## **FIELD ENGINEERING MANUAL**

***version 1***

**May 2013**

#### NOTE

- Contents of this manual can be changed without prior notice.
- There can be errors in this manual even though we have made best efforts to create the accurate manual. We are not liable for any loss and/or damage that are implemented to the MFP by using this manual.
- The parts/components that are used in the MFP are delicate and can be easily damaged if they are not handled in appropriate method. We recommend strongly that maintenance of MFP should be made by the maintenance engineers who are the authorize service engineers.
- Before starting any work, remove static electricity beforehand.

5.3 Adjustment .....	5-87

# 1 General Description

## 1.1 Product Description

## 1.2 Specifications

Item	Product Official Specification
<b>Copy</b>	
type	Desktop type / Console type
Original table	Fixed table
Scanning method	Color CIS
Acceptable copy paper type	Sheets and books *No Three-dimensional objects
Acceptable document size	Max:FBS:Legal, URADF:Legal
Auto document feeder (sheets)	N/A
>Doc. Thickness	N/A
>Doc. Weight (g/m <sup>2</sup> )	N/A
Reversing Auto document feeder (sheets)	Max:80 sheets (80g/m2 documents)
>Doc. Thickness	0.05 - 0.15mm (Single Sheet) 0.07 - 0.12mm (Multi Sheets)
>Doc. Weight (g/m <sup>2</sup> )	35.0 - 128.0g/m2 (Single Sheet) 52.0 - 105.0 g/m2 (Multi Sheets)
Manual duplex scan	no
Sensitive drum type	OPC drum
Printing method	Dry & Electrophotographic method
Exposure method	LED
Developing method	Mono component non-magnetic development method
Fusing method	Heating-roll fixing method
Recording paper size	
>1st-4th cassette	Letter(SEF), HalfLetter(LEF), Legal(SEF)
>Bypass Tray	Letter (SEF), Half-Letter (LEF), Legal (SEF), Executive (SEF), A6 (SEF), A5 (SEF/LEF), A4 (SEF), F4 (SEF), DL (SEF), COM#10 (SEF), Monarch (SEF), Postcard (SEF), Custom Size(width:90-216mm, length:140-356mm) *Custom size paper use for PC printing only.
>Large Capacity Cassette	N/A
Paper Media (for MP/Bypass)	Plain Paper, OHP*, Envelope/Postcard/PasteBoard *does not guarantee all environments or all OHP films (suggested OHP film: 3M PP2500)
Resolution (Max)	Scanner 600dpi / Printer 600dpi
Continuous copy speed (Max.)	>LTR SEF 25 ppm (Letter SEF, print from 1st cassette)
	>B4 SEF N/A
	>A3 SEF N/A
	>Small size paper / A6 18ppm/Postcard 12ppm
Paste Board	
Warm up time	approx.12 sec. (WUT1)
First copy out time (FCOT)	approx. 5sec
# of copies	1-99
Enlargement/Reduction	yes/yes:(FBS/URADF)
>Setting range	FBS: 25 - 400% (1% step) URADF:25 - 100% (1% step)
>Preset (A4 Setting)	LTR: 50% ,64%, 78%, 100%, 121%, 129%, 154%
>Preset (LTR Setting)	A4: 70%, 81%, 86%, 100%, 115%, 122%, 141%
Recording paper capacity (Std.)	500 sheets(Cassette) + 100 sheets (Bypass Tray)
(Max.)	500 sheets x 4(Cassette) + 100 sheets (Bypass Tray)
<b>Fax Specifications</b>	
Type	Tx & Rx
Compatibility	G3 & Super G3
Resolution (Scanning/Tx/Rx)	(horizontal x vertical)
>Super Fine	
	16 dots/mm×15.4 lines/mm (initial setting)
	(406 dpi × 392 lpi)
	not supported 600dpi × 600lpi
>Fine	8 dots/mm×7.7 lines/mm

Item	Product Official Specification
	(203 dpi × 196 lpi)
>Normal	8 dots/mm×3.85 lines/mm
	(203 dpi × 98 lpi)
>Grayscale	8 dots/mm×7.7 lines/mm
	(203 dpi × 196 lpi)
Telephone network	PSTN
Transmission speed	2sec. level (Super G3) 6sec. (G3)
Coding method	MH, MR, MMR, JBIG
Modem	
>G3:	14400, 12000, 9600, 7200, 4800, 2400 bps Control signal speed: 300 bps
>SuperG3:	33600, 31200, 28800, 26400, 24000, 21600, 19200, 16800, 14400, 12000, 9600, 7200, 4800, 2400 bps Control signal speed: 2400, 1200 bps
<b>Other Information</b>	
Image data memory capacity (Std.)	512 MB(Total Memory) Image data memory 16MB(Fax), 50MB(Copy)
(Max.)	N/A
Memory Backup (Standard)	No limit *The user data clear is necessary at the time of the disposal.
Backup data	Tx document(included PC Fax Tx), Rx document, List document as auto print, Auto Forwarding document
MB CF card capacity (Std.)	N/A
(Max.)	N/A
Interface	Hi-Speed USB 2.0(Std.) Hi-Speed USB 2.0 Host(Std.) Ethernet 10 BASE-T/ 100 BASE-TX(Std.)
Appearance : URADF model	
>Dimensions (W x D x H)	20.5×20.2×20.0 in. = 520×513×509 mm (Std. 2Way/1cassette)
>Dimensions (Max) (W x D x H)	20.5×20.2×34.2 in. = 520×513×869 mm (Max.: 5 Way/4 cassette)
>Weight (w/o consumables)	53.1 lb. = 24.1 kg (Std. 2 Way/1 cassette) 80.7 lb. = 36.6 kg (Max.5 Way/4 cassette)
Consumables Weight	
>Toner Cartridge	2.65 lb. = 1.2 kg(Approx.) include toner
>Developer Unit	N/A
>Drum Cartridge	12.65 lb. = 1.2 kg(Approx.) include toner
>Handset (includes Holder)	N/A
>Hopper tray	included in the main unit weight
Required Space for Installation	
*Standard Configuration	
>from ceiling	- from ceiling: more than 400 mm
>from back wall	- from back wall: more than 200 mm
>from right wall	- from right wall: more than 400 mm
>from left wall	- from left wall: more than 100 mm
>from front wall	- from front wall: more than 450 mm
Control panel language	English/French/Spanish
LCD mono	
>LCD language	Multi languages (see each model)
>LCD size	5.7 inch
>LCD resolution	320 dots × 240 dots (QVGA)
>LCD fonts	Large fonts: 12 dots x 24 dots Small fonts: 7 dots x 14 dots
>Clock indicate on LCD	yes
>>4-digit display of year	yes
>>AM/PM display	yes (LCD clock, LCD Settings, TTI and List)
Standby Mode (Default)	MyMFP

Item	Product Official Specification
Input method	By QWERTY key on touch panel
Power requirements	AC 115 V±10 % 50 Hz/60 Hz
Power consumption	
>Sleep mode	1.3 W
>Stand by	41 Wh
>Max.	1000 W(Full Option)
>TEC	1397 Wh
Electrical Currency	8.4 A (Full Option Max)
EMI Class	Class B
Environmental conditions	
>Practical temperature	10 - 32 °C (when humidity is 68%)
>Practical humidity	20 - 80 % (when temperature is 30°C)
Machine Reliability	
>Scanning pages per day (Ave.)	70 sheets
>Scanning page per day (Max.)	125 sheets
>Printing pages per day (Ave.)	150 sheets
>Printing pages per day (Max.)	500 sheets
>Working days	20 days
>Monthly Print Volume (Ave.)	3,000 sheets/month
>Monthly Print Volume (Max.)	10,000 sheets/month
>Scanner Life (FBS)	100,000 sheets
>Scanner Life (ADF)	N/A
>Scanner Life (URADF)	150,000 sheets
>Machine Life	600,000 sheets print or 5 years
<b>Scanner Unit</b>	
Scanning method	
>Scanning method	Color CIS
>Lamp	LED (RGB)
>Optical resolution (Max.)	600dpi x 600dpi
Color scanning	
>Color	yes
>Black & White	yes
>>Multi Level	no
>>Bi Level	yes
>Grayscale	256 level
>Drop out color	no
Color Scanning Mode	
ACS (Auto Color Sensor)	no
Full Color	yes
Bicolor	no
Mono Color	no
Effective scanning width	
>Copy/Scan	
>>A4/Letter	A4:210 mm Letter:216 mm
>>B4	no
>>A3/Ledger	no
>>Leading Registration	0 mm
>>End Registration	0.0 mm(FBS), 2.0 mm(URADF)
>Fax	
>>A4/Letter	A4:208 mm Letter 214 mm
>>B4	N/A
>>A3/Ledger	N/A
>>Leading Registration	2.5 mm
>>End Registration	2.0 mm
Contrast adjustment (Copy/Scan/Fax)	
>Auto	no
>Manual (# of levels)	yes (5 levels)
>Modification for the original document back-ground	Automation(w/o photo mode)
Size of Flat Bed Scanner	
	216 mm x 356 mm

Item	Product Official Specification
Type of Cover Platen (ADF)	N/A
Type of Cover Platen (URADF)	Lift up type (Lift up to 32 mm)
Document setting position and Scanning Alignment (FBS)	Rear left corner
Acceptable document size (FBS)	
>Auto detection	no
>Max. W(mm)×D(mm)	216 x 356 mm (Legal: SEF)
>Min. W(mm)×D(mm)	no limit
>Doc. thickness	no limit
Document Size (URADF)	
>Auto detection	no *can detect the length after scanning
>Acceptable Doc. Size	
>>Single page Document Through Size	
>>>Max. Document Size	Simplex: 216 x 900 mm (600dpi: 216 x 400 mm) Duplex: 216 x 356 mm
>>>Min. Document Size	Simplex: 120 x 100 mm Duplex: 120 x 139.5 mm
>>>Doc. thickness	0.05 - 0.15 mm
>>>Doc. Weight (g/)	35g/m <sup>2</sup> - 128g/m <sup>2</sup>
>>Multi pages Document Through Size	
>>>Max. Document Size	Simplex: 216 x 356 mm Duplex: 216 x 356 mm
>>>Min. Document Size	216 x 139.5 mm(210 x 148.5 mm)
>>>Doc. thickness	0.07 - 0.12 mm
>>>Doc. Weight (g/m <sup>2</sup> )	52.0 - 105.0 g/m <sup>2</sup>
Scanning Alignment (ADF)	N/A
Scanning Alignment (URADF)	Center
Document setting (ADF/URADF)	Face up
Auto document feeder (sheets) (ADF)	N/A
Auto document feeder (sheets) (URADF)	80 sheets (A4(SEF), F4(SEF), A5(LEF)) 80 sheets (Letter(SEF), Legal(SEF), HalfLetter(LEF)) *80g/m <sup>2</sup> , 20lb
Scanning resolution	
>Copy (B/W) (Auto,Text, Photo, Photo/Text, Background Off) →(Text,Text/Photo,Photo,Background Off)	Max : 600 dots/inch x 600 lines/inch
>Copy (Color)	N/A
>>Memory transmission	
>>>Super Fine	16 dots/mm×15.4 lines/mm (406 dpi × 392 lpi)
>>>Fine	8 dots/mm×7.7 lines/mm (203 dpi × 196 lpi)
>>>Normal	8 dots/mm×3.85 lines/mm (203 dpi × 98 lpi)
>>>Grayscale	8 dots/mm×7.7 lines/mm (203 dpi × 196 lpi)
>>>Background	8 dots/mm×7.7 lines/mm (203 dpi × 196 lpi)
>>Real-time transmission	
>>>Super Fine	
	16 dots/mm×15.4 lines/mm (406 dpi × 392 lpi)
>>>Fine	8 dots/mm×7.7 lines/mm (203 dpi × 196 lpi)
>>>Normal	8 dots/mm×3.85 lines/mm (203 dpi × 98 lpi)
>>>Grayscale	16 dots/mm× 15.4 lines/mm (406 dpi × 392 lpi)
>>>Background off	8 dots/mm×7.7 lines/mm (203 dpi × 196 lpi)

Item	Product Official Specification
>>PC-Scan (B/W) (Text,Text/Photo(UI Auto),photo)	Text,Auto(Text/Photo), photo: yes Background off: No
>>>Optical Resolution	600dpi × 600dpi
•Default	
>TWAIN / WIA Scan	300dpi × 300dpi (TWAIN only)
>Scan to Folder (SMB)	300dpi × 300dpi
>Scan to E-mail	300dpi × 300dpi
>Scan to FTP	300dpi × 300dpi
>Scan to CF/HDD	N/A
>Scan to USB	300dpi × 300dpi
>>PC-Scan (Color) (Auto,Text,Text/Photo,photo)	
>>>Optical Resolution	600dpi × 600dpi
•Default	
>TWAIN / WIA Scan	300dpi × 300dpi (TWAIN only)
>Scan to Folder (SMB)	300dpi × 300dpi
>Scan to E-mail	300dpi × 300dpi
>Scan to FTP	300dpi × 300dpi
>Scan to CF/HDD	N/A
>Scan to USB	300dpi × 300dpi
Grayscale (B/W)	
>Copy (B/W)	256 levels, Error diffusion
>Memory Tx	256 levels, DitherMatrix
>Real-time Tx	256 levels, Error diffusion
>PC-Scan (B/W)	
>>TWAIN / WIA Scan	256 levels, Error diffusion
>>Scan to Folder (SMB)	256 levels, Error diffusion
>>Scan to E-mail	256 levels, Error diffusion
>>Scan to FTP	256 levels, Error diffusion
>>Scan to CF	N/A
>>Scan to USB	256 levels, Error diffusion
# of pages for memory capacity (using the ADF) * measured by ITU-T No1Chart	
>600 dpi × 600 dpi (TWAIN)	No limit (Real Time Twain)
>300 dpi × 300 dpi (TWAIN)	No limit (Real Time Twain)
>200 dpi × 200 dpi (TWAIN)	No limit (Real Time Twain)
>200 dpi × 100 dpi (FAX)	1024 Sheets
Document scanning time (FBS)	
>Copy (B/W)	2.2 sec/page (Letter SEF)
(Color)	N/A
>Memory transmission	
>PC-Scan (B/W)	
>>400 dpi × 400 dpi	N/A
>PC-Scan (Color)	
>>400 dpi × 400 dpi	N/A

Mode selection	
>Resolution (Fax Tx)	yes, Normal/Fine/Super-Fine/Photo/Background off (default: Normal)
>Doc. Type (Copy)	yes, Text/Auto(Text&Photo)/Photo/Background off (default: Auto)
> Resolution/Doc. Type(Mono PC Scan)	yes, Text/Auto(Text&Photo)/Photo yes, 100dpi/200dpi/300dpi/600dpi (default: 300dpi/Auto)
> Resolution(Color PC Scan)	yes, Text/Auto(Text&Photo)/Photo yes, 100dpi/200dpi/300dpi/600dpi (default: 300dpi/Auto)
>Contrast (Fax Tx)	yes, 5 levels (default: Normal )
(Copy)	yes, Auto,5 levels (default: Auto )
(PC Scan B/W)	yes, 5 levels (default: Normal)
(PC Scan Color)	yes, 5 levels (default: Normal)
Scan Size setting	Yes Default: URADF: Auto / FBS : Letter
Verification stamp	yes
>Stamped Place	Center Bottom of Original , face side
>Stamp Color	pink(10,000 sheets)
Read Registration	URADF: Simplex $\pm 1.5$ mm / Duplex $\pm 1.92$ mm FBS: $\pm 1.5$ mm
Side Registration	URADF: Simplex $\pm 1.5$ mm / Duplex $\pm 1.98$ mm FBS: $\pm 1.5$ mm
Document Skew Rate (Lead/Side)	URADF: Simplex $\pm 1.0$ % / Duplex $\pm 1.28$ % FBS: $\pm 0.8$ %
Horizontal stretch	URADF: $\pm 1.0$ % / FBS: $\pm 0.8$ %
Vertical stretch	URADF: $\pm 1.0$ % / FBS: $\pm 0.8$ %
Document Jam Rate	Error (Double Feed, No Feed): under 0.10%
	Damage (Jam, Wrinkle, Fold): under Simplex 0.10% / Duplex 0.20%
<b>Printer Unit</b>	
Color Printing	no
Sensitive drum type	OPC drum
Printing method	Dry & Electrophotographic method
Exposure method	LED
Charging Method	Corona charging method
Cleaning Method for Charger Charge wire	Manual
Charger Cleaning Timing	Toner cartridge replacement timing
Charger cleaning warning timing	N/A
Developing method	Mono Component non-magnetic development method
Fusing method	Heat Fixing by the heat roller
Margin	
>Copy	
>>Top/Bottom	3 mm

Resolution	600dpi

Item	Product Official Specification
Smoothing	
>Hyper Fine	
>>(600dpi×600lpi)	no
>>(16 dots/mm×15.4 lines/mm)	no
>Super Fine	no
>Fine	no
>Normal	yes
Print speed (Max.)	25 ppm (Letter SEF, print from 1st cassette) *A6 18 ppm/Postcard 12 ppm
Duplex Print speed (Max.)	More than 10.0 ppm(MAX/A4)
Alignment	Upper left
Warm up time	approx. 12 sec
Paper Supply	Cassettes + Bypass Tray
Recording paper capacity (Standard)	500 sheets (Cassette) + 100 sheets (Bypass Tray)
(Max.)	500 sheets (Cassette) x 4 + 100 sheets (Bypass Tray)
Recording paper	
>Cassette (1st-4th)	1st: (Standard) / 2nd-4th: (Option)
>>Cassette type	Universal type
>>Designate method for the paper size	Manual setting by user's operation
>>Recording paper quantity	500 sheets (80g/m <sup>2</sup> , 20lb)
>>Paper Media	Plain Paper
>>Recording paper size	Letter(SEF), HalfLetter(LEF), Legal(SEF)
>Bypass Tray	Standard
>>Designate method for the paper size	Manual setting by user's operation
>>Recording paper quantity	100 sheets (80g/m <sup>2</sup> , 20lb) Envelope: 20(10°C 20%, 20°C 50%), 10 sheets(30°C 80%)
>>Paper Media (for MP/Bypass)	Plain Paper, OHP*, Envelope/Postcard/PasteBoard *does not guarantee all environments or all OHP films (suggested OHP film: 3M PP2500)
>>Recording paper size	Letter (SEF), Half-Letter (LEF), Legal (SEF), Executive (SEF), A6 (SEF), A5 (SEF/LEF), A4 (SEF), F4 (SEF), DL (SEF), COM#10 (SEF), Monarch (SEF), Postcard (SEF), Custom Size(width:90-216mm, length:140-356mm) *Custom size paper use for PC printing only.
Weight of Recording paper	60-90 g/m <sup>2</sup> , 20-24 lb(Cassette) 60-160 g/m <sup>2</sup> , 20-43 lb (Bypass tray)
Out put type of Recording paper	Face down
>Out put paper tray capacity	[Main unit] More than 250 sheets (A4/Letter) (N-N environment, 80g/ m <sup>2</sup> =20lb) [2-bin tray] 100 sheets (A4/Letter) (N-N environment, 80g/m <sup>2</sup> =20lb)
Recording paper detection	
>Out of paper detection	yes: Photo Sensor Type
>Paper jam detection	yes: Photo Sensor Type
>Remaining paper quantity display on LCD	no
>Remaining paper quantity display on Cassette	no
Toner Cartridge	Cartridge type
>Toner Quantity	24,000 sheets (ISO/IEC 19752, equivalent value)  cf. 20,000 sheets (6%, equivalent value)
>Low toner warning	yes:2.4K sheets (ISO/IEC 19752, equivalent value)  Detected by Dot count Warning timing is adjustable.
>>Action after low toner warning indication	600-2400 sheets (ISO/IEC 19752, equivalent value) by dot count (default 1200 sheets)
>Action after Toner empty	Stop printing
>Toner Saving (New Function)	yes
>No toner cartridge detection	yes: EEPROM
Toner collection container	yes

Item	Product Official Specification
>Detection of remaining Waste Toner	no
>Detection of the container existence	no (included in Toner cartridge)
Drum Cartridge	Cartridge type (includes Developing unit and Initial toner 2,400 sheets ISO/IEC 19752, equivalent value, cf 2,000 sheets 6% equivalent value)
>Drum Life (1 page-cycle print)	42,000 sheets (number of sheets(Letter/A4) or driving time of 1 page-cycle print)
>Drum Near End warning	yes: Detected by motor cycle or by number of prints Indicate message after printing 41500 sheets or 12600 sec
>>Action after drum near end warning indication	Can print 500 sheets or 1500 sec after near end warning
>Drum end detection	yes: Detected by motor cycle or by number of prints
>>Action after drum end detection	Stop printing
>New Drum detection	yes: EEPROM
>No Drum detection	yes: EEPROM
Others	
>2-bin (Plain Paper/Simplex, Duplex)	yes(option)  [Simplex] A4(SEF), A5(LEF/SEF), A6(SEF), F4(SEF) Letter(SEF), HalfLetter(LEF), Legal(SEF), Executive(SEF)  [Duplex] A4(SEF), A5(LEF/SEF), A6(SEF), F4(SEF) Letter(SEF), Legal(SEF)
>Shift tray (Plain Paper/Simplex, Duplex)	N/A
>Duplex Print (Plain Paper/Cassette 1-4, Bypass)	yes  [Cassette] A4(SEF), A5(LEF), F4(SEF) Letter(SEF), Legal(SEF)  [Bypass] Letter(SEF), Legal(SEF), A4(SEF), F4(SEF), A5(SEF/LEF), A6(SEF)
>Mechanical Counter	yes(option)
>Finisher	no
>>Staple	no
>>Punch	no
>>Extension-bin	no
>>Mail-bin	no
>>Saddle stitch	no
>Off-Line Stapler	no
Lead Registration	±1.5mm(simplex) / ±1.9mm(duplex)
Side Registration (1st cassette)	±1.8mm(simplex) / ±2.3mm(duplex)

# 2 Machine Composition

## 2.1 Document scanning section

### 2.1.1 Auto Document Feeder (ADF) Section

ADF (Auto Document Feeder) is a device that feeds the document continuously one page by one to the scanning section automatically. It consists mainly of document tray, Tx cover, inner guide, and platen cover. When the device is categorized by its functions, it consists of separator section that picks up each page of documents, register section that detects the leading edge of the document and controls the timing so that the document does not skew, and scan section that scans the document.

### Document insert section / separator section

The machine scans up to letter paper size document width. Place the document to the center of the document tray and align the document guide.

By pressing the start key through copy or transmission commands, the motor starts driving, and the driving force is transferred to the pick up roller through gears, and the document will be fed.

Document separator section consists mainly of separate roller and separate pad.

The document will be fed from the upper pages. Remaining documents are separated by the friction of the separate pad and only the top page will be fed by the separate roller.

### Register section

Following the document separation, the separate roller transfers the document to register section.

During this transfer, clutch 2 (CL2) which drives the register roller is turned off and the document leading edge stops at the register roller. The separate roller feeds the document forward, and that prevents the document to skew.

The document sensor (DRS) is placed between the separator section and the register roller to detect the leading edge of the document.

When the document leading edge passes the sensor and the loop is made, clutch 1 (CL1) runs idle (turns off) and clutch 2 runs (turns on) and the register roller transfers the document to the scan position

## Document detection

The sizes of the documents are detected by the following sensors;

Detection	Sensor
Document presence	DS1
Leading and trailing edge detection	DS2 DS3 (Back side) DRS DEXIT

## Scanning section for simplex document

The document sensor (DS2) is placed at scanning position to detect the leading edge and trailing edge of the document.

When the leading edge is detected, the feed roller transfers the document a certain steps where the scanning begins. When the trailing edge is detected, the feed roller transfers the document a certain steps where the scanning ends.

If the document has two or more pages, feeding of the next page begins when the former page scanning ends, and the page is scanned in the same way.

The steps where scanning begins can be adjusted with machine parameter.

## Scanning section for duplex document

The front side of the document will be scanned with the same mechanism as simplex document.

A few steps after DS2 turns on (detects the leading edge of document), feed roller switching solenoid (SL2) turns on to switch the document guide into backside scanning pass.

A few steps after DS2 turns off (detects the trailing edge of document), discharge path / U-turn path switching solenoid (SL1) turns on to switch the feed roller rolling in the reverse direction.

A few steps after DS3 turns on (detects the leading edge of document), scanning of the backside begins.

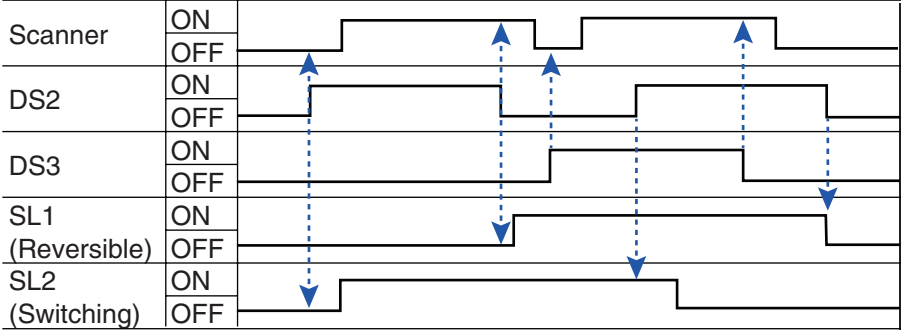

A few steps after DS3 turns off (detects the trailing edge of document), scanning of the backside ends.

A few steps after DS2 turns on (detects the leading edge of document), feed roller switching solenoid (SL2) turns off to switch the document guide to discharge pass.

When DS2 turns off (detects the trailing edge of document), discharge path / U-turn path switching solenoid (SL1) turns off to switch the feed roller rolling in the original direction.

When the backside of the document is scanned, the document will be discharged.

## 2.1.2 Flat Bed Scanner (FBS) section

The FBS (Flat Bed Scanner) section consists of document glass (pane) and optical reading section (CIS). The CIS (Contact Image Sensor) carried on CIS holder keeps the focal length by moving along the pane. CIS moves and thereby exposes the lamp light uniformly to the document. The FBS motor drives the timing belt on which the CIS holder is mounted. It drives the CIS holder at a speed adjusted by copy, scan or fax mode and resolution.

The original position of the CIS holder is where the home sensor is. This position is also the home position for scanning operation.

No.	Part name	No.	Part name
1	FBS motor	2	Home sensor
3	Guide bar	4	CIS (Contact Image Sensor)
5	CIS holder		

## 2.2 Recording section

### Recording paper feed path

The recording paper is separated from the remaining paper by friction of the pickup roller. The paper is transferred along the paper guide until it reaches the register roller. Then it is transferred to the exit tray by the register roller.

At duplex printing, the paper is transferred to the exit tray when the first side of paper is printed. A few steps after the switch back sensor (SWBS) has detected the paper trailing edge, the exit roller rolls in reverse and the paper is transferred to the image processing area by the duplex roller. The paper reaches to the image transfer area inside out, and the back side of the paper is printed.

Paper feed timing chart

#### Warming-up

- 1 When the power is turned on, or the side or front cover is closed, the machine controls the warming-up temperature of the fuser.
- 2 Devices start working in the following order: Fan, RX2 motor, Dup CL1, RX1 motor, REGCL, and 2bin motor.
- 3 Dup CL1, RX1 motor, REGCL, and RX2 Motor stop after a predetermined time in that order.
- 4 2bin motor stops after an predetermined time.
- 5 The machine controls the ready temperature of the fuser.
- 6 The fun stops.

#### One-page copy

- 1 The machine starts to control the printing temperature of the fuser when the start key is pressed at copy mode.
- 2 Devices start working in the following order: Fan, RX2 motor, Dup CL1, and RX1 motor.
- 3 In a predetermined condition, the paper feed clutch turns on, and the pick up roller feeds a paper.
- 4 The paper reaches the PRS, and loops at the resist roller.
- 5 The REGCL turns on, and the resist roller feeds the paper.
- 6 LED print head exposes the drum, and an image is developed then transferred to the paper. The image is fixed to the paper at the fuser.
- 7 The paper is fed by the fuser roller pairs to SWBS, PDS, and then dropped on the exit tray by the exit roller.
- 8 Devices stop working in the following order: RX1 motor, Dup CL1, and RX2 motor.
- 9 The machine controls the ready temperature of the fuser.
- 10 The fun stops.

#### One-page duplex copy

- 1 The machine starts to control the printing temperature of the fuser when the start key is pressed at copy mode.
- 2 Devices start working in the following order: Fan, RX2 motor, Dup CL1, and RX1 motor.
- 3 In a predetermined condition, the paper feed clutch turns on, and the pick up roller feeds a paper.
- 4 The paper reaches the PRS, and loops at the resist roller.
- 5 The REGCL turns on, and the resist roller feeds the paper.
- 6 LED print head exposes the drum, and an image is developed then transferred to the paper. The image is fixed to the paper at the fuser.
- 7 The paper is fed by the fuser roller pairs to SWBS, and reaches the PDS.
- 8 The PDS turns on for a predetermine time, and RX1 motor stops.
- 9 The SWBS turns off, and the Dup CL1 turns off. Then Dup CL2 turns on.
- 10 The exit roller rotates in reverse direction, and the paper is fed from PDS to SWBS and then to return paper path direction.
- 11 The Dup CL2 turns on, and 2bin motor rotates in reverse direction and switches the paper from 2bin tray paper path in return paper path.
- 12 The SWBS turns on, RX1 motor starts again.
- 13 The paper reaches the PRS again, and loops at the resist roller.
- 14 The REGCL turns on, and the resist roller feeds the paper.
- 15 The REGCL turns, and Dup CL2 stops.
- 16 LED print head exposes the drum, and an image is developed then transferred to the paper. The image is fixed to the paper at the fuser.
- 17 The Dup CL2 turns off, and the Dup CL1 starts.
- 18 The paper is fed by the fuser roller pairs to SWBS, PDS, and then dropped to the exit tray by the exit roller.
- 19 Devices stop working in the following order: RX1 motor, Dup CL1, and RX2 motor.
- 20 The machine controls the ready temperature of the fuser.
- 21 The fun stops.

#### Two-page copy with 2bin tray

- 1 The machine starts to control the printing temperature of the fuser when the start key is pressed at copy mode.
- 2 Devices start working in the following order: Fan, RX2 motor, Dup CL1, and RX1 motor.
- 3 In a predetermined condition, the paper feed clutch turns on, and the pick up roller feeds a paper.
- 4 The paper reaches the PRS, and loops at the resist roller.
- 5 The REGCL turns on, and the resist roller feeds the paper.
- 6 LED print head exposes the drum, and an image is developed then transferred to the first paper. The image is fixed to the paper at the fuser.
- 7 The paper is fed by the fuser roller pairs to SWBS, PDS, and then dropped to the exit tray by the exit roller.

- 8 When a predetermined time passes after REGCL is turned on in step 5, PFCL turns on, and the pick up roller feeds a paper.
- 9 The paper reaches the PRS, and loops at the resist roller.
- 10 The REGCL turns on, and the resist roller feeds the paper.
- 11 LED print head exposes the drum, and an image is developed then transferred to the second paper. The image is fixed to the paper at the fuser.
- 12 The paper is fed by the fuser roller pairs to SWBS, and reaches PDS.
- 13 The SWBS turns off, Dup CL1 turns off, and then Dup CL2 turns on.
- 14 The Dup CL2 turns on, and exit roller runs in reverse direction. The paper is fed to PDS, SWBS and then to the return paper path direction.
- 15 Dup CL2 is turns on, and 2bin motor runs in its normal direction and switches the paper path to the 2bin tray.
- 16 The paper is fed to 2bin PDS and then dropped on the 2bin tray.
- 17 SWBS is turns off, and the Dup CL2 turns off.
- 18 2bin PDS is turned off, and the 2bin motor stops.
- 19 Devices stop working in the following order: RX1 motor and RX2 motor.
- 20 The machine controls the ready temperature of the fuser.
- 21 The fun stops.

## 2.3 Image processing section

The image processing is roughly divided into the following steps:

1. Charging  
This step charges the drum negatively using the scorotron charger working on corona discharge system.
2. Exposure  
This step creates an electrostatic latent image on the drum surface by lighting the LED head (print head) according to the image data.
3. Development  
This step creates a visible image on the drum surface by adhering negatively charged toner on the drum.
4. Image transfer  
This step transfers the visible image on the drum surface onto the paper using a positive charged transfer roller.
5. Separation  
This step eliminates charge from paper and then separate it from the drum. The drum separation scraper works to separate the paper from the drum.
6. Cleaning  
This step cleans the residual toner and paper dust on the drum surface by scraping them off with a cleaning blade.
7. Discharging  
This step exposes light on the drum to neutralize remaining charge.
8. Fusing  
This step fuses the toner transferred on the paper using heat and pressure.

### 2.3.1 Developing unit

The machine uses an one-component nonmagnetic toner (negative). The toner is charged by friction between developing roller and toner supply roller, and between developing roller and blade, and adheres to the developing roller.

No.	Part name	No.	Part name
1	Blade	2	OPC drum
3	Developing roller	4	Toner supply roller
5	Toner agitator A	6	Toner agitator B

### 2.3.2 Drum structure

Photoconductive drum is a drum that has an organic material consisted UCL (Under Coat Layers) coated the surface with OPC (Organic Photo Conductor).

No.	Part name	No.	Part name
1	OPC drum	2	CTL: Charge Transport Layer
3	CGL: Charge Generation Layer	4	UCL: Under Coat Layer
5	Base		

### 2.3.3 Charging mechanism

The drum is charged evenly through a grid mesh by corona discharging of a multi-stylus electrode. The stylus type charger concentrates discharging to the grid mesh side, which generates less ozone than wire-electrical discharging. The generated ozone is removed by the ozone filter while emission.

No.	Part name	No.	Part name
1	Charger case	2	Multi-stylus electrode
3	OPC drum	4	Grid mesh

### 2.3.4 Exposure mechanism

The LED print head lights according to the image data transferred from the print controller, and exposes the drum surface. The exposed surface loses the energy of charge, and an invisible static image is created on the drum surface.

No.	Part name	No.	Part name
1	LED print head	2	OPC drum

## 2.3.5 Development mechanism

The static image created in exposure step is developed through toner adherence. The toner is transferred using the potential difference between the drum potential and developing bias charged on transfer roller. The exposed area on the drum surface has higher potential ( $V_L$ ) than the developing bias ( $V_b$ ) that makes the toner transfer from the developing roller to the drum surface. The potential of the non-exposed area keeps the exposing potential ( $V_o$ ) that is lower than the developing bias ( $V_b$ ), so the toner does not transfer to the drum surface.

## 2.3.6 Transfer mechanism

A specific amount of electric is applied to the transfer roller by a constant current control, and negatively charged toner on the drum surface is transferred to the paper by electrostatic force. The transfer voltage is controlled by paper size, paper type, simplex/duplex printing, temperature and humidity. The residual toner on the transfer roller is cleared by applying negative transfer voltage.

No.	Part name	No.	Part name
1	Transfer roller	2	Paper
3	OPC drum		

### 2.3.7 Separation mechanism

The electrostatic force on the paper is removed by a separator stylus, and the paper separates from the drum. The drum separation scraper also helps the paper separate from the drum.

No.	Part name	No.	Part name
1	Separation scraper	2	Star roller
3	Paper	4	Separation stylus
5	Transfer roller	6	OPC drum

### 2.3.8 Cleaning mechanism

The residual toner and paper dust on the drum is scraped off by a cleaning blade that is pressed against the drum surface.

No.	Part name	No.	Part name
1	Cleaning blade	2	Residual toner / Paper dust
3	OPC drum		

2.3.9 Toner transfer mechanism

No.	Part name	No.	Part name
1	Toner cartridge	2	Drum cartridge
3	Toner supply route	4	Toner collection route

Cross section

No.	Part name	No.	Part name
1	Toner cartridge	2	Drum cartridge
3	Toner discharge opening	4	Toner supply opening

2.3.10 Discharge mechanism

After transfer step, erase light is exposed on the drum to neutralize remaining charge and to provide for the next charging.

No.	Part name	No.	Part name
1	Eraser lamp	2	OPC drum

### 2.3.11 Fusing mechanism

The toner image transferred on to the paper is securely fixed.

A heat roller system is used as the fusing system. The toner image is fused by heater roller heated by the heater lamp, and securely fixed by the pressure between the heater roller and press rollers.

A thermistor detects and controls the heater roller temperature.

The thermostat functions when the heater lamp is not turned OFF even if the thermistor detects a high temperature malfunction.

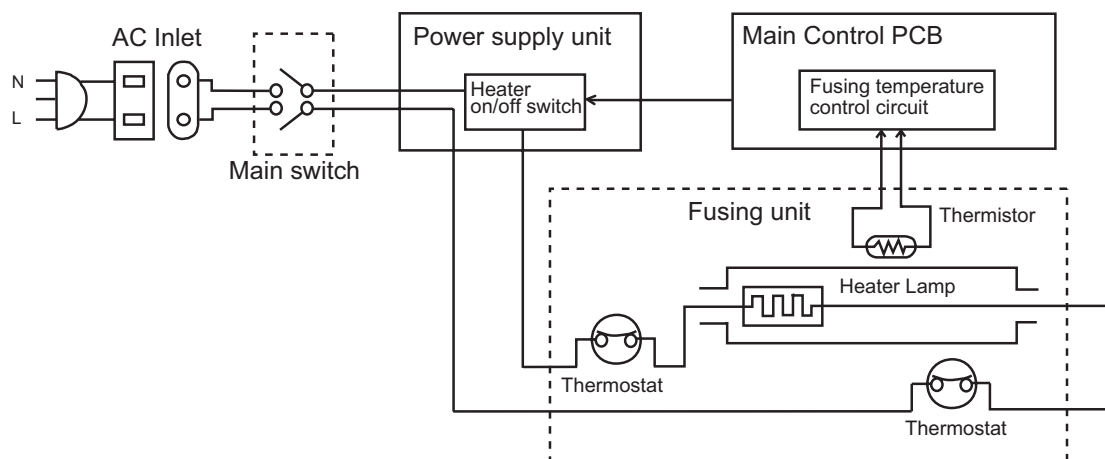

No.	Part name	No.	Part name
1	Scraper	2	Thermistor
3	Heater lamp	4	Heater roller
5	Press roller		

### Fusing temperature control circuit

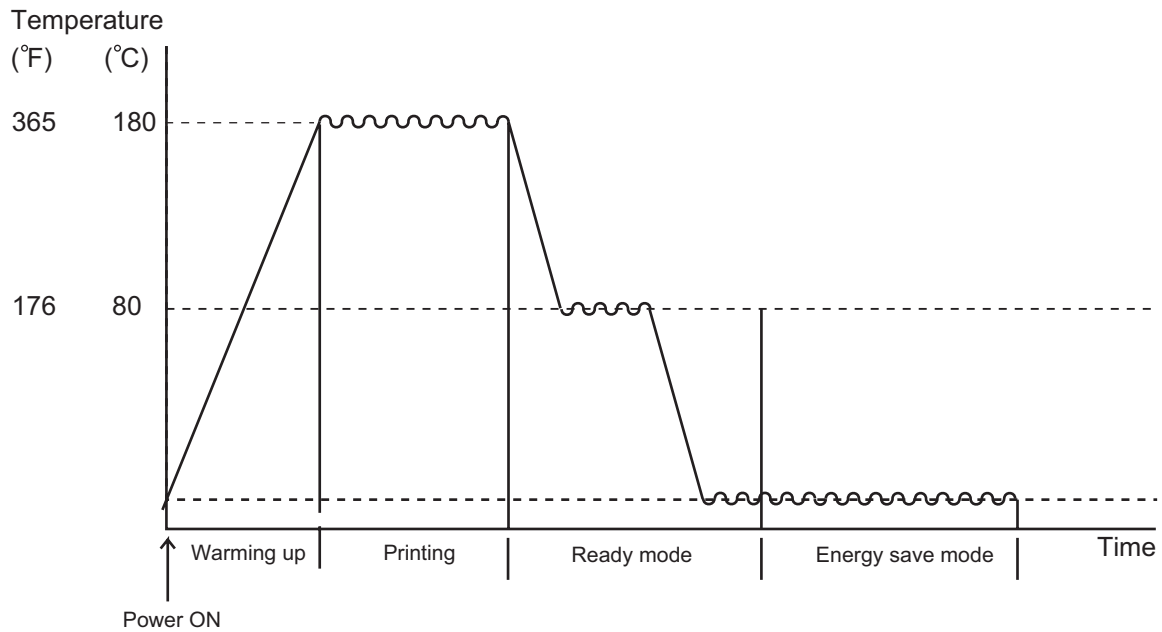

The thermistor detects the surface temperature of the heater roller and inputs that analog voltage into the main control board. Corresponding to this data, the heater lamp ON/OFF signal is output to the heater ON/OFF switch of the power supply unit, causing the heater lamp to turn ON or OFF to control the fusing temperature.

When the heater lamp is not turned OFF even if the thermistor detects a high temperature malfunction, the first thermostat shuts down the power to the heater lamp. When the first thermostat is malfunction, the second thermostat shuts down the power to the heater lamp.

## Fusing temperature

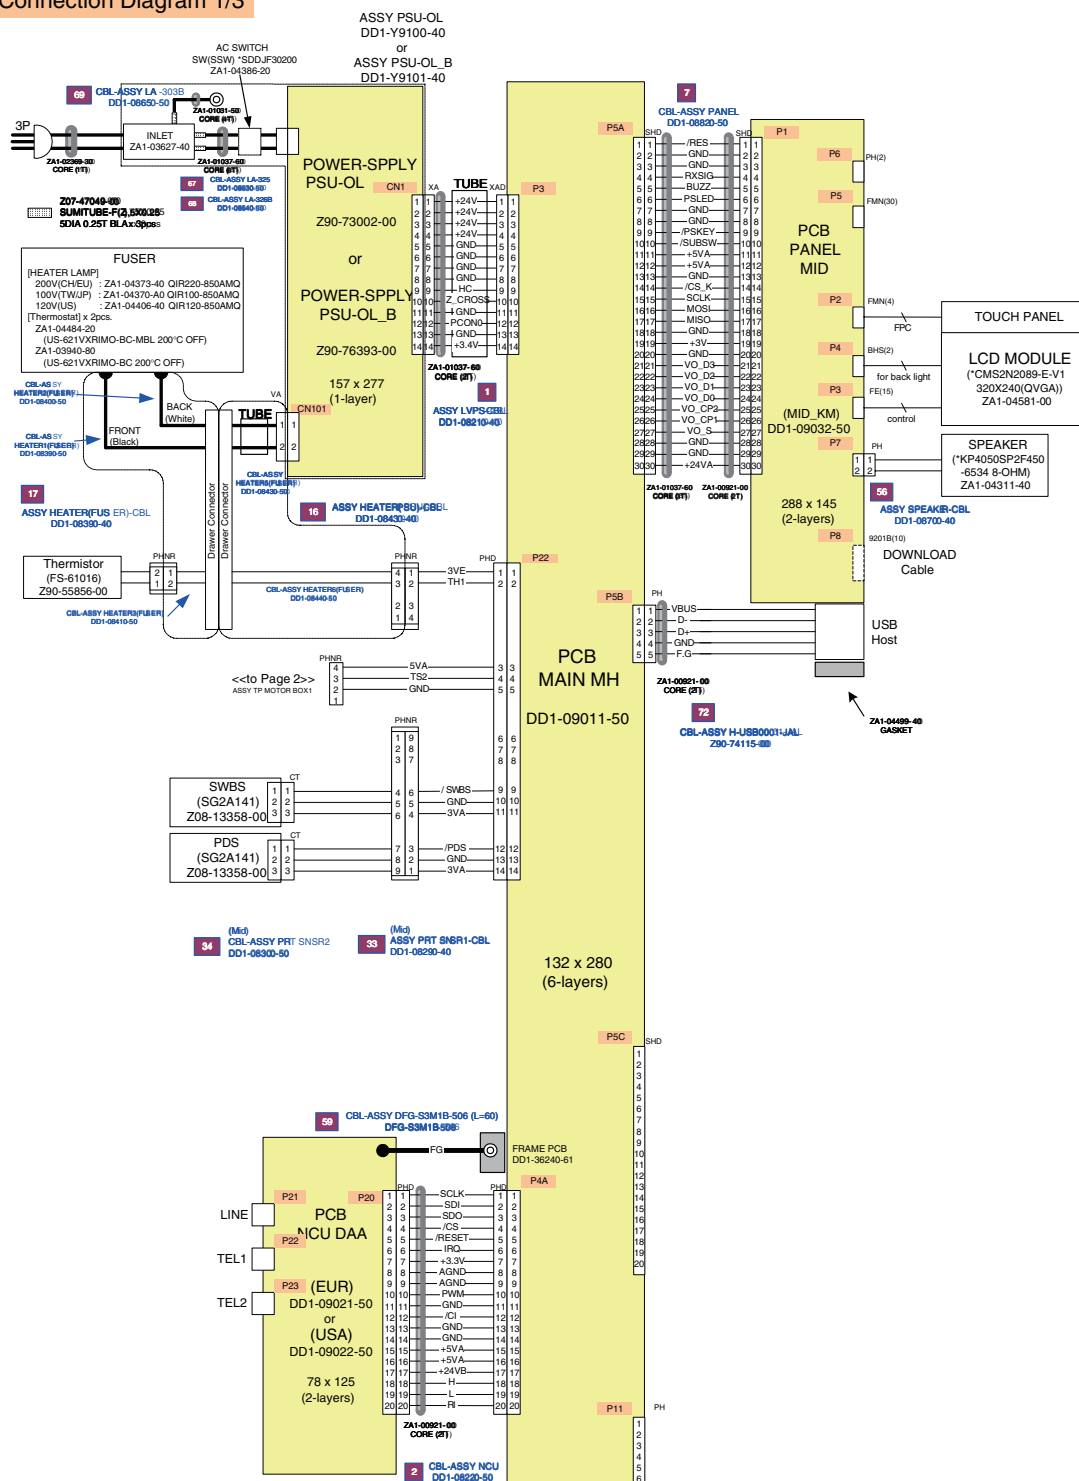

- 1) Warming Up After the initialization of the printer, warming up of the printer starts and the Heater Lamp turns ON until the temperature of the Heater Roller reaches approx. 170 °C.
- 2) Printing When the printer obtains the printing command from its controller, the Heater Roller is maintained at 180 °C.  
After printing, the printer turns to ready mode. The fuser kept at low temperature.
- 3) Ready The Heater Roller maintained at approx. 80 °C.
- 4) Energy save mode In this mode, saving the power.

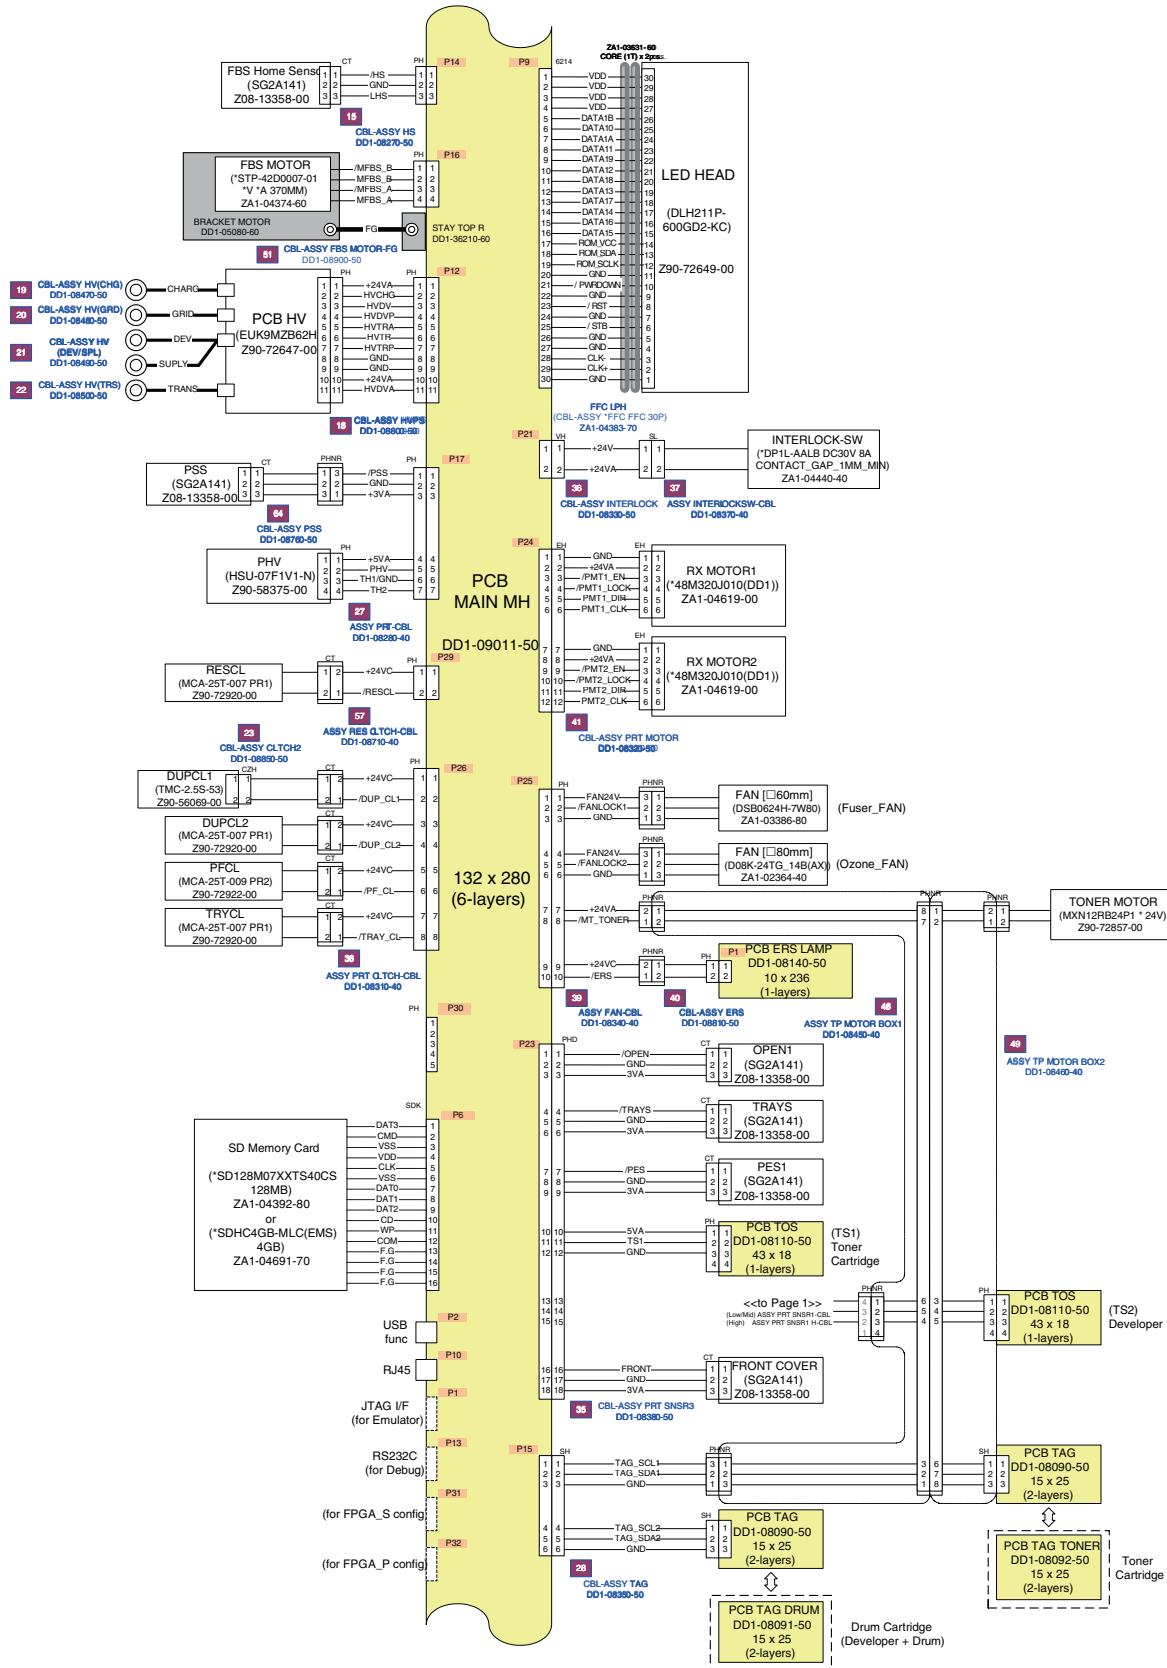

## 2.4 Interconnect Block Diagram

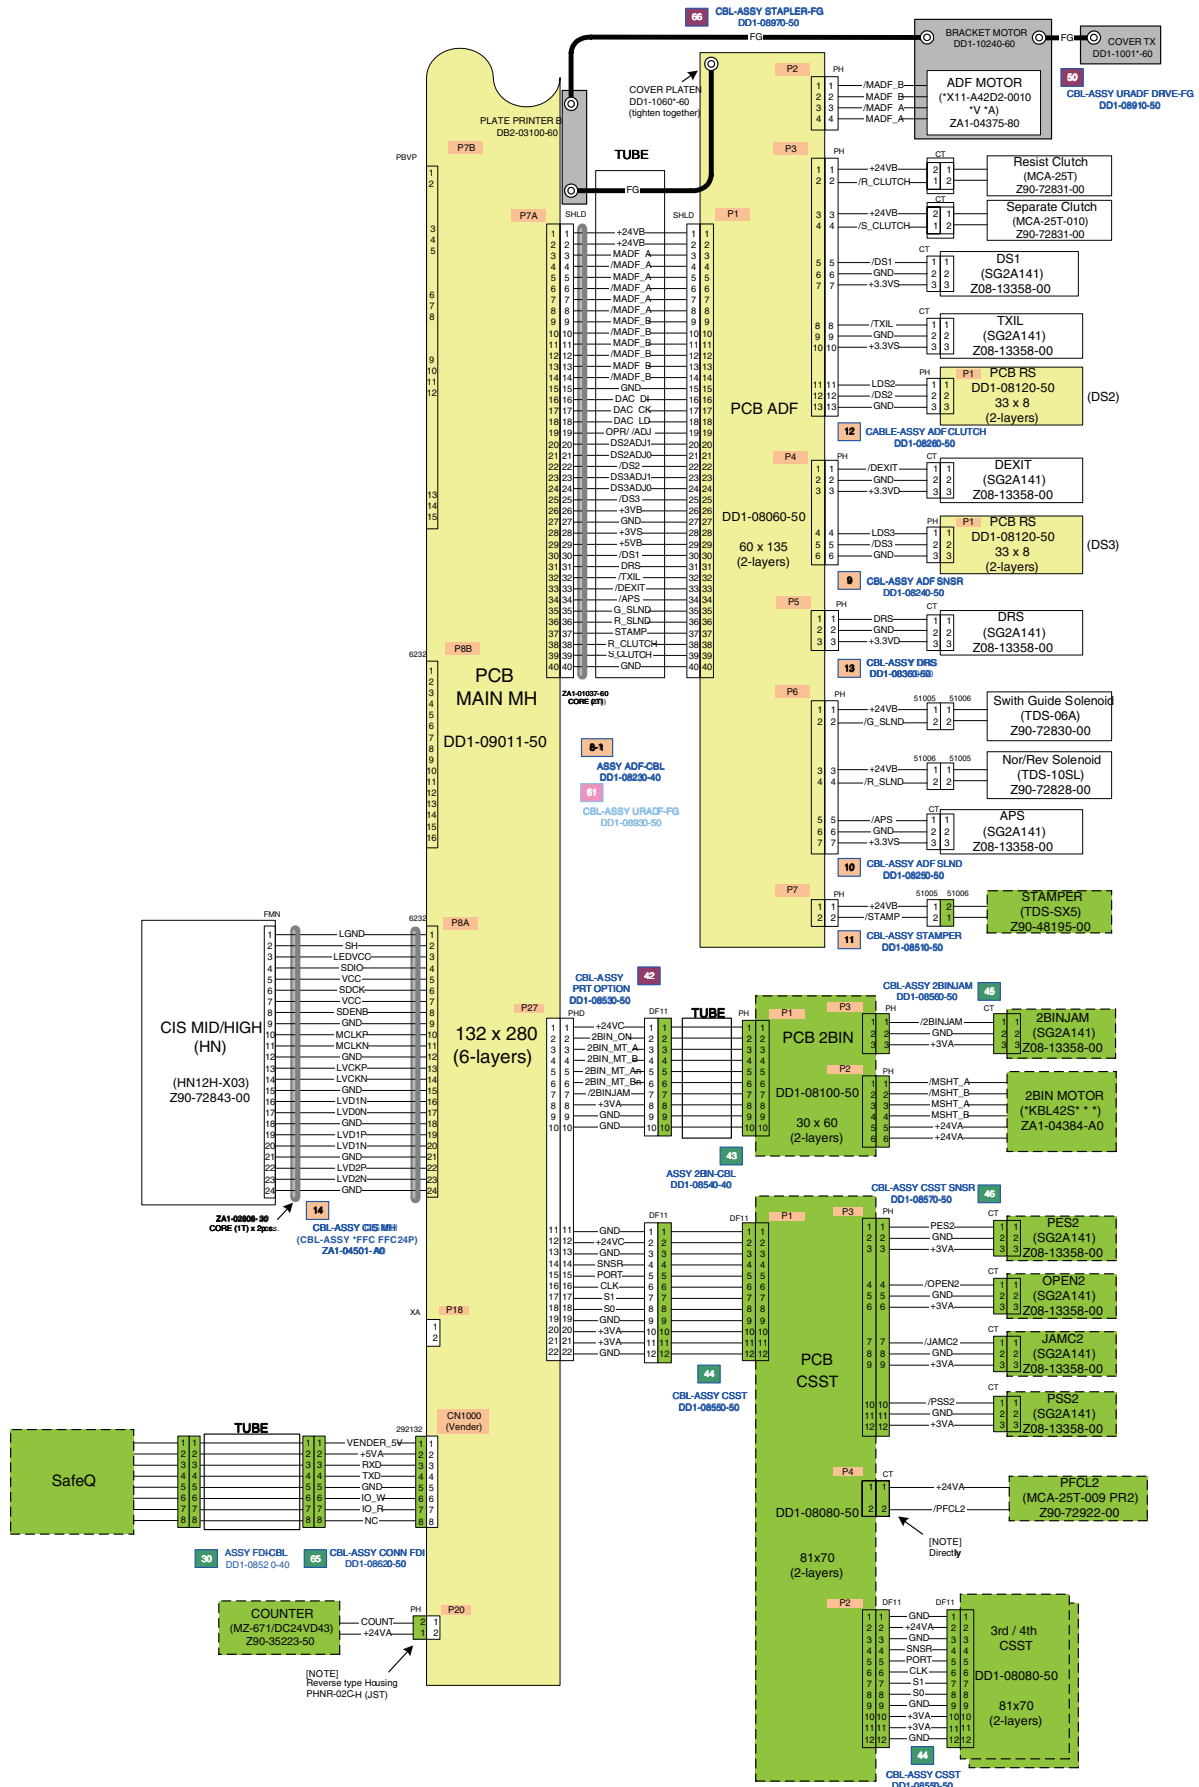

## Connection Diagram 1/3

2013/05/11

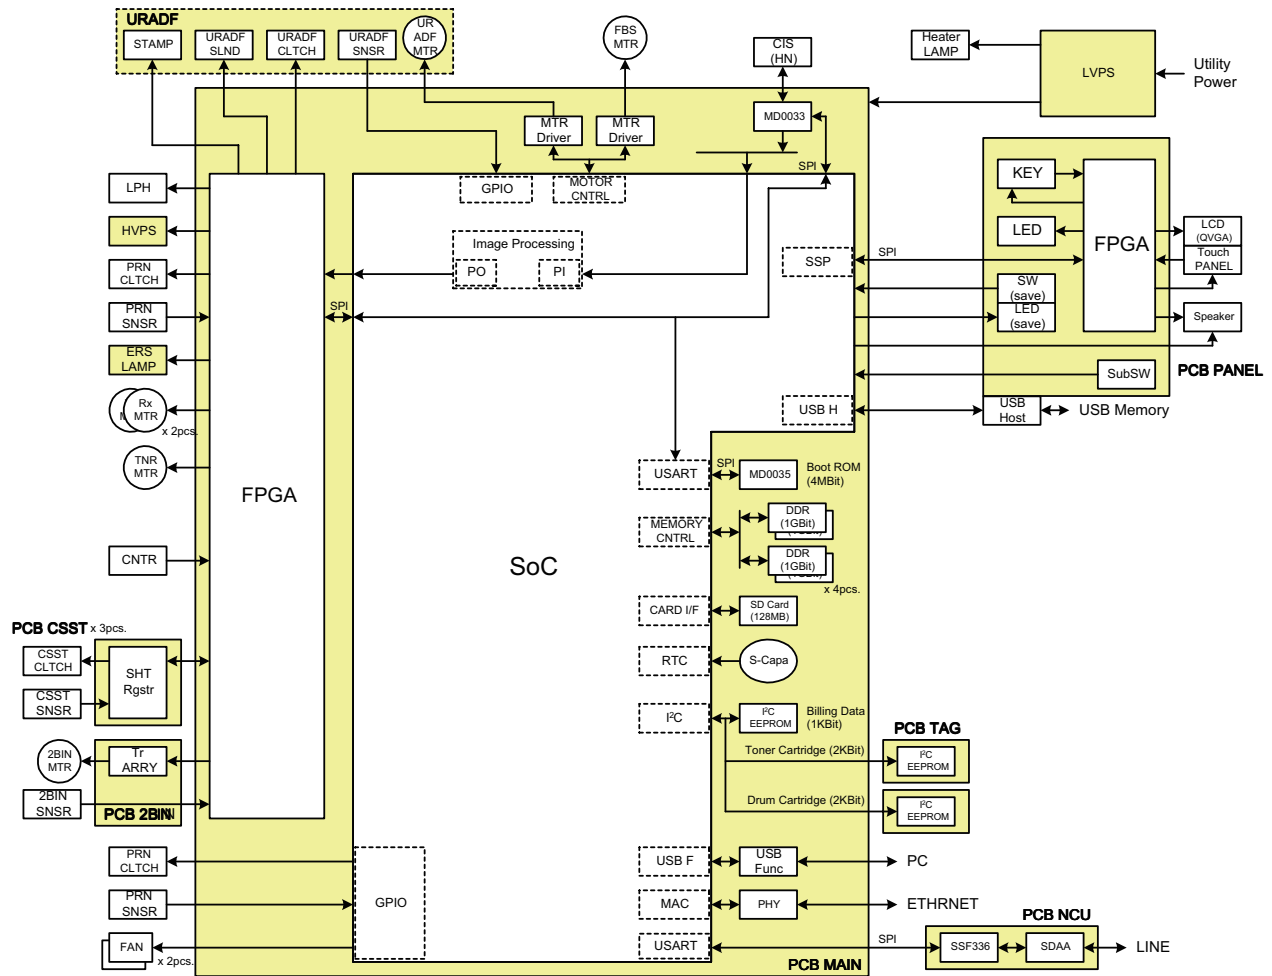

## 2.5 Circuit board constructions

## Main control board

This board controls the MFP system. By inserting the USB memory stick, firmware can be updated. The main devices mounted on the main control board and their functions are as follows:

Devices	Details
SoC	Controls the following operation: <ul style="list-style-type: none"><li>• DDR2 memory controller</li><li>• USB controller (USB Host/Function)</li><li>• Image processing (Pixel input/output)</li><li>• I2C I/F (Billing data, consumables Tag: toner and drum)</li><li>• Motor controller (FBS and ADF)</li><li>• Synchronous serial I/F (SPI), (Panel FPGA/MPU)</li><li>• USART(SPI) (NCU, printer/scanner FPGA, BootROM)</li><li>• Real Time Clock (Backup by an electric double-layer capacitor )</li><li>• Ethernet MAC</li><li>• General I/O (Printer and scanner sensors, printer clutches, fans)</li><li>• SD card I/F</li></ul>
FPGA	Controls the following operation: <ul style="list-style-type: none"><li>• Converts and transfers the output data to LED print head at its format.</li><li>• High-voltage power board (Charging, grid, developing, toner supply, transfer)</li><li>• General I/O (Printer and scanner sensors, printer clutches, fans)</li><li>• Eraser lamp</li><li>• Print motor</li><li>• Toner motor</li><li>• Mechanical counter (option)</li><li>• Cassette board (sensor and clutch) (option)</li><li>• 2bin tray board (sensor and motor) (option)</li></ul>
MD0033	This is the FPGA for image processing of scanned image. Offsets or gains the analogue signal from CIS, performs analog to digital (A/D) conversion, and inputs the signal to image processing section of the fax engine.
Motor driver	Drives the motors in the scanner section (FBS and ADF).
MD0035 (Flash)	Stores the Boot ROM (program) data. This is a non-volatile memory, and the data will not be erased when the machine is shut down.
DDR2-SDRAM	Stores image data. This is a volatile memory with no-backup, and the data will be erased when the machine is shut down.
SD card	This stores the firmware. This is a non-volatile memory, and the data will not be erased when the machine is shut down.
I2C EEPROM	This stores the billing data. This is a non-volatile memory, and the data will not be erased when the machine is shut down.

## **Panel board**

This board consists of keys, touch panel, LCD, FPGA/MPU controlling the LED, and their peripheral circuits.

## **Scanner connection board**

This board relays signals from ADF to motors, clutches, solenoids, and sensors.  
It is controlled by SoC and printer FPGA on the main control board.  
Power is not supplied during energy save setting.

## **Cassette board**

This board controls clutches and sensors of the optional cassettes.  
It is controlled by printer FPGA on the main control board.  
Power is not supplied during energy save mode.

## **Consumables TAG board**

This board mounts a memory to record and control information of the consumables (toner and drum). It is controlled by SoC (I2C I/F) on the main control board.  
Power is not supplied during energy save mode, but the data will not be erased since the memory is non-volatile.

## **2bin board**

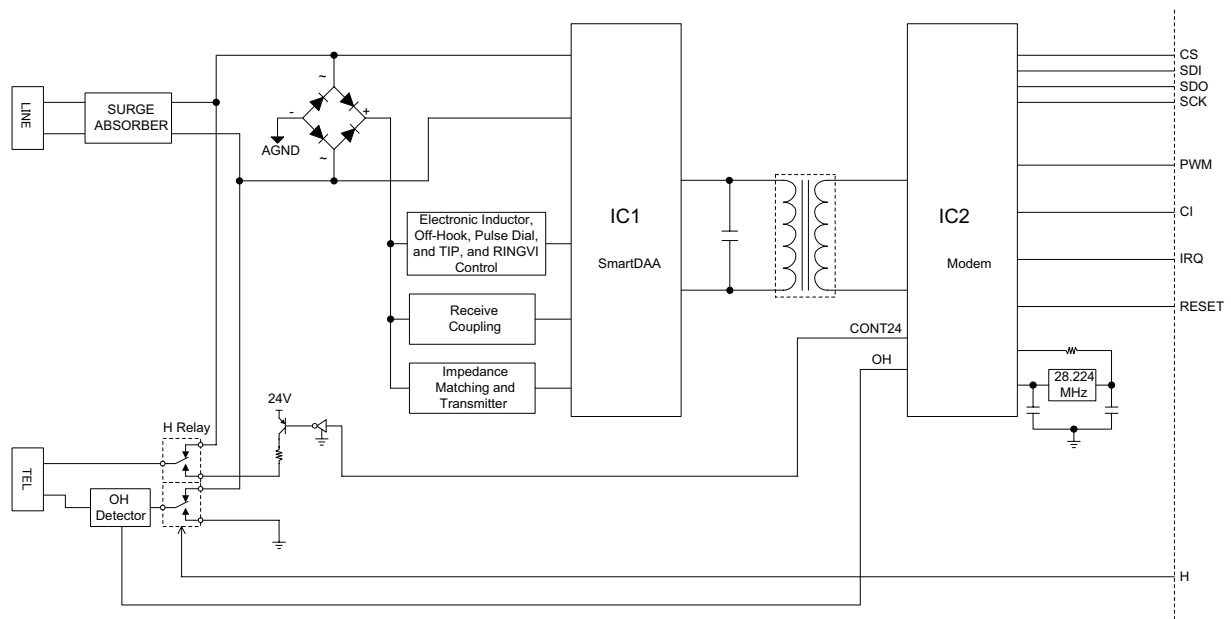

This board relays signals of 2bin motor drive circuit and 2bin paper discharge sensor.  
It is controlled by printer FPGA on the main control board.  
Power is not supplied during energy save mode.

## **High-voltage power board**

This board generates high-voltage power required for electrophotographic system ; charge, developing, transfer, and cleaning sections  
Power is not supplied during energy save mode.

## Network Control Unit (NCU) board

The NCU board provides the connection to the telephone line. It consists of the interface circuit, ring signal detector and telephone control circuit.

# 2.6 Sensors

## 2.6.1 Sensor Locations

The following illustration shows the relative positions of the machine's sensors.

## 2.6.2 Sensor Descriptions

The following table gives a brief description of each sensor and its function.

Code	Name	Detects	Sensor Type
DS1	Document sensor 1	Presence of document in feeder	Photo interrupter
DS2	Document sensor 2	Leading and trailing edge of document	Photo reflector
DS3	Document sensor 3	Leading and trailing edge of document backside	Photo reflector
DRS	Document resist sensor	Detect timing for document resist ration	Photo interrupter
DEXIT	Document exit sensor	Detect document discharge	Photo interrupter
HS	Mirror carriage home position sensor	CIS position	Photo interrupter
APS	ADF permission sensor	ADF ready	Photo interrupter
TXIL	Interlock switch	Scanner cover open or close	Photo interrupter
FCOVER (FRNT_OP)	Front cover switch	Detects front cover is open or close	Photo interrupter
PES (PES1)	Paper empty sensor	Detects presence of recording paper in the first paper cassette	Photo interrupter
PDS	Paper discharge sensor	Detects paper pass at paper exit	Photo interrupter
PRS	Paper resist sensor	Detects paper registrant timing	Photo interrupter
SWBK	Switchback sensor	Detects paper switching back at paper exit area at duplex printing	Photo interrupter
OPEN (CAS1)	Paper cassette open sensor	Detects the first paper cassette open or close	Photo interrupter
TOS_TC	Toner sensor	Detects toner empty at toner cartridge	Photo interrupter
TOS_DC	Toner sensor	Detects toner empty at drum cartridge	Photo interrupter
TRAYS (PESM)	Tray sensor	Detects presence of recording paper in the bypass tray	Photo interrupter
JAMC (SIDE_OP)	Jam access cover sensor	Detects the side cover open or close	Photo interrupter
TEMP	Temperature	Detects temperature and humidity	
TH1 (TH_F)	Thermistor 1	Fuser thermistor	
INTRLCK	Inter lock	Interlock switch for printers	Mechanical Switch

PES OP (PES2)	Paper empty sensor	Detects presence of recording paper in the 2nd paper cassette	Photo interrupter
OPEN OP (CAS2)	Paper cassette open sensor	Detects the 2nd paper cassette open or close	Photo interrupter
JAMC2 (JAM2_OP)	Jam access cover sensor	Detects the 2nd paper cassette side cover open or close	Photo interrupter

# 3 Adjustment Procedures

## 3.1 Field service program modes

The fax machine feature maintenance modes for machine adjustment. Each mode is listed below along with the command used to activate the mode and a brief functional description.

Press <Mode> about two seconds until you hear the beep twice.

When you press “\*”, you will hear short beeps. However continue the operation, as there is no problem.

Service Program	Explanation	Operation	Page
Machine parameters	Used to set or clear machine parameters.	<Mode>, <*>, <0>, <0>	3-3
Memory switch	Used to set or clear memory switches	<Mode>, <*>, <0>, <1>	3-17
User data clear	This mode clears user programmed information.	<Mode>, <*>, <0>, <2>	3-70
All RAM clear	This mode clears all backup data to initialize the machine.	<Mode>, <*>, <0>, <3>	3-70
Unique switches	These switches are used to program internal machine parameters.	<Mode>, <*>, <0>, <4>	3-47
T30 Monitor	The communications on the journal list are able to print.	<Mode>, <*>, <0>, <5>	3-71
Printer maintenance mode	Shows the error code for "Checkout error" errors.	<Mode>, <*>, <0>, <6>	3-74
Service report printing	You can print out a report that contains machine's usage and error history.	<Mode>, <*>, <0>, <7>	3-75
Monitor speaker	If you need to monitor the signal of fax communication, turn this mode on.	<Mode>, <*>, <0>, <8>	3-81
Test Modes	This mode offers the ability to print a test pattern and monitor certain unit output functions.	<Mode>, <*>, <0>, <9>	3-81
Print parameter settings	This function instructs the unit to print a list of the machine parameter, memory switch and unique switch settings.	<Mode>, <*>, <1>, <0>	3-86
Factory functions	This function provides several machine machina test.	<Mode>, <*>, <1>, <1>	3-86
Line tests	This mode offers several internal tests and ability to monitor certain unit output functions. 1. Relay test 2. Tonal signal test 3. DTMF output test	<Mode>, <*>, <1>, <2>	3-91
Mirror carriage transfer mode	This mode moves the mirror carriage to the transport position.	<Mode>, <*>, <1>, <4>	3-92
Consumable order sheet	Used to set or clear the consumable order sheet.	<Mode>, <*>, <1>, <5>	3-93
DRAM clear	This clears the image storage memory.	<Mode>, <*>, <1>, <6>	3-95
Life monitor maintenance	Use this mode to clear the resettable counter or reenter the life monitor.	<Mode>, <*>, <2>, <0>	3-96
Sensor input test	This mode enables to confirm the sensor status.	<Mode>, <*>, <2>, <2>	3-97
Printer diagnostic mode	This mode enables to confirm the operation of the printer parts.	<Mode>, <*>, <2>, <3>	3-99
Network service mode	Used to clear administrator's password and initialize authentication method.	<Mode>, <*>, <2>, <4>	3-100
Flash ROM sum check	This mode enables to check Sum after the Flash ROM version is updated.	<Mode>, <*>, <2>, <9>	3-100
Set service report	Used to enter location where to send the service report.	<Mode>, <*>, <4>, <2>	3-101
Printer registration adjustment	This mode adjusts the print position.	<Mode>, <*>, <4>, <3>	5-88
Reset printer trouble	This mode clears the service call. Clear the warning when the trouble is settled.	<Mode>, <*>, <4>, <5>	3-102
Cleaning mode	This mode rotate the Pickup roller and registration roller automatically so that you can clean the surface of them.	<Mode>, <*>, <4>, <6>	3-102

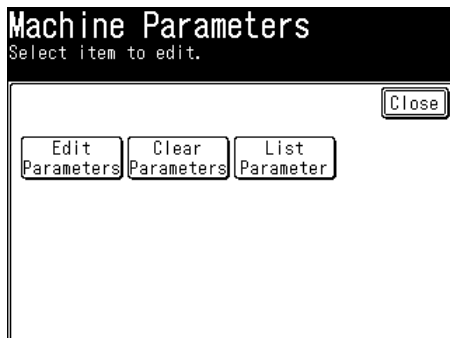

Service Program	Explanation	Operation	Page
Network switch mode	Adjust the network parameter.	<Mode>, <*>, <5>, <1>	3-102
Coverage measurement	You can scan and check the black ratio of a document.	<Mode>, <*>, <5>, <4>	3-105
Touch panel adjustment	Correct the X, Y on the touch panel.	<Mode>, <*>, <5>, <6>	3-106
Printer control parameter mode	Adjust functions of print controller.	<Mode>, <*>, <5>, <7>	3-107
Network capture	You can capture the packet data the machine has sent and received.	<Mode>, <*>, <5>, <8>	3-111
Storage maintenance	This mode is used to erase data the SD memory card on the main control board.	<Mode>, <*>, <5>, <9>	3-112
Initialize protection	Use this function to initialize protect passcode and administrator's password.	<Mode>, <*>, <6>, <1>	3-113
Color fine adjustments	Adjust the scan color. You can adjust RGB mode for front side of document, and make fine difference for back side of document.	<Mode>, <*>, <6>, <2>	3-114
AS400 batch settings	All AS400 related settings will turn on using this function.	<Mode>, <*>, <6>, <3>	3-114
Certification terminal	Enable this setting to use the certification terminal.	<Mode>, <*>, <6>, <5>	3-115
Service function menu	All the field service program modes are available from the menu.	<Mode>, <*>, <7>, <7>	3-115
Counter information maintenance	The machine has the counter data saved on both the EEPROM and SD card with its serial number connected. If for some reasons these two serial numbers do not match, maintenance the data manually.	<Mode>, <*>, <9>, <3>	3-115
RDS data copy	This mode enables you to import and export binary data including machine settings.	<Mode>, <*>, <9>, <4>	3-116
Asset number	This mode is used to input the asset number.	<Mode>, <*>, <9>, <5>	3-116
Update the firmware	Update main ROM, optional print controller ROM and network board ROM using this mode.	<Mode>, <*>, <9>, <8>	3-117
Quick Initial settings	You can do the following setting with continuously: 1. Initial settings 2. Consumable order sheet	<Mode>, <*>, <9>, <9>	3-116

## 3.2 Machine parameter adjustment

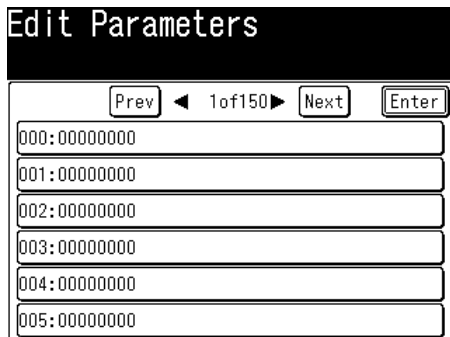

### 3.2.1 Setting the machine parameters

These switches are used to program internal machine parameters.

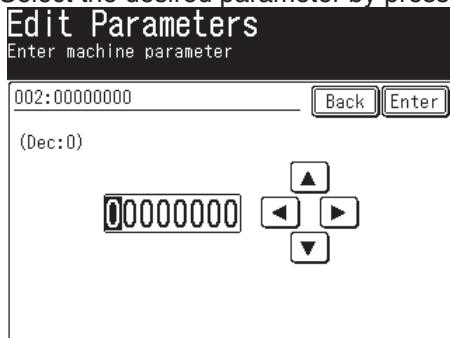

1. From standby, press <Mode>, <\*>, <0>, <0>.
2. Press [Edit Parameters].

3. Call up the desired switch by pressing [Prev] or [Next], or by pressing the numeric keys.

4. Select the desired parameter by pressing the box.

5. To navigate through the machine parameter settings:
  - The bits are ranged from 7 (left) to 0 (right).
  - Press [◀] or [▶] of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲], to change the bit value.
  - Press [Enter] to save the setting of the displayed parameter and return to the machine parameter edit screen.
  - Press [Back] *not* to save the setting of the displayed parameter.
6. If you want to set other machine parameters, repeat step 3-5. Otherwise, proceed to step 7.
7. Press <Reset> to return the machine to ready screen.

You can confirm the setting on a list. The machine parameters list will be printed by pressing [List Parameter] in step 2.

### 3.2.2 Clearing the machine parameters

Resets the machine parameters to factory defaults.

1. From standby, press <Mode>, <\*>, <0>, <0>.
2. Press [Clear Parameters].
3. Press [Yes]. The machine parameters will reset to factory defaults.

### 3.2.3 List

Adjustment	Parameter
• Image data output level (Data attenuation)	001
• URADF, Scanning start position adjustment (Horizontal) /Back	030
• URADF, Elastic rate adjustment (Horizontal) /Back	031
• URADF, Scanning start position adjustment (Vertical) /Back	033
• URADF, Scanning end position adjustment (Vertical) /Back	034
• URADF, Scanning start position adjustment (Horizontal) /Front	035
• URADF, Elastic rate adjustment (Horizontal) /Front	036
• URADF, Elastic rate adjustment (Vertical) /Front	037
• URADF, Scanning start position adjustment (Vertical) /Front	038
• URADF, Scanning end position adjustment (Vertical) /Front	039
• FBS, Scanning start position adjustment (Horizontal)	040
• FBS, Elastic rate adjustment (Horizontal)	041
• FBS, Elastic rate adjustment (Vertical)	042
• FBS, Scanning start position adjustment (Vertical)	043
• Duplex scan length adjustment	056
• Mirror carriage standby position adjustment	060
• Background level adjustment starting position	064
• Loop volume adjustment at DRS sensor	066
• Paper loop volume adjustment	260
• Density adjustment	301 ~ 357

### 3.2.4 Details

#### Machine Parameter 000 — Factory use only

\*1 URADF scan parameter will be added to the setting in “All” when documents are scanned using the URADF.

## Machine Parameter 358 ~ 404 — Factory use only

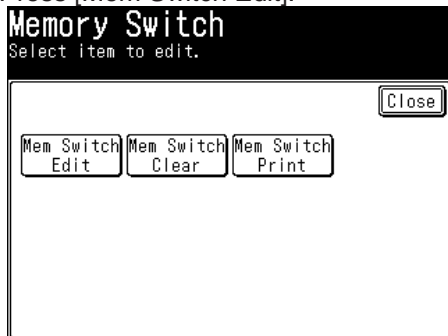

## 3.3 Memory switch adjustment

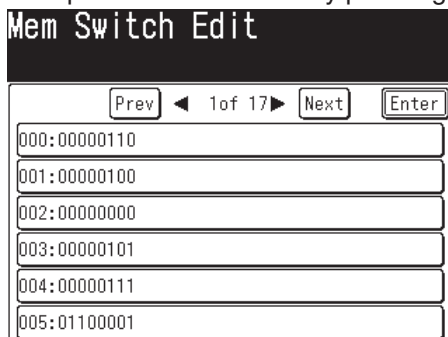

### 3.3.1 Setting the memory switches

These switches are used to program internal machine parameters.

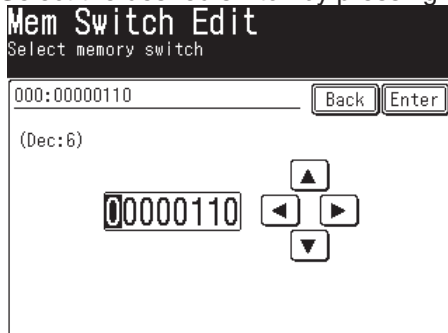

1. From standby, press <Mode>, <\*>, <0>, <1>.
2. Press [Mem Switch Edit].

3. Call up the desired switch by pressing [Prev] or [Next], or by pressing the numeric keys.

4. Select the desired switch by pressing the box.

5. To navigate through the memory switch settings:
  - The bits are ranged from 7 (left) to 0 (right).
  - Press ◀ or ▶ of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲] to change the bit value.
  - Press [Enter] to save the setting of the displayed memory switch and return to the memory switch edit screen.
  - Press [Back] not to save the setting of the displayed memory switch.
6. If you want to set other memory switches, repeat step 3-5. Otherwise, proceed to step 7.
7. Press <Reset> to return the machine to ready screen.

You can confirm the setting on a list. The switch list will be printed by pressing [Mem Switch Print] in step 2.

### 3.3.2 Clearing the memory switches

Resets the memory switches to factory defaults.

1. Press <Mode>, <\*>, <0>, <1>.
2. Press [Mem Switch Clear].
3. Press [Yes]. The memory switches will reset to factory defaults.

## Memory switch 00x : Dialer

### Memory switch 005 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	Factory use only	—
6	1	Ring signal detect time	Set the time that an incoming ring will not be detected after hanging up.  <u>Switch 654</u> 000 100 ms 001 200 ms 010 300 ms 011 400 ms 100 500 ms 101 600 ms 110 700 ms 111 800 ms
5	1		
4	0		
3	0	Number of CI signal detection 0 : Detect 1 time 1 : Detect 2 times	Select the number of detection time of CI signal in the ringer silent mode. Incoming calls are answered according to this setting regardless of the number of rings chosen in the user settings.
2	0	Dual ring detection	When enabled, the machine is able to auto answer an incoming ring with an off time of 120-60 ms.
1	0	Long ring detection 0 : No 1 : Yes	Allows the machine to respond to an incoming ring if the ring on time is longer than two seconds.
0	1	Frequency of the CI signal 0 : No 1 : Yes	When disabled, the unit will not check the frequency of the incoming CI signal.

### Memory switch 006~ 009 : Factory use only

## Memory switch 01x : Transmission

### Memory switch 010 :

bit	Initial Setting	Adjust	Usage / Comments	
7	1	Busy tone detection 0 : No 1 : Yes	Set this switch to “0” if the ring tone of remote unit is mistaken for a busy signal.	
6	0	Fallback pattern (bps) 2400    4800    7200    9600    12000    14400 Set at 0 :    2 times 2 times 2 times 2 times 2 times 2 times Set at 1 :    4 times 1 time   1 time   1 time   1 time   1 time		
5	0	Overseas mode 0 : No 1 : Yes	Re-enables echo suppression that is disabled by the CED signal (2100 Hz). Also ignores the first DIS signal and transmits the DCS signal in response to the second DIS signal.	
4	0	V. 29 Echo Protect tone 0 : No 1 : Yes	International telephone lines equipped with echo suppression will cut the beginning portion of the transmitted information which may cause the receiver not to receive the training and data. To protect the received image from degrading, a 0.5 second Echo Protect tone is placed prior to the training using G3 high-speed modem training (V. 29).	
3	1	Maximum transmit speed (kbps)  2.4   4.8   7.2   9.6   12   14.4   16.8   19.2   21.6   24   26.4   28.8   31.2   33.6 0   0   0   0   0   0   0   0   1   1   1   1   1   1 0   0   0   0   1   1   1   1   0   0   0   0   1   1 0   0   1   1   0   0   1   1   0   0   1   1   0   0 0   1   0   1   0   1   0   1   0   1   0   1   0   1

## Memory switch 01x : Transmission

### Memory switch 012 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	TTI clock type 0 : AM PM clock 1 : 24 hour clock	
6	1	TTI calendar type	bit 6 5
5	0		1 1 dd mm yyyy 1 0 mm dd yyyy (default) 0 1 yyyy/mm/dd
4	1	TTI transmit 0 : No 1 : Yes  <b>NOTE</b> Turning TTI transmission off may violate local or federal regulations.)	When set at “0”, transmission of the TTI is disabled. The TTI includes the followings: • Sender name • Sender’s fax number • Data & time, and number of pages To set the individually transmission of them, see Memory SW 016.
3	0	ECM response time 0 : 3 sec. 1 : 4.8 sec.	The time limit to receive the response signal for the ECM post message.
2	0	ECM error retransmit time 0 : 200 ms 1 : 400 ms	The time limit before the ECM error is retransmitted.
1	0	Interval between DIS and DCS	
0	0		
		0 ms 500 ms 1000 ms 1500 ms	
Switch 1		0 0 1 1	
Switch 0		0 1 0 1	

### Memory switch 013 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	ANSam detection 0 : Yes 1 : No	During the V8 handshake, if some noise disturbs the handshake and an error occurs, set to "1".
6	0	V.34 transmission 0 : Yes 1 : No	Individual setting for V.34 transmission.
5	0	CSI / TSI / CIG transmit 0 : Yes 1 : No	When set at "1", transmission of the CSI, TSI and CIG signals are disabled.
4	0	ECM mode 0 : On 1 : Off	Determines ECM mode. ECM mode reduces document memory and may lengthen transmission and reception times.
3	0	Retransmit automatically when receiving RTN / PIN signals 0 : Yes 1 : No	When set to "1", retransmission disables automatically if receiving RTN / PIN signals.
2	1	Factory use only	—
1	0	Factory use only	—
0	0	Factory use only	—

### Memory switch 014 : Factory use only

## Memory switch 01x : Transmission

### Memory switch 015 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	Program individual autodialer attributes 0 : No 1 : Yes	Allows individual setting of memory switches 010 as attribute 1, 011 as attribute 2, 012 as attribute 3 and 013 as attribute 4 when fax destination are programmed. (Refer to page 3-54 for settings.)
6	0	Factory use only	—
5	0	Factory use only	—
4	0	Factory use only	—
3	0	Factory use only	—
2	0	Sending RTC signal when transmission is canceled 0 : Yes 1 : No	RTC signal is sent at the end of the transmission. When set at "0", the machine will send the RTC if the transmission is canceled. No error will occur. When set at "1", an error will occur because RTC will not be sent at the end of a canceled transmission.
1	1	Cancel redial if T.4.1 or T.4.4 error occurs 0 : Yes 1 : No	When set at "0", if a T.4.1 or T.4.4 error occurs, the machine will not retry the transmission.
0	1	Action after EOR signal 0 : Continue 1 : Discontinue	Sets action after receiving PPR four times at 2400 bps.

### Memory switch 016 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	Factory use only	—
6	0	Factory use only	—
5	0	Factory use only	—
4	0	Disable DCS -bit 44 at Fine and Normal transmission 0: Enable 1: Disable	This avoid a trouble that a PC-FAX stretches to the vertical direction when the other party has received it. Use only when trouble has occurred.
3	1	Additional data on TTI transmit 0 : No 1 : Yes	When set at "0", the transmission of the additional data (time, the number of pages, file number, etc) is disabled.  <b>NOTE</b> This switch is available only when Memory switch 012, bit 4 and/or Memory switch 013, bit 5 is available.
2	1	Subscriber ID transmit 0 : No 1 : Yes	When set at "0", the transmission of the subscriber ID is disabled.  <b>NOTE</b> This switch is available only when Memory switch 012, bit 4 and/or Memory switch 013, bit 5 is available.
1	1	TTI (name) transmit 0 : No 1 : Yes	When set at "0", the transmission of the name which was stored in the unit is disabled.  <b>NOTE</b> This switch is available only when Memory switch 012, bit 4 and/or Memory switch 013, bit 5 is available.
0	0	Factory use only	—

## Memory switch 01x : Transmission

### Memory switch 017 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	Factory use only	—
6	0	Factory use only	—
5	0	Factory use only	—
4	0	Factory use only	—
3	0	Time between ANSam output and CM output	When using optical communication line, wait to make sure that the terminal adopter has turned the echo-canceler off. Waiting too long may fail the receiver to catch the CM and go to V 17 procedures. This setting is needed only for optical communication line.  bit      321 111      1750 msec 110      1500 msec 101      1250 msec 100      1000 msec 011      750 msec 010      500 msec 001      250 msec 000 <u>Refers the time set on the modem</u>
2	0		
1	0		
0	0		
0	0	Check only manually entered fax numbers in ID check transmission 0 : No 1 : Yes	When set at “1” , the ID check transmission will check only the manually entered fax numbers and not check the number entered using the address book.

### Memory switch 018 ~ 019 : Factory use only

## Memory switch 02x : Reception

### Memory switch 020 :

bit	Initial Setting	Adjust	Usage / Comments
7	0	Data error rate 0 : 10% 1 : 20%	Determines the allowable number of erred lines out of total lines received in a document.
6	0	Pause one second after sending CED 0 : No (75 ms) 1 : Yes (1 sec.)	A 2100 Hz CED signal disables echo suppression in some telephone equipment. When set to "1", the machine pauses one second after sending CED, which allows echo suppression to restart. This may help with problematic overseas reception.
5	1	Time between ANSam output and DIS output 0 : 75 msec 1 : 450 msec	This setting is for optical communication line. Adjust the time between ANSam output completion and DIS output start. (When V.8 procedure dose not start by output ANSam, it moves to V.8 procedure by output DIS) Terminal adopter turns the echo-canceler off and then on within 400 ms during the silent time. Use this adjustment to make sure that the echo-canceler is turned on again, when the communication procedure has moved from V.34 to T.30.
4	0	Factory use only	—
3	1	Receive speed (kbps)	Maximum receive speed may be slowed to compensate for poor phone lines.

### Memory switch 099 : Factory use only

## 3.4 Setting individual autodialer attributes

This function allows the user to configure an individual address book entry with the settings shown in Memory Switches 010, 011, 012, 013 and 014.

### To set the individual attributes:

1. Change memory switch 15, bit 7 to “1”. (See “3.3.1 Setting the Memory Switches” for more information on changing memory switch 015.)
2. When the function is enabled, an “Attribute” option is added to the address book destination registration steps. As an address book destination is programmed, an extra step showing Attribute 1, Attribute 2, Attribute 3, Attribute 4, and Attribute 5 are added as the last step.

0001:SpeedDial\_C001  
Select the address book item to enter/edit.

Back Enter

Search No.:0001 ▲

Name :SpeedDial\_C001

Fax No.:001-5678901234567890 1 of 2

e-mail:MailAddress\_C001

Super G3 :ON

Attribute1:10001101 ▼

0001:SpeedDial\_C001-6789  
Select the address book item to enter/edit.

Back Enter

Attribute2:01000000 ▲

Attribute3:11110000

Attribute4:00000100 2 of 2

Attribute5:00000000 ▼

3. Set the individual bit positions as shown in the following table. To change a setting, press ◀ or ▶ until the cursor is below the desired bit position; then press “1” or “0” to make the change.

0001:  
Select Attribute.

Attribute 1 Back Enter

(DEC:141)

10001101 ◀ ▶ ▲ ▼

4. Press [Enter] to save the setting of the displayed attribute and advance to the next attribute.
5. To set the other attribute, repeat steps 3-4.
6. When the last attribute is set, the fax will advance to the next autodialer programming steps.
7. When all the desired individual attributes are set, reset memory switch 15, bit 7 to “0”. (See “3.3.1 Setting the Memory Switches” for more information on changing memory switch 015.)

## Attribute 1 - Individual Autodialer Setting (Equivalent to Memory Switch 010)

Switch	Initial Setting	Adjust	Usage/Comments									
7	1	Busy tone detection 0: No 1: Yes	Sets this switch to “0” if the ring tone of remote unit is mistaken for a busy signal.									
6	0	Fallback pattern (bps) 2400    4800    7200    9600    14400 Set at 0: 2 times   2 times   2 times   2 times   2 times Set at 1: 4 times   1 times   1 times   1 times   1 times										
5	0	Overseas mode 0: No 1: Yes	Re-enables echo suppression that is disabled by the CED signal (2100 Hz). Also ignores the first DIS signal and transmits the DCS signal in response to the second DIS signal.									
4	0	V.29 Echo Protect tone 0: No 1: Yes	International telephone lines equipped with echo suppression will cut the beginning portion of the transmitted information which may cause the receiver not to receive the training and data. To protect the received image from degrading, a 0.5 second Echo Protect tone is placed prior to the training using G3 high-speed modem training (V.29).									
3	1	Maximum transmit speed (kbps) 2.4   4.8   7.2   9.6   12   14.4   16.8   19.2   21.6   24   26.4   28.8   31.2   33.6										
2	1	0   0   0   0   0   0   0   0   1   1   1   1   1   1 0   0   0   0   1   1   1   1   0   0   0   0   1   1

0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0

### Attribute 3 - Individual Autodialer Setting (Equivalent to Memory Switch 012)

Switch	Initial Setting	Adjust	Usage/Comments
7	1	TTI clock type 0 : AM PM clock 1 : 24 hour clock	
6	1	TTI calendar type	bit    6 5 1 1    dd mm yyyy (default) 1 0    mm dd yyyy 0 1    yyyy/mm/dd
5	0		
4	1	TTI transmit 0: No 1: Yes  <b>NOTE</b> Turning TTI transmission off may violate local or federal regulations.)	When set at “0”, transmission of the TTI is disabled. The TTI includes the followings: <ul style="list-style-type: none"><li>• Sender name</li><li>• Sender’s fax number</li><li>• Data &amp; time, and number of pages</li></ul> To set the individually transmission of them, see Memory SW 016.
3	0	ECM response time 0: 3 sec 1: 4.8 sec	The time limit to receive the response signal for the ECM post message.
2	0	ECM error retransmit time 0: 200 ms 1: 400 ms	The time limit before the ECM error is retransmitted.
1	0	Interval between DIS and DCS	
0	0	0 ms   500 ms   1000 ms   1500 ms Switch 1   0   0   1   1 Switch 0   0   1   0   1	

### Attribute 4 - Individual Autodialer Setting (Equivalent to Memory Switch 013)

Switch	Initial Setting	Adjust	Usage/Comments
7	0	ANSam detection 0 : Yes 1 : No	During the V8 handshake, if some noise disturbs the handshake and an error occurs, set to "1".
6	0	V. 34 transmission 0 : Yes 1 : No	Individual setting for V.34 transmission.
5	0	CSI / TSI / CIG transmit 0 : Yes 1 : No	When set at "1", transmission of the CSI, TSI and CIG signals are disabled.
4	0	ECM mode 0 : On 1 : Off	Determines ECM mode. ECM mode reduces document memory and may lengthen transmission and reception times.
3	0	Retransmit automatically when receiving RTN / PIN signals 0 : Yes 1 : No	When set to "1", retransmission disables automatically if receiving RTN / PIN signals.
2	1	Factory use only	—
1	0	Factory use only	—
0	0	Factory use only	—

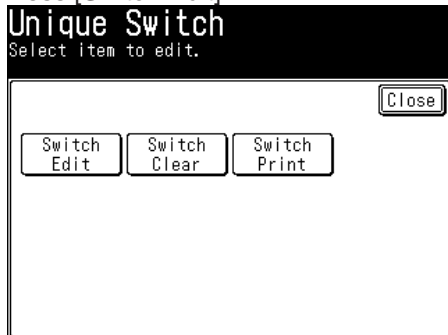

### Attribute 5 - Individual Autodialer Setting (Equivalent to Memory Switch 014)

## 3.5 Unique switch adjustment

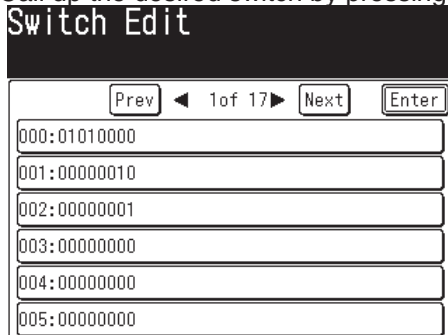

### 3.5.1 Setting the Unique Switches

These switches are used to program internal machine parameters.

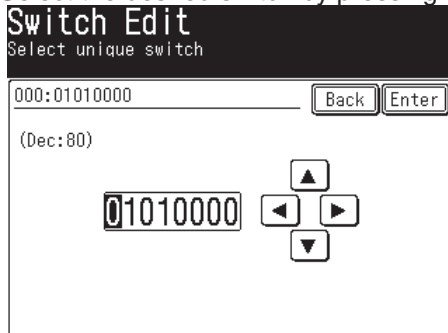

1. From standby, press <Mode>, <\*>, <0>, <4>.
2. Press [Switch Edit].

3. Call up the desired switch by pressing [Prev] or [Next] , or by pressing the numeric keys.

4. Select the desired switch by pressing the box.

5. To navigate through the unique switch settings:
  - The bits are ranged from 7 (left) to 0 (right).
  - Press [◀] or [▶] of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲], to change the bit value.
  - Press [Enter] to save the setting of the displayed parameter and return to the machine parameter edit screen.
  - Press [Back] *not* to save the setting of the displayed parameter.
6. If you want to set other unique switches, repeat step 3-5. Otherwise, proceed to step 7.
7. Press <Reset> to return the machine to ready screen.

You can confirm the setting on a list. The unique switch list will be printed by pressing [Switch Print] in step 2.

## 3.5.2 Clearing the unique switches

Resets the unique switches to factory defaults.

1. From standby, press <Mode>, <\*>, <0>, <4>.
2. Press [Switch Clear].
3. Press [Yes]. The unique switches will reset to factory defaults.

4. Press <Reset> to return the machine to standby.

## 3.5.3 List

000	• Congestion tone detection
001	• Enable the first tone key • Enable the second tone key • Enable the dial prefix key
003	• Display only direct input number on redial list • The period before detecting busytone after dialing
010	• Including TTI inside the document • The number of times PPR is detected during ECM transmission
013	• Encoding method for transmission
015	• Returns from V28 to V8 • V.8 handshake in real time Tx
017	• JBIG transmission
018	• Disconnect the line when the transmission speed falls down under 7200 bps • Disconnect the line when the transmission speed falls down under 4800 bps • Transmission when disable to detect first NSF in real time transmission
019	• Number of redial times for archive transmission
020	• Transmit CED signal • Printout the pages completed to receive during receiving into memory
021	• TCF check time (in 100 ms units)
022	• Document storage method • MMR reception • JBIG reception
023	• Encoding method for reception
029	• Displays the message "No Network Connection."
030	• 3429 baud symbol rate when communicating at V.34 • 3200 baud symbol rate when communicating at V.34 • 3000 baud symbol rate when communicating at V.34 • 2800 baud symbol rate when communicating at V.34 • 2400 baud symbol rate when communicating at V.34
032	• ANSam output time
035	• Reception level at CED 2100 Hz
037	• The timing between V.34 handshake signals
050	• Smooth printing for printing normal document
051	• Give priority to "fit to paper"
052	• Printing margin adjustment

053	• Printer density adjustment
056	• Reduce received fax in letter size
057	• Enable toner saving mode • Paper selection priority
071	• Line monitor in Quick memory transmission • Rx document to polling document
072	• Start copying even if no suitable paper size is set
075	• Journal list printing order
077	• Print time-out on PCL text printing (at local printing)
078	• Print time out on GDI (at local printing)
079	• Print time out on PCL (at local printing)
080	• Default tab on scan read screen
081	• Put dial error on journal
082	• Import / Export all data at mirroring • Check market information at mirroring
085	• Print/Send the consumable order sheet when the drum is near end • Print/Send the consumable order sheet when toner is near empty • Receive time stamp position
086	• Enable sleep mode • Prepare for printing when coming back from energy save mode
091	• Priority of fusing on pasteboard
095	• F4 paper length
096	• Warn that fuser switches are in envelope-printing position • How long to display the warning of envelope-printing position • Displays warning at fuser life
098	• Respond warm-up condition as ready on SNMP • Respond Sleep condition as ready on SNMP

0	0	Factory use only	

### Unique Switch 097— Factory use only

### Unique Switch 098 :

Switch	Initial Setting	Adjust	Usage/Comments
7	0	Factory use only	
6	0	Respond warm-up condition as ready on SNMP 0 : Respond as warm-up 1 : Respond as ready	To print on Row port correctly by AS400, set this switch to "1". When this switch is "1", SNMP manager such as WebJetAdmin displays "Ready" even if the printer is in warm-up condition. When the printer warms up while it is receiving information on Row port, the job will be divided. The latter divided job will be printed with initial font as it has no font information. This setting will avoid this font issue.
5	0	Respond Sleep condition as ready on SNMP 0 : Respond as sleep 1 : Respond as ready	To print on Row port correctly by AS400, set this switch to "1". When this switch is "1", SNMP manager such as WebJetAdmin displays "Ready" even if the printer is in sleep condition. When the printer sleeps while it is receiving information on Row port, printing will be disabled. To enable printing again, this error should be recovered with administrator authority, and this setting will avoid this issue.

### Unique Switch 099— Factory use only

## 3.6 Clear programmed data / user Settings

User programmed information such as address book entries, date, time, Transmit Terminal Identifier (TTI), Subscriber ID, etc., are stored in the unit's SD card.

This function does not clear the machine parameters, memory switches and unique switches.

1. Press <Mode>, <\*>, <0>, <2>.

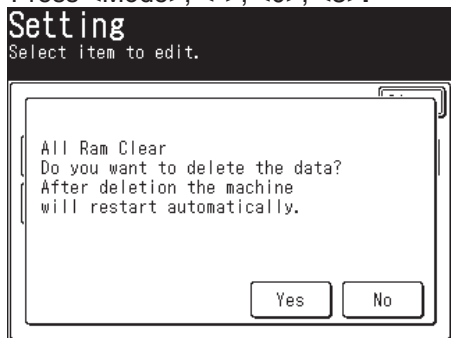

2. Press [Yes].

## 3.7 All RAM clear

The All RAM clear setting will erase all user-programmed information, all documents in memory, and reset the memory switches and unique switches to factory defaults.

This feature may also be used to try and clear a machine malfunction or lock up. If possible, when the All RAM clear is used to reset a malfunction or lock up, it is advisable to print the machine settings, address book entries to help in reprogramming this information.

1. Press <Mode>, <\*>, <0>, <3>.

2. Press [Yes].
3. The machine reboots automatically.

The clear modes initialize the following data :

	All RAM clear	User data clear
Machine parameter		
Memory switch	✓	
Unique switch	✓	
Consumable order sheet		
Life monitor		
Journal	✓	✓
Stored images	✓	✓

✓: Cleared

Blank : Not cleared

## 3.8 T.30 monitor

In all binary coded facsimile control procedures the HDLC frame structure is utilized. The basic HDLC structure is shown below.

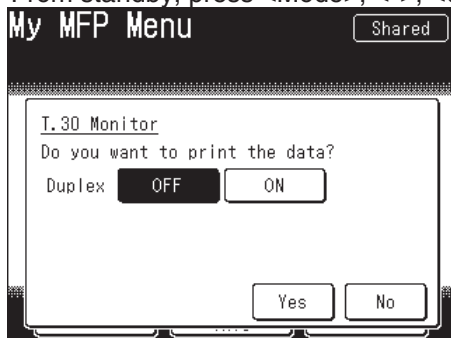

The control signal is identified by FCF (Facsimile Control Field). Additional 8-bit octet information follows FIF (Facsimile Information Field) and FC (Facsimile Control Field) to further clarify facsimile procedures. This is added to DIS, DCS, DTC, CIS, CIG, TSI, NSC, NSF, and NSS signals.

### 3.8.1 Print T.30 monitor

This mode causes the unit to print a G3 procedural summary of the last fax communication.

1. From standby, press <Mode>, <\*>, <0>, <5>.

2. Select [ON] or [OFF] for duplex printing, and press [Yes].

### 3.8.2 Multi T.30 monitor

The communications on the journal list are able to print.

1. Press <Job Confirm. / Fax Cancel>.
2. Press [History] tab and select [Fax Tx] or [Fax Rx].
3. Select the desired communication.
4. Press <\*>, <0>, <5>.
5. Select [ON] or [OFF] for duplex printing, and press [Yes].

(Example for fax transmission)

(Example for fax reception)

[01] 00000/01124

[V17 MMR A3 0 F E]

## NSF, NSC, NSS:

NSF, NSC, NSS are nonstandard unit frames. The first three bytes of the FIF are specified by T.30. The subsequent digits are individually determined by the manufacturers. The first byte refers to the country code. The second byte is a spare; it is 00 (hex) presently. The third byte is the manufacturer code.

TxFram	RxFram	D A T A
	NSF	20 00 00 45 00 00 00 00 00 00 00 00 00 00 00 00 00 00

## CSI, CIG, TSI:

CSI, CIG, TSI is composed of a maximum 20-digit number comprising the country code, area code, and subscriber's telephone number. In the printed results, printing starts from the least significant digit of the telephone number. The following code table lists the codes used to make the 20-digit number and their value. Below the code table is a CSI example.

Code	Value	Code	Value	Code	Value	Code	Value
20	Space	32	2	35	5	38	8
30	0	33	3	36	6	39	9
31	1	34	4	37	7	2B	+

An example telephone number of 123-456-7890 is represented as:

TxFram	RxFram	D A T A
CIS		30 39 38 37 36 35 34 33 32 31 20 20 20 20 20 20 0 9 8 7 6 5 4 3 2 1 20 20 20 20 20

## DIS, DTC, DCS:

DIS, DTC, DCS frames define the standard CCITT capabilities of the two units such as transmit and receive speeds, coding methods, printer speed, etc.

TxFram	RxFram	D A T A
DIS		00 EF F9 C4 80 81 80 00

The bits are in the following order:

( 8 7 6 5 4 3 2 1) (16 15 14 13 12 11 10 9) (24 23 22 21 20 19 18 17)  
(32 31 30 29 28 27 26 25) (40 39 38 37 36 35 34 33) (48 47 46 45 44 43 42 41)  
(56 55 54 53 52 51 50 49) (64 63 62 61 60 59 58 57)

Table for hexadecimal digit to binary number:

Hex	Binary	Hex	Binary	Hex	Binary	Hex	Binary
0	0000	4	0100	8	1000	C	1100
1	0001	5	0101	9	1001	D	1101
2	0010	6	0110	A	1010	E	1110
3	0011	7	0111	B	1011	F	1111

So in the above list the first "EF" is "11101111"(bit order 8 7 6 5 4 3 2 1)

## A transmission with PPR signal:

The error frame in fax reception is identified using the post-message signal and PPR signal.

TxFram	RxFram	D A T A
PPS MPS		BF 4F 00 00 0F
	PPR	BC F0 00 FF FF FF FF FF FF FF FF FF FF FF FF FF FF FF

In PPS signal FIF, the pages, blocks and frames are displayed one value less than the real value.

So in the above case:

Pages: 00 means one page

Blocks: 00 means one block

Frames: 0F means 16 frames

In PPR signal FIF, the error frame will be displayed with "1". In the above case the first frame is "F0" and it means there was an error from frame 4 to 7.

## 3.9 Printer maintenance mode

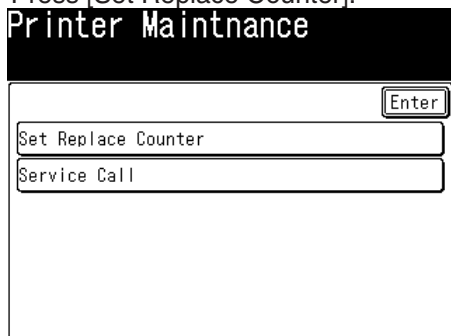

In case of followings, use this mode.

- When you have replaced the Fuser unit and/or Transfer roller.
- When "Checkout error : XX" message appear on the screen, access this mode to see the details.

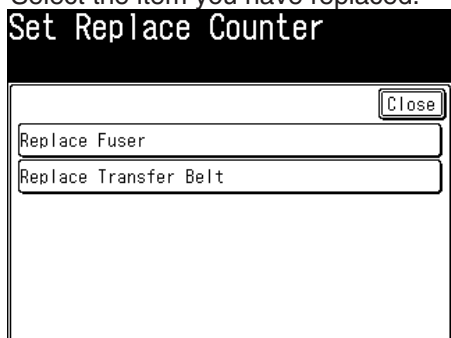

### 3.9.1 When you replace the fuser unit or transfer roller

To access the printer maintenance mode:

1. Press <Mode>, <\*>, <0>, <6>.
2. Press [Set Replace Counter].

3. Select the item you have replaced.

4. Press [Yes].

### 3.9.2 When “Checkout error : XX” message is displayed

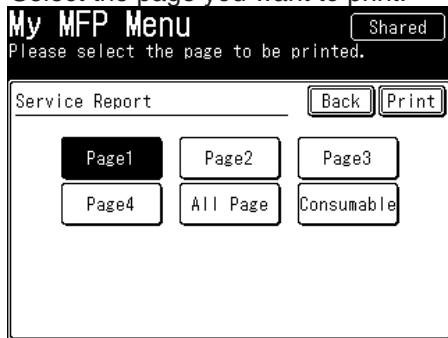

1. Press <Mode>, <\*>, <0>, <6>.
2. Press [Service Call].
3. Detail of printer error will be displayed.  
See “4.3 Checkout error” on page 4-3 for the printer error messages and an explanation of each are outlined.

## 3.10 Service report printing

You can print out a report that contains machine’s usage and error history.

### 3.10.1 Printing the service report

1. From standby, press <Mode>, <\*>, <0>, <7>.
2. Select the page you want to print.

When you select [Consumable], you can print out the report without counting up toner and drum consumptions used to print this report.

3. Press [Print].
4. Replace the consumables to others.  
This step is required only when “Consumable” is selected at step 2.
5. Select [ON] or [OFF] for duplex printing, and press [Yes].
6. When you have replaced the consumables in step 4, replace them to the originals.
3. Select [ON] or [OFF] for duplex printing, and press [Yes].

## NOTE

Do not press [Consumable] while the printer is operating.

### 3.10.2 Contents of the service report

## NOTE

Some device on the service report may not be equipped on your machine.

### Contents of the header

## 3.11 Monitor speaker

If you need to monitor the signal of fax communication, turn this mode to on. You can hear the signal sound with machine's speaker during fax transaction.

1. Press <Mode>, <\*>, <0>, <8>.
2. Select the monitor type from [ON until DIS] or [ON].

3. Select the speaker volume.  
To turn this mode off, perform steps 1 and 2 and select [OFF].

## 3.12 Test modes

This mode offers the ability to print a test pattern and monitor certain unit output functions. Included are followings.

- Life monitor
- Test pattern print
- Stamp test mode
- Document feeding test
- Set background level
- Make color Gamma
- Select color Gamma

### 3.12.1 Life monitor

This function displays the machine status.

1. Press <Mode>, <\*>, <0>, <9>, then select [Life Monitor].
2. Press [Detail] to see the options.

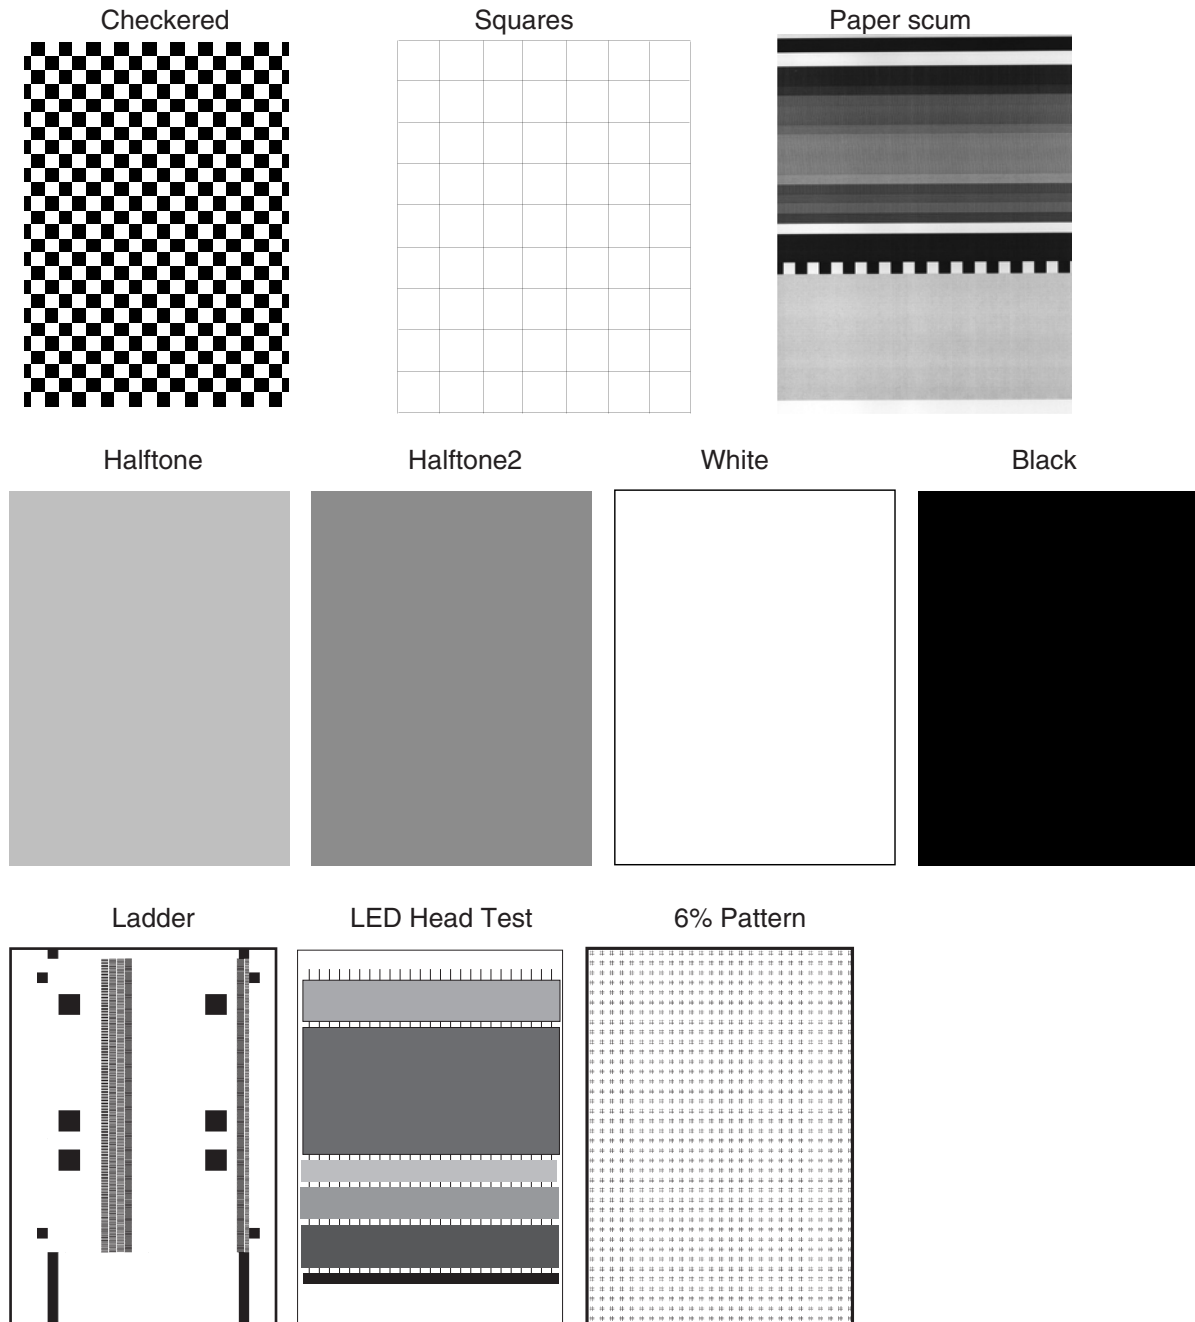

**ROM Ver** = displays main control board firmware version

Display	Item	Detail
1	Installation Date	Cumulative total pages
	Scan Count	
	Page Count	
	Tx (Transmission) Count	
2	Drum Replaced	Number of times drum is replaced
	Drum Life	Current drum working time (x 10 seconds)
	After Replaced	Total printed pages on current drum
	Drum Start Date	Date when current drum is started to user
	Drum Serial No.	Serial number of drum cartridge

Display	Item	Detail
3	Drum Cartridge Usage 1	History of used drum cartridge 1 (Drum star day, printed pages, and serial number)
4	Drum Cartridge Usage 2	History of used drum cartridge 2 (Drum star day, printed pages, and serial number)
5	Drum Cartridge Usage 3	History of used drum cartridge 3 (Drum star day, printed pages, and serial number)
6	Toner Replaced	Number of times toner cartridge is replaced
	After Replaced	Total printed pages on current toner cartridge
	Toner Start Date	Date when current toner cartridge is started to user
	Toner Serial No.	Serial number of toner cartridge
7	Toner Cartridge Usage 1	History of used toner cartridge 1 (Toner star day, printed pages, and serial number)
8	Toner Cartridge Usage 2	History of used toner cartridge 2 (Toner star day, printed pages, and serial number)
9	Toner Cartridge Usage 3	History of used toner cartridge 3 (Toner star day, printed pages, and serial number)
10	Fuser Replaced	Number of times fuser is replaced
	Fuser Life	Total printed pages
	Xsfer Replaced	Number of times transfer roller is replaced
	Xsfer Life	Total printed pages
11	Word Count (In Use)	The number of words used on display. If this words are less than the "Word Count (default)", some words may not be able to display. Translation is needed for the missing wording.
	Word Count (default)	The number of words the firmware uses.
12	PCL	Optional items status (Yes: Available, No: Not available)
	PS3 (PS3 option)	
	PDF (PDF direct print option)	
	BC (Barcode font option)	
	PPM	Print pages per minute.

### 3.12.2 Printer Test

The printer test mode offers ten different test patterns as shown below.

1. Press <Mode>, <\*>, <0>, <9>, then select [Test Pattern Print].
2. Select the desired pattern is displayed.
3. Select a cassette or tray that holds your desired paper size to test, and press [Enter].
4. Enter the numbers of pages to print and press [Enter].
5. Press [Yes].

### 3.12.3 Stamp test mode

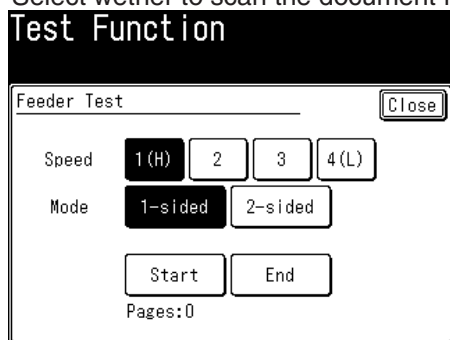

This mode tests the optional stamp. The stamp will be stamped on the document at a regular interval.

1. Load test documents into the automatic document feeder (ADF).
2. Press <Mode>, <\*>, <0>, <9>, then select [Stamp Test Mode].
3. Press [Start] to start the feeder test.
4. Press [End] to exit the test mode.

### 3.12.4 Document feeding test

The feeder test discharges all documents in the automatic document feeder (ADF) at a constant speed and displays the document total on the display.

1. Load test documents into the automatic document feeder (ADF).
2. Press <Mode>, <\*>, <0>, <9>, then select [Feeder Test].
3. Select the feeder speed from four steps.
4. Select whether to scan the document face only (1-sided) or both side of the document (2-sided).

5. Press [Start] to start the feeder test.
6. Press [End] to exit the test mode.

### 3.12.5 Set background level

The background level is an established threshold used to help measure the reflective ability of a scanned document. This threshold can change when CIS is replaced; therefore this mode should be used to reset the threshold when the item is changed.

This mode allows the level to be set without erasing memory contents.

1. Press <Mode>, <\*>, <0>, <9>, then select [Background level].
2. Press [Front].
3. Press [Start].

After the background level is set, the machine goes back to ready screen.

### 3.12.6 Make color gamma

The machine has a color gamma data table as color scanning correction data. The color gamma table adjusts RGB color balance, and is unique per machine because of the optical variation. Both the flash memory on main control board and SD card keep the color gamma table, and the same data will be saved on both parts when you make a color data though below operation.

Perform this operation to remake the color gamma table when the following parts is replaced:

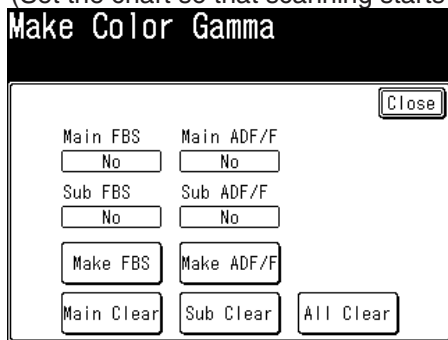

- Main control board and SD card are replaced at the same time

The following chart is required to make the color Gamma:  
2011-01

#### NOTE

Use a clean chart that is not tanned or folder.

1. Press <Mode>, <\*>, <0>, <9>, then select [Make Color Gamma].
2. Set the color gamma chart on FBS (Flat Bed Scanner), and press [Make for FBS].  
(Set the chart so that scanning starts from the chart top.)

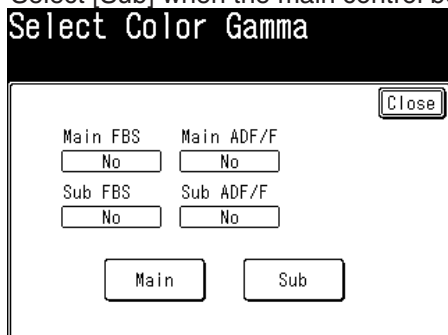

3. Set the color gamma chart on ADF, and press [Make ADF/F].  
(Set the chart so that scanning starts from the chart top.)
4. Press [Close] to go back to test function menu.

### 3.12.7 Select color gamma

The machine has a color gamma data table as color scanning correction data. The same color gamma table is kept on the flash memory on main control board (Sub) and SD card (Main). When one of the board is replaced, perform the following operation to remake the table on the other.

1. Press <Mode>, <\*>, <0>, <9>, then select [Select Color Gamma].
2. Select the source to be copied.  
Select [Sub] when the main control board is replaced, and [Main] when the SD card is replaced.

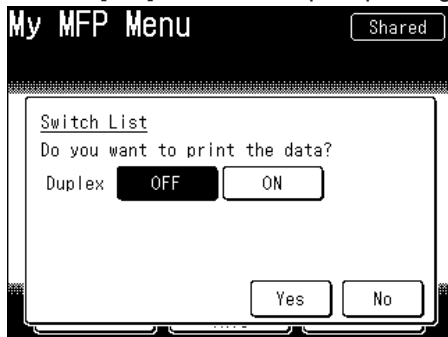

3. Check the display that "Yes" is displayed for all items.

## 3.13 Print machine parameters, memory switch and unique switch settings

This function instructs the unit to print a list of the machine parameter, memory switch and unique switch settings. The list shows the default and current settings for each.

1. Press <Mode>, <\*>, <1>, <0>.
2. Select [ON] to enable duplex printing, or [OFF] to disable it.

## 3.14 Factory functions

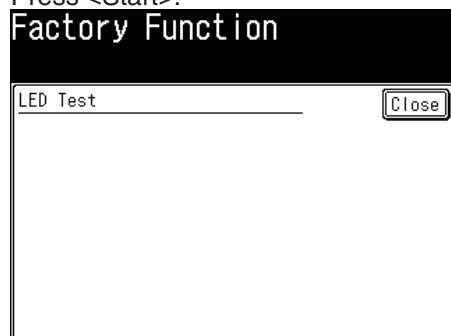

This function provides several machine machina test.

Test list

Test	Contents
LED test	Light on all the LED lamps to check that the lamps are working.
LCD test	Display test patterns on the LCD to check for dead pixel.
Panel test	Display the key name on the LCD when the key is pressed. You can check that the keys are working.
DRAM check	Check that the DRAM is working correctly. Check also when the memory is expanded.
RTC test	Factory use only.
Pseudo ring test	Check the bell of external telephone and the pseudo ring.
Forced toner supply mode	Factory use only.
Serial number writing	Factory use only.
USB test pattern print	Factory use only.
MAC address writing	Factory use only.

### 3.14.1 LED Test

1. Press <Mode>, <\*>, <1>, <1>, then select [LED Test].
2. Press <Start>.

When you press <Start>, the LED illuminates in the following order:  
All LEDs OFF → Green ON → Orange ON → All LEDs ON → All LEDs OFF.

### 3.14.2 LCD Test

This mode displays three test patterns in LCD.

1. Press <Mode>, <\*>, <1>, <1>, then select [LCD Test].
2. Press <Start> to turn all dots off.

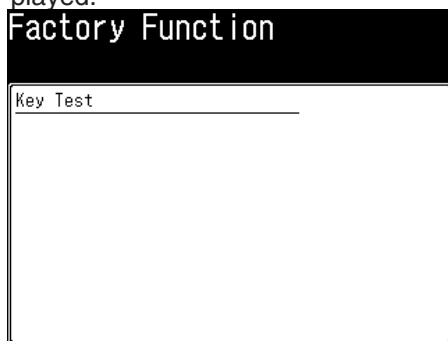

3. Press <Start> to turn all dots on.

4. Press <Start> to complete the test.

### 3.14.3 Key panel test

1. Press <Mode>, <\*>, <1>, <1>, then select [Panel Test].
2. As each button on the keypad is pressed, a representative name as show in the following table will be displayed.

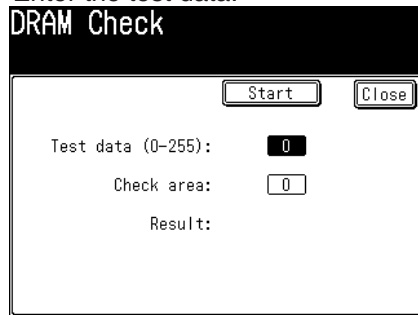

Key	Indication in LCD	Key	Indication in LCD
Mode	Mode	Login	Login
Personal Mode	Personal	Job Confirm /Fax Cancel	Job Confirm /Fax Cancel
Reset	Reset	Numeric keys 1 to 10, *, #	Tenkey 1 to 0, *, #
Start	Start	Stop	Stop
Energy Save	Energy Save		

3. Press <Stop> twice to complete the key panel test.

### 3.14.4 DRAM Check

This mode is used to test the DRAM memory, or document memory.

1. Press <Mode>, <\*>, <1>, <1>, then select [DRAM Check].
2. Enter the test data.

DRAM Check

Start Close

Test data (0-255): 0

Check area: 0

Result:

3. Depending on the amount of DRAM in the unit, press <0>.
4. Press [Start].  
The machine starts checking and the result (OK/NG) will be shown in the display.
5. Press [Close] to complete the test.

### 3.14.5 Pseudo ring test

1. Press <Mode>, <\*>, <1>, <1>, then select [Pseudo ring test].
2. Press [Start], to ring the bell.

Pseudo ring test

Start End

Close

3. Press [End] to stop.
4. Press [Close] to complete the test.

# 3.15 Line tests

This mode offers several internal tests and ability to monitor certain unit output functions. Included are relay tests, modem signal output monitoring, and DTMF output monitoring.

## NOTE

To monitor the tones, an external monitoring device must be connected to the telephone line jack.

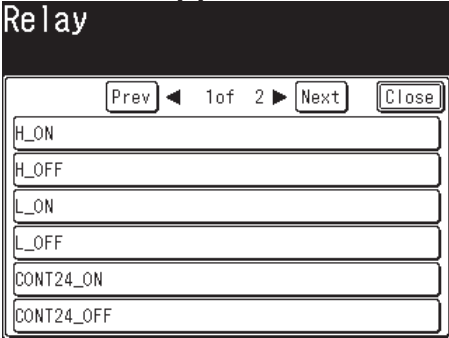

### 3.15.1 Relay Test

This mode tests the on/off operation of various relays and switches.

- 1. Press <Mode>, <\*>, <1>, <2>.
- 2. Select [Relay].

- 3. Select the relay you want to test. When it is selected, it will be highlighted.

H relay – on	H relay –off	L relay – on	L relay –off
CONT24V relay – on	CONT24V relay – off	RI relay – on	RI relay – off
Hook key			

- 4. Press [Close] to exit the test.

### 3.15.2 Tonal signal test

The tonal signal test permits the unit’s output tones to be monitored.

- 1. Press <Mode>, <\*>, <1>, <2>.
- 2. Press [Tonal].
- 3. Select your desired tonal signal test. When it is selected, it will be highlighted.

Refer to the table below.

Signal	Signal
None (stop signal)	400 Hz tone
600 Hz tone	1100 Hz tone
1300 Hz tone	2100 Hz tone
FSK _W1_B1	FSK BLACK
V27_1600_4800 picture date	V27_1200_2400 picture date

V34_2800_4800 ~ 26400
V34_3000_4800 ~ 28800
V34_3200_4800 ~ 31200
V34_34290_4800 ~ 33600

- 4. Press [Close] to exit the test.

### NOTE

It may take several moments for output signal to change.

### 3.15.3 DTMF output test

The DTMF output test permits the unit's DTMF tones to be monitored.

1. Press <Mode>, <\*>, <1>, <2>.
2. Select [DTMF].
3. Select your desired tonal DTMF tone. When it is selected, it will be highlighted.

SHARP	DTMF# (941 Hz + 1477 Hz)		

4. To stop outputting the DTMF tone, press <Stop>.
5. To select another DTMF tone, repeat steps 3-4.  
Otherwise, proceed to step 6.
6. To exit the DTMF output test, press [Close] under not tests.

### NOTE

It may take several moments for output signal to change.

## 3.16 Mirror carriage transfer mode

### IMPORTANT

The machine is shipped with mirror carriage locked to protect the machine's mirror carriage during shipping. When installing the machine, turn the power on and perform the following:

1. Press <Mode>, <\*>, <1>, <4> .
2. Select [OFF], and press [Enter].

### IMPORTANT

If reshipping, turn on this mode to move the mirror carriage to the transport position.

## 3.17 Consumable order sheet

When the drum cartridge is near end of its design life or the toner cartridge is near empty, the machine prints (or transmit) the consumable sheet.

### 3.17.1 Set consumable order sheet

Follow the instructions on the display and enter following items:

Items	Descriptions
Dealer code	Enter dealer code.
Dealer name	Enter dealer name.
Dealer Tel No	Enter dealer's telephone number. Up to 20 characters can be entered.
Dealer Fax No	Enter dealer's fax number. Up to 40 characters can be entered.
Dealer e-mail	Enter dealer's e-mail address.
Cust Account #	Enter customer's account number.
Cust Name	Enter customer's name.
Client department	Enter customer's department.
Address 1	Enter customer's address.
Address 2	Enter customer's address.
Cust Tel	Enter customer's telephone number.
Order sheet settings	Select the way to deal with the consumable order sheet when the printer consumable is near end of its designed life.  OFF                      Machine does not print or transmit the consumable order sheet even though the printer consumable is near end of its designed life.  Print                     Machine prints the consumable order sheet when the printer consumable is near end of its designed life.  Fax Transmit           Machine transmits the consumable order sheet to the dealer's fax number when the printer consumable is near end of its designed life.  e-mail                   Machine sends an e-mail to the dealer's e-mail address when the printer consumable is near end of its designed life.
E-mail subject	Modify the e-mail subject if necessary. This item can be modified when you set "Order sheet setting" to "e-mail".

1. Clear the junk data, if necessary. (See "Clear consumable order sheet" below.)
2. Press <Mode>, <\*>, <1>, <5>.
3. Press [Order Sheet].

4. Follow the instructions on the display and enter necessary items.

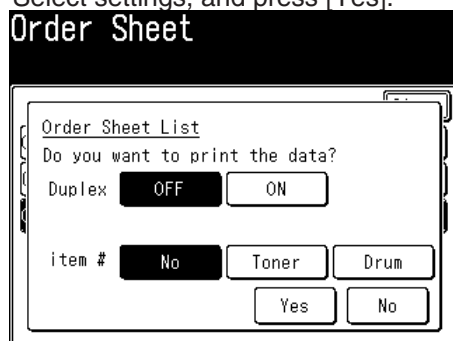

### 3.17.2 Clear consumable order sheet

1. Press <Mode>, <\*>, <1>, <5>.
2. Select [Clear Order Sheet].
3. Press [Yes].

### 3.17.3 Print consumable order sheet

To check the information has been registered correctly, print the consumable order sheet.

1. Press <Mode>, <\*>, <1>, <5>.
2. Select [Order Sheet List].
3. Select settings, and press [Yes].

### 3.18 DRAM clear

This clears the image storage memory.

1. Press <Mode>, <\*>, <1>, <6>.
2. Press [Yes].

## 3.19 Life monitor maintenance

### 3.19.1 Resettable counter clearing

Clear the counter of the machine. The following counter will be cleared:

- Scanned pages per mode (copy/scan/fax/print)
- Scanned times per mode (copy/scan/fax)
- Pages per scanner part (ADF/FBS)
- Times per scanner part (ADF/FBS)
- Scanner jam information
- Print pages per cassette
- Jammed pages per cassette
- Jammed pages per print part

1. Press <Mode>, <\*>, <2>, <0>.
2. Select [Initialize resettable counter].

3. Press [Yes].

### 3.19.2 Reentering the life monitor

Follow the instructions on the display and reenter following items if needed:

Items	Descriptions
Number of toner replacements	Number of times toner cartridge is replaced
Number of drum replacement	Number of times drum cartridge is replaced
Fuser Replaced Count	Number of times fuser is replaced
# pages after fuser replacement	Number of printed pages after fuser is replaced
Transfer Replaced Count	Number of times transfer roller is replaced
# pages after transfer replacement	Number of printed pages after transfer roller replaced

1. Press <Mode>, <\*>, <2>, <0>.
2. Select the desired item and reenter the counter value.

## 3.20 Sensor input test

You can check the sensor status. When the sensor operates, the value next to sensor name changes from OFF to ON or from ON to OFF. For example, when open the paper cassette 1, the CAS1:OFF change to CAS1: ON.

1. Press <Mode>, <\*>, <2>, <2>.
2. Press your desired button, and check the sensor status.

### Sensor Status

Scanner sensor list:

Name	Status	Name	Status
TXIL	OFF: ADF cover is open ON: ADF cover is close	HS	OFF: Mirror at size detecting position ON: Mirror at home position
DS1	OFF: No document ON: Detect document	DEXIT	OFF: No document ON: Detect document
DS2	OFF: No document ON: Detect document		
DS3	OFF: No document ON: Detect document		
APS	OFF: Platen cover is open ON: Platen cover is closed		
DRS	OFF: No document ON: Detect document		

Printer sensor list:

Name	Status	Name	Status
PRS	Paper resist sensor OFF: No paper ON: Paper detected	PDS	Paper discharge sensor OFF: No paper ON: Paper jam detected
SWBK	Switchback sensor OFF: No paper ON: Paper detected		
BINPDS	2 bin-tray paper discharge sensor OFF: No paper ON: Paper detected	OP_BIN	2 bin-tray sensor OFF: No unit ON: Unit detected
HP	No sensor on this machine		
LOCK_P	Fan lock sensor at power unit OFF: Unlocked (driving) ON: Locked (stop)	LOCK_F	Fan lock sensor for fuser unit OFF: Unlocked (driving) ON: Locked (stop)
LCK1M	Motor lock sensor for process motor OFF: Unlocked (driving) ON: Locked (stop)		
LCK2M	Motor lock sensor for paper feed OFF: Unlocked (driving) ON: Locked (stop)	TH_F (TH1)	Fuser temperature sensor
HYDRO	External humidity sensor		
TH_E	External temperature sensor	TOS_TC	Toner empty sensor for toner cartridge
TOS_DC	Toner empty sensor for drum cartridge		

Cassette sensor list:

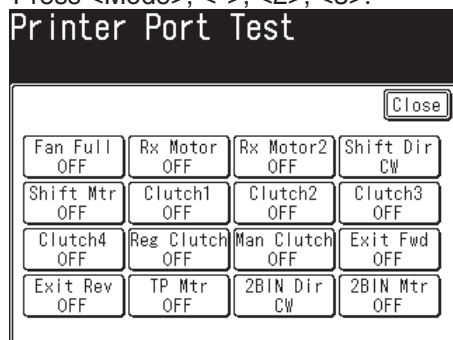

Name	Status	Name	Status
CAS1 (OPEN)	Cassette 1 open/closed OFF: Closed ON: Open	PES1 (PES)	Paper empty sensor for cassette 1 OFF: No paper ON: Paper detected
SIDE_OP (JAMC)	Interlock sensor (side cover open/ closed) OFF: Closed ON: Open		
CAS2 (OPEN OP)	Cassette 2 open/closed OFF: Closed ON: Open	PES2 (PES OP)	Paper empty sensor for cassette 2 OFF: No paper ON: Paper detected
JAM2_OP (JAMC2)	Cassette 2 side cover open/closed OFF: Closed ON: Open		
CAS3 (OPEN OP)	Cassette 3 open/closed OFF: Closed ON: Open	PES3 (PES OP)	Paper empty sensor for cassette 3 OFF: No paper ON: Paper detected
JAM3_OP (JAMC2)	Cassette 3 side cover open/closed OFF: Closed ON: Open		
CAS4 (OPEN OP)	Cassette 4 open/closed OFF: Closed ON: Open	PES4 (PES OP)	Paper empty sensor for cassette 4 OFF: No paper ON: Paper detected
JAM4_OP (JAMC2)	Cassette 4 side cover open/closed OFF: Closed ON: Open		
PESM (TRAYS)	Paper empty sensor for bypass tray OFF: No paper ON: Paper detected	FRNT_OP (FCOVER)	Front cover open/closed OFF: Closed ON: Open
CSST2	Cassette 2 sensor OFF: No unit ON: Unit detected	CSST3	Cassette 3 sensor OFF: No unit ON: Unit detected
CSST4	Cassette 4 sensor OFF: No unit ON: Unit detected		

Sensor for cassette 2 to 4 are displayed only when they are installed to the machine.

## 3.21 Printer diagnostic mode

This mode can confirm the operation of each part of the printer section.

1. Press <Mode>, <\*>, <2>, <3>.

2. Select the device you want to set to ON.

Fan Full : Rotate the fan motor with full power  
Rx Motor : Rotate the Rx motor  
Rx Motor 2: Rotate the Rx motor 2  
Shift Dir : (This function is not available on your machine)  
Shift Mtr : (This function is not available on your machine)  
Clutch 1 : Turn on clutch of cassette 1  
Clutch 2 : Turn on clutch of cassette 2  
Clutch 3 : Turn on clutch of cassette 3  
Clutch 4 : Turn on clutch of cassette 4  
Reg Clutch: Turn on resister roller clutch  
Man Clutch: Rotate bypass tray feed clutch  
Exit Fwd : Rotate the paper exit roller to paper discharge direction (forward)  
Exit Rev : Rotate the paper exit roller to reverses direction (reverse)  
TP Mtr : Rotate the toner motor  
2BIN Dir : Shows the 2-bin motor rotate direction  
2BIN Mtr : 2-bin motor rotates and stops every time pressed

## 3.22 Network service mode

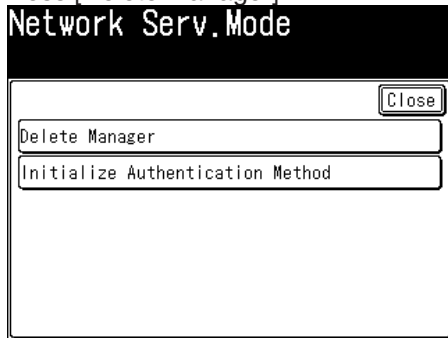

This mode provides the following two items:

- Delete administrator password
- Initialize authentication method

### 3.22.1 Delete administrator password

You can clear the administrator password.

1. Press <Mode>, <\*>, <2>, <4>.
2. Press [Delete Manager].

3. Press [Yes].

### 3.22.2 Initialize authentication method

You can initialize the authentication mode, and return it to its factory default (Stand-alone).

If you cannot log in to machine in following cases, use this operation.

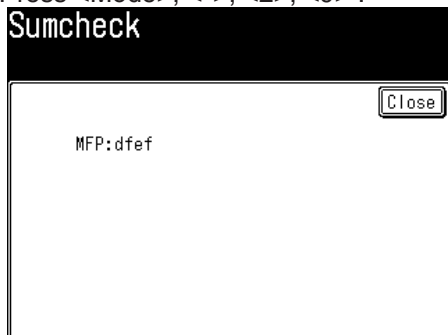

- Authentication method is set to single sign on
- Guest account cannot log in
- Cannot access to authentication server
- Cannot access to machine via web browser due to HTTP(S) service problem

1. Press <Mode>, <\*>, <2>, <4>.
2. Press [Initialize Authentication Method].
3. Press [Yes].

## 3.23 Flash Rom sum check

This mode allows you to check Sum after the Flash ROM version is updated.

1. Press <Mode>, <\*>, <2>, <9> .

## 3.24 Set service report

### 3.24.1 Set the service report

If using this feature, you should be enter following items:

Items	Descriptions
Send Service Report	OFF      Machine does not send the service report. Fax       Machine transmits service report according to this setting. E-mail    Machine send the service report via e-mail according to this setting.
Fax Number 1	Set the destination fax number. This item can be modified when you set "Send Service Report" to "Fax".
Fax Number 2	Set the destination fax number 2, if needed. This item can be modified when you set "Send Service Report" to "Fax".
E-mail Address 1	Set the destination e-mail address. This item can be modified when you set "Send Service Report" to "E-mail".
E-mail Address 2	Set the destination e-mail address 2, if needed. This item can be modified when you set "Send Service Report" to "E-mail".
E-mail Address 3	Set the destination e-mail address 3, if needed. This item can be modified when you set "Send Service Report" to "E-mail".
Report Format	Select between one page (first page) or detailed report (full pages).
Period	The report can be send either once in a determined month(s) or once in a month on a determined date and time
E-mail subject	Modify the e-mail subject if necessary. This item can be modified when you set "Send Service Report" to "E-mail".

1. Press <Mode>, <4>, <2>.
2. Press [Setting].

3. Follow the instructions on the display and enter necessary items.

### 3.24.2 Print the service report

1. Press <Mode>, <4>, <2>.
2. Press [Service Report].
3. Select [ON] or [OFF] for each settings, and press [Yes].

## 3.25 Reset printer trouble

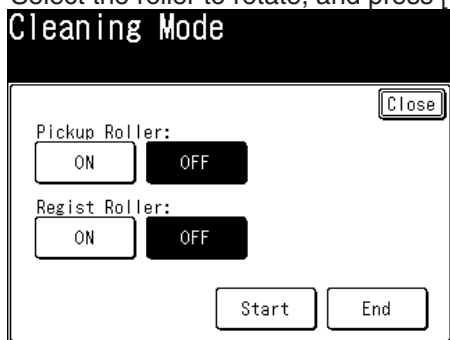

This mode clears the service call. Clear the warning when the trouble is settled. If fuser warming up error is settled, turn the machine OFF and ON following this operation.

1. Press <Mode>, <\*>, <4>, <5>.
2. Press [Yes].
3. Turn the power OFF and then ON.

## 3.26 Cleaning mode

This mode rotate the feed roller and registration roller automatically so that you can clean the surface of them.

1. Press <Mode>, <\*>, <4>, <6>.
2. Select the roller to rotate, and press [ON].

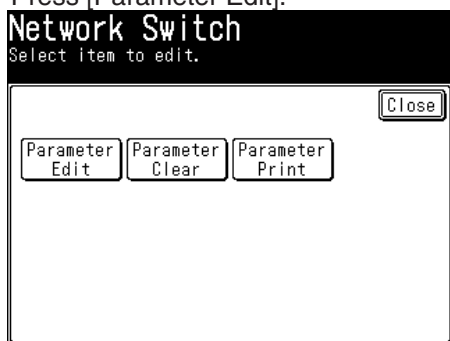

The screen displays 'Cleaning Mode' at the top. Below it, there are two sections: 'Pickup Roller:' and 'Regist Roller:'. Each section has two buttons: 'ON' and 'OFF'. The 'ON' buttons are highlighted. At the bottom, there are 'Start' and 'End' buttons. A 'Close' button is in the top right corner.

3. Press [Start] to rotate the roller.
4. Press [End] to stop rotating.

## 3.27 Network switch mode

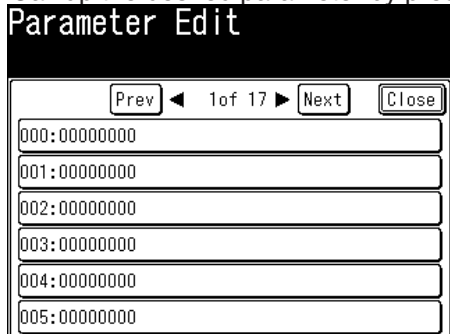

1. Press <Mode>, <\*>, <5>, <1>.
2. Press [Parameter Edit].

The screen displays 'Network Switch' at the top. Below it, the text 'Select item to edit.' is shown. There are three buttons: 'Parameter Edit', 'Parameter Clear', and 'Parameter Print'. The 'Parameter Edit' button is highlighted. A 'Close' button is in the top right corner.

When you press [Parameter Clear] and then [Yes], all the parameters return to their default value.

3. Call up the desired parameter by pressing [Prev] or [Next] , or by pressing the numeric keys.

The screen displays 'Parameter Edit' at the top. Below it, there are navigation buttons: 'Prev', '1 of 17', 'Next', and 'Close'. There are six input fields, each containing a hexadecimal value: '000:00000000', '001:00000000', '002:00000000', '003:00000000', '004:00000000', and '005:00000000'.

4. Select the desired parameter by pressing the box.

5. To navigate through the machine parameter settings:
- The bits are ranged from 7 (left) to 0 (right).
  - Press [◀] or [▶] of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲], to change the bit value.
  - Press [Enter] to save the setting of the displayed parameter and return to the machine parameter edit screen.
  - Press [Back] *not* to save the setting of the displayed parameter.
6. If you want to set other parameters, repeat step 3-5. Otherwise, proceed to step 7.
7. Press <Reset> to return the machine to ready screen.

You can confirm the initial setting of each parameter by the network switch list.  
The network switch list will be printed by pressing [Parameter Print] in step 2.

### Network switch 000~001: Factory use only

#### Network switch 002:

Switch	Initial Setting	Adjust	Usage/Comments
7	0	Maximum session times of SMTP	Set up the maximum session times. The number between 1 to 32 are available.  00011111 32 times : 00001001 10 times : 00000001 2 times 00000000 1 time (default)

### Network switch 014 ~ 099: Factory use only

## 3.28 Coverage measurement

You can scan and check the black ratio of a document.

1. Press <Mode>, <\*>, <5>, <4>.
2. Set the document, and press [Yes].
3. The document will be scanned, and you see the black ratio of that document on the display.

## 3.29 Touch panel adjustment

Correct the X, Y on the touch panel.

1. Press <Mode>, <\*>, <5>, <6>.
2. Touch the left upper corner of the display, and press <Start>.

### Touch Panel Adjust

Touch the left  
upper corner,  
then press <Start>.  
A = (20 , 20)

3. Touch the right bottom corner of the display, and press <Start>.

### Touch Panel Adjust

Touch the right  
bottom corner,  
then press <Start>.  
A = (265 , 265)  
B = (605 , 605)

## 3.30 Printer control parameter mode

The following settings are available for the PDL :

Adjustment	Parameter
• Enable PS3 tray setting • Cassette designation command • Paper size designation command	027
Change barcode font width	028
Tray number command for PCL 5	044 ~ 048
Tray number command for PCL XL	050 ~ 054
Cerner certification setting	060
Tray number command for PS3	064 ~ 068

1. Press <Mode>, <\*>, <5>, <7>.
2. Select [Parameter Edit], and press [Enter].

When you press [Parameter Clear] and then [Yes], all the parameters return to their default value.

3. Call up the desired switch by pressing [Prev] or [Next], or by pressing the numeric keys.
4. Select the desired parameter by pressing the box.
5. Adjust the parameter, and press [Enter].  
To navigate through the machine parameter settings:
  - The bits are ranged from 7 (left) to 0 (right).
  - Press [◀] or [▶] of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲], to change the bit value.
  - Press [Cancel] not to save the setting of the displayed parameter.
6. If you want to set other parameter, repeat step 3-5.

## Printer control parameter 000 ~ 026 : Factory use only

### Printer control parameter 027 :

bit	Initial Setting	Adjust	Usage/Comments
7	-	Factory use only	
6	-	Factory use only	
5	-	Factory use only	
4	0	Enable PS3 tray setting 0: No 1: Yes	Set this bit to "1" to customize tray number command on PS3. For detail setting, see page 3-111, Printer control parameter 064 ~ 068.
3	-	Factory use only	
2	-	Factory use only	
1	0	Cassette designation command 0: Default 1: HP	Some default cassette designation commands differ from those of HP. To use HP command, set this bit to "1". The default settings are on the table below. To customize the tray number command, see page 3-110.
0	0	Paper size designation command 0: Default 1: HP	Some default paper size designation commands differ from those of HP. (See table below.) To use HP command, set this bit to "1".

Cassette	PCL5		PCL XL	
	Default	HP	Default	HP
Auto	7	7	1	1
Bypass tray	2	2	2	2
Cassette 1	1	4	4	3
Cassette 2	4	1	5	4

## 3.31 Network capture (Packet capture)

You can capture the packet data the machine has sent and received. When you read the data using a packet analyzing tool such "tcpdump" or "Wireshark", you can use it as a subsidiary tool to detect the cause of transmission problem.

There are two ways to capture the packet data: capturing from web browser (see "3.42.6 Network capture" on page 3-130) and from the machine control panel. When you operate it from the machine, the captured data will be stored in the USB memory. You can output data captured on the panel from the panel only to the panel, and from web output to web only.

### 3.31.1 Setup

Set up the following items to use this function. This step is required only for the first time when you use this function.

Host	All : To capture the packets between the machine and all hosts, select [ON]. IP Address : To capture the packets between the machine and specific host, select [OFF] at "All". Then, enter the host name in the "Host" field". You can enter only IP address when you enter it from the machine control panel.
Protocol	Select the protocol to capture. You can select multiple protocols.
Port	Enter the port number to capture.
Count	Enter the number of packets to capture. Capturing stops automatically when it reaches this number. When you enter 0, you can capture the packets using the USB memory device until you press [Stop].
Size	Enter how many bites to store for each packet. You can enter number from 64 to 1514 bites.

1. Press <Mode>, <\*>, <5>, <8>.
2. Press [Capture Settings].
3. Set up the detailed capture setting.

### 3.31.2 Capturing packet data from machine control panel

When you capture packets using USB memory device, a file named “tcpdump.cap” will be created on the root. If there already exists a file with the same file name, that file will be overwritten with the new data.

1. Connect a USB memory to the machine.
2. Press <Mode>, <\*>, <5>, <8>.
3. Press [Capture], and then [Yes].
4. To stop capturing, press [Stop] and then [Yes].

#### **CAUTION**

Disconnect the USB memory device after capturing has finished.

## 3.32 Storage maintenance

The storage on the Message Board is an SD card. The following operations are available with this function:

Storage Export : Export the machine data to a storage device.

Disable SD Storage : Permanently disables the SD card from being read to prevent data from being accessed when the unit is disposed.

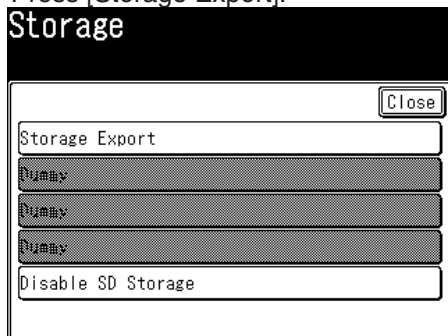

### 3.32.1 Storage export

#### Important

Use this feature in following cases:

- To replace the SD card from a standard card to an optional card
- When the SD card has become not-write-able.

1. Insert the new SD card to a card reader, and connect the card reader to the machine.
2. Press <Mode>, <\*>, <5>, <9>.
3. Press [Storage Export].

4. Press [Yes].

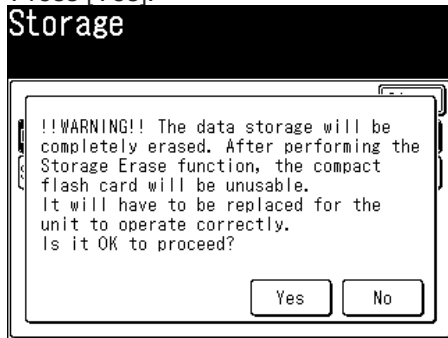

### 3.32.2 Erasing storage

#### CAUTION

When you perform this operation, the SD memory card cannot be recovered through “Resetting Storage” or any other operations.

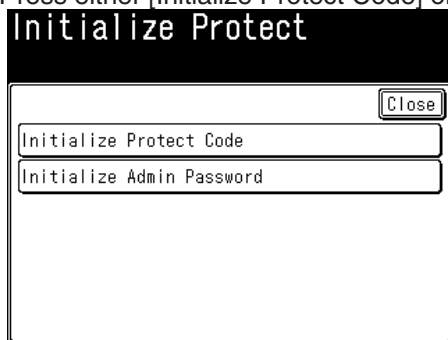

1. Press <Mode>, <\*>, <5>, <9>.
2. Press [Disable SD Storage].
3. Press [Yes].

### 3.33 Initialize protection

Use this function to initialize protect passcode and administrator's password.

1. Press <Mode>, <\*>, <6>, <1>.
2. Press either [Initialize Protect Code] or [Initialize Admin Password].

3. Press [Yes].

## 3.34 Color fine adjustment

Adjust the scan color. You can adjust RGB mode for front side of document, and make fine difference for back side of document.

1. Press <Mode>, <\*>, <6>, <2>.
2. Press either [Register / Change].  
When you press [Initialize] and then [Yes], all the parameters return to their default value.
3. Call up the desired parameter by pressing [Prev] or [Next] , or by pressing the numeric keys.
4. Select the desired parameter by pressing the box.
5. To navigate through the machine parameter settings:
  - The bits are ranged from 7 (left) to 0 (right).
  - Press [◀] or [▶] of the cursor key to move the cursor.
  - Press <0> or <1> on the numeric keys, or [▼] or [▲], to change the bit value.
  - Press [Enter] to save the setting of the displayed parameter and return to the machine parameter edit screen.
  - Press [Back] *not* to save the setting of the displayed parameter.
6. If you want to set other parameters, repeat step 3-5. Otherwise, proceed to step 7.
7. Press <Reset> to return the machine to ready screen.

Adjustment items	Step	Parameter number	Factory default (7654 3210)
R (Offsets) / Front side	R 0	000	0000 0000
	R +1	003	0000 0000
	R +2	002	0000 0000
	R +3	001	0000 0000
	R -1	004	0000 0000
	R -2	005	0000 0000
	R -3	006	0000 0000
	R all steps	009	0000 0000
G (Offsets) / Front side	G 0	010	0000 0000
	G +1	013	0000 0000
	G +2	012	0000 0000
	G +3	011	0000 0000
	G -1	014	0000 0000
	G -2	015	0000 0000
	G -3	016	0000 0000
	G all steps	019	0000 0000
B (Offsets) / Front side	B 0	020	0000 0000
	B +1	023	0000 0000
	B +2	022	0000 0000
	B +3	021	0000 0000
	B -1	024	0000 0000
	B -2	025	0000 0000
	B -3	026	0000 0000
	B all steps	029	0000 0000
R (Offsets) / Back side	R all steps	100	0000 1000
G (Offsets) / Back side	G all steps	101	0000 1000
B (Offsets) / Back side	B all steps	102	0000 1000

## 3.35 AS400 batch settings

All AS400 related settings will turn on using this function.

1. Press <Mode>, <\*>, <6>, <3>.
2. Select [ON], and press [Enter].

## 3.36 Certification terminal

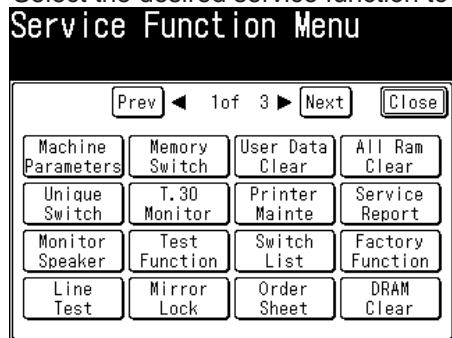

Enable this setting to use the certification terminal.

1. Press <Mode>, <\*>, <6>, <5>.
2. Select the terminal type, and press [Enter].

## 3.37 Service function menu

All the field service modes are available from the menu.

1. Press <Mode>, <\*>, <7>, <7>.
2. Select the desired service function to use.

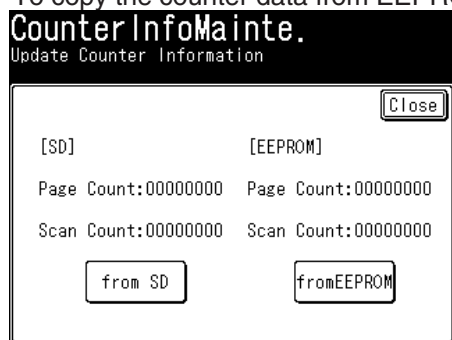

## 3.38 Counter information maintenance

The machine has the counter data saved on both the EEPROM and SD card with its serial number connected. If for some reasons these two serial numbers do not match, maintain the data manually.

### NOTE

The maintenance screen is normally displayed when the machine is turned on. Follow step 2. To maintain the data manually, start operation from step 1.

1. Press <Mode>, <\*>, <9>, <3>.
2. Check both counter data on EEPROM and SD card.  
To copy the counter data from SD card to EEPROM, press [from SD].  
To copy the counter data from EEPROM to SD card, press [from EEPROM].

3. Restart the machine when copying the data has finished.

## 3.39 RDS data copy

This mode enables you to import and export binary data including machine settings.

### Exporting RDS data

1. Connect a USB memory to the machine.
2. Press <Mode>, <\*>, <9>, <4>.
3. Press [USB Export].
4. Select the location of where to save the data, and press [Next].
5. Enter the file name, and press [Export].
6. When export is finished, press [OK] and disconnect the USB cable.

### Importing RDS data

1. Connect a USB memory to the machine.
2. Press <Mode>, <\*>, <9>, <4>.
3. Press [USB Import].
4. Brows the file you want to import, select it and press [Next].
5. Enter the file name, and press [Import].
6. When export is finished, press [OK]. The machine restarts from itself.

## 3.40 Asset number

This mode is used to input the asset number. You can also input the asset number from the web screen (see “Asset Number” on page 3-131).

1. Press <Mode>, <\*>, <9>, <5>.
2. Input asset number, and press [Enter].

Asset Number

0/ 13

Back Enter

Asset Number: \_

1 2 3 4 5 6 7 8 9 0

a b c d e f g h i j k l m n o p q r s t u v w x y z . ,

Upper Symbol Space ← Delete →

## 3.41 Quick Initial settings

At installation of this machine, you should set some parameters according to the following procedures. You can do the following setting with continuously.

1. Initial settings
2. Consumable order sheet settings

1. Press <Mode>, <\*>, <9>, <9>.

See following pages, how to set-up each mode:

Initial setting : See “Scanner and Fax Guide”.

Consumable order sheet : See “3.17.1 Set consumable order sheet” on page 3-94.

## 3.42 Update the firmware

There are three choices to update the ROM:

- Using the USB memory
- Using the Network (operating through control panel)
- Using the Network (operating through web browser). (See “3.42.4 Firmware Update” on page 3-128.)

In following cases, firmware cannot be updated. Check the machine in advance:

- The machine is in operation (scanning, printing, or sending fax etc.)
- The memory is in use by delayed transmission or for other reasons.

### CAUTION

Do not turn the power off while updating the firmware. Doing so may damage the main control board.

### 3.42.1 Updating the firmware using an USB memory

Update the machine firmware using an ROM data prepared in an USB memory. You can either update it automatically to the latest version : “Auto Update”, or to the desired version by selecting the ROM version manually : “Manual Update”.

#### Auto Update

To update the ROM automatically, create a “Boot” folder on the root directory of USB memory, then create a folder in it, and save the firmware in it.

- “xxxxxx” indicates the ROM version.

### NOTE

Save only one firmware in the folder. Auto Update is not available when two or more firmware are stored.

1. Press the power button on the control panel, and turn off the machine.
2. Connect the USB memory in which the firmware is stored.
3. Turn the machine on.  
Update starts automatically.
4. When the display shows “Firmware Updating OK”, turn the machine OFF and remove the USB memory.
5. Press [Machine Info] on My MFP Menu screen, and check the ROM version is updated.

## Manual update

Updating the ROM manually either by selecting the latest ROM version or by selecting the desired version. Two or more ROM data can be saved on an USB memory. Create a folder, and save the firmware in it.

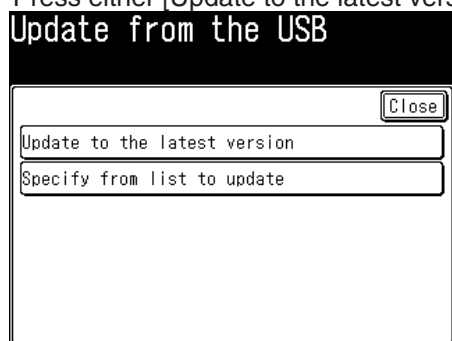

• “xxxxxx” indicates the ROM version.

1. Connect the USB memory in which the firmware is stored.
2. Press <Mode>, <\*>, <9>, <8>
3. Press [Update from the USB].

4. Press either [Update to the latest version] or [Specify with specified version].

5. When you have selected [Update to the latest version], go to step 8.  
When you have selected [Specify from list to update], press [File selection (Main):].
6. Select the ROM version to update, and press [Close].
7. Press [Update].
8. Press [Yes] and the updating starts.
9. When the display shows “Firmware Updating OK”, turn the machine OFF and remove the USB memory.
10. Press [Machine Info] on My MFP Menu screen, and check the ROM version is updated.

## NOTE

When you have selected [Update to the latest version] in step 5 while the machine is already the latest version, the display shows “Already up-to-date” and updating does not start.

### 3.42.2 Updating the firmware using the network

Update the machine firmware using an ROM data prepared on a network location.

Store the ROM data on a network location in advance. See how to name the folder in which you store the firmware on the former page.

#### Setup

Set up the following items to use this function. This step is required only for the first time when you use this function.

Protocol	Select the protocol from http, FTP, or SMB.
Path	Enter the path to the firmware.
Account	Enter the account to access the location where the firmware is stored.
Password	Enter the password to access the location where the firmware is stored.
Proxy Server	Enter the proxy server.
Proxy Port	Enter the proxy server port number.

1. Press <Mode>, <\*>, <9>, <8>.
2. Press [Update from the network].
3. Press [Specifying Server].
4. Enter the items as necessary.

#### Update

1. Press <Mode>, <\*>, <9>, <8>.
2. Press [Update from the network].
3. Press either [Update to the latest version] or [Specify with specified version].
4. When you have selected [Update to the latest version], and go to step 7.  
When you have selected [Specify from list to update], press [Main Unit Version:].
5. Enter the ROM version to update, and press [Enter].
6. Press [Update].
7. Press [Yes] and the updating starts.
8. When the display shows "Firmware Updating OK", turn the machine OFF and ON.

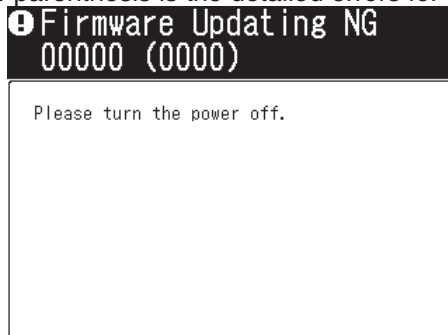

### 3.42.3 About error

If an error occurred during updating, a five-digit error code will be displayed.

Code	Cause / Countermeasure
11000	General error.
11020	Start error detected.
11030	Could not find the ROM file. Check the specified file.
11040	USB memory read error. Check the USB memory is working correctly.
11050	Network board read error. Check the network board is working correctly.
11060	File read error. Check that the ROM file are stored correctly.
11070	
11080	
11200	The machine is in use. Update when the machine and the memory are free.
11400	Could not find the ROM file. Check the specified file.
12030	Unable to update. Check the main control board is working correctly.

#### Start error (1020)

The detailed error code will be displayed when you press <Mode>, <\*>, <9>, <8>. The four-digit numbers in the parenthesis is the detailed errors for start error.

#### Third digit error code

Code	Cause / Countermeasure
0020	Fax is in use. (Reserved communications are existing.)
0080	Memory is in use.
00A0	Fax and memory are in use.

#### Last digit error code

Code	Cause / Countermeasure
0000	No information
0001	Machine is operating.
0002	Machine is printing.
0003	Machine is operating and printing.
0004	Machine is scanning.
0005	Machine is printing and scanning.
0006	Machine is operating and scanning.
0007	Machine is operating, printing, and scanning.
0008	Machine is communicating.
0009	Machine is operating and communicating.
000A	Machine is printing and communicating.
000B	Machine is operating, printing, and communicating.
000C	Machine is scanning and communicating.
000D	Machine is operating, scanning and communicating.
000E	Machine is printing, scanning and communicating.
000F	Machine is operating, printing, scanning and communicating.

**For example**

When the display shows 1020(008A), the update did not start because the memory is in use, and the machine was printing and communicating.

### 3.42.4 The indication while updating

While the firmware is being updated, you can be checked the status through LED lamps on the panel.

**Status**

Lighting LED		Status
1	<Login>	Initializing step
2	<Personal Mode>	ROM data acquisition step
3	<Job Confirm.>	Updating step

4 <Energy Save> flashes during above steps.

**Result**

Lighting LED		ROM type
5	Information lamp	Orange : Update failed

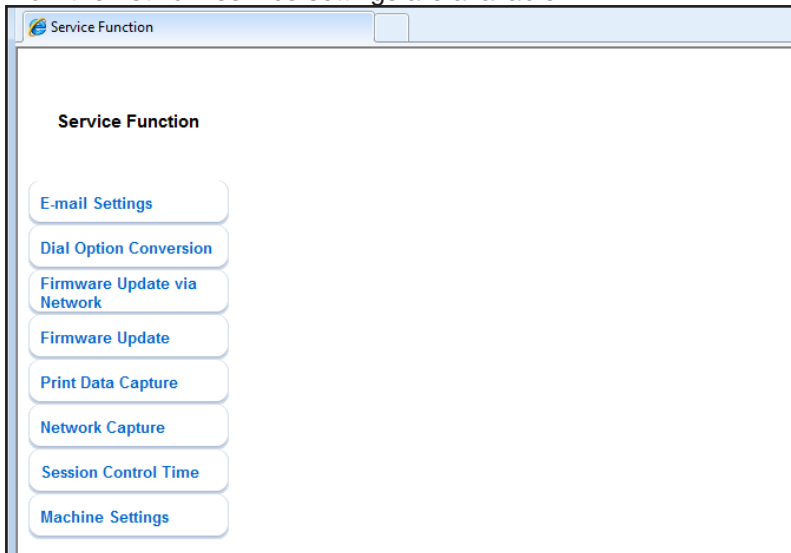

## 3.43 Network service functions

The following topics will be covered in this section:

- E-mail detail settings
- Dial option conversion settings
- Firmware Update via network
- Firmware Update
- Print Data Capture
- Network Capture
- Modifying the session control time
- Machine Settings

### To open the network service screen

1. Start the web browser on computer.
2. Type the machine's IP address in the URL address field followed by "/service".  
e.g. `http://192.168.1.10/service`
3. Enter login ID and password.  
ID : Administrator  
Password : 12345678
4. Now the network service settings are available.

### 3.43.1 E-mail detailed status

1. Open the network service screen. (See page 3-122.)
2. Click [E-mail Settings].
3. Set each item, and click [Save].

**Service Function**

E-mail Settings

### 3.43.2 Convert dialling characters in e-mail gateway functions

The following dialling characters will be converted to certain characters specified here:

- Pause (/P)
- Tone (/T)
- Flash (/F)

For example, when you enter "&A" for "/P" (pause) and specify a fax number like "123/P456", the number will be converted to "123&A456" and transmitted at e-mail gateway transmission.

1. Open the network service screen. (See page 3-122.)
2. Click [Dial Option Conversion].
3. Enter the characters to which the machine should convert the dialling character.

**Service Function**

- E-mail Settings
- Dial Option Conversion**
- Firmware Update via Network
- Firmware Update
- Print Data Capture
- Network Capture
- Session Control Time
- Machine Settings

**Dial Option Conversion**

Pause(/P)

Tone(/T)

Flash(/F)

4. Click [Save].

## NOTE

- The Flash character (/F) is not available for USA.
- Up to two characters are able to enter for each dialling character.
- For available characters, see table below.
- If the box is blank, the dialling characters will be overwritten when transmitting over the e-mail gateway.

	!	"	#	\$	%	&	'	(	)	*	+	,	-	.	/
0	1	2	3	4	5	6	7	8	9	:	;	<	=	>	?
@	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
P	Q	R	S	T	U	V	W	X	Y	Z	[	\	]	^	_
'	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o
p	q	r	s	t	u	v	w	x	y	z	{		}	~	

### 3.43.3 Firmware Update Via Network

To update the machine via network, set the items.

1. Open the network service screen. (See page 3-122.)
2. Click [Firmware Update via Network].
3. Enter the necessary information.
4. Click [Update] to start updating the machine.

**Service Function**

Save Initialize Update

**Firmware Update via Network**

Protocol ☒ HTTP ☐ FTP ☐ SMB

Path

Account

Password  ☐ Change Password

Proxy Server

Address

Port

Update Method ☒ Update to the latest version ☐ Update with specified version

Target of Update ☒ Machine

5. When updating has finished, the machine restarts automatically.  
Check the ROM version to see the update has succeeded. The ROM version is displayed at “Machine Status” on the Message Board.

### 3.43.4 Firmware Update

1. Open the network service screen. (See page 3-122.)
2. Click [Firmware Update].
3. Click [Browse] to browse the location where the firmware is located.

**Service Function**

Update

**Firmware Update**

Machine  Browse...

eg.

Machine: KM25e\_USA\_A0A0A0.bin

4. Click [Update].
5. When updating is finished, the machine restarts from itself.
6. Check the ROM version to see the update has succeeded. The ROM version is displayed at “Machine Status” on the Message Board.

### 3.43.5 Print data capture

User can capture and store print commands (PCL/GDI/PS/FAX) as a “.PRN File”. This feature supports concurrent processing to printing and capture print commands.

1. Open the network service screen. (See page 3-122.)
2. Click [Print Data Capture].
3. Enter the necessary information.

3-129

### 3.43.7 Modifying the session control time

Modify the session time between the machine and the Message Board users here. The factory default is 30 minutes.

When there is no communication between the machine and the Message Board user during this time, the user will forcibly be log out.

The time can be set between 10 to 1440 minutes (24 hours).

1. Open the network service screen. (See page 3-122.)
2. Click [Session Control time].
3. Input the desired value and click [Save].

### 3.43.8 Machine Settings

#### Asset Number

This mode is used to input the asset number. You can also input the asset number from the machine control panel. (See page 3-117.)

1. Open the network service screen. (See page 3-122.)
2. Click [Machine Settings].
3. Input the asset number to "Asset Number" box and click [Save].  
The asset number should be within 13 characters.

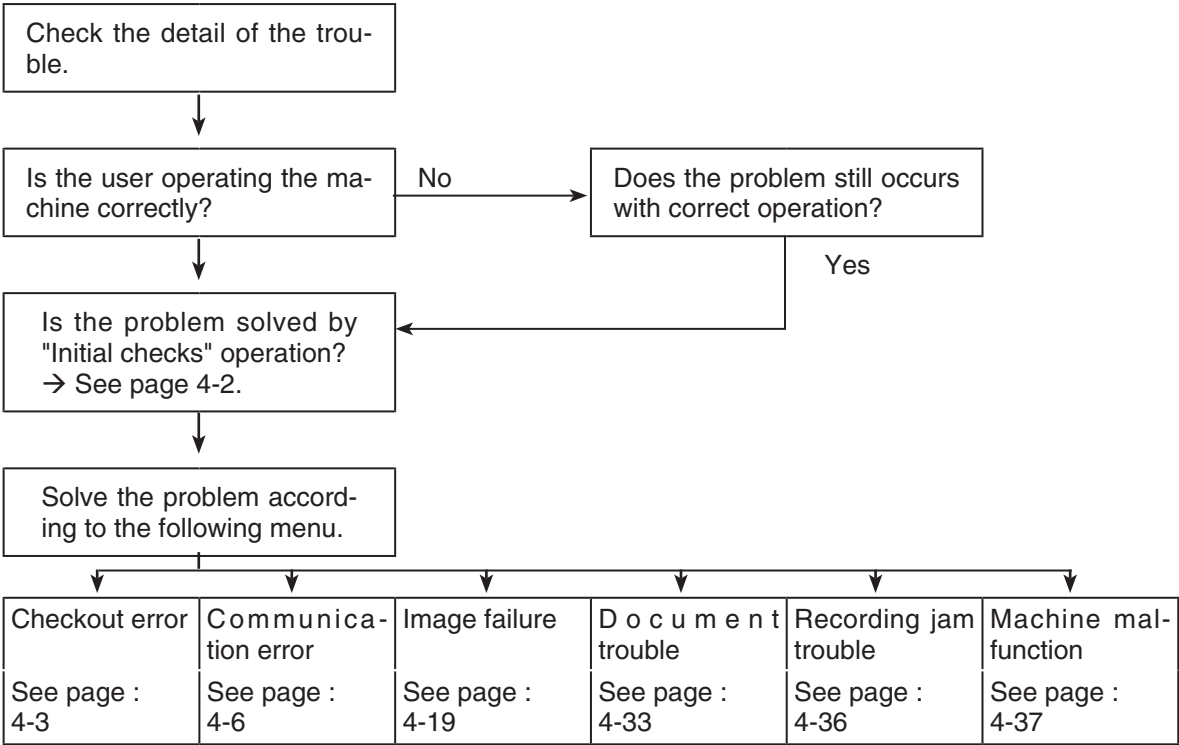

#### Guest User Name

This mode is used to edit the guest user name "GUEST".

1. Open the network service screen. (See page 3-122.)
2. Click [Machine Settings].
3. Input the new name for guest user to the "Guest User Name" box and click [Save].  
The asset number should be within 64 characters.

# 4 Troubleshooting procedures

## 4.1 Troubleshooting flow chart

## 4.2 Initial checks

Check all items:

Check items		Remedy
Machine	Is the power on?	Turn the power on.
	Are the covers closed correctly?	Close all covers correctly.
	Is the recording paper set?	Set the recording paper.
	Are the toner and drum set correctly?	Set the toner and drum correctly.
Toner	Is the recommended toner used?	Advise customers to use recommended toner otherwise image failure may occur easily.
Paper	Do customers use paper conform to the specification designed for use in the machine?	Advise customers to use suitable paper otherwise image failure or paper jam may occur easily.
	Does folded or wrinkled paper set in the paper cassette?	Reload new paper.
	Is the paper set correctly?	Refer the user's guide to set the paper correctly. If paper size dial adjustment or other operation such as paper size registration is needed, follow the instruction.
Paper path	Are the inner part such as fuser, transfer roller, or transfer guide dirty with paper waste or toner?	Clean the parts with paper cleaner or etc.
	Are all cassette parts working smoothly?	Replace the part not working smoothly.
	Are foreign objects on the paper path?	Remove the objects.
	Are the feed rollers worn out?	Replace the roller.
Scanning area / Document	Do customers use document conform to the specification designed for use in the machine?	Instruct customers to scan document on document glass when the document is not suitable for ADF. Using unsuitable document on ADF may cause document skew, separation problem or document jam easily.
	Are foreign objects on scanning path?	Remove the object.
	Is the scanner dirty?	Clean the scanner as dirty scanner may cause image failure.
	Are the separator roller and separator pad worn out?	Replace the roller or the pad
Communication	Is the machine connected to a line jack with a line cable?	Reconnect it.
	Are there advanced fax functions such as closed transmission or block junk fax set?	In some functions, free communication is not possible.
Printer environment	Is the machine connected to a network hub (or printer) with LAN cable (or USB cable)?	Reconnect it.
	Is the print driver or TWAIN driver installed correctly?	Reinstall the driver following the user's guide.
	If the machine is on network, is the network setting correct?	Refer to the user's guide and set up the network setting.
Others	When the machine is turned on in a warm place while the machine is cool (in winter, especially at machine installation), condensation occurs inside the printer that causes various problem. Trouble examples: <ul style="list-style-type: none"> <li>• Low image density or uneven density due to recording part condensation.</li> <li>• Image trouble due to toner moisture absorption</li> <li>• Blur image due to condensation on drum surface.</li> <li>• Paper discharge problem due to condensation in paper supply path.</li> </ul>	Wipe the parts with dry soft cloths, or wait for ten to twenty minutes after power on. Instruct customers to open toner or drum bag after it becomes to room temperature.

## 4.3 Checkout error

### 4.3.1 Checking the error message

When “Checkout error” message is displayed, follow the steps below to check the service call number.

1. Press <Mode>, <\*>, <0>, <6>.
2. Press [Service Call].
3. Check the service error code on the display.

Details code for the errors are displayed in parentheses.

### 4.3.2 Error code list

Code	Error Message
04:	RX motor 2 error
08:	RX motor 1 error
0B:	Fan error
0D:	Temperature / humidity sensor error
18:	Fuser error
51:	EEPROM error (Drum cartridge)
52:	EEPROM error (Toner cartridge)
53:	TP motor error
A0:	Printer device error
A1:	Print head connection error

## 4.3.2 Troubleshooting

### 04: RX motor 2 error

#### 08: RX motor error

Causes:

The machine has detected motor-lock signal while the motor is driving.

Suggested corrective action:

1. Check the connection of harness between the motor and main control board.
2. Replace the motor.
3. Replace the main control board.
4. Replace the harness between the motor and main control board.

### 0B: Fan Error

**Detail code:**

1: Fan 1 error (Fan for fuser; located on the back side of machine)

2: Fan 2 error (Fan for exhausting ozone; located on the left side of machine)

Causes:

The machine has detected fan error signal while the fan is driving.

Suggested corrective action:

1. Check the connection of harness between the fan and main control board.
2. Replace the motor.
3. Replace the main control board.
4. Replace the harness between the fan and main control board.

### 0D: Temperature / humidity sensor error

Causes:

The sensor showed an abnormal value.

Suggested corrective action:

1. Check the connection of the thermistor.
2. Replace the thermistor.

### 18: Fuser Error

**Detail code:**

1: Fuser started warming up but could not reach the warm-up starting temperature within specified time

2: Fuser could not reach the warm-up completion temperature within specified time

3: Printing started but could not reach the print motor driving temperature within specified time

4: Printing started but could not reach the paper feeding temperature within specified time

6: Printing started but could not reach the printing temperature within specified time

8: The fuser temperature does not rise when the heater is turned on

9: Fuser thermistor showed an abnormally high value

10: Fuser thermistor showed an abnormally low value

11: The fuser temperature does not drop after warming-up or printing has finished and a specified time has passed

Suggested corrective action:

1. Check the connection between the fuser and main control board.
2. Replace the fuser.
3. Replace the main control board.
4. Replace the power supply unit.

## **51: EEPROM error (Drum cartridge)**

### **Causes:**

The machine could not write or read the EEPROM of drum cartridge.

### **Suggested corrective action:**

1. Pull out the drum cartridge and check that springs touching the EEPROM of drum cartridge is not deformed.
2. Take the drum cartridge out the machine, and then restore it.
3. Check the connection between PCB TAG toner and the main control board.
4. Replace the drum cartridge.
5. Replace the main control board.

## **52: EEPROM error (Toner cartridge)**

### **Causes:**

The machine could not write or read the EEPROM of toner cartridge.

### **Suggested corrective action:**

1. Pull out the toner cartridge and check that springs touching the EEPROM of toner cartridge is not deformed.
2. Take the toner cartridge out the machine, and then restore it.
3. Check the connection between PCB TAG toner and the main control board.
4. Replace the toner cartridge.
5. Replace the main control board.
6. Replace the TP Assy.

## **53: TP motor error**

### **Causes:**

Toner is not supplied when TP motor is driving.

### **Suggested corrective action:**

1. Turn the power off and leave the machine for about ten minutes.
2. Shake the toner cartridge.
3. Check the connection between TP Assy and the main control board.
4. Replace the toner cartridge.
5. Replace the TP Assy.
6. Replace the main control board.

## **A0: Printer device error**

### **Causes:**

Printer register FPGA.

### **Suggested corrective action:**

1. Turn the power off and on.
2. Replace the main control board.

## **A1: Print head connection error**

### **Detail code:**

- 1: No LED-print head connection while machine returns from power saving mode
- 2: No LED-print head connection while machine starts a print job

### **Suggested corrective action:**

1. Turn the power off and on.
2. Check the connection between the LED-print head and main control board.

## 4.4 Communication trouble

### 4.4.1 Fax communication error

Deatail error code are printed on T.30 monitor.

Phase	Error code	Detail Error code	Description	Journal	Redial	Message	Note
Tx Phase A	D.0.1	0001	Local busy detection.	No	Yes	The sending was stopped. Please try again.	
	D.0.2	0002	Busy Tone detected			The line was busy. Please try again.	
	D.0.3	0003	Canceled transmission while dialing		No	Fax job was cancelled by user.	Occurs at broadcast with TCR.
	D.0.7	0007	Receiver does not answer		Yes	Check condition of remote fax.	
	D.0.8	0008	Can not detect dial tone			No dial tone detection. Check line connection.	
Tx Phase B	T.1.1	1011	T1 time-out error	Yes	Only when one or more pages are received	Confirm the remote fax.	
	T.2.1	1021	Can not detect CFR or FTT		No	Confirm the remote fax.	
	T.2.2	1022	Compatibility error			Confirm the remote fax.	
		1100	Password transmission failed			ID check Tx error. ID was not matched.	
		1101	Cannot obtain password at password transmission from receiving party			ID check Tx error. No fax number stored in remote fax.	
		1102	The obtained password from receiver at password transmission is blank				
		1103	The receiver is a product of other maker at closed communication			Close Tx error. Remote fax is not compatible.	
		1104	The receiver has no pass code field at closed transmission			Close Tx error. No pass -code stored in remote fax.	
		1105	The pass code did not match at closed transmission			Close Tx error. Passcode unmatched.	
		1109	Cannot adjust communication data rate			Confirm the remote fax.	Normally, this error does not occur.
		110A	Cannot adjust the communication mode (Normal, fine, super fine)				
		110B	Cannot receive standard frame			Confirm the remote fax.	
		110C	DIS T4 bit did not turn ON			Confirm the remote fax.	
		110D	DIS or DTC that FIF is 00 00 00 has been received. DTS requires hang up. German models only.				Normally, this error does not occur.

Phase	Error code	Detail Error code	Description	Journal	Redial	Message	Note
Tx Phase B	T.2.2	110E	The receiver has no box with matching sub-address	Yes	No	F-Code Tx Error. No F-Code information in the remote machine.	This error occurs at manual reception.
		1115	Cannot fast remote diagnose	Yes	No	No High-speed RDS. Cannot send a data.	
		1116	Trouble report was sent, but the receiver was not a diagnose host			Cannot send a trouble report. Remote machine is not RDS host.	
	T.2.3	1023	FTT returned at 2400 bps			Cannot receive with minimum speed.	
Tx Phase C	T.3.1	1031	Document feeding error Document length was over 1m Lamp error Scanner cover open error	Yes	No	Scanning error. Please send again.	
Tx Phase D	T.4.1	1041	Cannot receive MCF/RTN/RTP/ PIP/PIN	Yes	Only at memory Tx	Confirm the remote fax.	
	T.4.2	1042	RTN was received		No	The remote machine could not receive document.	
	T.5.1	1051	No response to RR		No	Confirm the remote fax.	
	T.5.2	1052	No response to CTC		No		
	T.5.3	1053	EOR output			Cannot receive with minimum speed.	
Tx V34 start up	T.8.1	1081	V8 process did not finished normally	Yes	No	Cannot send a fax in SuperG3 mode.	
		1800	Primary channel instruction did not match at V8 mode				
		1801	Primary channel instruction did not match at V8 mode (TX FAX)				
		1802	Primary channel instruction did not match at V8 mode (RX FAX)				
		1803	Cannot adjust modulation				
	T.8.10	108A	Cannot finish line probing normally	No	Yes		
	T.8.11	108B	Cannot finish equalizer training normally				
Transmission canceled	T.1.4	1014	Operator canceled the transmission	Yes	No	Fax job was cancelled by user.	

Phase	Error code	Detail Error code	Description	Journal	Redial	Message	Note
Rx Phase B	R.1.1	2011	T1 time-out error	No, if no page is received at auto reception	No	Confirm the remote fax.	Occurs at manual reception.
	R.1.2	2012	Compatibility error	Yes	No	Confirm the remote fax.	
		2100	The receiver is a product of other maker at closed communication			Closed Tx Err. Remote fax is not compatible.	
		2101	No pass code received at closed communication			Close Rx error. No passcode stored in remote fax.	
		2102	The receiver has no pass code field at closed communication			Close Rx error. Passcode unmatched.	
		2107	Cannot adjust communication data rate			Confirm the remote fax.	Normally, this error does not occur.
		2108	Cannot adjust communication code (MH, MR, MMR)				
		2109	Cannot adjust communication code (Normal, fine, super fine)				
		210A	Cannot adjust ECM mode				
		210B	Cannot adjust document width				
		210C	Cannot adjust minimum communication time				
		210D	Cannot adjust document length				
		210E	Cannot receive standard frame			Confirm the remote fax.	
		210F	Out-of -paper reception buffer error			Out of paper reception is full.	
		2118	Reception rejected while printing documents				
		2119	Cannot delete document for overwrite at overwrite mode			Machine error.	Normally, this error does not occur.
		211A	Cannot update Flash ROM through communication			Reception was stopped.	
		211B	Cannot fast remote diagnose			No High-speed RDS. Cannot receive data.	
	R.2.3	2023	No answer to FTT	Yes	No	Confirm the remote fax.	
Rx Phase C	R.3.1	2031	No answer to CFR DCN received			Confirm the remote fax.	
	R.3.3	2033	Hang up Continuous error line detected			Reception was stopped.	
	R.3.4	2034	DCN received to TT			Cannot receive with minimum speed.	
	R.3.6	2036	FRTN output			Some pages are not received correctly.	
	R.4.4	2044	Memory overflow			Memory over.	
	R.4.1	2041	Too long document received			Received doc. is not able to receive.	Document over 3m

Phase	Error code	Detail Error code	Description	Journal	Redial	Message	Note
Rx Phase D	R.4.2	2042	Cannot receive MPS/EOM/EOP	Yes	No	Confirm the remote fax.	
	R.5.1	2051	Cannot receive RR DNC received				
	R.5.2	2052	Error occurred while ECM data mode				
Rx V34 start up	R.8.1	2081	V8 process did not finished normally	Yes	No	Cannot send a fax in SuperG3 mode.	
		2800	Primary channel instruction did not match at V8 mode				
		2801	Primary channel instruction did not match at V8 mode (TX FAX)				
		2802	Primary channel instruction did not match at V8 mode (RX FAX)				
		2803	Cannot adjust modulation				
	R.8.10	208A	Cannot finish line probing normally	No	Yes at polling reception		
	R.8.11	208B	Cannot finish equalizer training normally		Yes at polling reception		

## 4.4.2 Network communication error

### Scan to e-mail transmission results

Error code	Display	Message	Description	Countermeasure
995	Transmission error	Not able to transmit. Mail server is not found.	DNS server name resolution failed.	Check the DNS setting.
988		Not able to transmit. Please confirm setting.	Authentication method in SMTP is different.	Check the SMTP/POP setting is correct.
987			User authentication failed.	
990			MAIL command in SMTP failed.	
997			Mail setting is not correct.	
989		Not able to transmit. Please confirm e-mail address.	RCPT command in SMTP failed.	Check the e-mail address set as destination is correct.
993		Not able to transmit. Please transmit a message once again.	Socket error.	Try transmission again.
992			Response time out error.	Check the network connections.
991			SMTP command failed.	
999			Memory error.	
996			Transmission job parameter error.	
986			File generating error.	
984			Code converter error.	
985			File not existing.	
980			Unknown error.	
994		Not a reply from e-mail server.	Connection error.	
1002	Transmission canceled	Not able to transmit. Stopped.	Stop error.	—

## Internet FAX reception result

Error code	Description	Countermeasure
2	The MFP is not compatible with the e-mail attached image.	Ask the sender to send an internet fax in a compatible file format.
3	The MFP refused to forward the received e-mail.	<ul style="list-style-type: none"> <li>•To respond to the forward request, set "Response to Fax Forwarding Request" in E-mail Settings &gt; Optional E-mail Settings.</li> <li>•Check "E-mail address or domain name that will accept forwarded transmission" at "Response to Fax Forwarding Request" in E-mail Settings &gt; Optional E-mail Settings.</li> </ul>
4	Cannot access to POP3 server.	Check that POP3 Server Address, POP3 Port Number, SSL, and POP3S Port Number is set correctly in E-mail Settings > SMTP/POP Settings.
5	No response from POP3 server.	Check the DNS server address in TCP/IP setting. Check the following items are set correct in E-mail Settings > SMTP/POP Settings: POP3 server address, POP 3 port number, SSL usage, and POP 3 S port number.
6	POP3 server authentication failed.	Check the following items are set correct in E-mail Settings > SMTP/POP Settings: Authentication method, POP3 user name, and POP 3 user password.

## Result of the reception error

Code	Display and history	Description
1	(No message)	The mail was received, and processed successfully.
2	Fax forwarding	FAX forwarded.
4	Error E-mail (MDN)	An error occurred, and replied to the MDN.
5	Error E-mail (Forwarding)	An error occurred, and e-mail is forwarded.
6	Error E-mail (Reply)	An error occurred, and an e-mail is replied
7	Error E-mail (Notice)	An error occurred, and an notification is sent.
8	Error E-mail (Size over)	An error occurred, and oversize notification is sent.
9	Erase	The e-mail was deleted.

## Scan to folder, Scan to Printer, and DocIndex transmission result

Error Code	Description	Check message	Countermeasure	NTSTATUS values	Details
10002	<Stop> was pressed during scanning with non-batch scan function	—	Wait for a while, and try to send again	—	
9999	System error	System error occurred	Wait for a while, and try to send again		
1001	Connection error	Not able to be connect	<ul style="list-style-type: none"> <li>• Check that host name on the network.</li> <li>• Check DNS server address, DNS suffix, and WINS server address are set correct at "TCP/IP settings".</li> <li>• Check that the destination computer name is registered on DNS server.</li> <li>• Check that the destination computer registers WINS setting correctly.</li> </ul>	STATUS_NOT_IMPLEMENTED 0xC0000002 STATUS_INVALID_DEVICE_REQUEST 0xC0000010 STATUS_ILLEGAL_FUNCTION 0xC00000AF	Invalid function. The server did not recognize or could not perform a system call generated by the server, e.g. set the DIRECTORY attribute on a data file, invalid seek mode.
1003				STATUS_OBJECT_PATH_INVALID 0xC0000039 STATUS_OBJECT_PATH_NOT_FOUND 0xC000003A STATUS_OBJECT_PATH_SYNTAX_BAD 0xC000003B STATUS_DFS_EXIT_PATH_FOUND 0xC000009B STATUS_REDIRTOR_NOT_STARTED 0xC00000FB STATUS_BAD_NETWORK_PATH 0xC00000BE	Directory invalid. A directory component in a path name could not be found.
1008				STATUS_SECTION_TOO_BIG 0xC0000040 STATUS_TOO_MANY_PAGING_FILES 0xC0000097 STATUS_INSUFF_SERVER_RESOURCES 0xC0000205 STATUS_NO_MEMORY 0xC0000017	Insufficient server memory to perform the requested function
1013				STATUS_DATA_ERROR 0xC000009C	Invalid data (generated only by IOCTL calls within the server)
1016				STATUS_DIRECTORY_NOT_EMPTY 0xC0000101	A Delete Directory request attempted remove the server's current directory
1017				STATUS_NOT_SAME_DEVICE 0xC00000D4	Not the same device (e.g. a cross volume rename was attempted)
1032				STATUS_SHARING_VIOLATION 0xC0000043	The sharing mode specified for Open conflicts with existing FIDs on the file.

Error Code	Description	Check message	Countermeasure	NTSTATUS values	Details
1033	Connection error	Not able to be connect	<ul style="list-style-type: none"> <li>• Check that host name on the network.</li> <li>• Check DNS server address, DNS suffix, and WINS server address are set correct at "TCP/IP settings".</li> <li>• Check that the destination computer name is registered on DNS server.</li> <li>• Check that the destination computer registers WINS setting correctly.</li> </ul>	STATUS_FILE_LOCK_CONFLICT 0xC0000054	A Lock request conflicted with an existing lock or specified an invalid mode, or an Unlock requested attempted to remove a lock held by another process.

3026				STATUS_DISK_CORRUPT_ERROR 0xC0000032 STATUS_DISK_CORRUPT_ERROR 0xc000009e	Unknown media type
3027				STATUS_NONEXISTENT_SECTOR 0xC0000015	Sector not found
3031				STATUS_FILE_INVALID 0xc0000098	General failure
3034				STATUS_WRONG_VOLUME 0xC0000012	The wrong disk was found in a drive
3039				STATUS_DISK_FULL 0xC000007F	The disk is full

Error Code	Description	Check message	Countermeasure	NTSTATUS values	Details
1005	Login error	Not able to log in.	<ul style="list-style-type: none"> <li>• Check that the entered user name and password are correct.</li> <li>• Check that the entered user name and password have authority to write.</li> </ul>	STATUS_ACCESS_DENIED 0xC0000022 STATUS_INVALID_LOCK_SEQUENCE 0xC000001E STATUS_INVALID_VIEW_SIZE 0xC000001F STATUS_ALREADY_COMMITTED 0xC0000021 STATUS_PORT_CONNECTION_REFUSED 0xC0000041 STATUS_THREAD_IS_TERMINATING 0xC000004B STATUS_DELETE_PENDING 0xC0000056 STATUS_PRIVILEGE_NOT_HELD 0xC0000061 STATUS_LOGON_FAILURE 0xC000006D STATUS_FILE_IS_A_DIRECTORY 0xC00000BA STATUS_FILE_RENAMED 0xC00000D5 STATUS_PROCESS_IS_TERMINATING 0xC000010A STATUS_CANNOT_DELETE 0xC0000121 STATUS_FILE_DELETED 0xC0000123 STATUS_LOGON_TYPE_NOT_GRANTED 0xC000015B	Access denied, the client's context does not permit the requested function. This includes the following conditions: invalid rename command, write to Fid open for read only, read on Fid open for write only, attempt to delete a non-empty directory.
1012				STATUS_OS2_INVALID_ACCESS 0x000C0001 STATUS_ACCESS_DENIED 0xC00000CA STATUS_DEVICE_DATA_ERROR 0xC000009C STATUS_ACCOUNT_DISABLED 0xC0000072 STATUS_ACCOUNT_EXPIRED 0xC0000193	Invalid open mode
2002				STATUS_WRONG_PASSWORD 0xC000006A	Invalid password - name/password pair in a Tree Connect or Session Setup is invalid.

Error Code	Description	Check message	Countermeasure	NTSTATUS values	Details
2004	Login error	Not able to log in.	<ul style="list-style-type: none"> <li>• Check that the entered user name and password are correct.</li> <li>• Check that the entered user name and password have authority to write.</li> </ul>	—	The client does not have the necessary access rights within the specified context for the requested function.
2006				STATUS_BAD_NETWORK_NAME 0xC00000CC	Invalid network name in tree connect
2007				STATUS_BAD_DEVICE_TYPE 0xC00000CB	Invalid device - printer request made to non-printer connection or non-printer request made to printer connection.
2049				STATUS_PRINT_QUEUE_FULL 0xC00000C6	Print queue full (files) -- returned by open print file
2050				STATUS_NO_SPOOL_SPACE 0xC00000C7 STATUS_PRINT_CANCELLED 0xC00000C8 STATUS_ADDRESS_ALREADY_EXISTS 0xC000020a	Print queue full -- no space
2051				—	EOF on print queue dump
2052				STATUS_PRINT_CANCELLED 0xC00000C8	The server encountered an internal error, e.g. system file unavailable.
2065				STATUS_UNEXPECTED_NETWORK_ERROR 0xC00000C4	The server encountered an internal error, e.g. system file unavailable.
2067				—	The FID and path name parameters contained an invalid combination of values.
2069				STATUS_NETWORK_ACCESS_DENIED 0xC00000C4	The access permissions specified for a file or directory are not a valid combination. The server cannot set the requested attribute.
2088				STATUS_IO_TIMEOUT 0xC00000B5	Operation timed out
2089				STATUS_REQUEST_NOT_ACCEPTED 0xC00000D0	No resources currently available for request
2090				STATUS_TOO_MANY_SESSIONS 0xC00000CE	Too many UIDs active on this session
1018	Cannot find the file in the shared folder	Not a file to a shared folder.	Check that the file is in the folder.	STATUS_NO_MORE_FILES 0x80000006	A File Search command can find no more files matching the specified criteria.

## Scan to FTP server and DocIndex transmission result

Error Code	Description	Check message	Detail	Countermeasure	Description
10002					
9999	System error	System error occurred.	An error occurred because there was a temporary system memory shortage.	Retry later.	
9000					
17	Connection error	Not able to be connected	Name resolution failed	<ul style="list-style-type: none"> <li>•Check DNS server address is set correct at "TCP/IP settings".</li> <li>•Check that the destination FTP server name is registered on DNS server.</li> </ul>	Invalid service call
33					Invalid IP address
56					TCP access error
210					Network error
211					No connection to FTP server
212					Connected to FTP server
213					Cannot open by FTP client
214					Open by FTP client
219					Received replay other than 22x from server
10	File read and write error	Not come by the file reading and writing.	Cannot send a file when the destination FTP server is write protected.	Check that the destination FTP server is not write protected.	Open type invalid
217					Replay including 1xx from server
218					Replay including 2xx from server
221					Replay including 3xx from server
7	Login error	Not able to log in.	Cannot login with the entered user name and password.	Check that the entered user name and password are correct.	Pointer of invalid FTP, user name or password
220					Replay including 23x from server
222					Replay including 33x from server

## 4.5 Image quality problems

Go through the following steps to solve the problem:

1. Check the machine parameters for image quality adjustments and see if the problems solves.
2. Adjust the background level and see if the problem solves. (See “3.12.5 Set background level” on page 3-85.) Clean the document glass and document pad in advance.
3. Determine if the failure is attributable to the input system (scanner section) or the output system (printer section):

1. Make copy full size copy of a document

2. Make a reduction copy of the document.

4.5.1 Typical fault images

1. Blank image

2. Black image

3. Low image density / rough image

4. Dark image density

5. Blank lines/ Blank spots

6. Void areas

7. Black lines

8. Black spots

9. Smear on back

10. Uneven image density

11. Periodically uneven image

12. Gradation reproduction failure

## 4.5.2 Blank image

### Scanner section

Section	Step	Check items	Result	Remedy
Scanner section	1	Is the scanner drive transmission mechanism in good condition?	No	Check and replace as necessary.
	2	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	3	Is the trouble settled with above steps?	No	1. Replace CIS. 2. Replace main control board.

### Printer section

Section	Step	Check items	Result	Remedy
Drum cartridge	1	Is the drum cartridge driven properly?	No	Correct / Replace drive coupling mechanism of drum cartridge and machine. Replace the drum cartridge.
	2	Are the developing bias, supply bias and blade bias contact terminal dirty or deformed?	Yes	Clean / Repair
	3	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Circuit boards	4	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
Transfer section	5	Is the transfer bias contact terminal dirty or deformed?	Yes	Clean / Replace
	6	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace LED print head. 3. Replace main control board. 4. Replace high-voltage power board. 5. Replace transfer roller unit.

### 4.5.3 Black image

#### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Does lamp turn ON when making copy with open platen cover?	Yes	Check step 4 and onward
			No	Reconnect / Replace harness
	2	Do step 1 again. Does the voltage level of pin1-3 of P8A on the main control panel change to +3.3V?	No	Replace main control board.
	3	Is the CIS installed properly?	No	Install it properly
	4	Is the CIS lens dirty?	Yes	Clean, or replace the part and adjust the background level
	5	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

#### Printer section

Section	Step	Check item	Result	Remedy
Drum cartridge	1	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Circuit boards	2	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	3	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace LED print head. 3. Replace main control board. 4. Replace high-voltage power board.

## 4.5.4 Low image density / rough image

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	2	Are the document glass, document pad and ADF glass dirty?	Yes	Clean
	3	Is the CIS lens dirty?	Yes	Clean, or replace the part and adjust the background level
	4	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
Paper	1	Is the paper damp?	Yes	Replace the paper.
LED print head	2	Is the lens dirty?	Yes	Clean
Drum cartridge	3	Are the developing bias, supply bias and blade bias contact terminal dirty or deformed?	Yes	Clean / Repair
	4	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Transfer section	5	Is the transfer bias contact terminal dirty or deformed?	Yes	Clean / Replace
	6	Is the transfer roller gap dirty?	Yes	Clean / Replace
Circuit boards	7	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
Toner sensor error	8	Is the toner sensor working? (Use "3.20 Sensor input test" on page 3-98 and check that the sensor is working.)	No	Reconnect / Replace sensor
	9	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace LED print head. 3. Replace main control board. 4. Replace high-voltage power board. 5. Replace transfer roller unit.

## 4.5.5 Dark image density

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Are the ADF glass and document glass dirty?	Yes	Clean
	2	Are the CIS (lens and lamp) and document glass dirty?	Yes	Clean
	3	Is the CIS installed properly?	No	Install it properly
	4	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	5	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
Drum cartridge	1	Are the developing bias, supply bias and blade bias contact terminal dirty or deformed?	Yes	Clean / Repair
	2	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Circuit boards	3	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	4	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace LED print head. 3. Replace main control board. 4. Replace high-voltage power board.

## 4.5.6 Blank lines

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Are the document glass and document pad dirty?	Yes	Clean
	2	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	3	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
LED print head	1	Is the lens dirty?	Yes	Clean
Drum cartridge	2	Are the separation scrapers dirty or damaged?	Yes	Clean / Replace
Fuser unit	3	Are the fusing rollers or separate blade dirty or damaged?	Yes	Replace fuser unit
Circuit boards	4	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
Transfer section	5	Is the transfer roller dented or damaged?	Yes	Replace
Discharge plate	6	Is the discharge plate deformed?	Yes	Replace
	7	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace LED print head. 4. Replace main control board. 5. Replace high-voltage power board.

## 4.5.7 Void areas

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Is the document glass dirty?	Yes	Clean
	2	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	3	Is the trouble settled with above steps?	No	1. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
Paper	1	Is the paper damp?	Yes	Replace the paper.
LED print head	2	Is the lens dirty?	Yes	Clean
Drum cartridge	3	Are the separation scrapers dirty or damaged?	Yes	Clean / Replace
Fuser unit	4	Are the fusing rollers or separation scraper dirty or damaged?	Yes	Clean / Replace
Circuit boards	5	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
Transfer section	6	Is the transfer roller dented or damaged?	Yes	Replace
	7	Is the transfer roller gap dirty?	Yes	Clean / Replace
Discharge plate	8	Is the discharge plate deformed?	Yes	Replace
	9	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace LED print head. 4. Replace main control board. 5. Replace high-voltage power board.

## 4.5.8 Black lines

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Are the CIS (lens and lamp) and document glass dirty?	Yes	Clean
	2	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	3	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
LED print head	1	Is the lens dirty?	Yes	Clean
Paper path	2	Is paper path dirty with toner?	YES	Clean
Drum cartridge	3	Is the multi-stylus electrode dirty?	Yes	Clean
	4	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
	5	Is the OPC drum dirty or damaged?	Yes	Replace OPC drum
Fuser unit	6	Are the fusing rollers or separation scraper dirty or damaged?	Yes	Clean / Replace
Circuit boards	7	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	8	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace LED print head. 4. Replace main control board. 5. Replace high-voltage power board.

## 4.5.9 Black spots

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Is the document glass dirty?	Yes	Clean
	2	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	3	Is the trouble settled with above steps?	No	1. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
Paper path	1	Is paper path dirty with toner?	YES	Clean
Drum cartridge	2	Is the OPC drum dirty or damaged?	Yes	Replace OPC drum
	3	Is there any cleaning trouble?	Yes	Replace drum cartridge
Fuser unit	4	Are the fusing rollers or separation scraper dirty or damaged?	Yes	Clean / Replace
Circuit boards	5	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	6	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace LED print head. 4. Replace main control board. 5. Replace high-voltage power board.

## 4.5.10 Smear on back

### Printer section

Section	Step	Check item	Result	Remedy
Paper path	1	Is paper path dirty with toner?	YES	Clean
Fuser unit	2	Are the fusing rollers or separation scraper dirty or damaged?	Yes	Clean / Replace
Transfer section	3	Is the transfer roller dented or damaged?	Yes	Replace
Circuit boards	4	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	5	Is the trouble settled with above steps?	NO	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace high-voltage power board. 4. Replace main control board.

## 4.5.11 Uneven image density

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Are the ADF glass and document glass dirty?	Yes	Clean
	2	Is the shading-sheet located under the size cover dirty?	Yes	Clean or replace CIS, and adjust the background level
	3	Is the CIS (lens and lamp) dirty or deteriorated?	Yes	Clean or replace CIS, and adjust the background level
	4	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	5	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

### Printer section

Section	Step	Check item	Result	Remedy
Drum cartridge	1	Is the drum cartridge driven properly?	No	Correct / Replace drive coupling mechanism of drum cartridge and machine. Replace the drum cartridge.
	2	Is the OPC drum dirty or damaged?	Yes	Replace OPC drum
	3	Are the developing bias, supply bias and blade bias contact terminal dirty or deformed?	Yes	Clean / Repair
	4	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Fuser unit	5	Are the fusing rollers or separation scraper dirty or damaged?	Yes	Clean / Replace
Transfer section	6	Is the transfer bias contact terminal dirty or deformed?	Yes	Clean / Repair
	7	Is the transfer roller dented or damaged?	Yes	Replace
Discharge plate	8	Is the discharge plate deformed?	Yes	Replace
Circuit boards	9	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	10	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace LED print head. 4. Replace main control board. 5. Replace high-voltage power board. 6. Replace transfer roller unit.

## 4.5.12 Periodically uneven image

### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Is the FBS motor drive gear cracked or dirty with foreign object?	Yes	Clean / Replace
	2	Is the scanner motor secured properly?	No	Secure properly
	3	Is the CIS secured properly?	No	Secure properly
	4	Are the CIS belt attached loosely?	Yes	Adjust the belt tension. Reattach the motor bracket assy.
	5	Are the scanner rails damaged or dirty with foreign object?	Yes	Clean / Replace

### Printer section

Section	Step	Check item	Result	Remedy
Drum cartridge	1	Is the drum cartridge driven properly?	No	Check and replace drive coupling mechanism Replace the drum cartridge.
Transfer section	2	Is the transfer roller driven properly?	No	Check and replace drive gearing mechanism
	3	Is the transfer roller gap dirty?	Yes	Clean / Replace
Paper path	4	Is the resist roller driven properly?	No	Check and replace drive coupling mechanism
Fuser unit	5	Is the fuser unit driven properly?	No	Check and replace drive gearing mechanism
	6	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace fuser unit. 3. Replace transfer roller unit.

### 4.5.13 Gradation reproduction failure

#### Scanner section

Section	Step	Check item	Result	Remedy
Scanner section	1	Is the shading-sheet located under the size cover dirty?	Yes	Clean or replace CIS, and adjust the background level
	2	Are the ADF glass and document glass dirty?	Yes	Clean
	3	Do the connection from CIS to main control board remain intact?	No	Reconnect / Replace harness.
	4	Is the trouble settled with above steps?	No	1. Adjust the background level. 2. Replace CIS. 3. Replace main control board.

#### Printer section

Section	Step	Check item	Result	Remedy
Drum cartridge	1	Are the developing bias, supply bias and blade bias contact terminal dirty or deformed?	Yes	Clean / Repair
	2	Are the grid bias, charge bias and drum ground contact terminal dirty or deformed?	Yes	Clean / Repair
Circuit boards	3	Are the connections from LED print head and from high-voltage board to main control board in good condition? (Check plugs firmly plugged and snapped harness.)	No	Reconnect / Replace harness
	4	Is the trouble settled with above steps?	No	1. Replace drum cartridge. 2. Replace LED print head. 3. Replace main control board. 4. Replace high-voltage power board.

## 4.6 Scanner related trouble

### Mechanical Errors

	Symptom	Possible Cause	Countermeasure
While feeding a document	ADF does not feed the document.	The pickup roller is dirty or worn out.	Clean the roller. Replace the roller.
		The power of the separation roller is getting decrease. The separation pad pressure does not match the paper quality.	Adjust the separation pressure. Clean the roller.
		The motor is not rotating.	Replace the motor. Replace the ADF board.
While scanning document	The feeder stops the feeding job while the document is taken into the feeder.	The malfunction of the sensor.	Replace the sensor.
		The motor power is not working properly.	Replace the motor. Replace the ADF board.
		The roller is dirty.	Clean the roller.
		The roller is worn out.	Replace the roller.
	The document is stuck and gets damaged while taken into the feeder.	Foreign objects entered the feed area.	Remove the objects.
		The paper quality is not acceptable. The paper shape is not acceptable.	Recommend the customer to use the document glass.

### Sensor Malfunctions

	Symptom	Possible Cause	Countermeasure
While feeding a document	No beep sound when you place the document. (The beep sound volume setting could be OFF.)	DS1 sensor defect	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Confirm the LCD indication changes by moving the DS1 sensor. OFF: No document / ON: Document 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the DS1 sensor. 4 Replace the sensor harness. 5 Replace ADF board. 6 Replace the harness between ADF board and main control board. 7 Replace the main control board.
		APS sensor defect	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Confirm that the LCD indication changes by opening and closing the platen cover. OFF: Cover Open / ON: Document 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the APS sensor. 4 Replace the sensor harness. 5 Replace ADF board. 6 Replace the harness between ADF board and main control board. 7 Replace the main control board.
	The machine feeds the document through the ADF without scanning.	DS1 or APS sensor defect	Check "DS1 sensor defect" and "APS sensor defect".

	Symptom	Possible Cause	Countermeasure
While scanning a document	The scan starting and ending area are not correct.	DS2 sensor defect	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Confirm that the LCD indication changes by opening the ADF cover and inserting a paper. OFF: No document / ON: Document 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the DS2 sensor. 4 Replace the sensor harness. 5 Replace the main control board.
		DS3 sensor defect	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Confirm that the LCD indication changes by opening the ADF cover and inserting a paper. 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the DS3 sensor. 4 Replace the sensor harness. 5 Replace ADF board. 6 Replace the harness between ADF board and main control board. 7 Replace the main control board.
While a document exits	The LCD shows a warning while a document exits after scanning.	DS1, DS2, DS3, DRS or DEXIT sensor defect	Check "DS1 sensor defect", "DS2 sensor defect" and "DS3 sensor defect" in that order. Perform <Mode>, <*>, <2>, <2> to display the sensor input test mode and confirm that DRS and DEXIT are working.
	The LCD shows a warning after a document exits.		
Others	The message, "Please close the flashing cover." is displayed on the LCD.  The flashing cover: The ADF cover	TXIL sensor defect	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Confirm that the LCD indication changes by opening and closing the ADF cover. OFF : Cover open / ON: Cover close 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the TXIL sensor. 4 Replace the sensor harness. 5 Replace ADF board. 6 Replace the harness between ADF board and main control board. 7 Replace the main control board.

## Scanning trouble

Symptom		Possible Cause	Countermeasure
An unusual noise occurs.		The belt has not been firmly inserted into the belt holder.	Check the belt.
While scanning	The lamp does not turn on	Harness is not firmly inserted to the connector.	Check the connectors.
		CIS defect.	Replace.
	CIS is touching the home side (on the left toward the front)	HS sensor defect.	0 Press <Mode>, <*>, <2>, <2> to display the sensor input test mode. 1 Remove the document glass and move the carriage by hand, and confirm that the LCD indication changes. OFF: Not home position ON : Home position 2 Check the sensor harness is firmly connected. 3 If the LCD indication does not change, replace the HS sensor. 4 Replace the sensor harness. 5 Replace the scanner board. 6 Replace the harness between scanner board and main control board.
	The carriage does not move.	FBS motor defect.	1 Check the motor harness is firmly connected. 2 Replace the FBS motor.
		Scanner board defect.	1 Check the connectors are firmly connected to the scanner board. 2 Replace the harness between scanner board and main control board. 3 Replace the scanner board. 4 Replace the main control board.

## 4.7 Recording paper jam

After removing the jammed paper, please open and close the side cover.

### Mechanical errors

Symptom	Possible cause	Countermeasure
Jam in the paper supply area	Faulty movement of some cassette parts.	Check each movement of a cassette part. Replace the faulty part.
	Paper is stuck in the recording area.	Remove the stuck paper.
	The paper feed roller is worn out.	Replace the roller.
Jam in the feed area	Paper is stuck in the feed area.	Remove the jammed paper.
Jam in the fuser or the paper exit area	Paper is stuck in the fuser or paper exit area.	Remove the jammed paper.
	The fuser roller is not clean.	Clean the fuser roller. Replace the fuser roller.

### Electrical errors

Symptom	Possible cause	Countermeasure
Jam in the feed area "Please close the flashing cover."	The paper supply electromagnetic clutch does not work.	<ul style="list-style-type: none"><li>• Check the wiring.</li><li>• Replace the paper supply electromagnetic clutch.</li><li>• Replace the main control board.</li></ul>
	The paper supply sensor (PSS) does not work.	Check that the wiring and actuator are working properly. If confirmed OK, then replace the PSS, or Main control board.
Jam in the feed area "Please close the flashing cover."	The malfunction of the PPS.	Check that the wiring and actuator are working properly. If confirmed OK, then replace the PSS, or the main control board.
Jam in the feed area "Check paper size....."	The paper size is not correct.	Check the paper, size setting.
Jam in the fuser or paper exit area	The paper discharge sensor (PDS) does not work.	Check that the wiring and actuators are working properly. If confirmed OK, then replace the PDS, or LPH board.

## 4.8 Machine malfunction

No.	Symptom	What to confirm	Countermeasure	
1	The LCD shows nothing.	1. Is the machine in energy save mode?	Yes	Press the energy save key, and release the mode.
			No	Check No.2.
		2. Is the power cable plugged correctly?	Yes	Check No.3.
			No	Plug the cable correctly.
		3. Is the power switch On?	Yes	Check No.4.
			No	Power on.
		4. Does the DC output voltages from the power supply unit to connector P3 on the main control boar have the following output?	Yes	Check No.5.
			No	Replace the power supply.
			</	

No	Symptom	What to confirm	Countermeasure	
3	Documents jam frequently. The LCD shows "Please reset the document."	1. Did you feed a single document?	Yes No	Check No. 2. Check No. 3
		2. Did you use thin paper or converted paper?	Yes No	Recommend the customer to use the document glass. Check No. 8.
		3. Did you set documents more than the capacity?	Yes No	Check No. 4. Check No. 5.
		4. If you set documents within the capacity, the symptom be fixed.	Yes No	Solved. Check No. 5.
		5. Did you use wrinkled or curled documents?	Yes No	Recommend the customer to use the document glass. Check No. 6.
		6. Does the machine still feed documents?	Yes No	Check No. 7. Check No. 8.
		7. Does the machine still discharge documents?	Yes No	Check No. 23. Check No. 24.
		8. Does the clutch rotate properly?	Yes No	Check No. 9. Replace the clutch.
		9. Does the separate roller work properly?	Yes No	Check No. 11. Check No. 10.
		10. Does the transfer gear work properly?	Yes No	Check No. 11. Adjust the gear.
		11. Does the ADF motor rotate properly?	Yes No	Check No. 12. Replace the ADF motor.
		12. Is the separation pad pressure appropriate?	Yes No	Check No. 13. Adjust the separation pad pressure.
		13. Do CN1-1, 2, 3 and 4 of the power supply have +24V output?	Yes No	Check No. 14. Replace the power supply.
		14. If you replace the harness between the power supply and main control board, the message will disappear.	Yes No	Replace the harness between the power supply and main control board. Check No. 15.
		15. Do P3-1, 2, 3, and 4 on the main control board have +24V output ?	Yes No	Check No. 16. Replace the main control board.
		16. Has the DS1 sensor been installed properly?	Yes No	Check No. 17. Re-install it properly.
		17. Does the feeler for the DS1 sensor work properly?	Yes No	Check No. 18. Replace the DS1 sensor feeler.
		18. Are there any foreign objects stuck around paper guides?	Yes No	Remove the objects. Check No. 19.
		19. Does the voltage level of P3-5 on the main control panel change to +0V when the DS1 is ON, and to +3.3V when the DS1 is OFF?	Yes No	Check No. 21. Check No. 20.
		20. If you replace the DS1 sensor, the symptom will be fixed.	Yes No	Replace the DS1. Replace the main control board.

No.	Symptom	What to confirm	Countermeasure	
3	Documents jam frequently. The LCD shows "Please reset the document."	21. Does the voltage level of P3-12 on the main control panel change to +0V when the DS2 is ON, and to +3.3V when the DS2 is OFF?	Yes No	Check No. 22. Check No. 25.
		22. If you replace the DS2 sensor, the symptom will be fixed.	Yes No	Replace the DS2. Replace the main control board.
		23. Does the voltage level of P4-5 on the main control panel change to +0V when the DS3 is ON, and to +3.3V when the DS3 is OFF?	Yes No	Check No. 24. Check No. 25.
		24. If you replace the DS3 sensor, the symptom will be fixed.	Yes No	Replace the DS3. Replace the main control board.
		25. Is the separation roller dirty?	Yes No	Replace the separation roller. Check No. 26.
		26. Is the separation pad dirty?	Yes No	Replace the separation pad. Replace the machine.
4	Documents skew	1. Have the document guides been adjusted properly?	Yes No	Check No. 2. Re-adjust the guides properly.
		2. Did you place different size documents at the same time?	Yes No	Set only the same size documents. Check No. 3.
		3. Are there any foreign objects on the paper pass?	Yes No	Remove the objects. Check No. 4.
		4. Have the separator roller and the pad separator been worn out?	Yes No	Replace them. Check No. 5.
		5. Are there any problems with on the installations and operations of the separator roller and the pad separator?	Yes No	Check their operations. Check No. 6.
		6. Is the guide outer deformed?	Yes No	Fix or replace it. Replace the machine.
5	Documents get wrinkled or torn frequently.	1. Are they thin documents?	Yes No	Recommend customer to use the document glass. Check No. 2.
		2. Are there any foreign objects on the document tray?	Yes No	Remove the objects. Check No. 3.
		3. Do the documents get wrinkled or torn around the feeding entry area?	Yes No	Check No. 4. Check No. 6.
		4. Has the entry area of the guide outer been deformed?	Yes No	Repair or replace it. Check No. 7.
		5. Is the separation pad dirty?	Yes No	Replace the separation pad. Replace the machine.

No.	Symptom	What to confirm	Countermeasure	
6	The warning message "Lamp error. Call for service." is displayed.	1. Has the lamp been illuminated?	Yes No	Check No. 2. Check No. 7.
		2. Is the CIS harness connecting correctly?	Yes No	Check No. 3. Connect the harness.
		3. Are the sheet document press or back ground level plate dirty?	Yes No	Clean, or replace them. Check No. 4.
		4. Is the document glass dirty?	Yes No	Clean, or replace them. Check No. 5.
		5. Are the carriage belts or the home sensor attached correctly?	Yes No	Check No. 4. Reattach them.
		6. If you replace the home sensor or the connecting harness, the symptom will be fixed.	Yes No	Replace the sensor or the harness. Check No. 7.
		7. If you replace the CIS or the connecting harness, the symptom will be fixed.	Yes No	Replace the carriage or the harness. Check No. 8.
		8. If you replace the carriage or the connecting harness, the symptom will be fixed.	Yes No	Replace the circuit board or the harness. Check No. 9.
		9. If you replace the main control board or the connecting harness, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
7	The message "No Paper" is displayed.	1. Did you load paper in the cassette properly?	Yes No	Check No.2. Re-load paper.
		2. Press the paper detection feeler when the machine is in ready mode, and check the sensor output changes to +3.3V through GND.		
		Cassette 1 : Main control board P23-7	Yes No	Replace the sensor or the harness. Check No. 3.
		Cassette 2 : 2nd CSST board P3-1	Yes No	Replace the sensor or the harness. Check No. 3.
		Cassette 3 : 3rd CSST board P3-1	Yes No	Replace the sensor or the harness. Check No. 3.
		Cassette 2 : 4th CSST board P3-1	Yes No	Replace the sensor or the harness. Check No. 3.
		3. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
8	Paper jams or the message "Open the flashing cover and check....." is displayed.	1. Is there any paper jam on the paper pass?	Yes No	Remove the paper. Check No. 2.
		2. Is there electrical continuity in the harness between the PSS sensor and the main control board?	Yes No	Check No. 3. Replace the PSS sensor or the connecting harness.
		3. Is there electrical continuity in the harness between the PDS sensor and the main control board?	YES NO	Check No. 4. Replace the connecting harness.
		4. If you replace the PSS sensor or the PDS sensor, the message will disappear.	Yes No	Replace the sensor. Check No. 5.
		5. If you replace the main control board, the message will disappear.	Yes No	Replace the main control board. Replace the machine.

No.	Symptom	What to confirm	Countermeasure	
9	Paper skew.	1. If you re-load the document and make more than 10 copies, paper skew still occurs.	Yes No	Check No. 2. Solved.
		2. Has the paper cassette been installed properly?	Yes No	Check No. 3. Re-install it properly.
		3. Does the cassette have any malfunctions?	Yes No	Replace the cassette. Replace the machine.
10	When using the auto feeder, the reception image expanded.	1. If you print "Checkered Pattern", the image will expand more vertically than horizontally. Note: The following causes are also possible. The sender sent the document data using unsuitable documents like excessively thick paper, no carbon paper, rear carbon paper, and so on.	Yes No	Check No. 2. The sender's problem. (It might be caused by using unsuitable documents, or sender transmission problems.)
		2. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
11	When using the auto feeder, the reception image compressed.	1. If you print "Checkered Pattern", the image is more compressed vertically than horizontally.	Yes No	Check No. 2. The sender's problem. (It might be caused by sender transmission problems.)
		2. If you pull out a paper from resist roller and the fuser, the friction is normal.	Yes No	Check No. 3. Clean resist roller. Replace resist roller or the fuser.
		3. The electromagnetic clutch is normal.	Yes No	Check No. 4. Replace the electromagnetic clutch.
		4. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
12	The printouts are too light.	1. Are copied and test print images too light, or uneven density? Note: The following causes are also possible. The contrast setting might be not appropriate. Contrast irregularities are likely on printouts of documents containing thin lines or small blue lettering.	Yes No	Check No. 2. The sender's problem. (Possible causes are inappropriate contrast setting, using colored documents, poor line connection, using unsuitable documents, or sender transmission problems.)
		2. If you replace the toner or the drum cartridge, the symptom will be fixed.	Yes No	Replace the toner or the drum cartridge. Refer to the "Image Quality Problems".
13	Clock malfunction	1. Are there any errors in the clock setting process?	Yes No	Follow the instruction manual. Check No. 2.
		2. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.

No.	Symptom	What to confirm	Countermeasure	
14	The machine does not receive or send a FAX.	1. Is the machine verifying the password?	Yes No	Check No. 2. Check No. 3.
		2. Is the password correct?	Yes No	Stop using the password verification, then check No. 3. Enter the correct password.
		3. Does the machine communicate with a right working machine?	Yes No	The operation might wrong, or counter machine might have problem. Check No. 4.
		4. If you replace the NCU board or the connecting harness, the symptom will be fixed.	Yes No	Replace the NCU board or the harness. Check No. 5.
		5. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
15	The auto memory reception does not work.	1. Has the auto reception been set?	Yes No	Check No. 2. Set auto reception mode.
		2. If you replace the NCU board or the connecting harness, the symptom will be fixed.	Yes No	Replace the NCU board or the harness. Check No. 3.
		3. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
16	A dial signal output fails after entering the number from the numeric keys.	1. Has the line type setting been set correctly ?	Yes No	Check No. 2. Set the correct line type.
		2. If you replace the NCU board or the connecting harness, the symptom will be fixed.	Yes No	Replace the NCU board or the harness. Check No. 3.
		3. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
17	The line monitor does not work.	1. Has the volume setting been set to OFF?	Yes No	Set the volume except OFF. Check No. 2.
		2. Has the setting for the line monitor been set up?	Yes No	Check No. 3. Set up the setting.
		3. If you replace the speaker or the connecting harness, the symptom will be fixed.	Yes No	Replace the speaker or the harness. Check No. 3.
		4. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.

No.	Symptom	What to confirm	Countermeasure	
18	An unusual sound occurs.	1. Does the sound occur during scanning?	Yes No	Check No. 2. Check No. 10.
		2. Does the sound occur during scanning using the ADF or document glass ?	Yes No	Check No. 3. Check No. 6.
		3. Are there any objects interfering with the roller or roller shaft?	Yes No	Remove the objects. Check No. 4.
		4. Has the ADF motor sounded abnormal?	Yes No	Clean the roller. Check the harness. Check No. 5.
		5. Are there any objects interfering with the ADF gear?	Yes No	Remove the objects. Check No. 6.
		6. Has the FBS motor sounded abnormal?	Yes No	Check the harness. Check No. 7.
		7. Are there any objects interfering with the FBS gear?	Yes No	Remove the objects. Check No. 8.
		8. Are there any objects interfering with the FBS pulley?	Yes No	Remove the objects. Check No. 9.
		9. Are there any objects interfering with the carriage traveling surface?	Yes No	Remove the objects using lint free waste. Check No. 10.
		10. Does the sound occur while recording?	Yes No	Check No. 11. Check No. 17.
		11. If you remove the drum or toner cartridge, the sound still occurs.	Yes No	Check No. 12. Replace the toner or drum cartridge.
		12. Are there any objects interfering with the drum gear, developing gear, or transfer gear?	Yes No	Remove the objects. Check No. 13.
		13. If you replace the toner or drum cartridge, the symptom will be fixed.	Yes No	Replace the toner or drum cartridge. Check No. 14.
		14. If you replace the transfer roller or fuser, the symptom will be fixed.	Yes No	Replace the transfer roller or fuser. Check No. 15.
		15. Are there any objects interfering with the driving mechanism?	Yes No	Remove the objects. Check No. 16.
		16. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.
19	The document memory can not be backed up.	1. Have the main control board and the capacitor been mounted to C42?	Yes No	Check No. 2. Connect it.
		2. Is the capacitor voltage above +0.7V when the machine in shut down?	Yes No	Check No. 4. Check No. 3.
		3. Did you charge the capacitor for more than 10 minutes?	Yes No	Check No. 4. Charge the battery.
		4. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.

No.	Symptom	What to confirm	Countermeasure							
20	Unit will not power up.	1. Is the power cord connected correct and power switch is turned on.	Yes No	Check No.2. Connect the power cord and turn the power on.						
		2. Is the electrical outlet is on?	Yes No	Check No.3. Connect the machine to a proper outlet.						
		3. Does the DC output voltages from the power supply unit to connector P3 on the main control boar have the following output? <table border="1"><tr><td>Pin 1, 2, 3, 4</td><td>+24V</td></tr><tr><td>Pin 14</td><td>+3.4V</td></tr><tr><td>Pin 5, 6, 7, 8, 11, 13</td><td>GND</td></tr></table>	Pin 1, 2, 3, 4	+24V	Pin 14	+3.4V	Pin 5, 6, 7, 8, 11, 13	GND	Yes No	Check No.4. Replace the power supply.
		Pin 1, 2, 3, 4	+24V							
		Pin 14	+3.4V							
Pin 5, 6, 7, 8, 11, 13	GND									
4. Is the connection between the power supply unit and the main control board OK?	Yes No	Check No.5. Reconnect the connection or replace the harness.								
5. If you replace the main control board, the symptom will be fixed.	Yes No	Replace the main control board. Replace the machine.								

# 5 Maintenance & Adjustment

## 5.1 Maintenance schedule

### Scanning Section

Parts Name	Maintenance Cycle (pages)		Reference Page
	Clean	Replace	
Covers	Wipe it with a soft cloth dampened with water. If that does not clean the part, wipe it first with a soft cloth dampened with natural detergent, then wipe it with a soft cloth dampened with water.	—	—
Touch panel display		—	—
ADF document pad		—	—
Document pad		—	—
ADF glass	Wipe it with a soft cloth dampened with water.	—	—
Document glass		—	—
Assy Piece Separator <sup>*2</sup>	Wipe it with a soft cloth dampened with alcohol.	60,000 sheets/A4 or 2 years	5-15
Roller Separate <sup>*2</sup>		60,000 sheets/A4 or 2 years	5-18
Roller Pickup <sup>*2</sup>		60,000 sheets/letter or 2 years	5-18
Roller Feed / Roller Press		—	—
Roller Exit / Roller Press		—	—
CIS	Wipe it with a dry soft cloth.	—	5-27

\*1 Replace these parts at the same time.

### Printer Section

Parts Name	Maintenance Cycle (pages)		Reference Page
	Clean	Replace	
Print head	Wipe it with a soft cloth dampened with alcohol.	—	5-56
Roller Pickup <sup>*2</sup>		100,000 sheets/A4 or 2 years	5-77
Pad Pressure CST <sup>*2</sup>		100,000 sheets/A4 or 2 years	5-78
Roller Feed OP		100,000 sheets/A4	5-84
Roller Duplex		300,000 sheets/A4	5-44
Roller Pickup MP		100,000 sheets/A4 or 2 years	5-45
Pad Pressure MP		100,000 sheets/A4 or 2 years	
Roller Resist		100,000 sheets/A4	5-46
Roller Exit		100,000 sheets/A4	5-63
Inter roller		—	5-42
2-bin roller	—	300,000 sheets/A4	
Fuser	—	100,000 sheets/A4	5-55
Roller Transfer	—	100,000 sheets/A4	5-42
Guide Transfer	—	100,000 sheets/A4	
Filter Ozone	—	150,000 sheets/A4	5-38

\*2 Replace these parts at the same time.

## Note

The maintenance cycle (pages or years) may be shorter than the above value according to the environment or usage of the machine, and the documents and paper that are used. The maintenance cycle (pages or years) are not insured and early replacement of the parts may be needed to maintain the machine quality.

## 5.2 Disassembly procedures

Before assembling,

- Disconnect the power cable
- Press the power button on the pannel after you have remoed the power cable
- Disconnect the line cable and other cables
- Pull out the toner cartridge from the machine
- Pull out the drum cartridge from the machine, and cover it with a black clothe

## 5.2.1 URADF

### TRAY DOCUMENT

1. Pull and remove the TRAY DOCUMENT [2] from the Guide outer B up [1].

## COVER TX SIDE B

1. Open the Cover platen [1].
2. Remove one screw [2].

3. Close the Cover platen [1].
4. Open the Cover Tx [3].
5. Release one hook [4], then remove the COVER TX SIDE B [5].

## SENSOR TxIL / DS1

1. Remove the Cover Tx side B. (See "COVER TX SIDE B" on page 5-5.)
2. Disconnect each connector for the SENSOR TxIL [1] and the Sensor DS1 [2].
3. Remove the SENSOR TxIL [1] and the Sensor DS1 [2].
  - \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
Remove the long side first.

### CAUTION

When assembling, please be careful to plug in the connectors correctly.

Sensor TxIL... Harness color: Red (marked R)

Sensor DS1... Harness color: Blue (marked B)

## PCB ADF

1. Remove the Cover Tx side B. (See "COVER TX SIDE B" on page 5-5.)
2. Disconnect all the PCB ADF connectors.
3. Remove two screws [1].
  - \* One screw place is jointed with ground wire.
5. Remove the PCB ADF [2].

## COVER TX SIDE F

1. Open the Cover platen [1].
2. Remove one screw [2].

3. Close the Cover platen [1].
4. Open the Cover Tx [3].
5. Release one hook [4], then remove the COVER TX SIDE F [5].

## SENSOR APS

1. Remove the Cover Tx side F. (See “COVER TX SIDE F” on page 5-8.)
2. Remove the APS bracket. (See “GUIDE INNER” on page 5-24.)
3. Remove the Solenoid guide. (See “SOLENOID GUIDE” on page 5-11.)
4. Disconnect the connector [1].
5. Remove the SENSOR APS [2].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After removing the hook on the short side, slide the sensor to the short side and remove it.

## SOLENOID ROLLER

1. Remove the Cover TX side F. (See "COVER TX SIDE F" on page 5-8.)
2. Remove the harness from the hook [1].
3. Disconnect the junction connector [2].
4. Remove one screw [3].
5. Remove the SOLENOID ROLLER [4].

### **⚠ CAUTION**

When assembling, pass the Pin PK 3×16 of Solenoid roller through the Bracket gear reverse hole [5].

## SOLENOID GUIDE

1. Remove the Cover TX side F. (See “COVER TX SIDE F” on page 5-8.)
2. Remove the APS Bracket. (See “GUIDE INNER” on page 5-24.)
3. Remove the harness from the hook [1].
4. Disconnect the junction connector [2].
5. Remove one screw [3] then remove the Bracket solenoid A [4].
6. Remove one screw [5] then remove the Bracket solenoid A [6].

### CAUTION

When assembling, pass the Pin PK 2×12 of Solenoid guide through the Guide switch hole [7].

## SENSOR DS2

1. Open the Cover platen [1].
2. Remove two screws [2] then remove the Stay platen [3].
3. Disconnect the connector of the SENSOR DS2 [4] then remove the harness from the hook.
4. Remove one screw [5], then remove the SENSOR DS2 [4].

## SENSOR DS3

1. Open the Cover platen [1].
2. Peel off the Sheet document press [2].  
\* Sheet document press is secured with the Velcro tape.
3. Remove one screw [3] of the Bracket press sheet.
4. Remove one screw [5] of the Bracket DS3 [4].
5. Remove the harness from the hook [6] then remove the Bracket DS3 [4].
6. Disconnect the connector from the SENSOR DS3 [7].
7. Remove one screw [8], then remove the SENSOR DS3 [7].

### **⚠ CAUTION**

When securing the Sheet document press, slide two Brackets press sheet [9] to the right side.

## SENSOR DEXIT

1. Open the Cover platen [1].
2. Peel off the Sheet document press [2].  
\* Sheet document press is secured with the Velcro tape.
3. Remove the harness from the hook [3].
4. Disconnect the connector of the SENSOR DEXIT [4].
5. Remove the SENSOR DEXIT [4].  
\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

### CAUTION

When securing the Sheet document press, slide two Brackets press sheet [5] to the right side.

## PIECE SEPARATOR

1. Open the Cover Tx [1].
2. Remove two shafts [2].
3. Remove the PIECE SEPARATOR [4] while releasing two hooks [3].

## SENSOR DRS

1. Open the Cover Tx [1].
  2. Remove two screws [2].
  3. Remove the Guide outer B up [4] while releasing two hooks [3].
  4. Disconnect the connector and remove the SENSOR DRS [5].
- \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## COVER TX

1. Remove the Cover Tx side B. (See "COVER TX SIDE B" on page 5-5.)
2. Remove the Cover Tx side F. (See "COVER TX SIDE F" on page 5-8.)
3. Remove one screw [1] on the back side.  
\* The screw is jointed with the ground wire.
4. Remove two harness locks [2].
5. Remove two shafts [3], then remove the COVER TX [4].  
\* When removing, raise the Cover Tx slightly and remove it from the shaft on the front side.  
\* Remove the ground wire through the Guide inner hole.

## ASSY ROLLER SEPARATOR

1. Remove the Cover Tx. (See "COVER TX" on page 5-17.)
2. Remove two screws [1].
3. Release two hooks [2] using a tool such as a driver, and remove the Guide outer A [3].
4. Remove one E-ring [4], then slide the Bearing D6 8 [5] and the Gear 26 [6] to the inner part.
5. Remove one E-ring [7], then remove the Bearing D6 8 [5] and the Gear 26 [6].
6. Remove three E-rings [8] and slide two Bearings D6 [9] and one Bearing D6 8 [10] toward the center.

7. Remove the ASSY ROLLER SEPARATOR [11].

## PRESS ROLLER A

1. Remove the Cover Tx. (See "COVER TX" on page 5-17.)
2. Remove the Guide outer A. (See "ASSY ROLLER SEPARATOR" on page 5-18.)
3. Remove two screws [1] and then remove two Springs P regist [2].
4. Remove one screw [3], then remove the Holder regist shaft [4].
5. Lift up the Shaft press roller regist [5] and remove the Press roller A [6].

## GUIDE HARNESS

1. Remove the Cover Tx side B. (See "COVER TX SIDE B" on page 5-5.)
2. Remove seven harness locks [1].
3. Remove one screw [2] and remove the secured Cover Tx ground wire.
4. Disconnect all the PCB ADF [3] connectors.
5. Remove the harness from the GUIDE HARNESS [4].
6. Remove the harness from three hooks [5].

7. Remove one screw [6].
8. Release the hook [7] and remove the GUIDE HARNESS [4] while pulling two insertions [8].  
\* Release the hook by slightly pressing down the GUIDE HARNESS [4].

## MOTOR URADF

1. Remove the Guide harness. (See "GUIDE HARNESS" on page 5-20.)
2. Remove three screws [1], then remove the Bracket motor [2].

3. Remove two screws [3], then remove the MOTOR URADF [4].

## PLATE PRINTER B

1. Remove one screw [1] (jointed with ground wire) and remove the PLATE PRINTER B [2].
2. Disconnect one connector [3].

## Important

When attaching the Plate printer B, be careful not to pinch the harness.

## COVER PLATEN

1. Remove the Plate printer B. (See “PLATE PRINTER B” on page 5-22.)
2. Remove one screw which fastens the ground wire to cover back. (See “PLATE PRINTER B” on page 5-22.)
3. Lift up the COVER PLATEN [1] and remove it.

## GUIDE INNER

1. Remove the Cover Tx side B. (See "COVER TX SIDE B" on page 5-5.)
2. Remove the Cover Tx side F. (See "COVER TX SIDE F" on page 5-8.)
3. Remove the Cover Tx. (See "COVER TX" on page 5-17.)
4. Disconnect the connector for the Sensor TxIL [1] and the Sensor DS1 [2].
5. Leave the Clutch URADF (separate clutch) [3] (regist clutch) [4] junction connector towards the Clutch URADF and disconnect the connector on the harness side.
6. Pull out the harness from the GUIDE INNER [5] hole [6].

7. Push down the handle of the Bracket APS [7] and remove it.
8. Remove two screws [8].
9. Lift up the GUIDE INNER [5] a little and release two hooks [9].

## NOTE

When reassembling the unite, note that two hooks [9] are not on the platen cover but under the hooks of the cover.

## GUIDE OUTER B ASSY

1. Remove the Guide inner. (See "GUIDE INNER" on page 5-24.)
2. Remove one E-ring [1] then remove the Clutch URADF [2].
3. Remove the Spring C reverse bracket [3].
4. Remove two E-rings [4], then remove two Bearings D6 8 [5].
5. Lift up the GUIDE OUTER B ASSY [6] and remove it.
  - \* Remove the harness through the Guide inner hole [7].

## GUIDE COVER PL

1. Remove the Guide inner. (See “GUIDE INNER” on page 5-24.)
2. Remove the Guide outer B assy. (See “GUIDE OUTER B ASSY” on page 5-25.)
3. Remove two screws [1].
4. Remove the GUIDE COVER PL[2].
  - \* Rotate towards the clockwise direction by looking from the front side and remove it.

## 5.2.2 Scanner section

### CIS

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove three screws [1].
3. Remove the Cover top FBS [3] while releasing four hooks [2].
4. Remove two Spacers CIS [4].
5. Remove the CIS [5] 90 degrees by sliding towards the lengthwise direction.
6. Remove the flat cable [6].

### CAUTION

When removing the Cover top FBS, be careful not to break the Pane.

## FBS MOTOR

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove the Cover top FBS. (See “CIS” on page 5-27.)
3. Remove the Spring C tension [1].
4. Remove one screw [2].
5. Move the Bracket motor [3] towards the center, then lift up and remove it.

6. Remove two screws [4] and remove the FBS MOTOR [5].

## SENSOR HS

1. Remove the Cover platen. (See "COVER PLATEN" on page 5-23.)
  2. Remove three screws. (See "CIS" on page 5-27.)
  3. Remove the Cover top FBS while releasing four hooks. (See "CIS" on page 5-27.)
  4. Remove the Space sensor [1].
  5. Release the hooks under the Chassis FBS, then remove the SENSOR HS [2].
- \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## 5.2.3 Panel section

### PCB PANEL ASSY

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove the Cover top FBS. (See “CIS” on page 5-27.)
3. Remove two screws [1].
4. Lift up the PCB PANEL ASSY [2].
5. Disconnect two connectors [3].

## PCB PANEL

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove the Cover top FBS. (See “CIS” on page 5-27.)
3. Remove the PCB panel assy. (See “PCB PANEL ASSY” on page 5-30.)
4. Remove four screws [1], then remove the Cover PCB panel [2].
5. Remove five screws [3], then remove the PCB PANEL [4].

## DISPLAY LCD B/W

1. Remove the Cover platen. (See "COVER PLATEN" on page 5-23.)
2. Remove the Cover top FBS. (See "CIS" on page 5-27.)
3. Remove the PCB panel assy. (See "PCB PANEL ASSY" on page 5-30.)
4. Remove the PCB PANEL. (See "PCB PANEL" on page 5-31.)
5. Remove the Knob volume [1].
6. Remove the film harness [2].
7. Disconnect the connector [3] and the film harness [4] on the back side.
8. Remove four hooks [5] then remove the Bracket LCD MID [6].

9. Remove two screws [7].
10. Remove the DISPLAY LCD B/W [9] while releasing two hooks [8].

## ⚠ CAUTION

- Handle the LCD gently to avoid from breaking it.
- If the LCD breaks and the liquid comes into contact with your hands, rinse with water. If you have contact with your eyes or mouth, rinse with water and consult a physician.

## CABLE-ASSY SPEAKER

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove the Cover top FBS. (See “CIS” on page 5-27.)
3. Remove the PCB panel assy. (See PCB PANEL ASSY.)
4. Remove the PCB PANEL. (See “PCB PANEL” on page 5-31.)
5. Remove two screws [1].
6. Remove the CABLE-ASSY SPEAKER [2].

## Important

When you reattach the speaker, be sure that a “△” inscription is at the direction where the harness is.

## 5.2.4 PCB section

### PCB MAIN

1. Remove the Plate printer B. (See “PLATE PRINTER B” on page 5-22.)
2. Remove eight screws [1].
3. Remove the Cover back [2].
  - \* Remove the insertion on the left side.

4. Disconnect all the PCB MAIN [3] connectors.
5. Remove six screws [4].
6. Remove the spacer [5].
7. Remove the PCB MAIN [3] while disconnecting two connectors [6] on the right side from the frame.

### **⚠ CAUTION**

Do not browse or edit the data in the SD card by connecting it to a computer. This might the machine not to boot correctly, of the data might be all erased when the machine has booted.

## PCB HV

1. Remove the Plate printer B. (See "PLATE PRINTER B" on page 5-22.)
  2. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
  3. Disconnect all the PCB HV [1] connectors.
  4. Remove four screws [2].
  5. Remove the PCB HV [1].
- \* There is a lug [3] on the left and the bottom which holds the PCB HV.

## PCB NCU

1. Remove the Plate printer B. (See “PLATE PRINTER B” on page 5-22.)
2. Remove the Cover back. (See “PCB MAIN” on page 5-34.)
3. Remove one screw [1], and remove the Cover L B [2].
4. Remove one screw [3].
  - \* The screw is jointed with the ground wire [4].

5. Disconnect one PCB NCU connector [5].
6. Remove four screws [6].
7. Remove the PCB NCU [8] while disconnecting the connector part [7] from the frame.

## PCB PSU

### **⚠ CAUTION**

- When you disassemble this unit, first press the power button on the panel after you have removed the power cable.
- Do not touch the components mounted on the PSU PCB and the heat sinks to avoid the risk of electrical shock.

1. Remove the power cord [3].
2. Remove two screws [4].
3. Open the Cover front [5].
4. Remove the upper part of the Cover left [7] while releasing the hook [6] and remove the Cover left [7].
5. Remove two screws [10].

6. Pull out the PCB PSU [11] a little.
7. Disconnect two connectors [12], then remove the PCB PSU [11].

### **Important**

When assembling the Cover left, insert in the lower part hook first.

## 5.2.5 Printer section

### FILTER OZONE 60

1. Remove the Cover left. (See “PCB PSU” on page 5-37.)
2. Remove the FILTER OZONE 60 [2] from the Cover left [1].

## FAN L

1. Remove the Cover left. (See “PCB PSU” on page 5-37.)
2. Remove the Cover tray window [1].
3. Disconnect the junction connector [2].
4. Lift up the FAN L [3] and remove it.

\* The bottom of the FAN L is secured with hook. To release the hook, push back and rotate the bottom side.

## SENSOR SG2A 141

1. Remove two screws [1].
2. Disconnect the connector of the SENSOR SG2A 141 [2].
3. Remove the Guide lower exit 2 bins [4] while releasing three hooks [3].
4. Remove the Spring C feeler [5], then remove the Feeler sensor 2 bins [6].
5. Remove the SENSOR SG2A 141 [2].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## ROLLER REGISTER

1. Open the Cover jam access [1].
2. Remove the SR4 [2] and remove the Gear 16H 0.8 [3].
3. Remove the Bearing roller register [4] and the Spring C register [5].
4. Remove the SR5 [6] then remove the Bearing roller register [7] and the Spring C register [8].
5. Remove the ROLLER REGISTER [9].
6. Remove the Bearing D6 8 [10] and the SR5 [11].

## ROLLER TRANSFER ASSY/GUIDE TRANSFER

1. Open the Cover jam access [1].
2. Insert a thin driver and lift up the right and left shaft of the Roller transfer assy [2].
3. Remove the Roller transfer assy [2].

4. Remove two Rollers gap [4] and one Gear 25H 0.6 [5] from the Roller transfer ASSY [3], then remove two Brackets transfer F [6].

5. Remove the Roller transfer [8] from the Guide transfer [7].
6. Remove one SR5 [9].
7. Remove two screws [10] from the Guide transfer [7] and remove the Bracket guide TR F [11] and the Bracket guide TR B [12].

## NOTE

When you have replaced the Roller Transfer, be sure to reset the counter. See "3.9.2 When "Checkout error : XX" message is displayed" on page 3-75 how to reset it.

## ROLLER DUPLEX

1. Open the Cover jam access. (See "ROLLER REGISTER" on page 5-41.)
2. Remove the Spring C stopper JAC [1].
3. Remove one screw [2] and remove the Stopper JAC [3] from the lug.
4. Remove four screws [4] and remove the Guide inner JAC [5].
5. Remove two screws [6] and remove the Guide duplex [7].

6. Remove two E-rings [8] and remove two Flange pulleys [9].
7. Remove the BLT (TMG) 30S2M330GB 165T 3W [10].
8. Remove two Gears 20/25P [11].
9. Remove two Bearings D4 6 [12].
10. Slide two Bearings D4 6 [13] to the outer side and remove two ROLLER DUPLEXs [14].

## ROLLER PICKUP MP

1. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
2. Open the Cover jam access.
3. Pull out the cassette a little.
4. Remove the Guide DUP MP [1] by bending the shaft.
5. Remove SR5 [2] and SR4[3].
6. Remove the Clutch [4].
7. Slide the Shaft pickup MP [5] towards the front and remove it.

8. Remove the Bearing D6 8 [6] on the front side.
9. Slide the ROLLER PICKUP MP [7] by pressing the hook [8] and remove it.

## PAD PRESSURE MP

1. Remove the Cover back. (See “PCB MAIN” on page 5-34.)
2. Open the Cover jam access. (See “ROLLER REGISTER” on page 5-41.)
3. Remove the Guide DUP MP [1] by bending the shaft. (See “ROLLER PICKUP MP” on page 5-45.)
4. Remove the Shaft pickup MP. (See “ROLLER PICKUP MP” on page 5-45.)
5. Remove the PAD PRESSURE MP [1].

## PRT MOTOR

1. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
2. Disconnect the connector for the PRT MOTOR [1].
3. Remove each of three screws [2].
4. Remove the PRT MOTOR [1].

## CLUTCH

1. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
2. Disconnect the junction connector [1].
3. Remove one screw [2], then remove the Plate FG regist [3].
4. Remove the harness from the clamp [4].
5. Remove the E-ring [5] and remove the CLUTCH PRTR (RES) [6].
6. Disconnect the junction connector [7].
7. Remove two screws [8], then remove the Frame drive B [9].
8. Remove the CLUTCH PRTR (PF) [10].
9. Disconnect the junction connector [11].
10. Remove the harness from the clamp [12].
11. Remove the SR [13] and remove the CLUTCH [14].
12. Remove the harness from two clamps [15].
13. Remove the Spring C exit FG [16].
14. Remove two screws [17], then remove the Frame drive C [18].
15. Disconnect two junction connectors [19] and remove two CLUTCHs [20].

## FRAME DRIVE A

1. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
2. Remove the PRT motor. (See "PRT MOTOR" on page 5-47.)
3. Remove the Plate FG regist. (See "CLUTCH" on page 5-48.)
4. Cut the cable tie [1], then remove the harness.
5. Remove the Spring C exit FG [2].
6. Remove the SR [3], then remove the Feed bearing [4].
7. Remove five screws [5], then remove the FRAME DRIVE A [6].

## GEARS

1. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
2. Remove the Clutch. (See "CLUTCH" on page 5-48.)
3. Remove the Frame drive A. (See "FRAME DRIVE A" on page 5-49.)

## CASE TC

1. Open the Cover front.
2. Pull out the toner and drum cartridge.
3. Disconnect the connector [1].
4. Remove two screws [2].
5. Remove the CASE TC [3].

## PCB TAG

1. Open the Cover front.
2. Pull out the toner and drum cartridge.
3. Remove the Case TC. (See "CASE TC" on page 5-51.)
4. Remove one screw [1], then remove the Holder chip [2].
5. Disconnect the connector [3] and remove the PCB TAG [4].

## PCB TOS (TOS\_DC)

1. Open the Cover front.
2. Pull out the toner and drum cartridge.
3. Remove the Case TC. (See "CASE TC" on page 5-51.)
4. Disconnect the connector [1].
5. Remove one screw [2], then remove the PCB TOS [3].

## MOTOR TONER

1. Open the Cover front.
2. Remove the Case TC. (See "CASE TC" on page 5-51.)
3. Remove six hooks [1] and remove the Case TC A [2].
4. Remove the Gear 41/13 0.6/0.6 [3] and the Gear 17W/11 0.5/0.6 [4].
5. Disconnect the connector [5] and remove the MOTOR TONER [6].

## PRINTER FUSER

1. Open the Cover jam access [1].
2. Remove two screws [2].
3. Remove the PRINTER FUSER [3].

### **⚠ CAUTION**

- Before removing the Printer fuser, make sure the power cord is unplugged. There is a possibility of electric shock.
- Make sure the Printer fuser becomes cool before removing it. The Roller heat is very hot immediately after the operation which may cause burns.

### **NOTE**

When you have replaced the Roller Transfer, be sure to reset the counter. See "3.9.1 When you replace the fuser unit or transfer roller" on page 3-74 how to reset it.

## PRINTER HEAD

1. Open the Cover front and remove the consumable supply.
2. Remove the Printer fuser. (See "PRINTER FUSER" on page 5-55.)
3. Remove one screw [1], then remove the Holder LPH B [2].
4. Release the PRINTER HEAD [3] lock by pressing in and pull out the FFC LPH [5].

## ASSY INTERLOCKSW-CBL

1. Remove the Cover platen. (See "COVER PLATEN" on page 5-23.)
2. Remove the Cover back. (See "PCB MAIN" on page 5-34.)
3. Open the Cover jam access. (See "PRINTER FUSER" on page 5-55.)
4. Remove ten screws [1].

5. Remove one screw [2].
6. Disconnect five connectors [3], and remove the cores from the harness.
7. Remove the Chassis FBS [4].

8. Remove five screws [5], and gently suspend the Stay top R [6].  
(Use caution not to damage the harness on the Chassis drive side.)
9. Pull out the ASSY INTERLOCKSW-CBL [7] upwards.
10. Disconnect the junction connector [8].

## COVER TRAY

1. Remove the Chassis FBS. (See “ASSY INTERLOCKSW-CBL” on page 5-57.)
2. Remove four screws [1].
3. Remove the COVER TRAY [2].

## EXIT ASSY

1. Remove the Printer fuser. (See "PRINTER FUSER" on page 5-55.)
2. Remove two screws [1] and remove the Cover right [2].
3. Disconnect one connector [3] and remove the harness from the hook [4].
4. Remove two screws [5].
5. Remove the EXIT ASSY [6].

## SENSOR PDS/SWBS

1. Remove the Exit assy. (See "EXIT ASSY" on page 5-60.)
2. Remove one screw [1], then remove the Spring C FG exit [2].
3. Remove three screws [3], lift up the Guide upper exit [4] from the front and remove the Guide lower exit [5].

3. Remove the Guide change exit [7] from the Guide lower exit [6].

4. Flip over the Guide lower exit [8] and disconnect two connectors [9].
5. Remove the SENSOR PDS [10] and the SENSOR SWBS [11].
  - \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.
  - After releasing the hook on the short side, slide the sensor to the short side and remove it.

## ROLLER EXIT

1. Remove the Exit assy. (See "EXIT ASSY" on page 5-60.)
2. Remove the Guide lower exit. (See "SENSOR PDS/SWBS" on page 5-61.)
3. Disconnect the connector [1] and remove the harness from the hook.
4. Release two hooks [2], then remove the Bracket gear [3].

5. Remove the Gear 20 0.8 [4] on the back side.

6. Remove one screw [5] then remove the Bracket shaft guide [6].

7. Flip over the Guide upper exit [7] and remove the Guide roller exit [8] by rotating.

8. Remove two SR3s [9].

9. Remove the Bearing D4 6 [10].

10. Remove the ROLLER EXIT [11].

## PCB TOS (TOC\_TC)

1. Remove the Cassette [1].
2. Disconnect the connector [2].
3. Remove the shaft [3] and take out the Bracket TOS TC.

4. Remove one screw [4], then remove the PCB TOS [5].

## SENSOR TEMP

1. Remove the Cassette [1].
2. Remove one screw [2], then remove the SENSOR TEMP [3].
3. Disconnect the connector [4].

## SENSOR PES

1. Open the Cover front and the Cover jam access.
2. Pull out the toner and drum cartridge.
3. Remove one screw [1].
4. Remove the Bracket sensor [2] and then disconnect the connector [3].
5. Remove the SENSOR PES [4].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## SENSOR PRS

1. Open the Cover jam access [1].
2. Remove one screw [2].
3. Remove the Guide roller regist B [3], then disconnect the connector [4].
4. Remove the SENSOR PRS [5].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## SENSOR TRAYS

1. Open the Cover jam access [1].
  2. Release the hooks from the bottom, then remove the SENSOR TRAYS [2].
  3. Disconnect the connector [3].
- \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## PCB ERS LAMP

1. Open the Cover jam access. (See “ROLLER TRANSFER ASSY/GUIDE TRANSFER” on page 5-42.)
2. Remove the Printer fuser. (See “PRINTER FUSER” on page 5-55.)
3. Remove one screw [1].
4. Remove the Spring C stopper JAC [2], then remove the Cover jam access [3].
5. Disconnect the connector [4].
6. Remove one screw [5], then remove the Bracket PCB LED [6].

7. Pull out the PCB ERS LAMP [7] from the Bracket PCB LED [6].

## DRUM CARTRIDGE

1. Open the Cover front and remove the DRUM CARTRIDGE.
2. Remove two screws [1], and remove the Cover dev F [2].
3. Remove two screws [3], and remove the Cover dev B [4].
4. Remove two Springs C lock [5].

5. Remove the Developing unit [7] shaft from the Drum unit [6].

## OPC DRUM

1. Remove the Drum unit from the Drum cartridge. (See “DRUM CARTRIDGE” on page 5-71.)
2. Remove two screws [1], then remove the Assy charger [2].  
\* Two pieces of PIECE LPH B [3] are in between the Assy charger and can easily fall off.  
Make sure you do not lose the Piece LPH B and take note not to mistake when assembling.

3. Remove one screw [4] then remove the Bracket shaft OPC assy [5].
4. Supporting the OPC DRUM [6] with hands keep it from dropping out, then slide and lift it to remove.

## ⚠ CAUTION

- Make sure there are no mistakes when assembling the Piece LPH B.
- Do not touch the OPC drum with your bare hands.
- If the OPC drum is removed, cover it with a black cloth.
- Do not touch or damage the OPC drum surface.

## Important

- Manually turn the OPC drum towards the rotation direction after replacing the OPC drum.  
If the resistance is strong, disassemble it again and apply a small amount of toner as lubricant to the edge of the Blade Cleaner.
- When the OPC drum is removed, Piece LPH B can easily fall off. Please be careful not to lose it.

## ASSY SCRAPER

1. Remove the ASSY SCRAPER [2] from the Drum unit [1].

2. Remove the Scraper [4], the Spring T scraper [5], two Rollers star [6] from the Holder scraper [3].

## Assembling the ASSY SCRAPER

1. Attach the Spring T scraper [1] by passing through the Scraper hole [2].

2. Install the Scraper [2] to the Holder scraper [3].
3. Install two Rollers star [4] to the Holder scraper [3].

4. Install the ASSY SCRAPER [5] to the Drum unit [6].

## WASTE TONER BOX

1. Remove one screw [2] from the toner cartridge [1].
2. Press two hooks [3], then remove the WASTE TONER BOX [4].

## 5.2.6 Paper feeding section

### ROLLER PICKUP

1. Remove the Cassette [1].
2. Remove one SR5 [2], remove the Bearing D6 8 [3], and then remove the Shaft pickup CST [4].

3. Remove one SR5 [5], then remove the Roller pickup [6].

## PAD PRESSURE CST

1. Remove the Cassette.
2. Remove the Shaft pickup CST. (See "ROLLER PICKUP" on page 5-77.)
3. Release two hooks [1], then remove the PAD PRESSURE CST [2].

## Replacement of CLUTCH CST

1. Remove one screw [1] then remove the Cover back OP [2].
2. Disconnect the junction connector [3].
3. Remove the SR4 [4], then remove the CLUTCH CST [5].
4. Reverse the procedure to assemble.

## Important

When attaching the Clutch CST, pass through the harness hole [6] and hook it onto the hook [7].

## PCB CST

1. Remove the Cover back OP. (See “Replacement of CLUTCH CST” on page 5-79.)
2. Disconnect all the PCB CST [1] connectors.
3. Remove two screws [2] and remove the PCB CST [1].
4. Reverse the procedure to assemble.

## Important

When assembling the PCB CST, insert it in the Frame PCB OP notch [3].

## OP CASSETTE

1. Remove the Cassette [1].
2. Remove two screws [2].

3. Remove two screws [3] on the back side.
4. Remove two screws [4], and remove the Cover back window [5] and the Cover back OP [6].
5. Disconnect one connector [7]. Move the harness towards the OP CASSETTE.
6. Lift up the body [8], and remove the OP CASSETTE [9].

## SENSOR OPEN OP

1. If there is a second tier OP Cassette extension, remove the lower cassette beforehand.
  2. Pull out the cassette [1] a little.
  3. Disconnect the connector [2].
  4. Remove the SENSOR OPEN OP [3].
- \* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## SENSOR PES OP

1. Remove the OP Cassette. (See “OP CASSETTE” on page 5-81.)
2. Remove one screw [1] then remove the Bracket sensor [2].
3. Disconnect the connector [3].
4. Remove the SENSOR PES [4].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## ROLLER FEED OP

1. Remove the OP Cassette. (See "OP CASSETTE" on page 5-81.)
2. Remove two SR5s [1].
3. Remove one SR3 [2].
4. Slide two Bearings D6 8 [3] to the outer side.
4. Lift up the ROLLER FEED OP [4] and remove the Gear 17 oneway OP [5].
5. Remove two Bearings D6 8 [3].
6. Remove the ROLLER FEED OP [4].

## SENSOR PSS

1. Remove the OP Cassette. (See “OP CASSETTE” on page 5-81.)
2. Remove the Roller feed OP. (See “ROLLER FEED OP” on page 5-84.)
3. Remove two screws [1] then remove the Guide paper OP [2].
4. Disconnect the connector [3].
5. Remove the SENSOR PSS [4].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## SENSOR JAMC2

1. Remove the OP Cassette. (See "OP CASSETTE" on page 5-81.)
2. Remove the Roller feed OP. (See "ROLLER FEED OP" on page 5-84.)
3. Remove the harness [1] from the Frame drive B OP hole [2].
4. Release two hooks [3] and remove the Spring T pickup OP [4].
5. Remove three screws [5], and remove the Frame drive ASSY OP [6].
6. Disconnect the connector [7].
7. Remove the SENSOR JAMC [8].

\* There are hooks on the short side (1 place) and the long side (2 places) on the sensor.  
After releasing the hook on the short side, slide the sensor to the short side and remove it.

## 5.3 Adjustment

### 5.3.1 Outline of printer registration adjustment

1. Adjust the printer registration of the first cassette. (See “5.3.2 Printer registration adjustment” below.)
2. Adjust the scan position and zoom for ADF and FBS.
3. After step 1 and 2, adjust print position for each cassette.

### 5.3.2 Printer registration adjustment

#### Adjuting printer registration (Vertical)

1. Load letter paper to the cassette or tray you want to adjust.
2. Use the Unique Switch 52 to adjust the printing margin to 0 mm. (bit 0, 1 → 0)
3. Printout the test pattern “Ladder”. (See “3.12.2 Printer Test” on page 3-84.)
4. Check width A on the test pattern Ladder meets the specifications.
5. If width A falls outside the specified range, see “Printer registration mode” on page 5-89 and adjust so that it falls within the range.
6. After you have finished the adjustment, you must reenter the setting of Unique Switch 52, you changed in step 2.

Adjust so that width A on the test pattern Checkered output falls within the following range.

Standard	Setting range
$10 \pm 1.5$ (mm)	-12.8 to 12.7 (mm) (0.1 mm step)

## Printer registration (Horizontal)

1. Load letter paper to the cassette or tray you want to adjust.
2. Use the Unique Switch 52 to adjust the printing margin to 0 mm. (bit 0, 1 → 0)
3. Printout the test pattern "Ladder". (See "3.12.2 Printer Test" on page 3-84.)
4. Check width A on the test pattern Ladder meets the specifications.
5. If width A falls outside the specified range, see "Printer registration mode" on page 5-89 and adjust so that it falls within the range.
6. After you have finished the adjustment, you must reenter the setting of Unique Switch 52, you changed in step 2.

Adjust so that width A on the test pattern Checkered output falls within the following range.

Standard	Setting range
10 ± 1.8 (mm)	-12.8 to 12.7 (mm) (0.6773 mm step)

## Printer registration mode

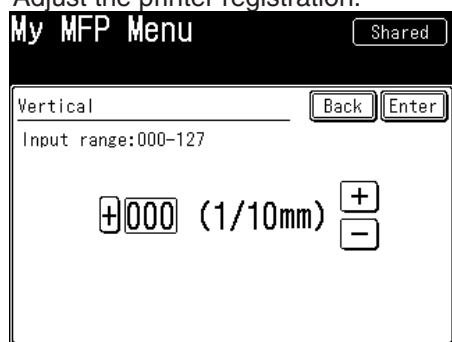

This mode adjusts the print registration for each paper source.

1. Press <Mode>, <\*>, <4>, <3>.
2. Select the direction to adjust, and press [Enter].

When you have selected vertical, skip to step 4.

3. Select the paper source you want to adjust, and press [Enter].
4. Adjust the printer registration:

- Press [+] or [-] at the head of the figures, and switch the adjustment direction between + or -.
- Press [+] or [-] at the end of the figures, and enter the adjustment range.

When you set “+12.3” for Vertical registration, the printing image moves 12.3 mm downward. If you set “-12.3”, the printing image moves 12.3 mm upward.

When you set “+12.3” for Horizontal registration, the printing image moves 12.3 mm rightward. If you set “-12.3”, the printing image moves 12.3 mm leftward. You can adjust between “-12.7 mm” and “+12.7 mm”.

5. Press [Enter].

### 5.3.3 Zoom adjustment

#### FBS zoom adjustment (Vertical)

Zoom ratio	Standard	Adjustment Tool	Setting Range
100 %	$\pm 1.0 \%$	Machine parameter:042	- 1.27 to 1.27 % (0.01 % step)

1. Load letter size paper to the first cassette.
2. Place a Test Chart on the document glass.
3. Make two copies on paper in the first cassette with 100 % magnification.
4. Measure the length of A on the second copy to find the difference.  
If length A falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust so that the setting of Machine Parameter 042 meets the specification.  
If length A is shorter than the standard, increase value.  
If length A is longer than the standard, decrease value.

## FBS zoom adjustment (Horizontal)

Zoom ratio	Standard	Adjustment Tool	Setting Range
100 %	$\pm 1.0 \%$	Machine parameter:041	- 1.27 to 1.27 % (0.01 % step)

1. Load letter size paper to the first cassette.
2. Place a Test Chart on the document glass.
3. Make two copies on paper in the first cassette with 100 % magnification.
4. Measure the length of A on the second copy to find the difference.  
If length A falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See "3.2.1 Setting the machine parameters" on page 3-3.)
6. Adjust the setting of Machine Parameter 041 to meet the specification.  
If the length A is shorter than the standard, increase value.  
If the length A is longer than the standard, decrease value.

## ADF zoom adjustment (Vertical)

Zoom ratio	Standard	Adjustment Tool	Setting Range
100 %	$\pm 1.0 \%$	Machine parameter:037	- 1.27 to 1.27 % (0.01 % step)

1. Load letter size paper to the first cassette.
2. Place a Test Chart on the ADF.
3. Make two copies on paper in the first cassette with 100 % magnification.
4. Measure the length of A on the second copy to find the difference.  
If length A falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust so that the setting of Machine Parameter 037 meets the specification.  
If the length A is shorter than the standard, increase value.  
If the length A is longer than the standard, decrease value.

## ADF zoom adjustment (Horizontal)

Zoom ratio	Standard	Adjustment Tool	Setting Range
100 %	$\pm 1.0 \%$	Machine parameter:036	- 1.27 to 1.27 % (0.01 % step)

1. Load letter size paper to the first cassette.
2. Place a Test Chart in the ADF.
3. Make two copies on paper in the first cassette with 100 % magnification.
4. Measure the length of A on the second copy to find the difference.  
If length A falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust the setting of Machine Parameter 036 to meet the specification.  
If the length A is shorter than the standard, increase value.  
If the length A is longer than the standard, decrease value.

### 5.3.4 Registration adjustment

#### FBS registration (top)

**Note:** This adjustment must be made after the adjustments of printer registration (top and side) of the first cassette and FBS zoom adjustments (vertical and horizontal) have been made.

Standard	Adjustment Tool	Setting Range
$0 \pm 2.2 \text{ (mm)}$	Machine parameter:043	$-10.67 \sim -10.67 \text{ (mm)}$ (0.084 mm step)

1. Load letter paper to the first cassette.
2. Place a Test Chart on the document glass.
3. Make a copy of it in the 1st cassette with 100 % magnification.
4. Check that the difference of width A and the copy of A (A') meets the specifications.  
If the difference falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust the setting of Machine Parameter 043 to meet the specification.  
If the width A is shorter than the standard, decrease value.  
If the width A is longer than the standard, increase value.

FBS registration (side)

**Note:** This adjustment must be made after the adjustments of printer registration (top and side) of the first cassette and FBS zoom adjustments (vertical and horizontal) have been made.

Standard	Adjustment Tool	Setting Range
0 ± 2.6 (mm)	Machine parameter:040	– 5.2925 ~ 5.2925 (mm) (0.2112 mm step)

1. Load letter paper to the 1st cassette.
2. Place a Test Chart on the document glass.
3. Make a copy of it in the first cassette with 100 % magnification.
4. Check that the difference of width A and the copy of A (A') meets the specifications.  
If the difference falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3“3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust the setting of Machine Parameter 040 to meet the specification.  
If the width A is shorter than the standard, increase value.  
If the width A is longer than the standard, decrease value.

## ADF registration (top)

**Note:** This adjustment must be made after the adjustments of printer registration (top and side) of the first cassette and ADF zoom adjustments (vertical and horizontal) have been made.

Standard	Adjustment Tool	Setting Range
$0 \pm 2.2$ (mm)	Machine parameter:038	$-10.67 \sim 10.67$ (mm) (0.0847 mm step)

1. Load letter paper to the 1st cassette.
2. Place a Test Chart on the ADF.
3. Make a copy of it in the first cassette with 100 % magnification.
4. Check that the difference of width A and the copy of A (A') meets the specifications.  
If the difference falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See "3.2.1 Setting the machine parameters" on page 3-3.)
6. Adjust the setting of Machine Parameter 038 to meet the specification.  
If the width A is shorter than the standard, decrease value.  
If the width A is longer than the standard, increase value.

ADF registration (side)

**Note:** This adjustment must be made after the adjustments of printer registration (top and side) of the first cassette and ADF zoom adjustments (vertical and horizontal) have been made.

Standard	Adjustment Tool	Setting Range
0 ± 2.9 (mm)	Machine parameter:035	- 5.29 ~ 5.29 (mm) (0.2112 mm step)

1. Load letter paper to the 1st cassette.
2. Place a Test Chart on the ADF.
3. Make a copy of it in the 1st cassette with 100 % magnification.
4. Check that the difference of width A and the copy of A (A') meets the specifications.  
If the difference falls outside the specified range, perform the following steps to make the adjustment.
5. Enter Machine Parameter mode. (See “3.2.1 Setting the machine parameters” on page 3-3.)
6. Adjust the setting of Machine Parameter 035 to meet the specification.  
If the width A is shorter than the standard, decrease value.  
If the width A is longer than the standard, increase value.

### 5.3.5 Separation pressure adjustment

You can adjust within the -1 to +2 range.

1. Remove the Piece separator. (See "PIECE SEPARATOR" on page 5-15.)
2. Remove the Holder separator spring [1] and reattach it so that the pressure suits to documents.

### 5.3.6 FBS skew adjustment

When the image scanned with the document glass is skewed, you can adjust it by shifting a part.

1. Remove the Cover platen. (See “COVER PLATEN” on page 5-23.)
2. Remove the Cover top FBS. (See “CIS” on page 5-27.)
3. Remove one screw [1], lift up the Holder CIS [2] a little and remove the Guide bar [3].  
\* Make sure the Holder CIS [2] does not come off from the belt and remove the Guide bar [3].

4. Cut the Guide bar [3] pin from the root using nippers or a cutter.

5. Rotate the Guide bar [3] 180 degrees and install it.
6. Move the Holder CIS [2] to two Chassis FBS ribs [4].

7. Check to see the Holder CIS [2] is parallel to the rib [4], then install the screw [1].  
Check again to see if it is parallel after installing the screw.

When the skew is not improved after following the above instructions, continue to the following steps:

- After looking at the image, if the right upper is lacking than the left upper, tilt the Holder CIS [2] to clockwise direction.
- After looking at the image, if the left upper is chipped than the right upper, tilt to counter clockwise direction. (Skew adjustment of  $\pm 1\%$  can be made)

8. There is a possibility of the tip resist or the back end resist of the FBS or the ADF slipped out of place.  
Check and adjust the resist.

### 5.3.7 ADF skew adjustment

1. Remove the Cover Tx. (See “COVER TX” on page 5-17.)
2. Remove the Guide outer A. (See “ASSY ROLLER SEPARATOR” on page 5-18.)
3. Remove two screws [1] and remove two Springs P regist [2].
4. Remove one screw [3] then remove the Holder regist shaft [4].
5. Rotate the Holder regist shaft [4] 180 degrees and reinstall it.

6. If the adjustment is made in direction A: the copied image will be rotated counterclockwise in relation to the recording paper.

7. If the adjustment is made in direction B: the copied image will be rotated clockwise in relation to the recording paper.

### 5.3.8 HINGE height adjustment

1. Close the Cover platen and check the height of the Cover platen and the left side body.  
Looking from the left side, check to see if the lug [1] on the backside of the Cover platen and the lug [2] on the front side is in contact with the Cover top FBS [3]. If not in contact, adjust with the following method.

2. Open the Cover platen and adjust the Hinge screw.  
If the lug [1] on the backside is not in contact, turn the Hinge L screw [4] counterclockwise. (Loosen)  
If the lug [2] on the front side is not in contact, first turn the Hinge L screw [4] clockwise within the range the lug on the backside [1] comes in contact. (Enclose)  
Next, turn the Hinge R screw [5] clockwise. (Enclose)
