Download new firmware from the HP Web site	107
Transfer the new firmware to the product	107
Use FTP to upload the firmware through a browser	107
Use FTP to upgrade the firmware on a network connection using Microsoft Windows	108
Use HP Web Jetadmin to upgrade the firmware	108
Use MS-DOS commands to upgrade the firmware for USB connections	109
Upgrade the HP Jetdirect firmware	109
Set the real-time clock	111
Set the real-time clock	111

5 Theory of operation

Basic operation	114
-----------------------	-----

Sequence of operation	114
Formatter system	116
Sleep mode	116
Resolution	117
Input/output	117
CPU	117
Memory	117
Hard disk	117
Random-access memory	117
DIMM slot	118
Firmware	118
Nonvolatile memory	118
PJL overview	118
PML	118
Control panel	118
Engine-control system	119
DC controller	120
Solenoids	120
Switches	121
Sensors	122
Motors and fans	123
Fuser control	125
Fuser temperature-control circuit	127
Fuser over-temperature protection	128
Fuser-failure detection	129
Fuser identification	129
Fuser-life detection	130
Relay-failure detection	130
Low-voltage power supply	130
Overcurrent/overvoltage protection	131
Safety	131
Voltage detection	131
Sleep (powersave) mode	131
High-voltage power supply	131
Laser/scanner system	134
Image-formation system	136
Image-formation process	137
Step 1: Pre-exposure	138
Step 2: Primary charging	138
Step 3: Laser-beam exposure	139
Step 4: Development	139
Step 5: Primary transfer	140
Step 6: Secondary transfer	140
Step 7: Separation	141

Step 8: Fusing	141
Step 9: ITB cleaning	142
Step 10: Drum cleaning	142
Print cartridge	143
Imaging drum	144
Developing roller engagement and disengagement	146
Intermediate transfer belt (ITB) unit	147
Primary-transfer-roller engagement and disengagement	148
ITB unit detection	149
Secondary-transfer-roller unit	151
Calibration	151
Color-misregistration control	152
Image-stabilization control	153
Color-sensor control (duplex models only)	153
Gray-axis correction	155
Pickup, feed, and delivery system	156
Pickup-and-feed unit	159
Cassette pickup	161
Cassette paper-size and cassette-presence detection	161
Cassette lift operation	163
Cassette paper-level and paper-presence detection	164
Multifeed prevention	165
Multipurpose tray pickup	166
Multipurpose tray last-paper detection	167
Paper feed	168
Skew-feed prevention	169
Paper-type detection	170
Feed-speed control	171
Fusing and delivery unit	173
Loop control	173
Pressure-roller pressurization control	174
Duplexing unit	175
Duplexing reverse and feed control	176
Jam detection	177
Optional input trays	179
Paper-feeder pickup and feed operation	182

6 Removal and replacement

Removal and replacement strategy	186
Introduction	186
Required tools	187
Types of screws	187
Service approach	188

Before performing service	188
After performing service	188
Parts removal sequences	189
User-replaceable parts	190

Paper-handling problems	428
Jams	428

Common causes of jams	428
Jam locations	429
Clear jams	429
Jam sensors	430
AREA 1: Jams in the output bin	431
AREA 2 and 3: Jams in the fuser and transfer area	433
AREA 4: Jams in the duplex area	440
AREA 5: Jams in Tray 2 and the internal paper path	445
AREA 6: Clear jams in Tray 1	449
Clear jams when printing banners	452
AREA 7: Jams in optional Trays 3, 4, and 5	455
AREA 8: Jams in the optional finishing devices	460
Clear staple jams	466
Jam recovery	470
Product feeds multiple sheets	471
Product pulls from incorrect tray	471
Product feeds incorrect page size	471
Paper does not feed automatically	472
Paper does not feed from Tray 2, 3, 4, or 5	472
Transparencies or glossy paper will not feed	473
Envelopes jam or will not feed in the product	473
Output is curled or wrinkled	474
Product will not duplex or duplexes incorrectly	474
Solve image-quality problems	476
Example print quality problems	476
Repetitive defects ruler	476
Overhead transparency defects	478
Print quality problems associated with the environment	478
Print quality problems associated with jams	478
Optimize and improve image quality	478
Use supported paper	479
Calibrate the product	479
Specify the correct paper type	479
Clean the fuser	480
Respond to control panel error messages	481
Clean the registration second transfer assembly	482
Use manual print modes	484

Table 1-1 Product guides

Guide	Description
Getting Started Guide	Provides step-by-step instructions for installing and setting up the product.
User Guide	Provides detailed information for using the product and for problem solving. Available on the product CD or in Program Group if the software is installed on a computer.
HP Easy Printer Care	To check the product status and settings, and to view problem solving information and online documentation, use HP Easy Printer Care. You must have performed a recommended software installation in order to use HP Easy Printer Care. See the user guide for more information about software installation.
HP ToolboxFX (HP Color LaserJet CP6015 Series Printer)	To check the product status and settings, and to view problem solving information and online documentation, use HP ToolboxFX. You must have performed a recommended software installation in order to use HP ToolboxFX. See the user guide for more information about software installation.
Online Help	Provides information about options that are available in the printer drivers. To view a Help file, open the online Help through the printer driver.

Product comparison

Table 1-2 Product models

Model	Features
HP Color LaserJet CP6015n 	<ul style="list-style-type: none"> • 100-sheet multipurpose input tray (Tray 1) • 500-sheet input tray (Tray 2) • HP Jetdirect embedded print server for connecting to a 10/100Base-TX network • 512 megabytes (MB) of random access memory (RAM)
HP Color LaserJet CP6015dn 	<ul style="list-style-type: none"> • 100-sheet multipurpose input tray (Tray 1) • 500-sheet input tray (Tray 2) • HP Jetdirect embedded print server for connecting to a 10/100Base-TX network • 512 megabytes (MB) of random access memory (RAM) • Duplexer
HP Color LaserJet CP6015de 	<ul style="list-style-type: none"> • 100-sheet multipurpose input tray (Tray 1) • 500-sheet input tray (Trays 2) • HP Jetdirect embedded print server for connecting to a 10/100Base-TX network • 512 megabytes (MB) of random access memory (RAM) • Duplexer • Meets ENERGY STAR® guidelines, Version 1.0
HP Color LaserJet CP6015x 	<ul style="list-style-type: none"> • 100-sheet multipurpose input tray (Tray 1) • Two 500-sheet input trays (Trays 2 and 3) • HP Jetdirect embedded print server for connecting to a 10/100Base-TX network • 512 megabytes (MB) of random access memory (RAM) • Duplexer
HP Color LaserJet CP6015xh 	<ul style="list-style-type: none"> • 100-sheet multipurpose input tray (Tray 1) • Four 500-sheet input trays (Trays 2, 3, 4, and 5) • HP Jetdirect embedded print server for connecting to a 10/100Base-TX network • 512 megabytes (MB) of random access memory (RAM) • Duplexer • 40 gigabyte (GB) hard drive.

Product features

Table 1-3 Features

Speed and throughput	<ul style="list-style-type: none">• Print up to 40 pages per minute (ppm) on letter-size paper and 41 ppm on A4-size paper.• Less than 11 seconds to print the first page• Recommended maximum monthly print volume of 4,000 to 17,000 pages• A 835 megahertz (MHz) microprocessor• Banner printing• Duplex at speed
Resolution	<ul style="list-style-type: none">• 600 dots per inch (dpi) with Image Resolution Enhancement technology 4800 for optimum overall imaging• 1200 x 600 dpi for detailed line work and small text
Memory	<ul style="list-style-type: none">• Models HP Color LaserJet CP6015n, HP Color LaserJet CP6015dn, and HP Color LaserJet CP6015de have 512 MB of random-access memory (RAM), expandable to 1 gigabyte (GB) by using 200-pin small outline dual inline memory modules (SODIMM) that support 128, 256, or 512 MB of RAM. Models HP Color LaserJet CP6015x and HP Color LaserJet CP6015xh have 512 MB of RAM, expandable to 1 GB.• Memory Enhancement technology (MEt) automatically compresses data to use RAM more efficiently.
User interface	<ul style="list-style-type: none">• Four-line graphical display on the control panel• An embedded Web server to gain access to support and order supplies (for network-connected products)• HP Easy Printer Care software (a Web-based status and troubleshooting tool)• Internet-enabled supply-ordering capabilities through HP Easy Printer Care software and embedded Web server
Paper-handling	<ul style="list-style-type: none">• Input<ul style="list-style-type: none">◦ Tray 1 (multipurpose tray): A multipurpose tray for paper, transparencies, labels, banner media, envelopes, and other paper types. See Supported paper types on page 56 for a list of paper types. The tray holds up to 100 sheets of paper, 50 transparencies, or 10 envelopes. See Supported paper and print media sizes on page 52.◦ Trays 2, 3, 4, and 5: 500-sheet trays. These trays automatically detect common paper sizes and allow printing on custom-size paper. Tray 2 supports up to 279 x 432 mm (11 x 17 inches) and A3 paper sizes, and Trays 3, 4, and 5 support sizes up to 305 x 457 mm (12 x 18 inches), and SRA3. See Supported paper and print media sizes on page 52 for a list of supported paper sizes. For a list of supported paper types, see Supported paper types on page 56.◦ Duplex printing: Provides automatic two-sided printing (printing on both sides of the paper). Not available on the HP Color LaserJet CP6015n model. This model cannot be upgraded to auto duplex.

Table 1-3 Features (continued)

The paper size range for automatic duplex printing is 175 mm to 320 mm (6.9 to 12.6 inches) x 210 mm to 457 mm (8.3 to 18 inches). The media weight range is 60–220 g/m² (16–58 lb).

- **Output**

- **Standard output bin:** The standard output bin is located on the top of the product. This bin can hold up to 500 sheets of paper. The product has a sensor that indicates when the bin is full.
- **Optional 3-bin stapler/stacker:** Provides job separation in multiple output bins, convenient stapling (up to 50-sheet jobs), job offset capability, and additional output capacity. The stacker has three bins: a 100-sheet bin, a 500-sheet bin, and a 1000-sheet bin.
- **Optional booklet maker finisher:** Provides convenient stapling (up to 50-sheet jobs), saddle-stitching (up to 15-sheet booklets), single-sheet v-folding, job separation and offset capability, as well as additional output capacity. The booklet maker finisher has three bins: two 1000-sheet bins and one bin that can hold up to 25 saddle-stitched booklets.

NOTE: The output bin capacities are based on 75 g/m² (20 lb) paper. Heavier paper decreases the capacity.

Languages and fonts

- HP Printer Control Language (PCL) 6
- HP Universal Printer Driver (UPD) PCL 5
- HP UPD postscript (PS)
- Printer Management Language
- 93 internal TrueType fonts scalable in HP PCL drivers. 93 internal scalable fonts in HP Postscript level 3 emulation (Euro symbols built in). Additional font solutions available via third-party flash memory products.

Print cartridges/image drums (4 of each)

- Two-part toner/imaging system
- Black print cartridges print up to 16,500 pages; Cyan, Magenta, or Yellow print cartridges print up to 21,000 pages each. Based on ISO standards.
- Image drums print up to 35,000 pages at 5% coverage
- Authentic HP print cartridge detection
- Automatic toner strip remover

Supported operating systems

- Microsoft® Windows® 2000, Windows® XP, and Windows Vista™
- Macintosh OS X, V10.2.8 , V10.3, V10.4, V10.5, and later
- Novell NetWare
- Unix®
- Linux

Connectivity

- Local area network (LAN) connector (RJ-45) for the embedded HP Jetdirect print server
 - Two enhanced input/output (EIO) slots
 - USB 2.0 connection
-

Table 1-3 Features (continued)

Environmental features	<ul style="list-style-type: none">• Sleep setting saves energy• High content of recyclable components and materials
Security features	<ul style="list-style-type: none">• Secure Disk Erase• Security lock (optional)• Job retention• User PIN authentication for stored jobs• IPv6 security

Product walkaround

Front view

HP Color LaserJet CP6015n, HP Color LaserJet CP6015dn, and HP Color LaserJet CP6015de

1	Control-panel display
2	Output bin (holds approximately 500 sheets of paper)
3	Duplex switchback tray (HP Color LaserJet CP6015dn and HP Color LaserJet CP6015de only)
4	Right door (provides access for clearing paper jams and replacing parts)
5	Tray 1 (100-sheet multi-purpose tray)
6	Power connection
7	On/Off switch
8	Tray 2 (500-sheet input tray)
9	Front cover (provides access to the print cartridges and image drums)

HP Color LaserJet CP6015x

1	Lower right door
2	Tray 3 (500-sheet input tray)

HP Color LaserJet CP6015xh

1	Lower right door
2	Trays 3, 4, and 5 (500-sheet input trays)

Back view

1	Interface ports
2	Lock lever for additional input bins (HP Color LaserJet CP6015x and HP Color LaserJet CP6015xh only)

Interface ports

The product has up to 4 ports (2 standard) for connecting to a computer or a network. The ports are at the left, rear corner of the product.

1	Two EIO interface expansion slots
2	Access port for Kensington lock
3	USB 2.0 port
4	Network connection (embedded HP Jetdirect print server)

Serial number and model number location

The model number and serial number are listed on identification labels located on the rear of the product. The serial number contains information about the country/region of origin, the product version, production code, and the production number of the product.

Figure 1-1 Sample model and serial number label

Model name	Model number
HP Color LaserJet CP6015n	Q3931A
HP Color LaserJet CP6015dn	Q3932A
HP Color LaserJet CP6015de	Q3935A
HP Color LaserJet CP6015x	Q3933A
HP Color LaserJet CP6015xh	Q3934A

Supported operating systems

The product supports the following operating systems:

- Windows XP (32-bit and 64-bit)
- Windows Server 2003 (32-bit and 64-bit)
- Windows 2000
- Windows Vista
- Mac OS X V10.2.8, V10.3, V10.4 and later

2 Control panel

- [Use the control panel](#)
- [Control panel menus](#)
- [Menu hierarchy](#)
- [Show Me How menu](#)
- [Retrieve job menu](#)
- [Information menu](#)
- [Paper handling menu](#)
- [Configure device menu](#)
- [Diagnostics menu](#)
- [Service menu](#)

Use the control panel

The control panel has a text display that provides access to all product functions. Use the buttons and numeric keypad to control jobs and the product status. The lights indicate overall product status.

Control-panel layout

The control panel includes a text display, job-control buttons, a numeric keypad, and three light-emitting diode (LED) status lights.

1	Stop button	Halts the current job, presents a choice to resume or cancel the current job, clears paper from the product, and clears any continuable errors that are associated with the halted job. If the product is not printing a job, pressing Stop pauses the product.
2	Menu button	Opens and closes menus.
3	Display	Shows status information, menus, help information, and error messages.
4	Back arrow (←) button	Navigates backward in nested menus.
5	Up arrow (▲) button	Navigates menus and text, and increases the values of numerical items in the display.
6	Checkmark (✓) button	Makes selections, resumes printing after continuable errors, and overrides a non-HP print cartridge.
7	Down arrow (▼) button	Navigates menus and text, and decreases the values of numerical items in the display.
8	Numeric keypad	Allows you to type numeric values for PINs and other numeric values.
9	Help (?) button	Provides detailed information about product messages or menus.
10	Attention light	The Attention light indicates that the product has a condition that requires intervention. Examples include an empty paper tray or an error message on the display.
11	Data light	The Data light indicates that the product is receiving data.
12	Ready light	The Ready light indicates that the product is ready to begin processing any job.

Interpreting control panel indicator lights

Indicator	On	Off	Flashing
Ready (green)	Product is online (able to accept and process data).	Product is offline or is turned off.	Product is attempting to stop printing and go offline.
Data (green)	Processed data is present in the product, but more data is needed to complete the job.	Product is not processing or receiving data.	Product is processing and receiving data.
Attention (amber)	A critical error has occurred. Product requires attention.	No conditions exist that require attention.	An error has occurred. Product requires attention.

Control panel menus

You can perform most routine printing tasks from the computer through the printer driver or software application. This is the most convenient way to control the product, and will override the product control-panel settings. See the help files associated with the software.

You can also control the product by changing settings in the product's control panel. Use the control panel to access features not supported by the printer driver or software application, and to configure trays for paper size and type.

Getting started basics

- Enter the menus by pressing the **Menu** button.
- Select a menu item by using the checkmark button ✓.
- Use the up or down arrows ▲▼ to navigate through the menus. In addition to menu navigation, the up and down arrows can increase and decrease numerical value selections. Hold down the up or down arrows to scroll faster.
- The back button ↩ allows you to move back in menu selections as well as select numerical values when configuring the product.
- Exit all menus by pressing **Menu**.
- If no key is pressed for 60 seconds, the product returns to the **Ready** state.

Menu hierarchy

The following tables list the hierarchies of each menu.

Open the menus

Press **Menu**.

Press the up arrow ▲ or down arrow ▼ button to navigate the listings.

Press the checkmark button ✓ to select the appropriate option.

The following top-level menus are available:

- **SHOW ME HOW.** See [Show Me How menu on page 18](#) for more information.
- **RETRIEVE JOB.** See [Retrieve job menu on page 19](#) for more information.
- **INFORMATION.** See [Information menu on page 20](#) for more information.
- **PAPER HANDLING.** See [Paper handling menu on page 21](#) for more information.
- **CONFIGURE DEVICE.** See [Configure device menu on page 22](#) for more information.
- **DIAGNOSTICS.** See [Diagnostics menu on page 45](#) for more information.
- **SERVICE.** See [Service menu on page 49](#) for more information.

Show Me How menu

The **SHOW ME HOW** menu prints a page that provides more information about the product.

To display: Press **Menu**, and then select **SHOW ME HOW**.

Item	Explanation
PRINT HELP GUIDE	Prints a page that shows links to additional help on the Web.

Retrieve job menu

The **RETRIEVE JOB** menu allows you to view listings of all stored jobs.

To display: Press **Menu**, and then select **RETRIEVE JOB**.

Item	Sub-Item	Options	Description
USER <X>			Each user who has stored jobs is listed by name. Select the appropriate user name to see a list of stored jobs.
	ALL PRIVATE JOBS		This message is displayed if a user has stored jobs that require a PIN.
	<JOB NAME>		Each job is listed by name.
		PRINT	Select this option to print a stored job. When printing a private job, the user is prompted to enter a PIN.
		COPIES	The number of copies of the job to be printed. The default is 1.
		DELETE	Select this option to delete a stored job. When deleting a private job, the user is prompted to enter a PIN.

Information menu

Use the **INFORMATION** menu to access and print specific product information.

To display: press **Menu**, and then select **INFORMATION**.

Item	Description
PRINT MENU MAP	Prints the control-panel menu map, which shows the layout and current settings of the control-panel menu items.
PRINT CONFIGURATION	Prints the product configuration pages, which show the printer settings and installed accessories.
PRINT SUPPLIES STATUS PAGE	Prints the estimated remaining life for the supplies; reports statistics on total number of pages and jobs processed, serial number, page counts, and maintenance information.
SUPPLIES STATUS	Displays the status of the print cartridges, image drums, fuser kit, roller kit, and transfer kit in a scrollable list.
PRINT USAGE PAGE	Prints a count of all paper sizes that have passed through the product; lists whether they were simplex, duplex, monochrome, or color; and reports the page count.
PRINT COLOR USAGE JOB LOG	Prints the color-use statistics for the printer.
PRINT DEMO	Prints a demonstration page.
PRINT RGB SAMPLES	Prints color samples for different RGB values. Use the samples as a guide for matching printed colors.
PRINT CMYK SAMPLES	Prints color samples for different CMYK values. Use the samples as a guide for matching printed colors.
PRINT FILE DIRECTORY	Prints the name and directory of files stored in the product.
PRINT PCL FONT LIST	Prints the available PCL fonts.
PRINT PS FONT LIST	Prints the available PS fonts.

Paper handling menu

Use this menu to configure input trays by size and type. It is important to correctly configure the trays with this menu before you print for the first time.

To display: Press **Menu**, and then select **PAPER HANDLING**.

 **NOTE:** If you have used other HP LaserJet product models, you might be accustomed to configuring Tray 1 to **First** mode or **Cassette** mode. On HP Color LaserJet CP6015 Series printers, setting Tray 1 to **ANY SIZE** and **ANY TYPE** is equivalent to **First** mode. Setting Tray 1 to a setting other than **ANY SIZE** or **ANY TYPE** is equivalent to **Cassette** mode.

Menu item	Value	Description
TRAY 1 SIZE	A list of available sizes appears.	Allows you to configure the paper size for Tray 1. The default is ANY SIZE . See Supported paper and print media sizes on page 52 for a complete list of available sizes.
TRAY 1 TYPE	A list of available types appears.	Allows you to configure the paper type for Tray 1. The default is ANY TYPE . See Supported paper types on page 56 for a complete list of available types.
TRAY X SIZE X = 2 or optional 3, 4, or 5	A list of available sizes appears.	Allows you to configure the paper size for Tray 2 or optional Trays 3, 4, or 5. The default size is LETTER or A4 , depending on your country/region. The paper size is detected by the guides in the tray. See Supported paper and print media sizes on page 52 for a complete list of available sizes.
TRAY X TYPE X = 2 or optional 3, 4, or 5	A list of available types appears.	Allows you to configure the paper type for Tray 2 or optional Trays 3, 4, or 5. The default is PLAIN . See Supported paper types on page 56 for a complete list of available types.

Configure device menu

The **CONFIGURE DEVICE** menu allows you to change the default printing settings, adjust the print quality, change the system configuration and I/O options, and reset the default settings.

Printing menu

These settings affect only jobs without identified properties. Most jobs identify all of the properties and override the values set from this menu.

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **PRINTING**.

Menu item	Values	Description
COPIES	Range: 1 - 32000	Allows you to set the default number of copies for print jobs. The default number is 1 .
DEFAULT PAPER SIZE	A list of available sizes appears.	Allows you to set the default paper size.
DEFAULT CUSTOM PAPER SIZE		Allows you to set the default size for any custom print job. The default unit of measure is MILLIMETERS.
<ul style="list-style-type: none">• UNIT OF MEASURE• X DIMENSION• Y DIMENSION		
OVERRIDE A4/LETTER	NO YES	Allows you to set the product to print an A4 job on letter-size paper when no A4 paper is loaded. The default is YES .
MANUAL FEED	OFF ON	The default is OFF . Setting it to ON makes MANUAL FEED the default for jobs that do not select a tray. You can override this setting in the printer driver.
COURIER FONT	REGULAR DARK	Allows you to select a version of the Courier font. The default is REGULAR .
WIDE A4	NO YES	Allows you to change the printable area of A4 paper so that eighty 10-pitch characters may be printed on a single line. The default is NO .
PRINT PS ERRORS	OFF ON	Allows you to select to print PS error pages. The default is OFF .
PRINT PDF ERRORS	OFF ON	Allows you to select to print PDF error pages. The default is OFF .

PCL sub-menu

This menu configures settings for the printer control language.

To display: Press **Menu**, select **CONFIGURE DEVICE**, select **PRINTING**, and then select **PCL SUBMENU**.

Item	Description
FORM LENGTH	Sets vertical spacing from 5 to 128 lines for default paper size.
ORIENTATION	Allows you to select default page orientation to portrait or landscape.
FONT SOURCE	Selects the font source.
FONT NUMBER	The product assigns a number to each font and lists the numbers on the PCL font list. The range is 0 to 999.
FONT PITCH	Selects the font pitch. This item might not appear, depending on the font selected. The range is 0.44 to 99.99.
SYMBOL SET	Selects any one of several available symbol sets at the product control panel. A symbol set is a unique grouping of all the characters in a font. PC-8 or PC-850 is recommended for line-draw characters.
APPEND CR TO LF	Select YES to append a carriage return to each line-feed that is encountered in backward-compatible PCL jobs (pure text, no job control). Some environments indicate a new line by only the line-feed control code. Use this option to append the required carriage return to each line feed.
SUPPRESS BLANK PAGES	When generating your own PCL, extra form feeds are included that would cause a blank page to be printed. Select YES for form feeds to be ignored if the page is blank.
MEDIA SOURCE MAPPING	The PCL5 MEDIA SOURCE MAPPING command selects an input tray by a number that maps to the various available trays and feeders.

Print Quality menu

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **PRINT QUALITY**.

Item	Sub-item	Values	Description
ADJUST COLOR	HIGHLIGHTS	Range from +5 to -5 . Default is 0 .	Adjust the darkness or lightness of highlights on a printed page. Lower values represent lighter highlights on a printed page, and higher values represent darker highlights on a printed page.
	• CYAN DENSITY		
	• MAGNETA DENSITY		
	• YELLOW DENSITY		
	• BLACK DENSITY		
	MIDTONES	Range from +5 to -5 . Default is 0 .	Adjust the darkness or lightness of midtones on a printed page. Lower values represent lighter midtones on a printed page, and higher values represent darker midtones on a printed page.
	• CYAN DENSITY		
	• MAGNETA DENSITY		
	• YELLOW DENSITY		
	• BLACK DENSITY		
	SHADOWS	Range from +5 to -5 . Default is 0 .	Adjust the darkness or lightness of shadows on a printed page. Lower values represent lighter shadows on a printed page, and higher values represent darker shadows on a printed page.
	• CYAN DENSITY		
	• MAGNETA DENSITY		
• YELLOW DENSITY			
• BLACK DENSITY			
	RESTORE COLOR VALUES		Restore the color settings by resetting the density values of each color.
SET REGISTRATION			Setting the registration shifts the margin alignment to center the image on the page from top to bottom and from left to right. You can also align the image on the front with the image printed on the back.
	PRINT TEST PAGE		Print a test page for setting the registration.
	SOURCE	ALL TRAYS TRAY 1 TRAY 2 TRAY <X> (X = 3, 4, or 5)	Select the source input tray for printing the SET REGISTRATION test page.
	ADJUST TRAY <X>	Shift from -20 to 20 along the X or Y axes. 0 is the default.	Perform the alignment procedure for each tray.
	• X1 SHIFT		When it creates an image, the product scans across the page from side to side as the sheet feeds from top to bottom into the product.
	• X2 SHIFT		
	• Y SHIFT		The scan direction is referred to as X. X1 is the scan direction for the first side of a 2-sided page. X2 is the scan direction for the second side of a 2-sided page. The feed direction is referred to as Y.

Item	Sub-item	Values	Description
AUTO SENSE MODE	TRAY 1 SENSING	FULL SENSING EXPANDED SENSING TRANSPARENCY ONLY	<p>Sets the sensing option for Tray 1 for paper types using AUTO SENSE mode.</p> <p>When FULL SENSING is selected, the product recognizes plain paper, heavy paper, glossy paper, tough paper, and transparencies. The product's media sensor senses every page.</p> <p>When EXPANDED SENSING is selected, the product recognizes plain paper, heavy paper, glossy paper, tough paper, and transparencies. It senses the first page only other than transparencies for which is sensed every page. All trays (1-5) have this capability.</p> <p>When TRANSPARENCY ONLY is selected, the product recognizes only overhead transparency and non-overhead transparency types.</p>
	TRAY <X> SENSING	EXPANDED SENSING TRANSPARENCY ONLY	<p>Sets the sensing option for Tray 2 and optional Trays 3, 4, and 5 for paper types using AUTO SENSE mode.</p> <p>When EXPANDED SENSING is selected, the product recognizes plain paper, glossy paper, tough paper, and transparencies. It senses the first page only other than transparencies for which is sensed every page. All trays (1-5) have this capability.</p> <p>When TRANSPARENCY ONLY is selected, the product recognizes only overhead transparency and non-overhead transparency types.</p>
ADJUST PAPER TYPES			<p>Sometimes you may need to adjust the product for a particular paper type or environment in order to improve print quality.</p> <p>To override the factory-default print-mode settings for a specific paper type, select it and apply any of the three adjustments described below.</p> <p>In addition, you can map non-HP media types to a different print mode, although this is not recommended.</p>
<ul style="list-style-type: none"> • <TYPE> — List of paper types 			
	BEST GLOSS MODE	OFF (default) ON	<p>Turn this setting ON to maintain stable gloss mode performance. This setting decreases the print speed.</p>
	RESISTANCE MODE	NORMAL (default) UP DOWN	<p>NORMAL is the default setting.</p> <p>The UP setting raises the secondary transfer bias. Use this setting if you are seeing faded images or scattered toner on certain paper types. These problems might be worse on the second side of a printed duplex page. These problems occur more often in high-temperature and high-humidity environments, or with coated paper.</p> <p>Use the DOWN setting if you are using light weight or thin media in a low-temperature and low-humidity environment and you are experiencing highly mottled, distorted, or grainy images, or</p>

Item	Sub-item	Values	Description
			images with toner missing. This setting reduces the secondary transfer bias.
	DISCHARGE MODE	NORMAL (default) ON	Select ON if you are seeing clumps of toner or toner spatter on print jobs. These problems can occur in low-temperature and low-humidity environments, with lightweight or thin paper. The problems might happen more frequently with duplex jobs.
	PRINT MODES	AUTO SENSE MODE (default) NORMAL TRANSPARENCY MODE <ADDITIONAL PRINT MODES>	Allows you to change the print mode for non-HP paper types, which can affect print quality. When AUTO SENSE MODE is enabled, the product media sensor picks the best print mode.
RESTORE MODES			Use this feature to return all paper type-mode settings to the factory-default settings.
OPTIMIZE	PAPER CURL	NORMAL (default) REDUCED	To help reduce paper curl, set this option to REDUCED . This decreases full speed to 10 PPM (instead of 40 ppm) and 3/4 speed to 7.5 ppm (instead of 30 ppm).
	PRE-ROTATION	OFF (default) ON	Set this feature to ON if horizontal streaks appear on pages. Using this feature increases the warm-up time for the product.
	FUSER TEMP	NORMAL (default) ALTERNATE 1 ALTERNATE 2 ALTERNATE 3	Reduces the temperature of the fuser to prevent a hot offset. If you are seeing a faint image of the page repeated at the bottom of the page or on the following page, you should first make sure the Paper Type and Print Mode settings are correct for the type of paper you are using. If you continue to see ghost images on your print jobs, set the Fuser Temp feature to one of the Alternate settings. Try the Alternate 1 setting first and see if it solves the problem. If you continue to see the problem, try Alternate 2 and then Alternate 3. With the Alternate 2 and Alternate 3 settings you may see an extra delay between jobs.
	TRAY 1	NORMAL (default) ALTERNATE	If you are seeing marks on the back side of the paper when printing from Tray 1, set the mode to ALTERNATE . This increases the frequency of the cleaning cycle.
	GLOSS MODE	NORMAL (default) HIGH	Chosen when stable high gloss is required. Set this feature to HIGH for glossy print jobs, such as photos, if you notice the gloss finish decreasing after the first page is printed. This setting reduces the performance for all paper types.
	LIGHT MEDIA	AUTO (default) ON	Prevents the fuser from wrapping with light paper. Set this feature to ON if you are frequently seeing Fuser Delay Jam or Fuser Wrap Jam messages,

Item	Sub-item	Values	Description
			especially when printing on lightweight paper or on jobs with heavy toner coverage.
	MEDIA TEMP	NORMAL (default) REDUCED	Set this feature to REDUCED if you are having problems with paper sticking together in the output bin.
	ENVIRONMENT	OFF (default) ON	Optimizes performance in extreme low-temperature environments. Set this feature to ON if the product is operating in a low-temperature environment and you are having problems with print quality such as blisters in the printed image.
	LINE VOLTAGE	OFF (default) ON	Optimizes performance in low-voltage conditions. Set this feature to ON if the product is operating in a low-voltage environment and you are having problems with print quality such as blisters in the printed image.
	CLEANING FREQUENCY	NORMAL (default) ALTERNATE	Set this feature to ALTERNATE if you are seeing defects in the printed output that repeat at 38 mm (1.5 inch) intervals. This feature increases the frequency at which the C roller is cleaned. Setting this feature to Alternate might also reduce printing speed and increase the frequency of consumable replacement.
	D-BLADE BIAS	NORMAL (default) ALTERNATE	Set this feature to ALTERNATE if you are seeing short white vertical lines in the printed output. The Alternate setting might also cause dark spots in the printed output, so be sure to test this setting on a few print jobs.
	WASTE BIN	NORMAL (default) ALTERNATE	Try setting this feature to ALTERNATE if you are seeing lengthwise toner streaks in your printed output, especially in jobs with low toner coverage.
	BACKGROUND	OFF (default) ON	Select ON if pages are printing with a shaded background. Using this feature can reduce gloss levels.
	HEAVY MODE	30 PPM (default) 24 PPM	The default setting is 30 PPM . Select the 24 PPM option to reduce the speed and improve fusing on heavy paper.
	TRACKING CONTROL	ON (default) OFF	Improves color stability by adjusting the bias voltage. This setting should remain ON .
	RESTORE OPTIMIZE		Use this feature to return all the settings in the Optimize menu to the factory-default values.
	QUICK CALIBRATE NOW		Performs a partial product calibration.
	FULL CALIBRATE NOW		Performs all product calibrations.

Item	Sub-item	Values	Description
CALIBRATE NEUTRALS	CALIBRATION SOURCE	TRAY 1 <SIZE/TYPE> TRAY 2 <SIZE/TYPE> TRAY <X> <SIZE/TYPE>	<p>This menu item affects the toner mixture in order to optimize neutral colors for color print jobs. A special sensor measures color on three specially printed pages from a selected tray and adjusts the color parameters. This corrects for too much or too little cyan, magenta, yellow, or black toner, which improves color consistency.</p> <p>Choose the source tray, paper type, and paper size for the calibration page.</p> <p>To run calibration on different paper types, load the desired paper type in a tray, select this menu item, and then specify the loaded tray.</p>
	CALIBRATION TYPE	<TYPE>	This item is available only if the selected tray type is set to ANY TYPE.
	CALIBRATION SIZE	<SIZE>	This item is available only if the selected tray size is set to ANY SIZE or ANY CUSTOM.
	UNIT OF MEASURE	INCHES MILLIMETERS	The unit of measure to describe a custom paper size. This item is available only if the selected paper size is set to CUSTOM.
	X DIMENSION		The X dimension of the custom paper size. This item is available only if the selected paper size is set to CUSTOM.
	Y DIMENSION		The Y dimension of the custom paper size. This item is available only if the selected paper size is set to CUSTOM.
AUTO CALIBRATE NEUTRALS		ON OFF	This menu item controls whether the CALIBRATE NEUTRALS process is performed automatically. If you select ON , the product performs the calibration automatically whenever environmental conditions indicate that it is required. Three calibration pages are printed. You can recycle these pages when the calibration is complete.
RESOLUTION		Image REt 4800 (default) 1200x600 dpi	Sets the resolution at which the product prints. The default value is Image REt 4800. Try the 1200x600 dpi setting to improve printing for detailed line work or small text.
EDGE CONTROL		OFF LIGHT NORMAL (default) MAXIMUM	<p>The Edge Control setting determines how edges are rendered. Edge control has two components: adaptive halftoning and trapping. Adaptive halftoning increases edge sharpness. Trapping reduces the effect of color-plane misregistration by overlapping the edges of adjacent objects slightly.</p> <ul style="list-style-type: none"> • OFF turns off both trapping and adaptive halftoning. • LIGHT sets trapping at a minimal level, and adaptive halftoning is on.

Item	Sub-item	Values	Description
			<ul style="list-style-type: none"> NORMAL is the default trapping setting. Trapping is at a medium level and adaptive halftoning is on. MAXIMUM is the most aggressive trapping setting. Adaptive halftoning is on.
PROCESS CLEANING PAGE			Allows you to create and process a cleaning page for cleaning excess toner off the pressure roller in the fuser. When the cleaning process runs, a blank page is printed. This page can be discarded.

System setup menu

Use the **SYSTEM SETUP** menu to change product- configuration defaults such as sleep mode, product personality (language), and jam recovery.

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **SYSTEM SETUP**.

Item	Sub-item	Values	Description
DATE/TIME	DATE	----/[MMM]/[YY] YEAR= [YYYY]/--[DD] MONTH= [YYYY]/[MMM]/-- DAY=	Allows you to set the correct date.
	DATE FORMAT	YYYY/MMM/DD MMM/DD/YYYY DD/MMM/YYYY	Allows you to choose the order in which the year, month, and day appear in the date.
	TIME	--[MM] [PM] HOUR= [HH]:-- [PM] MINUTE= [HH]:[MM] -- AM/PM=	Allows you to select from various configurations for the TIME format. Different wizards appear depending on the TIME FORMAT selected.
	TIME FORMAT	12 HOUR 24 HOUR	Allows you to select 12 HOUR or 24 HOUR format.
JOB STORAGE LIMIT		Continuous value Range: 1–100 Default = 32	Allows you to specify the number of Quick Copy jobs that can be stored on the product. The default value is 32. The maximum allowed value is 100.
JOB HELD TIMEOUT		OFF 4 HOURS 1 DAY 1 WEEK	Allows you to set the amount of time that Quick Copy jobs are kept before being automatically deleted from the queue. This menu item only appears when a hard disk is installed. The default value is OFF .
SHOW ADDRESS		AUTO OFF	This item determines whether the product's IP address is shown on the display with the READY message. The default is OFF .

Item	Sub-item	Values	Description
RESTRICT COLOR USE		ENABLE COLOR	Disables or restricts color use. The default is ENABLE COLOR . To use the COLOR IF ALLOWED setting, set up user permissions through the embedded Web server, HP Easy Printer Care, or Web Jetadmin. See Embedded Web server on page 78 , HP Easy Printer Care on page 75 , or Use HP Web Jetadmin software on page 81 .
		COLOR IF ALLOWED	
		DISABLE COLOR	
COLOR/BLACK MIX		AUTO	This menu item establishes how the product switches from color to monochrome (black and white) mode for maximum performance and print cartridge life. AUTO resets the product to the factory default setting. The default is AUTO . Select MOSTLY COLOR PAGES if nearly all of your print jobs are color with high page coverage. Select MOSTLY BLACK PAGES if you print mostly monochrome print jobs, or a combination of color and monochrome print jobs.
		MOSTLY COLOR PAGES	
		MOSTLY BLACK PAGES	
TRAY BEHAVIOR			Use this menu to control how the product handles paper trays and related prompts at the control panel.
	USE REQUESTED TRAY	EXCLUSIVELY FIRST	USE REQUESTED TRAY handles jobs that have specified a specific input tray. Two options are available: <ul style="list-style-type: none"> ● EXCLUSIVELY: The device never selects a different tray when the user has indicated that a specific tray should be used, even if that tray is empty. This is the factory default setting. ● FIRST: The device can pull from another tray if the specified tray is empty, even though the user specifically indicated a tray for the job.
	MANUALLY FEED PROMPT	ALWAYS UNLESS LOADED	This option controls whether a manual feed message should appear when the type or size for a job does not match the specified tray and the device pulls from the

Item	Sub-item	Values	Description
			<p>multipurpose tray instead. Two options are available:</p> <ul style="list-style-type: none"> ● ALWAYS: A prompt always appears before using the multipurpose tray. This is the factory default setting. ● UNLESS LOADED: A message appears only if the multipurpose tray is empty.
	PS DEFER MEDIA	ENABLE DISABLED	<p>This option affects how paper is handled when printing from an Adobe PS print driver.</p> <ul style="list-style-type: none"> ● ENABLED uses HP's paper handling model. ● DISABLED uses the Adobe PS paper handling model.
	SIZE/TYPE PROMPT	DISPLAY DO NOT DISPLAY	<p>This option controls whether the tray configuration message appears whenever a tray is closed. Two options are available:</p> <ul style="list-style-type: none"> ● DISPLAY: This option shows the tray configuration message when a tray is closed. You can configure the tray settings directly from this message. ● DO NOT DISPLAY: This option prevents the tray configuration message from automatically appearing.
	USE ANOTHER TRAY	ENABLE DISABLE	<p>This option turns on or off the control-panel prompt to select another tray when the specified tray is empty. Two options are available:</p> <ul style="list-style-type: none"> ● ENABLE: When this option is selected, the user is prompted either to add paper to the selected tray or to choose a different tray. This is the factory default setting. ● DISABLE: When this option is selected, the user is not given the option of selecting a different tray. The device prompts the user to add paper to the tray that was initially selected.
	DUPLEX BLANK PAGES	AUTO YES	<p>This option controls how the device handles two-sided jobs</p>

Item	Sub-item	Values	Description
			<p>(duplexing). Two options are available:</p> <ul style="list-style-type: none"> • AUTO enables Smart Duplexing, which instructs the device not to process both sides if the second side is blank. This can improve print speed. • YES disables Smart Duplexing and forces the duplexer to flip the sheet of paper even if it is printed on only one side. This might be preferable for certain jobs that use paper types such as letterhead or prepunched paper.
	IMAGE ROTATION	LEFT TO RIGHT RIGHT TO LEFT ALTERNATE	This option allows an image from an optional output accessory to be rotated 180 degrees, so that staples can be placed in the upper corner (usually narrow format devices).
SLEEP DELAY		1 MINUTE 15 MINUTES 30 MINUTES 45 MINUTES 60 MINUTES 90 MINUTES 2 HOURS 4 HOURS	Reduces power consumption when the product has been inactive for the selected period. The default is 60 MINUTES .
WAKE TIME	<DAY OF THE WEEK>	OFF CUSTOM	Allows you to configure the daily wake time for the product to avoid warm-up or calibration time. Select a day of the week and then select CUSTOM . Set the wake time for that day, and then choose whether the wake time should be applied to all days of the week.
OPTIMUM SPEED/ENERGY USAGE		FASTER FIRST PAGE SAVE ENERGY SAVE MOST ENERGY	<p>Sets the fuser cooling behavior.</p> <p>If FASTER FIRST PAGE is selected, power to the fuser is not turned off between jobs. This causes no impact to the first-page-out time.</p> <p>If SAVE ENERGY is selected, power to the fuser is turned off after 55 minutes of idle time. This</p>

Item	Sub-item	Values	Description
			causes minimal impact to the first-page-out time. If SAVE MOST ENERGY is selected, power to the fuser is turned off after each job. This causes the most impact to the first-page-out time.
DISPLAY BRIGHTNESS		Range is 1 through 10.	Sets the brightness of the control panel display. The default is 5 .
PERSONALITY		AUTO PCL PDF PS	Sets the default personality to automatic switching, PCL, PDF, or PS modes. The default is AUTO .
CLEARABLE WARNINGS		JOB ON	Sets whether a warning is cleared on the control panel or when another job is sent. The default is ON .
AUTO CONTINUE		OFF ON	Determines product behavior when the system generates an Auto Continuable error. The default is ON .
REPLACE SUPPLIES		STOP AT LOW STOP AT OUT OVERRIDE AT OUT 1 OVERRIDE AT OUT 2	Sets product behavior when a cartridge is low. The default is STOP AT LOW . This option allows the product to continue printing until a color supply is exhausted. When the product is set to STOP AT OUT , printing pauses until the color supply is replaced. The product displays an "Order supplies" message when a supply is running low and a "Replace supplies" message when a supply has been depleted. To ensure optimal print quality, HP recommends replacing a supply when the "Replace supplies" message is displayed. Replacing the supply at this point can help prevent waste of media or other supplies when one supply begins producing poor print quality. The Override options allow the product to continue using color supplies, such as print cartridges, the image drum, the image transfer kit, the roller kit, and the image fuser kit, that have reached their recommended replacement points.

Item	Sub-item	Values	Description
			<p>CAUTION: Using an Override option may result in unsatisfactory print quality and unavailability of certain features (such as toner remaining information).</p> <p>CAUTION: All print defects or supply failures incurred when an HP supply is used in Override mode are not considered defects in materials or workmanship under the HP Print Cartridge and Image Drum Limited Warranty Statement. For Warranty information, see Print cartridge and image drum limited warranty statement on page 981.</p> <p>The Override options can be enabled or disabled at any time and do not have to be re-enabled for each color supply. The product automatically continues printing when a color supply reaches its recommended replacement point. The message, "Replace supply Override in use," displays on the control panel while a color supply is used in Override mode. When the color supply is replaced with a new one, Override mode is deactivated until another color supply reaches its recommended replacement point.</p> <p>VERRIDE AT OUT 1 allows printing to continue when a color supply is out, but displays a warning. Printing stops if there is a risk of damage to product components.</p> <p>VERRIDE AT OUT 2 allows printing to continue when the color supply is out, but displays a warning message. Printing is not stopped even if there is a risk of damage to product components.</p>
SUPPLY INFORMATION	PAGES REMAINING	ON	
	ORDER MESSAGES	OFF	
	LEVEL GAUGE		
ORDER AT		RANGE=0-100%	The user can set the supply percentage remaining at which the ORDER AT message appears. The default is 5%.
COLOR SUPPLY OUT		STOP AUTOCONTINUE BLACK	Sets the COLOR SUPPLY OUT product behavior when a color supply is empty. When the product is set to AUTOCONTINUE BLACK , the product continues

Item	Sub-item	Values	Description
			printing with black toner only. The default is STOP .
JAM RECOVERY		AUTO OFF ON	Sets whether the product will attempt to reprint pages after a jam. The default is AUTO .
LANGUAGE		A listing of available languages appears.	Sets the default language. The default language is ENGLISH .

Output Setup menu

This menu and associated sub-items displays only when an optional output accessory is attached to the product.

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **OUTPUT SETUP**.

Item	Sub-item	Values	Description
OUTPUT SETUP			This menu appears when the HP 3-bin Stapler/Stacker Accessory or the HP Booklet Maker/Finisher Accessory is attached.
MULTIFUNC FINISHER or MBM-3 BIN STAPLER	OPERATION MODE	MAILBOX STACKER	Allows you to set the default operation mode. MAILBOX assigns a user or group of users to each output bin. STACKER treats all of the output bins as a single large bin. When one bin gets full, jobs are automatically routed to the next bin.
	STAPLES	NONE ONE LEFT ANGLED ONE RIGHT ANGLED TWO LEFT TWO RIGHT TWO TOP	Sets the default staple selection for documents sent to the device when no staple value is specified.
	STAPLES OUT	STOP CONTINUE	Sets the default behavior when a job specifies stapling and the stapler is out of staples. STOP stops printing if the stapler runs out of staples. CONTINUE allows a job to continue printing even when the device is out of staples.
	OFFSET	OFF ON	Turns the job offset feature on or off. When job offset is on, each copy of a job is shifted to one side in the output bin in order to keep

Item	Sub-item	Values	Description
			each copy separate from the others.
	A4/LETTER STAPLE	NORMAL ALTERNATE 1 ALTERNATE 2	<p>Controls the speed of the print engine to prevent paper jams by using the stapler buffer.</p> <p>With the NORMAL, the engine speed is normal, and the stapler buffer is used.</p> <p>If the ALTERNATE 1 setting is enabled, and the engine is in Autosense Mode, the engine slows down to prevent jams. If the product is NOT in Autosense Mode, the engine performs at normal speed, using the stapler buffer.</p> <p>If the ALTERNATE 2 setting is enabled, the engine always slows down to prevent jams, never using the stapler buffer.</p>

I/O menu

Items on the I/O (input/output) menu affect the communication between the product and the computer. If the product contains an HP Jetdirect print server, you can configure basic networking parameters by using this submenu. You can also configure these and other parameters through HP Web Jetadmin or the embedded Web server.

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **I/O**.

Item	Sub-item	Values	Description
I/O TIMEOUT		15 SECONDS Range: 5 - 300	Allows you to set the product I/O TIMEOUT in seconds. Use this setting to adjust timeout for the best performance. If data from other ports appears in the middle of your print job, increase the timeout value.

EMBEDDED JETDIRECT MENU See the next table for a list of options.

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus

Item	Sub-item	Values	Description
TCP/IP	ENABLE	OFF	OFF: Disable the TCP/IP protocol.
		ON	ON*: Enable the TCP/IP protocol.
	HOST NAME		An alphanumeric string, up to 32 characters, used to identify the product. This name is listed on the HP Jetdirect configuration page. The default host name is NPIxxxxxx, where xxxxxx is the last six digits of the LAN hardware (MAC) address.
	IPV4 SETTINGS	CONFIG METHOD	Specifies the method that TCP/IPv4 parameters will be configured on the HP Jetdirect print server.
		<ul style="list-style-type: none"> ● BOOTP ● DHCP ● AUTO IP ● MANUAL 	<p>Use BootP (Bootstrap Protocol) for automatic configuration from a BootP server.</p> <p>Use DHCP (Dynamic Host Configuration Protocol) for automatic configuration from a DHCPv4 server. If selected and a DHCP lease exists, DHCP RELEASE and DHCP RENEW menus are available to set DHCP lease options.</p> <p>Use Auto IP for automatic link-local IPv4 addressing. An address in the form 169.254.x.x is assigned automatically.</p> <p>Use the MANUAL SETTINGS menu to configure TCP/IPv4 parameters.</p>
		DEFAULT IP	Specify the IP address to default to when the print server is unable to obtain an IP address from the network during a forced TCP/IP reconfiguration (for example, when manually configured to use BootP or DHCP).
		<ul style="list-style-type: none"> ● AUTO IP ● LEGACY 	AUTO IP: A link-local IP address 169.254.x.x is set.

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus (continued)

Item	Sub-item	Values	Description
			LEGACY: The address 192.0.0.192 is set, consistent with older HP Jetdirect products.
		DHCP RELEASE	This menu appears if CONFIG METHOD was set to DHCP and a DHCP lease for the print server exists.
		<ul style="list-style-type: none"> • NO • YES 	<p>NO*: The current DHCP lease is saved.</p> <p>YES: The current DHCP lease and the leased IP address are released.</p>
		DHCP RENEW	This menu appears if CONFIG METHOD was set to DHCP and a DHCP lease for the print server exists.
		<ul style="list-style-type: none"> • NO • YES 	<p>NO*: The print server does not request to renew the DHCP lease.</p> <p>YES: The print server requests to renew the current DHCP lease.</p>
		MANUAL SETTINGS	(Available only if CONFIG METHOD is set to MANUAL .) Configure parameters directly from the printer control panel:
		<ul style="list-style-type: none"> • IP ADDRESS • SUBNET MASK • SYSLOG SERVER • DEFAULT GATEWAY • IDLE TIMEOUT 	<p>IP ADDRESS: The unique IP address of the printer, where n is a value from 0 to 255.</p> <p>SUBNET MASK: The subnet mask for the printer, where m is a value from 0 to 255.</p> <p>SYSLOG SERVER: The IP address of the syslog server used to receive and log syslog messages.</p> <p>DEFAULT GATEWAY: The IP address of the gateway or router used for communications with other networks.</p> <p>IDLE TIMEOUT: The time period, in seconds, after which an idle TCP print data connection is closed (default is 270 seconds, 0 disables the timeout).</p>
		PRIMARY DNS	Specify the IP address (n.n.n.n) of a Primary DNS Server.
		SECONDARY DNS	Specify the IP address (n.n.n.n) of a Secondary Domain Name System (DNS) Server.
	IPv6 SETTINGS	ENABLE	Use this item to enable or disable IPv6 operation on the print server.
		<ul style="list-style-type: none"> • OFF • ON 	<p>OFF*: IPv6 is disabled.</p> <p>ON: IPv6 is enabled.</p>
		ADDRESS	Use this item to manually configure an IPv6 address.
		<ul style="list-style-type: none"> • MANUAL SETTINGS • ADDRESS 	<p>Use the MANUAL SETTINGS menu to enable and manually configure a TCP/ IPv6 address.</p> <p>Select ENABLE and choose ON to enable manual configuration, or OFF to disable manual configuration.</p> <p>ADDRESS: Use this item to type a 32 hexadecimal digit IPv6 node address that uses the colon hexadecimal syntax.</p>

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus (continued)

Item	Sub-item	Values	Description
		DHCPV6 POLICY <ul style="list-style-type: none"> ● ROUTER SPECIFIED ● ROUTER UNAVAILABLE ● ALWAYS 	<p>ROUTER SPECIFIED: The stateful auto-configuration method to be used by the print server is determined by a router. The router specifies whether the print server obtains its address, its configuration information, or both from a DHCPv6 server.</p> <p>ROUTER UNAVAILABLE: If a router is not available, the print server should attempt to obtain its stateful configuration from a DHCPv6 server.</p> <p>ALWAYS: Whether or not a router is available, the print server always attempts to obtain its stateful configuration from a DHCPv6 server.</p>
		PRIMARY DNS	Use this item to specify an IPv6 address for a primary DNS server that the print server should use.
		SECONDARY DNS	Use this item to specify an IPv6 address for a secondary DNS server that the print server should use.
	PROXY SERVER		<p>Specifies the proxy server to be used by embedded applications in the product. A proxy server is typically used by network clients for Internet access. It caches Web pages, and provides a degree of Internet security, for those clients.</p> <p>To specify a proxy server, enter its IPv4 address or fully-qualified domain name. The name can be up to 255 octets.</p> <p>For some networks, you might need to contact your Internet Service Provider (ISP) for the proxy server address.</p>
	PROXY PORT		Type the port number used by the proxy server for client support. The port number identifies the port reserved for proxy activity on your network, and can be a value from 0 to 65535.
IPX/SPX	ENABLE	OFF ON	<p>OFF: Disable the IPX/SPX protocol.</p> <p>ON*: Enable the IPX/SPX protocol.</p>
	FRAME TYPE	AUTO EN_8023 EN_II EN_8022 EN_SNAP	<p>Selects the frame-type setting for your network.</p> <p>AUTO: Automatically sets and limits the frame type to the first one detected.</p> <p>EN_8023, EN_II, EN_8022, and EN_SNAP are frame-type selections for Ethernet networks</p>
APPLETALK	ENABLE	OFF ON	<p>OFF: Disable the AppleTalk protocol.</p> <p>ON*: Enable the AppleTalk protocol.</p>
DLC//LLC	ENABLE	OFF ON	<p>OFF: Disable the DLC/LLC protocol.</p> <p>ON*: Enable the DLC/LLC protocol.</p>
SECURITY	PRINT SEC PAGE	YES NO	<p>YES: Prints a page that contains the current security settings on the HP Jetdirect print server.</p> <p>NO*: A security settings page is not printed.</p>

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus (continued)

Item	Sub-item	Values	Description
	SECURE WEB	HTTPS REQUIRED HTTP/HTTPS OPTIONAL	<p>For configuration management, specify whether the embedded Web server will accept communications using HTTPS (Secure HTTP) only, or both HTTP and HTTPS.</p> <p>HTTPS REQUIRED: For secure, encrypted communications, only HTTPS access is accepted. The print server will appear as a secure site.</p> <p>HTTP/HTTPS OPTIONAL: Access using either HTTP or HTTPS is permitted.</p>
	IPSEC	KEEP DISABLE	<p>Specify the IPsec or Firewall status on the print server.</p> <p>KEEP: IPsec/Firewall status remains the same as currently configured.</p> <p>DISABLE: IPsec/Firewall operation on the print server is disabled.</p>
	RESET SECURITY	NO YES	<p>Specify whether the current security settings on the print server will be saved or reset to factory defaults.</p> <p>NO*: The current security settings are maintained.</p> <p>YES: Security settings are reset to factory defaults.</p>
DIAGNOSTICS	EMBEDDED TESTS	EXECUTE	<p>This menu provides tests to help diagnose network hardware or TCP/IP network connection problems.</p> <p>Embedded tests help to identify whether a network fault is internal or external to the product. Use an embedded test to check hardware and communication paths on the print server. After you select and enable a test and set the execution time, you must select EXECUTE to initiate the test.</p> <p>Depending on the execution time, a selected test runs continuously until either the product is turned off, or an error occurs and a diagnostic page is printed.</p>
		LAN HW TEST	<p>CAUTION: Running this embedded test will erase your TCP/IP configuration.</p> <p>This test performs an internal loopback test. An internal loopback test will send and receive packets only on the internal network hardware. There are no external transmissions on your network.</p> <p>Select YES to choose this test, or NO to not choose it.</p>
		HTTP TEST	<p>This test checks operation of HTTP by retrieving predefined pages from the product, and tests the embedded Web server.</p> <p>Select YES to choose this test, or NO to not choose it.</p>
		SNMP TEST	<p>This test checks operation of SNMP communications by accessing predefined SNMP objects on the product.</p> <p>Select YES to choose this test, or NO to not choose it.</p>
		DATA PATH TEST	<p>This test helps to identify data path and corruption problems on an HP postscript level 3 emulation</p>

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus (continued)

Item	Sub-item	Values	Description
			product. It sends a predefined PS file to the product, However, the test is paperless; the file will not print. Select YES to choose this test, or NO to not choose it.
		SELECT ALL TESTS	Select this item to run all the embedded tests. Select YES to run all tests, or select NO to not run all tests.
		EXECUTION TIME [H]	Use this item to specify the length of time (in hours) that an embedded test will be run. You can select a value from 1 to 60 hours. If you select zero (0), the test runs indefinitely until an error occurs or the product is turned off. Data gathered from the HTTP, SNMP, and Data Path tests is printed after the tests have completed.
		EXECUTE	NO* : Do not initiate the selected tests. YES : Initiate the selected tests.
	PING TEST		This test is used to check network communications. This test sends link-level packets to a remote network host, then waits for an appropriate response.
		DEST TYPE	Specify whether the target device is an IPv4 or IPv6 node.
		DEST IPV4	Type the IPv4 address.
		DEST IPV6	Type the IPv6 address.
		PACKET SIZE	Specify the size of each packet, in bytes, to be sent to the remote host. The minimum is 64 (default) and the maximum is 2048.
		TIMEOUT	Specify the length of time, in seconds, to wait for a response from the remote host. The default is 1 and the maximum is 100.
		COUNT	Specify the number of ping test packets to send for this test. Select a value from 1 to 100. To configure the test to run continuously, select 0.
		PRINT RESULTS	If the ping test was not set for continuous operation, you can choose to print the test results. Select YES to print results. If you select NO (default), results are not printed.
		EXECUTE	Specify whether to initiate the ping test. Select YES to initiate the test, or NO to not run the test.
	PING RESULTS		Use this item to view the ping test status and results using the control panel display.
		PACKETS SENT	Shows the number of packets (0 - 65535) sent to the remote host since the most recent test was initiated or completed.
		PACKETS RECEIVED	Shows the number of packets (0 - 65535) received from the remote host since the most recent test was initiated or completed.

Table 2-1 Embedded Jetdirect and EIO <X> Jetdirect menus (continued)

Item	Sub-item	Values	Description
		PERCENT LOST	Shows the percent of ping test packets that were sent with no response from the remote host since the most recent test was initiated or completed.
		RTT MIN	Shows the minimum detected roundtrip- time (RTT), from 0 to 4096 milliseconds, for packet transmission and response.
		RTT MAX	Shows the maximum detected roundtrip- time (RTT), from 0 to 4096 milliseconds, for packet transmission and response.
		RTT AVERAGE	Shows the average round-trip-time (RTT), from 0 to 4096 milliseconds, for packet transmission and response.
		PING IN PROGRESS	Shows whether a ping test is in progress. YES indicates a test in progress, and NO indicates that a test completed or was not run.
		REFRESH	When viewing the ping test results, this item updates the ping test data with current results. Select YES to update the data, or NO to maintain the existing data. However, a refresh automatically occurs when the menu times out or you manually return to the main menu.
LINK SPEED		AUTO 10T HALF: 10 Mbps, half-duplex operation. 10T FULL: 10 Mbps, full-duplex operation. 100TX HALF: 100 Mbps, half-duplex operation. 100TX FULL: 100 Mbps, full-duplex operation. 100TX AUTO: Limits auto-negotiation to a maximum link speed of 100 Mbps. 1000TX FULL: 1000 Mbps, full-duplex operation.	<p>The link speed and communication mode of the print server must match the network. The available settings depend on the product and installed print server. Select one of the following link configuration settings:</p> <p>CAUTION: If you change the link setting, network communications with the print server and network device might be lost.</p> <p>AUTO*: The print server uses auto-negotiation to configure itself with the highest link speed and communication mode allowed. If auto-negotiation fails, either 100TX HALF or 10TX HALF is set depending on the detected link speed of the hub/switch port. (A 1000T half-duplex selection is not supported.)</p>
PRINT PROTOCOLS			Use this item to print a page that lists the configuration of the following protocols: IPX/SPX, Novell NetWare, AppleTalk, DLC/LLC.

Resets menu

The **RESETS** menu allows you to reset factory settings, disable and enable sleep mode, and update the product after new supplies are installed.

To display: Press **Menu**, select **CONFIGURE DEVICE**, and then select **RESETS**.

Item	Values	Description
RESTORE FACTORY SETTINGS		Allows you to clear the page buffer, remove all perishable personality data, reset the printing environment, and return all default settings to factory defaults.
RESET CALIBRATION		Resets calibration values on the formatter.
SLEEP MODE	OFF LOW HIGH	<p>If SLEEP MODE is OFF, the product will never enter power save mode and no asterisk will appear next to any item when the user enters the menu item SLEEP DELAY.</p> <p>The LOW setting has a shorter wake-up time than the HIGH setting. The default setting is either LOW or HIGH, depending on your country/region.</p>

Diagnostics menu

The **DIAGNOSTICS** menu allows you to run tests that can help you identify and solve problems with the product.

To display: Press **Menu** and then select **DIAGNOSTICS**.

Item	Sub-item	Values	Description
PRINT EVENT LOG			Prints a report containing the last 50 entries in the product's event log, starting with the most recent.
SHOW EVENT LOG			Displays the last 50 events, starting with the most recent.
PQ TROUBLESHOOTING			Prints a page that includes instructions, pages for each color, a demo page, and a configuration page. These pages can help isolate print-quality problems.
PRINT DIAGNOSTICS PAGE			Prints a page that can assist in diagnosing product problems.
DISABLE CARTRIDGE CHECK			This item allows you to remove a print cartridge to help determine which cartridge is the source of a problem.
PAPER PATH SENSORS			Performs a test on each of the product's sensors to determine if they are working correctly and displays the status of each sensor.
PAPER PATH TEST			Tests the paper-handling features of the product, such as the configuration of the trays.
	PRINT TEST PAGE		Generates a page for testing the paper-handling features. You must define the path for the test in order to test specific paper paths.
	SOURCE	ALL TRAYS TRAY 1 TRAY 2 (Additional trays are shown, if applicable.)	Specifies whether the test page is printed from all trays or from a specific tray.
	DESTINATION	ALL BINS (Additional bins are shown, if applicable.)	Appears if there is an optional output accessory connected to the product. Selects the output option for the test page. You can send the test page to all output bins or only to a specific bin.
	DUPLEX	OFF ON	Determines whether the duplexer is included in the test.

Item	Sub-item	Values	Description
	COPIES	1 10 50 100 500	Determines how many pages should be sent from the specified source as part of the test.
FINISHING PAPER PATH TEST			This item only appears if there is an optional stapler/stacker or booklet maker connected to the product. Tests the paper-handling features on the output accessory.
	STACK	DESTINATION BIN MEDIA SIZE MEDIA TYPE COPIES DUPLEX PRINT TEST PAGE	Sets up the options for testing the stapler/stacker or booklet maker paper path. After setting up all of the options, select PRINT TEST PAGE to run the test.
	STAPLES	FINISHING OPTIONS DESTINATION BIN MEDIA SIZE MEDIA TYPE COPIES DUPLEX PRINT TEST PAGE	Sets up the options for testing the stapler/stacker or booklet maker stapling functions. After setting up all of the options, select PRINT TEST PAGE to run the test.
	BOOKLET MAKER (booklet maker only)	MEDIA SIZE MEDIA TYPE COPIES DUPLEX PRINT TEST PAGE	Sets up the options for testing the booklet-making functions of the booklet maker. After setting up all of the options, select PRINT TEST PAGE to run the test.
MANUAL SENSOR TEST			Performs tests to determine whether the paper path sensors are operating correctly.
MANUAL SENSOR TEST 2			Performs additional tests to determine whether the paper path sensors are operating correctly.
COMPONENT TEST	TRANSFER MOTORS BELT ONLY IMAGE DRUM MOTORS		Activate individual parts independently to isolate noise, leaking, and other hardware issues.

Item	Sub-item	Values	Description
	BLACK LASER SCANNER		
	CYAN LASER SCANNER		
	MAGENTA LASER SCANNER		
	YELLOW LASER SCANNER		
	FUSER MOTOR		
	FUSER PRESSURE RELEASE MOTOR		
	BLACK ALIENATION MOTOR		
	CYAN ALIENATION MOTOR		
	MAGENTA ALIENATION MOTOR		
	YELLOW ALIENATION MOTOR		
	ITB CONTACT/ALIENATION		
	PAPER TRANSPORT MOTOR		
	TRAY 1 PICKUP SOLENOID		
	TRAY 2 PICKUP MOTOR		
	TRAY 2 PICKUP SOLENOID		
	TRAY 3 PICKUP MOTOR		
	TRAY 3 PICKUP SOLENOID		
	TRAY 4 PICKUP MOTOR		
	TRAY 4 PICKUP SOLENOID		
	TRAY 5 PICKUP MOTOR		
	TRAY 5 PICKUP SOLENOID		
	DUPLEXER REVERSE MOTOR		
	DUPLEXER REFEED MOTOR		
	REPEAT	ONCE (default) CONTINUOUS	Allows the user to specify the number of times the device sequences. To terminate the test at any time the user can press Stop .
PRINT/STOP TEST		Range is 0 - 60,000 milliseconds. The default is 0.	Isolates print quality faults more accurately by stopping the product in mid-print cycle, which allows you to see where the image begins to degrade. This causes a jam message that might need to be manually cleared. A service representative should perform this test.
COLOR BAND TEST	PRINT TEST PAGE		Prints a color band test page that is used to identify arcing in the high-voltage power supply.

Item	Sub-item	Values	Description
	COPIES	Range is 1 to 30. The default value is 1.	Allows the user to determine how many copies of the internal page are printed.
FINISHER TESTS			If the optional stapler/stacker or booklet maker is installed, this menu runs tests on specific sensors and components. Different values are displayed, based on the accessory installed.
	MANUAL SENSOR TEST	READ ALL ONCE CONTINUOUS READING	Initiates a diagnostic test of the sensors on the stapler/stacker or booklet maker.
	COMPONENT TESTS	M1 - DELIVER MOTOR (booklet maker only) M2 - FOLDING MOTOR (booklet maker only) M3 - GUIDE MOTOR (booklet maker only) M4 - GUIDE PLATE MOTOR (booklet maker only) M9 - INLET MOTOR (booklet maker only) M31 - ENTRANCE MOTOR M36 - SWING MOTOR M37 - TRAY 1 MOTOR M38 - TRAY 2 MOTOR M39 - PROCESS MOTOR SL1 - FLAPPER 1 SOLENOID (booklet maker only) SL2 - FLAPPER 2 SOLENOID (booklet maker only) SL4 - BOOKLET SOLENOID (booklet maker only) SL5 - SWITCH SOLENOID (booklet maker only) SL31 - ROLLER 1A SOLENOID SL32 - BUFFER SOLENOID SL33 - OUTPUT SOLENOID SL34 - GUIDE SOLENOID	Activates a diagnostic test for the selected motor or solenoid.

Service menu

The SERVICE menu is locked and requires a PIN for access. This menu is intended for use by authorized service personnel. See [Service mode functions on page 508](#).

¹ Booklet maker only

² Stacking uses bins 1, 2, and 3 in the stapler/stacker, or bins 1 and 2 in the booklet maker.

Supported paper types

Table 3-4 Tray 1 paper information

Type	Specifications	Quantity	Driver settings	Paper orientation
Paper and cardstock, standard sizes	Range: 60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in) Equivalent to 100 sheets of 75 g/m ² (20 lb) bond.	Plain or unspecified	Load preprinted or prepunched paper facing down, with the bottom edge leading into the tray, or toward the front of the product
Envelopes	Less than 60 g/m ² (16 lb) bond to 90 g/m ² (24 lb) bond	Up to 10 envelopes	Envelope	Short edge leading, flap toward the back of the product, facing up
Labels	Maximum 0.23 mm (0.009 in) thick	Maximum stack height: 10 mm (0.6 in)	Labels	Side to be printed on facing down
Transparencies	Minimum 0.13 mm (0.005 in) thick	Maximum stack height: 10 mm (0.6 in)	Transparencies	Side to be printed on facing down
Heavy	0.13 mm (0.005 in) thick	Maximum stack height: 10 mm (0.6 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing down
Glossy	Range: 75 g/m ² (20 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing down
Photo media	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing down
Cut sheet paper	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in)	Plain or unspecified	Side to be printed on facing down
Tough paper	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in)	HP Tough paper	Side to be printed on facing down
Banner paper	Range: 75 g/m ² (20 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 10 mm (0.6 in)	Plain or unspecified	Side to be printed on facing down

△ **CAUTION:** Do not use banner media heavier than 120 g/m² with the optional 3-bin stapler/stacker or the optional booklet maker finisher. Heavy banner media is not supported for these products.

Table 3-5 Trays 2, 3, 4, and 5 paper information

Type	Specifications	Quantity	Driver Settings	Paper orientation
Paper and cardstock, standard sizes	Range: 60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	500 sheets of 75 g/m ² (20 lb) bond.	Plain or unspecified	Load preprinted or prepunched paper facing up, with the top toward the front of the tray or toward the left-hand side of the tray.
Labels	Maximum 0.13 mm (0.005 in) thick	Maximum stack height: 54 mm (2.1 in)	Labels	Side to be printed on facing up
Transparencies	Minimum 0.13 mm (0.005 in) thick	Maximum stack height: 54 mm (2.1 in)	Transparencies	Side to be printed on facing up

Table 3-5 Trays 2, 3, 4, and 5 paper information (continued)

Type	Specifications	Quantity	Driver Settings	Paper orientation
Heavy	0.13 mm (0.005 in) thick	Maximum stack height: 54 mm (2.1 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing up
Glossy	Range: 75 g/m ² (20 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 54 mm (2.1 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing up
Photo media	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 54 mm (2.1 in)	Light glossy, glossy, or heavy glossy	Side to be printed on facing up
Cut sheet paper	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 54 mm (2.1 in)	Plain or unspecified	Side to be printed on facing up
Tough paper	60 g/m ² (16 lb) bond to 220 g/m ² (58 lb) bond	Maximum stack height: 54 mm (2.1 in)	HP Tough paper	Side to be printed on facing up

Trays 2, 3, 4, and 5 capacity: 54 mm (2.126 in) height or 500 sheets of paper, whichever is less. Supported media types include: Cut sheet paper, labels, OHT, glossy paper, glossy film, photo media, and tough paper. Basis Weight: 60-220 g/m² (16-58 lb).

Duplex printing: Provides automatic two-sided printing (printing on both sides of the paper). Not available on the HP Color LaserJet CP6015n model, which cannot be upgraded to duplex printing. The paper size range for automatic duplex printing is 175 to 320 mm (7.2 to 12.6 in) x 210 to 457 mm (8.3 to 18 in). The media weight range is 60 to 220 g/m² (16 to 58 lb)

 **NOTE:** HP Color Laser Presentation Paper, Glossy (Q2546A, Q2547A) is not supported with this product. Using this type of paper can cause a fuser jam that might require the replacement of the fuser. Two recommended alternatives are HP Color LaserJet Presentation Paper, Soft Gloss (Q6541A) and HP Color LaserJet Brochure Paper, Glossy (Q6611A, Q6610A).

NOTE: For a complete list of specific HP-brand paper that this product supports, go to www.hp.com/sbso/product/supplies.

Special paper or print media guidelines

This product supports printing on special media. Use the following guidelines to obtain satisfactory results. When using special paper or print media, be sure to set the type and size in your print driver to obtain the best print results.

- △ **CAUTION:** HP LaserJet printers use fusers to bond dry toner particles to the paper in very precise dots. HP laser paper is designed to withstand this extreme heat. Using inkjet paper not designed for this technology could damage your printer.

Media type	Do	Do not
Envelopes	<ul style="list-style-type: none"> • Store envelopes flat. • Use envelopes where the seam extends all the way to the corner of the envelope. • Use peel-off adhesive strips that are approved for use in laser printers. 	<ul style="list-style-type: none"> • Do not use envelopes that are wrinkled, nicked, stuck together, or otherwise damaged. • Do not use envelopes that have clasps, snaps, windows, or coated linings. • Do not use self-stick adhesives or other synthetic materials.
Labels	<ul style="list-style-type: none"> • Use only labels that have no exposed backing between them. • Use Labels that lie flat. • Use only full sheets of labels. 	<ul style="list-style-type: none"> • Do not use labels that have wrinkles or bubbles, or are damaged. • Do not print partial sheets of labels.
Transparencies	<ul style="list-style-type: none"> • Use only transparencies that are approved for use in laser printers. • Place transparencies on a flat surface after removing them from the product. 	<ul style="list-style-type: none"> • Do not use transparent print media not approved for laser printers.
Letterhead or preprinted forms	<ul style="list-style-type: none"> • Use only letterhead or forms approved for use in laser printers. 	<ul style="list-style-type: none"> • Do not use raised or metallic letterhead.
Heavy paper	<ul style="list-style-type: none"> • Use only heavy paper that is approved for use in laser printers and meets the weight specifications for this product. 	<ul style="list-style-type: none"> • Do not use paper that is heavier than the recommended media specification for this product unless it is HP paper that has been approved for use in this product.
Glossy or coated paper	<ul style="list-style-type: none"> • Use only glossy or coated paper that is approved for use in laser printers. 	<ul style="list-style-type: none"> • Do not use glossy or coated paper designed for use in inkjet products.

Load paper and print media

You can load different media in the trays and then request media by type or size by using the control panel.

Load Tray 1

△ **CAUTION:** To avoid jams, never add or remove paper from Tray 1 during printing.

1. Open Tray 1.

2. Set the side guides to the correct width, and pull out the tray extensions to support paper.
3. Load paper in the tray with the side to be printed on face down and the top of the paper or non-postage end facing the front of the printer.

📝 **NOTE:** For Letter Rotated and A4 Rotated sizes, place the side to be printed on face down, with the top of the page facing into the printer.

4. Make sure the stack fits under the tabs on the guides and does not exceed the load-level indicators.
5. Adjust the side guides so that they lightly touch the paper stack but do not bend it.

Print envelopes

If your software does not automatically format an envelope, specify **Landscape** for page orientation in your software program or printer driver. Use the following guidelines to set margins for return and destination addresses on Commercial #10 or DL envelopes:

Address type	Left margin	Top margin
Return	15 mm (0.6 in)	15 mm (0.6 in)
Destination	102 mm (4 in)	51 mm (2 in)

For envelopes of other sizes, adjust the margin settings accordingly.

Load banner paper into Tray 1

You can print banners from 457 mm (18 in) to 915 mm (36 in) in length and from 99 mm (4 in) to 320 mm (12.6 in) in width.

- △ **CAUTION:** Do not use banner media heavier than 120 g/m² with the optional 3-bin stapler/stacker or the optional booklet maker finisher. Heavy banner media is not supported for these products.

Load Trays 2, 3, 4, or 5

Trays 2, 3, 4, and 5 each hold up to 500 sheets of standard paper or a 54 mm (2.13 in) stack of labels or other thick paper.

Load standard-sized paper into Trays 2, 3, 4, or 5

The product automatically detects the following standard sizes of paper in the 500-sheet trays: Letter, Letter Rotated, Legal, Executive, 11x17, A3, A4, A4 Rotated, A5, B4 (JIS), and B5 (JIS).

- △ **CAUTION:** Do not print envelopes or unsupported sizes of paper from the 500-sheet trays. Print on these types of paper only from Tray 1.

1. Slide the tray from the product.

 **NOTE:** Do not open the input tray while it is in use. Doing so can cause jams in the product.

2. Adjust the paper-width guide by squeezing the adjustment latch and sliding the guide to the size of the paper being used.

3. Adjust the paper-length guide by squeezing the adjustment latch and sliding the guide to the size of the paper being used.

4. Load paper into the tray face up. Check the paper to verify the guides lightly touch the stack, but do not bend it.

 **NOTE:** To prevent jams, do not overfill the input tray. Be sure the top of the stack is below the tray full indicator.

 **NOTE:** For best performance, fill the tray completely without splitting the ream of paper. Splitting the ream can cause a multifeed problem. The capacity of the paper tray can vary. For example, if you are using 75 g/m² (20 lb) paper, the tray holds a full ream of 500 sheets. If the media is heavier, the tray will not hold a full ream. Do not overfill the tray.

NOTE: If the tray is not adjusted correctly, an error message might appear or the media might jam.

5. Slide the tray into the product. The control panel shows the tray's media type and size. If the configuration is not correct, press the checkmark button ✓ on the control panel. If the configuration is correct, press the back arrow ↶.

Load undetectable standard-sized paper into Trays 2, 3, 4, and 5

The following undetectable standard-sized media is supported in the 500-sheet trays:

- Executive (JIS) (8.5 x 13)
- 12 x 18 (Trays 3, 4, or 5 only)
- B4 (ISO)
- RA3 (Trays 3, 4, or 5 only)

- SRA3 (Trays 3, 4, or 5 only)
- B5 (ISO)
- RA4
- SRA4
- 8K 270 x 390 mm
- 16K 195 x 270 mm
- 8K 260 x 368 mm
- 16K 184 x 260 mm
- 8K 273 x 394 mm
- 16K 197 x 273 mm

△ **CAUTION:** Do not print envelopes or unsupported sizes of paper from the 500-sheet trays. Print on these types of paper only from Tray 1. Do not overfill the input tray or open it while it is in use. Doing so can cause paper jams.

Load custom-size paper into Tray 2, 3, 4, or 5

To use custom media, change the size setting on the control panel to **CUSTOM** and set the unit of measure, X dimension, and Y dimension. See [Configure a tray to match print job settings on page 66](#) for more information.

1. Slide open the tray from the product.
2. Load the print media as described in steps 2 through 4 of the “Load detectable (standard-size) media into Tray 2, 3, 4, or 5” section. Then proceed to step 3 in this procedure.

3. Slide the tray into the product. The control panel shows the tray type and size configuration. To specify custom dimensions, or if the type is not correct, press the checkmark button ✓ when the control panel prompts to change the size or type.

4. Select **CUSTOM**, and then input the X and Y dimensions of the custom paper size.

 **NOTE:** Refer to the label in the paper tray, or to the figure below, to determine the X and Y dimensions.

5. If the configuration is correct, press the back arrow ↩.

Load large-size paper into Tray 3, 4, or 5

Use the following instructions if you are loading 11x17, RA3, SRA3, or 12 x 18-sized paper into Tray 3, 4, or 5.

1. Slide open Tray 3, 4, or 5.
2. Adjust the paper width guide by squeezing the adjustment latch and sliding the guide to the size of the paper being used.
3. Load the paper into the tray.
4. Move the paper stop lever to the correct position for the paper being used.

- For SRA3-sized paper, rotate the lever all the way to the left.
 - For A3- or 11x17-sized paper, rotate the lever down into the center position.
 - For RA3- or 12x18-sized paper, rotate the lever all the way to the right.
5. Slide the tray into the product. The control panel shows the tray's media type and size. If the configuration is not correct, press the checkmark button ✓. If the configuration is correct, press the back arrow ↩.

Configure trays

The product automatically prompts you to configure a tray for type and size in the following situations:

- When you load paper into the tray
- When you specify a particular tray or media type for a print job through the printer driver or a software program and the tray is not configured to match the print-job's settings

The following message appears on the control panel: **Tray <X> [type] [size] To change size or type press the checkmark button ✓. To accept settings press the back arrow ↶.**

 **NOTE:** The prompt does not appear if you are printing from Tray 1 and it is configured for **ANY CUSTOM** and **ANY TYPE**.

NOTE: If you have used other HP LaserJet product models, you might be accustomed to configuring Tray 1 to **First** mode or **Cassette** mode. For this product, setting Tray 1 size to **ANY CUSTOM** is equivalent to **First** mode. Setting size for Tray 1 to a setting other than **ANY CUSTOM** is equivalent to **Cassette** mode.

Configure a tray when loading paper

1. Load paper in the tray. Close the tray if you are using Tray 2, 3, 4, or 5.
2. The tray configuration message appears.
3. Press the back arrow ↶ to accept the detected size, or press the checkmark button ✓ to choose a different paper size.
4. If you are modifying the tray configuration, press the down arrow ▼ to highlight the correct size, and then press the checkmark button ✓.

 **NOTE:** The product automatically detects most paper sizes in Trays 2, 3, 4, and 5.

5. If you are modifying the tray configuration, press the down arrow ▼ to highlight the correct type, and then press the checkmark button ✓.

Configure a tray to match print job settings

1. In the software program, specify the source tray, the paper size, and the paper type.
2. Send the job to the product.

If the tray needs to be configured, the **LOAD TRAY X <TYPE> <SIZE>** message appears.

3. Load the tray with the specified type and size of paper, and then close the tray. Press the down arrow ▼ to highlight the correct size, or highlight **CUSTOM**.

To specify a custom size, first press the down arrow ▼ to highlight the correct unit of measure. Then use the numeric keypad to set the X and Y dimensions.

4. When the **TRAY<X> SIZE=<SIZE>** message appears, press the checkmark button ✓ to confirm the size.
5. When the **TRAY<X> TYPE=<TYPE>** message appears, press the checkmark button ✓ to confirm the type and continue with the job.

Configure a tray by using the Paper Handling menu

You can also configure the trays for type and size without a prompt from the product.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **PAPER HANDLING**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight the size or type setting for the desired tray, and then press the checkmark button ✓.
4. Press the up arrow ▲ or the down arrow ▼ to highlight the size or type. If you select a custom size, select the unit of measure, and then use the numeric keypad to set the X dimension and the Y dimension.
5. Press the checkmark button ✓ to save your selection.
6. Press the back arrow ↵.
7. Press the back arrow ↵ again.

Automatic media type sensing (auto sense mode)

The automatic media type sensor functions only when that tray is configured to ANY TYPE. Configuring a tray to any other type, such as Bond or Glossy, deactivates the media sensor in that tray.

The HP Color LaserJet CP6015 Series printers can automatically classify many paper types into one of the following categories:

- Plain
- Transparency
- Glossy
- Glossy film (tough paper)
- Heavy

For more control, a specific type must be selected in the job or configured in a tray.

Auto-sense settings

Full sensing

- The product recognizes plain and heavy paper, transparencies, glossy paper, and tough paper.
- The product stops every page to sense the type.
- This is the slowest mode.
- Only available for Tray 1

Expanded sensing (default)

- The product recognizes plain and heavy paper, transparencies, glossy paper, and tough paper.
- Each time the product begins a print job, it stops the first page to sense the type.

- The product assumes that the second and all subsequent pages are of the same media type as the first page.
- This is the second-fastest mode, and is useful for using stacks of the same media type.
- Available for all trays

Transparency only

- The product does not stop any pages for sensing but distinguishes between transparencies (Transparency mode) and paper (Normal mode).
- This is the fastest mode and is useful for high-volume printing in Normal mode.
- This mode is active automatically all the time in all trays even if one of the other two modes is selected.

For more information about setting these options, see [Print Quality menu on page 24](#)

Choose an output location

Standard output bin

The product has a standard output bin for printed pages.

When you send print jobs to the product from a computer, the output is routed to the standard output bin or to one of the output bins on the optional 3-bin stapler/stacker or booklet maker finisher.

Optional output accessories

An optional stapler/stacker or booklet maker can be installed with the product. When an accessory is installed, an output accessory bridge is also added on top of the product in order to route the print jobs to the accessory output bins.

3-bin stapler/stacker features

Table 3-6 3-bin stapler/stacker features

Job offset	Each copy of a job is shifted to one side in the output bin in order to keep each copy separate from the others. (Supported paper sizes: A3, A4, A4 rotated, A5, B4, B5, Ledger, Legal, Letter, Letter rotated, Statement.)
Two operation modes	Mailbox Mode assigns each bin to a user or group of users, and Stacker Mode uses all three output bins for all print jobs — when one bin is full, jobs are routed to the next bin.
Stapler	Built-in stapler staples jobs up to 50 sheets in size. Pages can be stapled in one position at the front, in one position at the back, or at two positions at the side or top.
Large-capacity output bins	The stacker has three bins: a 100-sheet bin, a 500-sheet bin, and a 1000-sheet bin.

Booklet maker finisher features

Table 3-7 Booklet-maker finisher features

Booklet-making	The booklet-making feature staples and folds print jobs of 2 to 15 pages into a booklet.
-----------------------	--

Table 3-7 Booklet-maker finisher features (continued)

Folding	Single-sheet print jobs can be automatically folded in the center.
Job offset	Each copy of a job is shifted to one side in the output bin in order to keep each copy separate from the others. (Supported paper sizes: A3, A4, A4 rotated, A5, B4, B5, Ledger, Legal, Letter, Letter rotated, Statement.)
Two operation modes	Mailbox Mode assigns each bin to a user or group of users, and Stacker Mode uses both output bins for all print jobs — when the top bin is full, jobs are routed to the next bin.
Stapler	Built-in stapler staples jobs up to 50 sheets in size. Pages can be stapled in one position at the front, in one position at the back, or at two positions at the side or top.
Large-capacity output bins	The stacker has three bins: two 1000-sheet bins and one bin that can hold up to 25 saddle-stitched booklets.

Accessory walkaround

Figure 3-1 3-bin stapler/stacker accessory

1	Output bins

5	Top cover
6	Connection cable

Configure the accessory operation mode

Select the operating mode at the control panel

You can set the operating mode for the 3-bin stapler/stacker or the booklet maker finisher at the product control panel.

1. At the control panel, press **Menu**.
2. Press the down arrow ▼ to highlight the **CONFIGURE DEVICE** menu, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight the **MBM-3 BIN STAPLER** menu or **MULTIFUNCT FINISHER**, and then press the checkmark button ✓.

4. Press the down arrow ▼ to highlight **OPERATION MODE**, and then press the checkmark button ✓.
5. Select the operation mode that you want to use.
 - When Mailbox Mode is used, each bin is assigned to a user or group of users. Every time a user sends a print job, the job is routed to the assigned bin.
 - When Stacker Mode is used and the optional 3-bin stapler/stacker is installed, the three bins act as a single bin. When one bin is full, jobs are automatically routed to the next bin. When Stacker Mode is used and the booklet maker finisher is installed, the two upper bins act as a single bin, and the third bin is reserved for booklets.

NOTE: Use the product embedded Web server to assign output bins to users or groups of users. For more information see [Embedded Web server on page 78](#)

Select the operating mode in the printer driver (Windows)

1. Click the **Start** button, point to **Settings**, and then click **Printers** (for Windows 2000) or **Printers and Faxes** (for Windows XP).
2. Right-click the HP product icon, and then click **Properties** or **Printing Preferences**.
3. Click the **Device Settings** tab.
4. Perform one of the following actions:

For automatic configuration: under **Installable Options**, click **Update Now** in the **Automatic Configuration** list.

-or-

For manual configuration: under **Installable Options**, select the appropriate operation mode in the **Accessory Output Bin** list.

5. Click **Apply** to save the settings.

Select the operating mode in the printer driver (Mac OS X)

1. In the **Apple** menu, click **System Preferences**.
2. In the **System Preferences** box, click **Print and Fax**.
3. Click **Set Up Printers**. A **Printer List** displays.
4. Select the HP product, and then click **Show Info** on the **Printers** menu.
5. Select the **Installable Options** panel.
6. In the **Accessory Output Bins** list, select correct accessory.
7. In the **Mailbox Mode** list, select the appropriate operational mode, and then click **Apply Changes**.

Information pages

Information pages provide details about the product and its current configuration. Use the following procedure to print the information pages.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight INFORMATION, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight the required information, and then press the checkmark button ✓ to print.

For more information about the available information pages, see [Information menu on page 20](#).

HP Easy Printer Care

Open the HP Easy Printer Care software

Use one of the following methods to open the HP Easy Printer Care software:

- On the **Start** menu, select **Programs**, select **Hewlett-Packard**, select **HP Easy Printer Care**, and then click **Start HP Easy Printer Care**.
- In the Windows system tray (in the lower-right corner of the desktop), double-click the HP Easy Printer Care icon.
- Double-click the desktop icon.

HP Easy Printer Care software sections

HP Easy Printer Care software can provide information about multiple HP products that are on your network as well as any products that are directly connected to your computer. Some of the items that are in the following table might not be available for every product.

The Help button (?) in the upper-right corner of each page provides more detailed information about the options on that page.

Section	Options
Device List tab When you open the software, this is the first page that appears. NOTE: To return to this page from any tab, click My HP Printers in the left side of the window.	<ul style="list-style-type: none">● Devices list: Shows the products that you can select. NOTE: The product information appears either in list form or as icons, depending on the setting for the View as option. <ul style="list-style-type: none">● The information on this tab includes current alerts for the product.● If you click a product in the list, the HP Easy Printer Care opens the Overview tab for that product.
Compatible Printers	Provides a list of all the HP products that support HP Easy Printer Care software.
Find Other Printers window Add more products to the My HP Printers list	Click the Find Other Printers link in the Devices list to open the Find Other Printers window. The Find Other Printers window provides a utility that detects other network printers so that you can add them to the My HP Printers list and then monitor those products from your computer.
Overview tab Contains basic status information for the device	<ul style="list-style-type: none">● Device Status section: This section shows product-identification information and the product status. It indicates product-alert conditions, such as an empty print cartridge. After you correct a problem with the product, click the refresh button  in the upper-right corner of the window to update the status.● Supplies Status section: Shows detailed supplies status, such as the percentage of toner remaining in the print cartridge and the status of the paper that is loaded in each tray.● Supplies Details link: Opens the supplies status page to view more detailed information about product supplies, ordering information, and recycling information.

Section	Options
<p>Support tab</p> <p>Provides links to support information</p>	<ul style="list-style-type: none"> ● Device Status section: This section shows product-identification information and the product status. Embedded Web server

Use the embedded Web server to view product status, configure product network settings, and to manage printing functions from your computer instead of from the product control panel. The following are examples of what you can do using the embedded Web server:

 **NOTE:** When the product is directly connected to a computer, use the HP Easy Printer Care to view the product status instead of the embedded Web server.

- View product status information.
- Determine the remaining life for all supplies and order new ones.
- View and change tray configurations.
- View and change the product control-panel menu configuration.
- View and print internal pages.
- Receive notification of product and supplies events.
- View and change network configuration.

To use the embedded Web server, you must have Microsoft Internet Explorer 5.01 or later or Netscape 6.2 or later for Windows, Mac OS, and Linux (Netscape only). Netscape Navigator 4.7 is required for HP-UX 10 and HP-UX 11. The embedded Web server works when the product is connected to an IP-based network. The embedded Web server does not support IPX-based product connections. You do not have to have Internet access to open and use the embedded Web server.

When the product is connected to the network, the embedded Web server is automatically available.

 **NOTE:** For complete information about using the embedded Web server, see the *Embedded Web Server User Guide*, which is on the CD that came with the product.

Open the embedded Web server by using a network connection

1. In a supported Web browser on your computer, type the product IP address or host name in the address/URL field. To find the IP address or host name, print a configuration page. See [Information pages on page 74](#).

 **NOTE:** After you open the URL, you can bookmark it so that you can return to it quickly in the future.

2. The embedded Web server has the following tabs that contain settings and information about the product:
 - **Information** tab
 - **Settings** tab
 - **Networking** tab

See [Embedded Web server sections on page 79](#) for more information about each tab.

Embedded Web server sections

Tab or section	Options
Information tab Provides product, status, and configuration information	<ul style="list-style-type: none">● Device Status: Shows the product status and shows the life remaining of HP supplies, with 0% indicating that a supply is empty. The page also shows the type and size of print paper set for each tray. To change the default settings, click Change Settings.● Configuration Page: Shows the information found on the configuration page.● Supplies Status: Shows the life remaining of HP supplies, with 0 percent indicating that a supply is empty. This page also provides supplies part numbers. To order new supplies, click Shop for Supplies in the Other Links area on the left side of the window.● Event log: Shows a list of all product events and errors.● Usage page: Shows a summary of the number of pages the product has printed, grouped by size and type.● Diagnostics page: Allows you to name the product, show the company name, assign an asset number to the product, and name the primary contact who manages the product. An HP-authorized support person might ask for this information.● Device Information: Shows the product network name, address, and model information. To customize these entries, click Device Information on the Settings tab.● Control Panel: Shows messages from the control panel, such as Ready or Sleep mode on.● Print: Allows you to send print-ready jobs to the product.
Settings tab Provides the ability to configure the product from your computer	<ul style="list-style-type: none">● Configure Device: Allows you to configure product default settings. This page contains the traditional menus found on the control-panel display.● E-mail Server: Network only. Used in conjunction with the Alerts page to set up e-mail alerts.● Alerts: Network only. Allows you to set up to receive e-mail alerts for various product and supplies events.● AutoSend: Allows you to configure the product to send automated e-mails regarding product configuration and supplies to specific e-mail addresses.● Security: Allows you to set a password that must be entered to gain access to the Settings and Networking tabs. Enable and disable certain features of the embedded Web server.● Edit Other Links: Allows you to add or customize a link to another Web site. This link is displayed in the Other Links area on all embedded Web server pages.● Device Information: Allows you to name the product and assign an asset number to it. Enter the name and e-mail address for the primary contact who will receive information about the product.● Language: Allows you to determine the language in which to display the embedded Web server information.● Date & Time: Allows time synchronization with a network time server.

Tab or section	Options
	<ul style="list-style-type: none"> ● Wake Time: Allows you to set or edit a wake time for the product to become ready. ● Restrict Color: Allows you to permit or restrict color printing. You can specify permissions for individual users or for jobs that are sent from specific software programs. <p>NOTE: The Settings tab can be password-protected. If this product is on a network, always consult with the system administrator before changing settings on this tab.</p>
<p>Networking tab</p> <p>Provides the ability to change network settings from your computer</p>	<p>Network administrators can use this tab to control network-related settings for the product when it is connected to an IP-based network. This tab does not appear if the product is directly connected to a computer, or if the product is connected to a network using anything other than an HP Jetdirect print server.</p> <p>NOTE: The Networking tab can be password-protected.</p>
<p>Other links</p> <p>Contains links that connect you to the Internet</p>	<ul style="list-style-type: none"> ● HP Instant Support™: Connects you to the HP Web site to help you find solutions to product problems. ● Shop for Supplies: Connects to the HP SureSupply Web site, where you will receive information on options for purchasing original HP supplies, such as print cartridges and paper. ● Product Support: Connects to the support site for the product, from which you can search for help regarding various topics. ● Show Me How: Connects to information that demonstrates specific tasks for the product. <p>NOTE: You must have Internet access in order to use any of these links. If you use a dial-up connection and did not connect when you first opened the embedded Web server, you must connect before you can visit these Web sites. Connecting might require that you close the embedded Web server and reopen it.</p>

Use HP Web Jetadmin software

HP Web Jetadmin is a Web-based software solution for remotely installing, monitoring, and troubleshooting network-connected peripherals. The intuitive browser interface simplifies cross-platform management of a wide range of devices, including HP and non-HP devices. Management is proactive, allowing network administrators the ability to resolve issues before users are affected. Download this free, enhanced-management software at www.hp.com/go/webjetadmin_software.

To obtain plug-ins to HP Web Jetadmin, click **plug-ins**, and then click the **download** link that is next to the name of the plug-in that you want. The HP Web Jetadmin software can automatically notify you when new plug-ins are available. On the **Product Update** page, follow the directions to automatically connect to the HP Web site.

If installed on a host server, HP Web Jetadmin is available to any client through a supported Web browser, such as Microsoft Internet Explorer 6.0 for Windows or Netscape Navigator 7.1 for Linux. Browse to the HP Web Jetadmin host.

 **NOTE:** Browsers must be Java-enabled. Browsing from an Apple PC is not supported.

Security features

This section explains important security features that are available for the product:

- [Secure the embedded Web server](#)
- [Secure Disk Erase](#)
- [Lock the control-panel menus](#)

Secure the embedded Web server

Assign a password for access to the embedded Web server so that unauthorized users cannot change the product settings.

1. Open the embedded Web server. See [Embedded Web server on page 78](#).
2. Click the **Settings** tab.
3. On the left side of the window, click **Security**.
4. Type the password next to **New Password**, and type it again next to **Verify Password**.
5. Click **Apply**. Make note of the password and store it in a safe place.

Secure Disk Erase

To protect deleted data from unauthorized access on the product hard drive, use the Secure Disk Erase feature in the HP Web Jetadmin software. This feature can securely erase print jobs from the hard drive.

Secure Disk Erase offers the following levels of disk security:

- **Non-Secure Fast Erase.** This is a simple file-table erase function. Access to the file is removed, but actual data is retained on the disk until it is overwritten by subsequent data-storage operations. This is the fastest mode. Non-Secure Fast Erase is the default erase mode.
- **Secure Fast Erase.** Access to the file is removed, and the data is overwritten with a fixed identical character pattern. This is slower than Non-Secure Fast Erase, but all data is overwritten. Secure Fast Erase meets the U.S. Department of Defense 5220-22.M requirements for the clearing of disk media.
- **Secure Sanitizing Erase.** This level is similar to the Secure Fast Erase mode. In addition, data is repetitively overwritten by using an algorithm that prevents any residual data persistence. This mode will impact performance. Secure Sanitizing Erase meets the U.S. Department of Defense 5220-22.M requirements for the sanitization of disk media.

Data affected

Data affected (covered) by the Secure Disk Erase feature includes temporary files that are created during the print process, stored jobs, proof and hold jobs, disk-based fonts, disk-based macros (forms), address books, and HP and third-party applications.

NOTE: Stored jobs will be securely overwritten only when they have been deleted through the **RETRIEVE JOB** menu on the product after the appropriate erase mode has been set.

This feature will not impact data that is stored on flash-based product non-volatile RAM (NVRAM) that is used to store default settings, page counts, and similar data. This feature does not affect data that is

stored on a system RAM disk (if one is used). This feature does not impact data that is stored on the flash-based system boot RAM.

Changing the Secure Disk Erase mode does not overwrite previous data on the disk, nor does it immediately perform a full-disk sanitization. Changing the Secure Disk Erase mode changes how the product cleans up temporary data for jobs after the erase mode has been changed.

Additional Information

For additional information about the HP Secure Disk Erase feature, see the HP support flyer or go to www.hp.com/go/webjetadmin.

Job storage

To securely print a private job, use the personal job feature. The job can only be printed when the correct PIN is entered at the control panel.

Lock the control-panel menus

To prevent someone from changing the product configuration, you can lock the control-panel menus. This prevents unauthorized users from changing the configuration settings such as the SMTP server. The following procedure describes how to restrict access to the control-panel menus by using the HP Web Jetadmin software. (See [Use HP Web Jetadmin software on page 81](#).)

1. Open the HP Web Jetadmin program.
2. Open the **DEVICE MANAGEMENT** folder in the drop-down list in the **Navigation** panel. Navigate to the **DEVICE LISTS** folder.
3. Select the product.
4. In the **Device Tools** drop-down list, select **Configure**.
5. Select **Security** from the **Configuration Categories** list.
6. Type a **Device Password**.
7. In the **Control Panel Access** section, select **Maximum Lock**. This prevents unauthorized users from gaining access to configuration settings.

Manage supplies

Use genuine HP print cartridges for the best printing results.

Print-cartridge storage

Do not remove the print cartridge from its package until you are ready to use it.

△ **CAUTION:** To prevent damage to the print cartridge, do not expose it to light for more than a few minutes.

HP policy on non-HP print cartridges

Hewlett-Packard Company cannot recommend the use of non-HP print cartridges, either new or remanufactured.

 **NOTE:** Any damage caused by a non-HP print cartridge is not covered under the HP warranty and service agreements.

To install a new HP print cartridge, see [Change print cartridges on page 86](#). To recycle the used cartridge, follow the instructions included with the new cartridge.

HP fraud hotline and Web site

Call the HP fraud hotline (1-877-219-3183, toll-free in North America) or go to www.hp.com/go/anticounterfeit when you install an HP print cartridge and the control-panel message says the cartridge is non-HP. HP will help determine if the cartridge is genuine and take steps to resolve the problem.

Your print cartridge might not be a genuine HP print cartridge if you notice the following:

- You are experiencing a high number of problems with the print cartridge.
- The cartridge does not look like it usually does (for example, the packaging differs from HP packaging).

Replace supplies

When you use genuine HP supplies, the product automatically notifies you when supplies are nearly depleted. The notification to order supplies allows ample time to order new supplies before they need to be replaced.

Locate supplies

Supplies are identified by their labeling and their blue plastic handles.

The following figure illustrates the location of each supply item.

Figure 4-1 Supply item locations

1	Print cartridges
2	Image drums
3	Fuser
4	Transfer unit
5	Transfer roller

Supply replacement guidelines

To facilitate the replacement of supplies, keep the following guidelines in mind when setting up the product.

- Allow sufficient space in the front and on the right side of the product for removing supplies.
- The product should be located on a flat, sturdy surface.

For instructions on installing supplies, see the installation guides provided with each supply item or see more information at www.hp.com/go/cljcp6015_software. When you connect, select **Solve a Problem**.

△ **CAUTION:** Hewlett-Packard recommends the use of genuine HP products in this product. Use of non-HP products may cause problems requiring service that is not covered by the Hewlett-Packard extended warranty or service agreements.

Approximate replacement intervals for supplies

The following table lists the estimated replacement intervals for supplies and the control panel messages that prompt when to replace each item. Usage conditions and print patterns may cause results to vary.

Item	Printer message	Page count	Approximate time period
Print cartridges	REPLACE <COLOR> CARTRIDGE	Black: 16,500 pages ¹	Black: 3 months
		Cyan, magenta, or yellow: 21,000 pages ¹	Cyan, magenta, or yellow: 4 months
Image drums	REPLACE <COLOR> DRUM	35,000 pages ¹	
Image transfer kit	REPLACE TRANSFER KIT	150,000 pages ²	36 months
Image fuser kit	REPLACE FUSER KIT	100,000 pages	25 months
Roller kit	REPLACE ROLLER KIT	150,000 pages	36 months
Stapler cartridge	REPLACE STAPLE CARTRIDGE	5000 staples	
Booklet maker staple cartridges	REPLACE STAPLE CARTRIDGES 2 AND 3	2,000 booklets	

¹ Cartridge yield figures are based on ISO standard testing.

² Approximate life is based on 4,000 pages per month.

Change print cartridges

When a print cartridge approaches the end of its useful life, the control panel displays a message recommending that you order a replacement. The product can continue to print using the current print cartridge until the control panel displays a message instructing you to replace the cartridge.

The product uses four colors and has a different print cartridge for each color: black (K), magenta (M), cyan (C), and yellow (Y).

Replace a print cartridge when the control panel displays a **REPLACE <COLOR> CARTRIDGE** message. The control panel display will also indicate the color that should be replaced (if a genuine HP cartridge is currently installed). Replacement instructions are included in the print-cartridge box.

△ **CAUTION:** If toner gets on clothing, wipe it off with a dry cloth and wash the clothes in cold water. Hot water sets toner into fabric.

📄 **NOTE:** Information about recycling used print cartridges is on the print-cartridge box.

Replace print cartridges

1. Grasp the grips on the sides of the front door and pull down to open.

2. Grasp the handle of the used print cartridge and pull out to remove.

3. Store the used print cartridge in a protective bag. Information about recycling used print cartridges is on the print-cartridge box.
4. Remove additional print cartridges in the same manner.
5. Remove the new print cartridge from its protective bag.

 **NOTE:** Store the protective bag in a secure place for future use.

6. Hold both sides of the cartridge and shake up and down 5-6 times.

7. Align the print cartridge with its slot and insert the print cartridge until it clicks into place.

8. Insert additional print cartridges in the same manner.
9. Grasp the grips on the sides of the front door and lift up to close.

To recycle the used print cartridge, follow the instructions included with the new print cartridge.

Change image drums

When an image drum approaches the end of its useful life, the control panel displays a message recommending that you order a replacement. The product can continue to print using the current image drum until the control panel displays a message instructing you to replace the image drum.

The product uses four colors and has a different image drums for each color: black (K), magenta (M), cyan (C), and yellow (Y).

Replace an image drum when the control panel displays **REPLACE <COLOR> DRUM** message. The control-panel display also indicates the color that should be replaced (if a genuine HP cartridge is currently installed). Replacement instructions are included in the image drum box.

 **NOTE:** If toner gets on clothing, wipe it off with a dry cloth and wash the clothes in cold water. Hot water sets toner into fabric.

NOTE: Information about recycling used image drums is on the image drum box.

Replace image drums

1. Grasp the grips on the sides of the front door and pull down to open.

2. With one hand, lift and slowly pull the used image drum out of the product. Grasp the blue handle with your other hand when accessible.

 **NOTE:** If reusing the same image drum, do not touch the green cylinder on the bottom of the drum because it can damage the drum.

3. Store the used image drum in a protective bag. Information about recycling used image drums is on the image drum box.
4. Remove additional image drums in the same manner.

5. Remove the new image drum from its protective bag.

 **NOTE:** Store protective bag in a secure place for future use.

NOTE: Do not shake the image drum.

NOTE: Do not touch the green cylinder on the bottom of the image drum because it can damage the drum.

6. Align the image drum with the correct slot and insert the image drum until it clicks into place. The gray protective cover on the bottom of the drum automatically slides off as the image drum is inserted. You can discard this cover.

7. Insert additional image drums in the same manner.
8. Grasp the grips on the sides of the front door and lift up to close.

To recycle the used image drum, follow the instructions included with the new image drum.

Install memory

You can install more memory for the product by adding a dual inline memory module (DIMM).

- △ **CAUTION:** Static electricity can damage DIMMs. When handling DIMMs, either wear an antistatic wrist strap, or frequently touch the surface of the DIMM antistatic package and then touch bare metal on the product.

Install DDR memory DIMMs

1. Turn the product off.

2. Disconnect all power and interface cables.

3. Locate the black formatter pressure release tabs on the formatter board in the rear of the product.

4. Gently press the black tabs toward each other.

5. Gently pull on the black tabs to pull the formatter board from the product. Place the formatter board on a clean, flat, grounded surface.

6. If you are adding a DIMM to slot 2, locate the hard disk release tab on the bottom of the formatter board, and then pinch the tab to release the end of the hard disk assembly.

7. Rotate the end of the hard disk assembly upward until you can disengage the hinge tabs at the other end.

8. Leaving the hard disk assembly plugged in, lay it to the side to allow space to add or replace the DIMM in slot 2.

9. To replace a DIMM that is currently installed in either slot, spread the latches on each side of the DIMM, lift the DIMM up at an angle, and pull it out.

10. Remove the new DIMM from the antistatic package. Locate the alignment notch on the bottom edge of the DIMM.

11. Holding the DIMM by the edges, align the notch on the DIMM with the bar in the DIMM slot at an angle and firmly press the DIMM into the slot until it is fully seated. When installed correctly, the metal contacts are not visible.

12. Push down on the DIMM until both latches engage the DIMM.

 **NOTE:** If you have difficulty inserting the DIMM, make sure the notch on the bottom of the DIMM is aligned with the bar in the slot. If the DIMM still does not go in, make sure you are using the correct type of DIMM.

13. If you had moved the hard disk assembly to access slot 2, re engage the hinge taps, and snap the release tab back into place on the formatter board.
14. Align the formatter board in the tracks at the bottom of the slot, and then slide the board back into the product. Be sure the pressure release tabs snap back into place.

 **NOTE:** To prevent damage to the formatter board, ensure the formatter board is aligned in the tracks.

15. Reconnect the power cable and interface cables, and turn the product on.

16. To enable the new memory, see the following section.

Enable memory for Windows

1. **Windows XP and Windows Server 2003 (using the default Start menu view):** Click **Start**, click **Settings**, and then click **Printers and Faxes**.

-or-

Windows 2000, Windows XP, and Windows Server 2003 (using the Classic Start menu view): Click **Start**, click **Settings**, and then click **Printers**.

-or-

Windows Vista: Click **Start**, click **Control Panel**, and then in the category for **Hardware and Sound** click **Printer**.

2. Right-click the driver icon, and then select **Properties**.
3. Click the **Device Settings** tab.
4. Expand the area for **Installable Options**.
5. Next to **Printer Memory**, select the total amount of memory that is installed.
6. Click **OK**.

Install an HP Jetdirect or EIO print server card or EIO hard disk

This product is equipped with two external I/O (EIO) slots. For example, you can install an additional HP Jetdirect print server card or a hard disk in the available slots.

1. Turn the product off.

2. Disconnect all power and interface cables.

3. Locate an open EIO slot. Loosen and remove the two retaining screws holding the cover for the EIO slot, and then remove the cover. You will not need these screws and the cover again. They can be discarded.

4. Firmly insert the HP Jetdirect print server card into the EIO slot.

5. Insert and tighten the retaining screws that came with the print server card.

6. Reconnect the power cable and remaining interface cables, and turn the product on.

7. Print a configuration page. An HP Jetdirect configuration page that contains network configuration and status information should also print.

If it does not print, turn the product off, and then uninstall and reinstall the print server card to ensure that it is completely seated in the slot.

8. Perform one of these steps:
 - Choose the correct port. See the computer or operating system documentation for instructions.
 - Reinstall the software, choosing the network installation this time.

Replace the staple cartridge

If the optional HP 3-bin Stapler/Stacker Accessory or HP Booklet Maker/Finisher Accessory runs out of staples while it is stapling a print job, the product automatically stops, if set to stop when out. If the product is set to continue when out, the product will continue to print without stapling.

NOTE: Only replace the staple cartridge unit when the stapler/stacker or booklet maker has run out of staples. Removing the staple cartridge at other times can cause an error to occur.

NOTE: When the stapler/stacker or booklet maker runs out of staples, the stapler unit will return to its default position automatically.

Replace the staple cartridge

1. Open the front door of the booklet maker or stapler/stacker.

2. Push up to on the staple cartridge to remove it from the booklet maker or stapler/stacker.

3. Insert the replacement staple cartridge unit into the stapler unit.

4. Push the staple cartridge unit into the stapler unit until it clicks into position.

5. Close the front door.

Replace saddle stitch staple cartridges in the booklet maker

1. Open the front door of the booklet maker.

2. Grasp the blue handle and pull the staple carriage out of the booklet maker.

3. Grasp the small blue handle on the staple cartridge unit and pull it toward you, then swing the staple cartridge unit into an upright position.

4. Grasp the edges of each staple cartridge and pull up firmly to remove the staple cartridges from the staple cartridge unit.

5. Unpack the new cartridges and remove the plastic packing lock from each one.

6. Hold the new cartridges so that the arrows on the cartridges align with the arrows on the staple cartridge unit and insert them into the unit.

7. Pull the handle of the staple cartridge unit toward you and rotate it downward to its original position. Lock it into position by pushing in the handle.

8. Push the staple carriage back into the booklet maker finisher.

9. Close the front door of the booklet maker.

Clean the product

Over time, particles of toner and paper accumulate inside the product. This can cause print-quality problems during printing. Cleaning the product eliminates or reduces these problems.

Clean the paper path and print-cartridge areas every time that you change the print cartridge or whenever print-quality problems occur. As much as possible, keep the device from dust and debris.

Clean spilled toner

If you get any toner on your clothes or hands, wash them in *cold* water. Hot water will set the toner into the fabric.

Clean the product exterior

Use a soft, damp, lint-free cloth to wipe dust, smudges, and stains off of the exterior of the device.

Clean the product interior

Component	Cleaning method
Guide for media path	Wipe with a lint-free cloth. If dirt cannot be removed, dampen the lint-free cloth with alcohol.
Pickup roller, separation roller, feed roller, MP tray pickup roller, MP tray separation roller, registration roller	Wipe with a lint-free cloth. If dirt cannot be removed, dampen the lint-free cloth with alcohol.
Static charge eliminator	Clean with the brush that is attached to the upper left of the right cover inside.

 **NOTE:** When the secondary transfer roller unit is opened, do not touch the ITB or media sensor unit in the ITB unit, while cleaning the component.

Figure 4-2 Location of product components that require cleaning

1	Pressure roller
2	Fuser roller

---	------------------

Upgrade the firmware

The product has remote firmware update (RFU) capability. Use the information in this section to upgrade the product firmware.

Determine the current firmware version

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **INFORMATION**, and then press the checkmark button ✓
3. Press the down arrow ▼ to highlight **PRINT CONFIGURATION**, and then press the checkmark button ✓ to print.

The firmware datecode is listed on the Configuration page in the section called **Printer Information**. The firmware datecode has this format: YYYYMMDD XX.XXX.X. The first string of numbers is the date, where YYYY represents the year, MM represents the month, and DD represents the date. For example, a firmware datecode of that begins with 20061125 represents November 25, 2006.

Download new firmware from the HP Web site

To find the most recent firmware upgrade for the product, go to www.hp.com/go/cljcp6015_software. This page provides instructions for downloading the new firmware version.

Transfer the new firmware to the product

 **NOTE:** The product can receive an .RFU file update when it is in a "ready" state.

The elapsed time for an update depends on the I/O transfer time, as well as the time that it takes for the product to re-initialize. The I/O transfer time depends on a number of things, including the speed of the host computer that is sending the update. If the remote firmware update process is interrupted before the firmware is downloaded (while **Receiving Upgrade** appears on the control-panel display), the firmware file must be sent again. If power is lost during the update (while the **Performing Upgrade** message appears on the control-panel display), the update is interrupted and the message **Resend Upgrade** appears (in English only) on the control-panel display. In this case, you must send the upgrade by using the USB port. Finally, any jobs that are ahead of the RFU job in the queue are completed before the update is processed.

Use FTP to upload the firmware through a browser

 **NOTE:** The firmware update involves a change in the format of nonvolatile random-access memory (NVRAM). Any menu settings that are changed from the default settings might return to default settings and must be changed again if you want settings that are different from the defaults.

1. Print a configuration page and note the TCP/IP address shown on the EIO Jetdirect page.
2. Open a browser window.
3. In the address line of the browser, type `ftp://<ADDRESS>`, where <ADDRESS> is the address of the product. For example, if the TCP/IP address is 192.168.0.90, type `ftp://192.168.0.90`.
4. Locate the downloaded .RFU file for the product.
5. Drag and drop the .RFU file onto the **PORT** icon in the browser window.

 **NOTE:** The product turns off and then on automatically to activate the update. When the update process is complete, a **READY** message displays on the product control panel.

Use FTP to upgrade the firmware on a network connection using Microsoft Windows

 **NOTE:** The firmware update involves a change in the format of nonvolatile random-access memory (NVRAM). Any menu settings that are changed from the default settings might return to default settings and must be changed again if you want settings that are different from the defaults.

1. Take note of the IP address on the HP Jetdirect page. The HP Jetdirect page is the second page that prints when you print the configuration page.

 **NOTE:** Before upgrading the firmware, make sure that the product is not in Sleep mode. Also make sure that any error messages are cleared from the control-panel display.

2. Open an MS-DOS command prompt on your computer.
3. Go to the folder where the firmware file is stored.
4. Type: `ftp TCP/IP ADDRESS>`. For example, if the TCP/IP address is 192.168.0.90, type `ftp 192.168.0.90`.
5. Press **Enter** on the keyboard.
6. When prompted for the user name, press **Enter**.
7. When prompted for the password, press **Enter**.
8. Type `bin` at the command prompt.
9. Press **Enter**. The message **200 Types set to I, Using binary mode to transfer files** appears in the command window.
10. Type `put` and then the file name (for example, if the file name is CP6015.rfu, type `CP6015.rfu`).
11. The download process begins and the firmware is updated on the product. This can take several minutes. Let the process finish without further interaction with the product or computer.

 **NOTE:** The product automatically turns off and then on again after processing the upgrade.

12. At the command prompt, type: `bye` to exit the ftp command.
13. At the command prompt, type: `exit` to return to the Windows interface.

Use HP Web Jetadmin to upgrade the firmware

This procedure requires that you install HP Web Jetadmin Version 7.0 or later on your computer. See [Use HP Web Jetadmin software on page 81](#). Complete the following steps to update a single product through HP Web Jetadmin after downloading the .RFU file from the HP Web site.

1. Start HP Web Jetadmin.
2. Open the **Device Management** folder in the drop-down list in the **Navigation** panel. Navigate to the **Device Lists** folder.
3. Expand the **Device Lists** folder and select **All Devices**. Locate the product in the list of devices, and then click to select it.

If you need to upgrade the firmware for multiple HP Color LaserJet CP6015 series products, select all of them by pressing the **Ctrl** key as you click the name of each product.

4. Locate the drop-down box for **Device Tools** in the upper-right corner of the window. Select **Update Printer Firmware** from the action list.
5. If the name of the .RFU file is not listed in the **All Available Images** box, click **Browse** in the **Upload New Firmware Image** dialog box and navigate to the location of the .RFU file that you downloaded from the Web at the start of this procedure. If the filename is listed, select it.
6. Click **Upload** to move the .RFU file from your hard drive to the HP Web Jetadmin server. After the upload is complete, the browser window refreshes.
7. Select the .RFU file from the **Printer Firmware Update** drop-down menu.
8. Click **Update Firmware**. HP Web Jetadmin sends the selected .RFU file to the product. The control panel shows messages that indicate the progress of the upgrade. At the end of the upgrade process, the control panel shows the **READY** message.

Use MS-DOS commands to upgrade the firmware for USB connections

To update the firmware by using a network connection, follow these instructions.

1. From a command prompt or in an MS-DOS window, type the following `copy /B FILENAME > \COMPUTERNAME\SHARENAME>`, where <FILENAME> is the name of the .RFU file (including the path), <COMPUTERNAME> is the name of the computer from which the product is being shared, and <SHARENAME> is the product share name. For example: `C:\>copy /b C:\6015FW.RFU \\YOUR_Computer\cljcp6015`.

 **NOTE:** If the file name or path includes a space, you must enclose the file name or path in quotation marks. For example, type: `C:\>copy /b "C:\MY DOCUMENTS\6015FW.RFU" \\YOUR_computer\cljcp6015`.

2. Press **Enter** on the keyboard. The control panel shows a message that indicates the progress of the firmware upgrade. At the end of the upgrade process, the control panel shows the **READY** message. The message **One File Copied** appears on the computer screen.

Upgrade the HP Jetdirect firmware

The HP Jetdirect network interface in the product has firmware that can be upgraded separately from the product firmware. This procedure requires that you install HP Web Jetadmin Version 7.0 or later on your computer. See [Use HP Web Jetadmin software on page 81](#). Complete the following steps to update the HP Jetdirect firmware by using HP Web Jetadmin.

1. Open the HP Web Jetadmin program.
2. Open the **Device Management** folder in the drop-down list in the **Navigation** panel. Navigate to the **Device Lists** folder.
3. Select the product that you want to update.
4. In the **Device Tools** drop-down list, select **Jetdirect Firmware Update**.
5. Under **Jetdirect firmware version** the HP Jetdirect model number and current firmware version are listed. Make a note of these.
6. Go to www.hp.com/go/wja_firmware.

7. Scroll down to the list of HP Jetdirect model numbers and find the model number you wrote down.
8. Look at the current firmware version for the model, and see if it is later than the version you wrote down. If it is, right-click on the firmware link, and follow the instructions on the Web page to download the new firmware file. The file must be saved into the <drive>:\PROGRAM FILES\HP WEB JETADMIN\DOC\PLUGINS\HPWJA\FIRMWARE\JETDIRECT folder on the computer that is running the HP Web Jetadmin software.
9. In HP Web Jetadmin, return to the main product list and select the digital sender again.
10. In the **Device Tools** drop-down list, select **Jetdirect Firmware Update** again.
11. On the HP Jetdirect firmware page, the new firmware version is listed under **Jetdirect Firmware Available on HP Web Jetadmin**. Click the **Update Firmware Now** button to update the Jetdirect firmware.

Set the real-time clock

Use the real-time clock feature to set the date and time settings. The date and time information is attached to stored print, so you can identify the most recent versions.

Set the real-time clock

Set the date

1. Press **Menu**.
 2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
 3. Press the down arrow ▼ to highlight **SYSTEM SETUP**, and then press the checkmark button ✓.
 4. Press the checkmark button ✓ to select **DATE/TIME**.
 5. Press the down arrow ▼ to highlight **DATE**, and then press the checkmark button ✓.
 6. Select the correct month, date of the month, and the year, and then press the checkmark button ✓ to save.
-

Set the date format

1. Press **Menu**.
 2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
 3. Press the down arrow ▼ to highlight **SYSTEM SETUP**, and then press the checkmark button ✓.
 4. Press the checkmark button ✓ to select **DATE/TIME**.
 5. Press the down arrow ▼ to highlight **DATE FORMAT**, and then press the checkmark button ✓.
 6. Select the month, date of the month, and year, and then press the checkmark button ✓ to save.

5 Theory of operation

- [Basic operation](#)
- [Formatter system](#)
- [Engine-control system](#)
- [Laser/scanner system](#)
- [Image-formation system](#)
- [Pickup, feed, and delivery system](#)
- [Jam detection](#)
- [Optional input trays](#)

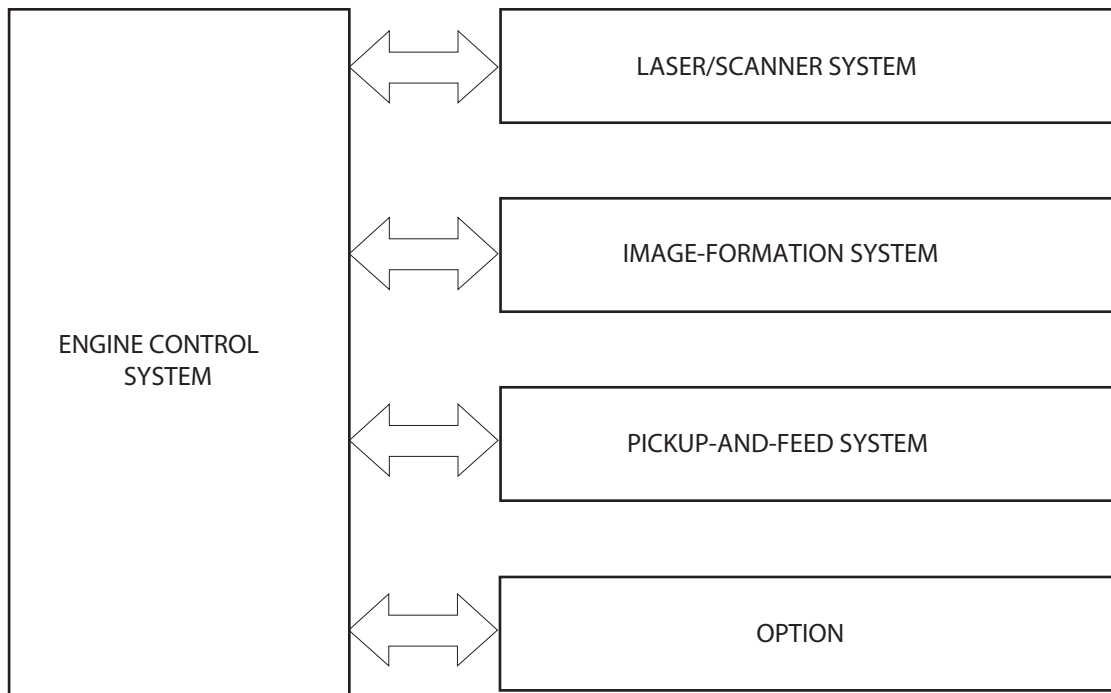

Basic operation

All high-level processes are routed through the formatter, which stores font information, processes the print image, and communicates with the host computer.

Basic product operation can be divided into the following systems:

- The engine-control system, which includes the power supply and the DC controller printed circuit assembly (PCA)
- The laser/scanner system, which forms the latent image on the photosensitive drum
- The image-formation system, which transfers a toner image onto the paper
- The paper pickup and feed system, which uses a system of rollers and belts to transport the paper through the product

Figure 5-1 Relationship between the main product systems

Sequence of operation

The DC controller PCA controls the operating sequence, as described in the following table. For detailed information about the timing of the processes, see [General timing chart on page 545](#).

Table 5-1 Sequence of operation

Period	Duration	Description
Waiting	From the time the power is turned on or when the product exits Sleep mode until the product is ready for printing	<ul style="list-style-type: none"> • Pressurizes the fuser pressure roller • Detects the print cartridges and imaging drums

Table 5-1 Sequence of operation (continued)

Period	Duration	Description
		<ul style="list-style-type: none">• Detects the home position for the intermediate-transfer belt (ITB) and the developing unit• Cleans waste toner from the ITB
Standby	From the end of the waiting sequence or the last rotation until the formatter receives a print command or until the product is turned off	<ul style="list-style-type: none">• The product is in the READY state.• The product enters Sleep mode after the specified length of time.• The product calibrates if it is time for an automatic calibration.
Initial rotation	From the time the formatter receives a print command until the paper enters the paper path	<ul style="list-style-type: none">• Activates the high-voltage power supply• Prepares each laser/scanner unit• Warms the fuser to the appropriate temperature
Printing	From the time the first sheet of paper enters the paper path until the last sheet has passed through the fuser	<ul style="list-style-type: none">• Forms the image on the photosensitive drums• Transfers the toner to the paper• Fuses the toner image onto the paper• Performs calibration after a specified number of pages
Last rotation	From the time the last sheet of paper exits the fuser until the motors stop rotating	<ul style="list-style-type: none">• Moves the last printed sheet into the output bin• Stops each laser/scanner unit• Discharges the bias from the high-voltage power supply

Formatter system

The formatter is responsible for the following procedures:

- Controlling Sleep mode
- Receiving and processing print data from the various product interfaces
- Monitoring control-panel functions and relaying product-status information (through the control panel and the network or the bidirectional interface)
- Developing and coordinating data placement and timing with the DC controller PCA
- Storing font information
- Communicating with the host computer through the network or the bidirectional interface

The formatter receives a print job from the network or the bidirectional interface and separates it into image information and instructions that control the printing process. The DC controller PCA synchronizes the image-formation system with the paper-input and -output systems, and then signals the formatter to send the print-image data.

The formatter also provides the electrical interface and mounting locations for two EIO cards and an additional DIMM.

Sleep mode

This feature conserves power after the product has been idle for an adjustable period of time. When the product is in Sleep mode, the control-panel backlight is turned off, but the product retains all settings, downloaded fonts, and macros. The default setting is for Sleep mode to be enabled, and the product enters the Sleep mode after a 60-minute idle time. The HP Color LaserJet CP6015de energy star bundle enters sleep mode after one minute. The Sleep mode can also be turned off from the **RESETS** menu on the control panel.

The product exits Sleep mode and enters the warm-up cycle when any of the following events occurs:

- A print job, valid data, or a PML or PJJL command is received
- A control-panel button is pressed
- A cover is opened
- A paper tray is opened
- The engine-test switch is pressed

 **NOTE:** Product error messages override the Sleep message. The product enters Sleep mode at the appropriate time, but the error message continues to appear.

Resolution

RESOLUTION	Image REt 4800 (default) 1200X600 dpi	Sets the resolution at which the product prints. The default value is Image REt 4800 . Try the 1200X600 dpi setting to improve printing for detailed line work or small text.
EDGE CONTROL	OFF LIGHT NORMAL MAXIMUM	The Edge Control setting determines how edges are rendered. Edge control has two components: adaptive halftoning and trapping. Adaptive halftoning increases edge sharpness. Trapping reduces the effects of color-plane. <ul style="list-style-type: none">• OFF turns off both trapping and adaptive halftoning.• LIGHT sets trapping at a minimal level, and adaptive halftoning is on.

 **NOTE:** The REt settings that are sent from software programs or printer drivers override the control-panel settings.

Input/output

The product receives print data primarily from the embedded HP Jetdirect print server. The product also has a USB 2.0 port for connecting directly to a computer.

CPU

The formatter incorporates a 835 MHz RISC processor.

Memory

The formatter system contains the product memory. All bundles support up to two RAM DIMMs up to 1 GB.

 **NOTE:** If the product encounters a problem when managing available memory, a clearable warning message appears on the control panel.

Hard disk

The HP Color LaserJet CP6015xh model comes standard with a 40 GB hard disk. The hard disk can permanently store fonts and forms. It can also be used for making multiple original prints and for job-storage features.

Random-access memory

The random-access memory (RAM) contains the page, I/O buffers, and the font storage area. It stores printing and font information received from the host system, and can also serve to temporarily store a full page of print-image data before the data is sent to the print engine. Memory capacity can be increased by adding a DIMM to the formatter. Note that adding memory might also increase the print speed for complex graphics.

DIMM slot

The DIMM slot can be used to add memory or fonts. There are two memory DIMM slots. Slot 1 is closest to the outside of the formatter. Slot 2 is closest to the hard disk.

Firmware

The firmware is contained on NAND flash memory soldered on the formatter board. A remote firmware upgrade process is available, which overwrites the firmware in the NAND flash.

Nonvolatile memory

The product uses nonvolatile memory (NVRAM) to store I/O and print-environment-configuration information. The contents of NVRAM are retained when the product is turned off or disconnected.

PJL overview

The printer job language (PJL) is an integral part of configuration, in addition to the standard printer command language (PCL). With standard cabling, the product can use PJL to perform a variety of functions, such as these:

- Two-way communication with the host computer through a network connection or a USB connection. The product can inform the host about such things as the control-panel settings, and the control-panel settings can be changed from the host.
- Dynamic I/O switching. The product uses this switching to be configured with a host on each I/O. The product can receive data from more than one I/O simultaneously, until the I/O buffer is full. This can occur even when the product is offline.
- Context-sensitive switching. The product can automatically recognize the personality (PS or PCL) of each job and configure itself to serve that personality.
- Isolation of print environment settings from one print job to the next. For example, if a print job is sent to the product in landscape mode, the subsequent print jobs print in landscape only if they are formatted for landscape printing.

PML

The printer management language (PML) allows remote configuration and status readback through the I/O ports.

Control panel

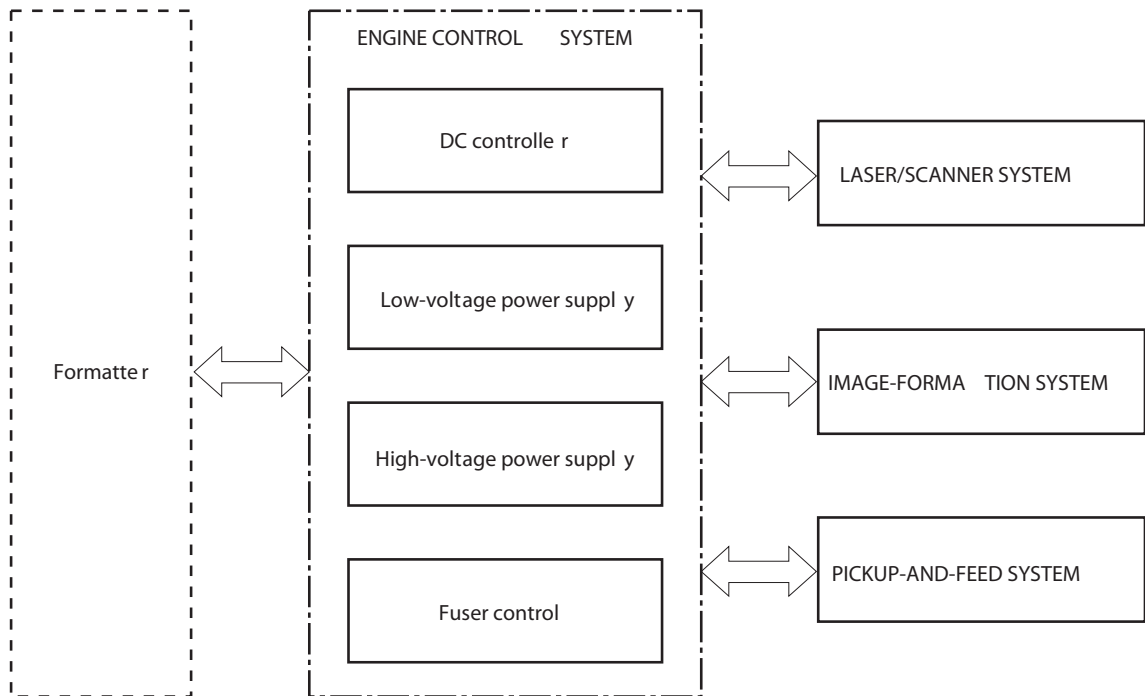

The formatter sends and receives product status and command data to and from a control-panel PCA.

Engine-control system

The engine-control system receives commands from the formatter and interacts with the other main systems to coordinate all product functions. It consists of the following components:

- DC controller
- Low-voltage power supply
- High-voltage power supply
- Fuser control

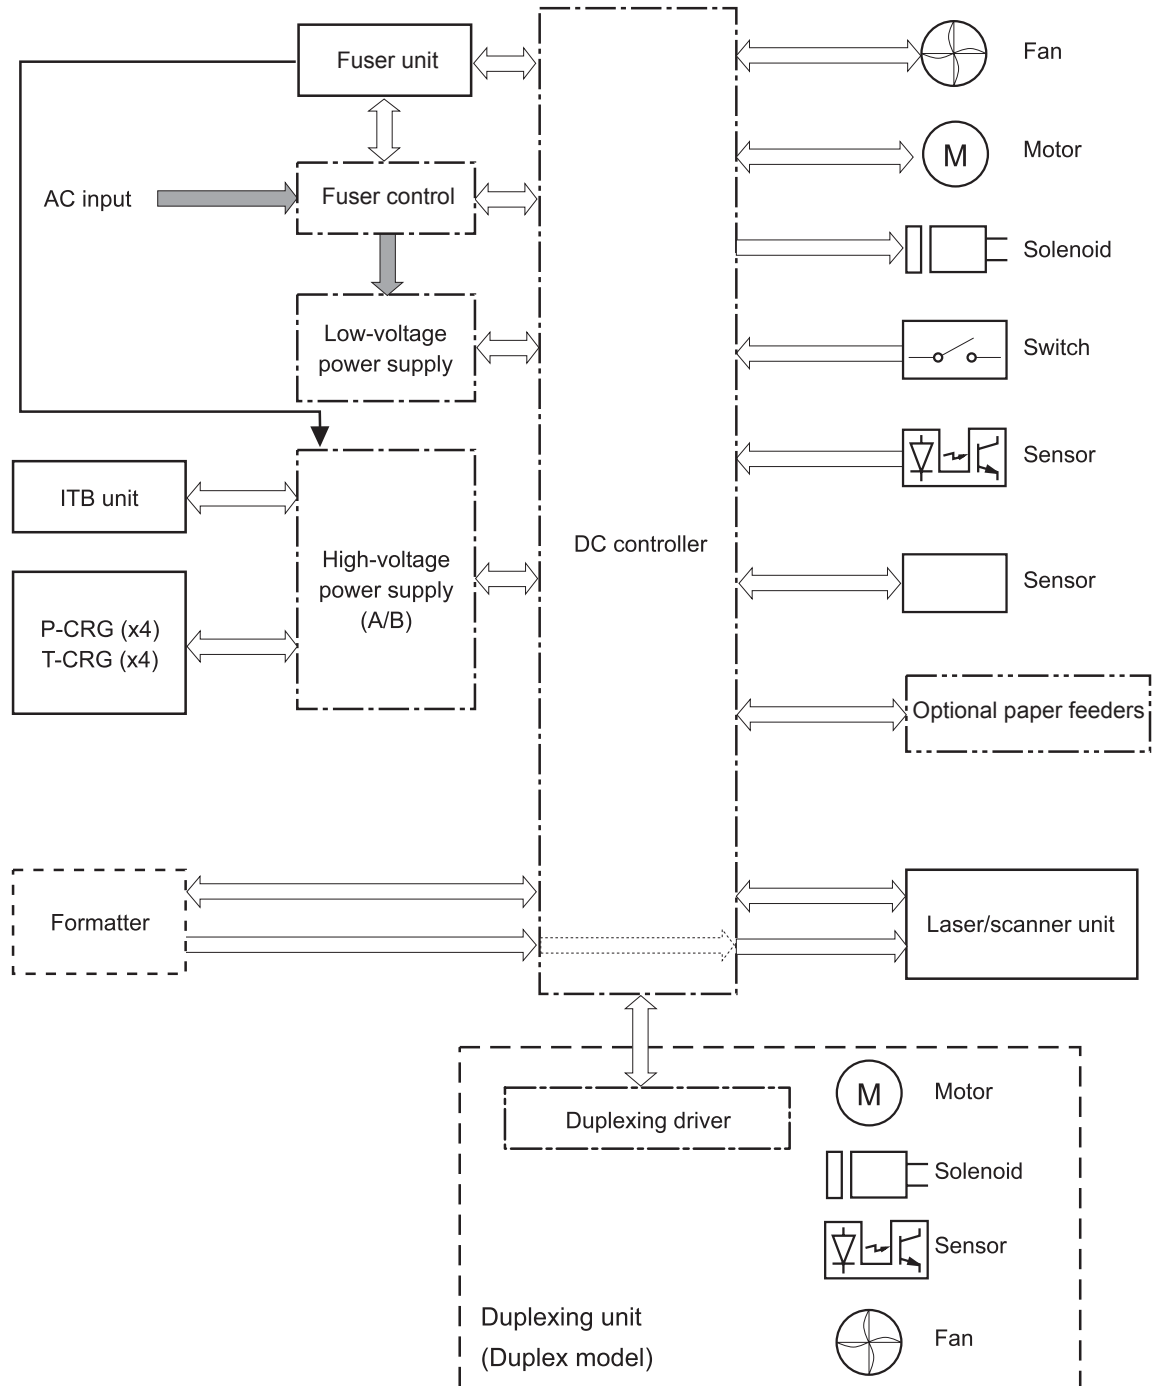

Figure 5-2 Engine-control system

DC controller

The DC controller provides operational commands to each of the product components, and it interacts with the other engine-control systems and product systems to control the product operational sequence.

Motors and fans

The product has 17 motors that drive the components in the paper-feed and image-formation systems. See [Motors on page 526](#). It also has nine fans that cool the interior of the product. See [Fans on page 525](#).

The DC controller can sense failure for all the fans and several of the motors. When this occurs, the DC controller notifies the formatter so it can halt the printing process and provide an alert on the control-panel display.

Table 5-5 Motors

Abbreviation	Name	Purpose	Type	Failure detection
M5	Pickup motor	Drives the cassette pickup roller, the cassette feed roller, and the MP tray pickup roller	Stepping motor	No
M6	Registration motor	Drives the registration roller	Stepping motor	No
M7	Cassette lifter motor	Drives the cassette-lifter mechanism	DC motor	No

Table 5-5 Motors (continued)

Abbreviation	Name	Purpose	Type	Failure detection
M9	Primary-transfer-roller disengagement motor	Engages or disengages the primary transfer roller	Stepping motor	No
M10	ITB motor	Drives the ITB and the secondary transfer roller	DC motor	Yes
M11	Fuser motor	Drives the fuser roller, the delivery roller, and the fuser pressure roller	DC motor	Yes
M12	Drum motor (Y)	Drives the photosensitive drum and the primary charging roller in the yellow imaging drum	DC motor	Yes
M13	Drum motor (M)	Drives the photosensitive drum and the primary charging roller in the magenta imaging drum	DC motor	Yes
M14	Drum motor (C)	Drives the photosensitive drum and the primary charging roller in the cyan imaging drum	DC motor	Yes
M15	Drum motor (K)	Drives the photosensitive drum and the primary charging roller in the black imaging drum	DC motor	Yes
M16	Toner-feed motor (K)	Drives the black toner feed screws and waste-toner feed screws	Stepping motor	No
M17	Toner-feed motor (C, M, Y)	Drives the yellow, magenta, and cyan toner feed screws and waste-toner feed screws	Stepping motor	No
M18	Developing disengagement motor (C, K)	Engages and disengages the developing rollers in the cyan- and black-imaging drums	Stepping motor	No
M19	Developing disengagement motor (Y, M)	Engages and disengages the developing rollers in the yellow- and magenta-imaging drums	Stepping motor	No
M301	Duplexing feed motor	Drives the duplexing paper-feed roller	Stepping motor	No
Duplex models only

Abbreviation	Name	Purpose	Type	Failure detection
M302 Duplex models only	Duplexing reverse motor	Drives the duplexing paper-reverse roller	Stepping motor	No
M303 Duplex models only	Duplexing re-pickup motor	Drives the duplexing paper re-pickup roller and engages or disengages the color sensor	Stepping motor	No

Table 5-6 Fans

Abbreviation	Name	Cooling area	Type	Speed
FM1	Laser/scanner cooling fan	Laser/scanner area and formatter	Intake	Full/half
FM2	Fuser cooling fan	Fuser	Intake	Full/half
FM3	Cartridge-area cooling fan	Print-cartridge and imaging-drum area	Exhaust	Full
FM4	VOC fan	Fuser	Exhaust	Full/half
FM5	Low-voltage power-supply cooling fan	Low-voltage power-supply unit	Exhaust	Full/half
FM6	Cartridge front-area cooling fan	Print-cartridge and imaging-drum area	Intake	Full/half
FM7	Delivery unit cooling fan	Delivery unit	Intake	Full
FM301 Duplex models only	Duplexing unit cooling fan 1	Duplexing driver PCA	Intake	Full
FM302 Duplex models only	Duplexing unit cooling fan 2	Output bin area	Exhaust	Full/half

Fuser control

The fuser-control circuit controls the fuser temperature. The heaters provide the high temperatures that melt the toner to bond it to the paper. The thermistors and thermopiles monitor the temperature inside the fuser. The thermostats control the current to the heaters. If the thermistors and thermopiles

detect abnormally high temperatures, the thermostats interrupt the power to the heaters to prevent overheating.

Figure 5-4 Fuser components

Table 5-7 Fuser components

Type of component	Abbreviation	Name	Function
Heaters	H1	Fuser-roller main heater	Heats the center area of the fuser roller
	H2	Fuser-roller sub heater	Heats both ends of the fuser roller
	H3	Pressure-roller heater	Heats the pressure roller
Thermistors (Contact type)	TH1	Fuser-roller end thermistor	Each thermistor detects the temperature on one end of the fuser roller.
	TH3		
	TH2	Pressure-roller end thermistor	Each thermistor detects the temperature on one end of the pressure roller.
	TH4		
Thermopiles (Non-contact type)	TP1	Main thermopile	Detects the temperature at the center of the fuser roller
	TP2	Sub thermopile	Detects the temperature at the center of the pressure roller

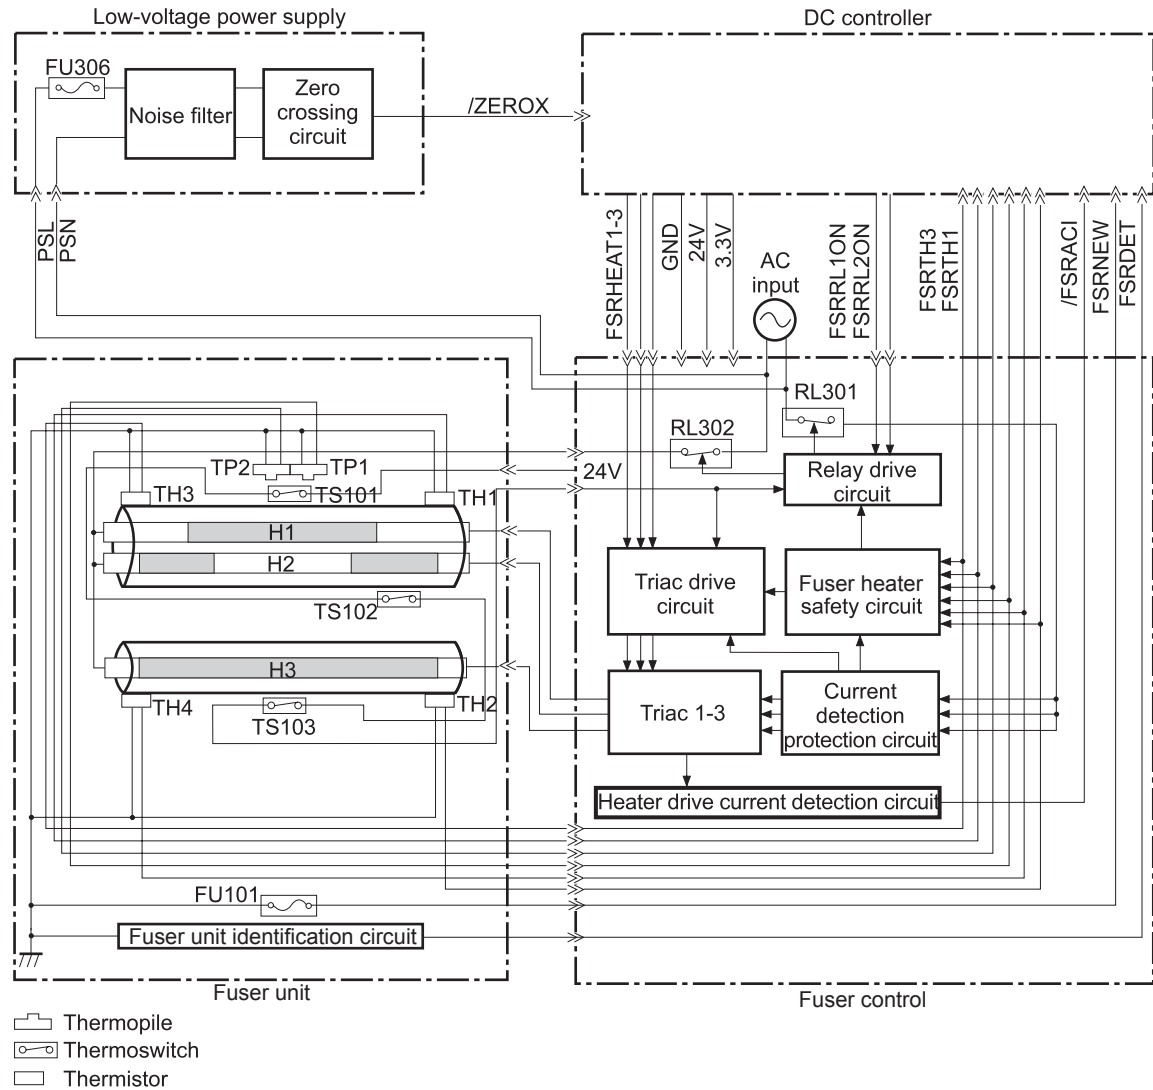

Table 5-7 Fuser components (continued)

Type of component	Abbreviation	Name	Function
Thermoswitches (Non-contact type)	TS101	Fuser-roller main thermoswitch	Controls the fuser-roller main heater
	TS102	Fuser-roller sub thermoswitch	Controls the fuser-roller sub heater
	TS103	Pressure-roller thermoswitch	Controls the pressure-roller heater

Fuser temperature-control circuit

The temperatures of the two rollers in the fuser fluctuate according to the stage of the printing process. The DC controller sends commands to the fuser-control circuit to adjust the temperatures accordingly.

Figure 5-5 Fuser temperature-control circuit

Fuser over-temperature protection

To protect the fuser from excessive temperatures, the product has four layers of protective functions. If one function fails, the subsequent functions should detect the problem.

- **DC controller:** When a thermistor or thermopile detects a temperature above a certain threshold, the DC controller interrupts power to the appropriate heater. Following are the thresholds for each component:
 - TH1: 223° C (433° F) or higher
 - TH2: 195° C (383° F) or higher
 - TH3: 223° C (433° F) or higher
 - TH4: 195° C (383° F) or higher
 - TP1: 240° C (464° F) or higher
 - TP2: 240° C (464° F) or higher
- **Fuser-heater safety circuit:** If the DC controller fails to interrupt the power to the heaters at the prescribed temperatures, the fuser-heater safety circuit deactivates the triac-drive circuit and releases the relay, which causes the heaters to stop at slightly higher temperature thresholds.
 - TH1: 230° C (446° F) or higher
 - TH2: 200° C (392° F) or higher
 - TH3: 230° C (446° F) or higher
 - TH4: 200° C (392° F) or higher
 - TP1: 250° C (482° F) or higher
 - TP2: 250° C (482° F) or higher
- **Current-detection protection circuit:** If current flowing in each triac exceeds a specific value, the current-detection protection circuit deactivates the triac-drive circuit and releases the relay, which interrupts the power supply to the heaters.
- **Thermoswitch:** If the temperature in the heaters is abnormally high, and the temperature the thermoswitches exceeds a pre-specified value, the contact to the thermoswitch is broken. Breaking this contact deactivates the triac-drive circuit and releases the relay, which interrupts the power supply to the heaters. Following are the thresholds for each thermoswitch:
 - TS101: 200° C (392° F) or higher
 - TS102: 200° C (392° F) or higher
 - TS103: 200° C (392° F) or higher

 **NOTE:** When the thermoswitches reach this temperature, the actual temperature on the fuser rollers is approximately 370° C (698° F).

Fuser-failure detection

When the DC controller detects any of the following conditions, it determines that the fuser has failed. It then interrupts power to the fuser heaters and notifies the formatter.

- **Abnormally high temperatures:** Temperatures are too high for any of the following components, at any time:
 - TH1: 223° C (433° F) or higher
 - TH2: 195° C (383° F) or higher
 - TH3: 223° C (433° F) or higher
 - TH4: 195° C (383° F) or higher
 - TP1: 240° C (464° F) or higher
 - TP2: 240° C (464° F) or higher
- **Abnormally low temperatures:** Temperatures are too low at any of the following components after the product has initialized.
 - TH1 or TH3: 120° C (248° F) or lower
 - TP1 or TP2: 140° C (284° F) or lower

Or, the temperature drops in either of the thermopiles (TP1 and TP2) by 30° C (86° F) or more within a specified length of time.
- **Abnormal temperature rise:** The temperature-detection sensors do not reach a predefined temperature within a specified length of time after the fuser heaters are turned on.
- **Temperature-detection-sensor failure 1:** The converted analog-to-digital value of each temperature detection sensor is abnormal.
- **Temperature-detection-sensor failure 2:** The difference in temperature between pairs of thermistors or thermopiles is greater than a predetermined amount. Following are the temperature differences for each pair:
 - Between TP1 and TP2: 20° C (68° F) or more
 - Between TH1 and TH3 (fuser-roller ends): 30° C (86° F) or more
 - Between TH2 and TH4 (pressure-roller ends): 25° C (70° F) or more
- **Drive-circuit failure:** The power-supply frequency is out of the specified range when the product is initializing or in standby mode. The specified range is between 40 and 70Hz.
- **Fuser discrepancy:** The fuser-ID voltage does not match the power-supply voltage when the product is turned on or when the right door is closed.

Fuser identification

Whenever the product is turned on or when the right door is closed, the DC controller detects whether the fuser is present and whether the fuser is for a 110-volt model or a 220-volt model.

Fuser-life detection

The fuser is rated to print a certain number of pages. When a new fuser is installed, the DC controller receives a signal and directs the formatter to set the fuser count to zero. As pages are printed, the formatter increments the fuser count. When the page count reaches a certain threshold, the formatter sends a message to the control panel to alert the customer to order a new fuser. When the maximum number of pages has printed, the formatter sends a message to the control panel to prompt the customer to replace the fuser.

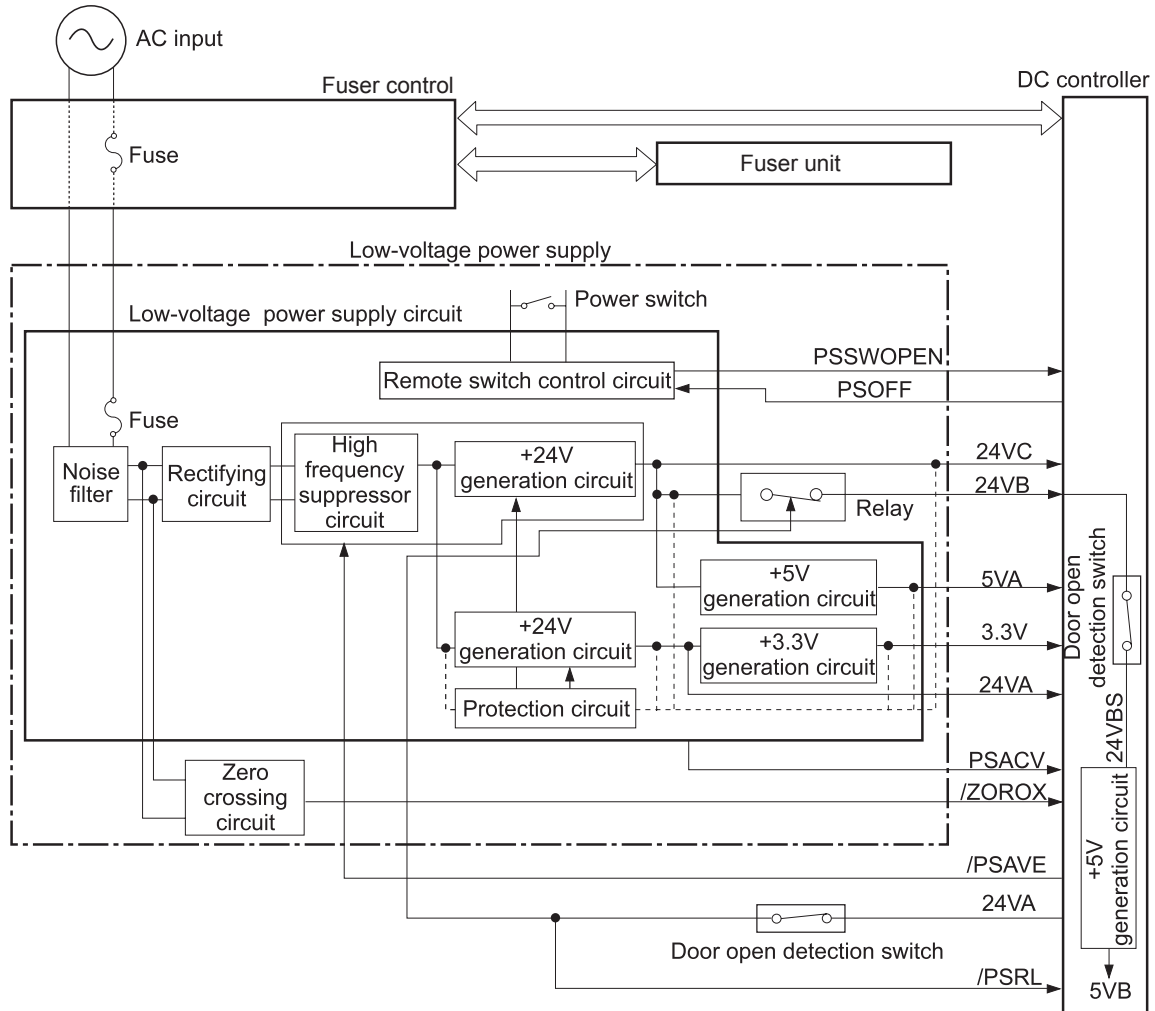

Relay-failure detection

If a fuser relay fails, the DC controller detects the failure and notifies the formatter. The DC controller checks for signals from the relays when the product is turned on or when it comes out of Sleep mode.

Low-voltage power supply

The low-voltage power-supply circuit converts the AC power from the wall receptacle into the DC voltage that the product components use. This is a universal power supply that accepts 110 Volt or 220 Volt input.

Figure 5-6 Low-voltage power-supply circuit

The low-voltage power supply converts the AC power into three DC voltages, which are then subdivided, as described in the following table.

Table 5-8 Converted DC voltages

Main DC voltage	Sub-voltage	Behavior
+24 V	+24VA	Constantly supplied
	+24VB	Interrupted when the front door or right door is opened Stopped during Sleep (powersave) mode
	+24VC	Stopped during Sleep (powersave) mode
+5 V	+5VA	Stopped during Sleep (powersave) mode
	+5VB	Interrupted when the front door or right door is opened Stopped during Sleep (powersave) mode
+3.3 V	none	Constantly supplied

Overcurrent/overvoltage protection

The low-voltage power supply stops supplying the DC voltage to the product components whenever it detects excessive current or abnormal voltage from the power source.

Safety

For personal safety, the low-voltage power supply interrupts power to the fuser, the high-voltage power supply, and the motors whenever the front door or right door is opened.

Voltage detection

The DC controller monitors the input voltage from the power source so it can control the voltage to the fuser. If the input voltage is out of range, the DC controller notifies the formatter that the low-voltage power supply has failed.

Sleep (powersave) mode

Sleep mode conserves energy by stopping the power to several components when the product is idle. If the DC controller detects voltage that is too high when the product is in Sleep mode, it determines that the low-voltage power supply has failed, and it notifies the formatter.

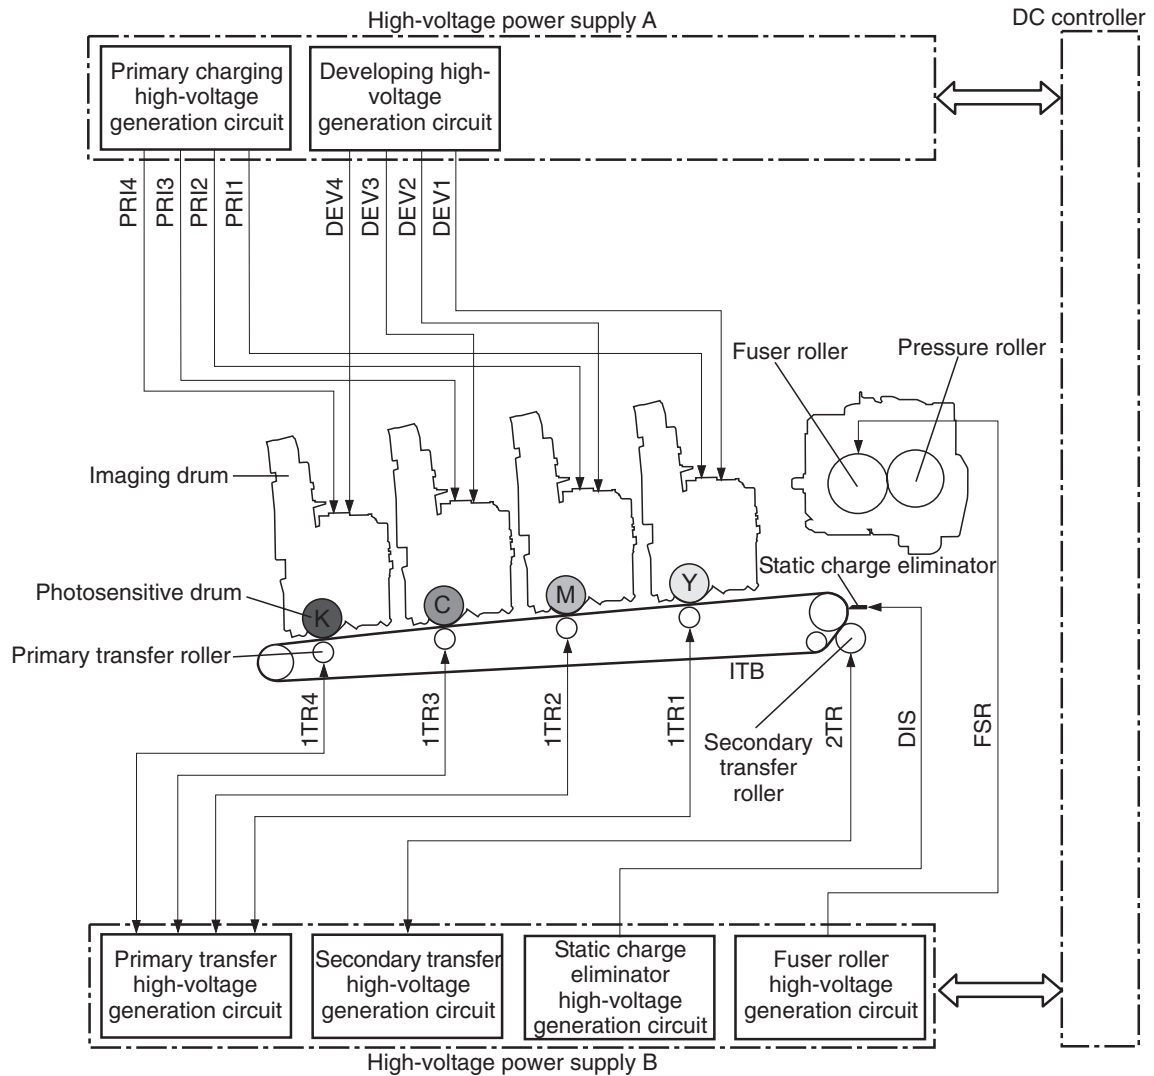

High-voltage power supply

The high-voltage power supply delivers the high-voltage biases to the following components that are used to transfer toner during the image-formation process:

- Primary-charging roller
- Developing roller

- Primary-transfer roller
- Secondary-transfer roller
- Fuser roller
- Static-charge eliminator

Figure 5-7 High-voltage power supply circuits

The high-voltage power supply contains several separate circuits.

Table 5-9 High-voltage power supply circuits

Circuit	Description
Primary-charging-bias generation	DC negative bias is applied to the surface of the photosensitive drum in each imaging drum to prepare it for image formation.
Developing-bias generation	DC negative bias is used to adhere the toner to each photosensitive drum during the image-formation process.
Primary-transfer-bias generation	DC positive bias is used to transfer the latent toner image from each photosensitive drum onto the ITB.

Table 5-9 High-voltage power supply circuits (continued)

Circuit	Description
Secondary-transfer-bias generation	Two DC biases, one positive and one negative, are used to transfer the toner from the ITB onto the paper.
Static-charge-eliminator-bias generation	DC negative bias is used to reduce the electrical charge on the paper after the secondary-transfer process.
Fuser-roller-bias generation	DC negative bias is applied to the fuser roller to remove any toner that adheres to the roller after fusing.

Laser/scanner system

The laser/scanner system forms the latent electrostatic image on the photosensitive drums inside each of the imaging drums. The product has two laser/scanners: one for yellow and magenta and the other for cyan and black.

The DC controller receives instructions from the formatter regarding the image of the page to be printed. The DC controller signals the lasers to emit light, and the laser beams pass through lenses and onto the scanner mirror, which rotates at a constant speed. The mirror reflects the beam onto the photosensitive drum in the pattern required for the image, exposing the surface of the drum so it can receive toner.

Figure 5-8 Laser/scanner system

The DC controller determines that a laser/scanner has failed when any of the following conditions occurs:

- **Laser failure:** The detected laser intensity does not match a specified value when the product initializes.
- **Beam-detect (BD) failure:** The BD interval is outside of a specified range during printing.
- **Scanner-motor failure:** The scanner motor does not reach a specified rotation speed within a certain time after it begins rotating.

Image-formation system

The image-formation system creates the printed image on the paper. It consists of the laser/scanners, print cartridges, imaging drums, ITB, and fuser.

Figure 5-9 Image-formation system

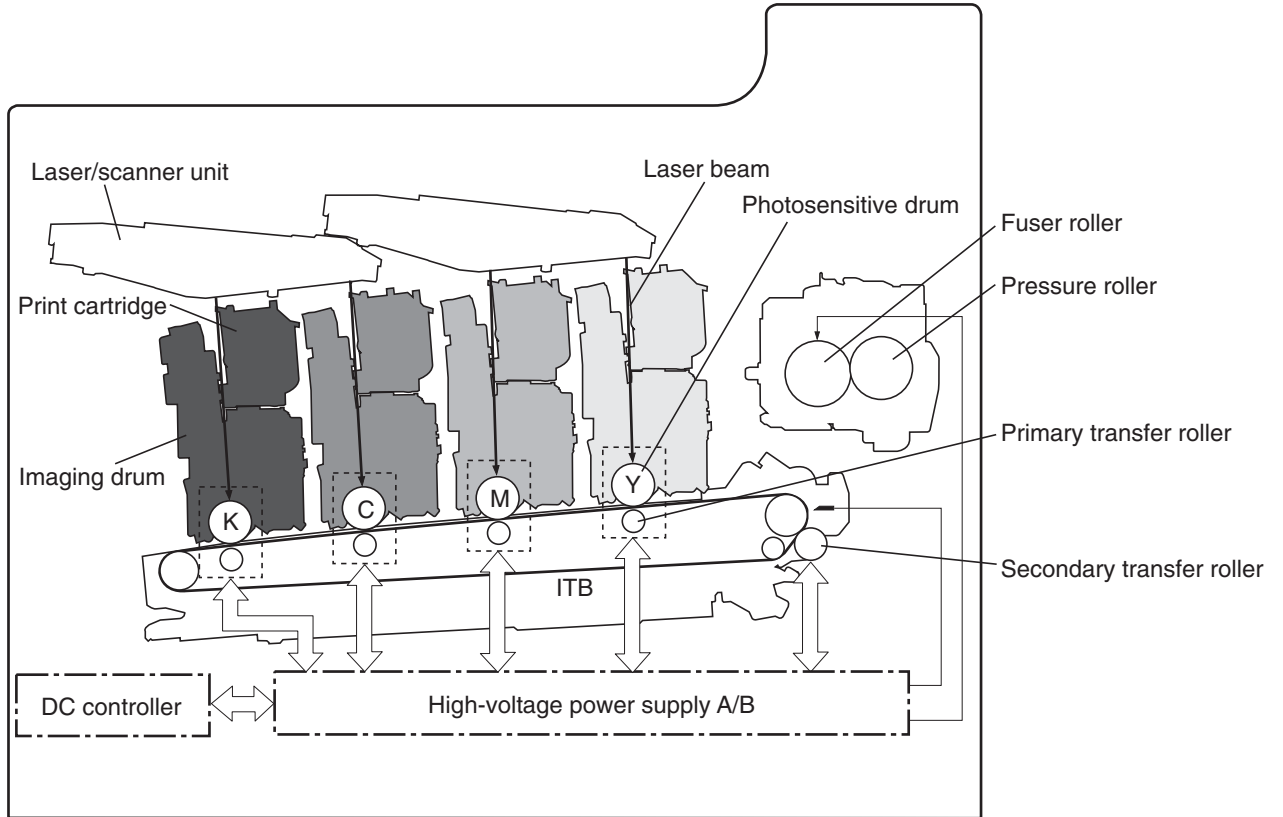

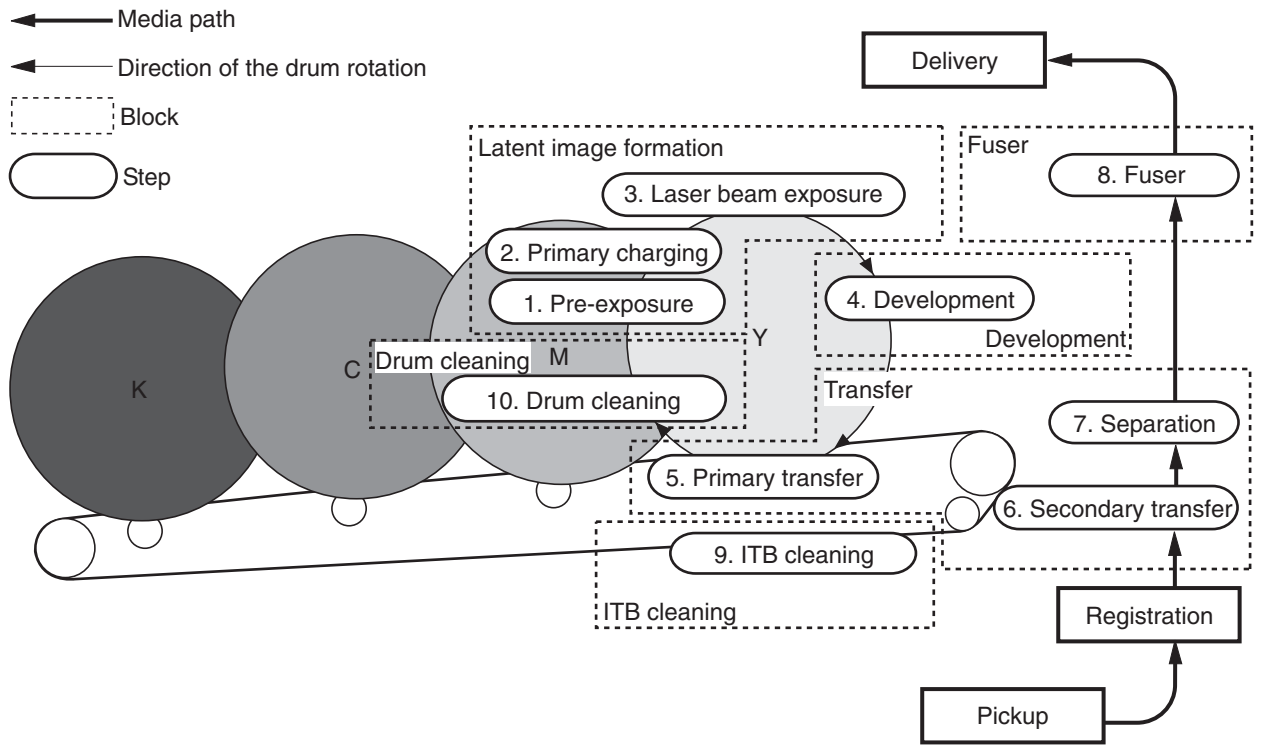

Image-formation process

The image-formation system consists of ten steps that are divided into six functional blocks.

Figure 5-10 Image-formation process

Functional block	Steps	Description
Latent image formation	1. Pre-exposure 2. Primary charging 3. Laser-beam exposure	An invisible latent image is formed on the surface of the photosensitive drums.
Development	4. Development	Toner adheres to the electrostatic latent image on the photosensitive drums.
Transfer	5. Primary transfer 6. Secondary transfer 7. Separation	The toner image is transferred to the ITB and subsequently to the paper.
Fusing	8. Fusing	The toner is fused to the paper to make a permanent image.
ITB cleaning	9. ITB cleaning	Residual toner is removed from the ITB.
Drum cleaning	10. Drum cleaning	Residual toner is removed from the photosensitive drums.

Step 1: Pre-exposure

Light from the pre-exposure LED strikes the surface of the photosensitive drum to remove any residual electrical charges from the drum surface.

Figure 5-11 Pre-exposure

Step 2: Primary charging

The primary-charging roller contacts the photosensitive drum and charges the drum with negative potential.

Figure 5-12 Primary charging

Step 3: Laser-beam exposure

The laser beam strikes the surface of the photosensitive drum in the areas where the image will be formed. The negative charge is neutralized in those areas, which are then ready to accept toner.

Figure 5-13 Laser-beam exposure

Step 4: Development

Toner inside the image drum acquires a negative charge as the developing cylinder contacts the developing blade. Because the negatively charged surface of the photosensitive drums have been neutralized where they have been struck by the laser beam, the toner adheres to those areas on the drums. The latent image becomes visible on the surface of each drum.

Figure 5-14 Development

Step 5: Primary transfer

The positively charged primary-transfer rollers contact the ITB, giving the ITB a positive charge. The ITB attracts the negatively charged toner from the surface of each photosensitive drum, and the complete toner image is transferred onto the ITB, beginning with yellow, then magenta, cyan, and black.

Figure 5-15 Primary transfer

Step 6: Secondary transfer

The paper acquires a positive charge from the secondary-transfer roller, and so it attracts the negatively charged toner from the surface of the ITB. The complete toner image is transferred onto the paper.

Figure 5-16 Secondary transfer

Step 7: Separation

The stiffness of the paper causes it to separate from the ITB as the ITB bends. The static-charge eliminator removes excess charge from the paper to ensure that the toner is fused correctly.

Figure 5-17 Separation

Step 8: Fusing

To create the permanent image, the paper passes through a set of heated, pressurized rollers to melt the toner onto the page. The fuser roller has a negative DC bias to prevent the negatively charged toner from being attracted to the roller, which would decrease print quality.

Figure 5-18 Fusing

Step 9: ITB cleaning

After the paper separates from the ITB, the cleaning blade scrapes the residual toner from the surface of the ITB, preparing it for the next image. The waste-toner feed screw picks up the residual toner and deposits it in the waste-toner container inside the imaging drum.

Figure 5-19 ITB cleaning

Step 10: Drum cleaning

Inside the imaging drum, the cleaning blade removes the residual toner from the surface of the photosensitive drum to prepare it for the next image. The waste-toner-feed screw picks up the residual toner and deposits it in the waste-toner container inside the imaging drum.

Figure 5-20 Drum cleaning

Print cartridge

The product has four print cartridges, one for each color. Each print cartridge contains a reservoir of toner and the following components:

- Toner-feed screw
- Toner stirrer
- Memory tag

Figure 5-21 Print-cartridge system

The toner-feed screw rotates, picks up the toner particles, and transports them into the imaging drum. The toner stirrer rotates at the same time as the toner-feed screw to keep the toner particles from sticking to each other.

The memory tag is a non-volatile memory chip that stores information about the usage for the print cartridge.

The DC controller notifies the formatter of an error if any of the following conditions exist:

- The memory tag fails to either read to or write from the DC controller
- A print-cartridge-presence sensors fails to detect the presence of the print cartridge
- The toner level in any of the print cartridges drops below a certain level
- The toner feed motor is rotating but the rotational-count sensor does not increment the rotation count after a specified length of time. This condition indicates a failure in the toner-feed motor.

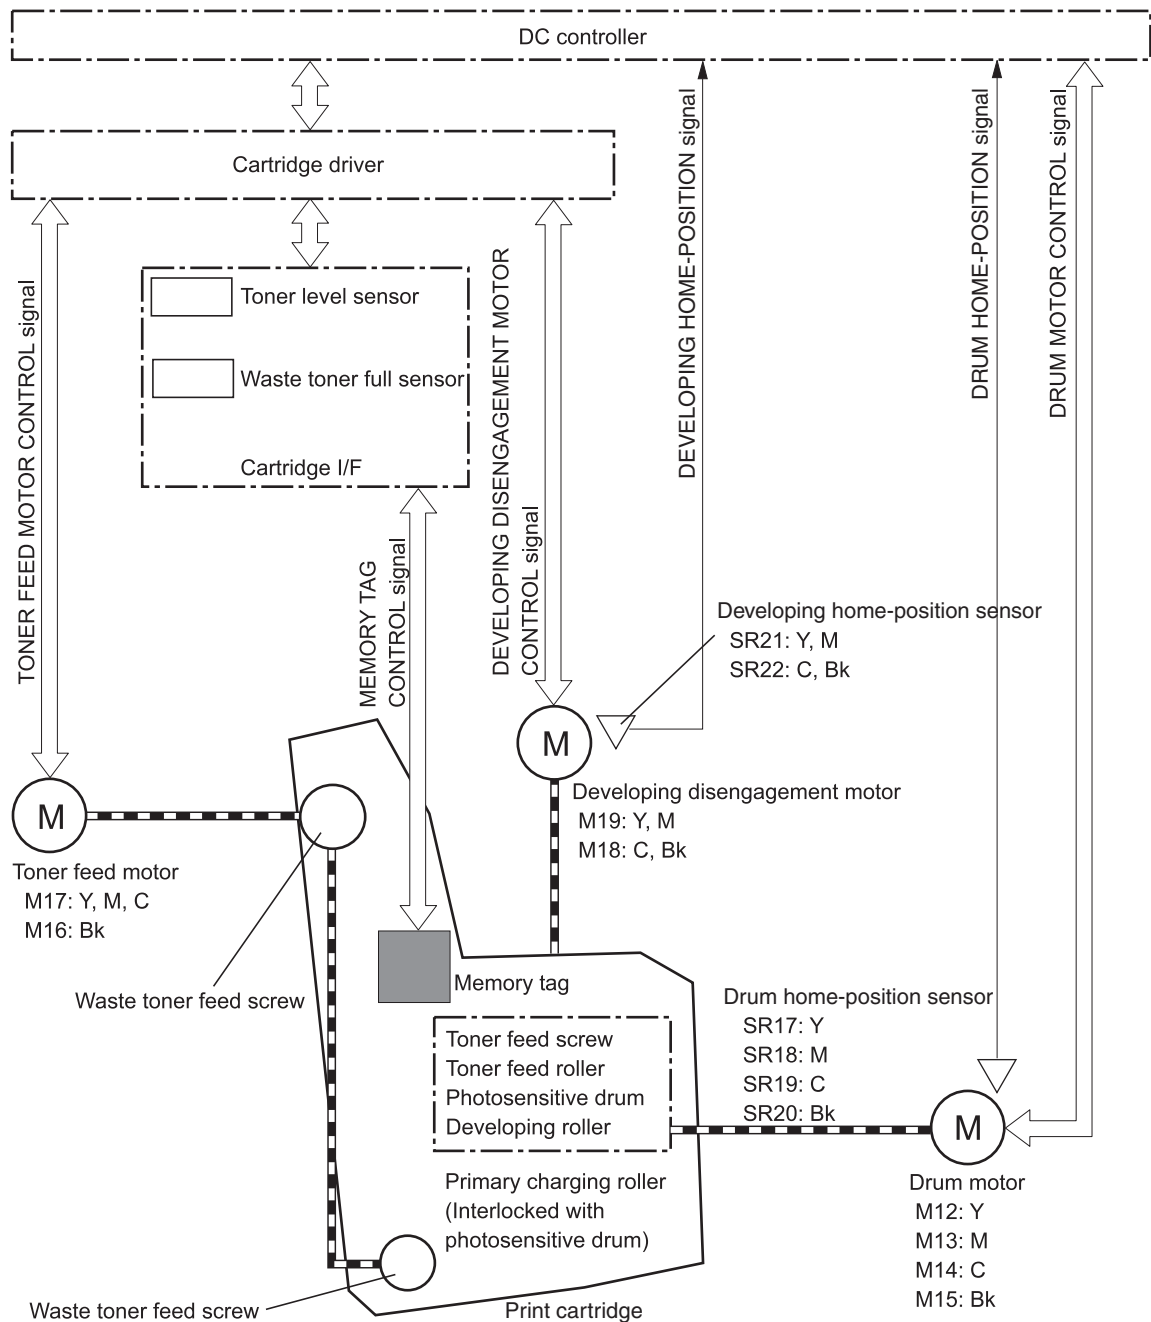

Imaging drum

The product has four imaging drums, one for each color. Each imaging drum contains the following components:

- Photosensitive drum
- Primary-charging roller
- Developing roller
- Toner-feed roller

- Toner-feed screw
- Waste-toner-feed screw

Figure 5-22 Imaging-drum system

The drum motor causes the photosensitive drum to rotate. That rotation causes the primary-charging roller to rotate. The drum motor also drives the toner feed screw, the toner-feed roller, and the developing roller to transfer toner from the print cartridge into the imaging drum.

The toner feed motor drives the waste-toner-feed screw, which removes the waste toner and transports it to the waste toner container.

The memory tag is a non-volatile memory chip that stores information about the usage for the imaging drum.

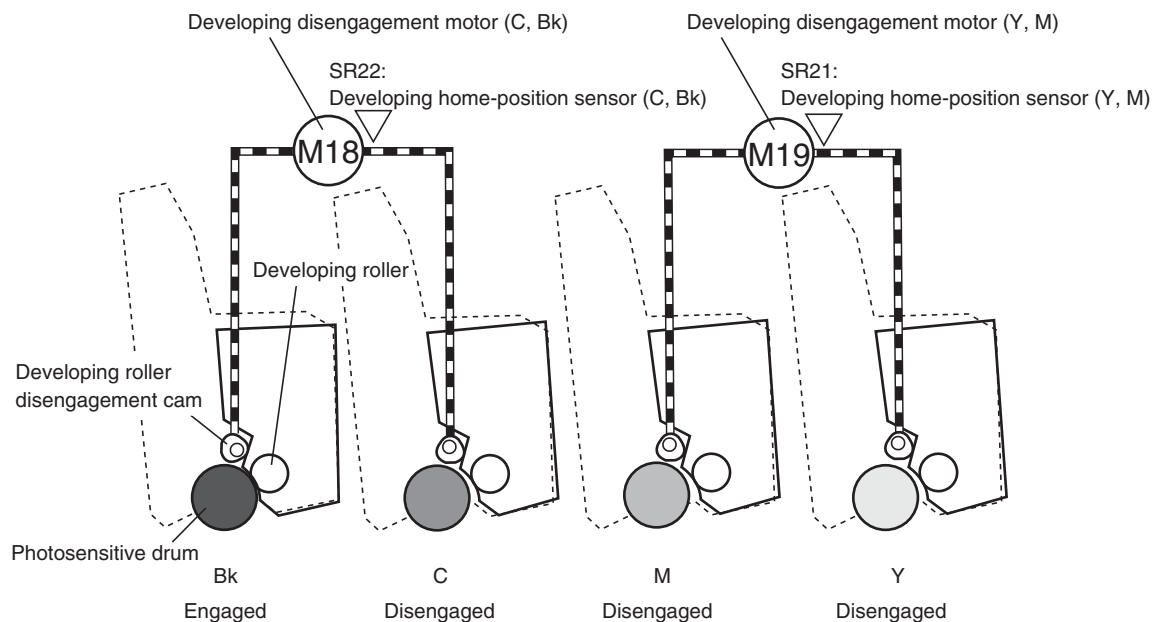

The DC controller notifies the formatter of an error if any of the following conditions exist:

- The memory tag fails to either read to or write from the DC controller
- The toner level in any of the waste toner containers reaches a certain level
- A drum-presence sensors fails to detect the presence of the imaging drum by monitoring the color misregistration/image density output.
- An imaging drum is installed incorrectly.
- The number of pages printed with the current imaging drum reaches a predetermined level
- The level of toner in the imaging drum is not at a predetermined level while the print cartridge is feeding toner to the imaging drum. This indicates a toner feed failure.
- The toner-level sensor detects a level of toner that is outside of a certain range during the print operation. This indicates a toner-level sensor failure.

Developing roller engagement and disengagement

The product can print in full-color mode or in black-only mode. To print in black only, the developing rollers in the cyan, magenta, and yellow imaging drums are disengaged. This maximizes the life of those three imaging drums.

Figure 5-23 Developing-roller engagement and disengagement control

The DC controller rotates the developing disengagement motor and changes the direction of the cam according to the instructions from the formatter for each print job.

When the product is turned on and at the end of each print job, all four of the developing rollers disengage from the photosensitive drums. If the next print job is full-color, each of the developing rollers engage. If the next print job is black-only, only the black developing roller engages.

If the DC controller does not detect any output from the developing home-position sensor, it determines that the developing-disengagement motor has failed.

Intermediate transfer belt (ITB) unit

The ITB unit accepts the toner images from the photosensitive drums and transfers the completed image to the paper. The ITB unit has these main components:

- ITB
- ITB feed roller
- ITB-driven roller
- Primary-transfer rollers

The ITB motor drives the ITB feed roller, which rotates the ITB. The motion of the ITB causes the primary transfer rollers to rotate.

Figure 5-24 ITB unit

Primary-transfer-roller engagement and disengagement

Depending on the requirements of the print job, the primary-transfer rollers engage with the ITB so it can receive toner from the photosensitive drums. There are three states of roller engagement.

Table 5-10 Primary-transfer-roller engagement states

All rollers disengaged	This is the home position for the ITB unit.
Black roller engaged	This is the state for a black-only print job.
All rollers engaged	This is the state for a full-color print job.

The primary-transfer-roller-disengagement motor rotates or reverses to place the primary-transfer-roller-disengagement cam into one of three positions. The cam causes the transfer roller slide plate to move to the right or left, which causes the primary-transfer rollers to move up to engage the ITB with the photosensitive drum or down to disengage it.

If the DC controller does not receive the expected signal from the ITB home-position sensor during the primary-transfer-roller-engagement or disengagement operation, but the primary-transfer-roller-

disengagement motor is rotating, it determines that the primary-transfer-disengagement mechanism has failed, and it notifies the formatter.

Figure 5-25 Three states of primary-transfer-roller engagement and disengagement

ITB unit detection

The DC controller monitors several signals from the ITB unit to detect status.

Table 5-11 ITB unit detection

ITB unit life detection	When a specified number of pages have been printed since an ITB unit was installed, the DC controller alerts the formatter that the ITB unit is at the end of its life.
ITB unit waste toner full detection	When a waste-toner container collects a specified level of toner, the DC controller alerts the formatter that the imaging drum needs to be replaced.
ITB unit presence detection	

Table 5-11 ITB unit detection (continued)

ITB perimeter detection	To ensure that the toner image is placed correctly on each page, the DC controller uses the ITB sensor marks on the surface of the ITB. It adjusts the paper re-pickup timing based on this position.
ITB sensor-mark detection-sensor-failure detection	If the DC controller cannot detect the ITB sensor marks, it notifies the formatter that the ITB sensor-mark detection-sensor has failed.

Secondary-transfer-roller unit

The secondary-transfer-roller unit transfers the toner image from the ITB surface onto the paper. The ITB motor drives the secondary transfer roller, and the registration motor drives the registration roller.

To ensure that the toner image is placed correctly on each page, the DC controller stops the registration motor when the leading edge of the paper passes the vertical synchronous position sensor. It holds the paper in this position until the ITB is in the correct position, according to the ITB perimeter detection, to align the toner image with the paper.

When the product is turned on, when it is coming out of Sleep mode, or after a door has been closed, DC bias is applied to the secondary transfer roller. If no current is detected, the DC controller notifies the formatter that the secondary-transfer-roller unit is not present.

The DC controller can detect when a new secondary-transfer-roller unit has been installed. After a specified number of pages have been printed since a new secondary-transfer-roller unit has been installed, the DC controller notifies the formatter that the secondary-transfer-roller unit is reaching the end of its life.

Figure 5-26 Secondary-transfer-roller unit

Calibration

The product calibrates itself to maintain excellent print quality. It corrects color-misregistration and color-density variation.

During calibration, the product places a specific pattern of toner on the surface of the ITB. Sensors at the end of the ITB read the toner pattern to determine if adjustments are necessary.

Figure 5-27 Toner patterns for calibration

Color misregistration/image density sensor

Color-misregistration control

Internal variations in the imaging drums or the laser/scanners can cause the toner images to become misaligned. The color-misregistration control corrects the following problems:

- Horizontal scanning start position
- Horizontal scanning magnification
- Vertical scanning start position

This calibration occurs at these times:

- The product is turned on or the front door is closed, after replacing an imaging drum.
- The product is turned on or the right door is closed, after replacing the ITB.
- A specified number of pages have been printed.
- The temperature in the laser/scanner unit area changes, which is a predictor of color misregistration.
- The user requests a calibration by using the control-panel menus.

If data from the color-misregistration and image-density sensors is outside a specified range when the product is turned on or when it is beginning the calibration sequence, the DC controller determines that these sensors have failed, and it notifies the formatter.

Image-stabilization control

Environmental changes or deterioration of the photosensitive drums and toner can cause variations in the image density. The image-stabilization control reduces these fluctuations. There are three kinds of image-stabilization controls.

Table 5-12 Image-stabilization controls

Environment change control	<p>The DC controller monitors environmental information from internal temperature and humidity sensors. It adjusts the high-voltage bias to accommodate environmental changes. This control is performed under the following circumstances:</p> <ul style="list-style-type: none">• The product is turned on.• The imaging drum is replaced.• A change in environmental conditions occurs.
Image density control (DMAX)	<p>This control corrects variations in image density that are related to deterioration of the photosensitive drum or the toner. The DC controller adjusts the high-voltage biases to correct the problem under the following conditions:</p> <ul style="list-style-type: none">• The thermopile detects a temperature that is too low when the product is turned on.• The product is turned on, or the front door is closed after replacing an imaging drum.• The product is turned on, or the right door is closed after replacing the ITB.• A specified number of pages have been printed.• A prescribed environmental change occurs• The product is recovered from sleep mode• After a specific period of the completion of a print operation
Image halftone control (DHALF)	<p>The formatter performs this control to calibrate the halftone, based on the halftone-density measurements, under the following conditions:</p> <ul style="list-style-type: none">• The thermopile detects a temperature that is too low when the product is turned on.• The product is turned on, or the front door is closed after replacing an imaging drum.• The product is turned on, or the right door is closed after replacing the ITB.• A specified number of pages have been printed.• A prescribed environmental change occurs• The product is recovered from sleep mode• After a specific period of the completion of a print operation

Color-sensor control (duplex models only)

The image halftone control measures the color halftones of the toner image on the ITB. However, this control cannot adjust halftone variations that occur because of differences in types of paper. To accommodate differences in paper, the product has a color-sensor-control mechanism, which is located

in the duplex paper path. The product adjusts the color halftones based on measurements from a test pattern that is printed on a page and passed through the duplexer after fusing.

Figure 5-28 Color-sensor control

The color sensor engages or disengages based on the position of the color-sensor disengagement cam, which is driven by reversing the duplexing re-pickup motor.

If the DC controller receives no signal from the color-sensor disengagement sensor during a color-sensor control operation, it determines that the duplexing paper feed mechanism has failed.

Gray-axis correction

The gray axis correction adjusts for differences in the process-gray color that is designated by the formatter. The formatter adjusts the color balance for cyan, magenta, and yellow based on measurements from this control.

Figure 5-29 Gray-axis correction

Flow of gray axis correction

Before the gray axis correction, the process color balance equivalent to Bk 20% is; Cyan 17%, Magenta 18% and Yellow 16%.
The formatter recognizes this color balance .

The gray axis correction determines that the process color balance equivalent to Bk 20% is; Cyan 20%, Magenta 14% and Yellow 15%.
This measurement value is sent to the formatter.

The formatter corrects the color balance referring to the measurement value.

Pickup, feed, and delivery system

The pickup, feed, and delivery system uses a series of rollers to move the paper through the product.

The duplexing flapper solenoid (SL301) controls the position of the duplexing flapper to feed the paper into the duplexing unit.

The pickup, feed, and delivery system can be divided into three units:

- Pickup-and-feed unit
- Fuser and delivery unit
- Duplexing unit

Figure 5-32 Three main units of the pickup, feed, and delivery system

Pickup-and-feed unit

The pickup-and-feed unit picks an individual sheet of paper from the multipurpose tray or the cassettes, carries it through the secondary-transfer unit, and feeds it into the fuser.

Table 5-15 Main operations within the pickup-and-feed system

Operation	Steps
Cassette pickup	<ol style="list-style-type: none"><li data-bbox="651 260 1123 287">1. Paper-size and cassette-presence detection<li data-bbox="651 310 831 338">2. Cassette pickup

The sequence of steps for the cassette tray pickup operation is the following:

1. When the product is turned on or the tray is pushed closed, the lifting mechanism lifts the paper stack so it is ready.
2. After receiving a print command from the formatter, the DC controller rotates the pickup motor, which causes the cassette pickup roller, cassette feed roller, and cassette separation roller to rotate.
3. The DC controller drives the cassette pickup solenoid, which rotates the cassette pickup cam. As the pickup cam rotates, the pickup arm moves down, the cassette pickup roller touches the surface of the paper stack, and it picks up one sheet of paper.

Figure 5-33 Cassette-pickup mechanism

Cassette paper-size and cassette-presence detection

The cassette end-plate detection switch and the cassette side-plate detection switch detect the size of the paper that is loaded in the cassette. Each of these switches contains three sub-switches.

The DC controller compares the paper length that is detected by the vertical-synchronous-position sensor to the detected size and to the size that is specified for the print job. If they do not match, the DC controller notifies the formatter.

The cassette end-plate detection switch also detects whether the cassette is present. If all three of its switches are off, the DC controller determines that the cassette is absent.

Figure 5-34 Cassette paper-size detection switches

Table 5-16 Switch states for paper-size detection

Letter-R	Off	Off	On	On or off	Off	On
A4-R	On	Off	On	On or off	Off	On

Table 5-16 Switch states for paper-size detection (continued)

Legal	On	Off	Off	On or off	Off	On
B4	On	Off	Off	On or off	On	On
A3	On	Off	Off	On or off	Off	Off
Ledger	On	Off	Off	On or off	On	Off
Cassette absence	Off	Off	Off			

¹ The top side-plate detection switch controls the lifter mechanism. When the switch is on, the lifting plate moves up. When it is off, the lifting plate moves down. Its position has no effect on paper-size detection.

Cassette lift operation

When the product is turned on, when the cassette is inserted, or as the paper level in the cassette decreases, the cassette lift mechanism raises the plate to keep the surface of the stack high enough so the pickup roller can reach it.

1. The DC controller rotates the cassette-lifter motor to raise the lift plate.
2. When the paper-stack surface sensor detects the paper surface, the DC controller stops rotating the cassette-lifter motor. If the sensor no longer detects paper, the DC controller begins rotating the motor again.

If the paper-stack surface sensor does not detect the paper within a specified time after the lifter motor begins rotating, the DC controller notifies the formatter that the lifter motor has failed.

Figure 5-35 Cassette lift mechanism

Cassette paper-level and paper-presence detection

The height of the paper-lift plate in the cassette indicates the paper level. The paper-level sensor, which is at the end of the lifter motor, monitors the rotations of the motor and calculates the paper level. It reports the paper level to the DC controller in the following increments:

- No paper
- Less than 10%
- Between 10% and 20%
- Between 20% and 40%
- More than 40%

The cassette media-presence sensor detects whether paper is in the cassette.

Figure 5-36 Paper-level-detection mechanism

Multifeed prevention

In each of the cassettes and in the multipurpose tray, a separation roller prevents multiple sheets of paper from entering the paper path. The separation roller is driven by the rotation of the feed roller, but

it is equipped with a torque limiter that counteracts this rotation when more than one sheet of paper is between the two rollers.

Figure 5-37 Multifeed prevention

Multipurpose tray pickup

The multipurpose tray paper-presence sensor detects whether paper is in the tray. If no paper is present, the DC controller notifies the formatter. The print operation is not performed until paper is in the tray.

The sequence of steps for the multipurpose tray pickup operation as follows:

1. After receiving a print command from the formatter, the DC controller reverses the pickup motor, which causes the multipurpose tray separation roller to rotate.
2. The DC controller turns on the multipurpose tray pickup solenoid, causing the multipurpose tray pickup roller to rotate.

3. The lifting plate rises to meet the rotating pickup roller, and paper is picked from the stack.
4. The multipurpose tray separation roller isolates a single sheet of paper in case more than one sheet was picked. The single sheet of paper is fed into the product. This mechanism is the same as for the cassette pickup operation.

Figure 5-38 Multipurpose tray pickup mechanism

Multipurpose tray last-paper detection

Because the paper path between the multipurpose tray paper-presence sensor and the registration roller is short, the product attempts to form the next image before the DC controller detects that the tray is empty. To prevent the image from being formed on the photosensitive drum and wasting toner, the multipurpose tray last-paper sensor detects the empty tray before the image-formation process begins.

As the last sheet of paper is picked up, the multipurpose tray last-paper detection roller rotates. It does not rotate if two or more sheets are in the tray. The multipurpose tray last-paper sensor detects the

moving roller, and it sends a signal to the DC controller. The DC controller notifies the formatter so it can temporarily disable the image-formation process.

Figure 5-39 Multipurpose tray last-paper detection

Paper feed

After the pickup operation, the paper is fed through the product and into the fuser.

1. The paper passes through the feed rollers. The registration shutter aligns the paper correctly to prevent skewed printing.
2. When the vertical synchronous position sensor detects the leading edge of the paper, the registration motor stops, and the paper movement pauses while the image on the ITB is timed to align with the leading edge of the paper.

3. While the paper is paused, the media sensor detects the type of paper.
4. When the timing is correct, the registration motor begins rotating again to feed the paper through the secondary transfer unit and into the fuser.

Figure 5-40 Paper-feed mechanism

Skew-feed prevention

The product can straighten the paper without slowing the feed operation.

1. As the paper enters the paper path, the leading edge strikes the registration shutter, but the paper does not pass through the shutter, so it is straightened.
2. The feed rollers keep pushing the paper, creating a force on the leading edge against the registration shutter.
3. When the force is great enough, the registration shutter opens and the paper passes through.

Figure 5-41 Skew-feed prevention

Paper-type detection

The product can detect the type of paper in the paper path, and it adjusts the print mode accordingly. The product uses two types of media sensors:

- **Reflection:** Detects the glossiness of the paper
- **Transmission:** Detects the thickness of the paper

Figure 5-42 Media sensor unit

The DC controller uses the information from the media sensors to determine the paper type, and it notifies the formatter. The DC controller notifies the formatter of a paper-type mismatch if any of the following conditions exist:

- **Simplex printing:**
 - The mode specified for the print job is Transparency, but the media sensor detects another type.
 - The mode specified for the print job is something other than Auto or Transparency, but the media sensor detects a transparency.
- **Duplex printing:** The mode specified for the print job is compatible with duplex printing, but the media sensor detects a transparency.

When the product is turned on or when it comes out of Sleep mode, it tests the media sensor by turning on the LED. If the intensity of the light does not match the specified value, the DC controller determines that the sensor has failed.

Feed-speed control

Depending on the type of paper, the product adjusts the feed speed to obtain the best print quality. For paper types that the media sensor cannot detect, the product adjusts the feed speed according to the print mode specified by the formatter for the print job.

Paper type (Control panel)	Print mode	Recommended paper weight range	Feed speed	Media-sensor detection

Fusing and delivery unit

The fusing and delivery unit fuses the toner onto the paper and delivers the printed page into the output bin. It has the following controls to ensure optimum print quality:

- Loop control
- Pressure roller pressurization/depressurization control

A sensor detects when the output bin is full, and the DC controller notifies the formatter.

Loop control

The loop control maintains even tension on the paper while it is moving through the fuser to prevent print-quality defects and paper-handling defects.

- If the fuser rollers rotate more slowly than the secondary transfer rollers, the paper warp increases and an image defect or paper crease occurs.
- If the fuser rollers rotate faster than the secondary transfer rollers, the paper warp decreases and the toner image is not transferred to the paper correctly, causing color misregistration.

To prevent these problems, the loop sensor, located between the secondary transfer rollers and the fuser rollers, detects whether the paper is sagging or is too taut. The DC controller adjusts the speed of the fuser motor accordingly.

Figure 5-43 Loop-control mechanism

Pressure-roller pressurization control

To prevent excessive wear on the pressure roller and to facilitate jam-clearing procedures, the pressure roller is not pressurized except during printing. The DC controller reverses the fuser motor, which rotates the fuser pressure-release cam.

Figure 5-44 Pressure-roller pressurization control

The pressure roller is depressurized under the following conditions:

- The product is turned off with the on/off switch.
- After a specific time period from entering the standby period
- During powersave mode
- When a paper jam is detected.

NOTE: The fuser remains pressurized if the power is interrupted by removing the power cord or turning off a surge protector, or if the fuser is removed without turning off the product.

Duplexing unit

For supported models, the duplexing unit reverses the paper and feeds it through the paper path to print the second side. It consists of the following components:

- **Duplexing-reverse unit:** Installed on top of the product
- **Duplexing-feed unit:** Inside the product, along the right side

Figure 5-45 Duplexing unit

Table 5-17 Duplexing-unit components

Abbreviation	Component
M301	Duplexing re-pickup motor
M302	Duplexing feed motor
M303	Duplexing reverse motor
SL301	Duplexing flapper solenoid
SR302	Duplexing paper re-pickup sensor
SR303	Duplexing paper-feed sensor
SR304	Duplexing paper-reverse sensor

All these components are driven by the duplexing driver, according to signals from the DC controller. If the DC controller cannot communicate with the duplexing driver, it notifies the formatter that the duplexing unit has failed.

Duplexing reverse and feed control

The duplexing reverse procedure pulls the paper into the duplexing unit after it exits the fuser, and the duplexing feed procedure moves the paper through the duplexer so it can enter the product paper path to print the second side of the page.

1. After the first side has printed, the duplexing flapper solenoid is opened, which creates a paper path into the duplexing-reverse unit.
2. After the paper has fully entered the duplexing-reverse unit, the duplexing-reverse motor reverses and directs the paper into the duplexing-feed unit.
3. The duplexing re-pickup motor and duplexing feed motor move the paper into the duplexing re-pickup unit.
4. To align the paper with the toner image on the ITB, the duplexing re-pickup motor stops and the paper pauses until the specified time.
5. The paper re-enters the paper path, and the second side is printed.

Jam detection

The product uses the following sensors to detect the paper as it moves through the paper path and to report to the DC controller if the paper has jammed.

- Vertical synchronous position sensor
- Cassette paper-feed sensor
- Multipurpose tray paper-feed sensor
- Loop sensor
- Fuser delivery paper-feed sensor
- Output-bin full sensor
- Duplexing paper re-pickup sensor
- Duplexing paper-feed sensor
- Duplexing paper-reverse sensor
- Media sensor

The product determines that a jam has occurred if one of these sensors detects paper at an inappropriate time. The DC controller stops the print operation and notifies the formatter.

Table 5-18 Jams that the product detects

Jam	Description
Pickup delay jam 1	Cassette pickup: The cassette paper-feed sensor does not detect the leading edge of the paper within a specified period after the cassette pickup solenoid has turned on. Multipurpose tray pickup: The multipurpose tray paper-feed sensor does not detect the leading edge of the paper within a specified period after the multipurpose tray solenoid has turned on.
Pickup delay jam 2	The vertical synchronous position sensor does not detect the leading edge of the paper within a specified period after the paper-feed sensor (for either the cassette or the multipurpose tray) detects the leading edge.
Pickup stationary jam	The media sensor does not detect the trailing edge of the paper within a specified period after the registration motor begins rotating to re-feed the paper.
Fuser delivery delay jam	The fuser delivery paper-feed sensor does not detect the leading edge of the paper within a specified period after the registration motor begins rotating to re-feed the paper.
Fuser delivery stationary jam	The fuser delivery paper-feed sensor does not detect the trailing edge of the paper within a specified period after it detects the leading edge.
Wrapping jam	After it has detected the leading edge of the paper, the fuser delivery paper-feed sensor detects the absence of paper, and it has not yet detected the trailing edge.
Delivery delay jam 3	The output bin full sensor does not detect the leading edge of the paper within a specified period after the fuser delivery paper-feed sensor has detected the leading edge.

Table 5-18 Jams that the product detects (continued)

Jam	Description
Residual paper jam	One of the following sensors detects paper presence during the initialization sequence: <ul style="list-style-type: none">● Fuser delivery paper-feed sensor● Loop sensor● Duplexing paper-reverse sensor
Door open jam	A door is open while paper is moving through the product.
Duplexing reverse jam 1	The duplexing paper-feed sensor does not detect the leading edge of the paper within a specified period after the paper-reverse operation starts.
Duplexing reverse jam 2	The duplexing paper-reverse sensor does not detect the trailing edge of the paper within a specified period after it detects the leading edge.
Duplexing re-pickup jam 1	The vertical synchronous position sensor does not detect the leading edge of the paper within a specified period after the paper is re-picked up from the duplexing pickup position.
Duplexing re-pickup jam 2	The duplexing paper re-pickup sensor does not detect the leading edge of the paper within a specified period after the paper-reverse operation starts.

After a jam, some sheets of paper might remain inside the product. If the DC controller detects residual paper after a door is closed or after the product is turned on, the product automatically clears itself of those residual sheets.

Optional input trays

The product is configured with either the additional 1x500-sheet input tray or 3x500-sheet input tray depending on which bundle was purchased.

- The 1x500-sheet input tray has one tray (Tray 3) and a storage compartment.
- The 3x500-sheet input tray has three trays (Trays 3, 4, and 5).

 **NOTE:** These optional trays are *not* identical to the main cassette (Tray 2).

Figure 5-46 Optional input trays

These additional trays are each controlled by paper-deck drivers, which contain a microcomputer. The paper-deck drivers receive commands from the DC controller. If the DC controller is unable to communicate with a paper-deck driver, it notifies the formatter that the optional input tray is not connected correctly.

Figure 5-47 Signals for the input trays

The input trays contain several motors, solenoids, sensors, and switches, as described in the following table.

Table 5-19 Electrical components for the optional input trays

Component type	Abbreviation	Component name
Motors	M101	Upper paper-feeder cassette pickup motor
	M102	Upper paper-feeder lifter cassette motor
	M111	Middle paper-feeder cassette pickup motor (3x500-sheet input tray only)
	M112	Middle paper-feeder cassette lifter motor (3x500-sheet input tray only)
	M121	Lower paper-feeder cassette pickup motor (3x500-sheet input tray only)
	M122	Lower paper-feeder cassette lifter motor (3x500-sheet input tray only)

Table 5-19 Electrical components for the optional input trays (continued)

Component type	Abbreviation	Component name
Solenoids	SL101	Upper paper-feeder cassette pickup solenoid
	SL111	Middle paper-feeder cassette pickup solenoid (3x500-sheet input tray only)
	SL121	Lower paper-feeder cassette pickup solenoid (3x500-sheet input tray only)
Sensors	SR101	Upper paper-feeder cassette paper-level sensor
	SR102	Upper paper-feeder cassette paper-feed sensor
	SR104	Upper paper-feeder cassette paper-presence sensor
	SR105	Upper paper-feeder cassette paper-stack surface sensor
	SR111	Middle paper-feeder cassette paper-level sensor (3x500-sheet input tray only)
	SR112	Middle paper-feeder cassette paper-feed sensor (3x500-sheet input tray only)
	SR114	Middle paper-feeder cassette paper-presence sensor (3x500-sheet input tray only)
	SR115	Middle paper-feeder cassette paper-stack surface sensor (3x500-sheet input tray only)
	SR121	Lower paper-feeder cassette paper-level sensor (3x500-sheet input tray only)
	SR122	Lower paper-feeder cassette paper-feed sensor (3x500-sheet input tray only)
	SR124	Lower paper-feeder cassette paper-presence sensor (3x500-sheet input tray only)
	SR125	Lower paper-feeder cassette paper-stack surface sensor (3x500-sheet input tray only)
Switches	SW101	Upper paper-feeder cassette end-plate position switch
	SW102	Upper paper-feeder cassette side-plate position switch
	SW103	Door open detection switch
	SW111	Middle paper-feeder cassette end-plate position switch (3x500-sheet input tray only)
	SW112	Middle paper-feeder cassette side-plate position switch (3x500-sheet input tray only)
	SW121	Lower paper-feeder cassette end-plate position switch (3x500-sheet input tray only)
	SW122	Lower paper-feeder cassette side-plate position switch (3x500-sheet input tray only)

Paper-feeder pickup and feed operation

The pickup and feed operation is the same for each of the trays.

Figure 5-48 Paper-feeder pickup and feed operation

The methods for all the following operations are the same as for the main cassette (Tray 2):

- Paper-size detection and cassette-presence detection
- Lift operation
- Paper-level and paper-presence detection
- Multiple feed prevention
- Jam detection

6 Removal and replacement

Removal and replacement strategy

Introduction

This chapter describes the removal and replacement of field-replaceable units (FRUs) only.

Replacing FRUs is generally the reverse of removal. Notes are included to provide directions for difficult or critical replacement procedures.

HP does not support repairing individual subassemblies or troubleshooting to the component level.

Never operate or service the printer with the protective cover removed from the laser/scanner assembly. The reflected beam, although invisible, can damage your eyes.

The sheet-metal parts can have sharp edges. Be careful when handling sheet-metal parts.

CAUTION:

Some parts are sensitive to electrostatic discharge (ESD). Look for the ESD reminder when removing printer parts. Always perform service work at an ESD-protected workstation or mat. If an ESD workstation or mat is not available, ground yourself by touching the sheet-metal chassis *before* touching an ESD-sensitive part.

Protect the ESD-sensitive parts by placing them in ESD pouches when they are out of the printer.

CAUTION: Do not bend or fold the flat flexible cables (FFCs) during removal or installation.

NOTE: To install a self-tapping screw, first turn it counterclockwise to align it with the existing thread pattern, and then carefully turn it clockwise to tighten. Do not overtighten. If a self-tapping screw-hole becomes stripped, repair the screw-hole or replace the affected assembly.

Required tools

- #2 Phillips screwdriver with a magnetic tip and a 152-mm (6-inch) shaft length

 **NOTE:** For the best fit, use a JIS #2 Phillips screwdriver for the stapler/stacker.

- Small, flat-blade screwdriver
- Needle-nose pliers
- ESD strap (if one is available)
- Penlight

△ **CAUTION:** Always use a Phillips screwdriver (callout 1). Do not use a pozidrive screwdriver (callout 2) or any motorized screwdriver. These can damage screws or screw threads.

Figure 6-1 Screwdrivers

Types of screws

Illustration	Description	Size	Use
	Screw with washer	M3X8	Used to secure metal components to metal components (for example, a ground wire to the frame)
	Screw, RS	M3X6 M3X10	Used to secure metal to metal
	Screw, tapping	M3X6	
	Screw	M3X8	

Screw

P3X8

Screw, tapping, truss head

M4X10

Used to secure anything to plastic

Service approach

The HP Color LaserJet CP6015 Series use a field repair strategy. Defective parts are diagnosed and replaced at the field-replaceable unit (FRU) assembly level. Printer repair normally begins by using the printer internal diagnostics and the following two-step process:

1. Isolate the problem to the major system (for example, the network or server, or the printer).
2. Troubleshoot the problem by using the procedures in the troubleshooting chapter.

After you locate a faulty part, the product can usually be repaired at the assembly level by replacing FRUs. Some mechanical assemblies might need to be repaired at the subassembly level. Hewlett-Packard Company does not support replacement of components on the printed circuit assemblies.

Before performing service

⚠ WARNING! Turn the product off, wait 5 seconds, and then remove the power cord before attempting to service the printer. *If this warning is not followed, severe injury and damage to the device can result.* The power must be on for certain functional checks during troubleshooting. However, the power supply should be disconnected during parts removal.

1. Remove all media.
2. Place the product on an ESD mat (if available). If an ESD workstation or mat is not available, ground yourself by touching the sheet-metal chassis *before* touching an ESD-sensitive part.
3. Remove the print cartridge.
4. Remove the trays.

After performing service

1. Reinstall the print cartridge.
2. Reinstall the trays.
3. Return all media to the trays.
4. Plug in the power cable and turn on the printer.

Parts removal sequences

Removal and replacement procedures for FRUs of the product are grouped into seven sequences based on their logical removal order. Each sequence begins with a flowchart that shows the FRUs in the order they must be removed and reinstalled. When multiple FRUs can be removed at the same point in the sequence, the sequence is divided into subsequences. Some FRU removal procedures are repeated in multiple sequences.

User-replaceable parts

When you use genuine HP supplies, the product automatically notifies you when supplies are nearly depleted. The notification to order supplies allows ample time to order new supplies before they need to be replaced.

Fuser

1. Turn the power off.

2. Open the right door.

3. Pull the two blue fuser handles forward.

△ **CAUTION:** The fuser can be hot while the product is in use. Wait for the fuser to cool before handling it.

4. Rotate the fuser-release levers down to open them.

5. Grasp the fuser handles and pull straight out to remove the fuser. Recycle the used fuser following the instructions included with the new fuser.

△ **CAUTION:** The fuser weighs 5 kg (11 lbs). Be careful not to drop it.

6. Remove the new fuser from its protective bag. Make sure the fuser-release levers are in the down and open position. Align the fuser with the arrows on the product. Push the fuser completely into the printer.

7. Rotate the fuser-release levers up to lock the fuser into place.

8. Push the fuser handles back to close them.

9. Close the right door and turn the power on.

Transfer roller

1. Turn the power off, and then open the right door.
2. Lift the green handle on the transfer assembly, and then open the panel.

3. Remove the transfer roller, and then recycle it.

4. Wipe roller area.

5. Remove the new transfer roller from its protective bag.

△ **CAUTION:** Do not touch the sponge part of the new transfer roller or clean the roller. Contaminants or scratching may result in poor print quality.

6. Align the transfer roller with the slots in the product and push until it clicks into place.

7. Close the transfer assembly.
8. Close the right door, and then turn the power on.

Intermediate-transfer belt (ITB)

1. Turn the power off and open the right door.
2. Lift the green handle on the transfer assembly, and then open the panel.

3. Raise the ITB levers.

4. Remove the ITB.

5. Wipe the ITB area.

6. Remove the new ITB from its protective bag.

△ **CAUTION:** Contaminants or scratching may result in poor print quality.

7. Install the new ITB.

△ **CAUTION:** Only push on the side handles of the ITB as indicated. Do not push on the center because it could scratch the ITB or leave fingerprints.

8. Lower the ITB levers.

9. Close the transfer assembly.
10. Close the right door, and then turn the power on.

Tray-1 pickup and separation rollers

1. Turn the power off, and then open the right door.
2. Remove the paper-feed cover.

3. Remove the multipurpose upper-feed guide.

4. Remove one plastic clip.

5. Remove the upper roller by sliding it to the right. Rotate the lower roller and then grasp the blue plastic tab and pull the roller off the rod.

6. Recycle the used rollers, following the instructions included with the new roller.
 7. Remove the new rollers from the protective bag and install.
-
- △ **CAUTION:** Do not touch the rubber part of the new roller. Contaminants or scratching may result in poor print quality.
-
8. Attach paper-feed cover and multi-purpose upper feed guide, and then close the right door.
 9. Turn the power on.

Tray-2, -3, -4, and -5 pickup rollers

1. Turn the power off, and then remove the paper tray.
2. Locate the rollers.

3. Turn the roller, and then grasp the plastic tab and pull the roller off the rod. Repeat the process for the other rollers. Recycle the used rollers.

4. Remove each roller from its protective bag. Do not touch the rubber part of the new roller. Contaminants or scratching may result in poor print quality.

5. Attach the new roller, sliding the new roller onto the rod until it clicks in place. Repeat the process for the other rollers.

6. Reinstall the paper tray, and then turn the power on.

Formatter

1. Turn the product off, and then disconnect all power and interface cables.

NOTE: Some parts are sensitive to electrostatic discharge (ESD). Look for the ESD reminder when removing printer parts. Always perform service work at an ESD-protected workstation or mat. If an ESD workstation or mat is not available, ground yourself by touching the sheet-metal chassis *before* touching an ESD-sensitive part.

2. Locate the black formatter-pressure-release tabs on the formatter board in the rear of the product, and then gently press the black tabs (callout 1) toward each other. Gently pull on the black tabs (callout 2) to pull the formatter board from the product (callout 3).

3. Place the formatter board on a clean, flat, grounded surface.
4. Remove the DDR memory DIMM. See [Install DDR memory DIMMs on page 91](#).

5. Disconnect all connectors to the hard-drive, and then release the hard-drive cage.

6. Remove the hard-drive cage.

7. Recycle the used formatter.
8. Remove the formatter from its protective bag, and then place it on a clean, flat, grounded surface.
9. Install the DDR memory DIMM and hard-drive cage to the new formatter.

10. Align the formatter board in the tracks at the bottom of the slot, and then slide the board back into the product. Attach all power and interface cables, and then turn the power on.

1 x 500-sheet input tray installation

1. Lock the wheels.
2. Turn the power off.
3. Set the product on the 1 x 500-sheet input tray.

△ **CAUTION:** The product weights approximately 66.5 kg (143 lb) and requires at least 4 people to lift and carry. Do not attempt to lift by yourself .

4. Turn the lever to lock the product into position.
5. Turn the product on.

3 x 500-sheet input tray installation

1. Lock the wheels on the 3 x 500-sheet input tray.
2. Turn the power to the product off.
3. Set the product on the 3 x 500-sheet input tray.

△ **CAUTION:** The product weights approximately 66.5 kg (143 lb) and requires at least 4 people to lift and carry. Do not attempt to lift it by yourself .

4. Turn the lever to lock the product into position.
5. Turn the product on.

Tray 2

1. Pull the old tray completely out of the product by pulling and lifting it up slightly. Recycle the used tray following the instructions included with the new tray.
2. Attach the front cover to the tray.
3. Reinsert the tray by aligning the side rollers and pushing it back into the product.

Trays 3, 4, and 5

1. Pull the tray completely out of the product by pulling and lifting it up slightly.
2. Recycle the used tray following the instructions included with the new tray.
3. Reinsert the tray by aligning the side rollers and pushing it back into the product.

Removal sequence 1

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-2 Removal sequence 1 flowchart

Secondary transfer unit

 **NOTE:** To begin, see [Removal sequence 1 on page 209](#).

1. Remove the following user-replaceable parts.
 - Transfer roller. See [Transfer roller on page 194](#).
 - Intermediate-transfer belt. See [Intermediate-transfer belt \(ITB\) on page 196](#).
2. With a flatblade screwdriver, release two tabs along the bottom edge, and then remove the right ITB guide.

Figure 6-3 Remove the secondary transfer unit (1 of 9)

3. Close the secondary transfer unit. On the left side, release one tab (callout 1), and then lift the connector cover (callout 2) to remove it.

Figure 6-4 Remove the secondary transfer unit (2 of 9)

4. Disconnect one connector (callout 1). To disconnect, push the front of the connector toward the product, and then pull out.

Figure 6-5 Remove the secondary transfer unit (3 of 9)

5. Remove one screw (callout 1), release one tab (callout 2), and then lift the left ITB guide (callout 3) to remove it.

Figure 6-6 Remove the secondary transfer unit (4 of 9)

6. Release one wire retainer (callout 1), one connector (callout 2), and one c-clip (callout 3).

Figure 6-7 Remove the secondary transfer unit (5 of 9)

7. Slide the bushing (callout 1) out onto the rod.

Figure 6-8 Remove the secondary transfer unit (6 of 9)

8. While tilting the feed guide (callout 1) backward, grasp the secondary transfer unit (callout 2) and slide it to the left. Release the right guide bar, and then remove the secondary transfer unit.

Figure 6-9 Remove the secondary transfer unit (7 of 9)

 **NOTE:** When reassembling the secondary transfer unit, make sure to position it correctly.

- Push down the secondary transfer unit stopper (callout 1). Place the gear unit (callout 2) under the ITB rail (callout 3).

Figure 6-10 Remove the secondary transfer unit (8 of 9)

- Lift and place the feed guide (callout 1) on the upper part of the secondary transfer unit (callout 2).

Figure 6-11 Remove the secondary transfer unit (9 of 9)

 **NOTE:** Be sure to calibrate the media sensor from the **SERVICE** menu on the control panel after the secondary transfer unit has been replaced.

Multipurpose drive unit

 **NOTE:** To begin, see [Removal sequence 1 on page 209](#).

1. Remove the fuser. See [Fuser on page 191](#).
2. Remove one screw (callout 1) and release the door hinge (callout 2).

Figure 6-12 Remove the multipurpose drive unit (1 of 7)

3. Remove two screws (callout 1) and the handle.

Figure 6-13 Remove the multipurpose drive unit (2 of 7)

4. Remove two screws (callout 1), release two tabs (callout 2), and then remove the right inner cover.

Figure 6-14 Remove the multipurpose drive unit (3 of 7)

5. Lift the secondary transfer unit stopper (callout 1), and then pull it forward to remove it.

Figure 6-15 Remove the multipurpose drive unit (4 of 7)

6. Release the two tabs (callout 1), and then slide the gear cover (callout 2) in the direction indicated to remove it.

Figure 6-16 Remove the multipurpose drive unit (5 of 7)

7. Remove two connectors (callout 1), one wire retainer (callout 2), and one ground screw (callout 3).

Figure 6-17 Remove the multipurpose drive unit (6 of 7)

8. Remove two screws (callout 1), two pins (callout 2), and then remove the multipurpose tray drive unit.

Figure 6-18 Remove the multipurpose drive unit (7 of 7)

Multipurpose-tray guide (Tray 1) unit

 **NOTE:** To begin, see [Removal sequence 1 on page 209](#).

- Disconnect one connector (callout 1), release one wire retainer (callout 2), remove two screws (callout 3), and then remove the multipurpose-tray guide (Tray-1) unit.

Figure 6-19 Remove the multipurpose-tray guide unit

Cassette (Tray-2) pickup unit

 **NOTE:** To begin, see [Removal sequence 1 on page 209](#).

- Disconnect one connector (callout 1), remove four screws (callout 2), and then the Tray-2 pickup unit (callout 3).

Figure 6-20 Remove the cassette (Tray-2) pickup unit

 **NOTE:** Removal sequence 1 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 2

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-21 Removal sequence 2 flowchart

Rear-left cover

 **NOTE:** To begin, see [Removal sequence 2 on page 221](#).

- Remove one screw (callout 1), release one tab (callout 2), and then remove the rear-left cover (callout 3).

Figure 6-22 Remove rear-left cover

Rear-right cover

 **NOTE:** To begin, see [Figure 6-21 Removal sequence 2 flowchart on page 221](#).

- Remove one screw (callout 1), release two tabs (callout 2), and then remove the rear-right cover (callout 3).

Figure 6-23 Remove rear-right cover

Rear cover

 **NOTE:** To begin, see the [Removal sequence 2 on page 221](#).

1. Remove two screws (callout 1).

Figure 6-24 Remove rear cover (1 of 2)

2. Remove nine screws (callout 1), and then remove the rear cover (callout 2).

Figure 6-25 Remove rear cover (2 of 2)

- For sequence 2A, see [Removal sequence 2A on page 230](#).
- For sequence 2B, see [Removal sequence 2B on page 231](#).
- For sequence 2C, see [Removal sequence 2C on page 232](#).
- For sequence 2D, see [Removal sequence 2D on page 236](#).

Low-voltage power supply unit

 **NOTE:** To begin, see the [Removal sequence 2 on page 221](#).

- Disconnect five connectors (callout 1), remove three screws (callout 2), and then remove the low-voltage power supply unit.

Figure 6-26 Remove the low-voltage power supply unit

High-voltage power supply PCA (A)

 **NOTE:** To begin, see [Removal sequence 2 on page 221](#).

1. Release the two tabs (callout 1), remove the two PCA holders (callout 2), and then remove one connector (callout 3).

Figure 6-27 Remove the high-voltage power supply PCA (A) (1 of 3)

2. Remove one screw (callout 1), release seven tabs (callout 2), and then remove the high-voltage power supply PCA (A).

Figure 6-28 Remove the high-voltage power supply PCA (A) (2 of 3)

 **NOTE:** When reassembling, set the bottom tab of the high-voltage power supply PCA (A) first. Ensure that the contact spring (callout 1) can be seen from the twelve confirmation windows.

Figure 6-29 Remove the high-voltage power supply PCA (A) (3 of 3)

Lifter drive unit

 **NOTE:** To begin, see [Removal sequence 2 on page 221](#).

1. Remove Tray 2. See [Tray 2 on page 208](#).
2. Disconnect three connectors (callout 1), remove three screws (callout 2), and then release two tabs (callout 3).

Figure 6-30 Remove the lifter drive unit (1 of 2)

3. Remove the lifter drive unit through the front of the product.

Figure 6-31 Remove the lifter drive unit (2 of 2)

 **NOTE:** When reassembling, ensure that the lifter drive unit is unlocked (callout 1). If the lifter is locked (callout 2), the lifter will not function correctly.

Figure 6-32 Unlocked position of the lifter drive unit (correct)

Figure 6-33 Locked position of the lifter drive unit (incorrect)

 **NOTE:** Removal sequence 2 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 2A

See [Removal sequence 2 on page 221](#) for procedures to remove prerequisite parts.

Fuser motor

1. Disconnect one connector (callout 1).
2. Remove four screws (callout 2), and then remove the fuser motor (callout 3).

Figure 6-34 Remove the fuser motor

 **NOTE:** Removal sequence 2A is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 2B

See [Removal sequence 2 on page 221](#) for procedures to remove prerequisite parts.

Intermediate-transfer belt (ITB) motor

- Disconnect one connector (callout 1). Remove three screws (callout 2), and then remove the ITB motor (callout 3).

Figure 6-35 Remove the intermediate-transfer belt (ITB) motor

 **NOTE:** Removal sequence 2B is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 2C

See [Removal sequence 2 on page 221](#) for procedures to remove prerequisite parts.

Face-down output bin

- Remove two screws (callout 1), and then remove the face-down output bin (callout 2).

Figure 6-36 Remove face-down output bin

Left cover

 **NOTE:** To begin, see [Removal sequence 2 on page 221](#).

1. Remove one screw (callout 1), and then release one pin (callout 2).

Figure 6-37 Remove left cover (1 of 2)

2. Release one tab (callout 1) while pulling out on the bottom left corner (callout 2). Slide the left cover (callout 3) in the direction that the arrow indicates.

Figure 6-38 Remove left cover (2 of 2)

Laser/scanner-fan duct

 **NOTE:** To begin, see [Removal sequence 2 on page 221](#).

1. Remove five screws (callout 1), and then swing the formatter case to the right.

Figure 6-39 Remove the laser/scanner-fan duct (1 of 3)

2. Disconnect the two connectors (callout 1), and then release two wire retainers (callout 2).

Figure 6-40 Remove the laser/scanner-fan duct (2 of 3)

3. Remove two screws (callout 1), and then remove the laser/scanner-fan duct (callout 2).

Figure 6-41 Remove the laser/scanner-fan duct (3 of 3)

 **NOTE:** Removal sequence 2C is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 2D

See [Removal sequence 2 on page 221](#) for procedures to remove prerequisite parts.

Print-cartridge driver PCA

1. Remove four screws (callout 1), and then swing the formatter case to the right.

Figure 6-42 Remove the print-cartridge driver PCA (1 of 3)

2. Disconnect one connector from the DC controller (callout 1).

Figure 6-43 Remove the print-cartridge driver PCA (2 of 3)

3. Disconnect seven connectors (callout 1), four screws (callout 2), and the print-cartridge driver PCA (callout 3).

Figure 6-44 Remove the print-cartridge driver PCA (3 of 3)

NOTE: Removal sequence 2D is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 3

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-45 Removal sequence 3 flowchart

Rear-left cover

 **NOTE:** To begin, see [Removal sequence 3 on page 238](#).

- Remove one screw (callout 1), release one tab (callout 2), and then remove the rear-left cover (callout 3).

Figure 6-46 Remove rear-left cover

Face-down output bin

 **NOTE:** To begin, see [Removal sequence 3 on page 238](#).

- Remove two screws (callout 1), and then remove the face-down output bin (callout 2).

Figure 6-47 Remove face-down output bin

Left cover

 **NOTE:** To begin, see [Removal sequence 3 on page 238](#).

1. Remove one screw (callout 1), and then release one pin (callout 2).

Figure 6-48 Remove left cover (1 of 2)

2. Release one tab (callout 1), and then slide the left cover (callout 2) in the direction that the arrow indicates.

Figure 6-49 Remove left cover (2 of 2)

For Removal sequence 3A, see [Removal sequence 3A on page 248](#).

High-voltage power supply PCA (B)

 **NOTE:** To begin, see the [Removal sequence 3 on page 238](#).

1. Disconnect two connectors (callout 1), and then remove one screw (callout 2).

Figure 6-50 Remove the high-voltage power supply PCA (B) (1 of 3)

2. Release six tabs (callout 1), and then remove the high-voltage power supply PCA (B)

Figure 6-51 Remove the high-voltage power supply PCA (B) (2 of 3)

 **NOTE:** When reassembling, ensure that the contact springs (callout 1) can be seen from the five confirmation windows. Failure to do so can cause print-quality issues.

Figure 6-52 Remove the high-voltage power supply PCA (B) (3 of 3)

Formatter case

 **NOTE:** To begin, see the [Removal sequence 3 on page 238](#).

1. Remove the wire-harness holder (callout 1), and then disconnect the flat cable (callout 2) from the formatter case.

Figure 6-53 Remove the formatter case (1 of 3)

2. Disconnect one connector (callout 1), release three wire retainers (callout 2), and then remove five screws (callout 3).

Figure 6-54 Remove the formatter case (2 of 3)

3. Rotate and lift the formatter case to remove it.

Figure 6-55 Remove the formatter case (3 of 3)

 **NOTE:** When reassembling, insert the C-shaped hinge on the top of the formatter case into the round hole.

DC controller PCA

 **NOTE:** To begin, see the [Removal sequence 3 on page 238](#).

1. Disconnect all connectors on the DC controller PCA.

△ **CAUTION:** Use care when removing the flat cable that comes from the formatter case (callout 1). Gently lift the black latch to release the cable.

Figure 6-56 Remove the DC controller PCA (1 of 2)

2. Remove six screws (callout 1), and then remove the DC controller PCA.

Figure 6-57 Remove the DC controller PCA (2 of 2)

NOTE: Removal sequence 3 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 3A

See [Removal sequence 3 on page 238](#) for procedures to remove prerequisite parts.

Environmental sensor

 **NOTE:** To begin, see [Removal sequence 3A on page 248](#).

- Disconnect one connector (callout 1). Release three tabs (callout 2), and then remove the environmental sensor (callout 3).

Figure 6-58 Remove the environmental sensors

 **NOTE:** Removal sequence 3A is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-59 Removal sequence 4 flowchart

Rear-left cover

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

- Remove one screw (callout 1), release one tab (callout 2), and then remove the rear-left cover (callout 3).

Figure 6-60 Remove rear-left cover

Rear-right cover

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

- Remove one screw (callout 1), release two tabs (callout 2), and then remove the rear-right cover (callout 3).

Figure 6-61 Remove rear-right cover

Rear cover

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Remove two screws (callout 1).

Figure 6-62 Remove rear cover (1 of 2)

2. Remove nine screws (callout 1), and then remove the rear cover (callout 2).

Figure 6-63 Remove rear cover (2 of 2)

- For removal sequence 4A, see [Removal sequence 4A on page 259](#).
- For removal sequence 4B, see [Removal sequence 4B on page 260](#).
- For removal sequence 4C, see [Removal sequence 4C on page 262](#).
- For removal sequence 4D, see [Removal sequence 4D on page 264](#).

Face-down output bin

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

- Remove two screws (callout 1), and then remove the face-down output bin (callout 2).

Figure 6-64 Remove face-down output bin

Left cover

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Remove one screw (callout 1), and then release one pin (callout 2).

Figure 6-65 Remove left cover (1 of 2)

2. Release one tab (callout 1), and then slide the left cover (callout 2) in the direction that the arrow indicates.

Figure 6-66 Remove left cover (2 of 2)

Print-cartridge driver PCA

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Remove five screws (callout 1) and swing the formatter case to the right.

Figure 6-67 Remove the print-cartridge driver PCA (1 of 3)

2. Disconnect one connector from the DC controller (callout 1).

Figure 6-68 Remove the print-cartridge driver PCA (2 of 3)

3. Disconnect seven connectors (callout 1), four screws (callout 2), and the print-cartridge driver PCA (callout 3).

Figure 6-69 Remove the print-cartridge driver PCA (3 of 3)

Image-drum motor

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Remove four screws (callout 1), and then remove the cartridge driver PCA mount (callout 2).

Figure 6-70 Remove the image-drum motor (1 of 3)

2. Disconnect two wire retainers (callout 1).

Figure 6-71 Remove the image-drum motor (2 of 3)

3. Remove one connector, four screws (callout 2), and the image-drum motor (callout 3).

Figure 6-72 Remove the image-drum motor (3 of 3)

 **NOTE:** Repeat this procedure for all drum motors.

NOTE: Removal sequence 4 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4A

See [Removal sequence 4 on page 249](#) for procedures to remove prerequisite parts.

Fuser fan

- Remove one screw (callout 1), disconnect one connector (callout 2), and then remove the fuser fan.

Figure 6-73 Remove the fuser fan

 **NOTE:** Removal sequence 4A is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4B

See [Removal sequence 4 on page 249](#) for procedures to remove prerequisite parts.

Print-cartridge feed motor (black)

- Disconnect one connector (callout 1). Remove two screws (callout 2), and then remove the print-cartridge feed motor (black) (callout 3).

Figure 6-74 Remove the print-cartridge feed motor (black)

Print-cartridge feed motor (yellow, magenta, and cyan)

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

- Disconnect one connector (callout 1). Remove two screws (callout 2), and then remove the print-cartridge feed motor (yellow, magenta, and cyan) (callout 3).

Figure 6-75 Remove the print-cartridge feed motor (yellow, magenta, and cyan)

 **NOTE:** Removal sequence 4B is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4C

See [Removal sequence 4 on page 249](#) for procedures to remove prerequisite parts.

Cartridge fan unit

1. Disconnect one connector (callout 1).

Figure 6-76 Remove the cartridge fan unit (1 of 2)

2. Release one tab (callout 1), and then remove the cartridge fan unit (callout 2).

Figure 6-77 Remove the cartridge fan unit (2 of 2)

Laser/scanner fan unit

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Disconnect one connector (callout 1).

Figure 6-78 Remove the laser/scanner fan unit (1 of 2)

2. Release one tab (callout 1), and then remove the laser/scanner fan unit (callout 2).

Figure 6-79 Remove the laser/scanner fan unit (2 of 2)

 **NOTE:** Removal sequence 4C is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4D

See [Removal sequence 4 on page 249](#) for procedures to remove prerequisite parts.

Fuser power-supply unit

1. Disconnect six connectors (callout 1), and then remove one cable guide (callout 2).

Figure 6-80 Remove the fuser power-supply unit (1 of 2)

2. Remove two screws (callout 1), and then remove the fuser power-supply unit.

Figure 6-81 Remove the fuser power-supply unit (2 of 2)

Primary-transfer-roller disengagement motor

 **NOTE:** To begin, see [Removal sequence 4 on page 249](#).

1. Remove one screw (callout 1), and then remove the motor cover (callout 2).

Figure 6-82 Remove the primary-transfer-roller disengagement motor (1 of 2)

2. Disconnect one connector (callout 1). Remove three screws (callout 2), and then remove the primary-transfer roller disengagement motor (callout 3).

Figure 6-83 Remove the primary-transfer-roller disengagement motor (2 of 2)

 **NOTE:** Removal sequence 4D is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4 Sub-1

Before starting removal sequence 4 Sub-1, you must complete removal sequence 4. See [Removal sequence 4 on page 249](#).

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-84 Removal sequence 4 Sub-1 flowchart

Print-cartridge drive unit (yellow and magenta)

 **NOTE:** Do not remove the print-cartridge drive unit (yellow and magenta) without having the alignment pins required for reinstallation.

- Remove four screws (callout 1), disconnect one connector (callout 2), and then remove the print-cartridge drive unit (yellow and magenta) (callout 3).

Figure 6-85 Remove the print-cartridge drive unit (yellow and magenta)

- For removal sequence 4 Sub-1A, see [Removal sequence 4 Sub-1A on page 276](#).

 **NOTE:** Follow the gear alignment procedures when reassembling the print-cartridge drive units and main drive unit.

Gear alignment

1. This procedure correctly aligns the gears of the main drive unit (callout 1) and the print-cartridge drive unit(s) (callout 2). Use the four pins (callout 3) supplied with the replacement units to align the gears.

Figure 6-86 Gear alignment (1 of 7)

2. Reinstall the main drive unit. Push the black locks (callout 3) to the left while rotating the top gears (callout 1) on the main drive unit until they lock into position. The large holes (callout 2) should point to the right (3 o'clock position).

Figure 6-87 Gear alignment (2 of 7)

3. Insert the long alignment pins (callout 1) through the gears (callout 2) in the main drive unit.

 **NOTE:** This step is not required. Gears can be held in position with the locks.

Figure 6-88 Gear alignment (3 of 7)

4. On the print-cartridge drive unit, rotate the top gear (callout 1) clockwise until the arrows align (callout 2). Insert the two short pins (callout 3).

Figure 6-89 Gear alignment (4 of 7)

5. Install the print-cartridge drive unit over the long pins in the main drive unit. Remove all pins (callout 1), disengage locks, and reinstalled screws.

Figure 6-90 Gear alignment (5 of 7)

△ **CAUTION:** Be sure to remove all pins (callout 1). Failure to do so can damage the product.

6. Ensure that the print-cartridge drive unit is installed correctly. The unit should be flush against the product (callout 1). Incorrect installation (callout 2) will cause the product to function incorrectly.

Figure 6-91 Correct position of print-cartridge drive unit (6 of 7)

Figure 6-92 Incorrect position of print-cartridge drive unit (7 of 7)

Print-cartridge drive unit (cyan and black)

 **NOTE:** To begin, see [Removal sequence 4 Sub-1 on page 266](#).

NOTE: Do not remove the print-cartridge drive unit (cyan and black) without having the alignment pins required for reinstallation.

- Remove four screws (callout 1), disconnect one connector (callout 2), and then remove the print-cartridge drive unit (cyan and black) (callout 3).

 **NOTE:** Follow the gear alignment procedures for the drive unit when reassembling. See [Gear alignment on page 268](#).

Figure 6-93 Remove the print-cartridge drive unit (cyan and black)

For sequence 4 Sub-1B, see [Removal sequence 4 Sub-1B on page 277](#).

Print-cartridge interface PCA (cyan and black)

 **NOTE:** To begin, see [Removal sequence 4 Sub-1 on page 266](#).

- Remove three screws (callout 1) and release one tab (callout 2), and then remove the print-cartridge interface PCA (cyan and black) (callout 3).

Figure 6-94 Remove the print-cartridge interface PCA (cyan and black)

 **NOTE:** When reassembling, some assemblies in this sequence require gear alignment. See [Gear alignment on page 268](#).

Main drive unit

 **NOTE:** To begin, see [Removal sequence 4 Sub-1 on page 266](#).

NOTE: Do not remove the main drive unit without having the alignment pins required for reinstallation. See [Gear alignment on page 268](#).

NOTE: Remove all image drums before removing the main drive unit. See. [Change image drums on page 88](#)

1. Disconnect five connectors (J113, J138, J139, J141, and J142) (callout 1) on the DC Controller PCA, behind the formatter case.

Figure 6-95 Remove the main drive unit (1 of 3)

2. Remove twelve screws (callout 1), and then the main drive unit (callout 2).

Figure 6-96 Remove the main drive unit (2 of 3)

 **CAUTION:** Do not remove screws that hold the main drive unit together.

 **NOTE:** Follow the gear adjustment procedures when reassembling the main drive unit. See [Gear alignment on page 268](#).

NOTE: Removal sequence 4 Sub-1 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4 Sub-1A

See [Removal sequence 4 Sub-1 on page 266](#) for procedures to remove prerequisite parts.

Print-cartridge interface PCA (yellow and magenta)

- Remove three screws (callout 1) and release one tab (callout 2), and then remove the print-cartridge interface PCA (yellow and magenta) (callout 3).

Figure 6-97 Print-cartridge interface PCA (yellow and magenta)

 **NOTE:** When reassembling, some assemblies in this sequence require gear alignment. See [Gear alignment on page 268](#).

NOTE: Removal sequence 4 Sub-1A is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 4 Sub-1B

See [Removal sequence 4 Sub-1 on page 266](#) for procedures to remove prerequisite parts.

Cartridge-fan duct

- Remove two screws (callout 1), and then remove the cartridge-fan duct (callout 2).

Figure 6-98 Remove the cartridge-fan duct

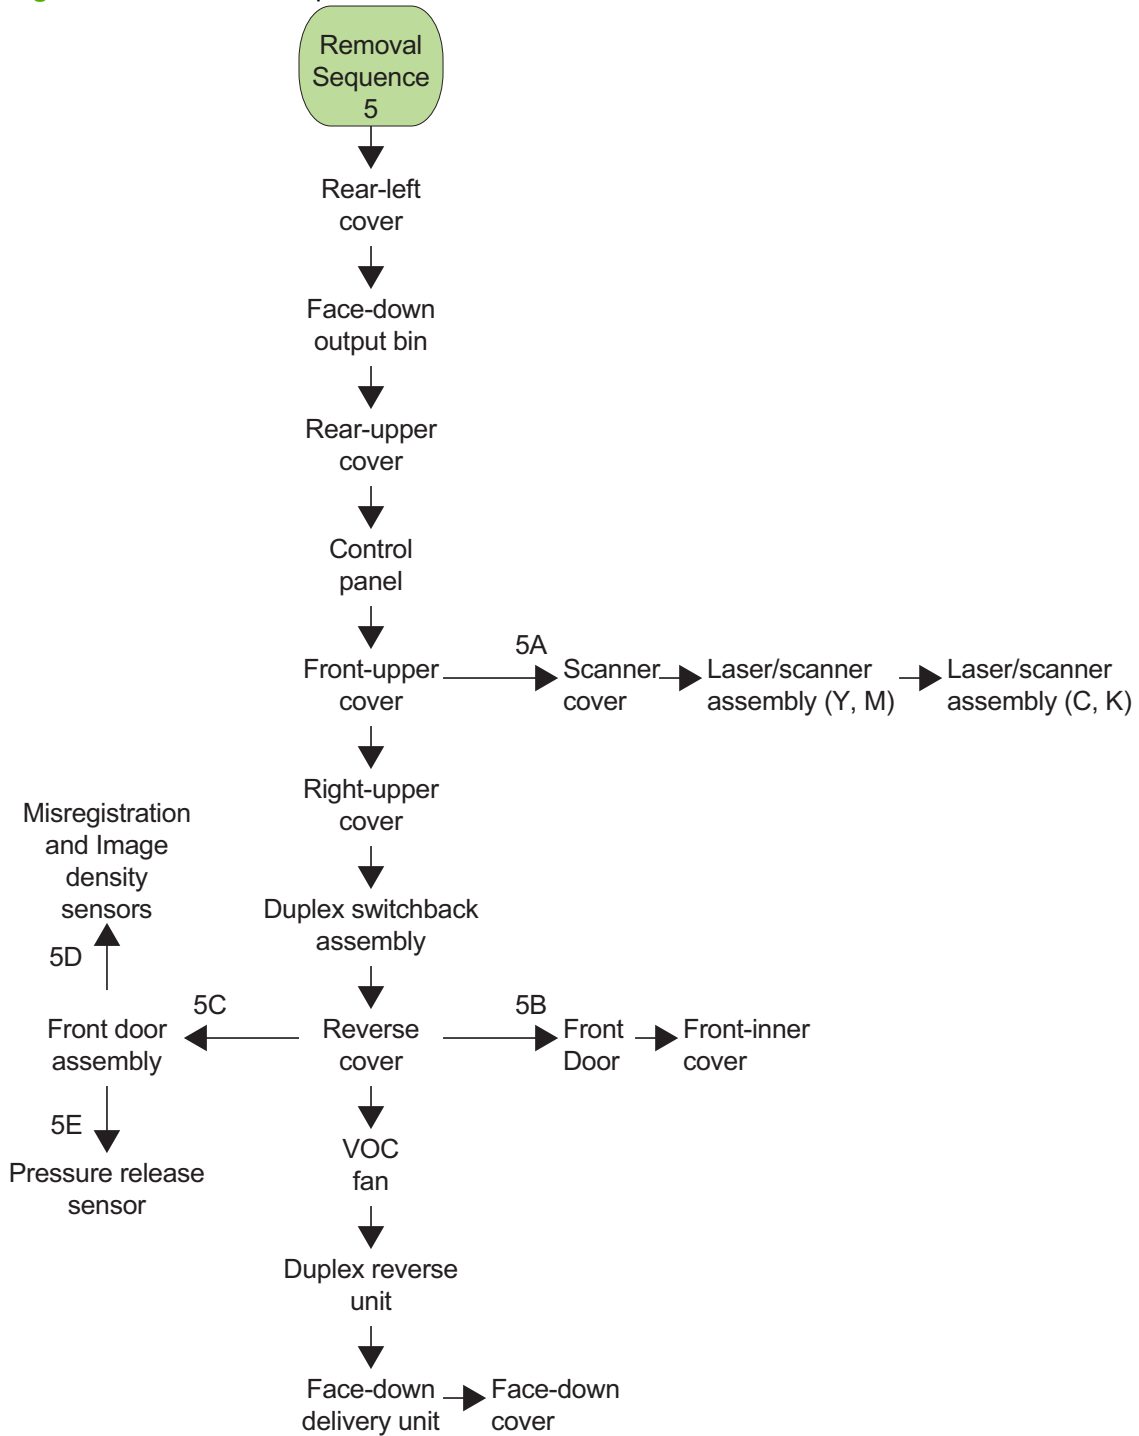

NOTE: Removal sequence 4 Sub-1B is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 5

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-99 Removal sequence 5 flowchart

Rear-left cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove one screw (callout 1), release one tab (callout 2) and then remove the rear-left cover (callout 3).

Figure 6-100 Remove rear-left cover

Face-down output bin

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove two screws (callout 1), and then the face-down output bin (callout 2).

Figure 6-101 Remove face-down output bin

Rear-upper cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove two screws (callout 1), and then remove the rear-upper cover (callout 2).

Figure 6-102 Remove rear-upper cover

Control panel

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Open the front door.
2. Remove the control panel overlay and save it for reinstallation with the replacement control panel.
3. Release three tabs (callout 1), and then push the control panel (callout 2) up at a 45 degree angle to remove.

Figure 6-103 Remove the control panel (1 of 2)

4. Disconnect one connector inside the control panel.

5. Remove one screw (callout 1), and then the grounding spring (callout 2).

 **NOTE:** Be careful not to damage the grounding spring. The service parts for the control panel do not include the grounding spring and the screw. Install the grounding spring when replacing the control panel.

Figure 6-104 Remove the control panel (2 of 2)

Front-upper cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Open the front door.
2. Remove one screw (callout 1) and lift one tab (callout 2). Slide the front-upper cover (callout 3) in the direction indicated.

Figure 6-105 Front-upper cover

3. This procedure is complete. To continue, see the following:
 - For sequence 5A, see [Removal sequence 5A on page 294](#).

Right-upper cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Open the right door.
2. Remove two screws (callout 1), and then remove the right-upper cover (callout 2).

Figure 6-106 Remove right-upper cover

Duplex switchback tray

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Press the release button (callout 1).

Figure 6-107 Remove and replace the duplex switchback tray

2. Remove the duplex switchback tray (callout 2).

Reverse cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

The reverse cover is difficult to remove and replace. The cover has six tabs (callout 1) that must clear the product when being removed. Not all the tabs are visible upon first inspection, so the first time removing the cover may be difficult.

Figure 6-108 Remove reverse cover (1 of 4)

1. Remove two screws (callout 1) and then lift to clear tabs.

Figure 6-109 Remove reverse cover (2 of 4)

2. Push in on the lower-right corner (callout 1) and then pull out on the lower-right and upper-right tabs (callout 2). Move to the other side of the product, and then carefully move one side of the cover at a time to remove. If you feel resistance, make sure you are clearing the black plastic part on the lower-right side. Lift the cover up and over this part, and then continue to move each side of the cover to remove.

Figure 6-110 Remove reverse cover (3 of 4)

 **NOTE:** When reassembling, slowly slide the reverse cover onto the product until the tabs are in place.

3. Slide the reverse cover slowly in the direction indicated ensuring that it clears all underlying parts.

Figure 6-111 Remove reverse cover (4 of 4)

- For sequence 5B, see [Removal sequence 5B on page 299](#).
- For sequence 5C, see [Removal sequence 5C on page 301](#).

VOC fan

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove one screw (callout 1), disconnect one connector (callout 2), and then remove the VOC fan (callout 3).

Figure 6-112 Remove the VOC fan

Duplexing reverse unit

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Disconnect three connectors (callout 1), remove two screws (callout 2), and then the duplexing reverse unit (callout 3).

Figure 6-113 Remove the duplexing reverse unit

Face-down delivery unit

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Disconnect one connector (callout 1), remove one screw (callout 2), and then move the inner cover (callout 3) to the side.

Figure 6-114 Remove the face-down delivery unit (1 of 3)

2. Remove two screws (callout 1), release one tab (callout 2), and then remove the gear cover (callout 3).

Figure 6-115 Remove the face-down delivery unit (2 of 3)

3. Remove three screws (callout 1), and then the face-down delivery unit (callout 2).

Figure 6-116 Remove the face-down delivery unit (3 of 3)

Face-down cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove three screws (callout 1), disconnect one connector (callout 2), and then remove the face-down cover.

Figure 6-117 Remove face-down cover

Removal sequence 5A

See [Removal sequence 5 on page 278](#) for procedures to remove prerequisite parts.

Scanner cover

- Remove eight screws (callout 1) and then remove the scanner cover (callout 2).

Laser/scanner assembly (yellow and magenta)

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Remove the cover (callout 1).

Figure 6-118 Remove the laser/scanner assembly (yellow and magenta) (1 of 3)

2. Disconnect three connectors (callout 1).

Figure 6-119 Remove the laser/scanner assembly (yellow and magenta) (2 of 3)

3. Unhook three springs (callout 1). Slide the laser/scanner assembly to the right, and then lift to remove it.

Figure 6-120 Remove the laser/scanner assembly (yellow and magenta) (3 of 3)

△ **CAUTION:** Use care when replacing the cables for the laser/scanner assemblies. The traces on the cable ends can be damaged when reinserted.

Laser/scanner assembly (cyan and black)

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

1. Push the tab (callout 1), and then slide the rod (callout 2) in the direction indicated to remove it.

Figure 6-121 Remove the laser/scanner assembly (cyan and black) (1 of 3)

2. Disconnect two connectors (callout 1).

Figure 6-122 Remove the laser/scanner assembly (cyan and black) (2 of 3)

3. Unhook three springs (callout 1), and then remove the laser/scanner assembly.

Figure 6-123 Remove the laser/scanner assembly (cyan and black) (3 of 3)

△ **CAUTION:** Use care when replacing the cables for the laser/scanner assemblies. The traces on the cable ends can be damaged when reinserted.

📝 **NOTE:** Removal sequence 5A is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 5B

See [Removal sequence 5 on page 278](#) for procedures to remove prerequisite parts.

Front door

1. Open the front door, and then remove the print cartridges and image drums.
2. Use a small flat-blade screwdriver to release the two arms (callout 1), and then remove the front door (callout 2).

Figure 6-124 Remove front door

Front-inner cover

 **NOTE:** To begin, see [Removal sequence 5 on page 278](#).

- Remove six screws (callout 1), and then pull the bottom of the front-inner cover (callout 2) to remove.

Figure 6-125 Remove front-inner cover

 **NOTE:** Removal sequence 5B is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 5C

See [Removal sequence 5 on page 278](#) for procedures to remove prerequisite parts.

Front-door assembly

1. Open the front door.
2. Remove six screws (callout 1), release the two tabs (callout 2), and then remove the front-door assembly (callout 3).

Figure 6-126 Remove front-door assembly

Removal sequence 5C is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

- For sequence 5D, see [Removal sequence 5D on page 302](#).
- For sequence 5E, see [Removal sequence 5E on page 304](#).

Removal sequence 5D

See [Removal sequence 5 on page 278](#) for procedures to remove prerequisite parts.

Color-misregistration and image-density sensor unit

1. Remove three screws (callout 1) and the print-cartridge guide (callout 2).

Figure 6-127 Remove the color-misregistration and image-density sensor unit (1 of 3)

2. Disconnect the two connectors (callout 1) and lift the color-misregistration/image-density sensor unit to remove it.

Figure 6-128 Remove the color-misregistration and image-density sensor unit (2 of 3)

 **NOTE:** When reassembling, snap the sensor on the rod (callout 1) and align the springs (callout 2).

Figure 6-129 Remove the color-misregistration and image-density sensor unit (3 of 3)

 **NOTE:** Removal sequence 5D is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 5E

See [Removal sequence 5 on page 278](#) for procedures to remove prerequisite parts.

Pressure-release sensor unit

1. From the front of the product, disconnect the two connectors (callout 1).

Figure 6-130 Remove the pressure-release sensor unit (1 of 2)

2. From the right side of the product, remove one screw (callout 1), and then the pressure-release sensor unit (callout 2).

Figure 6-131 Remove the pressure-release sensor unit (2 of 2)

 **NOTE:** Removal sequence 5E is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 6

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-132 Removal sequence 6 flowchart

Rear-left cover

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

- Remove one screw (callout 1), release one tab (callout 2) and remove the rear-left cover (callout 3).

Figure 6-133 Remove rear-left cover

Rear-right cover

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

- Remove one screw (callout 1), release two tabs (callout 2), and then remove the rear-right cover (callout 3).

Figure 6-134 Remove rear-right cover

Right-upper cover

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

1. Open the right door.
2. Remove two screws (callout 1), and then the right-upper cover (callout 2).

Figure 6-135 Remove right-upper cover

Right-door assembly

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

1. Open the right door.
2. Remove two screws (callout 1), and then lift the handle.

Figure 6-136 Remove right-door assembly (1 of 4)

3. Remove one screw (callout 1). Slide the right door arm (callout 2) in the direction indicated to remove it.

Figure 6-137 Remove right-door assembly (2 of 4)

4. Remove two screws (callout 1), release the two tabs (callout 2), and then remove the right inner cover.

Figure 6-138 Remove right-door assembly (3 of 4)

5. Remove one grounding screw (callout 1), disconnect three connectors (callout 2), and then lift the right-door assembly (callout 3) to remove it.

Figure 6-139 Remove right-door assembly (4 of 4)

Duplexing feed unit

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

1. Lift the duplexing feed upper guide (callout 1) in the direction indicated to remove.

Figure 6-140 Remove the duplexing feed unit (1 of 3)

2. Remove two screws (callout 1), release two tabs (callout 2), and then remove the cover (callout 3).

Figure 6-141 Remove the duplexing feed unit (2 of 3)

3. Remove five screws (callout 1), one wire retainer (callout 2), one connector (callout 3), and then remove the duplexing feed unit.

Figure 6-142 Remove the duplexing feed unit (3 of 3)

Multipurpose-tray (Tray-1) pickup unit

 **NOTE:** To begin, see [Removal sequence 6 on page 305](#).

1. Spread two tabs (callout 1) and remove the MP tray lower cover (callout 2). Close Tray 1.

 **NOTE:** Push down on the back of the Tray 1 so it is flat against itself. Close Tray 1 completely so that it is flush.

Figure 6-143 Remove the multipurpose tray (1 of 5)

2. Remove five screws (callout 1), and then one grounding screw (callout 2).

Figure 6-144 Remove the multipurpose tray (2 of 5)

3. Remove the MP-tray pickup unit and the MP tray together.

Figure 6-145 Remove the multipurpose tray (3 of 5)

4. Disconnect one connector (callout 1).

Figure 6-146 Remove the multipurpose tray (4 of 5)

5. With the door closed, use a flat blade screw driver to pry the left side out. Pull the tray in the directions indicated to remove.

Figure 6-147 Remove the multipurpose tray (5 of 5)

 **NOTE:** Removal sequence 6 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Removal sequence 7

Use the flowchart below to determine the sequence of part removal and reinstallation. For information about using removal sequences, see [Parts removal sequences on page 189](#).

Figure 6-148 Removal sequence 7 flowchart

Thermopile unit

 **NOTE:** To begin, see [Removal sequence 7 on page 315](#).

1. Remove the following user replaceable parts:
 - Fuser. See [Fuser on page 191](#).
2. Remove one screw (callout 1), and then release one tab (callout 2).

Figure 6-149 Remove the thermopile unit (1 of 2)

3. Disconnect two connectors (callout 1), and then remove the thermopile unit (callout 2).

Figure 6-150 Remove the thermopile unit (2 of 2)

Front-lower cover

 **NOTE:** To begin, see [Removal sequence 7 on page 315](#).

1. Remove the following user replaceable parts:
 - Tray 2. See [Tray 2 on page 208](#).
2. Remove one screw (callout 1), and then remove the front-lower cover (callout 2).

Figure 6-151 Remove front-lower cover

ITB duct

 **NOTE:** To begin, see [Removal sequence 7 on page 315](#).

1. Remove the following user replaceable parts:
 - Fuser unit. See [Fuser on page 191](#).
2. Release four tabs (callout 1).

Figure 6-152 Remove the ITB duct (1 of 2)

3. Remove the ITB duct.

Figure 6-153 Remove the ITB duct (2 of 2)

 **NOTE:** Removal sequence 7 is complete. To reassemble, reverse the steps in this procedure and all previous procedures of this sequence.

Optional input trays

This section provides procedures for removal and replacement of field-replaceable units (FRUs) for optional input trays.

1 x 500-sheet input tray

Right door

1. Open the right door.
2. Release one tab (callout 1), and then remove the arm (callout 2).

Figure 6-154 Remove the right door (1 of 2)

3. Release one tab (callout 1), and then remove the stopper (callout 2). Lift the right door (callout 3) to remove it.

Figure 6-155 Remove the right door (2 of 2)

Lower-rear cover

1. Release one tab (callout 1), and then remove the lever (callout 2).

Figure 6-156 Remove the lower-rear cover (1 of 2)

2. Remove four screws (callout 1). Release one tab (callout 2), and then remove the rear cover (callout 3).

Figure 6-157 Remove the lower rear cover (2 of 2)

Front-right cover

1. Remove the following:
 - Tray 2. See [Tray 2 on page 208](#).
2. Remove one screw (callout 1).

Figure 6-158 Remove the front-right cover (1 of 2)

3. Open the right door. Remove one screw (callout 1). Lift the front-right cover (callout 2) to remove it.

Figure 6-159 Remove the front-right cover (2 of 2)

Right cover

1. Remove the following:
 - Right door. See [Right door on page 319](#).
 - Front-right cover. See [Front-right cover on page 322](#).
 - Rear cover. See [Lower-rear cover on page 321](#).
2. Remove three screws (callout 1) and then remove the right cover (callout 2).

Figure 6-160 Remove the right cover

Front-upper cover

1. Remove the following:
 - Tray 2. See [Tray 2 on page 208](#).
 - Tray 3. See [Trays 3, 4, and 5 on page 208](#).
 - Front-right cover. See [Front-right cover on page 322](#).
2. Remove two screws (callout 1), and then remove the front-upper cover (callout 2).

Figure 6-161 Remove the front-upper cover

Lower-left cover

1. Remove the following:
 - Front-upper cover. See [Front-upper cover on page 324](#).
2. Remove one screw (callout 1). Slide the left cover (callout 2) in the direction indicated to remove it.

Figure 6-162 Remove the lower-left cover

Front-lower door

1. Remove the following:
 - Tray 3. See [Trays 3, 4, and 5 on page 208](#).
2. Release one tab (callout 1), and then remove the arm (callout 2).

Figure 6-163 Remove the front-lower cover (1 of 2)

3. Clear the bottom pin (callout 1), and then lift the front-lower door (callout 2) to remove it.

Figure 6-164 Remove the front-lower cover (2 of 2)

Box

1. Remove the following:
 - Front-lower door. See [Front-lower cover on page 317](#).
 - Front-right cover. See [Front-right cover on page 322](#).
2. Remove three screws (callout 1), and then remove the box with the inner cover (callout 2).

Figure 6-165 Remove the box (1 of 2)

3. Release the five tabs (callout 1), and then remove the box (callout 2).

Figure 6-166 Remove the box (2 of 2)

Pickup unit

The procedure varies depending on whether the input tray is attached to the product.

- Remove the following:
 - Tray 3. See [Trays 3, 4, and 5 on page 208](#).
 - Lower-rear cover. See [Lower-rear cover on page 321](#).
 - Right cover. See [Right cover on page 323](#).

Input tray is not attached

- Remove one screw (callout 1), and then remove the feed guide (callout 2).

Figure 6-167 Remove the pickup unit (1 of 3)

Input tray is attached

1. Remove one screw (callout 1), and then remove the cassette guide rail (callout 2).

Figure 6-168 Remove the pickup unit (1 of 3)

2. Disconnect three connectors (callout 1), and then remove one screw (callout 2).

Figure 6-169 Remove the pickup unit (2 of 3)

3. Remove one screw (callout 1). Grasp the pickup unit (callout 2), pull the left end off the sheet metal tab, and shift it left to release the right shaft. Pull the pickup unit forward to remove it.

 **NOTE:** If the pickup unit does not come out easily, gently slide a flat screwdriver over the top of the pickup unit to clear any interference with the feed guide.

Figure 6-170 Remove the pickup unit (2 of 3)

Auto-close unit

1. Remove the following:
 - Tray 3. See [Trays 3, 4, and 5 on page 208](#).
 - Lower rear cover. See [Lower-rear cover on page 321](#).
2. Disconnect the two connectors (callout 1).

Figure 6-171 Remove the auto-close unit (1 of 2)

3. Remove three screws (callout 1), and then remove the auto-close unit (callout 2).

Figure 6-172 Remove the auto-close unit (2 of 2)

Pickup motor

1. Remove the following:
 - Rear cover. See [Lower-rear cover on page 321](#).
2. Disconnect one connector (callout 1).
3. Remove two screws (callout 2), and then remove the pickup motor (callout 3).

Figure 6-173 Remove the pickup motor

Paper-feeder driver PCA

1. Remove the following:
 - Rear cover. See [Lower-rear cover on page 321](#).
2. Disconnect seven connectors on the paper-feeder driver PCA.

3. Remove two screws (callout 1), release two tabs (callout 2), and then remove the paper-feeder driver PCA (callout 3).

Figure 6-174 Remove the paper-feeder driver PCA

3 x 500-sheet input tray

Right door

To remove use the same procedure as with the 1 x 500 input tray. See [Right door on page 319](#).

Lower-rear cover

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Lower-rear cover on page 321](#).

Front-right cover

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Front-right cover on page 322](#).

Right cover

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Right cover on page 323](#).

Front-upper cover

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Front-upper cover on page 284](#).

Left cover

To remove use the same procedure as that found with the 1 x 500-sheet input tray. See [Lower-left cover on page 325](#).

Pickup unit (middle cassette)

1. Remove the following:
 - Tray 4. See [Trays 3, 4, and 5 on page 208](#).
 - Lower-rear cover. See [Lower-rear cover on page 321](#).
 - Right cover. See [Right cover on page 323](#).
2. Disconnect the three connectors (callout 1), and then remove one screw (callout 2).

Figure 6-175 Remove the pickup unit (middle cassette) (1 of 2)

3. Remove one screw (callout 1). Grasp the pickup unit (callout 2), and then shift to the left to release the right shaft. Pull the unit forward to remove it.

Figure 6-176 Remove the pickup unit (middle cassette) (2 of 2)

Pickup unit (lower cassette)

To remove use the same procedure as with the pickup unit (middle cassette). See [Pickup unit \(middle cassette\) on page 335](#).

Pickup unit (upper cassette)

The procedure varies depending on whether the input tray is attached to the product.

- Remove the following:
 - Pickup unit (middle cassette). See [Pickup unit \(middle cassette\) on page 335](#).

Input tray is not attached

- Remove one screw (callout 1), and then remove the feed guide (callout 2).

Figure 6-177 Remove the pickup unit (upper cassette) (1 of 3)

Input tray is attached

1. Remove one screw (callout 1), and then remove the cassette guide rail (callout 2).

Figure 6-178 Remove the pickup unit (upper cassette) (1 of 3)

2. Disconnect three connectors (callout 1), and then remove one screw (callout 2).

Figure 6-179 Remove the pickup unit (upper cassette) (2 of 3)

3. Remove one screw (callout 1).

4. Grasp the pickup unit (callout 2), pull the left end off the sheet metal tab, and shift to the left to release the right shaft. Pull the unit forward to remove it.

 **NOTE:** If the pickup unit does not come out easily, gently slide a flat screwdriver over the top of the pickup unit to clear any interference with the feed guide.

Figure 6-180 Remove the pickup unit (upper cassette) (3 of 3)

Auto-close unit

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Auto-close unit on page 331](#).

Pickup motor

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Pickup motor on page 332](#).

Paper-feeder driver PCA

To remove use the same procedure as with the 1 x 500-sheet input tray. See [Paper-feeder driver PCA on page 333](#).

7 Solve problems

Troubleshooting process

Determine the problem source

When the product malfunctions or encounters an unexpected situation, the product control panel alerts you to the situation. This section contains a pre-troubleshooting checklist to filter out many possible causes of the problem. A troubleshooting flowchart helps you diagnose the root cause of the problem. The remainder of this chapter provides steps for correcting problems.

- Use the pre-troubleshooting checklist to evaluate the source of the problem and to reduce the number of steps that are required to fix the problem.
- Use the troubleshooting flowchart to pinpoint the root cause of hardware malfunctions. The flowchart guides you to the appropriate section of this chapter that provides steps for correcting the malfunction.

Before beginning any troubleshooting procedure, check the following conditions:

- Are supply items within their rated life?
- Does the configuration page reveal any configuration errors?

NOTE: The customer is responsible for checking supplies and for using supplies that are in good condition.

Pre-troubleshooting checklist

The list below describes basic questions to ask the customer to help quickly define the problem(s).

Table 7-1 Pre-troubleshooting checklist

Environment	<ul style="list-style-type: none">● Is the product installed on a solid, level surface?● Is the product exposed to particle matter or dust?● Is the power-supply voltage within ± 10 volts of the specified power source?● Is the power supply plug inserted in the product and directly to the wall outlet (not a power strip)?● Is the operating environment within the specified parameters, as listed in chapter 1 of this manual?● Is the product exposed to ammonia gas, such as that produced by diazo copiers or office cleaning materials?● Is the product exposed to direct sunlight?
Media	<ul style="list-style-type: none">● Does the customer use only supported media?● Is the media in good condition (contains no curls, folds, and so forth)?● Is the media stored correctly and within environmental limits?
Input trays	<ul style="list-style-type: none">● Is the amount of media in the tray within specifications?● Is the media placed in the tray correctly?

Table 7-1 Pre-troubleshooting checklist (continued)

	<ul style="list-style-type: none">• Are the paper guides aligned with the media?• Is the paper tray correctly installed in the product?
Print cartridges	<ul style="list-style-type: none">• Is each print cartridge correctly installed?• Are original HP print cartridges installed?• Are the cartridges damaged?
ITB and fuser	<ul style="list-style-type: none">• Are the ITB and fuser correctly installed?• Is the ITB or fuser damaged?
Covers	<ul style="list-style-type: none">• Are the top cover and front cover closed?
Condensation	<ul style="list-style-type: none">• Does condensation occur following a temperature change (particularly in winter following cold storage)? If so, wipe the affected area dry or leave the product on for 10 to 20 minutes.• Was a print cartridge installed soon after being moved from a cold to a warm room? If so, allow the product to sit at room temperature for one to two hours.
Miscellaneous	<ul style="list-style-type: none">• Check for and remove any non-HP components (print cartridges, memory modules, and EIO cards) from the product.• If hardware or software configuration has not changed, or the problem is not associated with any specific software, contact the Customer Care Center (see chapter 1).• Remove the product from the network, and ensure that the failure is associated with the product before beginning troubleshooting.• For any print-quality issues, calibrate the product. See Calibrate the product on page 479.

Troubleshooting checklist

If the product is not responding correctly, complete the steps in the following checklist, in order. If the product does not pass a step, follow the corresponding troubleshooting suggestions. If a step resolves the problem, you can stop without performing the other steps on the checklist.

1. Make sure one of the following messages display on the control panel: **READY**, **PAUSED**, or **SLEEP MODE ON**. If no lights are on or the display does not say **READY**, **PAUSED**, or **SLEEP MODE ON**, see [Power-on checks on page 345](#).
2. Check the cabling.
 - a. Check the cable connection between the product and the computer or network port. Make sure that the connection is secure.
 - b. Make sure that the cable itself is not faulty by using a different cable, if possible.
 - c. Check the network connection. See [Solve network printing problems on page 354](#).
3. Ensure that the print media that you are using meets specifications.

4. Print a configuration page (see [Information pages on page 74.](#)) If the product is connected to a network, an HP Jetdirect page also prints.
 - a. If the pages do not print, check that at least one tray contains print media.
 - b. If the page jams in the product, see [Jams on page 428.](#)
5. If the configuration page prints, check the following items.
 - a. If the page prints correctly, then the product hardware is working. The problem is with the computer that you are using, with the printer driver, or with the program.
 - b. If the page does not print correctly, the problem is with the product hardware.
6. Does the image quality meet the user's requirements? If yes, go to step 7. If no, check the following items:
 - Print the print-quality troubleshooting pages. See [Example print quality problems on page 476](#) in this chapter.
 - Solve the print-quality problems, and then go to step 7.
7. At the computer, check to see if the print queue is stopped, paused, or set to print offline.

Windows: Click **Start**, click **Settings**, and then click **Printers** or **Printers and Faxes**. Double-click **HP Color LaserJet CP6015**.

-or-

Mac OS X: Open **Printer Setup Utility**, and then double-click the line for the **HP Color LaserJet CP6015**.
8. Verify that you have installed the HP Color LaserJet CP6015 Series printer driver. Check the program to make sure that you are using the HP Color LaserJet CP6015 Series printer driver.
9. Print a short document from a different program that has worked in the past. If this solution works, then the problem is with the program that you are using. If this solution does not work (the document does not print) complete these steps:
 - a. Try printing the job from another computer that has the product software installed.
 - b. If you connected the product to the network, connect the product directly to a computer with a USB cable. Redirect the product to the correct port, or reinstall the software, selecting the new connection type that you are using.

Troubleshooting flowchart

This flowchart highlights the general processes that you can follow to quickly isolate and solve product hardware problems.

Each row depicts a major troubleshooting step. A “yes” answer to a question allows you to proceed to the next major step. A “no” answer indicates that additional testing is needed. Proceed to the appropriate section in this chapter, and follow the instructions there. After completing the instructions, proceed to the next major step in this troubleshooting flowchart.

Table 7-2 Troubleshooting flowchart

1 Power on	Is the product on and does a readable message display?		Follow the power-on troubleshooting checks. See Power-on checks on page 345 . After the control panel display is functional, go to step 2.
	Yes ↓	No →	
2 Control panel messages	Does the message READY display on the control panel?		If an error message displays, see Control-panel messages on page 357 . After the errors have been corrected, go to step 3.
	Yes ↓	No →	
3 Event log	Open the DIAGNOSTICS menu and print an event log to see the history of errors with this product. Does the event log print?		If the event log does not print, see Print an event log on page 422 . If paper jams inside the product, see Jams on page 428 . If error messages display on the control panel when you try to print an event log, see Control-panel messages on page 357 . After successfully printing and evaluating the event log, go to step 4.
	Yes ↓	No →	
4 Information pages	Open the INFORMATION menu and print the configuration pages to verify that all of the accessories are installed. Are all of the accessories installed?		If accessories that are installed are not listed on the configuration page, remove the accessory and reinstall it. For more information about optional output devices, see Output accessories and intermediate paper-transfer unit (IPTU) on page 579 . After evaluating the configuration pages, go to step 5.
	Yes ↓	No →	
5 Image quality	Does the print quality meet the customer's requirements?		Compare the images with the sample defects in the image defect tables. See Image-quality issues on page 487 . After the print quality is acceptable, go to step 6.
	Yes ↓	No →	
6 Interface	Can the customer print successfully from the host computer?		Verify that all I/O cables are connected correctly and that a valid IP address is listed on the Jetdirect configuration page. See HP embedded Jetdirect page on page 350 . If error messages display on the control panel, see Control-panel messages on page 357 . When the customer can print from the host computer, this is the end of the troubleshooting process.
	Yes. This is the end of the troubleshooting process.	No →	

Power subsystem

Power-on checks

The basic product functions should start up as soon as the product is plugged into an electrical outlet and the power switch is pushed to the *on* position. If the product does not start, use the information in this section to isolate and solve the problem.

Power-on troubleshooting overview

Turn on the product power. If the control panel display remains blank, random patterns display, or asterisks remain on the control panel display, perform power-on checks to locate the cause of the problem.

During normal operation, the main cooling fan begins to spin briefly after the product power is turned on. Place your hand over the holes in the rear cover, above the formatter. If the fan is operating, you will feel air passing out of the product. You can also lean close to the product and hear the fan operating. When this fan is operational, the DC side of the power supply is functioning correctly.

After the fan is operating, the main motor turns on (unless the top cover is open, a jam condition is sensed, or the paper-path sensors are damaged). You should be able to visually and audibly determine if the main motor is turned on.

If the fan and main motor are operating correctly, the next troubleshooting step is to isolate print engine, formatter, and control panel problems. Perform an engine test (see [Engine-test button on page 495](#)). If the formatter is damaged, it might interfere with the engine test. If the engine-test page does not print, try removing the formatter and then performing the engine test again. If the engine test is then successful, the problem is almost certainly with the formatter, the control panel, or the cable that connects them.

If the control panel is blank when you turn on the product, check the following items.

1. Make sure that the product is plugged directly into an active electrical outlet (not a power strip) that delivers the correct voltage.
2. Make sure that the power switch is in the *on* position.
3. Make sure that the fan runs briefly, which indicates that the power supply is operational.
4. Make sure that the control panel display wire harness is connected. See [Control panel on page 282](#).
5. Make sure that the formatter is seated and operating correctly.
6. Remove any HP Jetdirect or other EIO cards, and then try to turn the product on again.

 **NOTE:** If the control panel display is blank, but the main cooling fan runs briefly after the product power is turned on, try printing an engine-test page to determine whether the problem is with the control-panel display, formatter, or other product components.

Tools for troubleshooting

Internal print-quality test pages

Diagnostics page

Use the diagnostics page to evaluate problems with color plane registration, EP parameters, and print quality.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT DIAGNOSTICS PAGE**, and then press the checkmark button ✓ to print the page.

1	Calibration information
2	Parameters
3	Color density
4	Color plane registration
5	Primary colors
6	Secondary colors
7	Horizontal banding

8	Temperature values (22M)
9	Humidity values (22N)

Configuration pages

Depending on the model, up to three pages print when you select **PRINT CONFIGURATION**. In addition to the main configuration page, an embedded Jetdirect configuration page prints as well as a page for the stapler/stacker.

Configuration page

Use the configuration page to view current product settings, to help troubleshoot product problems, or to verify installation of optional accessories, such as memory (DIMMs), paper trays, and printer languages.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **INFORMATION**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT CONFIGURATION**, and then press the checkmark button ✓.

The message **PRINTING CONFIGURATION** displays on the control panel until the product finishes printing the configuration page. The product returns to the **READY** state after printing the configuration page.

 **NOTE:** If the product is configured with EIO cards (for example, an HP Jetdirect Print Server) or an optional hard-disk drive, an additional configuration page will print that provides information about those devices.

Figure 7-1 Configuration page

1	Printer information
2	Installed personalities and options
3	Color density
4	Calibration information
5	Memory
6	Event log
7	Security
8	Paper trays and options

HP embedded Jetdirect page

The second configuration page is the HP embedded Jetdirect page, which contains the following information:

Figure 7-2 HP embedded Jetdirect page

1	HP Jetdirect Configuration indicates the product status, model number, hardware firmware version, port select, port configuration, auto negotiation, manufacturing identification, and manufactured date.
2	Security Settings information
3	Network Statistics indicates the total packets received, unicast packets received, bad packets received, framing errors received, total packets transmitted, unsendable packets, transmit collisions, and transmit late collisions.
4	TCP/IP information, including the IP address
5	IPX/SPX information
6	Novell/NetWare information
7	AppleTalk information
8	DLC/LLC information

Always make sure the status line under the HP Jetdirect configuration lines indicates "I/O Card Ready".

Embedded protocol page

The embedded protocol page contains the following information:

Figure 7-3 Embedded protocol page

1	IPX/SPX
2	Novell/NetWare
3	AppleTalk
4	DLC/LLC

Finding important information on the configuration pages

Certain information, such as the firmware date codes, the IP address, and the e-mail gateways, is especially helpful while servicing the product. This information is on the various configuration pages. [Table 7-3 Important information on the configuration pages on page 352](#) describes where to look for this information.

Table 7-3 Important information on the configuration pages

Type of information	Specific information	Configuration page
Firmware date codes When you use the remote firmware upgrade procedure, all of these firmware components are upgraded.	DC controller	Look on the main configuration page, under "Device Information."
	Firmware datecode	Look on the main configuration page, under "Device Information."
	Stapler/stacker firmware datecode	Look on the paper handling configuration page, under "Product Name."
	Embedded Jetdirect firmware version	Look on the embedded Jetdirect page, under "HP Jetdirect Configuration."
Accessories and internal storage All optional devices that are installed on the product should be listed on the main configuration page. In addition, separate pages print for the optional paper handling devices and the fax accessory. These pages list more-detailed information for those devices.	Internal disk (4700ph+ model only)	Look on the main configuration page, under "Installed Personalities and Options." Shows model and capacity.
	Embedded HP Jetdirect	Look on the main configuration page, under "Installed Personalities and Options." Shows model and ID.
	Total RAM	Look on the main configuration page, under "Memory."
	Duplex unit	Look on the main configuration page, under "Paper Trays and Options."
Additional 500-sheet feeders and optional output devices	Additional 500-sheet feeders and optional output devices	Look on the main configuration page, under "Paper Trays and Options."
Engine cycles and event logs Total page counts and maintenance kit counts are important for ongoing product maintenance. The configuration page lists only the three most recent errors. To see a list of the 50 most recent errors, print an event log from the DIAGNOSTICS menu.	Engine cycles	Look on the main configuration page, under "Device Information."
	Pages since last maintenance (print engine maintenance count)	Pages since last maintenance (print engine maintenance count)
Event-log information	Event-log information	Look on the main configuration page, under "Event log."

Solve performance problems

Problem	Cause	Solution
Pages print but are totally blank.	The sealing tape might still be in the print cartridges.	Verify that the sealing tape has been completely removed from the print cartridges.
	The document might contain blank pages.	Check the document that you are printing to see if content appears on all of the pages.
	The product might be malfunctioning.	To check the product, print a configuration page.
Pages print very slowly.	Heavier media types can slow the print job.	Print on a different type of media.
	Complex pages can print slowly.	Proper fusing may require a slower print speed to ensure the best print quality.
	If printed in large batches, narrow paper can slow the print job.	Print on a different paper size or in smaller batches.
Pages did not print.	The product might not be pulling media correctly.	<p>Make sure paper is loaded in the tray correctly.</p> <p>If the problem persists, you might need to replace the pickup rollers and the separation pad. See Tray-1 pickup and separation rollers on page 199.</p>
	The media is jamming in the product.	Clear the jam. See Jams on page 428 .
	The USB cable or network cable might be defective or incorrectly connected.	<ul style="list-style-type: none"> ● Disconnect the cable at both ends and reconnect it. ● Try printing a job that has printed in the past. ● Try using a different cable.
	Other devices are running on your computer.	The product might not share a USB port. If you have an external hard drive or network switchbox that is connected to the same port as the product, the other device might be interfering. To connect and use the product, you must disconnect the other device or you must use two USB ports on the computer.

Solve connectivity problems

Solve direct-connect problems

If you have connected the product directly to a computer, check the USB cable.

- Verify that the cable is connected to the computer and to the product.
- Verify that the cable is not longer than 2 meters (6 feet). Replace the cable if necessary.
- Verify that the cable is working correctly by connecting it to another product. Replace the cable if necessary.

Solve network connectivity problems

If the product is having problems communicating with the network, use the information in this section to resolve the problem.

Solve network printing problems

 **NOTE:** HP recommends that you use the product CD to install and set up the product on a network.

- Make sure that the network cable is securely seated into the product's RJ45 connector.
- Make sure that the Link LED on the formatter is lit. See [Understand lights on the formatter on page 494](#).
- Make sure that the I/O card is ready. Print a configuration page (see [Information pages on page 74](#)). If an HP Jetdirect print server is installed, printing a configuration page also prints a second page that shows the network settings and status.

 **NOTE:** The HP Jetdirect print server supports various network protocols (TCP/IP, IPX/SPX, Novell NetWare, AppleTalk, and DCL/LLC). Make sure that the correct protocols and network parameters are set correctly.

On the HP Jetdirect configuration page, verify the following items for your protocol:

- Under HP Jetdirect Configuration, the status is "I/O Card Ready."
- Protocol status is "Ready."
- An IP address is listed.
- The configuration method (Config by:) is listed correctly. See the network administrator if you are not sure which method is correct.
- Try printing the job from another computer.
- To verify that a product works with a computer, use a USB cable to connect it directly to a computer. You will have to reinstall the printing software. Print a document from a program that has printed correctly in the past. If this works, a problem with the network might exist.
- Contact your network administrator for assistance.

Verify communication over the network

If the HP Jetdirect configuration page shows an IP address for the product, use this procedure to verify that you can communicate with the product over the network.

1. **Windows:** Click **Start**, click **Run**, and then type `cmd`. An MS-DOS command prompt opens.

-or-

Mac: Click **Applications**, click **Utilities**, and then open the Terminal application. The terminal window opens.

2. Type `ping` followed by the IP address. For example, type `ping xxx.xxx.xxx.xxx` where "XXX.XXX.XXX.XXX" is the IPv4 address that is shown on the HP Jetdirect configuration page. If the product is communicating over the network, the response is a list of replies from the product.
3. Verify that the IP address is not a duplicate address on the network by using the address resolution protocol (`arp -a`) command. At the prompt, type `arp -a`. Find the IP address in the list and compare its physical address to the hardware address that is listed on the HP Jetdirect configuration page in the section called HP Jetdirect Configuration. If the addresses match, all network communications are valid.
4. If you cannot verify that the product is communicating over the network, contact the network administrator.

Control-panel message types

Four types of control-panel messages can indicate the status of or problems with the product.

Message type	Description
Status messages	Status messages reflect the current state of the product. They inform you of normal product operation and require no interaction to clear them. They change as the state of the product changes. Whenever the product is ready, not busy, and has no pending warning messages, the status message READY appears if the product is online.
Warning messages	Warning messages inform you of data and print errors. These messages typically alternate with the READY or status messages and remain until you press the checkmark button ✓. Some warning messages are clearable. If CLEARABLE WARNINGS is set to JOB , the next print job clears these messages.
Error messages	<p>Error messages communicate that some action must be performed, such as adding paper or clearing a jam.</p> <p>Some error messages are auto-continuable. If AUTO CONTINUE is set on the menus, the product will continue normal operation after an auto-continuable error message appears for 10 seconds.</p> <p>NOTE: Pressing any button during the 10-second auto-continuable error message overrides the AUTO CONTINUE setting, and a button function takes precedence. For example, pressing the Stop button pauses printing with an option to cancel the print job.</p>
Critical-error messages	Critical error messages inform you of a product failure. Some of these messages can be cleared by turning the product off and then on. These messages are not affected by the AUTO CONTINUE setting. If a critical error persists, service is required.

Control-panel messages

Control panel message	Description	Recommended action
10.32.00 Unauthorized Supply For help press ? (Help button)	An unauthorized print cartridge has been installed.	<ol style="list-style-type: none"> 1. Press the checkmark button ✓ to continue with this print cartridge.
10.90.XY REPLACE <COLOR> CARTRIDGE	A toner replenishment malfunction has occurred.	<p>Replace the print cartridge.</p> <p>If replacing the print cartridge does not fix the problem, replace the corresponding image drum.</p>
10.91.00 PRINT CARTRIDGE ERROR For help press ? (Help button) REPLACE BLACK PRINT CARTRIDGE To continue turn off then on	There is an error with the black-toner feed motor.	<p>The black print cartridge is defective and needs to be replaced. Please record message and contact support. After replacing the defective cartridge turn the power off then on to continue.</p> <ol style="list-style-type: none"> 1. Reconnect the connectors for the black-toner feed-motor rotational-count sensor (J2024), intermediate (J1930), and the DC controller PCA (J131). 2. Reconnect the connectors for the color/black I/F PCA (J2201B), cartridge driver PCA (J403, J404, and J405), and the DC controller PCA (J141). 3. Replace the black-toner feed motor.
10.91.09 PRINT CARTRIDGE ERROR For help press ? (Help button) REPLACE BLACK PRINT CARTRIDGE To continue turn off then on	There is an error with the color-toner feed motor.	<p>One of the cyan, magenta, or yellow print cartridges is defective and needs to be replaced. Please record the message and contact support. After replacing the defective cartridge, turn the power off then on to continue.</p> <ol style="list-style-type: none"> 1. Reconnect the connectors for the color-toner feed-motor rotational-count sensor (J2023), intermediate (J1929), and the DC controller PCA (J131). 2. Reconnect the connectors for the yellow/magenta cartridge I/F PCA (J2201A), the cyan/black cartridge I/F PCA (J2201B), the cartridge driver PCA (J402, J403, J406, and J408), and the DC controller PCA (J142). 3. Replace the color-toner feed motor.
10.XX.YY SUPPLY MEMORY ERROR For help press ? (Help button)	The product cannot read or write to at least one print cartridge e-label or an e-label is missing from a print cartridge.	Reinstall the print cartridge, or install a new print cartridge.
10.XX.YY SUPPLY MEMORY ERROR For help press ? (Help button)	<p>The product cannot read or write to at least one image drum.</p> <p>10.10.00-10.10.03 = Missing e-label on print cartridge</p>	<ol style="list-style-type: none"> 1. Open the front door. 2. Replace the specified image drum. 3. Close the front door.

Table 7-4 Control-panel messages (continued)

Control panel message	Description	Recommended action
	10.10.05-10.10.08 = Missing e-label on image drum 10.00.00-10.00.03 = Defective e-label on print cartridge 10.00.05-10.00.08 = Defective e-label on image drum	
11.XX Internal clock error To continue press ✓ (Checkmark button)	The product real time clock has experienced an error.	Whenever the product is turned off and then turned on again, set the time and date at the control panel. See Use the control panel on page 14 . If the error persists, replace the formatter.
13.12.11	Finisher stay jam at either PI33 or PI34 when engine powered on. When the engine is powered on, the finisher's upper-feed-path-entry sensor (PI33) or the upper-feed-path-exit sensor (PI34) is activated suggesting that there is paper in the upper paper path of the finisher at sensors PI33 or PI34.	Signal generated from PI33 (upper-feed-path-entry sensor) and PI34 (upper-feed-path-exit sensor) To locate these sensors, see Detect jams in the stacker unit on page 636 . <ol style="list-style-type: none">1. Open the top door and remove any media in the paper path (media detected at PI33).2. Raise the upper paper path (exit) delivery rollers and remove any media in the paper path (media detected at PI34).3. Check these sensors for obstructions. Verify that the sensor flags are not damaged, move freely, and are correctly aligned with the sensor body and properly mounted. Also check wiring and connectors for damage or loose connections.4. Carefully clean the sensor body by gently blowing clean air across the sensor to remove dust and debris.5. Verify that the sensor connectors (J708 and J707) are fully seated on the stacker controller PCA.6. Replace sensor PI33 and PI34.7. Only if the error persists and the previous steps fail to correct the problem, replace the stacker controller PCA. See Stacker controller PCA on page 737.
13.12.12	Finisher delay jam at PI33. The engine signals the finisher that paper is about to enter the finisher from the IPTU. The finisher's upper-feed-path-entry sensor (PI33), which detects paper entering the finisher, does not detect the paper within the expected time period triggering the error.	To locate this sensor, see Detect jams in the stacker unit on page 636 .

Table 7-4 Control-panel messages (continued)

Control panel message	Description	Recommended action
		<p>Open the IPTU and the finisher top door and check the following items:</p> <ul style="list-style-type: none"> ● If media is found in the IPTU but has not reached the finisher, perform the following steps: <ul style="list-style-type: none"> ◦ Remove and then reinstall the IPTU. Make sure that the connector is fully seated and that the IPTU is securely fastened. ◦ If the error persists, replace the IPTU. See IPTU on page 646. ● If media is jammed at the exit point of the IPTU (prior to entering the finisher), perform the following steps: <ul style="list-style-type: none"> ◦ Verify that the finisher is securely fastened to the engine. ◦ Make sure that the finisher and IPTU are correctly aligned. <p>Adjust the finisher castors to obtain a uniform gap between the finisher and the engine. The engine-to-finisher gap must be the same at the bottom and the top so that the finisher is parallel to the engine.</p> <p>With the engine-to-finisher gap correct, make sure that the finisher paper path entry point is aligned with the IPTU exit point.</p> <ul style="list-style-type: none"> ◦ Check the finisher entry point guides for damage. ◦ Verify that the finisher rollers are turning before the media leaves the IPTU. <p>If the rollers are not turning, test motor M9 by using the finisher component test from the control-panel display. If the motor does not activate during the test, check the connectors for motor M9 (inlet motor).</p> <p>Make sure that connector J705 is fully seated on the stacker controller PCA.</p> <p>If the error persists, replace motor M9 or the saddle paper-feeder assembly.</p> <p>Only if the error persists and the previous steps fail to correct the problem, replace the stacker</p>

USB STORAGE <X> NOT FUNCTIONAL For help press ? (Help button)	A parameter in the USB storage is not working correctly.	<ol style="list-style-type: none"> 1. Turn product off. 2. Disconnect the USB storage accessory, and replace with a new USB storage accessory.
USB STORAGE <X> REMOVED For help press ? (Help button)	A USB storage accessory has been disconnected.	<ol style="list-style-type: none"> 1. Turn product off. 2. Reconnect the USB storage accessory. 3. Turn product on.
USB STORAGE DEVICE FAILURE To clear press ✓ (Checkmark button)	The specified device has failed.	Press the checkmark button ✓ to clear.
USB STORAGE FILE SYSTEM IS FULL To clear press ✓ (Checkmark button)	A P.JL file system command could not store something on the file system because the file system was full.	Press the help button ? to clear.
USB STORAGE IS WRITE PROTECTED To clear press ✓ (Checkmark button)	The file system device is protected and no new files can be written to it.	Press the checkmark button ✓ to clear.
USB STORAGE] FILE OPERATION FAILED To clear press ✓ (Checkmark button)	A P.JL file system command attempted to perform an illogical operation.	Press the checkmark button ✓ to clear.
Wait for printer to reinitialize	This message can appear for a variety of reasons: The RAM DISK settings changed before the product has rebooted. The product is auto power cycling after changing external device modes. The user has exited Diagnostics. A new formatter has been installed with an old engine or a new engine has been installed with an old formatter.	No action is necessary.

Table 7-4 Control-panel messages (continued)

Control panel message	Description	Recommended action
WAITING FOR TRAY <XX> TO LIFT	The specified tray is lifting paper for feeding.	No action is necessary.
WARMING UP	Product is coming out of powersave mode.	No action is necessary.

Event log messages

Print an event log

Use the event log to help diagnose and solve product problems.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT EVENT LOG**, and then press the checkmark button ✓ to print the pages.

Show an event log

Use the control panel to view the event log.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **SHOW EVENT LOG**, and then press the checkmark button ✓ to print the pages.

Event log message

Event log message	Description	Recommended action
13.01.00 JAM IN TRAY N	A jam has occurred in the indicated tray.	<ol style="list-style-type: none"> 1. Open the tray. 2. Clear all paper. 3. Press the checkmark button ✓. 4. See Jam locations on page 429. See areas 5, 6, and 7 for more troubleshooting information.
13.02.00 TRANSFER AREA JAM, TRANSFER AND FUSER JAM	A jam has occurred in the right door of the product in the transfer or fuser areas.	See Jam locations on page 429 . See areas 2 and 3 for more troubleshooting information.
13.05.00 FUSER OUTPUT, PAPER LATE JAM	Paper is late arriving at SR15 fuser-delivery media-feed sensor in the fuser.	See Jam locations on page 429 . See area 2 for more troubleshooting information.
13.06.00 FUSER OUTPUT, PAPER STOPPED JAM	Paper has stopped at SR15 fuser-delivery media-feed sensor in the fuser.	See Jam locations on page 429 . See area 2 for more troubleshooting information.
13.10.00 DUPLEX TURN AROUND, PAPER LATE JAM	Paper is late arriving at SR304 duplexing media-reverse sensor.	See Jam locations on page 429 . See area 4 for more troubleshooting information.
13.11.00 DUPLEX TURN AROUND, PAPER STOPPED JAM	Paper has stopped at SR304 duplexing media-reverse sensor.	See Jam locations on page 429 . See area 4 for more troubleshooting information.
13.12.00 DUPLEX PATH, PAPER LATE JAM	Paper is late arriving at SR303 duplexing media-feed sensor.	See Jam locations on page 429 . See area 4 for more troubleshooting information.
13.13.00 DUPLEX PATH, PAPER STOPPED JAM	Paper has stopped at SR303 duplexing media-feed sensor.	See Jam locations on page 429 . See area 4 for more troubleshooting information.
13.1C.00 FUSER ACCORDION JAM	Paper has stopped at SR15 fuser-delivery media-feed sensor.	See Jam locations on page 429 . See area 2 for more troubleshooting information.
13.20.00 PRINTER COULD NOT AUTOMATICALLY EJECT PAPER	Paper is still in the product and must be cleared.	See Jam locations on page 429 .
13.21.00 DOOR OPEN JAM	A door on the product is open.	See Jam locations on page 429 . Check the doors in areas 1-7.
13.2C.00 JAM IN TOP COVER, DELIVERY DELAY JAM 1	Paper has stopped in the output-bin area.	See Jam locations on page 429 . See area 1 for more troubleshooting information.
13.2D.00 JAM IN TOP COVER, DELIVERY DELAY JAM 2	Paper has stopped in the output-bin area.	See Jam locations on page 429 . See area 1 for more troubleshooting information..
13.2E.00 JAM IN RIGHT DOOR (FUSER/TRANSFER JAM)	Paper has stopped in the fuser area or transfer area.	See Jam locations on page 429 . See areas 2 and 3 for more troubleshooting information.
13.30.00 JAM IN LOWER RIGHT DOOR or JAM IN RIGHT DOOR (FUSER/TRANSFER JAM)	Paper has stopped in the lower-right door or the upper-right door of the product.	See Jam locations on page 429 . See areas 2, 3 and 7 for more troubleshooting information.

55.06.02	The DC controller NVRM is not accessible.	<ol style="list-style-type: none"> 1. Turn the product off then on. 2. If the error persists, replace the DC Controller. See DC controller PCA on page 246.

Paper-handling problems

Jams

Common causes of jams

The product is jammed.

Cause	Solution
The paper does not meet specifications.	Use only paper that meets HP specifications. See Supported paper and print media sizes on page 52 .
A component is installed incorrectly.	Verify that the transfer belt and transfer roller are correctly installed.
You are using paper that has already passed through a product or copier.	Do not use paper that has been previously printed on or copied.
An input tray is loaded incorrectly.	Remove any excess paper from the input tray. Make sure that the stack is below the maximum stack height mark in the tray. See Load paper and print media on page 59 .
The paper is skewed.	The input-tray guides are not adjusted correctly. Adjust them so they hold the stack firmly in place without bending it.
The paper is binding or sticking together.	Remove the paper, flex it, rotate it 180°, or flip it over. Reload the paper into the input tray.
When printing on lightweight paper or on jobs with heavy toner coverage, paper is wrapping on the fuser causing Fuser Delay Jam or Fuser Wrap Jam messages.	Set the LIGHT MEDIA optimize mode on the Print Quality menu to ON .
The paper is removed before it settles into the output bin.	Reset the product. Wait until the page completely settles in the output bin before removing it.
During two-sided printing, you removed the paper before the second side of the document was printed.	Reset the product and print the document again. Wait until the page completely settles in the output bin before removing it.
The paper is in poor condition.	Replace the paper.
The internal tray rollers are not picking up the paper.	If the paper is heavier than 220 g/m ² (58 lb), it might not be picked from the tray. The rollers are worn. Replace the rollers.
The paper has rough or jagged edges.	Replace the paper.
The paper is perforated or embossed.	Perforated or embossed paper does not separate easily. Feed single sheets from Tray 1.
Device supply items have reached the end of their useful life.	Check the product control panel for messages prompting you to replace supplies, or print a supplies status page to verify the remaining life of the supplies. See Information pages on page 74 .
Paper was not stored correctly.	Replace the paper in the trays. Paper should be stored in the original packaging in a controlled environment.
Not all product packing material was removed.	Verify that the packing tape, cardboard, and plastic shipping locks have been removed from the product.

If the product still continues to jam, contact HP Customer Support or your authorized HP service provider.

Jam locations

Use this illustration to identify locations of jams. In addition, instructions appear on the control panel to direct you to the location of jammed paper and how to clear it.

 **NOTE:** Internal areas of the product that might need to be opened to clear jams have green handles or green labels.

Figure 7-5 Jam locations

1	AREA 1: Output-bin area
2	AREA 2: Fuser area
3	AREA 3: Transfer area
4	AREA 4: Duplexing area (for the HP Color LaserJet CP6015dn, x, and xh models only)
5	AREA 5: Tray-2 pickup area
6	AREA 6: Tray 1 area
7	AREA 7: Optional Trays 3, 4, and 5
8	AREA 8: Optional finishing device

Clear jams

When a jam occurs, a message appears on the control-panel display that describes the location of the jam. The following table lists the messages that can appear and provides links to the procedures for clearing the jam.

 **WARNING!** To avoid electrical shock, remove any necklaces, bracelets, or other metal items before reaching into the inside of the product.

Type of jam	Procedure
AREA 1: 13.XX.YY JAM ABOVE TOP OUTPUT BIN 13.XX.YY JAM IN TOP COVER	See AREA 1: Jams in the output bin on page 431 .
AREA 2 and 3: 13.XX.YY FUSER AREA JAM 13.XX.YY FUSER WRAP JAM 13.XX.YY TRANSFER AND FUSER JAM	See AREA 2 and 3: Jams in the fuser and transfer area on page 433 .
AREA 4: 13.XX.YY JAM IN RIGHT DOOR	See AREA 4: Jams in the duplex area on page 440 (for the HP Color LaserJet CP6015dn, x, and xh models only)
AREA 5: 13.XX.YY JAM IN TRAY 2 13.XX.YY TRANSFER AREA JAM	See AREA 5: Jams in Tray 2 and the internal paper path on page 445 .
AREA 6: 13.XX.YY JAM IN TRAY 1	See AREA 6: Clear jams in Tray 1 on page 449 .
AREA 7: 13.XX.YY JAM IN TRAY 3 13.XX.YY JAM IN TRAY 4 13.XX.YY JAM IN TRAY 5 13.XX.YY JAM IN LOWER RIGHT DOOR 13.XX.YY JAM IN INPUT ACCESSORY	See AREA 7: Jams in optional Trays 3, 4, and 5 on page 455
AREA 8: 13.XX.YY JAM IN LEFT ACCESSORY 13.XX.YY JAM INSIDE TOP DOOR	See AREA 8: Jams in the optional finishing devices on page 460 .

Jam sensors

Jams in areas 1-6 are detected by the paper sensors on the paper path. The product has the following sensors:

- Vertical-synchronous-position sensor (SR0)
- Cassette media-feed sensor (SR5)
- MP-tray media-feed sensor (SR7)
- Loop sensor (SR13)
- Fixing-delivery media-feed sensor (SR15)
- Face-down tray media-full sensor (SR16)

- Duplexing media-repickup sensor (SR302)
- Duplexing media-feed sensor (SR303)
- Duplexing media-reverse sensor (SR304)

Figure 7-6 Locations of Jam sensors

AREA 1: Jams in the output bin

Table 7-5 Causes and solutions for delivery delay jam

Cause	Solution
The face-down output-bin media-full sensor lever is damaged	Replace the face-down delivery unit.
Poor contact of the face-down output-bin media-full sensor connector	Reconnect the connectors of the face-down output-bin media-full sensor (J2016), intermediate (J1905) and the DC controller PCB (J108).
The face-down output-bin media-full sensor is defective	Check the face-down output-bin media-full sensor via the sensor monitor mode. If the sensor is defective, replace the face-down delivery unit.
Poor contact of the fuser-motor connector	Reconnect the connectors of the fuser motor (J1711), intermediate (J1720) and the DC controller PCA (J105).
The fuser motor is defective	Execute the fuser-motor driving test in the actuator drive mode. If the motor is defective, replace the fuser motor.

Area 1: Clear jams in the output bin

1. If jammed paper is visible in the output bin, gently pull the paper to remove it.

2. Open the right door.

3. If paper has jammed as it enters the output bin, gently pull the paper to remove it.

4. Close the right door.

AREA 2 and 3: Jams in the fuser and transfer area

Table 7-6 Causes and solutions for fuser delivery delay jams

Cause	Solution
The loop-sensor lever is not set correctly	Check the loop-sensor lever and place it in the correct position.
The spring of the fuser-delivery media-feed-sensor lever is unhooked	Check the spring of the fuser and right-door sensor levers and place it in the correct position.
The fuser-delivery media-feed-sensor lever is damaged	Replace the fuser or right door.
Poor contact of the fuser-delivery media-feed-sensor connector	Reconnect the connectors of the fuser-delivery media-feed sensor (J1945), intermediate (J1950, J1919) and the DC controller PCA (J108).
The fuser-delivery media-feed sensor is defective	Check the fuser-delivery media-feed sensor by the sensor monitor mode. If the sensor is defective, replace the right door.
Poor contact of the fuser-motor connector	Reconnect the connectors of the fuser motor (J1711), intermediate (J1720) and the DC controller PCA (J105).
The fuser motor is defective	Execute the fuser-motor driving test in the actuator drive mode. If the motor is defective, replace the fuser motor.

Table 7-7 Causes and solutions for wrapping jams

Cause	Solution
The fuser roller or pressure roller is dirty	Execute a fuser roller cleaning.
The guide of the fuser delivery unit is dirty	Clean the guide.
The fuser roller of the pressure roller is worn or deformed	Replace the fuser.

Table 7-8 Causes and solutions for fuser delivery stationary jams

Cause	Solution
The fuser roller or pressure roller is worn or deformed	Replace the fuser.
The fuser delivery roller is deformed	Replace the fuser.

Table 7-8 Causes and solutions for fuser delivery stationary jams (continued)

Cause	Solution
The gear of the fuser delivery roller is damaged	Replace the fuser.
The pressure roller is not within nip-width specifications	Check the nip-width specifications. If the pressure roller is not within the specifications, replace the fuser.

Table 7-9 Causes and solutions for residual media jams

Cause	Solution
The spring of the loop-sensor lever is unhooked	Check the spring and place it in the correct position.
The loop-sensor lever is damaged	Replace the right door.
Poor contact of the loop-sensor connector	Reconnect the connectors of the loop sensor (J2013), intermediate (J1954, J1955) and the DC controller PCA (J121).
The loop sensor is defective	Check the loop sensor via the sensor monitor mode. If the sensor is defective, replace the right-door unit.
The spring of the fuser-delivery media-feed-sensor lever is unhooked	Check the spring of the fuser and right door and place it in the correct position.
The fuser-delivery media-feed-sensor lever is damaged	Replace the fuser or right door.
Poor contact of the fuser-delivery media-feed-sensor connector	Reconnect the connectors of the fuser-delivery media-feed sensor (J1945), intermediate (J1950, J1919) and the DC controller PCA (J108).
The fuser-delivery media-feed sensor is defective	Check the fuser-delivery media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the right door.
The spring of the duplexing media-reverse sensor lever is unhooked	Check the spring and place it in the correct position.
The duplexing media-reverse sensor lever is damaged	Replace the duplexing reverse unit.
Poor contact of the duplexing media-reverse sensor connector	Reconnect the connectors of the duplexing media-reverse sensor (J2305) and the duplexing driver PCA (J4103).
The duplexing media-reverse sensor is defective	Check the duplexing media-reverse sensor via the sensor monitor mode. If the sensor is defective, replace the duplexing reverse unit.

Table 7-10 Causes and solutions for pickup delay jams 2

Cause	Solution
The registration roller is worn or deformed	Replace the secondary-transfer unit.
The spring of the registration shutter is unhooked	Check the spring and place it in correct position.
Poor contact of the vertical-synchronous-position sensor	Reinstall the ITB unit.
The vertical-synchronous-position sensor is defective	Check the vertical-synchronous-position sensor by the sensor monitor mode. If the sensor is defective, replace the ITB unit.

Table 7-10 Causes and solutions for pickup delay jams 2 (continued)

Cause	Solution
Poor contact of the registration-motor drive connector	Reconnect the connectors of the registration motor (J1706), intermediate (J1924) and the DC controller PCA (J111).
The registration motor is defective	Execute the registration-motor driving test in the actuator drive mode. If the motor is defective, replace the multipurpose drive unit.

Table 7-11 Causes and solutions for pickup stationary jam

Cause	Solution
Multiple feed of media	<p>Replace any worn or deformed parts (tray separation roller, tray feed roller, MP-tray pickup roller or MP-tray separation roller).</p> <p>Check the separation roller and MP-tray separation roller to see if they are firmly seated and coupled with the torque limiter.</p> <p>Replace the separation roller and feed roller.</p> <p>Replace the MP-tray pickup roller and MP-tray separation roller.</p>
The secondary transfer roller is not set correctly	Place the secondary-transfer-roller unit in the correct position.
The secondary transfer roller is worn or deformed	Replace the secondary-transfer-roller unit.
Poor contact of the ITB-motor drive connector	Reconnect the connectors of the ITB motor (J1710) and the DC controller PCA (J105).
The ITB motor is defective	Execute the ITB-motor driving test in the actuator drive mode. If the motor is defective, replace the ITB motor.
The ITB does not rotate smoothly	Replace the ITB unit.

Table 7-12 Causes and solutions for fuser delivery stationary jam

Cause	Solution
The fuser roller or pressure roller is worn or deformed	Replace the fuser.
The fuser delivery roller is deformed	Replace the fuser.
The gear of the fuser delivery roller is damaged	Replace the fuser.
The pressure roller is not within nip-width specifications	If the pressure roller is not within the specifications, replace the fuser.

△ **CAUTION:** The fuser can be hot while the product is in use. Wait for the fuser to cool before handling it.

AREA 2 and 3: Clear jams in the fuser and transfer area

1. Open the right door.

2. Lift the green handle on the transfer-access panel and open the panel.

3. If paper is visible entering the bottom of the fuser, gently pull downward to remove it.

4. Close the transfer-access panel.

5. Open the fuser jam access door above the fuser and remove any paper that is visible. Then close the fuser jam access door.

6. Paper could also be jammed inside the fuser where it would not be visible. Remove the fuser to check for jammed paper inside.

△ **CAUTION:** The fuser can be hot while the product is in use. Wait for the fuser to cool before handling it.

- a. Pull the two blue fuser handles forward.

- b. Rotate the fuser-release levers down to open them.

- c. Grasp the fuser handles and pull straight out to remove the fuser.

△ **CAUTION:** The fuser weighs 5 kg (11 lbs). Be careful not to drop it.

- d. Open the two fuser jam access doors by pushing and rotating the rear door backward, and pulling and rotating the front door forward. If paper is jammed inside the fuser, gently pull it straight up to remove it. If the paper tears, remove all paper fragments.

△ **CAUTION:** Even if the body of the fuser has cooled, the rollers that are inside could still be hot. Do not touch the fuser rollers until they have cooled.

- e. Close both fuser jam-access doors and align the fuser with the arrows on the product. Push the fuser completely into the printer.

- f. Rotate the fuser-release levers up to lock the fuser into place.

- g. Push the fuser handles back to close them.

7. Close the right door.

AREA 4: Jams in the duplex area

Table 7-13 Causes and solutions for duplexing reverse jams 1

Cause	Solution
The spring of the duplexing media-feed sensor is unhooked	Check the spring and place it in the correct position.
The duplexing media-feed-sensor lever is damaged	Replace the right-door unit.
Poor contact of the duplexing media-feed-sensor connector	Reconnect the connectors of the duplexing media-feed sensor (J1945), intermediate (J1909, J1950) and the DC controller PCA (J4105).
The duplexing media-feed sensor is defective	Check the duplexing media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the right door.
Poor contact of the duplexing feed-motor connector	Reconnect the connectors of the duplexing feed motor (J1772) and the duplexing driver PCA (J4108).
The duplexing feed motor is defective	Replace the duplexing reverse unit.

Table 7-14 Causes and solutions for duplexing reverse jams 2

Cause	Solution
Poor contact of the duplexing reverse-motor connector	Reconnect the connectors of the duplexing reverse motor (J1773) and the duplexing driver PCA (J4108).
The duplexing reverse motor is defective	Replace the duplexing reverse unit.

Table 7-15 Causes and solutions for duplexing repickup jams 1

Cause	Solution
The MP-tray upper guide or duplexing media-feed upper guide is not installed properly	Reinstall the MP-tray upper guide and duplexing media-feed upper guide.
The MP-tray upper guide or duplexing media-feed upper guide is scarred or deformed	Replace the MP-tray upper guide or duplexing media-feed upper guide.

Table 7-16 Causes and solutions for residual media jams

Cause	Solution
The spring of the loop-sensor lever is unhooked	Check the spring and place it in the correct position.
The loop-sensor lever is damaged	Replace the right door.
Poor contact of the loop-sensor connector	Reconnect the connectors of the loop sensor (J2013), intermediate (J1954, J1955) and the DC controller PCA (J121).
The loop sensor is defective	Check the loop sensor via the sensor monitor mode. If the sensor is defective, replace the right-door unit.
The spring of the fuser-delivery media-feed-sensor lever is unhooked	Check the spring of the fuser and right door and place it in the correct position.
The fuser-delivery media-feed-sensor lever is damaged	Replace the fuser or right door.
Poor contact of the fuser-delivery media-feed-sensor connector	Reconnect the connectors of the fuser-delivery media-feed sensor (J1945), intermediate (J1950, J1919) and the DC controller PCA (J108).
The fuser-delivery media-feed sensor is defective	Check the fuser-delivery media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the right door.
The spring of the duplexing media-reverse-sensor lever is unhooked	Check the spring and place it in the correct position.
The duplexing media-reverse-sensor lever is damaged	Replace the duplexing reverse unit.
Poor contact of the duplexing media-reverse-sensor connector	Reconnect the connectors of the duplexing media-reverse sensor (J2305) and the duplexing driver PCA (J4103).
The duplexing media-reverse sensor is defective	Check the duplexing media-reverse sensor via the sensor monitor mode. If the sensor is defective, replace the duplexing reverse unit.

Table 7-17 Causes and solutions for duplexing repickup jams 2

Cause	Solution
The spring of the duplexing media-repickup-sensor lever is unhooked	Check the spring and place it in the correct position.
The duplexing media-repickup-sensor lever is damaged	Replace the duplexing feed unit.
Poor contact of the duplexing media-repickup-sensor connector	Reconnect the connectors of the duplexing media-repickup sensor (J1945), intermediate (J1909, J1950) and the DC controller PCA (J4105).
The duplexing media-repickup sensor is defective	Check the duplexing media-repickup sensor by the sensor monitor mode. If the sensor is defective, replace the duplexing feed unit.
Poor contact of the duplexing repickup-motor connector	Reconnect the connectors of the duplexing repickup motor (J1771), intermediate (J1908, J1939, J1941) and the duplexing driver PCA (J4104).
The duplexing repickup motor is defective	Replace the duplexing feed unit.

 **NOTE:** This procedure is for the HP Color LaserJet CP6015, dn, de, x, and xh models only.

AREA 4: Clear jams in the duplex area

1. If jammed paper is visible in the duplex output area, gently pull it to remove it.

2. If no jammed paper is visible in the duplex output area, open the duplex switchback tray. Gently pull the jammed paper to remove it.

3. Check for jammed paper inside the product. Open the right door.

4. If paper is jammed below the duplexing unit, gently pull the paper downward to remove it.

5. If paper is jammed inside the right door, gently pull the paper to remove it.

6. Lift the paper-feed cover on the inside of the right door. If jammed paper is present, gently pull the paper straight out to remove it.

7. Lift the green handle on the transfer assembly and open the panel.

8. Gently pull the paper out of the paper path.

9. Close the transfer-access panel.

10. Close the right door.

AREA 5: Jams in Tray 2 and the internal paper path

Table 7-18 Causes and solutions for pickup delay jam 1: tray pickup

Cause	Solution
The tray separation roller or tray feed roller is worn or deformed	Replace the tray separation roller and tray feed roller.
Poor contact of the tray media-feed-sensor connector	Reconnect the connectors of the tray media-feed sensor (J2005), intermediate (J1922) and the DC controller PCA (J110).
The tray media-feed sensor is defective	Check the tray media-feed sensor by the sensor monitor mode. If the sensor is defective, replace the tray-pickup unit.
The arm spring of the tray pickup solenoid is unhooked	Check the spring and place it in the correct position.
Poor contact of the tray-pickup-solenoid drive connector	Reconnect the connectors of the tray pickup solenoid (J1923), intermediate (J1922) and the DC controller PCA (J110).
The tray pickup solenoid is defective	Execute the tray-pickup-solenoid driving test in the actuator drive mode. If the solenoid is defective, replace the tray-pickup unit.
Poor contact of the pickup-motor drive connector	Reconnect the connectors of the pickup motor (J1705), intermediate (J1924) and the DC controller PCA (J111).
The pickup motor is defective	Execute the pickup-motor driving test in the actuator drive mode. If the motor is defective, replace the multipurpose drive unit.

Table 7-19 Causes and solutions for pickup stationary jams

Cause	Solution
Multiple feed of media	Replace any worn or deformed parts (tray separation roller, tray feed roller, MP-tray pickup roller or MP-tray separation roller).
	Check the separation roller and MP-tray separation roller to see if they are firmly seated and coupled with the torque limiter.
	Replace the separation roller and feed roller.
	Replace the MP-tray pickup roller and MP-tray separation roller.
The secondary transfer roller is not set correctly	Place the secondary-transfer-roller unit in the correct position.

Table 7-19 Causes and solutions for pickup stationary jams (continued)

Cause	Solution
The secondary-transfer roller is worn or deformed	Replace the secondary-transfer-roller unit.
Poor contact of the ITB-motor drive connector	Reconnect the connectors of the ITB motor (J1710) and the DC controller PCA (J105).
The ITB motor is defective	Execute the ITB-motor driving test in the actuator drive mode. If the motor is defective, replace the ITB motor.
The ITB does not rotate smoothly	Replace the ITB unit.

AREA 5: Clear jams in Tray 2 and the internal paper path

1. Open the right door.

2. Lift the green handle on the transfer-access panel and open the panel.

3. Gently pull the paper out of the paper path.

4. Close the transfer-access panel.

5. Open Tray 2 and make sure that the paper is stacked correctly.

6. Pull the tray completely out of the product by pulling and lifting it up slightly.

7. Remove any paper from the feeder rollers inside the product.
8. Reinsert Tray 2 by aligning the side rollers and pushing it back into the product.

9. Close the tray.

10. Close the right door.

AREA 6: Clear jams in Tray 1

Table 7-20 Causes and solutions for pickup delay jam 1; MP-tray pickup

Cause	Solution
The MP-tray pickup roller or MP-tray separation roller is worn or deformed	Replace the MP-tray pickup roller and MP-tray separation roller.
Poor contact of the MP-tray media-feed-sensor connector	Reconnect the connectors of the MP-tray media-feed sensor (J2007), intermediate (J1935) and the DC controller PCA (J111).
The MP-tray media-feed sensor is defective	Check the MP-tray media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the MP-tray guide unit.
The arm spring of the MP-tray pickup solenoid is unhooked	Check the spring and place it in the correct position.
Poor contact of the MP-tray-pickup-solenoid drive connector	Reconnect the connectors of the MP-tray pickup solenoid (J1925), intermediate (J1926) and the DC controller PCA (J144).
The MP-tray pickup solenoid is defective	Execute the MP-tray-pickup-solenoid driving test in the actuator drive mode. If the solenoid is defective, replace the MP-tray-pickup unit.
Poor contact of the pickup-motor drive connector	Reconnect the connectors of the pickup motor (J1705), intermediate (J1924) and the DC controller PCA (J111).
The pickup motor is defective	Execute the pickup-motor driving test in the actuator drive mode. If the motor is defective, replace the multipurpose drive unit.

Table 7-21 Causes and solutions for pickup stationary jams

Cause	Solution
Multiple feed of media	Replace any worn or deformed parts (tray separation roller, tray feed roller, MP-tray pickup roller or MP-tray separation roller).
	Check the separation roller and MP-tray separation roller to see if they are firmly seated and coupled with the torque limiter.
	Replace the separation roller and feed roller.
	Replace the MP-tray pickup roller and MP-tray separation roller.
The secondary transfer roller is not set correctly	Place the secondary-transfer-roller unit in the correct position.

Table 7-21 Causes and solutions for pickup stationary jams (continued)

Cause	Solution
The secondary transfer roller is worn or deformed	Replace the secondary-transfer-roller unit.
Poor contact of the ITB-motor drive connector	Reconnect the connectors of the ITB motor (J1710) and the DC controller PCA (J105).
The ITB motor is defective	Execute the ITB-motor driving test in the actuator drive mode. If the motor is defective, replace the ITB motor.
The ITB does not rotate smoothly	Replace the ITB unit.

 **NOTE:** Even if jammed paper is visible in Tray 1, clear the jam from the inside of the product by opening the right door.

AREA 6: Clear jams in Tray 1

1. Open the right door.

 **NOTE:** When clearing jams of long paper (11 x 17, 12 x 18, A3, and banners), it may be necessary to cut or tear the jammed paper before opening the right door.

2. If paper is visible inside the right door, gently pull the paper downward to remove it.

3. If paper has entered the internal paper path, lift the green handle on the transfer-access panel and open the panel.

4. Gently pull the paper out of the paper path.

5. Close the transfer-access panel.

6. Close the right door.

Clear jams when printing banners

If a paper jam occurs while printing with banner paper, gently pull the paper forward through the output bin or back through Tray 1 to remove the paper from the paper path. After removing the paper, open and close the right door to clear the jam message from the control panel. If you cannot remove the paper, carry out the following steps:

1. Open the right door.

 **NOTE:** If you are printing to very heavy banner paper, and the paper is still feeding in through Tray 1, you may need to cut the paper at the base of Tray 1 in order to open the right door and pull the paper free of the Tray 1 rollers.

2. Lift the green handle on the transfer-access panel and open the panel.

3. Gently pull the paper out of the paper path

4. Close the transfer-access panel.

5. Close the right door.

AREA 7: Jams in optional Trays 3, 4, and 5

Jams in AREA 7 are detected by paper sensors on the paper path:

- Upper-PD-cassette media-feed sensor (SR102)
- Middle-PD-cassette media-feed sensor (SR112)
- Lower-PD-cassette media-feed sensor (SR122)

Figure 7-7 Paper-deck sensors

Table 7-22 Causes and solutions for pickup delay jam

Cause	Solution
The separation roller or feed roller for optional Trays 3, 4, and 5 is worn or deformed	Replace the separation roller and feed roller for optional Trays 3, 4, and 5.

Table 7-22 Causes and solutions for pickup delay jam (continued)

Cause	Solution
Poor contact of the Tray-3 media-feed-sensor connector	Reconnect the connectors of the Tray-3 media-feed sensor (J2102), intermediate (J1982) and the Tray-3 paper-deck driver PCA (J8106A).
The Tray-3 media-feed sensor for is defective	Check the Tray-3 media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the pickup-plate unit.
The spring of the Tray-3-pickup-solenoid arm is unhooked	Check the spring and place it in the correct position.
Poor contact of the Tray-3-pickup-solenoid drive connector	Reconnect the connectors of the Tray-3 pickup solenoid (J1983) and the Tray-3 paper-deck driver PCA (J8107A).
The Tray-3 pickup solenoid is defective	Execute the Tray-3-pickup-solenoid driving test in the actuator drive mode. If the solenoid is defective, replace the pickup solenoid.
Poor contact of the Tray-3 pickup-motor drive connector	Reconnect the connectors of the Tray-3 pickup motor (J1751) and the Tray-3 paper-deck driver PCA (J8107A).
The Tray-3 pickup motor is defective	Execute the Tray-3-pickup-motor driving test in the actuator drive mode. If the motor is defective, replace the pickup motor.
Poor contact of the Tray-4 media-feed-sensor connector	Reconnect the connectors of the Tray-4 media-feed sensor (J2112), intermediate (J1985) and the Tray-4 paper-deck driver PCA (J8106B).
The Tray-4 media-feed sensor is defective	Check the Tray-4 media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the pickup-plate unit.
The spring of the Tray-4-pickup-solenoid arm is unhooked	Check the spring and place it in the correct position.
Poor contact of the Tray-4-pickup-solenoid drive connector	Reconnect the connectors of the Tray-4 pickup solenoid (J1986) and the Tray-4 paper-deck driver PCA (J8107B).
The Tray-4 pickup solenoid is defective	Execute the Tray-4-pickup-solenoid driving test in the actuator drive mode. If the solenoid is defective, replace the pickup solenoid.
Poor contact of the Tray-4 pickup-motor drive connector	Reconnect the connectors of the Tray-4 pickup motor (J1752) and the Tray-4 paper-deck driver PCA (J8107B).
The Tray-4 pickup motor is defective	Execute the Tray-4-pickup-motor driving test in the actuator drive mode. If the motor is defective, replace the pickup motor.
Poor contact of the Tray-5 media-feed-sensor connector	Reconnect the connectors of the Tray-5 media-feed sensor (J2122), intermediate (J1988) and the Tray-5 paper-deck driver PCA (J8106C).
The Tray-5 media-feed sensor is defective	Check the Tray-5 media-feed sensor via the sensor monitor mode. If the sensor is defective, replace the pickup-plate unit.
The spring of the Tray-5-pickup-solenoid arm is unhooked	Check the spring and place it in the correct position.
Poor contact of the Tray- 5-pickup-solenoid drive connector	Reconnect the connectors of the Tray-5 pickup solenoid (J1989) and the Tray-5 paper-deck driver PCA (J8107C).
The Tray-5 pickup solenoid is defective	Execute the Tray-5-pickup-solenoid driving test in the actuator drive mode. If the solenoid is defective, replace the pickup solenoid.
Poor contact of the Tray-5 pickup-motor drive connector	Reconnect the connectors of the Tray-5 pickup motor (J1753) and the Tray-5 paper-deck driver PCA (J8107C).
The Tray-5 pickup motor is defective	Execute the Tray-5-pickup-motor driving test in the actuator drive mode. If the motor is defective, replace the pickup motor.

AREA 7: Clear jams in optional Trays 3, 4, and 5

1. Open the right door.

2. If paper is visible in the paper-input area, gently pull the jammed paper up to remove it.

3. Close the right door.

4. Open the lower-right door.

5. Gently pull the jammed paper to remove it.

6. Open the tray that is indicated in the control-panel message, and make sure that the paper is stacked correctly.

7. Close the tray.

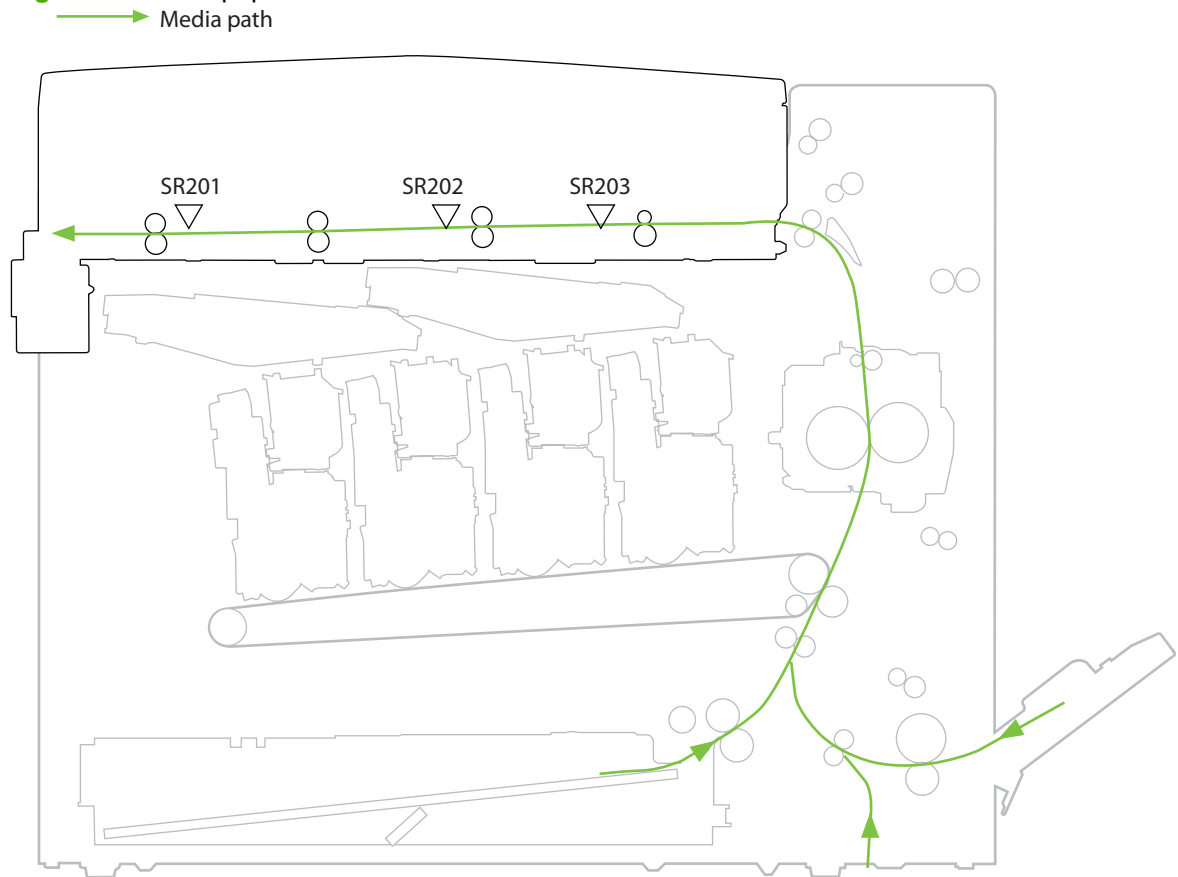

8. Close the lower-right door.

AREA 8: Jams in the optional finishing devices

Clear jams in the output-accessory bridge

Figure 7-8 IPTU paper sensors

Sensor	Description
SR201	IPTU paper-feed sensor 1
SR202	IPTU paper-feed sensor 2
SR203	IPTU paper-feed sensor 3

Table 7-23 Causes and solutions for delivery delay jams 1

Cause	Solution
The spring of the IPTU media-feed sensor-1 lever is unhooked	Check the spring and place it in the correct position.
The IPTU media-feed sensor-1 lever is damaged	Replace the lower-guide unit.
Poor contact of the IPTU media-feed sensor-1 connector	Reconnect the connectors of the IPTU media-feed sensor 1 (J12203) and the IPTU driver PCA (J7006).
The IPTU media-feed sensor 1 is defective	Check the IPTU media-feed sensor 1 by the sensor monitor mode. If the sensor is defective, replace the lower-guide unit.

Table 7-23 Causes and solutions for delivery delay jams 1 (continued)

Cause	Solution
Poor contact of the IPTU media-feed-motor-1 connector	Reconnect the connectors of the IPTU media-feed motor 1 (J7011) and the IPTU driver PCA (J7003).
The IPTU media-feed motor 1 is defective	Execute the IPTU-media-feed-motor driving test in the actuator drive mode. If the motor is defective, replace the IPTU media-feed motor 1.

Table 7-24 Causes and solutions for delivery delay jams 2

Cause	Solution
The spring of the IPTU media-feed sensor-2 lever is unhooked	Check the spring and place it in correct position.
The IPTU media-feed sensor-2 lever is damaged	Replace the lower-guide unit.
Poor contact of the IPTU media-feed sensor-2 connector	Reconnect the connectors of the IPTU media-feed sensor 2 (J12202) and the IPTU driver PCA (J7006).
The IPTU media-feed sensor 2 is defective	Check the IPTU media-feed sensor 2 via the sensor monitor mode. If the sensor is defective, replace the lower-guide unit.
The spring of the IPTU media-feed sensor-3 lever is unhooked	Check the spring and place it in the correct position.
The IPTU media-feed sensor-3 lever is damaged	Replace the lower-guide unit.
Poor contact of the IPTU media-feed sensor-3 connector	Reconnect the connectors of the IPTU media-feed sensor 3 (J12201) and the IPTU driver PCA (J7006).
The IPTU media-feed sensor 3 is defective	Check the IPTU media-feed sensor 3 via the sensor monitor mode. If the sensor is defective, replace the lower-guide unit.
Poor contact of the IPTU media-feed-motor-2 connector	Reconnect the connectors of the IPTU media-feed motor 2 (J7012) and the IPTU driver PCA (J7007).
The IPTU media-feed motor 2 is defective	Execute the IPTU-media-feed-motor driving test in the actuator drive mode. If the motor is defective, replace the IPTU media-feed motor 2.

Table 7-25 Causes and solutions for delivery stationary jams

Cause	Solution
The IPTU feed roller is worn or deformed	Replace the upper-guide unit or lower-guide unit.
The spring of the IPTU feed subroller is unhooked	Check the spring and place it in the correct position.

Clear jams in the optional finishing devices

1. Lift the latch on the top cover of the output-accessory bridge and open the top cover.

2. Gently pull the jammed paper to remove it.

3. Close the top cover of the output-accessory bridge.

Clear jams in the sorter area

Clear jams in the sorter area

1. Lift the latch on the top cover of the finishing device, and open the top cover.

 **NOTE:** Opening the top cover releases pressure on the output-bin rollers.

2. Remove jammed paper from the output bin or from the inside of the finishing device.

3. Close the top cover of the finishing device.

4. Lift the swing guide panel in the output bin. If you can see any jammed paper, gently pull it out.

Clear jams in the booklet maker

Clear jams in the booklet maker

1. If the paper is visible in the booklet output bin, gently pull the paper to remove it.

2. Open the front door of the booklet maker.

3. Push the upper delivery guide to the right, and remove any jammed paper.

4. Push the lower delivery guide to the right, and remove any jammed paper.

5. The positioning knob is the smaller, green dial on the right. Turn the positioning knob counterclockwise.

6. The jam-release knob is the larger, green dial on the left. Push in the jam-release knob, and then turn it clockwise to move any jammed paper into the output bin.

7. Close the front door of the booklet maker.

Clear staple jams

Clear staple jams in the main stapler

The HP 3-bin Stapler/Stacker and the HP Booklet maker/Finisher Accessory each have a main stapler, which is located near the top of the finishing device.

1. Open the front door of the finishing device.

2. To remove the staple cartridge, pull up on the green handle and pull out the staple cartridge.

3. Lift up on the small lever at the back of the staple cartridge.

4. Remove the damaged staples that protrude from the staple cartridge. Remove the entire sheet of staples that the damaged staples were attached to.

5. Close the lever at the back of the staple cartridge. Be sure that it snaps into place.

6. Reinsert the staple cartridge into the finishing device, and push down on the green handle until it snaps into place.

7. Close the front cover of the finishing device.

Clear staple jams in the booklet maker

The booklet maker has an additional saddle stitch stapler that is below the main stapler. The saddle stitch stapler has two staple cartridges.

1. Open the front door of the booklet maker.

2. Push the upper delivery guide to the right, and remove any jammed paper.

3. Grasp the blue handle for the stapler carriage and pull it straight out.

4. Grasp the handle of the blue staple cartridge unit and pull it toward you, then swing the staple cartridge unit into an upright position.

5. Check each staple cartridge for jammed staples.

- a. On each staple cartridge, press down on the green plastic tabs while lifting the jam clearance plate.

△ **CAUTION:** Do not place your fingers or hands underneath the staple cartridge during this procedure.

- b. Remove any jammed staples. Remove any damaged staples and the entire sheet of staples that the damaged staples were attached to.

- c. Press down on the jam clearance plate to close it.

△ **CAUTION:** Do not place your fingers or hands underneath the staple cartridge during this procedure.

6. Pull the staple cartridge unit forward, and swing it downward to the original position. Push in on the handle to lock it into position.

7. Push the staple carriage back into the booklet maker.

8. Close the front door of the booklet maker.

Jam recovery

This product provides a jam recovery feature that reprints jammed pages. The following options are available:

- **AUTO** — The product attempts to reprint jammed pages when sufficient memory is available.
 - **OFF** — The product does not attempt to reprint jammed pages. Because no memory is used to store the most recent pages, performance is optimal.
-
-  **NOTE:** When using this option, if the product runs out of paper and the job is being printed on both sides, some pages can be lost.
-
- **ON** — The product always reprints jammed pages. Additional memory is allocated to store the last few pages printed. This might cause overall performance to suffer.

Set the jam recovery feature

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **SYSTEM SETUP**, and press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **JAM RECOVERY**, and press the checkmark button ✓.
5. Press the down arrow or up arrow ▼/▲ to highlight the appropriate setting, and press the checkmark button ✓.
6. Press **Menu** to return to the **READY** state.

Product feeds multiple sheets

Product feeds multiple sheets

Cause	Solution
The input tray is overfilled. Open the tray and verify that the paper stack is below the maximum stack height mark.	Remove excess paper from the input tray.
Print paper is sticking together.	Remove paper, flex it, rotate it 180 degrees or flip it over, and then reload it into the tray. NOTE: Do not fan paper. Fanning can cause static electricity, which can cause paper to stick together.
Paper does not meet the specifications for this product.	Use only paper that meets HP paper specifications for this product.
Trays are not properly adjusted.	Make sure that the paper guides match the size of paper being used.

Product pulls from incorrect tray

Product pulls from incorrect tray

Cause	Solution
You are using a driver for a different product.	Use a driver for this product.
The specified tray is empty.	Load paper in the specified tray.
The paper size is not configured correctly for the input tray.	Print a configuration page or use the control panel to determine the paper size for which the tray is configured.
The guides in the tray are not against the paper.	Verify that the guides are touching the paper.

Product feeds incorrect page size

Product feeds incorrect page size

Cause	Solution
The correct size paper is not loaded in the input tray.	Load the correct size paper in the input tray.
The correct size paper is not selected in the software program or printer driver.	Confirm that the settings in the software program and printer driver are correct, because the software program settings override the printer driver and control panel settings, and the printer driver settings override the control panel settings. For more information, see user guide.
The correct size paper for the tray is not selected in the product control panel.	From the control panel, select the correct size paper for the tray.
The paper size is not configured correctly for the input tray.	Print a configuration page or use the control panel to determine the paper size for which the tray is configured.
The guides in the tray are not against the paper.	Verify that the paper guides are touching the paper.

Paper does not feed automatically

Paper does not feed automatically

Cause	Solution
Manual feed is selected in the software program.	Load Tray 1 with paper, or, if the paper is loaded, press the checkmark button ✓.
The correct size paper is not loaded.	Load the correct size paper.
The input tray is empty.	Load paper into the input tray.
Paper from a previous jam has not been completely removed.	Open the product and remove any paper in the paper path.
The paper size is not configured correctly for the input tray.	Print a configuration page or use the control panel to determine the paper size for which the tray is configured.
The guides in the tray are not against the paper.	Verify that the rear and width paper guides are touching the paper.
The manual-feed prompt is set to ALWAYS . The product always prompts for manual feed, even if the tray is loaded.	Open the tray, reload the media, and then close the tray. Or, change the manual-feed prompt setting to UNLESS LOADED , so that the product prompts for manual feed only when the tray is empty.
The USE REQUESTED TRAY setting on the product is set to EXCLUSIVELY , and the requested tray is empty. The product will not use another tray.	Load the requested tray. Or, change the setting from EXCLUSIVELY to FIRST on the CONFIGURE DEVICE menu. The product can use other trays if no media is loaded in the specified tray.

Paper does not feed from Tray 2, 3, 4, or 5

Paper does not feed from Tray 2, 3, 4, or 5

Cause	Solution
The correct size paper is not loaded.	Load the correct size paper.
The input tray is empty.	Load paper in the input tray.
The correct paper type for the input tray is not selected in the product control panel.	From the product control panel, select the correct paper type for the input tray.
Paper from a previous jam has not been completely removed.	Open the product and remove any paper in the paper path. Closely inspect the fuser area for jams.
None of the optional trays appear as input tray options.	The optional trays only display as available if they are installed. Verify that any optional trays are correctly installed. Verify that the printer driver has been configured to recognize the optional trays.
An optional tray is incorrectly installed.	Print a configuration page to confirm that the optional tray is installed. If not, verify that the tray is correctly attached to the product.
The paper size is not configured correctly for the input tray.	Print a configuration page or use the control panel to determine the paper size for which the tray is configured.
The guides in the tray are not against the paper.	Verify that the guides are touching the paper.

Transparencies or glossy paper will not feed

Transparencies or glossy paper will not feed

Cause	Solution
The correct paper type is not specified in the software or printer driver.	Verify that the correct paper type is selected in the software or printer driver.
The input tray is overfilled.	Remove excess paper from the input tray. Do not load more than 200 sheets of glossy paper or glossy film, or more than 100 transparencies in Tray 2, 3, 4, or 5. Do not exceed the maximum stack height marks for Tray 1.
Paper in another input tray is the same size as the transparencies, and the product is defaulting to the other tray.	Make sure that the input tray containing the transparencies or glossy paper is selected in the software program or printer driver. Use the product control panel to configure the tray to the paper type loaded.
The tray containing the transparencies or glossy paper is not configured correctly for type.	Make sure that the input tray containing the transparencies or glossy paper is selected in the software program or printer driver. Use the product control panel to configure the tray to the paper type loaded.
Transparencies or glossy paper might not meet supported paper specifications.	Use only paper that meets the HP paper specifications for this product.
High-humidity environments may cause glossy paper not to feed, or to feed too many sheets.	Print glossy paper from Tray 2, 3, 4, or 5 for best results. Avoid printing glossy paper in high humidity conditions. When printing glossy paper, removing the paper from the wrapper and letting it rest for a few hours can improve feeding into the product. However, letting paper rest in humid environments may also cause blisters.

- △ **CAUTION:** HP Color Laser Presentation Paper, Glossy (Q2546A) is not supported with this product. Using this type of paper can cause a fuser jam that might require the replacement of the fuser. Two recommended alternatives are HP Color LaserJet Presentation Paper, Soft Gloss (Q6541A) and HP Color LaserJet Brochure Paper, Glossy (Q6611A, Q6610A). For a list of supported paper types, see [Supported paper types on page 56](#).

Envelopes jam or will not feed in the product

Envelopes jam or will not feed in the product

Cause	Solution
Envelopes are loaded in an unsupported tray. Only Tray 1 can feed envelopes.	Load envelopes into Tray 1.
Envelopes are curled or damaged.	Try using different envelopes. Store envelopes in a controlled environment.
Envelopes are sealing because the moisture content is too high.	Try using different envelopes. Store envelopes in a controlled environment.
Envelope orientation is incorrect.	Verify that the envelope is loaded correctly.
This product does not support the envelopes being used.	Refer to the <i>HP LaserJet Printer Family Print Media Guide</i> .
Tray 1 is configured for a size other than envelopes.	Configure Tray 1 size for envelopes.

Output is curled or wrinkled

Output is curled or wrinkled

Cause	Solution
Paper does not meet the specifications for this product.	Use only paper that meets the HP paper specifications for this product.
Paper is damaged or in poor condition.	Remove paper from the input tray and load paper that is in good condition.
Product speed needs to be reduced.	Set the PAPER CURL option in the Print Quality menu to REDUCED to decrease full speed to 10 ppm (instead of 40 ppm) and 3/4 speed to 7.5 ppm (instead of 30 ppm).
Product is operating in an excessively humid environment.	Verify that the printing environment is within humidity specifications.
You are printing large, solid-filled areas.	Large, solid-filled areas can cause excessive curl. Try using a different pattern.
Paper used was not stored correctly and might have absorbed moisture.	Remove paper and replace it with paper from a fresh, unopened package.
Paper has poorly cut edges.	Remove paper, flex it, rotate it 180 degrees or turn it over, and then reload it into the input tray. Do not fan paper. If the problem persists, replace the paper.
The specific paper type was not configured for the tray or selected in the software.	Configure the software for the paper (see the software documentation). Configure the tray for the paper, see Load paper and print media on page 59 .
The paper has previously been used for a print job.	Do not re-use paper.

Product will not duplex or duplexes incorrectly

Product will not duplex (print 2-sided jobs) or duplexes incorrectly

Cause	Solution
You are trying to duplex on unsupported paper.	Verify that the paper is supported for duplex printing.
The printer driver is not set up for duplex printing.	Set up the printer driver to enable duplex printing.
The first page is printing on the back of preprinted forms or letterhead.	Load preprinted forms and letterhead in Tray 1 with the letterhead or printed side down, with the top of the page toward the back of the product. For Tray 2, 3, 4 and 5, load the paper printed side up with the top of the page toward the back of the product.
The product model does not support automatic 2-sided printing.	The HP Color LaserJet CP6015n does not support automatic 2-sided printing.
The product configuration is not set for duplexing.	In Windows, run the automatic configuration feature: <ol style="list-style-type: none">1. Click the Start button, point to Settings, and then click Printers (for Windows 2000) or Printers and Faxes (for Windows XP).2. Right-click the HP product icon, and then click Properties or Printing Preferences.

Product will not duplex (print 2-sided jobs) or duplexes incorrectly

Cause	Solution
	<ol style="list-style-type: none"><li data-bbox="879 275 1219 300">3. Click the Device Settings tab.<li data-bbox="879 325 1430 380">4. Under Installable Options, click Update Now in the Automatic Configuration list.

Solve image-quality problems

This section helps you define print-quality problems and what to do to correct them. Often print-quality problems can be handled easily by making sure that the product is properly maintained, using paper that meets HP specifications, or running a cleaning page.

Example print quality problems

Some print quality problems arise from use of inappropriate paper.

- Use paper that meets HP paper specifications.
- The surface of the paper is too rough. Use paper that meets HP paper specifications.
- The printer driver setting or paper tray setting might be incorrect. Be sure that you have configured the paper tray at the product control panel and have also selected the correct driver setting for the paper that you are using.
- The print mode might be set incorrectly, or the paper might not meet recommended specifications.
- The transparencies you are using are not designed for proper toner adhesion. Use only transparencies designed for HP Color LaserJet products.
- The moisture content of the paper is uneven, too high, or too low. Use paper from a different source or from an unopened ream of paper.
- Some areas of the paper reject toner. Use paper from a different source or from an unopened ream of paper.
- The letterhead you are using is printed on rough paper. Use a smoother, xerographic paper. If this solves your problem, consult with the printer of your letterhead to verify that the paper used meets the specifications for this product.
- Several optimize print modes can be used to address print quality issues. See [Print Quality menu on page 24](#).

Repetitive defects ruler

If defects repeat at regular intervals on the page, use this ruler to identify the cause of the defect. Place the top of the ruler at the first defect. The marking that is beside the next occurrence of the defect indicates which component needs to be replaced.

36 mm	Developer roller in an image drum. The print quality defect will be in one of the four image drums (image drum).
40 mm	Charge roller in an image drum. The print quality defect will be spots or dots sometimes caused when feeding labels and will be in one of the four image drums (image drum).
50 mm	Transfer 1 roller in the transfer unit (transfer kit).
71 mm	Transfer 2 roller in the roller kit (transfer kit).
82 mm	Tension in the transfer unit (transfer kit).
94 mm	Image drum. The print quality defect will be in one of the four image drums (image drum).

144 mm	Pressure roller in the fuser (fuser kit).
148 mm	Fusing roller in the fuser (fuser kit).

To identify if the image drum is the problem, insert an image drum from another HP Color LaserJet CP6015 series, if one is available, before ordering a new image drum.

If the defect repeats at 94.0 mm (3.75 inch) intervals, try replacing the image drum before replacing the fuser.

Overhead transparency defects

Overhead transparencies might display any of the image quality problems that any other type of paper could display, as well as defects specific to transparencies. In addition, because transparencies are pliable while in the print path, they are subject to being marked by the paper-handling components.

 **NOTE:** Allow transparencies to cool at least 30 seconds before handling them.

- On the printer driver's **Paper** tab, select **Transparency** as the paper type. Also, make sure that the tray is correctly configured for transparencies.
- Check that the transparencies meet the specifications for this product.
- If transparencies are sticking together in the output bin, set **MEDIA TEMP** to **REDUCED** from the print quality menu. See [Use manual print modes on page 484](#).
- Handle transparencies by the edges. Skin oil on the surface of transparencies can cause spots and smudges.
- Small, random dark areas on the trailing edge of solid fill pages might be caused by transparencies sticking together in the output bin. Try printing the job in smaller batches.
- If the selected colors are undesirable when printed, select different colors in the software program or printer driver.
- If you are using a reflective overhead projector, use a standard overhead projector instead.

Print quality problems associated with the environment

If the product is operating in excessively humid or dry conditions, verify that the printing environment is within specifications. See [Environmental specifications on page 991](#). Several optimization modes can also help with environmental conditions. See [Use manual print modes on page 484](#).

Print quality problems associated with jams

- Make sure that all paper is cleared from the paper path.
- If the product recently jammed, print two to three pages to clean the product.
- The paper does not pass through the fuser, causing image defects to appear on subsequent documents. Print two to three pages to clean the product.

Optimize and improve image quality

The following procedures can be used to solve most image-quality problems.

If following the procedures do not improve print quality, go to www.hp.com/support/cljcp6015.

Use supported paper

Using unsupported paper or other media in the product can cause a wide variety of image-quality problems. For a list of supported paper types, see [Supported paper types on page 56](#).

Calibrate the product

Calibration is a product function that optimizes print quality. If you experience any image-quality problems, calibrate the product.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT QUALITY**, and then press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **FULL CALIBRATE NOW**, and then press the checkmark button ✓.

If this calibration procedure does not fix the image-quality problems, perform the following additional calibration procedure.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT QUALITY**, and then press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **CALIBRATE NEUTRALS**, and then press the checkmark button ✓.

Specify the correct paper type

 **NOTE:** The steps can vary; this procedure is most common.

When you load a different paper type into the product, specify the type of paper you are using.

1. After loading the paper tray, specify the paper type at the control panel by using the control panel buttons. For more information, see [Load Trays 2, 3, 4, or 5 on page 60](#). Use the table below to aid in selecting the best paper type. The same type is then selected in the printer driver at the time of printing.
2. When you send a print job from your computer, on the **File** menu in the software program, click **Print**.
3. Select the product, and then click **Properties** or **Preferences**.
4. Select the **Paper/Quality** tab.
5. In the **Paper Type** drop-down box, select **More...** and then select the paper type that best matches the paper that is loaded in the product.

If you are using the HP Color LaserJet CP6015 PCL 6 printer driver, select the **General Everyday Printing** shortcut and select **Paper Type**. If you are using the HP Universal Printing PS driver, select the **Paper/Quality** tab and then select **Paper Type**.

6. Select the paper type that best matches the paper that is loaded in the product.

Use the table below to help select the best type in the driver. The table maps the default settings for specific paper types to the types that are listed in the driver and on the product control panel. For example, if you are using glossy paper that is 125 g/m², the type that would be selected in the printer driver is XHVY Glossy 131-175 g/m².

Printer modes	Paper types that can be selected from the printer driver and control panel
<ul style="list-style-type: none"> • Normal • Heavy 1 • Heavy 2 • Heavy 3 • Glossy 1 • Glossy 2 • Glossy 3 • Gloss Film • OHT 	Unspecified
Light 1 60-74 g/m ²	Light 60-74 g/m ²
Normal 75-90 g/m ²	Intermediate 85-95 g/m ²
Heavy 1 91-120 g/m ²	Heavy 111-130 g/m ²
Heavy 2 121-163 g/m ²	Extra Heavy 131-175 g/m ²
Heavy 3 164-220 g/m ²	Cardstock 176-220 g/m ²
Gloss 1 91-120 g/m ²	HVY Glossy 111-130 g/m ²
Gloss 2 121-160 g/m ²	XHVY Glossy 131-175 g/m ²
Gloss 3 161-220 g/m ²	Card Glossy 176-220 g/m ²
Gloss Film	HP Tough Paper
OHT	Color Laser Transparency
Label	Labels
Envelope	Envelope
Envelope 2	Heavy Envelope
Rough 1 60-90 g/m ²	Rough
Rough 2 >91 g/m ²	Heavy Rough

Clean the fuser

Use the cleaning page to keep the fuser free of toner and paper particles that can sometimes accumulate. Accumulation of toner and particles can cause specks to appear on the front or back side of print jobs.

HP recommends that you use the cleaning page when there is a print-quality issue.

A **CLEANING** message appears on the product control panel display while the cleaning is taking place.

In order for the cleaning page to work correctly, print the page on copier-grade paper (not bond, heavy, or rough paper). A blank page will be printed when the task is complete. Discard the page.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PRINT QUALITY**, and then press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **PROCESS CLEANING PAGE**, and then press the checkmark button ✓.
5. Discard the printed page. The task is complete.

Respond to control panel error messages

If you see a **54.ERROR <XX>** message in the event log, you might need to perform some maintenance on the product to avoid more errors and to solve print-quality problems.

1. Open and then close the right door of the product to log a **54.ERROR <XX>** as the latest event in the event log.
2. Press **Menu**.
3. Press the down arrow ▼ to highlight **INFORMATION**, and then press the checkmark button ✓.
4. Press down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
5. Press the down arrow ▼ to highlight **PRINT EVENT LOG**, and then press the checkmark button ✓.
6. Find the most recent event in the log.
 - If the event is a **54.OE.01 MEDIA SENSOR** event, a service technician needs to replace the registration-second-transfer assembly. Contact HP Support at www.hp.com/support/cljcp6015 and provide them with this error code.
 - If the event is a **54.OE.02 MEDIA SENSOR** event, you need to replace the product transfer kit. Contact HP Support at www.hp.com/support/cljcp6015 and provide them with this error code.
 - If the event is a **54.OE.03 MEDIA SENSOR** event, clean the registration-second-transfer assembly media sensor using the following procedure.

Clean the registration second transfer assembly

1. Open the right door.

2. Locate and remove the cleaning brush.

3. Lift the green handle on the transfer-access panel and open the panel.

4. Clean the media sensor with the cleaning brush.

5. Close the transfer access panel, and replace the cleaning brush in its holder.

6. Close the right door.

Use manual print modes

Try the following manual print modes to see if they solve the image-quality problems. These options can be found in the Optimize submenu under the control-panel Print Quality menu. See [Print Quality menu on page 24](#).

- **PAPER CURL:** The **REDUCED** setting decreases full speed to 10 PPM (instead of 40 PPM) and 3/4 speed to 7.5 PPM (instead of 30 PPM) in order to reduce paper curl problems.
- **PRE-ROTATION:** Set this feature to **ON** if horizontal streaks appear on pages. Using this feature increases the warmup time for the product.
- **FUSER TEMP:** If you are seeing a faint image of the page repeated at the bottom of the page or on the following page, you should first make sure the Paper Type and Print Mode settings are correct for the type of paper you are using. If you continue to see ghost images on your print jobs, set the Fuser Temp feature to one of the Alternate settings. Try the **ALTERNATE 1** setting first and see if it solves the problem. If you continue to see the problem, try **ALTERNATE 2** and then **ALTERNATE 3**. With the **ALTERNATE 2** and **ALTERNATE 3** settings you may see an extra delay between jobs.
- **TRAY 1:** Set the mode to **ALTERNATE** if you are seeing marks on the back side of the paper when printing from Tray 1. This increases the frequency of the cleaning cycle.
- **GLOSS MODE:** Set this feature to **HIGH** for glossy print jobs, such as photos, if you notice the gloss finish decreasing after the first page is printed.
- **LIGHT MEDIA:** Set this feature to **ON** if you are frequently seeing Fuser Delay Jam or Fuser Wrap Jam messages, especially when printing on lightweight paper or on jobs with heavy toner coverage.
- **MEDIA TEMP:** Set this feature to **REDUCED** if you are having problems with paper sticking together in the output bin.
- **ENVIRONMENT:** Optimizes performance in extreme low temperature environments. Set this feature to **ON** if the product is operating in a low-temperature environment and you are having problems with print quality such as blisters in the printed image.
- **LINE VOLTAGE:** Optimizes performance in low-voltage conditions. Set this feature to **ON** if the product is operating in a low-voltage environment and you are having problems with print quality such as blisters in the printed image.
- **CLEANING FREQUENCY:** If you are seeing defects in the printed output that repeat at 38 mm (1.5 inch) intervals, set this feature to **ALTERNATE**. This feature increases the frequency at which the C roller is cleaned. Setting this feature to **ALTERNATE** might also reduce printing speed and increase the frequency of consumable replacement.
- **D-BLADE BIAS:** If you are seeing short white vertical lines in the printed output, set this feature to **ALTERNATE**. The **ALTERNATE** setting might also cause dark spots in the printed output, so be sure to test this setting on a few print jobs.
- **WASTE BIN:** Set this feature to **ALTERNATE** if you are seeing lengthwise toner streaks in your printed output, especially in jobs with low toner coverage.
- **BACKGROUND:** Turn this feature on if pages are printing with a shaded background. Using this feature can reduce gloss levels.
- **HEAVY MODE:** Sets speed to **30 PPM** or **24 PPM** in order to better feed heavy paper.
- **TRACKING CONTROL:** Improves color stability by adjusting the bias voltage. Make sure this mode is set to **ON**.

Print-quality-troubleshooting pages

Use the built-in print-quality-troubleshooting pages to help diagnose and solve print-quality problems.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PQ TROUBLESHOOTING**, and then press the checkmark button ✓ to print the pages.

The product returns to the **READY** state after printing the print-quality-troubleshooting pages. Follow the instructions on the pages that print out.

Figure 7-9 Print-quality troubleshooting procedure

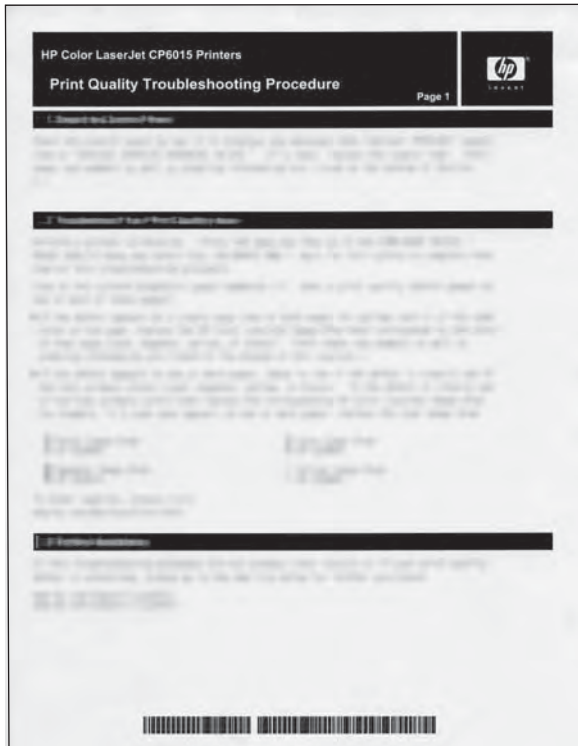

Figure 7-10 Yellow print-quality troubleshooting page

Figure 7-11 Yellow comparison page

Yellow cannot be easily seen unless combined with cyan, so half of each page is yellow and the other half is an amplified version of yellow problems (green half). Compare the yellow on page one with the corresponding green on page two for defects. You can also check the cyan page for defects.

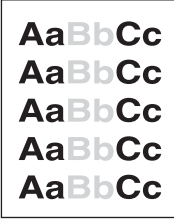

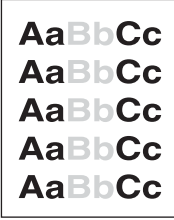

Figure 7-12 Black print-quality troubleshooting page

<p>1. Grids</p>	<p>The grids are in inches and millimeters. They are label with letters and numbers so that defects can be described by position and by distance between repeats.</p>
<p>2. Color plane registration (CPR) bars</p>	<p>After printing, the box with no extra color in each area on each page shows how far off the CPR of that color is. Each page has two process direction areas and three scan direction areas that are labeled x and y and 1–11. The page should be fed by the long edge. Each square from the center equals 42 microns.</p>
<p>3. Color ramp patches</p>	<p>Used to detect offset for the OPC or developer in the image drum or offset in the fuser.</p>

Image-quality issues

The following examples depict letter-size paper that has passed through the product short-edge first. These examples illustrate problems that would affect all of the pages that you print, whether you print in color or in black only. The topics that follow list the typical cause and solution for each of these examples.

Problem	Cause	Solution
Print is light or faded on entire page. 	Poor contacts exist on the ITB unit and the product grounding unit. Poor secondary transfer contacts with exist on the secondary transfer roller and the ITB unit.	Clean the grounding contacts. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts. Clean the contacts. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts.
Print is light or faded in a particular color. 	Poor primary transfer bias contacts on the ITB unit and product. Poor primary charging bias contacts with the print cartridge and product. Poor developing bias contacts with the print cartridge and product.	Clean the contacts of the color that produces the light print. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts.
Image is too dark. 	The image-density sensor is defective.	Replace the color misregistration/image-density sensor unit.
Page is blank.	The high-voltage power-supply PCA is defective (no developing bias output).	Replace the high-voltage power-supply PCA A. See High-voltage power supply PCA (A) on page 226 .
The page is all black or a solid color.	Poor primary charging contacts or developing bias contacts from the high-voltage power-supply PCA A to print cartridge.	Clean each contact of the color that produces the all black or solid color. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts.
White spots appear in an image	The static charge eliminator is dirty. The primary transfer roller is deformed or has deteriorated. The secondary transfer roller is deformed or has deteriorated.	Clean the static charge eliminator. Replace the ITB. See Intermediate-transfer belt (ITB) on page 196 . Replace the secondary-transfer-roller unit. See Transfer roller on page 194 .

Problem	Cause	Solution
The back of the page is dirty.	The feed roller that makes contact with the back of the media is dirty.	Use the repetitive image defect ruler to identify the dirty roller. See Repetitive defects ruler on page 476 . Clean the dirty roller. If the dirt does not come off, replace the roller.
	The fuser inlet guide or separation guide is dirty.	Clean the dirty parts. If the dirt does not come off, replace the guide.
	The pressure roller is dirty.	Execute the cleaning page. If the dirt does not come off, replace the fuser. See Fuser on page 191 .
Vertical streaks or bands appear on the page.	Scratches are present on the circumference of the photosensitive drum.	Replace the print cartridge of the color that matches the defect.
	Scratches are present on the circumference of the fuser roller.	Replace the fuser. See Fuser on page 191 .
	Scratches are present on the circumference of the ITB.	Replace the ITB unit. See Intermediate-transfer belt (ITB) on page 196 .
	The ITB drive roller is deformed or has deteriorated.	
	The ITB cleaning mechanism is malfunctioning.	
Vertical white lines appear in a particular color.	The laser beam window is dirty.	Clean the window and remove any foreign substances.
	Scratches are present on the circumference of the developing cylinder or photosensitive drum.	Replace the image drum of the color that matches the defect. See Change image drums on page 88 .
	The laser/scanner-unit mirror is dirty.	Replace the laser/scanner unit.
Vertical white lines appear in all colors.	Vertical scratches are present on the fuser roller.	Replace the fuser. See Fuser on page 191 .
	Scratches are present on the circumference of the ITB.	Replace the ITB. See Intermediate-transfer belt (ITB) on page 196 .
Horizontal lines appear on the page.	Horizontal scratches are present on the photosensitive drum.	Replace the image drum of the color that matches the defect. See Change image drums on page 88 .
	Horizontal scratches are present on the fuser roller.	Replace the fuser. See Fuser on page 191 .

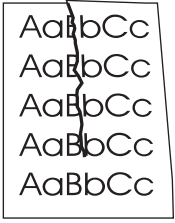

Problem	Cause	Solution
A horizontal white line appears on the page.	Horizontal scratches are present on the photosensitive drum.	Replace the image drum of the color that matches the defect. See Change image drums on page 88 .
	Scratches are present on the circumference of the ITB.	Replace the ITB. See Intermediate-transfer belt (ITB) on page 196 .
Image in a particular color does not print in the correct color.	Poor primary charging contacts or developing bias contacts between the high-voltage power-supply PCA A and the image drum.	Clean each contact of the color that produces the missing color. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts.
	The image drum (primary charging roller, developing cylinder or photosensitive drum) is defective.	Replace the image drum of the color that matches the defect. See Change image drums on page 88 .
	The high-voltage power-supply PCA A is defective (no primary charging bias or developing bias output).	Replace the high-voltage power-supply PCA A. See High-voltage power supply PCA (A) on page 226 .
	The laser/scanner unit is defective.	Replace the laser/scanner unit. See Laser/scanner assembly (cyan and black) on page 297 .
Dropouts appear.	The secondary transfer roller is deformed or has deteriorated.	Replace the secondary-transfer-roller unit. See Transfer roller on page 194 .
	The primary charging roller, developing cylinder, or photosensitive drum is deformed or has deteriorated.	Replace the image drum of the color that matches the defect. See Change image drums on page 88 .
	The fuser roller is deformed or has deteriorated.	Replace the fuser. See Fuser on page 191 .
	The high-voltage power-supply PCA B is defective (no transfer bias output).	Replace the high-voltage power-supply PCA A. See High-voltage power supply PCA (A) on page 226 .
The toner is not fully fused to the paper.	The fuser roller or pressure roller is scarred or deformed.	Replace the fuser. See Fuser on page 191 .
	The fuser control PCA is defective.	Replace the fuser control PCA.
	The thermistor or fuser heater has deteriorated.	Replace the fuser. See Fuser on page 191 .
	The thermopile is defective.	Replace the thermopile-case unit.

Problem	Cause	Solution
Some color is misregistered.	The product is incorrectly calibrated.	Calibrate the product. See Calibrate the product on page 479 .
	The ITB unit is defective.	If the ITB does not rotate smoothly or a cleaning malfunction occurs (ITB is dirty), replace the ITB unit. See Intermediate-transfer belt (ITB) on page 196 .
	The drive gear of the ITB motor is worn or chipped.	Check each drive gear between the ITB drive roller and the ITB motor. If the gear is worn or chipped, replace the drive unit. See Intermediate-transfer belt (ITB) motor on page 231 .
	The color misregistration sensor is defective.	Replace the color misregistration/image-density sensor unit.
	The laser/scanner unit is defective.	Replace the laser/scanner unit. See Laser/scanner assembly (cyan and black) on page 297 .
Toner smears appear on the media.	The product has residual media.	Remove the residual media.
	Poor grounding contacts exist between each image drum and the product.	Clean the grounding contacts on each drum and the product. If the problem remains after cleaning, check the contacts for damage. Replace any deformed or damaged parts.
	The fuser inlet guide is dirty.	Clean the fuser inlet guide.
The printed page contains misformed characters.	The product is experiencing page skew.	See the "Text or graphics are skewed on the printed page" row in this table.
	The laser/scanner unit is defective.	Replace the laser/scanner unit. See Laser/scanner assembly (cyan and black) on page 297 .
Text or graphics are skewed on the printed page.	The registration shutter spring is unhooked.	Check the spring and place it in the correct position.
	The registration shutter spring is deformed.	Replace the secondary-transfer unit. See Secondary transfer unit on page 210 .

Problem	Cause	Solution
<p>The printed page contains wrinkles or creases.</p> 	<p>The roller or media feed guide is dirty.</p>	<p>Clean any dirty components.</p>
	<p>A roller is deformed or has deteriorated.</p>	<p>Replace any deformed or deteriorated rollers.</p>
	<p>The paper feed guide is damaged.</p>	<p>Replace the paper-feed-guide unit.</p>
<p>The front of the page is dirty.</p>	<p>The feed roller that contacts with front of media is dirty.</p>	<p>Use the repetitive image defect ruler to identify the dirty roller. Clean the dirty roller. If the dirt does not come off, replace the roller. See Repetitive defects ruler on page 476.</p>
	<p>The fuser roller or pressure roller is dirty.</p>	<p>Clean the fuser. If the dirt does not come off, replace the fuser. See Fuser on page 191.</p>

Interface troubleshooting

Communication checks

 **NOTE:** Communication problems are normally the customer's responsibility. Time spent attempting to resolve these problems might not be covered by the Hewlett-Packard warranty.

Refer the customer to the network administrator for assistance in troubleshooting network problems.

If the printer is *not* connected to an MS-DOS-based host, use the following table to check the connection.

Table 7-26 Communication check

Check	Action
Does the computer configuration match the parameters described in the configuration instructions?	Verify that the configuration of the computer's communications port matches these parameters. View the Jetdirect configuration page for print server status, and to verify configuration parameters for operation on your network. NOTE: If these parameters are not set correctly, an error message might appear on the control panel.

EIO troubleshooting

If the printer contains an optional HP Jetdirect print server and you cannot communicate with the printer over the network, verify the operation of the print server. Print a configuration page. If the Jetdirect card does not appear under "Installed personalities and options" on the configuration page, see the troubleshooting section of the *HP Jetdirect Print Server Administrators Guide* supplied with the print server.

If the host system and printer still do not communicate, replace the formatter PCA, or if installed the EIO card and reconfigure the printer. If the problem persists, use a protocol analyzer to find the source of the problem.

 **CAUTION:** HP LaserJet printers are not designed to work with mechanical switch-box products that do not have surge protection. These devices generate high transient voltages that cause permanent damage to the formatter PCB. This circumstance is not covered under the Hewlett-Packard warranty.

Engine diagnostics

This section provides an overview of the engine diagnostics that are available in the HP Color LaserJet CP6015 Series product. The product contains extensive internal diagnostics that help in troubleshooting print quality, paper path, noise, component, and timing issues.

LED diagnostics

LED, engine, and individual diagnostics can identify and troubleshoot product problems.

Understand lights on the formatter

Three LEDs on the formatter indicate that the product is functioning correctly.

1	Heartbeat LED
2	HP Jetdirect LEDs

HP Jetdirect LEDs

The embedded HP Jetdirect print server has two LEDs. The yellow LED indicates network activity, and the green LED indicates the link status. A blinking yellow LED indicates network traffic. If the green LED is off, a link has failed.

For link failures, check all of the network cable connections. In addition, you can try to manually configure the link settings on the embedded print server by using the product control-panel menus.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **CONFIGURE DEVICE**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **I/O**, and then press checkmark button ✓.
4. Press the down arrow ▼ to highlight **EMBEDDED JETDIRECT MENU**, and then press the checkmark button ✓.
5. Press the down arrow ▼ to highlight **LINK SPEED**, and then press the checkmark button ✓.
6. Select the appropriate link speed, and then press the checkmark button ✓.

Heartbeat LED

The heartbeat LED indicates that the formatter is functioning correctly. While the product is initializing after you turn it on, the LED blinks rapidly, and then turns off. When the product has finished the initialization sequence, the heartbeat LED pulses on and off.

The heartbeat LED will perform the following sequences:

1. The LED blinks with four fast bursts at power on.
2. The LED blinks at a fast, steady rate during memory testing (one blink per 8 MB).
3. The LED stays off for about eight seconds, while the boot code is decompressing, before the display turns on.
4. The LED blinks at a steady rate of two blinks per second for the remainder of the product operation.
5. If these sequences are not performed, check the following:
 - Reseat the memory.
 - Replace the memory.
 - Replace the formatter.
6. If the control panel display does not illuminate, perform an engine test to check the engine. You must have paper loaded in Tray 2 for the engine test.

Engine-test button

To verify that the product engine is functioning, print an engine test page. Use a small pointed object to depress the test-page switch located on the rear of the product. The test page should have a series of horizontal lines. The test page can use only Tray 2 as the paper source, so make sure that paper is loaded in Tray 2.

Figure 7-13 Engine-test button

Diagnostics menu

The diagnostics menu allows you to run tests that can help you identify and solve problems with the printer.

Menu item	Description
PRINT EVENT LOG	This item will print an event log that will display the last 50 entries in the printer's event log, starting with the most recent. See Print an event log on page 422 .
SHOW EVENT LOG	This item displays the last 50 events on the control panel display, starting with the most recent. See Show an event log on page 422 .
PQ TROUBLESHOOTING	This item prints a series of 8 pages that include instructions, pages for each color, demo page, and configuration page. These pages can help isolate print-quality problems. See Print-quality-troubleshooting pages on page 485 .
PRINT DIAGNOSTICS PAGE	This item allows you to print a page that can assist in diagnosing printer problems. See Internal print-quality test pages on page 347 .
DISABLE CARTRIDGE CHECK	This item allows you to remove a print cartridge to help determine which cartridge is the source of a problem. See Disable cartridge check on page 498 .
PAPER PATH SENSORS	This item performs a test on each of the printer's sensors to determine if they are working correctly and displays the status of each sensor. See Paper-path sensors test on page 499 .
PAPER PATH TEST	This item is useful for testing the paper handling features of the printer, such as the configuration of the trays. See Paper-path test on page 501 .
MANUAL SENSOR TEST	This item performs tests to determine whether the paper-path sensors are operating correctly. See Manual sensor test (special-mode test) on page 501 .
MANUAL SENSOR TEST 2	This item performs tests to determine whether the paper-path sensors are operating correctly. See Manual sensor test 2 (special-mode test) on page 502 .
COMPONENT TEST	This item will activate individual parts independently to isolate noise, leaking, and other hardware issues. See Component tests on page 503 .
PRINT/STOP TEST	This item isolates print-quality faults more accurately by stopping the printer in mid-print cycle. Stopping the printer in mid-print cycle allows you to see where the image begins to degrade. Stopping the printer in mid-print cycle will cause a jam that may need to be manually removed. A service representative should perform this test. See Print/stop test on page 507 .
COLOR BAND TEST	Use this page to print a color-band test page that is used to identify arcing in the high-voltage power supply. See Color-band test on page 507 .

Diagnostics mode

Some of the diagnostic tests automatically put the printer into a special diagnostics mode. During the special diagnostics mode the printer can perform actions that would normally cause the printer to enter an error state. Always follow the control panel directions in the **DIAGNOSTICS** menu to exit the special diagnostics mode correctly and return the printer to a normal state.

Diagnostics that put the engine into the special diagnostics mode

Four diagnostic tests put the engine into a special state:

- Disable-cartridge check
- paper-path sensors
- Manual sensor test
- Manual sensor test 2
- Component test

While the printer is in the special diagnostics mode, the following message should appear:

READY DIAGNOSTICS MODE

TO EXIT PRESS STOP

When the printer is in the special diagnostics mode, these five tests display in the menu and are available to be run. To gain access into other diagnostic tests or to leave the special state, press **Stop**, and then select **EXIT**. The printer will reset itself, and then return to the normal state.

 **NOTE:** You need to have a good understanding of how the printer operates in order to use the engine diagnostics successfully. Before proceeding with these diagnostic tests, make sure that you understand the information in chapter 5 of this manual.

Diagnostic tests

Different tests can be used to isolate different types of issues. For component or noise isolation, you can run the diagnostic test after removing the covers. Removing the covers provides a better view of the areas that are being tested. To operate the printer with the covers removed, the door switch levers must be depressed (this is the door-closed position).

 **WARNING!** Be careful when performing printer diagnostics to avoid risk of injury. Only trained service personnel should open and run the diagnostics with the covers removed. Never touch any of the power supplies when the printer is turned on.

Figure 7-14 Front and right door switch on the right side

Figure 7-15 Front-door switch on the left side

 **NOTE:** Any time a cartridge is installed or removed while the covers are removed, the door interlock must be cycled to simulate opening and closing the top cover in order for the engine to recognize the change. When the covers are installed, the door switch and fuser interlock are automatically operated. When the covers are removed, you must perform these steps manually.

Disable cartridge check

Use this diagnostic test to print internal pages or send an external job to the product when one or more print cartridges or image drum pairs are removed or exchanged. The print cartridges and image drums are keyed. They must be removed in pairs and can only be used in the correct color slot. Consumable supply errors are ignored while the product is in this mode. When the product is in this mode, you can navigate the menus and print internal pages or send an external print job to the product. This test can be used isolate problems, such as noise, and to isolate print-quality problems that are related to individual print cartridges or image drum pairs.

 **NOTE:** Do not remove or exchange print cartridges and image drums before you start the disable cartridge check diagnostic. After starting the test, you can remove or exchange print cartridges and image drum pairs.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **DISABLE CARTRIDGE CHECK**, and then press the checkmark button ✓.

To exit this diagnostic test, press **Stop** and then select **EXIT DIAGNOSTICS**.

Paper-path sensors test

This test displays the status of each paper-path sensor and allows viewing of sensor status while printing internal pages.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **PAPER PATH SENSORS**, and then press the checkmark button ✓.
4. Select the paper-path test options for the test you want to run.

Table 7-27 Paper-path sensors diagnostic tests

Sensor name	Sensor number	Paper-path sensors test name
Vertical-synchronous-position sensor	SR0	A Registration
Loop sensor	SR13	B Loop
Fixing-delivery media-feed sensor	SR15	C Fuser Output
Duplexing media-reverse sensor	SR304	D Duplexer Switchback
Duplexing media-feed sensor	SR303	E Duplexer Delivery
Duplexing media-repickup sensor	SR302	F Duplexer Refeed
Face-down tray media-full sensor	SR16	G Output bin full
IPTU media-feed sensor 1	SR203	H IPTU 1
IPTU media-feed sensor 2	SR202	I IPTU 2
IPTU media-feed sensor 3	SR201	J IPTU 3
Developing home-position sensor	SR21, YM, SR22 CK	K Developer alienation
Fixing home-position sensor	SR26	L Fuser pressure release ¹
ITB home-position sensor	SR10	M ITB alienation
Media sensor	MS	N Media sensor

¹ Open and close the right door to toggle the fuser pressure-release sensor.

To test the media sensor in the paper-path sensors diagnostic mode, feed paper by printing from a computer to the product or by activating the paper-path test diagnostic test. The following table provides the values for the N-media-sensor test.

Table 7-28 N-media-sensor test values

Code	Media type	Tray 1	Cassette
0	Unknown	✓	✓
1	Normal media 85-95 gm ²	✓	✓
3	LBP OHT	✓	✓
4	Glossy media 111-130 gm ²	✓	✓
5	Gloss film (HP Tough Paper)	✓	✓
6	Non-assured OHT		
7	Heavy media 111-130 gm ²	✓	✓
8	Light media		
9	Rough media		
A	Extra Heavy Glossy media (Glossy media3) 176-220 gm ²	✓	✓
B	Heavy Glossy media (Glossy media2) 131-175 gm ²	✓	✓
C	Heavy media3 176-220 gm ²	✓	✓
D	Heavy media2 131-175 gm ²	✓	✓

To determine if the media sensor is defective or requires cleaning, check the event log for errors as described below. For instructions on how to clean the media sensor, see [Clean the registration second transfer assembly on page 482](#).

If **54.ERROR<XX>** appears in the event log, you might need to perform maintenance on the product to avoid more errors and to solve print-quality problems.

1. Open and then close the right door of the product to log **54.ERROR<XX>** as the most recent event in the event log.
2. Press **Menu**.
3. Press the down arrow ▼ to highlight **INFORMATION**, and then press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.

5. Press the down arrow ▼ to highlight **PRINT EVENT LOG**, and then press the checkmark button ✓.
6. Find the most recent event in the event log.
 - If the event is a **54.OE.01 MEDIA SENSOR** event, a service technician must replace the registration-second-transfer assembly. See [Secondary transfer unit on page 210](#).
 - If the event is a **54.OE.02 MEDIA SENSOR** event, replace the product transfer kit.
 - If the event is a **54.OE.03 MEDIA SENSOR** event, clean the registration second-transfer-assembly media sensor. See [Secondary transfer unit on page 210](#).

Paper-path test

This diagnostic test generates one or more test pages that you can use to isolate the cause of jams.

To isolate a problem, you can specify which input tray to use, specify whether to use the duplex path, and specify the number of copies to print. Multiple copies can be printed to help isolate intermittent problems. The following options become available after you start the diagnostic feature:

- **PRINT TEST PAGE.** Run the paper-path test from the default settings: Tray 2, no duplex, and one copy. To specify other settings, scroll down the menu and select the setting, and then scroll back up and select **PRINT TEST PAGE** to start the test.
 - **SOURCE.** Select Tray 1, Tray 2, or the optional trays.
 - **DUPLEX.** Enable or disable 2-sided printing.
 - **COPIES.** Set the numbers of copies to be printed; the choices are 1, 10, 50, 100, or 500.
1. Press **Menu**.
 2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
 3. Press the down arrow ▼ to highlight **PAPER PATH TEST**, and then press the checkmark button ✓.
 4. Select the paper-path test options for the test you want to run.

Manual sensor test (special-mode test)

Use this diagnostic test to manually test the product sensors and switches. Each sensor is represented by a letter and number on the control panel display. See [Table 7-29 Manual sensor diagnostic tests on page 502](#) for a definition of the sensor letter codes.

 **NOTE:** The media sensor (N) cannot be tested manually. For this sensor, see [Paper-path sensors test on page 499](#).

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **MANUAL SENSOR TEST**, and then press the checkmark button ✓.

To exit this diagnostic, press the **Stop** key, and then select **EXIT DIAGNOSTICS**.

Menus cannot be opened during this test, so the checkmark button ✓ serves the same function as the **Stop** button.

Table 7-29 Manual sensor diagnostic tests

Sensor or switch name	Sensor or switch number	Manual sensor test
Vertical-synchronous-position sensor	SR0	A Registration
Loop sensor	SR13	B Loop
Fuser-delivery media-feed sensor	SR15	C Fuser Output
Duplexing media-reverse sensor	SR304	D Duplexer Switchback
Duplexing media-feed sensor	SR303	E Duplexer Delivery
Duplexing media-repickup sensor	SR302	F Duplexer Refeed
Face-down tray media-full sensor	SR16	G Output bin full
IPTU media-feed sensor 1	SR203	H IPTU 1
IPTU media-feed sensor 2	SR202	I IPTU 2
IPTU media-feed sensor 3	SR201	J IPTU 3
Developing home-position sensor	SR21 YM, SR22 CK	K Developer alienation
Fuser home-position sensor	SR26	L Fuser pressure release
ITB home-position sensor	SR10	M ITB alienation
Media sensor	MS	N Media sensor
Front-door-open-detection sensor	SR32	O Door opening/closing
Right-door-open-detection switch	SW1	P Right door sensor
Fixing-unit-cover-open-detection sensor	SR34	Q Fuser door sensor
Secondary-transfer-unit-cover-open-detection sensor	SR33	R T2 door sensor

Manual sensor test 2 (special-mode test)

Use this test to test paper-path sensors and the paper-size switches manually. The following illustrations and table show the locations of these sensors.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **MANUAL SENSOR TEST 2**, and then press the checkmark button ✓.

Table 7-30 Manual sensor test 2 diagnostic tests

Sensor or switch name	Sensor or switch number	Manual sensor test 2
Tray-1 media-presence sensor	SR6	S Tray 1 paper sensor ¹
Tray-1 media-feed sensor	SR7	T Tray 1 feed sensor ²
Tray-2 media-presence sensor	SR1	U Tray 2 paper sensor

Table 7-30 Manual sensor test 2 diagnostic tests (continued)

Sensor or switch name	Sensor or switch number	Manual sensor test 2
Tray-2 media-feed sensor	SR5	V Tray 2 feed sensor
Tray-2 media-stack surface sensor	SR2	W Tray 2 paper surface sensor ³
Tray-2 end-plate-position-detection switch or Tray-2 side-plate-position-detection switch	SW4, SW5	X Tray 2 paper size sensor ⁴
Tray -3 media-presence sensor	SR104	Y Tray 3 paper sensor
Tray-3 media-feed sensor	SR102	Z Tray 3 feed sensor
Tray-3 media-stack surface sensor	SR105	a Tray 3 paper surface sensor
Tray-3 end-plate-position-detection switch or Tray-3 side-plate-position-detection switch	SW101, SW102	b Tray 3 paper size sensor
Tray-4 media-presence sensor	SR114	c Tray 4 paper sensor
Tray-4 media-feed sensor surface sensor	SR112	d Tray 4 feed sensor
Tray-4 media stack	SR115	e Tray 4 paper surface sensor
Tray-4 end-plate-position-detection switch or Tray-4 side-plate-position-detection switch	SW111, SW112	f Tray 4 paper size sensor
Tray-5 media-presence sensor	SR124	g Tray 5 paper sensor
Tray-5 media-feed sensor	SR122	h Tray 5 feed sensor
Tray-5 media-stack surface sensor	SR125	i Tray 5 paper surface sensor
Tray-5 end-plate-position-detection switch or Tray-5 side-plate-position-detection switch	SW121, SW122	j Tray 5 paper size sensor

¹ The paper sensor detects paper in the tray.

² The paper-feed sensor detects jams.

³ The paper-surface sensor detects whether or not the tray is raised.

⁴ The paper-size sensor detects paper size.

To perform an end-plate (left-side set of switches) or side-plate (right-side set of switches) switch test, do the following:

- Remove the appropriate tray (for example, if you want to test SW4 or SW5, remove Tray 2).
- Watch for the corresponding bit to toggle from 1 to 0. Note that it can take a few seconds for bits to toggle.
- Test each switch individually to see if the corresponding bit toggles from 0 to 1.

Component tests

Component test (special-mode test)

This test activates individual parts independently to isolate problems.

Each component test can be performed once or repeatedly. If you select **CONTINUOUS** from the drop-down menu as the repeat option, the test cycles the component on and off. This process continues for two minutes, and then the test terminates.

 **NOTE:** The door-interlock switch must be defeated to run any of the component tests. If covers are removed, the door switch must be manually cycled during some tests in order for the engine to recognize a change. The ITB assembly can be open, closed, or removed while some of these tests are executing. Print cartridges can be installed or removed during certain tests. The control-panel display prompts you to remove some or all cartridges during certain tests to rotate and isolate certain components, and to protect the cartridges and ITB.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **COMPONENT TEST**, and then press the checkmark button ✓.
4. Select the component test options for the test you want to run.

Table 7-31 Component test details

Component test	Motor or solenoid number	Component test control-panel display message	Comments
ITB-motor / drum-motor driving test	M10, M12 Y, M13 M, M14 C, M15 Bk	Transfer motors	This test simultaneously activates the ITB motor and four drum motors for 10 seconds.
ITB-motor driving test	M10	Belt only	This test activates the ITB motor for 10 seconds.
Drum-motor driving test	M12 Y, M13 M, M14 C, M15 Bk	Image drum motors	This test individually activates the Y/M/C/Bk drum motors for 10 seconds.
Scanner-motor driving test	No number, part of scanner	Black laser scanner	This test activates the cyan/black scanner motor for 10 seconds.
Scanner-motor driving test	No number, part of scanner	Cyan laser scanner	This test activates the cyan/black scanner motor for 10 seconds.
Scanner-motor driving test	No number, part of scanner	Magenta laser scanner	This test activates the Y/M scanner motor for 10 seconds.
Scanner-motor driving test	No number, part of scanner	Yellow laser scanner	This test activates the Y/M scanner motor for 10 seconds.
Fuser-motor driving test	M11	Fuser motor	This test activates the fuser motor for 10 seconds.
Fuser pressure-release-motor driving test	M11	Fuser pressure-release motor	This test activates or reverses the fuser motor and pressurizes or depressurizes the pressure roller.
Developing-disengagement driving test	M18	Black alienation motor	This test activates the cyan/black-developing disengagement motor and

Table 7-31 Component test details (continued)

			engages or disengages the developing rollers.
Developing-disengagement driving test	M18	Cyan alienation motor	This test activates the cyan/black-developing disengagement motor and engages or disengages the developing rollers.
Developing-disengagement driving test	M19	Magenta alienation motor	This test activates the yellow/magenta-developing disengagement motor and engages or disengages the developing rollers.
Developing-disengagement driving test	M19	Yellow alienation motor	This test activates the yellow/magenta-developing disengagement motor and engages or disengages the developing rollers.
ITB disengagement-motor driving test	M9	ITB contact/alienation	This test activates the primary transfer roller disengagement motor. The test either separates the ITB from the photosensitive drum, engages the ITB with only the Bk photosensitive drum, or engages with four photosensitive drums.
IPTU media-feed-motor driving test	M201, M202	Paper transport motor	This test is available only if the IPTU is installed. The test activates the IPTU motor for 10 seconds.
Tray-1-pickup-solenoid driving test	SL2	Tray-1 pickup solenoid	This test activates the Tray-1 pickup solenoid for 10 seconds.
Tray-2-cassette-pickup-motor driving test	M5, for Tray-1 and Tray-2 cassette	Tray-2 pickup motor	This test activates the Tray-2-cassette pickup motor for 10 seconds.
Tray-2-cassette-pickup-solenoid driving test	SL1	Tray-2 pickup solenoid	This test activates the Tray-2-cassette pickup solenoid for 10 seconds.
Tray-3-pickup-motor driving test	M101	Tray-3 pickup motor	This test activates the Tray-3 pickup motor for 10 seconds.
Tray-3-pickup-solenoid driving test	SL101	Tray-3 pickup solenoid	This test activates the Tray-3 pickup solenoid for 10 seconds.
Tray-4-pickup-motor driving test	M111	Tray-4 pickup motor	This test activates the Tray-4 pickup motor for 10 seconds.
Tray-4-pickup-solenoid driving test	SL111	Tray-4 pickup solenoid	This test activates the Tray-4 pickup solenoid for 10 seconds.
Tray-5-pickup-motor driving test	M121	Tray-5 pickup motor	This test activates the Tray-5 pickup motor for 10 seconds.

Table 7-31 Component test details (continued)

Tray-5-pickup-solenoid driving test	SL121	Tray-5 pickup solenoid	This test activates the Tray-5 pickup solenoid for 10 seconds.
Duplexing reverse-motor test	M303	Duplexer reverse motor	This test activates the duplexing reverse motor for 10 seconds.
Duplexing feed-motor test	M302	Duplexer feed motor	This test activates the duplexing feed motor for 10 seconds.
Duplexing repickup-motor test	M301	Duplexer refeed motor	This test activates the duplexing repickup motor for 10 seconds.

Print/stop test

Use this diagnostic test to isolate the cause of problems such as image-formation defects and jams within the engine. During this test you can stop the paper anywhere along the product paper path. The test can be programmed to stop printing internal pages or an external print job when the paper reaches a certain position. The test can also be programmed to stop from 0 to 60,000 mS. If the timer is set to a value that is greater than the job-print time, you can recover the product in one of two ways.

- After the print job is completed press **Stop** to return to the **DIAGNOSTICS** menu before the timer times out.
- After the timer times out, press **Stop**. Activate the door switch to restart the engine and return it to a normal state.

When the timer trips, the control panel display shows the message **PRINTING STOPPED To continue, press ✓**. Pressing **Menu** will print the previously selected job. If you do not want the previous job to print, press **Stop** first, and then press **Menu**.

 **NOTE:** Do not attempt to perform a print/stop test while the product is calibrating, because you be required to power-cycle the product. If a jam message displays on the control panel during testing, activate the door switch.

Color-band test

The color-band test page shows bands of colors that can indicate whether or not the product is producing colors correctly.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **DIAGNOSTICS**, and then press the checkmark button ✓.
3. Press the down arrow ▼ to highlight **COLOR BAND TEST**, and then press the checkmark button ✓.
4. Press the down arrow ▼ to highlight **PRINT TEST PAGE**, and then press the checkmark button ✓.

Service mode functions

Service menu

The **SERVICE** menu is PIN-protected for added security. Only authorized service people have access to the **SERVICE** menu. When you select **SERVICE** from the list of menus, the product prompts you to enter an eight-digit PIN number. The PIN for the HP Color LaserJet CP6015 Series is 03601508.

1. Press **Menu**.
2. Press the down arrow ▼ to highlight **SERVICE**, and then press the checkmark button ✓.
3. Enter the eight-digit PIN using the alphanumeric keypad.
4. Press the checkmark button ✓ to enter the PIN and open the **SERVICE** menu.

The following menu items appear in the **SERVICE** menu:

CLEAR EVENT LOG	Use this item to clear the product event log.
CLEAR BOOTLOADER PASSWORD	This menu item allows you to clear the bootloader password if it has been lost.
MONO CYCLE COUNT	After replacing the formatter, use this item to reset the mono page count so that the figure continues to represent the page count for the product engine. The page count that is stored in NVRAM and printed on the configuration page represents the number of pages that the formatter has formatted (not including engine-test prints). If you install a new formatter when repairing a product, use this menu item to reset the page count to the previous value. In this way, the page count reflects the number of pages that the engine has printed rather than restarting the count for the new formatter. The page count is in two categories: total mono pages and total color pages.
COLOR CYCLE COUNT	After replacing the formatter, use this item to reset the color page count so that the figure continues to represent the page count for the product engine. The page count that is stored in NVRAM and printed on the configuration page represents the number of pages that the formatter has formatted (not including engine-test prints). If you install a new formatter when repairing a product, use this menu item to reset the page count to the previous value. In this way, the page count reflects the number of pages that the engine has printed rather than restarting the count for the new formatter. The page count is in two categories: total mono pages and total color pages.
REFURBISH CYCLE COUNT	Use this item to record the page count when the product was refurbished.
SERIAL NUMBER:	After replacing the formatter, use this item to reset the product serial number.
REFURBISH CYCLE COUNT	Use this item to record the page count when the product was refurbished.
SERVICE ID	Use this item to show the date that the product was first used on the control panel. This eliminates the need for users to keep paper receipts for proof of warranty.
Restore the service ID	

If you replace the formatter, the date is lost. Use this menu item to reset the date to the original date that the product was first used. The date format is YYDDD. Use the following formula to calculate the dates:

1. To calculate YY, subtract 1990 from the calendar year. For instance, if the product was first used in 2002, calculate YY as follows: $2002 - 1990 = 12$. YY = 12.
2. Subtract 1 from 10 (October is the tenth month of the year): $10 - 1 = 9$.
 - Multiply 9 by 30: $9 \times 30 = 270$ or add 17 to 270: $270 + 17 = 287$. Thus, DDD = 287.

Convert the service ID to an actual date

You can use the product Service ID number to determine whether the product is still under warranty. Use the following formula to convert the Service ID into the installation date as follows:

1. Add 1990 to YY to get the actual year that the product was installed.
2. Divide DDD by 30. If there is a remainder, add 1 to the result. This is the month.
3. The remainder from the calculation in step 2 is the date.

Using the Service ID 12287 as an example, the date conversion is as follows:

1. $12 + 1990 = 2002$, so the year is 2002.
2. 287 divided by $30 = 9$ with a remainder of 17 . Since there is a remainder, add 1 to 9 to get 10, which represents October.
3. The remainder in step 2 is 17, so that is the date.
4. The complete date is 17-October-2002.

NOTE: A six-day grace period is built into the date system.

COLD RESET PAPER

When you perform a cold reset, the paper size that is stored in NVRAM is reset to the default factory setting. If you replace a formatter board in a country/region that uses A4 as the standard paper size, use this menu to reset the default paper size to A4. LETTER and A4 are the only available values.

CALIBRATE MEDIA SENSOR

When a 54.0E.03 error appears in the event log, the registration second-transfer assembly needs to be replaced. After it is replaced, the media sensor must be calibrated. Select **CALIBRATE MEDIA SENSOR** in the **SERVICE** menu, and then send 10 jobs through the product. Make sure that there is a pause between each job that allows the product to completely spin down. After this process, the sensor is calibrated.

Product resets

Restore factory-set defaults

Hard disk initialization

A hard disk initialization will erase and reformat the product's hard disk. Perform hard disk initialization only if an error code displays on the control panel indicating a disk error. Always try initializing the hard disk before replacing it.

1. Turn the product on.
2. As the product performs its power-on sequence, press and hold the **Menu** button until all three lights on the control panel are lit.
3. Press the back arrow \leftarrow . The message **INITIALIZE DISC** displays on the control panel.
4. Press the down arrow \blacktriangledown . The product initializes the hard disk and continues its power-on sequence.

NVRAM initialization

△ **CAUTION:** Initializing NVRAM resets the serial number, the event log, the page counts, the calibration settings, and the EIO card. Use the **SERVICE** menu to restore the serial number and page counts. You also need to reconfigure any computers that print to this product to recognize the product. Initialize NVRAM only when absolutely necessary. In most situations, use a cold reset to reset product variables but still retain the needed values in the **SERVICE** menu.

Before initializing NVRAM, print a configuration page and a supplies status page to gather the following information:

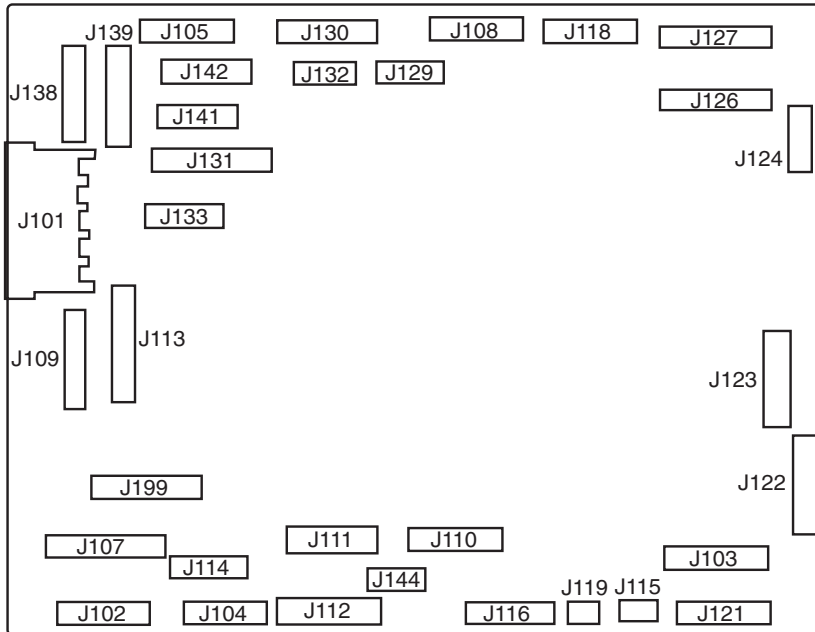

- Total page count and color page count
 - Serial number
1. Turn the product on and watch the control panel display.
 2. When the display shows the memory count, press and hold the down arrow \blacktriangledown until all three lights on the control panel are lit.
 3. Press the up arrow \blacktriangle .
 4. Press **Menu**. The message **SKIP DISK LOAD** displays on the control panel.
 5. Press the up arrow \blacktriangle until **NVRAM INIT** is highlighted, and then press the checkmark button \checkmark . The product initializes NVRAM and then continues its power-on sequence.

M11	Fuser motor	Drives the fuser roller, the delivery roller, and the fuser pressure roller	DC motor	Yes
M12	Drum motor (Y)	Drives the photosensitive drum and the primary charging roller in the yellow imaging drum	DC motor	Yes
M13	Drum motor (M)	Drives the photosensitive drum and the primary charging roller in the magenta imaging drum	DC motor	Yes
M14	Drum motor (C)	Drives the photosensitive drum and the primary charging roller in the cyan imaging drum	DC motor	Yes
M15	Drum motor (K)	Drives the photosensitive drum and the primary charging roller in the black imaging drum	DC motor	Yes
M16	Toner-feed motor (K)	Drives the black toner feed screws and waste-toner feed screws	Stepping motor	No
M17	Toner-feed motor (C, M, Y)	Drives the yellow, magenta, and cyan toner feed screws and waste-toner feed screws	Stepping motor	No
M18	Developing disengagement motor (C, K)	Engages and disengages the developing rollers in the cyan- and black-imaging drums	Stepping motor	No
M19	Developing disengagement motor (Y, M)	Engages and disengages the developing rollers in the yellow- and magenta-imaging drums	Stepping motor	No
M301	Duplexing feed motor	Drives the duplexing paper-feed roller	Stepping motor	No
Duplex models only				
M302	Duplexing reverse motor	Drives the duplexing paper-reverse roller	Stepping motor	No
Duplex models only				
M303	Duplexing re-pickup motor	Drives the duplexing paper re-pickup roller and engages or	Stepping motor	No
Duplex models only

8 Output accessories and intermediate paper-transfer unit (IPTU)

- [Theory of operation](#)
- [Specifications](#)
- [Removal and replacement](#)
- [Solve problems](#)

Theory of operation

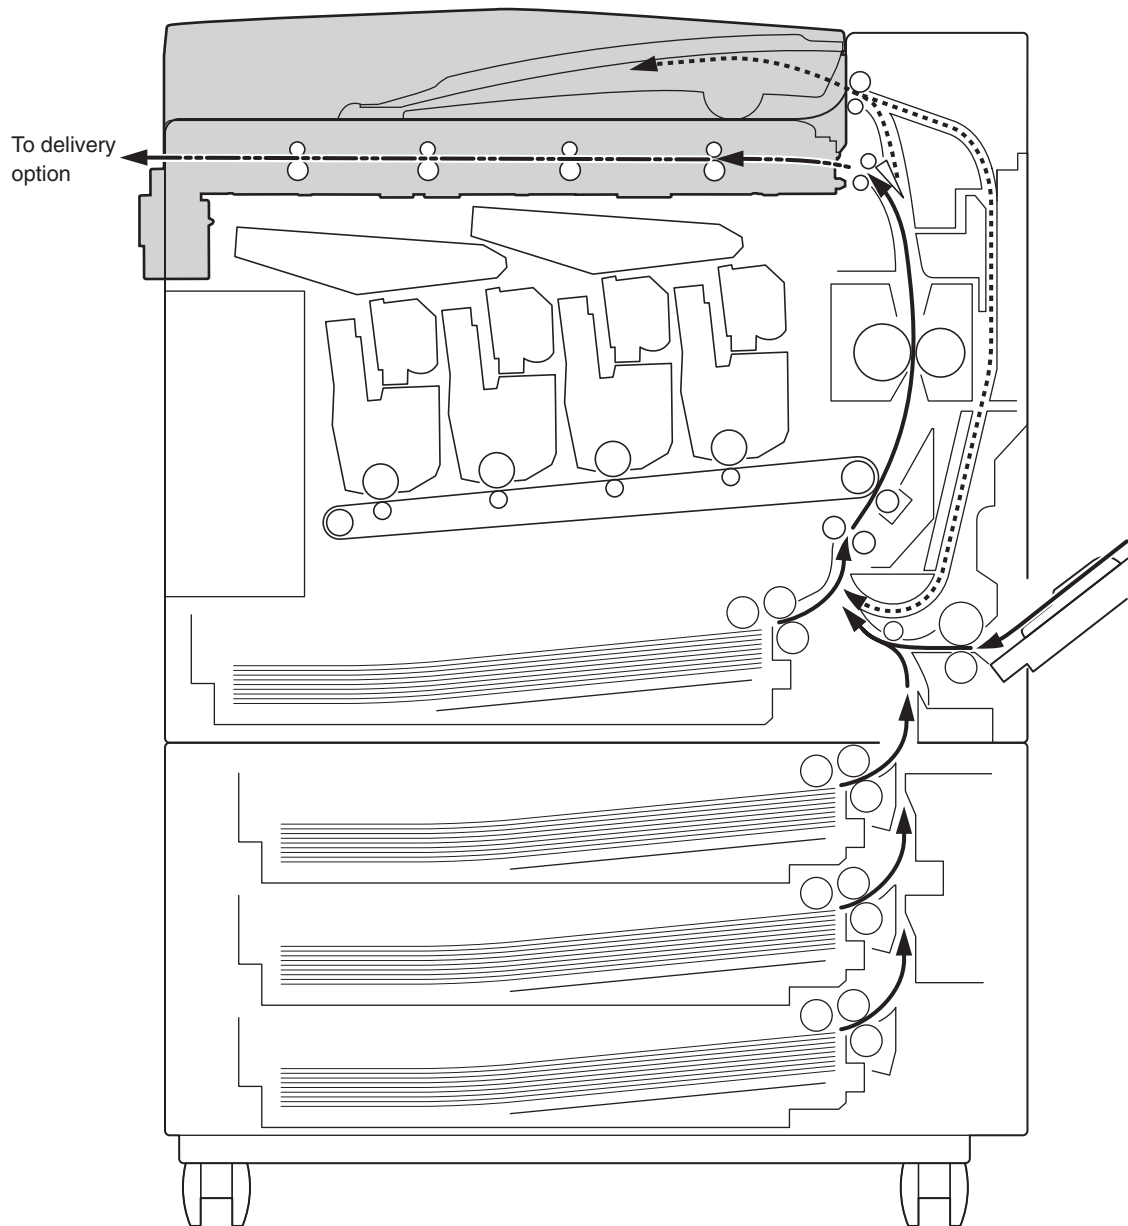

Intermediate paper-transfer unit (IPTU)

 **NOTE:** This item is called the “output-accessory bridge” in the user documentation for this product.

Basic operation

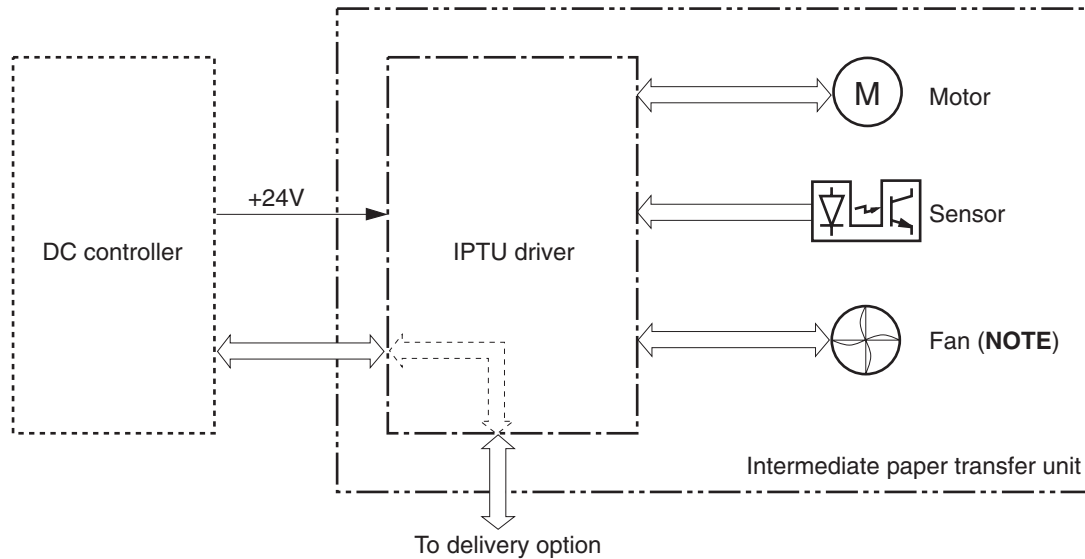

The intermediate paper-transfer unit (IPTU) is optionally installed to the face-down delivery unit of the product. It feeds paper to the staple/stacker or booklet maker. The face-down tray is removed when you install the IPTU.

Figure 8-1 Paper path of the IPTU

The IPTU driver controls the operational sequence of the IPTU and the serial communication with the DC controller of the product. The DC controller sends several commands to the IPTU driver at specific times. The IPTU driver drives the motors according to the commands. The IPTU driver sends the status information of the IPTU to the DC controller. The DC controller determines if there is an IPTU illegal connection. The DC controller notifies the formatter if it does not control the serial communication with the IPTU driver when the product is turned on, when it is recovering from Sleep mode, or during the prerotation period when the door closes. The printer supplies DC24V to the IPTU. The IPTU driver generates DC3.3V for sensors and ICs based on the DC24V.

Figure 8-2 Signal flow in the IPTU

NOTE: Only for the Kauai

Table 8-1 Components of the IPTU

Symbol for component		Name	Remark
Motor	M201	IPTU media-feed motor 2	
	M202	IPTU media-feed motor 1	
Sensor	SR201	IPTU media-feed sensor 3	
	SR202	IPTU media-feed sensor 2	
	SR203	IPTU media-feed sensor 1	
	SR204	IPTU door-open-detection sensor	
Fan	FM8	IPTU feed-unit cooling fan	

Feed operation

The paper is delivered to the staple/stacker or booklet maker through the IPTU.

Figure 8-3 Motors and sensors of the IPTU

Table 8-2 IPTU components

Component		Signal	Driver
IPTU feed motor 2	M201	IPTU feed-motor-2 control signal	IPTU driver
IPTU feed motor 1	M202	IPTU feed-motor-1 control signal	IPTU driver
IPTU media-feed sensor 3	SR201	IPTU media-feed 3 signal	IPTU driver
IPTU media-feed sensor 2	SR202	IPTU media-feed 2 signal	IPTU driver
IPTU media-feed sensor 1	SR203	IPTU media-feed 1 signal	IPTU driver
IPTU door-open-detection sensor	SR204	IPTU door-open-detection signal	IPTU driver

IPTU sequence

1. The paper is fed into the IPTU after fusing.
2. The DC controller sends a drive command to the IPTU driver after the fusing delivery media-feed sensor detects the leading edge of paper.
3. When it receives a command, the IPTU driver drives the IPTU feed motors to rotate the PD media-feed rollers.
4. The IPTU feed rollers feed the paper to the accessory.

Jam detection

The IPTU uses three media-feed sensors on the media path to detect the presence of paper and to check whether paper is being fed correctly or has jammed. The IPTU identifies a jam if the sensor detects paper at a specified time stored in the IPTU driver. The IPTU driver stops a print operation and notifies the formatter through the DC controller when it determines that a jam has occurred.

The IPTU detects the following jams:

- Delivery-delay jam 1

This jam occurs if the IPTU media-feed sensor 1 does not detect the leading edge of a sheet of paper within a specified period from when the paper is delivered from the printer into the IPTU.

- Delivery-delay jam 2

This jam occurs if the IPTU media-feed sensor 2 does not detect the leading edge of a sheet of paper within a specified period from when the IPTU media-feed sensor 1 detects the leading edge. This jam also occurs if the IPTU media-feed sensor 3 does not detect the leading edge of the sheet within a specified period from when the IPTU media-feed sensor 2 detects the leading edge.

- Delivery-stationary jam 1

This jam occurs if the IPTU media-feed sensor 1 does not detect the trailing edge of sheet of paper within a specified period from when it detects the leading edge. This jam also occurs if the IPTU media-feed sensor 2 does not detect the trailing edge of a sheet of paper within a specified period from when it detects the leading edge. This also occurs if the IPTU media-feed sensor 3 does not detect the trailing edge of a sheet of paper within a specified period from when it detects the leading edge.

3-bin stapler/stacker

Basic operation

The stapler/stacker delivers jobs from the product several ways. The modes of delivery include simple stacking, job offset, and stapling. The stacker controller PCA controls all operations involved in these modes, according to the commands from the product.

Figure 8-4 Basic operation of the stapler/stacker

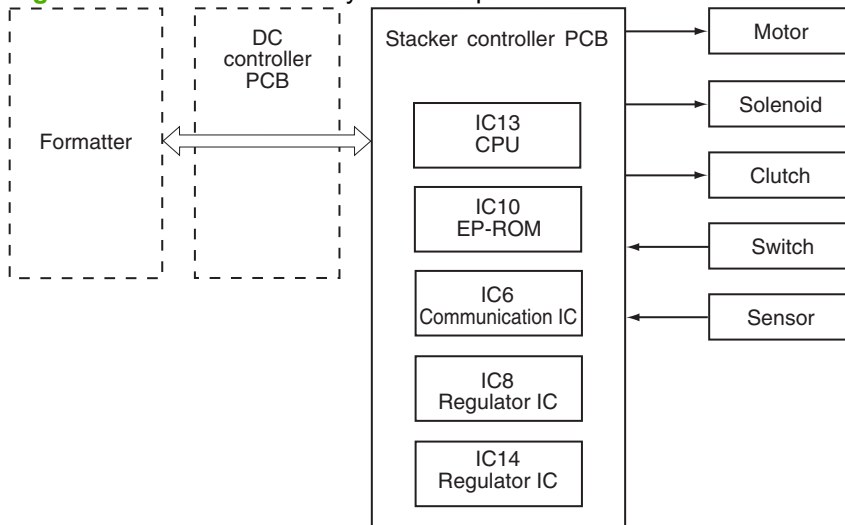

NOTE: With job offset, each sheet of a job is shifted to one side in the output bin in order to keep each sheet separate from the others.

Electrical circuitry

The stacker controller PCA controls the stacker operation sequence. A 16-bit microprocessor (CPU) is installed on the stacker controller PCA to control the stacker operation sequence and CAN communication with the video controller PCA. The stacker controller PCA drives solenoids, motors, and so forth in response to the commands received from the video controller through the CAN communication line. In addition, the stacker controller PCA reports information about various sensors and switches to the video controller through the CAN communication line. Major functions of the IC chips installed on the stacker controller PCA are as follows:

- IC13 (CPU): Controls the operation sequence
- IC10 (EEP-ROM): Backs up adjustment values
- IC6 (Communication IC): Communicates with the host machine
- IC8 (Regulator IC): Generates 5 V
- IC14 (Regulator IC): Generates 3.3 V

Figure 8-5 Electrical circuitry of the stapler/stacker

Feed drive system

Based on commands from the product, the stapler/stacker delivers jobs to the output bins in the appropriate mode: simple stacking, job offset, and stapling.

Figure 8-6 Electrical circuitry of the stapler/stacker

Figure 8-7 Output bins of the stapler/stacker

Construction of the control system

Jobs sent from the product are delivered to the output bin or the processing output bin according to the ejection type. For jobs delivered to the staple bin, job offset or stapling is performed according to the instructions from the product. When ejecting from the processing output bin, a stack trailing-edge assist guide is used in addition to the stack-ejection roller to eject the stack. The inlet motor (M31), stack-ejection motor (M32), and stack trailing-edge assist motor (M39) are step motors. These motors are rotated forward or backward by the microcomputer (CPU) in the stacker controller PCA. The following two sensors are provided in the paper delivery path to detect the arrival or passing of copies:

- Stacking paper-path-entry sensor (PI33)
- Stacking paper-path-delivery sensor (PI34)

Each output bin also has sensors to detect the presence of a sheet on the bin:

- First output-bin paper sensor (PI42)
- Second output-bin paper sensor (PI43)

If a sheet does not reach or pass each sensor within the prescribed time, the stacker controller PCA stops the operation and notifies the product that a jam has occurred. After a jam is cleared and all of the doors are closed, the stapler/stacker checks whether the sheet is detected by the stacking paper-

path-entry sensor or stacking paper-path-delivery sensor. If the sensors detect a sheet, the stapler/stacker determines that the jam is not fixed and sends a jam processing signal to the product again.

Figure 8-8 Stacker controller PCA (1 of 2)

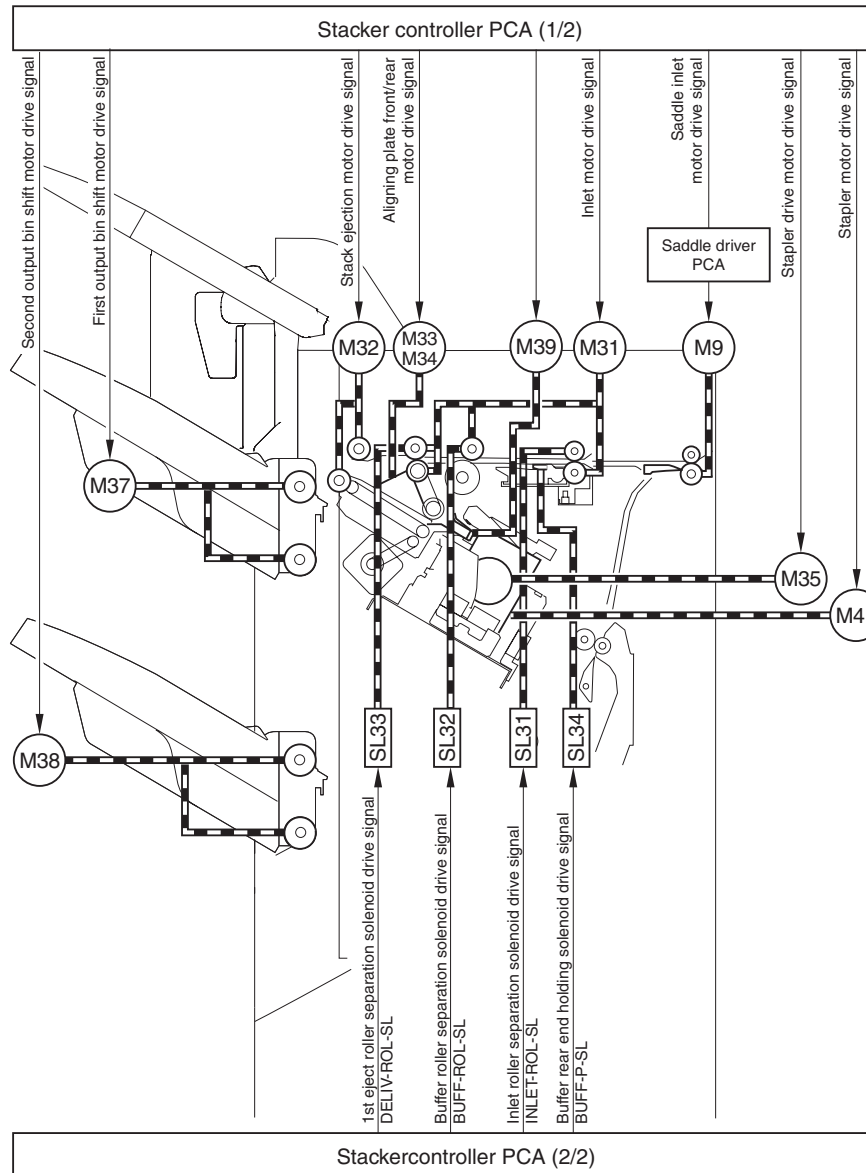

Figure 8-9 Stacker controller PCA (2 of 2)

Paper delivery path (stapler/stacker and booklet maker)

There are three paper paths to output bins 1, 2, and the additional output bin depending on the ejection process.

All sheets are ejected through the following path when the accessory is set to non-sort.

Figure 8-10 Paper path when set to non-sort

When the product sorts paper size other than A4, B5, or LTR or when set to staple and sort, copies are delivered to the processing output bin for aligning and stapling and then ejected using the stack trailing-edge assist.

Figure 8-11 Paper path for sizes other than A4, B5, or LTR

With A4, B5, or LTR paper sizes, two sheets of paper feed into the buffer (two or three sheets if 2-point stapling). The sheets are then aligned and stapled in the processing output bin and ejected. While stapling or offset is performed, copies are simultaneously ejected, delivered to the buffer, and stacked in the processing output bin. Copies are received continuously from the product. The stack delivered from the buffer is ejected to the processing output bin, and the stack processed in the processing output

bin is ejected to the output bin. Simultaneous stack ejection is described below for two A4 copies between stacks when the equipment is set to sort.

1. When the first paper reaches the switchback point, it is sent to the buffer unit, and the buffer guide holds the trailing edge of the paper.

Figure 8-12 Paper path (1 of 5)

2. When the first sheet arrives at the buffer, the second sheet is sent from the product.

Figure 8-13 Paper path (2 of 5)

3. The first delivery roller descends and works with the stack-delivery roller to deliver the first and second sheet to the processing output bin. At the same time, the return roller and stack trailing-edge assist send the stack in the processing output bin to the output bin.

Figure 8-14 Paper path (3 of 5)

4. When the stack in the processing output bin is sent to the delivery output bin and the trailing edge of the first and second paper exits the first delivery roller, the stack-delivery roller and return roller deliver the first and second sheet to the processing output bin.

Figure 8-15 Paper path (4 of 5)

5. The first and second paper delivered to the processing output bin are aligned and then delivered to the output bin.

Figure 8-16 Paper path (5 of 5)

Intermediate-process output-bin assembly (stapler/stacker and booklet maker)

Stack job offset

The job-offset operation offsets the paper stack to the front or rear when ejecting to sort the paper stack. The forward/backward movement of the sheet delivered to the processing output bin is controlled by the front-aligning plate and rear-aligning plate. The aligned copies are stapled or ejected according to the signal from the product. When the power is turned on, the stacker controller PCA drives the aligning-plate front motor (M33) and aligning-plate rear motor (M34) to return the two aligning plates to home

position. The name and function of motors and sensors used by the stack job-offset function are shown below.

Figure 8-17 Motors and sensors for stack job offset

Figure 8-18 Stack job offset example
Results Delivering 4 sets

Table 8-3 Motors for the stack job offset

Motor	Function
Front-aligning-plate motor (M33)	Aligns paper in the processing output bin to the front

Table 8-4 Sensors for the stack job offset (continued)

Sensor	Function
Rear-aligning-plate HP sensor (PI37)	Detects the aligning plate rear-home position
Stack trailing-edge assist HP sensor (PI39)	Detects the stack trailing-edge assist home-position

Process output bin paper-stacking operation

When the trailing edge of the paper exits the first delivery roller, the sheet is delivered to the processing output bin by the stack-delivery roller and return roller and then pushed against the processing output-bin stopper.

Figure 8-19 Process output bin

Offset operation

Each sheet is pulled forward or backward using the front-aligning plate and the rear-aligning plate. The offset operation is performed each time a sheet is pulled onto the processing output bin.

Figure 8-20 Job offset operation (1 of 2)

Figure 8-21 Job offset operation (2 of 2)

Stack trailing-edge assist operation

To improve stacking performance when ejecting jobs delivered to the processing output bin, a stack trailing-edge assist guide supports the back of the stack during stack ejection.

Figure 8-22 Stack trailing-edge assist operation

Stack delivery operation

The stack is ejected each time 2–4 large sheets or 2–6 small sheets are offset on the processing output bin. The swing motor turns and the swing guide descends causing the upper and lower stack-delivery rollers to hold the stack. The stack-delivery motor turns the stack-delivery roller and return roller. At the same time, the stack trailing-edge assist motor starts the stack trailing-edge assist guide, and the stack held by the stack-delivery rollers is moved forward. When the stack trailing-edge assist motor reverses,

the stack trailing-edge assist guide returns to home position. The stack-delivery motor then ejects the stack with the upper and lower stack-delivery rollers.

Figure 8-23 Stack delivery

Staple operation (stapler/stacker and booklet maker)

The stapling operation staples the prescribed number of copies with the stapler unit. The staple position depends on the staple mode and paper size. The stapler-shift home-position sensor (PI40) detects whether the stapler unit is at the home position. The stapler unit is equipped with a stapler-alignment interference sensor (PI46). The staple motor (M41) operation is prohibited when the stapler-alignment interference sensor (PI46) is on. This prevents stapling at the stopper and damaging the stopper when the stapler-shift motor (M35) is incorrectly adjusted. When the power is turned on, the stacker controller PCA drives the stapler-shift motor (M35) to return the stapler unit to home position. If the stapler unit is already at home position, it waits in that state.

Figure 8-24 Stapler unit

Figure 8-25 Staple location

Table 8-5 Sensors used in stapling

Sensor	Symbol	Connector	Function	Remarks
Stapler-shift home-position sensor	PI40	J721B-6	Detects the home position for the stapler moving back and forth	
Stapler-alignment interference sensor	PI46	J717-3	Staple prohibited area detection	
Stapler home-position sensor	PI50	J717-5	Detects the home position for the stapling operation	In the stapler
Staple edging sensor	PI51	J717-6	Detects the staple top position	In the stapler
Staple sensor	PI52	J717-7	Detects presence or absence of staples in the cartridge	In the stapler

Table 8-6 Motors used in stapling

Function	Motor	Symbol	Remarks
Moves the stapler	Stapler-shift motor	M35	
Performs the stapling operation	Staple motor	M41	

The stacker controller PCA moves the stapler according to the specified stapling position. When the rear of the first sheet passes the first delivery roller, the stacker controller PCA stops the stack-delivery motor (M32) and then rotates it in reverse. The stack-delivery motor rotates the stack-delivery roller and return roller and delivers the paper to the processing output bin. The paper in the processing output bin is detected by the processing-output-bin paper sensor (PI38). When the paper is delivered to the processing output bin, the swing motor (M36) starts and raises the swing guide. When the swing-guide home-position sensor (PI35) detects the rising of the swing guide, the swing-guide motor stops and holds the swing guide at the raised position. After the processing-output-bin paper sensor detects the paper, the aligning motor (M33/M34) starts and aligns the paper.

Figure 8-26 Paper path for stapling

Figure 8-27 Rollers and sensors for stapling

The stacker controller PCA starts the swing motor (M36) and lowers the swing guide when the rear of the second paper passes the first delivery roller. The stack-delivery motor is reversed. The stack-delivery motor rotates the stack-delivery roller (upper) and return roller and sends the paper to the processing output bin. At this point, the stack-delivery roller (lower) does not rotate because the stack-ejection lower-roller clutch (CL32) is disengaged. The output-bin paper sensor (PI38) detects the processing-output-bin paper sensor (P138). When the paper is delivered to the processing output bin, the swing motor (M36) starts and raises the swing guide. When the swing-guide home-position sensor (PI35) detects the rising of the swing guide, the swing-guide motor stops and holds the swing guide at the raised position. After the processing-output-bin paper sensor detects the paper, the aligning motor (M33/M34) starts and aligns the paper.

Figure 8-28 Paper path

When the last sheet is aligned, the stacker controller PCA moves the aligning plate to the alignment position with the aligning motor (M33/M34) (the paper is held by the aligning plate). Then the stacker controller PCA staples at the specified staple position. After stapling, the stacker controller PCA starts the swing motor (M36) and lowers the swing guide. Then the stack is ejected by the stack-delivery roller, return roller, and stack trailing-edge assist guide.

Figure 8-29 Shift process for the staple unit

Staple unit

The stapler motor (M41) rotates the cam one turn for stapling. The stapler home-position sensor (PI50) detects the home position of the cam. The macro computer (IC13) on the stacker controller PCA controls the forward and reverse rotation of the stapler motor. When the stapler home-position sensor is off, the stacker controller PCA rotates the stapler motor in the forward direction until the sensor turns on, allowing the staple cam to return to the original position. The staple sensor (PI52) is used to detect the presence or absence of a staple cartridge in the machine and the presence or absence of staples in the cartridge. The staple edging sensor (PI51) determines whether staples are pushed up to the top of the

staple cartridge. For safety, the stacker controller circuit does not drive the staple motor (M41) unless the staple safety switch (MS34) is on.

Figure 8-30 Stapling operation (1 of 2)

Figure 8-31 Stapling operation (2 of 2)

Shift the stapler unit

The stapler-shift motor (M35) shifts the stapler unit. The stapler-shift home-position sensor (PI40) detects the home position. When there is a staple command from the product, the stapler shifts to the

staple ready position, which depends on the stapling position and paper size. The stapler unit waits at the following points when staple mode is selected:

Figure 8-32 Front 1-point stapling

Figure 8-33 Rear 1-point stapling

Figure 8-34 2-point stapling

Stack operation (stapler/stacker and booklet maker)

Output bin operation

This accessory has an upper output bin (output-bin 1) and a lower output bin (output-bin 2).

- The output-bin-1-shift motor (M37) and output-bin-2-shift motor (M38) move output-bin 1 and output-bin 2 up and down independently.
- The output-bin-1 paper sensor (PI42) and output-bin-2 paper sensor (PI43) detect paper stacked on the output bin.
- The output-bin-1 paper-surface sensor (PI41) and output-bin-2 paper-surface sensor (PI48) detect the home positions of output-bin 1 and output-bin 2.
- The home position is the top surface of the paper when paper is stacked on the output bin, or the position where the edge of the output bin is detected when no paper is stacked.
- When the power is turned on, the stacker controller PCA drives the output-bin-1-shift motor (M37) and output-bin-2-shift motor (M38) to return the output bin to home position. If already at home position, the output bin is moved from the home position and then returned. If both output bins are at home position, this is performed for output-bin 1 and then for output-bin 2.
- If the product specifies output-bin 2, the stacker controller PCA shifts the output bin so that output-bin 2 is at the delivery port. When paper is stacked on the output bin, a prescribed number of pulses drive the output-bin-1-shift motor (M37) or output-bin-2-shift motor (M38) to lower the output bin. Then the output bin returns to home position to prepare for the next stack.
- The upper and lower limits of the output bin are detected by three area sensors (PS981, PS982, and PS983) on the output-bin-1- and output-bin-2-shift area sensor PCA.

- The stacker controller PCA stops driving the output-bin-1-shift motor (M37) and output-bin-2-shift motor (M38) when it detects the upper or lower limit of the output bin. Also, the on/off combinations of the area sensors (PS981, PS982, PS983) are used to detect over-stacking according to the stack height for large-size and mixed stacking.
- The stacker controller PCA stops supplying +24 V to the output-bin-1-shift motor (M37) and stops the stacker operation when the output-bin-1 switch (MS33) turns on.

Figure 8-35 Items detected by the area sensors (PS981, PS982, PS983)

 **NOTE:** PI42 is located on output-bin 1.

NOTE: PI43 is located on output-bin 2.

Figure 8-36 Output-bin components

Table 8-7 Output-bin-1-shift area sensor PCA

Detected items	Area sensors 1 (PS983)	Area sensors 2 (PS982)	Area sensors 3 (PS981)
Output-bin-1 upper limit	off	off	off
Stack-count 500-sheet limit exceeded	on	on	off
Stack-count 1000-sheet limit exceeded	on	off	off
Output-bin-1 lower limit	on	off	on

Table 8-8 Output-bin-2-shift area sensor PCA

Detected items	Area sensors 1 (PS983)	Area sensors 2 (PS982)	Area sensors 3 (PS981)
Output-bin-2 upper limit	off	on	off
Stack-count 500-sheet limit exceeded	on	on	off
Stack-count 1000-sheet limit exceeded	on	off	off
Output-bin-2 lower limit (Stapler/stacker)	off	off	off
Output-bin-2 lower limit (Booklet maker)	off	off	on

Shutter operation

To prevent the delivery section from catching stacked paper in output-bin 1 when it passes, a shutter is provided at the delivery section. The shutter closes when output-bin 1 passes, even when no paper is stacked. When the shutter clutch (CL31) and stack-ejection lower-roller clutch (CL32) are on, the shutter

moves up (closes) when the stack-ejection motor (M32) turns forward and moves down (open, delivery enabled), which occurs when the motor turns backward. The shutter home-position sensor (PI45) detects the opening and closing of the shutter.

Figure 8-37 Shutter location

Jam detection

The following sensors detect paper and determine whether paper is delivered properly.

- Stacking paper-path-entry sensor (PI33)
- Stacking paper-path-delivery sensor (PI34)

A jam is identified by checking whether paper is present at each sensor at the timing programmed in the memory of the microcomputer (CPU) on the stacker controller PCA. When the CPU identifies a jam, it suspends the stacker's delivery operation and informs the product of the jam. When all doors are closed after the paper jam is removed, the stacker use the two sensors (stacking paper-path-entry sensor and stacking paper-path-delivery sensor) to check for further jams. If the sensors detect paper,

the stacker determines that the paper jam has not been removed and sends another jam removal signal to the product.

Figure 8-38 Jam detection sensors

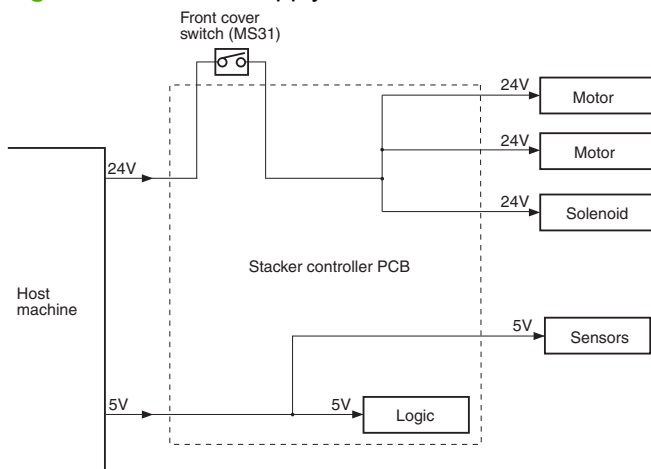

Power supply

Power-supply route

When the product power is turned on, 5 Vdc and 24 Vdc are supplied from the product to the stacker controller PCA. The 24 Vdc power drives the motors, solenoids, etc. The 5 Vdc power drives sensors, IC chips on the stacker controller PCA, etc. When the front-cover switch (MS31) is open, the 24 Vdc power for the motor drive is shut down.

Figure 8-39 Power-supply route

Protection function

The 24Vdc for the motor and solenoid drive has a fuse or motor driver for over-current protection.

HP Booklet Maker/Finisher accessory

Basic operation

The following section describes the basic operation of the HP Booklet Maker/ Finisher accessory.

Basic operation of the stacker unit

The stacker unit processes jobs from the product in several ways. These include simple stacking, job offset, and stapling. The stacker controller PCA controls all operations involved in these modes, according to the commands from the product. Jobs from the product can also be routed for booklet making.

Figure 8-40 Stacker unit basics

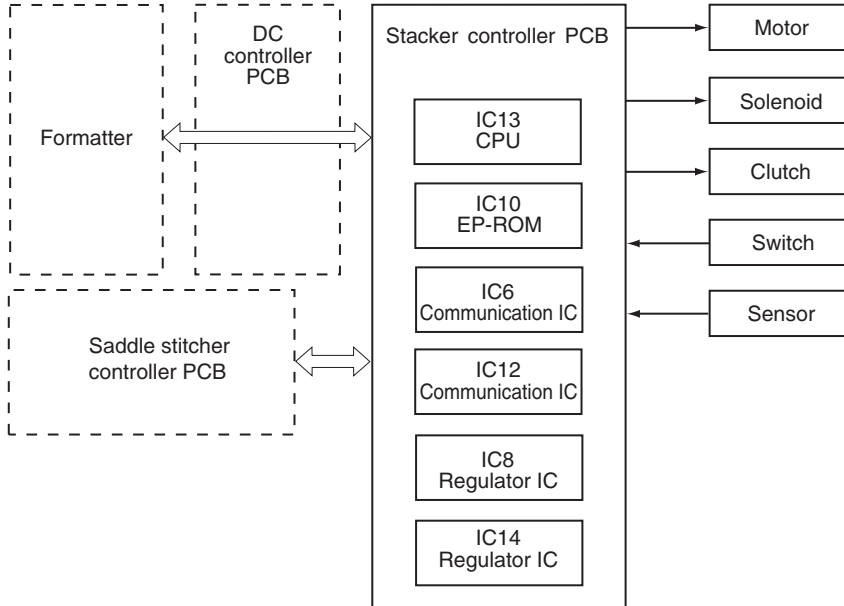

Electrical circuitry of the stacker unit

A 16-bit microprocessor (CPU) is installed on the stacker controller PCA to control the stacker operation sequence and CAN communication with the video controller PCA. The stacker controller PCA drives solenoids, motors, and so forth in response to the commands received from the video controller through the CAN communication line. In addition, the stacker controller PCA reports information about various sensors and switches to the video controller through the CAN communication line. Major functions of the IC chips installed on the stacker controller PCA are as follows:

- IC13 (CPU): Controls the operation sequence
- IC10 (EEP-ROM): Backs up adjustment values
- IC6 (Communication IC): Communicates with the host machine
- IC12 (communication IC): Communicates with the saddle stitcher unit

- IC8 (Regulator IC): Generates 5 V
- IC14 (Regulator IC) : Generates 3.3 V

Figure 8-41 Electrical circuitry of the stacker unit

Basic operation of the booklet maker unit

The booklet maker unit staples and folds (in half) stacks of paper delivered from the stacker unit. The product sends commands via the stacker to the saddle sticher controller PCA, which controls these operations.

Figure 8-42 Booklet maker unit basics

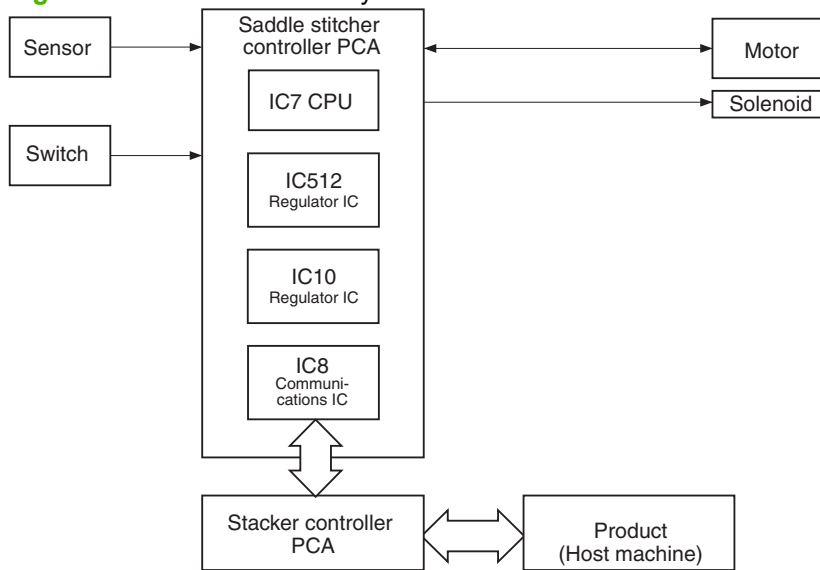

Electrical circuitry for the booklet maker unit

The saddle-stitcher controller PCA has a microprocessor that controls the sequence of operations and that handles serial communications with the stacker controller PCA. This includes driving solenoids and motors in response to the commands from the stacker controller PCA. The saddle-stitcher controller PCA is also used to communicate the state of various sensors and switches to the stacker controller PCA in serial. The functions of the major ICs mounted on the saddle stitcher controller PCA are as follows:

- IC7 (CPU): Controls the sequence of operations. Contains the sequence program
- IC8 (communications IC): Communicates with the finisher unit
- IC512 (regulator IC): Generates 5 V
- IC10 (regulator IC): Communicates with the product

Figure 8-43 Electrical circuitry for the booklet maker unit

Feed drive system

The stacker unit stacks paper delivered from the product, offsets stack jobs, or staples and delivers paper to the outputs according to commands from the product. The booklet maker unit carries, aligns, and stitches paper delivered from the product, and then feeds the resulting stack. After these operations, the booklet maker unit folds the stacks of paper and delivers them to the booklet-maker-unit output bin. The delivery methods are shown in the following figure.

Figure 8-44 Feed drive for the stacker unit

Figure 8-45 Feed drive for the booklet maker unit

Construction of the stacker-unit control system

The paper sent from the product is delivered to the output bin or the processing tray according to the type. Job offset or stapling is performed on paper delivered to the output bin, according to the instructions from the product. When paper ejects from the processing tray, a stack trailing-edge assist guide is used in addition to the stack-ejection roller to eject the stack. The inlet motor (M31), stack-ejection motor (M32), and stack trailing-edge assist motor (M39) are step motors. The microcomputer (CPU) in the stacker controller PCA rotates these motors forward or backward. The following two sensors in the paper delivery path detect the arrival or passing of papers:

- Stacking paper-path-entry sensor (PI33)
- Stacking paper-path-delivery sensor (PI34)

Each output bin also has sensors to detect the presence of a paper on the bin:

- First output-bin paper sensor (PI42)
- Second output-bin paper sensor (PI43)

If the sheet does not reach or pass each sensor within the prescribed time, the stacker controller PCA determines that the jam has occurred and stops the operation. It then notifies the product that a jam has occurred. After the jam is cleared and the doors are closed, the stacker unit checks whether the sheet is detected by the stacking paper path entry sensor or stacking paper path delivery sensor. If the sensors

detect a sheet of paper, the stacker unit determines that the jam is not cleared and re-sends the jam processing signal to the product.

Figure 8-46 Components of the stacker unit control system (1 of 2)

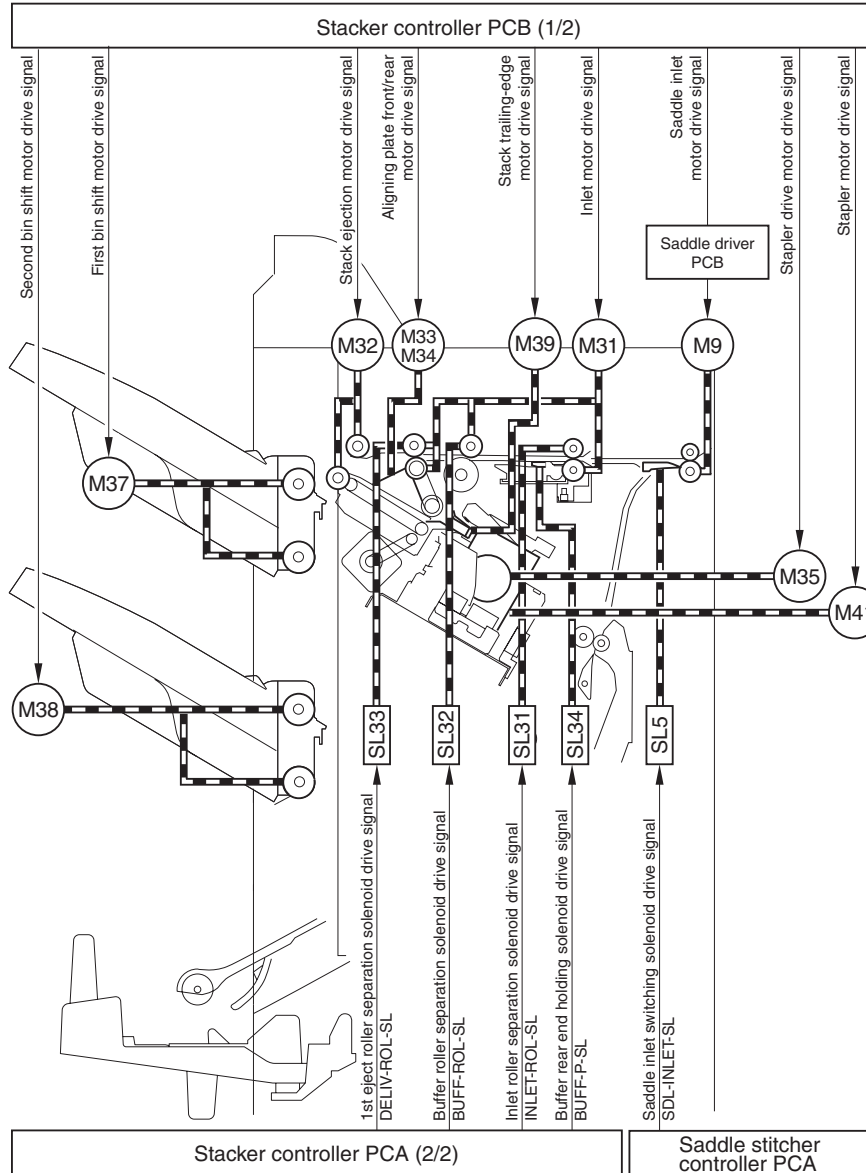

Figure 8-47 Components of the stacker unit control system (2 of 2)

Paper-delivery path for the stacker unit

See [Paper delivery path \(stapler/stacker and booklet maker\) on page 587](#).

Construction of the booklet-maker-unit control system

- The paper-output mechanism keeps paper from the stacker unit in place for stapling and folding.
- The No. 1 flapper and the No. 2 flapper of the paper inlet configure the paper path to fit the paper size.
- The paper-positioning plate is kept at a predetermined location to fit the paper size.
- The paper-positioning-plate motor (M4) drives the paper-positioning plate, and the position of the plate is identified by the number of motor pulses coming from the paper-positioning-plate home-position sensor (PI7).
- The feed rollers and the crescent roller handle paper moved by the inlet roller and held in a predetermined position.
- The feed plate moves paper by coming into contact with or moving away from paper as needed.
- The alignment plates order the stack when paper is output. The alignment motor (M5) drives the alignment plates. The position of the alignment motor (M5) is identified by the number of motor pulses sent from the alignment-plate home-position sensor (PI5).

- The guide plate covers the folding rollers to prevent interference between paper and the paper-folding rollers when paper is output. The guide plate moves down before paper is folded to expose the paper-folding rollers.
- The inlet has three paper sensors (PI18, PI19, PI20) that are each suited to specific paper sizes.
- The paper-positioning plate has a paper-positioning-plate paper sensor (PI8).

Figure 8-48 Components of the booklet-maker-unit control system

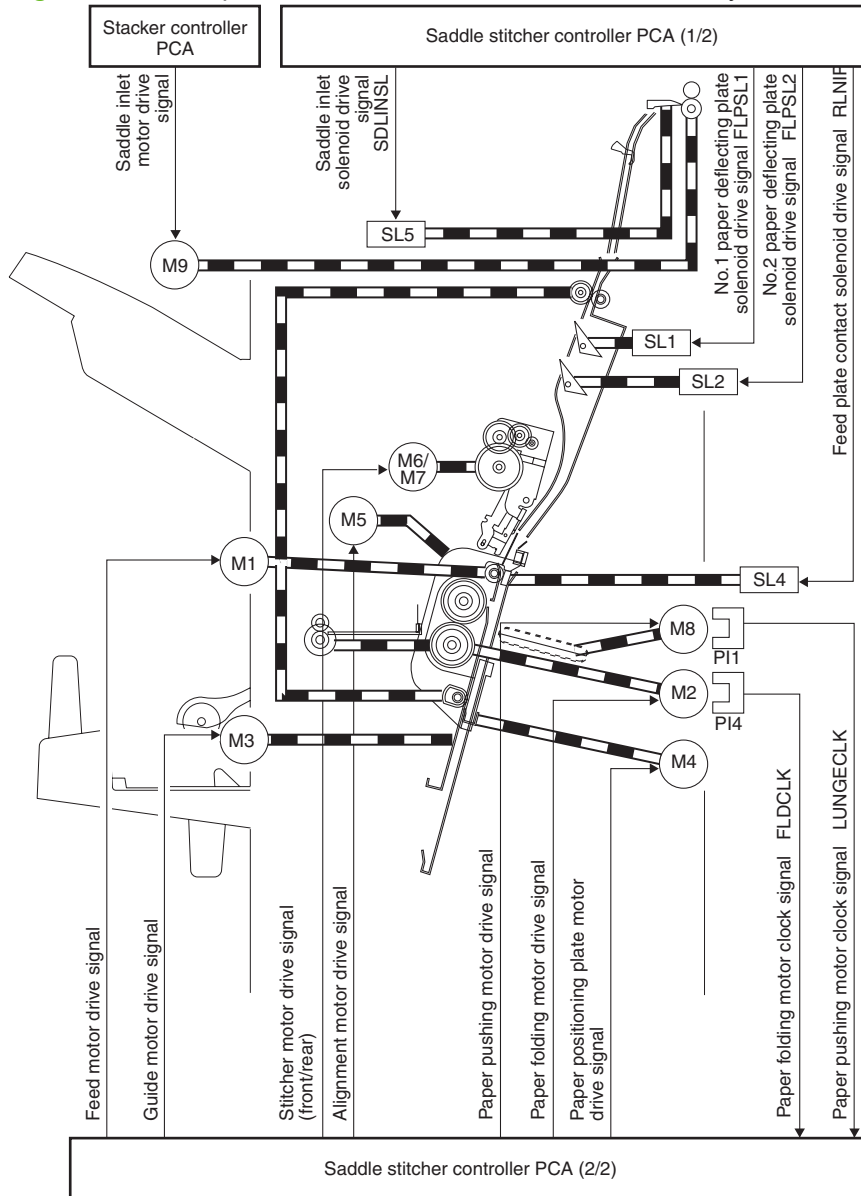

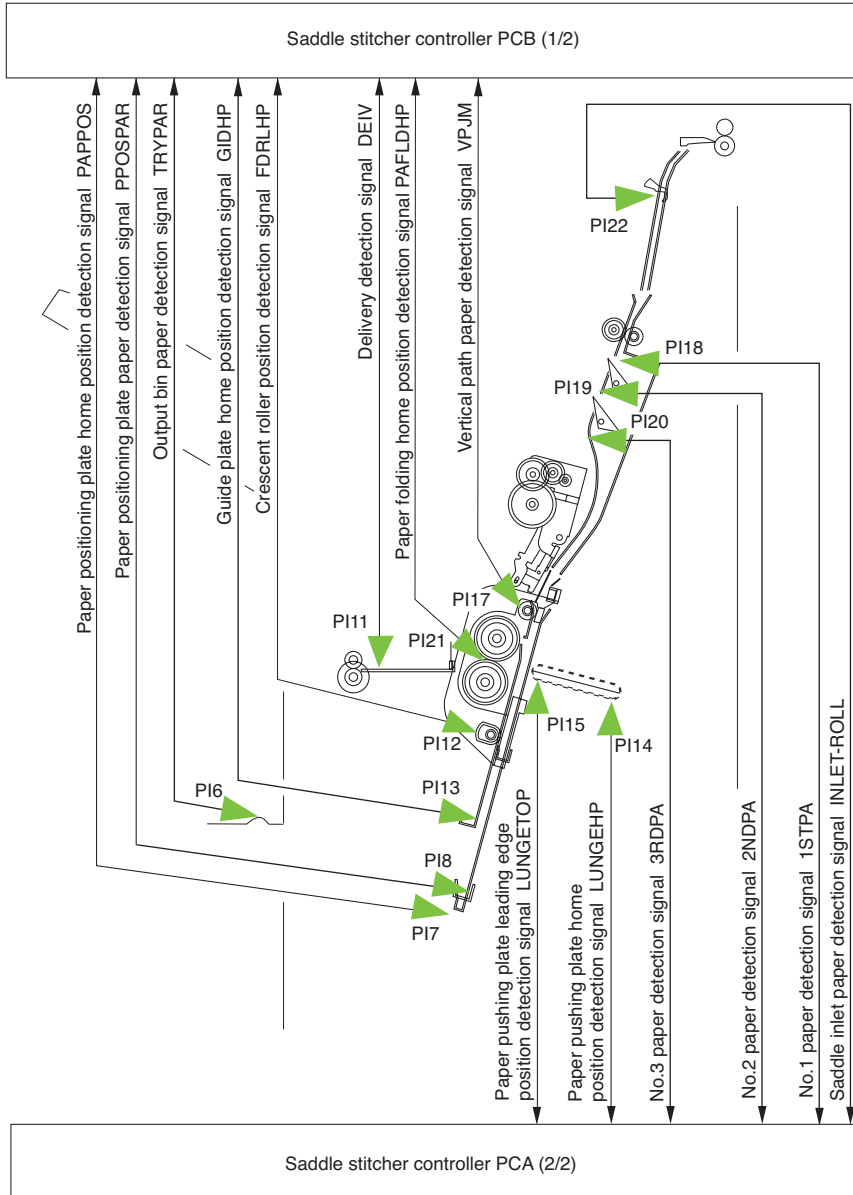

Figure 8-49 Components of the booklet-maker control system

Paper-delivery path (booklet maker only)

The saddle-stitcher flapper routes paper from the product to the booklet maker unit. The booklet maker unit staples, folds and then delivers the paper to the booklet-maker-unit output bin.

Figure 8-50 Booklet-maker-unit paper path

Basic operation for the booklet maker

- When receiving paper from the stacker unit, the booklet maker unit outputs paper in a vertical orientation to a vertical path.
- Two paper-deflecting plates configure the path.

- The paper-positioning plate sets the position of the paper so that the center of the stack matches the stapling/folding position.
- Subsequent paper is output closer to the delivery slot. The volume of paper that can be output is as follows: 15 sheets (maximum of 14 sheets of 80 g/m² + 1 sheet of 250 g/m²).

Figure 8-51 Paper delivery for booklet maker

The alignment plates put paper in order when it is output to the vertical-path assembly. Mounted at the edge of the-vertical path assembly, alignment plates also prepare the stack for delivery after stapling.

Figure 8-52 Alignment plates

When all paper has been output, the two stitchers staple the stack. The stitchers face the center of a stack and alternate to prevent the paper from wrinkling and to limit the load on the power supply. If only one sheet arrives, stitching does not take place and the next operation (stack feeding) occurs.

Figure 8-53 Stitching the stack

The booklet maker unit folds the stitched stack, and then feeds it to where the stapling position matches the height of the paper-pushing plate and the paper-folding roller nip. The paper-positioning plate moves the stack forward and the guide plate descends so that the paper-folding rollers directly face the stack.

Figure 8-54 Position the stack

The paper-pushing plate moves the stack to the paper-folding rollers that hold the stack at its center and fold it. The paper-folding rollers and delivery roller then output the stack to the output bin.

Figure 8-55 Fold and deliver the stack

Control of the inlet flappers

The two flappers mounted at the paper inlet configure the feed path according to paper size. The flappers detect the trailing edge of the paper and prevent the trailing paper from butting against the top of the existing stack. The following table shows the relationship between sensors and paper sizes.

Table 8-9 Sensors and paper sizes

Sensor	A3/279 mm x 432 mm (11 x 17)	B4/LGL	A4R/LTRR
No.1 paper sensor (PI18)	Used	Used	Used
No.2 paper sensor (PI19)	Not used	Used	Used
No.3 paper sensor (PI20)	Not used	Not used	Used

Each flapper is driven by its own solenoid. The following table shows the relationship between solenoids and paper sizes.

Table 8-10 Solenoids and paper sizes

Sensor	A3/279 mm x 432 mm (11 x 17)	B4/LGL	A4R/LTRR
No.1 paper-deflecting solenoid (SL1)	off	on	on
No.2 paper-deflecting solenoid (SL2)	off	off	on

Figure 8-56 A3/279 mm x 432 mm (11 x 17) paper path (3 sheets)

Figure 8-57 B4/LGL paper path (3 sheets)

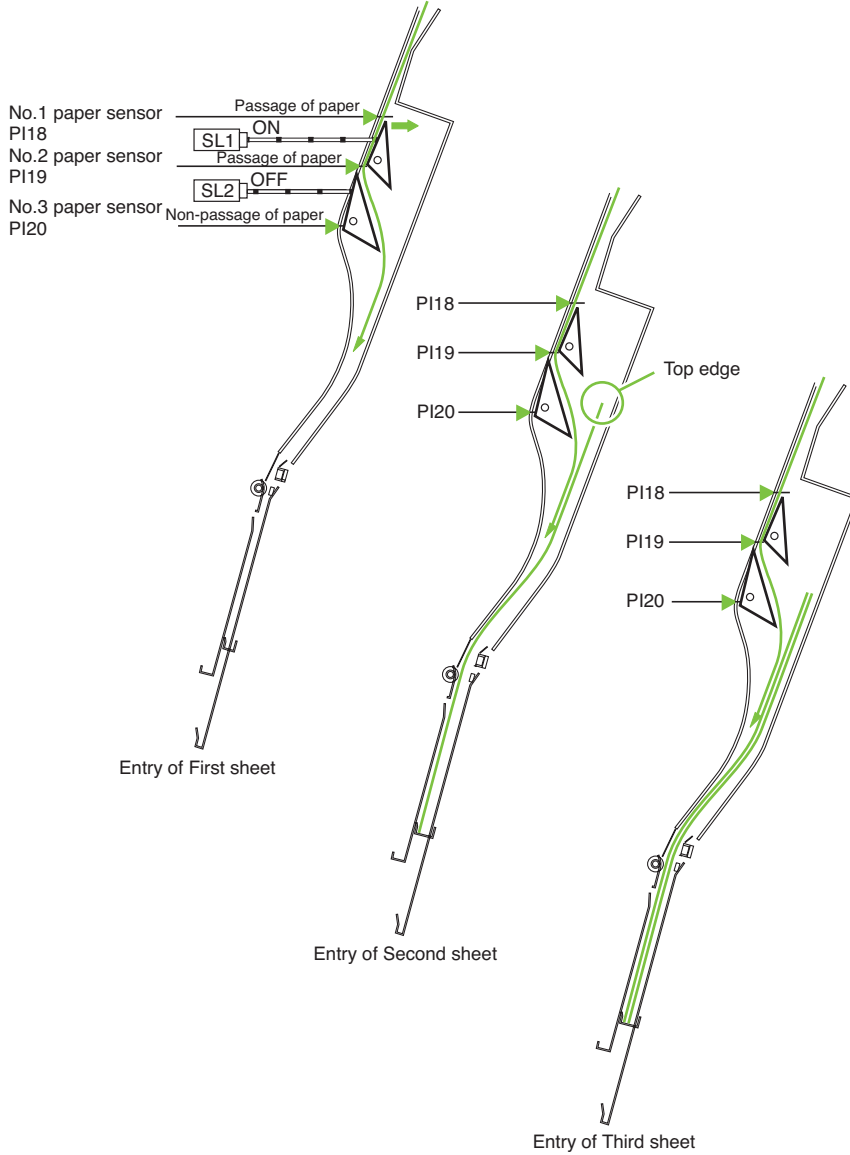

Figure 8-58 A4R/LTRR Paper Path (3 sheets)

Control of paper movement

- When the leading edge of the paper has passed the inlet flapper, the intermediate-feed roller and the crescent roller start to move the paper forward.
- When the leading edge of the paper reaches the intermediate-feed roller, the feed-plate-contact solenoid (SL4) causes the roller to contact the path bed and move the paper forward. When the leading edge of the paper reaches the paper-positioning plate, contact is broken.
- When the leading edge of the first sheet reaches the paper-positioning plate, the paper-positioning-plate paper sensor (PI8) turns on. Subsequent sheets will not be checked because the first sheet will still be over the sensor.

- The crescent roller rotates while sheets are output, butting the leading edge of each sheet against the paper-positioning plate and keeping the leading edge of the stack in order.
 - The alignment motor (M5) drives the alignment plates for each sheet to keep both the left and right edges of the sheet in order.
1. The solenoid turns on while paper is being moved so that the feed plate comes into contact.

Figure 8-59 Paper movement (1 of 3)

2. The solenoid turns off when the paper touches the paper-positioning plate. The feed motor continues to rotate.

Figure 8-60 Paper movement (2 of 3)

3. The solenoid turns on when the next sheet arrives, and the feed plate comes into contact.

Figure 8-61 Paper movement (3 of 3)

Alignment of paper

The alignment motor (M5) drives the alignment plates each time paper is output, putting both left and right edges of the sheet in order. The alignment-plate motor is a four-phase stepping motor. The position of the alignment plate is identified by the number of motor pulses from the alignment-plate home-position sensor (PI5). The following briefly describes how the saddle-stitching mechanism operates on two sheets.

1. When the first sheet is output, the alignment plates touch the left and right edges of the stack (first alignment). The alignment plates leave the home position in advance and wait at points 10 mm from the edges of the stack.

Figure 8-62 Paper alignment (1 of 8)

2. The alignment plates move away from the stack and then return (Second alignment).

Figure 8-63 Paper alignment (2 of 8)

3. The alignment plates move 10 mm from the edge of the stack.

Figure 8-64 Paper alignment (3 of 8)

4. When the stack arrives, steps 1 through 3 repeat.

5. The alignment plates return to the stack and stitching takes place.

Figure 8-65 Paper alignment (4 of 8)

6. The alignment plates move 10 mm from the edges of the stack and folding and delivery takes place.

Figure 8-66 Paper alignment (5 of 8)

7. When the first sheet of the following stack reaches the No. 1 paper sensor, the guide moves to 10 mm from the edge of the stack for the next alignment.

Figure 8-67 Paper alignment (6 of 8)

Figure 8-68 Paper alignment (7 of 8)

Figure 8-69 Paper alignment (8 of 8)

In case of 2 sheets:

▨ : Alignment ▩ : Escape

- [1]: Move to wait position
- [2]: Stapling period
- [3]: Paper folding/delivery period
- [4]: Move to following stack size wait position

Control the phase of the crescent roller

During alignment, the crescent roller can create friction against the roller causing the stack to move incorrectly. To prevent this problem, the crescent-roller phase sensor (PI12) identifies the phase of the crescent roller to determine the timing of alignment. The flag for the crescent-roller phase sensor is

mounted to the crescent-roller shaft. The roller shaft rotates, turning the sensor on and off. Operation of the alignment plates corresponds with the change in the state of the sensor.

Figure 8-70 Crescent-roller process (1 of 4)

Figure 8-71 Crescent-roller process (2 of 4)

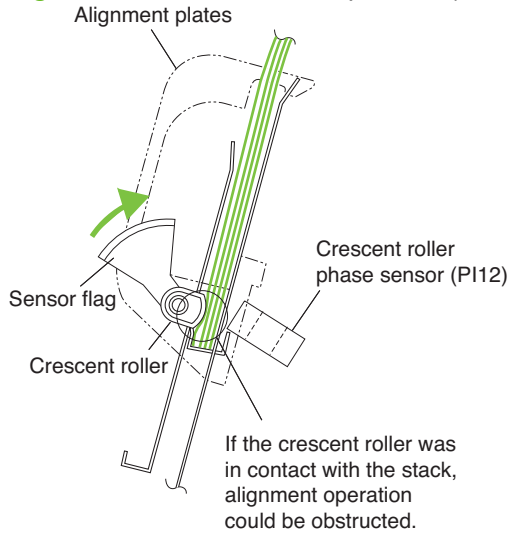

Figure 8-72 Crescent-roller process (3 of 4)

Figure 8-73 Crescent-roller process (4 of 4)

Overview of folding

The paper-folding mechanism includes a guide plate, paper-folding rollers, paper-pushing plate, and paper-positioning plate. The guide plate covers the folding rollers to prevent sheets from contacting the folding rollers during output. Before folding, the guide plate descends, allowing the folding rollers to operate. The following tables show the names and the functions of the motors and sensors used by the paper folding mechanism.

Motor	Function
Paper-folding motor (M2)	Drives the folding roller
Paper-pushing-plate motor (M8)	Drives the paper-pushing plate

Sensor	Function
Paper-pushing-plate-motor clock sensor (PI1)	Detects the paper-pushing-plate-motor clock
Paper-folding-motor clock sensor (PI4)	Detects the paper-folding-motor clock
Output-bin paper sensor (PI6)	Detects the presence/absence of a stack of sheets in the saddle output bin
Delivery sensor (PI11)	Detects the paper delivery
Paper-pushing-plate home-position sensor (PI14)	Detects the paper pushing plate leading edge position
Vertical-path paper sensor (PI17)	Detects the presence/absence of paper after removal of a jam
Paper-folding home-position sensor (PI21)	Detects the paper-folding home position

Control of stack movement

After stitching, the paper-positioning plate lowers allowing the stack to come into contact with the paper-folding rollers. The location of the paper-positioning plate is determined by the number of motor pulses from the paper-positioning home-position sensor (PI7). As the paper-positioning plate operates, the guide plate lowers for folding.

Figure 8-74 Movement of the stack

Figure 8-75 Stack sequence

Fold the stack

The paper-pushing plate pushes the center of the stack to the roller-contact section and waits at the leading-edge position until the stack is taken by the paper-folding roller. When the paper-folding roller has gripped the stack, the paper-pushing-plate motor rotates, returning the paper-pushing plate to its home position. The paper-folding roller draws the stack until the delivery roller moves it to the output bin. The thickness of the paper-folding rollers is reduced at the upper half of the periphery but maintained in the center area and at the lower half of the periphery. At the lower half of the periphery where the thickness is not reduced, the paper-folding roller (upper) and the paper-folding roller (lower) contact

each other tightly, and paper starts to be folded at this position. The upper and lower rollers feed paper while folding it and stop at the folding position. At the upper half of the periphery where the thickness is reduced, the upper and lower paper-folding rollers do not contact each other except at the center, so they only feed the paper to prevent paper from being wrinkled. The paper-folding start and stop positions are controlled by the number of motor pulses delivered from the paper-folding home-position sensor (P121).

Figure 8-76 Folding position (1 of 5)

Figure 8-77 Folding process (2 of 5)

Figure 8-85 Double-folding process (5 of 5)

Intermediate-process-tray assembly

See [Intermediate-process output-bin assembly \(stapler/stacker and booklet maker\) on page 591.](#)

Staple operation

The stacker unit provides 1-point front stapling, 1-point rear stapling, and 2-point stapling. The booklet stapler provides 2-point center stapling.

Figure 8-86 Location of the staplers

Stapler unit

- The staple motor (M41) rotates the cam one turn for stapling. The macro computer (IC101) on the stacker controller PCA controls the motor.
- The staple home-position sensor (PI50) detects the home position of the cam. When the staple home-position sensor is off, the stacker controller PCA rotates the staple motor forward until the sensor turns on, moving the staple cam to its original position.
- The staple sensor (PI52) detects presence of a staple cartridge and of staples in the cartridge.
- The staple-edging sensor (PI51) determines whether staples are pushed to the top of the staple cartridge.
- For safety, the stacker-controller circuit does not drive the staple motor (M41) unless the staple safety switch (MS34) is turned on.

Figure 8-87 Stapling operation (1 of 2)

Figure 8-88 Stapling operation (2 of 2)

Stapling operation

See [Staple operation \(stapler/stacker and booklet maker\)](#) on page 595.

Stitcher (stapler) unit

The stitcher base unit includes two stitchers and stitcher bases. The stitchers are fixed in position and do not slide or swing. Stitching begins when the stitcher motor (M7, M6) drives the rotary cam. The front and rear stitcher units operate with a time delay to prevent wrinkling of paper and to limit the load applied to the power supply. The stitcher home-position sensor (SW7, SW5) monitors the movement of the rotary cam and allows identification of individual stitcher operations. The staple sensor (SW6, SW4)

detects the presence or absence of staples inside the staple cartridge. The alignment plates keep both edges of the stack in place while stitching takes place.

Figure 8-89 Stitcher unit

Figure 8-90 Sequence of stitching

Figure 8-91 Rotation of the cam

Stack operation

See [Stack operation \(stapler/stacker and booklet maker\)](#) on page 601.

Jam detection

The stacker unit and booklet maker unit detect jams and provide messages to the product.

Detect jams in the stacker unit

The inlet sensor (PI33) and delivery sensor (PI34) detect the presence of paper to determine if paper is delivered properly. A jam is identified by checking whether paper is present at each sensor at the timing programmed in the memory of the microcomputer (CPU) on the stacker controller PCA. When the CPU identifies a jam, it suspends the stacker's delivery operation and informs the product. When all doors are closed after the paper jam is removed, the stacker checks whether paper is detected by the sensors (inlet sensor and delivery sensor). If the sensors detect paper, the stacker determines that paper jam is not removed and resends the message to the product.

Figure 8-92 Jams in the stacker unit

Detect jams in the booklet maker unit

The saddle stitcher unit identifies any of the following conditions as a jam, and sends the jam signal to the product. When all doors are closed after the jam is removed, the saddle stitcher unit checks whether the vertical-path paper sensor (PI17) has detected the presence of paper. If the sensor has detected

paper, the unit identifies the condition as being a faulty jam removal and sends the jam signal to the product once again.

Figure 8-93 Jams in the booklet maker unit

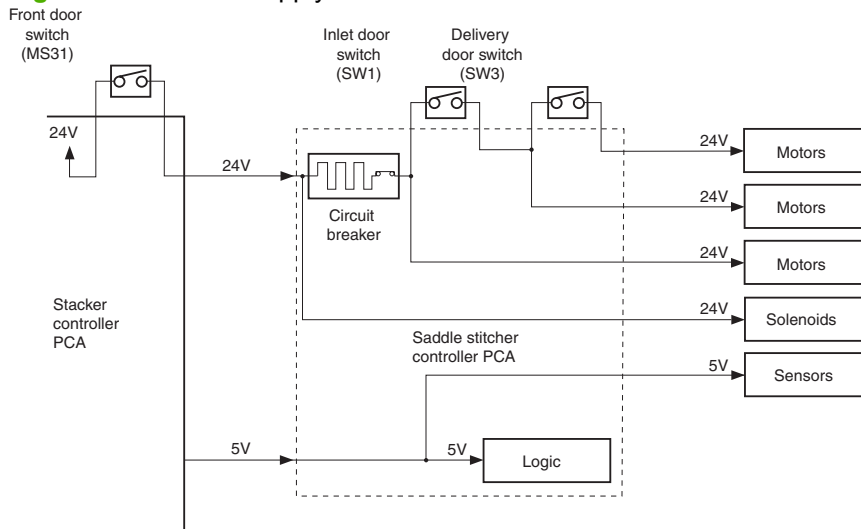

Power supply

The stacker unit and booklet maker unit use both 5 Vdc and 24 Vdc power.

Power-supply route for the stacker unit

When power is turned on, 5 Vdc and 24 Vdc are supplied from the product to the stacker controller PCA. The 24 Vdc power drives the motor, solenoid, and so on. The 5 Vdc power drives sensors, IC chips on the stacker controller PCA, and so on. Both 5 Vdc and 24 Vdc are also supplied from the stacker controller PCA to the saddle-stitcher controller PCA. The 24 Vdc power for the motor drive is shut down when the front door switch (MS31) is open. A block diagram of the power supply is shown as follows.

Figure 8-94 Power-supply route for the stacker unit

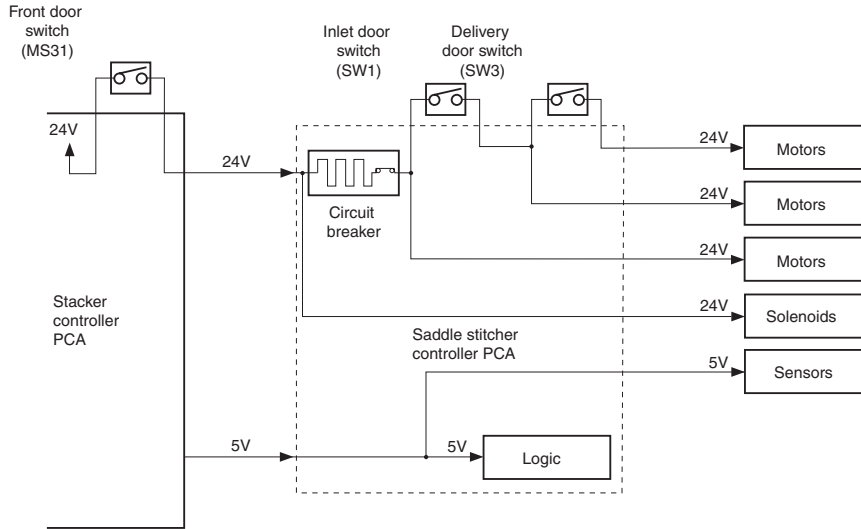

Protective function for the stacker unit

The 24 Vdc has a fuse or motor driver with over-current protection.

Power-supply route for the booklet maker unit

When the power to the product is turned on and the door is closed, 24 Vdc and 5 Vdc are supplied from the stacker-controller PCA as saddle sticher power. The 24 V power supply to solenoids is supplied from the stacker controller PCA without passing through protection mechanisms such as microswitches. The 5 Vdc power drives sensors, IC chips on the stacker controller PCA, and so on. The 24 V power supply to motors is not supplied if either of the door switches of the booklet maker unit is open.

Figure 8-95 Power supply route for the booklet maker unit

Protective function for the booklet maker unit

The 24 Vdc power supply for motors and solenoids comes with a circuit breaker (CB1). The 24 V power supply for the guide motor (M3), alignment motor (M5), and the paper-positioning plate motor (M4) comes with a fuse designed to blow when there is too much current.

Specifications

Use the following guidelines to obtain satisfactory results. For information about supported paper sizes, see, [Table 3-3 Supported paper and print media sizes for the optional HP 3-bin Stapler/Stacker and HP Booklet Maker/Finisher accessories on page 53.](#)

Accessory specifications

Table 8-11 Stapling and stacking specifications (stapler/stacker and booklet maker)

Item	Specifications		Remarks
Stacking method	Stack sub tray (for stapler/stacker only), output bin 1 and output bin 2: by lifting tray		Stack sub tray is interlocked with output bin 1
Stacking orientation	Face down		
Paper capacity	Paper form	Cut-sheet	
	Special paper	Envelope, OHT film, colored paper, label paper, thick paper	
	Paper weight	60 g/m ² to 220 g/m ²	
	Paper size	Feed direction: 139.7 mm to 482.6 mm Cross feed direction: 98.425 mm to 330.2 mm	Large size paper length > 216 mm Small size maximum paper length: 216 mm
Mode	Non sort, job offset, staple sort		
Paper size	Non sort	A3, B4, A4, A4-R, B5-R, A5-R, LDR, LGL, LTR, LTR-R, EXE-R, Youkei No.4, Kakukei No.2, COM10, Monarch, DL, C5, B5 envelope, New-DRY type postcard, 12 x 18, 312 x 440 mm, custom size	Large size: A3, B4, A4-R, LDR, LGL, LTR-R Small size: A4, B5-R, A5-R, LTR, EXE-R
	Job offset	A3, B4, A4, A4-R, LDR, LGL, LTR, LTR-R	
	Staple sort	A3, B4, A4, A4-R, LDR, LGL, LTR, LTR-R

Item	Specifications	Remarks		
Stacking capacity	Non sort, Job offset	Stack sub tray (for stapler/stacker only)	Large size maximum stack height: 17 mm Small maximum stack height: 24 mm	Stack tray overstacking detection is provided.
		Output bin 1	Large size maximum stack height: 73.5 mm Small size maximum stack height: 73.5 mm	
		Output bin 2	Large size maximum stack height: 73.5 mm Small size maximum stack height: 147 mm	
	Staple sort	Large size maximum stack height: 73.5 mm Small size maximum stack height: 73.5 mm 30 copies or less		
		Special paper	Not specified but up to 10 envelopes can be stacked	
		Mixed stacking	Plain paper, recycled paper 60 to 80 g/m ² Plain paper, thick paper 61 to 220 g/m ² Special paper	
Job offset	Not specified			
Staple sort	Maximum stack height: 73.5 mm, 30 copies or less			
Stapling position	Front 1-point stapling, Rear 1-point stapling, 2-point stapling	Rear parallel stapling		
Stapling	By rotating cam			
Staple supply	Special staple cartridge (5000 staples)			
Staple near end detection	Provided: Low staple warning is signaled after the staple near end is detected.	Remaining about 40 staples		
Staple detection	Provided			
Manual stapling	Not provided			

Table 8-11 Stapling and stacking specifications (stapler/stacker and booklet maker) (continued)

Item	Specifications	Remarks	
Staple capacity	Large size: 2 to 30 sheets 2 sheets of 199 g/m ² paper and 28 sheets of 80 g/m ² paper maximum: 30 sheets in total A3, B4, A4- R, LDR, LGL, LTR-R	Plain paper: 60 g/m ² to 81 g/m ² : 30 sheets	<ul style="list-style-type: none"> Stapling thickness: 5.5 mm or less Including 2 cover pages except extra thick paper when cover mode is applied
		Plain paper: 82 g/m ² to 90 g/m ² : 22 sheets	
		Thick paper: 91 g/m ² to 105 g/m ² : 14 sheets	
		Thick paper: 106 g/m ² to 120 g/m ² : 11 sheets	
		Thick paper: 121 g/m ² to 163 g/m ² : 9 sheets	
		Extra thick paper: 164 g/m ² to 199 g/m ² : 6 sheets	
		Extra thick paper: 200 g/m ² to 220 g/m ² : 5 sheets	
	Small size: 2 to 50 sheets 2 sheets of 199 g/m ² paper and 48 sheets of 80 g/m ² maximum: total 50 sheets A4, LTR	Plain paper: 60 g/m ² to 81 g/m ² : 50 sheets	
		Plain paper: 82 g/m ² to 90 g/m ² : 44 sheets	
		Thick paper: 91 g/m ² to 105 g/m ² : 28 sheets	
		Thick paper: 106 g/m ² to 148 g/m ² : 18 sheets	
		Thick paper: 149 g/m ² to 163 g/m ² : 13 sheets	
		Extra thick paper: 164 g/m ² to 199 g/m ² : 12 sheets	
		Extra thick paper: 200 g/m ² to 220 g/m ² : 5 sheets	
Glossy paper	Glossy paper: 91 g/m ² to 130 g/m ² : 8 sheets		
	Glossy paper: 131 g/m ² to 220 g/m ² : 5 sheets		
Self-diagnosis function	Provided with staple unit failure, tray failure and jam detection etc.	Identified by LED	
Dimensions	W: 662 mm x D: 657 mm x H: 1063 mm		
Weight	Approximately 54 kg

Table 8-12 Specifications for booklet making (Booklet maker only) (continued)

Item	Specifications
Position adjustment	Provided
Power supply	From stacker unit (24VDC)

Figure 8-97 Staple and folding position

Stapler/stacker output-bin capacities

The actual capacities of the stapler/stacker output bins vary from 100 sheets, to 500 sheets, to 1,000 sheets of plain paper, depending on the bin. However, the stapler/stacker has been designed to accept only 30 staple jobs at one time, regardless of the number of pages in each job. Therefore, customers may see an **OUTPUT BIN FULL** message on the control panel long before the individual output bin is at full capacity.

Table 8-13 Stapler/stacker output-bin capacities

Output bin	Actual capacity of output bin	Number of staple jobs accepted	Bin capacity for staple jobs
Top output bin	100 sheets of plain paper ¹	30 staple jobs, regardless of size	30 staple jobs, or 100 sheets (whichever comes first)
Output-bin 1	500 sheets of plain paper ¹		30 staple jobs or 500 sheets (whichever comes first)
Output-bin 2 (stacker bin)	1,000 sheets of plain paper ¹		30 staple jobs or 1,000 sheets (whichever comes first)

¹ Based on 75 g/m² (20 lb) paper

Example scenario:

A customer sends 40 staple jobs to the accessory with each job consisting of just two sheets (40 jobs x 2 sheets = 80 total sheets). Because the capacity of the stacker output bin is 1,000 sheets, the customer expects the 80-sheet job to output without issue.

However, the stacker bin sends an **OUTPUT BIN FULL** message to the control panel at the end of 30 jobs (30 jobs x 2 sheets = 60 total sheets). The actual full capacity of the output bin is 1,000 sheets, but

the stapler/stacker assumes the bin is full after stacking only 60 sheets due to reaching the 30-staple job limit.

The customer calls HP to complain that the stapler/stacker is not working correctly.

Booklet-maker output-bin capacities

The actual capacities of the booklet-maker output bins are 1,000 sheets of plain paper. However, the booklet maker has been designed to accept only 30 staple jobs at one time, regardless of the number of pages in each job. Therefore, customers may see an **OUTPUT BIN FULL** message on the control panel long before the individual output bin is at full capacity.

Table 8-14 Booklet-maker output-bin capacities

Output bin	Actual capacity of output bin	Number of staple jobs accepted	Bin capacity for staple jobs
Output-bin 1	1,000 sheets of plain paper ¹	30 staple jobs, regardless of size	30 staple jobs or 1000 sheets (whichever comes first)
Output-bin 2	1,000 sheets of plain paper ¹		30 staple jobs or 1,000 sheets (whichever comes first)

¹ Based on 75 g/m² (20 lb) paper

Removal and replacement

Intermediate paper-transfer unit (IPTU)

 **NOTE:** This item is called the “output-accessory bridge” in the user documentation for this printer.

NOTE: Before removing and replace FRUs from the IPTU, remove the IPTU from the printer.

IPTU

1. Remove two screws (callout 1).

Figure 8-98 Remove IPTU

2. Slide the IPTU away from the printer to remove.

Figure 8-99 Remove IPTU

△ **CAUTION:** When disassembling or reassembling the IPTU, use the edge of a work table as shown below.

Figure 8-100 Correct placement of the IPTU (1 of 2)

The connector can be damaged when the IPTU is placed on a table as shown below.

Figure 8-101 Incorrect placement of the IPTU (2 of 2)

Reverse guide

- Remove two pins (callout 1), and then remove the reverse guide (callout 2).

Figure 8-102 Remove the reverse guide

Rear cover

1. Remove three screws (callout 1) and then slide the upper cover (callout 2) in the direction that the arrow indicates to remove it.

Figure 8-103 Remove the rear cover (1 of 4)

2. Remove three screws (callout 1).

Figure 8-104 Remove the rear cover (2 of 4)

3. Remove three screws with washers (callout 1), and then release three tabs (callout 2). Release the bottom of the rear cover (callout 3) first and then lift to remove.

Figure 8-105 Remove the rear cover (3 of 4)

Figure 8-106 Remove the rear cover (4 of 4)

 **NOTE:** When reassembling, tighten the screws from left to right.

Figure 8-107 Reassemble the rear cover

Upper-guide assembly

1. Remove three screws (callout 1).

Figure 8-108 Remove upper-guide assembly (1 of 2)

2. Remove the upper-guide assembly (callout 1).

Figure 8-109 Remove upper-guide assembly (2 of 2)

Damper unit

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
2. Remove three screws (callout 1), and then remove the damper unit (callout 2).

Figure 8-110 Remove the damper unit

Right-belt drive unit

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
 - IPTU paper-feed motor 2. [IPTU paper-feed motor 2 on page 662](#)
2. Disconnect three connectors (callout 1).

Figure 8-111 Remove the right-belt drive unit (1 of 6)

3. Release three tabs (callout 1) and then remove two wire-harness guides (callout 2).

Figure 8-112 Remove the right-belt drive unit (2 of 6)

4. Disconnect two connectors (callout 1), and then remove two screws (callout 2). Release two tabs (callout 3), and then remove the IPTU driver PCA (callout 4).

Figure 8-113 Remove the right-belt drive unit (3 of 6)

5. Remove one screw (callout 1), and then remove the belt cover plate (callout 2).

Figure 8-114 Remove the right-belt drive unit (4 of 6)

6. Remove three screws (callout 1) , and then remove the right-belt drive unit (callout 2).

Figure 8-115 Remove the right-belt drive unit (5 of 6)

 **NOTE:** When reassembling, be sure to attach the IPTU drive using two washers with each screw.

Figure 8-116 Remove the right-belt drive unit (6 of 6)

Left-belt drive unit

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
 - Right-belt drive unit. See [Right-belt drive unit on page 654](#).
 - IPTU paper-feed motor 1. See [IPTU paper-feed motor 1 on page 661](#).
2. Remove one screw (callout 1) , and then remove the belt cover plate (callout 2).

Figure 8-117 Remove the left-belt drive unit (1 of 3)

3. Remove two screws (callout 1), and then remove the left-belt drive unit (callout 2).

Figure 8-118 Remove the left-belt drive unit (2 of 3)

 **NOTE:** When reassembling, be sure to attach the IPTU drive using two washers with each screw.

Figure 8-119 Remove the left-belt drive unit (3 of 3)

Finisher-lock assembly

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
2. Locate the finisher lock assembly (callout 1).

3. Disconnect three connectors (callout 1), and then release the wire harnesses from the guide (callout 2).

Figure 8-120 Remove the finisher-lock assembly (1 of 3)

4. Remove two screws (callout 1).

Figure 8-121 Remove the finisher-lock assembly (2 of 3)

 **NOTE:** Remove two screws (callout 1), and then remove the finisher-lock assembly (callout 2).

Figure 8-122 Remove the finisher-lock assembly (3 of 3)

IPTU paper-feed motor 1

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
2. Disconnect one connector (callout 1). Remove two screws (callout 2), and remove then the IPTU paper-feed motor 1 (callout 3).

Figure 8-123 Remove the IPTU paper-feed motor 1

IPTU paper-feed motor 2

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
2. Disconnect one connector (callout 1). Remove two screws (callout 2), and then remove the IPTU paper-feed motor 2 (callout 3).

Figure 8-124 Remove the IPTU paper-feed motor 2

IPTU driver PCA

1. Remove the following:
 - Rear cover. See [Rear cover on page 649](#).
2. Disconnect all the connectors on the IPTU driver PCA. Remove two screws (callout 1), release two tabs (callout 2), and then remove the IPTU driver PCA (callout 3).

Figure 8-125 Remove the IPTU driver PCA

Booklet maker and stapler/stacker

Identify the booklet maker and stapler/stacker

- Remove and replace procedures for the booklet maker (callout 1) and stapler/stacker (callout 2) are provided in this section.

Figure 8-126 Booklet maker and stapler/stacker (1 of 2)

Most FRUs and removal procedures apply to both the booklet maker (callout 1) and stapler/stacker (callout 2). Exceptions are noted where they exist.

Figure 8-127 Booklet maker and stapler/stacker (2 of 2)

Remove the booklet maker and stapler/stacker from the printer

1. Turn the power off.
2. Disconnect the power cord (callout 1).

Figure 8-128 Remove output accessory (1 of 5)

3. Open the front door to the output accessory and loosen the thumb screw (callout 1).

Figure 8-129 Remove output accessory (2 of 5)

4. Press down the release button while moving the output accessory away from the printer.

Figure 8-130 Remove output accessory (3 of 5)

 **NOTE:** When reassembling, adjust the wheels on the output accessory to ensure correct attachment to the printer.

Figure 8-131 Remove output accessory (4 of 5)

Figure 8-132 Remove output accessory (5 of 5)

External covers

Entrance lower-guide assembly

1. Remove five screws (callout 1) and the cover (callout 2).

Figure 8-133 Remove entrance lower-guide assembly (1 of 2)

2. Remove six screws (callout 1), one e-ring (callout 2), one thumbscrew (callout 3), and then remove the entrance lower-guide assembly.

Figure 8-134 Remove entrance lower-guide assembly (2 of 2)

Front door

1. Open the front door (callout 1) and remove the clip (callout 2).

Figure 8-135 Remove the front door

2. Lift the front door off the three hinges (callout 1) to remove.

Rear cover

1. Remove the cable cover by using the two pry points marked on the rear cover to release the cover.

 **NOTE:** Reposition output bins if necessary to remove the cable cover.

 **CAUTION:** When moving output bins, be careful not to damage the stack-delivery gate. See [Move output bins 1 and 2 on page 679](#).

Figure 8-136 Remove the rear cover (1 of 2)

 **CAUTION:** When reinstalling the cable cover, the cover must be flush with the rear cover so that it does not interfere with movement of the output bins, or damage can result.

2. Remove six screws (callout 1), and then lift the rear cover (callout 2) up and off.

Figure 8-137 Remove the rear cover (2 of 2)

Front-foot cover

1. Remove the following:
 - Front door. See [Front door on page 669](#)
2. Remove two screws (callout 1), and then remove the front-foot cover (callout 2) by moving the cover to the left and up.

Figure 8-138 Remove the front-foot cover

Rear-foot cover

1. Remove the following:
 - Rear cover. See [Rear cover on page 670](#).
2. Remove one screw (callout 1), and then slide the rear-foot cover (callout 2) to the right to remove.

Figure 8-139 Remove the rear-foot cover

Front inside-upper cover

1. Remove the following:
 - Front door. See [Front door on page 669](#).
2. Remove four screws (callout 1), and then remove the front inside-upper cover (callout 2).

Figure 8-140 Remove the front inside-upper cover

Front inside-lower cover (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#)
 - Front-foot cover. See [Front-foot cover on page 671](#)
2. Remove one screw (callout 1), and then remove the roller knob (callout 2).

Figure 8-141 Remove the front inside-lower cover (1 of 2)

3. Remove four screws (callout 1) and remove the front inside-lower cover (callout 2).

Figure 8-142 Remove the front inside-lower cover (2 of 2)

Left-upper cover

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Rear cover. See [Rear cover on page 670](#).
2. Remove two screws (callout 1).

Figure 8-143 Remove the left-upper cover (1 of 3)

3. With the top door open, tilt the left-upper cover to the right, and then slide it to the left to remove.

Figure 8-144 Remove the left-upper cover (2 of 3)

 **NOTE:** When replacing, hook the two tabs of the left-upper cover (callout 1) under the steel plate located under the top door.

Figure 8-145 Remove the left-upper cover (3 of 3)

Top door

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Rear cover. See [Rear cover on page 670](#).
2. Open the top door (callout 1) and locate the two hooks (callout 2) at the top of the two spring-loaded arms.

Figure 8-146 Remove the top door (1 of 3)

3. Press the hooks at the top (callout 1) to release them from the top door.

Figure 8-147 Remove the top door (2 of 3)

4. Remove one screw (callout 1), and then remove the top door (callout 2).

Figure 8-148 Remove the top door (3 of 3)

Grate-shaped upper guide

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).

 **NOTE:** Position output bins below the grate-shaped upper guide.

2. Remove five screws (callout 2), and then remove the grate-shaped upper guide (callout 1).

Figure 8-149 Remove the grate-shaped upper guide

Move output bins 1 and 2

△ **CAUTION:** Lowering the output bins without lifting the shutter can cause the stack-delivery gate to come off the accessory.

1. Raise and hold the shutter to cover the stack-delivery gate.

Figure 8-150 Move output bins (1 of 3)

2. While covering the shutter, pull the output-bin lift-motor-gear clutch on the bottom of the output bin. Lower the output bin past the stack-delivery gate.

△ **WARNING!** Hold the output bin with your hand when releasing the clutch. When the output-bin lift-motor-gear clutch is released, the output bin drops by its own weight.

Figure 8-151 Move output bins (2 of 3)

📄 **NOTE:** If the stack-delivery gate (callout 1) comes off, retain the spring (callout 2) and reinstall. The spring ends (callout 3) fit in the slots provided.

Figure 8-152 Move output bins (3 of 3)

Grate-shaped lower guide

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#).
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
2. Remove ten screws (callout 1), and then remove the grate-shaped lower guide.

Figure 8-153 Remove grate-shaped lower guide

 **NOTE:** When reinstalling, be careful not to hook the grate-shaped lower guide to the sensor flag arm.

PCA cover

- Remove eight screws (callout 1), and then remove the PCA cover (callout 2) (booklet maker only).

Figure 8-154 Remove the PCA cover

Drive system

Stapler

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 2. Pull out the stapler, remove one screw (callout 1), and then remove the PCA cover (callout 2).
- △ **CAUTION:** Handle the FCC cable (callout 3) with care. It can be easily damaged if folded, dented, or mishandled.

Figure 8-155 Remove stapler (1 of 3)

3. Disconnect three connectors (callout 1), release one tab (callout 2), and then remove the PCA (callout 3).

Figure 8-156 Remove stapler (2 of 3)

4. Remove one screw (callout 1), and then remove the stapler with the stapler base (callout 2).

△ **CAUTION:** When removing and reinstalling the stapler, be careful not to damage the flag (callout 3).

Figure 8-157 Remove stapler (3 of 3)

Stapler assembly

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Stapler. See [Stapler on page 683](#).
2. Remove one screw (callout 1), and then remove one cover (callout 2).

Figure 8-158 Remove stapler assembly (1 of 5)

3. Disconnect one connector (callout 1).

Figure 8-159 Remove stapler assembly (2 of 5)

4. From the rear of the accessory, remove two screws (callout 1).

Figure 8-160 Remove stapler assembly (3 of 5)

5. From the front of the accessory, push the stapler assembly back to clear the tabs (callout 1), and then lift up. Remove the stapler assembly through the front of the accessory.

△ **CAUTION:** Handle the FCC cable (callout 3) with care. It can be easily damaged if folded, dented, or mishandled.

Figure 8-161 Remove stapler assembly (4 of 5)

📄 **NOTE:** When reinstalling, make sure the tabs are positioned correctly (callout 1).

Figure 8-162 Remove stapler assembly (5 of 5)

Swing unit

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#).
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#).
 - Processing tray. See [Operation-tray assembly on page 703](#).
2. Remove one screw (callout 1), and then lift the swing-pressure guide (callout 2) to remove.

Figure 8-163 Remove the swing unit (1 of 6)

3. Remove one e-ring (callout 1), two belts (callout 2), and one gear (callout 3).

Figure 8-164 Remove the swing unit (2 of 6)

4. Unhook the swing pressure rack (callout 1) from the swing unit center hook.

Figure 8-165 Remove the swing unit (3 of 6)

5. Remove one e-ring (callout 1) on each side of the swing unit.

Figure 8-166 Remove the swing unit (4 of 6)

6. Slide the bushing (callout 2) to the inside and lift the swing unit (callout 1) to remove.

Figure 8-167 Remove the swing unit (5 of 6)

△ **CAUTION:** When reinstalling the swing unit, make sure the grounding plate (callout 1) is positioned so that the bottom of the grounding plate rubs against the metal plate when the swing arm moves up and down. Also make sure the pins (callout 2) are inserted correctly and the swing-pressure guide is flush (callout 3).

Figure 8-168 Remove the swing unit (6 of 6)

Upper crossmember unit

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
2. Remove the e-ring (callout 1). Slide the shaft (callout 2) to the rear side, and then remove the bushing (callout 3). Remove one screw (callout 4), and then remove the stopper (callout 5).

Figure 8-169 Remove the upper crossmember unit (1 of 5)

3. Disconnect four connectors (callout 1), and then remove the wire from the six wire retainers (callout 2).

Figure 8-170 Remove the upper crossmember unit (2 of 5)

4. Remove one screw (callout 1) and a grounding wire (callout 2). Remove the two cable bands (callout 3). Disconnect six connectors (callout 4), and then release 16 wire retainers (callout 5).

Figure 8-171 Remove the upper crossmember unit (3 of 5)

5. Remove the four screws (callout 1).

Figure 8-172 Remove the upper crossmember unit (4 of 5)

6. Lift the upper crossmember unit (callout 1), release the catch of the swing pressure rack (callout 2), and then remove the upper crossmember unit.

 **NOTE:** Do not lose the spring that is attached to the back of the upper crossmember unit.

Figure 8-173 Remove the upper crossmember unit (5 of 5)

Saddle unit (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Front inside-lower cover. See [Front inside-lower cover \(booklet maker only\) on page 673](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#).
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#).
 - Booklet-delivery output bin unit. See [Booklet-delivery output bin unit \(booklet maker only\) on page 715](#).
 - PCA cover. See [PCA cover on page 682](#).
 - Inlet feed unit. See [Inlet feed unit \(booklet maker only\) on page 729](#) or [Inlet feed unit \(stapler-stacker only\) on page 726](#).
2. Disconnect two connectors (callout 1), and then release the wire from the two retainers (callout 2). From the delivery side, release the wire from the two retainers (callout 3).

Figure 8-174 Remove the saddle unit (1 of 7)

3. Remove two screws (callout 1).

Figure 8-175 Remove the saddle unit (2 of 7)

4. Remove one screw (callout 1), and then remove one spring (callout 2).

Figure 8-176 Remove the saddle unit (3 of 7)

5. Disconnect one connector (callout 1). Release two wire retainers (callout 2), and then remove two screws (callout 3). Remove the guide plate (callout 4).

Figure 8-177 Remove the saddle unit (4 of 7)

6. Remove four screws (callout 1), and then remove two brackets (callout 2).

Figure 8-178 Remove the saddle unit (5 of 7)

7. Remove three screws (callout 1), and then remove the saddle unit (callout 2) from the paper-feed side.

Figure 8-179 Remove the saddle unit (6 of 7)

NOTE: Install the saddle unit so that the Mylar (callout 1) at the front-upper side of the saddle is on the outside of the delivery-guide plate (callout 2). A delivery fault will occur if it is on the inside.

Figure 8-180 Remove the saddle unit (7 of 7)

Saddle-stapler assembly (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front inside-lower cover. See [Front inside-lower cover \(booklet maker only\) on page 673](#).
2. Remove one e-ring (callout 1), one shaft (callout 2), and one roller (callout 3). With one hand on the handle and the other supporting the bottom, slide the stitcher stapler out of the accessory.

Figure 8-181 Remove the saddle-stapler assembly

Positioning plate unit (inner side-plate assembly) (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front inside-lower cover. See [Front inside-upper cover on page 672](#).
 - PCA cover. See [PCA cover on page 682](#).
 - Saddle-stitcher controller PCA. See [Saddle-stitcher controller PCA \(booklet maker only\) on page 738](#).
2. Remove four screws (callout 1) and two brackets (callout 2).

Figure 8-182 Remove the positioning plate unit (1 of 5)

3. Disconnect two connectors (callout 1), two wire retainers (callout 2), and two clamps (callout 3).

Figure 8-183 Remove the positioning plate unit (2 of 5)

4. Disconnect two connectors (callout 1) and release four wire retainers (callout 2). Remove three screws (callout 3), and then remove the paper-folding/paper-pushing motor base (callout 4).

Figure 8-184 Remove the positioning plate unit (3 of 5)

5. Remove four screws (callout 1), and then remove the stay (callout 2). Do not remove the wire retainer on the stay.

Figure 8-185 Remove the positioning plate unit (4 of 5)

6. Disconnect two connectors (callout 1) and release two wire retainers (callout 2). Remove two screws (callout 3), shift the positioning plate unit (callout 4) forward, and then remove it from the paper-feeding side.

Figure 8-186 Remove the positioning plate unit (5 of 5)

Document feed system

Operation-tray assembly

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#).
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#).

2. The sensor flag arm is very fragile. Grip the sensor flag by the snap fasteners and not by the arm. To remove the sensor flag, start at one end, grip each snap fastener at the base gently pull to remove one at a time.

Figure 8-187 Remove the operation-tray assembly (1 of 6)

 **NOTE:** When reinstalling, the small tab (callout 2) on each snap fastener must be inserted into a hole (callout 3). The sensor flag (callout 1) will not work properly if the tabs are not installed correctly.

Figure 8-188 Remove the operation-tray assembly (2 of 6)

3. Remove one e-ring (callout 1), one parallel pin (callout 2), one gear (callout 3), one e-ring (callout 4), and one bushing (callout 5).

 **NOTE:** The parallel pin (callout 3) drops when the gear (callout 2) is removed. Be sure to locate and save the pin for reinstallation.

Figure 8-189 Remove the operation-tray assembly (3 of 6)

4. Release three wire retainers (callout 1). Remove four screws (callout 2), and then remove the PCA mount (callout 3).

Figure 8-190 Remove the operation-tray assembly (4 of 6)

5. Remove one e-ring (callout 1) and the stack-delivery-roller rear-side clutch (callout 2). Behind the clutch, remove one e-ring (callout 3), one bushing (callout 4), and one bearing (callout 5), and then remove the stack-delivery roller.

Figure 8-191 Remove the operation-tray assembly (5 of 6)

6. Disconnect one connector (callout 1), and then release one clamp and one edge saddle (callout 2). Remove two screws (callout 3), and then pull out the operation-tray assembly (callout 4) in the paper-delivery direction.

 **NOTE:** When removing parts inside the operation tray, be careful not to exert force on the aligning plates (front/rear) or the rear-end stopper plate.

Figure 8-192 Remove the operation-tray assembly (6 of 6)

 **NOTE:** When attaching the operation-tray assembly, do not mount the Mylar sheet (callout 1) on top of the stack trailing-edge assist guide (callout 2).

Figure 8-193 Correct position of sheet

Output-bin 1

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#)
2. Remove one screw (callout 1), and then remove the stopper (callout 2).

Figure 8-194 Remove output-bin 1 (1 of 3)

3. Remove two screws (callout 1), release two wire retainers (callout 2) and then disconnect two connectors (callout 3).

Figure 8-195 Remove output-bin 1 (2 of 3)

4. Hold output-bin 1 to prevent the bin from falling. Insert your finger in the hole at the rear side of the bin and release the lift-motor gear. Lift the shutter to prevent damage to the stack-delivery gate. Lift output-bin 1 to remove.

Figure 8-196 Remove output-bin 1 (3 of 3)

 **NOTE:** When reinstalling, be careful not to twist the tray cable. Lift the shutter to prevent damage to the stack-delivery gate. See [Move output bins 1 and 2 on page 679](#)

NOTE: Output bin 1 and output bin 2 are different. Do not reverse the locations of the output bins when reinstalling

Output-bin 2

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#)
 - Output-bin 1. See [Output-bin 1 on page 708](#).
2. Remove screw (callout 1), and then remove the stopper (callout 2).

Figure 8-197 Remove output-bin 2 (1 of 3)

3. Remove two screws (callout 1) and one connector (callout 2).

 **NOTE:** Output-bin 2 has one connector. Output-bin 1 has two connectors.

Figure 8-198 Remove output-bin 2 (2 of 3)

4. Hold output-bin 2 to prevent the bin from falling. Insert your finger in the hole at the rear side of the bin and release the lift-motor gear. Lift the shutter to prevent damage to the stack-delivery gate. Lift output-bin 2 to remove.

Figure 8-199 Remove output-bin 2 (3 of 3)

 **NOTE:** When reinstalling, be careful not to twist the tray cable. Lift the shutter to prevent damage to the stack-delivery gate. See [Move output bins 1 and 2 on page 679](#)

NOTE: Output bin 1 and output bin 2 are different. Do not reverse the locations of the output bins when reinstalling

Upper output bin (stapler-stacker only)

- Lift the back of the upper output bin (callout 1) to remove.

Figure 8-200 Remove the upper output bin

Buffer rollers

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
2. Remove the buffer roller axis (callout 1) from the two arms (callout 2). Remove two clips (callout 3), and then remove the two buffer rollers (callout 4).

Figure 8-201 Remove buffer rollers

Booklet-delivery output bin (booklet maker only)

1. Press the hinge of the booklet-delivery output bin to release it from the booklet maker accessory.

Figure 8-202 Remove booklet-delivery output bin (1 of 2)

2. Disconnect one connector (callout 1), and then remove the booklet-delivery output bin.

Figure 8-203 Remove booklet-delivery output bin (2 of 2)

Booklet-delivery output bin unit (booklet maker only)

1. Lift the lever (callout 1) to open booklet-delivery output bin unit.

Figure 8-204 Remove the saddle-delivery output bin (1 of 3)

2. Remove the door pin (callout 1) to release the booklet-delivery output bin unit.

Figure 8-205 Remove the saddle delivery output bin (2 of 3)

3. Release one wire retainer (callout 1) and disconnect two connectors (callout 2). Remove the booklet-delivery output bin unit.

Figure 8-206 Remove the saddle delivery output bin (3 of 3)

Return roller unit

1. Remove the following:
 - Front door. See [Front door on page 669](#)
 - Rear cover. See [Rear cover on page 670](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#)
 - Swing unit. See [Swing unit on page 688](#)
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Upper output bin (stapler-stacker only). See [Upper output bin \(stapler-stacker only\) on page 712](#).

2. Disconnect one connector (callout 1), release two wire retainers (callout 2), and remove two screws (callout 3).

Figure 8-207 Remove the return roller unit (1 of 2)

3. Remove return roller unit from the front side.

Figure 8-208 Remove the return roller unit (2 of 2)

Pressure roller unit

1. Remove the following:
 - See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#)
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Top door. See [Top door on page 676](#).
 - Upper crossmember unit. See [Upper crossmember unit on page 692](#).
 - Stacker controller PCA. See [Stacker controller PCA on page 737](#).
2. Release three wire retainers (callout 1), remove four screws (callout 2), and then remove the PCA mount (callout 3).

Figure 8-209 Remove the pressure roller unit (1 of 8)

3. Disconnect one connector (callout 1) and release two wire retainers (callout 2).

Figure 8-210 Remove the pressure roller unit (2 of 8)

4. Remove three screws (callout 1), and then remove the drive unit (callout 2).

Figure 8-211 Remove the pressure roller unit (3 of 8)

5. Remove one e-ring (callout 1), one gear (callout 2), and one parallel pin (callout 3).

 **NOTE:** The parallel pin (callout 3) drops when the gear (callout 2) is removed. Be careful not to lose it.

Figure 8-212 Remove the pressure roller unit (4 of 8)

6. Remove one e-ring (callout 1), one gear (callout 2), and one parallel pin (callout 3).

 **NOTE:** The parallel pin (callout 3) drops when the gear (callout 2) is removed. Be careful not to lose it.

Figure 8-213 Remove the pressure roller unit (5 of 8)

7. Remove the e-ring (callout 1) and one bushing (callout 2).

Figure 8-214 Remove the pressure roller unit (6 of 8)

8. Remove one e-ring (callout 1) and one bushing (callout 2).

Figure 8-215 Remove the pressure roller unit (7 of 8)

9. Slide the pressure roller unit (callout 1) to the rear side, and then remove from the front side.

Figure 8-216 Remove the pressure roller unit (8 of 8)

Entrance upper guide unit

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#)
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Top door. See [Top door on page 676](#).
2. Remove one screw (callout 1), and then remove the grounding wire (callout 2).
3. Release three wire retainers (callout 3).

Figure 8-217 Remove the entrance upper guide unit (1 of 3)

4. Disconnect one connector (callout 3).

Figure 8-218 Remove the entrance upper guide unit (2 of 3)

5. Remove one screw (callout 1), and then remove the door lock unit (callout 2).
6. Remove one screw (callout 3), and then remove the grounding wire (callout 4).
7. Remove one screw (callout 5), and then remove the one pin (callout 6).
8. Remove the entrance upper guide unit (callout 7).

Figure 8-219 Remove the entrance upper guide unit (3 of 3)

Upper-delivery guide (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#).
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#).
2. Remove two screws (callout 1), one ground screw (callout 2), and then remove the upper-delivery guide (callout 3).

Figure 8-220 Remove the upper-delivery guide

Inlet feed unit (stapler-stacker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#).
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
2. Remove three screws (callout 1), and then remove the front inside-lower cover (callout 2).

Figure 8-221 Remove the inlet feed unit (1 of 4)

3. Remove the rear cover.

4. Remove two connectors (callout 1), and then remove two screws (callout 2).

Figure 8-222 Remove the inlet feed unit (2 of 4)

5. Remove the two screws from the front side of the inlet feed unit (callout 1).

Figure 8-223 Remove the inlet feed unit (3 of 4)

6. Open the top door (callout 1) and remove the inlet feed unit (callout 2) by lifting up and off.

Figure 8-224 Remove the inlet feed unit (4 of 4)

Inlet feed unit (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#)
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Front inside-lower cover. See [Front inside-lower cover \(booklet maker only\) on page 673](#).
 - Rear cover. See [Rear cover on page 670](#).
2. Disconnect the four connectors (callout 1), and then remove the harness from the clamp (callout 2).
3. Remove the three screws (callout 3).

Figure 8-225 Remove the inlet feed unit (1 of 4)

4. Remove three screws (callout 1), and then remove the support plate (callout 2).

Figure 8-226 Remove the inlet feed unit (2 of 4)

5. Remove one screw (callout 1).

Figure 8-227 Remove the inlet feed unit (3 of 4)

6. Open the top door (callout 1), and then remove the inlet feed unit (callout 2).

Figure 8-228 Remove the inlet feed unit (4 of 4)

Paper-folding roller (booklet maker only)

1. Remove the following:
 - Front door. See [Front door on page 669](#)
 - Front inside-upper cover. See [Front inside-upper cover on page 672](#).
 - Front-foot cover. See [Front-foot cover on page 671](#).
 - Front inside-lower cover. See [Front inside-lower cover \(booklet maker only\) on page 673](#).
 - Rear cover. See [Rear cover on page 670](#).
 - Rear-foot cover. See [Rear-foot cover on page 671](#).
 - Left-upper cover. See [Left-upper cover on page 674](#).
 - Grate-shaped upper guide. See [Grate-shaped upper guide on page 678](#).
 - Upper output bin. See [Upper output bin \(stapler-stacker only\) on page 712](#)
 - Output-bin 1. See [Output-bin 1 on page 708](#).
 - Output-bin 2. See [Output-bin 2 on page 710](#).
 - Grate-shaped lower guide. See [Grate-shaped lower guide on page 681](#)
 - Upper-delivery guide. See [Upper-delivery guide \(booklet maker only\) on page 725](#)
 - PCA cover. See [PCA cover on page 682](#)
2. Disconnect two connectors (callout 1), and then release two edge saddles (callout 2) and two clamps (callout 3).

Figure 8-229 Remove the paper-folding roller (1 of 9)

3. Disconnect two connectors (callout 1) and release four edge saddles (callout 2). Remove three screws (callout 3), and then remove the paper-folding/paper-pushing motor base (callout 4).

Figure 8-230 Remove the paper-folding roller (2 of 9)

4. Remove one screw (callout 1), one spring retaining plate (callout 2), and two tension springs (callout 3).

Figure 8-231 Remove the paper-folding roller (3 of 9)

5. Remove one screw (callout 1), one spring-retaining plate (callout 2), and two tension springs (callout 3).

Figure 8-232 Remove the paper-folding roller (4 of 9)

6. From the rear side, remove two c-rings (callout 1), remove one sensor flag (callout 2), and then remove two bearings (callout 3).

Figure 8-233 Remove the paper-folding roller (5 of 9)

7. From the front, remove two c-rings (callout 1), remove two gears (callout 2), and then remove two bearings (callout 3).

Figure 8-234 Remove the paper-folding roller (6 of 9)

8. Open the saddle delivery output bin. Remove two screws (callout 1) and two brackets (callout 2).

Figure 8-235 Remove the paper-folding roller (7 of 9)

- Slide the two paper-folding rollers to the front, and then pull them out in the delivery direction.

Figure 8-236 Remove the paper-folding roller (8 of 9)

- △ **CAUTION:** When reinstalling, attach the gears (callout 1) so that the slots (callout 2) of the paper-folding rollers face each other to ensure gear alignment.

Figure 8-237 Remove the paper-folding roller (9 of 9)

Electrical system

Stacker controller PCA

1. Remove the following:
 - Rear cover. See [Rear cover on page 670](#).
2. Disconnect all connectors (callout 1) on the stacker controller PCA.
3. Remove four screws (callout 2), and then remove the stacker controller PCA (callout 3).

Figure 8-238 Remove the stacker controller PCA

4. Adjust the stack alignment position. See [Adjust the alignment position on page 768](#).

Saddle-stitcher controller PCA (booklet maker only)

1. Remove the following:
 - Rear cover. See [Rear cover on page 670](#).
2. Disconnect all connectors on the saddle-stitcher controller PCA. Remove four screws (callout 1) and then remove the saddle-stitcher controller PCA.

Figure 8-239 Remove the saddle-stitcher controller PCA

3. Adjust the folding position. See [Adjust the folding position to the stitch position \(Booklet maker only\) on page 770](#).

Solve problems

Intermediate paper-transfer unit (IPTU)

 **NOTE:** This item is called the “output-accessory bridge” in the user documentation for this product.

Stapler/stacker and booklet maker

Individual component diagnostics

Manual sensor test

The manual sensor test indicates the status of the sensors in the product. It can verify the current status or the last change in status of the listed sensors.

From the **DIAGNOSTICS** menu, scroll to and touch **Read all once** to check the current status of the sensors. Each sensor is assigned a letter. The sensor test indicates the status of each sensor with a corresponding “0” for non-activated or “1” for activated. The status message appears on the control-panel display for 10 seconds. After 10 seconds, the message is cleared and **Ready** appears on the control-panel display.

From the **DIAGNOSTICS** menu, scroll to and touch **Continuous reading** to check the last change in status of the sensors. The output device reads the status of the sensors and stores the data. Next, the output device continuously reads the sensors until it detects a change. The change-in-status message appears on the control-panel display indicating which sensor changed from the original reading. Note that the status messages appear on a first-in, first-out basis. If two or more sensors change in a short period of time, only the first change detected is indicated as a status message on the control-panel display.

Use the following table to determine which component each letter designates..

Table 8-15 Manual sensor test letter designations

Letter	Component
A	Front door 1, PI32 (Front-door sensor)
B	Front door 2, PI9 (Saddle-guide sensor)
C	Top door, PI31 (Top-door sensor)
D	Booklet door 1, PI3 (Booklet-delivery-door sensor)
E	Booklet door 2, SW3
F	Stapler home sensor, P140 (Staple-shift home-position sensor)
G	Swing unit, PI35 (Swing-guide home-position sensor)
H	Folding plate, PI13 (Guide home-position sensor)
I	Process tray assy, PI38 (Processing-tray sensor)
J	Bin-1 empty, PI42 (Output-bin-1 paper sensor)

Table 8-15 Manual sensor test letter designations (continued)

Letter	Component
K	Bin-2 empty, PI43 (Output-bin-2 paper sensor)
L	Bin-3 empty, PI44
M	Flapper 1, PI19 (#1 flapper paper sensor)
N	Flapper 2, PI20 (#2 flapper paper sensor)

Component test

The component test exercises the individual motors and solenoids one at a time so that you can determine the cause of noise inside the product. The component test exercises each motor for approximately 5 seconds and each solenoid for 3 seconds. Note that the product requires that some motors be moved back to the home position. The solenoids are deactivated after the exercise period.

A list of the motors and solenoids appears on the control-panel display, but no messages appear unless the component test detects a hardware malfunction. The following table lists the motors and solenoids that are exercised during the component test.

Table 8-16 Component test motors and solenoids

Component number	Component name
M1	Delivery motor (Feed motor)
M2	Folding motor (Paper-folding motor)
M3	Guide motor
M4	Guide-plate motor (Paper-positioning-plate motor)
M9	Inlet motor (Saddle-inlet motor)
M31	Entrance motor
M35	Staple motor (Staple-shift motor)
M36	Swing motor
M37	Tray-1 motor (Output-bin-1-shift motor)
M38	Tray-2 motor (Output-bin-2-shift motor)
M39	Process motor (Stack trailing-edge-assist motor)
SL1	Flapper-1 solenoid (#1 paper-deflecting solenoid)
SL2	Flapper-2 solenoid (#2 paper-deflector solenoid)
SL4	Booklet solenoid (Feed-plate-contact solenoid)
SL5	Switch solenoid (Saddle-inlet solenoid)
SL31	Roller 1A solenoid (Inlet-roller-alienate solenoid)
SL32	Buffer solenoid (Buffer-roller-alienate solenoid)
SL33	Output solenoid (#1 delivery-roller-alienate solenoid)
SL34	Guide solenoid (Buffer rear-end holding solenoid)

LED diagnostics

The LEDs (callout 1) on the rear cover of the accessories indicate malfunctions and errors by blinking a specified number of times.

Figure 8-240 LEDs on the output accessories

Table 8-17 LED

Classification	Number of blinks			Error
	Red LED	Yellow LED	Green LED	
Malfunction (Stacker unit)	1		1	Swing motor (M36)

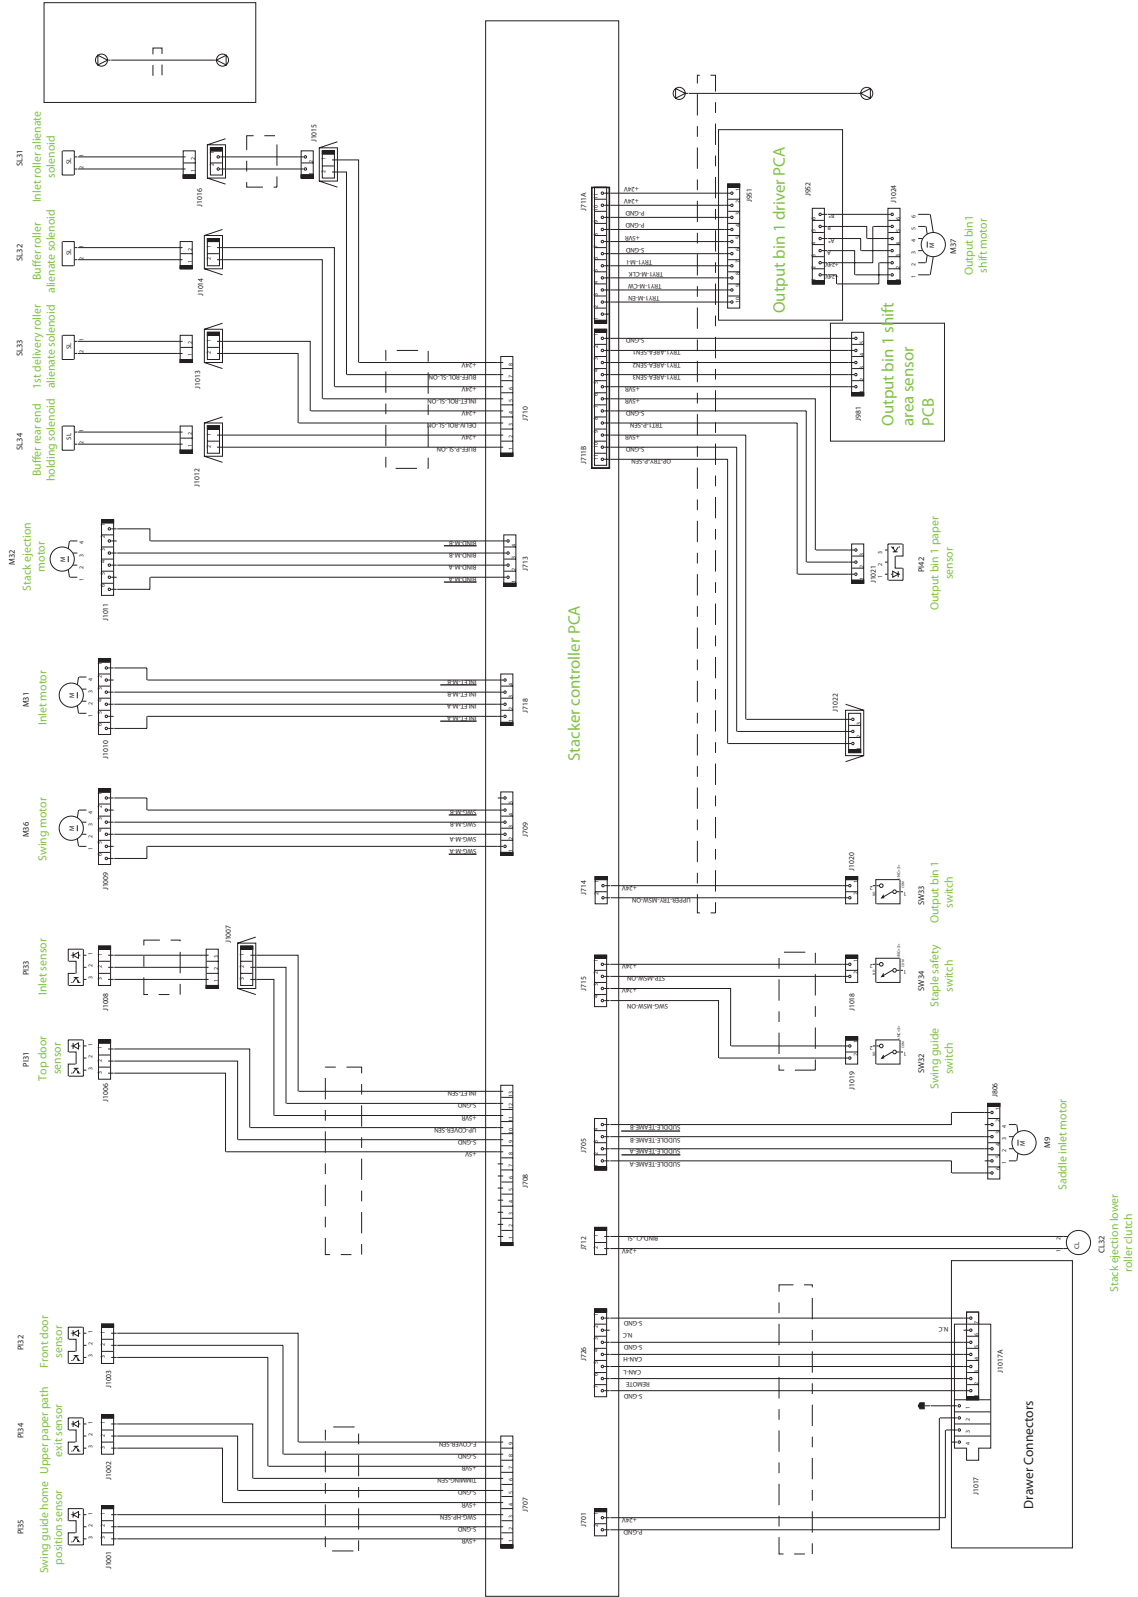

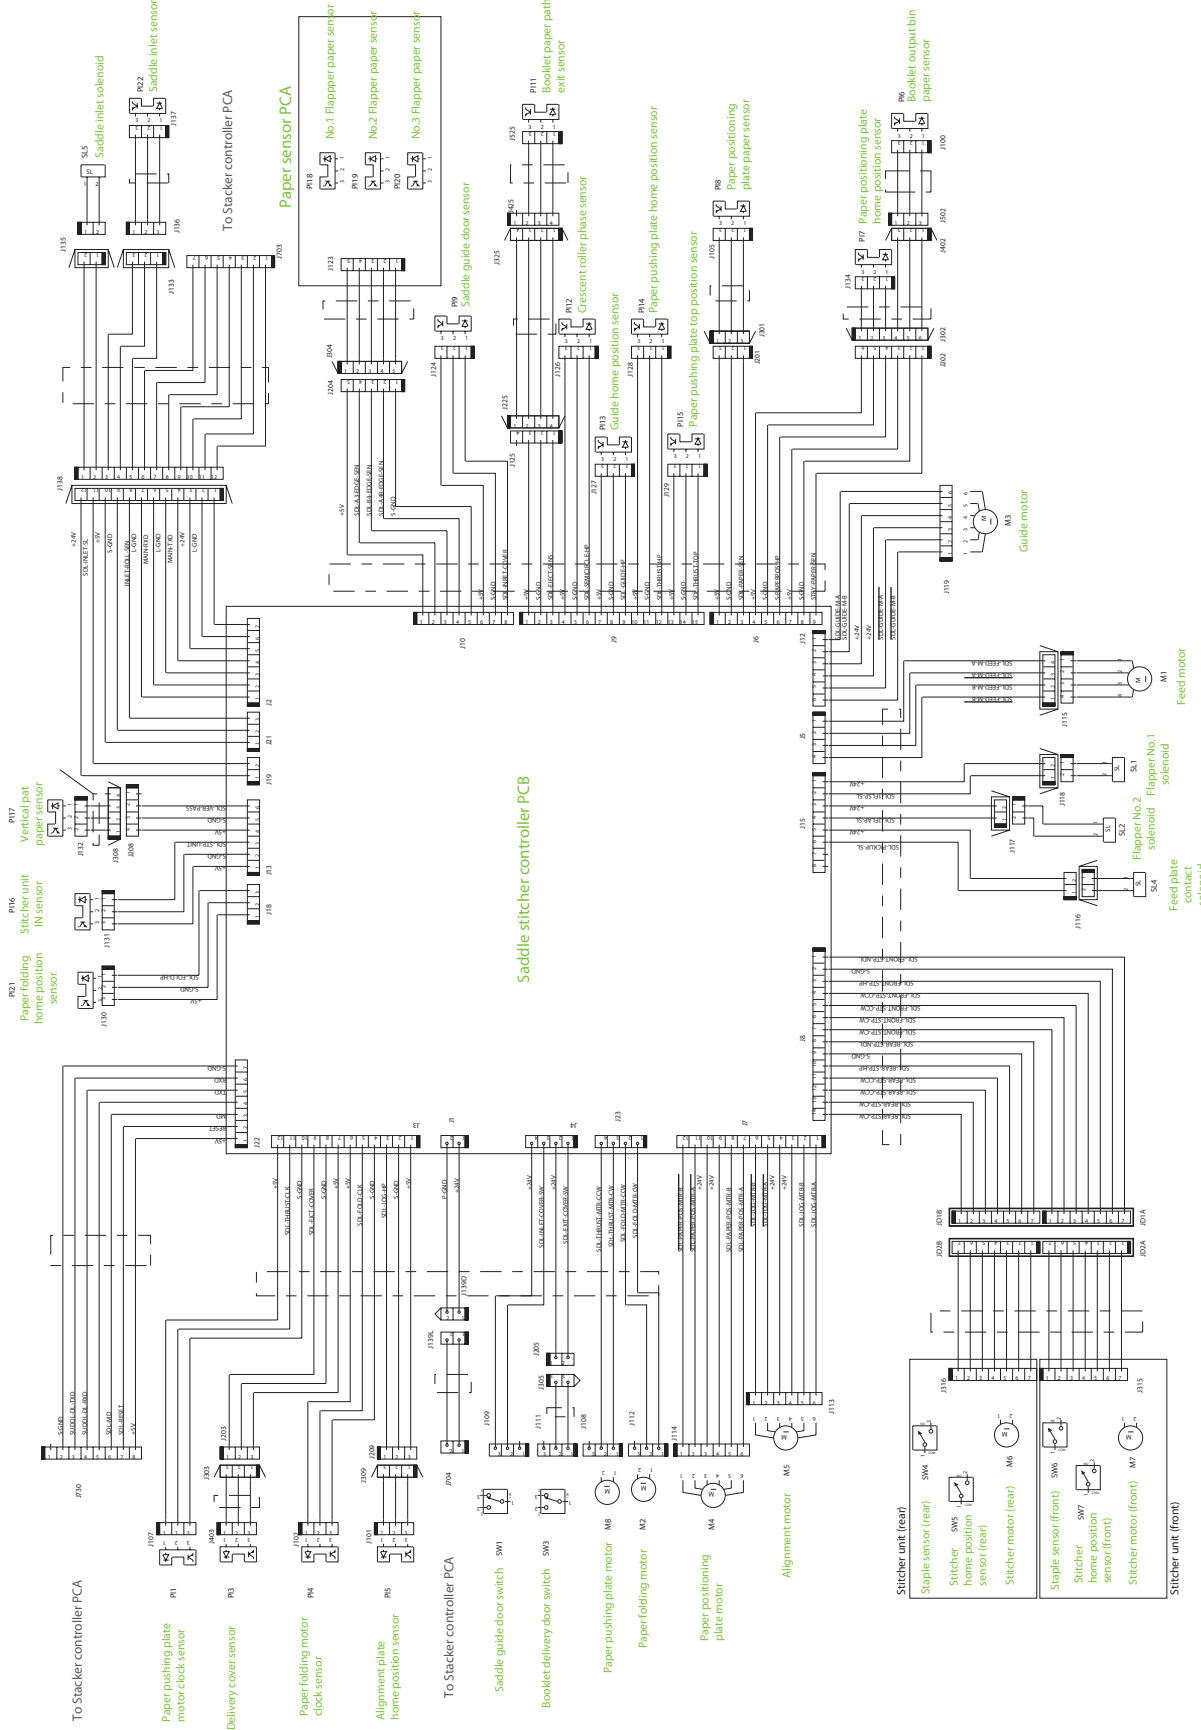

Figure 8-263 Saddle-stitcher controller PCA circuit diagram

Adjustments

Adjust the alignment position

These adjustments are for the primary stapler unit for the both the stapler/stacker and booklet maker finishers.

Perform this adjustment after replacing the stacker controller PCA or when the alignment position must be changed.

 **NOTE:** When the stacker controller PCA is replaced, EP-ROM (IC10) must be transferred from the old board to the new board so that old adjustment values stay with finisher. Otherwise, this adjustment must be made in order to program IC10.

1. Turn the printer off.
2. Disconnect the communication/power cable from the accessory to the printer.
3. Remove the rear cover of the accessory.
4. Set SW4 on the stacker controller PCA according to the paper used for adjustment.

Figure 8-264 SW4 settings

5. Reconnect the communication/power cable from the finisher to the printer.
6. Turn the printer power on at the printer.
7. Press SW3 on the stacker controller PCA. When SW3 is pressed, the swing guide opens and the alignment plate moves to prescribed position.
8. Place ten sheets of A4/LTR paper between the alignment plates and push them squarely against the stopper.

 **NOTE:** The objective of this adjustment is to adjust the plates so that they will be lightly and evenly touching the sides of the stacked paper.

9. Press SW1 or SW2 on the stacker controller PCA and adjust the alignment plate against the paper. When SW1 is pressed, the alignment plate moves 0.42 mm forward. When SW2 is pressed, the alignment plate moves 0.42 mm backward. The adjustment range is +/- 4.2 mm.
10. When adjustment is complete, remove the paper and press SW3 on the stacker controller PCA once to store the adjustment in memory.
11. Turn off all bits of stacker controller PCA SW4.
12. Turn the power off and install the rear cover of the stacker unit.

Adjust the staple position

Adjust the stapler position after replacing the stacker controller PCA or when the staple position must be changed for some reason. This adjustment sets the front and rear stitches with A4/A4R when the paper used for adjustment is AB type and with LTR/LTRR when the paper is INCH type.

 **NOTE:** When the stacker controller PCA is replaced, EP-ROM (IC10) must be transferred from the old board to the new board so that old adjustment values stay with finisher. Otherwise, this adjustment must be made in order to program IC10.

1. Remove the rear cover.
2. Turn the printer power off and set SW4 on the stacker controller PCA according to paper/stitch position used for adjustment.

Figure 8-265 SW4 settings

3. Turn the printer power on.
4. Press SW3 on the stacker controller PCA. When SW3 is pressed, the swing guide opens and the alignment plate moves to prescribed position.
5. Place two sheets of paper between the alignment plates, push them against the stopper, and then push the rear edge of the paper against the rear alignment plate. If the gap between the front alignment plate and front edge of the paper is 1 mm or greater, adjust the plate alignment before continuing.
6. Press SW3 on the stacker controller PCA once to staple and then remove the stapled paper manually to verify the staple position.
7. Press SW3 on the stacker controller PCA once.
8. If the staple position is correct, insert a sheet of paper between the aligning plates and push it against the stopper, push the far end edge of the paper to the rear aligning plate, press SW3 once (stapling action/store adjustment value), and then proceed to step 11.
9. To adjust the staple position, press SW1 or SW2 on the stacker controller PCA and adjust the staple position. When SW1 is pressed, the staple position moves 0.49 mm forward. When SW2 is pressed, the staple position moves 0.49 mm backward.
10. Repeat steps 5 and 6 and check that the staple position is adjusted correctly.
11. Turn off all bits of SW4 on the stacker controller PCA.
12. Turn off the printer off and install the rear cover.

Adjust the folding position to the stitch position (Booklet maker only)

Adjust the position of the booklet fold by changing the settings of bits six through eight of DIPSW1 on the saddle-stitcher controller board to match the booklet stapling (stitching) position. If the saddle-stitcher controller PCA has been replaced, be sure to set the new DIPSW1 so that the settings will be the same as those on the old DIPSW1. Perform this adjustment if you must change the folding position. DIPSW1 on the saddle-stitcher controller PCA to match the stitching position (adjusting the distance over which the paper positioning plate is moved to the folding position from the stitching position).

1. Turn the printer power off and disconnect the communication/power cord from the booklet maker to the printer.
2. Remove the PCA cover from the lower portion of the booklet maker. To establish a baseline for measurements, set bits 1 through 8 of SW504 on the saddle-stitcher controller PCA as follows:

 **NOTE:** Do not change bit 5.

Figure 8-266 SW504 settings

Do not change bit 5.

3. Remove the rear cover. Open the front door and the paper-jam-access guide plate (saddle-guide assembly) (green handle above the booklet stapler unit) of the saddle stitcher unit. Moving to the rear of the machine, tape the actuator of the inlet-cover sensor (saddle-guide assembly) (PI9) and inlet-door switch (saddle-guide assembly) (SW1) so that both sensor and switch remain activated signaling that the saddle guide is in the closed position throughout the entire adjustment procedure.
4. You will be using two sheets of A3 or 11 x 17 paper. Mark the top of the paper as shown. This is a reference mark only to show a specific end of the paper. The mark's position just needs to be somewhere at one end of the paper as shown.

Figure 8-267 Mark the paper

5. Close the saddle-guide assembly and the front door of the accessory. Reconnect the power cord from the booklet maker to the printer. Turn the printer power on and wait until the printer is in a ready state.
6. Press SW1 on the saddle-stitcher controller PCA so that the feed motor (M1) starts to rotate. You will need to press SW1 three seconds or more if the 11 x 17 paper is used.

7. Open the front door of the booklet maker and then open saddle-guide assembly (callout 1). Insert the two sheets of marked paper down the paper path leading to the folding unit and past the booklet stapler unit. Push them in by hand until the front edge of the sheets push against the paper positioning plate.

Figure 8-268 Folding position adjustment (1 of 2)

8. Verify that the paper is properly located against the paper positioning plate by opening the booklet delivery door and looking at the paper positioning plate (callout 1).

 **NOTE:** It is important for the bottom of the sheets of paper to be squarely resting on the paper positioning plate for the adjustment to be accurate.

Figure 8-269 Folding position adjustment (2 of 2)

9. Close the saddle-guide assembly.
10. Press SW1 on the saddle-stitcher controller PCA. The saddle stitcher unit will "stitch" the sheets, and fold and deliver the stack automatically to the booklet output bin.

- Measure the distance (L) between the stitching position and the folding position. Then perform "positive width adjustment" or "negative width adjustment" to suit the relationship between the stitching position and the folding position. If the stitching position is below the folding position, perform "negative width adjustment." If the stitching position is above the folding position, perform "positive width adjustment."

Figure 8-270 Positive and negative width adjustment

NOTE: If the L adjustment is significantly larger than what the adjustment allows, the most common cause is that the paper was not fully inserted and resting squarely on the paper position plate.

- Change the settings of bits 6 through 8 on SW504 referring to the following table.

Table 8-31 SW504 settings

SW504 bit settings			Setting (in units of 0.5 mm)
Bit 6	Bit 7	Bit 8	
OFF	ON	ON	+3
OFF	ON	OFF	+2
OFF	OFF	ON	+1
OFF	OFF	OFF	0
ON	OFF	ON	-1
ON	ON	OFF	-2
ON	ON	ON	-3

Table 8-32 Do not use the following setting.

Bit 6	Bit 7	Bit 8
ON	OFF	OFF

13. When adjustment has been completed and the stitch staples are within the fold line, set SW504 bits 1 to 4 (only) to OFF.
14. Remove the tape from the actuator arm of switch SW1 and PI9 on the rear frame of the booklet-making assembly.

Adjust the stitcher unit

1. Open the front cover.
2. Pull out the stitcher mount unit to the front. Pull the stitcher towards you and then pull up.
3. Remove three screws (callout 2) and then remove the stitcher cover (callout 3).

Figure 8-271 Adjust the stitcher (1 of 6)

4. Remove the stitcher positioning tool (callout 4) from the back of the cover.

Figure 8-272 Adjust the stitcher (1 of 6)

5. To adjust the front stitcher, remove the front guide plate (callout 4) and center guide plate (callout 6). To adjust the rear stitcher, remove the center guide plate (callout 6) and the rear guide plate (callout 7) (one screw each).

Figure 8-273 Adjust the stitcher (2 of 6)

6. To adjust the front stitcher, loosen the two screws (callout 9) on the stitcher mount (callout 8). To adjust the rear stitcher, loosen the two screws (callout 10) on the stitcher mount.

Figure 8-274 Adjust the stitcher (3 of 6)

7. Insert the tool (callout 12) into the staple slot of the stitcher (callout 11).

Figure 8-275 Adjust the stitcher (5 of 6)

8. Tilt the stitcher, and turn the stitcher gear (callout 13) to match the recess of the tool (callout 14) and the mount (callout 15) and then tighten the screws on the mount to secure.

Figure 8-276 Adjust the stitcher (6 of 6)

Order parts, accessories, and supplies

Several methods are available for ordering parts, supplies, and accessories.

Order directly from HP

You can obtain the following items directly from HP:

- **Replacement parts:** Outside the United States, order parts by contacting your local authorized HP service center. To order replacement parts in the U.S., go to the following Web sites:
 - HP Parts Store: www.hp.com/buy/parts
 - Partsurfer: www.partsurfer.hp.com
 - HP Parts Portal: www.hp.com/go/HPparts
- **Supplies and accessories:** To order supplies in the U.S., go to www.hp.com/go/ljsupplies. To order supplies worldwide, go to www.hp.com/ghp/buyonline.html. To order accessories, go to www.hp.com/support/cljcp6015.

Order directly through the software

HP Easy Printer Care and HP ToolboxFX are product management tools designed to make product configuration, monitoring, supplies ordering, troubleshooting, and updating as simple and efficient as possible.

Service documentation

Description	Part number	Self-repair level
Manual-service, EN CLJ CP6015	Q3931-90938	
Service/support CD	Q3931-60110	

Part numbers

Ordering information and availability might change during the life of the product.

Accessories

Item	Description	Part number
HP Color LaserJet 1 x 500 Paper Feeder	500-sheet paper feeder and cabinet	CB473A
HP Color LaserJet 3 x 500 Paper Feeder	3-drawer (500 sheets each) paper feeder and cabinet	CB474A
HP 3-bin Stapler/Stacker Accessory	3-bin stapler/stacker with output accessory bridge unit	Q6998A
HP 3-bin Stapler/Stacker or HP Booklet Maker/Finisher staple cartridge (upper cartridge on HP Booklet Maker/Finisher)	5000-staple replacement cartridge	C8091A C8091-67901 (Order this part number.)

Item	Description	Part number
HP Booklet Maker/Finisher Accessory	Booklet maker finisher with output accessory bridge unit	Q6999A
HP Booklet Maker/Finisher saddle-stitch staple cartridge (lower cartridge)	2000-staple replacement cartridge	CC383A CC383-67901 (Order this part number.)

Print cartridges

Item	Description	Part number
HP Color LaserJet black print cartridge	21,000-page black cartridge	CB380A
HP Color LaserJet cyan print cartridge	16,500-page cyan cartridge	CB381A
HP Color LaserJet yellow print cartridge	16,500-page yellow cartridge	CB382A
HP Color LaserJet magenta print cartridge	16,500-page magenta cartridge	CB383A

Image drums

Item	Description	Part number
HP Color LaserJet black image drum		CB384A
HP Color LaserJet cyan image drum		CB385A
HP Color LaserJet yellow image drum		CB386A
HP Color LaserJet magenta image drum		CB387A

Maintenance kits

Item	Description	Part number
Image fuser kit	110 volt	CB457A
Image fuser kit	220 volt	CB458A
Roller kit		CB459A
Image transfer kit		CB463A

Memory

Item	Description	Part number
200-pin DDR memory DIMM (dual inline memory module)	128 MB	Q7557A
	256 MB	Q7558A
Boosts the ability of the product to handle large or complex print jobs.	512 MB	Q7559A

Cables and interfaces

Item	Description	Part number
Enhanced I/O (EIO) card	HP Jetdirect 635n IPv6/IPsec Print Server	J7961G
USB cable	2-meter standard USB-compatible device connector	C6518A

Description	Part number	Table and page
Arm, lock	RC1-9913-000CN	Input-tray main body (3x500-sheet) on page 839
Arm, paper-delivery gate	RC2-1293-000CN	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
Auto-close assembly, 1x500-sheet	RM1-3531-040CN	Input-tray auto-close assembly on page 843
Auto-close assembly, 3x500-sheet	RM1-3531-040CN	Input-tray auto-close assembly on page 843
Band, door	RC1-9043-000CN	Printer front-door assembly on page 789
Bearing, ball	XG9-0586-000CN	Printer internal components (4 of 7) on page 799
Bearing, ball, 6902ZZNR	4S3-1050-000CN	Saddle assembly (booklet-maker) on page 903
Belt, paper-feed, cogged	RC1-9674-000CN	Intermediate-feed main body on page 851
Belt, timing	XF2-1608-840CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Belt, timing	XF2-3837-340CN	Saddle assembly (booklet-maker) on page 903
Belt, timing, cogged	XF2-1607-860CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Belt, timing, cogged	XF9-0748-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Block, reinforcement (simplex)	RC1-9354-000CN	Printer internal components (2 of 7) on page 795
Booklet-output bin (saddle-tray assembly)	RM1-4113-000CN	Saddle-tray assembly (booklet-maker) on page 907
Bushing	RC1-8734-000CN	Printer internal components (3 of 7) on page 797
Bushing	RC1-9915-000CN	Input-tray main body (1x500-sheet) on page 835
Bushing	RC1-9915-000CN	Input-tray main body (3x500-sheet) on page 839
Bushing	FU5-1169-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Button, main-switch	RC1-9300-000CN	Printer internal components (7 of 7) on page 807
Cable TP/T2 open-sensor	RM1-5030-000CN	Printer internal components (7 of 7) on page 807

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Cable, fixing open-sensor	RM1-5029-000CN	Printer internal components (5 of 7) on page 803
Cable, flexible flat	RK2-1356-000CN	Printer internal components (6 of 7) on page 805
Cable, laser flexible flat	RK2-1354-000CN	Printer internal components (2 of 7) on page 795
Cable, laser flexible flat	RK2-1355-000CN	Printer internal components (2 of 7) on page 795
Cable, operation-tray	FG3-2903-000CN	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
Cable, option-sensor PCA connect	RM1-3574-000CN	Input-tray main body (1x500-sheet) on page 835
Cable, option-sensor PCA connect	RM1-3574-000CN	Input-tray main body (3x500-sheet) on page 839
Cable, paper-pickup option	RM1-3575-000CN	Input-tray main body (1x500-sheet) on page 835
Cable, paper-pickup option	RM1-3575-000CN	Input-tray main body (3x500-sheet) on page 839
Cable, paper-pickup-option drawer	RM1-3571-000CN	Input-tray main body (3x500-sheet) on page 839
Cable, pickup-option door switch	RM1-3572-000CN	Input-tray main body (1x500-sheet) on page 835
Cable, pickup-option door switch	RM1-3572-000CN	Input-tray main body (3x500-sheet) on page 839
Cable, pickup-option drawer	RM1-3571-000CN	Input-tray main body (1x500-sheet) on page 835
Cable, pickup-option lifter unit	RM1-3576-000CN	Input-tray auto-close assembly on page 843
Cable, pickup-option PCA connect	RM1-3573-000CN	Input-tray main body (3x500-sheet) on page 839
Cable, saddle-unit	4G1-2283-000CN	Saddle assembly (booklet-maker) on page 903
Cable, sensor	4G1-2285-000CN	Saddle-tray assembly (booklet-maker) on page 907
Cable, solenoid	FG3-2892-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Cable, staple-connecting assembly	4G3-1777-000CN	Staple assembly (stapler/stacker and booklet-maker) on page 897
Cable-mount lattice assembly	RM1-4128-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Cartridge contact-holder assembly	RM1-3254-000CN	Printer internal components (7 of 7) on page 807

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Cartridge-interface assembly kit with service document	Q3931-67917	Printer internal components (7 of 7) on page 807
Cassette (1x500-sheet)	RM1-3529-000CN	Input-tray cassette on page 845
Cassette (3x500-sheet)	RM1-3529-000CN	Input-tray cassette on page 845
Cassette paper-pickup assembly (includes 1 pick and 2 feed rollers)	RM1-3206-000CN	Printer cassette paper-pickup assembly on page 815
Cassette-assembly kit	Q3931-67918	Printer cassette on page 813
Caster, double-lock, front	RC1-9896-000CN	Input-tray main body (1x500-sheet) on page 835
Caster, double-lock, front	RC1-9896-000CN	Input-tray main body (3x500-sheet) on page 839
Caster, rear	RC1-9917-000CN	Input-tray main body (1x500-sheet) on page 835
Caster, rear	RC1-9917-000CN	Input-tray main body (3x500-sheet) on page 839
Caster, universal	RC2-1315-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Clamp, cable	WT2-5738-000CN	Input-tray main body (1x500-sheet) on page 835
Clamp, cable	WT2-5738-000CN	Input-tray main body (3x500-sheet) on page 839
Clamp, FFC	WT2-5912-000CN	Printer internal components (2 of 7) on page 795
Clamp, formatter cable	RC1-9261-000CN	Printer internal components (7 of 7) on page 807
Claw, latch, right	FC5-5021-000CN	Saddle assembly (booklet-maker) on page 903
Clutch, electromagnetic	4H3-0370-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Color-plane-registration joint cable	RM1-3624-000CN	Printer internal components (6 of 7) on page 805
Color-plane-registration sensor assembly	RM1-3258-000CN	Printer internal components (3 of 7) on page 797
Connector, drawer	VS1-7258-000CN	Printer internal components (5 of 7) on page 803
Connector, drawer	VS1-7257-012CN	Input-tray main body (1x500-sheet) on page 835
Connector, drawer	VS1-7257-012CN	Input-tray main body (3x500-sheet) on page 839
Connector, snap-tight	VS1-7177-002CN	Printer internal components (2 of 7) on page 795

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Connector, snap-tight	VS1-7177-003CN	Printer internal components (4 of 7) on page 799
Control-panel unit	RM1-4516-000CN	Printer external covers and panels on page 787
Cover, blanking (simplex)	RC1-9362-000CN	Printer external covers and panels on page 787
Cover, cassette back-end	RC1-9201-000CN	Printer internal components (5 of 7) on page 803

DC motor assembly	RM1-4519-000CN	Printer internal components (4 of 7) on page 799
DC-controller kit with service document	Q3931-67916	Printer internal components (6 of 7) on page 805
DC-controller power cable	RM1-3610-000CN	Printer internal components (6 of 7) on page 805
Deflector	FB3-7928-020CN	Saddle assembly (booklet-maker) on page 903
Deflector	FB5-2697-000CN	Saddle assembly (booklet-maker) on page 903
Delivery-switch mount assembly	FM2-1639-000CN	Saddle assembly (booklet-maker) on page 903
Door, stock	RC1-9921-000CN	Input-tray main body (1x500-sheet) on page 835
Drive-belt assembly	RM1-3684-000CN	Intermediate-feed main body on page 851
Drum-motor assembly	RM1-3286-000CN	Printer internal components (4 of 7) on page 799
Duct, air	RC1-8961-000CN	Printer internal components (4 of 7) on page 799
Duct, cartridge	RC1-9276-000CN	Printer internal components (4 of 7) on page 799
Duct, face-down joint	RC1-8964-000CN	Printer internal components (4 of 7) on page 799
Duct, scanner	RC1-9334-000CN	Printer internal components (2 of 7) on page 795
Duct, scanner-fan	RC1-9309-000CN	Printer internal components (4 of 7) on page 799
Duplex-switchback tray assembly kit	Q3931-67921	Printer duplexing-tray assembly on page 827
Duplexing-feed assembly	RM1-3665-000CN	Printer duplexing-feed assembly on page 829
Duplexing-reverse assembly	RM1-3652-000CN	Printer duplexing-reverse assembly on page 825
Entrance lower-guide assembly	RM1-4110-000CN	Saddle paper-feeder assembly (stapler/stacker) on page 913
Entrance lower-guide assembly	RM1-4110-000CN	Saddle paper-feeder assembly (booklet-maker) on page 915
Entrance upper-guide assembly	RM1-4172-000CN	Entrance upper-guide assembly (stapler/stacker and booklet-maker) on page 895
Entrance-sensor flag assembly	FM2-0718-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Face-down end-tray assembly	RM1-3340-000CN	Printer external covers and panels on page 787
Face-down full-flag assembly	RM1-4391-000CN	Printer face-down paper-delivery assembly on page 823
Face-down paper-delivery assembly	RM1-3293-000CN	Printer face-down paper-delivery assembly on page 823
Face-down unit-1 cable	RM1-3390-000CN	Printer internal components (7 of 7) on page 807
Face-down unit-2 cable	RM1-3391-000CN	Printer internal components (7 of 7) on page 807
Fan	RK2-1377-000CN	Printer internal components (4 of 7) on page 799
Fan	RK2-1382-000CN	Printer internal components (4 of 7) on page 799
Fan	RK2-1378-000CN	Printer internal components (4 of 7) on page 799
Fan	RK2-1378-000CN	Printer internal components (5 of 7) on page 803
Fan	RK2-1378-000CN	Printer duplexing-reverse assembly on page 825
Fan assembly	RM1-3364-000CN	Printer internal components (2 of 7) on page 795
Filter unit, air	RC1-9313-000CN	Printer external covers and panels on page 787
Fin-lock assembly	RM1-3685-000CN	Intermediate-feed main body on page 851
Fixing assembly kit, 110-127V	Q3931-67914	Printer internal components (4 of 7) on page 799
Fixing assembly kit, 220-240V	Q3931-67915	Printer internal components (4 of 7) on page 799
Fixing one-way gear assembly	RM1-3247-000CN	Printer internal components (4 of 7) on page 799
Fixing power-supply assembly	RM1-3218-000CN	Printer internal components (7 of 7) on page 807
Fixing power-supply assembly	RM1-3218-000CN	Printer PCA assembly location on page 831
Fixing-bias cable assembly	RM1-4409-000CN	Printer internal components (7 of 7) on page 807
Fixing-fan cover assembly	RM1-5950-000CN	Printer external covers and panels on page 787
Fixing-joint cable	RM1-3612-000CN	Printer internal components (7 of 7) on page 807

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Fixing-motor cable	RM1-3217-000CN	Printer internal components (6 of 7) on page 805
Flag, paper-face sensing, upper	FC5-4162-000CN	External panels and covers (stapler/stacker) on page 861
Flag, paper-sensing sensor	FC5-5004-000CN	External panels and covers (stapler/stacker) on page 861
Flag, paper-sensing sensor	FC5-5004-000CN	External panels and covers (booklet-maker) on page 863
Flag, roller	FB3-7925-030CN	Saddle assembly (booklet-maker) on page 903
Flag, sensor	FB3-7979-000CN	Saddle assembly (booklet-maker) on page 903
Flag, sensor	FB5-5937-020CN	Saddle assembly (booklet-maker) on page 903
Flexible-cable mount assembly	FM2-0720-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Foot, rubber	RC1-9208-000CN	Printer internal components (6 of 7) on page 805
Formatter-case assembly	RM1-3253-000CN	Printer internal components (6 of 7) on page 805
Front cable	RM1-3617-000CN	Printer internal components (6 of 7) on page 805
Front-door assembly	RM1-3356-000CN	Printer front-door assembly on page 789
Front-door assembly	RM1-4134-000CN	External panels and covers (stapler/stacker) on page 861
Front-door assembly	RM1-4122-000CN	External panels and covers (booklet-maker) on page 863
Gear, 16T	FS6-0823-000CN	Saddle assembly (booklet-maker) on page 903
Gear, 16T	FS6-0830-000CN	Saddle assembly (booklet-maker) on page 903
Gear, 16T/33T	FS6-0822-000CN	Saddle assembly (booklet-maker) on page 903
Gear, 16T/56T	FS6-0829-000CN	Saddle assembly (booklet-maker) on page 903
Gear, 17T	FU5-0457-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Gear, 17T	FU5-0457-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Gear, 29T	FU5-2399-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Gear, 30T	FU5-0428-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Gear, 34T	RU5-0791-000CN	Printer internal components (4 of 7) on page 799
Gear, 40T	FU5-0454-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Gear, 44T	FU5-0435-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Gear, 44T	FU5-0435-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Gear, 44T	FU5-0435-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Gear, 50T	4S3-0171-000CN	Saddle assembly (booklet-maker) on page 903
Gear, 83T/25T	RU5-0790-000CN	Printer internal components (4 of 7) on page 799
Grip-support front assembly	RM1-3225-000CN	Printer internal components (2 of 7) on page 795
Grip-support rear assembly	RM1-3226-000CN	Printer internal components (2 of 7) on page 795
Guide, cable	RC1-9329-000CN	Printer internal components (6 of 7) on page 805
Guide, cable, A	RC1-9306-000CN	Printer internal components (7 of 7) on page 807
Guide, cable, B	RC1-9307-000CN	Printer internal components (6 of 7) on page 805
Guide, cable, C	RC1-9308-000CN	Printer internal components (6 of 7) on page 805
Guide, cable, D	RC1-9312-000CN	Printer internal components (6 of 7) on page 805
Guide, cable, E	RC1-9318-000CN	Printer internal components (6 of 7) on page 805
Guide, cable, F	RC1-9323-000CN	Printer internal components (7 of 7) on page 807
Guide, duplexing-feed, upper (duplex)	RL1-1335-000CN	Printer right-door assembly on page 791
Guide, face-down inner	RC1-8959-000CN	Printer internal components (2 of 7) on page 795
Guide, fixing-cable	RC1-9332-000CN	Printer internal components (7 of 7) on page 807

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Guide, intermediate transfer belt (ITB)-entrance, front	RC1-9185-000CN	Printer internal components (3 of 7) on page 797
Guide, intermediate transfer belt (ITB)-entrance, rear	RC1-9186-000CN	Printer internal components (3 of 7) on page 797
Guide, multi-purpose, right	RL1-1283-000CN	Printer internal components (2 of 7) on page 795
Guide, multi-purpose, upper	RC1-8526-000CN	Printer multi-purpose paper-pickup assembly on page 817
Guide, paper-feed roller	RC1-9881-000CN	Input-tray main body (1x500-sheet) on page 835
Guide, paper-feed roller	RC1-9881-000CN	Input-tray main body (3x500-sheet) on page 839
Guide, side-wall	RC2-1284-000CN	External panels and covers (booklet-maker) on page 863
Guide-motor assembly	4G3-0725-000CN	Saddle assembly (booklet-maker) on page 903
Guide-sensor assembly	RM1-4400-000CN	Printer internal components (5 of 7) on page 803
High-voltage transfer B PCA assembly	RM1-5475-000CN	Printer internal components (1 of 7) on page 793
High-voltage-transfer A PCA assembly	RM1-3582-000CN	Printer internal components (7 of 7) on page 807
High-voltage-transfer A PCA assembly	RM1-3582-000CN	Printer PCA assembly location on page 831
High-voltage-transfer B PCA assembly	RM1-5475-000CN	Printer PCA assembly location on page 831
Hinge, front-door, 1	FC5-4991-030CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Hinge, front-door, 2	FC5-4992-030CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Holder, cartridge-fan	RC1-9277-000CN	Printer internal components (4 of 7) on page 799
Holder, environment-sensor	RC1-9324-000CN	Printer internal components (2 of 7) on page 795
Holder, fixing-fan	RC1-9278-000CN	Printer internal components (4 of 7) on page 799
Holder, high-voltage-connector	RC1-9328-000CN	Printer internal components (7 of 7) on page 807
Holder, roller, 2	FB3-7973-000CN	Saddle assembly (booklet-maker) on page 903
Holder, scanner-fan	RC1-9279-000CN	Printer internal components (4 of 7) on page 799

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Holder, scanner-thermistor	RC1-9260-000CN	Printer internal components (2 of 7) on page 795
Inner side-plate assembly	4G3-0671-000CN	Saddle assembly (booklet-maker) on page 903
Inner side-plate assembly	4G3-0671-000CN	Inner side-plate assembly (booklet-maker) on page 919
Inner-cover assembly	RM1-4123-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Interface-joint cable	RM1-3623-000CN	Printer internal components (6 of 7) on page 805
Interlock-switch assembly	RM1-3589-000CN	Printer internal components (2 of 7) on page 795
Intermediate paper-transfer unit (IPTU)-driver PCA assembly	RM1-3559-000CN	Intermediate-feed main body on page 851
Intermediate paper-transfer unit (IPTU)-driver PCA assembly	RM1-3559-000CN	PCA assembly on page 857
Intermediate transfer belt (ITB) assembly	RM1-3307-000CN	Printer internal components (3 of 7) on page 797
Intermediate transfer belt (ITB) duct assembly	RM1-4401-000CN	Printer internal components (5 of 7) on page 803
Intermediate transfer belt (ITB) estrangement-drive assembly	RM1-3280-000CN	Printer internal components (3 of 7) on page 797
Intermediate transfer belt (ITB) lock-support front assembly	RM1-3228-000CN	Printer internal components (3 of 7) on page 797
Intermediate transfer belt (ITB) lock-support rear assembly	RM1-3215-000CN	Printer internal components (3 of 7) on page 797
Intermediate transfer belt (ITB)-drawer assembly	RM1-3240-000CN	Printer internal components (3 of 7) on page 797
Knob (booklet-maker only)	FB3-7881-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Knob, latch	FC5-5024-000CN	Saddle-guide assembly (booklet-maker) on page 909
LED-PCA assembly	RM1-4141-000CN	External panels and covers (stapler/stacker) on page 861
LED-PCA assembly	RM1-4141-000CN	External panels and covers (booklet-maker) on page 863
Left upper-cover assembly	RM1-4179-000CN	External panels and covers (stapler/stacker) on page 861
Left-side wall assembly	RM1-3233-000CN	Printer internal components (1 of 7) on page 793
Left-upper cover assembly	RM1-4129-000CN	External panels and covers (booklet-maker) on page 863
Lever, door-interlock shutter	RC1-9220-000CN	Printer internal components (5 of 7) on page 803

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Lever, lock	RC1-9883-000CN	Input-tray main body (1x500-sheet) on page 835
Lever, lock	RC1-9883-000CN	Input-tray main body (3x500-sheet) on page 839
Lever, paper-sensing	RC1-8928-000CN	Printer internal components (5 of 7) on page 803
Lever, stopper	4A3-1782-000CN	Saddle assembly (booklet-maker) on page 903
Lifter-drive-assembly kit	RM1-3222-020CN	Printer lifter-drive assembly on page 811
Limiter, torque	RC1-8519-000CN	Printer multi-purpose paper-pickup assembly on page 817
Limiter, torque	FC5-3657-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Link-slide assembly	4G3-0271-000CN	External panels and covers (stapler/stacker) on page 861
Link-slide assembly	4G3-0271-000CN	External panels and covers (booklet-maker) on page 863
Low-voltage power-supply assembly	RM1-3594-000CN	Printer internal components (5 of 7) on page 803
Low-voltage power-supply assembly	RM1-3594-000CN	Printer PCA assembly location on page 831
Lower height-guide assembly	RM1-4135-000CN	External panels and covers (stapler/stacker) on page 861
Lower-guide assembly	RM1-3686-000CN	Intermediate-feed lower-guide assembly on page 853
Main controller PCA assembly (stapler/stacker and booklet-maker)	RM1-4139-000CN	PCA assembly on page 925
Main drive-unit kit with service document	Q3931-67911	Printer internal components (4 of 7) on page 799
Main switch-holder assembly	RM1-3252-000CN	Printer internal components (7 of 7) on page 807
Memory-tag PCA assembly	RM1-3585-000CN	Printer internal components (4 of 7) on page 799
Memory-tag PCA assembly	RM1-3585-000CN	Printer PCA assembly location on page 831
Middle-height cover assembly	RM1-4119-000CN	External panels and covers (booklet-maker) on page 863
Motor, stepping	4K1-1103-000CN	Pass lower-guide assembly (booklet-maker) on page 917
Motor, stepping, DC	RK2-1366-000CN	Printer internal components (4 of 7) on page 799
Motor, stepping, DC	RK2-1370-000CN	Printer internal components (4 of 7) on page 799

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Motor, stepping, DC	RK2-1331-000CN	Input-tray main body (1x500-sheet) on page 835
Motor, stepping, DC	RK2-1331-000CN	Input-tray main body (3x500-sheet) on page 839
Motor, stepping, DC	RK2-1320-000CN	Intermediate-feed main body on page 851
Motor-mount assembly	4G3-0670-000CN	Saddle assembly (booklet-maker) on page 903
Motor-mount assembly	4G3-0670-000CN	Motor-mount assembly (booklet-maker) on page 923
Mount, LED-PCA	RC2-1735-000CN	External panels and covers (stapler/stacker) on page 861
Multi-purpose paper-pickup assembly	RM1-3345-000CN	Printer multi-purpose paper-pickup assembly on page 817
Multi-purpose-drive assembly	RM1-3366-000CN	Printer multi-purpose-drive assembly on page 809
Multi-purpose-guide assembly	RM1-3291-000CN	Printer multi-purpose-guide assembly on page 821
Multi-purpose-tray assembly	RM1-3341-000CN	Printer multi-purpose-tray assembly on page 819
Multi-tray cable	RM1-3630-000CN	Printer multi-purpose-tray assembly on page 819
Operation-tray assembly	RM1-4125-000CN	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
Option paper-sensor PCA assembly	RM1-3570-000CN	Input-tray paper-pickup assembly on page 847
Option-sensor assembly	FM2-1708-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Panel cable	RM1-3389-000CN	Printer internal components (6 of 7) on page 805
Panel, height, upper	RC2-1283-000CN	External panels and covers (stapler/stacker) on page 861
Panel, height, upper	RC2-1283-000CN	External panels and covers (booklet-maker) on page 863
Panel-joint cable	RM1-3622-000CN	Printer internal components (6 of 7) on page 805
Paper feed-roller assembly	RM1-0037-020CN	Input-tray paper-pickup assembly on page 847
Paper-delivery-guide assembly	RM1-4407-000CN	Printer face-down paper-delivery assembly on page 823
Paper-face sensing assembly	4G3-1624-000CN	External panels and covers (stapler/stacker) on page 861

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Paper-face sensing assembly	4G3-1624-000CN	External panels and covers (booklet-maker) on page 863
Paper-face sensor assembly	4G3-0934-000CN	External panels and covers (stapler/stacker) on page 861
Paper-face sensor assembly	4G3-0934-000CN	External panels and covers (booklet-maker) on page 863
Paper-feed PCA assembly	RM1-3569-000CN	Input-tray main body (1x500-sheet) on page 835
Paper-feed PCA assembly	RM1-3569-000CN	Input-tray main body (3x500-sheet) on page 839
Paper-feed PCA assembly (1x500-sheet)	RM1-3569-000CN	Input-tray PCA assembly on page 849
Paper-feed PCA assembly (3x500-sheet)	RM1-3569-000CN	Input-tray PCA assembly on page 849
Paper-feeder motor assembly	RM1-4175-000CN	Paper-feeder motor assembly (stapler/stacker and booklet-maker) on page 887
Paper-pickup assembly (1x500-sheet)	RM1-3533-000CN	Input-tray paper-pickup assembly on page 847
Paper-pickup assembly (3x500-sheet)	RM1-3533-000CN	Input-tray paper-pickup assembly on page 847
Paper-sensor assembly	FM2-0707-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Paper-sensor assembly	FM2-0707-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Paper-sensor assembly	FM2-0707-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Partition-plate assembly, cyan	RM1-3238-000CN	Printer internal components (1 of 7) on page 793
Partition-plate assembly, magenta	RM1-3237-000CN	Printer internal components (1 of 7) on page 793
Partition-plate assembly, yellow	RM1-3235-000CN	Printer internal components (1 of 7) on page 793
Photo interrupter, TLP1242	WG8-5593-000CN	External panels and covers (stapler/stacker) on page 861
Photo interrupter, TLP1242	WG8-5593-000CN	External panels and covers (booklet-maker) on page 863
Photo interrupter, TLP1242	WG8-5593-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Photo interrupter, TLP1242	WG8-5593-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Photo interrupter, TLP1242	WG8-5593-000CN	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
Photo interrupter, TLP1242	WG8-5593-000CN	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle assembly (booklet-maker) on page 903
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle assembly (booklet-maker) on page 903
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle assembly (booklet-maker) on page 903
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle assembly (booklet-maker) on page 903
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle assembly (booklet-maker) on page 903
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle-tray assembly (booklet-maker) on page 907
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle paper-feeder assembly (booklet-maker) on page 915
Photo interrupter, TLP1242	WG8-5593-000CN	Pass lower-guide assembly (booklet-maker) on page 917
Photo interrupter, TLP1242	WG8-5593-000CN	Inner side-plate assembly (booklet-maker) on page 919
Photo interrupter, TLP1242	WG8-5593-000CN	Saddle paper-delivery assembly (booklet-maker) on page 921
Photo interrupter, TLP1243	WG8-5696-000CN	Printer internal components (2 of 7) on page 795
Photo interrupter, TLP1243	WG8-5696-000CN	Printer internal components (5 of 7) on page 803
Photo interrupter, TLP1243	WG8-5696-000CN	Printer internal components (7 of 7) on page 807
Photo interrupter, TLP1243	WG8-5696-000CN	Printer multi-purpose-guide assembly on page 821
Photo interrupter, TLP1243	WG8-5696-000CN	Printer face-down paper-delivery assembly on page 823
Photo interrupter, TLP1243	WG8-5696-000CN	Printer duplexing-reverse assembly on page 825
Photosensor assembly	RM1-3250-000CN	Printer internal components (2 of 7) on page 795
Pin	XD3-2200-102CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Pin, dowel	XD9-0240-000CN	Printer internal components (4 of 7) on page 799

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Pin, dowel	XD3-2200-102CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Pin, dowel	XD3-2200-142CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Pin, dowel	XD3-2300-142CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Pin, dowel	XD3-2300-142CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Pin, dowel	XD3-2300-202CN	Saddle assembly (booklet-maker) on page 903
Plate, control-panel grounding	RC1-9238-000CN	Printer external covers and panels on page 787
Plate, drawer-guard	RC1-9235-000CN	Printer internal components (5 of 7) on page 803
Plate, fan-fixing, front	RC1-9190-000CN	Printer internal components (5 of 7) on page 803
Plate, fixing-motor	RL1-1216-000CN	Printer internal components (4 of 7) on page 799
Plate, grounding (booklet-maker only)	4A3-1955-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Plate, grounding (booklet-maker only)	RC2-1536-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Plate, hinge-stop (booklet-maker only)	4A3-4715-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Plate, HVT-A (high-voltage transmission) guard	RC1-9326-000CN	Printer internal components (7 of 7) on page 807
Plate, option-tray, front	FC5-6978-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Plate, rotation	4A3-1779-000CN	Saddle assembly (booklet-maker) on page 903
Plate, sensor, front	RC1-9246-000CN	Printer internal components (5 of 7) on page 803
Plate, switch-cover	RC1-9901-000CN	Input-tray main body (1x500-sheet) on page 835
Plate, switch-cover	RC1-9901-000CN	Input-tray main body (3x500-sheet) on page 839
Plate, tension	FF5-5805-040CN	Saddle assembly (booklet-maker) on page 903

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Press-motor assembly	FM2-1409-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Pressure-roller assembly	FM2-0730-000CN	Pressure-roller assembly (stapler/stacker and booklet-maker) on page 891
Pulley, 16T/gear, 32T	FS6-0815-000CN	Pass lower-guide assembly (booklet-maker) on page 917
Pulley, 20T	FU5-3086-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Pulley, 30T	FS5-3576-000CN	Saddle assembly (booklet-maker) on page 903
Pulley, 32T/gear, 16T	FS6-0814-000CN	Pass lower-guide assembly (booklet-maker) on page 917
Pulley, 39T	FS5-3577-000CN	Saddle assembly (booklet-maker) on page 903
Rack, front	FB3-7967-000CN	Saddle assembly (booklet-maker) on page 903
Rack, rail	FC5-5436-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Rack, rear	FB3-7934-000CN	Saddle assembly (booklet-maker) on page 903
Rail, cassette, left	RL1-1311-000CN	Input-tray main body (1x500-sheet) on page 835
Rail, cassette, left	RL1-1311-000CN	Input-tray main body (3x500-sheet) on page 839
Rail, cassette, right	RL1-1215-000CN	Printer internal components (5 of 7) on page 803
Rail, cassette, right	RL1-1310-000CN	Input-tray main body (1x500-sheet) on page 835
Rail, cassette, right	RL1-1310-000CN	Input-tray main body (3x500-sheet) on page 839
Rail, fixing, front	RC1-8931-000CN	Printer internal components (4 of 7) on page 799
Rail, fixing, rear	RC1-8939-000CN	Printer internal components (4 of 7) on page 799
Rail, left, top	RL1-1213-000CN	Printer internal components (5 of 7) on page 803
Rail, reverse, rear	RC1-9206-000CN	Printer internal components (2 of 7) on page 795
Rear-cover-mount plate assembly	RM1-3354-000CN	Printer internal components (6 of 7) on page 805
Rear-end sensor assembly	FM2-0763-000CN	Saddle assembly (booklet-maker) on page 903

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Rear-lower cable	RM1-3618-000CN	Printer internal components (6 of 7) on page 805
Rear-right cover assembly	RM1-4415-000CN	Printer external covers and panels on page 787
Rear-upper cable	RM1-3619-000CN	Printer internal components (6 of 7) on page 805
Registration 2nd-transfer assembly kit with service document	Q3931-67909	Printer internal components (3 of 7) on page 797
Retainer	RC1-8511-000CN	Printer internal components (3 of 7) on page 797
Retainer	RC1-8511-000CN	Printer multi-purpose paper-pickup assembly on page 817
Return-roller assembly	FM2-0725-090CN	Return-roller assembly (stapler/stacker and booklet-maker) on page 889
Right-door assembly	RM1-3538-000CN	Input-tray main body (1x500-sheet) on page 835
Right-door assembly	RM1-3537-000CN	Input-tray main body (3x500-sheet) on page 839
Right-door sub-assembly	RM1-3333-000CN	Printer right-door assembly on page 791
Right-lower cover assembly	RL1-1280-000CN	Printer external covers and panels on page 787
Right-side wall assembly	RM1-3239-000CN	Printer internal components (1 of 7) on page 793
Ring, C, external	XD2-3100-152CN	Saddle assembly (booklet-maker) on page 903
Ring, E	XD9-0234-000CN	Printer internal components (4 of 7) on page 799
Ring, E	XD9-0234-000CN	Printer internal components (5 of 7) on page 803
Ring, E	XD9-0136-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Ring, E	XD9-0136-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Ring, E	XD9-0137-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Roller, folding	4A3-1783-000CN	Saddle assembly (booklet-maker) on page 903
Roller, paper-pickup	RL1-1289-000CN	Input-tray paper-pickup assembly on page 847
Roller, rail	RC1-9231-000CN	Input-tray main body (1x500-sheet) on page 835

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Roller, rail	RC1-9231-000CN	Input-tray main body (3x500-sheet) on page 839
Roller, tray-guide	RU5-6035-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Roller, tray-guide	FC5-4221-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Roller, tray-guide	RU5-6035-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Roller, tray-guide	FC5-4221-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Roller, tray-guide	RU5-6035-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Saddle paper-delivery assembly	RM1-4130-000CN	Saddle assembly (booklet-maker) on page 903
Saddle paper-delivery assembly	RM1-4130-000CN	Saddle paper-delivery assembly (booklet-maker) on page 921
Saddle paper-feeder assembly	RM1-4136-000CN	Saddle paper-feeder assembly (stapler/stacker) on page 913
Saddle paper-feeder assembly	RM1-4109-000CN	Saddle paper-feeder assembly (booklet-maker) on page 915
Saddle, wire	WT2-5694-000CN	Printer internal components (4 of 7) on page 799
Saddle, wire	WT2-5694-000CN	Input-tray main body (1x500-sheet) on page 835
Saddle, wire	WT2-5694-000CN	Input-tray main body (3x500-sheet) on page 839
Saddle-controller PCA assembly	RM1-4140-000CN	Saddle assembly (booklet-maker) on page 903
Saddle-controller PCA assembly (booklet-maker)	RM1-4140-000CN	PCA assembly on page 925
Saddle-guide assembly	FM2-0756-000CN	Saddle assembly (booklet-maker) on page 903
Saddle-guide assembly	FM2-5024-000CN	Saddle-guide assembly (booklet-maker) on page 909
Saddle-motor assembly	FM2-0737-000CN	Saddle paper-feeder assembly (stapler/stacker) on page 913
Saddle-motor assembly	FM2-0737-000CN	Saddle paper-feeder assembly (booklet-maker) on page 915
Saddle-stapler assembly	RM1-4178-000CN	Saddle assembly (booklet-maker) on page 903

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Saddle-stapler assembly	RM1-4178-000CN	Saddle-stapler assembly (booklet-maker) on page 911
Scanner assembly kit (1 scanner assembly per kit) with service document	Q3931-67907	Printer internal components (2 of 7) on page 795
Scanner-joint cable	RM1-3620-000CN	Printer internal components (6 of 7) on page 805
Screw, machined, truss-head, M3x4	XB1-2300-407CN	Printer internal components (4 of 7) on page 799
Screw, machined, truss-head, M4x8	XB1-2400-805CN	Printer internal components (7 of 7) on page 807
Screw, RS stepped, M3	FU9-9059-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Screw, RS, M13x12	XA9-1801-000CN	Printer internal components (7 of 7) on page 807
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (1 of 7) on page 793
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (2 of 7) on page 795
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (3 of 7) on page 797
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (4 of 7) on page 799
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (5 of 7) on page 803
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (6 of 7) on page 805
Screw, RS, M3x6	XA9-1495-000CN	Printer internal components (7 of 7) on page 807
Screw, RS, M3X6 (duplex)	XA9-1495-000CN	Printer right-door assembly on page 791
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (1 of 7) on page 793
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (2 of 7) on page 795
Screw, RS, M3x8	XA9-1449-000CN	Printer internal components (2 of 7) on page 795
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (3 of 7) on page 797
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (4 of 7) on page 799
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (5 of 7) on page 803
Screw, RS, M3x8	XA9-1449-000CN	Printer internal components (6 of 7) on page 805

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Screw, RS, M3x8	XA9-1504-000CN	Printer internal components (7 of 7) on page 807
Screw, RS, M3x8	XA9-1386-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Screw, RS, M4x8	XA9-1448-000CN	Input-tray main body (1x500-sheet) on page 835
Screw, RS, M4x8	XA9-1448-000CN	Input-tray main body (1x500-sheet) on page 835
Screw, RS, M4x8	XA9-1448-000CN	Input-tray main body (3x500-sheet) on page 839
Screw, RS, M4x8	XA9-1448-000CN	Input-tray main body (3x500-sheet) on page 839
Screw, RS, M4x8 (booklet-maker only)	XA9-0732-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Screw, stepped	RS5-9099-000CN	Input-tray main body (1x500-sheet) on page 835
Screw, stepped	RS5-9099-000CN	Input-tray main body (3x500-sheet) on page 839
Screw, tapping, pan-head, M4x10	XB4-7401-006CN	Input-tray main body (1x500-sheet) on page 835
Screw, tapping, truss-head, M4X10	XB4-7401-005CN	Printer external covers and panels on page 787
Screw, tapping, truss-head, M4X10	XB4-7401-005CN	Printer external covers and panels on page 787
Screw, tapping, truss-head, M4X10	XB4-7401-005CN	Printer right-door assembly on page 791
Screw, tapping, truss-head, M4x10	XB4-7401-005CN	Printer internal components (5 of 7) on page 803
Screw, TP, M3x30	XB6-7303-005CN	Printer internal components (5 of 7) on page 803
Screw, TP, M3x6	XA9-1159-000CN	Printer internal components (4 of 7) on page 799
Screw, TP, M3x6	XA9-1469-000CN	Input-tray main body (1x500-sheet) on page 835
Screw, TP, M3x6	XA9-1469-000CN	Input-tray main body (3x500-sheet) on page 839
Screw, TP, M3x6 (booklet-maker only)	XB6-7300-607CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Screw, TP, M4x8	XA9-1300-000CN	Printer internal components (6 of 7) on page 805
Screw, with washer, M3x6	XB2-8300-607CN	Printer internal components (4 of 7) on page 799

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Screw, with washer, M3x6	XB2-8300-607CN	Input-tray main body (1x500-sheet) on page 835
Screw, with washer, M3x6	XB2-8300-607CN	Input-tray main body (3x500-sheet) on page 839
Screw, with washer, M4X12	XA9-1422-000CN	Printer right-door assembly on page 791
Screw, with washer, M4X12	XA9-1422-000CN	Printer right-door assembly on page 791
Screw, with washer, M5x12	XA9-0912-000CN	Input-tray main body (1x500-sheet) on page 835
Screw, with washer, M5x12	XA9-0912-000CN	Input-tray main body (3x500-sheet) on page 839
Screw, with washer, M5x12	XA9-0912-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Sensor unit, humidity	RK2-2376-000CN	Printer internal components (2 of 7) on page 795
Sensor/switch assembly	FM2-1417-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Shaft, lock	RC1-9912-000CN	Input-tray main body (1x500-sheet) on page 835
Shaft, lock	RC1-9912-000CN	Input-tray main body (3x500-sheet) on page 839
Sheet, entrance-guide	FC5-5542-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Sheet, fixing-crossmember	RC1-9232-000CN	Printer internal components (2 of 7) on page 795
Shutter H.P.-sensor assembly	FM2-1401-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Solenoid	FL2-0821-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Spring, leaf	RC1-9233-000CN	Printer internal components (1 of 7) on page 793
Spring, tension	RU5-2822-000CN	Printer internal components (2 of 7) on page 795
Spring, tension	RU5-2796-000CN	Printer internal components (5 of 7) on page 803
Spring, tension	4S3-2116-000CN	Saddle assembly (booklet-maker) on page 903
Spring, tension	4S3-2117-000CN	Saddle assembly (booklet-maker) on page 903

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Spring, tension	FS6-2582-000CN	Saddle assembly (booklet-maker) on page 903
Spring, torsion	RU5-2825-000CN	Printer internal components (2 of 7) on page 795
Spring, torsion	RC1-9244-000CN	Printer internal components (5 of 7) on page 803
Spring, torsion	FC5-5005-000CN	External panels and covers (stapler/stacker) on page 861
Spring, torsion	FC5-5005-000CN	External panels and covers (booklet-maker) on page 863
Spring, torsion	FC5-6857-000CN	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
Spring, torsion	FB3-7980-000CN	Saddle assembly (booklet-maker) on page 903
Stack lower-tray assembly	RM1-4105-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Stack sub-tray assembly	RM1-4115-000CN	Top output bin (stack sub-tray assembly) (stapler/stacker) on page 883
Stack upper-tray assembly	RM1-4101-000CN	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
Stack upper-tray assembly	RM1-4102-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Stack-ejection motor assembly	4G3-0769-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Stack-tray assembly	RM1-4104-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Stack-tray assembly	RM1-4104-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Staple assembly	FM2-0721-000CN	Staple assembly (stapler/stacker and booklet-maker) on page 897
Stapler sub-assembly	FM2-0722-000CN	Staple assembly (stapler/stacker and booklet-maker) on page 897
Stapler unit	FL2-0846-000CN	Saddle-stapler assembly (booklet-maker) on page 911
Stock-box assembly	RM1-3539-000CN	Input-tray main body (1x500-sheet) on page 835

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Stopper, right-door	RC1-9882-000CN	Input-tray main body (1x500-sheet) on page 835
Stopper, right-door	RC1-9882-000CN	Input-tray main body (3x500-sheet) on page 839
Support, door-cover (simplex)	RC1-9014-000CN	Printer right-door assembly on page 791
Support, lock-shaft	RC1-9900-000CN	Input-tray main body (1x500-sheet) on page 835
Support, lock-shaft	RC1-9900-000CN	Input-tray main body (3x500-sheet) on page 839
Support, PCA	VT2-0001-008CN	Input-tray main body (1x500-sheet) on page 835
Support, PCA	VT2-0001-008CN	Input-tray main body (3x500-sheet) on page 839
Swing-guide assembly	RM1-4108-000CN	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
Swing-press shaft assembly	FM2-1423-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Switch, button	WC2-5512-000CN	Input-tray main body (1x500-sheet) on page 835
Switch, button	WC2-5512-000CN	Input-tray main body (3x500-sheet) on page 839
Switchback-cover assembly	RM1-3360-000CN	Printer external covers and panels on page 787
T2 guide-arm assembly	RM1-4411-000CN	Printer internal components (7 of 7) on page 807
Tag PCA-holder assembly	RM1-4402-000CN	Printer internal components (4 of 7) on page 799
Tape, door	RC1-9884-000CN	Input-tray main body (1x500-sheet) on page 835
Tape, door	RC1-9884-000CN	Input-tray main body (3x500-sheet) on page 839
Thermistor unit	RK2-1363-000CN	Printer internal components (2 of 7) on page 795
Thermopile case assembly	RM1-3232-000CN	Printer internal components (2 of 7) on page 795
Toner cartridge drive assembly kit with service document	Q3931-67912	Printer internal components (4 of 7) on page 799
Toner cartridge drive assembly kit with service document	Q3931-67913	Printer internal components (4 of 7) on page 799
Toner-motor cable	RM1-3383-000CN	Printer internal components (4 of 7) on page 799

Table 9-58 Alphabetical parts list (continued)

Description	Part number	Table and page
Toner-motor cable	RM1-3385-000CN	Printer internal components (4 of 7) on page 799
Top-cover assembly	RL1-1284-000CN	Printer internal components (1 of 7) on page 793
Top-door (upper-cover) assembly	RM1-4121-000CN	External panels and covers (stapler/stacker) on page 861
Top-door (upper-cover) assembly	RM1-4121-000CN	External panels and covers (booklet-maker) on page 863
Transfer contact-holder assembly	RM1-3230-000CN	Printer internal components (1 of 7) on page 793
Tray 1 pickup, retard-roller kit	Q3931-67920	Printer multi-purpose paper-pickup assembly on page 817
Tray 2 pickup, feed-roller kit	Q3931-67919	Printer cassette paper-pickup assembly on page 815
Tray-driver PCA assembly	FG3-2887-000CN	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
Tray-driver PCA assembly	FG3-2887-000CN	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
Upper delivery-guide assembly	RM1-4131-000CN	Saddle assembly (booklet-maker) on page 903
Upper-cover lock assembly	4G3-0210-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Upper-crossmember assembly	RM1-4180-000CN	Finisher main body (stapler/stacker and booklet-maker) on page 869
Upper-guide assembly	RM1-3687-000CN	Intermediate-feed upper-guide assembly on page 855
Window, LED	RC2-1734-000CN	External panels and covers (booklet-maker) on page 863

Table 9-59 Numerical parts list

Part number	Description	Table and page
4A3-1763-000CN	Arm, adjustment, front	Saddle assembly (booklet-maker) on page 903
4A3-1764-000CN	Arm, adjustment, rear	Saddle assembly (booklet-maker) on page 903
4A3-1779-000CN	Plate, rotation	Saddle assembly (booklet-maker) on page 903
4A3-1782-000CN	Lever, stopper	Saddle assembly (booklet-maker) on page 903
4A3-1783-000CN	Roller, folding	Saddle assembly (booklet-maker) on page 903
4A3-1955-000CN	Plate, grounding (booklet-maker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
4A3-4715-000CN	Plate, hinge-stop (booklet-maker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
4G1-1498-000CN	Area-sensor PCA assembly	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
4G1-1498-000CN	Area-sensor PCA assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
4G1-1498-000CN	Area-sensor PCA assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
4G1-2283-000CN	Cable, saddle-unit	Saddle assembly (booklet-maker) on page 903
4G1-2285-000CN	Cable, sensor	Saddle-tray assembly (booklet-maker) on page 907
4G3-0210-000CN	Upper-cover lock assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
4G3-0271-000CN	Link-slide assembly	External panels and covers (stapler/stacker) on page 861
4G3-0271-000CN	Link-slide assembly	External panels and covers (booklet-maker) on page 863
4G3-0670-000CN	Motor-mount assembly	Saddle assembly (booklet-maker) on page 903
4G3-0670-000CN	Motor-mount assembly	Motor-mount assembly (booklet-maker) on page 923
4G3-0671-000CN	Inner side-plate assembly	Saddle assembly (booklet-maker) on page 903

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
4G3-0671-000CN	Inner side-plate assembly	Inner side-plate assembly (booklet-maker) on page 919
4G3-0725-000CN	Guide-motor assembly	Saddle assembly (booklet-maker) on page 903
4G3-0769-000CN	Stack-ejection motor assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
4G3-0934-000CN	Paper-face sensor assembly	External panels and covers (stapler/stacker) on page 861
4G3-0934-000CN	Paper-face sensor assembly	External panels and covers (booklet-maker) on page 863
4G3-1624-000CN	Paper-face sensing assembly	External panels and covers (stapler/stacker) on page 861
4G3-1624-000CN	Paper-face sensing assembly	External panels and covers (booklet-maker) on page 863
4G3-1777-000CN	Cable, staple-connecting assembly	Staple assembly (stapler/stacker and booklet-maker) on page 897
4H3-0370-000CN	Clutch, electromagnetic	Finisher main body (stapler/stacker and booklet-maker) on page 869
4K1-1103-000CN	Motor, stepping	Pass lower-guide assembly (booklet-maker) on page 917
4S3-0171-000CN	Gear, 50T	Saddle assembly (booklet-maker) on page 903
4S3-1050-000CN	Bearing, ball, 6902ZZNR	Saddle assembly (booklet-maker) on page 903
4S3-2116-000CN	Spring, tension	Saddle assembly (booklet-maker) on page 903
4S3-2117-000CN	Spring, tension	Saddle assembly (booklet-maker) on page 903
C8091-67901	5000-staple replacement cartridge	Staple assembly (stapler/stacker and booklet-maker) on page 897
C8091-67901	5000-staple replacement cartridge	Saddle-stapler assembly (booklet-maker) on page 911
CC383-67901	2000-staple cartridge (for booklet making)	Staple assembly (stapler/stacker and booklet-maker) on page 897
CC383-67901	2000-staple cartridge (for booklet making)	Saddle-stapler assembly (booklet-maker) on page 911
FB3-7881-000CN	Knob (booklet-maker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
FB3-7925-030CN	Flag, roller	Saddle assembly (booklet-maker) on page 903

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
FB3-7928-020CN	Deflector	Saddle assembly (booklet-maker) on page 903
FB3-7934-000CN	Rack, rear	Saddle assembly (booklet-maker) on page 903
FB3-7967-000CN	Rack, front	Saddle assembly (booklet-maker) on page 903
FB3-7973-000CN	Holder, roller, 2	Saddle assembly (booklet-maker) on page 903
FB3-7979-000CN	Flag, sensor	Saddle assembly (booklet-maker) on page 903
FB3-7980-000CN	Spring, torsion	Saddle assembly (booklet-maker) on page 903
FB5-2697-000CN	Deflector	Saddle assembly (booklet-maker) on page 903
FB5-5937-020CN	Flag, sensor	Saddle assembly (booklet-maker) on page 903
FC5-3657-000CN	Limiter, torque	Finisher main body (stapler/stacker and booklet-maker) on page 869
FC5-4162-000CN	Flag, paper-face sensing, upper	External panels and covers (stapler/stacker) on page 861
FC5-4221-000CN	Roller, tray-guide	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FC5-4221-000CN	Roller, tray-guide	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FC5-4991-030CN	Hinge, front-door, 1	Finisher main body (stapler/stacker and booklet-maker) on page 869
FC5-4992-030CN	Hinge, front-door, 2	Finisher main body (stapler/stacker and booklet-maker) on page 869
FC5-5004-000CN	Flag, paper-sensing sensor	External panels and covers (stapler/stacker) on page 861
FC5-5004-000CN	Flag, paper-sensing sensor	External panels and covers (booklet-maker) on page 863
FC5-5005-000CN	Spring, torsion	External panels and covers (stapler/stacker) on page 861
FC5-5005-000CN	Spring, torsion	External panels and covers (booklet-maker) on page 863
FC5-5021-000CN	Claw, latch, right	Saddle assembly (booklet-maker) on page 903
FC5-5024-000CN	Knob, latch	Saddle-guide assembly (booklet-maker) on page 909

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
FC5-5436-000CN	Rack, rail	Finisher main body (stapler/stacker and booklet-maker) on page 869
FC5-5542-000CN	Sheet, entrance-guide	Finisher main body (stapler/stacker and booklet-maker) on page 869
FC5-6857-000CN	Spring, torsion	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
FC5-6978-000CN	Plate, option-tray, front	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
FF5-5805-040CN	Plate, tension	Saddle assembly (booklet-maker) on page 903
FG3-2887-000CN	Tray-driver PCA assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FG3-2887-000CN	Tray-driver PCA assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FG3-2892-000CN	Cable, solenoid	Finisher main body (stapler/stacker and booklet-maker) on page 869
FG3-2903-000CN	Cable, operation-tray	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
FL2-0821-000CN	Solenoid	Finisher main body (stapler/stacker and booklet-maker) on page 869
FL2-0846-000CN	Stapler unit	Saddle-stapler assembly (booklet-maker) on page 911
FM2-0707-000CN	Paper-sensor assembly	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
FM2-0707-000CN	Paper-sensor assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FM2-0707-000CN	Paper-sensor assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FM2-0709-000CN	Area-sensor holder assembly	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
FM2-0709-000CN	Area-sensor holder assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FM2-0709-000CN	Area-sensor holder assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
FM2-0710-000CN	Approach-switch assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FM2-0718-000CN	Entrance-sensor flag assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-0720-000CN	Flexible-cable mount assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-0721-000CN	Staple assembly	Staple assembly (stapler/stacker and booklet-maker) on page 897
FM2-0722-000CN	Stapler sub-assembly	Staple assembly (stapler/stacker and booklet-maker) on page 897
FM2-0725-090CN	Return-roller assembly	Return-roller assembly (stapler/stacker and booklet-maker) on page 889
FM2-0730-000CN	Pressure-roller assembly	Pressure-roller assembly (stapler/stacker and booklet-maker) on page 891
FM2-0737-000CN	Saddle-motor assembly	Saddle paper-feeder assembly (stapler/stacker) on page 913
FM2-0737-000CN	Saddle-motor assembly	Saddle paper-feeder assembly (booklet-maker) on page 915
FM2-0756-000CN	Saddle-guide assembly	Saddle assembly (booklet-maker) on page 903
FM2-0763-000CN	Rear-end sensor assembly	Saddle assembly (booklet-maker) on page 903
FM2-1401-000CN	Shutter H.P.-sensor assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-1409-000CN	Press-motor assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-1417-000CN	Sensor/switch assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-1423-000CN	Swing-press shaft assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
FM2-1639-000CN	Delivery-switch mount assembly	Saddle assembly (booklet-maker) on page 903
FM2-1708-000CN	Option-sensor assembly	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
FM2-5024-000CN	Saddle-guide assembly	Saddle-guide assembly (booklet-maker) on page 909

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
FS5-3576-000CN	Pulley, 30T	Saddle assembly (booklet-maker) on page 903
FS5-3577-000CN	Pulley, 39T	Saddle assembly (booklet-maker) on page 903
FS6-0814-000CN	Pulley, 32T/gear, 16T	Pass lower-guide assembly (booklet-maker) on page 917
FS6-0815-000CN	Pulley, 16T/gear, 32T	Pass lower-guide assembly (booklet-maker) on page 917
FS6-0822-000CN	Gear, 16T/33T	Saddle assembly (booklet-maker) on page 903
FS6-0823-000CN	Gear, 16T	Saddle assembly (booklet-maker) on page 903
FS6-0829-000CN	Gear, 16T/56T	Saddle assembly (booklet-maker) on page 903
FS6-0830-000CN	Gear, 16T	Saddle assembly (booklet-maker) on page 903
FS6-2582-000CN	Spring, tension	Saddle assembly (booklet-maker) on page 903
FU5-0428-000CN	Gear, 30T	Finisher main body (stapler/stacker and booklet-maker) on page 869
FU5-0435-000CN	Gear, 44T	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
FU5-0435-000CN	Gear, 44T	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FU5-0435-000CN	Gear, 44T	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FU5-0454-000CN	Gear, 40T	Finisher main body (stapler/stacker and booklet-maker) on page 869
FU5-0457-000CN	Gear, 17T	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
FU5-0457-000CN	Gear, 17T	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FU5-1169-000CN	Bushing	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
FU5-2399-000CN	Gear, 29T	Finisher main body (stapler/stacker and booklet-maker) on page 869

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
FU5-3086-000CN	Pulley, 20T	Finisher main body (stapler/stacker and booklet-maker) on page 869
FU9-9059-000CN	Screw, RS stepped, M3	Finisher main body (stapler/stacker and booklet-maker) on page 869
Q3931-67905	Cover, face-down	Printer external covers and panels on page 787
Q3931-67907	Scanner assembly kit (1 scanner assembly per kit) with service document	Printer internal components (2 of 7) on page 795
Q3931-67909	Registration 2nd-transfer assembly kit with service document	Printer internal components (3 of 7) on page 797
Q3931-67911	Main drive-unit kit with service document	Printer internal components (4 of 7) on page 799
Q3931-67912	Toner cartridge drive assembly kit with service document	Printer internal components (4 of 7) on page 799
Q3931-67913	Toner cartridge drive assembly kit with service document	Printer internal components (4 of 7) on page 799
Q3931-67914	Fixing assembly kit, 110-127V	Printer internal components (4 of 7) on page 799
Q3931-67915	Fixing assembly kit, 220-240V	Printer internal components (4 of 7) on page 799
Q3931-67916	DC-controller kit with service document	Printer internal components (6 of 7) on page 805
Q3931-67917	Cartridge-interface assembly kit with service document	Printer internal components (7 of 7) on page 807
Q3931-67918	Cassette-assembly kit	Printer cassette on page 813
Q3931-67919	Tray 2 pickup, feed-roller kit	Printer cassette paper-pickup assembly on page 815
Q3931-67920	Tray 1 pickup, retard-roller kit	Printer multi-purpose paper-pickup assembly on page 817
Q3931-67921	Duplex-switchback tray assembly kit	Printer duplexing-tray assembly on page 827
Q3931-67922	DC controller kit with service document	Printer PCA assembly location on page 831
RC1-8511-000CN	Retainer	Printer internal components (3 of 7) on page 797
RC1-8511-000CN	Retainer	Printer multi-purpose paper-pickup assembly on page 817
RC1-8519-000CN	Limiters, torque	Printer multi-purpose paper-pickup assembly on page 817
RC1-8526-000CN	Guide, multi-purpose, upper	Printer multi-purpose paper-pickup assembly on page 817
RC1-8527-000CN	Cover, multi-purpose blanking	Printer right-door assembly on page 791

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RC1-8734-000CN	Bushing	Printer internal components (3 of 7) on page 797
RC1-8925-000CN	Damper, gear	Printer internal components (4 of 7) on page 799
RC1-8928-000CN	Lever, paper-sensing	Printer internal components (5 of 7) on page 803
RC1-8931-000CN	Rail, fixing, front	Printer internal components (4 of 7) on page 799
RC1-8939-000CN	Rail, fixing, rear	Printer internal components (4 of 7) on page 799
RC1-8959-000CN	Guide, face-down inner	Printer internal components (2 of 7) on page 795
RC1-8961-000CN	Duct, air	Printer internal components (4 of 7) on page 799
RC1-8964-000CN	Duct, face-down joint	Printer internal components (4 of 7) on page 799
RC1-9014-000CN	Support, door-cover (simplex)	Printer right-door assembly on page 791
RC1-9043-000CN	Band, door	Printer front-door assembly on page 789
RC1-9185-000CN	Guide, intermediate transfer belt (ITB)-entrance, front	Printer internal components (3 of 7) on page 797
RC1-9186-000CN	Guide, intermediate transfer belt (ITB)-entrance, rear	Printer internal components (3 of 7) on page 797
RC1-9189-000CN	Arm, 1st-estramgement	Printer internal components (3 of 7) on page 797
RC1-9190-000CN	Plate, fan-fixing, front	Printer internal components (5 of 7) on page 803
RC1-9201-000CN	Cover, cassette back-end	Printer internal components (5 of 7) on page 803
RC1-9206-000CN	Rail, reverse, rear	Printer internal components (2 of 7) on page 795
RC1-9208-000CN	Foot, rubber	Printer internal components (6 of 7) on page 805
RC1-9211-000CN	Cover, main-switch	Printer internal components (7 of 7) on page 807
RC1-9220-000CN	Lever, door-interlock shutter	Printer internal components (5 of 7) on page 803
RC1-9231-000CN	Roller, rail	Input-tray main body (1x500-sheet) on page 835
RC1-9231-000CN	Roller, rail	Input-tray main body (3x500-sheet) on page 839
RC1-9232-000CN	Sheet, fixing-crossmember	Printer internal components (2 of 7) on page 795

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RC1-9233-000CN	Spring, leaf	Printer internal components (1 of 7) on page 793
RC1-9235-000CN	Plate, drawer-guard	Printer internal components (5 of 7) on page 803
RC1-9238-000CN	Plate, control-panel grounding	Printer external covers and panels on page 787
RC1-9244-000CN	Spring, torsion	Printer internal components (5 of 7) on page 803
RC1-9246-000CN	Plate, sensor, front	Printer internal components (5 of 7) on page 803
RC1-9260-000CN	Holder, scanner-thermistor	Printer internal components (2 of 7) on page 795
RC1-9261-000CN	Clamp, formatter cable	Printer internal components (7 of 7) on page 807
RC1-9276-000CN	Duct, cartridge	Printer internal components (4 of 7) on page 799
RC1-9277-000CN	Holder, cartridge-fan	Printer internal components (4 of 7) on page 799
RC1-9278-000CN	Holder, fixing-fan	Printer internal components (4 of 7) on page 799
RC1-9279-000CN	Holder, scanner-fan	Printer internal components (4 of 7) on page 799
RC1-9300-000CN	Button, main-switch	Printer internal components (7 of 7) on page 807
RC1-9306-000CN	Guide, cable, A	Printer internal components (7 of 7) on page 807
RC1-9307-000CN	Guide, cable, B	Printer internal components (6 of 7) on page 805
RC1-9308-000CN	Guide, cable, C	Printer internal components (6 of 7) on page 805
RC1-9309-000CN	Duct, scanner-fan	Printer internal components (4 of 7) on page 799
RC1-9312-000CN	Guide, cable, D	Printer internal components (6 of 7) on page 805
RC1-9313-000CN	Filter unit, air	Printer external covers and panels on page 787
RC1-9318-000CN	Guide, cable, E	Printer internal components (6 of 7) on page 805
RC1-9323-000CN	Guide, cable, F	Printer internal components (7 of 7) on page 807
RC1-9324-000CN	Holder, environment-sensor	Printer internal components (2 of 7) on page 795
RC1-9326-000CN	Plate, HVT-A (high-voltage transmission) guard	Printer internal components (7 of 7) on page 807

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RC1-9328-000CN	Holder, high-voltage-connector	Printer internal components (7 of 7) on page 807
RC1-9329-000CN	Guide, cable	Printer internal components (6 of 7) on page 805
RC1-9332-000CN	Guide, fixing-cable	Printer internal components (7 of 7) on page 807
RC1-9334-000CN	Duct, scanner	Printer internal components (2 of 7) on page 795
RC1-9336-000CN	Cover, left	Printer external covers and panels on page 787
RC1-9339-000CN	Cover, right-upper	Printer external covers and panels on page 787
RC1-9341-000CN	Cover, panel	Printer external covers and panels on page 787
RC1-9342-000CN	Cover, rear-upper	Printer external covers and panels on page 787
RC1-9344-000CN	Cover, rear-left	Printer external covers and panels on page 787
RC1-9348-000CN	Cover, internal, right	Printer internal components (3 of 7) on page 797
RC1-9354-000CN	Block, reinforcement (simplex)	Printer internal components (2 of 7) on page 795
RC1-9360-000CN	Cover, face-down drive	Printer external covers and panels on page 787
RC1-9362-000CN	Cover, blanking (simplex)	Printer external covers and panels on page 787
RC1-9511-000CN	Cover, motor	Printer right-door assembly on page 791
RC1-9667-000CN	Cover, intermediate-feed SW.	Intermediate-feed main body on page 851
RC1-9674-000CN	Belt, paper-feed, cogged	Intermediate-feed main body on page 851
RC1-9871-000CN	Cover, rear	Input-tray main body (1x500-sheet) on page 835
RC1-9871-000CN	Cover, rear	Input-tray main body (3x500-sheet) on page 839
RC1-9872-000CN	Cover, left	Input-tray main body (1x500-sheet) on page 835
RC1-9872-000CN	Cover, left	Input-tray main body (3x500-sheet) on page 839
RC1-9873-000CN	Cover, front-upper	Input-tray main body (1x500-sheet) on page 835
RC1-9873-000CN	Cover, front-upper	Input-tray main body (3x500-sheet) on page 839

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RC1-9874-000CN	Cover, right-lower	Input-tray main body (1x500-sheet) on page 835
RC1-9874-000CN	Cover, right-lower	Input-tray main body (3x500-sheet) on page 839
RC1-9881-000CN	Guide, paper-feed roller	Input-tray main body (1x500-sheet) on page 835
RC1-9881-000CN	Guide, paper-feed roller	Input-tray main body (3x500-sheet) on page 839
RC1-9882-000CN	Stopper, right-door	Input-tray main body (1x500-sheet) on page 835
RC1-9882-000CN	Stopper, right-door	Input-tray main body (3x500-sheet) on page 839
RC1-9883-000CN	Lever, lock	Input-tray main body (1x500-sheet) on page 835
RC1-9883-000CN	Lever, lock	Input-tray main body (3x500-sheet) on page 839
RC1-9884-000CN	Tape, door	Input-tray main body (1x500-sheet) on page 835
RC1-9884-000CN	Tape, door	Input-tray main body (3x500-sheet) on page 839
RC1-9896-000CN	Caster, double-lock, front	Input-tray main body (1x500-sheet) on page 835
RC1-9896-000CN	Caster, double-lock, front	Input-tray main body (3x500-sheet) on page 839
RC1-9900-000CN	Support, lock-shaft	Input-tray main body (1x500-sheet) on page 835
RC1-9900-000CN	Support, lock-shaft	Input-tray main body (3x500-sheet) on page 839
RC1-9901-000CN	Plate, switch-cover	Input-tray main body (1x500-sheet) on page 835
RC1-9901-000CN	Plate, switch-cover	Input-tray main body (3x500-sheet) on page 839
RC1-9912-000CN	Shaft, lock	Input-tray main body (1x500-sheet) on page 835
RC1-9912-000CN	Shaft, lock	Input-tray main body (3x500-sheet) on page 839
RC1-9913-000CN	Arm, lock	Input-tray main body (1x500-sheet) on page 835
RC1-9913-000CN	Arm, lock	Input-tray main body (3x500-sheet) on page 839
RC1-9915-000CN	Bushing	Input-tray main body (1x500-sheet) on page 835
RC1-9915-000CN	Bushing	Input-tray main body (3x500-sheet) on page 839

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RC1-9917-000CN	Caster, rear	Input-tray main body (1x500-sheet) on page 835
RC1-9917-000CN	Caster, rear	Input-tray main body (3x500-sheet) on page 839
RC1-9921-000CN	Door, stock	Input-tray main body (1x500-sheet) on page 835
RC2-1278-000CN	Cover, rear	External panels and covers (stapler/stacker) on page 861
RC2-1278-000CN	Cover, rear	External panels and covers (booklet-maker) on page 863
RC2-1279-000CN	Cover, tray-connector	External panels and covers (stapler/stacker) on page 861
RC2-1279-000CN	Cover, tray-connector	External panels and covers (booklet-maker) on page 863
RC2-1280-000CN	Cover, left-lower	External panels and covers (booklet-maker) on page 863
RC2-1283-000CN	Panel, height, upper	External panels and covers (stapler/stacker) on page 861
RC2-1283-000CN	Panel, height, upper	External panels and covers (booklet-maker) on page 863
RC2-1284-000CN	Guide, side-wall	External panels and covers (booklet-maker) on page 863
RC2-1293-000CN	Arm, paper-delivery gate	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
RC2-1315-000CN	Caster, universal	Finisher main body (stapler/stacker and booklet-maker) on page 869
RC2-1347-000CN	Cover, option-slide	External panels and covers (stapler/stacker) on page 861
RC2-1351-000CN	Cover, internal, lower (stapler/stacker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
RC2-1536-000CN	Plate, grounding (booklet-maker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
RC2-1734-000CN	Window, LED	External panels and covers (booklet-maker) on page 863
RC2-1735-000CN	Mount, LED-PCA	External panels and covers (stapler/stacker) on page 861
RK2-1320-000CN	Motor, stepping, DC	Intermediate-feed main body on page 851
RK2-1331-000CN	Motor, stepping, DC	Input-tray main body (1x500-sheet) on page 835
RK2-1331-000CN	Motor, stepping, DC	Input-tray main body (3x500-sheet) on page 839

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RK2-1354-000CN	Cable, laser flexible flat	Printer internal components (2 of 7) on page 795
RK2-1355-000CN	Cable, laser flexible flat	Printer internal components (2 of 7) on page 795
RK2-1356-000CN	Cable, flexible flat	Printer internal components (6 of 7) on page 805
RK2-1363-000CN	Thermistor unit	Printer internal components (2 of 7) on page 795
RK2-1366-000CN	Motor, stepping, DC	Printer internal components (4 of 7) on page 799
RK2-1370-000CN	Motor, stepping, DC	Printer internal components (4 of 7) on page 799
RK2-1377-000CN	Fan	Printer internal components (4 of 7) on page 799
RK2-1378-000CN	Fan	Printer internal components (4 of 7) on page 799
RK2-1378-000CN	Fan	Printer internal components (5 of 7) on page 803
RK2-1378-000CN	Fan	Printer duplexing-reverse assembly on page 825
RK2-1382-000CN	Fan	Printer internal components (4 of 7) on page 799
RK2-2376-000CN	Sensor unit, humidity	Printer internal components (2 of 7) on page 795
RL1-1210-000CN	Cover, rear	Printer external covers and panels on page 787
RL1-1213-000CN	Rail, left, top	Printer internal components (5 of 7) on page 803
RL1-1215-000CN	Rail, cassette, right	Printer internal components (5 of 7) on page 803
RL1-1216-000CN	Plate, fixing-motor	Printer internal components (4 of 7) on page 799
RL1-1280-000CN	Right-lower cover assembly	Printer external covers and panels on page 787
RL1-1283-000CN	Guide, multi-purpose, right	Printer internal components (2 of 7) on page 795
RL1-1284-000CN	Top-cover assembly	Printer internal components (1 of 7) on page 793
RL1-1289-000CN	Roller, paper-pickup	Input-tray paper-pickup assembly on page 847
RL1-1310-000CN	Rail, cassette, right	Input-tray main body (1x500-sheet) on page 835
RL1-1310-000CN	Rail, cassette, right	Input-tray main body (3x500-sheet) on page 839

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RL1-1311-000CN	Rail, cassette, left	Input-tray main body (1x500-sheet) on page 835
RL1-1311-000CN	Rail, cassette, left	Input-tray main body (3x500-sheet) on page 839
RL1-1321-000CN	Cover, right-front	Input-tray main body (3x500-sheet) on page 839
RL1-1322-000CN	Cover, right-front	Input-tray main body (1x500-sheet) on page 835
RL1-1335-000CN	Guide, duplexing-feed, upper (duplex)	Printer right-door assembly on page 791
RL1-1477-000CN	Cover, internal, lower (booklet-maker only)	Finisher main body (stapler/stacker and booklet-maker) on page 869
RL1-1717-000CN	Cover, front-lower	External panels and covers (stapler/stacker) on page 861
RL1-1717-000CN	Cover, front-lower	External panels and covers (booklet-maker) on page 863
RL1-1718-000CN	Cover, rear-lower	External panels and covers (stapler/stacker) on page 861
RL1-1718-000CN	Cover, rear-lower	External panels and covers (booklet-maker) on page 863
RL1-2210-000CN	Cover, option-tray, front	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
RM1-0037-020CN	Paper feed-roller assembly	Input-tray paper-pickup assembly on page 847
RM1-3206-000CN	Cassette paper-pickup assembly (includes 1 pick and 2 feed rollers)	Printer cassette paper-pickup assembly on page 815
RM1-3215-000CN	Intermediate transfer belt (ITB) lock-support rear assembly	Printer internal components (3 of 7) on page 797
RM1-3217-000CN	Fixing-motor cable	Printer internal components (6 of 7) on page 805
RM1-3218-000CN	Fixing power-supply assembly	Printer internal components (7 of 7) on page 807
RM1-3218-000CN	Fixing power-supply assembly	Printer PCA assembly location on page 831
RM1-3222-020CN	Lifter-drive-assembly kit	Printer lifter-drive assembly on page 811
RM1-3225-000CN	Grip-support front assembly	Printer internal components (2 of 7) on page 795
RM1-3226-000CN	Grip-support rear assembly	Printer internal components (2 of 7) on page 795
RM1-3228-000CN	Intermediate transfer belt (ITB) lock-support front assembly	Printer internal components (3 of 7) on page 797

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-3230-000CN	Transfer contact-holder assembly	Printer internal components (1 of 7) on page 793
RM1-3232-000CN	Thermopile case assembly	Printer internal components (2 of 7) on page 795
RM1-3233-000CN	Left-side wall assembly	Printer internal components (1 of 7) on page 793
RM1-3235-000CN	Partition-plate assembly, yellow	Printer internal components (1 of 7) on page 793
RM1-3237-000CN	Partition-plate assembly, magenta	Printer internal components (1 of 7) on page 793
RM1-3238-000CN	Partition-plate assembly, cyan	Printer internal components (1 of 7) on page 793
RM1-3239-000CN	Right-side wall assembly	Printer internal components (1 of 7) on page 793
RM1-3240-000CN	Intermediate transfer belt (ITB)-drawer assembly	Printer internal components (3 of 7) on page 797
RM1-3247-000CN	Fixing one-way gear assembly	Printer internal components (4 of 7) on page 799
RM1-3250-000CN	Photosensor assembly	Printer internal components (2 of 7) on page 795
RM1-3252-000CN	Main switch-holder assembly	Printer internal components (7 of 7) on page 807
RM1-3253-000CN	Formatter-case assembly	Printer internal components (6 of 7) on page 805
RM1-3254-000CN	Cartridge contact-holder assembly	Printer internal components (7 of 7) on page 807
RM1-3258-000CN	Color-plane-registration sensor assembly	Printer internal components (3 of 7) on page 797
RM1-3280-000CN	Intermediate transfer belt (ITB) estrangement-drive assembly	Printer internal components (3 of 7) on page 797
RM1-3286-000CN	Drum-motor assembly	Printer internal components (4 of 7) on page 799
RM1-3291-000CN	Multi-purpose-guide assembly	Printer multi-purpose-guide assembly on page 821
RM1-3293-000CN	Face-down paper-delivery assembly	Printer face-down paper-delivery assembly on page 823
RM1-3307-000CN	Intermediate transfer belt (ITB) assembly	Printer internal components (3 of 7) on page 797
RM1-3319-000CN	2nd-transfer-roller assembly	Printer internal components (3 of 7) on page 797
RM1-3333-000CN	Right-door sub-assembly	Printer right-door assembly on page 791
RM1-3340-000CN	Face-down end-tray assembly	Printer external covers and panels on page 787

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-3341-000CN	Multi-purpose-tray assembly	Printer multi-purpose-tray assembly on page 819
RM1-3345-000CN	Multi-purpose paper-pickup assembly	Printer multi-purpose paper-pickup assembly on page 817
RM1-3354-000CN	Rear-cover-mount plate assembly	Printer internal components (6 of 7) on page 805
RM1-3356-000CN	Front-door assembly	Printer front-door assembly on page 789
RM1-3360-000CN	Switchback-cover assembly	Printer external covers and panels on page 787
RM1-3364-000CN	Fan assembly	Printer internal components (2 of 7) on page 795
RM1-3366-000CN	Multi-purpose-drive assembly	Printer multi-purpose-drive assembly on page 809
RM1-3383-000CN	Toner-motor cable	Printer internal components (4 of 7) on page 799
RM1-3385-000CN	Toner-motor cable	Printer internal components (4 of 7) on page 799
RM1-3389-000CN	Panel cable	Printer internal components (6 of 7) on page 805
RM1-3390-000CN	Face-down unit-1 cable	Printer internal components (7 of 7) on page 807
RM1-3391-000CN	Face-down unit-2 cable	Printer internal components (7 of 7) on page 807
RM1-3529-000CN	Cassette (1x500-sheet)	Input-tray cassette on page 845
RM1-3529-000CN	Cassette (3x500-sheet)	Input-tray cassette on page 845
RM1-3531-040CN	Auto-close assembly, 1x500-sheet	Input-tray auto-close assembly on page 843
RM1-3531-040CN	Auto-close assembly, 3x500-sheet	Input-tray auto-close assembly on page 843
RM1-3533-000CN	Paper-pickup assembly (1x500-sheet)	Input-tray paper-pickup assembly on page 847
RM1-3533-000CN	Paper-pickup assembly (3x500-sheet)	Input-tray paper-pickup assembly on page 847
RM1-3537-000CN	Right-door assembly	Input-tray main body (3x500-sheet) on page 839
RM1-3538-000CN	Right-door assembly	Input-tray main body (1x500-sheet) on page 835
RM1-3539-000CN	Stock-box assembly	Input-tray main body (1x500-sheet) on page 835
RM1-3559-000CN	Intermediate paper-transfer unit (IPTU)-driver PCA assembly	Intermediate-feed main body on page 851

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-3559-000CN	Intermediate paper-transfer unit (IPTU)-driver PCA assembly	PCA assembly on page 857
RM1-3569-000CN	Paper-feed PCA assembly	Input-tray main body (1x500-sheet) on page 835
RM1-3569-000CN	Paper-feed PCA assembly	Input-tray main body (3x500-sheet) on page 839
RM1-3569-000CN	Paper-feed PCA assembly (1x500-sheet)	Input-tray PCA assembly on page 849
RM1-3569-000CN	Paper-feed PCA assembly (3x500-sheet)	Input-tray PCA assembly on page 849
RM1-3570-000CN	Option paper-sensor PCA assembly	Input-tray paper-pickup assembly on page 847
RM1-3571-000CN	Cable, pickup-option drawer	Input-tray main body (1x500-sheet) on page 835
RM1-3571-000CN	Cable, paper-pickup-option drawer	Input-tray main body (3x500-sheet) on page 839
RM1-3572-000CN	Cable, pickup-option door switch	Input-tray main body (1x500-sheet) on page 835
RM1-3572-000CN	Cable, pickup-option door switch	Input-tray main body (3x500-sheet) on page 839
RM1-3573-000CN	Cable, pickup-option PCA connect	Input-tray main body (3x500-sheet) on page 839
RM1-3574-000CN	Cable, option-sensor PCA connect	Input-tray main body (1x500-sheet) on page 835
RM1-3574-000CN	Cable, option-sensor PCA connect	Input-tray main body (3x500-sheet) on page 839
RM1-3575-000CN	Cable, paper-pickup option	Input-tray main body (1x500-sheet) on page 835
RM1-3575-000CN	Cable, paper-pickup option	Input-tray main body (3x500-sheet) on page 839
RM1-3576-000CN	Cable, pickup-option lifter unit	Input-tray auto-close assembly on page 843
RM1-3582-000CN	High-voltage-transfer A PCA assembly	Printer internal components (7 of 7) on page 807
RM1-3582-000CN	High-voltage-transfer A PCA assembly	Printer PCA assembly location on page 831
RM1-3585-000CN	Memory-tag PCA assembly	Printer internal components (4 of 7) on page 799
RM1-3585-000CN	Memory-tag PCA assembly	Printer PCA assembly location on page 831
RM1-3589-000CN	Interlock-switch assembly	Printer internal components (2 of 7) on page 795
RM1-3594-000CN	Low-voltage power-supply assembly	Printer internal components (5 of 7) on page 803

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-3594-000CN	Low-voltage power-supply assembly	Printer PCA assembly location on page 831
RM1-3610-000CN	DC-controller power cable	Printer internal components (6 of 7) on page 805
RM1-3612-000CN	Fixing-joint cable	Printer internal components (7 of 7) on page 807
RM1-3617-000CN	Front cable	Printer internal components (6 of 7) on page 805
RM1-3618-000CN	Rear-lower cable	Printer internal components (6 of 7) on page 805
RM1-3619-000CN	Rear-upper cable	Printer internal components (6 of 7) on page 805
RM1-3620-000CN	Scanner-joint cable	Printer internal components (6 of 7) on page 805
RM1-3622-000CN	Panel-joint cable	Printer internal components (6 of 7) on page 805
RM1-3623-000CN	Interface-joint cable	Printer internal components (6 of 7) on page 805
RM1-3624-000CN	Color-plane-registration joint cable	Printer internal components (6 of 7) on page 805
RM1-3630-000CN	Multi-tray cable	Printer multi-purpose-tray assembly on page 819
RM1-3652-000CN	Duplexing-reverse assembly	Printer duplexing-reverse assembly on page 825
RM1-3665-000CN	Duplexing-feed assembly	Printer duplexing-feed assembly on page 829
RM1-3684-000CN	Drive-belt assembly	Intermediate-feed main body on page 851
RM1-3685-000CN	Fin-lock assembly	Intermediate-feed main body on page 851
RM1-3686-000CN	Lower-guide assembly	Intermediate-feed lower-guide assembly on page 853
RM1-3687-000CN	Upper-guide assembly	Intermediate-feed upper-guide assembly on page 855
RM1-3688-000CN	Damper assembly	Intermediate-feed main body on page 851
RM1-4101-000CN	Stack upper-tray assembly	Output bin 1 (stack upper-tray assembly) (stapler/stacker) on page 873
RM1-4102-000CN	Stack upper-tray assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877
RM1-4104-000CN	Stack-tray assembly	Output bin 1 (stack upper-tray assembly) (booklet-maker) on page 877

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-4104-000CN	Stack-tray assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
RM1-4105-000CN	Stack lower-tray assembly	Output bin 2 (stack lower-tray assembly) (stapler/stacker and booklet-maker) on page 881
RM1-4107-000CN	Area-sensor flag assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
RM1-4108-000CN	Swing-guide assembly	Swing-guide assembly (stapler/stacker and booklet-maker) on page 893
RM1-4109-000CN	Saddle paper-feeder assembly	Saddle paper-feeder assembly (booklet-maker) on page 915
RM1-4110-000CN	Entrance lower-guide assembly	Saddle paper-feeder assembly (stapler/stacker) on page 913
RM1-4110-000CN	Entrance lower-guide assembly	Saddle paper-feeder assembly (booklet-maker) on page 915
RM1-4113-000CN	Booklet-output bin (saddle-tray assembly)	Saddle-tray assembly (booklet-maker) on page 907
RM1-4115-000CN	Stack sub-tray assembly	Top output bin (stack sub-tray assembly) (stapler/stacker) on page 883
RM1-4119-000CN	Middle-height cover assembly	External panels and covers (booklet-maker) on page 863
RM1-4121-000CN	Top-door (upper-cover) assembly	External panels and covers (stapler/stacker) on page 861
RM1-4121-000CN	Top-door (upper-cover) assembly	External panels and covers (booklet-maker) on page 863
RM1-4122-000CN	Front-door assembly	External panels and covers (booklet-maker) on page 863
RM1-4123-000CN	Inner-cover assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
RM1-4125-000CN	Operation-tray assembly	Operation-tray assembly (stapler/stacker and booklet-maker) on page 885
RM1-4128-000CN	Cable-mount lattice assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
RM1-4129-000CN	Left-upper cover assembly	External panels and covers (booklet-maker) on page 863
RM1-4130-000CN	Saddle paper-delivery assembly	Saddle assembly (booklet-maker) on page 903
RM1-4130-000CN	Saddle paper-delivery assembly	Saddle paper-delivery assembly (booklet-maker) on page 921

Table 9-59 Numerical parts list (continued)

Part number	Description	Table and page
RM1-4131-000CN	Upper delivery-guide assembly	Saddle assembly (booklet-maker) on page 903
RM1-4134-000CN	Front-door assembly	External panels and covers (stapler/stacker) on page 861
RM1-4135-000CN	Lower height-guide assembly	External panels and covers (stapler/stacker) on page 861
RM1-4136-000CN	Saddle paper-feeder assembly	Saddle paper-feeder assembly (stapler/stacker) on page 913
RM1-4139-000CN	Main controller PCA assembly (stapler/stacker and booklet-maker)	PCA assembly on page 925
RM1-4140-000CN	Saddle-controller PCA assembly	Saddle assembly (booklet-maker) on page 903
RM1-4140-000CN	Saddle-controller PCA assembly (booklet-maker)	PCA assembly on page 925
RM1-4141-000CN	LED-PCA assembly	External panels and covers (stapler/stacker) on page 861
RM1-4141-000CN	LED-PCA assembly	External panels and covers (booklet-maker) on page 863
RM1-4172-000CN	Entrance upper-guide assembly	Entrance upper-guide assembly (stapler/stacker and booklet-maker) on page 895
RM1-4175-000CN	Paper-feeder motor assembly	Paper-feeder motor assembly (stapler/stacker and booklet-maker) on page 887
RM1-4178-000CN	Saddle-stapler assembly	Saddle assembly (booklet-maker) on page 903
RM1-4178-000CN	Saddle-stapler assembly	Saddle-stapler assembly (booklet-maker) on page 911
RM1-4179-000CN	Left upper-cover assembly	External panels and covers (stapler/stacker) on page 861
RM1-4180-000CN	Upper-crossmember assembly	Finisher main body (stapler/stacker and booklet-maker) on page 869
RM1-4391-000CN	Face-down full-flag assembly	Printer face-down paper-delivery assembly on page 823
RM1-4400-000CN	Guide-sensor assembly	Printer internal components (5 of 7) on page 803
RM1-4401-000CN	Intermediate transfer belt (ITB) duct assembly	Printer internal components (5 of 7) on page 803
RM1-4402-000CN	Tag PCA-holder assembly	Printer internal components (4 of 7) on page 799

A Service and support

Hewlett-Packard limited warranty statement

HP PRODUCT

HP Color LaserJet CP6015 Series product

DURATION OF LIMITED WARRANTY

One-year limited warranty

HP warrants to you, the end-user customer, that HP hardware and accessories will be free from defects in materials and workmanship after the date of purchase, for the period specified above. If HP receives notice of such defects during the warranty period, HP will, at its option, either repair or replace products which prove to be defective. Replacement products may be either new or equivalent in performance to new.

HP warrants to you that HP software will not fail to execute its programming instructions after the date of purchase, for the period specified above, due to defects in material and workmanship when properly installed and used. If HP receives notice of such defects during the warranty period, HP will replace software which does not execute its programming instructions due to such defects.

HP does not warrant that the operation of HP products will be uninterrupted or error free. If HP is unable, within a reasonable time, to repair or replace any product to a condition as warranted, you will be entitled to a refund of the purchase price upon prompt return of the product.

HP products may contain remanufactured parts equivalent to new in performance or may have been subject to incidental use.

Warranty does not apply to defects resulting from (a) improper or inadequate maintenance or calibration, (b) software, interfacing, parts or supplies not supplied by HP, (c) unauthorized modification or misuse, (d) operation outside of the published environmental specifications for the product, or (e) improper site preparation or maintenance.

TO THE EXTENT ALLOWED BY LOCAL LAW, THE ABOVE WARRANTIES ARE EXCLUSIVE AND NO OTHER WARRANTY OR CONDITION, WHETHER WRITTEN OR ORAL, IS EXPRESSED OR IMPLIED AND HP SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, SATISFACTORY QUALITY, AND FITNESS FOR A PARTICULAR PURPOSE. Some countries/regions, states or provinces do not allow limitations on the duration of an implied warranty, so the above limitation or exclusion might not apply to you. This warranty gives you specific legal rights and you might also have other rights that vary from country/region to country/region, state to state, or province to province. HP's limited warranty is valid in any country/region or locality where HP has a support presence for this product and where HP has marketed this product. The level of warranty service you receive may vary according to local standards. HP will not alter form, fit or function of the product to make it operate in a country/region for which it was never intended to function for legal or regulatory reasons.

TO THE EXTENT ALLOWED BY LOCAL LAW, THE REMEDIES IN THIS WARRANTY STATEMENT ARE YOUR SOLE AND EXCLUSIVE REMEDIES. EXCEPT AS INDICATED ABOVE, IN NO EVENT WILL HP OR ITS SUPPLIERS BE LIABLE FOR LOSS OF DATA OR FOR DIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL

(INCLUDING LOST PROFIT OR DATA), OR OTHER DAMAGE, WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. Some countries/regions, states or provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

THE WARRANTY TERMS CONTAINED IN THIS STATEMENT, EXCEPT TO THE EXTENT LAWFULLY PERMITTED, DO NOT EXCLUDE, RESTRICT OR MODIFY AND ARE IN ADDITION TO THE MANDATORY STATUTORY RIGHTS APPLICABLE TO THE SALE OF THIS PRODUCT TO YOU.

Print cartridge and image drum limited warranty statement

This HP product is warranted to be free from defects in materials and workmanship.

This warranty does not apply to products that (a) have been refilled, refurbished, remanufactured or tampered with in any way, (b) experience problems resulting from misuse, improper storage, or operation outside of the published environmental specifications for the printer product or (c) exhibit wear from ordinary use.

To obtain warranty service, please return the product to place of purchase (with a written description of the problem and print samples) or contact HP customer support. At HP's option, HP will either replace products that prove to be defective or refund your purchase price.

TO THE EXTENT ALLOWED BY LOCAL LAW, THE ABOVE WARRANTY IS EXCLUSIVE AND NO OTHER WARRANTY OR CONDITION, WHETHER WRITTEN OR ORAL, IS EXPRESSED OR IMPLIED AND HP SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, SATISFACTORY QUALITY, AND FITNESS FOR A PARTICULAR PURPOSE.

TO THE EXTENT ALLOWED BY LOCAL LAW, IN NO EVENT WILL HP OR ITS SUPPLIERS BE LIABLE FOR DIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFIT OR DATA), OR OTHER DAMAGE, WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE.

THE WARRANTY TERMS CONTAINED IN THIS STATEMENT, EXCEPT TO THE EXTENT LAWFULLY PERMITTED, DO NOT EXCLUDE, RESTRICT OR MODIFY AND ARE IN ADDITION TO THE MANDATORY STATUTORY RIGHTS APPLICABLE TO THE SALE OF THIS PRODUCT TO YOU.

Color LaserJet Fuser Kit, Transfer Kit, and Roller Kit Limited Warranty Statement

This HP product is warranted to be free from defects in materials and workmanship until the printer provides a low-life indicator on the control panel.

This warranty does not apply to products that (a) have been refurbished, remanufactured or tampered with in any way, (b) experience problems resulting from misuse, improper storage, or operation outside of the published environmental specifications for the printer product or (c) exhibit wear from ordinary use.

To obtain warranty service, please return the product to place of purchase (with a written description of the problem) or contact HP customer support. At HP's option, HP will either replace products that prove to be defective or refund your purchase price.

TO THE EXTENT ALLOWED BY LOCAL LAW, THE ABOVE WARRANTY IS EXCLUSIVE AND NO OTHER WARRANTY OR CONDITION, WHETHER WRITTEN OR ORAL, IS EXPRESSED OR IMPLIED AND HP SPECIFICALLY DISCLAIMS ANY IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY, SATISFACTORY QUALITY, AND FITNESS FOR A PARTICULAR PURPOSE.

TO THE EXTENT ALLOWED BY LOCAL LAW, IN NO EVENT WILL HP OR ITS SUPPLIERS BE LIABLE FOR DIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL (INCLUDING LOST PROFIT OR DATA), OR OTHER DAMAGE, WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE.

THE WARRANTY TERMS CONTAINED IN THIS STATEMENT, EXCEPT TO THE EXTENT LAWFULLY PERMITTED, DO NOT EXCLUDE, RESTRICT OR MODIFY AND ARE IN ADDITION TO THE MANDATORY STATUTORY RIGHTS APPLICABLE TO THE SALE OF THIS PRODUCT TO YOU.

Customer self repair warranty service

HP products are designed with many Customer Self Repair (CSR) parts to minimize repair time and allow for greater flexibility in performing defective parts replacement. If during the diagnosis period, HP identifies that the repair can be accomplished by the use of a CSR part, HP will ship that part directly to you for replacement. There are two categories of CSR parts: 1) Parts for which customer self repair is mandatory. If you request HP to replace these parts, you will be charged for the travel and labor costs of this service. 2) Parts for which customer self repair is optional. These parts are also designed for Customer Self Repair. If, however, you require that HP replace them for you, this may be done at no additional charge under the type of warranty service designated for your product.

Based on availability and where geography permits, CSR parts will be shipped for next business day delivery. Same-day or four-hour delivery may be offered at an additional charge where geography permits. If assistance is required, you can call the HP Technical Support Center and a technician will help you over the phone. HP specifies in the materials shipped with a replacement CSR part whether a defective part must be returned to HP. In cases where it is required to return the defective part to HP, you must ship the defective part back to HP within a defined period of time, normally five (5) business days. The defective part must be returned with the associated documentation in the provided shipping material. Failure to return the defective part may result in HP billing you for the replacement. With a customer self repair, HP will pay all shipping and part return costs and determine the courier/carrier to be used.

Customer support

Get telephone support, free during your warranty period, for your country/region	Country/region phone numbers are on the flyer that was in the box with your product or at www.hp.com/support/ .
Have the product name, serial number, date of purchase, and problem description ready.	
Get 24-hour Internet support	www.hp.com/support/cljcp6015
Get support for products used with a Macintosh computer	www.hp.com/go/macosex
Download software utilities, drivers, and electronic information	www.hp.com/go/cljcp6015_software
Order supplies and paper	www.hp.com/go/suresupply
Order genuine HP parts or accessories	www.hp.com/buy/parts
Order additional HP service or maintenance agreements	www.hp.com/go/carepack

Availability of support and service

Around the world, HP provides a variety of service and support options for purchase. Availability of these programs will vary depending upon your location.

HP maintenance agreements

HP has several types of maintenance agreements that meet a wide range of support needs. Maintenance agreements are not part of the standard warranty. Support services may vary by area. Check with your local HP dealer to determine the services available to you.

On-site service agreements

To provide you with the level of support best suited to your needs, HP has on-site service agreements with three response times:

Priority onsite service

This agreement provides 4-hour service response to your site for calls made during normal HP business hours.

Next-day onsite service

This agreement provides support by the next working day following a service request. Extended coverage hours and extended travel beyond HP's designated service zones are available on most on-site agreements (for additional charges).

Weekly (volume) on-site service

This agreement provides scheduled weekly on-site visits for organizations with many HP products. This agreement is designated for sites using 25 or more workstation products, including printers, plotters, computers, and disk drives.

HP Color LaserJet CP6015xh	972.8 mm (38.3 inches)	1079.5 mm (42.5 inches)	983 mm (38.7 inches)

Electrical specifications

⚠ WARNING! Power requirements are based on the country/region where the product is sold. Do not convert operating voltages. This can damage the product and void the product warranty.

Table B-3 Power requirements (HP Color LaserJet CP6015 Series)

Specification	110-volt models	230-volt models
Power requirements	100 to 127 volts (± 10%)	220 to 240 volts (± 10%)
	50/60 Hz (± 2 Hz)	50/60 Hz (± 2 Hz)
Rated current	12.0 Amps	6.0 Amps

Table B-4 Power consumption HP Color LaserJet CP6015 Series (average, in watts)^{1, 2}

Product model	Printing ³	Ready ⁴	Sleep (110V) ^{5, 6}	Sleep (220V)	Off
HP Color LaserJet CP6015n	1195 W	207 W	18.9 W	21.5 watts	0.1 W
HP Color LaserJet CP6015dn (Europe)	1195 W	207.5 W	(N/A)	21.5 watts	0.2 W
HP Color LaserJet CP6015dn (non-European countries/regions)	1195 W	207.5 W	18.9 W	N/A	0.1 W
HP Color LaserJet CP6015de	1195 W	50 W	18.9 W	N/A	0.1 W
HP Color LaserJet CP6015x	1195 W	208 W	18.9 W	21.5 watts	0.1 W
HP Color LaserJet CP6015xh	1200 W	211.4 W	19.4 W	22 watts	0.1 W

¹ Values subject to change. See www.hp.com/support/cljcp6015 for current information.

² Power numbers are the highest values measured using all standard voltages.

³ HP Color LaserJet CP6015 series printing speeds are 40 ppm for Letter and 41 ppm for A4 sizes.

⁴ Heat dissipation in Ready mode = 722 BTU/hour.

⁵ Default time from Ready mode to Sleep mode = 60 minutes.

⁶ Recovery time from Sleep mode = less than 125 seconds

Acoustic specifications

Table B-5 Sound power and pressure level¹ (HP Color LaserJet CP6015 Series)

Sound power level	Declared per ISO 9296
Printing ²	$L_{WA} = 6.9$ Bels (A) [69 dB(A)]
Ready	inaudible
Sound pressure level	Declared per ISO 9296
Printing ²	$L_{pAm} = 54$ dB (A)
Ready	inaudible

¹ Values subject to change. See www.hp.com/go/cljcp6015_software for current information.

² HP Color LaserJet CP6015 Series speed is 40 ppm for A4 or Letter-sized paper in either full color or monochrome. Configuration tested (HP Color LaserJet CP6015): Base model, simplex printing with A4 paper size.

Environmental specifications

Environmental condition	Recommended	Allowed	Storage/standby
Temperature (product and print cartridge)	17° to 25°C (62.6° to 77°F)	10° to 30°C (50° to 86°F)	0° to 35°C (32° to 95°F)
Relative humidity	30% to 70% relative humidity (RH)	10% to 80% RH	5% to 95%
Altitude	N/A	0 meters (0 feet) to 2500 meters (8000 feet)	N/A

C Regulatory information

FCC regulations

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. If this equipment is not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase separation between equipment and receiver.
- Connect equipment to an outlet on a circuit different from that to which the receiver is located.
- Consult your dealer or an experienced radio/TV technician.

 **NOTE:** Any changes or modifications to the printer that are not expressly approved by HP could void the user's authority to operate this equipment.

Use of a shielded interface cable is required to comply with the Class B limits of Part 15 of FCC rules.

Environmental product stewardship program

Protecting the environment

Hewlett-Packard Company is committed to providing quality products in an environmentally sound manner. This product has been designed with several attributes to minimize impacts on our environment.

Ozone production

This product generates no appreciable ozone gas (O₃).

Power consumption

Power usage drops significantly while in Ready and Sleep mode, which saves natural resources and saves money without affecting the high performance of this product. To determine the ENERGY STAR® qualification status for this product, see the Product Data Sheet or Specifications Sheet. Qualified products are also listed at:

www.hp.com/go/energystar

Paper use

This product's optional automatic duplex feature (two-sided printing) and N-up printing (multiple pages printed on one page) capability can reduce paper usage and the resulting demands on natural resources.

Plastics

Plastic parts over 25 grams are marked according to international standards that enhance the ability to identify plastics for recycling purposes at the end of the product's life.

HP LaserJet print supplies

It's easy to return and recycle your empty HP LaserJet print cartridges—free of charge—with HP Planet Partners. Multilingual program information and instructions are included in every new HP LaserJet print cartridge and supplies package. You help reduce the toll on the environment further when you return multiple cartridges together rather than separately.

HP is committed to providing inventive, high-quality products and services that are environmentally sound, from product design and manufacturing to distribution, customer use, and recycling. When you participate in the HP Planet Partners program, we ensure your HP LaserJet print cartridges are recycled properly, processing them to recover plastics and metals for new products and diverting millions of tons of waste from landfills. Please note that the cartridge will not be returned to you. Thank you for being environmentally responsible!

 **NOTE:** Use the return label to return original HP LaserJet print cartridges only. Please do not use this label for HP inkjet cartridges, non-HP cartridges, refilled or remanufactured cartridges, or warranty returns. For information about recycling your HP inkjet cartridges, please go to www.hp.com/recycle.

Return and recycling instructions

United States and Puerto Rico

The enclosed label in the HP LaserJet toner cartridge box is for the return and recycling of one or more HP LaserJet print cartridges after use. Please follow the applicable instructions below.

Multiple returns (more than one cartridge)

1. Package each HP LaserJet print cartridge in its original box and bag.
2. Tape the boxes together using strapping or packaging tape. The package can weigh up to 31 kg (70 lb).
3. Use a single pre-paid shipping label.

OR

1. Use your own suitable box, or request a free bulk collection box from www.hp.com/recycle or 1-800-340-2445 (holds up to 31 kg (70 lb) of HP LaserJet print cartridges).
2. Use a single pre-paid shipping label.

Single returns

1. Package the HP LaserJet print cartridge in its original bag and box.
2. Place the shipping label on the front of the box.

Shipping

For all HP LaserJet print cartridge recycling returns, give the package to UPS during your next delivery or pickup, or take it to an authorized UPS drop-off center. For the location of your local UPS drop-off center, call 1-800-PICKUPS or visit www.ups.com. If you are returning via USPS label, give the package to a U.S. Postal Service carrier or drop off at a U.S. Postal Service Office. For more information, or to order additional labels or boxes for bulk returns, visit www.hp.com/recycle or call 1-800-340-2445. Requested UPS pickup will be charged normal pickup rates. Information subject to change without notice.

Non-U.S. returns

To participate in HP Planet Partners return and recycling program, just follow the simple directions in the recycling guide (found inside the packaging of your new product supply item) or visit www.hp.com/recycle. Select your country/region for information on how to return your HP LaserJet printing supplies.

Paper

This product is capable of using recycled papers when the paper meets the guidelines outlined in the *HP LaserJet Printer Family Print Media Guide*. This product is suitable for the use of recycled paper according to EN12281:2002.

Material restrictions

This HP product contains a battery that may require special handling at end-of-life.

The battery contained in this product includes:

Type	Carbon monofluoride lithium battery
Weight	0.8 grams
Location	Formatter board
User removable	No

廢電池請回收

This product contains mercury in the fluorescent lamp of the control panel liquid crystal display that might require special handling at end-of-life.

For recycling information you can visit www.hp.com/go/recycle or contact your local authorities or the Electronics Industry Alliance (www.eiae.org).

Disposal of waste equipment by users in private households in the European Union

This symbol on the product or on its packaging indicates that this product must not be disposed of with your other household waste. Instead, it is your responsibility to dispose of your waste equipment by handing it over to a designated collection point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Material Safety Data Sheet (MSDS)

Material Safety Data Sheets (MSDS) for supplies containing chemical substances (for example, toner) can be obtained by accessing the HP Web site at www.hp.com/go/msds or www.hp.com/hpinfo/community/environment/productinfo/safety.

Declaration of Conformity

Declaration of Conformity

according to ISO/IEC 17050-1 and EN 17050-1

Manufacturer's Name: Hewlett-Packard Company
DoC#: BOISB-0601-00-rel. 1.0
Manufacturer's Address: 11311 Chinden Boulevard,
Boise, Idaho 83714-1021, USA

declares that the product

Product Name: HP Color LaserJet CP6015 series
Accessories CB 473A — 1x500-sheet input tray/stand
CB474A — 3x500-sheet input tray/stand
Q6999A — HP Booklet Maker/Finisher Accessory
Q6998A — 3-Bin Stapler/Stacker Accessory

Regulatory Model Number:²⁾ BOISB-0601-00
Product Options: ALL

Toner Cartridges/Image Drums: CB380A, CB381A, CB382A, CB383A, CB384A, CB385A,
CB386A, CB387A

conforms to the following Product Specifications:

Safety: IEC 60950-1:2001 / EN60950-1: 2001 + A11
IEC 60825-1:1993 +A1 +A2 / EN 60825-1:1994 +A1 +A2 (Class 1 Laser/LED Product)
GB4943-2001

EMC: CISPR 22:2005 / EN 55022:2006 – Class B¹⁾
EN 61000-3-2:2000 +A2
EN 61000-3-3:1995 + A1
EN 55024:1998+A1 + A2
FCC Title 47 CFR, Part 15 Class B/ ICES-003, Issue 4
GB9254-1998, GB17625.1-2003

Supplementary Information:

The product herewith complies with the requirements of the EMC Directive 2004/108/EC and the Low Voltage Directive 2006/95/EC, and carries the CE-Marking accordingly.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two Conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

1) The product was tested in a typical configuration with Hewlett-Packard Personal Computer Systems.

2) For regulatory purposes, this product is assigned a Regulatory model number. This number should not be confused with the product name or the product number(s).

Certificate of volatility

This is a statement regarding the volatility of customer data stored in memory. It also outlines how to erase secure data from the product.

Types of memory

Volatile memory

The product utilizes volatile memory (64MB on the board and 256MB installed, for a total of 320MB) to store customer data during the printing and copying process. When the product is powered off, this volatile memory is erased.

Non-volatile memory

The product utilizes non-volatile memory (EEPROM) to store system control data and user preference settings. No customer print or copy data is stored in non-volatile memory. This non-volatile memory can be cleared and restored to factory defaults by performing a Cold Reset or Restore Factory Defaults from the control panel.

Hard-disk-drive memory

The product contains an internal hard disk drive (40GB or larger) that may retain data after the product is powered off. The product also may contain additional optional compact flash storage, or an external EIO hard disk. Data stored in these devices may be from stored print jobs or third-party solutions. Some of this data can be erased from the control panel of the product, but most must be erased using the Secure Storage Erase features available within HP Web Jetadmin. Secure Storage Erase features comply with U.S. Department of Defense (DOD) specification 5220–22.M.

Safety statements

Laser safety

The Center for Devices and Radiological Health (CDRH) of the U.S. Food and Drug Administration has implemented regulations for laser products manufactured since August 1, 1976. Compliance is mandatory for products marketed in the United States. The device is certified as a "Class 1" laser product under the U.S. Department of Health and Human Services (DHHS) Radiation Performance Standard according to the Radiation Control for Health and Safety Act of 1968. Since radiation emitted inside the device is completely confined within protective housings and external covers, the laser beam cannot escape during any phase of normal user operation.

△ **WARNING!** Using controls, making adjustments, or performing procedures other than those specified in this user guide may result in exposure to hazardous radiation.

Canadian DOC regulations

Complies with Canadian EMC Class B requirements.

« Conforme à la classe B des normes canadiennes de compatibilité électromagnétiques. « CEM ». »

LASERTURVALLISUUS

LUOKAN 1 LASERLAITE

KLASS 1 LASER APPARAT

HP Color LaserJet CP6015 Series-laserkirjoitin on käyttäjän kannalta turvallinen luokan 1 laserlaite. Normaalisissa käytössä kirjoittimen suojakotelointi estää lasersäteen pääsyn laitteen ulkopuolelle.

Laitteen turvallisuusluokka on määritetty standardin EN 60825-1 (1994) mukaisesti.

VAROITUS!

Laitteen käyttäminen muulla kuin käyttöohjeessa mainitulla tavalla saattaa altistaa käyttäjän turvallisuusluokan 1 ylittävälle näkymättömälle lasersäteilylle.

VARNING!

Om apparaten används på annat sätt än i bruksanvisning specificerats, kan användaren utsättas för osynlig laserstrålning, som överskrider gränsen för laserklass 1.

HUOLTO

HP Color LaserJet CP6015 Series-kirjoittimen sisällä ei ole käyttäjän huollettavissa olevia kohteita. Laitteen saa avata ja huoltaa ainoastaan sen huoltamiseen koulutettu henkilö. Tällaiseksi huoltotoimenpiteeksi ei katsota väriainekasetin vaihtamista, paperiradan puhdistusta tai muita käyttäjän käsikirjassa lueteltuja, käyttäjän tehtäväksi tarkoitettuja ylläpitotoimia, jotka voidaan suorittaa ilman erikoistyökaluja.

VARO!

Mikäli kirjoittimen suojakotelo avataan, olet alttiina näkymättömälle lasersäteilylle laitteen ollessa toiminnassa. Älä katso säteeseen.

VARNING!

Om laserprinterns skyddshölje öppnas då apparaten är i funktion, utsättas användaren för osynlig laserstrålning. Betrakta ej strålen.

Tiedot laitteessa käytettävän laserdiodin säteilyominaisuuksista:

Aallonpituus 785-800 nm

Teho 5 mW

Luokan 3B laser

Substances Table (China)

有毒有害物质表

根据中国电子信息产品污染控制管理办法的要求而出台

部件名称	有毒有害物质和元素					
	铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr(VI))	多溴联苯 (PBB)	多溴二苯醚 (PBDE)
打印引擎	X	0	X	X	0	0
控制面板	0	0	0	0	0	0
塑料外壳	0	0	0	0	0	0
格式化板组件	X	0	0	0	0	0
碳粉盒	X	0	0	0	0	0

3043

0：表示在此部件所用的所有同类材料中，所含的此有毒或有害物质均低于 SJ/T11363-2006 的限制要求。

X：表示在此部件所用的所有同类材料中，至少一种所含的此有毒或有害物质高于 SJ/T11363-2006 的限制要求。

注：引用的“环保使用期限”是根据在正常温度和湿度条件下操作使用产品而确定的。
