job is sent to the document server, the S: counter increments. When you enter document server mode and then scan an original, the L: counter increments.
- When a print job is sent to the document server, the P: counter increments.
- When a network application sends data to the document server, the O: counter increments.
- When an image from Palm 2 is stored on the document server, the O: counter increments.
- When a fax is sent to the document server, the F: counter increments.

8 021	T:Pjob/LS	*CTL	These SPs reveal how files printed from the document server were stored on the document server originally. [0 to 99999999/ 0 / 1] The L: counter counts the number of jobs stored from within the document server mode screen at the operation panel.
8 022	C:Pjob/LS	*CTL	
8 023	F:Pjob/LS	*CTL	
8 024	P:Pjob/LS	*CTL	
8 025	S:Pjob/LS	*CTL	
8 026	L:Pjob/LS	*CTL	
8 027	O:Pjob/LS	*CTL	

- When a copy job stored on the document server is printed with another application, the C: counter increments.
- When an application like DeskTopBinder merges a copy job that was stored on the

**System Service Mode**

document server with a print job that was stored on the document server, the C: and P: counters both increment.

- When a job already on the document server is printed with another application, the L: counter increments.
- When a scanner job stored on the document server is printed with another application, the S: counter increments. If the original was scanned from within document server mode, then the L: counter increments.
- When images stored on the document server by a network application (including Palm 2), are printed with another application, the O: counter increments.
- When a copy job stored on the document server is printed with a network application (Web Image Monitor, for example), the C: counter increments.
- When a fax on the document server is printed, the F: counter increments.

8 031	T:Pjob/DesApl	*CTL	These SPs reveal what applications were used to output documents from the document server. [0 to 9999999/ 0 / 1] The L: counter counts the number of jobs printed from within the document server mode screen at the operation panel.
8 032	C:Pjob/DesApl	*CTL	
8 033	F:Pjob/DesApl	*CTL	
8 034	P:Pjob/DesApl	*CTL	
8 035	S:Pjob/DesApl	*CTL	
8 036	L:Pjob/DesApl	*CTL	
8 037	O:Pjob/DesApl	*CTL	

- When documents already stored on the document server are printed, the count for the application that started the print job is incremented.
- When the print job is started from a network application (Desk Top Binder, Web Image Monitor, etc.) the L: counter increments.

8 041	T:TX Jobs/LS	*CTL	These SPs count the applications that stored files on the document server that were later accessed for transmission over the telephone line or over a network
8 042	C:TX Jobs/LS	*CTL	
8 043	F:TX Jobs/LS	*CTL	

**System Service Mode**

8 044	P:TX Jobs/LS	*CTL	(attached to an e-mail, or as a fax image by I-Fax). [0 to 9999999/ 0 / 1] <b>Note:</b> Jobs merged for sending are counted separately. The L: counter counts the number of jobs scanned from within the document server mode screen at the operation panel.
8 045	S:TX Jobs/LS	*CTL	
8 046	L:TX Jobs/LS	*CTL	
8 047	O:TX Jobs/LS	*CTL	

- When a stored copy job is sent from the document server, the C: counter increments.
- When images stored on the document server by a network application or Palm2 are sent as an e-mail, the O: counter increments.

8 051	T:TX Jobs/DesApl	*CTL	These SPs count the applications used to send files from the document server over the telephone line or over a network (attached to an e-mail, or as a fax image by I-Fax). Jobs merged for sending are counted separately. [0 to 9999999/ 0 / 1] The L: counter counts the number of jobs sent from within the document server mode screen at the operation panel.
8 052	C:TX Jobs/DesApl	*CTL	
8 053	F:TX Jobs/DesApl	*CTL	
8 054	P:TX Jobs/DesApl	*CTL	
8 055	S:TX Jobs/DesApl	*CTL	
8 056	L:TX Jobs/DesApl	*CTL	
8 057	O:TX Jobs/DesApl	*CTL	

- If the send is started from Desk Top Binder or Web Image Monitor, for example, then the O: counter increments.

8 061	T:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total the finishing methods. The finishing method is specified by the application.		
8 062	C:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for copy jobs only. The finishing method is specified by the application.		

## System Service Mode

8 063	F:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for fax jobs only. The finishing method is specified by the application. <b>Note:</b> Finishing features for fax jobs are not available at this time.		
8 064	P:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for print jobs only. The finishing method is specified by the application.		
8 065	S:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for scan jobs only. The finishing method is specified by the application. <b>Note:</b> Finishing features for scan jobs are not available at this time.		
8 066	L:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for jobs output from within the document server mode screen at the operation panel. The finishing method is specified from the print window within document server mode.		
8 067	O:FIN Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs total finishing methods for jobs executed by an external application, over the network. The finishing method is specified by the application.		
8 06x 1	Sort	Number of jobs started in Sort mode. When a stored copy job is set for Sort and then stored on the document server, the L: counter increments. (See SP8 066 1)	
8 06x 2	Stack	Number of jobs started out of Sort mode.	
8 06x 3	Staple	Number of jobs started in Staple mode.	
8 06x 4	Booklet	Number of jobs started in Booklet mode. If the machine is in staple mode, the Staple counter also increments.	
8 06x 5	Z-Fold	Number of jobs started In any mode other than the Booklet mode and set for folding (Z-fold).	

**System Service Mode**

8 06x 6	Punch	Number of jobs started in Punch mode. When Punch is set for a print job, the P: counter increments. (See SP8 064 6.)
8 06x 7	Other	Reserved. Not used.

8 071	T:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of jobs broken down by the number of pages in the job, regardless of which application was used.		
8 072	C:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of copy jobs by size based on the number of pages in the job.		
8 073	F:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of fax jobs by size based on the number of pages in the job.		
8 074	P:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of print jobs by size based on the number of pages in the job.		
8 075	S:Jobs/PGS		[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of scan jobs by size based on the number of pages in the job.		
8 076	L:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of jobs printed from within the document server mode window at the operation panel, by the number of pages in the job.		
8 077	O:Jobs/PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count and calculate the number of "Other" application jobs (Web Image Monitor, Palm 2, etc.) by size based on the number of pages in the job.		

Appendix:  
SP Mode  
Tables

**System Service Mode**

8 07x 1	1 Page	8 07x 8	21 to 50 Pages
8 07x 2	2 Pages	8 07x 9	51 to 100 Pages
8 07x 3	3 Pages	8 07x 10	101 to 300 Pages
8 07x 4	4 Pages	8 07x 11	301 to 500 Pages
8 07x 5	5 Pages	8 07x 12	501 to 700 Pages
8 07x 6	6 to 10 Pages	8 07x 13	701 to 1000 Pages
8 07x 7	11 to 20 Pages	8 07x 14	1001 to Pages

- For example: When a copy job stored on the document server is printed in document server mode, the appropriate L: counter (SP8076 0xx) increments.
- Printing a fax report counts as a job and increments the F: counter (SP 8073).
- Interrupted jobs (paper jam, etc.) are counted, even though they do not finish.
- If a job is paused and re-started, it counts as one job.
- If the finisher runs out of staples during a print and staple job, then the job is counted at the time the error occurs.
- For copy jobs (SP 8072) and scan jobs (SP 8075), the total is calculated by multiplying the number of sets of copies by the number of pages scanned. (One duplex page counts as 2.)
- The first test print and subsequent test prints to adjust settings are added to the number of pages of the copy job (SP 8072).
- When printing the first page of a job from within the document server screen, the page is counted.

8 111	T:FAX TX Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) sent by fax, either directly or using a file stored on the document server, on a telephone line. <b>Note:</b> Color fax sending is not available at this time.		
8 113	F: FAX TX Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) sent by		

**System Service Mode**

	fax directly on a telephone line. <b>Note:</b> Color fax sending is not available at this time.
8 11x 1	B/W
8 11x 2	Color

- These counters count jobs, not pages.
- This SP counts fax jobs sent over a telephone line with a fax application, including documents stored on the document server.
- If the mode is changed during the job, the job will count with the mode set when the job started.
- If the same document is faxed to both a public fax line and an I-Fax at a destination where both are available, then this counter increments, and the I-Fax counter (8 12x) also increments.
- The fax job is counted when the job is scanned for sending, not when the job is sent.

8 121	T:IFAX TX Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) sent, either directly or using a file stored on the document server, as fax images using I-Fax. <b>Note:</b> Color fax sending is not available at this time.		
8 123	F: IFAX TX Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of jobs (color or black-and-white) sent (not stored on the document server), as fax images using I-Fax. <b>Note:</b> Color fax sending is not available at this time.		
8 12x 1	B/W		
8 12x 2	Color		

- These counters count jobs, not pages.
- The counters for color are provided for future use; the color fax feature is not available at this time.
- The fax job is counted when the job is scanned for sending, not when the job is sent.

**System Service Mode**

8 131	T:S-to-Email Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) scanned and attached to an e-mail, regardless of whether the document server was used or not.		
8 135	S: S-to-Email Jobs	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of jobs (color or black-and-white) scanned and attached to e-mail, without storing the original on the document server.		
8 13x 1	B/W		
8 13x 2	Color		
8 13x 3	ACS		

- These counters count jobs, not pages.
- If the job is stored on the document server, after the job is stored it is determined to be color or black-and-white then counted.
- If the job is cancelled during scanning, or if the job is cancelled while the document is waiting to be sent, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.
- If several jobs are combined for sending to the Scan Router, Scan-to-Email, or Scan-to-PC, or if one job is sent to more than one destination. each send is counted separately. For example, if the same document is sent by Scan-to-Email as well as Scan-to-PC, then it is counted twice (once for Scan-to-Email and once for Scan-to-PC).

8 141	T:Deliv Jobs/Svr	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) scanned and sent to a Scan Router server.		
8 145	S: Deliv Jobs/Svr	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of jobs (color or black-and-white) scanned in scanner mode and sent to a Scan Router server.		

**System Service Mode**

8 14x 1	B/W
8 14x 2	Color
8 14x 3	ACS

- These counters count jobs, not pages.
- The jobs are counted even though the arrival and reception of the jobs at the Scan Router server cannot be confirmed.
- If even one color image is mixed with black-and-white images, then the job is counted as a “Color” job.
- If the job is cancelled during scanning, or if the job is cancelled while the document is waiting to be delivered, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.
- Even if several files are combined for sending, the transmission counts as one job.

8 151	T:Deliv Jobs/PC	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) scanned and sent to a folder on a PC (Scan-to-PC). <b>Note:</b> At the present time, 8 151 and 8 155 perform identical counts.		
8 155	S:Deliv Jobs/PC	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of jobs (color or black-and-white) scanned and sent with Scan-to-PC.		
8 15x 1	B/W		
8 15x 2	Color		
8 15x 3	ACS		

- These counters count jobs, not pages.
- If the job is cancelled during scanning, it is not counted.
- If the job is cancelled while it is waiting to be sent, the job is not counted.
- If the job is cancelled during sending, it may or may not be counted, depending on what stage of the process had been reached when the job was cancelled.

Appendix:  
SP Mode  
Tables

**System Service Mode**

- Even if several files are combined for sending, the transmission counts as one job.

8 161	T:PCFAX TX Jobs	*CTL	These SPs count the number of PC Fax transmission jobs. A job is counted from when it is registered for sending, not when it is sent. [0 to 9999999/ 0 / 1] <b>Note:</b> At the present time, these counters perform identical counts.
8 163	F:PCFAX TX Jobs	*CTL	

- This counts fax jobs started from a PC using a PC fax application, and sending the data out to the destination from the PC through the copier.

8 161	T:PCFAX TX Jobs	*CTL	
8 163	F:PCFAX TX Jobs	*CTL	

8 175	S: Dvliv Jobs/WSD	*CTL	-
8 181	T: Scan to Media Jobs	*CTL	
8 185	S: Scan to Media Jobs	*CTL	
x 1	B/W		
x 2	Color		
x 3	ACS		

- SP 8 191 to 8 196 count the number of scanned sides of pages, not the number of physical pages.
- These counters do not count reading user stamp data, or reading color charts to adjust color.
- Previews done with a scanner driver are not counted.
- A count is done only after all images of a job have been scanned.
- Scans made in SP mode are not counted.

**Examples**

- If 3 B5 pages and 1 A3 page are scanned with the scanner application but not stored,

**System Service Mode**

the S: count is 4.

- If both sides of 3 A4 sheets are copied and stored to the document server using the Store File button in the Copy mode window, the C: count is 6 and the L: count is 6.
- If both sides of 3 A4 sheets are copied but not stored, the C: count is 6.
- If you enter document server mode then scan 6 pages, the L: count is 6.

8 201	T:LSize Scan PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of large pages input with the scanner for scan and copy jobs. Large size paper (A3/DLT) scanned for fax transmission are not counted. <b>Note:</b> These counters are displayed in the SMC Report, and in the User Tools display.		
8 203	F: LSize Scan PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of large pages input with the scanner for fax transmission. <b>Note:</b> These counters are displayed in the SMC Report, and in the User Tools display.		
8 205	S:LSize Scan PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of large pages input with the scanner for scan jobs only. Large size paper (A3/DLT) scanned for fax transmission are not counted. <b>Note:</b> These counters are displayed in the SMC Report, and in the User Tools display.		

8 211	T:Scan PGS/LS	*CTL	These SPs count the number of pages scanned into the document server . [0 to 9999999/ 0 / 1] The L: counter counts the number of pages stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen
8 212	C:Scan PGS/LS	*CTL	
8 213	F:Scan PGS/LS	*CTL	
8 215	S:Scan PGS/LS	*CTL	
8 216	L:Scan PGS/LS	*CTL	

Appendix: SP Mode Tables

**System Service Mode**

- Reading user stamp data is not counted.
- If a job is cancelled, the pages output as far as the cancellation are counted.
- If the scanner application scans and stores 3 B5 sheets and 1 A4 sheet, the S: count is 4.
- If pages are copied but not stored on the document server, these counters do not change.
- If both sides of 3 A4 sheets are copied and stored to the document server, the C: count is 6 and the L: count is 6.
- If you enter document server mode then scan 6 pages, the L: count is 6.

8 221	ADF Org Feeds	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages fed through the ADF for front and back side scanning.		
8 221 1	Front	<p>Number of front sides fed for scanning:</p> <p>With an ADF that can scan both sides simultaneously, the Front side count is the same as the number of pages fed for either simplex or duplex scanning.</p> <p>With an ADF that cannot scan both sides simultaneously, the Front side count is the same as the number of pages fed for duplex front side scanning. (The front side is determined by which side the user loads face up.)</p>	
8 221 2	Back	<p>Number of rear sides fed for scanning:</p> <p>With an ADF that can scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex scanning.</p> <p>With an ADF that cannot scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex rear-side scanning.</p>	

- When 1 sheet is fed for duplex scanning the Front count is 1 and the Back count is 1.
- If a jam occurs during the job, recovery processing is not counted to avoid double counting. Also, the pages are not counted if the jam occurs before the first sheet is output.

**System Service Mode**

8 231	Scan PGS/Mode	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages scanned by each ADF mode to determine the work load on the ADF.		
8 231 1	Large Volume	Selectable. Large copy jobs that cannot be loaded in the ADF at one time.	
8 231 2	SADF	Selectable. Feeding pages one by one through the ADF.	
8 231 3	Mixed Size	Selectable. Select "Mixed Sizes" on the operation panel.	
8 231 4	Custom Size	Selectable. Originals of non-standard size.	
8 231 5	Platen	Book mode. Raising the ADF and placing the original directly on the platen.	
8 231 6	Mixed 1side/2side	-	

- If the scan mode is changed during the job, for example, if the user switches from ADF to Platen mode, the count is done for the last selected mode.
- The user cannot select mixed sizes or non-standard sizes with the fax application so if the original's page sizes are mixed or non-standard, these are not counted.
- If the user selects "Mixed Sizes" for copying in the platen mode, the Mixed Size count is enabled.
- In the SADF mode if the user copies 1 page in platen mode and then copies 2 pages with SADF, the Platen count is 1 and the SADF count is 3.

8 241	T:Scan PGS/Org	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of scanned pages by original type for all jobs, regardless of which application was used.		
8 242	C:Scan PGS/Org	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages scanned by original type for Copy jobs.		

**System Service Mode**

8 243	F:Scan PGS/Org	*CTL	[0 to 9999999/ 0 / 1]			
	These SPs count the number of pages scanned by original type for Fax jobs.					
8 245	S:Scan PGS/Org	*CTL	[0 to 9999999/ 0 / 1]			
	These SPs count the number of pages scanned by original type for Scan jobs.					
8 246	L:Scan PGS/Org	*CTL	[0 to 9999999/ 0 / 1]			
	These SPs count the number of pages scanned and stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen					
	<b>8 241</b>		<b>8 242</b>	<b>8 243</b>	<b>8 245</b>	<b>8 246</b>
8 24x 1: Text	Yes	Yes	Yes	Yes	Yes	Yes
8 24x 2: Text/Photo	Yes	Yes	Yes	Yes	Yes	Yes
8 24x 3: Photo	Yes	Yes	Yes	Yes	Yes	Yes
8 24x 4: GenCopy, Pale	Yes	Yes	No	Yes	Yes	Yes
8 24x 5: Map	Yes	Yes	No	Yes	Yes	Yes
8 24x 6: Normal/Detail	Yes	No	Yes	No	No	No
8 24x 7: Fine/Super Fine	Yes	No	Yes	No	No	No
8 24x 8: Binary	Yes	No	No	Yes	No	No
8 24x 9: Grayscale	Yes	No	No	Yes	No	No
8 24x 10: Color	Yes	No	No	Yes	No	No
8 24x 11: Other	Yes	Yes	Yes	Yes	Yes	Yes

- If the scan mode is changed during the job, for example, if the user switches from ADF to Platen mode, the count is done for the last selected mode.

**System Service Mode**

8 251	T:Scan PGS/ImgEdt	*CTL	These SPs show how many times Image Edit features have been selected at the operation panel for each application. Some examples of these editing features are: <ul style="list-style-type: none"> <li>▪ Erase&gt; Border</li> <li>▪ Erase&gt; Center</li> <li>▪ Image Repeat</li> <li>▪ Centering</li> <li>▪ Positive/Negative</li> </ul> [0 to 9999999/ 0 / 1] Note: The count totals the number of times the edit features have been used. A detailed breakdown of exactly which features have been used is not given.
8 252	C:Scan PGS/ImgEdt	*CTL	
8 254	P:Scan PGS/ImgEdt	*CTL	
8 256	L:Scan PGS/ImgEdt	*CTL	
8 257	O:Scan PGS/ImgEdt	*CTL	

The L: counter counts the number of pages stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen.

8 261	T:Scan PGS/ColCr	*CTL	-
8 262	C:Scan PGS/ ColCr	*CTL	-
8 266	L:Scn PGS/ColCr	*CTL	-
8 26x 1	Color Conversion	These SPs show how many times color creation features have been selected at the operation panel.	
8 26x 2	Color Erase		
8 26x 3	Background		
8 26x 4	Other		

8 281	T:Scan PGS/TWAIN	*CTL	These SPs count the number of pages scanned using a TWAIN driver. These counters reveal how the TWAIN driver is used for delivery functions.
8 285	S:Scan PGS/TWAIN	*CTL	

**Appendix:  
SP Mode  
Tables**

**System Service Mode**

			[0 to 9999999/ <b>0</b> / 1] <b>Note:</b> At the present time, these counters perform identical counts.
--	--	--	--

8 291	T:Scan PGS/Stamp	*CTL	These SPs count the number of pages stamped with the stamp in the ADF unit. [0 to 9999999/ <b>0</b> / 1]  The L: counter counts the number of pages stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen
8 293	F:Scan PGS/Stamp	*CTL	
8 295	S:Scan PGS/Stamp	*CTL	

8 301	T:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]
	These SPs count by size the total number of pages scanned by all applications. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-441].		
8 302	C:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]
	These SPs count by size the total number of pages scanned by the Copy application. Use these totals to compare original page size (scanning) and output (printing) page size [SP 8-442].		
8 303	F:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]
	These SPs count by size the total number of pages scanned by the Fax application. Use these totals to compare original page size (scanning) and output page size [SP 8-443].		
8 305	S:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]
	These SPs count by size the total number of pages scanned by the Scan application. Use these totals to compare original page size (scanning) and output page size [SP 8-445].		
8 306	L:Scan PGS/Size	*CTL	[0 to 9999999/ <b>0</b> / 1]

**System Service Mode**

	These SPs count by size the total number of pages scanned and stored from within the document server mode screen at the operation panel, and with the Store File button from within the Copy mode screen. Use these totals to compare original page size (scanning) and output page size [SP 8-446].	
8 30x 1	A3	
8 30x 2	A4	
8 30x 3	A5	
8 30x 4	B4	
8 30x 5	B5	
8 30x 6	DLT	
8 30x 7	LG	
8 30x 8	LT	
8 30x 9	HLT	
8 30x 10	Full Bleed	
8 30x 254	Other (Standard)	
8 30x 255	Other (Custom)	

8 311	T:Scan PGS/Rez	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by resolution setting the total number of pages scanned by applications that can specify resolution settings.		
8 315	S: Scan PGS/Rez	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by resolution setting the total number of pages scanned by applications that can specify resolution settings. <b>Note:</b> At the present time, SP8-311 and SP8-315 perform identical counts.		
8 31x 1	1200dpi <		

Appendix:  
SP Mode  
Tables

**System Service Mode**

8 31x 2	600dpi to 1199dpi		
8 31x 3	400dpi to 599dpi		
8 31x 4	200dpi to 399dpi		
8 31x 5	< 199dpi		

- Copy resolution settings are fixed so they are not counted.
- The Fax application does not allow finely-adjusted resolution settings so no count is done for the Fax application.

8 381	T:Total PrtPGS	*CTL	These SPs count the number of pages printed by the customer. The counter for the application used for storing the pages increments. [0 to 9999999/ 0 / 1] The L: counter counts the number of pages stored from within the document server mode screen at the operation panel. Pages stored with the Store File button from within the Copy mode screen go to the C: counter.
8 382	C:Total PrtPGS	*CTL	
8 383	F:Total PrtPGS	*CTL	
8 384	P:Total PrtPGS	*CTL	
8 385	S:Total PrtPGS	*CTL	
8 386	L:Total PrtPGS	*CTL	
8 387	O:Total PrtPGS	*CTL	

- When the A3/DLT double count function is switched on with SP5104, 1 A3/DLT page is counted as 2.
- When several documents are merged for a print job, the number of pages stored are counted for the application that stored them.
- These counters are used primarily to calculate charges on use of the machine, so the following pages are not counted as printed pages:
  - Blank pages in a duplex printing job.
  - Blank pages inserted as document covers, chapter title sheets, and slip sheets.
  - Reports printed to confirm counts.
  - All reports done in the service mode (service summaries, engine maintenance reports, etc.)
  - Test prints for machine image adjustment.
  - Error notification reports.

**System Service Mode**

- Partially printed pages as the result of a copier jam.

8 391	LSize PrtPGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count pages printed on paper sizes A3/DLT and larger. <b>Note:</b> In addition to being displayed in the SMC Report, these counters are also displayed in the User Tools display on the copy machine.		

8 401	T:PrtPGS/LS	*CTL	These SPs count the number of pages printed from the document server. The counter for the application used to print the pages is incremented.  The L: counter counts the number of jobs stored from within the document server mode screen at the operation panel.  [0 to 9999999/ 0 / 1]
8 402	C:PrtPGS/LS	*CTL	
8 403	F:PrtPGS/LS	*CTL	
8 404	P:PrtPGS/LS	*CTL	
8 405	S:PrtPGS/LS	*CTL	
8 406	L:PrtPGS/LS	*CTL	

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the L: count.
- Fax jobs done with Web Image Monitor and Desk Top Binder are added to the F: count.

8 411	Prints/Duplex	*CTL	This SP counts the amount of paper (front/back counted as 1 page) used for duplex printing. Last pages printed only on one side are not counted.  [0 to 9999999/ 0 / 1]
-------	---------------	------	---

8 421	T:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing. This is the total for all applications.		
8 422	C:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the copier application.		

## System Service Mode

8 423	F:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the fax application.		
8 424	P:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the printer application.		
8 425	S:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by the scanner application.		
8 426	L:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing from within the document server mode window at the operation panel.		
8 427	O:PrtPGS/Dup Comb	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by binding and combine, and n-Up settings the number of pages processed for printing by Other applications		
8 42x 1	Simplex> Duplex		
8 42x 2	Duplex> Duplex		
8 42x 3	Book> Duplex		
8 42x 4	Simplex Combine		
8 42x 5	Duplex Combine		
8 42x 6	2>	2 pages on 1 side (2-Up)	
8 42x 7	4>	4 pages on 1 side (4-Up)	
8 42x 8	6>	6 pages on 1 side (6-Up)	
8 42x 9	8>	8 pages on 1 side (8-Up)	

**System Service Mode**

8 42x 10	9>	9 pages on 1 side (9-Up)		
8 42x 11	16>	16 pages on 1 side (16-Up)		
8 42x 12	Booklet			
8 42x 13	Magazine			

- These counts (SP8 421 to SP8 427) are especially useful for customers who need to improve their compliance with ISO standards for the reduction of paper consumption.
- Pages that are only partially printed with the n-Up functions are counted as 1 page.
- Here is a summary of how the counters work for Booklet and Magazine modes:

Booklet			Magazine	
Original Pages	Count		Original Pages	Count
1	1		1	1
2	2		2	2
3	2		3	2
4	2		4	2
5	3		5	4
6	4		6	4
7	4		7	4
8	4		8	4

8 431	T:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of pages output with the three features below, regardless of which application was used.		
8 432	C:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of pages output with the three features		

**System Service Mode**

	below with the copy application.		
8 434	P:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of pages output with the three features below with the print application.		
8 436	L:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of pages output from within the document server mode window at the operation panel with the three features below.		
8 437	O:PrtPGS/ImgEdt	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the total number of pages output with the three features below with Other applications.		
8 43x 1	Cover/Slip Sheet	Total number of covers or slip sheets inserted. The count for a cover printed on both sides counts 2.	
8 43x 2	Series/Book	The number of pages printed in series (one side) or printed as a book with booklet right/left pagination.	
8 43x 3	User Stamp	The number of pages printed where stamps were applied, including page numbering and date stamping.	

8 441	T:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by all applications.		
8 442	C:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by the copy application.		
8 443	F:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by the fax		

**System Service Mode**

	application.		
8 444	P:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by the printer application.		
8 445	S:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by the scanner application.		
8 446	L:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed from within the document server mode window at the operation panel.		
8 447	O:PrtPGS/Ppr Size	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by print paper size the number of pages printed by Other applications.

8 44x 254	Other (Standard)		
8 44x 255	Other (Custom)		

Appendix:  
SP Mode  
Tables

**System Service Mode**

- These counters do not distinguish between LEF and SEF.

8 451	PrtPGS/Ppr Tray	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of sheets fed from each paper feed station.		
8 451 1	Bypass	Bypass Tray	
8 451 2	Tray 1	Copier	
8 451 3	Tray 2	Copier	
8 451 4	Tray 3	Paper Tray Unit (Option)	
8 451 5	Tray 4	Paper Tray Unit (Option)	
8 451 6	Tray 5	LCT (Option)	
8 451 7	Tray 6	Currently not used.	
8 451 8	Tray 7	Currently not used.	
8 451 9	Tray 8	Currently not used.	
8 451 10	Tray 9	Currently not used.	

8 461	T:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ 0 / 1]
	<p>These SPs count by paper type the number pages printed by all applications.</p> <ul style="list-style-type: none"> <li>▪ These counters are not the same as the PM counter. The PM counter is based on feed timing to accurately measure the service life of the feed rollers. However, these counts are based on output timing.</li> <li>▪ Blank sheets (covers, chapter covers, slip sheets) are also counted.</li> <li>▪ During duplex printing, pages printed on both sides count as 1, and a page printed on one side counts as 1.</li> </ul>		
8 462	C:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by paper type the number pages printed by the copy		

**System Service Mode**

	application.		
8 463	F:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by paper type the number pages printed by the fax application.		
8 464	P:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by paper type the number pages printed by the printer application.		
8 466	L:PrtPGS/Ppr Type	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by paper type the number pages printed from within the document server mode window at the operation panel.		
8 46x 1	Normal		
8 46x 2	Recycled		
8 46x 3	Special		
8 46x 4	Thick		
8 46x 5	Normal (Back)		
8 46x 6	Thick (Back)		
8 46x 7	OHP		
8 46x 8	Other		

8 471	PrtPGS/Mag	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by magnification rate the number of pages printed.		
8 471 1	< 49%		
8 471 2	50% to 99%		
8 471 3	100%		
8 471 4	101% to 200%		

Appendix:  
SP Mode  
Tables

**System Service Mode**

8 471 5	201% <
---------	--------

- Counts are done for magnification adjusted for pages, not only on the operation panel but performed remotely with an external network application capable of performing magnification adjustment as well.
- Magnification adjustments done with printer drivers with PC applications such as Excel are also counted.
- Magnification adjustments done for adjustments after they have been stored on the document server are not counted.
- Magnification adjustments performed automatically during Auto Reduce/Enlarge copying are counted.
- The magnification rates of blank cover sheets, slip sheets, etc. are automatically assigned a rate of 100%.

8 481	T:PrtPGS/TonSave	*CTL	
8 484	P:PrtPGS/TonSave	*CTL	
<p>These SPs count the number of pages printed with the Toner Save feature switched on.</p> <p><b>Note:</b> These SPs return the same results as this SP is limited to the Print application.</p> <p>[0 to 9999999/ 0 / 1]</p>			

8 491	T:PrtPGS/Col Mode	*CTL	These SPs count the number of pages printed in the Color Mode by each application.
8 492	C:PrtPGS/Col Mode	*CTL	
8 493	F:PrtPGS/Col Mode	*CTL	
8 496	L:PrtPGS/Col Mode	*CTL

	These SPs count by color mode the number of pages sent by fax to a telephone number.		
8 63x 1	B/W		
8 63x 2	Color		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8631 and SP8633 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each

## System Service Mode

destination.

8 641	T:IFAX TX PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the number of pages sent by fax to as fax images using I-Fax.		
8 643	F:IFAX TX PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the number of pages sent by Fax as fax images using I-Fax.		
8 64x 1	B/W		
8 64x 2	Color		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8641 and SP8643 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each destination.

8 651	T:S-to-Email PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the total number of pages attached to an e-mail for both the Scan and document server applications.		
8 655	S-to-Email PGS	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the total number of pages attached to an e-mail for the Scan application only.		
8 65x 1	B/W		
8 65x 2	Color		

**System Service Mode**

 Note

- The count for B/W and Color pages is done after the document is stored on the HDD. If the job is cancelled before it is stored, the pages are not counted.
- If Scan-to-Email is used to send a 10-page document to 5 addresses, the count is 10 (the pages are sent to the same SMTP server together).
- If Scan-to-PC is used to send a 10-page document to 5 folders, the count is 50 (the document is sent to each destination of the SMB/FTP server).
- Due to restrictions on some devices, if Scan-to-Email is used to send a 10-page document to a large number of destinations, the count may be divided and counted separately. For example, if a 10-page document is sent to 200 addresses, the count is 10 for the first 100 destinations and the count is also 10 for the second 100 destinations, for a total of 20.).

8 661	T:Deliv PGS/Svr	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by both Scan and LS applications.		
8 665	Deliv PGS/Svr	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the total number of pages sent to a Scan Router server by the Scan application.		
8 66x 1	B/W		
8 66x 2	Color		

 Note

- The B/W and Color counts are done after the document is stored on the HDD of the Scan Router server.
- If the job is canceled before storage on the Scan Router server finishes, the counts are not done.
- The count is executed even if regardless of confirmation of the arrival at the Scan Router server.

8 671	T:Deliv PGS/PC	*CTL	[0 to 9999999/ 0 / 1]
-------	----------------	------	-----------------------

**System Service Mode**

	These SPs count by color mode the total number of pages sent to a folder on a PC (Scan-to-PC) with the Scan and LS applications.		
8 675	Deliv PGS/PC	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count by color mode the total number of pages sent with Scan-to-PC with the Scan application.		
8 67x 1	B/W		
8 67x 2	Color		

8 681	T:PCFAX TXPGS	*CTL	These SPs count the number of pages sent by PC Fax. These SPs are provided for the Fax application only, so the counts for SP8 681 and SP8 683 are the same. [0 to 9999999/ 0 / 1]
8 683	F:PCFAX TXPGS	*CTL	

- This counts pages sent from a PC using a PC fax application, from the PC through the copier to the destination.
- When sending the same message to more than one place using broadcasting, the pages are only counted once. (For example, a 10-page fax is sent to location A and location B. The counter goes up by 10, not 20.)

8 691	T:TX PGS/LS	*CTL	These SPs count the number of pages sent from the document server. The counter for the application that was used to store the pages is incremented. [0 to 9999999/ 0 / 1] The L: counter counts the number of pages stored from within the document server mode screen at the operation panel. Pages stored with the Store File button from within the Copy mode screen go to the C: counter.
8 692	C:TX PGS/LS	*CTL	
8 693	F:TX PGS/LS	*CTL	
8 694	P:TX PGS/LS	*CTL	
8 695	S:TX PGS/LS	*CTL	
8 696	L:TX PGS/LS	*CTL	

**System Service Mode**

**Note**

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the count.
- If several documents are merged for sending, the number of pages stored are counted for the application that stored them.
- When several documents are sent by a Fax broadcast, the F: count is done for the number of pages sent to each destination.

8 701	TX PGS/Port	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages sent by the physical port used to send them. For example, if a 3-page original is sent to 4 destinations via ISDN G4, the count for ISDN (G3, G4) is 12.		
8 701 1	PSTN-1		
8 701 2	PSTN-2		
8 701 3	PSTN-3		
8 701 4	ISDN (G3,G4)		
8 701 5	Network		

8 711	T:Scan PGS/Comp	*CTL	[0 to 9999999/ 0 / 1]
8 715	S:Scan PGS/Comp	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages sent by each compression mode.		
8 715 1	JPEG/JPEG2000		
8 715 2	TIFF(Multi/Single)		
8 715 3	PDF		
8 715 4	Other		

8 725	S: Dvliv PGS/WSD	*CTL	-

System Service Mode

8 735	S: Scan to PGS/Media	*CTL	
x 1	B/W		
x 2	Color		

8 741	RX PGS/Port	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the number of pages received by the physical port used to receive them.		
8 741 1	PSTN-1		
8 741 2	PSTN-2		
8 741 3	PSTN-3		
8 741 4	ISDN (G3,G4)		
8 741 5	Network		

8 771	Dev Counter	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the frequency of use (number of rotations of the development rollers) for black and other color toners.		
8 771 1	Total		
8 771 2	K		
8 771 3	Y		
8 771 4	M		
8 771 5	C		

8 781	Toner Bottle Info.	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the number of already replaced toner bottles. <b>NOTE:</b> Currently, the data in SP7-833-011 through 014 and the data in SP8-781-001 through 004 are the same.		

**System Service Mode**

8 781 1	Toner: BK	The number of black-toner bottles
8 781 2	Toner: Y	The number of yellow-toner bottles
8 781 3	Toner: M	The number of magenta-toner bottles
8 781 4	Toner: C	The number of cyan-toner bottles

8 791	LS Memory Remain	*CTL	This SP displays the percent of space available on the document server for storing documents. [0 to 100 / 0 / 1]
-------	------------------	------	---

	Toner Remain	*CTL	[0 to 100/ 0 / 1]
8 801	These SPs display the percent of toner remaining for each color. This SP allows the user to check the toner supply at any time. <b>Note:</b> This precise method of measuring remaining toner supply (1% steps) is better than other machines in the market that can only measure in increments of 10 (10% steps).		
8 801 1	K		
8 801 2	Y		
8 801 3	M		
8 801 4	C		

8 851	Coverage Count: 0-10%	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 0% to 10%.		
8 851 11	0 to 2%: BK	8 851 31	5 to 7%: BK
8 851 12	0 to 2%: Y	8 851 32	5 to 7%: Y
8 851 13	0 to 2%: M	8 851 33	5 to 7%: M

**System Service Mode**

8 851 14	0 to 2%: C	8 851 34	5 to 7%: C
8 851 21	3 to 4%: BK	8 851 41	8 to 10%: BK
8 851 22	3 to 4%: Y	8 851 42	8 to 10%: Y
8 851 23	3 to 4%: M	8 851 43	8 to 10%: M
8 851 24	3 to 4%: C	8 851 44	8 to 10%: C

8 861	Coverage Count: 11-20%	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 11% to 20%.		
8 861 1	BK		
8 861 2	Y		
8 861 3	M		
8 861 4	C		

8 871	Coverage Count: 21-30%	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is from 21% to 30%.		
8 871 1	BK		
8 871 2	Y		
8 871 3	M		
8 871 4	C		

8 881	Coverage Count: 31%-	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the number of scanned sheets on which the coverage of each color is 31% or higher.		

Appendix:  
SP Mode  
Tables

**System Service Mode**

8 881 1	BK
8 881 2	Y
8 881 3	M
8 881 4	C

8 891	Printing PGS: Present Ink	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the amount of the remaining current toner for each color.		
8 891 1	BK		
8 891 2	Y		
8 891 3	M		
8 891 4	C		

8 901	Printing PGS: Log: Latest 1	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the amount of the remaining previous toner for each color.		
8 901 1	BK		
8 901 2	Y		
8 901 3	M		
8 901 4	C		

8 911	Printing PGS: Log: Latest 2	*CTL	[0 to 9999999/ 0 / 1]
	These SPs display the amount of the remaining 2nd previous toner for each color.		
8 911 1	BK		

**System Service Mode**

8 911 2	Y
8 911 3	M
8 911 4	C

8 921	Coverage Count: Total	*CTL	[0 to 9999999/ 0 / 1]
	Displays the total coverage and total printout number for each color.		
8 921 1	BK (%)		
8 921 2	Y (%)		
8 921 3	M (%)		
8 921 4	C (%)		
8 921 14	BK (Page)		
8 921 15	Y (Page)		
8 921 16	M (Page)		
8 921 17	C (Page)		

8 941	Machine Status	*CTL	[0 to 9999999/ 0 / 1]
	These SPs count the amount of time the machine spends in each operation mode. These SPs are useful for customers who need to investigate machine operation for improvement in their compliance with ISO Standards.		
8 941 1	Operation Time	Engine operation time. Does not include time while controller is saving data to HDD (while engine is not operating).	
8 941 2	Standby Time	Engine not operating. Includes time while controller saves data to HDD. Does not include time spent in Energy Save, Low Power, or Off modes.	

Appendix:  
SP Mode  
Tables

**System Service Mode**

8 941 3	Energy Save Time	Includes time while the machine is performing background printing.
8 941 4	Low Power Time	Includes time in Energy Save mode with Engine on. Includes time while machine is performing background printing.
8 941 5	Off Mode Time	Includes time while machine is performing background printing. Does not include time machine remains powered off with the power switches.
8 941 6	SC	Total time when SC errors have been staying.
8 941 7	PrtJam	Total time when paper jams have been staying during printing.
8 941 8	OrgJam	Total time when original jams have been staying during scanning.
8 941 9	Supply PM Unit End	Total time when toner end has been staying

8 951	AddBook Register	*CTL		
	These SPs count the number of events when the machine manages data registration.			
8 951 1	User Code	User code registrations.	[0 to 9999999/ 0 / 1]	
8 951 2	Mail Address	Mail address registrations.		
8 951 3	Fax Destination	Fax destination registrations.		
8 951 4	Group	Group destination registrations.		
8 951 5	Transfer Request	Fax relay destination registrations for relay TX.		
8 951 6	F-Code	F-Code box registrations.		

**System Service Mode**

8 951 7	Copy Program	Copy application registrations with the Program (job settings) feature.	[0 to 255 / 0 / 255]
8 951 8	Fax Program	Fax application registrations with the Program (job settings) feature.	
8 951 9	Printer Program	Printer application registrations with the Program (job settings) feature.	
8 951 10	Scanner Program	Scanner application registrations with the Program (job settings) feature.	

8 999	Adomin. Counter List	*CTL	[0 to 9999999/ 0 / 1]
	Displays the total coverage and total printout number for each color.		
8 999 1	Total		
8 999 2	Copy: Full Color		
8 999 3	Copy: BW		
8 999 4	Copy: Single Color		
8 999 5	Copy: Two Color		
8 999 6	Printer Full Color		
8 999 7	Printer BW		
8 999 8	Printer Single Color		
8 999 9	Printer Two Color

**9.1.4 TEST PATTERN PRINTING**

Printing Test pattern: SP2-109

Some of these test patterns are used for copy image adjustments but most are used primarily for design testing.

 **Note**

- Do not operate the machine until the test pattern is printed out completely. Otherwise, an SC occurs.

1. Enter the SP mode and select **SP2-109-003**.
2. Enter the number for the test pattern that you want to print and press [#].
3. When you want to select the single color of Magenta, Yellow or Cyan for printing a test pattern, select the color with SP2-109-005 (2: Magenta, 3: Yellow, 4: Cyan).
4. When you want to change the density of printing a test pattern, select the density with SP2-109-006 to -009 for each color.

 **Note**

- If you select "0" with SP2-109-006 to -009, the color to be adjusted to "0" does not come up on a test pattern.
5. When you are prompted to confirm your selection, touch "Yes" to select the test pattern for printing.
  6. Touch "Copy Window" to open the copy window, then select the settings for the test print (paper size etc.).

 **Note**

- If you want to use black and white printing, touch "Black & White" on the LCD. If you want to use color printing, touch "Full Colour" on the LCD.
7. Press the "Start" key to start the test print.
  8. After checking the test pattern, touch "SP Mode" on the LCD to return to the SP mode display.
  9. Reset all settings to the default values.
  10. Touch "Exit" twice to exit SP mode.

D331

## Component Layout

	Size		
<b>Switches</b>			
SW1	Tray Cover	Detects whether the tray cover is opened or not.	9
SW2	Upper Tray Set	Detects whether the upper tray is opened or not.	4
SW3	Lower Tray Set	Detects whether the lower tray is opened or not.	14
<b>Magnetic Clutches</b>			
MC1	Upper Paper Feed	Starts paper feed from the upper tray.	7
MC2	Lower Paper Feed	Starts paper feed from the lower tray.	10
MC3	Relay	Drives the relay rollers.	8
<b>PCBs</b>			
PCB1	Tray Main	Controls the paper tray unit and communicates with the copier/printer.	22
<b>Others</b>			
H1	Optional Tray Heater	Removes humidity from the paper in the trays.	17

### 2.1.4 DRIVE LAYOUT

d331v103

Paper Tray  
Unit PB3030  
D331

1. Paper feed motor	5. Lower paper feed clutch
2. Drive belt	6. Upper paper feed roller
3. Upper paper feed clutch	7. Relay roller
4. Relay clutch	8. Lower paper feed roller

## Paper Feed and Separation Mechanism

**2.2 PAPER FEED AND SEPARATION MECHANISM**

The paper tray holds 500 sheets. The paper feed roller [A] drives the top sheet of paper from the paper tray to the copier/printer. The friction pad [B] allows only one sheet to feed at a time. The friction pad applies pressure to the feed roller with a spring [C].

## 2.3 PAPER LIFT MECHANISM

d331d956

The paper size switch detects when the tray is pushed in.

When the paper tray is pushed into the machine, the pin [A] for the lift motor pressure shaft engages the lift motor coupling [B] and the pin [C] for the bottom plate lift shaft in the tray engages the bottom plate pressure lever coupling [D]. The pin [E] on the rear of the tray pushes the lock lever so that the lift motor can lift the bottom plate pressure lever.

The lift motor turns on, and turns clockwise as viewed on the diagram. The main pressure spring [H] pulls the bottom plate pressure lever, and this lifts the tray bottom plate.

When the top of the stack touches the feed roller, the motor cannot pull up the plate any more, so it pulls the actuator [G] into the lift sensor [F].

The pressure of the feed roller on the paper is now too high, so the lift motor reverses to reduce this pressure. It reverses for 300 ms or 600 ms, depending on the paper size. For smaller paper, it reverses the larger amount (600 ms) to reduce the pressure more.

When the paper tray is pulled out, the pins [A, C] disengage from the couplings [B, D], and

### Paper Lift Mechanism

the bottom plate drops. To make it easier to push the tray in, the lift motor rotates backwards 1.7 seconds to return the bottom plate pressure lever coupling [D] to the original position.

## 2.4 PAPER END DETECTION

d331d105

If there is some paper in the paper tray, the paper stack raises the paper end feeler [A] and the paper end sensor [B] is deactivated.

When the paper tray runs out of paper, the paper end feeler drops into the cutout [C] in the tray bottom plate and the paper end sensor is activated.

When the paper tray is drawn out with no paper in the tray, the shape of the paper end feeler causes it to lift up.

## Paper Height Detection

**2.5 PAPER HEIGHT DETECTION**

d331d956a

The amount of paper in the tray is detected by the combination of on/off signals from two paper height sensors [A] and [B].

When the amount of paper decreases, the bottom plate pressure lever [C] moves the actuator up.

The following combination of sensor signals is sent to the copier/printer.

Amount of Paper	Paper Height Sensor 1	Paper Height Sensor 2
Near End	OFF	ON
30%	ON	ON
70%	ON	OFF
100%	OFF	OFF

When the tray contains paper of a small width, the paper feed pressure may become too low when the thickness of the remaining stack of paper has decreased. The lift motor rotates forward 300 ms after the sensor detects a certain amount of paper remaining in the tray to increase paper feed pressure, simulating the pressure generated by a full tray.

## 2.6 PAPER SIZE DETECTION

d331d108

There are three paper size sensors [A] (SN1, SN2 and SN3) on the paper tray unit. Each paper tray has its own actuator [B], with a unique combination of notches. This actuator is moved when the paper end fence [C] is adjusted for the installed paper. To determine which size has been installed, the CPU reads which paper size sensors the actuator has switched off. Refer to the size detection lists as shown below.

EU/ AISA Size		SN1	SN2	SN3	SP Setting
A6 SEF	148 x 105	OFF	ON	OFF	A5 LEF
B5 LEF	182 x 257	ON	OFF	ON	B6 SEF/ Exe LEF
A4 LEF	210 x 297	ON	ON	OFF	LT LEF/ A5 SEF/ HLT SEF
B5 SEF	257 x 182	OFF	OFF	ON	
LT SEF	279 x 216	OFF	OFF	OFF	
A4 SEF	297 x 210	ON	OFF	OFF	LG SEF
B4 SEF	364 x 257	ON	ON	ON	

## Paper Size Detection

A3 SEF	420 x 297	OFF	ON	ON	DLT SEF
<b>NA Size</b>		<b>SN1</b>	<b>SN2</b>	<b>SN3</b>	<b>SP Setting</b>
A6 SEF	148 x 105	OFF	ON	OFF	A5 LEF
B5 LEF	182 x 257	ON	OFF	ON	Exe LEF/ B6 SEF
LT LEF	210 x 297	ON	ON	OFF	A4 LEF/ A5 SEF/ HLT SEF
B5 SEF	257 x 182	OFF	OFF	ON	
LT SEF	279 x 216	OFF	OFF	OFF	
A4 SEF	297 x 210	ON	OFF	OFF	
LG SEF	364 x 257	ON	ON	ON	
DLT SEF	420 x 297	OFF	ON	ON	A3 SEF

The CPU disables paper feed from a tray if the paper size cannot be detected. If the paper size actuator is broken, or if there is no tray installed, the Add Paper indicator will light.

## 2.7 SIDE AND END FENCES

Paper Tray  
Unit PB3030  
D331

### 2.7.1 SIDE FENCES

If the tray is full of paper and it is pushed in strongly, the fences may deform or bend. This may cause the paper to skew or the side-to-side registration to be incorrect. To correct this, each side fence has a stopper [A] attached to it. Each side fence can be secured with a screw [B], for customers who do not want to change the paper size.

### 2.7.2 END FENCE

As the amount of paper in the tray decreases, the bottom plate [C] lifts up gradually. The end fence [D] is connected to the bottom plate. When the tray bottom plate rises, the end fence moves forward and pushes the back of the paper stack to keep it squared up.

- Transport Motor: Drives the registration and exit rollers.

## 2.2 BASIC OPERATION

### 2.2.1 ORIGINAL SET AND SIZE DETECTION

The original set sensor [A] detects if the original is set or not. The original sensor [B] detects if the original is on the original tray or not (this lets the machine know as early as possible, whether there is another original on the tray).

The original size detection mechanism consists of the four original width sensors ([F]: Width Sensor S, [G]: Width Sensor M, [H] Width Sensor L, [I]: Width Sensor LL) and three original length sensors ([C]: Length Sensor S, [D]: Length Sensor M, [E]: Length Sensor L). Based on the combined output of the length sensors and the width sensors, the machine can detect the size of the original. This integrated detection mechanism is detailed in the table below.

Size	Width Sensor				Length Sensor			Area	
	S	M	L	LL	S	M	L	LT	A/B
A3/SEF (297 x 420)	ON	ON	ON	ON	ON	ON	ON	O	O
B4/SEF (257 x 364)	ON	ON	-	-	ON	ON	ON	-	O
A4/SEF (210 x 297)	ON	-	-	-	ON	ON	-	O	O
A4/LEF (297 x 210)	ON	ON	ON	ON	-	-	-	O	O
B5/SEF (182 x 257)	-	-	-	-	ON	-	-	-	O
B5/LEF (257 x 182)	ON	ON	-	-	-	-	-	-	O
A5/SEF (148 x 210)	-	-	-	-	-	-	-	-	O
A5/LEF (210 x 148)	ON	-	-	-	-	-	-	-	O
11" x 17"/SEF (DLT)	ON	ON	ON	-	ON	ON	ON	O <sup>1</sup>	O <sup>5</sup>

## Basic Operation

11" x 15"/SEF	ON	ON	ON	-	ON	ON	ON	● <sup>1</sup>	-
10" x 14"/SEF	ON	ON	-	-	ON	ON	ON	O	-
8.5" x 14"/SEF (LG)	ON	-	-	-	ON	ON	ON	O <sup>2</sup>	-
8.5" x 13"/SEF (F4)	ON	-	-	-	ON	ON	ON	● <sup>2</sup>	O
8.25" x 13"/SEF	ON				ON	ON	ON	-	-
8" x 13"/SEF (F)	ON	-	-	-	ON	ON	ON	-	-
8.5" x 11"/SEF (LT)	ON	-	-	-	ON	-	-	O <sup>3</sup>	O <sup>6</sup>
8.5" x 11"/LEF (LT)	ON	ON	ON	-	-	-	-	O <sup>4</sup>	O <sup>7</sup>
7.25" x 10.5"/SEF (US EXE)	ON	-	-	-	ON	-	-	O	-

267 mm x 195 mm	ON	ON	ON	-	-	-	-	-	● <sup>7</sup>

**Symbol**

O: Yes (Default), ●: Yes (Can select this with SP mode), ON: Paper present, LT: North America, A/B: Europe, Asia

 Note

- For "O/●" mark, which has superscripted number, it is possible to change the original detection size with SP6-016. For example, instead of LT (O<sup>3</sup>), the machine can be set up to detect 10" x 8" (●<sup>3</sup>).
- The F size can be selected with SP5-126. The default is 8.5" x 13"
- The machine cannot detect more than one size of original in the same job.

**2.2.2 MIXED ORIGINAL SIZE MODE**

This section explains what happens when the user selects mixed original size mode. Because this ARDF is a sheet-through document feeder, the method for original document width detection is the same as when the originals are the same size, but the document length detection method is different. Therefore, the scanning speed is slightly slower.

**Document length detection**

From when the skew correction sensor switches on until it switches off, the CPU counts the transport motor pulses. The number of pulses determines the length of the original.

**Feed-in cycle**

When the original size for the copy modes listed below cannot be determined, the image cannot be correctly scaled (reduced or enlarged) or processed until the original's length has been accurately detected. The length must be determined before the image is scanned.

Auto Reduce/Enlarge
Centering
Erase Center/Border
Booklet
Image Repeat

The originals follow this path:

1. Length detection → Scanning glass → Inverter table
2. Inverter table → Scanning glass → Inverter table (restores the original order)
3. Inverter table → Scanning glass (image scanned) → Exit tray

**Normal feed-in**

In a copy mode other than those listed above, when the reduction/enlargement ratio has been determined, the originals are scanned normally. In order to store the scanned images, a large area of memory (the detected original width x 432 mm length) is prepared. Next, only the portion of the image up to the detected original length is read from memory and printed.

## Basic Operation

**2.2.3 PICK-UP AND SEPARATION**

The original is set with the image facing up. The original pushes actuator and the original set sensor is activated.

After pressing the start button, the feed clutch is activated and the original feed unit [A] moves down. At the same time, the pick-up solenoid is activated and the original table lifts until the original comes in contact with the pick-up roller [B]. The pick-up roller then feeds the top sheet of paper.

After being fed from feed belt [C], the topmost sheet is separated from the stack by the separation roller [D] and sent to the skew correction roller.

The mechanism is an FRR system, consisting of the original feed belt [C] and separation roller [D].

## 2.2.4 SKEW CORRECTION

When an original is fed into the feeder, the feed motor [B] rotates forwards. At this time, the feed belt turns but the skew correction roller [C] does not. Because of this, when the leading edge of the paper gets to the skew correction roller, skew in the original is removed. A short time after the leading edge of the original turns on the skew correction sensor [A], the feed motor [B] turns off for 40 ms and rotates in reverse. At this time, the skew correction roller [C] and the feed belt both turn, and original feed continues. The original is fed by the skew correction roller after the feed clutch [D] has turned off.

## Basic Operation

**2.2.5 ORIGINAL TRANSPORT AND EXIT*****Single-Sided Originals***

The feed motor feeds the separated original to the skew correction roller [A] at maximum speed. After skew correction, the feed and transport motors feed the original through the scanning area at a lower speed (the scanning area contains the original exposure guide [B] and DF exposure glass [C]). After scanning, the original is fed out by the transport roller [D] and exit roller [E].

***Double-Sided Originals***

After skew correction, the feed and transport motors drive the skew correction roller [A], registration roller [B], transport roller [C] and the exit roller [D]. The front side of the original is then scanned.

When the original exit sensor detects the leading edge of the original, the junction gate solenoid is activated and the junction gate [E] opens. The original is then transported

towards the inverter table.

Soon after the trailing edge of the original passes the exit sensor, the junction gate solenoid switches off and the junction gate [E] is closed. When the original has been fed onto the inverter table, the feed motor switches on in reverse. The original is then fed by the inverter roller [F], and then by the skew correction roller [A] and registration roller [B] to the scanning area (where the reverse side will be scanned).

The original is then sent to the inverter table again to be turned over. This is done so that the duplex copies will be properly stacked front side down in the exit tray [G] in the correct order.

### **Original Sensor**

During one-to-one copying, copy paper is fed to the skew correction roller in advance (while the original is still being scanned), to increase the copy speed. The original sensor monitors the stack of originals in the feeder, and detects when the trailing edge of the last page has been fed in. The main CPU then stops the copier from feeding an unwanted extra sheet of copy paper.

### **2.2.6 CONDITIONS FOR JAM DETECTION**

Jam Mode	Detection Timing
Initial	When turning on the machine, the skew correction sensor, registration sensor or exit sensor detects an original.
	When the cover is closed or DF is down, the skew correction sensor, registration sensor or exit sensor detects an original.
	When the cover is opened or DF is lifted up, the skew correction sensor, registration sensor or exit sensor detects an original.

## Basic Operation

Sensor stays on too long	The skew correction sensor does not turn off even if the original was fed by the maximum length of the original + 150 mm after the skew correction sensor turned on.
	The registration sensor does not turn off even if the original was fed by its length x 1.5 after the registration sensor turned on.
	The exit sensor does not turn off even if the original was fed by its length x 1.5 after the exit sensor turned on.
Sensor does not come on	The skew correction sensor does not turn on even if the original was fed by transport path length x 1.5.
	The registration sensor does not turn on even if the original was fed by transport path length x 1.5 after the skew correction sensor turned on.
	The exit sensor does not turn on even the original was fed by transport path length x 1.5 after the skew correction sensor turned on.

### 1.2.2 STAPLER UNIT MOVEMENT MOTOR

1. Front cover (👉 Front Cover)

d429r115

D429 Internal Finisher Type C2550

## Motors

2. Bracket with stapler unit movement motor [A] (⚙️ x 2, spring x 1, belt)

d429r116

3. Two gears [A] (⊕ x 1)

d429r117

4. Stapler unit movement motor [A] (⚙️ x 2)

### 1.3 STAPLER UNIT

1. Front cover (☛ Front Cover)

d429r118

2. White lever [A] (spring x 1, hook)
3. Black lever [B] (hook)

d429r119

4. Shaft [A] (☞ x 1)

↓ Note

- Remove the green stapler cartridge first, to make this step more easy.

d429r122

5. Move the stapler unit [A] to the center.
6. Stand the internal finisher [B] as shown above.
7. Remove two screws.

D429 Internal Finisher Type C2550

## Stapler Unit

**Note:**

d429r123

Make sure that the end fences [A] are placed as shown above when replacing the stapler unit.

d429r124

8. Move the stapler unit to the rear side, and then remove the stapler unit [A] (☞ x 2).

## 1.4 SENSORS

### 1.4.1 MAIN UNIT

#### *Relay Sensor*

d429r107

1. Relay sensor [A] (hook,  x 1)

#### *Belt Roller Position Sensor*

1. Rear cover ( Rear, Left Rear and Rear Inner Cover)
2. Front cover ( Front Cover)

d429r108

3. Top bracket [A] ( x 6)

**Sensors**

d429r109

4. Belt roller position sensor with the bracket [A] (🔧 x 1)
5. Belt roller position sensor [B] (hook, 🪝 x 1)

**Stapler Safety Sensor**

1. Stapler unit (🔧 Stapler Unit)

d429r125

2. Stapler safety sensor [A] (🪝 x 1, hook)

**Stapler Unit HP Sensor**

1. Front cover (🔧 Front Cover)

d429r127

2. Bracket with stapler unit HP sensor (🔧 x 1)
3. Stapler unit HP sensor [A] (hook, 🪝 x 1)

## 1.4.2 INVERTER UNIT

### *Entrance Sensor*

d429r129

1. Bracket with entrance sensor (🔧 x 1)
2. Entrance sensor [A] (🔧 x 1, hook)

D429 Internal  
Finisher  
Type C2550

## Fan

### 1.5 FAN

#### 1.5.1 FRONT FAN

d429r126

1. Front fan [A] (🔧 x 2, 📏 x 1, 📏 x 1)

## Main Board

## 1.6 MAIN BOARD

1. Rear cover (🔩Rear, Left Rear and Rear Inner Cover)
2. Left rear cover (🔩Rear, Left Rear and Rear Inner Cover)

d429r128

3. Main board (🔩 x 2, clip x 2, 📎 x all)

D429 Internal  
Finisher  
Type C2550

Punch Unit

## 1.7 PUNCH UNIT

- The punch unit must be removed from the internal finisher for this procedure.

### 1.7.1 PUNCH SLIDER UNIT

d429r139

1. Brackets [A] and ground plate [B] at the right side of the punch unit (🔧 x 1 each)

d429r138

2. Brackets [A] at the left side of the punch unit (🔧 x 1 each)

d429r140

3. Harness bracket [A] (🔧 x 4)
4. Wire guide cover [B] (🔧 x 1)

Punch Unit

d429r141

- 5. Positioning pins [A] (🔩 x 3, spring)

d429r142

- 6. Punch slider unit [A] (🔧 x all)

D429 Internal  
Finisher  
Type C2550

## Safety and Symbols

### Replacement Procedure Safety

#### **CAUTION**

- Turn off the main power switch and unplug the machine before beginning any of the replacement procedures in this manual.

### Symbols Used in this Manual

This manual uses the following symbols.

: See or Refer to

: Screws

: Connector

: Clip ring

: E-ring

: Clamp

## 1. INSTALLATION PROCEDURE

### 1.1 FAX OPTION (D432) INSTALLATION

This fax option is only used for D038/D041 models.

#### 1.1.1 COMPONENT CHECK

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	FCU	1
2	G3 Decal	1
3	Ferrite Core	1
4	Serial Number Decal	1
5	Fax Keytop	1
6	Data Display Decal Sheet (18 languages: ASIA only)	1
7	Handset Bracket (NA only)	1
8	Telephone Cord (NA only)	1
9	Handset Support Bracket (NA only)	1
10	Screw: M3x6 (NA only)	2
11	Clamp* <sup>1</sup> (NA only)	1
12	FCC Decal (NA only)	1
-	TEL Cap (NA only)	1

\*1: Item No. 11 is used only when the internal finisher (D429) is installed with NA models.

(See "Handset Installation" in the Fax Field Service Manual.)

## Fax Option (D432) Installation

### 1.1.2 FAX OPTION INSTALLATION PROCEDURE

#### **⚠ CAUTION**

- Before installation, print out all data in the printer buffer.
- Push the operation switch to put the machine in standby mode. Make sure the power LED is off, turn the main switch off, and then disconnect the power cord and the network cable.
- The copier must be connected to a properly grounded socket outlet.

1. **For NA models**, attach the FCC decal near the serial number plate of the mainframe.

d432i501

2. Remove the FCCU cover [A] (⚙ x 2).

Fax Option (D432) Installation

D432/D433  
Fax Option  
Type  
C2550/C2530

3. Press down the **MBU** [A].

↓ Note

- Make sure that the **MBU** is seated correctly. If not, SC672 occurs.

4. Remove the jumper [B] (set to OFF) and set it to ON.

↓ Note

- The machine may issue SC819 or SC820 if the jumper is not set to "ON" correctly. (Sometimes these SC codes are not issued.)

5. Install the **FCU** [A] (x 2; removed in step 3).

6. Write the serial number of the fax unit on the serial number decal, and then attach this decal to the bracket [B] of the fax unit.

7. Attach the ferrite core to the telephone cord.

## Fax Option (D432) Installation

### CAUTION

- A telephone cord with the ferrite core must be used for RF interference suppression.
8. Connect the telephone cord to the "LINE" jack.
  9. **Only for NA models:** Install the TEL cap in the "TEL" jack if the handset will not be installed.

d432i107

10. Remove dummy keytop [A] and replace it with the Fax keytop [B].

d432i108

11. Attach the Super G3 decal [A].
12. Plug in the machine and turn on the main power switch.

### Important

- After you turn the machine on, if you see a message that tells you the SRAM has been formatted due to a problem with SRAM, turn the machine off and on again to clear the message.
13. Enter the "User Tools" mode and set date and time.

**Fax Option (D432) Installation**

14. Do SP3102 in the fax SP mode and enter the serial number for the fax unit.
15. Enter the correct country code with SP1101-016 (System SW 0F, Country/area code for functional settings).
16. Exit the SP mode, and turn the machine off and on.

D432/D433  
Fax Option  
Type  
C2550/C2530

## Fax Option (D433) Installation

### 1.2 FAX OPTION (D433) INSTALLATION

This fax option is only used for D037/D040 models.

#### 1.2.1 COMPONENT CHECK

Check the quantity and condition of the components against the following list.

No.	Description	Q'ty
1	FCU	1
2	G3 Decal	1
3	Serial Number Decal	1
4	Fax Operation Panel	1
-	Fax Operation Decal Sheet	1

d433i100

#### 1.2.2 FAX OPTION INSTALLATION PROCEDURE

##### **⚠ CAUTION**

- Before installation, print out all data in the printer buffer.
- Push the operation switch to put the machine in standby mode. Make sure the power LED is off, turn the main switch off, and then disconnect the power cord and the network cable.

Fax Option (D433) Installation

D432/D433  
Fax Option  
Type  
C2550/C2530

- The copier must be connected to a properly grounded socket outlet.

1. Remove the FCU cover [A] (⚙️ x 2).

2. Press down the **MBU** [A].

↓ Note

- Make sure that the **MBU** is seated correctly. If not, SC672 occurs.

3. Remove the jumper [B] (set to OFF) and set it to ON.

↓ Note

- The machine may issue SC819 or SC820 if the jumper is not set to "ON" correctly. (Sometimes these SC codes are not issued.)

### Fax Option (D433) Installation

4. Install the **FCU [A]** (x 2; removed in step 3).
5. Write the serial number of the fax unit on the serial number decal, and then attach this decal to the bracket [B] of the fax unit.
6. Connect the telephone cord to the "LINE" jack.
7. **Only for NA models**, install the TEL cap in the "TEL" jack if the handset will not be installed.

8. Slide the dummy cover [A] to the left side with a flat-head screwdriver, and then remove it (hooks).

9. Put the fax operation panel [A] on the left edge of the copier's operation panel, and then slide it to the right side.
10. Attach the fax function decal at the location [B].
11. Attach an appropriate fax operation decal at the location [C].

## Fax Option (D433) Installation

12. Attach the Super G3 decal [A].
13. Plug in the machine and turn on the main power switch.

**★ Important**

- After you turn the machine on, if you see a message that tells you the SRAM has been formatted due to a problem with SRAM, turn the machine off and on again to clear the message.
14. Enter the "User Tools" mode and set date and time.
  15. Do SP3102 in the fax SP mode and enter the serial number for the fax unit.
  16. Enter the correct country code with SP1101-016 (System SW 0F, Country/area code for functional settings).
  17. Exit the SP mode, and turn the machine off and on.

## Fax Unit Options

### 1.3 FAX UNIT OPTIONS

#### 1.3.1 MEMORY UNIT (G578) (D432 ONLY)

1. Remove the FCU from the machine.

2. Install the memory option [A] on the FCU.
3. Reinstall the FCU in the machine.

#### 1.3.2 HANDSET (B433)

**Note**

- The optional handset is available for the U.S. version only.

1. Remove the screw [A] first, and the rear cover [B] (⚙️ x7).

d432i110

2. Remove the scanner left cover [C] (⚙ x 2).

d432i111

3. Make two holes [D] in the scanner left cover.

d432i112

4. Attach the handset support bracket [E] inside the scanner left cover.

d432i113

### Fax Unit Options

5. Secure the handset bracket [F] (⚙ x 2: M3x6 in the accessories of the FCU option).

d432i115

6. Reattach the scanner left cover to the machine.

d432i119

7. Remove the label [G] from the handset cradle [H].

d432i120

8. Attach the cradle to the handset bracket (⚙ x 2: M3x8).

d432i117

9. Set the handset on the handset bracket.
10. Put the ferrite core [I] on the handset core as shown. The length [J] must be 60 mm.
11. Connect the handset cable to the “TEL” jack at the rear of the machine.

***D037/D041 with the internal finisher***

Do steps from 1 to 9 in the “Handset (B433)” installation procedure.

d432i116

1. Attach the clamp [A] to the scanner left cover.
2. Set the telephone cable [B] as shown above.

d432i114a

3. Put the ferrite core [C] on the handset core as shown. The length [D] must be 60 mm.
4. Connect the handset cable to the “TEL” jack at the rear of the machine.

FCU

---

## 2. REPLACEMENT AND ADJUSTMENT

### 2.1 FCU

1. When you replace the FCU board, remove the MBU board from the old FCU board and install it on the new FCU board.
2. Set the correct date and time with the User Tools: User Tools > System Settings > Timer Setting > Set Date/Time.

 Note

- Do not turn off the battery switch (SW1).
- Do SP6101 to print the system parameters, and check the settings.

## 3. TROUBLESHOOTING

### 3.1 ERROR CODES

If an error code occurs, retry the communication. If the same problem occurs, try to fix the problem as suggested below. Note that some error codes appear only in the error code display and on the service report.

Code	Meaning	Suggested Cause/Action
0-00	DIS/NSF not detected within 40 s of Start being pressed	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ The machine at the other end may be incompatible.</li> <li>▪ Replace the FCU.</li> <li>▪ Check for DIS/NSF with an oscilloscope.</li> <li>▪ If the rx signal is weak, there may be a bad line.</li> </ul>
0-01	DCN received unexpectedly	<ul style="list-style-type: none"> <li>▪ The other party is out of paper or has a jammed printer.</li> <li>▪ The other party pressed Stop during communication.</li> </ul>
0-03	Incompatible modem at the other end	The other terminal is incompatible.
0-04	CFR or FTT not received after modem training	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Try changing the tx level and/or cable equalizer settings.</li> <li>▪ Replace the FCU.</li> <li>▪ The other terminal may be faulty; try sending to another machine.</li> <li>▪ If the rx signal is weak or defective, there may be a bad line.</li> </ul> <p><b>Cross reference</b> Tx level - NCU Parameter 01 (PSTN)</p>

## Error Codes

Code	Meaning	Suggested Cause/Action
		Cable equalizer - G3 Switch 07 (PSTN) Dedicated Tx parameters in Service Program Mode
0-05	Modem training fails even G3 shifts down to 2400 bps.	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Try adjusting the tx level and/or cable equalizer.</li> <li>▪ Replace the FCU.</li> <li>▪ Check for line problems.</li> </ul> <p><b>Cross reference</b> See error code 0-04.</p>
0-06	The other terminal did not reply to DCS	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Try adjusting the tx level and/or cable equalizer settings.</li> <li>▪ Replace the FCU.</li> <li>▪ The other end may be defective or incompatible; try sending to another machine.</li> <li>▪ Check for line problems.</li> </ul> <p><b>Cross reference</b> See error code 0-04.</p>
0-07	No post-message response from the other end after a page was sent	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Replace the FCU.</li> <li>▪ The other end may have jammed or run out of paper.</li> <li>▪ The other end user may have disconnected the call.</li> <li>▪ Check for a bad line.</li> <li>▪ The other end may be defective; try sending to another machine.</li> </ul>
0-08	The other end sent RTN or PIN after receiving a page, because there were too many errors	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Replace the FCU.</li> <li>▪ The other end may have jammed, or run out of paper or memory space.</li> </ul>

## Error Codes

Code	Meaning	Suggested Cause/Action
		<ul style="list-style-type: none"> <li>▪ Try adjusting the tx level and/or cable equalizer settings.</li> <li>▪ The other end may have a defective modem/FCU; try sending to another machine.</li> <li>▪ Check for line problems and noise.</li> </ul> <p><b>Cross reference</b></p> <ul style="list-style-type: none"> <li>▪ Tx level - NCU Parameter 01 (PSTN)</li> <li>▪ Cable equalizer - G3 Switch 07 (PSTN)</li> <li>▪ Dedicated Tx parameters in Service Program Mode</li> </ul>
0-14	Non-standard post message response code received	<ul style="list-style-type: none"> <li>▪ Incompatible or defective remote terminal; try sending to another machine.</li> <li>▪ Noisy line: resend.</li> <li>▪ Try adjusting the tx level and/or cable equalizer settings.</li> <li>▪ Replace the FCU.</li> </ul> <p><b>Cross reference</b> See error code 0-08.</p>
0-15	The other terminal is not capable of specific functions.	<p>The other terminal is not capable of accepting the following functions, or the other terminal's memory is full.</p> <ul style="list-style-type: none"> <li>▪ Confidential rx</li> <li>▪ Transfer function</li> <li>▪ SEP/SUB/PWD/SID</li> </ul>
0-16	CFR or FTT not detected after modem training in confidential or transfer mode	<ul style="list-style-type: none"> <li>▪ Check the line connection.</li> <li>▪ Replace the FCU.</li> <li>▪ Try adjusting the tx level and/or cable equalizer settings.</li> <li>▪ The other end may have disconnected, or it may be defective; try calling another machine.</li> <li>▪ If the rx signal level is too low, there may be a line problem.</li> </ul>

## IFAX Troubleshooting

**3.2 IFAX TROUBLESHOOTING**

Use the following procedures to determine whether the machine or another part of the network is causing the problem.

Communication Route	Item	Action [Remarks]
General LAN	1. Connection with the LAN	<ul style="list-style-type: none"> <li>▪ Check that the LAN cable is connected to the machine.</li> <li>▪ Check that the LEDs on the hub are lit.</li> </ul>
	2. LAN activity	Check that other devices connected to the LAN can communicate through the LAN.
Between IFAX and PC	1. Network settings on the PC	<ul style="list-style-type: none"> <li>▪ Check the network settings on the PC. [Is the IP address registered in the TCP/IP properties in the network setup correct? Check the IP address with the administrator of the network.]</li> </ul>
	2. Check that PC can connect with the machine	<ul style="list-style-type: none"> <li>▪ Use the “ping” command on the PC to contact the machine. [At the MS-DOS prompt, type ping then the IP address of the machine, then press Enter.]</li> </ul>
	3. LAN settings in the machine	<ul style="list-style-type: none"> <li>▪ Check the LAN parameters</li> <li>▪ Check if there is an IP address conflict with other PCs. [Use the “Network” function in the User Tools. If there is an IP address conflict, inform the administrator.]</li> </ul>
Between machine and e-mail server	1. LAN settings in the machine	<ul style="list-style-type: none"> <li>▪ Check the LAN parameters</li> <li>▪ Check if there is an IP address conflict with other PCs. [Use the “Network” function in the User Tools. If there is an IP address conflict, inform the administrator.]</li> </ul>

Communication Route	Item	Action [Remarks]
	2. E-mail account on the server	<ul style="list-style-type: none"> <li>Make sure that the machine can log into the e-mail server.</li> <li>Check that the account and password stored in the server are the same as in the machine.</li> </ul> [Ask the administrator to check.]
	3. E-mail server	<ul style="list-style-type: none"> <li>Make sure that the client devices which have an account in the server can send/receive e-mail.</li> </ul> [Ask the administrator to check. Send a test e-mail with the machine's own number as the destination. The machine receives the returned e-mail if the communication is performed successfully.]
Between e-mail server and internet	1. E-mail account on the Server	<ul style="list-style-type: none"> <li>Make sure that the PC can log into the e-mail server.</li> <li>Check that the account and password stored in the server are the same as in the machine.</li> </ul> [Ask the administrator to check.]
	2. E-mail server	<ul style="list-style-type: none"> <li>Make sure that the client devices which have an account in the server can send/receive e-mail.</li> </ul> [Ask the administrator to check. Send a test e-mail with the machine's own number as the destination. The machine receives the returned e-mail if the communication is performed successfully.]

## IFAX Troubleshooting

Communication Route	Item	Action [Remarks]
	3. Destination e-mail address	<ul style="list-style-type: none"> <li>▪ Make sure that the e-mail address is actually used.</li> <li>▪ Check that the e-mail address contains no incorrect characters such as spaces.</li> </ul>
	4. Router settings	<ul style="list-style-type: none"> <li>▪ Use the “ping” command to contact the router.</li> <li>▪ Check that other devices connected to the router can send data over the router.</li> </ul> <p>[Ask the administrator of the server to check.]</p>
	5. Error message by e-mail from the network of the destination.	<ul style="list-style-type: none"> <li>▪ Check whether e-mail can be sent to another address on the same network, using the application e-mail software.</li> <li>▪ Check the error e-mail message.</li> </ul> <p>[Inform the administrator of the LAN.]</p>

### 3.3 IP-FAX TROUBLESHOOTING

#### 3.3.1 IP-FAX TRANSMISSION

##### *Cannot send by IP Address/Host Name*

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	Specified IP address/host name correct?	Check the IP address/host name.
3	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
4	Transmission sent manually?	Manual sending not supported.
5	IP address of local machine registered?	Register the IP address.
6	Remote terminal port number setting other than 1720?	Send by specifying the port number.
7	Specified port number correct?	Confirm the port number of the remote fax.
8	DNS server registered when host name specified?	Contact the network administrator.
9	Remote fax a T.38 terminal?	Check whether the remote fax is a T38 terminal.
10	Remote fax switched off or busy?	Check that the remote fax is switched on.
11	Network bandwidth too narrow?	Request the network administrator to increase the bandwidth.
		Raise the delay level. IPFAX SW 01 Bit 0 to 3

**IP-Fax Troubleshooting**

		IP-Fax bandwidth is the same as the DCS speed. Set IP-Fax SW00 Bit 6 to 1.
12	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

**Cannot send via VoIP Gateway**

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	VoIP Gateway T.38 standard?	Contact the network administrator.
3	VoIP Gateway installed correctly?	Contact the network administrator.
4	VoIP Gateway power switched on?	Contact the network administrator.
5	Is the IP address/host name of the specified Gateway correct?	Check the IP address/host name.
6	Number of the specified fax correct?	Check the remote fax number.
7	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
8	Transmission sent manually?	Manual sending not supported.
9	IP address of local fax registered?	Register the IP address.
10	DNS registered when host name specified?	Contact the network administrator.
11	Remote fax a G3 fax?	Check that the remote fax is a G3 fax.
12	G3 fax is connected to VoIP gateway?	Check that G3 fax is connected.
13	Remote G3 fax turned on?	Check that G3 fax is switched on.

## IP-Fax Troubleshooting

14	Network bandwidth too narrow?	Request the network administrator to increase the bandwidth.
		Raise the network delay level. IPFAX SW 01 Bit 0 to 3
		IP-Fax bandwidth is the same as the DCS speed. Set IP-Fax SW00 Bit 6 to 1.

D432/D433  
 Fax Option  
 Type  
 C2550/C2530

**Cannot send by Alias Fax number.**

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	Number of specified Alias fax correct?	Confirm the Alias of the remote fax. Error Code: 13-14
3	Firewall/NAT installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
4	Transmission sent manually?	Manual sending not supported.
5	Gatekeeper installed correctly?	Contact the network administrator.
6	Gatekeeper power switched on?	Contact the network administrator.
7	IP address/host name of Gatekeeper correct?	Check the IP address/host name.
8	DNS server registered when Gatekeeper host name specified?	Contact the network administrator.
9	Enable H.323 SW is set to on?	Check the settings. See User Parameter SW 34 Bit 0
10	IP address of local fax registered?	Register the IP address of the local fax.
11	Alias number of local fax registered?	Register the Alias number of the local

**IP-Fax Troubleshooting**

		fax.
12	Remote fax registered in Gatekeeper?	Contact the network administrator.
13	Remote fax a T.38 terminal?	Check whether the remote fax is a T38 terminal.
14	Remote fax switched off or busy?	Contact the network administrator.
15	Network bandwidth too narrow?	Request the system administrator to increase the bandwidth.
		Raise the delay level. IPFAX SW 01 Bit 0 to 3
		Lower the modem transmission baud rate. IPFAX SW 05
16	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

**3.3.2 IP-FAX RECEPTION*****Cannot receive via IP Address/Host Name.***

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot breach the firewall. Send by using another method (Fax, Internet Fax)
3	IP address of local fax registered?	Register the IP address.
4	Port number specified at remote sender fax (if required)?	Request the sender to specify the port number.
5	Specified port number correct (if required)?	Request the sender to check the port number.

## IP-Fax Troubleshooting

6	DNS server registered when host name specified on sender side?	Contact the network administrator.  Note <ul style="list-style-type: none"> <li>The sender machine displays this error code if the sender fax is a Ricoh model.</li> </ul>
7	Network bandwidth too narrow?	Request the system administrator to increase the bandwidth.
		Lower the start modem reception baud rate on the receiving side. IPFAX SW06
8	Remote fax cancelled transmission?	Check whether the remote fax cancelled the transmission.

D432/D433  
 Fax Option  
 Type  
 C2550/C2530

**Cannot receive by VoIP Gateway.**

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot breach the firewall. Request the remote fax to send by using another method (Fax, Internet Fax)
3	VoIP Gateway installed correctly?	Contact the network administrator.
4	VoIP Gateway power switched on?	Contact the network administrator.
5	IP address/host name of specified VoIP Gateway correct on sender's side?	Request the remote fax to check the IP address/host name.
6	DNS server registered when host name specified on sender side?	Contact the network administrator.
7	Network bandwidth too narrow?	Request the network administrator to increase the bandwidth.
8	G3 fax connected?	Check that G3 fax is connected.

**IP-Fax Troubleshooting**

9	G3 fax power switched on?	Check that G3 fax is switched on.
---	---------------------------	-----------------------------------

**Cannot receive by Alias Fax number.**

Check Point		Action
1	LAN cable connected?	Check the LAN cable connection.
2	Firewall/NAT is installed?	Cannot the breach firewall. Request the remote fax to send by using another method (Fax, Internet Fax)
3	Gatekeeper installed correctly?	Contact the network administrator.  Note <ul style="list-style-type: none"> <li>The sender machine displays this error code when the sender fax is a Ricoh model.</li> </ul>
4	Power to Gatekeeper switched on?	Contact the network administrator.  Note <ul style="list-style-type: none"> <li>The sender machine displays this error code when the sender fax is a Ricoh model.</li> </ul>
5	IP address/host name of Gatekeeper correct on the sender's side?	Request the sender to check the IP address/host name.  Note <ul style="list-style-type: none"> <li>The sender machine displays this error code when the sender fax is a Ricoh model.</li> </ul>
6	DNS server registered when Gatekeeper host name specified on sender's side?	Contact the network administrator.  Note <ul style="list-style-type: none"> <li>The sender machine displays this error code when the sender fax is a Ricoh model.</li> </ul>
7	Enable H.323 SW is set to on?	Request the sender to check the settings.

## IP-Fax Troubleshooting

		<p>User Parameter SW 34 Bit 0</p> <p>↓ Note</p> <ul style="list-style-type: none"> <li>Only if the remote sender fax is a Ricoh fax.</li> </ul>

## 4. SERVICE TABLE

### 4.1 BEFOREHAND

#### CAUTION

- Never turn off the main power switch when the power LED is lit or flashing. To avoid damaging the hard disk or memory, press the operation power switch to switch the power off, wait for the power LED to go off, and then switch the main power switch off.

#### Note

- The main power LED (Ⓢ) lights or flashes while the platen cover or ARDF is open, while the main machine is communicating with a facsimile or the network server, or while the machine is accessing the hard disk or memory for reading or writing data.

## 4.2 SERVICE TABLES

### 4.2.1 SP1-XXX (BIT SWITCHES)

#### ☛ Bit Switches

1	Mode No.	Function
101	System Switch	
	001 – 032	00 – 1F Change the bit switches for system settings for the fax option ☛ "Bit Switches"
102	Ifax Switch	
	001 – 016	00 – 0F Change the bit switches for internet fax settings for the fax option ☛ "Bit Switches"
103	Printer Switch	
	001 – 016	00 – 0F Change the bit switches for printer settings for the fax option ☛ "Bit Switches"
104	Communication Switch	
	001 – 032	00 – 1F Change the bit switches for communication settings for the fax option ☛ "Bit Switches"
105	G3-1 Switch	
	001 – 016	00 – 0F Change the bit switches for the protocol settings of the standard G3 board ☛ "Bit Switches"
111	IP fax Switch	
	001 – 016	00 – 0F Change the bit switches for optional IP fax parameters ☛ "Bit Switches"

## Service Tables

## 4.2.2 SP2-XXX (RAM DATA)

2	Mode No.		Function
101	RAM Read/Write		
	001		Change RAM data for the fax board directly. ☛ "Service RAM Addresses"
102	Memory Dump		
	001	G3-1 Memory Dump	Print out RAM data for the fax board. ☛ "Service RAM Addresses"
103	G3-1 NCU Parameters		
	001 – 023	CC, 01 – 22	NCU parameter settings for the standard G3 board. ☛ "NCU Parameters"

## 4.2.3 SP3-XXX (TEL LINE SETTINGS)

3	Mode No.		Function
101	Service Station		
	001	Fax Number	Enter the fax number of the service station.
102	Serial Number		
	000		Enter the fax unit's serial number.
103	PSTN-1 Port Settings		
	001	Select Line	Select the line type setting for the G3-1 line. If the machine is installed on a PABX line, select "PABX", "PABX(GND)" or "PABX(FLASH)".
	002	PSTN Access Number	Enter the PSTN access number for the G3-1 line.

## Service Tables

	003	Memory Lock Disabled	Not used
107	IPFAX Port Settings		
	001	H323 Port	Sets the H323 port number.
	002	SIP Port	Sets the SIP port number.
	003	RAS Port	Sets the RAS port number.
	004	Gatekeeper port	Sets the Gatekeeper port number.
	005	T.38 Port	Sets the T.38 port number.
	006	SIP Server Port	Sets the SIP port number.
	007	IPFAX Protocol Priority	Select "H323" or "SIP".
201	FAX SW		
	001 – 032	00 – 1F	

D432/D433  
 Fax Option  
 Type  
 C2550/C2530

#### 4.2.4 SP4-XXX (ROM VERSIONS)

4	Mode No.		Function
101	001	FCU ROM Version	Displays the FCU ROM version.
102	001	Error Codes	Displays the latest 64 fax error codes.
103	001	G3-1 ROM Version	Displays the G3-1 modem version.

#### 4.2.5 SP5-XXX (INITIALIZING)

5	Mode No.	Function
101	Initialize SRAM (except Secure)	

**Service Tables**

	000	Initializes the bit switches and user parameters, user data in the SRAM, files in the SAF memory, and clock.
102	Erase All Files	
	000	Erases all files stored in the SAF memory.
103	Reset Bit Switches (except Secure)	
	000	Resets the bit switches and user parameters.
104	Factory setting	
	000	Resets the bit switches and user parameters, user data in the SRAM and files in the SAF memory.
105	Initialize All Bit Switches	
	000	Initializes all the current bit switch settings.
106	Initialize Security Bit Switches	
	000	Initializes only the security bit switches. If you select automatic output/display for the user parameter switches, the security settings are initialized.

**4.2.6 SP6-XXX (REPORTS)**

<b>6</b>	Mode No.	Function
101	System Parameter List	
	000	- Touch the "ON" button to print the system parameter list.
102	Service Monitor Report	
	000	- Touch the "ON" button to print the service monitor report.
103	G3 Protocol Dump List	

Service Tables

D432/D433  
Fax Option  
Type  
C2550/C2530

	001	G3 All Communications	Prints the protocol dump list of all communications for all G3 lines.
	002	G3-1 (All Communications)	Prints the protocol dump list of all communications for the G3-1 line.
	003	G3-1 (1 Communication)	Prints the protocol dump list of the last communication for the G3-1 line.
105	All Files print out		
	000	-	<p>Prints out all the user files in the SAF memory, including confidential messages.</p> <p><a href="#">↓ Note</a></p> <ul style="list-style-type: none"> <li>Do not use this function, unless the customer is having trouble printing confidential messages or recovering files stored using the memory lock feature.</li> </ul>
106	Journal Print out		
	001	All Journals	The machine prints all the communication records on the report.
	002	Specified Date	The machine prints all communication records after the specified date.
107	Log List Print out		
	001	All log files	These log print out functions are for designer use only.
	002	Printer	
	003	SC/TRAP Stored	
	004	Decompression	
	005	Scanner	
	006	JOB/SAF	
	007	Reconstruction	

**Service Tables**

	008	JBIG	
	009	Fax Driver	
	010	G3CCU	
	011	Fax Job	
	012	CCU	
	013	Scanner Condition	
108	IP Protocol Dump List		
	001	All Communications	Prints the protocol dump list of all communications for the IP fax line.
	002	1 Communication	Prints the protocol dump list of the last communication for the IP fax line.

**4.2.7 SP7-XXX (TESTS)**

These are the test modes for PTT approval.

<b>7</b>	Function
101	G3-1 Modem Tests
102	G3-1 DTMF Tests
103	Ringer Test
104	G3-1 V34 (S2400baud)
105	G3-1 V34 (S2800baud)
106	G3-1 V34 (S3000baud)
107	G3-1 V34 (S3200baud)
108	G3-1 V34 (S3429baud)
109	Recorded Message Test

## 4.3 BIT SWITCHES

### **WARNING**

- Do not adjust a bit switch or use a setting that is described as “Not used”, as this may cause the machine to malfunction or to operate in a manner that is not accepted by local regulations. Such bits are for use only in other areas, such as Japan.

#### Note

- Default settings for bit switches are not listed in this manual. Refer to the System Parameter List printed by the machine.

### 4.3.1 SYSTEM SWITCHES

System Switch 00 [SP No. 1-101-001]		
No	FUNCTION	COMMENTS
0	Dedicated transmission parameter programming 0: Disabled, 1: Enabled	Set this bit to 1 before changing any dedicated transmission parameters. Reset this bit to 0 after programming dedicated transmission parameters.
1	<b>Not used</b>	Do not change

## Bit Switches

System Switch 00 [SP No. 1-101-001]		
No	FUNCTION	COMMENTS
2	Technical data printout on the Journal 0: Disabled 1: Enabled	1: Instead of the personal name, the following data are listed on the Journal for each G3 communication.
	e.g. 0000 (1) // 32 (2) V34 (3) // 288 (4) // 264 (5) // L0100 (6) 03 (7) 04 (8) (1): EQM value (Line quality data). A larger number means more errors. (2): Symbol rate (V.34 only) (3): Final modem type used (4): Starting data rate (for example, 288 means 28.8 kbps) (5): Final data rate (6): Rx level (refer to the note after this table for how to read the rx level) (7): Total number of error lines that occurred during non-ECM reception. (8): Total number of burst error lines that occurred during non-ECM reception.	
	<p> Note</p> <ul style="list-style-type: none"> <li>▪ EQM and rx level are fixed at "FFFF" in tx mode.</li> <li>▪ The seventh and eighth numbers are fixed at "00" for transmission records and ECM reception records.</li> </ul>	
	Rx level calculation Example: 0000 // 32 V34 // 288/264 // L 01 00 03 04 The four-digit hexadecimal value (N) after "L" indicates the rx level. The high byte is given first, followed by the low byte. Divide the decimal value of N by -16 to get the rx level. In the above example, the decimal value of N (= 0100 [H]) is 256. So, the actual rx level is $256/-16 = -16$ dB	
3	<b>Not used</b>	Do not change this setting.
4	Line error mark print 0: OFF, 1: ON (print)	When "1" is selected, a line error mark is printed on the printout if a line error occurs during reception.
5	G3 communication parameter	This is a fault-finding aid. The LCD shows the key

**Bit Switches**

D432/D433  
Fax Option  
Type  
C2550/C2530

	display 0: Disabled 1: Enabled	parameters (see below). This is normally disabled because it cancels the CSI display for the user. Be sure to reset this bit to 0 after testing.
6	Protocol dump list output after each communication 0: Off 1: On	This is only used for communication troubleshooting. It shows the content of the transmitted facsimile protocol signals. Always reset this bit to 0 after finishing testing. If system switch 09 bit 6 is at "1", the list is only printed if there was an error during the communication.
7	Not used	Do not change the setting.

**System Switch 01 - Not used** (Do not change the factory settings.)

<b>System Switch 02 [SP No. 1-101-003]</b>		
<b>No</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0-1	<b>Not used</b>	Do not change these settings.
2	Force after transmission stall 0: Off 1: On	With this setting on, the machine resets itself automatically if a transmission stalls and fails to complete the job.
3	<b>Not used</b>	Do not change these settings.
4	File retention time 0: Depends on User Parameter 24 [18(H)] 1: No limit (until the year 2126)	1: A file that had a communication error will not be erased unless the communication is successful.
5	<b>Not used</b>	Do not change this setting.
6-7	Memory read/write by RDS Bit 7: 0, Bit 6: 0	(0,0): All RDS systems are always locked out. (0,1), (1,0): Normally, RDS systems are locked

**Bit Switches**

	Always disabled Bit 7: 0, Bit 6: 1 User selectable Bit 7: 1, Bit 6: 0 User selectable Bit 7: 1, Bit 6: 1 Always enabled	out, but the user can temporarily switch RDS on to allow RDS operations to take place. RDS will automatically be locked out again after a certain time, which is stored in System Switch 03. Note that if an RDS operation takes place, RDS will not switch off until this time limit has expired. (1,1): At any time, an RDS system can access the machine.
--	---	---

<b>System Switch 03 [SP No. 1-101-004]</b>		
<b>No</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0-7	Length of time that RDS is temporarily switched on when bits 6 and 7 of System Switch 02 are set to "User selectable"	00 - 99 hours (BCD). This setting is only valid if bits 6 and 7 of System Switch 02 are set to "User selectable". The default setting is 24 hours.

<b>System Switch 04 [SP No. 1-101-005]</b>		
<b>No</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0-2	<b>Not used</b>	Do not change these settings.
3	Printing dedicated tx parameters on Quick/Speed Dial Lists 0: Disabled 1: Enabled	1: Each Quick/Speed dial number on the list is printed with the dedicated tx parameters.
4-7	<b>Not used</b>	Do not change these settings.

<b>System Switch 05 - Not used</b> (Do not change the factory settings.)
<b>System Switch 06 - Not used</b> (Do not change the factory settings.)
<b>System Switch 07 - Not used</b> (Do not change the factory settings.)

## Bit Switches

**System Switch 08 - Not used** (Do not change the factory settings.)

**System Switch 09 [SP No. 1-101-010]**

No	FUNCTION	COMMENTS
0	Addition of image data from confidential transmissions on the transmission result report 0: Disabled 1: Enabled	If this feature is enabled, the top half of the first page of confidential messages will be printed on transmission result reports.
1	Inclusion of communications on the Journal when no image data was exchanged. 0: Disabled 1: Enabled	0: Communications that reached phase C (message tx/rx) of the T.30 protocol are listed on the Journal. 1: Communications that reached phase A (call setup) of T.30 protocol are listed on the Journal. This will include telephone calls.
2	Automatic error report printout 0: Disabled 1: Enabled	0: Error reports will not be printed. 1: Error reports will be printed automatically after failed communications.
3	Printing of the error code on the error report 0: No 1: Yes	1: Error codes are printed on the error reports.
4	<b>Not used</b>	Do not change this setting.
5	Power failure report 0: Disabled 1: Enabled	1: A power failure report will be automatically printed after the power is switched on if a fax message disappeared from the memory when the power was turned off last.
6	Conditions for printing the protocol dump list 0: Print for all communications 1: Print only when there is a communication error	This switch becomes effective only when system switch 00 bit 6 is set to 1. 1: Set this bit to 1 when you wish to print a protocol dump list only for communications with errors.

## 4.3.2 I-FAX SWITCHES

I-fax Switch 00 [SP No. 1-102-001]		
No	FUNCTION	COMMENTS
	Original Width of TX Attachment File	This setting sets the maximum size of the original that the destination can receive. (Bits 3~7 are reserved for future use or not used.)
0	A4	0: Off (not selected), 1: On (selected) If more than one of these three bits is set to "1", the larger size has priority. For example, if both Bit 2 and Bit 1 are set to "1" then the maximum size is "A3" (Bit 2). When mail is sent, there is no negotiation with the receiving machine at the destination, so the sending machine cannot make a selection for the receiving capabilities (original width setting) of the receiving machine. The original width selected with this switch is used as the RX machine's original width setting, and the original is reduced to this size before sending. The default is A4. If the width selected with this switch is higher than the receiving machine can accept, the machine detects this and this causes an error.
1	B4	
2	A3	
3-6	Reserved	
7	Not used

No	FUNCTION	COMMENTS
0	Paper size selection priority 0: Width 1: Length	0: A paper size that has the same width as the received data is selected first. 1: A paper size which has enough length to print all the received lines without reduction is selected first.
1	Paper size selected for printing A4 width fax data 0: 8.5" x 11" size 1: A4 size	This switch determines which paper size is selected for printing A4 width fax data, when the machine has both A4 and 8.5" x 11" size paper.
2	Page separation 0: Enabled 1: Disabled	1: If all paper sizes in the machine require page separation to print a received fax message, the machine does not print the message (Substitute Reception is used). After a larger size of paper is set in a cassette, the machine automatically prints the fax message.

**Bit Switches**

3-4	Printing the sample image on reports Bit 4: 0, Bit 3: 0 = The upper half only Bit 4: 0, Bit 3: 1 = 50% reduction in sub-scan only Bit 4: 1, Bit 3: 0 = Same size Bit 4: 1, Bit 3: 1 = <b>Not used</b>	“Same size” means the sample image is printed at 100%, even if page separation occurs. User Parameter Switch 19 (13H) bit 4 must be set to “0” to enable this switch. Refer to Detailed Section Descriptions for more on this feature.
5-6	<b>Not used</b>	Do not change the settings.
7	Equalizing the reduction ratio among separated pages (Page Separation) 0: Enabled 1: Disabled	0: When page separation has taken place, all the pages are reduced with the same reduction ratio. 1: Only the last page is reduced to fit the selected paper size when page separation has taken place. Other pages are printed without reduction.

2-3	Compression modes available in transmit mode Bit 3: 0 Bit 2: 0 = MH only Bit 3: 0 Bit 2: 1 = MH/MR Bit 3: 1 Bit 2: 0 = MH/MR/MMR Bit 3: 1 Bit 2: 1 = MH/MR/MMR/JBIG	These bits determine the compression capabilities to be used in the transmission and to be declared in phase B (handshaking) of the T.30 protocol.
4	<b>Not used</b>	Do not change the settings.
5	JBIG compression method: Reception 0: Only basic supported 1: Basic and optional both supported	Change the setting when communication problems occur using JBIG compression.
6	JBIG compression method: Transmission 0: Basic mode priority 1: Optional mode priority	Change the setting when communication problems occur using JBIG compression.

**Bit Switches**

7	<b>Not used</b>	Do not change the settings.
---	-----------------	-----------------------------

<b>Communication Switch 01 [SP No. 1-104-002]</b>		
<b>No</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0	ECM 0: Off 1: On	If this bit is set to 0, ECM is switched off for all communications. In addition, V.8 protocol and JBIG compression are switched off automatically.
1	<b>Not used</b>	Do not change the settings.
2-3	Wrong connection prevention method Bit 3: 0, Bit 2: 0 = None Bit 3: 0, Bit 2: 1 = 8 digit CSI Bit 3: 1, Bit 2: 0 = 4 digit CSI Bit 3: 1, Bit 2: 1 = CSI/RTI	(0,1) - The machine will disconnect the line without sending a fax message, if the last 8 digits of the received CSI do not match the last 8 digits of the dialed telephone number. This does not work when manually dialed. (1,0) - The same as above, except that only the last 4 digits are compared. (1,1) - The machine will disconnect the line without sending a fax message, if the other end does not identify itself with an RTI or CSI. (0,0) - Nothing is checked; transmission will always go ahead.  <b>Note</b> <ul style="list-style-type: none"> <li>▪ This function does not work when dialing is done from the external telephone.</li> </ul>
4-5	<b>Not used</b>	Do not change the setting.
6-7	Maximum printable page length available Bit 7: 0 Bit 6: 0 = No limit Bit 7: 0 Bit 6: 1 = B4 (364 mm) Bit 7: 1 Bit 6: 0 = A4 (297 mm) Bit 7: 1 Bit 6: 1 = <b>Not used</b>	The setting determined by these bits is informed to the transmitting terminal in the pre-message protocol exchange (in the DIS/NSF frames).

## Bit Switches

Communication Switch 02 [SP No. 1-104-003]		
No	FUNCTION	COMMENTS
0	G3 Burst error threshold 0: Low 1: High	If there are more consecutive error lines in the received page than the threshold, the machine will send a negative response. The Low and High threshold values depend on the sub-scan resolution, and are as follows.
		100 dpi      6(L) → 12(H)
		200 dpi      12(L) → 24(H)
		300 dpi      18(L) → 36(H)
		400 dpi      24(L) → 48(H)
1	Acceptable total error line ratio 0: 5% 1: 10%	If the error line ratio for a page exceeds the acceptable ratio, RTN will be sent to the other end.
2	Treatment of pages received with errors during G3 reception 0: Deleted from memory without printing 1: Printed	0: Pages received with errors are not printed.
3	Hang-up decision when a negative code (RTN or PIN) is received during G3 immediate transmission 0: No hang-up, 1: Hang-up	0: The next page will be sent even if RTN or PIN is received. 1: The machine will send DCN and hang up if it receives RTN or PIN. This bit is ignored for memory transmissions or if ECM is being used.
4-7	<b>Not used</b>	Do not change the settings.

## Bit Switches

	Bit 1: 0, Bit 0: 1 = 400 (ms) Bit 1: 1, Bit 0: 0 = 800 (ms) Bit 1: 1, Bit 0: 1 = <b>Not used</b>	
2	Select cancellation of high-speed RX if carrier signal lost while receiving 0: Off 1: On	This switch setting determines if high-speed receiving ends if the carrier signal is lost when receiving during non-ECM mode
3	<b>Not used</b>	Do not change the settings
4	Maximum allowable frame interval during image data reception. 0: 5 s 1: 13 s	This bit set the maximum interval between EOL (end-of-line) signals and the maximum interval between ECM frames from the other end. Try using a longer setting if error code 0-21 is frequent.
5	<b>Not used</b>	Do not change the settings.
6	Reconstruction time for the first line in receive mode 0: 6 s 1: 12 s	When the sending terminal is controlled by a computer, there may be a delay in receiving page data after the local machine accepts set-up data and sends CFR. This is outside the T.30 recommendation. But, if this delay occurs, set this bit to 1 to give the sending machine more time to send data. Refer to error code 0-20. ITU-T T.30 recommendation: The first line should come within 5 s of CFR.
7	<b>Not used</b>	Do not change the settings.

**G3 Switch 0B - Not used** (do not change the settings).

**G3 Switch 0C - Not used** (do not change the settings)

**G3 Switch 0D - Not used** (do not change the settings).

**Bit Switches**

<b>G3 Switch 0E [SP No 1-105-015]</b>		
0-7	Set CNG send time interval Some machines on the receiving side may not be able to automatically switch the 3-second CNG interval.	
	High order bit	3000-2250ms: 3000-50xNms 3000 – 50 x Nms 0F (3000 ms) ≤ N ≤ FF (2250 ms)
	Low order bit	00-0E(3000-3700ms: 3000+50xNms 3000 – 50 x Nms 0F (3000 ms) ≤ N ≤ 0F (3700 ms)

<b>G3 Switch 0F [SP No. 1-105-016]</b>		
<b>No</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0	Alarm when an error occurred in Phase C or later 0: Disabled 1: Enabled	If the customer wants to hear an alarm after each error communication, change this bit to "1".
1	Alarm when the handset is off-hook at the end of communication 0: Disabled 1: Enabled	If the customer wants to hear an alarm if the handset is off-hook at the end of fax communication, change this bit to "1".
2	<b>Not used</b>	Do not change the settings.
4	Sidaa manual calibration setting 0: Off 1: On	1: manually calibrates for communication with a line, whose current change occurs such as an optical fiber line.
5-7	<b>Not used</b>	Do not change the settings.

## 4.3.6 IP FAX SWITCHES

IP Fax Switch 00 [SP No. 1-111-001]		
No.	FUNCTION	COMMENTS
0	<b>Not used</b>	Do not change this setting.
1	IP Fax Transport 0: TCP, 1: UDP	Selects TCP or UDP protocol for IP-Fax
2	IP Fax single port selection 0: OFF, 1: ON (enable)	Selects single data port.
3	IP Fax double ports (single data port) selection 0: OFF, 1: ON (enable)	Selects whether IP-Fax uses a double port.
4	IP Fax Gatekeeper 0: OFF, 1: ON (enable)	Enables/disables the communication via the gatekeeper for IP-Fax.
5	IP Fax T30 bit signal reverse 0: LSB first, 1: MSB first	Reverses the T30 bit signal.
6	IP Fax max bit rate setting 0: Not affected, 1: Affected	When "0" is selected, the max bit rate does not affect the value of the DIS/DCS. When "1" is selected, the max bit rate affects the value of the DIS/DCS.
7	IP Fax received telephone number confirmation 0: No confirmation, 1: Confirmation	When "0" is selected, fax data is received without checking the telephone number. When "1" is selected, fax data is received only when confirming that the telephone number from the sender matches the registered telephone number in this machine. If this confirmation fails, the line is disconnected.

**Bit Switches**

IP-Fax Switch 01						
No.	FUNCTION					COMMENTS
0-3	Select IP FAX Delay Level					Raise the level by selecting a higher setting if too many transmission errors are occurring on the network. If TCP/UDP is enabled on the network, raise this setting on the T.30 machine. Increasing the delay time allows the recovery of more lost packets. If only UDP is enabled, increase the number of redundant packets. Level 1~2: 3 Redundant packets Level 3: 4 Redundant packets
	Bit3	Bit2	Bit1	Bit0	Setting	
	0	0	0	0	Level 0	
	0	0	0	1	Level 1	
	0	0	1	0	Level 2	
	0	0	1	1	Level 3	
4-7	IP Fax preamble wait time setting					Selects the preamble wait time. [00 to 0f] There are 16 values in this 4-bit binary switch combination. Waiting time: set value level x 100 ms Max: 0f (1500 ms) Min: 00 (No wait time) The default is "0000" (00H).

IP Fax Switch 02 [SP No. 1-111-003]		
No.	FUNCTION	COMMENTS
0	IP Fax bit signal reverse setting 0: Maker code setting 1: Internal bit switch setting	When "0" is selected, the bit signal reverse method is decided by the maker code. When "1" is selected, the bit signal reverse method is decided by the internal bit switch. When communicating between IP Fax devices, LSB first is selected.)
1	IP Fax transmission speed setting 0: Modem speed 1: No limitation	Selects the transmit speed for IP Fax communication.

## Bit Switches

2	SIP transport setting 0: TCP 1: UDP	This bit switch sets the transport that has priority for receiving IP Fax data. This function is activated only when the sender has both TCP and UDP.
3	CCM connection 0: No CCM connection 1: CCM connection	When "1" is selected, only the connection call message with H.323 or no tunneled H.245 is transmitted via CCM.
4	Message reception selection from non-registered SIP server 0: Answer 1: Not answer	0: This answers the INVITE message from the SIP server not registered for the machine. 1: This does not receive the INVITE message from the SIP server not registered for the machine and send a refusal message.
5	ECM communication setting 0: No limit for image compression 1: Limit for image compression	0: This does not limit the type of the image compression with ECM communication. 1: When the other end machine is Cisco, this permits the image compression other than JBIG or MMR with ECM communication.
6-7	<b>Not used</b>	Do not change these settings.

IP Fax Switch 03 [SP No. 1-111-004]		
No.	FUNCTION	COMMENTS
0	Effective field limitation for G3 standard function information 0: OFF, 1: 4byte (DIS)	Limits the effective field for standard G3 function information.
1	Switching between G3 standard and G3 non standard 0: Enable switching 1: G3 standard only	Enables/disables switching between G3 standard and G3 non-standard.
2	Not used.	Do not change this setting.

**Bit Switches**

3	ECM frame size selection at transmitting 0: 256byte, 1: 64byte	Selects the ECM frame size for sending.
4	DIS detection times for echo prevention 0: 1 time, 1: 2 times	Sets the number of times for DIS to detect echoes.
5	CTC transmission selection 0: PPRx1 1: PPRx4	When "0" is selected, the transmission condition is decided by error frame numbers. When "1" is selected, the transmission condition is based on the ITU-T method.
6	Shift down setting at receiving negative code 0: OFF, 1: ON	Selects whether to shift down when negative codes are received.
7	<b>Not used</b>	Do not change this setting.

<b>IP Fax Switch 04 [SP No. 1-111-005]</b>		
<b>No.</b>	<b>FUNCTION</b>	<b>COMMENTS</b>

<b>IP Fax Switch 09 [SP No. 1-111-010]</b>		
<b>No.</b>	<b>FUNCTION</b>	<b>COMMENTS</b>
0	Network I/F setting for SIP connection 0: IPv4 1: IPv6.	Selects the connection type (IPV4 or IPV6) to connect to the SIP server.
1	Network I/F setting for Fax communication 0: Same setting as SIP server connection 1: Automatic setting	0: The I/F setting for fax communication follows the setting for SIP server connection. 1: The negotiation between the SIP server and the device decides whether IPv4 or IPv6 is used for the I/F setting for fax communication.
2	Record-route setting 0: Disable 1: Enable	0: Disables the record-route function of the SIP server. 1: Enables the record-route function of the SIP server.
3-7	<b>Not used</b>	Do not change these settings.

## 4.4 NCU PARAMETERS

The following tables give the RAM addresses and the parameter calculation units that the machine uses for ringing signal detection and automatic dialing. The factory settings for each country are also given. Most of these must be changed by RAM read/write (SP2-102), but some can be changed using NCU Parameter programming (SP2-103, 104 and 105); if SP2-103, 104 and 105 can be used, this will be indicated in the Remarks column. The RAM is programmed in hex code unless (BCD) is included in the Unit column.

 **Note**

- The following addresses describe settings for the standard NCU.
- Change the fourth digit from “5” to “6” (e.g. 680500 to 680600) for the settings for the first optional G3 interface unit and from “5” to “7” (e.g. 680700) for the settings for the second optional G3 interface unit.

## NOTES

1. If a setting is not required, store FF in the address.

2. Italy and Belgium only

RAM address 68055E: the lower four bits have the following meaning.

Bit 2 - 1: International dial tone cadence detection enabled (Belgium)

Bit 1 - Not used

Bit 0 - 1: PSTN dial tone cadence detection enabled (Italy)

If bit 0 or bit 2 is set to 1, the functions of the following RAM addresses are changed.

680508 (if bit 0 = 1) or 680538 (if bit 2 = 1): tolerance for on or off state

duration (%), and number of cycles required for detection, coded as in address 680533.

68050B (if bit 0 = 1) or 68053B (if bit 2 = 1): on time, hex code (unit = 20 ms)

68050C (if bit 0 = 1) or 68053C (if bit 2 = 1): off time, hex code (unit = 20 ms)

3. Pulse dial parameters (addresses 68054A to 68054F) are the values for 10 pps. If 20 pps is used, the machine automatically compensates.

4. The first ring may not be detected until 1 to 2.5 wavelengths after the time specified by this parameter.

5. The calculated level must be between 0 and 10.

The attenuation levels calculated from RAM data are:

High frequency tone:

- $-0.5 \times N_{680552/680554} - 3.5$  dBm
- $-0.5 \times N_{680555}$  dBm

Low frequency tone:

- $-0.5 \times (N_{680552/680554} + N_{680553}) - 3.5$  dBm
- $-0.5 \times (N_{680555} + N_{680553})$  dBm

 Note

- $N_{680552}$ , for example, means the value stored in address 680552(H)

**NCU Parameters**

6. 68054A: Europe - Between Ds opening and Di opening, France - Between Ds closing and Di opening  
68054D: Europe - Between Ds closing and Di closing, France - Between Ds opening and Di closing
7. Tone signals which frequency is lower than 1500Hz (e.g., 800Hz tone for AI short protocol) refer to the setting at 6805B5h. Tones which frequency is higher than 1500Hz refer to the setting at 6805B6h.
8. 68054A, 68054D, 68054E: The actual inter-digit pause (pulse dial mode) is the sum of the period specified by the RAM addresses 68054A, 68054D, and 68054E.

## 4.5 DEDICATED TRANSMISSION PARAMETERS

There are two sets of transmission parameters: Fax and E-mail

Each Quick Dial Key and Speed Dial Code has eight bytes of programmable parameters allocated to it. If transmissions to a particular machine often experience problems, store that terminal's fax number as a Quick Dial or Speed Dial, and adjust the parameters allocated to that number.

The programming procedure will be explained first. Then, the eight bytes will be described.

### 4.5.1 PROGRAMMING PROCEDURE

1. Set the bit 0 of System Bit Switch 00 to 1.
2. Enter Address Book Management mode ([User Tools]> System Settings> Key Operator> Address Book Management).
3. Select the address book that you want to program.
4. For the fax parameter, select "Fax Dest.", for the E-mail parameter, select "E-mail", then press "Start". Make sure that the LED of the Start button lights green.
5. The settings for the switch 00 are now displayed. Press the bit number that you wish to change.
6. To scroll through the parameter switches, either:
7. Select the next switch: press "Next" or Select the previous switch: "Prev." until the correct switch is displayed. Then go back to step 6.
8. After the setting is changed, press "OK".
9. After finishing, reset bit 0 of System Bit Switch 00 to 0.

### 4.5.2 PARAMETERS

#### *Fax Parameters*

The initial settings of the following fax parameters are all FF(H) - all the parameters are disabled.

<b>Switch 00</b>
<b>FUNCTION AND COMMENTS</b>
ITU-T T1 time (for PSTN G3 mode) If the connection time to a particular terminal is longer than the NCU parameter setting, adjust this byte. The T1 time is the value stored in this byte (in hex code), multiplied by 1

**Dedicated Transmission Parameters**

second.  
**Range:**  
 0 to 120 s (00h to 78h)  
 FFh - The local NCU parameter factory setting is used.  
 Do not program a value between 79h and FEh.

Switch 01							
No	FUNCTION						COMMENTS
0-4	Tx level						If communication with a particular remote terminal often contains errors, the signal level may be inappropriate. Adjust the Tx level for communications with that terminal until the results are better. If the setting is "Disabled", the NCU parameter 01 setting is used. <span style="background-color: #e6f2ff; border: 1px solid #000080; padding: 2px;">↓ Note</span> <ul style="list-style-type: none"> <li>▪ Do not use settings other than listed on the left.</li> </ul>
	Bit4	Bit3	Bit2	Bit1	Bit0		
	0	0	0	0	0	0	
	0	0	0	0	1	-1	
	0	0	0	1	0	-2	
	0	0	0	1	1	-3	
	0	0	1	0	0	-4	
	↓	↓	↓	↓	↓	↓	
	0	1	1	1	1	-15	
	1	1	1	1	1	Disabled	
5-7	Cable equalizer Bit 7: 0, Bit 6: 0, Bit 5: 0 = None Bit 7: 0, Bit 6: 0, Bit 5: 1 = Low Bit 7: 0, Bit 6: 1, Bit 5: 0 = Medium Bit 7: 0, Bit 6: 1, Bit 5: 1 = High Bit 7: 1, Bit 6: 1, Bit 5: 1 = Disabled						Use a higher setting if there is signal loss at higher frequencies because of the length of wire between the modem and the telephone exchange when calling the number stored in this Quick/Speed Dial. Also, try using the cable equalizer if one or more of the following symptoms occurs. Communication error with error codes such as 0-20, 0-23, etc.

**Dedicated Transmission Parameters**

		<p>Modem rate fallback occurs frequently.</p> <p><a href="#">↓ Note</a></p> <ul style="list-style-type: none"> <li>▪ Do not use settings other than listed on the left.</li> </ul> <p>If the setting is “Disabled”, the bit switch setting is used.</p>

Bits 2 to 3: Not used

Bit 4: Indicates the parties 0: Not indicated, 1: Indicated

Bit 5: Include sender's name on reports 0: Off, 1: On

Bit 6: Not used

Bit 7: Inclusion of a sample image on reports 0: Off, 1: On

**6800D5(H) - User parameter switch 05 (SWUSR\_05)**

Bit 0: Substitute reception when the base copier is in an SC condition

0: Enabled, 1: Disabled

Bits 1 and 2: Condition for substitute rx when the machine cannot print messages (Paper end, toner end, jam, and during night mode)

Bit 2: 0, Bit 1: 0 = The machine receives all the fax messages.

Bit 2: 0, Bit 1: 1 = The machine receives the fax messages with RTI or CSI.

Bit 2: 1, Bit 1: 0 = The machine receives the fax messages with the same ID code.

Bit 2: 1, Bit 1: 1 = The machine does not receive anything.

Bit 3: Not used

Bit 4: Not used

Bit 5: Just size printing 0: Off, 1: On

Bit 6: Not used

Bit 7: Add paper display when a cassette is empty 0: Off, 1: On

**6800D6(H) - User parameter switch 06 (SWUSR\_06):** Not used

**6800D7(H) - User parameter switch 07 (SWUSR\_07)**

Bit 0 Ringing 0: Off, 1: On

Bit 1: Automatic answering message 0: Off, 1: On

Bit 2: Parallel memory transmission 0: Off, 1: On

Bits 3 and 4: Not used

## Service RAM Addresses

Bit 5: Remote control 0: Off, 1: On

Bits 6 and 7: Not used

**6800D8(H) - User parameter switch 08 (SWUSR\_08)**

Bits 0 and 1: Not used.

Bit 2: Authorized reception

0: Only faxes from senders whose RTIs/CSIs are specified for this feature are accepted.

1: Only faxes from senders whose RTIs/CSIs are not specified for this feature are accepted.

Bits 3 to 7: Not used.

**6800D9(H) - User parameter switch 09 (SWUSR\_09):** Not used

**6800DA(H) - User parameter switch 10 (SWUSR\_0A)**

Bits 0 to 2: Not used

Bit 3: Page reduction 0: Off, 1: On

Bits 4 and 5: Not used

Bit 6: Use both e-mail notification and printed reports to confirm the transmission results 0: Off, 1: On

Bit 7: Not used

**6800DB(H) - User parameter switch 11 (SWUSR\_0B)**

Bits 0 and 1: Not used

Bit 2: White original detection 0: Off, 1: On (alarm and alert message on the LCD)

Bit 3: Receive rejection for 1300 Hz transmission 0: Off (receive), 1: On (not receive)

Bit 5: Not used

Bit 6: Printout of messages received while acting as a forwarding station 0: Off, 1: On

Bit 7: Not used

**6800DC(H) - User parameter switch 12 (SWUSR\_0C):** Not used

**6800DD(H) - User parameter switch 13 (SWUSR\_0D):** Not used

**6800DE(H) - User parameter switch 14 (SWUSR\_0E)**

Bit 0: Message printout while the machine is in Night Printing mode 0: On, 1: Off

Bit 1: Maximum document length detection 0: Double letter, 1: Longer than double-letter (well log) – up to 1,200 mm

Bit 2: Not used

Bit 3: Fax mode settings, such as resolution, before a mode key (Copy/Fax/Printer/Scanner) is pressed 0: Not cleared, 1: Cleared

Bits 4 to 6: Not used

Bit 7: Not used

**6800DF(H) - User parameter switch 15 (SWUSR\_0F)**

**Service RAM Addresses**

(This switch is not printed on the user parameter list.)

Bits 0, 1 and 2: Cassette for fax printout

Bit 2: 0, Bit 1: 0, Bit 0: 1 = 1st paper feed station

Bit 2: 0, Bit 1: 1, Bit 0: 0 = 2nd paper feed station

Bit 2: 0, Bit 1: 1, Bit 0: 1 = 3rd paper feed station

Bit 2: 1, Bit 1: 0, Bit 0: 0 = 4th paper feed station

Bit 2: 1, Bit 1: 0, Bit 0: 1 = LCT

Other settings Not used

Bits 3 and 4: Not used

Bit 5: Using the cassette specified by bits 0, 1 and 2 above only 0: On, 1: Off

Bits 6 and 7: Not used

**6800E0(H) – User parameter switch 16 (SWUSR\_10)**

(This switch is not printed on the user parameter list.)

Bits 0 and 1: Not used

Bit 2: Paper size selection priority for an A4 size fax message when A4/LT size paper is not available. 0: A3 has priority, 1: B4 has priority

Bits 3 to 7: Not used

**6800E1(H) – User parameter switch 17 (SWUSR\_11)**

Bit 0: Not used

⇒ Bit 1: Broadcasting 0: Disabled, 1: Enabled

Bit 2: Inclusion of the “Add” button when a sequence of Quick/Speed dials is selected for broadcasting 0:Not needed, 1: Needed

⇒ Bits 3 ,5 and 6: Not used

⇒ Bit 4: Display Destination Prior to Transmission 0: Disabled, 1: Enabled

Bit 7: Press “Start” key without an original when using on hook dial or the external phone, 0: displays “Cannot detect original size”. 1: Receives fax messages.

**6800E2(H) - User parameter switch 18 (SWUSR\_12)**

Bit 0: TTI date 0: Off, 1: On

Bit 1: TTI sender 0: Off, 1: On

Bit 2: TTI file number 0: Off, 1: On

Bit 3: TTI page number 0: Off, 1: On

Bits 4 to 6: Not used

Bit 7: Japan only

**6800E3(H) - User parameter switch 19 (SWUSR\_13)**

Bit 0: Not used

Bit 1: Journal format

Rev. 02/2009

Service RAM Addresses

D432/D433  
Fax Option  
Type  
C2550/C2530

0: The Journal is separated into transmissions and receptions

1: The Journal is separated into G3-1, G3-2, and G3-3 communications

Bit 2: Not used

Bit 3: 90° image rotation during B5 portrait Tx (This switch is not printed on the user parameter list.) 0: Off, 1: On

Bit 4: Reduction of sample images on reports to 50% in the main scan and sub-scan directions. (This switch is not printed on the user parameter list.) 0: Technician adjustment (printer switch 0E bits 3 and 4), 1: 50% reduction

Bit 5: Use of A5 size paper for reports (This switch is not printed on the user parameter list.)

0: Off, 1: On

Bits 6 and 7: Not used

**6800E4(H) - User parameter switch 20 (SWUSR\_14)**

Bit 0: Automatic printing of the LAN fax result report 0: Off, 1: On

Bit 1: Not used.

Bits 2 to 5: Store documents in memory which could not be printed from PC fax (LAN fax) driver

Bit 5	Bit 4	Bit 3	Bit 2	Setting
0	0	0	0	0 min.
0	0	0	1	1 min.
↓	↓	↓	↓	↓
1	1	1	0	14 min.
1	1	1	1	15 min.

Bits 6 and 7: Not used.

**6800E5(H) - User parameter switch 21 (SWUSR\_15)**

Bit 0: Print results of sending reception notice request message 0: Disabled (print only when error occurs), 1: Enabled

Bit 1: Respond to e-mail reception acknowledgment request 0: Disabled, 1: Enabled

Bit 2: Not used

⇒ Bit 3: File format for forwarded folders and E-Mail 0: TIFF, 1: PDF

Bit 4: Transmit Journal by E-mail 0: Disabled, 1: Enabled

Bit 5: Not used

**Service RAM Addresses**

**Rev. 12/2008**

Bit 6: Network error display 0: Displayed, 1: Not displayed

Bit 7: Transmit error mail notification 0: Enabled, 1: Disabled

**6800E6(H) - User parameter switch 22 (SWUSR\_16)**

(This switch is not printed on the user parameter list.)

Bit 0: Dial tone detection (PSTN 1) 0: Disabled, 1: Enabled

⇒ Bits 1 to 3: Not used

⇒ Bits 4 to 7: Destination Reentered Count (0 -15) (See chart ☛)

Reentered Count				
7	6	5	4	Count
0	0	0	0	0
0	0	0	1	1
0	0	1	0	2
				⋮
1	1	1	1	15

**6800E7(H) – User parameter switch 23 (SWUSR\_17):** Not used

**6800E8(H) - User parameter switch 24 (SWUSR\_18):** Not used

**6800E9(H) - User parameter switch 25 (SWUSR\_19)**

Bit 0: Not used

Bit 1: Reception mode switch timer 0: Off, 1: On (switching Fax or Fax/Tel)

Bit 2: Mode priority switch 0: Fax first, 1: Tel first

Bit 3: Dial in function (Japan Only)

Bit 4: RDS operation 0: Not acceptable, 1: Acceptable for the limit specified by system switch 03

**Note**

- This bit is only effective when RDS operation can be selected by the user (see system switch 02).

Bits 5 to 7: Not used

**6800EA(H) - 6800EB(H) - User parameter switches 26 - 27 (SWUSR\_1A - 1B):** Not used

**6800EC(H) - User parameter switch 28(SWUSR\_1C)**

**Xxxxxx**

**6800ED(H) - User parameter switch 29(SWUSR\_1D)**

**xxxxxxx**

**6800EE(H) and 6800EF(H) - User parameter switches 30 and 31 (SWUSR\_1E and 1F):**

Not used

**6800F0(H) - User parameter switch 32 (SWUSR\_20)**

Bit 0: Quotation priority for a destination when there is no destination of the specified type

0: Paper output priority = Priority order: 1. IP-fax destination, 2. Fax Number, 3. E-mail address, 4. Folder

1: Electric putout order = Priority order: 1. E-mail address, 2. Folder, 3. IP-fax destination, 4. Fax number

Bits 1 to 7: Not used

**6800F1(H) - User parameter switch 33 (SWUSR\_21):** Not used

**6800F2(H) - User parameter switch 34 (SWUSR\_22)**

## Service RAM Addresses

Bit 0: Gatekeeper server used with IP-Fax 0: Disabled, 1: Enabled

Bit 1: SIP server used with IP-Fax 0: Disabled, 1: Enabled

Bits 2 to 7: Not used

**680100 to 68010F(H)** - G4 Parameter Switches – Not used

**680110 to 68012F(H)** - G4 Internal Switches – Not used

**680130 to 68016F(H)** - Service Switches

**680170 to 68017F(H)** - IFAX Switches

**680180 to 68018F(H)** - IP-FAX Switches

**680190 to 6801AF(H)** - Service station's fax number (SP3-101)

**6801B0 to 6801B9(H)** - Own fax PABX extension number

**6801BA to 6801C3(H)** - Own fax number (PSTN) – Not used

**6801C4 to 6801D7(H)** - Own fax number (ISDN G4) – Not used

**6801D8 to 6801E3(H)** - The first subscriber number (ISDN G3) – Not used

**6801E4 to 6801EF(H)** - The second subscriber number (ISDN G3) – Not used

**6801F0 to 6801FB(H)** - The first subscriber number (ISDN G4) – Not used

**6801FC to 680207(H)** - The second subscriber number (ISDN G4) – Not used

**680208 to 68021B(H)** - PSTN-1 RTI (Max. 20 characters - ASCII) - See the following note.

**68021C to 68022F(H)** - PSTN-2 RTI (Max. 20 characters - ASCII) - Not used

**680230 to 680246(H)** - PSTN-3 RTI (Max. 20 characters - ASCII) - Not used

**680247 to 680286(H)** - TTI 1 (Max. 64 characters - ASCII) - See the following note.

**680287 to 6802C6(H)** - TTI 2 (Max. 64 characters - ASCII) - Not used

**6802C7 to 680306(H)** - TTI 3 (Max. 64 characters - ASCII) - Not used

**680307 to 68031A(H)** - PSTN-1 CSI (Max. 20 characters - ASCII)

**68031B to 68032E(H)** - PSTN-2 CSI (Max.20 characters - ASCII) - Not used

**68032F to 680342(H)** - PSTN-3 CSI (Max.20 characters - ASCII) - Not used

**680343(H)** - Number of PSTN-1 CSI characters (Hex)

**680344(H)** - Number of PSTN-2 CSI characters (Hex) - Not used

**680345(H)** - Number of PSTN-3 CSI characters (Hex) - Not used

 Note

- If the number of characters is less than the maximum (20 for RTI, 32 for TTI), add a stop code (00[H]) after the last character.

**680380 to 680387(H)** - Last power off time (Read only)

680380(H) - 01(H) - 24-hour clock, 00(H) - 12-hour clock (AM), 02(H) - 12-hour clock (PM)

680381(H) - Year (BCD)

680382(H) - Month (BCD)

680383(H) - Day (BCD)

**Service RAM Addresses**

680384(H) – Hour

680385(H) – Minute

680386(H) – Second

680387(H) - 00: Monday, 01: Tuesday, 02: Wednesday, /// , 06: Sunday

**680394(H)** - Optional equipment (Read only – Do not change the settings)

Bit 0: Page Memory      0: Not installed, 1: Installed

Bit 1: SAF Memory      0: Not installed, 1: Installed

Bits 2 to 7; Not used

**680395(H)** - Optional equipment (Read only – Do not change the settings)

Bits 0 to 3: Not used

Bit 4: G3-2 0: Not installed, 1: Installed

Bit 5: G3-3 0: Not installed, 1: Installed

Bit 6 and 7: Not used

**680406 to 68040A** – Option G3 board (G3-2) ROM information (Read only)

680406(H) - Suffix (BCD)

680407(H) - Version (BCD)

680408(H) - Year (BCD)

680409(H) - Month (BCD)

68040A(H) - Day (BCD)

**68040B to 68040F** – Option G3 board (G3-3) ROM information (Read only)

68040B(H) - Suffix (BCD)

68040C(H) - Version (BCD)

68040D(H) - Year (BCD)

68040E(H) - Month (BCD)

68040F(H) - Day (BCD)

**680410(H)** - G3-1 Modem ROM version (Read only)**680412(H)** - G3-2 Modem ROM version (Read only)**680414(H)** - G3-3 Modem ROM version (Read only)**680420(H)** - Number of multiple sets print (Read only)**680476(H)** - Time for economy transmission (hour in 24h clock format - BCD)**680477(H)** - Time for economy transmission (minute - BCD)**680492(H)** - Transmission monitor volume 00 - 07(H)**680493(H)** - Reception monitor volume 00 - 07(H)**680494(H)** - On-hook monitor volume 00 - 07(H)**680495(H)** - Dialing monitor volume 00 - 07(H)**680496(H)** - Buzzer volume 00 - 07(H)

## Service RAM Addresses

- 680497(H)** - Beeper volume 00 - 07(H)
- 6804A8(H)** - Machine code (Check ram 4)
- 68918E(H)** - Gatekeeper server address - Main (Max. 128 characters - ASCII)
- 68920E(H)** - Gatekeeper server address - Sub (Max. 128 characters - ASCII)
- 68928E(H)** - Arias Number (Max. 128 characters - ASCII)
- 68930E(H)** - SIP user name (Max. 128 characters - ASCII)
- 68938E(H)** - **SIP digest authentication password** (Max. 128 characters - ASCII)
- 68940E(H)** - Gateway address information (Max. 7100 characters - ASCII)
- 68AFCA(H)** - Stand-by port number for H.232 connection
- 68AFCH** - Stand-by port number for SIP connection
- 68AFCE(H)** - RAS port number
- 68AFD0(H)** - Gatekeeper port number
- 68AFD2(H)** - Port number of data waiting for T.38
- 68AFD4(H)** - Port number of SIP server
- 68AFD6(H)** - Priority for SIP and H.323 0: H.323, 1: SIP
- 68AFD7(H)** - SIP function 0: Disabled, 1: Enabled
- 68AFD8(H)** - H.323 function 0: Disabled, 1: Enabled
- 68AFD9(H)** - **SIP digest authentication function** 0: Disabled, 1: Enabled
- 68AFDA(H)** - **IP-Fax backup data** 00 - 600 (H) - Not used
- 69ED6A(H) to 69ED92(H)** - SIP server address (Read only)
- 69ED6A(H) - Proxy server - Main (Max. 128 characters - ASCII)
- 69ED72(H) - Proxy server - Sub (Max. 128 characters - ASCII)
- 69ED7A(H) - Redirect server - Main (Max. 128 characters - ASCII)
- 69ED82(H) - Redirect server - Sub (Max. 128 characters - ASCII)
- 69ED8A(H) - Registrar server - Main (Max. 128 characters - ASCII)
- 69ED92(H) - Registrar server - Sub (Max. 128 characters - ASCII)
- 6BEBFE(H) - 6BEC1E (H) - Dial tone detection parameter** (Max. 11 x 3 lines)
- This initializes following order. [0x04, 0x40, 0x03, 0x60, 0x64, 0xf4, 0x01, 0x64, 0x04, 0xc8, 0x00]
- 6BEBFE(H)** – Dial tone detection frequency – Upper limit (High)
- Defaults: NA: 06, EU: 06, ASIA: 06
- 6BEBFF(H)** – Dial tone detection frequency – Upper Limit (Low)
- Defaults: NA: 50, EU: 50, ASIA: 50
- 6BEC00(H)** – Dial tone detection frequency – Lower Limit (High)
- Defaults: NA: 03, EU: 02, ASIA: 02
- 6BEC01(H)** – Dial tone detection frequency – Lower Limit (Low)

**Service RAM Addresses**

Defaults: NA: 60, EU: 90, ASIA: 90

**6BEC02(H)** –Dial tone detection waiting time (20 ms)

Defaults: NA: 64, EU 64, ASIA: 64

**6BEC03 to 6BEC04** – Dial tone detection monitoring time (20 ms)

Defaults

Area	6BEC03	6BEC04
NA	F4	01
EU	F4	01
ASIA	F4	01

**6BEC05(H)** – Dial tone detect judge time (20 ms)

Defaults: NA: 64, EU: 1B, ASIA: 32

**6BEC06(H)** – Dial tone disconnect permission time (20 ms)

Defaults: NA: 11, EU: 0F, ASIA: 11

## 5. SPECIFICATIONS

### 5.1 GENERAL SPECIFICATIONS

#### 5.1.1 FCU

Type:	Desktop type transceiver
Circuit:	PSTN PABX
Connection:	Direct couple
Original Size:	Book (Face down) Maximum Length: 432 mm [17 ins] Maximum Width: 297 mm [11.7 ins] ARDF (Face up) (Single-sided document) Length: 128 - 1200 mm [5.0 - 47.2 ins] Width: 105 - 297 mm [4.1 - 11.7 inch] (Double-sided document) Length: 128 - 432 mm [5.0 - 17 inch] Width: 105 - 297 mm [4.1 - 11.7 inch]
Scanning Method:	Flat bed, with CCD
Resolution:	G3 8 x 3.85 lines/mm (Standard) 8 x 7.7 lines/mm (Detail) 8 x 15.4 line/mm (Fine) See Note 1 16 x 15.4 line/mm (Super Fine) See Note 1 200 x 100 dpi (Standard) 200 x 200 dpi (Detail) 400 x 400 dpi (Super Fine) See Note 1 <a href="#">Note</a> <ul style="list-style-type: none"> <li>▪ Optional Expansion Memory required</li> </ul>

**General Specifications**

Transmission Time:	G3: 3 s at 28800 bps; Measured with G3 ECM using memory for an ITU-T #1 test document (Slerexe letter) at standard resolution
Data Compression:	MH, MR, MMR, JBIG
Protocol:	Group 3 with ECM
Modulation:	V.34, V.33, V.17 (TCM), V.29 (QAM), V.27ter (PHM), V.8, V.21 (FSK)
Data Rate:	G3: 33600/31200/28800/26400/24000/21600/ 19200/16800/14400/12000/9600/7200/4800/2400 bps Automatic fallback
I/O Rate:	With ECM: 0 ms/line Without ECM: 2.5, 5, 10, 20, or 40 ms/line
Memory Capacity:	ECM: 128 KB SAF Standard: 4 MB With optional Expansion Memory: 28 MB Page Memory Standard: 8 MB (Print: 4 MB + Scanner: 4 MB) With optional Expansion Memory: 16 MB (Print 8 MB + Scanner: 8 MB)

**5.1.2 CAPABILITIES OF PROGRAMMABLE ITEMS**

The following table shows the capabilities of each programmable items.

Item	D432	D433
Total Destinations in Address Book	2000	150
Groups	100	10
Destination per Group	500	100
Destinations for All Files	500	300

## General Specifications

Programs	100	-
Special Senders	30	30

D432/D433  
 Fax Option  
 Type  
 C2550/C2530

The following table shows how the capabilities of the document memory will change after the Expansion Memory are installed.

	Without the Expansion Memory		With the Expansion Memory	
	D433	D432	D433	
Memory Transmission file	400	200	400	-
Memory capacity for memory transmission (See the Note below)	320	320	2240	-

↓ Note

- Measured using an ITU-T #1 test document (Slerexe letter) at standard resolution, auto image density mode, and Text mode.

## IFAX Specifications

## 5.2 IFAX SPECIFICATIONS

<b>Connectivity:</b>	Local area network Ethernet 100base-Tx/10base-T IEEE802.11a/g, g (wireless LAN), 1000 Base-T
<b>Resolution:</b>	Main scan: 400 dpi, 200 dpi Sub scan: 400 dpi, 200 dpi, 100 dpi <a href="#">↓ Note</a> <ul style="list-style-type: none"> <li>▪ To use 400 dpi, IFAX SW01 Bit 4 must be set to "1".</li> </ul>
<b>Transmission Time:</b>	1 s (through a LAN to the server) Condition: ITU-T #1 test document (Selerexe Letter) MTF correction: OFF TTI: None Resolution: 200 x 100 dpi Communication speed: 10 Mbps Correspondent device: E-mail server Line conditions: No terminal access
<b>Document Size:</b>	Maximum message width is A4/LT. <a href="#">↓ Note</a> <ul style="list-style-type: none"> <li>▪ To use B4 and A3 width, IFAX SW00 Bit 1 (B4) and/or Bit 2 (A3) must be set to "1".</li> </ul>
<b>E-mail File Format:</b>	Single/multi-part MIME conversion Image: TIFF-F (MH, MR, MMR)
<b>Protocol:</b>	<b>Transmission:</b> SMTP, TCP/IP <b>Reception:</b> POP3, SMTP, IMAP4, TCP/IP
<b>Data Rate:</b>	100 Mbps(100base-Tx) 10 Mbps (10base-T)

## IFAX Specifications

<b>Authentication Method:</b>	SMTP-AUTH POP before SMTP A-POP
<b>Remark:</b>	The machine must be set up as an e-mail client before installation. Any client PCs connected to the machine through a LAN must also be e-mail clients, or some features will not work (e.g. Autorouting).

D432/D433  
Fax Option  
Type  
C2550/C2530

## IP-FAX Specifications

**5.3 IP-FAX SPECIFICATIONS**

Network:	Local Area Network Ethernet/10base-T, 100base-TX IEEE802.11a/g, g (wireless LAN), 1000 Base-T
Scan line density:	8 x 3.85 lines/mm, 200x100dpi (standard character), 8 x 7.7lines/mm, 200x200dpi (detail character), 8 x 15.4lines/mm (fine character: optional expansion memory required), 16 x 15.4lines/mm, 400x400dpi (super fine character: optional expansion memory required)
Original size:	Maximum A3 or 11"x 17" (DLT)
Maximum scanning size:	Standard: A3, 297mm x 432mm Irregular: 297mm x 1200mm
Transmission protocol:	Recommended: T.38 Annex protocol, TCP, UDP/IP communication
Compatible machines:	IP-Fax compatible machines
IP-Fax transmission function:	Specify IP address and send fax to an IP-Fax compatible fax through a network. Also capable of sending fax from a G3 fax connected to the public telephone lines via a VoIP gateway.
IP-Fax reception function:	Receive a fax sent from an IP-Fax compatible fax through a network. Also capable of receiving fax from a G3 fax connected the public telephone lines via a VoIP gateway.

## 5.4 FAX UNIT CONFIGURATION

Component	Code	No.	Remarks
MBU	D432/ D433	3	Included with the fax unit
GWFCU		2	
Speaker		1	
Expansion Memory	G578	4	Optional only for D432
Handset Type 1018	B433	-	NA only. Also used with AT/AP-C2
