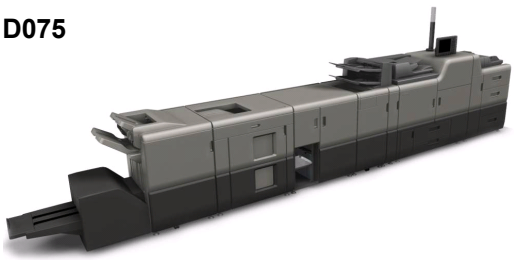
Product Concept

D075



Introduction

The D074 and D075 are multi-function copiers, and the M044 is a printer. These units are Ricoh's new flagship light production line-up. They feature heavy production-class features, such as, an improved customizable paper library, enhanced TCRU, and a more powerful Fiery Controller. In addition, features found on Ricoh's heavy-production machines, such as enhanced image quality with chemical toner, oil less fusing, and expanded finishing options are also available on this series.

Key Installation Points For the Pro C751EX / C651EX / C751:

- The Paper Library .mqp file needs to be loaded at installation.
- A forklift is required to remove the main frame from the shipping pallet.
- Developer is pre-installed from the factory.
- Toner Sub Hoppers are empty and need to be primed at installation. Execute SP3051-1.
- Check Installation Section of this PSG for weight, space and power requirements.
- The Pro C751EX Series requires NEMA 6-20 receptacle. (208v-240v, 20A)
- Installation requires setting SP5193-001 to "6" for the external Fiery controller.
- 2 Network connections are required – 1 for Fiery printing / Fiery Scanning and1 for @Remote / GW Scanning.
- Controller / Mainframe network connections – Lower network slot on Controller / Right network slot on GW Controller.

Configuration

Main Frame Configuration

Pro C 751/751ex/651ex Paper Feed options

Large Paper Capacity

Standard configuration has a 2,500-sheets input paper capacity. Standard configuration with LCT and Bypass Tray Unit, makes its total capacity to 7,000 sheets.
Using Bypass Tray Unit, 330.2mm X 630mm (13"X24.8) size paper is capable which is larger than 901 paper capability.

Installation

Installation Requirements (Environment)

Temperature Range:	Recommended Temp. 23° C (73.4° F). Allowed Range: 10° C to 32° C (50° F to 89.6° F)
Humidity Range:	15% to 80% RH
Ambient Illumination:	Less than 1,500 lux (do not expose to direct sunlight)
Ventilation:	3 times/hr
Ambient Dust:	Less than 0.10 mg/m^3 (2.0 x 10-6oz/yd^3)
Avoid areas exposed to sudden temperature changes: • Areas directly exposed to cool air from an air conditioner. • Areas directly exposed to heat from a heater.	
Do not place machine where it will be exposed to corrosive gas or vapor.	
Do not install the machine at any location over 2,000m (6,500 ft.) above sea level.	
Place the machine on a strong and level base.	
Do not place the machine where it may be subject to strong vibrations.	
Machine level	Front to rear = Less than 5.0 mm (0.2") away from level
	Right to left = Less than 5.0 mm (0.2") away from level
Notes: • If the machine is installed in a location where the ambient temperature is more than 30°C (86°F): (1) Do not run full color printing longer than 2 hours, and (2) never turn the main power switch off immediately after a long print job. Leave the machine on so that the fans can expel the hot air from the machine and cool the electronic components. • If this machine is to be used in a high temperature and high humidity condition, the tray heater is required to get the proper print quality. Connect the tray heater harness during the mainframe installation. • Do not connect the machine to the same power source as other electrical devices. • Leave the machine on so that the fans can expel the hot air and Ozone from the machine and cool the electronic components.	

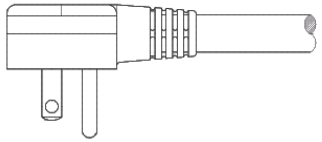
Network connections (X2):

1. Fiery Controller:
    a. Printing is only available via the Fiery controller.
    b. WIM access to Fiery Controller Settings.
2. GW network connection.
    a. Allows for @Remote connection.
    b. Web Image Monitor connection to mainframe GW settings

Main Unit

Single Phase

- The required wall outlet is a **NEMA 6-20** (receptacle) ⟶
- 208 to 240V, 50/60 Hz: More than 20 A Single Phase.
- Power cord length: 12ft.
- Do not place anything on power cord.



Required Breaker
The operating area where the machine is to be installed must have a required breaker for the power line.
North America: Listed circuit breaker, rating: 240V 20A, double pole

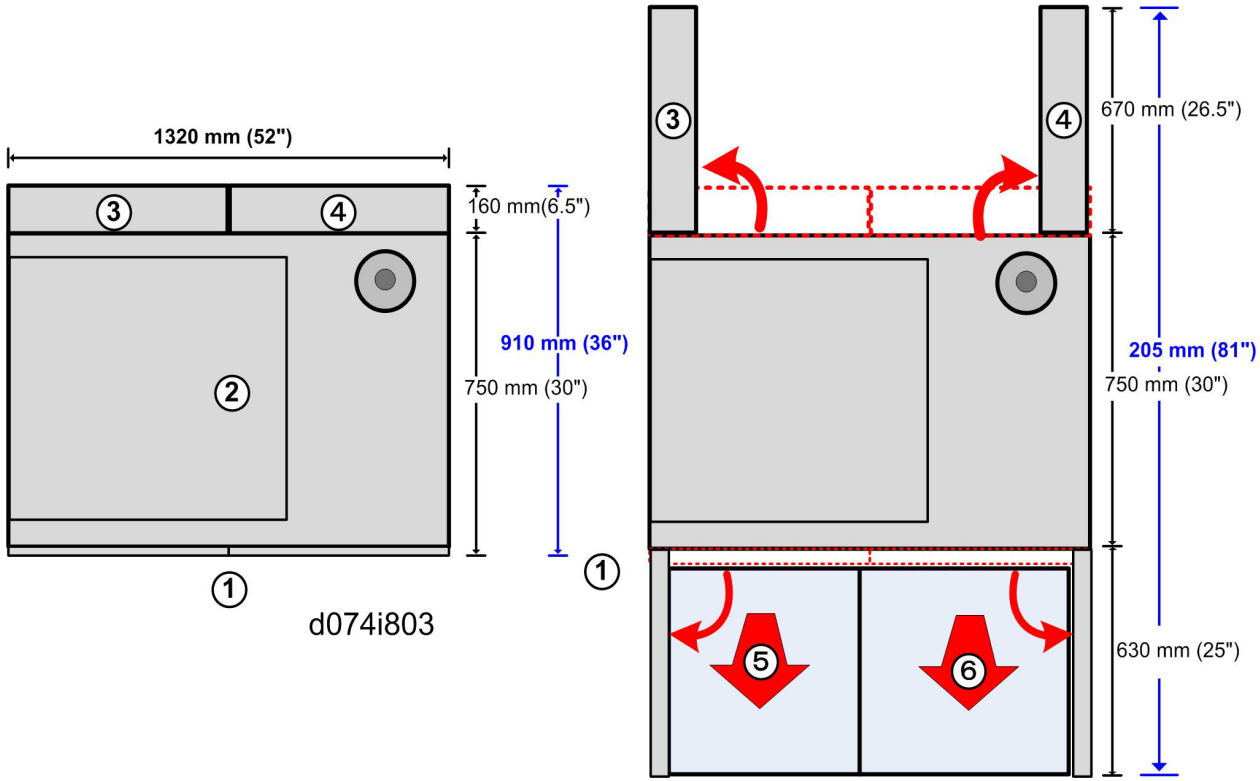
SPACE REQUIREMENTS

Main Machine



Notes	
Rear Distance	Approximately 670 mm (26.5 in.) clearance required behind the machine with both rear Boxes open.
Weight Distribution (When leveling feet are lowered)	
Weight	Less than 1212 lbs (550kg)
*The floor and floor surface should support the listed weights.	
*Use of the leveling bolts is recommended for all installations, even when the machine is level. This prevents the unit from being moved after installation.	

1. Front Doors — Both doors swing open to the front
2. Main Machine — Remains stationary.
3. Cooling Box — Swings open to the rear
4. Controller Box — Swings open to the rear
5. Left Drawer Slides — open to the front for servicing (fusing unit, etc.)
6. Right Drawer — Slides open to the front for servicing (registration unit, etc.)

- The Depth and Height are fixed to the mainframe dimensions.
- The total length of the installation can be calculated by using the above chart.

Instruction on how to determine total length:

1. Section A / B: Determine which options are to be installed. Add the values indicated under the option and enter this value _____ (Length A/B)
2. Section C: Determine which options are to be installed. Enter the value from column 9 here…….. _____ (Length C)
3. Section D: Determine which options are to be installed. Enter the value from column 21 here…….. _____ (Length D)
4. If Buffer Pass Unit is installed - add 330mm (11.8”) to the length…….. _____(Buffer)
5. Total length……..._____(Total)

Dimensions (W x D x H): _____mm x 910 mm x 1,320 mm (____” x 35.8” x 51.9”) {W = length]

Total space required = Dimensions plus additional space requirements from “Space” section.

SOUND POWER LEVEL

	Mainframe itself	Full System
Stand-by	Less than 52.5dB – 72dB (C1a) Less than 55.5dB – 72dB (C1b/P1)	Less than 52.5dB – 72dB (C1a) Less than 55.5dB – 72dB (C1b/P1)
Printing	Less than 72dB – 75dB (All models)	Less than 78dB – 79dB (All models)

		Target
Max. Power Consumption	Printing	Less than 4,000W
	Sleep Mode	Less than 30W

NOTE: The above measurements were made in accordance with ISO 7779. The measurements were taken from the normal position of the operator.

Storage/Transportation

	Storage	Transportation
Mainframe	Temperature -30 ~ +50° C Humidity Less than 85% RH Stack Max. 2 cartons	Temperature -30 ~ +50° C Humidity 15% RH ~ 95% RH Stack Max. 2 cartons
Toner (***)	-30 ~ +45° C 15 - 90% RH	Under 30-45° C 15-90% RH
Developer (***)	-30 ~ +45° C 15-90% RH	Under 30-45° C 15-90% RH

- Do not exceed a month under conditions where the temperature is between 35° C and 40° C.
- Do not exceed 12 hours under conditions where the temperature is 40° C and 45℃.

Sales Unit / Service Unit Responsibilities (before delivery)

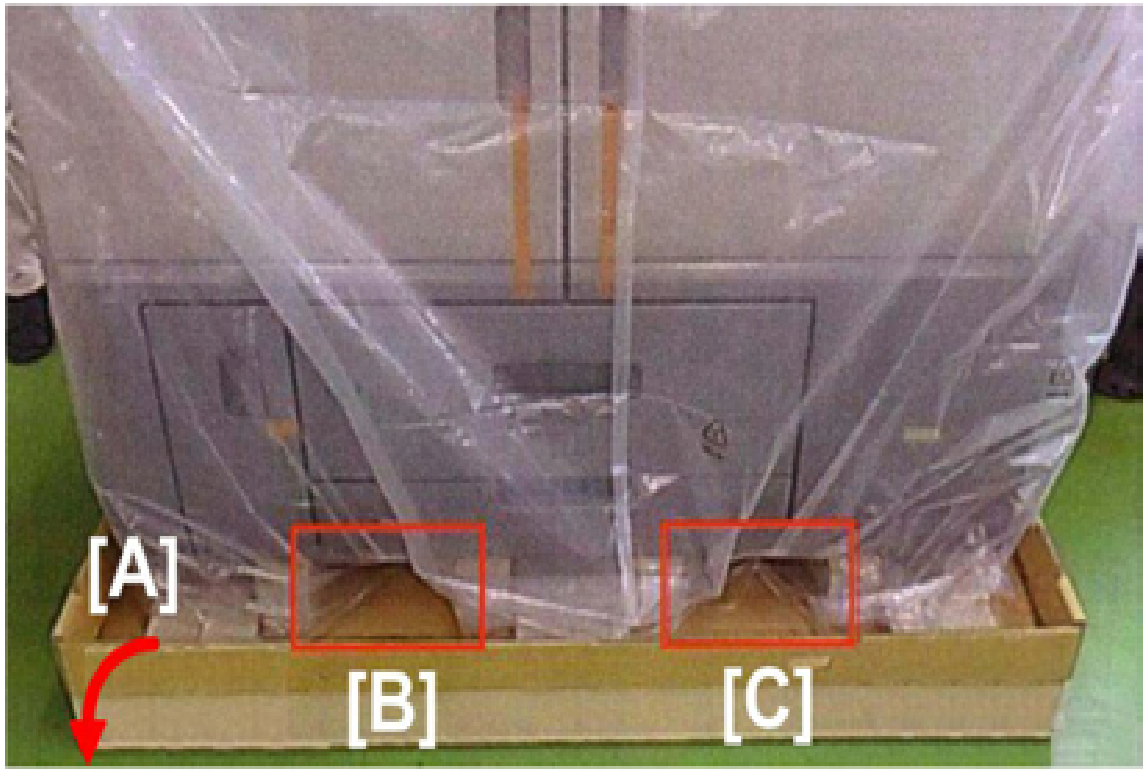
1. Inform the customer of required power requirements (including accessories that require an independent power source).
2. Inform the customer of power source placement, including placement of power sources for accessories.
3. Remove the main unit from pallet if customer cannot provide a forklift. The Pro C751ex / Pro C751 & ProC651ex require a forklift to remove the unit from the shipping pallet.
4. Inform the customer of weight and size of main unit and accessories.
5. If the customer does not have doorways wider than 1100mm (43.3”), a technician is required to remove the rear unit of the main frame, reducing the unit depth to 750mm (30”). This will allow the unit to fit through most doorways.

Customer Responsibilities

1. Provide and stabile, level surface that can support the main unit and accessories.
2. Insure adequate space is available to allow main unit and accessories to be delivered and moved to installation area
3. Provide proper power sources for main unit and accessories.
4. Insure proper position of power source as to allow all units to plug directly into power source.
5. Insure the installation area meets environmental specifications.
6. Provide a network connections:
    a. Minimum of 1 network connection is need for the Fiery connection.
    b. A second network connection is needed for @Remote and GW scanning.
7. If TCRU (Trained Customer Replaceable Units) are utilized:
    a. The customer shall provide space to store TCRUs
        i. This storage space should meet the environmental specifications outlined in the Installation Requirements of the main unit.
        ii. The operator and/or the technician should have access to TCRUs during main unit operation hours.
        iii. If spare parts are to be kept on site to rebuild TCRUs, the parts should be store relative to the TCRUs. TCRU recycle program TBA.
        iv. If TCRUs are to be rebuilt at the customer location, the customer should provide a location with a flat surface away from the main unit to allow the technician to perform the rebuild of the TCRUs so as to not interfere with the operation of the main unit.

Forklift

When removing the Pro C751 / 651 from the shipping pallet, refer to the fork positioning labels below.



1. Knock down the front edge of the cardboard [A].
2. Insert the arms of the forklift at [B] and [C].

SCAN TO FOLDER

	Specification
Protocol Support	SMB, FTP, NCP
Security	Client folder log-in (log-in name and password) Encryption of log-in name and password during transmission
Resolution	Default: 200dpi 100, 150, 200, 300, 400, 600dpi
Max. Resisted Client Folder Address in HDD	Max. 2,000 folders
Maintain Client Folder Address in HDD	Via Operation Panel, Web Image Monitor
Max. Client Folders per send	Max. 50 client folders
Group Address	Max. 100 destinations (To Folder: 50, To e-mail: 100) *1
Input Subject	No
Scan file size	1 document Up to 2000MB
File size when combined Scan to Folder & Scan to E-mail	128-102,400KB, Default = 2,048KB (With restriction) 725MB (W/O restriction) (Conforming to the scan to e-mail specification)
File Type	Single Page TIFF/JPEG, Single Page PDF, Multi Page TIFF, Multi Page PDF, Single Page High-compression PDF, Multi Page High-compression PDF
Program Registration	Yes (Up to 25 programs)
Dividing file in Scan to E-mail	Yes (By page or size) / No, Default = Yes (By size) (When Scan to PC combine with Scan to e-mail)
Resend	Yes / No, Default = Yes

*1. User can send to Max 100 destinations in the same group. But the number of folders has to be less than 50, since Max. folder destinations are 50. If there are more than 50 folder destinations registered in Group address, a message pops up.
100 destinations 50 folders included >>>OK
100 destinations 51 folders included >>>NG

Max. Number of address per sending (Combination between E-mail and Folder)

	Input via	Condition 1 Max. address can Select or input	Condition 2 Max. address allow in single operation	Condition 3 Combination of Address: Max.
Scan to E-mail	Address book	500	500	550
	Manual input	100	500	550
Scan to Folder	Address book	50	50	550
	Manual input	50	50	550

The number of destination which user can put has to satisfy all of above 3 conditions

PERIPHERALS SPECIFICATION

The specifications described below are for the peripherals themselves. Specifications for Pro C751ex / 751 / 651ex Series mainframe are put higher priority than the peripherals when they are used together as a system.

ADF SPECIFICATION (STANDARD on C 1)

Item	Specification	Remarks
Dimensions (W x D x H)	680 x 565 x 180mm	
Weight	Less than 19.5 Kg	
Power Source	From mainframe	
Noise (Power level)	Less than 72dB	
Stack capacity	100 sheets or less than 12mm	80g/m2, 20lbs Bond
Original size	- Simplex B6-A3 (SEF), 5 1/2" x 8 1/2" – 11" x 17" (SEF) - Duplex A5-A3 (SEF) 5 1/2" x 8 1/2" – 11" x 17" (SEF)	
Original Weight	- Simplex 40-128 g/m2 11-34 lb Bond - Duplex 52-128 g/m2 14-34 lb Bond	
Original set position	Left-rear corner	
Original Feed	ADF, SADF mode	
Original Set	Face Up, First sheet on top	
Original Feeding Speed	B/W: 75 opm Color: 75 opm (200 dpi)	A4 LEF or LT LEF
Power Source	From Mainframe	

Remarks:
* When using the GW Scanner the Original Feeding Speed is 75 opm.

DLT / A3 TRAY KIT

This option is put on the Tandem LCT in 1st tray of base-unit, and can feed DLT or A3 paper. This 1st tray can normally feed LT or A4 size paper only. So it's useful for users that require DLT or A3 paper extremely.

Item	Specification
Dimensions (W x D x H)	495 x 530 x 175 mm
Weight	10 kg
Paper size	A3 SEF, B4 SEF, A4 11"x17" SEF, 8 1/2"x14 SEF, 8 1/2x11"
Paper capacity	1,000 sheets

Note:

. This option is put on the Tandem LCT in 1st tray of base-unit, and can feed DLT (11"x17") or A3 paper. This 1st tray can normally feed LT (81/2"x11") or A4 size paper only.

TCRU Addendum

Pro C751ex / C751 / C651ex @Remote and TCRU Implementation Guide

@Remote

Concept / Objective

The "embedded" @Remote is a key part of the Pro C751ex/751/651ex service strategy. @Remote will be considered a standard service offering.

1. Technician is automatically dispatched for RANK "A" SC codes (Un-resettable SP modes).
2. Proactive PM is scheduled using the PM alarm function of @Remote.
3. Machine information (i.e. Copy Volume, Service Codes, Jams, etc.) captured by @Remote is monitored and evaluated to ensure that the machine performance and service quality is meeting or exceeding targets and expectations.

@Remote Settings Required for the Pro C751ex / C751 / C651ex

To have a "PM Call" communicated to the Customer Vision Center (CVC) for dispatching activities, a different Service Depot Number needs to be selected to obtain a Request Number for the Pro C751ex/C751/C651ex. In addition, several SP settings need to be changed at machine installation. Please refer to "**Appendix 3**" (page 16) for the detailed procedure to enable @Remote and page 12 for the SP settings.

Note: A PM Alarm will not be communicated to the CVC if the Pro C751ex/C751/C651ex is connected behind a RC Gate. The Pro C751ex/C751/C651ex must be connected directly to the network via a separate connection – one network connection for the Pro C751ex/C751/C651ex mainframe printer function and a second network connection for @Remote communication.

For additional information on @Remote, go to the following link to view or download basic @Remote documents.

http://tscweb.net/atremote/atremote_documentation.asp

Product Support Guide
D075 / D074 / M044
TCRU (Trained Customer Replaceable Unit)

Concept / Objective

The design of the Ricoh Pro C751ex (D075) / Pro C651ex (D074) / Pro C751 (M044) mainframe allows trained and skilled Key Operators to replace select mainframe subassemblies (TCRUs) at PM Alarm ("Replace…" message indicated on the Display Panel) and / or EM Call occurrence to ensure maximum uptime.

This concept and opportunity will allow Sales and Service to:

- **Establish a strong presence in Central Reprographics Department, Print for Pay, and Facilities Management accounts.**
- **Challenge & replace competitor's products that offer TCRU type service.**
- **Offer and provide a Shared Service that meets the response time and uptime requirements of the production-printing environment.**

Benefit Realizations

For Customers

- Maximum uptime maintained by a TCRU replacement (at notification or via your Call Avoidance/Customer Assistance (CA) process).
- PM time is significantly shorter than the traditional PM (individual parts replacement) because of subassembly (TCRU) replacement that allows the replaced TCRU to be refurbished by the Technician while the machine is up and running.
- Convenience of managing required PM activity through TCRU replacement at PM Alarm or according to job workload or schedule.

For Service Support Organizations

- Call Avoidance / Customer Assistance will reduce the number of service visits - an immediate on-site service visit may not be required if an EM issue can be resolved with a TCRU replacement by the Key Operator.
- Replacement TCRU provides a subassembly troubleshooting method (swap units) to isolate root causes quicker.
- Refurbishment of TCRUs can be completed on a scheduled basis to not disrupt Customer or Technician daily activity.
- No requirement to complete PM's during off or after hours which result in higher Service costs.

TCRU Kit - Order Process, Pricing and Contents

Subject to change without notice

Product Support Guide
D075 / D074 / M044

Customers have the option of participating in the Shared Service (self maintenance of unit replacement) or Full Service. If Full Service is chosen, the TCRU is used as a FRU (Field Replaceable Unit) by Field Technicians as a tool to reduce service time.

TCRU Kit is available to customers as finished goods with EDP Code.

Kit B

Components	Part No.	Description	Q'ty	Unique / Common
TCRU	D0744483	Fuser Unit	1	U

Subject to change without notice

Fusing Unit - TCRU

To minimize the PM or EM service time of the Fusing Unit, it is strongly recommended that TCRU Kit B be ordered. If the customer plans to run heavy weight media and different paper widths (11" / 12" / 13") an additional Fuser Unit may be required for each paper width. This will eliminate copy quality issues that occur when the paper edge wears lines into the Fust Belt.

The Fusing Unit is available as a service part and supply Item.

Addendum – Shared Service (TCRU) Agreement

Guidelines, in the form of a Maintenance Agreement Addendum, have been developed (sample provided in Appendix 1 – Page 13) to help protect your service organization from possible increases in service related costs because of unnecessary or premature TCRU replacement by the Key Operator. These guidelines include the Key Operator's responsibilities when a TCRU is replaced at PM Alarm or for an EM issue.

As with any Service Agreement, the Addendum also reflects verbiage on issues concerning liability and requires the Customer's acknowledgement (name, signature, and date) that they have read, understand, and accept the contents of the Addendum. This part of the Agreement must be signed before deploying the Kit at the Customer's account.

The Addendum also serves as an acknowledgement by the Key Operator that they have been trained by Service personnel on the Shared Service requirements, processes, and workflows. This must be signed and dated by the Key Operator after completion of the TCRU Training by the Technician. A copy of this signed document should be given to the Customer and the original should be kept on file at the Service location.

Key Operator Training Overview

Critical to the successful implementation and management of this Shared Service Offering is the replacement of a TCRU by a Key Operator. This requires the mechanical removal as well as interaction with the Display Panel, through Super User Mode, to reset a PM Counter. The following are the established guidelines on the key areas that should be demonstrated to and reviewed with the Key Operator(s) when the Kit is deployed. (At machine installation in most cases.)

Training Activity Summary

1. **Conducted By**: Installing Field Service Representative (FSR) or Customer Service Representative (CSR).
2. **When**: At Machine Installation and also a refresher at the 1st TCRU replacement (at PM Alarm)
3. **Critical Documents/Process to Review**:
    a. TCRU Replacement & Troubleshooting Manuals (included in the TCRU kit)
    b. TCRU Replacement Form (Appendix 2)
    c. TCRU Replacement Workflows – PM & EM
    d. Addendum – Shared Service (TCRU) Agreement
4. **Simulations Performed**:
    a. The actual replacement of all TCRUs.
    b. Have the Key Operator remove and replace each TCRU to verify procedures
5. **Time/Duration:** Plan on spending 45 – 60 minutes to properly train the Key Operator(s)

Refurbishment Options

Several refurbishment methods have been utilized and evaluated. After reviewing the results and taking into account the logistics and economic requirements or impacts to Service, the following table reflects three options with their advantages and disadvantages. ***Option #1, is Ricoh's recommended approach, which was successfully employed during our field test.***

Please note that there are other options available to implement and manage the refurbishment of used TCRUs at the local level. Any of the options presented can be used as a guideline to develop and customize an implementation plan based on your organization and capabilities. Option #2 or #3 may be a consideration as your Shared Service account MIF increases.

	Activities	Benefits	Disadvantages
1	Refurbish the TCRU at the Customers site	▪ One Visit ▪ No additional travel time is required for transporting the TCRUs between the Customer's locations and the Service location. ▪ The Units remain at the customers location eliminating the risk of damage during return handling or shipping	▪ The FSR has to remain on-site longer to refurbish the TCRU
2	Transport the replaced TCRUs to the local service location for refurbishment and return the same unit(s) back to the original customer	▪ The FSR's time at the customer's location is kept to a minimum ▪ TCRU refurbishing can be scheduled at the service location	▪ Transportation of the TCRUs between the customer and the service locations is required ▪ Potential damage to TCRUs during transportation and/or handling ▪ Dimensions of TCRUs cartons ▪ Replacement of TCRUs may not be available when the customer requires
3	"Swap" the replaced TCRUs at the customer's location with refurbished TCRUs and transport the replaced TCRU to the local service location for refurbishment	▪ Same as option 2 ▪ Refurbished TCRUs are immediately available to the Key Operator ensuring maximum uptime	▪ Same as option 2 ▪ An additional set of TCRUs is required at the local service location thus increasing costs

Option #1 Note: Refurbishment components (PM Kit) should be stored at the Account to eliminate Rescheduled Calls.

Service Offering Visibility & Management thru Dispatch System

TCRU (Shared Service) customers will demand a quicker response time and a higher service level than customers without this type of "mission critical" equipment. The FSR is required to call the customer immediately after an EM call is assigned for this type of customer.

Service Items for Ricoh Pro C751ex/C751/C651ex - (GMA) General Maintenance Agreements.

Service Item	Item Description (Short-Customer View)	Item Description (Long)
SVC-SILVER	Labor, Parts, Black Toner, Color Toner	Full Service GMA - Standard Double Click (11x17), Black & Color Toner Included, Technician Replaces TCRU
SVC-SILVER-D-TCRU	Labor, Parts, Black Toner, Color Toner - Cust TCRU (D-Click)	Shared Service GMA - Standard Double Click (11x17), Black & Color Toner Included, Customer Replaces TCRU
SVC-SILVER-S	Labor, Parts, Black Toner, Color Toner (S-Click)	Full Service GMA - Single Click (11x17), Black & Color Toner Included, Technician Replaces TCRU
SVC-SILVER-S-TCRU	Labor, Parts, Black Toner, Color Toner - Cust TCRU (S-Click)	Shared Service GMA - Single Click (11x17), Black & Color Toner Included, Customer Replaces TCRU
SERVICE & PARTS	Labor and Parts Only	Full Service GMA - Standard Double Click (11x17), Parts & Labor Only, Technician Replaces TCRU
SVC-PARTS-D-TCRU	Labor and Parts Only - Cust TCRU (D-Click)	Shared Service GMA - Standard Double Click (11x17), Parts & Labor Only, Customer Replaces TCRU
SVC-PARTS-S	Labor and Parts Only (S-Click)	Full Service GMA - Single Click (11x17), Parts & Labor Only, Technician Replaces TCRU
SVC-PARTS-S-TCRU	Labor and Parts Only - Cust TCRU (S-Click)	Shared Service GMA - Single Click (11x17), Parts & Labor Only, Customer Replaces TCRU

When a FSR visits a customer to refurbish TCRU(s) that were replaced by the key Operator for EM or PM activity, "TCRU" **must be entered by the FSR in the "Notes" field when debriefing the call to indicate that TCRU(s) were refurbished during the call.**

TCRU Workflows – EM & PM

TCRU Replacement and Service Workflows are critical to the successful implementation and management of the Shared Service Offering.

While a PM Workflow is much more straightforward than an EM Workflow, the success of both is a shared responsibility between the Key Operator, your Help Desk, the Call Handling Process (Service Dispatch), and the on-site Field Service Representative.

Note: See Suggested Workflows on the following pages.

TCRU Workflows - "Shared Service" TCRU Program

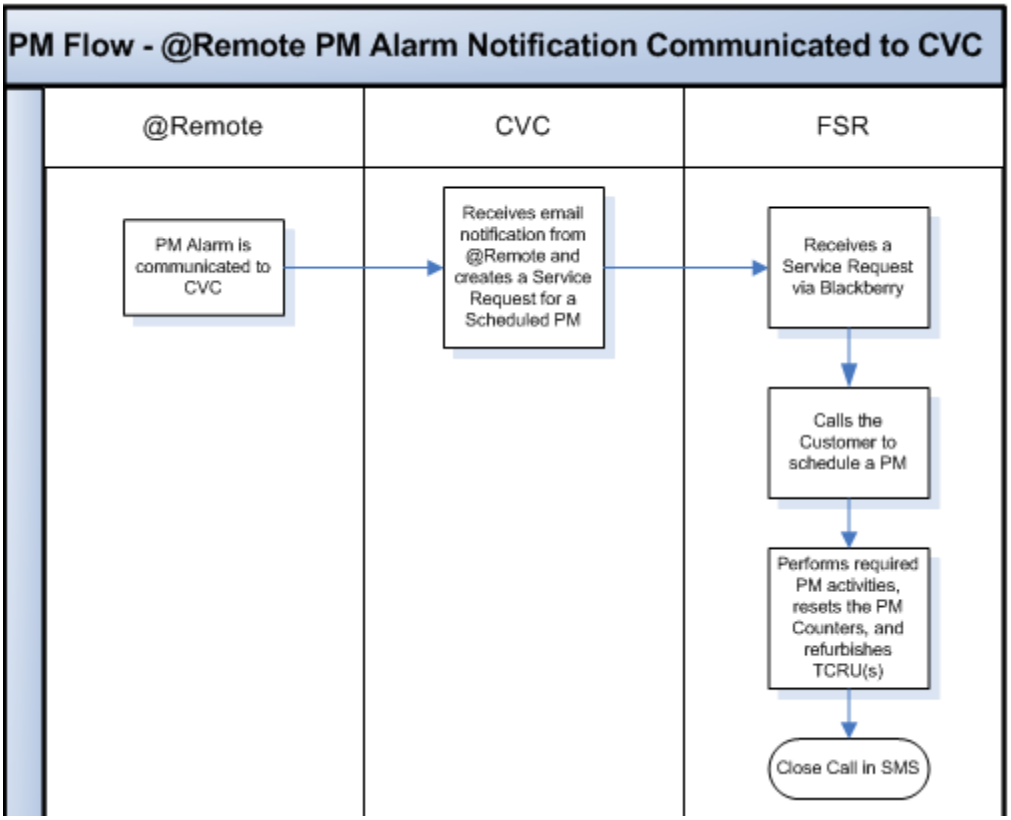
PM Guideline

Optimum machine performance is dependent upon quality service and scheduled maintenance; therefore, proactive and scheduled PMs are required for the Pro C751ex/C751/C651ex. The CVC (Customer Vision Center) @Remote Dispatcher creates a Service Request for a PM Call after receiving one of the following notifications from **(see SP Mode Settings that are required on page 12):**

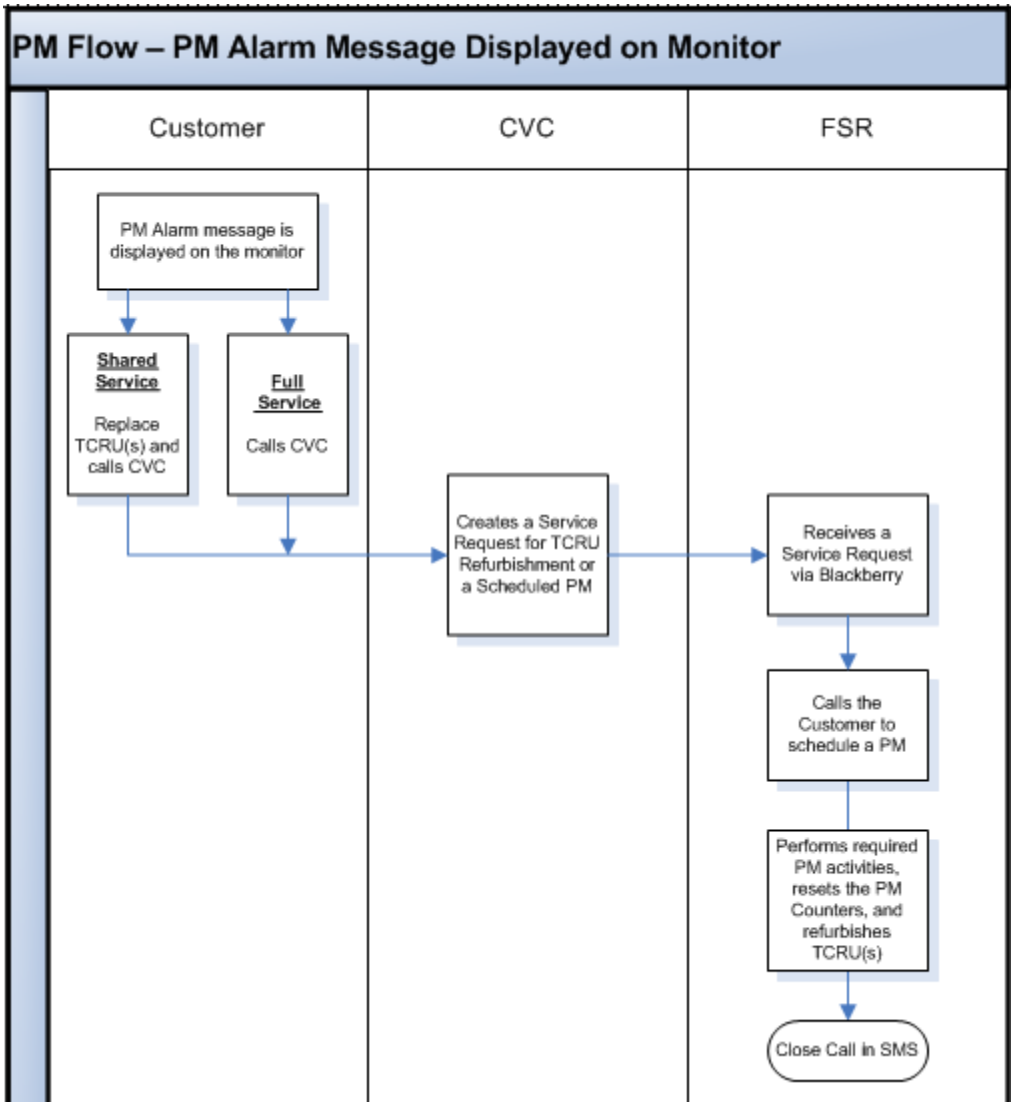
1. PM Alarm is communicated via @Remote.



Note: PM Parts Counter needs to be reset after performing a PM (SP7618).

Subject to change without notice

2. Customer calls CVC for PM request when a PM Alarm is displayed on the monitor > the @Remote feature is not enabled on the machine.



Note: PM Counter needs to be reset after performing a PM (SP7804).

Subject to change without notice

PM Procedure, PM Alarm Settings, and SP Mode Settings Required for Each Service Type

Service Type	PM Procedure	PM Alarm Settings	SP Mode Settings
TCRU Service with @Remote PM Alarm	A PM Alarm is sent via @remote to the CVC when the main PM Parts counter (SP7617-01) reaches 380K (95% of the PM target). A PM is then "scheduled" with the account by the Technician. Note: This 95% of target @remote PM Alarm is not displayed on the machine. Technician replaces or refurbishes the Fusing Unit (FRU) and TCRU(s) if the PM counter of each TCRU is close to or has exceeded the main PM counter. Color PM Unit(s) / TCRU(s) The Key Operator replaces a TCRU if the PM unit replacement alarm is displayed and a Technician's visit has not been scheduled. (i.e. Color Charge Unit).	Send PM alarm via @remote at 380K (95% of PM target) to dispatch a Technician to perform PM activities for the Fusing Unit and other 400K PM items. Color PM Unit(s) / TCRU(s) Set the PM Alarm message for every PM unit to be displayed on the screen to notify the Key Operator that a TCRU replacement is required.	**SP5062-01:ON (Default: OFF)** **SP7956-01: 1 (Default: 0)** SP5514-01: 1 (Default) **SP5513-01: 380 (Default: 300)** **SP5515-02: 0 (Default: 1)** **SP5515-03: 0 (Default: 1)** **SP5515-08: 1 (Default)**
TCRU Service without @Remote PM Alarm	Key Operator replaces a TCRU if a PM Alarm is displayed. The Key Operator calls Service after replacing the TCRU(s) and the Technician visits the account to refurbish the replaced TCRU(s). The Technician also checks the counters for the other PM units or components and performs any additional PM activities that are required.	Set the PM Alarm message for every PM unit to be displayed on the screen.	**SP5062-01:ON (Default: OFF)** **SP7956-01: 1 (Default: 0)**
Full Service with @Remote PM Alarm	A PM Alarm is sent via @remote to the CVC when the main PM counter reaches 380K (95% of the PM target). This will trigger the scheduling of a PM.	Set the PM Alarm to 380K (95% of the PM target) for the main PM counter to send a PM Alarm via @Remote.	SP5062-01:OFF (Default) SP7956-01: 0 (Default) SP5514-01: 1 (Default) **SP5513-01: 380 (Default: 300)** **SP5515-02: 0 (Default: 1)** **SP5515-03: 0 (Default: 1)** **SP5515-08: 1 (Default)**
Full Service without @Remote PM Alarm	A PM Alarm is displayed when the main PM counter (SP7803-01) reaches 380k (95% of the PM target). The Key Operator calls for Service.	Set the PM Alarm to 380k (95% of PM target) for the main PM counter to display a message on screen.	**SP5501-01: 380 (Default: 0)**

Note: The SP Settings must be adjusted by the Technician at installation according to the Service Type (Maintenance Contract) that has been established with the account.

Appendix 1

Sample Addendum to Maintenance Agreement for Pro C751ex/C751/C651ex

The Service Maintenance Agreement between ***"dealer name"*** and Customer is hereby amended as follows:

1. Only those Customer employees that have been trained and certified by a service representative of ***"dealer name"*** are authorized to provide the limited services with respect to Trained Customer Replaceable Units pursuant to this Addendum (hereinafter "Key Operators"). ***"dealer name"*** shall have no responsibility for and disclaims any and all liability with respect to any loss or damage to person or property resulting from or arising out of the acts or conduct of any persons other than a trained and certified Key Operator.

2. The Key Operator may replace a TCRU when a Preventive Maintenance Alarm is indicated on the Display Panel of the equipment. Replacement activities shall be limited to the following:
   a) replacement of the TCRU
   b) reset of the TCRU counter through the Display Panel
   c) printing of the Counter Page
   d) completion of the TCRU Replacement Form
   e) repacking of the replaced TCRU and enclosing items c & d in the replacement TCRU carton

3. The Key Operator may not replace a TCRU before the Preventive Maintenance Alarm is indicated on the Display Panel without approval and instruction from a Field Service Representative. Such approval shall be initiated by the Key Operator through a Service Call.

4. If / When the Key Operator replaces a TCRU before the Preventive Maintenance Alarm is indicated on the Display Panel without approval and instruction from a Field Service Representative, the replaced TCRU shall be retained by the customer and evaluated by the Field Service Representative during the next Service visit. The Field Service Representative may determine that the TCRU has not achieved the target life and that it may be reused without refurbishment for the remainder of it's' target yield. The remaining yield of the TCRU will be noted by the Field Service Representative on the TCRU Replacement Form. The noted remaining yield ("Preventive Maintenance Target") is to be entered by the Key Operator when the TCRU is replaced to ensure an accurate next Preventive Maintenance Alarm for the TCRU.

5. For any Emergency Maintenance issue, such as image quality, jamming, or Service Codes, the Key Operator may not replace a TCRU without approval and instruction from a Field Service Representative. The resolution to any Emergency Maintenance machine issue is to be initiated by the Key Operator placing a Service Call to the Service location. The Service location may provide immediate assistance through a Helpdesk and / or assign the Service Call to a Field Service Representative. If the Service Call is assigned, the Field Service Representative will immediately contact the Key Operator to discuss the issue and determine if the issue can be resolved with a TCRU replacement. If the issue cannot be resolved with a TCRU replacement, the Field Service Representative will visit the account to investigate.

6. If / When a TCRU is replaced for an Emergency Maintenance issue with the approval and instruction from a Field Service Representative, the Key Operator is required to:

   a) reset of the TCRU counter through the Display Panel
   b) print the Counter Page
   c) complete the TCRU Replacement Form
   d) repack the replaced TCRU and enclose Items C & D in the replacement TCRU carton

Sample Addendum to Maintenance Agreement – page 2

7. If a TCRU is replaced by the Key Operator and it does not resolve an Emergency Maintenance issue, the Key Operator is required to reinstall the original TCRU and return the replacement TCRU to its original carton.

8. Any TCRU that is replaced for an Emergency Maintenance issue by a Key Operator at a 24 Hour / 7 Day account without the instruction of a Field Service Representative, must be reported to the servicing location by the account the next business day (for the servicing location).

9. Replaced TCRUs are to be stored near the machine or in an accessible location for the Field Service Representative.

10. The replaced TCRU will be refurbished and / or repaired locally at the Customer's location, or will be replaced ("swapped") with a refurbished TCRU at the Service provider's earliest opportunity.

11. If a TCRU incurs non-repairable damage during normal usage or replacement, the Service location will provide a replacement TCRU unit at no charge.

12. The premature or unnecessary replacement of a TCRU outside the guidelines reflected in this "Addendum, **Shared Service** Agreement" may subject the Customer to a surcharge or to the cancellation of the Shared Service Agreement.

13. Damage to a TCRU caused by Key Operator misuse, abuse, or negligence may subject the Customer to a surcharge or to the cancellation of the Shared Service Agreement.

14. Customer hereby assumes the risk and liability for loss, damage or injury to person or property arising out of the acts and conduct of Customer taken pursuant to this Addendum. In no event shall ***your dealer name"*** shall not be liable for any loss or any special, incidental or consequential damages caused by the use or misuse of the TCRU replacement process. In no event shall the recovery of any kind or nature exceed the price paid for the Shared Service.

This **Addendum, Trained Customer Replaceable Unit (TCRU) Shared Service Agreement** has been reviewed and is fully understood.

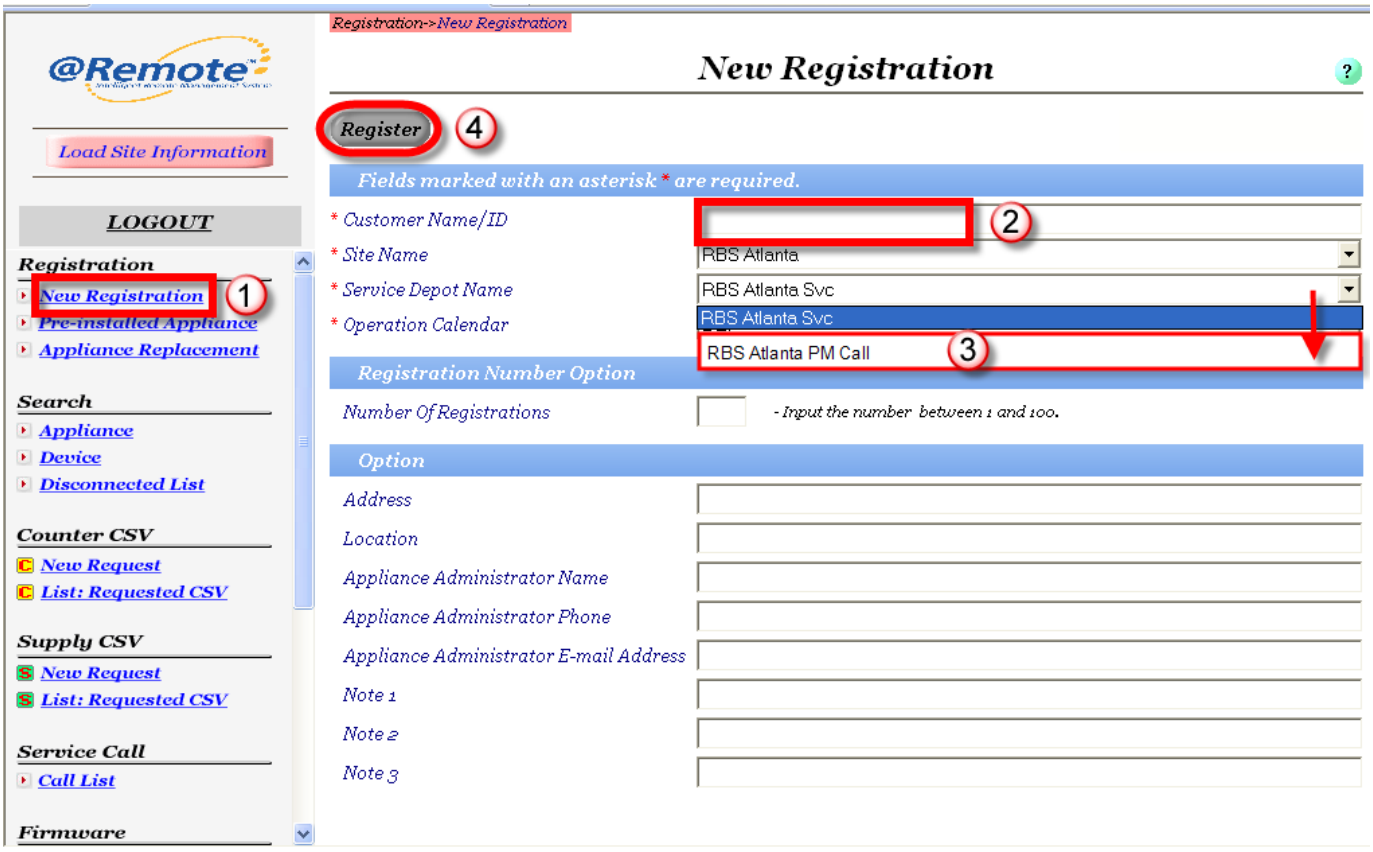
Appendix 3

How to enable the embedded @Remote Functionality for the Pro C751ex/C751/C651ex (for Ricoh Direct Service)

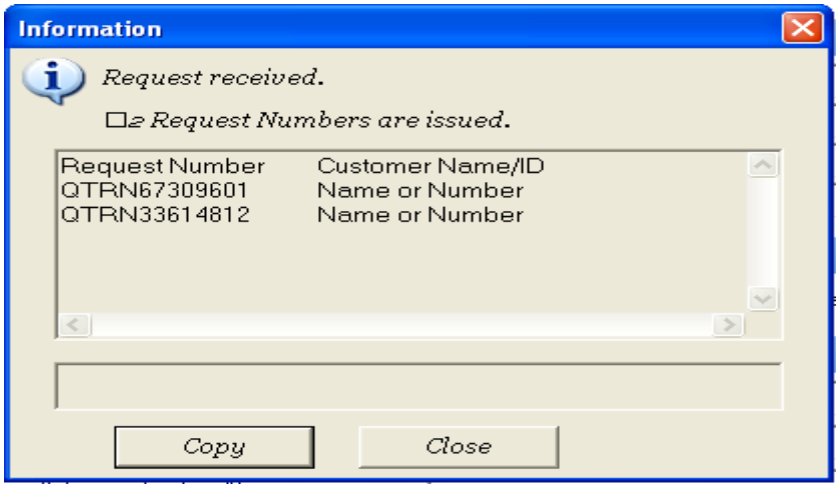
Prior to activating embedded @Remote:

1. Log into the @Remote Center using the following URL: https://rcg.support.ricoh.com/atremotecenter/MainServlet
2. Select New Registration (1) Pre-register the Device in the @Remote Center System after entering the Required and / or Optional Information and selecting "**Register"** (see 2, 3 4 below). When Obtaining a Request Number prior to installing the Pro 901C as an Embedded @Remote Device, you will have to obtain the Request Number a little differently. For these Devices and only for these devices, please select the Service Depot Name from the pull down list and choose **your** Service Depot with the "PM Call".

This Service Depot setting is designed to send PM Call notifications to the Call Center for PM Work Order Creation. In the example screen shot below, you can see that there are two Service Depot Names, one for all RC Gate and Embedded Device Installations and one for Embedded Device Installations that are going to also send PM Calls.

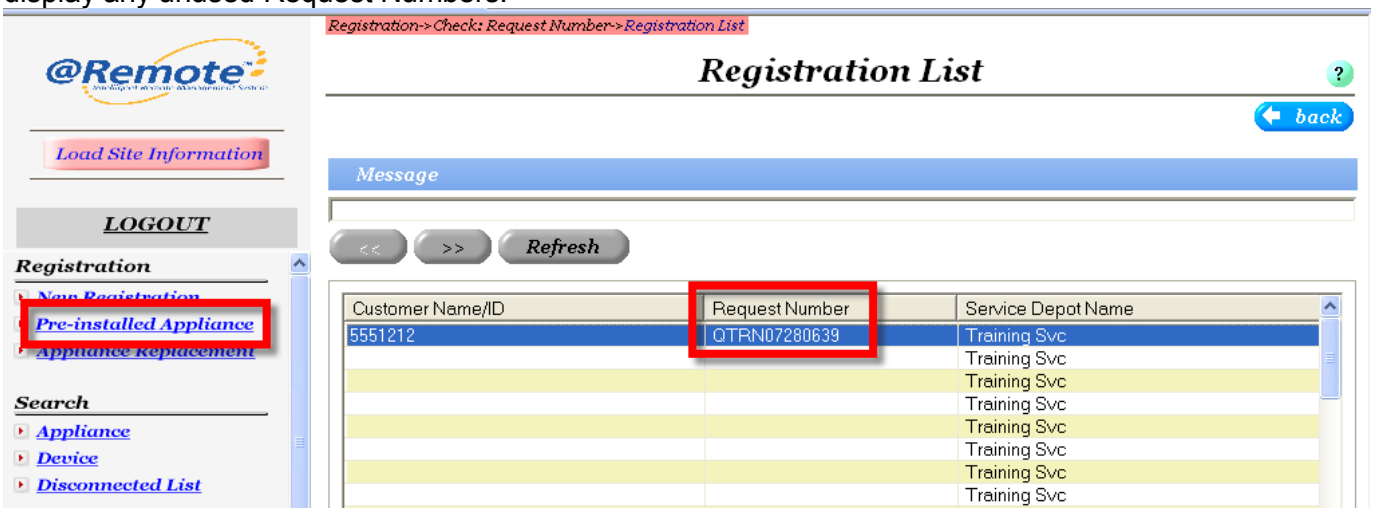


Subject to change without notice



3. Record the Request Number provided by the @Remote Center System (selecting Copy in the screen above will save the Request Number(s) to your Clip Board). You will need to input this number into the Device as a part of the Registration process. Request Numbers are valid for a period of Three Months.

4. If you forget the Request Number, you can always obtain them by going to the @Remote Center System and Selecting the Pre-installed Appliance on the menu, which will display any unused Request Numbers.



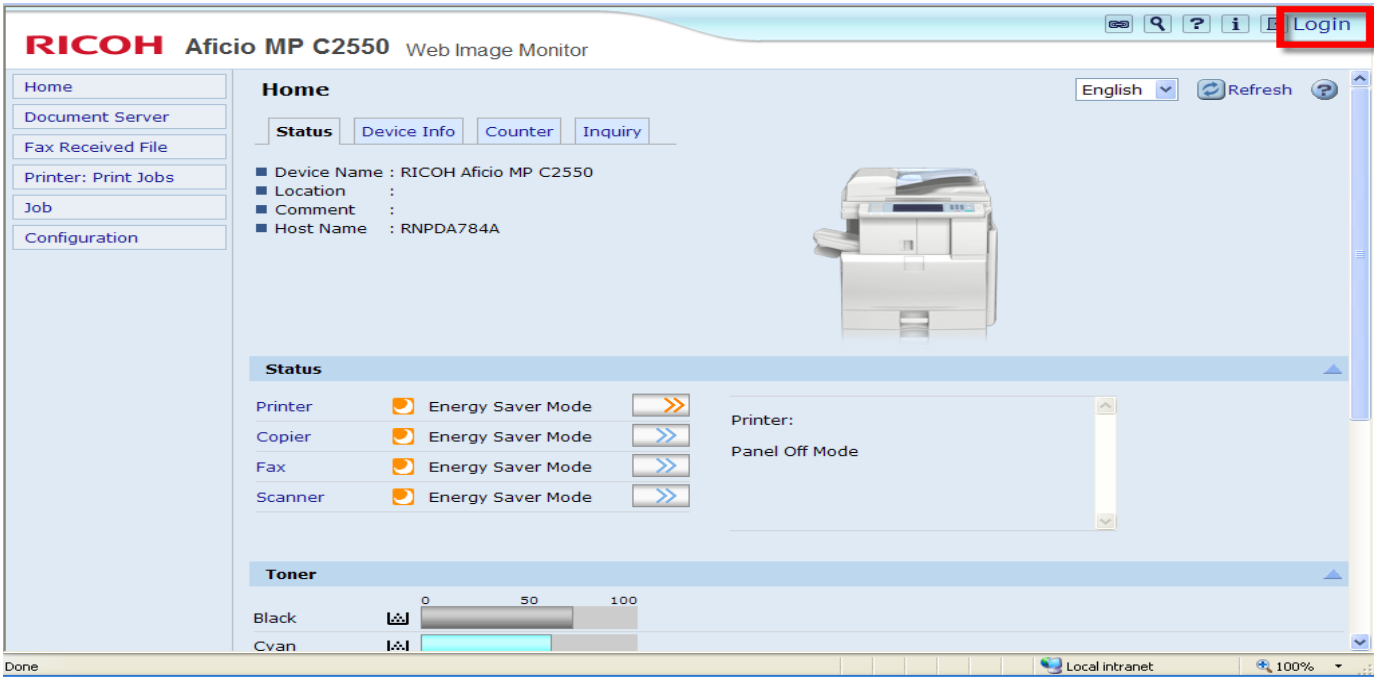
5. Complete the installation process for the Device as normal. Perform all regular post installation testing of the Device to ensure the MFPs proper operation.

Check the following setting at the Devices Op Panel, if it is set to [Prohibited], change to [Do not prohibit].

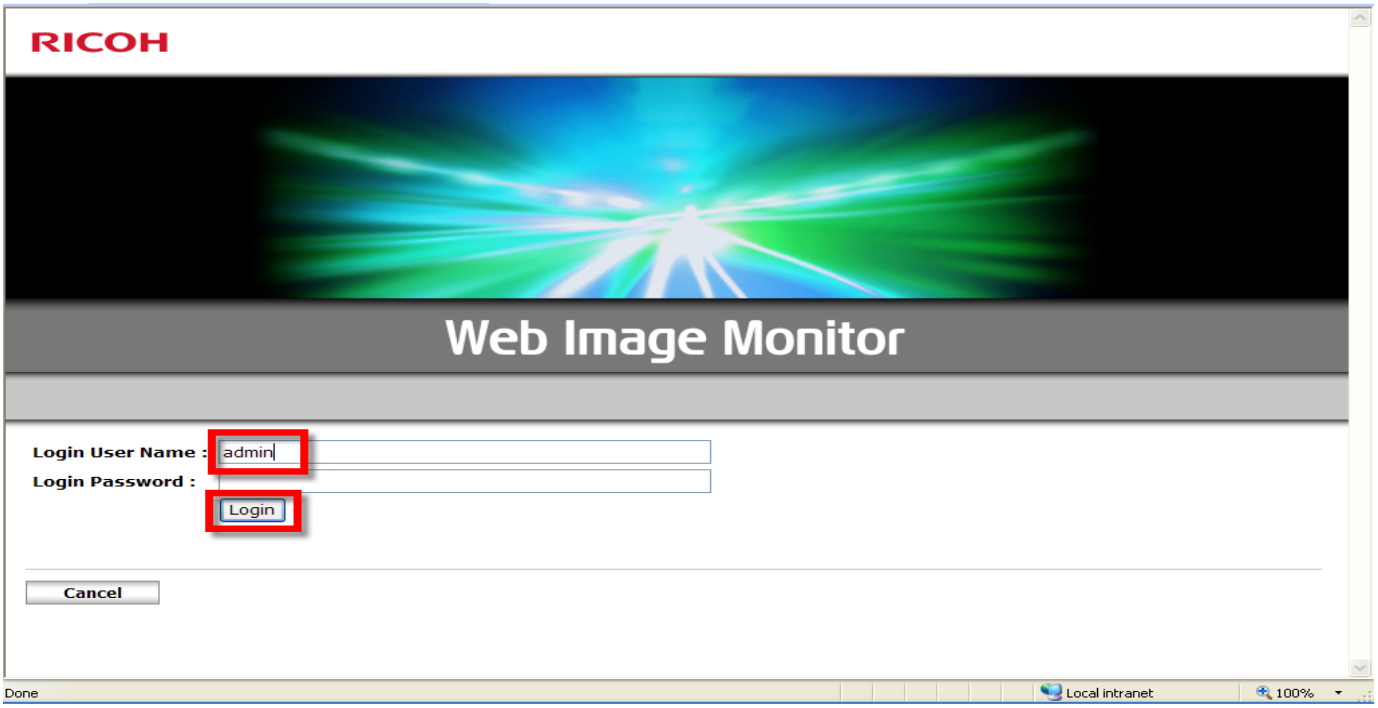
How to check and verify and / or change this setting;

User Tools/Counter > System Settings > Administrator Tools > Extended Security > @Remote Service

6. Access the Device's Web Image Monitor (WIM) and select **Login**

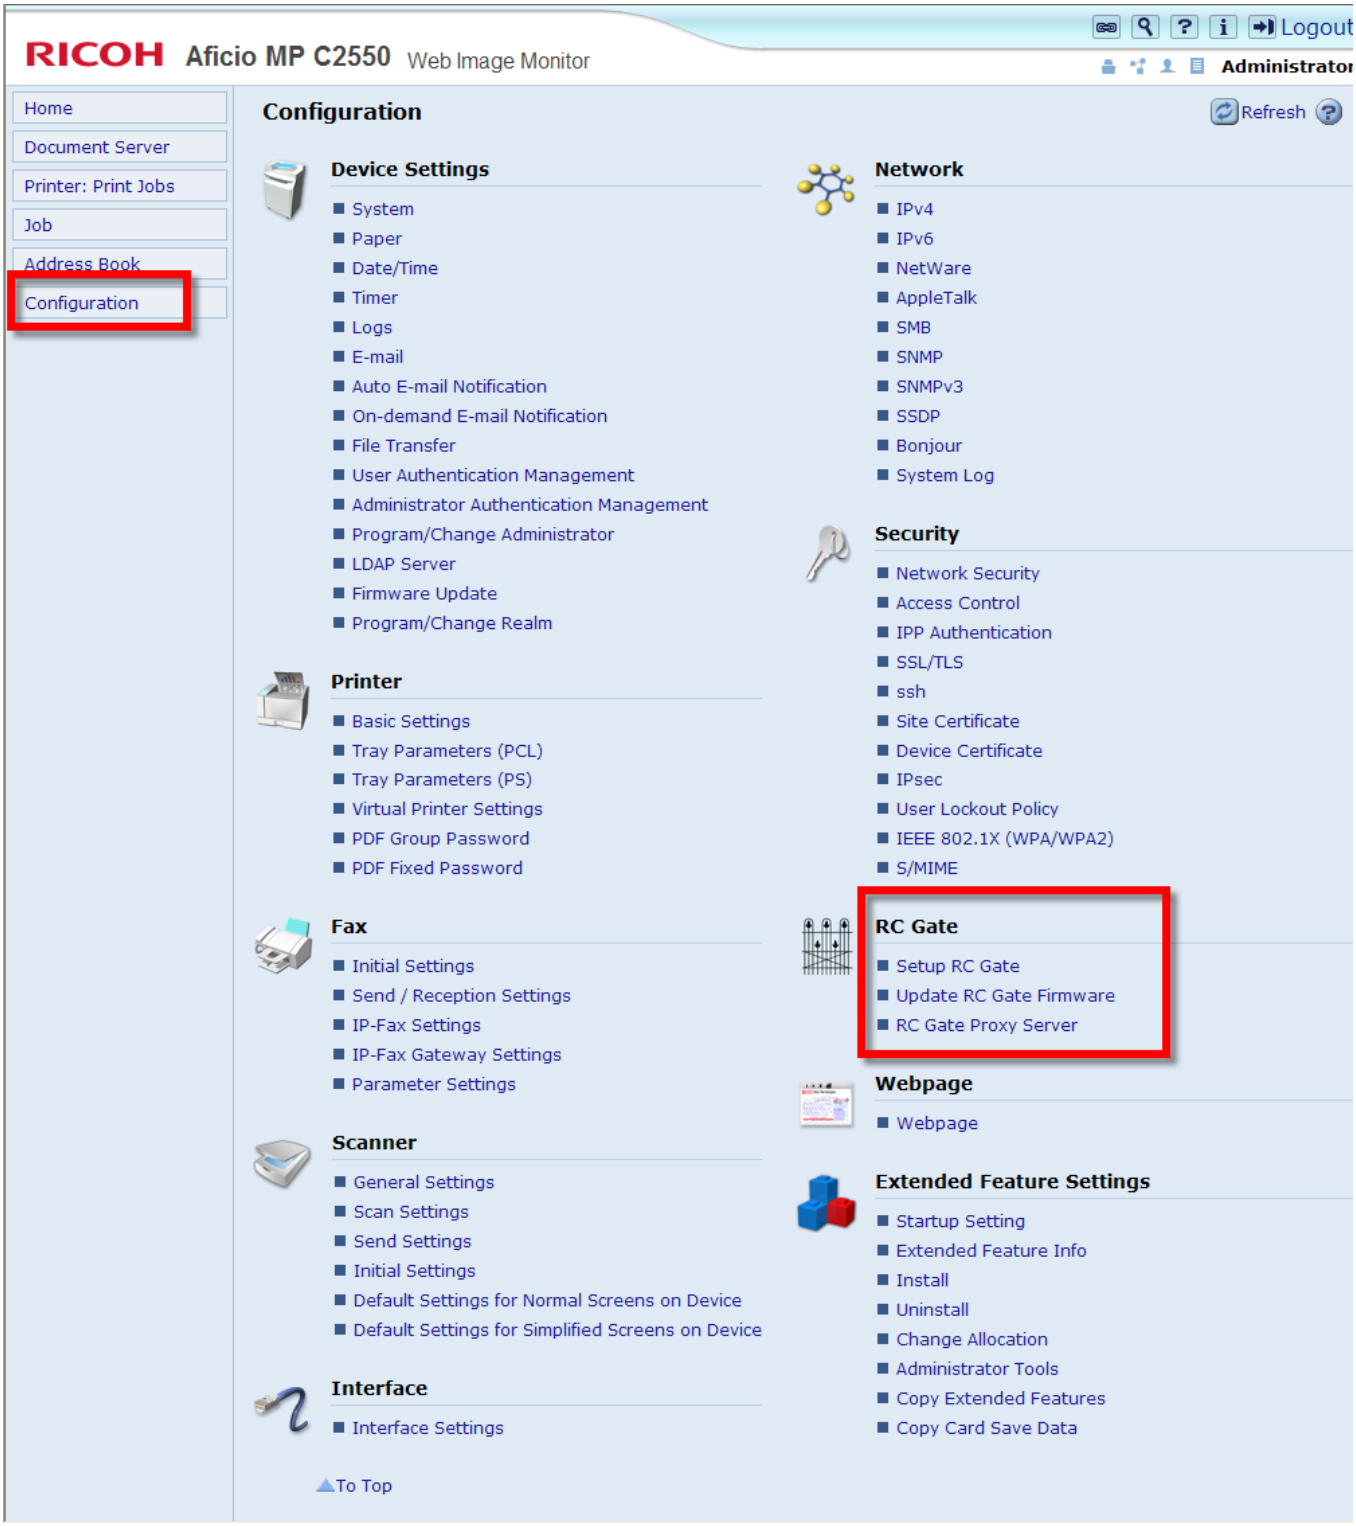


7. Log into the Device Web Image Monitor as **Admin**



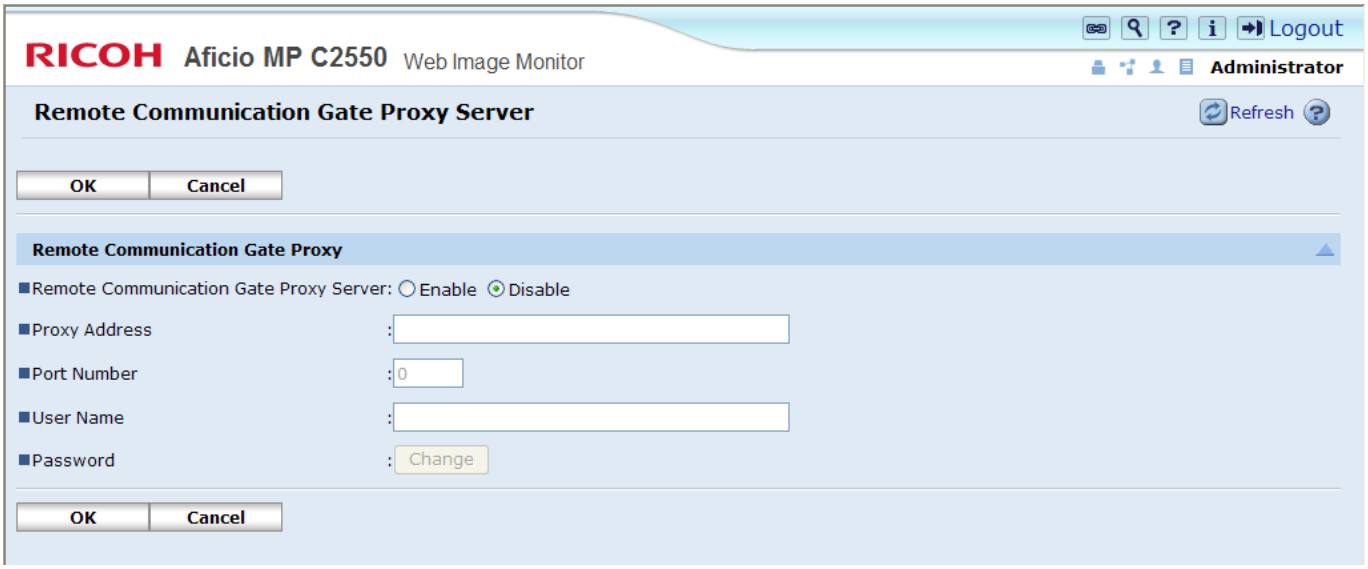
Subject to change without notice

8. Scroll down the Left Side Menu and select **Configuration**, then select **RC Gate**

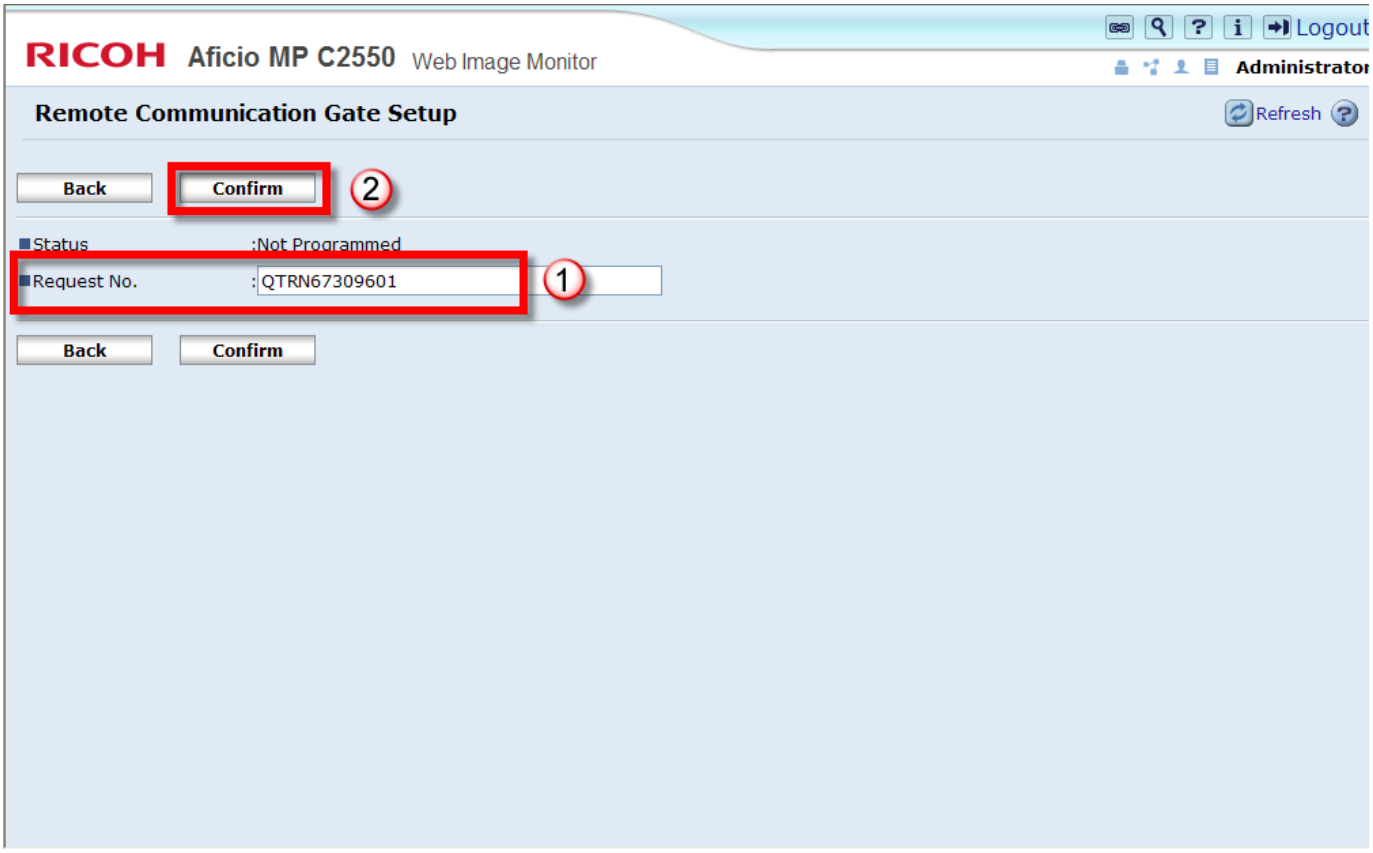


9. Note: if your Customer uses a Proxy Server to Access the Internet, then Program the RC Gate Proxy Information into the Device prior to selecting Setup RC Gate, otherwise, skip this Step.

Subject to change without notice

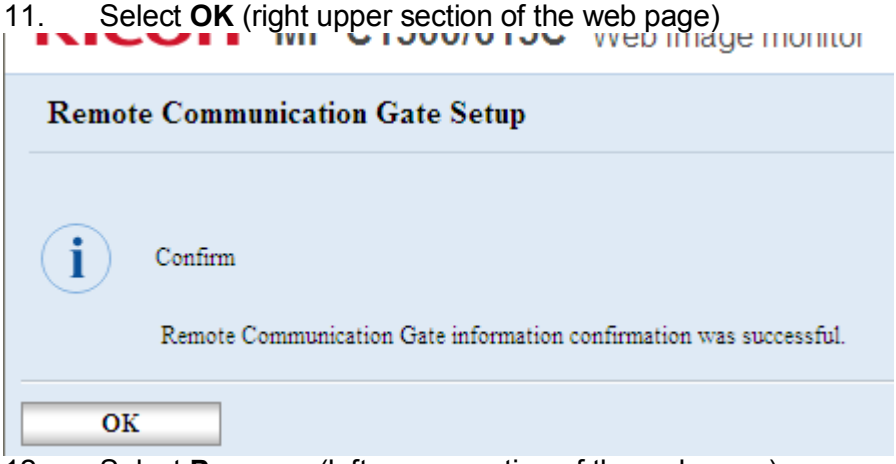


10. Select **Setup RC Gate,** Enter the **Request Number** obtained in Step 3 above and select **Confirm** (left upper section of the web page)

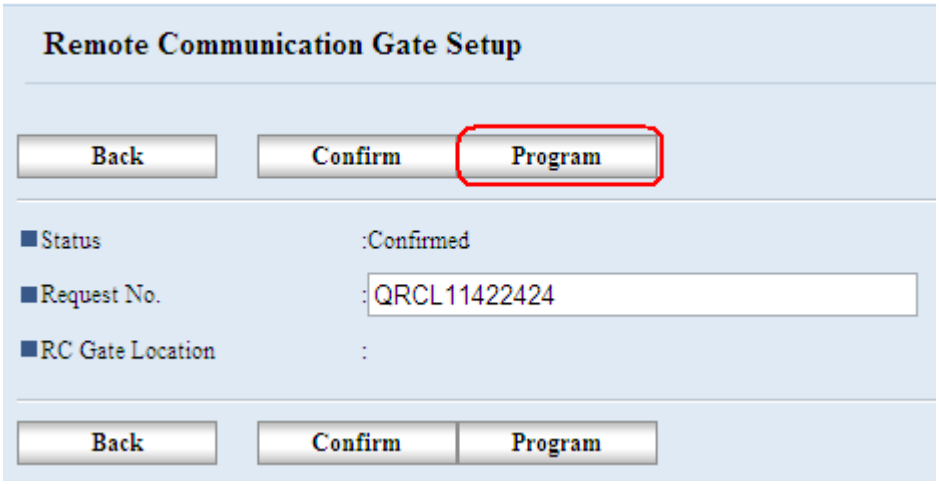


Subject to change without notice

11. Select **OK** (right upper section of the web page)



12. Select **Program** (left upper section of the web page)



13. Select **OK** (right upper section of the web page)

Subject to change without notice

14. Verify that the Web Image Monitor is indicating Status: **Registered**

The @Remote Embedded Device is now Reporting into the @Remote Center and is completely registered (Managed Mode) in the @Remote Center; this is the last step to perform in the Web Image Monitor.

15. Check the Device List of the center GUI that the registered device is appeared in the list with “Registered” status as Device Condition. If Device Condition is still “Found”, it will be changed to “Registered” automatically at the time when the device sends next hourly polling.

16. Check and / or change the following SP Modes to ensure that the PM Calls are enabled for this Device.

	Shared Service Customer	**Full Service Customer**
SP mode settings for @Remote	SP5062-01: ON (Default: OFF) SP7956-01: 1 (Default: 0) SP5514-01: 1 (Default) SP5513-01: 380 (Default: 300) SP5515-02: 0 (Default: 1) SP5515-03: 0 (Default: 1)	SP5062-01: OFF (Default) SP7956-01: 0 (Default) SP5514-01: 1 (Default) SP5513-01: 380 (Default: 300) SP5515-02: 0 (Default: 1) SP5515-03: 0 (Default: 1)

Installing Embedded @Remote using SP Mode

You can install Embedded @Remote by using the SP Modes instead of the Web Image Monitor.

Access the Service SP Modes.
Go to SP 5816-202 and enter the Request Number
Go to SP 5816-203 and select Confirmation Execute
Go to SP 5816-204 and select Confirm Result
Go to SP 5816-205 and select Confirm Place
Go to SP 5816-206 and select Register Execute
Go to SP 5816-207 and select Register Result to ensure that the configuration was successful.
