Important Safety Notices

Prevention of Physical Injury

1. Before disassembling or assembling parts of the copier and peripherals, make sure that the copier power cord is unplugged.

2. The wall outlet should be near the copier and easily accessible.

3. If any adjustment or operation check has to be made with exterior covers off or open while the main switch is turned on, keep hands away from electrified or mechanically driven components.

4. The copier drives some of its components when it completes the warm-up period. Be careful to keep hands away from the mechanical and electrical components as the copier starts operation.

5. The inside and the metal parts of the fusing unit become extremely hot while the copier is operating. Be careful to avoid touching those components with your bare hands.

Health Safety Conditions

1. Toner and developer are non-toxic, but if you get either of them in your eyes by accident, it may cause temporary eye discomfort. Immediately wash eyes with plenty of water. If unsuccessful, get medical attention.

2. The copier, which use high voltage power source, can generate ozone gas. High ozone density is harmful to human health. Therefore, the machine must be installed in a well-ventilated room.

Observance of Electrical Safety Standards

The copier and its peripherals must be serviced by a customer service representative who has completed the training course on those models.

⚠ WARNING

- ⊘ Keep the machine away from flammable liquids, gases, and aerosols. A fire or an explosion might occur.

⚠ CAUTION

- The Controller board on this machine contains a lithium battery. The danger of explosion exists if a battery of this type is incorrectly replaced. Replace only with the same or an equivalent type recommended by the manufacturer. Discard batteries in accordance with the manufacturer's instructions and local regulations.

- The optional fax and memory expansion units contain lithium batteries, which can explode if replaced incorrectly. Replace only with the same or an equivalent type recommended by the

manufacturer. Do not recharge or burn the batteries. Used batteries must be handled in accordance with local regulations.

Safety and Ecological Notes for Disposal

1. Do not incinerate toner bottles or used toner. Toner dust may ignite suddenly when exposed to an open flame.

2. Dispose of used toner, the maintenance unit which includes developer or the organic photoconductor in accordance with local regulations. (These are non-toxic supplies.)

3. Dispose of replaced parts in accordance with local regulations.

4. When keeping used lithium batteries in order to dispose of them later, do not put more than 100 batteries per sealed box. Storing larger numbers or not sealing them apart may lead to chemical reactions and heat build-up.

Laser Safety

The Center for Devices and Radiological Health (CDRH) prohibits the repair of laser-based optical units in the field. The optical housing unit can only be repaired in a factory or at a location with the requisite equipment. The laser subsystem is replaceable in the field by a qualified Customer Engineer. The laser chassis is not repairable in the field. Customer engineers are therefore directed to return all chassis and laser subsystems to the factory or service depot when replacement of the optical subsystem is required.

⚠ WARNING

- Use of controls, or adjustment, or performance of procedures other than those specified in this manual may result in hazardous radiation exposure.

⚠ WARNING

- WARNING: Turn off the main switch before attempting any of the procedures in the Laser Optics Housing Unit section. Laser beams can seriously damage your eyes.

- CAUTION MARKING:

Security Function Installation

The machine contains the Security function (Data Overwrite Security and HDD Encryption unit) built into the controller board.

If you are installing a new machine, it is recommended to activate the Data Overwrite Security and HDD Encryption unit by selecting "Format All Data" from "System Settings" on the operation panel.

⬇Note

- This method is recommended because there is no user data on the hard drive yet (Address Book data, image data, etc.).

If the customer wishes to activate the Data Overwrite Security and HDD Encryption unit on a machine that is already running, it is recommended to activate the unit by selecting "All Data" from "System Settings" on the operation panel.

⭐Important

- **Selecting "All Data" will preserve the data that has already been saved to the hard drive. (If "Format All Data" is selected, all user data saved to the hard drive up to that point will be erased).**

Immediately after encryption is enabled, the encryption setting process will take several minutes to complete before you can begin using the machine.

⬇Note

- If encryption is enabled after data has been stored on the disk, or of the encryption key is changed, this process can take up to three and a half hours or more.

The machine cannot be operated while data is being encrypted.

Once the encryption process begins, it cannot be stopped.

Make sure that the machine's main power is not turned off while the encryption process is in progress.

If the machine's main power is turned off while the encryption process is in progress, the hard disk will be damaged and all data on it will be unusable.

Print encryption key and keep the encryption key (which is printed as a paper sheet).

Keep the encryption key in a safe place. If the encryption key is lost and it need, the controller board, hard disk and NVRAM must all be replaced at the same time.

Note

- "NVRAM" mentioned in here means the NVRAM on Controller Board.

- "NVRAM" or EEPROM on BCU has nothing to do with this.

Please use the following procedure when the Data Overwrite Security and HDD Encryption reinstalled.

Machine Data Encryption Key

This is an encryption key which allows you to protect confidential data stored in the machine.

It is essential that the safekeeping and destruction of this encryption key be under your direct responsibility.

Data saved and programmed on the machine (documents, image data, setting values, address book contents etc.) can be encrypted/decrypted with this encryption key.

If this machine breaks down, saved and programmed data in the machine can only be restored by entering this encryption key.

(Please note that it may not be possible to restore data in certain machine breakdown cases.)

This machine data encryption key will remain valid as long as the encryption is not cancelled or the encryption key is not changed.

After changing or cancelling the encryption key, please shred this document to destroy confidential data.

Moving the Machine

This section shows you how to manually move the machine from one floor to another floor. See the section "Transporting the Machine" if you have to pack the machine and move it a longer distance.

1. Remove all trays from the optional paper feed unit or LCT.

Transporting the Machine

Main Frame

1. Do SP 4806-001 to move the scanner carriage from the home position. This prevents dust from falling into the machine during transportation.

2. Remove the toner cartridges. This prevents toner flow into the toner supply tube, which is caused by vibration during transport. This can also cause the tube to be clogged with toner.

3. Make sure there is no paper left in the paper trays. Then fix down the bottom plates with a sheet of paper and tape.

4. Empty the toner collection bottle. Then attach securing tape to stop the toner bottle from coming out.

5. Take out the scanner stay from inside the front door and install the scanner stay.

6. Do one of the following:

   • Attach shipping tape to the covers and doors.

   • Shrink-wrap the machine tightly.

Note

• After you move the machine, make sure you do the "Auto Color Registration" as follows. This optimizes color registration.

• 1. Do the "Forced Line Position Adj. Mode c" (SP2-111-3).

• 2. Then do the "Forced Line Position Adj. Mode a" (SP2-111-1).
  To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

• Make sure that the side fences in the trays are correctly positioned to prevent color registration errors.

I/F Card Slots

RTB 26a
Delete text
as shown
- Slot A is used for one of the optional I/F connections (only one can be installed): IEEE1284, IEEE802.11a/g g (Wireless LAN), ~~Remote Communication Gate~~.

- Slot B is used for the File Format Converter ~~or Remote Communication Gate~~.

- Slot C is used for Gigabit Ethernet.

SD Card Slots

- Slot 1 (upper) is already occupied by the PDF direct print, VM and App2me SD Card by factory default, and is also used for optional applications (e.g.: Browser Unit, PostScript 3, PictBridge, IPDS unit, etc).

- Slot 2 (lower) is used for installing applications, or for service only (for example, updating the firmware).

SD Card Appli Move

Overview

The service program "SD Card Appli Move" (SP5-873) lets you move application programs from one SD card to another SD card.

If more than one application is required, the applications must be moved to one SD card with SP5873-1 (PostScript 3, Security Application, PictBridge, IPDS unit, PDF Direct, etc.).

Be very careful when you do the SD Card Appli Move procedure:

- The data necessary for authentication is transferred with the application program from an SD card to another SD card. Authentication fails if you try to use the SD card after you move the application program from one card to another card.

- Do not use the SD card if it has been used before for other purposes. Normal operation is not guaranteed when such an SD card is used.
d088i511

- Remove the cover [A] (🖉 x 2), and then keep the SD card in the place [B] after you move the application program from one card to another card. This is done for the following reasons:

  - The SD card can be the only proof that the user is licensed to use the application program.

  - You may need to check the SD card and its data to solve a problem in the future.

Move Exec

The menu "Move Exec" (SP5-873-001) lets you move application programs from the original SD card to another SD card.

⭐**Important**

- **Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.**

1. Turn the main switch off.

2. Make sure that a target SD card is in SD Card Slot 1 (upper). The application program is moved to this SD card.

3. Insert the source SD card with the application program in SD Card Slot 2 (lower).The application program is copied from this source SD card.

4. Turn the main switch on.

5. Start the SP mode.

6. Select SP5-873-001 "Move Exec".

7. Follow the messages shown on the operation panel.

8. Turn the main switch off.

9. Remove the source SD card from SD Card Slot 2 (lower).

10. Turn the main switch on.

11. Check that the application programs run normally.

Undo Exec

"Undo Exec" (SP5-873-002) lets you move back application programs from an SD card in SD Card Slot 1 (upper) to the original SD card in SD Card Slot 2 (lower). You can use this program when, for example, you have mistakenly copied some programs by using Move Exec (SP5-873-001).

⭐**Important**

- **Do not turn ON the write protect switch of the system SD card or application SD card on the machine. If the write protect switch is ON, a download error (e.g. Error Code 44) occurs during a firmware upgrade or application merge.**

1. Turn the main switch off.

2. Insert the original SD card in SD Card Slot 2 (lower). The application program is copied back into this card.

3. Insert the SD card with the application program in SD Card Slot 1 (upper).The application program is copied back from this SD card.

4. Turn the main switch on.

5. Start the SP mode.

6. Select SP5-873-002 "Undo Exec."

7. Follow the messages shown on the operation panel.

8. Turn the main switch off.

9. Remove the SD card from SD Card Slot 2 (lower).

10. Turn the main switch on.

11. Check that the application programs run normally.

12. Make sure that the machine can recognize the option, see "Check All Connections" at the end of this section (📖 p.174).

3. Set the following SPs to "1" before you turn the power off. Then, the machine will reset the PM counters automatically. In the case of developer, the developer initialization will also be done automatically.

4. Exit the SP mode.

Item	SP
Developer	Black: 3902-005 Yellow: 3902-006 Cyan: 3902-007 Magenta: 3902-008

Make sure that the registration is adjusted within the adjustment standard range as shown below.

Leading Edge

Adjusts the leading edge registration for each paper type and process line speed.

Side to Side

Adjusts the side-to-side registration for each paper feed station. Use SP mode (SP1-002) to adjust the side-to-side registration for the optional paper feed unit, LCT, and duplex unit.

Adjustment Standard

- Leading edge (sub-scan direction): 5.2 ± 2 mm
- Side to side (main-scan direction): 2 ± 1 mm

Paper Registration Standard

The registration in both main- and sub-scan directions can change within the following tolerance.

- Sub-scan direction: 0 ± 9 mm
- Main-scan direction: 0 ± 4 mm

Adjustment Procedure

1. Enter SP2-109-003.

2. Print out the test pattern (14: 1-dot trimming pattern) with SP2-109-003.

   ⬇ Note

   - Registration can change slightly as shown on the previous page. Print some pages of the 1-dot trimming pattern for step 3 and 4. Then average the leading edge and side-to-side registration values, and adjust each SP mode.

3. Do the leading edge registration adjustment.

   1) Check the leading edge registration and adjust it with SP1-001.

   2) Select the adjustment conditions (paper type and process line speed).

   3) Input the value. Then press the ⊕ key.

   4) Generate a trim pattern to check the leading edge adjustment.

4. Do the side-to-side registration adjustment.

   1) Check the side-to-side registration and adjust it with SP1-002.

   2) Select the adjustment conditions (paper feed station).

   3) Input the value. Then press the ⊕ key.

   4) Generate a trim pattern to check the leading edge adjustment.

Erase Margin Adjustment

⬇ Note

- Adjust the erase margin C and D only if the registration (main scan and sub scan) cannot be adjusted within the standard values. Do the registration adjustment after adjusting the erase margin C and D, and then adjust the erase margin A and B.
1. Enter SP2-109-003.

2. Print out the test pattern (14: 1-dot trimming pattern) with SP2-109-003.

3. Check the erase margin A and B. Adjust them with SP2-103-001 to -015 if necessary.

   - Leading edge: 0.0 to 9.0 mm (default: 4.2 mm)

   - Side-to-side: 0.0 to 9.0 mm (default: 2.0 mm)

   - Trailing edge: 0.0 to 9.0 mm (default: 4.2 mm)

Color Registration

Line Position Adjustment

The automatic line position adjustment usually is done for a specified condition to get the best color prints.

Do the following if color registration shifts:

- Do "Auto Color Registration" as follows to do the forced line position adjustment.

1. First do SP2-111-3.

2. Then do SP2-111-1.

   To check if SP 2-111-1 was successful, watch the screen during the process. A message is displayed at the end. Also, you can check the result with SP 2-194-10 to -12.

- You should also do the line position adjustment at these times:

- After you transport or move the machine (you should do the forced line position adjustment if you install the machine at the user location.) if the machine is pre-installed at the workshop and moved to the user location,

- When you open the drum positioning plate

- When you remove or replace the motors, clutches, and/or gears related to the drum/ development/transfer sections

- When you remove or replace the image transfer belt, image transfer belt unit or laser optical housing unit

Printer Gamma Correction

Note

- The ACC is usually sufficient to adjust the color balance to get the best print output. You only need the printer gamma correction to fine-tune to meet user requirements.

Use SP modes if you want to modify the printer gamma curve created with ACC. You can adjust the gamma data for the following:

- Highlight

- Middle

- Shadow areas

- IDmax.

The adjustable range is from 0 to 30 (31 steps).

Copy Mode

- KCMY Color Balance Adjustment -

The adjustment uses only "Offset" values.

Note

- Never change "Option" values (default value is 0).

Highlight (Low ID)	Levels 2 through 5 in the C4 chart 10-level scale
Middle (Middle ID)	Levels 3 through 7 in the C4 chart 10-level scale
Shadow (High ID)	Levels 6 through 9 in the C4 chart 10-level scale
ID max	Level 10 in the C4 chart 10-level scale (affects the entire image density.)
Offset	The higher the number in the range associated with the low ID, middle ID, high ID, and ID max, the greater the density.

There are four adjustable modes (can be adjusted with SP4-918-009):

- Copy Photo mode
- Copy Letter mode
- Copy Letter (Single Color) mode
- Copy Photo (Single Color) mode
- Adjustment Procedure -
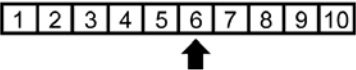

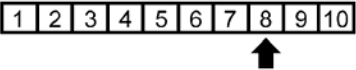

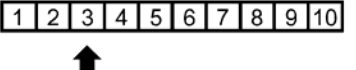

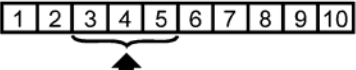

1. Copy the C-4 chart in the mode that you want to adjust.

2. Enter the SP mode.

3. Select "System SP."

4. Select SP4-918-009.

5. Adjust the offset values until the copy quality conforms to the standard (see the table below).

🔸Note
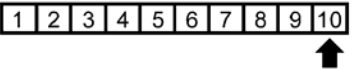

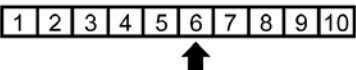

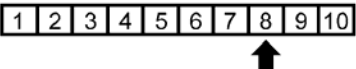

- 1. Never change "Option" value (default value is "0").

- 2. Adjust the density in this order: "ID Max", "Middle", "Shadow", "Highlight".

4. Install the drive pulley on the shaft [A].

Note

- Do not attach the pulley to the shaft with the screw at this time.

5. Insert the left end into the slit [B]. The end should go via the rear track of the left pulley [C] and the rear track of the movable pulley [D].

4. Install the drive pulley on the shaft.

   ⬇Note

   • Do not attach the pulley on the shaft with the screw at this time.

5. Install the wire.

Note

- The winding of the wire on the three pulleys at the rear of the scanner should be the same as the winding on the three pulleys at the front. This must show as a mirror image.

Example: At the front of the machine, the side of the drive pulley with the three windings must face the front of the machine. At the rear of the machine, it must face the rear.

6. Do steps 7 through 13 again in the "Reinstalling the Front Scanner Wire" Section.

Laser Optics

⚠ WARNING

- Turn off the main switch and unplug the machine before beginning any of the procedures in this section. Laser beams can cause serious eye injury.

Caution Decal Location

Caution decals are placed as shown below.

d088r113

⚠ WARNING

- Be sure to turn off the main switch and disconnect the power plug from the power outlet before beginning any disassembly or adjustment of the laser unit. This copier uses a class IIIb laser beam with a wavelength of 655 nm and an output of 7 mW. The laser can cause serious eye injury.

LD Safety Switch

d111d001d
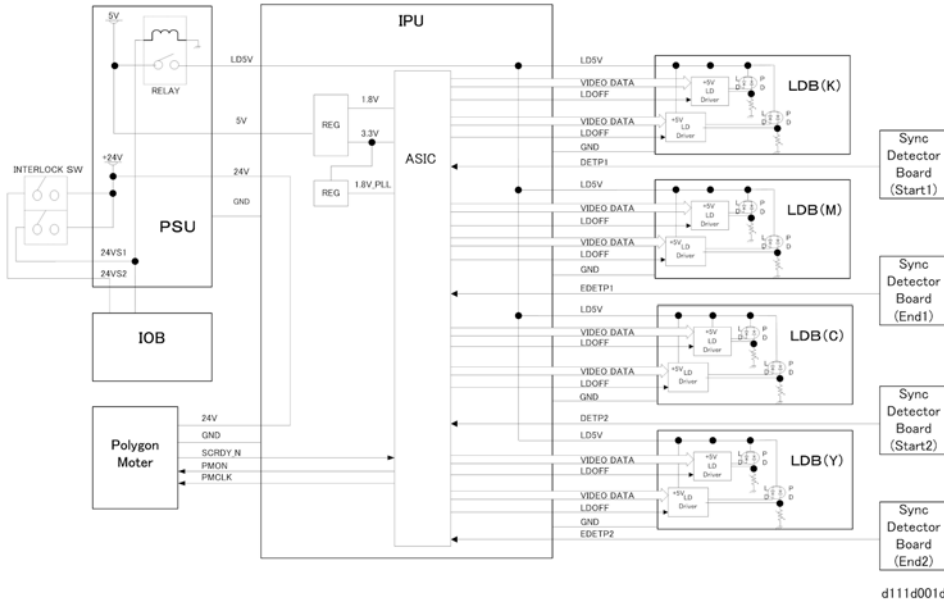

A relay on the PSU ensures technician and user safety. It also prevents the laser beam from turning on during servicing. This relay turns off when the front cover, upper left cover, or right door is opened. At this time it cuts the power (+5V) supplied to the LD board for each color through the IPU.

Two safety switches are turned on or off by the front door or right door, and this opens the relay.

• LD Driver: Precise Pulse Modulation ASIC on C-MOS technology

• LDB: LD Drive Board (included in the LD Unit)

Error Messages

Along with other switches, the LD safety switches help show error messages related to external covers. When one or more covers are open, the messages, "Cover is open." and "Close the indicated cover," show with a diagram. The diagram shows which cover is open.

Laser Optics Housing Unit

⚠CAUTION

• Before installing a new laser optics housing unit, remove the sponge padding and the tag from the new unit.

�b Note

- A new laser optics housing unit has a bracket to protect the LD units. When you install the new unit, do not remove the bracket until near the end of the installation procedure (the correct time is stated in the manual).

Fusing

Fusing Unit PM Parts

In the fusing unit, there are some PM parts. Refer to the following list to check the PM parts.

Maintenance Parts	Replacement Procedure
Heating sleeve belt unit	👉 p.297
Pressure Roller	👉 p.300

Fusing Unit

⚠️CAUTION

- Turn off the main switch and wait until the fusing unit cools down before beginning any of the procedures in this section. The fusing unit can cause serious burns.

1. If you will replace the heating roller or pressure roller in the fusing unit (at PM for example), then reset each counter.
   - Set SP 3902-018 to "1" for the heating roller replacement.
   - Set SP 3902-019 to "1" for the pressure roller replacement.

   🔽Note

   - If you do this, then the machine will reset the PM counter for the heating roller or pressure roller automatically, after you turn the power on again.
   - It is not necessary to clear the PM counter for the fusing unit with SP mode when you replace the fusing unit. This is because the fusing unit has a new unit detection mechanism.

2. Turn off the main power switch.

3. Open the right door.

Remove the NVRAM from the old controller board. Then install it on the new controller board after you replace the controller board. Replace the NVRAM if the NVRAM on the old controller board is defective.

🔖 **Note**

• Make sure you print out the SMC reports ("SP Mode Data" and "Logging Data") before you replace the NVRAM.

⚠️CAUTION

• Keep NVRAMs away from any objects that can cause static electricity. Static electricity can damage NVRAM data.

• Make sure the NVRAM is correctly installed on the controller board.

• Make sure that the DIP-switch settings on the old controller board are the same for the new controller board. Do not change the DIP switches on the controller board in the field.

When installing a new HDD unit

1. Turn the main power switch on. The disk is automatically formatted.

2. Install the stamp data using "SP5853".

3. Switch the machine off and on to enable the fixed stamps for use.

Disposal of HDD Units

- Never remove an HDD unit from the work site without the consent of the client.

- If the customer has any concerns about the security of any information on the HDD, the HDD must remain with the customer for disposal or safe keeping.

- The HDD may contain proprietary or classified (Confidential, Secret) information. Specifically, the HDD contains document server documents and data stored in temporary files created automatically during copy job sorting and jam recovery. Such data is stored on the HDD in a special format so it cannot normally be read but can be recovered with illegal methods.

Reinstallation

Explain to the customer that the following information stored on the HDD is lost when the HDD is replaced:

- Document server documents

- Custom-made stamps

- Document server address book

The address book and document server documents (if needed) must be input again.

If you previously backed up the address book to an SD card with SP5846 051, you can use SP 5846 052 to copy the data from the SD card to the hard disk.

If the customer is using the Data Overwrite Security feature, the DOS function must be set up again. For more, see Section 1 (Installation).

If the customer is using the optional Browser Unit, this unit must be installed again. For more, see Section 1 (Installation).

⭐**Important**

- **The toner bottles detection board should be pulled out horizontally. If you ignore this, the toner bottle detection terminals [A] may be damaged.**

NVRAM Replacement Procedure

This machine has two types of NVRAM. One is on the BCU (☞ p.347); the other is on the controller board (☞ p.357).

NVRAM on the BCU

1. Make sure that you have the SMC report (factory settings). This report comes with the machine.

2. Output the SMC data (SP5-990-001) if possible.

3. Turn the main switch off.

4. Install an SD card into SD card slot 3. Then turn the main power on.

5. Copy the NVRAM data to an SD card (SP5-824-001) if possible.

6. Turn off the main switch. Then unplug the power cord.

7. Replace the NVRAM on the BCU and reassemble the machine.

8. Plug in the power cord. Then turn the main switch on.

9. Select a paper-size type (SP5-131-001).

10. Specify the serial number and destination code of the machine.

⬇**Note**

- Contact your supervisor for details on how to enter the serial number and destination code.

- SC 999 or "Fusing Unit Setting Error" can be shown until the serial number and destination code are correctly programmed.

11. Turn the main switch off and on.

12. Copy the data from the SD card to the NVRAM (SP5-825-001) if you have successfully copied them to the SD card.

13. Turn the main switch off. Then remove the SD card from SD card slot 2.

14. Turn the main switch on.

15. Specify the SP and UP mode settings.

16. Do the process control self-check.

17. Do ACC for the copier application program.

18. Do ACC for the printer application program.

⬇Note

- If the message "SD card for restoration is required." appears after the NVRAM replacement, the encryption key should be restored. See "Encryption Key Restoration for NVRAM" for the restoration procedure. (☛ p.863)

NVRAM on the controller board

1. Make sure that you have the SMC report (factory settings). This report comes with the machine.

2. Output the SMC data ("ALL") using SP5-990-001. (SP5-990-001)

3. Turn off the main switch.

4. Insert a blank SD card into slot #2, and then turn on the main switch.

5. Upload the NVRAM data to the blank SD card using SP5-824-001 (NVRAM Data Upload).

6. Turn off the main power switch, and then unplug the AC power cord.

7. Remove the SD card containing the NVRAM data from slot #2.

8. Replace the NVRAM on the controller board with a new one.

9. Plug in the AC power cord, and then turn on the main power switch.

⭐Important

- **When you do this, SC995-02 (Defective NVRAM) will be displayed. However, DO NOT turn off the main power switch. Continue with this procedure.**

10. Re-insert the SD card that you removed in step 7 back into slot #2.

11. Download the old NVRAM data from the SD card onto the new NVRAM using SP5-825-001 (NVRAM Data Download).

⬇Note

- This will take about 2 or 3 minutes.

12. Turn off the main power switch, and then remove the SD card from slot #2.

13. Turn on the main power switch.

14. Output the SMC data ("ALL") using SP5-990-001, and make sure that it matches the SMC data you printed out in step 2 above (except for the value of the total counter).

    Note

    - The value of the total counter is reset to "0" when the NVRAM is replaced.

15. Do Process Control Self-check.

16. Do ACC for the Copier function.

17. Do ACC for the Printer function.

    Important

    - Do all of the following if SP5-824-001 (NVRAM Data Upload) and SP5-825-001 (NVRAM Data Download) cannot be performed for some reason.

      1. Manually enter all data on the SMC report (factory settings).

      2. Install the Security function (Data Overwrite Security and HDD Encryption unit) again. For the procedure, see "Security function Installation" in "Installation Procedure" of "Copier Installation". (p.40)

    Note

    - If the message "SD card for restoration is required." appears after the NVRAM replacement, the encryption key should be restored. See "Encryption Key Restoration for NVRAM" for the restoration procedure. (p.863)

Service Mode Lock/Unlock

At locations where the machine contains sensitive data, the customer engineer cannot operate the machine until the Administrator turns the service mode lock off. This function makes sure that work on the machine is always done with the permission of the Administrator.

1. If you cannot go into the SP mode, ask the Administrator to log in with the User Tool and then set "Service Mode Lock" to OFF after he or she logs in:

    User Tools > System Settings > Administrator Tools > Service Mode Lock > OFF

    - This unlocks the machine and lets you get access to all the SP codes.

- The CE can service the machine and turn the machine off and on. It is not necessary to ask the Administrator to log in again each time the machine is turned on.

2. Go into the SP mode and set SP5169 to "1" if you must use the printer bit switches.

3. After machine servicing is completed:

   - Change SP5169 from "1" to "0".

   - Turn the machine off and on. Tell the administrator that you have completed servicing the machine.

   - The Administrator will then set the "Service Mode Lock" to ON.

Remarks

DFU: Design/Factory Use only

Do not touch these SP modes in the field.

A sharp (#) to the right hand side of the mode number column means that the main switch must be turned off and on to effect the setting change.

An asterisk (*) to the right hand side of the mode number column means that this mode is stored in the NVRAM. If you do a RAM clear, this SP mode will be reset to the default value. "ENG" and "CTL" show which NVRAM contains the data.

- ENG: NVRAM on the BCU board
- CTL: NVRAM on the controller board

The settings of each SP mode are explained in the right-hand column of the SP table in the following way.

[Adjustable range / **Default setting** / Step] Alphanumeric

🔸**Note**

- If "Alphanumeric" is written to the right of the bracket as shown above, the setting of the SP mode shows on the screen using alphanumeric characters instead of only numbers. However, the settings in the bracket in the SP mode table are explained by using only the numbers.

SSP: This denotes a "Special Service Program" mode setting.

2005	[Charge DC Voltage] Charge Roller DC Voltage Adjustment (Paper Type, Process Speed, Color) Paper Type ➜ Plain, Thick 1, Thick 2 Plain: High speed, Thick 1: Middle speed, Thick 2&FINE: Low speed		
	Adjusts the DC component of the charge roller bias in the various print modes. Charge bias (DC component) is automatically adjusted during process control; therefore, adjusting these settings does not effect while process control mode (SP3-041-1 Default: ON) is activated. When deactivating process control mode with SP3-041-1, the values in these SP modes are used for printing.

2150	[Area Mag. Correction] LD Pulse Area Correction (Color, Area) **FA**		
	Adjusts the magnification for each area. The main scan (297 mm) is divided into 8 areas. Area 1 is at the front side of the machine (left side of the image) and area 8 is at the rear side of the machine (right side of the image). Decreasing a value makes the image shift to the left side on the print. Increasing a value makes the image shift to the right side on the print. 1 pulse = 1/16 dot

	• If the execution of SP5816-151 has succeeded and embedded RCG-M has connected to the **external** line, this SP display is completely blank.
	• If embedded RCG-M has connected to an **internal** line, then the number of the connection to the external line is displayed.
	• If embedded RCG-M has connected to an external line, a comma is displayed with the number. The comma is inserted for a 2 sec. pause.
	• The number setting for the external line can be entered manually (including commas).
156	**Dial Up User Name**
	Use this SP to set a user name for access to remote dial up. Follow these rules when setting a user name:
	• Name length: Up to 32 characters
	• Spaces and # allowed but the entire entry must be enclosed by double quotation marks (").

	Limit: 24 numbers (numbers only)

5

162	Connection Timing Adjustment Incoming
	When the Call Center calls out to an embedded RCG-M modem, it sends a repeating ID tone (*#1#). This SP sets the time the line remains open to send these ID tones after the number of the embedded RCG-M modem is dialed up and connected.
	[0 to 24 / 1 / 1 /step]
	The actual amount of time is this setting x 2 sec. For example, if you set "2" the line will remain open for 4 sec.
163	Access Point
	This is the number of the dial-up access point for RCG-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used.
	Default: 0
	Allowed: Up to 16 alphanumeric characters
164	Line Connecting
	This SP sets the connection conditions for the customer. This setting dedicates the line to RCG-M only, or sets the line for sharing between RCG-M and a fax unit.

173	Modem Serial No.	This SP displays the serial number registered for the RCG-M.
174	Retransmission Limit
	Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, RCG-M generates charges based on transmission time for the customer, so a limit is placed upon the time allowed for these transactions.
	If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.

	FAX TX Priority	-	
187	This SP determines whether pushing the off-hook button will interrupt a RCG-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816 164 is set to "0". [0 or 1/ **0** / -] 0: Disable, 1: Enable

041	Fill Addr Acl Info.	
	This SP must be executed immediately after installation of an HDD unit in a basic machine that previously had no HDD. The first time the machine is powered on with the new HDD installed, the system automatically takes the address book from the NVRAM and writes it onto the new HDD. However, the new address book on the HDD can be accessed only by the system administrator at this stage. Executing this SP by the service technician immediately after power on grants full address book access to all users. **Procedure** 1. Turn the machine off. 2. Install the new HDD. 3. Turn the machine on. 4. The address book and its initial data are created on the HDD automatically. 5. However, at this point the address book can be accessed by only the system administrator or key operator. 6. Enter the SP mode and do SP5846-041. After this SP executes successfully, any user can access the address book.

	Displays the value given by the following formula: (Current revolution / Target revolution) $\times$ 100. This shows how much of the unit's expected lifetime has been used up. The Rotation (%) counter is based on rotations, not prints. If the number of rotations reaches the limit, the machine enters the end condition for that unit. If the print count lifetime is reached first, the machine also enters the end condition, even though the R (%) counter is still less than 100%. [0 to 255 / - / 1 %/step]

Main SP Tables-8

SP8-xxx: Data Log2

Many of these counters are provided for features that are currently not available, such as sending color faxes, and so on. However, here are some Group 8 codes that when used in combination with others, can provide useful information.

SP Numbers	What They Do
SP8211 to SP8216	The number of pages scanned to the document server.
SP8401 to SP8406	The number of pages printed from the document server
SP8691 to SP8696	The number of pages sent from the document server

Specifically, the following questions can be answered:

- How is the document server actually being used?
- What application is using the document server most frequently?
- What data in the document server is being reused?

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an "application"). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

Prefixes		What it means
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.).
C:	Copy application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the document server.
F:	Fax application.	
P:	Print application.	
S:	Scan application.	

| L: | Local storage (document server) | Totals (jobs, pages, etc.) for the document server. The L: counters work differently case by case. Sometimes, they count jobs/pages stored on the document server; this can be in document server mode (from the document server window), or from another mode, such as from a printer driver or by pressing the Store File button in the Copy mode window. Sometimes, they include occasions when the user uses a file that is already on the document server. Each counter will be discussed case by case. |
| O: | Other applications (external network applications, for example) | Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future. |

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

- For example: When a copy job stored on the document server is printed in document server mode, the appropriate L: counter (SP8076 0xx) increments.

- Printing a fax report counts as a job and increments the F: counter (SP 8073).

- Interrupted jobs (paper jam, etc.) are counted, even though they do not finish.

- If a job is paused and re-started, it counts as one job.

- If the finisher runs out of staples during a print and staple job, then the job is counted at the time the error occurs.

- For copy jobs (SP 8072) and scan jobs (SP 8075), the total is calculated by multiplying the number of sets of copies by the number of pages scanned. (One duplex page counts as 2.)

- The first test print and subsequent test prints to adjust settings are added to the number of pages of the copy job (SP 8072).

- When printing the first page of a job from within the document server screen, the page is counted.

- These counters count jobs, not pages.

- This SP counts fax jobs sent over a telephone line with a fax application, including documents stored on the document server.

- If the mode is changed during the job, the job will count with the mode set when the job started.

- If the same document is faxed to both a public fax line and an I-Fax at a destination where both are available, then this counter increments, and the I-Fax counter (8 12x) also increments.

- If the user selects "Mixed Sizes" for copying in the platen mode, the Mixed Size count is enabled.
- In the SADF mode if the user copies 1 page in platen mode and then copies 2 pages with SADF, the Platen count is 1 and the SADF count is 3.

5804	Fusing Exit Motor	
	Note: These SP modes will be moved to Super SP mode in the near future.	
	Important: Use the procedure below to do the output checks for the fusing exit motor. If you do not follow this procedure, a kink will form in the fusing belt sleeve, and the fusing sleeve belt unit will need to be replaced. **1.** Do one of the following: • Open the right cover of the paper bank • Remove one of the toner bottles • Pull out the waste toner bottle half-way • Remove the fusing unit **2.** Enter SP mode. **3.** Do the following out output checks: • SP5-804-031 (Fusing exit motor: High speed) • SP5-804-032 (Fusing exit motor: Middle speed) • SP5-804-033 (Fusing exit motor: Low speed) • SP5-804-035 (Fusing exit motor: Very low speed) **4. Without exiting SP mode,** turn the main power switch off and then on again. **Important:** If you exit SP mode before you turn the main power switch off, the fusing exit motor will stay off when the machine warms up. Heat will be concentrated in one area of the fusing belt sleeve and cause a kink to form. If this happens, you will need to replace the fusing sleeve belt unit. **5.** Do the reverse of what you did in step 1 (for example, reattach the fusing unit).

	bit 1	DFU	-	-
	bit 2	**Job Cancel**	Disabled (Not cancelled)	Enabled (Cancelled)
		If this bit switch, all jobs will be cancelled after a jam occurs. Note: If this bitsw is enabled, printing under the following conditions might result in problems: - Job submission via USB or Parallel Port - Spool printing (WIM >Configuration > Device Settings > System)		
	bit 3	**PCL/PS bypass tray paper rotation (SEF/LEF)**	0: Disable	1: Enable
		This bitsw causes the device to revert to the behavior of previous generations. It only takes effect if "Bypass Tray Setting Priority" = "Driver/Command". Previous spec (bitsw=1): If a standard sized paper mismatch occurred in the bypass tray, the MFP always prompted for SEF paper. If this bitsw=0 (default) then in the event of a standard sized paper mismatch, the MFP will always prompt for paper of the rotation (SEF/LEF) determined by the MFP bypass tray paper setting or by the bypass tray sensor.

Before You Begin

An SD card is a precision device. Always observe the following precautions when you handle SD cards:

- Always switch the machine off before you insert an SD card. Never insert the SD card into the slot with the power on.

- Do not remove the SD card from the service slot after the power has been switched on.

- Never switch the machine off while the firmware is downloading from the SD card.

- Keep SD cards in a safe location where they are not exposed to high temperature, high humidity, or exposure to direct sunlight.

- Always handle SD cards with care. Do not bend or scratch them. Do not let the SD card get exposed to shock or vibration.

- Make sure that the write protection of an SD card is unlocked when you download an application to it. If not, downloading fails and a download error (e.g. Error Code 44) occurs during a firmware upgrade.

Keep the following points in mind when you use the firmware update software:

- "Upload" means to send data from the machine to the SD card. "Download" means to send data from the SD card to the machine.

- To select an item on the LCD, touch the appropriate button on the soft touch-screen of the LCD, or, press the appropriate number key on the 10-key pad of the operation panel. For example, when "Exit (0)" shows on the screen you can touch the Exit button on the screen, or, press the "0" button on the operation panel of the copier.

- Make sure that the machine is disconnected from the network to prevent a print job for arriving while the firmware update is in progress before you start the firmware update procedure.

Updating Firmware

Preparation

- If the SD card is blank, copy the entire "romdata" folder onto the SD card.

- If the card already contains the "romdata" folder, copy the "D142" folder onto the card.

If the card already contains folders up to "D142", copy the necessary firmware files (e.g. D142xxxx.fwu) into this folder.

🔸Note

- Do not put multiple machine firmware programs on the same SD card. Copy the only model firmware you want.

Updating Procedure

1. Turn the main power switch off.

d1440117a
2. Remove the slot cover [A] (🔩 x 1).

3. Insert the SD card into SD Card Slot 2 (lower). Make sure the label on the SD card faces [B] the front side of the machine.

4. Slowly push the SD card into the slot so it locks in place. You will hear it click. Make sure the SD card locks in place.

   ⬇Note

   - To remove the SD, push it in to unlock the spring lock. Then release it so it pops out of the slot.

5. Disconnect the network cable from the copier if the machine is connected to a network.

6. Switch the main power switch on. After about 45 seconds, the initial version update screen appears on the LCD in English.

7. On the screen, touch the button or press the corresponding number key on the operation panel to select the item in the menu that you want to update.

ROM/NEW	What it means
ROM:	Tells you the number of the module and name of the version currently installed. The first line is the module number, the second line the version name.
NEW:	Tells you the number of the module and name version on the SD card. The first line is the module number, the second line the version name.

Note

- Controller, engine and operation panel firmware cannot be updated at the same time. It is recommended to update firmware modules one by one.

8. Touch "UpDate (#)" (or ⊕) to start the update.

Note

- The progress bar does not show for the operation panel firmware after you touch "OpPanel". The power on key flashes on and off at 0.5 s intervals when the LCDC firmware is updating. The power key flashes on and off at 3 s intervals when the update is finished.

9. The "Update is Done" message appears on the operation panel after completing the updating. The message differs depending on the firmware that has been updated.

10. Switch the copier main power switch off when you see the "Update is Done" message or follow the procedure that is displayed on the operation panel.

11. Press in the SD card to release it. Then remove it from the slot.

12. Switch the copier on for normal operation.

Error Messages

An error message shows in the first line if an error occurs during the download.

Add:
Troubleshooting for Error Messages

The error code consists of the letter "E" and a number. The example above shows error "E24" displayed. For details, refer to the Error Message Table. (☞ p.721)

Firmware Update Error

If a firmware update error occurs, this means the update was cancelled during the update because the module selected for update was not on the SD card.
Recovery after Power Loss

If the ROM update is interrupted as a result of accidental loss of power while the firmware is updating, then the correct operation of the machine cannot be guaranteed after the machine is switched on again. If the ROM update does not complete successfully for any reason, then in order to ensure the correct operation of the machine, the ROM update error will continue to show until the ROM is updated successfully.

In this case, insert the card again and switch on the machine to continue the firmware download automatically from the card without the menu display.

Updating the LCDC for the Operation Panel

Do the following procedure to update the LCDC (LCD Control Board).

Using the Debug Log

Overview

This machine provides a Save Debug Log feature that allows the Customer Engineer to save and retrieve error information for analysis.

Every time an error occurs, debug information is recorded in volatile memory. But this information is lost when the machine is switched off and on.

To capture this debug information, the Save Debug Log feature provides two main features:

- Switching on the debug feature so error information is saved directly to the HDD for later retrieval.

- Copying the error information from the HDD to an SD card.

Do the following procedure below to set up the machine so the error information is saved automatically to the HDD when a user has problems with the machine. Then ask the user to reproduce the problem.

Switching ON and Setting UP Save Debug Log

The debug information cannot be saved until the "Save Debug Log" function has been switched on and a target has been selected.

1. Enter the SP mode and switch the Save Debug Log feature on.

    - Enter the SP mode.

    - Touch "System SP".

    - On the LCD panel, open SP5857.

2. Under "5857 Save Debug Log", touch "1 On/Off".
```
COPY : SP-5-857-001
  Save Debug Log
  On/Off (1:ON 0:OFF)

        1

   Initial  0

           ↑Prev Page   ↓Next Page
```
b178s001

3. On the control panel keypad, press "1". Then press ⊕. This switches the Save Debug Log feature on.

Note

- The default setting is "0" (OFF). This feature must be switched on in order for the debug information to be saved.

```
COPY : SP-5-857-002
Save Debug Log
Target (2:HDD 3:SD)

        2

    Initial  2

           ↑Prev Page   ↓Next Page
```
b178s002
4. Select the target destination where the debug information will be saved. Under "5857 Save Debug Log", touch "2 Target", enter "2" with the operation panel key to select the hard disk as the target destination. Then press ⊕.

Note

- Select "3 SD Card" to save the debug information directly to the SD card if it is inserted in the service slot.

5. Now touch "5858" and specify the events that you want to record in the debug log. SP5858 (Debug Save When) provides the following items for selection.

1	Engine SC Error	Saves data when an engine-related SC code is generated.
2	Controller SC Error	Saves debug data when a controller-related SC Code is generated.
3	Any SC Error	Saves data only for the SC code that you specify by entering code number.
4	Jam	Saves data for jams.

Note

- More than one event can be selected.

Example 1: To Select Items 1, 2, 4

Touch the appropriate items(s). Press "ON" for each selection. This example shows "Engine SC Error" selected.
Example 2: To Specify an SC Code

Touch "3 Any SC Error", enter the 3-digit SC code number with the control panel number keys. Then press ⊕. This example shows an entry for SC670.
↓Note

- For details about SC code numbers, please refer to the SC tables in Section 4. "Troubleshooting".

6. Select one or more memory modules for reading and recording debug information. Touch "5859".

   Under "5859" press the necessary key item for the module that you want to record.

   Enter the appropriate 4-digit number. Then press ⊕.

↓Note

- Refer to the two tables below for the 4-digit numbers to enter for each key.

The example below shows "Key 1" with "2222" entered.
The following keys can be set with the corresponding numbers. (The initials in parentheses indicate the names of the modules.)

7. The machine is now set to record the debugging information automatically on the HDD (the target selected with SP5857-002) for the events that you selected with SP5858 and the memory modules selected with SP5859.

Please keep the following important points in mind when you do this setting:

- Note that the number entries for Keys 1 to 5 are the same for the Copy, Printer, Scanner, and Web memory modules.

- The initial settings are all zero.

- These settings remain in effect until you change them. Be sure to check all the settings, especially the settings for Keys 6 to 10. To switch off a key setting, enter a zero for that key.

- You can select any number of keys from 1 to 10 (or all) by entering the corresponding 4-digit numbers from the table.

- You cannot mix settings for the groups (COPY, PRINTER, etc.) for 006 to 010. For example, if you want to create a PRINTER debug log you must select the settings from the 9 available selections for the "PRINTER" column only.

- One area of the disk is reserved to store the debug log. The size of this area is limited to 4 MB.

Retrieving the Debug Log from the HDD

Retrieve the debug log by copying it from the hard disk to an SD card.

1. Insert the SD card into slot 2 (service slot) of the copier.

2. Enter the SP mode and execute SP5857-009 (Copy HDD to SD Card (Latest 4 MB)) to write the debugging data to the SD card.

3. Use a card reader to copy the file and send it for analysis to your local Ricoh representative by email. You can also send the SD card by regular mail if you want.

Recording Errors Manually

SC errors and jams only are recorded to the debug log automatically. Please instruct the user to do the following immediately after occurrence to save the debug data for any other errors that occur while the customer engineer is not on site. Such problems also include a controller or panel freeze.

Note

- You must previously switch on the Save Debug Feature (SP5857-001) and select the hard disk as the save destination (SP5857-002) if you want to use this feature.

1. Press ⏏ (Clear Modes).on the operation panel when the error occurs.

2. On the control panel, enter "01". Then hold down ⊙ for at least 3 seconds until the machine beeps and then release it. This saves the debug log to the hard disk for later retrieval with an SD card by the service representatives.

3. Switch the machine off and on to resume operation.

   The debug information for the error is saved on the hard disk. This lets the service representative retrieve it on their next visit by copying it from the HDD to an SD card.

Debug Log Codes

SP5857-015 Copy SD Card-to-SD Card: Any Desired Key

This SP copies the log on an SD card (the file that contains the information written directly from shared memory) to a log specified by key number. The copy operation is executed in the log directory of the SD card inserted in the same slot. (This function does not copy from one slot to another.) Each SD card can hold up to 4 MB of file data. Unique file names are created for the data during the copy operation to prevent overwriting files of the same name. This means that log data from more than one machine can be copied onto the same SD card. This command does not execute if there is no log on the HDD for the name of the specified key.

SP5857-016 Create a File on HDD to Store a Log

This SP creates a 32 MB file to store a log on the HDD. However, this is not a completely empty file. The created file will hold the number "2225" as the SCS key number and other non-volatile information. Even if this SP is not executed, a file is created on the HDD when the first log is stored on the HDD (it takes some time to complete this operation). This creates the possibility that the machine may be switched off and on before the log can be created completely. If you execute this SP to create the log file beforehand, this will greatly reduce the amount of time required to acquire the log information and save onto the HDD. With the file already created on the HDD for the log file, the data only needs to be recorded. A new log file does not need to be created. To create a new log file, do SP5857-011 to delete the debug log data from the HDD. Then do SP5857-016.

SP5857-017 Create a File on SD Card to Store a Log

This SP creates a 4 MB file to store a log on an SD card. However, this is not a completely empty file. The created file will hold the number "2225" as the SCS key number and other non-volatile information. Even if this SP is not executed, a file is created on the SD card when the first log is stored on the SD card (it takes some time to complete this operation). This creates the possibility that the machine may be switched off and on before the log can be created completely. If you execute this SP to create the log file beforehand, this will greatly reduce the amount of time required to acquire the log information and save onto the SD card. With the file already created on the SD card for the log file, the data only needs to be recorded; a new log file does not require creation. To create a new log file, do SP5857-012 to delete the debug log data from the SD card. Then do SP5857-017.

Card Save Function

Overview

Card Save:

- The Card Save function is used to save print jobs received by the printer on an SD card with no print output. Card Save mode is toggled using printer Bit Switch #1 bit number 4. Card Save will remain enabled until the SD card becomes full, or until all file names have been used.

- Captures are stored on the SD card in the folder /prt/cardsave. File names are assigned sequentially from PRT00000.prn to PRT99999.prn. An additional file PRT.CTL will be created. This file contains a list of all files created on the card by the card save function.

- Previously stored files on the SD card can be overwritten or left intact. Card Save SD has "Add" and "New" menu items.

  - **Card Save (Add):** Appends files to the SD Card. Does not overwrite existing files. If the card becomes full or if all file names are used, an error will be displayed on the operation panel. Subsequent jobs will not be stored.

  - **Card Save (New):** Overwrites files in the card's /prt/cardsave directory.

Limitation:

- Card Save cannot be used with PJL Status Readback commands. PJL Status Readbacks will not work. In addition they will cause the Card Save to fail.

Procedure

1. Turn the main power switch OFF.

2. Insert the SD card into slot 2. Then turn the power ON.

3. Enter SP mode.

4. Select the "Printer Sp".

5. Select SP-1001 "Bit Switch".

d027t101
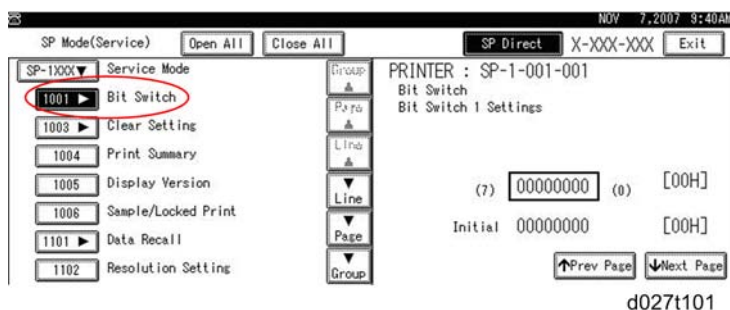

6. Select "Bit Switch 1 Settings" and use the numeric keypad to turn bit 4 ON and then press the "#" button to register the change. The result should look like: **00010000**. By doing this, Card Save option will appear in the "List/Test Print" menu.

A:

Machine serial number (fixed for each machine)

B:

SP number saved in this file.

First four digits (5992) in this part are fixed. The other one or two digits are the detail SP number. In this case, it is one digit. Therefore, this file is of SP5-992-001 (All data list). See the upper SP table for the correspondence between SP detail numbers and the contents.

C:

File creation date

Year/Month/Day ("Zero" will be omitted if each is one digit.)

D:

File creation time

Hour/Minute/Second ("Zero" will be omitted if each is one digit.)

E:

File Extension CSV (Comma Separated Value)

This part is fixed.

Note

- A folder named by the machine serial number will be created on the SD card when this function is executed.

Service Call

Service Call Conditions

The "SC Table" section shows the SC codes for controller errors and other errors. The latter (not controller errors) are put into four types. The type is determined by their reset procedures. The table shows the classification of the SC codes.

	Key	Definition	Reset Procedure
Controller errors	CTL	The error has occurred in the controller.	See "Troubleshooting Procedure" in the table.
Other errors	A	The error involves the fusing unit. The machine operation is disabled. The user cannot reset the error.	Turn the main switch off and on. Reset the SC (set SP5-810-1). Turn the main switch off and on.
	B	The error involves one or some specific units. The machine operates as usual, excluding the related units.	Turn the operation switch off and on.
	C	The error is logged. The SC-code history is updated. The machine operates as usual.	The SC will not show. Only the SC history is updated.
	D	The machine operation is disabled. You can reset the machine by turning the operation switch or main switch off and on. If the error occurs again, the same SC code is displayed.	Turn the operation switch or main power switch off and on.

RTB 31 Correction

After you turn the main power switch off, wait for one second or more before you turn the main power switch on (SC 672). All SCs are logged. The print log data (SP5-990-004) in SP mode can check the latest 10 SC codes detected and total counters when the SC code is detected.

↓Note

- If the problem concerns electrical circuit boards, first disconnect then reconnect the connectors before you replace the PCBs.

- If the problem concerns a motor lock, first check the mechanical load before you replace motors or sensors.

(-13)	Device file does not exist

Recovery from SC 925

Procedure 1

If the machine shows SC codes for HDD errors (SC860 to SC865) with SC 925, do the recovery procedures for SC860 to SC865.

Procedure 2

If the machine does not show one of the five HDD errors (SC860 to SC865), turn the machine power off and on. If this is not the solution for the problem, then initialize the NetFile partition on the HDD with SP5832-011 (HDD Formatting – Ridoc I/F).

NetFiles: Jobs printed from the document server using a PC and DeskTopBinder

- Before you initialize the NetFile partition on the HDD, tell the customer that:

- Received faxes on the delivery server will be erased

- All captured documents will be erased

- DeskTopBinder/Print Job Manager/Desk Top Editor job history will be erased

- Documents on the document server, and scanned documents, will not be erased.

- The first time that the network gets access to the machine, the management information must be configured again (this will use a lot of time).

Before you initialize the Netfile partition with SP5832-011, do these steps:

1. Go into the User Tools mode and do "Delivery Settings" to print all received fax documents that are scheduled for delivery. Then erase them.

2. In the User Tools mode, do Document Management> Batch Delete Transfer Documents.

3. Do SP5832-011, then turn the machine power off and on.

Procedure 3

If "Procedure 2" is not the solution for the problem, do SP5832-001 (HDD Formatting – All), then turn the machine power off and on.

SP5832-001 erases all document and address book data on the hard disks. Ask the customer before you do this SP code.

Procedure 4

If "Procedure 3" is not the solution for the problem, replace the HDD.

Note 1

If a problem always occurs in a specific condition (for example. printer driver setting, image file), the problem may be caused by a software error. In this case, the following data and information needs to be sent back to your product specialist. Please understand that it may take some time to get a reply on how to solve the problem, because in some cases the design staff in Japan must analyze the data.

Line Position Adjustment

When there are color registration errors on the output, do the line position adjustment as follows.

Note

- Use A3/DLT size paper for this adjustment.

Test

1. Do SP2-111-003 (Mode c: rough adjustment).

2. Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.

3. Do SP2-111-001 (Mode a: fine adjustment twice).

4. Use SP2-194-007 to check if the result of the line position adjustment is correct (0: Completed successfully, 1: Not completed). If the result is "1", refer to 'Countermeasure list for color registration errors'.

5. Put some A3/DLT paper on the by-pass tray.

    Note

    - When you print a test pattern, use the by-pass tray to feed the paper.

6. Print out test pattern "7" with SP2-109-003.

7. Check the printed output with a loupe.

Toner End Recovery Error

If the toner end message on the LCD is displayed in the following conditions, there are some possible causes. Check the machine referring to the flow chart for the toner end recovery error.

- After a new toner bottle has been installed in the machine

- When a displayed color toner bottle still has toner inside

Flow Chart for the Toner End Recovery Error
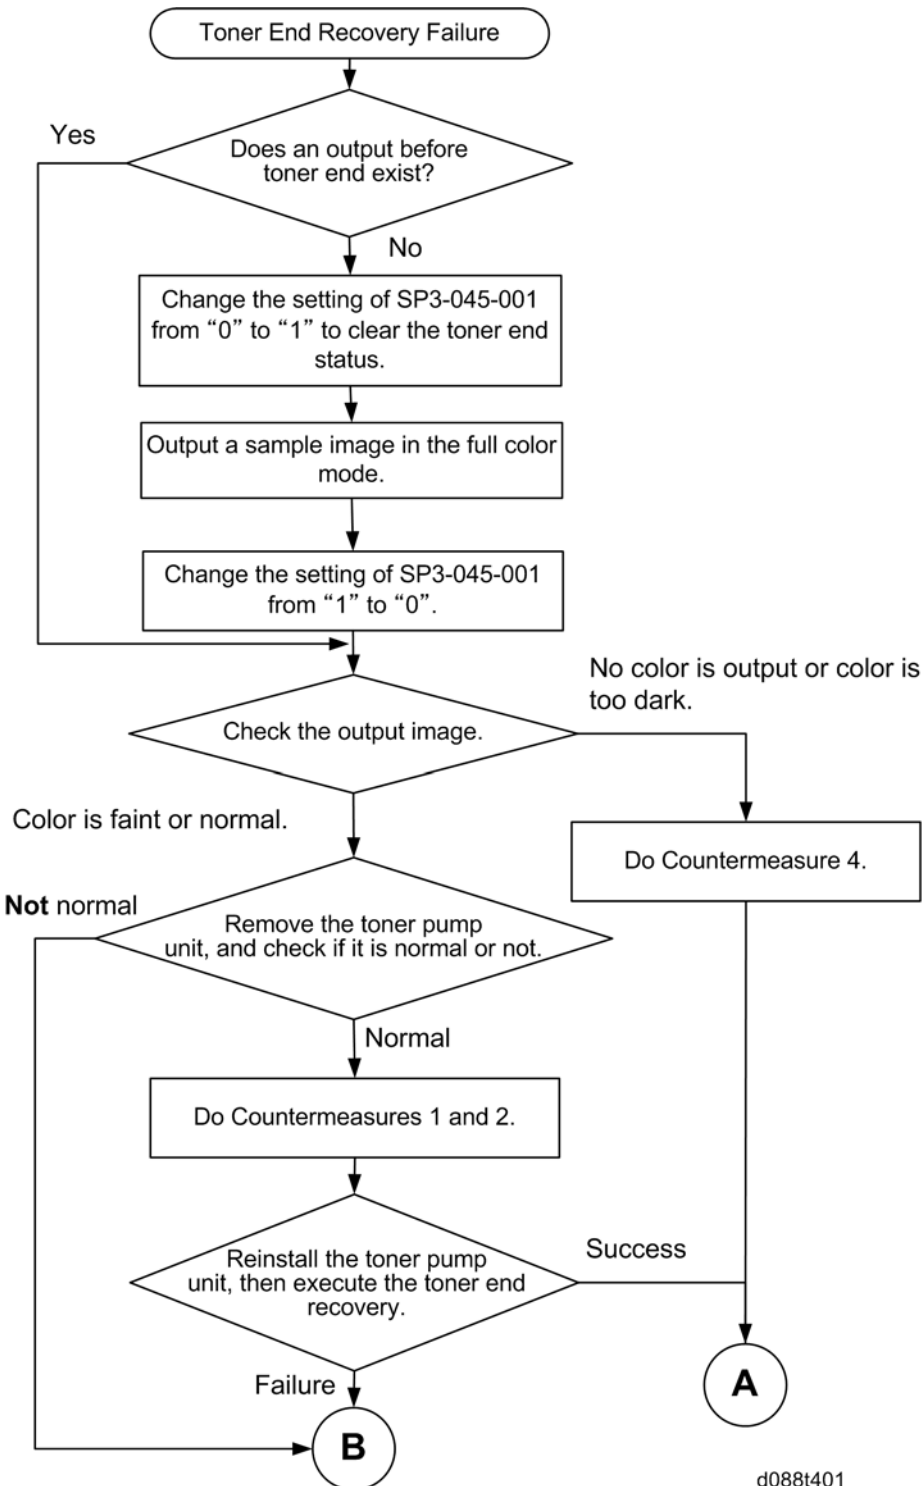

d088t401
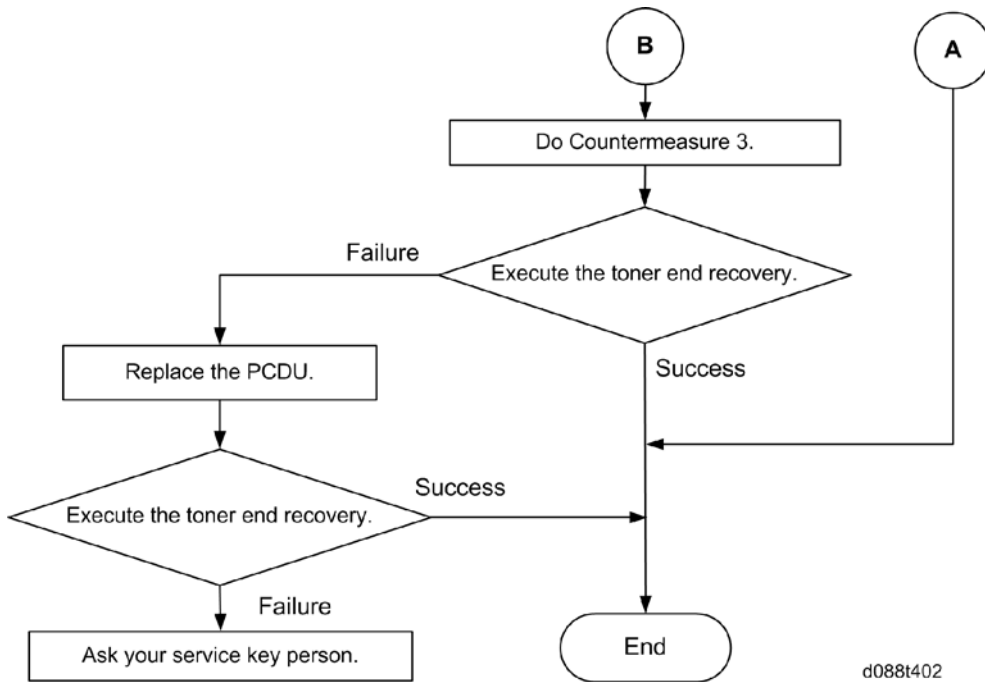

d088t402

Countermeasure 1

1. Check if the toner supply tube is bent or disconnected.

1. Straighten the toner supply tube or connect it correctly.

Countermeasure 2

1. Remove the target color toner bottle.

1. Disconnect the toner supply tube from the toner pump unit.

2. Remove the blocked toner in the toner supply tube with a vacuum cleaner.

Countermeasure 3

• Replace the toner pump unit (p.245).

Countermeasure 4

• Replace the PCDU (p.236).

Toner Bottles Detection Error

If the no toner bottles message is displayed on the LCD when turning on the main power switch, or SC 681-11 to 14 occurs during operation, deformed detection terminals of toner bottles may cause a toner bottle ID communication error. If this occurs, follow the countermeasure below.

Countermeasure 1

• Replace the toner bottles.

Countermeasure 2

• Replace the toner bottle detection board (👉 p.362).

◆Note

• When replacing the toner bottle detection board, make sure not to deform the toner bottle detection terminals. This error does not occur if toner bottles are replaced correctly.

Damaged Lift Sensor Switch or Motor

SC798 is displayed when the SR3070 (D585) is unpacked or installed, or later during machine operation if the lift sensor switch or motor was damaged during machine installation.

Cause

- The section of the exit tray circled in the photo below is contacted (hit) during the shipping process.

- The customer lifts the tray all the way up.

d1420081

Solution

If the symptom occurs at machine installation, do Procedure 1 below.

If the symptom occurs during machine operation after installation, do Procedure 2 below.

Procedure 1

Do this procedure if the symptom occurs at machine installation.

1. Turn off the main power switch.

6. Push down the two tray support plates (left and right sides) all the way.

7. Attach the above gear and snap (snap x 1).

8. Attach all parts and connectors that you removed in steps 1 - 4.

9. Turn on the main power switch and make sure that SC798 does not occur.

Procedure 2

Do this procedure if the symptom occurs after installation, during regular operation.

1. Check the tray position.

2. Check the position and ON-OFF response of the tray lift sensor switch.

3. Check the tray lift motor and tray lift sensor harness.

4. Remove and reattach the tray lift motor.

5. Replace the tray lift motor or tray lift sensor.

⭐**Important**

- Whenever you lift or carry the SR3070, always hold it by the bottom edges of the front cover [C] and rear cover [A], as the figure left below. If you do not, SC798 will occur when you attach the finisher. DO NOT hold the finisher by the tray holder [B], as the figure right below.

Encryption Key Restoration for NVRAM

How to restore the old encryption key to the machine

The following message appears after the controller board is replaced, or after the hard disk and controller board are replaced. In such cases, it is necessary to restore the encryption key to the new controller board.

SD card for restoration is required.
Turn the main power switch off and set the SD card, then turn the main power switch on.

d1420101

To do this, follow the procedure below.

1. Prepare an SD card that has been initialized in FAT16 format.

2. Using a PC, create a folder in the SD card and name it "restore_key".

3. Create a folder in the "restore_key" folder and name it the same as machine's serial number, "xxxxxxxxxxx" (11 digits).

4. Create a text file called "key_xxxxxxxxxxx.txt" and save it in the "xxxxxxxxxxx" folder. Write the encryption key in the text file.

   /restore_key/xxxxxxxxxxx/key_xxxxxxxxxxx.txt

   <img> Note

   - Ask an Administrator to enter the encryption key. The key has already been printed out by the user and may have been saved in the "key_xxxxxxxxxxx.txt" file. (The function of back-up the encryption key to the SD card directly is provided 11A products or later.)

5. Turn on the machine's main power switch.

6. Confirm that a message is displayed on the LCD telling to insert the SD card that contains the encryption key.

7. Turn off the main power switch.

8. Insert the SD card that contains the encryption key into Slot 2 (the lower slot).

9. Turn on the main power switch.

   <img> Note

   - The machine will automatically restore the encryption key to the flash memory on the controller board.

10. Turn off the main power switch when the machine has returned to normal status.

11. Remove the SD card from Slot 2.

How to do a forced start up with no encryption key

If the encryption key back-up has been lost, follow the procedure below to do a forced start-up.

⭐ Important

- **The HDD will be formatted after the forced start-up.**

- **Encrypted data will be deleted.**

- **User settings will be cleared.**

1. Prepare an SD card.

2. Create a directory named "restore_key" inside the root directory of the SD card. Then, save the "nvram_key.txt" file using the following name:

   /restore_key/nvram_key.txt

3. Create a text file and write "nvclear".

⭐**Important**

- Write this string at the head of the file.

- Use all lower-case letters.

- Do not use quotation marks or blank spaces.

- It is judged that a forced start has been selected when the content of "nvclear" is executed and the machine shifts to the alternate system (forced start).

4. Confirm that a message is displayed on the LCD telling to insert the SD card that contains the encryption key.

5. Turn off the main power switch.

6. Insert the SD card that contains the encryption key into Slot 2 (the lower slot).

7. Turn on the main power switch.

8. Turn on the main power switch, the machine automatically clear the HDD encryption.

9. Turn off the main power switch when the machine has returned to normal status.

10. Remove the SD card from Slot 2.

11. Turn on the main power switch.

12. Memory clear SP5-801-xx (Exclude SP-5-801-001: All Clear and SP-5-801-002: Engine), and clear SP5-846-046: address book.

13. Set necessary user settings in User Tools key.

Fax Icon is not Displayed

When the fax unit is installed on the machine, the fax icon [A] is displayed on the home screen of the operation panel, as shown below. (The figure shown below is an example of the home screen. The location of each icon depends on the settings.)

d1420109

If the fax icon is not displayed (as shown below), the FCU should be replaced. Refer to the Fax service manual for the FCU replacement procedure.
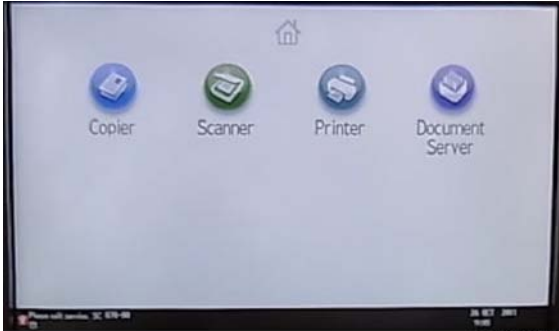

d1420108

Other Symptoms

The following pages explain troubleshooting for the following symptoms:

- SC 861(HDD reboot error) to 865 (HDD access error)

- Any SC that indicates a defective controller board

- "Please wait" remains on display

Flowchart for the error

Test the machine using the flow chart below, to determine which parts are causing the problem.
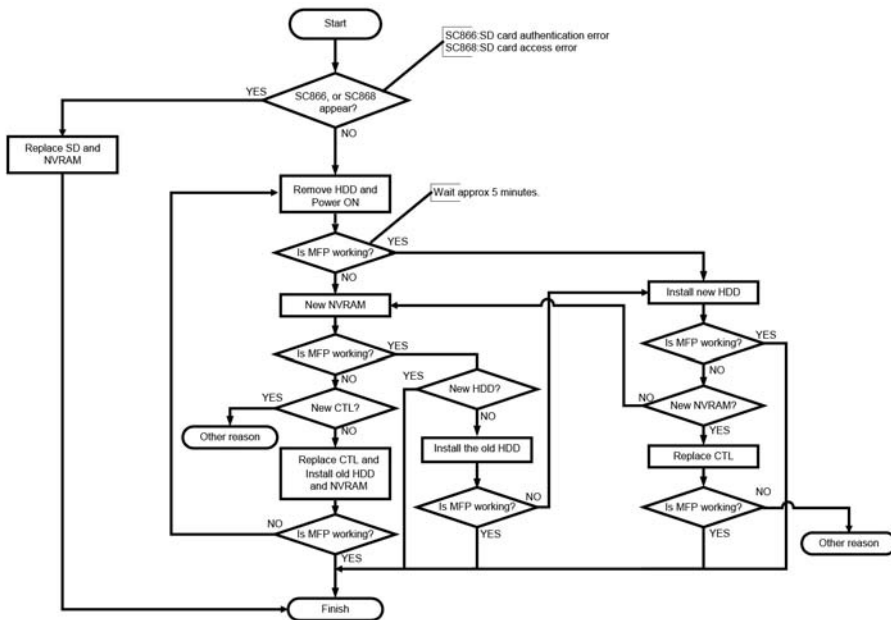

d1420102

Countermeasure list for the error

The following table shows what to do in each case: For example, if only the controller and HDD were found to be defective, then it is No 4 in the table below.

⚠CAUTION

- For continued protection against risk of fire, replace only with same type and rating of fuse.

Scanner Test Mode

SBU Test Mode

Output the SBU test pattern with SP4-807-001 to make sure the scanner SBU operates correctly. The SBU test pattern prints out after you have set the SP mode settings and pressed the start key.

- The CCD on the SBU board may be defective if the copy is abnormal but the SBU test pattern is normal.
- The following can be the cause if the copy is abnormal and the SBU test pattern is also abnormal:
  - The harness may not be correctly connected between the SBU and the IPU.
  - The IPU or SBU board may be defective.

7. Energy Saving

Energy Save

Energy Saver Modes

Customers should use energy saver modes properly, to save energy and protect the environment.

d082d911a
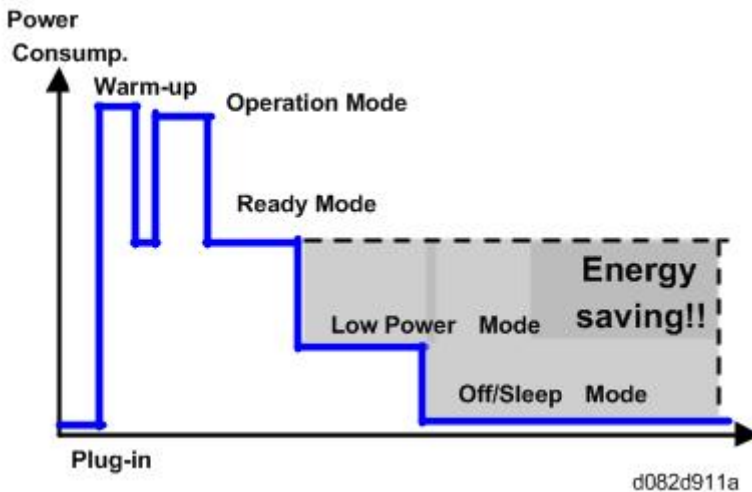

The area shaded grey in this diagram represents the amount of energy that is saved when the timers are at the default settings. If the timers are changed, then the energy saved will be different. For example, if the timers are all set to 240 min., the grey area will disappear, and no energy is saved before 240 min. expires.

Timer Settings

The user can set these timers with User Tools (System settings > Timer setting)

- Energy saver timer (1 – 240 min): Low Power Mode. Default setting: 1 min (for NA and EU)/10 min (others).
- Auto off timer (1 – 240 min): Off/Sleep Mode. Default setting: 1 min (for NA and EU)/16 min (others).

Normally, Energy Saver timer < Auto Off timer. But, for example, if Auto Off timer < or = Energy Saver timer, the machine goes immediately to Off mode when the Auto Off timer expires. It skips the Energy Saver mode.

Example

- Low power: 15 min.

- Auto Off: 1 min.

- The machine goes to Off mode after 1 minute. Low Power mode is not used.

Return to Stand-by Mode

Low Power Mode

The recovery time depends on the model and the region.

- C3a, b: 10 sec. or less.

Off/Sleep Mode

Recovery time.

- C3a, b: 10 sec. or less.

Recommendation

We recommend that the default settings should be kept.

- If the customer requests that these settings should be changed, please explain that their energy costs could increase, and that they should consider the effects on the environment of extra energy use.

- If it is necessary to change the settings, please try to make sure that the Auto Off timer is not too long. Try with a shorter setting first, such as 30 min., then go to a longer one (such as 60 min.) if the customer is not satisfied.

- If the timers are all set to the maximum value, the machine will not begin saving energy until 240 minutes has expired after the last job. This means that after the customer has finished using the machine for the day, energy will be consumed that could otherwise be saved.

- If you change the settings, the energy consumed can be measured using SP8941, as explained below.

Energy Save Effectiveness

SP 8941 (Machine Status) keeps a record of the amount of time that the machine spends in each mode.

- 8941-001: Operating mode

- 8941-002: Standby mode

- 8941-004: Low power mode

- 8941-005: Off/sleep mode

With this data, and the power consumption values from the specifications, we can estimate the amount of energy that is used by the machine.

This should only be used as a reference value, because the power consumption specifications are measured in a controlled environment with a constant power supply.

To get an exact measurement at the customers site, a watt meter must be used to measure the actual energy consumed.

To use SP8941 to calculate the energy consumed:

- At the start of the measurement period, read the values of SP8941 001 to 005.

- At the end of the measurement period, read the values of SP8941 001 to 005 again.

- Find the amount of time spent in each mode (subtract the earlier measurement from the later measurement).

- Multiply this by the power consumption spec for each mode.

- Convert the result to kWh (kilowatt hours)

Paper Save

Effectiveness of Duplex/Combine Function

Duplexing and the combine functions reduce the amount of paper used. This means that less energy overall is used for paper production, which improves the environment.

1. Duplex:

Reduce paper volume in half!
d062d102

2. Combine mode:

Reduce paper volume in half!
d062d100

3. Duplex + Combine:

Using both features together can further reduce paper volume by 3/4!
d062d101

To check the paper consumption, look at the total counter and the duplex counter.

The total counter counts all pages printed.

- For one duplex page, the total counter goes up by 2.
- For a duplex job of a three-page original, the total counter goes up by 3.

The duplex counter counts pages that have images on both sides.

- For one duplex page, the duplex counter goes up by 1.
- For a duplex job of a three-page original, the duplex counter will only increase by 1, even though two sheets are used.

How to calculate the paper reduction ratio

How to calculate the paper reduction ratio, when compared with Single-sided copying, with no 2-in-1 combine mode

Paper reduction ratio (%) = Number of sheets reduced: A/Number of printed original images: B x 100

- Number of sheets reduced: A

  = Output pages in duplex mode/2 + Number of pages in Single-sided with combine mode + Number of pages in Duplex with combine mode x 3/2
  A = ((2) + (3) + (4))/2 + (5) + (6) x 3/2

- Number of printed original images: B

  = Total counter6 + Number of pages in Single-sided with combine mode + Number of pages in Duplex with combine mode
  B = (1) + (5) + (6)

- (1) Total counter: SP 8581 001 (pages)
- (2) Single-sided with duplex mode: SP 8421 001 (pages)
- (3) Double-sided with duplex mode: SP 8421 002 (pages)
- (4) Book with duplex mode: SP 8421 003 (pages)
- (5) Single-sided with combine mode: SP 8421 004 (pages)

7

- (6) Duplex with combine mode: SP 8421 005 (pages)

Other Yield Parts

The parts mentioned in these tables have a target yield. However, the total copy/print volume made by the machine will not reach the target yield within the machine's targeted lifetime if the machine is used

under the target usage conditions (ACV, color ratio, P/J, and C/O). So, these parts are categorized not as PM parts but as yield parts (EM parts).

2005	[Charge DC Voltage] Charge Roller DC Voltage Adjustment (Paper Type, Process Speed, Color) Paper Type ➜ Plain, Thick 1, Thick 2 Plain: High speed, Thick 1: Middle speed, Thick 2&FINE: Low speed		
	Adjusts the DC component of the charge roller bias in the various print modes. Charge bias (DC component) is automatically adjusted during process control; therefore, adjusting these settings does not effect while process control mode (SP3-041-1 Default: ON) is activated. When deactivating process control mode with SP3-041-1, the values in these SP modes are used for printing.

3

162	Connection Timing Adjustment Incoming
	When the Call Center calls out to an embedded RCG-M modem, it sends a repeating ID tone (*#1#). This SP sets the time the line remains open to send these ID tones after the number of the embedded RCG-M modem is dialed up and connected.
	[0 to 24 / 1 / 1 /step]
	The actual amount of time is this setting x 2 sec. For example, if you set "2" the line will remain open for 4 sec.
163	Access Point
	This is the number of the dial-up access point for RCG-M. If no setting is done for this SP code, then a preset value (determined by the country selected) is used.
	Default: 0
	Allowed: Up to 16 alphanumeric characters
164	Line Connecting
	This SP sets the connection conditions for the customer. This setting dedicates the line to RCG-M only, or sets the line for sharing between RCG-M and a fax unit.

173	Modem Serial No.	This SP displays the serial number registered for the RCG-M.
174	Retransmission Limit
	Normally, it is best to allow unlimited time for certification and ID2 update requests, and for the notification that the certification has been completed. However, RCG-M generates charges based on transmission time for the customer, so a limit is placed upon the time allowed for these transactions.
	If these transactions cannot be completed within the allowed time, do this SP to cancel the time restriction.

187	FAX TX Priority	-	
	This SP determines whether pushing the off-hook button will interrupt a RCG-M transmission in progress to open the line for fax transaction. This SP can be used only if SP5816 164 is set to "0". [0 or 1/ **0** / -] 0: Disable, 1: Enable		
200	Manual Polling	-	Executes the manual polling.

041	Fill Addr Acl Info.	
	This SP must be executed immediately after installation of an HDD unit in a basic machine that previously had no HDD. The first time the machine is powered on with the new HDD installed, the system automatically takes the address book from the NVRAM and writes it onto the new HDD. However, the new address book on the HDD can be accessed only by the system administrator at this stage. Executing this SP by the service technician immediately after power on grants full address book access to all users. Procedure 1. Turn the machine off. 2. Install the new HDD. 3. Turn the machine on. 4. The address book and its initial data are created on the HDD automatically. 5. However, at this point the address book can be accessed by only the system administrator or key operator. 6. Enter the SP mode and do SP5846-041. After this SP executes successfully, any user can access the address book.

7803		[PM Counter Display] (Page, Unit, [Color])		
		Displays the number of sheets printed for each current maintenance unit.		
		PM counters click up based on the number of A4 (LT) LEF size sheets printed. Therefore, the A3 (DLT) Double Count is activated. The Double Count cannot be deactivated.		
		When a unit is replaced, the machine automatically detects that the new unit is installed. Then, the current PM counter value is automatically moved to the PM Counter - Previous (SP7-906-1 to 10) and is reset to "0".		
		The total number of sheets printed with the last unit replaced can be checked with SP7-906-1 to 10.		
		NOTE: The LCT is counted as the 3rd feed station.

(Current revolution / Target revolution) × 100. This shows how much of the unit's expected lifetime has been used up.

The Rotation% counter is based on rotations, not prints. If the number of rotations reaches the limit, the machine enters the end condition for that unit. If the print count lifetime is reached first, the machine also enters the end condition, even though the R% counter is still less than 100%.

091	Displays the value given by the following formula: (Current printouts / Target printouts) × 100. This shows how much of the unit's expected lifetime has been used up. The Page% counter is based on printouts, not revolutions. If the number of printouts reaches the limit, the machine enters the end condition for that unit. If the revolution count lifetime is reached first, the machine also enters the end condition, even though the Page% counter is still less than 100%. [0 to 255 / 0 / 1 %/step]

Main SP Tables-8

SP8-XXX: Data Log2

Many of these counters are provided for features that are currently not available, such as sending color faxes, and so on. However, here are some Group 8 codes that when used in combination with others, can provide useful information.

SP Numbers	What They Do
SP8211 to SP8216	The number of pages scanned to the document server.
SP8401 to SP8406	The number of pages printed from the document server
SP8691 to SP8696	The number of pages sent from the document server

Specifically, the following questions can be answered:

- How is the document server actually being used?
- What application is using the document server most frequently?
- What data in the document server is being reused?

Most of the SPs in this group are prefixed with a letter that indicates the mode of operation (the mode of operation is referred to as an "application"). Before reading the Group 8 Service Table, make sure that you understand what these prefixes mean.

Prefixes		What it means
T:	Total: (Grand Total).	Grand total of the items counted for all applications (C, F, P, etc.).
C:	Copy application.	Totals (pages, jobs, etc.) executed for each application when the job was not stored on the document server.
F:	Fax application.	
P:	Print application.	
S:	Scan application.	

L:	Local storage (document server)	Totals (jobs, pages, etc.) for the document server. The L: counters work differently case by case. Sometimes, they count jobs/pages stored on the document server; this can be in document server mode (from the document server window), or from another mode, such as from a printer driver or by pressing the Store File button in the Copy mode window. Sometimes, they include occasions when the user uses a file that is already on the document server. Each counter will be discussed case by case.
O:	Other applications (external network applications, for example)	Refers to network applications such as Web Image Monitor. Utilities developed with the SDK (Software Development Kit) will also be counted with this group in the future.

The Group 8 SP codes are limited to 17 characters, forced by the necessity of displaying them on the small LCDs of printers and faxes that also use these SPs. Read over the list of abbreviations below and refer to it again if you see the name of an SP that you do not understand.

Key for Abbreviations

Abbreviation	What it means
/	"By", e.g. "T:Jobs/Apl" = Total Jobs "by" Application
>	More (2> "2 or more", 4> "4 or more")
AddBook	Address Book
Apl	Application
B/W	Black & White
Bk	Black
C	Cyan
ColCr	Color Create
ColMode	Color Mode
Comb	Combine
Comp	Compression
Deliv	Delivery

Abbreviation	What it means
DesApl	Designated Application. The application (Copy, Fax, Scan, Print) used to store the job on the document server, for example.
Dev Counter	Development Count, no. of pages developed.
Dup, Duplex	Duplex, printing on both sides
Emul	Emulation
FC	Full Color
FIN	Post-print processing, i.e. finishing (punching, stapling, etc.)
Full Bleed	No Margins
GenCopy	Generation Copy Mode
GPC	Get Print Counter. For jobs 10 pages or less, this counter does not count up. For jobs larger than 10 pages, this counter counts up by the number that is in excess of 10 (e.g., for an 11-page job, the counter counts up 11-10 =1)
IFax	Internet Fax
ImgEdt	Image Edit performed on the original with the copier GUI, e.g. border removal, adding stamps, page numbers, etc.
K	Black (YMCK)
LS	Local Storage. Refers to the document server.
LSize	Large (paper) Size
Mag	Magnification
MC	One color (monochrome)
NRS	New Remote Service, which allows a service center to monitor machines remotely. "NRS" is used overseas, "CSS" is used in Japan.
Org	Original for scanning
OrgJam	Original Jam

Abbreviation	What it means
Palm 2	Print Job Manager/Desk Top Editor: A pair of utilities that allows print jobs to be distributed evenly among the printers on the network, and allows files to moved around, combined, and converted to different formats.
PC	Personal Computer
PGS	Pages. A page is the total scanned surface of the original. Duplex pages count as two pages, and A3 simplex count as two pages if the A3/DLT counter SP is switched ON.
PJob	Print Jobs
Ppr	Paper
PrtJam	Printer (plotter) Jam
PrtPGS	Print Pages
R	Red (Toner Remaining). Applies to the wide format model A2 only. This machine is under development and currently not available.
Rez	Resolution
SC	Service Code (Error SC code displayed)
Scn	Scan
Sim, Simplex	Simplex, printing on 1 side.
S-to-Email	Scan-to-E-mail
SMC	SMC report printed with SP5990. All of the Group 8 counters are recorded in the SMC report.
Svr	Server
TonEnd	Toner End
TonSave	Toner Save
TXJob	Send, Transmission
YMC	Yellow, Magenta, Cyan
YMCK	Yellow, Magenta, Cyan, Black

↓Note

- All of the Group 8 SPs are reset with SP5 801 1 Memory All Clear.

8 001	T:Total Jobs	*CTL	These SPs count the number of times each application is used to do a job.
8 002	C:Total Jobs	*CTL	[0 to 9999999/ **0** / 1]
8 003	F:Total Jobs	*CTL	**↓Note**
8 004	P:Total Jobs	*CTL	• The L: counter is the total number of times the other applications are used to send a job to the document server, plus the number of times a file already on the document server is used.
8 005	S:Total Jobs	*CTL	
8 006	L:Total Jobs	*CTL	

- These SPs reveal the number of times an application is used, not the number of pages processed.

- When an application is opened for image input or output, this counts as one job.

- Interrupted jobs (paper jams, etc.) are counted, even though they do not finish.

- Only jobs executed by the customer are counted. Jobs executed by the customer engineer using the SP modes are not counted.

- When using secure printing (when a password is required to start the print job), the job is counted at the time when either "Delete Data" or "Specify Output" is specified.

- A job is counted as a fax job when the job is stored for sending.

- When a fax is received to fax memory, the F: counter increments but the L: counter does not (the document server is not used).

- A fax broadcast counts as one job for the F: counter (the fax destinations in the broadcast are not counted separately).

- A fax broadcast is counted only after all the faxes have been sent to their destinations. If one transmission generates an error, then the broadcast will not be counted until the transmission has been completed.

- A printed fax report counts as one job for the F: counter.

- The F: counter does not distinguish between fax sending or receiving.

8 221	ADF Org Feeds	*CTL	[0 to 9999999/ **0** / 1]
	These SPs count the number of pages fed through the ADF for front and back side scanning.		

8 221 1	Front	Number of front sides fed for scanning:
		With an ADF that can scan both sides simultaneously, the Front side count is the same as the number of pages fed for either simplex or duplex scanning.
		With an ADF that cannot scan both sides simultaneously, the Front side count is the same as the number of pages fed for duplex front side scanning. (The front side is determined by which side the user loads face up.)
8 221 2	Back	Number of rear sides fed for scanning:
		With an ADF that can scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex scanning.
		With an ADF that cannot scan both sides simultaneously, the Back count is the same as the number of pages fed for duplex rear-side scanning.

- When 1 sheet is fed for duplex scanning the Front count is 1 and the Back count is 1.

- If a jam occurs during the job, recovery processing is not counted to avoid double counting. Also, the pages are not counted if the jam occurs before the first sheet is output.

8 231 6	Mixed 1side/ 2side		Simplex and Duplex mode.	

- If the scan mode is changed during the job, for example, if the user switches from ADF to Platen mode, the count is done for the last selected mode.

- The user cannot select mixed sizes or non-standard sizes with the fax application so if the original's page sizes are mixed or non-standard, these are not counted.

- If the user selects "Mixed Sizes" for copying in the platen mode, the Mixed Size count is enabled.
- In the SADF mode if the user copies 1 page in platen mode and then copies 2 pages with SADF, the Platen count is 1 and the SADF count is 3.

8 641	T:IFAX TX PGS	*CTL	[0 to 9999999/ **0** / 1]
	These SPs count by color mode the number of pages sent by fax to as fax images using I-Fax.

8 64x 1	B/W		
8 64x 2	Color		

- If a document has color and black-and-white pages mixed, the pages are counted separately as B/W or Color.
- At the present time, this feature is provided for the Fax application only so SP8641 and SP8643 are the same.
- The counts include error pages.
- If a document is sent to more than one destination with a Group transmission, the count is done for each destination.
- Polling transmissions are counted but polling RX are not.
- Relay, memory, and confidential mailbox transmissions and are counted for each destination.

8 651	T:S-to-Email PGS	*CTL	[0 to 9999999/ **0** / 1]

8 655	S:S-to-Email PGS	*CTL	[0 to 9999999/ **0** / 1]
	These SPs count by color mode the total number of pages attached to an e-mail for the Scan application only.		
8 65x 1	B/W		
8 65x 2	Color		

Note

- The count for B/W and Color pages is done after the document is stored on the HDD. If the job is cancelled before it is stored, the pages are not counted.

- If Scan-to-Email is used to send a 10-page document to 5 addresses, the count is 10 (the pages are sent to the same SMTP server together).

- If Scan-to-PC is used to send a 10-page document to 5 folders, the count is 50 (the document is sent to each destination of the SMB/FTP server).

- Due to restrictions on some devices, if Scan-to-Email is used to send a 10-page document to a large number of destinations, the count may be divided and counted separately. For example, if a 10-page document is sent to 200 addresses, the count is 10 for the first 100 destinations and the count is also 10 for the second 100 destinations, for a total of 20.).

8 66x 1	B/W		
8 66x 2	Color		

Note

- The B/W and Color counts are done after the document is stored on the HDD of the Scan Router server.

- If the job is canceled before storage on the Scan Router server finishes, the counts are not done.

- The count is executed even if regardless of confirmation of the arrival at the Scan Router server.

- This counts pages sent from a PC using a PC fax application, from the PC through the copier to the destination.

- When sending the same message to more than one place using broadcasting, the pages are only counted once. (For example, a 10-page fax is sent to location A and location B. The counter goes up by 10, not 20.)

8 691	T:TX PGS/LS	*CTL	These SPs count the number of pages sent from the document server. The counter for the application that was used to store the pages is incremented.

8 696	L:TX PGS/LS	*CTL	

Note

- Print jobs done with Web Image Monitor and Desk Top Binder are added to the count.

- If several documents are merged for sending, the number of pages stored are counted for the application that stored them.

- When several documents are sent by a Fax broadcast, the F: count is done for the number of pages sent to each destination.

-31 to -35	Fusing Exit Motor **Note:** These SP modes will be moved to Super SP mode in the near future.	
	Important: Use the procedure below to do the output checks for the fusing exit motor. If you do not follow this procedure, a kink will form in the fusing belt sleeve, and the fusing sleeve belt unit will need to be replaced. **1.** Do one of the following: • Open the right cover of the paper bank • Remove one of the toner bottles • Pull out the waste toner bottle half-way • Remove the fusing unit **2.** Enter SP mode. **3.** Do the following out output checks: • SP5-804-031 (Fusing exit motor: High speed) • SP5-804-032 (Fusing exit motor: Middle speed) • SP5-804-033 (Fusing exit motor: Low speed) • SP5-804-035 (Fusing exit motor: Very low speed) **4. Without exiting SP mode,** turn the main power switch off and then on again. **Important:** If you exit SP mode before you turn the main power switch off, the fusing exit motor will stay off when the machine warms up. Heat will be concentrated in one area of the fusing belt sleeve and cause a kink to form. If this happens, you will need to replace the fusing sleeve belt unit. **5.** Do the reverse of what you did in step 1 (for example, reattach the fusing unit).

Test Pattern Printing

Printing Test pattern: SP2-109

Some of these test patterns are used for copy image adjustments but most are used primarily for design testing.

↓Note

- Do not operate the machine until the test pattern is printed out completely. Otherwise, an SC occurs.

1. Enter the SP mode and select **SP2-109-003**.

2. Enter the number for the test pattern that you want to print and press [#].

3. When you want to select the single color of Magenta, Yellow or Cyan for printing a test pattern, select the color with SP2-109-005 (2: Magenta, 3: Yellow, 4: Cyan).

4. When you want to change the density of printing a test pattern, select the density with SP2-109-006 to -009 for each color.

   ↓Note

   - If you select "0" with SP2-109-006 to -009, the color to be adjusted to "0" does not come up on a test pattern.

5. When you are prompted to confirm your selection, touch "Yes" to select the test pattern for printing.

6. Touch "Copy Window" to open the copy window, then select the settings for the test print (paper size etc.).

   ↓Note

   - If you want to use black and white printing, touch "Black & White" on the LCD. If you want to use color printing, touch "Full Colour" on the LCD.

7. Press the "Start" key to start the test print.

8. After checking the test pattern, touch "SP Mode" on the LCD to return to the SP mode display.

9. Reset all settings to the default values.

10. Touch "Exit" twice to exit SP mode.
