Note: (Do not store more than 12 hours under the temperature between 40 and 50^0C. Do not store more than a month under the temperature between 35 and 40^0C. Store in a dry, dark place where temperature does not exceed 40^0C on continuance storage/transportation conditions.

Transporting the Machine after Installation

The following should be done before transporting the machine.

1. Move the ITB lock lever down to the shipping position. This moves the ITB away from the Black PCDU.

2. Do SP 4806-001 to move the scanner carriage from the home position. This prevents dust from falling into the machine during transportation.

3. Remove the toner bottles. This prevents toner flow into the toner supply tube, which is caused by vibration during transport.   This can also cause the tube to be clogged with toner.

4. Make sure there is no paper left in the paper trays. Then fix down the bottom plates with a sheet of paper and tape.

5. Attach securing tape to stop the waste toner bottle from coming out.

6. Do one of the following:
   - Secure covers and doors with shipping tape.
   - Shrink-wrap the machine tightly.

PM / Yield Parts Yields

PM parts as well as yield parts are affected by the number of prints per job (P/J). The actual part life is determined by the number of its rotations, which depends on the P/J. The number of rotations a part makes per page increases, if the P/J is lower. This is because the machine always stops at a certain (fixed) time after the last sheet is fed out, regardless of the P/J. The lower the P/J, the more revolutions are made per page.

The table below shows the expected number of prints made for 1 P/J vs. 4 P/J.

Unit	Number of Prints (K copies/prints)			
	1 P/J	2 P/J	3 P/J	4 P/J
Black PCDU	40K	60K	60K	60K
Color PCDU	15K	24K	24K	24K
Image Transfer Belt Cleaning Unit	81K	120K	120K	120K
Paper Transfer Roller Unit	81K	120K	120K	120K
Fusing Unit	70K	120K	120K	120K

The expected yield of all PM & Yield parts is calculated assuming the following conditions:

- A4 (LT) short-edge feed
- Color ratio: 20%
- Expected ACV: 2k
